INDEPENDENT OFFICES APPROPRIATIONS FOR 1963

MONDAY, AUGUST 6, 1962

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, D.C.

The subcommittee met at 10 a.m., pursuant to notice, in room F–37, U.S. Capitol Building, Hon. Warren G. Magnuson (chairman) presiding.

Present: Senators Magnuson, Ellender, Holland, Monroney, Allott, and Saltonstall.

OFFICE OF EMERGENCY PLANNING

STATEMENT OF EDWARD A. McDERMOTT, DIRECTOR, OFFICE OF EMERGENCY PLANNING; ACCOMPANIED BY JUSTICE M. CHAMBERS, DEPUTY DIRECTOR; CHARLES S. BREWTON, ASSISTANT DIRECTOR; JOHN E. COSGROVE, ASSISTANT DIRECTOR; IRVIN STEWART, DIRECTOR OF TELECOMMUNICATIONS MANAGEMENT; CHARLES H. KENDALL, GENERAL COUNSEL; WILLIAM B. RICE, DIRECTOR OF ADMINISTRATION; KENNETH A. McLEAN, CHIEF, BUDGET BRANCH; AND HUBERT R. GALLAGHER, ACTING DIRECTOR, LIAISON AND PUBLIC AFFAIRS

LETTER FROM THE PRESIDENT

Senator MAGNUSON. The committee will come to order.

We have under discussion this morning H.R. 12711, specifically appropriations for the Office of Emergency Planning.

I would like to put in the record the letter from the President of the United States, addressed to me, of August 2, 1962, on this matter.

(The letter referred to follows:)

THE WHITE HOUSE,
Washington, August 2, 1962.

Hon. WARREN G. MAGNUSON,
Subcommittee on Appropriations,
U.S. Senate, Washington, D.C.

DEAR SENATOR: Legislation and appropriations are pending before the Congress on civil defense programs which would greatly increase the capacity of this country to survive and recover after a nuclear blow. Your subcommittee has jurisdiction over these appropriations. I wish again to state my view that, in these times, the Federal Government has an inescapable responsibility to take practical and sensible measures to minimize loss of life in the event of nuclear attack, to continue the essential functions of the Government, and to provide a base for our survival and recovery as a nation. These matters are an integral part of a balanced defense program for the security of our nation.

You know from your own experience how the sense of urgency with which we view these matters fluctuates. When a crisis is near, we pay attention to them; when it seems distant, they recede from the forefront of our concern. It is important that we overcome our natural tendency to put off making preparations for a contingency which is both awful and unlikely.

Last year I sent to the Congress a program embodying my views of what is a sensible and practical program, which focused on protecting as many of our people as possible against lethal fallout radiation. The Secretary of Defense and my other senior advisers on this subject had intensively reviewed what is known and what is not known about the possible effects of nuclear warfare. The conclusion was clear that, for the foreseeable future, under a wide range of attack assumptions, large numbers of lives could be saved by adequate fallout shelter space. Postponement of practical measures to shield our people from fallout radiation cannot be justified by the inevitable imponderables and the continuing need for a greater research effort. The Department of Defense is continuously examining present and future weapons systems and studying the effects of a wide range of hypothetical nuclear attacks. Nothing in the studies that have been made since last year's decisions justifies change of the program which we have proposed.

The Defense Department survey, which was the first step in our new program, reveals that we already have enough shelter space for 60 million people which needs only to be marked and provisioned. Funds made available for fiscal year 1962 have financed completion of the survey and procurement of over half of the necessary provisions. Thus we are beyond debating whether to create public shelter systems; we have now done it as a result of the action taken by Congress at my request last summer. When we complete this task, the chances of survival of tens of millions of Americans will be improved at a cost of $3 to $4 for each person. We may well take satisfaction in this achievement.

Communities planning to create an effective shelter program founded on space identified in the national survey must be able to act in reliance on the Federal Government to carry out announced plans to deliver shelter supplies, improve the warning system, equip a radiological monitoring net, protect emergency broadcasting stations, and provide training materials and instructor training to meet the need for specialized skills in each shelter. The Defense Department is dependent upon the pending $235 million appropriation request to carry out the Federal Government's share in this undertaking.

Municipal governments and building owners around the country are now faced with the difficult task of working out the details of making effective use of the surveyed shelter space. This is not an easy thing to do. It is gratifying to all of us to see so many hard-pressed mayors, county commissioners, building owners, school superintendents, businessmen, and other community leaders stepping up to this job. This will be our country's first experience with the practical problems of sheltering large numbers of people. I anticipate far better understanding of what can be done to meet the problems presented by the risks of nuclear attack after Federal, State, and local government programs are translated into something visible and immediately useful in the months ahead.

I particularly wish to call attention to the importance of continuing last year's program for adding low-cost fallout shelter space to suitable buildings owned or leased by the Federal Government. Successful completion of the first phase of the new civil defense program depends on public-spirited decisions by building owners to allow their property to be used for the protection of people working or living nearby. Failure of Federal, State, and local governments to provide shelter space in public buildings makes it difficult to communicate to our citizens the priority which this type of protection must command. Many Americans in public and private life have been and will soon be actively participating in the new civil devense program in reliance on Federal leadership and support.

The second phase of the new civil defense program will provide financial help to schools, hospitals, and similar nonprofit institutions electing to include fallout shelter space needed in their buildings. It requires legislation which is pending before the two Armed Services Committees and, therefore, is not effectively before the Appropriations Subcommittees.

A decision to put public money into shelters in privately owned buildings is a difficult one which deserves deliberate and careful scrutiny by the appropriate committees of Congress. I had hoped that hearings for this purpose would have taken place earlier in this session when there was time and an opportunity to give the matter the necessary attention. At this late juncture, I can appreciate the preference of the chairmen of the Armed Services Committees to defer these im-

portant hearings until early in the next Congress when they can be given the time and attention of those concerned. However, local planing to meet requirements for new shelter space, which is closely related to plans to use existing shelter, is likely to be delayed pending clarification of the proposed Federal financing for shelter space in schools, hospitals, and other community institutions. Accordingly, I am requesting that these hearings be held early enough to enable a supplemental request for enough fiscal year 1963 funds to keep pace with those communities and eligible institutions with plans for creating new fallout shelter spaces.

I am sending similar letters to the chairmen of other congressional committees with responsibilities in this matter.

Sincerely,

JOHN F. KENNEDY.

HOUSE ACTION

Senator MAGNUSON. This is the office of Emergency Planning.

The amount, for the record, the total amount, of appropriations in 1962 were $86,550,000. The budget estimates for 1963 were $11 million.

The House recommended $9 million which, of course, is a cutback of $77,550,000, but $2 million from the 1963 estimates.

The cutback, I think the record should show, is due to a transfer of much of the activities to another department of Government.

We will put your letter, justifications, and statement in the record in full and you can go ahead and start with it now.

(The letter, justifications, and statement of Mr. McDermott follow:)

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF EMERGENCY PLANNING,
OFFICE OF THE DIRECTOR,
Washington, D.C., August 2, 1962.

Hon. WARREN G. MAGNUSON,
Chairman, Subcommittee in Charge of the Independent Offices Appropriation Bill for 1963, U.S. Senate, Washington, D.C.

DEAR SENATOR MAGNUSON: In response to your letter of July 27, 1962, concerning our recommendations for changes in the independent offices appropriation bill for 1963, I am transmitting four proposed amendments to the House bill.

The net effect of the House bill will be to—

1. Seriously impair the agency's ability to discharge its responsibilities in essential security planning and emergency preparedness areas and in telecommunications;
2. Eliminate all OEP-sponsored research and development to meet requirements in essential security program areas;
3. Reduce the ability of many Federal agencies to develop an operational capability to function within their areas of responsibility in the event of national emergency;
4. Eliminate the entire program for providing financial assistance to States and local governments in their planning for postattack economic recovery.

We requested $11 million in 1963 for programs under our immediate direction. The House bill reduces this request to $4 million, a cut of 64 percent. The various Federal agencies requested a total of $6,876,000 within their regular budgets for emergency planning activities. The House bill combines these activities into a single appropriation under OEP administration and reduces the request to $5 million, a cut of 27 percent.

The reasoning behind the drastic reductions recommended by the House appears to be based on these two arguments:

1. OEP has similar responsibilities to the former Office of Defense Mobilization organization in 1958 but is substantially larger.
2. Emergency planning has been going on for 10 years. Presumably, the plans should have been completed during this long period, hence we can afford to reduce our effort accordingly.

In answer to the claim that OEP is basically a continuation of the old ODM organization, I would like to point out that the two agencies are not directly comparable for two reasons:

1. The scope and magnitude of the nuclear threat has increased enormously since 1958. As a result, the problem of developing plans for economic mobi-

lization is infinitely more complex and difficult. ODM was oriented primarily around a conventional World War II type of mobilization. Economic mobilization plans today must reflect current military realities. This requires extensive research on the effect of nuclear weapons on our industrial capacity.

2. The Office of Emergency Planning has many responsibilities which were never performed by ODM, including disaster relief, stimulation and guidance of State and local planning for emergency resources management and economic stabilization, important new telecommunications management functions, coordination of Federal emergency preparedness at the regional level, and direction and staffing of relocation sites.

The claim that we can reduce emergency planning as a result of our work in prior years might be supportable if all political, economic, and military factors could be held constant. Unfortunately we live in a changing world. Any plan would become obsolete in a very short time unless it were continually updated to reflect changes in military technology and strategy. An obvious example is found in plans which depended for success on the hours of attack warning that manned bombers might allow. These, of course, need complete revision now that missiles have reduced the possible warning time to minutes.

The drastic reduction proposed by the House comes at a time when emergency planning is more important and critical than ever. At the time of the 1961 Berlin crisis, a special study of the Nation's emergency preparedness indicated an urgent need to revise plans and strategic concepts to take into account dramatic advances in weapons technology. There was also criticism by the Joint Committee on Defense Production that there was a void in emergency planning and preparedness at the State and local levels and that the Federal effort was far from adequate. Subsequently, actions were initiated by the President to update and expand our plans for emergencies in the light of the changing military and international situation. In addition, special responsibilities have been assigned to the agency such as emergency information planning and studies of stockpile requirements, fuel, transportation and textiles.

For OEP functions a total of 551 positions were justifiable at the time of the split of OCDM. Through reorganizations, streamlining, and general improvement of the agency we felt that in 1963 OEP could be operated with 450 people. In addition to this voluntary reduction of 101 people the House bill would further cut the agency by approximately 250 positions and would critically impair its ability to respond to the Nation's emergency preparedness requirements. I therefore strongly recommend that you and your subcommittee give careful consideration to our proposed amendments and restore the funds eliminated by the House.

Sincerely,

J. M. CHAMBERS, *Deputy Director.*

SALARIES AND EXPENSES

(1962 act, $7,930,000; 1963 estimate, $8,000,000; H.R. 12711, $4,000,000)

(House hearings, p. 207)

REQUESTED AMENDMENT TO H.R. 12711

Page 2, line 24, strike out "$4,000,000" and insert in lieu thereof "$8,000,000."

HOUSE REPORT NO. 2050

"This agency coordinates the nonmilitary program for the defense of the United States under a delegation of authority from the President. It works with Federal agencies and seeks to mobilize State, local, and private participation. Its responsibilities are very similar to those of the Office of Defense Mobilization in 1958. Emergency planning has been going on for many years and the committee is recommending $4 million to continue such planning and coordinating activities in 1963 instead of $8 million as proposed in the budget estimate."

EFFECT OF HOUSE ACTION

The House bill would seriously impair the agency's ability to discharge its responsibilities in essential security planning and emergency preparedness areas and telecommunications. In addition, all OEP sponsored research and development to meet requirements in essential security programs would be eliminated.

JUSTIFICATION FOR RESTORATION

In recommending a reduction in the budget request for salaries and expenses from $8 million to $4 million, the House committee assumed that the current responsibilities of the Office of Emergency Planning are similar to those of the Office of Defense Mobilization (ODM) in 1958. The two agencies are not directly comparable for two reasons. First of all, the change in our military strategic situation since 1958 has been enormous. The mobilization plans developed by ODM did not have to account for the infinite variety and pattern of damage to our industrial capacity which ICBM warfare could produce today. Considering the range and destructive power of modern day weapons, the job of planning for economic recovery is far more complex and difficult. A considerable amount of sophisticated research is required into the effect of nuclear attack on our economic resources in order to obtain a factual basis for realistic emergency plans.

Further, many additional responsibilities have been assigned to OEP and significantly greater direction and emphasis are being given to the old responsibilities. Typical of the current OEP functions are—

1. Advice and assistance to the President in the total nonmilitary defense effort, including the coordination of the efforts of Federal agencies and assistance to States and communities in negotiating interstate and intercommunity agreements.
2. Establishment of standards of performance and monitoring and inspection of progress within the Federal agencies.
3. Development and maintenance on a current basis of mobilization plans.
4. Investigation and recommendation with respect to imports alleged to threaten to impair the national security.
5. Development of national plans and programs for continuity of government, resource management, and economic stabilization.
6. Guidance and leadership toward continuity of government, resources management, and economic stabilization at the State and local level.
7. Policy direction and maintenance of security of classified facilities.
8. Research and development responsibilities.
9. Natural disaster relief program.
10. Telecommunications functions.

The House bill would eliminate the entire research program of $1,500,000. Although OEP relies to a great extent on research performed by other agencies, there are many requirements unique to OEP which cannot be obtained elsewhere. An important part of OEP's research effort in 1963 will be devoted to strengthening a national resource evaluation program. The National Resource Evaluation Center (NREC) is in a protected facility outside of Washington. NREC, using electronic computer techniques, estimates casualties, resource damage, and the condition of surviving resources under various attacks. It is also developing sophisticated analytical tools for analyzing the effects on the mobilization base of any proposed Government program or change in the economy. These estimates are used by the National Security Council, the Department of Defense, and other departments and agencies as well as OEP. To be of maximum service to other Federal agencies and to OEP, advanced computer and mathematical techniques have to be developed to handle the unending number of variables.

This reduction in resources to carry out the agency's programs comes at a time when emergency plans in both the civil and economic fields are of critical importance. At the time of the 1961 Berlin crisis, a special study of the Nation's emergency preparedness indicated an urgent need to revise plans and strategic concepts to take into account dramatic advances in weapons technology. The basic assumptions behind the continuity of Government program had been formulated when the main threat consisted of Soviet bombers and when warning time was measured in hours rather than minutes. There was also criticism by the Joint Committee on Defense Production that there was a void in emergency planning and preparedness at the State and local levels and that the Federal effort was far from adequate. Subsequently, actions were initiated by the President to update and expand our plans for emergencies in the light of the changing military concepts and international situations. In addition, special responsibilities have been assigned to the agency such as emergency information planning and studies of stockpile requirements, fuel, transportation, and textiles.

The Office of Emergency Planning has been reorganized to enable it to move rapidly and directly to correct these deficiencies and fulfill the President's requirements—and with a smaller and more efficient staff. Last August when OCDM was split and the shelter program transferred to the Department of Defense, OEP was left with 551 employees. Since that time over 100 positions

were abolished or transferred. The 450 positions requested for 1963 is an extremely austere staffing level in comparison to the job at hand. Cutting this level in half, as proposed by the House, would critically impair OEP's ability to respond to the Nation's emergency preparedness needs. It is, therefore, strongly urged that the entire House reduction of $4 million be restored by the Senate.

Salaries and Expenses—General Restrictions

REQUESTED AMENDMENT TO H.R. 12711

Page 3, line 3, after the words "to exceed $75." insert, ": *Provided further*, That $1,500,000 of the foregoing amount shall remain available until expended for studies and research to develop measures and plans for emergency preparedness."—restoring the appropriation language to that contained in the estimate.

JUSTIFICATION

The House reduction of $4 million to the salaries and expenses appropriation would deny the entire $1,500,000 requested for research and development. The corresponding language permitting the funds to remain available until expended was deleted as well. This amendment will restore the authority to use $1,500,000 of the salaries and expenses appropriation beyond the end of the fiscal year. The justification for restoring the funds is presented in a separate proposed amendment to the House bill.

The OEP research program will be conducted by contract with qualified universities and private research organizations. It is difficult to predict the exact time a contract may be entered into or the length of time required to complete.

Although OEP has well formulated requirements, it may be prudent to delay a contract award beyond the end of the fiscal year in order to find the contractor most suitable and qualified to carry on the work at terms advantageous to the Government. Unexpected delays and difficulties are always experienced in any research program which extends the completion date beyond the original estimate. A contemplated project might justifiably be delayed because the preliminary results of another research project have a possible bearing on the contemplated project. For these reasons, and to insure the effective and economical administration of the research program, it is requested that authority be provided for the funds to carry over for obligation in subsequent years. Restoration of the original language proposed by OEP is strongly recommended.

Postattack Planning

(1962 act, 0; 1963 estimate, $3,000,000; H.R. 12711, 0)

(House hearings, p. 207)

REQUESTED AMENDMENT TO H.R. 12711

Page 3, line 4, preceding the words "civil defense" insert the following paragraph:

"POSTATTACK PLANNING

"For expenses, not otherwise provided for, necessary for studies and research to develop State and local programs for the effective use in time of war of natural and industrial resources for military and civilian needs, for the maintenance and stabilization of the civilian economy in time of war, and for the adjustment of such economy to war needs and conditions, including services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a), $3,000,000, to remain available until expended (50 U.S.C. 404)."

This restores the appropriation language and requested amount contained in the estimate.

HOUSE REPORT NO. 2050

"The $3 million requested to begin a 3-year program of grants to States for postattack planning has been denied. The Federal Government has been doing this type of planning for 10 years."

EFFECT OF HOUSE ACTION

The House action would eliminate the entire program for providing financial assistance to States and local governments in their planning for postattack

economic recovery. The lack of a coordinated, nationwide plan for emergency resource management at the State and local level could mean the difference between survival or destruction in the event of nuclear war.

JUSTIFICATION FOR RESTORATION

The House committee, in denying all funds for this program, remarked that the Federal Government has been engaged in this type of planning for 10 years. An implication was left that nothing more need be done. Actually, the type of assistance rendered to the States by OCDM and its predecessor, FCDA, dealt primarily with civil defense and continuity of government. The whole problem of resource management at the State and local level following a nuclear strike was virtually ignored due to the more pressing and immediate problem of protecting the civilian population.

Federal plans have been developed to stabilize the economy and manage resources, but nuclear attack on this country might be so devastating (as has become apparent in the last few years) that some period of time may elapse before Federal plans could be implemented. During such an interim period, we must rely on the State and local governments to manage their resources and economies in the national interest.

To assist the State and local governments in preparing for this task, OEP has developed a comprehensive program and a detailed planning guide. A series of conferences has been held during which the program was discussed with State and local officials and community leaders.

It is proposed to support the States and local areas to develop emergency resource management plans consistent with national policies, plans, and procedures. The cost of this effort would be shared by the Federal Government, the State and local governments, and private individuals and organizations. Experience gained in a pilot project shows a breakdown of approximately 17 percent Federal support, 23 percent State and local, and 60 percent private support.

The funds requested for 1963 would enable concrete plans to be developed in about 15 States and 30 local areas. Coverage of the remaining States and local areas will be undertaken over the following 2 years. The program of Federal assistance will not continue once State and local plans have been completed.

This program is vital to our national security and has the wholehearted backing of State and local officials. It is urgently requested that the entire amount of $3 million eliminated by the House be restored.

Civil Defense and Defense Mobilization Functions of Federal Agencies

(Estimate, $6,876,000; 1962 act, $5,000,000; H.R. 12711, $5,000,000)

(House hearings, p. 284)

REQUESTED AMENDMENT TO H.R. 12711

Page 3, line 11, strike out "$5,000,000" and insert in lieu thereof "$6,876,000", the estimate.

HOUSE REPORT NO. 2050

"*Civil defense and defense mobilization functions of Federal agencies.*—For civil defense and defense mobilization activities of other Federal agencies, the committee recommends $5 million, the same amount as was appropriated for this purpose in 1962. The committee recommends that delegations, other than those of the Department of Defense and the Department of Health, Education, and Welfare to maintain the medical stockpile, be financed from this one account, with sums as necessary to be allocated by OEP. The $6,876,000 included in budget programs of individual agencies to finance such functions have been or will be deleted from other parts of this and other bills. This fund is intended to finance only essential responsibilities delegated by Executive orders in civil defense and emergency preparedness for which an agency has no statutory responsibility. Departments should not expect additional funds for tasks they would normally be expected to perform without a specific delegation."

JUSTIFICATION

On February 16, 1962, the President issued Executive orders assigning specific emergency planning functions to the following nine departments and agencies of the Federal Government: Department of Agriculture, Department of Commerce, Federal Aviation Agency, Department of Health, Education, and Welfare, Housing and Home Finance Agency, Department of the Interior, Interstate Commerce Commission, Department of Labor and Post Office Department. Copies of these Presidential assignments are available for the committee.

The amounts requested are necessary for these departments and agencies to carry out their assigned functions. In addition, $207,000 is requested for Treasury Department, Small Business Administration, Veterans' Administration, and the Federal Communications Commission whose Executive orders are in preparation.

These Executive orders provide clear direction from the President for carrying out specific preparedness functions. The Office of Emergency Planning will closely review and monitor progress under the provisions of the Executive orders and will measure results against specific objectives.

The individual departments and agencies were requested by the Bureau of the Budget to include the amounts for civil defense and defense mobilization functions in their own budgets. The House of Representatives action removed the individual amounts and appropriated the sum of $5 million to the OEP for allocation to the individual departments and agencies. The House action reduces the 1963 budget to slightly below the 1962 level and provides for no expansion under the Executive order assignments made by the President. An increase from $5 million to $6,876,000 is requested to carry out the following programs:

Agriculture.—An increase of $101,355 is requested to finance the broadened preparedness responsibility of the Department of Agriculture under Executive Order 10998 issued by the President on February 16, 1962. Under that order the Secretary of Agriculture is required to prepare national emergency plans and develop preparedness programs covering food resources, farm equipment, fertilizer, and food resource facilities. The increase will make it possible to accelerate food management planning with State and local governments and with the food industry. The objective will be to assure continued production, processing, and flow of food in a postattack emergency.

Commerce.—An increase of $175,000 is required for the transportation staff to perform the emergency transportation coordinating functions recently assigned to the Department of Commerce by Executive order. The 14 people requested will integrate mobilization requirements for all modes of transportation. An increase of $127,000 is requested for the Bureau of Census computations of surface areas within National Location Code geographic locations. These computations will provide necessary data for damage assessment and other resource availability analyses by the National Resources Evaluation Center.

Federal Aviation Agency.—An increase of $79,000 is requested for the Federal Aviation Agency to extend its assistance to airlines in developing disaster plans. A case study outlining the vulnerability and emergency use of facilities was prepared during 1962 and issued to all U.S. air carriers. There is need to increase contacts with all elements of general aviation (i.e., 600 repair stations, 2,400 air-agency and air-taxi operations bases, 1,200 non-Federal civil aviation communications stations and dispatching centers.) Field operation courses would be conducted with these increased funds at all FAA field offices. One engineer in each of the offices will be given training in atomic, biological, and chemical defense. Special projects will be undertaken to develop a prototype plan and provide assistance for small and medium-size airports in preparing to meet emergency conditions.

Federal Communications Commission.—An increase of $52,209 is shown for FCC. This is not truly an increase but the same expenditure as previous year which was financed from their regular appropriation; $52,209 represents funds normally spent by FCC in the performance of emergency planning and mobilization functions with the broadcast industry. The FCC also provides a staff member at the National Resource Evaluation Center.

Health, Education, and Welfare.—Presidential assignments to this Department include the emergency health program, emergency food and drug program and the emergency welfare program. Funds for the emergency health program will be covered by the Department of Health, Education, and Welfare and are not considered in this appeal. The total program for emergency food and drug activities, emergency welfare, and the related field planning proposed for 1963 is

an increase of $79,000 over the 1962 level of $627,500. The emergency food and drug program has as its goals:

1. To provide a safe supply of food and drugs postattack.
2. To advise people how to decontaminate food and drugs.
3. To assist in renewing, postattack, the production of safe food and drugs.

In 1962, 37 training courses in emergency food and drug procedures were presented to Federal, State, and local officials and to the food industry in 24 States; $15,000 of the increase requested for 1963 is for employment on a full-year basis of 2 instructor positions filled for only part of the year in 1962.

An increase of $48,000 is requested for carrying out emergency welfare functions. One professional staff member is now provided at each of six HEW regional offices to assist State and local welfare agencies in emergency preparedness. Their objective is to "develop local competency to provide essential welfare aid and services to all persons in need in the event of a national emergency, including groups needing specialized services—children, handicapped, aged, and others." A survey of the emergency welfare readiness in 27 communities is planned for 1963. The requested increase would provide for emergency welfare positions at the other three regional offices. These additional positions are necessary to provide assistance to the States of New York, Pennsylvania, New Jersey, Delaware, Missouri, Iowa, Minnesota, North Dakota, South Dakota, Nebraska, Kansas, Colorado, Utah, Wyoming, Idaho, and Montana.

Housing and Home Finance Agency.—An increase of $89,125 is proposed in the Housing and Home Finance Agency request. By Executive order the President assigned to HHFA the responsibility for developing national preparedness programs covering all aspects of lodging or housing and community facilities.

The $89,125 is required to increase the staff from 18 to 25 persons to carry out the responsibilities under the Executive order. Elimination of the increase could seriously limit the progress which should be made, particularly in the emergency housing field.

Interior.—The increase of $57,400 is to provide for additional training courses and guidance to the oil and gas, water and power, and minerals industries in emergency operations, protection from radiological effects and security and protection from possible enemy action. This money will also provide three oil and gas experts for the three remaining OEP regions, giving all OEP regional offices staff support in this important area.

Interstate Commerce Commission.—The requested increase of $105,000 is to provide for 11 positions to work with the operating bureaus of the Commission: Bureau of Operating Rights, Bureau of Traffic, and Bureau of Water Carriers and Freight Forwarders, particularly to develop a system of claimancy and resource management for all modes of surface transportation. A national priority system would also be developed during fiscal year 1963. The effect of the House action would be to hold ICC to its present level and to eliminate 11 positions from the request. This would make impossible substantial progress in the fields described.

Labor.—Among the emergency responsibilities assigned to the Department by the February 16 Executive order, two of the most important are the mobilization of civilian manpower in an emergency, and provision for wage stabilization under emergency conditions. During fiscal year 1962 the Department of Labor developed a plan for assignment of particular elements of the labor force to emergency tasks consistent with the jobs which they do day to day. Task forces of construction workers were established in five Florida communities. Although established for postattack use, this emergency arrangement can also be used during peacetime emergencies such as hurricanes. The 1963 request contemplates extending the task force plan to other work groups in 50 additional communities, one in each State. The effect of the House action would seriously delay the installation of this program nationwide.

The Labor Department provides funds to State employment security agencies for personnel to carry on planning for emergency manpower activities including installation of task forces. In fiscal year 1962 funds were provided for the equivalent of 85 personnel. In fiscal year 1963 it is proposed to use these personnel, with the requested increase of five, to install local operating programs previously developed at the State level. In fiscal year 1962 funds for State agencies were supplemented by carryover of unexpended State funds for manpower mobilization planning. Such carryover is not available for fiscal year 1963. Holding this program at the 1962 level would result in a reduction of approximately 20 positions in State employment security agencies.

Post Office.—The Post Office Department has made excellent strides in preparing the postal system of the United States for adaptation to emergency situations. Continued progress is expected during 1963 with all postal employees being instructed in emergency procedures. All post offices in the United States will receive specific assignments during 1963.

No increase is requested for fiscal year 1963. The $11,000 requested covers the position of one employee who is responsible for planning and programing the national registration program for registering persons and families, receiving and answering welfare inquiries, and reuniting families in emergencies.

Treasury.—An increase of $12,637 is provided. The Department has eight positions for its emergency preparedness functions in monetary credit, and banking matters. These were not filled for the full year. The increase in funds will provide full year financing. No increase in staff is planned.

Small Business.—The proposed $25,800 increase is for two additional positions. These personnel will develop procedures and arrangements for Small Business Administration to serve as prime contractor to small businesses in defense contracting in a postattack situation.

Veterans' Administration.—No increase is planned. The funds which were originally requested in the Veterans' Administration appropriation cover the cost of a representative at the National Resources Evaluation Center.

Office of Emergency Planning

Summary of appropriations

Appropriations	1961 actual	1962 actual	1963 estimate	1963/1962 difference
Salaries and expenses	$25,346,000	$7,930,000	$8,000,000	+$70,000
Postattack planning			3,000,000	+3,000,000
Civil defense and defense mobilization functions of Federal agencies	6,567,000	4,520,850		−4,520,850
Federal contributions	16,000,000	814,201		−814,201
Emergency supplies and equipment	9,175,000	318,841		−318,841
Research and development	4,000,000	766,200		−766,200
Construction of facilities		2,500,000		−2,500,000
Subtotal, OEP	61,088,000	16,850,092	11,000,000	−5,850,092
Disaster relief, Executive Office of the President		21,000,000		−21,000,000
Total, all appropriations	61,088,000	37,850,092	11,000,000	−26,850,092

Appropriation history

Fiscal year:	
1951	$26,750,000
1952	77,021,250
1953	44,250,000
1954	49,275,000
1955	50,186,000
1956	70,900,000
1957	95,760,000
1958	41,561,300
1959	45,285,000
1960	52,885,000
1961	61,088,000
1962	[1] 16,850,092
Subtotal	631,811,642
1963 (request)	11,000,000
Total	642,811,642

[1] Excludes $69,699,908 appropriated to OCDM for civil defense functions transferred to the Secretary of Defense by Executive Order 10952 on Aug. 1, 1961, and medical stockpile functions transferred to DHEW by Executive Order 10958 on the same date.

NOTES

Excludes civil defense procurement fund.

Amounts listed for each year include supplementals and deficiencies.

Prior year data include the Office of Defense Mobilization, the Federal Civil Defense Administration, and the Office of Civil and Defense Mobilization.

Amounts listed for each year do not include funds for disaster relief, as this account is appropriated directly to the President.

INTRODUCTION

The Office of Emergency Planning's principal responsibility is assisting the President in the planning and administration of the Nation's nonmilitary defense, a job which can properly be viewed only in the broader perspective of the total national security effort. Political and economic defense planning, and direct military preparations are mutually dependent and must be planned within a common framework of concepts and assumptions. Every point in the preparations for nonmilitary defense is affected by, or affects, the national military defense plans and objectives.

Nonmilitary defense is composed of two principal elements: One is civil defense, the direct responsibility for which has been assigned to the Department of Defense. The other part is concerned with the preservation, or reconstruction, of national political and economic structures and systems. This is the responsibility of the Office of Emergency Planning. The Government and the economy must be prepared to support national security objectives, and, more important, to preserve those political and economic freedoms which distinguish us from our enemies.

The budget estimates emphasize the planning directed to these ends. They are divided into categories of Executive direction, emergency planning, resource planning, and research and development. Funds are also sought to provide guidance and assistance to States and local governments in postattack planning, and to administer disaster relief. The estimates do not cover detailed operations or promotional activities. These have been transferred to regular operating agencies. Rather, there is a relatively small headquarters staff supported by eight area offices. This staff is charged with identifying the character of the contingencies facing us, and preparation of plans suitable to those contingencies. It insures that these plans are executed by appropriate agencies of the Federal and other levels of government.

The principal categories of planning in which OEP is engaged are the preservation of our national political structure, the preservation and use of Government organizations, facilities, and personnel, including the temporary conduct of Government business from other places, and the preservation and use of the economy. By far the most complicated of these are the plans for using the economy to sustain the Nation in its national purposes; and to preserve its identity and recreate its abilities if an attack should occur. OEP is concerned with plans and preparations for the most effective use of resources to support national security objectives, including creation and maintenance of emergency stockpiles where necessary. The agency is also concerned with emergency plans for highly sophisticated fiscal, credit, and monetary systems, and with direct wartime controls over resources. Finally, the agency is concerned in planning in the extremely sensitive area of national and international telecommunications.

It will be necessary to engage in some contractual research on subjects not able to be pursued in detail by the small staff contemplated. This will allow specific problems to be solved and competences to be tapped without building a large permanent organization within the Executive Office.

Salaries and expenses—Summary of obligations by activities

	1961 actual	1962 estimate	1963 estimate	1963/1962 difference
1. Executive direction	$3,125,776	$3,220,826	$2,944,300	−$276,526

STATEMENT OF MR. EDWARD A. MCDERMOTT, DIRECTOR, OFFICE OF EMERGENCY PLANNING

Mr. Chairman and members of the committee, in addressing the United Nations last year, the President said, "* * * in a spiraling arms race, a nation's security may well be shrinking even as its arms increase." This was stated in the context of our intention to challenge the Soviet Union to a peace race, but its broader significance is both obvious and cogent.

In essence, notwithstanding that the Congress has wisely authorized our continuing development of awesome military strength, the President was noting that time and events are tending to erode the security of even the most powerfully armed nations. If peace and disarmament remain elusive, despite our best efforts, perhaps no combination of national security measures can ever again guarantee any nation's invulnerability.

Nevertheless, I believe strongly that the President's assessment of this truly fundamental issue yields only one practicable national choice: that is, we must continue to buttress our security by every possible means, even while we pursue lasting peace.

On the military side, this is hardly arguable at this point in time—but I believe that an essential companion effort is the continuation and strengthening of vital nonmilitary facets of our modern-day national security.

The case may be stated simply: whether or not probable, nuclear attack on the United States has become possible. The possibility may increase before it dimin-

ishes. If it should occur, military strength alone cannot temper the potential impact. It may be that every aspect of postattack capability to respond cannot be detailed in advance—but neither can we pursue a national policy of fatalism and hope to improvise effectively.

Therefore, we must go on vigorously with the development of a variety of preparedness operations unprecedented in our history. It is slow and difficult work, for it goes to the root of our capability to restore and maintain the basic fabric of our way of life if attack should come.

Postattack continuity of government, the postattack management of our surviving resources, and postattack maintenance of the solvency, functioning, and stability of our monetary and economic systems are not as dramatic as missiles, jet bombers, and nuclear weapons; but they represent aspects of our national security which have become wholly essential.

I believe we have the capacity in the United States to deal with preparedness in these and related nonmilitary fields, and I am encouraged greatly by the foundation already in place and developing. I should like to outline the status and direction of some of this work, for the country is not fuly aware of the extent to which it has been set in motion.

Therefore, I welcome this opportunity to discuss with you the first budget request of the Office of Emergency Planning and to ask for the restoration of certain funds disallowed by the House. (Your chairman has been kind enough to permit us to appear later in a brief executive session to discuss certain classified matters that bear on the question.) Since we appeared before you last year, the nonmilitary defense functions of the Federal Government have been importantly reorganized. One of the primary reasons for the reorganization was to place major operating responsibilities in operating agencies and to revitalize a staff agency within the Executive Office of the President to concentrate on those planning, preparedness, and coordinating functions which are so often neglected when combined with major operational tasks.

The Office of Emergency Planning is that staff agency. It is a new agency, but many of its responsibilities are not new. They stem from familiar laws—the National Security Act of 1947, the Defense Production Act of 1950, the Strategic and Critical Materials Stock Piling Act of 1946, the Trade Agreements Extension Act of 1958, the Buy American Act of 1933, the Communications Act of 1934, the Federal Disaster Act of 1950, and the Federal Civil Defense Act of 1950. These continuing functions and responsibilities are not new—but many of them have in recent years taken second place to the pressing demands of civil defense operations. A review of the status of our nonmilitary preparedness at the time of the Berlin crisis of 1961 revealed deficiencies which required correction. A reorganization resulted in the transfer of over 1,100 employees from the Office of Civil and Defense Mobilization to the operating departments and agencies of the Federal Government. It made it possible for the Office of Emergency Planning to direct its attention to the correction of these deficiencies through attention to the overall emergency planning and coordinating functions which are discussed in more detail below.

In any conflict, whether it be cold-war competition, limited or conventional war, nuclear war, or the struggle to recover from such a war, the most important single factor is the effective application of the Nation's available resources—human and material—to the goal of winning. This is the common thread that runs through our responsibilities and functions. We must know—in manageable detail—the resources that are available; we must estimate within reasonable ranges those that would be lost and those that would remain after a nuclear attack; we must examine the interrelationships—the interdependence of resources such as food, fuel, transportation, production, communications, etc.—so that the best possible estimates of supply and requirements can be made; we must plan to anticipate vital deficiencies and prevent them; and we must develop realistic plans and preparations for the continuity of decisionmaking capability—both in Government and in vital sectors of the private economy—so that the Nation's resources are applied as effectively as is humanly possible to meet both military requirements and the supporting essential civilian requirements.

This is of course a monumental task, and virtually every agency of government plays a part in it. At the risk of oversimplifying, the task of OEP may be said to be that of advising and assisting the President in the central planning, coordinating, and monitoring of progress in all fields of civil emergency preparedness, and in carrying on those activities which cut across agency lines and can only be effectively handled at a central point.

I indicated above that most of our responsibilities are not new. There are, however, some major new assignments which we will discuss in executive session. New assignments from the President in telecommunications, made since this budget was prepared, are the subject of a supplemental request now before the Congress.

Our continuing responsibilities, and the new and vital emphasis being placed on our efforts to discharge them effectively, would be seriously affected by the House action on our request.

AMENDMENTS TO HOUSE BILL

I have proposed in a formal communication to the chairman four specific amendments to the bill as passed by the House:

(1) *I ask that the original amount of $8 million be restored for "Salaries and expenses."*—The reduction of this amount to $4 million would eliminate a modest but vitally needed program of research and development and would seriously impair OEP's ability to discharge its responsibilities in essential security planning and preparedness areas and telecommunications.

(2) *I ask that language be restored permitting $1,500,000 of the "Salaries and expenses" appropriation to remain available until expended for studies and research.*—Like other agencies of government, we have learned that the prudent and economical use of research funds requires that there be flexibility in the timing of planned projects Preliminary findings in one project may argue the wisdom of deferring the initiation of another planned project to take advantage of unexpected results likely to be obtained from the first.

(3) *I ask that the sum of $3 million be restored for State and local studies and research under the heading "Postattack planning."*—As the Joint Committee on Defense Production recognized in its 11th annual report, there are many unanswered questions within the field of State and local responsibility for rehabilitation and resource management. This is understandable, since this responsibility has always been a Federal one, for which advances in weapons technology now require a substantial degree of State and local preparation as well. Since such State and local preparedness is a matter of vital national concern, we propose a program, to run for 3 years only, of financial assistance to aid State and local governmental and private efforts to assemble required data and develop necessary emergency plans. Without the State, local, and private participation which can be thus enlisted, the job will be time consuming and costly, if in fact it can be done at all. The expressed interest and concern of the Governors indicates that the States will cooperate fully.

(4) *I ask that the sum of $5 million for civil defense and defense mobilization functions of Federal agencies be increased to $6,876,000.*—The higher amount is the total originally requested in the separate agency submissions, exclusive of the health program needs. It reflects an austere assessment of the requirements of their ongoing programs at a time when increased demands are being made on them to undertake plan revisions, participate in supply-requirements analyses, provide technical advice and guidance to State and local officials, and quicken the tempo of their emergency preparedness. To cut support of this activity below the requested level would be to impair their ability to meet the responsibilities recently assigned to them by Executive orders and jeopardize their emergency operational ability.

Before I leave the question of support of the emergency preparedness functions of other Federal agencies, I should like to explain that the original submission in the individual agency requests was consistent with the President's direct Executive order assignments to them. If we are to build into the departments and agencies adequate strength to function under all emergency conditions, emergency preparations must become a part of their normal operation. It is of course too late to propose any change in the procedure at this time, but I hope that there may be acceptance of the concept in next year's appropriation.

I should like now to discuss briefly some of our assigned tasks and the progress that has been made.

Continuity of government

The continuity of government program is designed to reduce the vulnerability of government—Federal, State, and local—to attack; provide the necessary facilities, processes, and systems for coping with any emergency; and assure that our representative form of government may be reconstituted in the event of its disruption.

The essential features of the program are the same at all levels of government:

(1) The provision of automatic lines of succession for key officials.

(2) The preservation and management of essential records.

(3) The provision of emergency operating centers in less vulnerable locations than the Nation's Capital.

(4) Planning for the effective utilization of government personnel and facilities in an emergency.

Federal preparations are well advanced, but significant modifications in emergency operating plans must be made to take realistically into account technological advances in weapons and delivery systems. Major emphasis is being placed on the maintenance of an emergency operating capability on the part of the key Federal agencies, and we are moving in new directions as a result of a recent classified study. I shall discuss this more fully in executive session.

Emergency resource management

During World War II and the Korean conflict, we met the needs of our wartime economy with a broad system of controls over basic materials, wages, and prices, and through a constant surveillance of manufacturing facilities and the recruitment and training of personnel to service a greatly expanded production base. This system depended greatly on supervision from a central source—the Nation's Capital. We cannot now be certain how long it would take to establish minimum central control that would be required after a nuclear attack. A substantial percentage of our productive capacity might be destroyed or disrupted and the Federal Government might be temporarily unable to regulate or administer on a nationwide basis. In such a situation, we would need to rely temporarily on the Federal field establishment, operating in accordance with previously developed plans, to give leadership to an unprecedented State and local effort in emergency resource management.

To develop a state of readiness on the part of the Federal Government to meet such a situation the President in February signed nine Executive orders delegating important emergency preparedness functions to the Secretaries of the Interior, Agriculture, Commerce, Labor; Health, Education, and Welfare, to the Postmaster General, to the Administrator of the Federal Aviation Agency, to the Housing and Home Finance Administrator, and to the Interstate Commerce Commission. In these Executive orders, the agencies are directed "to develop a state of readiness with respect to all conditions of national emergency, including attack upon the United States."

In turn, the President has charged me with the responsibility to advise and assist him in determining policy for these functions as they affect the total national preparedness effort, and on his behalf monitor and coordinate the whole program.

Economic stabilization

The resource strength of the country could be seriously weakened if there were not adequate plans and preparations for stabilization of the Nation's monetary and economic systems in a period when demand greatly exceeded supply. The OEP is charged with giving leadership to governmental and nongovernmental preparations to maintain a stable economy in wartime emergencies. This program involves several agencies of government, and several stabilization measures.

The Department of the Treasury, the Federal Reserve Board, the Federal Home Loan Bank Board, the Council of Economic Advisers, and other financial agencies, under delegation from the Department of the Treasury, are continuing to develop their policies and emergency measures for the restoration, continued functioning, and stabilization of the monetary and economic systems in the undamaged or relatively undamaged areas during the postattack period. Special attention is being devoted to developing methods and procedures for carrying out postattack emergency financial policies already agreed upon.

The Housing and Home Finance Agency is assisting OEP with the development of plans for emergency rent stabilization. It has started work on a training guide for use by State and local organizations in developing their capability to handle emergency postattack rent stabilization measures. The training guide is expected to be released during this fiscal year.

The Department of Labor is developing readiness for handling emergency postattack wage and salary stabilization measures through its Wage and Hour Division field offices. Having agreed upon emergency wage and salary stabilization plans and policies, the Department of Labor is preparing its field offices to administer such plans in the event of an emergency.

Comprehensive program for State and local governments

Since 1958 there have been dramatic changes in weapons technology and delivery systems. Plans which were being translated into installations and hardware have had to be drastically altered. This is no less true in nonmilitary defense than it is in military defense, where we accept as commonplace the rapid obsolescence of plans and equipment.

It is perfectly true, as the House report states, that the Federal Government has been planning emergency preparedness for 10 years, but such plans cannot remain static in the face of a changing threat. One of the areas of most significant change in nonmilitary defense is that of emergency resource management, including economic stabilization. This has always been a Federal function, but a realistic recognition of the speed and power of missile-delivered nuclear weapons indicates that the central Federal capability to perform it may be destroyed or damaged for a long period.

For the first time in our history, we must seriously plan for the contingency that the States and localities may represent for some time the Nation's only capability for emergency resource management, and for economic stabilization if the functioning capability of the Federal Government is destroyed or damaged of if sections of the country are effectively cut off by nuclear attack damage to communications and transportation. For this reason, we have formulated a comprehensive program for survival of government and management of resources to assist the States and localities.

In recognition of the fact that many of these responsibilities are new to them, we have developed guidance materials for their use, and have worked cooperatively with State and local officials and with bankers, industrialists, labor leaders, farm leaders, and other community leaders in initiating the program.

As a starter, we sent a letter to each of the Governors outlining the problems and the specific actions suggested by OEP. Every Governor was asked to appoint an emergency planning director and to establish an emergency resource planning committee drawn from government and civil leadership. They will advise the Governor on the resource readiness of the State, identify deficient areas, and take the steps to correct these weaknesses. Many of these task forces are already at work, with the active cooperation of the eight OEP regional offices. The response of the Governors has been most encouraging. Forty-five of them have already designated "emergency planning directors." All have pledged their cooperation.

We have also conducted a series of eight regional conferences, the last of which was held in Seattle in May. Over 3,000 government, business, agriculture, and labor leaders participated, drawn from all the States. These conferences had a twofold purpose: First, we provided representatives from the States with comprehensive briefings on the Federal Government's program of emergency planning. Second, and equally important, we heard from State and local representatives on the status of their programs, their studies of specific areas, the deficiencies they have uncovered, and the measures they propose to correct these conditions.

To further our efforts and, more importantly, to establish a strong working relationship on the State and local level, the Office of Emergency Planning invited the 45 emergency planning directors already appointed by Governors to attend a conference in Washington on June 21, as a followup of the regional conferences. During the coming months our regional staffs will be working with the State emergency planning directors in developing State and local plans and programs. The States are enthusiastic and local governments are committed to this program.

It was my privilege to make a progress report on emergency planning to the Governors' conference at its recent national meeting at Hershey, Pa. The conference unanimously endorsed the program and by resolution authorized its committee on civil defense and postattack recovery to work with OEP in a "program of studies, research, and general education in the area of postattack recovery and rehabilitation measures and procedures."

We are also working with the Committee on Suggested State legislation of the Council of State Governments, and with the Civil Defense and Postattack Recovery Committee of the Governors' Conference on State Emergency Planning legislation, with a view of preparing additional model State laws on resource management and economic stabilization which will be recommended to State legislatures for enactment. Model legislation will give the Governors and State governments the authority to act in a nuclear emergency and thus avoid the confusion that resulted after Pearl Harbor when immediate rationing, allocations, and other controls were necessary, but delayed in achievement.

The National Association of County Officials, the American Municipal Association, and the U.S. Conference of Mayors are also cooperating fully with us in this program.

In preparing for the survival of government, most States require amendments to their constitutions before all of the necessary authority is available to their legislatures. To facilitate the adoption of State constitutional amendments, the Council of State Governments and the Office of Emergency Planning developed a sample amendment to equip the legislatures with the authority and responsibility to enact any necessary legislation. As of today, 34 State legislatures have approved amendments dealing with continuity of government. In 22 of these States, the voters have ratified the amendment by outstanding majorities ranging up to 14 to 1. In no State have the voters rejected the proposed amendment. Additionally, as a result of this program, some 200 specific State laws in support of continuity of government objectives have been enacted by State legislatures.

As for municipalities, we have developed a suggested continuity of government ordinance in cooperation with municipal and county organizations. This suggested ordinance has been published by the National Institute of Municipal Law Officers as a part of its model ordinance service and is available to assist county and municipal officials in establishing lines of succession to their key offices.

Assuring the continuity of civil authority is an enormous and important task Its success will depend on adequate staff, both in national headquarters and in the field. The tools are available, but stimulation and motivation are required to put them to use.

Stockpile program

The OEP has a continuing responsibility to recommend policy with respect to the stockpiling of materials likely to be in short supply in the event of war mobilization. As technology changes, so do requirements for quantities and nature of materials to be stockpiled. The orderly disposal of materials determined to be no longer needed to meet national security needs must be so handled as to avoid adverse effects on world markets and on the domestic economy. Decisions with respect to disposals must therefore be made with great care and after careful study of the possible consequences. Continuing long-range studies of technological changes are required to anticipate requirements for new materials, the obsolescence of old ones, and developments in substitutability of materials.

Effect of imports on the national security

Under the Trade Agreements Extension Act of 1958, the OEP is charged with responsibility for investigating, either on its own motion or upon petition by affected domestic interests, the nature and volume of imports which might have an adverse effect upon the national security. Such adverse effect might take the form of eliminating the domestic production base of a product or products vitally needed in wartime when oversea sources might be denied to us. Each such case must be carefully and thoroughly investigated, and a recommendation forwarded to the President.

Special studies

With increasing frequency the President calls upon the OEP to conduct special studies and analyses having a particular bearing on the national security. For example, in December the President ordered the initiation under my direction of a comprehensive study of petroleum supplies and requirements in relation to national security objectives. This study, requiring substantial staff support, is now underway. Others, either recently completed or now underway, include a major stockpile study, a study of medical manpower needs and problems, a long-range study of availability of basic and critical materials, and the study of some of our basic national security problems which I shall discuss in executive session.

National defense executive reserve

In 1955, an amendment to the Defense Production Act authorized the President to establish and train executive reservists for employment in the Government in times of emergency. We believe that effective use of executive civilian talent is a keystone for the successful mobilization of our resources when the Nation is confronted by crisis. In 1956, the President issued Executive Order 10660 establishing the national defense executive reserve, and today more than 2,600 reservists are assigned to participating agencies. OEP coordinates the executive reserve program in behalf of the President.

Natural disaster relief

During the recent Governors' conference at Hershey, I outlined the steps we have taken to improve our administration and coordination of Federal disaster relief operations. Following Hurricane Carla, and as a result of a study initiated by the President, changes were made in procedure and administration of Federal disaster relief operations so that—

(1) The President can receive more quickly facts needed to make an immediate decision regarding a declaration of a major disaster and allocation of funds;

(2) Disaster allocations will be more realistic and initial allocations will be made pending completion of more detailed surveys of need; and

(3) Applicants can be paid more quickly.

Telecommunications

In February 1962, the President signed Executive Order 10995 establishing the position of Director of Telecommunications Management to be held by an Assistant Director of OEP. Areas of responsibility of this official include the broad fields of (1) assignment of radio frequencies to Government stations; (2) advising and assisting the Department of State in international telecommunication negotiations; (3) coordination of telecommunications activities of the executive branch and formulation, after consultation with appropriate agencies, of overall policies and standards therefor; and (4) mobilization planning in telecommunication. As the Executive order was issued subsequent to the preparation of the budget estimates now before the committee, the additional personnel required for the new responsibilities are not covered in the request before you, but are included in a supplemental request submitted recently.

In the area of radio frequency management, more than 31,000 frequency actions were processed in fiscal year 1962. This number compares with some 26,000 actions in fiscal year 1961 and 36,000 actions estimated for fiscal year 1963. Plans are being made to apply electronic computer techniques to frequency selection, assignment, and recordkeeping activities to help meet the frequency needs of Federal agencies in a more timely and efficient manner. Radio spectrum allocation planning in fiscal year 1962 involved the implementation of international agreements reached in 1959, and preparations for international conferences on space telecommunication scheduled for 1963. Preliminary views on space allocations were developed and discussed with experts of other nations. Intensive effort in this area will be continued in fiscal year 1963. This effort is expected to require a minimum of 40 meetings within the United States of all available experts, as well as participation in a series of international preparatory meetings. The results of this activity will have a decided impact on space telecommunication operations in the near-term future, both for the United States and for other nations. The tempo of international negotiations such as these is expected to remain at a high level, and additional qualified people are needed.

The head of each major Federal department and agency has designated an official to work with the Director of Telecommunications Management in policy matters and related fields of mutual interest. Some 15 Federal agencies were asked to furnish information about their communication systems, plans for future developments, and a statement of policies and standards which govern the operation of their networks. This material will be assembled and reviewed as received. Plans and procedures will be developed as necessary to future coordination of communication activities of the executive branch. Mobilization planning for telecommunication continued in fiscal year 1962 on the basis of Executive Order 10705. Existing plans for the use of radio frequencies, domestic common carrier service, and common carrier channels to oversea points in emergency were kept current. Organization and staffing plans for a unit to be responsible for exercising in an emergency the President's wartime powers over telecommunication were kept under review. It is expected that an executive order assigning emergency preparedness responsibilities will be issued to the FCC during the present calendar year. Planning for the mobilization of Government telecommunication resources will be continued by the OEP. The combined efforts of these two agencies should lead to materially improved readiness in this field.

Research and resource analysis

To serve the several complex program goals outlined above requires the best research and analysis that OEP can bring to bear on the many problems involved. It depends, for the most part, on research and development sponsored by other agencies of the Federal Government. The small Research Office in OEP monitors

research that has an actual or potential bearing on OEP work and stimulates research likely to be useful to us by other agencies, both governmental and private. Research results are interpreted and presented in terms which are meaningful to those in OEP who are solving basic national security and nonmilitary defense problems and developing policies and programs for the maximum national preparedness.

There are, however, problems which require research and study not done in any other agency. These are problems which are vital to the national preparedness, and the failure to study and resolve them could mean the difference between the Nation's postattack recovery and its elimination as a first-rate economic power. Compared with the magnitude and complexity of the problems to be solved, our request is indeed a modest one. Where it is impossible or uneconomical for OEP to recruit the specialized staff to conduct such studies, we hope to continue to contract with universities or other research institutions to perform the work.

An important part of OEP's research effort is devoted to strengthening a national resource evaluation program. The National Resource Evaluation Center (NREC) is in a protected facility outside Washington. NREC, using electronic computer techniques, makes estimates of casualties and resource damage and estimates of the condition of surviving resources under a broad spectrum of attack and other assumptions. NREC also makes estimates of requirements versus supplies; and it is now developing a capability to rapidly formulate production goals and programs that are consistent with stated priorities and at the same time are within the limits of available resources and manpower. It provides estimates of the effects of hypothetical attacks on the United States for use by the National Security Council, the Department of Defense, and by other departments and agencies as well as by OEP. To be of maximum service to other Federal agencies and to OEP, advanced computer and mathematical techniques have to be developed to handle the unending number of variables.

In conclusion, I reemphasize that we deal with problems to which the methods of solution are not known. Indeed, in some cases the dimensions of the problems are not clear or precise. As the President stated last September, the responsibilities of the Office of Emergency Planning cover "investigation, advice, coordination, and policy formulation in connection with our preparedness effort. These functions of OEP may be of critical importance to our very survival. The national security requires that there be soundly conceived and well-tested plans for every emergency."

I ask that you consider these words of the President very carefully. The work of our agency, including its participation on the National Security Council, contributes importantly to our national effort in the continuing cold war struggle. In the event of increased mobilization, or sudden requirements of a possible limited military engagement, the preparations which make up OEP's assignment are indispensable. In the event of a nuclear attack, the adequacy of our preparation for recovery could make the difference between survival as a nation with a continuing influence on the world scene, or our decline to the position of a third- or fourth-rate power.

It is critically important that our planning and preparation be completed in advance of any contingency. It will be too late when the emergency is upon us.

Our agency responsibilities are sobering and challenging. We prepared this budget after the transfer of operating responsibilities last year, and made it an austere and modest one which will find our staff pushed to meet its responsibilities. I am a firm believer in the morale-building effect of having just a little bit more work to do than one can accomplish. Our recent reorganization has given us a taut, streamlined agency, and I can assure you of my determination to keep it that way.

Under the new emphases and dimensions of national preparedness, all of the programs, including resources planning and mobilization, economic stabilization, continuity of government, stockpiling, comprehensive program, natural disaster, telecommunications management, executive reserve, special studies and assignments from the President, and assistance to the President in coordinating the total emergency preparedness effort, require a minimum of 450 people and $11 million to support. The cost of our program is modest, indeed, as compared with other national security expenses, and I therefore recommend full restoration of the funds eliminated by the House and approval of the budget request as submitted.

STATEMENT OF EDWARD A. MCDERMOTT

Senator MAGNUSON. All right.

Mr. MCDERMOTT. I appear before you, Mr. Chairman, in support of the appropriation request for OEP for funds in the total sum of $11 million for fiscal 1963.

This includes $8 million for a continuation of on-going programs and efforts, and $3 million for the development of State and local capabilities in resource management and economic stabilization and emergency planning.

The House bill denied this latter request of $3 million and reduced the former request to $4 million.

ROLE AND MISSION OF OEP

I wish to discuss, then, the role and mission of OEP and the need for funds requested, and to respectfully ask for the full restoration of the House reduction.

Many significant changes have taken place in the field of emergency planning for recovery and rehabilitation since the predecessor agency of OEP—that is, OCDM—appeared before this subcommittee last year.

Senator MAGNUSON. Now, could you put there in the record the amount which the Defense Department asked for in this field, so that we can get this into the proper perspective?

Mr. MCDERMOTT. We will be happy to submit it, but you will be hearing later today from the Office of Civil Defense on their appropriation.

Senator MAGNUSON. OK.

CIVIL DEFENSE TRANSFERRED TO DOD

Mr. MCDERMOTT. These changes were initiated by Executive Order 10952, which was issued by the President last summer, and which transferred the operating civil defense responsibilities to the Department of Defense. I submit for the record, a copy of Executive Order 10952.

Senator MAGNUSON. That will be put in the record.

(The Executive Order 10952 referred to follows:)

THE WHITE HOUSE

EXECUTIVE ORDER 10952

ASSIGNING CIVIL DEFENSE RESPONSIBILITIES TO THE SECRETARY OF DEFENSE AND OTHERS

Whereas the possibility of enemy attack upon the United States must be taken into account in developing our continental defense program; and

Whereas following a thorough review and consideration of our military and nonmilitary defense activities, I have concluded that adequate protection of the civilian population requires a substantial strengthening of the Nation's civil defense capability; and

Whereas the rapid acceleration of civil defense activities can be accomplished most effectively and efficiently through performance by the regular departments and agencies of government of those civil defense functions related to their established roles and capabilities; and

Whereas I have concluded that the undertaking of greatly accelerated civil defense activities, including the initiation of a substantial shelter program, requires new organizational arrangements:

Now, Therefore, by virtue of the authority vested in me as President of the United States and Commander in Chief of the Armed Forces of the United States, including the authority contained in the Federal Civil Defense Act of 1950, as amended, and other authorities of law vested in me pursuant to Reorganization Plan No. 1 of 1958, it is hereby ordered as follows:

Section 1. *Delegation of Authority to the Secretary of Defense.* (a) Except as hereinafter otherwise provided and as is reserved to the Office of Civil and Defense Mobilization in section 2 of this order, the Secretary of Defense is delegated all functions (including as used in this order, powers, duties, and authority) contained in the Federal Civil Defense Act of 1950, as amended (hereinafter referred to as the Act), vested in me pursuant to Reorganization Plan No. 1 of 1958 (72 Stat. 1799), subject to the direction and control of the President. Such functions to be performed by the Secretary of Defense, working as necessary or appropriate through other agencies by contractual or other agreements, as well as with State and local leaders, shall include but not be limited to the development and execution of:

(i) a fallout shelter program;

(ii) a chemical, biological, and radiological warfare defense program;

(iii) all steps necessary to warn or alert Federal military and civilian authorities, State officials, and the civilian population;

(iv) all functions pertaining to communications, including a warning network, reporting on monitoring, instructions to shelters and communications between authorities;

(v) emergency assistance to State and local governments in a postattack period, including water, debris, fire, health, traffic, police, and evacuation capabilities;

(vi) protection and emergency operational capability of State and local government agencies in keeping with plans for the continuity of government; and

(vii) programs for making financial contributions to the States (including personnel and administrative expenses) for civil defense purposes.

(b) In addition to the foregoing, the Secretary shall:

(i) develop plans and operate systems to undertake a nationwide postattack assessment of the nature and extent of the damage resulting from enemy attack and the surviving resources, including systems to monitor and report specific hazards resulting from the detonation or use of special weapons; and

(ii) make necessary arrangements for the donation of Federal surplus property in accordance with section 203(j)(4) of the Federal Property and Administrative Services Act of 1949, as amended (40 U.S.C. 484(j)(4)), subject to applicable limitations.

Section 2. *Civil Defense Responsibilities of the Office of Civil and Defense Mobilization.* The Director of the Office of Civil and Defense Mobilization shall

(a) advise and assist the President in:

(i) determining policy for, planning, directing, and coordinating, including the obtaining of information from all departments and agencies, the total civil defense program;

(ii) reviewing and coordinating the civil defense activities of the Federal departments and agencies with each other and with the activities of the States and neighboring countries in accordance with section 201(b) of the Act;

(iii) determining the appropriate civil defense roles of Federal departments and agencies, and enlisting State, local and private participation, mobilizing national support, evaluating progress of programs, and preparing reports to the Congress relating to civil defense matters;

(iv) helping and encouraging the States to negotiate and enter into interstate civil defense compacts and enact reciprocal civil defense legislation in accordance with section 201(g) of the Act; and

(v) providing all practical assistance to States in arranging, through the Department of State, mutual civil defense aid between the States and neighboring countries in accordance with section 203 of the Act;

b) develop plans, conduct programs, and coordiante preparations for the continuity of Federal governmental operations in the event of attack; and

(c) develop plans, conduct programs, and coordinate preparations for the continuity of State and local governments in the event of attack, which plans, programs, and preparations shall be designed to assure the continued effective functioning of civilian political authority under any emergency condition.

Section 3. *Excluded Functions.* The following functions of the President under the provisions of the Act are excluded from delegations to the Secretary of Defense made by this order and are reserved to the President:

(a) Those under subsections (h) and (i) of section 201 of the Act (50 U.S.C. App. 2281(h), (i)) to the extent that they pertain to medical stockpiles and food stockpiles.

(b) Those under the following provision of the Act: Sections 102(a), 201(b), and 402 and Title III.

Section 4. *Transfer of Property, Facilities, Personnel, and Funds.* Subject to applicable law, there shall be hereby transferred to the Secretary of Defense such portion of the property, facilities, and personnel of the Office of Civil and Defense Mobilization engaged in the performance of the civil defense responsibilities herein assigned to the Secretary of Defense as shall be agreed upon by the Secretary and the Director of the Office of Civil and Defense Mobilization together with such portions of the funds currently available for those purposes as shall be approved by the Director of the Bureau of the Budget.

Section 5. *Reports.* The Secretary of Defense shall annually submit to the President a written report covering expenditures, contributions, activities, and accomplishments of the Secretary of Defense pursuant to this order.

Section 6. *Redelegation.* The Secretary of Defense is hereby authorized to redelegate within the Department of Defense the functions hereinabove delegated to him.

Section 7. *Amendment.* The Director of the Office of Civil and Defense Mobilization is hereby relieved of responsibilities under the Act except as otherwise provided herein, and the provisions of Executive Order No. 10773, as amended, are amended accordingly.

Section 8. *Prior actions.* (a) Except to the extent that they may be inconsistent with the provisions of this order, and except as particular Executive orders or other orders are amended, modified, or superseded by the provisions of this order, all determinations, authorizations, regulations, rulings, certificates, orders (including emergency preparedness orders), directives, contracts, agreements, and other actions made, issued, or entered into with respect to any function affected by this order, and not revoked, superseded, or otherwise made inapplicable before the date of this order, shall continue in full force and effect until amended, modified, or terminated by the President or other appropriate authority; but, to the extent necessary to conform to the provisions of this order, any of the foregoing shall be deemed to refer to the Secretary of Defense or other appropriate officer or agency instead of, or in addition to, the Office of Civil and Defense Mobilization or the Director thereof.

(b) This order shall not terminate any delegation or assignment of any substantive (program) function to any delegate agency made by any emergency preparedness order heretofore issued by the Director of the Office of Civil and Defense Mobilization (26 F.R. 651–662; 835–840) (which emergency preparedness order shall remain in effect until amended or revoked by or at the specific direction of the President). No such emergency preparedness order shall limit the delegation or assignment of any substantive (program) function to the Secretary of Defense made by the foregoing sections of this order.

Section 9. *Effective Date.* This order shall become effective on the first day of August, 1961.

JOHN F. KENNEDY.

THE WHITE HOUSE, *July 20, 1961.*

POSTATTACK PREPAREDNESS

Mr. MCDERMOTT. With this transfer a new sense of urgency was given to the neglected area of postattack preparedness.

It is a simple fact that in our prior planning while OCDM, the predecessor agency of OEP, had both the civil defense and postattack responsibilities, there was a civil defense orientation, and there was, I believe, an inattention to this area of postattack preparedness.

Actions that have been taken since last summer, when the President issued this Executive order, have been not only fully considered in the executive department of the Government but also have the full support of the President himself.

I realize that these efforts to improve the nonmilitary preparedness capability of the Nation are neither dramatic nor glamorous. The mission is frequently misunderstood, and it is nicer for people not to think about the economic consequences of a nuclear attack on the country.

However, progress has been made. That progress is encouraging, and I think that the job before us can be done.

The committee should understand that the Office of Emergency Planning is an agency within the Executive Office of the President, and it is a new agency with many of its responsibilities inherited from its predecessor.

RESPONSIBILITIES OF OEP

Senator MAGNUSON. Now, put in the record here or you can make the statement here now:

Define just as clear as you can what are your responsibilities now.

Mr. MCDERMOTT. All right. The responsibilities that the Office of Emergency Planning has flow from many sources, including the National Security Act of 1947, the Defense Production Act of 1950, the Strategic and Critical Materials Stockpiling Act of 1946, the Trade Agreements Extension Act of 1958, the Buy American Act of 1933, the Communications Act of 1934, the Federal Disaster Act of 1950, and the Federal Civil Defense Act of 1950.

OEP is a planning and coordinating agency with a small national office staff and a regional office establishment to service the States and local communities.

As Director, I am adviser to the President in the board area of nonmilitary defense, and I am honored to be a member of the National Security Council.

Senator MAGNUSON. Now, your job is to determine policy that stems from these particular laws that you have mentioned?

Mr. MCDERMOTT. Correct.

Senator MAGNUSON. And also you do not handle any of the active functions——

Mr. MCDERMOTT. No.

Senator MAGNUSON (continuing). Of the Office of Civil Defense Mobilization?

Mr. MCDERMOTT. No. We are not an operating agency. We develop and recommend policy to the President and monitor its implementation.

We recommend the actions that should be taken by other departments and agencies.

Senator MAGNUSON. All right. Let's take these one by one, so that the Senate can know what we are doing.

Mr. MCDERMOTT. Fine.

NATIONAL SECURITY ACT FUNCTIONS

Senator MAGNUSON. What would be your direct functions under the National Security Act? I mean, that phase of it?

Mr. MCDERMOTT. Under the National Security Act? The responsibilities that we have under that act relate primarily to plans for the management of the resources of this country in any kind of an emergency that may arise and determining the priorities among the various claimants.

I believe you will see in the statement there, sir, that we have treated these responsibilities——

Senator MAGNUSON. Oh, you have them all in your statement?

Mr. McDERMOTT. Yes, they are all in the statement, and we have grouped them by programs, which I think will be more meaningful to you. I will cover them very briefly.

Senator MAGNUSON. All right.

Mr. McDERMOTT. In the field of resources, in any conflict, whether it is cold war or limited war or conventional or nuclear war, and in our struggle to recover, the most important single factor is the effective application of the Nation's available resources, both human and material, to the goal of winning.

In this area then, the role of OEP is to advise and assist the President in the central planning, coordinating, and monitoring of activities of all the departments of Government concerned with these problems.

Our studies show, as I indicated earlier, that this function has not received the attention it requires, and that the plans that now are, or until very recently were, in being did not accommodate to the realities of the world in which we live today.

We find that as a——

Senator MAGNUSON. Well now, suppose that you sat down and recommended a policy in relation to natural resources which involves the Department of the Interior?

Mr. McDERMOTT. All right.

DELEGATION OF FUNCTIONS

Senator MAGNUSON. Let's say here, oh, energy resources such as coal or oil. Then if that policy is accepted or that recommendation is accepted by the President then you transmit it, or, he does, or both of you, to the Department of the Interior to perform certain functions——

Mr. McDERMOTT. Right.

Senator MAGNUSON (continuing). In this field?

Mr. McDERMOTT. That is right.

Senator MAGNUSON. Then they must come before us in the Interior appropriations——

Mr. McDERMOTT. That is right.

Senator MAGNUSON (continuing). And ask for x number of dollars to perform a function which has been directed to them by your organization, with the consent of the President?

Mr. McDERMOTT. Correct, except that there is this change, sir, that in order to give these responsibilities the significance and the importance they should have, we are now following the policy, and the President adopted this last spring, that instead of OEP issuing directives to these other departments and agencies, the President, himself, has issued Executive orders——

FINANCING OF MOBILIZATION FUNCTIONS OF OTHER FEDERAL AGENCIES

Senator MAGNUSON. Executive orders?

Mr. McDERMOTT. And last February there were nine Executive orders issued by the President, assigning emergency responsibilities to Interior, Agriculture, Commerce, Labor, HEW, the Post Office, the Federal Aviation Agency——

Senator MAGNUSON. Agriculture is——

Mr. McDERMOTT (continuing). Housing and Home Finance, and Interstate Commerce Commission.

There are other Executive orders now in preparation.

Senator MAGNUSON. Yes. The reason I asked that is because heretofore these agencies would do the job?

Mr. MCDERMOTT. Right.

Senator MAGNUSON. And this other agency would come to the Appropriations Committees and request appropriations, and, in turn, pay the other agency for what they did, and we had a lot of trouble with that in this committee.

Mr. MCDERMOTT. That is right.

Senator MAGNUSON. So this is now changed?

HOUSE REVERSAL OF POLICY

Mr. MCDERMOTT. Well, it was changed, sir, except that the action of the House has put it back on its original basis.

The decision was made this year, with the issuance of these Executive orders that the departments and agencies that have these Executive order assignments should make their appropriation requests as part of their regular budget submission, and this was done this year.

In the House, however, those appropriations requests, totaling $6,876,000, have been grouped into that $5 million item, and the House action appropriates the $5 million to the Office of Emergency Planning for distribution by OEP.

That $5 million was not in our appropriation request.

Senator MAGNUSON. Well, then we are back where we started?

Mr. MCDERMOTT. You are back where you started from in terms of the House action.

RECOMMENDATION CONCERNING HOUSE ACTION

Senator MAGNUSON. Now, what do you recommend in regard to the House action?

Mr. MCDERMOTT. We recommend, sir, that in the future the departments and agencies that have these responsibilities, under direct Executive orders from the President, make their own appropriation requests and support them, before this or the appropriate committee, and that the funds be appropriated directly to the Department.

POLICY DETERMINATION

Our job is to determine the policy and coordinate the actions of a particular department, under these Executive orders, with the actions of our other departments and agencies of Government.

We would prefer not to be in the situation of having to allocate these funds.

EXAMPLE OF PROCEDURE

Senator MAGNUSON. Well now, there is an Executive order here, and, again, let us use Interior as an example.

Do you then look at what they do or what they expect to do on this job or what they recommend?

Mr. MCDERMOTT. Correct. Under this new procedure, sir, if it were followed——

Senator MAGNUSON. Yes?

Mr. McDERMOTT. That is the suggested procedure, we would participate in the budget preparation or would review the budget.

Senator MAGNUSON. So that if it was out of line for the job you gave them to do, you would have the chance to say so?

Mr. McDERMOTT. That is right, and that action would be taken in connection with the preparation of the budget each year and contemporaneously with or immediately prior to its submission to the Bureau of the Budget.

Senator MAGNUSON. In other words, you ride a little herd on them and follow through?

"INSPECTOR GENERAL" RESPONSIBILITY

Mr. McDERMOTT. Correct. Our role might be described as that of an inspector general. We have an IG responsibility.

Now, we have not been able to exercise that as yet, as I explained to you, because there is this confusion now as to how it is going to be handled in the——

HOUSE REPORT

Senator MAGNUSON. And the House says, on the $5 million, and I quote from the House report:

The committee recommends that the delegations—

that is the jobs you delegate—

other than those Department of Defense and HEW, to maintain a medical stockpile, be financed from one account—

which sums, as necessary, will be allocated by you.

Mr. McDERMOTT. That is correct. And that goes back to the old procedure to which you alluded earlier.

Senator MAGNUSON. Back to the old procedure which we had trouble with.

Senator ALLOTT. That is to get away from the business of having to consider a separate budget in about 15 or 16 different places.

DEFENSE PRODUCTION ACT RESPONSIBILITIES

Senator MAGNUSON. All right. Now, under the Defense Production Act, I know this is in here but you can summarize this.

What are your responsibilities there?

Mr. McDERMOTT. Well, the responsibilities under the Defense Production Act relate, of course, primarily to defense priorities and problems pertaining to the stockpile and to maintenance of the mobilization base.

We have various stockpile responsibilities under both the Defense Production Act and under the Strategic and Critical Materials Stock Piling Act.

As you know, OEP determines the policy for these strategic and critical materials stockpiles——

FUNCTIONS OF GSA

Senator MAGNUSON. And GSA does the buying?

Mr. McDERMOTT. They do the housekeeping and the buying, the selling, and the storing.

There is considerable activity, which the members of this committee are aware of, in stockpiling today.

Specifically, what is being done, for your information, is that the President has appointed an Executive Stockpile Committee of Cabinet-level people, within the Government, of which I am Chairman as Director of OEP. We are reviewing all aspects of the stockpile program to determine policy for it, to determine what our policy is going to be toward acquisitions and disposals and so on.

The stockpiling program is a very important element of the Office of Emergency Planning activities.

Senator MAGNUSON. So that we are to understand that if GSA comes to us and asks for X number of dollars to buy, or authority to sell, that this would stem from a decision made by you and this particular committee?

Mr. MCDERMOTT. That is right, with full interdepartmental consultation, of course.

Senator MAGNUSON. They are merely your agents in this matter?

Mr. MCDERMOTT. That is right. They are our agents in this matter.

Senator MAGNUSON. I think we ought to get this straight, because GSA does carry out the policy of a decision that is made at a higher level.

Mr. MCDERMOTT. That is right. Now, the Administrator of GSA——

Senator MAGNUSON. As to how they carry it out, that is another story.

UPGRADING OF STOCKPILE BY PAYMENTS IN KIND

Mr. MCDERMOTT. Correct. I would like to make a point here, if I could, sir, on that.

I understand that the House, in acting on the GSA appropriation, eliminated from their appropriation for fiscal year 1963, the authority to upgrade stockpile materials by payment in kind.

We feel that the use of payment in kind is a desirable mechanism for the upgrading and improvement of our stockpile, and I believe that when they appear before you GSA is going to ask for a restoration of that authority.

And we would like to go on record as fully supporting that request for restoration.

I think it is an important thing to have in our administrative package.

Senator MAGNUSON. The Senator from Colorado and I have gone through that for a long time, too, now.

If we are going to keep some of the stockpiles we ought to keep them in the best possible condition so they will have some value.

Mr. MCDERMOTT. Correct.

Senator MAGNUSON. Now the Trade Agreements Extension Act, under that what is your——

NATIONAL DEFENSE EXECUTIVE RESERVE

Mr. MCDERMOTT. There is one other point, sir, under DPA that I should tell you about because it is of current interest.

We have also the responsibility for the development and management of the National Defense Executive Reserve.

Senator MAGNUSON. What do you mean? Do you mean you store away executives?

Mr. MCDERMOTT. No; we do not store them. We try to identify them, but there was an amendment to the Defense Production Act in 1955 which directed the President to develop this Executive Reserve for service to Government in an emergency.

Under an Executive order, issued in 1956, those responsibilities rest with the Office of Emergency Planning. Now, today, we direct and coordinate, on behalf of the President, this Executive Reserve program.

There are 15 departments and agencies of Government that participate in it. There are approximately 2,700 reservists in the program now. This is an important program.

It is very important that we have, and train, these people in advance so that their services are available to us if an emergency should occur. These people come primarily from the business sector.

They volunteer their time and they are making a very important contribution.

Now, on October 22 of this year——

Senator MAGNUSON. And in some cases they are specialists?

Mr. MCDERMOTT. In many cases they are specialists.

On October 22 of this year we are having a national conference of the executive reservists on which the President just issued a memorandum to me a few days ago, which I submit for the record together with details on the program.

Senator MAGNUSON. All right, we will put that in the record.

(The material referred to follows:)

THE WHITE HOUSE,
Washington, July 27, 1962.

Memorandum for Hon. Edward A. McDermott, Director, Office of Emergency Planning.

I am informed that you plan to hold a conference of the National Defense Executive Reserve in October. There is a real need for a reserve of highly qualified individuals from American industry, labor, and professional groups to provide additional leadership needed in time of national emergency.

In the past, these people have been selected after the emergencies developed. I believe we should select them in advance. They can then receive additional training through the programs of the participating departments and agencies, and a more rapid and certain means of meeting emergency problems will be available.

It is encouraging to know that men of the high caliber participating in the conference are prepared to serve in the Executive Reserve, committing themselves in advance to the heavy burdens that will be placed upon them if their services should be needed.

I hope that the October conference will strengthen the Executive Reserve program and furnish a forum for the exchange of ideas between the reservists and the key Government officials who are working with them to strengthen our national security. All Federal departments with an interest in the program should participate fully in the conference and in the sponsorship of the Executive Reserve program.

I will be interested in receiving your report on the discussions that take place at the conference.

JOHN F. KENNEDY.

NATIONAL DEFENSE EXECUTIVE RESERVE

In 1955 the Defense Profuction Act was amended and section 710(e) provided for the establishment of the National Defense Executive Reserve. The purpose of the program is to establish and train a nucleus of executives outside the Government who would serve in executive positions in Government during periods of emergency.

Under Executive Order 10660, the Director of OEP is directed to institute and administer the Executive Reserve program; to coordinate the activities of other agencies in establishing units of the Reserve; to provide standards of recruitment and training; and to issue necessary rules and regulations.

Currently, 17 agencies are participating in the program under OEP's policy direction and coordination, with approximately 2,700 reservists in all parts of the country enrolled to date. The program is growing, both in numbers of reservists in existing programs and as additional agencies consider Executive Reserve units. However, it has not yet attained the strength levels necessary to support Federal mobilization programs.

Current planning, in accordance with the President's statement (attached), is directed to the expansion of the Executive Reserve in every agency delegated primary mobilization responsibilities. National goals will be established within which each agency will plan, at both national and regional levels, a year-round training program. The Executive Reserve program will be strengthened in the field to supplement State and local emergency resource management programs.

The first phase of improving and expanding the Reserve will be covered in the Third National Training Conference scheduled to be held October 22, 1962, in Washington. This conference will identify the changing roles of the Federal agencies under the Executive orders, and will emphasize readiness in the field to carry out emergency assignments.

Administration of the total Executive Reserve program by OEP requires 4 man-years.

TRAINING PROGRAM

Mr. McDERMOTT. The President feels that this program is important and it does flow from the Defense Production Act.

Senator MAGNUSON. All right.

Senator ALLOTT. Let me ask one question on that.

Do these men actually participate in the training?

Mr. McDERMOTT. Yes, and I hope, to a greater degree in the future than they have in the past.

Senator ALLOTT. How much have they in the past?

Mr. McDERMOTT. Well, the BDSA, the Business and Defense Services Administration of Commerce, represents the largest segment, and they have had an extensive, and, I believe, completely successful training program.

They had a session here in Washington last year, and they have regional meetings, and I am personally very impressed with what they have done.

TOTAL IN EXECUTIVE RESERVE

Senator ALLOTT. How many people does this involve?

Mr. McDERMOTT. In the BDSA Executive Reserve? Approximately 1,300.

Senator ALLOTT. And you have 2,700 units?

Mr. McDERMOTT. No, there are 2,700 in total, sir.

There are 17 departments and agencies participating, and there are a total of 2,700 individuals in the program.

The biggest segment of those is BDSA, in Commerce.

Other departments have lesser numbers, ranging down to 10 or 15. I feel that the overall training can be improved, except I recognize that BDSA has done a good job with its reservists.

One of the objectives of the conference of October 22, which the President is supporting, is to improve the capability of these people to meet their responsibilities.

TRADE AGREEMENTS EXTENSION ACT RESPONSIBILITIES

Senator MAGNUSON. All right. Now, the Trade Agreements Extension Act.

Mr. MCDERMOTT. Well, under Section 8 of the Trade Agreements Extension Act, when interested industries petition the President for the imposition of quantitative import controls on a particular commodity, on the grounds that the importation of those commodities is adversely affecting our national security interests, the President refers that petition to the Office of Emergency Planning.

We make the detailed study and factual investigation that is necessary to arrive at a determination.

We make a recommendation to the President and he acts accordingly, or, he acts on the recommendation, not necessarily "accordingly."

But there is considerable volume of activity under section 8 of the Trade Agreements Extension Act.

BUY AMERICAN ACT

Senator MAGNUSON. All right; we have the Buy American Act of 1933.

Mr. MCDERMOTT. Mr. Chambers will address himself to that.

Mr. CHAMBERS. In the Buy American Act, as you know, there is authority to pay higher prices for domestic products. The problem has come up in certain very significant items, particularly as an example in connection with steam turbine cases, whether or not we should pay a higher differential and still buy American. These cases are referred over to OEP because they almost always have some national security connotation.

Do we want to manufacture these turbines in our country or become dependent on other nations? These cases are referred to us specifically as they arise, and we do monitor them and make recommendations.

The President has to take action.

Senator MAGNUSON. Now when you speak of "differential," supposing you decide to pay or establish the differential, who pays that and how?

Mr. CHAMBERS. Well, the difference, sir, is reflected in the cost of the buying department——

Senator MAGNUSON. This is Federal, all Federal business?

Mr. CHAMBERS. All Federal business, where the Federal Government is buying. Then if we say, "Yes, we think you can go beyond the buy American differential," the buying agency will negotiate or on a bid basis get the best price they can.

Senator MAGNUSON. And that will be reflected and naturally your decision in their appropriation will indicate that?

Mr. CHAMBERS. That is correct.

DECISIONS ON ESSENTIALITY OF A PARTICULAR BUSINESS

Senator ALLOTT. Now, could I ask a question on that, Mr. Chairman?

Senator MAGNUSON. Yes.

Senator ALLOTT. How quickly are decisions ordinarily rendered on the essentiality of any particular business?

TIMELAG ON DECISIONS

Mr. CHAMBERS. I think in the past, sir, that there have been some cases that have taken entirely too long. On an average I would say it takes around 6 months.

We have seen some records where they have gone considerably longer than that.

Our aim is to get this down to where we can make a much faster decision.

Senator ALLOTT. Have some of them gone as long as a year or 2 years or for 3 years?

Mr. CHAMBERS. I do not think 2 or 3 years but, in all candidness, I think some have taken at least a year before a recommendation has been made.

Senator ALLOTT. And you are generally and genuinely trying now to get this down to a period which is within the realm of practicalities?

Mr. CHAMBERS. We think we must, sir. The evaulation of the petition that comes in depends on facts current at that time, and if we take too long we really will have to start all over again periodically to update the basis for a decision.

We must get them down where they will only take a reasonable length of time.

Senator ALLOTT. Would you say 3 months?

Mr. CHAMBERS. I cannot put a particular time on it. It might vary. Some are much more complicated than others.

There are certainly many cases where 3 months would be true; others, unquestionably, will take longer.

The point is that we want to get them down to within the most practical time.

Senator ALLOTT. Well, if you have them hanging on the ropes for 6 months or for more, do you not stymie the activity?

Do you not break this function down to the place where it is not of any real value?

EXPEDITING BUY AMERICAN CASES

Mr. CHAMBERS. I think that is correct, sir, and at the present time, for the record, on section 8 cases, as far as I know, there are none pending within our shop.

There are some pending final decisions. As far as buy American activities are concerned, I know of no cases pending and at the time we completed our recent reorganization, about 2 months ago, it was discussed in detail with the people who handle it.

And we are closely watching the cases that come in and we are going to see that they are expedited.

Senator ALLOTT. Well, assuming that you were a Senator and you got a letter from a constitutent——

Senator MAGNUSON. You are wishing him all of that trouble?

Senator ALLOTT. Which said:

> How can you justify this particular product or buy it from Europe, when their wage scale over there is $1.25 at the highest, and I am now paying close to $3?
>
> I, therefore, have to bid more or have to offer this product at more than they do and yet you are taking my dollars and going over there and buying them from them.

Now how do you answer your constituent, and I am sure you have seen one or two of these letters, Senator Magnuson.

Senator MAGUNSON. Oh, yes.

Mr. CHAMBERS. You are placing me in the active role of a U.S. Senator to answer that question.

Frankly, this goes to the whole question of the many debates on the Trade Act. This is not our role. It is not our responsibility to try to judge that particular aspect of it.

But it is a difficult question to answer and, frankly, as a Senator, sir, I would not know how to answer it. From our standpoint these questions are not referred to us. We do try to judge several things——

Senator MAGNUSON. Well, what questions are referred to you?

Senator ALLOTT. I am just trying to get the thing straightened out in my own mind.

PROCEDURE IN BUY AMERICAN CASES

Mr. CHAMBERS. When a case comes in to us, and for this purpose I will group both section 8 and the Buy American Act, because the principles are the same, we conduct a careful study in which every Government department involved participates, as to whether or not the industry concerned is going to be adversely affected if we buy foreign, and whether we would make ourselves too dependent on certain foreign manufacturers for those particular commodities which are deemed to be essential from the security standpoint.

If the decision should turn out that such is the case, then we would recommend to the President that he take appropriate action, and he may or may not agree with our recommendation, of course.

If we decide, however, when we look at it, that on balance the national security is not being threatened, then that is just about the limit of our responsibilities——

Mr. MCDERMOTT. I would like to emphasize at that point that under section 8 of the Trade Agreements Extension Act we are not authorized under the law to apply any considerations other than the national security consideration.

Economic considerations and the welfare of the industry, and so on, are not accommodated under section 8 of the Trade Agreements Extension Act. They come under other responsibilities. You are also correct, sir, when you say that there has historically been a long delay in the disposition of some of these cases.

When I assumed the directorship of this Agency——

Senator MAGNUSON. Well, how do you get the case?

Mr. MCDERMOTT. From the President, sir. In some instances they come direct; some come through the White House.

Senator MAGNUSON. Well, supposing a department is in doubt whether they should carry out this act, would they tell that to the White House who, in turn, would turn it over to you? What is the——

Mr. MCDERMOTT. They can come to us directly. Actually, sir, there has been, in my experience, no instance of the situation which you suggest. The cases which we have considered are cases that have arisen under section 8.

Senator MAGNUSON. Then you recommend to the President?

Mr. MCDERMOTT. We make an investigation and a recommendation.

Senator MAGNUSON. Then the President, to carry it out, if he agrees with you, issues an Executive order?

Mr. McDERMOTT. Not necessarily. If the finding under this section 8 analysis is that there is no impairment or adverse effect on our national security, then that is the end of it under the Trade Agreements Extension Act.

There may be further relief available through the Tariff Commission or someplace else. But if there were an affirmative finding, under section 8, by the President, that there was a national security consideration, then he would take some action, the nature of the action depending on the case.

But in April of this year there were several of these cases that were pending, and they are the cases to which the Senator refers. They have been pending, some left not only by my predecessor but his predecessors going back to Governor Hoegh's day.

My objective was to conclude those cases, and we have concluded all except one and that will be concluded very soon. But I agree with you that there must be more efficiency and proper management, not only for the Government's interest, but industry's interest, and more expeditious handling.

Senator MAGNUSON. But the President can take independent Executive action, without even referring the case to you?

Mr. McDERMOTT. Correct.

Senator MAGNUSON. And where he does that, you would have nothing to do with it?

Mr. McDERMOTT. That is correct.

Senator MAGNUSON. I mean, you would have nothing further, let's say, to do with it?

Mr. McDERMOTT. Correct.

Senator MAGNUSON. And that could go for economic reasons——

FUNCTION OF TARIFF COMMISSION

Mr. CHAMBERS. Normally, it would come to him through the Tariff Commission.

As you know, the industry goes to the Tariff Commission, and it goes to the President from the Tariff Commission.

Senator MAGNUSON. Yes; but the President can issue Executive orders without the Tariff Commission on Buy American?

Mr. McDERMOTT. That is true.

Senator MAGNUSON. Is that not correct, under the act, because, as I said, he just issued one last week on lumber.

That was a separate order and that would not come through you people.

Mr. McDERMOTT. No; nor would we normally be consulted on something like that.

Senator MAGNUSON. But if we are talking about tariffs or quotas, then the Tariff Commission would have to take some action one way or the other before the President could go ahead?

Mr. CHAMBERS. The Tariff Commission normally will not take nto consideration security problems.

We do look at them from a security standpoint when they are referred to us.

Senator MAGNUSON. Well, supposing they are talking about an industry that is vital to our national security, and they have a petition before the Tariff Commission for economic reasons that the Tariff

Commission should do something about it—would the Tariff Commission contact you for advice or would you go down and testify and make a recommendation to them?

Mr. CHAMBERS. The Tariff Commission would not. When it comes to the President's approval, then he could refer it down to us from a security standpoint.

Senator MAGNUSON. In other words, you might come in on the tail end as to what the President would do?

Mr. CHAMBERS. That is correct.

RELATION MITH TARIFF COMMISSION

Senator MAGNUSON. But there is no liaison between you and the Tariff Commission.

Mr. CHAMBERS. Well, there is actually close working liaison, but as I understand it——

Senator MAGNUSON. How did you ever break into that ivory tower?

Mr. CHAMBERS. I will withdraw that.

As I understand it, and this is probably a very poor understanding, the Tariff Commission will take a position either under the peril point provision or a request for relief, and they look to the economic factors only.

And I know, on the opposite side of the table, before the Tariff Commission, people frequently plead that "If you do not do this, it is going to adversely affect the national security."

Senator MAGNUSON. That would be part of the petition of the people asking for relief: "It might be that we are important to national security"——

Mr. CHAMBERS. That is right.

Senator MAGNUSON. And they might call on you to verify that?

Mr. CHAMBERS. Correct. But it will probably be done after recommendation by the Commission, and the President would ask us to make the study for him.

Senator MAGNUSON. Are there any questions on that phase of it?

Senator ALLOTT. I know, but I just want to bring this down to a specific industry. We have in our State an industry which is engaged in the production of scientific porcelain.

You know, these people are treated on a free hands, no holds barred, or some kind of a basis, in the world market, particularly as regards the German and Japanese porcelain.

Now, how would you get into an area like this which is distinctly of scientific and peculiar value to the United States? How would you get into this?

PROCEDURE FOR HANDLING SECTION 8 CASES

Mr. CHAMBERS. The law, the Trade Agreements Act, is rather specific. It specifies that any industry can come to OEP and petition on the grounds that imports of a particular item are such as to constitute a threat to national security. That is how we get in on it. They can also go directly to the President who can refer it down to us for study.

If we feel—and there are certain industries which we watch rather carefully—that a study should be made, we can initiate certain

studies on our own motion. At that point all these factors are evaluated and then we either recommend to the President that we deny the petition or we report to him that, in our opinion, there is a threat to the national security, at which time the President can accept or reject that finding. I believe under the law he can actually order a further study if he wants it to be made.

But, in any event, the final decision is in the President.

RELATION TO NATIONAL SECURITY

Senator ELLENDER. Is it not a fact that by using the national security theory a lot of people think they can get better results than depending strictly on the present status of the economy?

Mr. CHAMBERS. I think that is correct.

Senator ELLENDER. Would you be able to tell us what percentage of those cases presented to you really involve national security?

Mr. CHAMBERS. If I can have this piece of paper back we can speak from the record.

There have been instances where we have recommended that there is a threat to the national security.

Now, percentagewise I would say that out of the petitions that we have received, most of them have been denied; several have been withdrawn; and only one has been approved.

Senator ELLENDER. Well; I find this: On many projects here in our country, particularly public works projects, the proponents try to attach the national security aspect in order to be able to make a better case. I presume that the same thing is happening to these.

Mr. CHAMBERS. Well, I would think, sir, that an industry, when it approaches its problem, is going to take very route that may offer relief, and which they feel may be one that they can use.

Senator MAGNUSON. And it is pretty hard to find a dividing line.

Where do you stop? There are some things that obviously are in the national security interest. Other things are in the middle, and——

Mr. CHAMBERS. Well, of course, it gets them to the question as to whether or not the imports are such as to threaten it, and this gets down to be a very tight point at times.

ACTION ORIGINATED BY INDUSTRY

Mr. MCDERMOTT. On the point you made originally, the industries are well aware of their rights under section 8, and if they feel there is a security consideration they generally initiate the action with us rather than wait for the Tariff Commission to bring it in through the back door.

Senator MAGNUSON. Yes. I want to say this off the record.

(Discussion off the record.)

SUMMARY OF RESPONSIBILITIES

Mr. MCDERMOTT. At this point, I would like to submit for the record a paper which summarizes our responsibilities in the general area of resources planning and mobilization that we have been discussing and a table showing the status of investigations conducted under the Trade Agreements Extension Act.

(The material referred to follows:)

Resources Planning and Mobilization

In this area of its responsibility, OEP has three objectives: (1) The creation of organizational structures and systems to control resources under emergency conditions, (2) the establishment and maintenance of a mobilization base (including stockpiling of critical materials) to meet emergency demands, and (3) the preparation of estimates and analyses, in advance, of requirements to be placed on the total economy in relation to its ability to respond under a variety of emergency conditions. Specific examples of OEP efforts and accomplishments are as follows:

SUPPLY-REQUIREMENTS STUDIES

Supply-requirements studies of major resources are underway (materials, manpower, transportation, petroleum, electric power, production facilities, and industrial components) for both conventional and nuclear war, including attack on the United States. These studies will provide the basis for a complete review of the objectives for all material in the national stockpile of strategic and critical materials.

Preliminary analyses of many of these studies should be completed by the end of calendar year 1962. This target date is predicated on both OEP and the delegate agencies having at least the number of personnel they have now.

STRATEGIC AND CRITICAL MATERIALS

The House report accompanying H.R. 12711 (independent offices appropriation bill, 1963) contained the following statement on page 12:

"The committee has omitted language contained in the bill last year authorizing materials in the inventory to be used for payment-in-kind for expenses of beneficiating materials pending a decision on future policies relating to stockpiling."

OEP supports GSA's request for restoration of the language for the following reasons:

1. Future policies concerning the stockpiling of materials have, to a large degree, been completed, including determination that (*a*) all objectives will be reexamined and, where necessary, revised to indicate wartime deficits based on current DOD strategic plans; (*b*) there will be an orderly disposal program of any identified surpluses; (*c*) a new procurement program will be developed limited to three or four unfilled objectives, with barter as a substitute for cash wherever possible, and (*d*) a restricted barter program will be established.

2. Payment-in-kind during the past year has resulted in a cash saving of more than $2 million, and has reduced our surpluses an equal amount.

3. Upgrading of materials is urgently needed, all to be financed by payment-in-kind. Specifically:

(*a*) Upgrading of columbite and tantalite ores to columbium and tantalum metals.

(*b*) Upgrading of subspecification manganese ores at Butte, Mont., to specification grade silicomanganese.

(*c*) Upgrading of gum opium to morphine powder to provide a ready source of morphine for survival purposes in event of nuclear attack on this country.

(*d*) Upgrading of castor oil to sebaic acid.

PRODUCTION EQUIPMENT

Efforts over a 3-year period to stimulate modernization of production equipment will bear fruit under the liberalized depreciation rules issued July 12 by the Treasury Department. This will gradually strengthen the mobilization base.

PLANNING FOR EMERGENCY COORDINATION

In 1963 work will be accelerated on the development of the organizational arrangements, procedures, and systems required for centralized control of resources under emergency conditions including nuclear attack on the United States. In order to assure the most effective and efficient use of resources in the event of an emergency, the plans for a central programing organization and a system for determining resources use, must be developed now.

MANPOWER

Effective mobilization and utilization of the Nation's human resources in time of emergency is vital. In fiscal year 1962 the primary emphasis was on completing mobilization planning among the Federal agencies, and on obtaining the support and participation of State and local governments. OEP has completed the series of manpower conferences begun last year. Results at Federal, State, and local levels have been very encouraging. In addition, OEP will continue to feature manpower planning as an element of its comprehensive program.

In fiscal year 1962, work was concluded on pilot projects in community planning for manpower mobilization. The Kalamazoo, Mich., approach was to identify manpower, in conjunction with other resources, which can be earmarked in advance for possible use in an emergency. The report is being analyzed, and will be reworked, to serve as a general guideline for possible use in other interested communities. In Allentown, Pa., and Tallahassee, Fla., working with the Bureau of Apprenticeship and Training, the U.S. Department of Labor worked out a plan for mobilizing task forces of manpower in specific building trades. Five other cities in Florida have adopted the technique and are proceeding with plans on this basis.

A subcommittee of the OEP Committee on National Labor-Management, Manpower-Management, developed a study on the reemployment rights of workers who leave jobs to perform emergency service. The Committee on Specialized Personnel has continued its surveillance in the fields of scientific and technical manpower.

ECONOMIC STABILIZATION

During this fiscal year 1962, OEP continued its efforts to strengthen mobilization readiness with respect to the Nation's emergency economic stabilization plan (annex 27 to the national plan), particularly in connection with possible nuclear attack.

Annex 27 with draft appendixes on emergency price stabilization, emergency rent stabilization, emergency wage and salary stabilization, consumer rationing, and monetary, banking, and credit controls were widely circulated to all States and territories through the medium of regional OEP offices and regional economic stabilization conferences. Encouraged by the reaction to the unprecedented preparedness concepts outlined in annex 27 and the draft operating appendixes, major emphasis was placed upon developing State and local understanding of emergency economic stabilization policies and plans and creating the necessary State and local nucleus organizations to administer postattack price and rent stabilization, and emergency consumer rationing, wherever economic functioning was possible.

Thus far, 37 States have designated an individual to assume responsibility for developing a statewide emergency economic stabilization program, 13 States have organized State level consumer rationing committees, and 7 States have established emergency price and rent stabilization committees.

With added emphasis from the comprehensive plan for State and local resources management and the recent regional conferences on resource planning, OEP's objective is for all States to be completely organized for stabilization preparedness work during fiscal year 1963.

The Department of the Treasury, the Federal Reserve Board, the Federal Home Loan Bank Board, the Council of Economic Advisers, and other financial agencies, continued to develop their policies and emergency measures for the restoration, continued functioning, and stabilization of the monetary and economic systems in the undamaged or relatively undamaged areas during the postattack period. Special attention was devoted during the year to developing methods and procedures for carrying out postattack emergency financial policies already agreed upon.

The Housing and Home Finance Agency assisted OEP with plans for emergency rent stabilization. During the fiscal year, HHFA started work on a training guide for use by State and local organizations in developing their capability to handle emergency and postattack rent stabilization. The guide is planned for release in 1963. The Department of Labor assisted OEP in developing readiness for handling emergency and postattack wage and salary stabilization measures through its Wage and Hour Division field offices. Having agreed upon plans and policies, worked toward a state of readiness in its field offices to administer such plans in the event of an emergency.

OEP continued its series of regional economic stabilization conferences to present emergency plans to officials of all levels of government and to representatives of industry, business, and finance.

Additional progress was made during the fiscal year in identifying the requirements of State and local governments to enhance their capability to undertake local emergency rationing after an attack. Proposals advanced to meet such requirements are now being considered.

NATIONAL SECURITY INVESTIGATIONS OF IMPORTS

Section 8 of the Trade Agreements Extension Act of 1958 (Public Law 85–686) provides the authority and a means for determining the extent to which imports may be threatening to impair the national security. The OEP Director is responsible for investigating allegations that an article is being imported into the United States in quantities and under circumstances which threaten to impair the national security. If, as a result of an investigation, he is of the opinion that a threat to the national security exists, he must so advise the President.

No new applications for investigation under section 8 (Public Law 85–686) were filed in fiscal year 1962. However, work continued on four outstanding cases and three of these were concluded by the end of the fiscal year. On May 29, 1962, the Director OEP announced his conclusions that imports of transistors and related semiconductor products were not threatening the national security. The same conclusions were announced on June 5, 1962, about imports of surplus military rifles and on June 22, 1962, about imports of hard fiber cordage and twine products. The national security investigation of imports of textiles and textile manufactures was the only case outstanding at the end of fiscal year 1962. The basic work on this case is nearly completed.

Table 1 shows the status of all national security import investigations under Public Law 85–686.

Resources planning and mobilization work in OEP requires a total of 89 people.

TABLE 1.—*Investigations under the Trade Agreements Extension Act of 1958 (Public Law 85–686)*

Product or commodity	Source of petition	Date filed	Status
Cobalt	Howe Sound Co., 500 5th Ave., New York, N.Y.	Oct. 2, 1958	Petition denied, Oct. 2, 1959.
Cordage and twine products, hard fiber.	Plymouth Cordage Co., Plymouth, Mass., and Columbian Rope Co., Auburn, N.Y.	Sept. 13, 1960	Petition denied, June 22, 1962.
Crude oil and its products	Department of State and Department of Defense.	Jan. 22, 1959	Certified to the President, Feb. 27, 1959.
Dental burs [1]	American Dental Association, 1010 Vermont Ave. NW., Washington, D.C.	May 12, 1958	Petition withdrawn, Jan. 10, 1961.
Electric power equipment, heavy.[1]	General Electric Co., Schenectady, N.Y., and National Electrical Manufacturers Association, 115 East 44th St., New York, N.Y.	Mar. 7, 1958	Petition denied, June 12, 1959.
Fluorspar	American Fluorspar Producers Association, Elizabethtown, Ill.	Oct. 29, 1958	Petition denied, Sept. 25, 1959.
Steam turbine generators	General Electric Co., Schenectady, N.Y., and Westinghouse Electric Corp., Pittsburgh, Pa.	Feb. 20, 1959	Petition denied, Nov. 18, 1960.
Surplus military rifles	Sporting Arms and Ammunition Manufacturers Institute, 250 East 43d St., New York, N.Y.	June 29, 1959	Petition denied, June 5, 1962.

RESPONSIBILITIES UNDER COMMUNICATIONS ACT

Senator MAGNUSON. All right. Now, you have responsibilities under the Communications Act of 1934.

Now, how do you fit into that?

Mr. MCDERMOTT. Well, there has been previously in OCDM, our predecessor agency, a telecommunications responsibility.

However, in this reorganization that has taken place, in February of 1962, the President issued another Executive order, 10995, which I

will submit for the record together with some data on the telecommunications program and workload.

Senator MAGNUSON. All right. We will put that into the record.

(The Executive Order No. 10995 and other material referred to follows:)

[Reprinted from the Federal Register, Feb. 20, 1962 (27 F.R. 1519)]

EXECUTIVE ORDER 10995

ASSIGNING TELECOMMUNICATIONS MANAGEMENT FUNCTIONS

Whereas telecommunications is vital to the security and welfare of this Nation and to the conduct of its foreign affairs;

Whereas it is imperative that the United States maintain an efficient and well-planned national and international telecommunications program capable of stimulating and incorporating rapid technological advances being made in the field of telecommunications;

Whereas the radio spectrum is a critical natural resource which requires effective, efficient, and prudent administration in the national interest;

Whereas it is essential that responsibility be clearly assigned within the executive branch of the Government for promoting and encouraging effective and efficient administration and development of U.S. national and international telecommunications and for effecting the prudent use of the radio frequency spectrum by the executive branch of the Government;

Whereas there is an immediate and urgent need for an examination of ways and means of improving the administration and utilization of the radio spectrum as a whole;

Whereas there is an immediate and urgent need for integrated short and long-range planning with respect to national and international telecommunications programs, for continuing supervision over the use of the radio frequency spectrum by the executive branch of the Government and for the development of national policies in the field of telecommunications:

Now, therefore, as President of the United States and Commander in Chief of the Armed Forces of the United States, and by virtue of the authority vested in me by sections 305 and 606 of the Communications Act of 1934, as amended (47 U.S.C. 305 and 606), and by section 301 of title 3 of the United States Code, it is hereby ordered as follows:

SECTION 1. There is hereby established the position of Director of Telecommunications Management, which position shall be held by one of the Assistant Directors of the Office of Emergency Planning provided for under Reorganization Plan No. 1 of 1958, as amended (72 Stat. 1799).

SEC. 2. Subject to the authority and control of the President, the Director of Telecommunications Management shall:

(a) Coordinate telecommunications activities of the executive branch of the Government and be responsible for the formulation, after consultation with appropriate agencies, of overall policies and standards therefore. He shall promote and encourage the adoption of uniform policies and standards by agencies authorized to operate telecommunications systems. Agencies shall consult with the Director of Telecommunications Management in the development of policies and standards for the conduct of their telecommunications activities within the overall policies of the executive branch.

(b) Develop data with regard to U.S. Government frequency requirements.

(c) Encourage such research and development activities as he shall deem necessary and desirable for the attainment of the objectives set forth in section 6 below.

(d) Contract for studies and reports related to any aspect of his responsibilities.

SEC. 3. The authority to assign radiofrequencies to Government agencies, vested in the President by section 305 of the Communications Act of 1934, as amended (47 U.S.C. 305), including all functions heretofore vested in the Interdepartment Radio Advisory Committee, is hereby delegated to the Director of the Office of Emergency Planning, who may redelegate such authority to the Director of Telecommunications Management. Such authority shall include the power to amend, modify, or revoke frequency assignments.

SEC. 4. The functions and responsibilities vested in the Director of the Office of Emergency Planning by Executive Order No. 10705 of April 17, 1957, as amended, may be redelegated to the Director of Telecommunications Management. Executive Orders No. 10695A of January 16, 1957, and No. 10705, as

amended, are hereby further amended insofar as they are inconsistent with the present order. Executive Order No. 10460 of June 16, 1953, is hereby revoked.

SEC. 5. The Director of Telecommunications Management shall establish such interagency advisory committees and working groups composed of representatives of interested agencies and consult with such departments and agencies as may be necessary for the most effective performance of his functions. To the extent that he deems it necessary or advisable to continue the Interdepartment Radio Advisory Committee, it shall serve in an advisory capacity to the Director of Telecommunications Management.

SEC. 6. In carrying out functions under this order, the Director of Telecommunications Management shall consider the following objectives:

(a) Full and efficient employment of telecommunications resources in carrying out national policies;

(b) Development of telecommunications plans, policies, and programs under which full advantage of technological development will accrue to the Nation and the users of telecommunications; and which will satisfactorily serve the national security; sustain and contribute to the full development of world trade and commerce; strengthen the position and serve the best interests of the United States in negotiations with foreign nations; and permit maximum use of resources through better frequency management;

(c) Utilization of the radio spectrum by the Federal Government in a manner which permits and encourages the most beneficial use thereof in the public interest;

(d) Implementation of the national policy of development and effective use of space satellites for international telecommunications services.

SEC. 7. Nothing contained in this order shall be deemed to impair any existing authority or jurisdiction of the Federal Communications Commission.

SEC. 8. The Director of Telecommunications Management and the Federal Communications Commission shall assist and give policy advice to the Department of State in the discharge of its functions in the field of international telecommunications policies, positions, and negotiations.

SEC. 9. The Director of Telecommunications Management shall issue such rules and regulations as may be necessary to carry out the duties and responsibilities vested in him by this order or delegated to him under this order.

SEC. 10. All executive departments and agencies of the Federal Government are authorized and directed to cooperate with the Director of Telecommunications Management and to furnish him such information, support, and assistance, not inconsistent with the law, as he may require in the performance of his duties.

JOHN F. KENNEDY.

THE WHITE HOUSE, *February 16, 1962.*

TELECOMMUNICATIONS MANAGEMENT

Following are specific workload figures and accomplishments in the field of telecommunications management:

Frequency assignment statistics

	Fiscal year 1961	Fiscal year 1962	Fiscal year 1963 estimate
Applications received for radiofrequency assignments	7,895	7,640	8,500
Agenda items resulting from applications received	14,289	13,900	16,000
Number of actions required to handle agenda items	26,628	31,375	36,000
New assignments within the total actions (above)	11,831	14,560	16,000
Number of IBM cards required to handle frequency actions	80,000	96,000	108,000
Number of cards in file of Government assignments	----------	250,000	----------
Number of cards in file of non-Government assignments	----------	360,000	----------

Maintenance and use of records

1. Conversion of the format of the list of frequency assignments to Government radio stations, begun in 1960, was completed in fiscal year 1962. This project required the manual punching of 228,000 cards and the proofing of 140,000 lines of information. Approximately 83,000 cards were processed in fiscal year 1962 alone. Purpose of the project was to permit more efficient use of the capabilities of the machine system.

2. Maintenance of the duplicate card file of non-Government assignments involved the processing of approximately 166,000 cards in fiscal year 1960, 184,000 cards in fiscal year 1961, 360,000 cards in fiscal year 1962. About 240,000 cards are expected to be handled in this project in fiscal year 1963.
3. Listing of approximately 7,000 U.S. Government oversea assignments will require the punching of approximately 20,000 IBM cards in fiscal year 1963.
4. Miscellaneous sorting and tabulating projects will be performed for individual agencies as requested.

Mobilization planning

There was a continuing review of:
1. The priority system for resumption of leased intercity private-line service. There are an estimated 10,500 certifications presently on file. An estimated 105,000 circuits or networks have been so certified.
2. The precedence systems for—
   Public telephone messages.
   Public telegraph messages.
   TWX.
3. Two Government frequency-usage plans for emergency. (Classified.)
4. The plan for Government use of non-Government channels to oversea points. (Classified.)
5. Procedures for obtaining telecommunications resources during, or for use during, a war emergency.
6. Telecommunications aspects of continuity of Government plans, including:
   Relocation site and communications facilities.
   Nucleus staff, including executive reservists.
   Essential records.
7. Industry participation in emergency planning, covering
   Express and bypass routes.
   Underground transcontinental cable.
   Emergency operating centers.
   Plans for continuity of management and operations.

The telecommunications management responsibilities reflected in the regular 1963 budget submission require 49 people. Additional responsibilities have been assigned by the President. These responsibilities, and the personnel required, are reflected in a supplemental which is expected to be reviewed by the Senate in a few days.

TELECOMMUNICATION RESPONSIBILITIES

Mr. McDERMOTT. The President, in that Executive order, took the bulk of the telecommunications responsibilities that reposed with him and delegated them to the Director of the Office of Emergency planning, and at the same time established a new position of Director of Telecommunications Management in the Executive Offices of the President.

Senator MAGNUSON. Now, let's see——

Mr. McDERMOTT. And that is Dr. Irvin Stewart, who is Director of Telecommunications Management, and he is here this morning.

Senator MAGNUSON. Oh, there he is.

Mr. McDERMOTT. And he is here to answer any questions on this.

Senator MAGNUSON. Now, he has got a new shop?

Mr. McDERMOTT. Well, he is an Assistant or one of the three Assistant Directors, Presidential appointees, in the Office of Emergency Planning.

In addition, he is the Director of Telecommunications Management. So, Dr. Stewart has the full responsibility for the implementation of the assignment to OEP in the telecommunications field under Executive Order 10995.

There is a substantially expanded telecommunications responsibility under this order.

Dr. Stewart was selected by the President on the basis of his qualifications and will answer any questions on telecommunications.

ORGANIZATION OF AGENCY

Senator MAGNUSON. Well, for the rest of the committee, we ran over this quite carefully in the Commerce Committee when Dr. Stewart was up there, but what they have done is they have correlated all these activities of boards and so forth in your group here, and Dr. Stewart has charge of this and this involves all the problems of the spectrum, defense problems and the use of the spectrum and things of that nature.

Mr. MCDERMOTT. Correct.

Senator MAGNUSON. And he has the final say, speaking for the President, in these matters, but he——

Mr. MCDERMOTT. Yes.

Senator MAGNUSON (continuing). Does have to have liaison with you people yet?

Mr. MCDERMOTT. He is an Assistant Director of our agency. So he works closely with and through me.

Senator MAGNUSON. What is our friend "Charlie"?

Mr. MCDERMOTT. Charlie Brewton is an Assistant Director, as is Mr. John Cosgrove, who is seated over here.

They are the three Assistant Directors of the agency and they do a multitude of things.

Senator MAGNUSON. Well, we are glad to see Charlie back, because he is an old hand around here.

Senator ELLENDER. How many Directors have you?

Mr. MCDERMOTT. There is a Director of the agency——

Senator ELLENDER. Yes.

Mr. MCDERMOTT. The position I hold. There is a Deputy, Mr. Chambers.

They are three Assistant Directors. They are all Presidentially appointed and confirmed by the Senate.

Senator ELLENDER. All doing different work?

Mr. MCDERMOTT. They all have different responsibilities within the agency.

As you see here, this agency covers a rather wide spectrum of activities, and these gentlemen——

Senator ELLENDER. I thought it was about to go out of existence at one time.

Mr. MCDERMOTT. Well, that was a misconception, Senator Ellender, flowing from the fact that when the President issued Executive Order 10952 transferring the operating responsibilities for Civil Defense to the Department of Defense, nothing was said in that order about all the residual responsibilities of OEP.

So it looked in that order as though we were going out of business, but that is not the fact.

Senator ELLENDER. You know, whenever the Government organizes an agency, that agency rarely dies. It goes on living and expanding.

I suppose you are asking for more money here today to get more people?

Mr. MCDERMOTT. No, sir.

Senator ELLENDER. If not, you will certainly be an exception.

Mr. MCDERMOTT. We are an exception. We are going the other way, I am proud to say, sir.

This is a small agency, and I think we are improving its efficiency considerably, and we have a small appropriation request.

Senator MAGNUSON. Dr. Stewart, you put in the record a brief statement of your activities in the field, because you have been down there now a few weeks and we would kind of like a little report in the record, not too long, but just a brief statement.

Senator ELLENDER. Suppose you do that along with the other Assistants.

Senator MAGNUSON. Yes, and, Charlie, you put one in also. And who else?

Mr. MCDERMOTT. Mr. John Cosgrove. We will submit these papers for the record.

In addition, we will submit a paper on each major program, explaining exactly what is done and how many people are involved, so the record will be complete.

(The information referred to follows:)

The Assistant Directors, together with the Deputy Director, serve as the Director's principal advisers on policy decision and are called upon to represent the Director in dealings with policy level officials of other Federal departments and agencies and with nongovernmental groups. The Assistant Directors also are assigned the responsibility for special programs and efforts which involve various segments of the agency. For example, Assistant Director Brewton currently has the responsibility for directing all appropriate followup on the comprehensive program and monitoring all phases of the textile study under section 8 of the Trade Agreements Extension Act. Assistant Director Cosgrove currently has the responsibility for reorganizing the national executive reserve program, for certain relationships with State and local officials and organizations, and for the initial development of the new Liaison and Public Affairs Office. The responsibilities of Assistant Director Stewart, who also is the Director of Telecommunications Management, are covered in the following report on telecommunication activities.

TELECOMMUNICATIONS

Executive Order 10995 assigning additional functions in telecommunications was signed February 16, 1962. The Assistant Director of OEP who became Director of Telecommunications Management under that order took office subsequent to the submission of the budget request to the Congress. No additional personnel have been added to the Telecommunications Office as yet. The demands placed upon the existing staff by the current workload are such that new actions related to the Executive order have been started only to a very limited extent. A request for additional personnel to carry out the duties under Executive Order 10995 is now pending in the Bureau of the Budget and should reach the Congress shortly.

With radio conferences on space communications scheduled to be held in New Delhi in January 1963 on technology and Geneva in October 1963 on frequency allocations, a great deal of effort has been devoted to developing the position to be taken by the United States. This activity will increase in magnitude and urgency in the coming weeks.

A new agreement on the coordination of radiofrequency assignments above 30 megacycles has been negotiated between Canada and the United States to bring about more efficient use of the radio spectrum in the border areas of the two countries. It is expected to come into force within the next few weeks.

A statement of the preliminary views of the executive branch on additional frequency allocations for radioastronomy has been developed and is now in the process of coordination with the Federal Communications Commission.

Considerable progress has been made, working with the International Frequency Registration Board, Geneva, Switzerland, in the review of uses of high frequencies pursuant to the 1959 Geneva telecommunication conference results. It has been possible to delete a number of points of communication no longer heavily used because of changes in requirements. This work is expected to be continued for some time at a high level of activity.

Radar design criteria have been developed and are being prepared for distribution to all Federal agency users of radar. These criteria are an initial step toward the establishment of standards of good engineering practice for executive branch agencies. Their application to the design and procurement of future

equipments should improve considerably the effectiveness of use of the radio spectrum.

Rules have been developed for Government agency use of frequencies with incidental, restricted, and low-power radiation devices without the need for a specific application and assignment. These rules are similar to those of the Federal Communications Commission. Heretofore, every radio station operated by a Government agency had to be specifically authorized regardless of how low the power. The result is a uniform requirement for Government and non-Government users.

A requirement has been introduced that each Government agency certify in connection with each application for a new or modified frequency assignment that a study of existing assignments has revealed that none of them could meet the need which led to the application under consideration.

A spot-check survey of radio monitoring information was started to help determine the best method of reviewing the use actually being made of frequencies by executive agencies, but additional qualified personnel will be needed if work in this area is to be carried out effectively.

A survey was initiated to determine Federal agency uses of electronic data-processing systems, currently in use or planned for the future, in connection with the management of telecommunication resources, facilities, and systems, including the solution of scientific, engineering, and technical problems associated therewith. Of particular interest in this area is the adaptation of available information and experience to assist in applying electronic computer techniques to frequency selection, assignment, and recordkeeping activities of the executive branch.

The processing of radio frequency assignments for the radio stations of the Federal Government has continued at an accelerated rate, more than 7,600 applications for such assignments having been handled in fiscal year 1962. This resulted in more than 31,000 frequency actions and consequential changes in the master card file of frequency assignments to the radio stations of the Federal Government. There is underway the transfer of the function of recording Government frequency assignments from Washington to the existing Machine Records Unit in Frostburg, Md. When completed, efficiency should be increased significantly and cost reduced through a lower rate of personnel change.

A start has been made on a survey of the telecommunications policies and systems of the agencies of the executive branch of the National Government.

A restudy of the organization for the handling of telecommunications in an emergency has been substantially completed; it should result in a reorientation of the emergency telecommunications program before the end of the calendar year.

Activities outlined above involve close coordination with the Federal Communications Commission.

FEDERAL DISASTER ACT

Senator MAGNUSON. All right. Let's move on.

The Federal Disaster Act.

Mr. MCDERMOTT. Under public law——

Senator MAGNUSON. If you look on page 3 you might see what we are discussing.

Mr. MCDERMOTT. Under Public Law 875 we administer for the President his responsibilities under the Federal Natural Disaster Act.

There is not included in our fiscal 1963 appropriation any request for funds for the President's account for this purpose.

But in view of the storm that occurred on the east coast in March, since the fiscal year 1963 appropriation was prepared, it is probable that there will be a supplemental request some time during the year.

As you know, when a major disaster occurs the Governor of the affected State or States can petition the President for the declaration of a major disaster.

Senator MAGNUSON. That is right.

Mr. MCDERMOTT. When such a request is received by the President he turns that over to us.

PROCEDURES UNDER ACT

We, through our field organization, make the necessary investigation to see if the conditions precedent to the invocation of Public Law 875, have been met. That is, we determine the severity and the extent of the damage, particularly the public damage.

We determine whether the States have expended in the preceding 12 calendar months from their funds, the requisite amounts of money to qualify under Public Law 875 and so on.

If we determine that the particular disaster qualifies under the law, I make that recommendation to the President and if he agrees, he makes a Presidential declaration of a major disaster. When he does that, it invokes a number of activities throughout the Federal Government structure.

For example, the Housing and Home Finance Agency becomes involved, the Department of Agriculture and the Bureau of Public Roads, the Corps of Engineers, and others.

We then, in the field, direct and coordinate the activities of all of these Federal agencies that participate in the emergency restoration, of the damage done by that storm. We supervise the allocation of the funds to the States and local communities for qualifying work and handle all of the administrative and accounting phases.

PROCEDURE UNDER PRESIDENTIAL ORDER

Senator MAGNUSON. All right. Now, suppose you go through that procedure and the President issues the order——

Mr. MCDERMOTT. Yes, sir?

Senator MAGNUSON. And the Army Engineers are directed to do certain things.

Mr. MCDERMOTT. Correct, sir.

Senator MAGNUSON. Do they then come to us in their appropriations for the money?

Mr. MCDERMOTT. No, that money, sir, is appropriated to a special account of the President.

Senator MAGNUSON. This is the President's $10 million fund?

Mr. MCDERMOTT. Well, it varies.

Senator MAGNUSON. Well, we keep it at that level.

Mr. MCDERMOTT. It is a little under that now as a result of this east coast disaster, but all of those moneys are expended from that account.

EAST COAST DISASTER

Senator MAGNUSON. Let's take the east coast disaster. All of these departments have been coming in here asking for extra money because they had to do some extra work due to the east coast storms.

The other day we gave the Coast and Geodetic Survey quite a large sum of extra money——

Senator ELLENDER. Mr. Chairman, in those instances I have had the experience with public works appropriations.

That is where permanent damage is done to navigation and related areas.

Mr. MCDERMOTT. Right.

Senator ELLENDER. And he is interested in the civilian——

Mr. McDERMOTT. In just the emergency restoration.

Senator MAGNUSON. Emergency? Just as the name implies? You do not go any further than that?

ACTIVITY AT STATE LEVEL

Mr. McDERMOTT. Right. We make emergency repairs of essential public facilities.

Now one other thing that might clarify your point is that, as a result of this east coast storm and the damage, there has been considerable activity at the State level for the Federal Government to do more or to participate more fully with the State.

So, conceivably, departments and agencies involved in that might be asking for separate funds, but that is separate from this.

Senator ELLENDER. Mr. McDermott, I do not understand one of the categories which you mentioned. You said the State had to do something or had to expend funds.

Mr. McDERMOTT. Correct.

Senator ELLENDER. What is that?

DISASTER RELIEF SCHEDULE FOR STATES

Mr. McDERMOTT. There is a schedule that has been developed by the Federal Government, in cooperation with the Governors' conference, under which a State, depending upon its economic situation and population, has a certain sum in a schedule that the Governor must certify has been expended by the State in disaster costs either currently or in the 12 calendar months preceding the occurrence of the particular disaster.

Senator ELLENDER. Federal money?

Mr. McDERMOTT. No, State money. In other words, if a natural disaster occurred in State X——

Senator ELLENDER. It must be ready to do a certain amount of work?

Mr. McDERMOTT. Correct. If the disaster occurred in State X and State X, under this schedule, had a $100,000 requirement, the Governor would have to certify that in the preceding 12 calendar months State X, from its own funds, expended at least $100,000 over and above normal expenditures in the restoration of like damage.

In other words, when a disaster occurs the Federal Government does not come in right away and pay its own money. There has to have been State participation on a graded basis—depending upon the State—prior to eligibility for Federal funds.

Senator ELLENDER. Well, I presume that that is in order to make it so that there will not be too much dependence on the Federal Government?

STATE OBLIGATION

Mr. McDERMOTT. Correct. In other words, the States have an obligation.

Now it is important, sir, that the State funds need not be expended on the immediate disaster so that you hold up repairs. We have a 12 preceding calendar month test.

So if they had a series of small floods, and small windstorms and so on, and the State did expend x dollars and such in that preceding 12

months, then they automatically qualify in this disaster. But that determination and a Presidential declaration must be made before moneys are allocated.

Senator ALLOTT. I do not understand the logic of that.

METHOD OF HANDLING ALLOCATIONS

You might have a situation in any State, for instance the State of Delaware where they may not have had any damage or spent any money in this respect in the previous years at all. They might have had no occasion to. Then comes a storm like they had last spring. Then what do you do with them? They would not expend any money, and it seems to me that what you are saying is, "The Lord did not visit his sins on you last year, so that you had to expend any money; therefore, you cannot get any money."

Mr. MCDERMOTT. I beg your pardon, Senator, I misled you. The State can qualify by making the expenditure in the current disaster, but ordinarily it does not work that way.

States and political subdivisions of every State are, every month or every week, expending money in the repair of public facilities that have been damaged in some kind of a minor casualty.

So that in most instances they can make the showing or if a true major disaster occurs it becomes evident very early that the State is going to be spending additional funds that will qualify it. Now——

Senator ALLOTT. Now in that event then——

Mr. MCDERMOTT. We would not hold up the declaration.

Senator ALLOTT. You would have another one which is not only what they spent in the last 12 months but what they are prepared to spend now in the case of a disaster?

PROMPT STATE ACTION

Mr. MCDERMOTT. It can work that way.

As a matter of fact, I do not know of any instance where an eligible major disaster has occurred justifying Presidential action where the State has not, in fact, already expended its money.

Now you asked whether this is desirable or not. It is interesting, I believe, that this procedure has been approved by the Governors themselves, and they have agreed that this is a reasonable requirement, that the States make some expenditure from their own funds for disasters of this kind.

Senator ALLOTT. With this, I am in complete accord. I do not want to be put in the wrong position here. But I just wanted to be sure that the criteria was also whether or not the States are willing to participate now. Now upon what percentage basis is this participation?

NATURAL DISASTER PROGRAM

Mr. MCDERMOTT. I will submit for the record a paper on the natural disaster program and allocations made in 1962, and with that I will submit to you a schedule showing what the requirements presently are for each State.

I do not have it available in the materials here, but there will be a listing of the 50 States, showing what the requirement is as well as our experience in fiscal year 1962.

(The information referred to follows:)

PUBLIC LAW 875 DISASTER ASSISTANCE—REGULATIONS CONCERNING MINIMUM STATE EXPENDITURES

Federal assistance under Public Law 875 in any State is available only after the Governor of that State certifies that the total of State and local expenditures (over and above normal expenditures) for disaster relief purposes exceeds an amount published by the Director, OEP, as the minimum for that State and that disaster and for all disasters during a 12-month period immediately preceding the request. The following annual schedule of minimum State and local expenditures and obligations is currently in effect:

$250,000 minimum:
- Alaska
- Hawaii
- Idaho
- Nevada
- New Hampshire
- North Dakota
- Puerto Rico
- South Dakota
- Vermont
- Virgin Islands
- Wyoming

$500,000 minimum:
- Arizona
- Arkansas
- Delaware
- District of Columbia
- Maine
- Mississippi
- Montana
- New Mexico
- Rhode Island
- Utah

$1 million minimum:
- Alabama
- Colorado
- Kansas
- Kentucky
- Nebraska
- Oklahoma
- Oregon
- South Carolina
- West Virginia

$1,500,000 minimum:
- Connecticut
- Florida
- Georgia
- Iowa
- Louisiana
- Maryland
- Minnesota
- North Carolina
- Tennessee
- Virginia
- Washington

$2 million minimum:
- Indiana
- Massachusetts
- Missouri
- Wisconsin

$2,500,000 minimum:
- Michigan
- New Jersey
- Ohio
- Texas

$3 million minimum:
- California
- Illinois
- New York
- Pennsylvania

NATURAL DISASTER

There was no request for disaster funds in the 1963 budget. At the time of the budget call, it was anticipated that there would be a sufficient carryover to cover emergencies occurring in fiscal year 1963. The March 6–8, 1962, storm changed this. A subsequent supplemental appropriations request was intended to provide funds for current disaster work and a carryover for 1963. Funds required for the east coast storm exceeded early estimates. The balance in the fund on July 30 was $5,165,844.

During fiscal year 1962, 16 major disasters were declared in 14 States. Funds totaling $47,005,000 were allocated for these disasters. Hurricane Carla in September 1961 and the east coast storm of March 1962 made the greatest impact on disaster operations. The March storm alone resulted in allocations totaling $30,550,000 for six States. Attached is a list showing Presidential declarations of major disaters and amounts allocated from the President's fund.

The basic objective of the natural disaster program is to provide relief in accordance with Public Law 875. A constant goal is to improve administration of the program by OEP, Federal agencies, and the States. New procedures initiated in the past fiscal year have expedited assistance and simplified financial procedures, while still assuring adequate controls. In a further effort to improve program administration, an educational program is underway to explain Federal disaster relief to Governors and other State officials, to Congressmen, to local

applicants and the general public, and to acquaint them with requirements and procedures.

Administration of the total natural disaster program by OEP requires 10 man-years supported by the "Salaries and expenses" appropriation.

Major disaster declarations, fiscal year 1962

State	Date of declaration	Type	Allocation
West Virginia	July 23, 1961	Floods	$1,750,000
Texas	Sept. 16, 1961	Hurricane Carla	8,000,000
Louisiana	do	do	0
California	Nov. 16, 1961	Brush and forest fires	830,000
Idaho	Feb. 14, 1962	Floods	1,250,000
Nevada	Feb. 22, 1962	do	325,000
California	Mar. 6, 1962	do	2,760,000
New Jersey	Mar. 9, 1962	Severe storm, high tides and flooding	17,100,000
Maryland	do	do	1,300,000
Delaware	do	do	4,500,000
Virginia	do	do	3,500,000
West Virginia	do	Floods	400,000
Kentucky	Mar. 12, 1962	do	800,000
New York	Mar. 16, 1962	Severe storm, high tides, and flooding	3,500,000
North Carolina	do	do	650,000
Nebraska	May 10, 1962	Floods	340,000
Total			47,005,000

NOTE.—Of the above total, $20,000,000 was allocated after the close of the fiscal year. These funds could not be allocated until the supplemental appropriation was available.

DETERMINATION OF MINIMUM STATE EXPENDITURES

Senator ELLENDER. Who fixes that?

Mr. MCDERMOTT. That is fixed by agreement between the Office of Emergency Planning, the Bureau of the Budget, and other elements of the executive branch.

Senator ELLENDER. Is that on a yearly basis?

Mr. MCDERMOTT. It was developed in conjunction with a committee of the Governors' conference.

It is not on a yearly basis, but on a 3-year basis. It is up for review this fall.

There will be some changes made in the schedule this year, based on some changed situations in the States.

Senator ELLENDER. I suppose that is prompted by the fact that the Federal Government is called upon to render all sorts of help in all sorts of disasters and for purely local matters that could have been taken care of by the people themselves.

IMPROVEMENT IN DISASTER RELIEF ADMINISTRATION

Mr. MCDERMOTT. We, in the last year or at least since I have been in office, had to decline a number of those.

One other point I want to make here which I think is important and which works well is this.

There was a prior practice that when a disaster occurred the President did not act until all of the preliminary fieldwork was done, and he knew how much he was going to have to allocate from this fund.

PRESENT PRACTICE IN DISASTER AREAS

We have changed that procedure now and as soon as we determine that a particular disaster is going to qualify under Public Law 875,

we recommend to the President and he makes a declaration of natural disaster, without any funded allocation.

That permits these other Federal departments and agencies to get in and start doing their work, and we withhold the actual allocation from the President's fund until we have more accurate and reliable information on the amount that is going to be involved.

In the prior years what was happening to this account was that sometimes the President made an early allocation on the basis of a recommendation made to him, and when the smoke all cleared away, maybe only 30 or 35 percent of that money was used.

Well, that was poor fiscal management, and it complicated administration of the program.

Now we believe that under this new system we are going to reach 90 or 95 percent accuracy on the allocation and the amount actually expended.

UTILIZATION OF LOAN AGENCIES

Senator ELLENDER. Well, then, on the other hand, by following a procedure in which you could utilize the loaning agencies——

Mr. MCDERMOTT. Correct.

Senator ELLENDER (continuing). The Small Business Administration, for instance?

Mr. MCDERMOTT. Correct. The earlier we can get the Presidential action, without allocation, the more help is available to the States from the other Federal departments and agencies, and I think that is working very well.

Senator ELLENDER. And that is an order to let some of the local people bear the burden through legitimate loans, provided under the Small Business and other facilities?

Mr. MCDERMOTT. That is correct, as well as the Department of Agriculture and many other departments.

Senator ELLENDER. Yes.

Senator MAGNUSON. All right. Any questions?

FEDERAL CIVIL DEFENSE ACT OF 1950

Now, we are getting down to the nub of the reorganization. What are your responsibilities now under this act?

Mr. MCDERMOTT. We have no operating responsibilities in civil defense. That is, in the usual civil defense programs, as you understand them, and as the American public understands them.

We do, however, have the responsibility for the coordination of the Federal civil defense plan with the other activities of the departments and agencies in this whole emergency preparedness area, and we also have a substantial responsibility in emergency resource management, part of which responsibility derives from the broad language of the Federal Civil Defense Act.

I would like to say a word on that because it is, in a sense, a new and a difficult problem.

On this management of resources, during World War II and during the Korean war the needs of our domestic economy were met by a broad system of controls, over basic materials and wages and prices, that were administered by the Federal Government.

CHANGING NATURE OF THREAT

Now, the changing threat to which we are exposed, and that is nuclear missile warfare and other things, makes it possible, if there is to be an attack upon this country, the central leadership in the management of resources in an emergency would not be available.

To prepare for this part of the concept of these Executive orders it is the plan to develop a capability within the Government, not only at the national level but out in the field, to deal with this problem.

CAPABILITY AT STATE LEVEL

We also must, it seems to me, develop a capability at the State level for the Governors and for the State authorities to manage the resources and to stabilize the economies of their States in a postattack period, if there should be a disruption of Federal direction. We must assume that there would be a period of time, which we certainly hope would not occur but which is, nevertheless, possible, when the Federal Government could not fulfill its responsibilities.

So the new thinking in resource management and economic stabilization is to develop something which does not now exist, and that is the capability at the State and local level to deal with these problems that have traditionally been handled by the Federal Government.

I have a brief paper which I will submit for the record which explains that program in more detail.

Senator MAGNUSON. All right.

(The material referred to follows:)

COMPREHENSIVE PROGRAM FOR SURVIVAL OF GOVERNMENT AND MANAGEMENT OF RESOURCES

The Federal Government has historically exercised exclusive jurisdiction over the management of national resources in wartime. On the other hand, in the Federal Civil Defense Act of 1950, civil defense was described as the responsibility primarily of the several States and their political subdivisions. This approach was modified by the Congress in 1958 to recognize that the protection of life and property from attack is a joint responsibility of the National Government and the States and their political subdivisions.

The management of resources for national purposes in an emergency remains the responsibility of the Federal Government, but under the conditions of a nuclear attack it is clear that it may for a time be unable to discharge this responsibility effectively in many localities. For this reason, policy and plans are now based on a partnership between the National Government and State and local governments under which the latter will manage resources, particularly toward their conservation for national purposes, immediately upon an attack, wherever the National Government is unable for a period of time to act. Since the survival and recovery of governmental structures and resources are essential to each other, the approaches to both were combined into a comprehensive program.

Having determined the need for this basic approach, the National Government during the past year and a half has taken the following actions:

1. Published the "Comprehensive Program for Survival of Government and Management of Resources" to explain the concept to Federal agencies and to State and local governments.

2. Worked with representatives of civil defense and State and local governments and obtained unanimous pledges of support from the Governors of the 50 States.

3. Announced the program as national policy and conducted eight regional meetings to acquaint Government and business leadership with the fundamentals of the concept and with the need for State and local action.

4. Developed and distributed for use of State and local planners an "Organization and Planning Guide" containing detailed technical guidance for getting a State or local program underway.

5. Established a system under which Federal agencies will provide direct additional guidance and technical advice to States and localities as they get their programs underway.

6. Through the eight regional offices of OEP and the regional Civil and Defense Mobilization Committees, established a coordinating mechanism to assure that States and local governments are brought into contact with all of the Federal agencies having technical experience and know-how.

In addition to these actions by the National Government, progress can be reported by many of the States and localities which are getting their programs underway. Since the last conference conducted by OEP on April 7, 1962, the following progress has been reported by the States and their political subdivisions.

1. Emergency planning directors have been named in 45 States and in Puerto Rico and the Canal Zone.

2. Nineteen States have completed the naming of their emergency resources planning committees which will assist the State directors and seven of these have established their task groups. A total of 13 State programs are expected to be underway by December 31, 1962.

3. Some 57 geographical areas established within participating States will conduct similar studies to develop a capability for managing resources within the respective areas. Other States are in process of establishing them. A total of 25 geographic area programs are or will be in process by December 31, 1962.

Ten man-years are required to provide direction and support to the comprehensive program.

Progress report, by regions, July 26, 1962

Region	Number of States in region	Emergency Planning Director names	He is also Civil Defense Director	ERPC Committee organized	State task groups organized	State programs which are or will be underway by Dec. 31, 1962	Geographical areas established	Geographical areas which are or will be underway by Dec. 31, 1962

FUNCTIONS ASSIGNED TO DEPARTMENTS

Senator ELLENDER. Do not some departments assist in making this——

Mr. MCDERMOTT. Oh, yes. Under the present plan the President has issued nine Executive orders which have assigned these functions by Presidential order to the departments and agencies.

And I emphasize again that OEP is not an operating agency. We do not operate these programs.

It is being done by the in-being departments and agencies that have the greatest capability in the particular field.

Senator ELLENDER. The reason I asked is Senator Magnuson has

been trying to pursue the matter that each agency is asking for a separate sum in order to carry that operation out.

That is why I wanted to bring it out.

HOUSE ACTIONS ON DEPARTMENTS

Senator MAGNUSON. Yes, and what happened is that we used to have quite a hassle around here because they would have the agency do something and they would get the moneys and pay the agencies and we finally said that the agencies should come up themselves.

In connection with this I will place in the record a table taken from the Senate hearings on the Treasury-Post Office appropriations, 1963, setting forth the funding of emergency preparedness activities by agencies, and estimates set forth in the fiscal year 1963 budget.

(The table referred to follows:)

[Table from Senate hearings on Treasury and Post Office appropriations, 1963, p. 381]

Funding of emergency preparedness activities

[In thousands of dollars]

	Fiscal year 1962			Fiscal year 1963 budget estimate
	Appropriation	Appropriation transfers	Program funding [1]	
Office of Emergency Planning	86,550	−71,865	14,685	11,000
Office of Civilian Defense	207,600	+49,432	257,032	695,000
Department of Health, Education, and Welfare (medical stockpile)	13,000	+22,433	[2] 35,433	40,000
Department of Agriculture			(344)	305
Department of Commerce			(2,485)	2,801
Federal Aviation Agency			(121)	200
Department of Health, Education, and Welfare			(1,600)	2,106
Housing and Home Finance Agency			(161)	250
Department of the Interior			(429)	487
Department of Labor			(978)	1,285
Post Office Department			(11)	11
Veterans' Administration			(17)	17
Interstate Commerce Commission			(70)	175
Federal Communications Commission			(15)	68
Small Business Administration			(16)	42
Department of the Treasury			(67)	80
Total	307,150	0	307,150	753,827

[1] Figures in parens indicate funding supplied by OEP and OCD.
[2] Does not include comparative transfer of $314 thousand from OEP.

Senator MAGNUSON. And the House turned around and put it back on them again. So this is a matter that we will have to look at.

Senator ALLOTT. So that everything except for HEW and the medical stockpile——

Mr. MCDERMOTT. Correct, and we recommend the other procedure and, in fact, did not include this in our budget.

Senator MAGNUSON. All right. Now, let's go on here for just a little bit.

Mr. MCDERMOTT. I might, on that point, sir, mention that the staff has been advised that those agencies that are affected are here.

They each have a brief statement prepared and would be available if you would like to have them testify. Each has submitted a statement for the record.

Senator MAGNUSON. Well, we will talk to them in just a minute.

PLANNING CONTINUITY OF GOVERNMENT

Now, on page 7 of your report you say that you are responsible for the planning of continuity of Government?

Mr. MCDERMOTT. That is correct, sir. I would like to submit for the record an unclassified statement on continuity of Government.

CONTINUITY OF GOVERNMENT, FEDERAL LEVEL

Program

The continuity-of-Government program is designed to reduce the vulnerability of Government to attack, provide the necessary facilities, processes, and systems for coping with any emergency, and assure that our representative form of government may be reconstituted in the event of its disruption. This involves:

1. *Continuity of leadership.*—Lines of succession have been established by all Federal agencies but they are inadequate as to depth and geographical dispersal. Delegations of authority by heads of agencies to subordinate officials have generally been made but to an inadequate degree. Yet to be accomplished is the tieing of Cabinet level successors into the total command and control system; the establishment of stricter standards of adequacy for lines of succession, delegations of authority, and assurance of appropriate depth and dispersal; as well as effective implementation by departments and agencies.

2. *Emergency operating capability.*—(*a*) *Facilities:* Emergency operating sites have been established (93 for headquarters offices and 440 for field offices). Most of these have no protection against the effects of nuclear weapons; many of the headquarters sites are continuously activated but few to a meaningful degree. One protected regional center is under construction at Denton, Tex., region 5, and a second for region 1 has been approved by Congress.

During the past year the emergency facility program has been thoroughly reexamined in the light of the current military situation. During the coming year, adjustments in plans and concepts will be made toward a more effective and economical program.

(*b*) *Facility support programs:* Programs which support dispersed facilities have similarly been reviewed and improvements planned, particularly the emergency air transportation system and communications.

(*c*) Records: The program for the preservation of essential records is well advanced; however, the records reporting and evaluation system is to be improved and the program at the field level will be expanded.

(*d*) Response to warning: All agencies are in a position to receive and respond to emergency warning. Most major agencies have established single points of contact on a 24-hour basis, and have developed internal alerting systems.

Guidance, on an interim basis, has been provided all agencies on appropriate actions to take on warning.

During the coming year civil emergency actions will be closely integrated with those of the military. Under new planning concepts, a more positive state of readiness by all elements of Government will be achieved.

CONTINUITY OF GOVERNMENT, STATE AND LOCAL

Program

The State and local continuity-of-government program is designed to—

1. preserve leadership and authority.
2. preserve the structure of State and local civil government.
3. strengthen government's capacity for emergency operations.

To attain these objectives, legislation is needed in every State; ordinances are required in every locality. Each of the 50 States requires an amendment to its constitution before all of the necessary authority is available to its legislature. To facilitate such action, OEP and the Council of State Governments have prepared a sample constitutional amendment and six suggested acts.

Accomplishments

	Number of States approving
Proposed constitutional amendment approved by legislatures	[1] 34
Chief executive succession	30
Other executive succession	23
Legislative succession	21
Judicial succession	16
Local succession	26
State relocation	28
Local relocation	26
Records preservation and management	7
Total State legislative approvals	211

[1] 22 of these 34 have been ratified by the voters.

The 1963 plans

1. Encourage the States which have not already adopted the suggested constitutional and legislative measures to do so.
2. Encourage States to prepare plans for operating in an emergency. This will tie directly into the comprehensive program.
3. Work with county and city officials on local ordinances.

The total continuity-of-government program requires 25 people.

AUTOMATIC LINES OF SUCCESSION OF KEY OFFICIALS

Senator MAGNUSON. And that involves the provision of automatic lines of succession for key officials, the preservation and management of essential records, provision of emergency operating centers in less vulnerable locations than the Nation's Capital, and so on and so forth, and you would like to discuss that in executive session?

Mr. MCDERMOTT. That is a matter——

Senator MAGNUSON. All right. Is that agreeable with the committee, that part of it?

I think you covered most——

Mr. MCDERMOTT. I would like to make a little comment on the size of the agency, if you have any question about it.

RESTORATION REQUEST

Senator MAGNUSON. I was going to come to your specific request. You make this request to the Senate committee.

You ask—this is on page 5, members of the committee—that the original amount of $8 million be restored.

Mr. MCDERMOTT. $8 million, sir.

Senator MAGNUSON. $8 million.

EFFECT OF FAILURE OF REQUEST

And then you go on to say that the reduction of this amount to $4 million would eliminate the modest but vitally needed program of research and development, and you say it would seriously impair the ability to discharge the responsibilities that we have just been talking about.

Mr. MCDERMOTT. That is right. It would mean——

Senator MAGNUSON. Do you have anything more to add to that?

SIZE OF AGENCY

Mr. McDermott. No, we are down now—I have pared this agency down—I intend by November to have a total national and regional field office complement of 450 people, which is a reduction from 1,800 or 1,900 that were in OCDM.

Senator Magnuson. Well, let's not use that as an example.

Mr. McDermott. No, you are correct. My efforts have been directed of reducing OEP from 551 to 450.

Senator Ellender. They have more work, though.

Mr. McDermott. No question about it. We will reduce about a hundred in personnel.

Senator Ellender. You mean in work that you are doing?

Mr. McDermott. On our current responsibilities. We are getting down to about 450 people for our total responsibilities.

Senator Ellender. It sounds like you were overloaded to begin with.

Mr. McDermott. We have been able to reduce by 100. But I think we are at the minimum that we need and, of course, the action of the House would require a further reduction of about 50 percent of our personnel and would very seriously impair our emergency preparedness efforts.

CLARIFICATION OF HOUSE ACTION

Mr. Rice. May I clarify something?

The House report indicated a reduction from $11 million to $9 million. The $11 million we requested was strictly for financing OEP and the programs for which it is responsible.

The $9 million allowed by the House included the $5 million for the delegate agencies.

So as a practical matter, OEP in its request, was cut by the House from $11 million to $4 million.

Mr. McDermott. We did not ask for that $5 million that is now included in the $9 million in the House bill.

Senator Magnuson. All right. No. 2, you ask that language be restored permitting 1 million, under "Salaries and expenses" to remain available for studies and research.

Is that included in the eight?

Mr. McDermott. That is included in the eight, sir.

Senator Magnuson. All right.

Research and Development

Mr. McDermott. And we have a very limited research program.

Our research program in OEP is to monitor and avail ourselves of all of the research being done by DOD and other departments and agencies that relates to our problems.

However, there is a minimum amount of research that is not being done elsewhere, and we are asking for new funds there so they will be——

Senator Magnuson. You want to use part of your funds——

Mr. McDermott. Correct, we ask the right to use a million and a half.

Senator MAGNUSON. Well, what kind of a research do you do that you could not find in the departments?

NEW PROBLEMS

Mr. MCDERMOTT. Well, as the threat changes there are many new problems that arise; for example, the economic impact, the resource management, and economic stabilization impact of a nuclear attack upon this country, from the standpoint of our economy, has not been studied and is not being studied by the Department of Defense, for example. They look at it from the military standpoint.

Senator ALLOTT. The Office of Civil Defense group has been in here year after year and said that they were doing this.

Mr. MCDERMOTT. Well, they were while that was part of OCDM, but bear in mind, with the separation of these functions in the last year, that the Office of Civil Defense in the Department of Defense is continuing the research that is oriented to its program, but there is a void in this recovery and rehabilitation planning area that civil defense does not cover.

I emphasize that our research program is very modest compared with the civil defense program.

AUTHORITY TO USE FUNDS

And all we are asking is authority to have some of this salary and expense money available for that research when it becomes necessary, and if the research is not available elsewhere in the Government and it is more economic to have it done outside than to add to our staff to get it done.

Senator MAGNUSON. But if we should decide that you do not need to do this research, we should cut the 8 million by 1½ million.

Mr. MCDERMOTT. That is right, sir.

Senator MAGNUSON. Senator Ellender, do you have any questions?

Mr. MCDERMOTT. I would like to submit for the record my statement on that, which supports the kind of research unique to OEP and not available elsewhere.

(The information referred to follows:)

IN SUPPORT OF RESEARCH AND DEVELOPMENT FUNDS, OFFICE OF EMERGENCY PLANNING, FISCAL YEAR 1963

One of the basic responsibilities of OEP is to develop plans for the preservation of government and the mobilization of the economy during limited war or post nuclear attack. Realistic plans must be based on detailed and accurate knowledge of the effect of various degrees of war and nuclear attack on the economic resources of the Nation. Sophisticated analyses of our resources against probable damage patterns as well as the ability of our governmental and economic systems to perform under stress, require a substantial research effort. In the past, research was devoted primarily to civil defense/shelter design.

An important part of OEP's R. & D. effort is devoted to strengthening a national resource evaluation program. The National Resource Evaluation Center (NREC) is in a protected facility outside of Washington. NREC, using electronic computer techniques, makes estimates of casualties and resource damage and estimates of the condition of surviving resources under a broad spectrum of attack and other assumptions. NREC also makes estimates of requirements versus supplies; and it is now developing a capability to rapidly formulate production goals and programs that are consistent with stated priorities and at the same time are within the limits of available resources and manpower. Also

it is developing sophisticated analytical tools for analyzing the effects on the mobilization base of any proposed Government programs or changes in the economy. NREC provides estimates of the effects of hypothetical attacks on the U.S. economy for use by the National Security Council, the Department of Defense, and by other departments and agencies as well as by OEP. Consequently, our total defense posture is improved, and the estimates developed would be vital to survival and recovery operations in case of attack. To be of maximum service to other Federal agencies and to OEP, advanced computer and mathematical techniques have to be developed to handle the unending number of variables.

The Office of Emergency Planning depends, for the most part, on research and development sponsored by other agencies of the Federal Government. The small research office in OEP monitors all research that has an actual or potential bearing on OEP work. Research results are interpreted and presented in terms which are meaningful to those in OEP who are solving basic national security and nonmilitary defense problems and developing policies and programs for the maximum national preparedness.

There are, however, problems which require research and study which is not done in any other agency. These are problems which are vital to the national preparedness, and the failure to study and resolve them could mean the difference between the Nation's postattack recovery and its elimination as a first-rate economic power. The problems which require specialized skills and expertise outside the agency are illustrated by the following:

An examination in depth of the probable effects on manufacturing facilities, technical skills, transportation, energy sources, monetary systems, civilian versus military needs, communications, etc., of various plans and actions to preserve and restore the economy under a spectrum of nuclear attacks (ranging from limited to maximum destruction).

An analysis of the structure of the economy to determine the conditions and capabilities that would exist under a broad spectrum of emergency conditions. Such analysis would emphasize the interrelationships of all facets of the economy.

Economic analyses of imports in all of the related factors which affect specific industries such as textiles and apparel industries.

A study of the many possibilities for economic countermeasures for defense to identify the possibilities for success under varying conditions and to provide estimates of the costs of various countermeasures.

The development of computer techniques which will make instantaneously available the data upon which to base allocations of radio frequency channels to the various Government agencies. This will materially shorten the present manual procedures.

Analyses of local ordinances, governmental staffing, techniques, methods, and financing as they affect a State or local government's ability to preserve itself and reconstitute its authority postattack—pointing toward model laws or ordinances, staffing, lines of succession, records preservation, etc.

It could be argued that the agency should perform its own research of the type enumerated above. Each project is evaluated in this light before a decision is reached to contract for the work outside the agency.

As a general criterion, research is contracted out only when this is found to be the most economical means of getting the job done. In general, contract research requires special experience and expertise which a small agency like OEP cannot staff for permanently or on a short-term basis for each project. Further, the small OEP staff has a full-time job in taking the results of research, intelligence, international and national conditions, military and nonmilitary factors, etc., and applying them to the solution of basic national preparedness problems, developing national preparedness policies and designing specific programs to meet this Nation's nonmilitary defense needs. In addition, the OEP staff is involved on a daily basis with such continuing responsibilities as natural disaster, coordination of various executive branch departments in the total nonmilitary defense program, perfecting the ongoing programs, etc. All of these programs require an input of new ideas, concepts, thoughts, etc.; for example, a study of public reactions to the many Government actions that were taken in a disaster such as Hurricane Carla. This research will provide us with guides to improve the program, services, and effectiveness of assistance to State and local governments.

Most of the above studies attempt to relate the effect of various forms of conflict from limited war to nuclear attack upon the present structure of our

economy. It is also necessary to reverse the procedure. We need to develop a dynamic working model that predicts what effect alternative economic policies will have under each form of enemy conflict. In this connection, national policies on stockpiles are of prime importance, but systematic attention also must be given to those national policies and programs which influence international trade, economic growth, economic stability, industrial centralization, or dispersal, etc., and the effect of these policies on our strategic position.

To monitor and interpret research being performed elsewhere, to supervise research being performed under OEP contract, and to administer the national resources evaluation program, 20 people are required under the "Salaries and expenses" appropriation.

POSTATTACK PLANNING

Senator MAGNUSON. Any questions on the part of the committee? I guess not.

No. 3, you ask that the sum of $3 million be restored for State and local studies and research under the heading "Postattack planning."

Mr. MCDERMOTT. Correct.

Senator MAGNUSON. Is that in addition to the eight?

Mr. MCDERMOTT. Yes, the 8 and the 3 make it 11.

Senator MAGNUSON. What did the House give you on that?

Mr. MCDERMOTT. They eliminated that. Now, I would like to submit for the record a paper on this program.

(The material referred to follows:)

POSTATTACK PLANNING PROGRAM ($3 MILLION)

The Office of Emergency Planning has been assigned the overall responsibility for the national planning in the areas of stabilization of the economy and management of resources. Federal plans have been developed to carry out these functions, but nuclear attack on this country might be so devastating that some period of time may exist before Federal plans could be implemented and Federal management of the economy and national resources applied. During such an interim period we must rely on the States and local governments to use their authorities to exercise this management in the national interest.

To assist the States and local governments in preparing for this task, we have developed a comprehensive program for the survival of government and for the management of resources, together with an organization and planning guide, and have instituted a series of conferences at which these activities are being explained to the officials of State and local governments.

The concept of preparing State and local governments to use their authority to carry out the Federal responsibility of managing resources in the national interest is new. This concept has been brought about by the increased capabilities of our possible enemy to deliver greater numbers of megaton yield weapons upon this country.

The States and local geographic areas, in previous planning, have only considered the necessity of managing their own resources for the immediate survival operations. They have not considered the problem of conserving resources in the national interest so vital to this Nation's rehabilitation. In its 11th annual report the Joint Committee on Defense Production pointed out:

"Mobilization for general war involving a nuclear attack is so broad in scope that each department and agency of the Federal Government and each State and locality has responsibilties which are so vast as to involve many unanswered questions. The achievement of preparedness for such an emergency will be highly dependent upon the development of mobilization plans followed by such action programs as will provide the means to retaliate against enemy forces, provide warning and protection for the population, and the means for rehabilitation."

Since the Federal Government is asking the States to perform this task in the interim period, we propose to support the States and local areas' development of emergency resource management plans consistent with policies, plans, and procedures of the Federal Government. This support will include: Funds for staff salaries, travel, telephone communications, and printing; technical assistance, guidance, and program coordination. The States would agree to pay the full

salary of an Emergency Planning Director and provide technical and other administrative support necessary to carry out the program.

We have received assurances that organizations and individuals in the private sector of the economy will contribute time and effort to this planning. It is estimated that the private sector contribution amounted to 60 percent of the total cost of a pilot program completed last year in Sonoma County, Calif.

We and the States will make use of all data previously collected under FCDA and OCDM programs, plus data presently available in the States and local areas.

We will require that State and local plans be consistent with Federal policies, plans, and procedures, so that Federal management can be assumed without delay. Also, to assure proper use of Federal funds, the States and local areas will be required to follow standards and procedures set forth in an "Administrative Manual for the Development of State and Local Emergency Resource Management Plans," already developed by OEP.

We will solicit proposals from the States and will consider those meeting OEP requirements in the order received. We will concentrate on approximately 15 States and 30 local areas in the first year. We will expand the program as rapidly as possible to cover all the States and as many local areas as possible within the funds available. This program will not continue beyond the development of plans for all States and those local areas OEP determines necessary in the national interest. A 3-year program is planned.

In addition to providing funds for salaries, travel, telephone communications, and printing, the Federal Government will provide technical support and specific planning assumptions to each State and local area.

Funds will be allocated to the States based on population, with an adjusted minimum of $35,000 and maximum of $116,700 for States more sparsely populated. The $3 million requested this year will be allocated to the States within maximums and minimums on a scale in the order their proposals are received, not to exceed the overall limit. We expect to receive proposals from approximately 15 States and 30 local areas during fiscal year 1963. This is based on our estimate of the number of States and areas which will meet the requirements set forth in the manual, a prerequisite to submission of proposals. We will expand the program as rapidly as possible within moneys made available.

STATE PARTICIPATION IN POSTATTACK PLANNING

Mr. McDermott. Briefly, what is behind it is this:

Going back to an earlier statement that I made about the necessity of developing a capability at State and local levels to deal with the problems of resource management, allocation and economic stabilization, in a postnuclear attack where the Federal direction may be disrupted, if we are going to develop that capability it is up to the States to perform a traditionally Federal function.

We have met with the Governors and have done a lot of preliminary work in this area, and the States are ready to go ahead.

Leadership from the private sector is volunteering its help at this time at the State and local level, but we must support to a limited degree this activity by the States. There will be a substantial contribution by the States.

We would expect that the Federal contribution to this would be something in the area of 20 percent of the total cost. We have developed a detailed manual and guides on this program which we will submit to the committee for review which will explain the full details.

REGIONAL OFFICE ACTIVITIES AND PERSONNEL

Senator Magnuson. Does this involve the activities of your field people?

Mr. McDermott. It does to a degree.

Senator Magnuson. How many people do you have in the field that will participate in this program with the States?

Mr. McDERMOTT. We have a total personnel in the field of 107.

Senator MAGNUSON. Is this included in your 450?

Mr. McDERMOTT. The 450? Yes.

Senator MAGNUSON. And these are the people that are so-called regional directors——

Mr. McDERMOTT. And their staffs.

Senator MAGNUSON. And their staffs that work with the States?

Mr. McDERMOTT. Correct. Now, what we have done in the regional offices is we have reduced the size of those staffs slightly to get us within this 450 personnel.

We have converted our regional office personnel from specialists, or are in the process of doing it, from specialists to generalists.

We are training our regional office people to be knowledgeable across the board in all of the problems for which OEP is responsible in the field.

As an improved service to the States rather than having seven or eight different people from the OEP regional office dealing with the Governors and making personal decisions, we are going to have one man from the regional office assigned to a particular State who will cover all programs across the board, natural disaster, resource management, economic stabilization, continuity of government, and so on.

We have very small regional staffs, ranging from 9 to 13 people. I would like to insert for the record a statement supporting the need for our regional offices.

(The statement referred to follows:)

JUSTIFICATION FOR OEP REGIONAL ORGANIZATION

In discharging its responsibility for resources mobilization planning and continuity of Government ODM concentrated on the Federal level, ODM's principal efforts at the field level were aimed at establishing relocation sites for agency field establishments and participation in the annual exercises (Operation Alerts). Because of the limited field activity, ODM carried out its limited field responsibilities through a regional mobilization committee which consisted of various resource agencies. The committee was chaired by a coordinator designated by ODM from one of the participating agencies.

The lack of substantive field activity by ODM was due to the status of mobilization planning at the national level and the prevailing concept of Federal responsibility during an emergency. In the first instance, basic national policies and plans were still in the developmental stages requiring the closest coordination with the other Federal departments and agencies principally at the national level. Implementation at the field level was dependent upon their further development and refinement. In the second instance, mobilization planning was proceeding on the basis that the Federal Government would manage and control the economy and all resources during and after an emergency. Consequently, no preattack or postattack mobilization responsibilities were assigned to State and local governments. Their primary concern was civil defense. Hence, the lack of sufficient reasons for an ODM regional organization.

OEP's responsibilities and current national preparedness policies and concepts are significantly different and require a regional organization to carry them out. Specifically:

1. The national plan for civil defense and defense mobilization not only spelled out basic nonmilitary defense policies but assigned mobilization responsibilities to the Federal Government and to State and local governments. This represented a major change in the previous concept. The issuance of the 15 emergency preparedness orders, the subsequent issuance of superseding Executive orders began to bring the full resources of the Federal Government to bear upon the problems of nonmilitary defense. OEP regional offices assure that adequate plans and programs are developed by the Federal field establishments and are properly coordinated with each other.

2. With the State and local governments now having postattack responsibilities for the economy and resources, on the spot, guidance and assistance by OEP is required in the development of plans and programs and organizations. The OEP regional offices must work not only with the State and local governments but with Federal agencies to make certain that the Federal plans are properly integrated and coordinated with those of the State and local governments.

3. The regional offices represent, in the field, the many programs and responsibilities of OEP. Specifically they work with State and local officials in getting emergency planning legislation and ordinances, planning relocation sites, testing emergency plans, training State and local staffs, etc. Another important responsibility is the administration of the Natural Disaster Act, Public Law 875. During disasters the regional offices provide the information upon which the Director, OEP, bases his recommendations to the President for the declaration of major disasters. Regional offices coordinate the activities of the various Federal agencies who provide assistance to stricken communities. The review requests from the States for financial assistance for specific projects.

The specific accomplishments in the regions that are enumerated under each of the OEP programs are a total reflection of the accomplishments and success of the OEP regional offices.

The regional organization requires a total of 93 people supported by the "Salaries and expenses" appropriation.

SENATE POLICY

Senator MAGNUSON. Now, would you say that this program is carrying out the policy that the Senate, on five or six occasions, I believe, have had full discussions on and votes on, and that is on the principle of turning most of this actual work in civil defense back to the local people?

GOVERNORS' SUPPORT OF POSTATTACK PLANNING

Mr. MCDERMOTT. The analogy would be accurate although I emphasize again this is not civil defense in its traditional sense. This is recovery or rehabilitation planning.

Senator MAGNUSON. Well, which is part of the picture?

Mr. MCDERMOTT. Which is part of the picture, correct.

Senator MAGNUSON. And do you——

Mr. MCDERMOTT. Now, we find, encouragingly, that while the States have done very little, or hardly anything in this area up to the present time, that the Governors are very interested in it.

The Governors are aware that should there be an attack upon this country, and a substantial disruption here in Washington, that they are going to have a whole bag of problems that are presently unfamiliar to them in the administration of their responsibilities as Governors, such as the management of resources and the stabilization of the economy, and if we do not create that or assist in creating that capability at the State level, what we are fighting to save could very well be lost, and chaos could follow in a few weeks.

Senator MAGNUSON. All right. Any questions?

ASSISTANCE TO STATES

Senator ELLENDER. Are there any funds being asked for in order to assist the States, as in the case of last year or the year before?

Mr. MCDERMOTT. The $3 million, sir, is for that purpose under a set of guidelines which has been fully developed and which will be submitted to the staff.

Senator ELLENDER. Will these people be hired by you?

Mr. MCDERMOTT. No, they will be hired by the State under their merit system.

Senator ELLENDER. I see. So that it is almost the same thing except that you do not cover as much territory as you did before?

Mr. MCDERMOTT. Correct. This is part of a 3-year program, and we are asking for no-year funds.

So it is all detailed in this written submission that is being made to you, and I would ask that the staff and committee carefully consider it.

FUNDS FOR SALARIES OF STAFF

Senator MAGNUSON. Is part of the $3 million to be used to pay part of the salaries of the State employees?

Mr. MCDERMOTT. Correct.

Senator MAGNUSON. But part of it is also to pay your employees?

Mr. MCDERMOTT. No, sir.

Our personnel, our regional office personnel, will be paid out of our regular "Salaries and expenses"——

Senator MAGNUSON. That is what I mean. You have regular employees——

Mr. MCDERMOTT. Correct.

Senator MAGNUSON. The hundred and something that you mentioned, but the State also has employees and part of this money will be used to pay part of their salaries?

Mr. MCDERMOTT. Sir, this is a program that has not yet been developed.

This is not an on-going thing. This is a new effort.

Senator ELLENDER. Your part will be paid out of the $8 million?

Mr. MCDERMOTT. Correct.

Senator ELLENDER. And the $3 million will be used to assist the States in paying——

Mr. MCDERMOTT. Correct.

Senator MAGNUSON. Oh, I see.

Mr. MCDERMOTT. You are correct, Senator.

Senator MAGNUSON. Your people are covered in your "Salaries and expenses," the $4 million that the House gave you and the $8 million that you are asking for.

This is a separate——

PILOT STUDIES OF POSTATTACK PLANNING

Mr. MCDERMOTT. On the basis of a couple of pilot studies that we have had made in Sonoma County, Calif., and elsewhere, State participation and the volunteer effort of the private sector leadership in this type of planning has contributed 80 percent of the cost.

In other words, the Federal Government would be supporting about 20 percent of the total cost of this activity at the State level.

I think it is a bargain in terms of developing this capability and in getting the States ready to carry out what is otherwise——

Senator ELLENDER. What was the percentage before you reduced it as much as you have?

Mr. MCDERMOTT. Well, we have no experience with this, Senator Ellender, on which I could give you a reasonable answer.

Senator ELLENDER. No, no, I mean in respect to the demands or the requests that were made in prior years.

I am sure that the amount that you asked for, in order to contribute to the States for this contribution is much more than $3 million.

Mr. MCDERMOTT. That was in the civil defense budget.

Senator ELLENDER. But on the same principle?

LOCAL GROUPS BEST QUALIFIED FOR RECOVERY PLANNING

Mr. MCDERMOTT. Yes, but different in this respect, in terms of developing a rehabilitation and recovery plan for a particular State, because of the geographical and economical differences and many other differences that distinguish one State from the other, we find that it is State government and private sector leadership that are best qualified to do this kind of planning, your transportation specialists, your utility people, and so forth.

Now, unlike civil defense programs where under your matching program there you pay part of everybody's salary, in this program, as our submission will indicate, we pay only a limited number of administrative people and the bulk of the talent is volunteered from the private sector within the States.

Senator ELLENDER. Well, I wish other departments of Government had the idea that the local people could do a better job than the Federal people.

I am glad you admit that.

GOVERNOR'S CONFERENCE ENDORSEMENT OF PROGRAM

Mr. MCDERMOTT. We are very encouraged at the response to this, and I think that people do demonstrate a willingness to participate.

This was the subject of a considerable discussion at the Governors' Conference in Hershey early last month, and the Governors, in a resolution, heartily endorsed this program and that will be submitted to you for the record.

And I must say that all 50 Governors, without a single objection, are cooperating fully.

(The information referred to follows:)

EXCERPTS FROM REPORT AND RESOLUTION OF GOVERNERS' CONFERENCE ADOPTED AT HERSHEY, PA., JULY 1–4, 1962

The following excerpt is from page 5 of the report of the committee on civil defense.

"* * * there is now evidence of far more vigorous and effective Federal action in the fields of both civil defense and postattack recovery than has been the case for many years past. In view of all the foregoing considerations, it is our belief that the 1962 Governors' conference should urge all States to realine or reorient their own internal organization as necessary to insure a maximum of coordination and support for both the Office of Emergency Planning and the civil defense elements of the Department of Defense in the development and implementation of their respective action programs. Your committee plans to keep this matter under continuing review over the coming months and to offer additional comments and recommendations at the 1963 Governors' conference.

One section of the resolution provides that each State should:

"(*k*) Cooperate with the Federal Government in a program of studies, research and general education in the area of postattack recovery and rehabilitation measures and procedures * * *."

Other sections provide:

"4. *Further resolved*, That the committee on civil defense undertake a study of the problems of recovery and rehabilitation following a nuclear attack and report to the 1963 Governors' conference as to the feasible steps which might be taken by all levels of government in cooperation with private institutions to strengthen our capacity as a nation not only to survive but to recover with all possible speed from any nuclear attack against us; and

"5. *Further resolved*, That the name of the "Committee on Civil Defense" of the Governors' conference be changed henceforth to "Committee on Civil Defense and Postattack Recovery."

EXPERIENCE BASED ON PILOT STUDIES

Senator ALLOTT. Mr. Chairman, I want to get this clear: First, you have no experience upon which to base this program to date?

Mr. MCDERMOTT. Other than some pilot studies that have been run, for example, in Sonoma County, Calif.

Second, a virtually year-long series of discussions and staff work and conferences with the Governors in the development of this.

Senator ALLOTT. Where is Sonoma?

Mr. MCDERMOTT. In California.

Senator MAGNUSON. Back of San Francisco. It's a nice place to conduct studies.

Mr. MCDERMOTT. I have never been there, sir.

STATES COMMITTED TO MATCHING PROGRAM

Senator ALLOTT. All right. What States do you have that are already committed or committed by law to have authority to match your program, because this would involve the States putting up $15 million on the basis of what you suggest as 20 percent.

Mr. MCDERMOTT. Not exactly, sir, because under this program as we are proposing it, we would support certain administrative staff costs at the State level.

The bulk of the work, the planning work, is being done or would be done not by Government people but by private sector people, by the representatives of transportation and public utilities and so on.

And we have found that so far they are willing to volunteer their time, and the industries and the businesses that they represent are willing to make their time available for that purpose.

Senator ALLOTT. You are going to appoint administrators up to the extent of about 20 percent of the total——

Mr. MCDERMOTT. The Governors would. The Governors would under the particular State's merit system. There would be certain limited staff support for which we would reimburse the State under a contract, the details of which are in the written submission that we are making to the committee and your staff.

BASIS OF PROGRAM

Senator ALLOTT. And what you are going primarily on now is your pilot plan study in this very pleasant place that the chairman speaks of, and also the resolution of the Governors' conference, and this is what we are building this program on at the present time?

Mr. MCDERMOTT. No, sir; it is considerably more than that.

Of course, I must say this, in all fairness, that we have not moved as far as I would like to in this because there is no point in getting a lot

of activity agitated at the State level if you are not going to be able to carry it through.

However, this program has been discussed personally with each Governor. It has the uniform support of the 50 Governors.

APPOINTMENT OF EMERGENCY PLANNING DIRECTOR

Some 45 Governors have already appointed emergency planning directors who would supervise this.

Senator ALLOTT. Forty-five?

Mr. MCDERMOTT. Forty-five, many of these people are volunteers. Some of them come from the private sectors. Some of them come from the governmental sector, but 45 States have made those appointments.

Others—it may be 46 today or tomorrow, but I feel that within the next few months all 50 States will, and when you say there is nothing on which to base it you are correct in that we have no experience or we had no experience last year, but I feel that the studies that we have made indicate that this is going to work, and it is going to be much cheaper than the Federal Government doing this job itself or attempting to do the job itself by putting Federal people in the individual States to develop these plans and programs.

Senator MAGNUSON. Off the record.

(Discussion off the record.)

Senator MAGNUSON. All right; now we get into page 6, No. 4.

Senator ALLOTT. Well, let me ask this——

Senator MAGNUSON. Oh, excuse me.

Senator ALLOTT. There is one aspect about this on which I have not quite finished.

Senator Saltonstall spoke about this, and he is a member of this committee——

Mr. MCDERMOTT. Yes, sir.

Senator ALLOTT. And he is very interested in getting this back to the local level. I am inclined to be sympathetic to that.

Now, in view of the fact that before you get this money 2 months of the year are going to be passed, and if legislation is necessary it is going to be February of next year before any of the Governors could really act on this thing, are you going to be able to utilize all of the $3 million?

ENABLING LEGISLATION NOT REQUIRED

Mr. MCDERMOTT. Well, first of all, sir, no Federal enabling legislation is necessary.

Senator ALLOTT. No; I am speaking about the States.

Mr. MCDERMOTT. And the Governors tell me that no State legislation is required, that they can do this under their existing powers and authority.

There is no State that has indicated that any legislative action is necessary for them to proceed with this.

That has been checked out with——

Senator ALLOTT. Now, I just cannot quite go along with this.

If a Governor has to get money in order to bolster a part of this—unless some of them happen to have some in an emergency fund, are they not going to have to go to their State legislatures?

Mr. McDermott. Well, there are emergency funds and also the State people participating are the people who have other responsibilities in State government and, as a matter of executive assignment, devote some of their attention to this problem which they have not done in the past.

Now, we explored this with Governor Rockefeller and his committee, which is the committee of the Governors' conference that has general jurisdiction in this area, and it is their feeling that the States can fulfill their obligation without enabling legislation.

DELAY IN PROGRAM

The problem of the 2 months is this: I feel it would be ill advised for us to go any further with this program until we know what the Federal attitude toward it is going to be.

I regret, of course, the delay, but I would prefer not to move further with the program until we see what action is going to be taken.

Senator Allott. But you have done away with one-sixth of the year?

Mr. McDermott. That is right, sir.

Senator Allott. Now, is the $3 million all going to be necessary?

REQUEST FOR NO-YEAR FUNDS

Mr. McDermott. We are asking for no-year funds. There is no way for us to predict the extent to which the States will be able to respond to this.

Our best estimate is, and again this is a matter of consultation with the Governors, but our best estimate is $3 million, but if you will notice in our appropriation we are expressly asking for no-year funds so that if the States are not ready in this 10-month year to proceed we will not disburse all of those funds.

And we will make an accounting to this committee and to other committees as to the use of those funds on subsequent occasions.

Senator Allott. In your statement you say it would be run for 3 years only.

Mr. McDermott. Well, we feel that because of the varying degrees of readiness that exist in the States and because the attitudes existing in the States vary slightly, I think realistically it would take 3 years for all States to have completed this work.

We have to have some goal, and we have selected a 3-year goal as a realistic one.

But once this thing is done, then it is done for the future.

Senator Allott. That is all.

Senator Magnuson. All right. We will proceed quickly then if there are no further questions to page 6.

CIVIL DEFENSE AND DEFENSE MOBILIZATION

We get down to the item, item No. 4, concerning this $5 million which you asked for civil defense and defense mobilization functions of Federal agencies, or, rather, you have asked that it be increased to $6,876,000.

Now, you also——

Mr. McDermott. Now, sir, let me correct the record there.
Senator Magnuson. That is what it says.

INCREASE REQUESTED

Mr. McDermott. No, we ask that the sum of $5 million for civil defense and defense mobilization functions of the Federal agencies, which was included in the House bill, be increased to the requested amount of $6,876,000, but this goes back to something that we talked about earlier.

We didn't ask for the $6,876,000 initially. That was asked for by the departments and agencies who had received these assignments by Executive order.

The House action gave us the——

Senator Magnuson. $5 million?

Mr. McDermott (continuing). $5 million for that purpose, which we did not ask for.

Senator Magnuson. Sir, if we want to follow your recommendations we will cut this out.

Mr. McDermott. Well, either/or. If you are going to follow the House and say that we should have this money and disburse it——

Senator Magnuson. Then we should——

Mr. McDermott (continuing). Then it should be the total amount of the request, the combined request, of these agencies and they are here to support their individual requests, and I will not speak for them.

Senator Magnuson. But if we desire to go the other way, we do not appropriate anything?

Mr. McDermott. To us, you would not, but you would include it in the appropriations to the departments and agencies if that is still possible.

Senator Ellender. To the amount of $6,876,000?

Mr. McDermott. That is correct.

Senator Magnuson. This off the record.

(Discussion off the record.)

SUMMARY OF 1962 OBLIGATIONS

Senator Allott. I have before me a summary of these obligations submitted last year——

Senator Magnuson. Let's take them up separately.

Senator Allott. Yes, but why do we not put this memorandum in the record?

Mr. McDermott. That would be agreeable.

Senator Allott. They show what they did last year.

Commerce has $2½ million in here, and they want $2.8 million this year, and it is going to be pretty difficult to justify.

We have been through this many times.

Senator Magnuson. Here is——

Mr. McDermott. Yes, sir.

Senator Allott. And I feel that these——

Mr. McDermott. We will submit that for the record.

(The information referred to follows:)

Summary of obligations by activity

	1962	1963 estimate	House action
Civil defense and defense mobilization functions of Federal agencies:			
Agriculture	$653,645	$755,000	
Commerce	2,485,282	2,800,700	
FAA	121,000	200,000	
FCC	15,300	67,509	
HEW	627,500	706,500	
HHFA	160,875	250,000	
Interior	429,100	486,500	
ICC	70,000	175,000	
Labor	978,348	1,285,000	
Post Office	11,000	11,000	
Treasury	67,363	80,000	
SBA	16,200	42,000	
VA	16,700	17,000	
Total	[1] 5,652,313	6,876,209	$5,000,000
Civil defense medical stockpile activities (emergency health services, HEW)[2]	36,765,000	41,445,000	5,500,000
Grand total	42,417,313	48,321,209	10,500,000

[1] The 1962 appropriation for civil defense and defense mobilization functions of Federal agencies was $5,000,000. However, additional funds were provided by OCD.
[2] This appropriation is being appealed separately by DHEW.

JUSTIFICATION OF AGENCY REQUESTS

Senator MAGNUSON. We will take these up later.

Senator ALLOTT. Just this part in the record is what I want.

Mr. RICE. Each of the subsequent pages justify the requests of each of the agencies.

Mr. MCDERMOTT. Yes, and they are going to do that individually.

Senator MAGNUSON. They are going to do that individually?

Now if you will, gentlemen, permit us, these gentlemen are here now and they both have short statements.

Mr. MCDERMOTT. Thank you very much.

Senator MAGNUSON. Thank you very much for appearing.

(Statements on the civil defense and defense mobilization functions of Federal agencies follow:)

STATEMENT OF ROBERT S. REED, SPECIAL ASSISTANT TO THE SECRETARY OF AGRICULTURE

Mr. Chairman and members of the committee, my purpose in being here is to give you a brief explanation of the plans of the Department of Agriculture for use of the funds for civil defense planning included in the USDA budget for 1963. The $755,000 included in the budget estimate for 1963 provides for a slight increase and some change in emphasis in our defense activities. The budget items being discussed here are largely to replace funds formerly allocated to Agriculture from OCDM and its successor agencies.

During the last year, the Secretary has completely realined defense planning work within Agriculture to give added impetus to the program. This was done to carry out Executive orders assigning the Department added responsibilities and to improve our readniess. In part, this increased work was made possible by the transfer of funds from Office of Emergency Planning and Department of Defense. A great share of the added emphasis, particularly by the newly established USDA State and county defense boards, was by people in the Department with other full-time assignments.

As you are aware, giving increased responsibilities for a defense program to Department people who already have a full-time assignment creates problems. But I can report that these people have found time to do an excellent job in developing a capability to carry out Agriculture's emergency responsibilities. In some States, however, the full job of organizing and developing the capability

needed to meet emergency responsibilities cannot be carried out with the present arrangements. The same is true with that part of the Department charged with working with industry to assure their undertanding of our plans and their developing their own capability to service and operate under an attack on this country.

The Secretary, late in 1961, named me to coordinate the defense work of all agencies within the Department. My Assistant and I with our secretaries constitute the entire defense coordinating staff. We also coordinate the natural disaster program responsibilities of Agriculture. In May 1962, the Secretary directed that the natural disaster operations of the Department should be used as a means of training our people to meet any defense emergency. Our primary emphasis has been on developing a capability by the field staff of USDA to carry out the food, fire, and other defense responsibilities of the Department even if national direction is interrupted by an attack on our Nation. This has been done with continued emphasis on the national level planning that provides guidance to the field people.

As you will note from the budget estimate, assistance for USDA State and country defense boards and food management planning are the two areas for which considerably increased funds are requested. Our USDA State defense boards are developing agreements or memorandums of understanding with the State governments on how to handle postattack food problems. Such agreements have been formally signed with over one-fourth of the States and in the majority of the other States negotiations are underway or oral agreements have been reached on division of responsibility subsequent to an attack. Since some of these agreements include considerable advanced planning, additional help is needed in some States. Also, as understandings are developed with the States, then the USDA county defense boards must be trained to understand their emergency responsibilities. Also, this adds to the need for us to advise the food industry of these State and Federal plans so they will know what to expect and their own responsibilities in an emergency. Many of the food industries have asked us to provide them with more such information so they can perfect their own plans.

Funds requested for the rural defense information and education program and for radiological research, training, and monitoring are about the same as used in fiscal year 1962. Both of these programs are carried out in close cooperation with the Office of Civil Defense, Department of Defense, which has indicated it will continue to assist by supplying publications, monitoring instruments, and other support for these USDA programs.

Additional funds are requested to permit USDA to have full-time representation at the OEP-OCD regional offices. The importance of these regional offices will be explained by these agencies. A USDA representative at these offices is necessary if USDA is to have a capability to provide regional level coordination and direction in case an emergency renders the national offices inoperative.

The funds requested for economic research related to defense will make possible the initiation of special studies needed to support other USDA programs and to provide data for the OEP National Resources Evaluation Center. This work will be in addition to the special studies of quantities of food in homes and wholesale stocks which were undertaken cooperatively with the Office of Civil Defense in 1962.

I appreciate this opportunity to briefly describe our defense plans to the committee. I have with me several of our people who will be glad to answer any questions you may have on particular items in our budget request.

STATEMENT OF HOWARD J. SIMONS, DIRECTOR, DEFENSE SERVICES STAFF, AGRICULTURAL STABILIZATION AND CONSERVATION SERVICE, U.S. DEPARTMENT OF AGRICULTURE

If USDA does not have capability to function in the field in the immediate postattack period, it may not function at all during this period. This is true since lack of communication may make it impossible for national headquarters to direct activities for some time. USDA State and county defense boards and regional liaison representatives are vital parts of the USDA emergency field organization.

Assistance to USDA State defense boards

The request for $200,000 is designed to provide necessary assistance to USDA State defense boards.

A USDA State defense board has been established in every State and in Puerto Rico and the Virgin Islands in order to mobilize the field capability of USDA for use in an emergency. The chairman and members represent the various agencies of USDA which have important defense responsibilities in the field and they attempt to carry out their defense responsibilities along with other regular duties. The boards have no staff members who are concerned primarily with defense.

Defense policies and instructions have been issued to the USDA State defense board chairmen in accordance with Executive Order 10998, along with lists of work priorities. Many of the defense board chairmen find it impossible to carry out the full range of their defense assignments because of the pressure of other activities. This situation has caused many of the chairmen to recommend that funds be obtained to provide necessary assistance specifically on defense. Since there is no counterpart of the State board chairman in the current organization of the Department, the chairman cannot carry the full load himself nor is it possible in many States to call upon other regular personnel to provide the assistance needed.

The responsibilities of the chairman of the USDA State defense board are heavy. He is responsible, for example, for determining with State Governors or officials appointed by the Governor the proper relationships to be maintained between USDA and State and local government in the event of emergency. These and related understandings must be prepared in writing and kept up to date. The State defense board chairman must assure himself that all segments of USDA in the State are prepared to function effectively and in a coordinated manner in an emergency. He must take the lead in training the USDA county defense boards and assisting them with emergency preparations. In addition to these duties, the State defense board chairman is executive secretary of the USDA State disaster committee and he must be kept up to date on natural disaster activities.

Regional liaison representation

The $183,000 in the budget is to build the regional liaison representative staff back to full strength so USDA will have a full-time regional liaison representative and a full-time secretary in each of the eight regions which are the same as the regions used by the Office of Emergency Planning, and the Office of Civil Defense of the Department of Defense. Since only $150,095 was available for this purpose in fiscal year 1962, the full-time regional liaison representatives were reduced from eight to four in the middle of the year, although the eight full-time secretaries were retained. Regional liaison assignments in the other four regions were given to employees with other regular duties.

The four part-time regional liaison representatives find it impossible to carry out effectively the regional liaison responsibilities, at the same time keeping up with other regular responsibilities. To remedy this situation, four additional full-time regional liaison representatives are needed. The Director of the Office of Emergency Planning has urged that USDA maintain a full complement of full-time regional liaison representatives.

The regional liaison representatives are responsible for maintaining continuous liaison relationships with the Office of Emergency Planning, Office of Civil Defense of the Department of Defense, and other Federal agencies at the regional level. The regional liaison representative assists the Office of Emergency Planning, for example, in correctly interpreting USDA policy to State government and in interpreting Office of Emergency Planning policy to USDA officials on both defense and natural disaster activities. The regional liaison representatives are receiving an increasing number of requests from USDA State defense boards for technical assistance in defense planning. The full-time regional liaison representatives have been helpful in this, particularly as functions of the State boards relate to regional level activities. Regional liaison representatives are responsible for readiness of USDA to discharge its emergency responsibilities under Executive Order 10998 at the regional level. For example, the regional liaison representative must be ready to direct all activities of USDA in a postattack situation if communications with USDA national headquarters are cut off. Those who are located full time at regional offices of the Office of Emergency Planning and Office of Civil Defense of the

Department of Defense during the preemergency period are in a position to serve promptly and effectively in an emergency situation.

DEPARTMENT OF AGRICULTURE

Defense preparedness in the Department of Agriculture is organized to perform the functions delegated to it by the President in Executive Orders 10958 and 10998. The 1963 budget request for $755,000 for defense work in USDA reflects the broadened responsibilities in the emergency assignments under these Executive orders. To carry out the added responsibilities as reflected by Executive Order 10998, the following are included in the USDA budget request for 1963:

Recapitulation of estimates:	*1963 budget*
(*a*) Assistance to USDA State and county defense boards	$200,000
(*b*) Food management activities	200,000
(*c*) National defense planning and coordination	52,000
(*d*) Rural defense information and education	60,000
(*e*) Radiological research, training, and monitoring	30,000
(*f*) Special defense surveys and analyses	30,000
(*g*) Regional liaison	183,000
Total	755,000

(*a*) *Assistance to USDA State defense boards, $200,000*

These funds are to provide minimum essential assistance to USDA State defense boards in developing local plans to meet emergencies that could arise. The chairmen and members of the State defense boards carry out their defense assignments in addition to other regular work. Defense policies and instructions have now been issued, the boards have been established, and the chairmen of many of the boards need assistance to carry out the responsibilities assigned to them under Executive Order 10998. There is no counterpart of the defense board chairman in the present organization of USDA and he cannot easily call upon regular personnel to give him the additional assistance needed. In recent meetings, the State board chairmen have urged that assistance be provided to them. The chairmen have or are developing and maintaining understandings with State government and the food industry and other groups, coordinating defense planning at the State level and training and directing county defense board members. Readiness to function in event of an emergency is of the utmost importance in the field since communications with national headquarters may be cut off in the immediate postattack period.

(*b*) *Food management activities, $200,000*

These funds will be used principally to accelerate work with the food industry to develop a readiness to meet whatever situation might arise from an attack on this country. Considerable progress has been made on a part-time basis by commodity and distribution technicians carrying on regular nondefense assignments in initiating defense food management activities. Additional funds will permit working more closely with the industry and State governments on plans to assure continued production and processing of food, salvage when feasible, and by increasing the likelihood of a continued flow of food in a postattack situation. State governments and the food industry must be given more specifics and more details on their assigned roles in an emergency

Examples of accomplishments last year by the total effort devoted to this work included:

(*a*) Assignment of specific defense roles to each organizational unit;

(*b*) Development of preliminary food management plans and procedures for use at State and county levels;

(*c*) Clarifying principles governing understandings with State governments on postattack food resources management;

(*d*) Refining arrangements to accommodate the procurement of military food supplies; and

(*e*) Holding series of 2-day food management training meetings for a few State and regional personnel of the Department.

The present program level will have to be accelerated substantially to meet State, local, and industry demands for guidance. Work must be stepped up on developing standby food orders, and in extending and intensifying the training of agency, State, county, and industry personnel in emergency food management principles and procedures. In addition, much work needs to be done to develop

information about sources of supply and distribution patterns of individual food facilities, and to identify problems in food processing and distribution which would likely prevail in an emergency.

(c) National defense planning and coordination, $52,000

Coordination of the defense work in Agriculture with its natural disaster operations and its regular program activities is carried out in the Office of the Secretary. The Office of the Special Assistant to the Secretary for Defense to perform this function was established in the middle of the fiscal year 1962, and the funds requested will maintain the present two-man staff with secretarial help. This Office has realined defense assignments within USDA to make better utilization of available personnel and revitalize the field staff. This has resulted in development of memorandums of understanding with State governments on how postattack food responsibilities will be handled in 12 States with negotiations for such mutually desirable arrangements underway in all other States. This Office also provides liaison with other Federal agencies on defense matters.

(d) Rural defense information and education program, $60,000

The rural defense information and education program plans to use these funds for staff and developmental costs of special publications, visuals, leaflets, and other information materials for distribution through the Cooperative Extension Service to farmers and rural people to acquaint them how to protect themselves, their livestock, and crops from the effects of a nuclear attack.

As provided in Executive Order 10998, this program is developed and carried out in consonance with the Office of Civil Defense. In fiscal year 1962 the costs of part of the publications for this program were paid by the Office of Civil Defense, Department of Defense, from civil defense funds and it is understood that this arrangement will be continued in fiscal year 1963.

Accomplishments in 1962 included initiation of a series of leaflets on "You Can Survive" distributed to the State and county extension service personnel to assist them in providing civil defense advice to rural people, four civil service publications now at the printers, preparation of training materials and advising State and county extension services on carrying out their rural civil defense programs.

(e) Radiological research, training, and monitoring, $30,000

The Office of Civil Defense has supplied USDA with 3,557 operational monitoring kits. The Department has trained 515 radiological defense instructors and 8,823 radiological monitors. OCD is providing the USDA with 1,479 additional monitoring kits, 12,753 dosimeters, and 1,018 chargers during the fiscal year 1963. Funds provided will be used for training additional personnel to use such instruments, to maintain them, and to improve our monitoring capability. USDA research on protective measures against radioactive fallout will be continued and made available for postattack use by the Department's field staff, farmers, food processors, and others interested in this phase of civil defense.

(f) Special defense surveys and analyses, $30,000

The program would be directed toward an economic analysis of both local and national aspects of the effects that nuclear warfare would have on our agricultural plant and productivity.

Our modern agricultural plant is highly dependent on purchase of gasoline, oil, fertilizer, machinery, and other goods and services such as transportation, and a consequent serious reduction in the flow of goods to farmers would greatly reduce farmers' capacity to produce. Economic analysis is needed of probable impacts on agricultural production.

The 1963 program will also include some economic analysis to support the work of the OEP National Resources Evaluation Center and other defense planning.

Research work begun in fiscal year 1962 and being continued this year under a $95,000 contract from the Office of Civil Defense of DOD includes measurement of the number of man-days' supply of food and beverages on hand at the wholesale level of distribution and in houses.

(g) Regional liaison representatives, $183,000

The amount included in the budget is to build the regional liaison representative staff back to full strength so USDA will have a full-time RLR and a full-time secretary in each of the eight regions, which are the same as the

regions used by OEP and OCD. Since only $150,095 was available for this purpose in fiscal year 1962, the RLR's were reduced from eight to four in the middle of the year, althought the eight full-time secretaries were retained. RLR assignments in the other four regions were given to employees with other regular duties. The four full-time RLR's in the fiscal year 1962 were able to maintain the necessary liaison arrangements with OEP, OCD, and other Federal agencies, provide technical assistance to USDA State defense boards and coordinate the development of USDA plans at the regional level. The four part-time RLR's did as much of this as they could, but with workload steadily increasing they could not carry out the full RLR assignment. It is essential that they be replaced as soon as possible by full-time personnel. The OEP Director has urged that this action be taken. Justification for the regional offices and the agency representatives at these sites is included in the OEP budget. In addition to providing an emergency capability, these RLR's are assisting USDA State defense boards wtih their defense planning, and in case of natural disasters represent USDA in the regional work.

The increase of funds requested is to finance the broadened preparedness responsibilities of the Department of Agriculture under Executive Order 10998 issued to the Secretary by the President on February 16, 1962. Under that order the Secretary of Agriculture is required to prepare national emergency plans and develop preparedness programs covering food resources, farm equipment, fertilizer, and food resource facilities. The increase will make it possible to accelerate food management planning with State and local governments and with the food industry. The objective will be to assure continued production, processing, and flow of food in a postattack emergency.

Civil defense and defense mobilization functions—U.S. Department of Commerce

	1962 estimate	1963 request
General administration:		
Transportation staff (emergency transportation coordinating functions)	(1)	$175,000
Office of Emergency Planning Coordinator	$175,000	183,600
Defense Air Transportation Administration	103,000	104,000
Bureau of the Census	81,000	227,000
Business and Defense Services Administration	1,888,200	1,888,200
Maritime Administration	68,000	75,900
Weather Bureau	147,000	147,000
Total program (obligations)	2,462,200	2,800,700
Comparative transfers from other accounts and adjustments	23,082	
Total	2,485,282	2,800,700

[1] Although no funds were included in the fiscal year 1962 budget for this program there was a total of $52,000 allocated from OEP for the 2d half of the fiscal year 1962 when the responsibility for the program was transferred to the Department of Commerce from OEP.

Executive Order 10999 issued February 16, 1962, assigned emergency preparedness functions to the Secretary of Commerce. In general terms, these were to prepare national emergency plans and develop preparedness programs covering:

1. Development and coordination of overall policies, plans, and procedures for the provision of a centralized control of all modes of transportation in an emergency for the movement of passenger and freight traffic of all types, and the determination of the proper apportionment and allocation of the total civil transportation capacity, or any portion thereof, to meet overall essential civil and military needs.

2. Federal emergency operational responsibilities with respect to: highways, roads, streets, bridges, tunnels, and appurtenances; highway traffic regulation; allocation of air carrier aircraft for essential military and civilian operations; ships in coastal and intercoastal use and ocean shipping, ports and port facilities; and the Saint Lawrence Seaway; except those elements of each normally operated or controlled by the Department of Defense.

3. The production and distribution of all materials, the use of all production facilities, the control of all construction materials, and the furnishing of basic industrial services with certain specific exceptions.

4. Fallout forecasting based on current weather data.

5. Collection and reporting of census data for emergency planning purposes.

The Executive order stated that these plans and programs shall be designed

to develop a state of readiness in these areas with respect to all degrees of national emergency including attack upon the United States.

With the exception of the assignment of the function relating to Transportation Planning and Coordination, the Executive order was a restatement of functions previously delegated to the Department of Commerce and upon which they have been continuously working.

The transportation function is broad in scope and covers the following:

1. The Secretary shall develop long-range programs designed to integrate the mobilization requirements for movement of all forms of commerce with all forms of national and international transportation systems including air, ground, water, and pipelines, in an emergency; more particularly he shall:

(*a*) *Resources and requirements.*—Obtain, assemble, analyze, and evaluate data on the requirements of all claimants for all types of civil transportation to meet the needs of the military and of the civil economy. Consolidate, evaluate, and interpret both current and projected resources and requirements data developed by all Federal agencies concerned with moving passengers or cargo by all modes of transportation for the purpose of initiating actions designed to stimulate Government and industry actions to improve the peacetime structure of the transportation system for use in an emergency.

(*b*) *Economic projections.*—Conduct a continuing analysis of transportation problems and facilities in relation to long-range economic projections for the purpose of recommending incentive and/or regulatory programs designed to bring all modes of transportation in balance with each other, with current economic conditions, projected peacetime conditions, and with emergency conditions.

(*c*) *Passenger and cargo movement.*—Develop plans and procedures which would provide for the central collection and analysis of passenger and cargo movement demands of both shipper and user agencies as they relate to the capabilities of various transport modes in existence at the time, control or delegate control of the priority of movement of passengers and cargo for all modes of transportation by mode or within a mode and develop policies, standards, and procedures for emergency enforcement of controls through the use of means such as education, incentives, embargoes, permits, sanctions, claimancy policies, etc.

(*d*) *Emergency transportation functions.*—In consonance with plans developed by other agencies assigned operational responsibilities in the transportation program, develop plans for and be prepared to provide the administrative facilities for performing emergency transportation functions when required by the President.

Major accomplishments in fiscal year 1962

1. Regional Emergency Planning Coordinators—

(*a*) Coordinated the revision and updating of all Commerce field agencies' continuity of operations plans.

(*b*) Developed and issued emergency operations orders providing for automatic actions to be taken upon receipt of alert warning.

(*c*) Assisted industries in developing industrial defense plans (St. Lawrence Seaway and Union Carbide, typical examples).

2. The Office of Emergency Transportation initiated research to develop facts which will serve as a principal component of future transportation planning by this office.

3. (*a*) The Defense Air Transportation Administration developed and published three allocations of civil air carrier aircraft to DOD for the Civil Reserve Air Fleet (CRAF). These allocations required to phase in new aircraft and eliminate those lost, sold, etc. "SPOT" allocations made on average of six to eight times a month.

(*b*) Revised CRAF planning policy to require self-support by airlines.

(*c*) Issued interim insurance binders covering a total of 149 U.S. aircraft. Applications for coverage of 45 additional aircraft being processed.

4. Bureau of the Census provided two full-time statisticians and other staff and computer time to NREC:

(*a*) For test exercises.

(*b*) To maintain permanent manufacturing plant number system and provide up-to-date operating data for large plants.

(*c*) To complete and publish new National Location Code of Census geographic areas. (Completed.)

5. The Office of Industrial Mobilization (BDSA):

(*a*) Processed 572 special assistance cases involving priorities with a value of $51,857,800, and processed 322 cases for authorization having a total value of $156,035,133.

(*b*) Engaged in stockpile activities including:

(1) Nine reviews of estimates of essential civilian and war-supporting requirements.

(2) Thirty-six recommendations for disposition of surplus stockpile materials.

(3) Thirteen reviews of purchase and acceptance specifications.

(4) Seventeen reviews of stockpile storage procedures.

(5) Five special studies pertaining to stockpile and strategic materials.

(6) Seventeen studies of supply-requirements for nonstockpile strategic items.

(*c*) Completed and issued 24 analyses covering 80 products or segments of industry.

(*d*) Entered into research contract to test and improve method of estimating through vertical analysis the national capability to produce essential products following nuclear attack.

(*e*) Provided advice and guidance to private industry and Government agencies on dispersion of facilities with respect to approximately 20 sites.

6. Maritime Administration:

(*a*) Completed six annexes to Manual for Emergency Utilization and Control of U.S. Ports.

(*b*) Published Supplement No. 1 for Operation of U.S. Seaports under emergency conditions.

(*c*) Completed basic inventory and port transshipment capacity estimate of selected U.S. ports.

(*d*) Completed and distributed formula methodology for estimating general cargo-handling capacity and berthing facilities.

7. Weather Bureau:

(*a*) Issued fallout forecasts twice daily for 55 geographical locations and 4 times daily at 18 additional locations.

(*b*) Equipped all Weather Bureau stations with necessary instruments to monitor fallout radiation. Maintained these instruments and tested operability.

(*c*) Tested communications procedures and trained all monitoring personnel in operation of instruments and reporting procedures.

Proposed accomplishments, fiscal year 1963

1. Continue programs related to maintaining current capabilities and updating and revision of plans as required.

2. In the Office of Emergency Transportation:

(*a*) Consolidate, evaluate, and interpret current and projected resources and requirements data developed by all Federal agencies concerned with all modes of transportation.

(*b*) Develop system for effective allocation of total transportation capacity to meet overall essential military and civilian requirements.

(*c*) Establish a procedure for centralized control of transportation to insure maximum utilization.

(*d*) Integrate transportation planning activities of the Department with those of DOD.

3. In the Defense Air Transportation Administration:

(*a*) Revised civil reserve air fleet plans to include both an international and domestic fleet effective August 1, 1962. Allocation includes 328 aircraft in the international fleet and 73 in the domestic fleet. Allocation will be revised on a quarterly basis with spot allocations as required.

(*b*) Participation in NATO exercise and U.S. logistical supporting exercise.

(*c*) Continue participation in review of CRAF policy and resolution of disagreements concerning responsibilities of CRAF program.

(*d*) Continue development of a wartime air priorities system.

4. In the Bureau of Census:

(*a*) Compute square miles of land and water in each standard location area.

(*b*) Update data in resource file for large manufacturing plants.

(*c*) Develop plans for postattack population surveys.

5. In BDSA Office of Industrial Mobilization:

(*a*) Process an estimated 1,500 special assistance authorization cases including Project Apollo, a $4 billion project.

(*b*) Review and revise basic data sheets for 60 stockpile items.
(*c*) Prepare supply requirements analyses for 25 strategic materials and 30 high-heat alloy special property materials in a mobilization period.
(*d*) Study and advise on market impact of sales of 60 surplus stockpile materials.
(*e*) Review and advise on 30 purchase specifications and 15 procedures for storing stockpile materials.
(*f*) Prepare an estimated 12 special studies on material problems related to stockpile.
(*g*) Within the Industry Evaluation Board conduct an analysis covering 65 to 70 products.

6. In Maritime Administration:
(*a*) Complete estimate of emergency requirements for principal items of specialized equipment.
(*b*) Develop communication plan for emergency port control organization.
(*c*) Continue project work on emergency offshore tanker and petroleum handling facilities.

7. In Weather Bureau: Continue program at same level.

Summary of how the Department proposes to use the 1963 funds

To meet the proposed objectives for fiscal year 1963 the Department plans to use the funds allocated as follows:

1. *Office of Emergency Transportation ($175,000).*—To provide 14 new positions and related costs of administering these new responsibilities.

2. *Office of Emergency Planning Coordinator ($183,600).*—To provide financial support for 18 of the total office complement of 21 positions. Of this amount, two positions, an assistant to the Emergency Planning Coordinator for civil defense activities and a clerical assistant, are assigned to the Washington office. Sixteen positions are located throughout the eight regional offices established by OCD–OEP. Each regional office is staffed by a regional coordinator and a secretary.

The increase of $8,600 requested for fiscal year 1963 is to fill two secretarial vacancies in the regional offices. In fiscal 1962 the funds for these two positions were impounded to make travel funds available to the eight regional coordinators. The increase will permit filling these vacancies and provide a limited amount of funds for travel.

3. *Defense Air Transportation Administrator ($104,000).*—To continue to provide for eight positions and related costs. An increase of $1,000 is requested to enable professional staff personnel to attend various meetings which have a direct effect on the DATA programs.

4. *Bureau of the Census ($227,000).*—To provide—

(*a*) Support for Census staff assigned full time to the National Resource Evaluation Center	$25,000
(*b*) Updating census records relating to critical manufacturing plants	14,000
(*c*) Planning for a postattack population survey	34,000
(*d*) Computation of the surface area of each of the standard geographic locations included in the national location code	127,000
(*e*) Proportionate share of Bureau administrative expense for this activity	27,000
Total	227,000

These funds include provision for an increase of five permanent employees assigned to this program making a total of six permanent positions.

5. *Business and Defense Services Administration ($1,888,200).*—To provide for an average of 165 man-years at a cost of $1,511,000 and other objects of $377,200. No increase has been requested for fiscal year 1963.

6. *Maritime Administration ($75,900).*—To provide for the seven permanent positions and related costs. The increase requested ($7,900) covers $2,100 in pay and personnel benefits and $5,800 for other objects.

7. *Weather Bureau ($147,000).*—To provide for 16 permanent positions and related costs. No increase has been requested over fiscal year 1962.

Effects of House of Representatives cut in proposed funds

Assuming the allocation of funds to the Department of Commerce by OEP would be the same as for fiscal year 1962, the programs would be affected as follows:

1. Office of Emergency Transportation: Since no funds would be provided the Office would be deactivated and the function discontinued.
2. Office of the Emergency Planning Coordinator: The two secretarial positions would not be filled and the funds derived therefrom used for travel purposes.
3. Bureau of the Census: The statistical information and assistance required by the National Resource Evaluation Center could not be provided.
4. The Maritime Administration: The program would be curtailed and certain objectives could only be partially met.
5. All other programs would be continued as planned.

CIVIL DEFENSE AND DEFENSE MOBILIZATION FUNCTIONS

Federal Aviation Agency

Salaries and expenses, civil aviation defense functions:

1962 estimate	$121,000
1963 estimate	200,000

Executive Order 11003 assigns to the Federal Aviation Agency the responsibility for preparing and furnishing guidance to the civil aviation industry in the development of plans and programs to maintain that industry in a state of readiness for all degrees of national emergency, including attack upon the United States.

Accomplishments for 1962

Initiated programs of guidance and assistance to all elements of civil aviation in the formulation of plans for emergency operations, viz, disaster control planning for operational areas and airport defense planning for airports.

Meetings were conducted with officials of 23 airlines where disaster plans were tentatively formulated. A prototype disaster plan was developed. A case study outlining the vulnerability and emergency use of facilities of a major airline headquarters was prepared and issued to all U.S. air carriers as a prototype.

Met with officials and members of the larger national general aviation organizations (i.e., International Flying Farmers Association, Flying Physicians Association, Aircraft Owners and Pilots Association, Ninety-Nines, National Association of State Aviation Officials, etc.) to render advice, guidance, and indoctrination to enable them to initiate disaster control programs among their members.

Held orientation briefings at 29 airport service field offices. Established liaison with airport service engineers and the Air Force Reserve Recovery Units at civil airports.

Trained 31 airport field engineers in radiological monitoring and assisted 7 in obtaining extensive training in atomic, biological, and chemical warfare defense.

Prepared draft copies of the following publications: (1) "Airport Disaster Control Guide," (2) "A Sample Disaster Control Plan," (3) "Radiation Safety for Civil Airports," (4) "Radiological Decontamination for Civil Airports," and (5) "Airport Defense Facts Sheets." An airport terminal building fallout shelter data sheet is also available.

A special project was undertaken to develop a prototype airport disaster control plan.

Proposed accomplishments for 1963

Extend orientation meetings additional air carriers not contacted in fiscal year 1962.

Continue efforts to offer training and encourage training at radiological monitoring classes by representatives of all national civil aviation organizations.

Increase contacts with all elements of general aviation (i.e., 600 repair stations, 2,400 air-agency and air-taxi operations bases, 1,200 non-Federal civil aviation communications stations and dispatching centers.)

As directed by Executive Order 11003, the agency concerned with defense readiness will provide guidance to the FAA regions on the development of plans for emergency management of civil aviation facilities, civil airports, civil aviation service, and civil aircraft other than air carrier.

Plans and procedures will be prepared for the effective utiilzation of repair station capabilities, especially during a national emergency.

Guidance will be prepared and furnished the regions by the Washington service offices in the conduct of a national program of vulnerability reduction, disaster preparedness, and damage control for civil air carriers, general aviation operators, civil airports, and aircraft maintenance and repair stations.

Plans and procedures will be developed with respect to decontamination and emergency utilization of civil airports, aircraft repair stations, and maintenance bases.

Guidance and regulations as necessary and appropriate will be developed for the salvage of supplies and equipment and the rehabilitation or replacement of essential air carriers, airports, and general operating facilities.

Courses dealing with civil defense knowledge and skills will be prepared and incorporated into aeronautical courses.

Plans and procedures will be developed for assessing and reporting the effects of enemy attack on civil airports, civil aircraft, air carriers, and general operating facilities and maintenance bases.

The emergency readiness capabilities of airports, air carriers and other civil aviation operators, maintenance bases, and repair stations will be evaluated periodically.

Administrative direction in the development of radiological monotoring capabilities will be encouraged in all FAA regional offices.

An increase of $79,000 is requested for the Federal Aviation Agency in order to extend its work with airlines to assist them in developing disaster plans. Field operation courses would be conducted with these increased funds at all FAA field offices. One engineer in each of the offices will be given training in atomic, biological, and chemical defense. Special projects will be undertaken to develop a prototype plan and provide assistance for small- and medium-size airports in preparing to meet emergency conditions.

Federal Communications Commisison

Salaries and expenses, defense coordination:

1962 estimate	$15,300
1963 estimate	67,509

In FCC, the Defense Coordination Division assures the continuity of FCC effort in emergency planning and mobilization of FCC personnel and facilities: it coordinates the activities of the Commission's damage assessment officer and the work of the broadcast bureaus defense activities officer with NREC. In 1962 estimate covers only the cost of FCC representation to the National Resoure Evaluation Center.

Accomplishment for 1962

Developed data for the National Resource Evaluation Center, coordinated defense planning activities with the broadcast bureaus, and continued planning for the continuity of the FCC and its emergency operation activities. Selected and trained Executive Reserve personnel.

Proposed accomplishments for 1963

To continue furnishing data to the National Resource Evaluation Center and other emergency planning and mobilization activities of FCC. Continue to select and train additional executive reservists.

Department of Health, Education, and Welfare—Estimates for delegate agency activities (other than Public Health Service) fiscal years 1962–63

	1962 amount	1963 amount
Food and drug activities	$105,000	$120,000
Emergency welfare services	290,000	338,000
Field planning	136,000	150,000
Executive direction and coordination	96,500	98,500
Total	627,500	706,500

STATEMENT

For the purpose of the fiscal year 1963 hearing, the functions delegated to the Secretary of Health, Education, and Welfare are covered in two ways: (1) The request of $41,445,000 for emergency health activities, including the medical stockpile, will be presented later by Assistant Surgeon General Hundley, and (2) the request of $706,500 for delegated nonhealth emergency activities is discussed in the paragraphs which follow.

If a nuclear attack should ever come, it will bring massive destruction and disruption not only to houses and homes, but to health and welfare services, sanitation services, access to normal food and water supplies, and the other necessities of daily living. People will be hurt, sick, homeless, and frantic for knowledge of what has happened to other family members. Those who are sheltered from radiation can survive, but on emerging from shelter into what is left of the community they must be aided by emergency health and welfare measures under the most austere conditions.

Lifesaving measures, reuniting of families, and reestablishment of family and community living would be an important, perhaps the most important, part of the painful process of postattack recovery. The Department of Health, Education, and Welfare has concern for this problem not only because of the President's Executive order but also because its regular programs are devoted to the needs of people. This concern would have first claim on every departmental resource and every employee in the postattack period.

What can be done about this in terms of emergency preparedness? The Department must enlist thoughtful attention to postattack problems by the entire DHEW organization, and by the personnel of State and local counterpart agencies and national voluntary agencies for health and welfare. We are required by Executive order to develop national guidance materials. This we are doing. We must translate these into State and local training and competency. We must help the States to improve their local health and welfare survival plans. We must engage in appropriate research and damage assessment work. We must strengthen our regional organization by having regional relocation sites in being. We must continue to work with regional OEP and OCD staffs in coordinated planning and testing of emergency procedures so that postattack operations could continue when cut off from national headquarters. We must relate this also to survival planning within the States of the region. One staff assistant for this purpose is required in each DHEW regional office. All this is part of the Department's assignment to develop an emergency organization structure, and to coordinate with other departments and agencies, as required in section 13 of Executive Order 11001.

Omitting at this time any further reference to emergency health, the remainder of this statement deals with two substantive areas, (1) emergency food and drug preparedness and (2) emergency welfare preparedness.

EMERGENCY FOOD AND DRUG ACTIVITIES

Program assignment

To develop a national program for the maintenance of safety, including decontamination procedures, in the distribution and use of food, drugs, and biologicals in an emergency, involving training and close cooperation among Federal, State, and local food and drug officials and the food and drug industry.

Some 1962 accomplishments

Thirty-seven training courses in emergency food and drug procedures presented to Federal, State, and local officials and to the food industry in 24 States.

There were 1,530 people given training in these professional courses.

Speakers and guest instructors provided for 20 professional and industry association meetings and training courses.

Research studies made to determine the vulnerability of six staple food commodities to contamination by two potential BW organisms.

Research studies begun in methods of decontamination of these six foods.

Fluorescent antibody techniques investigated to evaluate their use in determining food contamination with BW organisms.

Studies begun concerning the heat stability of a third potential BW organism.

Cultures of a fourth potential organism obtained and arrangements made to produce large quantities of a fifth organism for use in vulnerability studies.

Continuing discussions held with representatives of other research organizations to avoid duplication of effort.

Objectives for 1963

To continue research and to expand emergency food and drug training to more States and cities, to more people, and to more industry groups.

Effect of House action

To hold at the 1962 level will eliminate one of three training teams, reduce the ability to furnish guest instructors for State, local, and industry professional courses, and curtail the planned expansion of research in additional food vulnerability studies, including penetration of packaged foods by aerosols containing bacteriological and chemical contaminants.

EMERGENCY WELFARE SERVICES

Scope

Emergency welfare services, as defined in the Executive order, include emergency feeding, clothing and billeting of displaced persons, locating and reuniting of families, the care of special groups, such as unaccompanied children, and the development of plans for postattack welfare organization. The Federal Civil Defense Act also authorizes temporary emergency financial aid to victims of the attack and the development of State plans for this purpose is also part of the welfare function.

Program assignment

To develop and increase local competency to provide essential welfare assistance and services to all persons in need under conditions of national emergency; for this purpose, to prepare national guidance materials, extend guidance and technical assistance to State and local welfare departments, conduct training activities, maintain plans in readiness for temporary emergency financial aid where required.

Some 1962 accomplishments

Development of guidance materials for State and local use, i.e., working drafts of five manuals for field testing.

Thirty-eight Federal-State agreements negotiated with State welfare departments.

Thirteen memoranda of understanding with national voluntary agencies (e.g., American Red Cross), as required by the Executive order.

A series of regional conference for the guidance and training of State welfare officials.

Development of a set of standards and survey forms for evaluating emergency welfare readiness and the testing of these by field surveys in eight communities.

Development of prepositioned materials for postattack damage assessment.

Objectives for 1963

To continue the field testing and final editing of guidance materials for State and local use, to extend the opportunity for technical assistance and training to the States in three regions where at present there is no regional representatives, and participate with OCD in further communities readiness surveys.

Effect of House action

To hold at the 1962 level will mean that 3 of the 9 DHEW regions will be unable to assist the 16 States of those regions in the translation of national welfare guidance into State and local survival plans. These 16 States are New York, Pennsylvania, New Jersey, Delaware, Missouri, Iowa, Minnesota, North Dakota, South Dakota, Nebraska, Kansas, Colorado, Utah, Wyoming, Idaho, and Montana.

Housing and Home Finance Agency—Defense planning activities

1963 appropriation request $250,000

Executive Order 11004, dated February 16, 1962, assigned to the Administrator, Housing and Home Finance Agency, the responsibility to "prepare national emergency plans and develop preparedness programs covering all aspects of lodging, housing, and community facilities related thereto." This Executive order superseded previous assignments of civil defense and defense mobilization responsibilities.

During fiscal year 1962 HHFA completed the preparation of a number of technical guidelines for State and local use and several emergency operating instructions for HHFA staff use. These include instructions and guides for—

(*a*) Interim local rent control.
(*b*) Assessing the damage to housing.
(*c*) Provision of water under primitive conditions.
(*d*) The establishment of local emergency housing organizations.
(*e*) Emergency housing construction.
(*f*) Emergency repair of damaged housing.
(*g*) Provision of emergency community facilities.
(*h*) The management of emergency housing.

The guides which were intended for the use of State and local authorities have been referred to the Office of Emergency Planning and the Office of Civil Defense (DOD) for reproduction and distribution to State and local governments.

The activities proposed for fiscal year 1963 are intended to accomplish two things:

(*a*) To complete additional guides and operating instructions.

(*b*) To improve and expand the organization and training of emergency personnel at regional, State, and local levels.

Additional guidelines and instructions will be prepared during fiscal year 1963 for the following:

(*a*) Emergency instructions for local public housing and redevelopment agencies.

(*b*) An operating plan for a Federal rent-control program.

(*c*) The conversion of nondwelling structures to dwelling use, plans and specifications and instructions for the manufacture and use of mobile housing such as trailers.

(*d*) The provision of financial assistance to localities for the emergency repair or construction of austere community facilities (water and sewer).

(*e*) The plans, regulations, and procedures under which HHFA would carry out its emergency function as central claimant for materials, equipment, and manpower necessary for emergency housing and community facilities.

In fiscal year 1963 a most important part of HHFA's emergency readiness program will be the expansion of the tests, training, and indoctrination of regional, State, and local staffs in the execution of the emergency plans and instructions which have been prepared.

HHFA has a skeleton emergency organization. This organization must be completed by the designation of staff for each emergency function and the training of staff so that response in an emergency becomes automatic.

Special training and test runs must be conducted to evaluate each operating instruction as for example the emergency construction of barracks. The whole procedure of application, programing, contracting, etc., would be tested on a simulated basis.

These preattack training and organization activities are essential if the plans which have been made are to be effective at State and local levels in an emergency. This will involve conferences and training sessions in each of the HHFA regions and in each State, and in a selected group of localities, and this activity accounts for the increase in funds requested for fiscal year 1963.

The defense coordinator's staff in the Office of the Administrator directs, supervises, and coordinates the emergency planning activities of HHFA and its five constituent agencies. HHFA also maintains an employee at the National Resources Evaluation Center for damage assessment activities.

The estimate of $250,000 is $89,125 above the amount estimated for 1962. The increase requested would provide a total staff of 25 persons to carry out the responsibilities under Executive order—an increase of 7 over June 30, 1962. Elimination of the increase could seriously limit the progress which can be made, particularly in the emergency housing field.

Department of the Interior—Recapitulation of estimates

	Available, 1962 amount	Estimate, 1963 amount
Office of the Secretary	$29,100	$53,500
Office of Water and Power	24,000	53,000
Office of Oil and Gas	115,000	200,000
Office of Minerals Mobilization	261,000	180,000
Total	429,100	486,500

The direct mobilization program financed by transfer of funds from the appropriation for the delegate agencies totals $429,100 for the current fiscal year. The request for the fiscal year 1963 is $486,500, or a net increase of $57,400 over 1962.

Executive Order 10997, effective February 16, 1962, delegates to the Secretary of the Interior the responsibility for carrying out the Government's mobilization planning functions with respect to electric power, petroleum and gas, solid fuels, metals, and minerals.

These functions also involve day-to-day activities of the Department which are financed through the regular Department budget. The funds requested in this budget are for specific defense activities over and above those which can be carried with regular Interior funds.

The plans being developed and implemented in the fields cited above are designed to develop a state of readiness to meet the conditions of any national emergency, including direct attack on the United States. There follows a brief discussion of the activities for which funds are requested.

OFFICE OF THE SECRETARY

The request for the Office of the Secretary is $53,500 which includes an increase of $24,400 over that available for the current fiscal year. The request consists of $19,000 for continuing the Department's representation at the National Resources Evaluation Center, $17,500 for radiological defense training, and $17,000 for expenses of Interior-paid mobilization personnel.

The representation at the National Resources Evaluation Center is a continuing function and no increase is requested. Regarding the radiological defense training, the Department has been requested to man 325 stations of the Federal fixed station monitoring network. The sum requested is primarily for paying the traveling expenses of employees to locations where they can receive training, and $7,500 for radiological equipment. The expenses of Interior-paid mobilization personnel consist of travel and other expenses of Interior personnel in coordinating the Interior activities with the regional personnel of the Office of Emergency Planning and the Department of Defense.

ELECTRIC POWER

For the fiscal year 1963 certain salaries and expenses relating to defense electric power are included with those of the Assistant Secretary for Water and Power Development.

In addition, there is requested for the fiscal year 1963 the amount of $53,000. This is an increase of $29,000 over the amount available for 1962 from the Office of Emergency Planning appropriation.

The President has delegated to the Department of the Interior responsibility for preparedness measures in the field of electric power. Plans are developed, but must be continually implemented to assure prompt restoration of electric power service as soon as possible after an attack. To carry this out, Interior has established a Defense Electric Power Administration. This Administration consists of an active headquarters staff and a standby field organization which will be activated as conditions warrant during a national emergency. The field organization consists of 16 power areas within the 48 States and 1 each in Alaska, Hawaii, and Puerto Rico. Each power area is headed by a director, with alternates, to insure continuous direction. These are employed by the Department on a without-compensation basis and devote part of their time to mobilization planning without cost to the Federal Government except for security clearances. At the present time Interior has approximately 40 w.o.c. employees who devote

part of their time to electric power mobilization activities. Mobilization planning and implementation is necessary also on regional and State levels, special power studies are required, and it is necessary to train industry personnel. The organization, coordinating, and training required of the Washington personnel is more than can be provided by the current staff and the increase will permit the addition of one professional engineer with a stenographer, and some increase in funds for travel and other expenses.

OIL AND GAS

The estimate of $200,000 is $85,000 more than the amount available for the fiscal year 1962. These funds are urgently needed to assist State, city, and local governments to plan, test, and coordinate with Federal planning their programs for the emergency handling of petroleum and gas. Most of this work must be accomplished at the State, city, and local level.

Current planning provides for the Office of Oil and Gas to serve as the nucleus of a standby Federal petroleum and gas agency to be in readiness to exercise directional control of oil and gas industry operations during a national emergency. Operating in close conjunction would be appropriate State, city, and local government emergency units supervising allocation and distribution of oil and gas to the consumer. Backing up all levels of government would be industry endeavoring to supply products and services as needed.

In carrying out its responsibilities in Executive Order 10997, the Office of Oil and Gas makes maximum use of its built-in capabilities. The advice and experience of its technical specialists are drawn upon freely and its information materials and studies fully utilized in developing and coordinating national level emergency planning guidance and in providing direction and review of field emergency planning programs.

During the fiscal year 1962, the Office of Oil and Gas has staffed five area offices with an oil and gas emergency planning representative and a secretarial assistant. In fiscal year 1963, funds are requested to staff three more of these area offices so as to have an oil and gas representative in each of the eight area offices to work with State, city, and local officials and representatives of industry.

If the oil and gas emergency planning programs are to succeed, they must have the wholehearted participation of the petroleum and gas industries. Limited guidance dealing with industry survival preparations is provided by our area representatives. However, a specialist in industry facilities protection is urgently needed in the Washington office to prepare manuals for the use of our field personnel and for the development of specific guidance to individual petroleum and gas companies regarding their disaster planning problems. Funds are requested in the fiscal year 1963 to provide an industrial specialist and secretarial assistant for this purpose.

Recruitment for the petroleum and gas unit of the national defense executive reserve must be expanded and reservists trained to carry out their duties in an emergency situation. Fifty to sixty individuals are expected to be nominated during fiscal year 1963 and the estimate includes funds for security checks required for these reservists. Thus far training and orientation of reservists have been confined to their receiving information materials by mail, infrequent participation of Operation Alert exercises, and occasional contact with our area representatives. It is proposed to conduct reservist training conferences every quarter in each of the eight area offices during the fiscal year 1963. Funds for travel of full-time employees to conduct these training conferences is included in the budget estimate; however, if any traveling is necessary for executive reservists, it is at their own expense.

Substantial progress has been made in these emergency planning programs thus far during the fiscal year 1962, and the funds requested are urgently needed to continue assistance to State, city, local, and industry officials, as well as to inaugurate the programs in the remaining three areas.

OFFICE OF MINERALS MOBILIZATION

The Executive order delegates to the Secretary of the Interior the responsibility for carrying out the Government's mobilization planning functions with respect to metals, minerals, and solid fuels. The Secretary has reassigned to the Office of Minerals Mobilization this responsibility for developing and keeping current preparedness measures.

This $180,000 budget estimate covers these functions.

I. Preparedness measures

The OMM responsibilities are (1) to insure that in a defense emergency the supply of metals, minerals, and solid fuels will be adequate to meet the Nation's needs; (2) to assist industry in developing and maintaining a capability of responding to the demands of an emergency, and (3) to provide the nucleus of the staff of an emergency organization for metals, minerals, and solid fuels.

II. Mobilization supply

OMM evaluates potential sources of strategic metals, minerals, and solid fuels which would be available in wartime, and measures these sources of supply against estimates of wartime requirements. It makes recommendations for actions necessary to close the gap between foreseeable wartime supply and demand.

III. Continuity of industry

OMM renders assistance to the metals, minerals, and solid fuels industries in developing and maintaining their capability of responding to a defense emergency.

Stockpiles.—OMM assists OEP in formulating and carrying out plans and programs for the stockpile of critical and strategic materials and for survival items.

IV. Continuity of government

OMM is prepared to operate as the Government agency for metals, minerals, and solid fuels in an emergency. In this respect, the following programs are carried out:

1. *Maintenance of relocation centers for emergency operations.*—Necessary operating equipment, files and duplicate documents are maintained in readiness for operation in a defense emergency.

2. *Emergency staffing plans.*—The organization and staffing charts have been prepared and are being kept current.

3. *The Executive reserve.*—Senior officials from industry are being recruited and trained for Government service in the metals, minerals, and solid fuels areas. To date 67 have been recruited and the Office is in the process of designating and indoctrinating additional persons as reservists.

4. *Priorities and allocations.*—Standby orders have been prepared, and are being maintained on a current basis, to insure that in a defense emergency, the metals, minerals, and solid fuels industries will be in a position to operate smoothly and have adequate materials for operation, maintenance, and repair of their plants as well as for essential construction.

5. *Damage assessment.*—Data on metals, minerals, and solid fuels production facilities necessary to provide damage assessment in event of an attack have been collected and are maintained for OEP's National Evaluation Resources Center.

6. *Product and facility ratings.*—OMM performs staff work for the Industry Evaluation Board for rating products and facilities under its jurisdiction.

7. *Solid fuels guidance.*—OMM plans Federal activities for the handling of solid fuels at the State and local level during an emergency.

Interstate Commerce Commission

Emergency transportation activities:	
1962 estimate	$70,000
1963 estimate	175,000

The Interstate Commerce Commission has assigned functions under Executive Order 11005 to develop preparedness covering railroads, motor carriers, and inland waterway equipment and shipping.

1962 accomplishments

Mobilization orders to cover all modes of transportation have been updated and have been filed at emergency relocation sites and at each ICC field office. Copies of the orders were made available to industry trade associations and State regulatory agencies, and through them to transportation companies and operators. These standby orders give guidance to carriers and shippers in determining precedence to be accorded the movement of persons and goods under emergency conditions.

An outline for interstate and intrastate emergency transport plans has been presented to the Governor of each State with an invitation for participation by representatives of the State governments. Coordinated Federal-State planning for domestic surface transportation is proceeding in several States.

The ICC Executive Reserve Unit, consisting of outstanding representatives of the transportation industries, has been increased from 106 to 372 members, with an additional 129 nominees to be appointed. This provides the Commission with voluntary standby executive talent located throughout the country and ready to assist the field staff of the Commission to give guidance and assistance in an emergency in the use and rehabilitation of the various modes of transportation.

Proposed accomplishments for fiscal year 1963

Activity will be required to maintain on a current basis plans and orders which have already been issued. Major emphasis will, however, be placed on developing the ability nationally to insure the availability of manpower, fuel, materials, equipment, supplies, and services which will be needed in support of the recovery of transportation systems after an attack.

The ICC would develop its capability to act as claimant for necessary manpower, materials, and supplies needed by the transportation industry.

Tentative requirements would be assembled for emergency transportation service and would be developed in cooperation with the Department of Commerce, Department of Defense, and Office of Emergency Preparation. In fiscal year 1963 the Commission proposes to develop standby priority systems to expedite the movement of essential cargoes and passengers under emergency conditions. Plans would be developed for the most efficient use of transportation through the reduction of bottlenecks and the speeding of turnarounds.

The ICC will develop plans and procedures for financial aids and incentives including credit assistance to domestic surface transportation and storage organizations that might need such assistance in various mobilization conditions, particularly those resulting from attack.

Effect of House action

The request for this agency is an increase of $105,000 to provide for 11 positions to work with the operating bureaus of the Commission (Safety and Service, Motor Carriers, and Water Carriers and Freight Forwarders), particularly to develop a system of claimancy and resources management and further organize and train the executive reservists, for all modes of domestic surface transportation. A national permitting system would also be developed during fiscal year 1963. The effect of the House action would be to hold ICC to its present level and to eliminate 11 positions from the request. This would make impossible substantial progress in the fields described.

U.S. Department of Labor—Civil Defense and Defense Mobilization Functions (1962, $978,348; 1963, $1,285,000)

The Department of Labor submitted a request for $1,285,000 to carry out its civil defense and defense mobilization planning responsibilities during fiscal year 1963. In fiscal year 1962, the Department received from funds appropriated to OCDM $978,348. What has been accomplished with these funds, together with proposals for 1963 and the effect on these plans if funds are limited to the amount allocated in 1962 are detailed below.

Background

Under Executive Order 11000 the Secretary of Labor is assigned certain emergency preparedness functions which include preparation of national emergency plans and development of preparedness programs covering civilian manpower mobilization, more effective utilization of limited manpower resources including critical occupations and specialized personnel, worker incentives and protection, manpower resources and requirements, skill development and training, wage and salary stabilization, and labor-management relations. Executive Order 11000 specifies that the breadth of such planning "shall be designed to develop a state of readiness in these areas with respect to all conditions of national emergency, including attack upon the United States."

The Department of Labor has been denied the use of funds by its regular Appropriations Committees for such civil defense and defense mobilization planning purposes. The House of Representatives Appropriations Subcommittee concerned with appropriations for the Department of Labor has consistently stated that it will "look with extreme disfavor on the diversion, for these purposes, of any funds in the bill" (85th Cong., 2d sess., Rept. No. 1565). The only source of funds available to the Department in the past years has been allocations made to it by OCDM and last year by OCD–DOD and OEP. In 1963, the

Department's civil and defense mobilization planning activities will be limited by the funds made available to it through allocation by the Office of Emergency Planning.

The responsibilities assigned to the Department of Labor are an essential element in the completion of overall planning for emergency readiness. The two major groups of responsibilities of the Department—planning for civilian manpower mobilization and for wage stabilization in an emergency—are among the most essential elements for the survival of the Nation in the event of a nuclear war. Manpower, of all production elements, is the essential ingredient of any productive system. Wage stabilization is an essential element of economic stabilization during emergency conditions.

The Department's civil and defense mobilization planning programs are designed to develop at the local level a maximum readiness for efficient utilization of manpower and enforcement of wage stabilization provisions, when needed, to permit the country to survive emergencies that it might face while at the same time insuring that effective organization and controls exist for the proper management of these vital programs at all higher levels of Government.

1962 accomplishments

The Department of Labor, during the past year, developed a plan for the tentative preassignment of members of the labor force to task groups. These task forces consist of workers accustomed to working together and familiar with each others' skills. The members of the task forces would be able to know, in advance of an attack on the United States, the kinds of assignments they would be expected to carry out, the supervisors who would direct their work and the sources of materials, supplies and equipment they would need for their immediate civil defense assignments.

Task forces of construction workers in five Florida communities were initiated during fiscal year 1962. The establishment of such task forces was particularly desirable in Florida where they will have an opportunity to prove themselves in the types of peacetime emergency situations that frequently occur during hurricane seasons. Similar task forces previously initiated in Tallahassee, Fla., and Allentown, Pa., were further developed. In anticipation of an expanded program in 1963, a training program was initiated for selected Department of Labor field representatives, working with local joint apprenticeship committees, who will be responsible for development of task forces of construction workers throughout the United States.

The Department has identified skills essential to civil defense duties and is developing staffing patterns for services commonly found in civil defense organizations at the operating level. Such staffing patterns have been completed for shelter management, radiological detection, and welfare services. These staffing patterns, coupled with the Department's skill survey techniques, are essential elements of a method for determining the relative manpower resources of a community to meet estimated civil defense requirements. An application of this approach is currently being tried in Spokane, Wash.

Forty-four State employment security agencies completed emergency manuals of operations containing procedures to be followed by their operating staffs in the emergency management of manpower. Survey materials were developed for use in testing emergency readiness of local manpower offices to carry out their emergency assignments. These questionnaires when tested in eight communities throughout the country provided substantial information about strengths and weaknesses in the current state of manpower mobilization readiness of these communities.

The Department is developing a plan for imposing maximum manpower controls in the event of an extreme emergency. Preliminary plans for the utilization of youth in an emergency have been drafted for further consideration by experts in this field. The Department has worked closely with other agencies having manpower responsibilities which rely upon or affect those of the Department. Extensive asistance was rendered the Office of Emergency Planning in the development and explanation of the manpower aspects of the comprehensive program for survival of government and management of resources.

Statistical materials have been added to the library of data at the National Resources Evaluation Center. These data now include detailed information on 50 occupations for standard metropolitan areas so that in an emergency basic data will be available for a quick evaluation of probable surviving manpower resources by State and region. In addition, employment data by industry are being developed for inclusion at NREC to permit equally rapid analysis

of the surviving labor force in accordance with its industry attachment. Further studies were made of the probable productivity characteristics of the labor force in the weeks immediately following an attack on the United States.

Considerable progress was made toward developing wage stabilization programs, and about half of the designated field representatives of the Department received initial training in the application of such measures in the event of an emergency.

Proposals for 1963

The Department in 1963 proposes to expand the task force plan to cover all activities, including construction, which can be similarly organized for survival work, and help install the plan in 50 additional communities, 1 in each State. Local offices of the employment service will be trained in applying the procedures provided for in the State emergency manuals of operations. There is need for improving procedures for the expeditious recruitment and uitilization of women and teenagers not part of the preattack labor force. A plan for compensation payments for injury or death of authorized civil defense workers will be developed for emergency use. Plans for an equitable and effective procedure for assignment of manpower, if required in an extreme emergency, will be considered. State employment security agencies should be provided with more detailed information on the kinds of labor market controls to be used under varying circumstances.

Material on file at the National Resources Evaluation Center will be augmented and updated to reflect better information available from the 1960 census. Further information will be obtained on the probable productivity of the surviving labor force in order that those responsible for the determination of essential programs may have a better idea of what manpower resources will be needed in the postattack period.

Wage and salary stabilization plans and operating procedures, together with labor-management relations programs for effectively minimizing disputes in an emergency, will be thoroughly reviewed and coordinated with price control programs developed by OEP, and training programs will be expanded so that wage stabilization programs will be effectively enforced in the field in the event of an emergency.

These are essential programs for effective emergency operations.

Budget request for fiscal year 1963

Funds requested will permit the 85 State employees presently assigned by State employment security agencies to mobilization planning activities to continue their work in this field, shifting from emphasis on development of programs to the completion and installation of specific plans such as task forces, thereby strengthening local emergency readiness capability. The remaining funds proposed for civil and defense mobilization planning by the Department of Labor will maintain approximately the same number of personnel presently assigned to these planning activities in accordance with the specialized programs identified above.

Of the total $1,285,000 requested, $350,000 would support the expansion of task forces to 50 additional communities. In fiscal year 1962, only $17,000 was spent on this aspect of defense readiness planning. State employment security agencies would receive $650,000 in place of $593,000 available to them in fiscal year 1962 for emergency readiness planning. The remaining expenditures would be about the same as for fiscal year 1962, except for central coordination in the Office of the Secretary which would be curtailed from $124,000 to $96,000 in 1963.

Effect of House action

If the Department were allocated $978,348, the same amount as that available to it from delegate agencies funds in fiscal year 1962, the overall program would have to be adjusted substantially. The rate of expansion of the task force program would be reduced in half. Funds available to State employment security agencies for completion of emergency plans and training of local office per-

sonnel in emergency procedures would be reduced to $350,000, making total funds available to State employment security agencies about one-fourth less than funds available to them in fiscal year 1962. The equivalent of about 20 employees would have to be reassigned elsewhere. Some of the personnel currently engaged in civil and defense mobilization planning activities at the national Office level would also have to be reassigned.

A great deal of time and effort have been expended in the recruitment and training of the civil and defense mobilization planning staff already on the job in Washington, in the field, and in the State employment security agencies. Insofar as possible, these personnel should be continued in their present activities in accordance with the budget needs of the essential programs briefly identified above for fiscal year 1963.

Civil Defense and Defense Mobilization Functions

TREASURY DEPARTMENT

During the fiscal year 1962, the Office of Emergency Planning provided $67,363 to finance eight positions and related expenses on a part-year basis. The annual cost of financing the program on the same basis would have been $99,500. However, it is believed that the Treasury's responsibilities can be discharged during the fiscal year 1963 with a minimum of $80,000, which will provide for the continuation of the present staff of six employees.

The Treasury Department is responsible for the development of policies, plans, and procedures for the performance of emergency functions which include (1) emergency stabilization aspects of the monetary credit, and financial system; (2) emergency collection of revenue; (3) enforcement of emergency banking regulations; (4) supervision of the Federal depository system; (5) direction of transactions in Government securities under emergency conditions; (6) recommendations on tax and debt policies; (7) participation in financial arrangements with foreign governments; (8) regulation of foreign assets in this country and foreign financial dealings; (9) emergency procedures for the manufacture, issuance, and redemption of coin and currency; (10) emergency systems for the issuance and payment of Treasury checks, (11) maintenance of the Central Government accounting system; (12) emergency administration of customs laws, navigation laws, tax laws, laws governing import, manufacture, and distribution of narcotics, and laws on control of alcohol, alcoholic beverages, and tobacco; (13) suppressing counterfeiting and forgery of Government securities; (14) protection of the President and Vice President under attack conditions; (15) granting of loans for the expansion of productive capacity for essential materials; and (16) in cooperation with the Department of Defense, provision for port security, search and rescue on the high seas, aids to maritime navigation, and enforcement of various marine inspection laws, as required in an emergency. The Department is responsible for the coordination of such emergency plans and preparedness programs with other departments and agencies and with the Office of Emergency Planning.

The emergency preparedness program is designed to provide a state of readiness for the continuity of essential emergency operations of the Department, with respect to all conditions of national emergency including an attack on the United States. It is essential that emergency preparedness plans are continually coordinated, reviewed, and updated in light of various changing conditions and that orientation, training, and briefings are conducted to keep top level officials informed of the substantive plans, as well as the plans for relocation.

Accomplishments, 1962

Emergency banking regulations have been sent to over 20,000 National and State banks, mutual savings banks and savings and loan associations; plans have been developed for the field bank examining staff of the Comptroller of the Currency to assist banks in postattack operations; Federal Reserve banks have been authorized and instructed to perform emergency functions to main-

tain the banking, monetary, and financial accounting system until Federal control can be reestablished; emergency instructions have been furnished to all Federal agencies for whom checks are issued; plans have been developed for meeting the requirement for currency and coin in a postattack economy; plans have been developed for continuing revenue collections and customs controls; authority has been delegated to bureau heads to take any action that the Secretary is authorized to take and to redelegate such authority; emergency relocation sites have been designated and key officials given emergency assignments.

Proposed accomplishments, 1963

Unclassified projects include the participation in an interagency study to develop emergency plans dealing with the problem of loss sharing; development of standby legislation that would be required in a postattack period, such as the suspension of certain reserve requirements of Federal Reserve member banks to encourage subscriptions for U.S. securities; drafting regulations providing for the relief of owners of U.S. securities destroyed or made inaccessible as a result of enemy attack; development of instructions under which relief will be granted banks whose U.S. securities are destroyed or made inaccessible due to enemy attack; participation in an interagency study to review existing legislative credit guarantee authority to determine emergency use and requirements; review of foreign assets control plans; review periodically the progress of commercial banks in emergency preparedness; emergency check issuance procedures will be coordinated with other Federal agencies; and participate with Office of Emergency Planning in economic stabilization and other preparedness programs.

Small Business Administration

Salaries and expenses:

1962 estimate	$16,200
1963 estimate	42,000

Washington staff (three positions)

The SBA has the responsibility for developing plans for adapting its program to emergency conditions. By Executive order the Administrator has been delegated rsponsibility to provide programs to insure the continuity of the agency to continue in an emergency its functions immediately essential to the survival of SBA and its employees; to provide additional essential functions as dictated by an emergency situation; to support the national defense program; and to resume normal functions that were suspended during an emergency.

NREC staff (one professional and one secretary)

The Small Business representative to the National Resource Evaluation Center integrates into the national damage assessment system the date required to develop an estimate of postattack damage to Small Business Administration personnel, facilities, and materiel.

1962 Accomplishments

Completed planning and instituted training to assure continuity of the agency's operation during emergency conditions and to enable the agency to resume normal functions that were suspended during the emergency.

Supplied staff support to the National Resource Evaluation Center in connection with the facility inventory of small plants.

Proposed Accomplishments for 1963

Continue staff support to NREC so as to update and maintain small business production facilities information and to maintain on a decentralized basis similar information in each SBA field office.

Develop detailed plans and procedures to enable the Small Business Administration to serve as a prime contractor to small business in defense contracts in a postattack situation.

Veterans' Administration

Salaries and expenses, representation at NREC:

1962 estimate	$16,700
1963 estimate	17,000

Funds are requested, as in previous years, for the VA representative to the National Resources Evaluation Center. His function is to integrate into the national damage assessment system the data required to develop an estimate of postattack damage to VA personnel and facilities (hospitals, medical personnel, medical stocks, etc.). He coordinates the development of VA requirements in consideration of the effects of hypothetical or actual nuclear attack. Also, he has special responsibilities for developing data and techniques required for evaluating the effects of massive attacks on continuity of Government; and he serves as Assistant to the Director of the Resources Data Division of NREC.

Post Office

Salaries and expenses, program planning:

1962 estimate	$11,000
1963 estimate	11,000

The $11,000 requested is for one man who is responsible for planning and programing the national registration program concerned with registering persons and families for the purpose of receiving and answering welfare inquiries and reuniting families in civil defense emergencies (Executive Order 11002, sec. 2(a)). The Post Office Department has absorbed considerable costs for conducting civil defense and defense mobilization activities where these activities are reasonably interpreted as coming within the Department's statutory responsibility.

Accomplishments, 1962

A technical manual covering all aspects of the postal registration and information program was prepared and distributed in September 1961 to postal operating officials. Copies were also furnished to appropriate State and local officials.

Separate detailed instructions were prepared and furnished all postmasters concerning the actions and procedures applicable at post office level with regard to storage, issuance, completion, and collection of the emergency change of address and safety notification cards now stored at every post office, station, and branch.

An inventory was initiated and completed of the emergency change of address cards and the safety notification cards maintained in ready standby storage at all post offices (about 39,000 points). Replacements were provided to remedy any deficiencies noted.

The selection of postal concentration center-central postal directory locations was commenced and 86 primary locations plus 1 or more alternates for each have been selected to date covering 47 States. While some selections are subject to revision, the entire locating program may be regarded as substantially complete.

Proposed accomplishments for 1963

Preassign all post offices in the country to specific postal concentration center-central postal directory locations, both for receipt and dispatch of mails and for representation in central postal directories in the event an attack necessitates such actions. The selection of postal concentration center-central postal directory locations and assignment of offices have been adapted to existing highly developed mail routing systems offering maximum flexibility so that emergency operations would continue to function with minimum postattack special arrangements.

Complete the selection of buildings in which to house prospective postal concentration center-central postal directories, the designation of postmasters to head them, and cadres to staff them.

To develop a training program for central postal directory personnel through official training channels which currently extends to 500 post offices. This will be primarily concerned with training of cadre personnel in central postal directory procedures and in related welfare support activities.

To educate and instruct postmasters and personnel at every post office in the procedures required at the local level with regard to issuance, completion, and collection of emergency forms, and welfare support activities.

87888—62——7

COMMUNICATIONS

Senator MAGNUSON. In closing this session, let me place in the record letters received by the subcommittee on the subject of OEP appropriations.

(The letters referred to follow:)

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF EMERGENCY PLANNING,
Washington, D.C., August 1, 1962.

Hon. WARREN G. MAGNUSON,
U.S. Senate, Washington, D.C.

DEAR SENATOR MAGNUSON: One of the important programs of the Office of Emergency Planning is known as the comprehensive program for survival of Government and management of resources. This program is based on the concept that the war powers of the Federal Government are supreme and therefore it is a primary objective of the Federal Government to plan for and develop a Federal capability to control operations for survival involving more than one State. Also there is a need for a working partnership between government and community leaders at all levels to achieve national preparedness.

In limited or conventional war, the Federal Government will act to control the economy as the national interest may require. In the event of nuclear attack, however, we must be prepared for a temporary breakdown of Federal control in some geographical areas. In those instances, citizens will necessarily look to their Governor or their mayor not only to maintain law and order but to conserve and use surviving resources wisely—looking toward recovery and restoration of the total national economy. This will require immediate and forceful action in functional areas heretofore exclusively controlled by the Federal Government. In taking such action, State and local governments will carry out Federal as well as State laws to achieve national objectives. In such cases, Federal control will be reestablished as soon as possible.

On the concepts stated above, the Office of Emergency Planning has developed and presented to all of the States of the Nation the comprehensive program. This was done through eight regional conferences throughout the country, to which were invited Governors, mayors, State and city government officials and leaders of the business communities.

The Director of the Office of Emergency Planning, Hon. Edward A. McDermott, has placed our mutual friend, Mr. Charles S. Brewton, Assistant Director of OEP, in active charge of the development and effectuation of the whole program. The success of this comprehensive planning effort, which is the first effort for bringing together all of the unilateral planning which has been done in the past several years by individual Federal and State Governments and by individual industries, is pointed up in the attached summary report of regional conferences. It is noteworthy, I think, that outstanding Governors throughout the country, including our own Gov. Al Rosellini, have issued commendatory statements on this effort of OEP. Governor Rosellini's statement appears on page 10 of the summary report.

Mr. Brewton and I, knowing of your profound interest in transportation and the whole question of national preparedness, feel that this outstanding program and effort by OEP will be of interest and value to you in that the program includes the bringing together of all of the planning for the control and use of the transportation complex of the Nation in case of emergency. The program provides for establishment, in each State, of a Transportation Task Force composed of the regularly constituted State and local level officials having transportation responsibilities and outstanding industry members of the various modes of transportation. Also included among the task force members are regional representatives of the various Federal Government transport agencies.

In closing, may I point out that the comprehensive program has been widely acclaimed, not only in our own State of Washington but also throughout the country. State emergency planning directors have already been appointed by the Governors of 47 States.

It is this type of activity for which the Office of Emergency Planning seeks the $3 million postattack planning item in its appropriation request for fiscal year 1963.

As always, you have my very best regards and good wishes.

Sincerely,

PAUL REVELLE.

GOVERNORS' CONFERENCE,
Chicago, Ill., July 11, 1962.

Hon. CARL HAYDEN,
Chairman, Senate Appropriations Committee,
Senate Office Building,
Washington, D.C.

MY DEAR SENATOR: It is my pleasure to transmit to you the resolution on civil defense as adopted by the 54th annual meeting of the Governors' Conference at Hershey, Pa., on July 2, 1962.

Pursuant to the terms of the resolution, there is also enclosed copy of the report of the Committee on Civil Defense as adopted by the Governors' conference.

With kindest regards, I am,
Sincerely,

BREVARD CRIHFIELD, *Secretary.*

RESOLUTION ADOPTED BY THE GOVERNORS' CONFERENCE, 54TH ANNUAL MEETING, HERSHEY, PA., JULY 2, 1962

CIVIL DEFENSE

Be it resolved by the Governors' conference, That the report of the Committee on Civil Defense be adopted and that a copy thereof, together with this resolution be transmitted to the President of the United States with the recommendation that a special communication be sent to the Congress of the United States emphasizing the continued urgency of the proposed Federal shelter incentive program and urging its enactment; and be it further

Resolved, That the report of the Committee on Civil Defense be similarly transmitted to the chairman of the Armed Service Committees and of the Appropriations Committees of the House and Senate of the U.S. Congress with the recommendation that favorable action on the President's request for authorizing legislation and appropriations for civil defense be promptly taken; and be it further

Resolved, That each State, to the extent it has not already done so, should—

(*a*) Develop procedures and strengthen its organization to insure that applications for Federal aid are promptly processed and coordinated at State level, that advice and assistance are furnished to local jurisdictions on all aspects of their responsibilities under the Federal program, and that State guidance is promulgated concerning planning and training for the ultilization of all group and community shelters financed in whole or in part with public funds;

(*b*) Exempt fallout shelters from increased property tax assessment;

(*c*) Provide group shelter protection for the occupants of all State-owned buildings, as well as assist and encourage local jurisdictions to provide such shelter in public buildings;

(*d*) To the extent feasible, provide financial incentives, in addition to those offered by the Federal Government, for the construction of group shelters by schools, universities, and other nonprofit institutions;

(*e*) Establish civil and criminal penalties for sellers and builders of shelters which are below civil defense standards and which are sold or built without prior notification to the buyer as to the substandard characteristics;

(*f*) Modify, as necessary, State and local laws and regulations concerning building codes so as to permit fallout shelter construction in accordance with standards of effective shielding established by the Federal Government;

(*g*) Provide on a statewide basis advice, assistance and other appropriate incentives for home, group, and community shelter builders;

(*h*) Insure the provision of fallout-protected emergency operating facilities for essential elements of State and local government;

(*i*) In cooperation with the Federal Government, augment existing early warning facilities to insure adequate warning coverage throughout the State;

(*j*) Establish State (home) guard forces, at least in cadre form;

(*k*) Cooperate with the Federal Government in a program of studies, research, and general education in the area of postattack recovery and rehabilitation measures and procedures; and

(*l*) Encourage and assist local governments to support and assist in carrying out the Federal shelter incentive program; and be it further

Resolved, That the Committee on Civil Defense undertake a study of the problems of recovery and rehabilitation following a nuclear attack and report

to the 1963 annual meeting of the Governors' Conference as to the feasible steps which might be taken by all levels of government in cooperation with private institutions to strengthen our capacity as a nation not only to survive but to recover with all possible speed from any nuclear attack against us; and be it further

Resolved, That the name of the "Committee on Civil Defense" of the Governors' conference be changed henceforth to "Committee on Civil Defense and Postattack Recovery."

GOVERNORS' CONFERENCE,
FIFTY-FOURTH ANNUAL MEETING,
Hershey, Pa., July 1–4, 1962.

REPORT AND RESOLUTION, COMMITTEE ON CIVIL DEFENSE

The Governors of our 50 States have, at each of their recent annual meetings, recommended with an increasing sense of urgency a nationwide program of fallout protection.

We have urged such a program because we believed it to be a matter of the utmost importance to the safety and security of the individual citizen, to the strength and survival of the Nation and to the preservation of peace with freedom.

Our goal, a goal endorsed by President Kennedy in a communication to us last October, has been "to reach for fallout protection for every American as rapidly as possible." We, therefore, warmly support the proposed Federal program for a more effective civil defense, with its vital emphasis on fallout protection for all of our people.

As Governors, we share a primary responsibility for the safety and well-being of our people. As Governors we shall continue to do all that is within our ability to protect our citizens from the hazards of nuclear attack. Our success in this task, however, will be greatly determined by the quality and firmness of the leadership at the national level.

It is especially important that a long term and steadfast national commitment be made both to this goal of protection and to a purposeful program designed to achieve it.

With this objective in mind, your committee has cooperated with the Federal authorities in the development of such a program. On September 17, 1961, we met in Washington with Secretary McNamara and Assistant Secretary Pittman for a general discussion of civil defense matters. Following the meeting, we presented to the President and to Secretary McNamara a series of recommendations for action in a number of areas: Warning, evacuation, fallout protection, the preservation of law and order, the military forces, the stockpiling of food and medical supplies, postattack rehabilitation and public information. These recommendations were transmitted also to all Governors.

In November, the New York State Legislature, in extraordinary session, adopted legislation establishing a State shelter incentive program.

On December 11, we met in New York City with Deputy Secretary of Defense Roswell Gilpatric to receive an advance briefing on the proposed new Federal shelter incentive program. At the heart of this program is a shelter incentive proposal which would by incentive payments induce schools, hospitals, and other welfare organizations to incorporate fallout protection in buildings they occupy.

On December 14, following release of the Federal program, your committee issued a statement to all Governors, and to the press, endorsing the Federal proposal and pointing out that an effective civil defense, "with its primary emphasis on a group, community, and family shelter program, will call for a cooperative effort by every level of government, by all of our institutions—business and nonprofit—and by every citizen."

Embodied in the committee's statement was a series of 12 recommendations for supporting actions by States and local governments. A majority of the States have already responded to a number of these recommendations with implementing measures. We urge that the 1962 Governors' Conference also register its endorsement of these recommendations.

We understand that the Federal shelter incentive program, with its accompanying fund authorization, is still awaiting action by the Congress. Indeed, the Armed Services Committees of neither the House of Representatives nor the U.S. Senate, before whom the essential authorizing legislation is pending, have

scheduled hearings or taken any other action to advance President Kennedy's civil defense program.

While action at the State level is a necessary ingredient in any effective civil defense effort, the goal of truly nationwide protection cannot be achieved without a meaningful Federal program. We, therefore, wish to urge the President and the Congress to give this proposed Federal shelter incentive and civil defense program their full and vigorous support.

The fact that, at the level of the Federal Government, the Secretary of Defense has been assigned responsibility for aspects of civil defense, while all matters relating to recovery and rehabilitation following a nuclear attack remain the responsibility of the Director of the Office of Emergency Planning, has given rise to a considerable degree of confusion and concern at State and local levels.

Both Federal agencies have their regional organizations. Both are in contact with State and local officials. And both have programs of action which in many States must be handled by a single organization, charged with both civil defense and emergency planning responsibilities.

Your committee recognizes that the situation thus created poses serious administrative problems for our States and communities. However, it is scarcely a year since the President first announced this new alinement of Federal responsibilities. The past 12 months have been largely a period of reorganization and reorientation for both Federal agencies. Duplications and overlapping functions are still being sorted out, and the respective roles of the two agencies are now being clarified. Moreover, there is now evidence of far more vigorous and effective Federal action in the fields of both civil defense and post-attack recovery than has been the case for many years past. In view of all the foregoing considerations, it is our belief that the 1962 Governors' Conference should urge all States to realine or reorient their own internal organization as necessary to insure a maximum of coordination and support for both the Office of Emergency Planning and the civil defense elements of the Department of Defense, in the development and implementation of their respective action programs. Your committee plans to keep this matter under continuing review over the coming months and to offer additional comments and recommendations at the 1963 Governors' Conference.

As we continue our study of the problems of civil defense in a nuclear age, it is increasingly clear that much work remains to be done to assure the speedy recovery of our Nation and its institutions following any attack. It is of first importance that we plan in advance of any attack how the surviving resources of people, equipment, material, and services can be most effectively and promptly mobilized for the Nation's welfare. Recovery and rehabilitation after a nuclear thrust against us is not an insoluble problem. The real challenge is to apply the knowledge we already have not only as to how to minimize the casualties and disruption from the attack itself but as to the measures which can impart speed and success to our efforts to make an early and effective recovery as a nation.

The present lack of adequate national planning for post-attack recovery is a serious gap in our nonmilitary defense. We recommend that the several states make a special effort in the coming year to initiate the studies and the plans which are needed on the local level to ascertain the best means by which specific communities can make the most effective recovery from any possible nuclear attack. To underscore the new and affirmative attention which we believe should be given by the committee on civil defense to all aspects of the recovery and rehabilitation problem, we believe that the phrase "post-attack recovery" should be added next year to the official name of this committee.

Now, therefore, we urge the adoption by this 1962 Governors' Conference of the following resolutions:

1. *Resolved*, That the report of the committee on civil defense and the resolutions recommended by it be adopted and that a copy thereof be transmitted by the chairman of the conference to the President of the United States with the recommendation that a special communication be sent to the Congress of the United States emphasizing the continued urgency of the proposed Federal shelter incentive program and urging its enactment;

2. *Further resolved*, That the report of the committee on civil defense and the resolutions urged by it be similarly transmitted to the chairmen of the Armed Services Committees and of the Appropriation Committees of the House and Senate of the U.S. Congress with the recommendation that favorable action on the President's request for authorizing legislation and appropriations for civil defense be promptly taken:

3. *Further resolved*, That each State, to the extent it has not already done so, should—

(*a*) Develop procedures and strengthen its organization to insure that applications for Federal aid are promptly processed and coordinated at State level, that advice and assistance is furnished to local jurisdiction on all aspects of their responsibilities under the Federal program, and that State guidance is promulgated concerning planning and training for the utilization of all group and community shelters financed in whole or in part with public funds;

(*b*) Exempt fallout shelters from increased property tax assessment;

(*c*) Provide group shelter protection for the occupants of all State-owned buildings as well as assist and encourage local jurisdictions to provide such shelter in public buildings;

(*d*) To the extent feasible, provide financial incentives, in addition to those offered by the Federal Government, for the construction of group shelters by schools, universities, and other nonprofit institutions;

(*e*) Establish civil and criminal penalties for sellers and builders of shelters which are below civil defense standards and which are sold or built without prior notification to the buyer as to the substandard characteristics;

(*f*) Modify, as necessary, State and local laws and regulations concerning building codes so as to permit fallout shelter construction in accordance with standards of effective shielding established by the Federal Government;

(*g*) Provide on a statewide basis advice, assistance, and other appropriate incentives for home, group, and community shelter builders;

(*h*) Insure the provision of fallout-protected emergency operating facilities for essential elements of State and local governments;

(*i*) In cooperation with the Federal Government, augment existing early warning facilities to insure adequate warning coverage throughout the State;

(*j*) Establish State (home) Guard forces, at least in cadre form;

(*k*) Cooperate with the Federal Government in a program of studies, research, and general education in the area of postattack recovery and rehabilitation measures and procedures; and

(*l*) Encourage and assist local governments to support and assist in carrying out the Federal shelter incentive program;

4. *Further resolved*, That the committee on civil defense undertake a study of the problems of recovery and rehabilitation following a nuclear attack and report to the 1963 Governors' conference as to the feasible steps which might be taken by all levels of government in cooperation with private institutions to strengthen our capacity as a Nation not only to survive but to recover with all possible speed from any nuclear attack against us; and

5. *Further resolved*, That the name of the "committee on civil defense" of the Governors' conference be changed henceforth to "committee on civil defense and postattack recovery."

MILLERS' NATIONAL FEDERATION,
Washington, D.C., August 3, 1962.

Hon. CARL HAYDEN,
Subcommittee on Department of Agriculture and Related Agencies, Committee on Appropriations, U.S. Senate, Washington, D.C.

DEAR SENATOR HAYDEN: The Millers' National Federation last year began developing a full-scale defense planning program for the entire U.S. flour milling industry. Our reasons for doing so and some of our activities are set forth in the attached statement.

Because the success of our planning depends to a great extent on guidance and leadership from the Federal Government, we have watched with interest the progress of the appropriations requests of several agencies and departments.

Even though your subcommittee may not deal with all the various requests, we want to take this opportunity to give you our views.

Sincerely yours,

C. L. MAST, Jr., *President.*

STATEMENT BY MILLERS' NATIONAL FEDERATION ON CIVIL DEFENSE APPROPRIATIONS

This presentation is made in behalf of the Millers' National Federation, the national trade association of the wheat flour milling industry, whose membership represents in excess of 90 percent of the total wheat flour production in the United States.

This statement is directed particularly toward the following Department of Agriculture requests for amended appropriations:

(*a*) The Agricultural Marketing Service project statement, item 3a, "food management, planning, and related civil defense activities," the original estimate being $50,000 and the requested increase of $150,000 to bring it to a total 1963 estimate of $200,000;

(*b*) The Agricultural Stabilization and Conservation Service, a request of an increase in the budget of $300,000 to "provide for a full-time liaison representative and secretary at regional headquarters, $100,000; to provide for assistance to the USDA State defense boards, $200,000; this being an increase in the project statement for defense liaison and management originally $83,000, the increase to be $300,000 making the amended estimate $383,000."

Early in September 1961, leaders in the industry expressed the feeling that the flour milling industry, as a major food industry, had a responsibility to be prepared and in position to operate in case of a nuclear attack upon the Nation. This matter was further discussed at a meeting of the executive committee of the Millers' National Federation on September 8, 1961, at which time the emergency planning committee was appointed, with Malcolm B. McDonald, of International Milling Co., Minneapolis, Minn., as chairman and with six other members representing all areas and all phases of flour milling in the United States.

This committee, meeting on October 4, 1961, moved quickly to implement the program outlined, and staff members of the federation in late October spent several days in Washington conferring with the appropriate representatives of the Department of Agriculture, the Food and Drug Administration, the Department of Defense, and the Department of Commerce.

After detailed studies of the Federal Civil Defense Act of 1950, the Executive orders implementing this act, the "national plan" and the various detailed breakdowns of the national plan as put together by the Office of Civil and Defense Mobilization and the consultations with those in Government directly charged with the responsibilities in connection with civil defense, this industry agreed that this responsibility on the part of the industry should be broken down as follows:

(*a*) Corporate responsibility;

(*b*) Plant level preparation;

(*c*) Technical problems of radioactive contamination, chemical and biological attack; and

(*d*) Operating problems under Government emergency regulations.

The first subdivision of this program—corporate responsibility—while crucial to the industry itself, has very little interest to the community at large. The other three subdivisions, however, are a most important part of the civil defense effort and they have been undertaken by the industry recognizing that the odds are very great that the programs and preparations involved may never have to be put into effect. It recognizes further that, if they are needed, the need will be desperate, there will not be time to then make preparations, and the industry can be and must be in a position to contribute quickly and definitely to the problem of feeding the people following any such attack.

Accordingly, a series of bulletins were prepared, 11 in number to date with additional bulletins being in process, dealing with the four general subjects listed. These bulletins were an attempt on the part of the industry and fully qualified technical consultants used in the preparation of the bulletins to take an impossibly complex subject and reduce it to terms which the average, intelligent layman can understand and make effective.

The plant level preparation assignment was dealt with in such a way as to inform the industry as to the probable situation that would exist in the event

of an attack, the types and degrees of contamination that might be expected, the necessary procedures to meet those conditions, to clean up any contamination and to be in position to quickly resume processing of wheat.

The technical problems of radioactive contamination, chemical and biological attack were dealt with similarly.

In connection with these two divisions arrangements were made for a nuclear defense school under the joint sponsorship of the Millers' National Federation and Kansas State University at Manhattan, Kans., for 3-day courses directed particularly to cereal chemist and operating personnel of flour mills. These schools were of necessity limited to 40 because of the nature of the instruction that was given. The first was held in April of this year; the second session is scheduled for September 5, 6, and 7 of 1962. The schools have had the most complete cooperation on the part of the university, on the part of the industry, and on the part of the Government. It is expected that they will be continued until several hundred have had the opportunity of taking the instruction since there are over 200 operating flour mills in the United States and it is most important that at least 2 individuals of each of these plants have this type of training.

The lines of authority and responsibility as outlined in the series of Executive orders signed February 16, 1962, made little change so far as responsibilities for food are concerned. This is a direct responsibility of the Department of Agriculture and of the Food and Drug Administration of the Deaprtment of Health, Education, and Welfare.

This industry recognizes the almost insurmountable obstacles that will be confronted in the event of an attack and the training and the general program is directed toward supplementing the authorities and responsibilities of the appropriate governmental agencies concerned.

In the matter of the control of foodstuffs down to the wholesale level, this is a direct responsibility of Agriculture. The plan of operation which has been set forth includes regional offices, USDA State defense boards, USDA county defense boards, all of which in an emergency are faced with massive responsibilities that require immediate and positive decisions and handling. The major load has been placed on the Agricultural Marketing Service and the Agricultural Stabilization and Conservation Service. The chairman of the ASCS committee is the State chairman of the USDA State defense board; the office manager of the county ASCS office is the chairman of the USDA county defense board.

It has been our experience that these gentlemen simply have not had the staff nor the time to fully study and understand the responsibility of duties involved in these assignments. It seems to us most important that, at least at the State level, the chairman of the USDA State Defense Board should have an assistant whose first and primary responsibility is civil defense and the problems which would be faced by his office in event of an emergency. Only in very few instances is such possible under the present arrangement and under the present staffing.

If the Congress believes in a civil defense program—and we believe it unquestionably does—if the administration believes that the situation justifies that type of planning—and we are sure it does—certainly the quite modest request for additional appropriations for setting up this type of an organization for handling the food supplies of the country should be given further, and we sincerely hope, favorable consideration.

The emergency food reserve program in connection with which there is no request for additional appropriations does include authorization to utilize some $30 million of presently existing departmental funds in a pilot program. These pilot programs, No's. 1 and 2, merely authorize the building up the pipeline in connection with current distributions of surplus foods in order to make them available in the event of an emergency. We doubt that there is any major opposition to this as a prudent testing of procedures that may be most important in a time of emergency.

Pilot program No. 3 would involve the relocation of approximately 24 million bushels of CCC wheat stocks which move is viewed with known skepticism by the milling industry. We feel the necessity of transferring wheat stocks is minimized by the fact that the wheat flour milling industry has an effective program in operation for the quick supplying of processed wheat. The Department has wheat stocks available at most of the active milling plants in the United States so that dispersal is well assured. Our skepticism includes the practicability of, under emergency conditions, making this program available as a source of emergency feeding. However, the amount involved is not large, the expense

involved is not of a major nature, and possibly it should be considered as another step to meet emergency conditions, the extent of which we are not in position to evaluate.

Several other Federal agencies have been directed to carry out certain civil defense and emergency planning functions. For example, the Food and Drug Administration has the awesome responsibility of insuring that the U.S. food supply is safe for consumption following a nuclear attack. The Office of Civil Defense, the Interstate Commerce Commission, and several other agencies also have responsibilities which must be carried out if business is to invest valuable time and money in voluntary defense planning in the national interest.

This industry has given long, detailed, and serious consideration to the situation that would confront this country in the event of such a nuclear attack. It feels the matter of preparation must be done in advance if it is to be in any way effective or efficient. We are anxious to prepare our industry to contribute to the maximum extent possible to solving the problems that would be immediately upon us. To the extent these various appropriation requests come before you, we sincerely hope you will give them careful and favorable consideration.

Attached is a full file of the bulletins to date dealing with nuclear defense used as a handbook by the industry and in the hands of every flour mill in the United States.

NATIONAL AERONAUTICS AND SPACE COUNCIL

STATEMENT OF DR. E. C. WELSH, SECRETARY, ACCOMPANIED BY DR. JEROME B. WIESNER, DIRECTOR, OFFICE OF SCIENCE AND TECHNOLOGY

JUSTIFICATION OF ESTIMATES FOR FISCAL YEAR 1963

The National Aeronautics and Space Council requests an appropriation for fiscal year 1963 of $530,000, to meet salaries and other expenses of the Council staff.

The Council staff was activated in March 1961, when the President appointed, with the advice and consent of the Senate, an executive secretary. In April 1961, by amendment to the National Aeronautics and Space Act of 1958, the Council was located in the Executive Office of the President. Until August 17, 1961, the staff was funded, in a limited fashion, first from the President's emergency fund until July 1, and then from advances against its fiscal year 1962 appropriation request. On August 17, an appropriation of $320,000 for the Council staff became law. Then, on September 30, 1961, a supplemental appropriation was received in the amount of $225,000.

The supplemental of $225,000 was justified on the fact that the original submission had been made prior to the President's decision to accelerate substantially the space program in all of its aspects. Such expanded and accelerated program projected a significant increase in workload upon the Space Council and its staff.

While the Space Council and its staff have been very active during the approximately 9 months of operation, there has still not been sufficient experience to establish a clear pattern for manpower and other requirements. However, such experience as has been obtained gives indication that the fiscal year 1962 appropriation of $545,000 approximates the amount needed for salaries and other expenses, in light of the currently projected space program. In fact, as a result of estimates of nonrecurring costs for certain equipment, etc., and through the use of consultants for peakload projects, the appropriation required for fiscal year 1963 is reduced by $15,000 as compared with this fiscal year.

A total staff of about 32 is planned, including the executive secretary, aerospace assistants, other professional and clerical staff. The staff is under the supervision of the executive secretary, has the responsibility for preparing recommendations and taking other actions, through the Council, to advise and assist the President throughout the broad spectrum identified as aeronautic and space activities. In reference to the activities concerning which the Council is to advise and assist the President, the law specifies no limit to such activites, but does state that they will include the following:

"1. Survey all significant aeronautical and space activities including the policies, plans, programs, and accomplishments of all departments and agencies of the United States engaged in such activities;

"2. Develop a comprehensive program of aeronautical and space activities to be conducted by departments and agencies of the United States;

"3. Designate and fix responsibility for the direction of major aeronautical and space activities;

"4. Provide for effective cooperation among all departments and agencies of the United States engaged in aeronautical and space activities, and specify, in any case in which primary responsibility for any category of aeronautical and space activities has been assigned to any department or agency, which of those activities may be carried on concurrently by other departments or agencies; and

"5. Resolve differences arising among departments and agencies of the United States with respect to aeronautical and space activities under this act, including differences as to whether a particular project is an aeronautical and space activity."

In brief, the Council's functions include surveying policies, developing programs, designating responsibilities, providing cooperation, and resolving differences. Performance of these functions applies to all aeronautic and space

activities and to all departments and agencies of the Government engaged in such activities.

Some of the space areas in which staff members have responsibilities are communications, navigation, meteorology, manned military projects, manned nonmilitary projects, unmanned scientific explorations, booster and propulsion developments, employment of atomic energy, international relationships, legislative and budgetary changes, and Executive order preparation and modification.

To supplement the full-time work of the staff, funds are included to provide consultant services which will be required from time to time on specific projects. Provision is made in the estimates for necessary travel and for rental of motor vehicles on an as-needed basis. Provision is also made for transportation of things; rent, communication, and utilities; printing and reproduction; supplies and materials; equipment; personnel benefits; and other services.

NATIONAL AERONAUTICS AND SPACE COUNCIL—SALARIES AND EXPENSES

Personnel Compensation and Staffing.—$385,000 for 32 permanent positions distributed as follows:

	1962	1963
Permanent positions	32	32
Average employment	27	30

Summary statement on "Other objects": for 1963, $145,000

12 Personnel benefits, $27,600.—Includes contributions to retirement fund, $24,100; health benefits, $1,800; group insurance, $1,200; and FICA, $500.

21 Travel and transportation of persons, $40,000.—Includes funds for travel to space research and development sites for firsthand study by Council staff. Also includes funds for payment to GSA motor pool for hire of automobiles when needed for transportation of officials and staff of the Council on official business in the Washington area.

22 Transportation of things, $5,000.—Provides costs for shipment of supplies and materials and costs of moving household goods as provided by law.

23 Rent, communications, and utilities, $8,000.—For telephone services and equipment usage and other utilities as required. Also included are telegraph and penalty mail.

24 Printing and reproduction, $5,000.—Provides for printing and binding of reports, studies, and other publications as needed, and normal duplicating done on a commercial or reimbursable basis.

25 Other services, $42,400.—Provides $25,000 reimbursement to GSA for administrative services, and $17,400 for health room services, office machine repair, furniture repair, personnel security checks, commercial contracts, etc.

26 Supplies and materials, $5,000.—For office supplies and other work materials such as legislative bills, reports, enacted legislation, and periodicals.

31 Equipment, $12,000.—For office furniture and equipment, including such items as typewriters and calculators.

BUDGET REQUEST

Senator MAGNUSON. We will hear Dr. Welsh from the Space Council. This is the National Aeronautics and Space Council, of which you are the executive secretary.

Last year you had $545,000, and this year your budget is $530,000. The House approved your request, which amounts to a reduction of $15,000 from your fiscal 1962 request and appropriation.

Dr. WELSH. That is correct. It is exactly what we asked for this year.

Senator MAGNUSON. Do you have any further statement to make or discussion on the workings of the Council?

Dr. WELSH. No, sir. Only to respond to questions. I have a prepared statement to put in the record, if you wish it.

Senator MAGNUSON. Your letter and the statement will be inserted in the record.

(The statement referred to follows:)

EXECUTIVE OFFICE OF THE PRESIDENT,
NATIONAL AERONAUTICS AND SPACE COUNCIL,
Washington, July 30, 1962.

Hon. WARREN G. MAGNUSON,
Chairman, Subcommittee in Charge of Independent Offices Appropriation Bill, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: This acknowledges receipt of your letter of July 27, in which you inquire as to whether any changes are required in the House independent offices appropriation bill, so far as the National Aeronautics and Space Council is concerned.

I wish to advise that no changes are required or suggested. The House bill (H.R. 12711), contains on page 2, line 15, an amount of $530,000 which is exactly what I had requested in my presentation and testimony.

I plan to appear before your committee, as requested, at 10 o'clock on August 6.

Sincerely,

E. C. WELSH, *Executive Secretary.*

NATIONAL AERONAUTICS AND SPACE COUNCIL—FISCAL YEAR 1963

For fiscal 1963, request is made for an appropriation of $530,000 to meet the salaries and other expenses of the Council's staff. This amount is $15,000 less than the total requested and appropriated for fiscal year 1962.

The Council staff was activated in March 1961, when the President, with the advice and consent of the Senate, appointed Dr. E. C. Welsh as Executive Secretary. Initially, a small staff nucleus was funded from the President's emergency fund until July 1, and then from advances against its fiscal year 1962 appropriation request. On August 17, an appropriation of $320,000 for the Council staff became law. Then, on September 30, 1961, a supplemental appropriation was received in the amount of $225,000.

As of this date, actual appropriations for Space Council staff activity have been available for slightly less than a year. While there has been substantial accomplishment during the whole period since activation, there has not been sufficient experience to establish a clear pattern of manpower and other requirements. However, such experience as has been obtained gives indication that the fiscal year 1962 appropriations approximate the amount needed, in light of the currently projected space program. In fact, as a result of estimates of nonrecurring costs for certain equipment, etc., and through the assistance of consultants for peakloads or for special projects, the request for fiscal year 1963 is estimated at $530,000, as compared with $545,000 for fiscal year 1962. In order to get the maximum efficient use out of the requested funds, it is considered desirable to have flexibility in the use of such funds as between the various itemized objects, except in regard to the money requested for travel.

Of the approximately $365,000 identified as available for salaries during fiscal year 1962, the Council staff is currently obligated on an annual basis at about $275,000. This will build up gradually as top quality personnel develops. A total staff of about 32 is planned, including the Executive Secretary, aerospace assistants, and other professional and clerical staff. Provision is made in the estimates for necessary travel and for rental of motor vehicles on an as-needed basis. Provision is also made for transportation of things; rent, communication, and utilities; printing and reproduction; supplies and materials; equipment; personnel benefits; and other services.

The staff, under the supervision of the Executive Secretary, has been carrying out increasing responsibilities in advising and assisting the President in the broad area of aeronautic and space activities.

E. C. WELSH.

GENERAL STATEMENT

Senator MAGNUSON. Are there any questions from members of the committee?

Senator ALLOTT. I would like to know what you are doing.

Dr. WELSH. The Space Council is engaged in coordinating the activities of all the other agencies involved in space and aeronautics; handles questions of jurisdiction that may arise as between such agencies; and makes recommendations to the President on policy changes. As an illustration, the communication satellite policy of the President was drafted in a coordinated manner by our staff. Also, the communications satellite legislation, which was sent up by the President, was so drafted. We were instrumental in developing the budget program which was sent up last year for the expanded and accelerated space program. This included the decision to make the lunar trip in this decade.

Senator MAGNUSON. And the new authorization bill which has just been gotten through with.

Dr. WELSH. Yes.

TOTAL EMPLOYEES

Senator ALLOTT. How many employees do you have?

Dr. WELSH. Twenty-four now and we are planning on about 32. There was no staff at all when we activated the Council about a year ago.

Senator ALLOTT. You want to increase that from 24 to 32 this year?

Dr. WELSH. It is an incremental part of the growth. We started with zero and set a target of 32 and budgeted for 32, and figured we could work it out with $545,000, which we thought was necessary. Now we think we can do it for $530.000.

Senator ALLOTT. That is all I want.

LIAISON WITH OFFICE OF SCIENCE AND TECHNOLOGY

Senator MAGNUSON. As long as Dr. Wiesner is here, what is the liaison in this particular field of science and technology, which is his new shop? How do you work it?

Dr. WELSH. It is continuous. It is practically daily contact without overlapping. I do not go about hiring a series of scientists because he has them. If I want a study made then I discuss it with Dr. Wiesner, and he gets a panel to prepare a scientific study so I do not duplicate with him. We in the Council are involved in the overall coordination and policy in regard to space and aeronautics, across the board. Dr. Wiesner has the broad scientific job.

Senator MAGNUSON. But you both really render assistance and advice in the decisions of the White House?

Dr. WELSH. That is correct.

Senator MAGNUSON. Both of you?

Dr. WIESNER. Yes.

Dr. WELSH. That is correct.

Senator MAGNUSON. You are in a specialized field and Dr. Wiesner is in other fields.

Dr. WELSH. Yes.

Senator MAGNUSON. And in this too.

Dr. WIESNER. I might say we have had an unbelievably good working arrangement between the two of us. Dr. Welsh calls on me for technical problems and I call on him if there are technical problems broader than the scientific responsibilities I have.

Senator MAGNUSON. Do you think we should put oceanography in with these fellows too—so we have both space and depth?

Dr. WELSH. I certainly agree to its relative importance.

Senator ALLOTT. Then you would encompass his office, or functions in the field of his office, but he would not necessarily encompass the fields of your office.

Dr. WIESNER. That is right. In scientific matters we share the responsibility in the space field, but my responsibilities encompass all fields in Government science and technology, whereas his responsibility encompasses only half of it.

Dr. WELSH. Just space and aeronautics.

Dr. WIESNER. Because space and aeronautics is a very large part of our scientific program in dollar volume. What I estimate to be a $12 billion budget that we will be dealing with next year, I suppose space would be $5 billion of that.

Senator ELLENDER. Dr. Welsh, you say your office has been in existence for a year?

Dr. WELSH. A little over a year. I was appointed a year ago March. We had a budget for about a year.

Senator ELLENDER. And your purpose is to coordinate?

Dr. WELSH. Coordinate and make policy recommendations to the President on space and aeronautics matters and, of course, to do anything in those fields which the President asks us to do.

Senator ELLENDER. What is the purpose? Is it to prevent duplication and thereby save a little money?

Dr. WELSH. This is one of the purposes; yes, sir.

Senator ELLENDER. In the year you have been with it, how much have you saved the Government?

Dr. WELSH. I would not be able to judge.

WORK DUPLICATION

Senator ELLENDER. Have you been able to dispose of some of the agencies, or somebody in the agencies wherein there was duplication of work of other agencies?

Dr. WELSH. As far as getting into the internal operation of how many people they have in the other agency, the answer is "No." As far as getting into their budgets and reviewing them ahead of time to see that both NASA and Defense do not have the same projects or are duplicating the use of people and resources, we get into that.

Senator ELLENDER. To see they do not have the same what?

Dr. WELSH. The same projects.

Senator ELLENDER. But to what extent have you found any great duplication there?

Dr. WELSH. We found some duplication in some of the proposals that have come up, and when we have gone through them the duplication no longer exists, to the best of our knowledge. In budget and

planning proposals, for example, we just had sessions on communications satellite projects to see if the Defense Department and NASA were doing the same thing.

Senator ELLENDER. And you found no duplications?

Dr. WELSH. I did not say we found none, but by bringing them up and making them show whether there is any duplication, we have helped generate the policy decisions made that will eliminate duplication. It is difficult to see in a big area of this sort where you save a particular amount of money, because you do not know what the expenditures would have been if we had not gotten into the picture first.

Senator ELLENDER. That is the point I want to make. The fact that you are there to watch and make recommendations is a deterrent to duplication.

Dr. WELSH. We think so, and I think it is correct that we think so.

Senator MONRONEY. What part of your effort is devoted to defense, Dr. Wiesner, or military, and what part to the civilian participation in space?

Dr. WIESNER. I wonder if you would not prefer to hold that question until I have made my statement, because I will allude to some of this in the statement.

Senator MONRONEY. Yes.

Dr. WELSH. I think I should respond to some extent to say that as far as the National Aeronautics and Space Council is concerned, one member is the Secretary of Defense, one member is the Administrator of the NASA, one member is the Chairman of the Atomic Energy Commission, and one member is the Secretary of State. When we have a Council meeting they are all represented. We cannot get an exact percentage of how much is military, but we have space responsibility as far as Defense is concerned, just as much as we do for NASA.

Senator MAGNUSON. Anything further? Any further questions?

Senator MAGNUSON. Let's have Dr. Wiesner go ahead. Why don't you just stay here, Dr. Welsh, and we will hear from Dr. Wiesner?

OFFICE OF SCIENCE AND TECHNOLOGY

STATEMENT OF DR. JEROME B. WIESNER, DIRECTOR

HOUSE ACTION

Senator MAGNUSON. The House made appropriations of $700,000, which is $150,000 under the budget estimates. Dr. Wiesner wants to devote himself to that particular item and, as I said, we will put your letter, statement, and justifications in the record in full.

Dr. WIESNER. You do not want me to read it?

Senator MAGNUSON. I think you can highlight it because this is a new thing. The people are not new, but it is a new reorganization of the whole field of science and technology.

Dr. WIESNER. Yes. Why don't I say a few things since is it new?

Senator MAGNUSON. Yes.

(The letter, statement, and justifications referred to follow:)

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF SCIENCE AND TECHNOLOGY,
Washington, August 2, 1962.

Hon. WARREN G. MAGNUSON,
Chairman, Independent Offices Appropriations Subcommittee,
U.S. Senate, Washington, D.C.

DEAR SENATOR MAGNUSON: Your invitation of July 27 to appear before your subcommittee in connection with the proposed fiscal year 1963 budget of the Office of Science and Technology is indeed appreciated.

In further reply to your request, I believe that the public interest does require a change in H.R. 12711 that was reported July 27 to the House of Representatives by its Committee on Appropriations. Page 3, line 16, makes appropriations in the amount of $700,000 for the Office of Science and Technology. This represents a decrease of $150,000 from the $850,000 amount requested by the President. In my view, the new Office would be unable to carry out its new statutory functions with the effectiveness desired both by the President and by the Congress unless the original budget is approved.

I am enclosing with this letter a copy of my prepared testimony which I should like to submit on the occasion of the hearings scheduled for August 6. In this statement I have endeavored to clarify certain of the points which may not have been brought out in my testimony before the subcommittee of the House Committee on Appropriations.

I am looking forward very much to this opportunity to discuss this budget and to answer any questions which you or your committee may have.

Sincerely,

JEROME B. WIESNER.

STATEMENT OF DR. JEROME B. WIESNER

Mr. Chairman, members of the committee, I am pleased to respond to your invitation to appear before this committee to explain the fiscal year 1963 budget request for the new Office of Science and Technology.

The background leading to the creation of the Office of Science and Technology and a statement of its general functions are set forth in Reorganization Plan No. 2 of 1962, and the President's message of transmittal of March 29, 1962. We expect this plan to go a long way toward meeting the needs for stronger, permanent Presidential staff assistance cited last year by the Senate Subcommittee on National Policy Machinery, chaired by Senator Jackson.

As you know, the President requested $850,000 to cover salaries and expenses of this Office during this fiscal year. The House Appropriations Committee has reported out a budget of $700,000. I should like to make a few observations that may assist your consideration of the original budget estimate, particularly certain elements of that figure which may not have been brought out in my testimony before the House committee.

By way of background, the Office of Science and Technology was established to advise and assist the President on matters of national policy affected by or pertaining to science and technology. It is not an operating agency. Rather, the new Office was given statutory responsibility in a staff capacity to the President to evaluate the scientific and technical programs undertaken by all agencies of the Federal Government and to assure that science and technology are used most effectively for national security and the public interest. The special assistant to the President for science and technology previously provided all such assistance to the President, but attention was necessarily focused on particular scientific activities. Those evaluations had neither the comprehensiveness nor the continuity now required.

In the National Science Foundation Act of 1950, the Congress recognized the need for broad evaluation of Government science; that is, the achievement of coordinated Federal policies for the promotion of basic research and education in the sciences and the evaluation of scientific research programs undertaken by agencies of the Federal Government. Because the National Science Foundation has been an operating agency, an organizational equal with those agencies whose program it would coordinate, the provisions were never carried out in practice. The reorganization plan transferred these responsibilities to the OST, thus augmenting responsibilities discharged by the special assistant in the last fiscal year.

In the past, primary emphasis was placed by the special assistant on particular scientific problems directly related to national policy; for example, defense, space, and disarmament. While these problems will continue to occupy much of the attention of the new Office, we will, in addition, undertake a more systematic review and integration of federally supported research and development, as well as scientific and technical education programs. This matter of coordination has become increasingly significant as the R. & D. budget has grown, as science and technology have become more intimately involved in every agency's mission, and as the demand on our research resources draws almost to the limit of our available supply of highly trained manpower.

An important new responsibility of the Office of Science and Technology will be to facilitate communication with the Congress on scientific matters. One of the advantages of the new arrangement will be to have an appointed official of the executive branch—the Director of OST, who is nominated by the President with advice and consent of the Senate—able to provide the Congress with authoritative information on the administration's scientific policies and activities from an overall, rather than a fragmented, point of view. The relationship with the Congress is new and will require a period of experimentation to learn how to serve the Congress best.

Although not obliged by the reorganization plan to do so, the President intends to employ both the President's Science Advisory Committee and the Federal Council for Science and Technology as dual sources of advice through OST.

The PSAC, composed of 18 eminent scientists and engineers appointed by the President, is the source of independent advice from the scientific community in industry and the universities. The Federal Council, composed of policy ranks officials from Federal agencies having major programs of R. & D. and representing the Government scientific community, functions as a science subcabinet. As Director of OST, I shall serve as Chairman of the Council, thus facilitating its use as an important instrument both to develop facts on interagency programs and to exercise coordinating functions of the new Office.

Personnel of OST will assist me in carrying out the functions of the Office while simultaneously providing the necessary operating staff for the Federal Council, for PSAC, and for the consultants who we will continue to call upon to supplement resident expertise. These connections between OST, the Federal Council, and PSAC enormously multiply the effectiveness of a small staff in developing goals, assessing the quality of agency programs and exercising coordinating functions of the new Office. The staff serves to identify critical problems in the Federal program deserving of this Office's attention, collect and interpret facts, and make recommendations, particularly to translate the opportunities of science into action programs to be carried on within the relevant agencies.

Each of the 11 full-time technical staff members has responsibility for at least one of the broad areas of science and technology within the Government such as the life sciences, space, civilian technology, military technology, etc.,

87888—62——8

and serves as a link between the Director, the individual agencies and the consultants.

On the use of consultants: Because of the enormous spectrum of subject matter with which this Office must be concerned, covering as it does the full range of scientific inquiry involving both the physical and life sciences, the Office of the Special Assistant has previously depended on a consulting service of approximately 200 specialists throughout the country, drawn from universities and industry. While there is need to assemble scientific talent when a problem arises, the demand for the particular type of expertise ceases once the problem is solved. The mechanism of consultant use is ideally suited to this form of action. In this way it has been possible to operate with a small permanent staff and yet provide the President with the best available advice in almost any field of science. Furthermore, this extensive use of consultants makes available counsel from a group of outstanding scientists and engineers that it would not be possible to attract as permanent Federal employees.

With the creation of the Office of Science and Technology, the staff of the Office of the Special Assistant has been entirely transferred to the new Office, as were the consultant activities under the PSAC. The PSAC itself has been organizationally retained in the White House. Physically, the staff of the new Office including secretariat of PSAC and the Federal Council will remain in the same location in the Executive Office Building.

The character of the Office of Science and Technology and the scope and level of its activities projected in the $850,000 budget for fiscal year 1963 reflect the growing activities and benefit of experience of the past few years in the Office of the Special Assistant for Science and Technology, and will permit the strengthening of staff and consultant activities required to carry out the intent of the reorganization legislation.

In fiscal year 1962, a total of $651,000 was expended directly by the Office of the Special Assistant for Science and Technology. Of this amount, $573,000 was furnished from the White House special projects funds; $53,000 was provided by the National Science Foundation for work which the Office did in their behalf, corresponding to the transfer of a limited number of Science Foundation responsibilities to this Office (in fiscal year 1963 the completion of this transfer of responsibilities will occur as outlined by the President in his reorganization message on March 29, 1962). An additional $25,000 was provided from the President's emergency fund to make possible certain urgent studies related to national security.

The $850,000 requested for an operating budget in fiscal year 1963, details of which have been transmitted to the committee, accommodates both a modest increase in staff and consultant capabilities needed to meet our broadened responsibilities, and also an assumption of expenses for supporting administrative services which, previously provided by the White House, must now be provided by the new agency.

These particular items are listed in the following table:

Printing and reproduction	$4,000
Supplies and materials	10,000
Equipment	11,000
General services	7,000
Total	32,000

In addition, it will be necessary for us to provide our own administrative and clerical services for budgetary, personnel and operational matters, which I estimate will cost approximately $15,000. These items added to the last year's operating budget total $698,000 required merely to maintain the previous level of activity.

The additional $152,000 of our request would permit the critical expansion of staff, some small increase in use of consultants, and associated travel costs needed to meet our new commitments.

The net increase in staff from 24 to 35 represents half clerical and half professional additions. Due to the lack of funds in fiscal year 1962, this office operated with an extremely large overtime schedule for the secretarial staff, averaging more than 9 hours a week per secretary. White House regulations limited overtime payments to 4 hours per week, and the employees were obliged to take the remainder in compensatory time when they could. As an independent office, we are now obliged to pay for any overtime performed.

To summarize, I believe that the responsibilities assigned to our new office are without precedent. It is my concept to concentrate on developing a small

staff with unusual technical and personal qualifications, calling on the services of consultants as needed, so as to gain the benefit of all the sources of expert opinion which the various institutions of Government, universities, and industry can offer. We intend to be selective in the problems we tackle, with the goal of providing to the President and to the Congress information and judgments concerning both the substantive involvement of science and technology in decision and policymaking, and the effective management of this growing Federal R. & D. enterprise.

We also plan to take those steps necessary to assure the evolution of coordinated, Government-wide programs to be sure that we identify goals, plan and program for their achievement with the most prudent possible use of our resources, physical and intellectual.

BASIC STATEMENT OF FUNCTIONS ACCOMPANYING BUDGET REQUEST

Reorganization Plan No. 2 of 1962, transmitted from the President to Congress on March 29, 1962, provides for establishment of the Office of Science and Technology as a permanent unit within the Executive Office of the President.

The Director of the Office of Science and Technology will be appointed by the President, by and with the advice and consent of the Senate, and provision for a Deputy Director, similarly appointed, is made. The staff of OST will consist of technical specialists, to whom broad areas of scientific and technological interest of the Federal Government are assigned.

It is the responsibility of this Office to provide: Advisory assistance and staff support to the President in developing policies and evaluating programs to assure that science and technology are used most effectively in the interests of national security and general welfare; proper coordination of Federal science and technology functions; review of major policies, plans and programs of science and technology of the various agencies of the Federal Government for appropriate emphasis on the relationship of science and technology to national security and foreign policy, and measures for furthering science and technology in the Nation; assessment of selected scientific and technical developments and programs relative to their impact on national policies; review, integration, and coordination of Federal science and technology activities with consideration to their impact on non-Federal resources and institutions; understanding and cooperative relations with the Nation's scientific and engineering communities; and such other related matters as may be assigned by the President to this Office.

To accomplish these responsibilities the Director makes extensive use of eminent scientists both within and without the Government structure. These experts are called together to serve in panels dealing with subjects in which they are knowledgeable. The immediate staff of technical specialists, under the supervision of the Director, acts to coordinate these panels in the capacity of executive secretaries. Panel subjects include areas as significant and broad in scope as space science and technology, national security affairs, military technology, and civilian technology. At the completion of each panel study, a report is prepared for the use of the Director. In cases where the report is considered to be of national significance, it may be released as a White House document. In such instances it is carefully reviewed and approved by the President's Science Advisory Committee prior to its transmittal to the President and, as such, represents a Science Advisory Committee publication.

The extensive use of consultants for panel activities requires that the Office have wide discretion in its methods of operation, since panels dealing with diverse subjects are frequently handled in different ways. For example, a highly classified report concerning our national defense will be produced in a manner which is entirely unlike the methods used to produce an unclassified report assessing the present state of the behavioral sciences. The varied spectrum of activities plus the Director's immediate responsibilities to the President require that he have maximum flexibility in the operation of the Office. He must have a staff which also is able to apply extensive training in the basic sciences to a variety of disparate problems. Staff studies may be undertaken in response to specific requests, either by the President or the Congress or by other agencies within the Government. The following paragraphs will outline subjects which are frequently studied by this Office.

The area of national security affairs includes military and nuclear technology broadly, military strategy, technical intelligence, and disarmament. Typical problems are the following: Analysis of impact of developments in military technology on military strategy; assessment of relative value of different stra-

tegic weapon systems; determination of priority of various military programs in the DOD and AEC budgets; evaluation of the effectiveness and policy implications of advanced weapon systems, review of critical technical intelligence estimates and assessment of their impact on the military and national policy; development of specific proposals for the control and limitation of armaments; and evaluation of the military and policy implications of disarmament proposals.

Military technology will include such areas as civil defense, limited war, and continental defense. Exemplary problems are: Technical review and assessment of current and potential governmentwide civil defense programs and policies; review and assessment of proposed program and policy for air defense of the United States; review and assessment of selected programs for U.S. general purpose forces and the balance in research and development effort devoted to the achievement of military postures supporting specific (nongeneral war) national security policies.

The area of outer space science and technology includes technical fields such as launch vehicle propulsion technology and spacecraft design and development; space vehicle command, control and communications; overall vehicle and missions systems engineering; means for scientific investigations of space; the applications of advanced concepts of electronics and nucleonics as well as other rapidly developing technical fields to space exploration for civilian and defense purposes. Problems encompass the means and methods for utilizing the national space exploration program to enhance U.S. posture abroad; establishing the level of effectiveness of NASA operations in overall systems integration and reliability engineering for the manned lunar landing program, and devising ways and means for realizing improvements in these operations; examining the programs for scientific investigations in space of NASA and the DOD to assure that they take full advantage of the resources available in universities and major industrial technical establishments, and that effective relationships are maintained with the scientific community.

Civilian technology covers industrial and economic development in the United States as well as abroad, insofar as science and technology plays an important role; evaluating means for science and technology to contribute more effectively to national and international economic growth, industrial development and trade; and insuring that civilian technological development undertaken by the Federal Government facilitates efforts by the private sector and is responsible to domestic and international needs for economic growth, industrial development, and trade; identifying and ecouraging civil byproducts of defense and space-oriented Government-sponsored research and development; examining fiscal and regulatory Federal Government practices and related Government organization so as to provide industry with maximum incentives for technological innovation; and formulating organizational, programmatic, and budgetary measures to improve governmental policy in those areas. They include, as examples, housing and construction, transportation, textiles, and coal utilization.

While these illustrations by no means delineate the entire range of activities with which this Office is concerned, they at least give an indication of both the scope and the depth of the investigations undertaken.

EXECUTIVE OFFICE OF THE PRESIDENT

Office of Science and Technology

SALARIES AND EXPENSES

"For expenses necessary for the Office of Science and Technology, including services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a) but at rates for individuals not to exceed $50 per diem, $850,000."

Program and financing

[In thousands of dollars]

	1961 actual	1962 estimate	1963 estimate
Program by activities: Scientific policy development and program evaluation	----------	----------	850
Financing: New obligational authority	----------	----------	850

Object classification

[In thousands of dollars]

		1961 actual	1962 estimate	1963 estimate
11	Personnel compensation:			
	Permanent positions			338
	Positions other than permanent			108
	Other personnel compensation			16
	Total personnel compensation			462
12	Personnel benefits			28
21	Travel and transportation of persons			287
23	Rent, communications and utilities			38
24	Printing and reproduction			7
25	Other services			2
	Services of other agencies			5
26	Supplies and materials			10
31	Equipment			11
	Total obligations			850

Personnel summary

	1961 actual	1962 estimate	1963 estimate
Total number of permanent positions			35
Full-time equivalent of other positions			7
Average number of all employees			42
Number of employees at end of year			100
Average GS grade			11.3
Average GS salary			$9,700

Detail of personnel compensation

	1961 actual	1962 estimate	1963 estimate	
			Number	Total salary
Grades and ranges:				
Special positions at rates equal to or in excess of $18,500:				
Director			1	$22,500
Deputy Director			1	20,500
GS–18. $18,500: Technical staff members			6	111,072
GS–17. $16,530 to $17,570: Technical staff members			2	33,342
GS–16. $15,255 to $16,295: Technical staff member			1	16,307
GS–15. $13,730 to $15,030:				
Technical staff members			4	54,996
Administrative Officer			1	13,749
GS–14. $12,210 to $13,510: Technical staff member			1	13,270
GS–12. $8,955 to $10,255			1	9,235
GS–9. $6,435 to $7,425			1	7,426
GS–8. $5,885 to $6,875			7	43,867
GS–7. $5,355 to $6,345			6	34,694
GS–6. $4,830 to $5,820			2	11,315
GS–4. $4,040 to $4,670			1	4,160
Total permanent			35	396,433
Deduct lapses			4.5	58,433
Net permanent (average number, net salary)			30.5	338,000
Positions other than permanent: Intermittent employment				108,000
Other personnel compensation: Overtime and holiday pay				16,000
Total personnel compensation				462,000

Justification of estimates—Other objects, fiscal year 1963

12 Personnel benefits $28,000

This amount is based on the total estimate of staff salary costs plus the cost of services of consultants and panel members. Staff benefits include reimbursement to the employees retirement fund, health and life insurance. Social security payments will also be made in connection with panel and consultant employment.

21 Travel 287,000

Approximately $34,000 will be required for staff travel, both to provide attendance of the Director or his staff at important scientific conferences, and to enable members of the staff to convene panel meetings in locations other than Washington, when this is necessary. The remainder of the total requested will be used to cover the travel costs of the panel members and consultants. This will include the travel costs for panelists who serve without compensation, but who usually request reimbursement for travel expenses incurred.

23 Rents and communications and utilities 38,000

To provide the necessary telephone, telegraph, and teletype services as well as postage expenses anticipated in the budget year.

24 Printing and reproduction 7,000

To reimburse the GPO, other Government agencies, and private contractors for the printing and reproduction of numerous reports, publications, and allied materials prepared by this Office.

25 Other services: Administrative contracts 7,000

To reimburse the PHS for employee participation in the service of a health unit, and to provide for the necessary contractual services required such as repair of typewriters, adding machines, and other office equipment; cleaning and repair of furniture and rugs; photographic and art services.

26 and 31 Supplies, materials, and equipment 21,000

This amount will enable the office to establish an inventory of supplies and materials and to provide the items required for normal operations throughout the year. It will also provide about $2,000 for the purchase of necessary periodicals and books.

GENERAL STATEMENT

Dr. WIESNER. As you know, there has been a Special Assistant for Science and Technology in the White House for a number of years, and I came in with the new administration in that role. Last year the Subcommittee on National Policy Machinery made some recommendations regarding the need for a stronger and more permanent organization. This problem had previously been studied by other groups who came to the same conclusion. Some people have made a much stronger recommendation, of which I am sure you are all aware, for a Department of Science. This would bring much of governmental science into a single organization, possibly with a head of that office in a Cabinet position.

REORGANIZATION PLAN NO. 2

At the President's request, I took a year to study all the proposals for providing stronger White House assistance in the coordination and integration of the science program and to see if we could find a way to satisfy all of the other requirements that Senator Jackson's committee brought out including the need to have some responsible group to report to the Congress. Essentially, we have followed their recommendations in Reorganization Plan No. 2 that the President sent to Congress on March 29, 1962.

This plan was approved by both Houses and in July President Kennedy appointed me Director of the office. We have transferred the

staff of the Special Assistant for Science and Technology from the White House staff to the new office in the Executive Office of the President.

I also retain the position as Special Assistant to the President. In addition to the tasks we performed for the President prior to the reorganization, we have taken on the responsibility for surveillance and policymaking in the field of science which was previously assigned to the National Science Foundation in its act of 1950, and which it never felt appropriate to fulfill. The new office being in the Executive Office of the President is not an operating agency. I still have the responsibility to provide special assistance to the President as in the past in any field he is particularly interested in, and to undertake general surveillance in those areas of special concern, and am now attempting to make a broader assessment of the organization of national science activities. For this purpose we did ask for some additional funds.

EXPENDITURES, 1962

In the presentation of our budget to the House, I did not make completely clear both the new functions and the level of expenditure that was involved last year. In my statement I show that we spent roughly $698,000 last year for the activities carried out for the President.

Senator ELLENDER. Is that before reorganization?

Dr. WIESNER. Before reorganization.

Senator ELLENDER. 600-and-some-odd thousand?

REQUEST FOR 1963

Dr. WIESNER. $698,000. And this year we asked for $850,000. The additional $152,000 would be used in part to support the administrative structure, which unfortunately we have to build up because we are an independent entity. Prior to this we received all of our administrative support from the White House.

In addition to that, we intend to have a full-time staff member for activities in science information. This has become a very critical Government problem; possibly a staff member for oceanography, which Senator Magnuson knows a great deal about.

RESULTS OF LOWER BUDGET

If we are forced to operate on the $700,000 budget, what I shall probably do is attempt to curtail some of the activities which we did perform for the President last year that might be of less importance than some of the new functions. For example, the problem of liaison with the Congress on scientific matters, which is a new function for our office will require additional effort. As a matter of fact, I will be candid and say I do not know precisely what will be asked of us by the Congress. I will be required to spend some of my time on this task. We will all require the time of additional people to assist in making more comprehensive reviews of scientific research and scientific education programs in this country, as they are becoming much more critical than they have been in the past with the growing science budget.

GROWTH IN RESEARCH

The situation is that a decade ago the country expended $1 billion a year in research and development, and is now spending approximately $12 billion, and it is clear it is not going to stop. It is a growing thing. The mechanism to keep Congress and the President assured there is not too much overlap, that we have adequate manpower to do these tasks, and that the programs are sensibly and well thought out that was adequate a decade ago is not adequate today. That is why Senator Jackson recommended strengthening of this operation and why we are attempting to do so.

This is an experimental process. I am not precisely sure how to do the best job, and the people who want a stronger organization may turn out to be right. My own conviction is, though, that one can always strengthen organizations, but if you create too strong a bureaucratic organization it is very hard to change and turn back.

CONNECTION WITH NATIONAL AERONAUTICS AND SPACE COUNCIL

Senator ELLENDER. What connection has your organization with Dr. Welsh's?

Dr. WIESNER. We are both in the Executive Office of the President.

Senator ELLENDER. But separate?

Dr. WIESNER. We are separate, but side by side. When Dr. Welsh's office was created, it was obvious that there was an overlap between us because my office has the responsibility for research and development in all fields, and space research overlaps some of the other fields. On the other hand, he has some of this responsibility too.

We decided to coordinate our activities. We agreed we would provide the technical assistance that his office needed. So when he believes there is a need for technical review either because a program looks poor or we question whether something is needed, or there appears to be an overlap between two scientific programs in different agencies, then Dr. Welsh asks me to carry out a technical review. If I see a need in that field that involves him, before I carry out a technical study I go to Dr. Welsh and get his concurrence.

COOPERATIVE EFFORTS

For the year that we have been operating, this has been a very satisfactory arrangement, and we have had cooperative efforts in about eight or nine specialized fields in the space program. He has already mentioned the communications satellite, where I provided technical assistance to his office in the consideration of the broader problem. We have also looked at problems in the bioastronautic field.

Senator MAGNUSON. Also backing you up is the President's Science Advisory Committee.

Dr. WIESNER. Yes.

Senator MAGNUSON. And the Federal Council for Science and Technology as a dual source of advice.

Dr. WIESNER. That is right.

Senator MAGNUSON. Is the Federal Council the so-called departmental organization?

ADVISORY GROUPS

Dr. WIESNER. Yes. The President has available to him two advisory groups—the Science Advisory Committee, a committee of distinguished men, 18 of them, that serve for 3-year terms, and the Federal Council for Science and Technology, composed of the highest ranking governmental officer in each department, accounting for 95 percent of the Government research and development.

Senator MAGNUSON. They report to you?

Dr. WIESNER. They report to the President, but I am Chairman of the group.

Senator MAGNUSON. It is sifting down to you?

Dr. WIESNER. Yes.

FUNCTION OF AGENCY

Senator MAGNUSON. So what you are talking about is $850,000 to ride herd on and make as good sense as we can in the huge scientific and research programs that are going on in the Government.

Dr. WIESNER. That is right.

HOUSE LANGUAGE ON TECHNICAL SPECIALISTS

Senator ALLOTT. What do you have to say about the House language where they state first of all that $150,000 would provide you with 35 technical specialists, and further say:

> The Director is urged to concentrate on developing a highly qualified but modest staff which will proceed carefully and bring good results. The committee believes that considerable economies can be realized from the efforts of this Office but feels that it is the quality not the quantity of work that is important.

Dr. WIESNER. I certainly agree with that. I believe there was a misunderstanding about the number 35, incidentally. The number 35 was including total staff at the end period, and the budget was to cover those 35 people, but that includes secretarial as well as technical staff members. If they gave me latitude to hire 35 staff, that would have taken into account the expansion for the next several years.

Senator ALLOTT. Do I understand you to say 35 technical specialists would leave you without any secretaries, but your secretarial help is included in the 35?

Dr. WIESNER. Yes. Because we want to add 6 technical people and 5 secretaries to the present staff of 24, so that the total would be 35. As I pointed out in my prepared statement, we depend very heavily on consultants from both Government and industry. The reason for that is that my office has responsibility for the total scope of science, and if I try to build up a competence for all of the special branches of science, I would need two or three hundred people, and we do not need them continuously. Therefore we have staff members who have a broad range of responsibility in an area, and have consultants that we can call on when we have a specialized problem.

AMOUNT FOR SALARIES

Senator ELLENDER. How much of the $850,000 is spent for salaries?

Dr. WIESNER. In our justification we asked for $338,000 for permanent positions. A total of $462,000 for compensations, including consultants—108 plus 16.

FUNDS FOR CONSULTANTS

Senator ELLENDER. What do you pay those consultants?

Dr. WIESNER. We pay consultants $50 a day, unless they happen to be members of the President's Science Advisory Committee, then we pay them $75. In other words, 18 of the consultants, members of the Advisory Committee get $75. $50 is slightly on the low side perhaps of some agency scales; if $75 becomes a more universal Government figure, and we will have to come back and ask you for more money. It sounds like a lot of money until you multiply it by the number of days a man works per year. It is not very different from the salary for a good scientist.

SERVICE WITHOUT PAY

Incidentally, many of our consultants serve without compensation. Last year a third of the consultants in our office did not get salaries either because they were Government or university employees whose research activities were supported by the Government, or from corporations whose bookkeeping procedures made it too clumsy to take compensation.

Senator ELLENDER. I notice your total compensation according to the justification is $462,000.

Dr. WIESNER. Yes, sir.

Senator ELLENDER. What is the rest of the money for?

TRAVEL

Dr. WIESNER. A large share of it goes for travel. In this particular budget, $287,000 is used for travel, because when you employ consultants the money goes as much for travel as for compensation.

Senator ELLENDER. You travel throughout the United States?

Dr. WIESNER. Yes. We may use a man from Los Angeles, or Boston, or New York, and he comes to Washington to work. We also pay his travel. If a man comes from the west coast the travel may far exceed the consulting fee. We have tried very hard to use the country's very best scientists. This procedure not only enables me to operate with a small permanent staff and still have a call on people in all fields, it also provides us with a more distinguished group of people to help us than we could hire on a full-time basis. It is a pattern which grew up before I came into this position as special assistant to the President, but one which I find totally satisfactory.

Senator ALLOTT. This would mean an increase from $651,000 for your previous function

Dr. WIESNER. That's right.

Senator ALLOTT. By $199,000, which is an increase of $200,000 in a $600,000 budget. Will it be on the same basis next year?

FUNDS ALLOCATED FROM WHITE HOUSE

Dr. WIESNER. I say there in my memorandum that I would like to point out $651,000 are the funds which came from the White House. On the President's request we did do a scientific manpower study,

which the Science Foundation helped finance, and for the first half of the year the Science Foundation funded it, because I did not have funds. So there is an additional $53,000 there.

ADMINISTRATIVE COSTS

Additionally, as I point out, about $47,000 of expenditure are administrative costs in addition to manpower costs, which are going to be required because the White House will no longer supply us with printing, supplies, materials, and general services, and so on. So there is an apparently high cost here, and I do not anticipate we will request anywhere near this large an increase in the request next year. I would not say that we will not ask for any increase because there is a likelihood that there will be some proposed increase in the following years.

We are just beginning to assess what some of the new functions require.

OPERATION MOHOLE

Senator ALLOTT. I would like to ask you this: On page 2 you say part of your duties are to evaluate scientific and technical programs undertaken by all agencies of the Federal Government, and to assure that sicence and technology are used most effectively for national security and the public interest.

For example, would this include the Operation Mohole on which the National Science Foundation is now proposing to spend some $45 or $50 million? I know it's not much in some people's minds, but would it include such an operation as this? I am thinking of the complete fiasco which has surrounded that situation in the last year.

Dr. WIESNER. If I or the President felt it was about time to do it, and I think I have become convinced that it does deserve an examination.

Senator ALLOTT. Would you accept a suggestion from the senior Senator from Colorado?

Dr. WIESNER. Yes.

Senator ALLOTT. That it does need a very careful look?

Dr. WIESNER. Yes, indeed. You see, in the past my office has been primarily responsive to the requests from the President. Now I will have an independent responsibility to maintain surveillance of the scientific programs. I would submit what we are asking for is a very modest sum of money to try to provide top-level management for this very large scientific program.

Senator ALLOTT. And can I depend on your keeping me informed of what you discern and discover when you look into this particular project?

Dr. WIESNER. Yes, sir, I know about its scientific purpose, but I don't know about its management problems. I will keep you informed.

Senator ALLOTT. That is all.

TELESCOPE IN WEST VIRGINIA

Senator ELLENDER. Doctor, did you have anything to do with this big telescope that was abandoned, I think in West Virginia, after spending a lot of money there?

Dr. WIESNER. Yes; I did.

Senator ELLENDER. Was it your recommendation to discontinue it?

Dr. WIESNER. First of all, the answer is, "Yes," I concurred in the recommendation, but it was not mine. It was a Department of Defense recommendation.

Senator ELLENDER. What part did you play in having this project discontinued? Not that I don't believe the right thing was done, but I am trying to learn what happened.

Dr. WIESNER. Mr. McNamara, or his staff generally, keep me informed about problems that are related to science and technology that they think are of interest to the President. Many months ago we talked about this problem and it became obvious that it would involve some difficult decisions.

RISE IN COST OF PROJECT

You see, it was a project begun a great many years ago. The original estimate for the construction of the telescope ran between $17 and $40 million depending upon how far back one goes. The earliest tentative estimate was $17 million. With the passing years it became technically more difficult and costly. We discussed it last year and it was agreed to place a ceiling of $135 million on it. It was discussed by the President's scientific advisers, with Mr. McNamara. When the Navy told the Defense Department that once again it had a new estimate and new date for completion, almost everyone who was involved decided it would be impossible to justify the figure, which was in excess of $200 million.

STUDIES BY SCIENTISTS AND DEFENSE

The Defense Department made a study of the various military uses of it, and asked me to make a study of the potential nonmilitary technical and scientific uses. I had a meeting with a group of radio astronomers to review its potential as a basic research tool. We felt that it had important scientific potential. If it existed it would be a useful tool for radio-astronomy, but my group concluded that one could not justify the $130 million or so still needed on a scientific basis. When it became clear it could not be defended as a military expenditure, I had to say to the President that in my opinion it was not defensible as a scientific expenditure, although it would be useful if it did exist.

On the basis of the joint recommendation of Mr. McNamara's group that it was no longer necessary because time had passed it by and new techniques were available to do what it was supposed to do, and my recommendation that one could not justify this large expenditure for basic research, the President agreed to its cancellation.

RIVALRY BETWEEN AGENCIES

Senator ELLENDER. As to that particular project, to what extent do you find any rivalry between various agencies to continuing it?

Dr. WIESNER. I would not say there was rivalry. As always, the people who have been proponents for a great many years continued in the belief of its military value. A dispassionate observer would conclude that the military value is now very marginal. I could not say there would not be some military value, but judged in terms of the very large and continuing expenditures it did not seem to justify

continuation. I watched the Defense Department studies throughout the entire period and I concurred in the recommendation.

INVOLVEMENT OF AGENCY IN "PUSH-BUTTON WAR"

Senator ELLENDER. To what extent does your office have anything to do with all of these new gadgets that are being tried and experimented with in our defense? In other words, to make it easier to fight a war—a pushbutton war?

Dr. WIESNER. Well, I can be involved in one of several ways. If the President is concerned and interested in a project or desires a technical judgment about something going on, he may ask my office to study it, and immediately I do. If the Bureau of the Budget becomes concerned that something is not quite defensible technically, they may suggest to the President that I make a study. If one of my staff members sees something he thinks justifies examination, I may initiate it.

Senator ELLENDER. That is the point. You can act independently to decide that?

Dr. WIESNER. Prior to the creation of the new office, I only acted after consultation with the President. Now the language permits me to act independently, but on any major issue I would first consult with the President or with Mr. McNamara. I have found perfect rapport in working with the Defense Department through Mr. McNamara, and if I am concerned about something I normally talk to him directly and he makes a study of his own.

TOTAL FULL-TIME SPECIALISTS

Senator MONRONEY. Do I understand that you have only 35 full-time technical specialists plus staff assistants?

Dr. WIESNER. No, Senator. We will have less than 35. We have 17 or 18 professional full-time people, but also can count on consultants.

Senator MONRONEY. Plus secretarial?

Dr. WIESNER. The staff are technical people. The difference between the 17 and 18 and the 35 will be secretarial and administrative people. But then we have the President's Science Advisory Committee and the Federal Council for Science and Technology, and can call upon the Science Foundation to assist us, as well as the individual agencies for reports and studies. We have a pool of about 250 outside consultants we can bring in for special projects.

Senator MONRONEY. I don't see how you can get that much done without these highly skilled and technical people. It seems to me they are the very vortex of the information funneling through to the last decision of the Bureau of the Budget and the President. Certainly money spent in this way would give us at least someone who is on guard with technical scientific competence to sort these things out which would benefit the Congress.

Dr. WIESNER. Yes. In the past we have been successful, by being highly selective about what we have done, and that concerns me now about the new possibilities. We do have responsibility for broader range surveillance. We need to expand the staff somewhat, but our success, to the extent we have been successful, has resulted from being

selective and calling on very good people and doing things thoroughly. I hope to continue that practice. If I build up a very large organization and depend on a very large internal staff, we would change the nature of the assistance we can give the President. It might turn out to be satisfactory, but it would be very different.

So I am anxious to let this develop slowly and try to depend on quality.

COST OF SCIENTIFIC RESEARCH

Senator MONRONEY. It seems to me it is one of the most vitally needed control points and built-in devices the President and the Bureau of the Budget have on what is going on and what has perhaps been duplicating important proposals on how research and development can be done. I presume the cost of our scientific research would go well above the $1 billion figure. Therefore some of these things—not all—would come before your group for surveillance.

Dr. WIESNER. If you take the research and development budget, which I talked about before, the total research and development budget for science is about $12 billion.

Senator MONRONEY. Do you participate in the science end of it?

DETERMINATION OF POLICY

Dr. WIESNER. Yes, we do. You see, we depend heavily on external groups, and possibly to a degree more than we should. We have not looked at the minute details of the programs, but looked at the general policies of the program and examine in great detail only when that appears desirous. It would be a very bad mistake for me to try to weigh every defense expenditure of the Defense Department.

On the other hand, we should look at the general policy and general health of the programs. I have spent days on a $100,000 program when we have trouble. That means when somebody calls it to the President's attention—somebody in Congress, or industry, or other groups say it is not going well—then I will spend as much time on a $100,000 program as on a $100 million program trying to understand it; but in general I do not believe my office should try to second-guess the detail of everything being done in Government. I do not think we should. We will just waste our time and a great deal of money, if we do.

Senator MAGNUSON. Are there any further questions?

If not, thank you, gentlemen.

All right. We will go into executive session.

(Whereupon, at 11:50 a.m., the subcommittee went into executive session and the witnesses appearing from various agencies to justify the funds for "civil defense and defense mobilization functions of Federal agencies" were excused by the subcommittee.)

(AFTERNOON SESSION—2:04 P.M., MONDAY, AUGUST 6, 1962)

DEPARTMENT OF DEFENSE

OFFICE OF CIVIL DEFENSE

STATEMENT OF HON. STEUART L. PITTMAN, ASSISTANT SECRETARY OF DEFENSE (CIVIL DEFENSE); ACCOMPANIED BY PAUL S. VISHER, DEPUTY ASSISTANT SECRETARY; WILLIAM P. DURKEE, DIRECTOR FOR FEDERAL ASSISTANCE; JOSEPH ROMM, DIRECTOR FOR PLANS AND PROGRAMS; TROY V. McKINNEY, COMPTROLLER FOR CIVIL DEFENSE; AND CHARLES M. MANNING, DEPUTY ASSISTANT GENERAL COUNSEL (ADMINISTRATION), OFFICE OF THE SECRETARY OF DEFENSE

BUDGET ESTIMATES FOR 1963

Senator MAGNUSON. The committee will come to order.

Several Senators will be here, but we have a long afternoon to go.

We have the Office of Civil Defense, Department of Defense, which for the purpose of the record, in 1962, $207,600,000 was the budget.

The budget estimates for 1963 are $695 million, and the House recommended, in the House bill, $75 million or minus 600. In 1962 the House appropriations were $132,600,000, and the 1963 estimates, are minus $620 million, and restoration is requested of $158,673,000.

Steuart Pittman is here, the Assistant Secretary of Defense, for Civil Defense, and he has a statement.

We will be glad to hear from you, Mr. Pittman.

Mr. PITTMAN. Thank you, Mr. Chairman. It is a great privilege to be here.

Senator MAGNUSON. First of all, we will put a letter from the Secretary of Defense, Mr. McNamara, and the justifications in the record in full.

Mr. PITTMAN. All right.

(The letter, justifications, and general statement follow:)

STATEMENT OF STEUART L. PITTMAN, ASSISTANT SECRETARY OF DEFENSE (CIVIL DEFENSE)

Mr. Chairman and members of the committee, this is my first appearance before your subcommittee and the first presentation of the President's civil defense program before any committee of the Senate. This comes at a time when the newspapers report that "a body blow" or "blockbuster" has hit the civil defense program. These references to the House civil defense appropriation are somewhat overstated. What has happened, in a word, is the appropriation of about one-third of the funds requested for the current civil defense activities. The only new element in the program requires legislation and, therefore, is not at issue. Rejection of two-thirds of the funds requested for current activities would, in my judgment, postpone for a year or indefinitely the first real prospect

this Nation has yet had of achieving a capability to save large numbers of lives under nuclear attack.

I will take the time I have today to show what we have tried to do to the national civil defense effort in the short year in which the Defense Department has been responsible for the program, and why most of the essential elements in this first year of progress would have to be postponed a year or abandoned under the House appropriation.

NATURE OF THE PROGRAM

The last year has been devoted to defining a realistic objective and focusing major civil defense activities on its attainment. The objective is double barreled: To locate and to stimulate the creation of enough fallout shelter space substantially to meet the full national requirement; and simultaneously, to bring about organization, planning, and training in every community in the country so that people will know how to go to shelter space, how to live in it, how to emerge, decontaminate and survive in the hazardous first few weeks.

Shielding from radiation is the first and essential task of civilian protection under nuclear attack. Without a system of shelters, civil defense cannot be taken entirely seriously by the growing number of people who understand what a nuclear explosion can do. The President's civil defense program, therefore, is designed to offer the most realistic and effective protection which can be made widely available to the American people, consistent with the demands of other high priority national needs.

It is important to be clear about what this program is not. It is not a massive public works project to bring maximum security in a nuclear war to the American people by providing them with habitable space underground. Estimates from various studies of such an undertaking have gone from $20 to $150 billion. Nor is it a continuation of the easy, but unrealistic, programs of the past which have netted very little in lifesaving potential for the funds expended.

Civil defense today is a serious and complex undertaking, loaded down with the kind of problems most of us would like to avoid. It is forced on us by certain simple facts: First, nuclear war is possible; and, second, in addition to its unavoidable destruction, it would bring hazards to life which can be minimized by preparations within reach.

The Federal civil defense program is a balanced series of activities designed to accomplish what State and local governments and private organizations cannot be expected to do, and to provide leadership, guidance and support for a nationwide effort to create a capability in each community to increase greatly the number of people who would survive a nuclear attack. The program was developed on the assumption that for the foreseeable future any large nuclear attack would blanket most of the country with lethal fallout radiation. There is no known way to survive this condition except by taking cover behind a mass of building material or earth sufficient to cut off radiation in harmful doses. The philosophy of the program is to carve out a manageable part of the risk, namely, fallout radiation and cut back the large-scale loss of life which could result from this hazard, rather than diffusing the effort over ineffective measures to protect those located too close to a nuclear explosion. We are accustomed to taking out insurance at reasonable premiums against only part of the risks to which our lives, health, and property are exposed. Limitations on the scope of the policy do not lead us to conclude the insurance is without value; rather than do nothing, we take the protection that is available.

DESCRIPTION OF THE PROGRAM

For these reasons priority has been given to creating adequate fallout shelter space for as many people as possible. This first year has been devoted to finding and bringing into use shelter space which already exists and which costs nothing. We call this the national shelter survey. An immense amount of valuable detailed information on major buildings throughout the country has been gathered and is available to Federal, State, and local governments and to building owners for a wide variety of uses. By drawing on advanced data gathering techniques from various sources, including the Bureau of the Census and the National Bureau of Standards, the cost of this undertaking has been reduced well below earlier estimates. The usefulness of this space for shelter purposes is now being verified by architects and engineers under contract with the Army Corps of Engineers and Navy Bureau of Yards and Docks. Shelter supplies are under procurement, many building owners have signed licenses giving permission for use of their buildings as public shelters, and municipal governments,

working closely with the Department of Defense, are preparing to take delivery of shelter supplies and install them in shelters. Most of the Federal funds needed for this project have been obligated and were appropriated for fiscal year 1962. The lifesaving potential of this shelter space will become a reality in one city after another during the coming fall and winter.

The second phase of the shelter program, which must await legislative action and is not before this subcommittee, will be financial contributions to schools, hospitals, colleges and similar nonprofit institutions to assist them in creating shelter space in their buildings. These buildings will offer better locations than existing shelter space in relation to residential population. The impact of the survey and the incentive program is expected to stimulate local resources and initiative to create a substantial amount of additional shelter space to make up the total requirements. Industry is already responding and there will be a new interest in low-cost home shelters by homeowners located away from community shelters or preferring to stay in their homes.

Shelters alone will not do the job. We must have an improved warning system. The national emergency alarm repeater (NEAR) system is ready for operational pilot installation. A radiological monitoring net is needed to make possible an orderly emergence from shelters and the planning of rescue work. Emergency communications during the period of shelter occupancy will depend on protection of personnel in key broadcasting stations. Shelters for large groups of people could not be effectively used without special skills in shelter management, medical care, and use of radiation detection equipment. The health resources of the country must be organized for emergency use. Each community must have guidance in planning for the restoration of community services and the bare essentials of living following emergence from shelters. In short, shelter systems in those areas which will have them this year must be made effective by a range of high-priority supporting civil defense activities which have been reoriented to the priorities of the new civil defense program last year and require accelerated development in fiscal year 1963.

These activities are a joint undertaking by the Federal, State, and local governments. Division of responsibility has been worked out in a manner acceptable to the State and local civil defense organizations, the new priorities are being worked into local survival plans, and the Defense Department is for the first time using Federal financial assistance as leverage to accomplish a more coherent nationwide civil defense effort over a reasonable period of time. State and local governments are responding to the Federal program but are relying heavily on the tangible support which is now offered and must continue on an accelerated basis to meet the demands of the shelter space found in the survey. This is enough space for 60 million people or one-third of the population.

This is a brief description of the elements of the current program. If time permitted, I would show how each part reinforces the other. The impairment of essential elements of this program postpones the date when the projected system can be said to have a realistic capacity to save significant numbers of lives under nuclear attack. Interruption of activities involving local participation destroys confidence in Federal leadership and support and makes it questionable whether resumption can be anticipated after a hiatus. Civil defense has had its opportunity to move forward in fiscal year 1962. It cannot slide back in fiscal year 1963 without damage from which it will take time to recover.

PUBLIC ATTITUDES

Following the upsurge in public interest in shelters, which occurred during the defense buildup and the Berlin crisis last summer and fall, a widespread belief exists that civil defense has again fallen into the trough of public apathy and indifference. There is reason to believe, however, that the majority of informed Americans are deeply concerned about improving the odds of survival for their families and communities, in this nuclear age.

We have projected a program which depends on participation of management and leadership elements of the country, which in turn depends on public understanding of the program objectives and justification. Public attitudes on this subject are being studied by the Michigan State University under a contract with the Office of Civil Defense in order to provide information for the continuing development and operation of the program. About a month ago, Michigan State University subcontracted to Elmo Roper Associates to run a nationwide interview-type poll on a set of questions prepared by the university in carrying out its contract with us. The results are particularly interesting because of their contrast with a large number of congressional polls over the last few

months which produced generally negative reactions to the question of whether there should be a program of federally subsidized community shelters. The Roper poll shows than 68 percent of those polled think that fallout shelters should be included in the design of large new buildings; 77 percent favor Federal financial assistance for schools, hospitals, and colleges to create shelter space in their buildings; and 86 percent favor the marking, stocking, and equipping of the large amount of shelter space found in the survey. This, in essence, is the President's program. This evidence, plus recent trips around the country, lead me to the conclusion that there is a great deal of latent support for practical measures to shield people from fallout radiation, and that much of the negative reaction is based on the misconception that a nationwide shelter system necessarily means a vast multibillion-dollar public works project.

It is also my impression that a good deal of confusion persists on the fundamental question of whether fallout shelter space would save a significant number of lives under a large-scale nuclear attack. As the President has pointed out in his recent letter to the chairman of this committee, the Defense Department has undertaken a most elaborate and systematic study of this and related questions. The new civil defense program is predicated on the considered judgment of the Secretary of Defense and the President that the lifesaving potential of a fallout shelter system more than justifies the tangible and intangible costs. Certain distinguished scientists and commentators have questioned this conclusion, and publicity has tended to follow the dissenters. It is worth remembering that the President carries an immense responsibility for the safety of our people if war should ever come, that the Secretary of Defense and other key advisers know well the strengths and weaknesses of the vast apparatus of analysis which has been applied to this problem in the Defense Department, that they have had available all of the important studies on this subject in recent years, and that our people have no better place to turn than to the President and the Secretary of Defense on matters encompassing such a wide range of technical and military data, including classified intelligence estimates. I believe that the debate on shelters, and the resulting confusion in the public mind, is a byproduct of an intellectual and emotional revolt against the arms race which has been forced upon us. There has been remarkably little intelligent public discussion of the President's new civil defense program and what it has set out to accomplish. The word "shelter" has symbolized expensive, underground structures sealed off from light and air; it has been used to connote a molelike existence over long periods of time. I predict that a year from now there will be a far better understanding of both the problems and the practical measures of self-protection that are open to us.

SHELTER SURVEY FUNDS

Of the $207.6 million appropriated for fiscal year 1962, $140 million was authorized by the Congress for the initiation of a program to survey and mark shelter space in existing buildings, and to provision these shelter spaces on an austere basis. The fiscal year 1963 budget as presented to the Congress requested $56 million for the completion of this phase of the Federal civil defense program and for continuing the survey for new buildings as they are constructed.

With the funds made available by Congress in fiscal year 1962 a survey of shelter space has identified shelter space in existing buildings and other facilities capable of shielding about 60 million people from fallout radiation. Shelter supplies for 37 million of the 60 million spaces are actually on hand or in process of procurement. The fiscal year 1963 budget request would provide the completion of provisioning of these 60 million spaces, including Federal warehousing and transportation costs during fiscal year 1963.

State, county, and municipal governments have been called upon to manage this difficult project at the local level—to obtain the permission of building owners to use space in their buildings and to prepare to receive large volumes of shelter supplies, and to install these supplies in shelters. Many local governments have already made the extensive preparations to accomplish these tasks; have enlisted the support and cooperation of civic organizations and leaders; and have started to expand staffs to do the work.

The Federal Government has already incurred most of the necessary costs of finding and bringing into use existing shelter space, and in doing so has imposed important responsibilities and burdens on local governments and building owners to do their part. For the Federal Government to fail to complete its part of the project at this stage would be wasteful of fiscal year 1962 appropria-

tions, destructive of relations with municipal governments on the civil defense program, and an abandonment of the opportunity to improve the chances of survival of large numbers of people at a cost of $3 to $4 per person.

For these reasons, I urge that the $56 million for completing and continuing the shelter survey, marking, and stocking program be reinstated.

FUNDS FOR SHELTER IN FEDERAL BUILDINGS

In fiscal year 1962 the Federal Government has led municipal governments and building owners into bringing into use shelter space for 60 million people, has provided encouragement in many forms to industry, local governments, and home owners to create fallout shelter space at their own expense, and has expanded a shelter-oriented civil defense program. It is vital, therefore, that the Federal Government do in its own buildings what it is leading public and private organizations around the country into doing. Apart from the obvious damage to the President's civil defense program which would result from a failure of the Government to do what it asks others to do, a valuable opportunity would be lost to develop low-cost designs and innovations for the benefit of non-Federal owners of buildings.

I strongly urge the restoration of $35 million for the continuation of this portion of the civil defense program.

RESEARCH AND DEVELOPMENT FUNDS

Our budget request provides for the $17.8 million for research and development, a level slightly less than that experienced during fiscal year 1962. If there is no intervening emergency, the proposed research program may over a long period contribute more to national security than any other element of the program. In order to adapt civil defense programs to changing conditions of the future, our level of research and development must continue at a high rate. The program is aimed at economy of hardware and operations, effectiveness of systems, providing the basis for planning, decisions on future programs, operational decisions, and the reliability of performance of men and equipment in saving lives and in coping with the postattack environment.

To accomplish this, there must be additional research on systems directly related to civil defense such as warning, communications, radiation monitoring, supporting utilities and shelter supplies, and the management and health of potential shelter inhabitants and the postattack surviving population. We must conduct studies on a scale not feasible in the laboratories such as large-scale decontamination experiments. We must also do research on the potential future thermal threat, on the nature of ignition and spread of fires, the potential of chemical and biological agents—and potential defensive systems to overcome such threats. Lastly, we must continue our current research and development efforts to minimize the costs of our current program efforts. The House action has reduced the level of this program to $10 million, approximately $8 million less than the fiscal year 1962 level. This will have the effect of limiting the value of the research and development already undertaken, in that a considerable portion of the funds requested is to complete work started in fiscal year 1962.

Full restoration of the requested $17.8 million is necessary to carry forward this carefully conceived and well-balanced research program.

OPERATIONS AND MAINTENANCE

As the House report identified only three specific reductions in arriving at the $65 million recommended for operations and maintenance, in the reclama I have presented our requirements for this portion of the program to which a credit of $65 million is applied. The requirement totals $124.9 million and, when the $65 million is deducted, it leaves $59.9 million, which we are requesting be added to the amount approved by the House of Representatives.

I have pointed to the necessity for supporting systems to make shelters effective. These supporting activities must keep pace with the development of the system of fallout shelters.

The House report stated that it "recommends $65 million to continue the established programs at the same general level as in 1962." We must recognize that the $126 million requested in the President's budget is a continuation of programs already established. We have not injected any innovations in this segment of our program. We have, however, expanded and accelerated activ-

ities such as training and education, warning, protection of emergency broadcast stations, and Federal contributions to States and local governments on a matching basis, so that they may meet their growing and immediate obligations in civil defense.

Some of the consequences of such a sharp reduction in funds for operations and maintenance are as follows:

1. The national emergency alarm repeater system designed to bring warning into every home, office, and factory in the land would be postponed for a year.

2. Fallout protection for key radio broadcast stations needed for government authorities to communicate with the public immediately following an attack would be delayed for a year.

3. The capability of local governments to train necessary skilled personnel in the management and operation of existing shelter space could not be developed during this year. Without specialized skills in each community shelter, successful occupancy could not be expected.

4. The adult education program in 37 States would have to be curtailed and the program could not be offered to the remaining 13 States. Current applications by 10 States to participate in this program would be denied. The medical self-help training program which has been developed in cooperation with the Public Health Service, the American Medical Association, and the American College of Surgeons could not be offered to the American public and probably could not be revived later in view of the extensive voluntary efforts which have gone into preparation in the last half year.

5. The development of the projected radiological monitoring net would be postponed for 1 year, which would mean, among other things, that people in shelters would fail to have information from outside on nearby radiation hazards and advice on when and how to emerge from shelters.

6. The express deletion of one-third of the requested funds for Federal contribution for State and local government personnel and administrative costs would immediately strike at the capability of many civil defense organizations to take on the tasks of bringing the surveyed shelter space into use. State and local governments have appropriated, or are in the process of appropriating, funds in reliance on Federal contributions.

7. The elimination of funds for emergency operating centers of local governments would interrupt work in process on 67 facilities in 15 States and 52 local political subdivisions. It would also set back several years of successful effort to stimulate plans for continuity of local government in an emergency.

8. The assumption of the House Appropriations Committee report that management costs for the Office of Civil Defense may be cut in half would mean that the undertakings developed by the fiscal year 1962 program could not be met by the remnants of the organization in fiscal year 1963. The levels of program activity will be determined more by obligations of funds in fiscal year 1962 than by obligations of funds in fiscal year 1963.

In summary, I respectfully request the restoration of $158.7 million as indicated in the reclama statements before you. Although delay in the as yet unauthorized shelter incentive program will not directly undermine current activities in the immediate future, the deferment or impairment of any of the presently continuing operations would downgrade the capability for survival which is projected for the end of fiscal year 1963.

The SECRETARY OF DEFENSE,
Washington, August 2, 1962.

Hon. WARREN G. MAGNUSON,
Chairman, Subcommittee in Charge of the Independent Offices Appropriation Bill for 1963, U.S. Senate.

DEAR SENATOR MAGNUSON: H.R. 12711 as passed by the House of Representatives on August 1, 1962, has been carefully reviewed in light of the established President's civil defense program. Differences between the House bill and the President's budget presented to the Congress eliminate or impair the major segments of our current civil defense activities.

Failure to restore most of the funds requested would require us to reshape the program, deferring high priority elements of a carefully balanced nationwide civil defense effort.

The attached statements set forth proposed amendments to the House bill, together with the justification, which we deem essential. These amendments

cover the amounts of the appropriation, the appropriation structure, the language, and the general provisions of the House bill.

The Assistant Secretary of Defense (Civil Defense) and members of his staff will present these items and discuss them with your committee on the scheduled hearing date. He will be pleased to provide you with such additional information, in explanation and justification, as you may desire.

It is respectfully requested that your committee consider favorably the restorations and modifications proposed.

Sincerely,

ROBERT S. MCNAMARA.

DEPARTMENT OF DEFENSE—OFFICE OF CIVIL DEFENSE

OPERATION AND MAINTENANCE

GENERAL RESTRICTIONS

(Estimate, $18,000,000; 1962 act, 0[1]; H.R. 12711, $12,000,000)

REQUESTED AMENDMENT TO H.R. 12711

Page 3, line 24, strike out "$12,000,000" and insert in lieu thereof "$18,000,000".

JUSTIFICATION

Under section 205 of the Federal Civil Defense Act (50 U.S.C., app. 2286) contributions are made to the States (and their political subdivisions) for necessary and essential civil defense personnel and administrative expenses. The contributions are equally matched by the States. The limitation on the amount which may be used for financial assistance to State and local governments for personnel and administrative expenses is requested to be restored to $18 million, the amount contained in the President's budget. Indications have been received from the State and local governments that expenditures on their part, eligible for equal matching by the Federal Government under this program, will meet or exceed this amount.

DEPARTMENT OF DEFENSE—OFFICE OF CIVIL DEFENSE

OPERATION AND MAINTENANCE

(Estimate, $126,245,000; 1962 act, 0[1]; H.R. 12711; $65,000,000)

(House hearings p. 86)

REQUESTED AMENDMENT TO H.R. 12711

Page 3, line 23, strike out "$65,000,000" and insert in lieu thereof "$124,918,000", which is $1,327,000 below the budget estimate, and an increase of $59,918,000 over the House-approved amount.

HOUSE REPORT NO. 2050

"*Operation and maintenance.*—The committee recommends $65 million to continue the established programs of civil defense at the same level as in 1962. During the last fiscal year most civil defense programs formerly administered by the Office of Civil and Defense Mobilization were transferred by Executive order to the Department of Defense. An allocation of $12 million is again earmarked for allocation to States and localities for grants for personnel and administrative expenses, the same level as at present. Allowance is not made for a 3-percent contingency reserve which was available under the Department's revised 1962 financial plan and $8 million requested to make grants for construction of emergency operating centers is not recommended as the cost estimates are too indefinite. The bill includes $7,300,000 for salaries and supporting costs, or one-half the budget estimate."

---

[1] Financed under "Civil defense, Department of Defense," appropriation and from funds transferred from Office of Civil and Defense Mobilization pursuant to Executive Order 10952 dated July 20, 1961.

JUSTIFICATION

The effect of the requested amendment is to restore funds for the following programs and projects:

1. Warning and alert	$25,000,000
2. Radiological fallout detection and monitoring	18,133,000
3. Stockpile maintenance	1,700,000
4. Communications and control	10,100,000
5. Damage assessment	2,500,000
6. Training, education, and public information	20,885,000
7. Financial assistance to States	32,000,000
(*a*) Survival supplies and equipment	(6,000,000)
(*b*) Emergency operating centers	(8,000,000)
(*c*) Personnel and administrative expenses	(18,000,000)
8. Management	14,600,000
Total	124,918,000
Less House approval	65,000,000
Restoration requested	59,918,000

Restoration would provide for continuation of those programs established during fiscal year 1962 and prior years. Funds are not being requested for the introduction of any new programs. Certain of these continuing activities, such as warning, communications and control, training and education, and financial assistance to the States have been expanded to meet the increased demands for national and local civil defense capabilities related to the already identified shelter capabilities.

1. Warning and alert (national emergency alarm repeater system $25 million

The funds requested for warning and alert will enable the Office of Civil Defense to continue the development and implementation of the national emergency alarm repeater (NEAR) system to provide almost instantaneous nationwide warning to every home, office, and factory served by an electric power system. Indications of impending attack are picked up by the various early warning networks; these are transmitted to Air Force Sector Headquarters; and, when the indication is verified, the NEAR system would be activated and thereby provide the civilian warning throughout the country. It would reach areas where outdoor warning devices cannot cover or be heard. For the first time rural areas would receive effective attack warning and could take appropriate action.

In 1962 the Office of Civil Defense initiated final testing and arranged for eight pilot installations of signal generators on existing electric power distribution systems. In addition, contracts were let for a pilot production run of 100,000 NEAR receivers. NEAR receivers will eventually be placed in buildings throughout the country and would convert a warning signal imposed on the powerlines to a loud tone which would warn of impending attack. The fiscal year 1963 funds provide for a complete engineering survey of a large number of the electrical power systems and would begin the installation of necessary signal generators and coupling and synchronization equipment on selected systems.

It is to begin this program on a nationwide basis that we are requesting restoration of the following funds:

Power system surveys	$2,500,000
Generators, coupling, and synchronization equipment for installation in selected systems	22,500,000
Total	25,000,000

2. Radiological fallout detection and monitoring, $18,133,000

(*a*) *Monitoring stations ($8,911,192).*—A minimum of 150,000 monitoring stations are needed to provide Federal, State, and local civil defense units the necessary capability to measure, report, and evaluate the radiological situation resulting from a nuclear attack in order to permit maximum lifesaving operation in a fallout environment. These stations will be located at the Federal, State, and local service facilities, such as fire, police, public roads departments, hospitals, utilities, industry, and at facilities of the U.S. Weather Bureau, Federal Aviation Agency, Air Weather Service, and Armed Forces installations. The personnel of

these services manning the stations are usually available on a 24-hour basis, are well organized and have a communications capability.

The Office of Civil Defense has purchased 49,608 sets of instrument for monitoring stations from funds made available during fiscal years 1960 and 1961. Large order buying with resultant lower prices permitted the procurement of another 150,392 sets in fiscal year 1962 for a total available from fiscal years 1960–62 funds of 200,000 sets. The goal is 150,000 stations with 2 sets per station or 300,000 sets. Another 100,000 sets will be needed in fiscal year 1963 which will meet the goal. Final development of the CD V–715B remote reading high range survey meter was not completed in time for procurement in fiscal year 1962 and must be postponed until 1963. During 1963 it is proposed to procure one of these remote instruments for each of the 150,000 monitoring stations in addition to the two sets mentioned above. Obligation of funds for procurement during fiscal year 1962 and the proposed funding for fiscal year 1963 is summarized as follows:

	Fiscal year 1962		Fiscal year 1963	
	Number of units	Amount	Number of units	Amount
Monitoring sets, excluding 715B	150,392	$8,294,369.66	100,000	$4,696,192.00
715B remote meter			150,000	4,215,000.00
Total		8,294,369.66		8,911,192.00

With two sets per station this means an average of only one set per 10 square miles of land. With only one set our monitoring capability is reduced to a 20-square-mile area which must be monitored to assure absolute safety to people, livestock, and food supplies. The 715B remote instrument is required to eliminate the necessity of dangerous exposure to monitoring personnel during heavy fallout.

(*b*) *Aerial monitoring.* (*$234,000*).—Aerial monitoring is needed to supplement the monitoring stations. It offers the most rapid method of estimating the degree and extent of fallout contamination over large areas and agricultural lands in the early postattack period. Its advantages are speed, reasonable accuracy, and flexibility. It can be used regardless of the location or severity of the radiation level since aircraft can fly from distant fields and radiation levels in the aircraft are many times lower than on the ground.

The need for a suitable aerial monitoring instrument for large area coverage is critical. In order to assure a nationwide aerial monitoring capability by 1965, procurement of this item must be initiated in fiscal year 1963. This capability will provide vital information during periods of extremely high radiation intensities and reduce the necessity for needless dangerous exposure to surface monitors.

An instrument specially developed by Oak Ridge National Laboratory for aerial survey was to be procured during fiscal year 1962. However, full testing and development has not yet been completed. One thousand units scheduled for fiscal year 1962 will be procured in later years. The goal is to have an aerial monitoring capability at about 5,000 municipal airports throughout the country. Only 3,000 of these are manned around the clock; therefore, the first effort will be to furnish instruments to these airports from procurement scheduled over a 3-year period from fiscal year 1963 to fiscal year 1965.

The aerial monitoring instrument is estimated to cost $650 per unit; the minimum procurement for fiscal year 1963 to initiate the program and associated training is 360 instruments for $234,000.

(*c*) *Meters for civil defense workers.* (*$8 million*).—By fiscal year 1965 the overall goal is to make 5 million dosimeters available to emergency workers for the purpose of controlling their exposure to radiation. Fiscal year 1962 funds procured 1 million dosimeters. This proposed amendment will provide for the procurement of an additional 2 million dosimeters during fiscal year 1963 at a cost of $8 million. Further delay in the procurement of these instruments, in the event of an emergency would leave a large number of emergency workers without the means to control exposures to radiation and would critically handicap the carrying out of rescue, decontamination, and other emergency functions

so necessary to postattack survival. The obligation of funds for procurement of dosimeters during fiscal year 1962 and the proposed amendment for fiscal year 1963 is detailed as follows:

	Fiscal year 1962		Fiscal year 1963	
	Number of units	Amount	Number of units	Amount
CD V-742 dosimeters	1,000,000	$4,210,000	2,000,000	$8,000,000
CD V-750 charger	30,000	108,000		
Total		4,318,000		8,000,000

(*d*) *Calibration units* (*$82,895*).—The overall goal is to provide a minimum of two calibration units per State, one for each DOD/GSA warehouse, and one for each of the OCD regional headquarters. This requires a minimum of 120 calibration units. Taking advantage of large order buying and resultant lower prices, 95 calibrators were procured during fiscal year 1962. This proposal amendment will procure an additional 25 units from fiscal year 1963 funds and complete the initial equipping phase of the program. The procurement of this item is a vital factor to insure the success of a nationwide maintenance and calibration program. Without the calibration units the instruments purchased prior to fiscal year 1963 and those proposed in this amendment will not operate with an acceptable degree of accuracy in the event of an emergency.

The procurement of 25 additional units during fiscal year 1963 will cost $82,895.

(*e*) *Spare parts* (*$404,913*).—The requirement for spare parts, like the requirement for calibrators, is essential to the nationwide instrument maintenance system. Past experience indicates that a spare part procurement of 5 percent of the total cost of the survey meters and dosimeter chargers was required to maintain the instruments in proper operating condition. This proposed amendment continues the level of spare parts for instruments proposed for procurement in fiscal year 1963 at the same level.

(*f*) *Prototype automatic monitoring system* (*$500,000*).—In fiscal year 1962 a research project was initiated to design the necessary hardware and systems configuration for an automatic monitoring system. The project requires the development of a 10-station prototype automatic monitoring system: including specific locations of the monitoring stations; a data collection center; equipment to be used; identification of development requirements; and installation and testing of the equipment. It also includes the determination of the communications requirement and methods. This is scheduled to be completed from funds made available in fiscal year 1963.

The proposed amendment would furnish the basic information needed to ascertain the feasibility and applicability of automatic monitoring systems. It is estimated the development of the equipment and prototype installation costs will be $500,000.

3. Stockpile maintenance, $1,700,000

(*a*) *Warehouse operations* (*$935,000*).—The funds requested will provide for continuing the warehouse operations performed by other Federal agencies and required in conjunction with the radiological and engineering stockpiles. Radiological and engineering items are required in the initial postattack period and, therefore, they must be procured in advance of an emergency and provided secure storage. In addition, radiological instruments must be assembled into training or operational sets as required, periodically tested and maintained, and issued to State and local governments. Funds are requested to provide the additional warehouse operational personnel and radiological instrument technicians necessary to carry out the greatly expanded radiological program for instruments purchased in fiscal year 1962 to be distributed in fiscal year 1963. Sustaining these warehouse operations is essential to the continuing development of a nationwide radiological defense capability.

(*b*) *Testing of stocks* (*$40,000*).—As the requirement for radiological detection and measuring instruments has increased over the past 5 years, several electronic instrument manufacturing concerns have submitted competitive bids for OCD-

proposed procurement of these items. OCD issues specifications for these items; but in order to insure that a prospective manufacturer can mass produce the items within acceptable tolerances, prototypes submitted by the manufacturer are thoroughly tested for conformance with the specification. Without these tests, there would be no firm basis for letting procurement contracts. The National Bureau of Standards performs this service for OCD and other agencies. To continue this service in the current program $40,000 is required.

(c) *Maintenance of stocks (engineering) ($100,000).*—In previous years, 45 ten-mile units of emergency engineering equipment were procured and stockpiled at 21 strategic locations across the Nation. Forty-three of the units are stored and maintained through cross-servicing agreements with the Department of the Army, Veterans' Administration, and General Services Administration. Two units are stored and maintained through contract agreements with the State of Vermont and with a private contractor in Thomasville, Ga. This engineering stockpile would be needed for postattack survival and recovery purposes to meet local emergency water requirements where municipal facilities have been destroyed.

Funds are requested to continue the maintenance of these stocks at the fiscal year 1962 level, including required replacement, special modifications, and reconditioning required after return to storage from loan for use in major disasters, as well as those used in our expanded radiological monitoring training programs.

(d) *Transportation ($500,000).*—Radiological supplies are received at the warehouses in large quantities from the manufacturers. These supplies are packaged as standard operational kits or training sets and granted to the States for the establishment of fallout monitoring stations and the training of monitors. These funds are required for the packaging and distribution of supplies to the States in order that a national radiological detection and monitoring capability may be developed.

(e) *Replenishment of maintenance supplies ($125,000).*—Radiological detection and measuring instruments are dependent upon batteries for power. Under operational use, batteries have a life of at least 50 hours; and while in storage their shelf life is about 1 year. In order to insure that instruments will be in a state of constant operational readiness, provision must be made for the replacement of deteriorated batteries and deteriorated ancillary supplies no longer suitable for issue or use. Provision must also be made for the procurement of packaging materials and special containers required for the packaging of assembled radiological operational kits and training sets; procurement of spare parts for older model radiological instruments; test equipment for the instrument maintenance shops; and specialized supplies incident to calibration and decontamination functions. An amount of $125,000 is essential to sustain the program.

4. Communications and control, $10,100,000

Restoration of the full amount of the funds requested would enable Civil Defense to have in place the necessary communications systems required to activate systems to warn the population of impending attack, to provide means for effective emergency command and control, and to assist in the national recovery effort.

(a) *Recurring communications cost ($3,155,000).*—There are two emergency communications networks currently in existence, NACOM No. 1 and NACOM No. 2. These complementary systems make use of teletypewriters, telephones, and radio systems in order to provide backup, one for the other, so as to provide reasonably secure communications capability. In addition to these systems the national warning system (NAWAS) has been developed and implemented. This communications network carries the warning signal from the Air Defense Headquarters through 7 warning centers to 500 strategically located State and local warning points for further dissemination. The other existing system is the Washington area warning system (WAWAS), which was established to meet the special warning requirements of the Nation's Capital and the surrounding area.

Funds being requested provide for the recurring maintenance and operating costs related to the aforementioned systems.

(b) *Protection of broadcast stations ($6,360,000).*—The Federal Civil Defense Act (Public Law 920) calls for adequate communication to the public of emergency information and instructions. The communications medium combining the greatest coverage of the Nation's population with greatest number of receivers in homes and automobiles, and the least amount of delicate and/or cumbersome

receiving equipment is standard AM radio. A program was initiated in fiscal year 1962, therefore, to equip 76 selected stations with the necessary fallout protection to provide a continuing capability to broadcast in an emergency. The ultimate goal of this program is to provide fallout protection to a sufficient number of stations so that the Nation's entire population is within range of one or more operational, protected transmitters.

Funds requested for fiscal year 1963 will provide for protecting about 900 of the Nation's AM radio broadcasting stations, appropriately located throughout the country.

In the event of an attack by nuclear weapons, it is inevitable that our nationwide communications systems, conceded to be the best in the world, would be seriously disrupted. Under these circumstances broadcasting would provide the broadest coverage for initial and continuing means of informing and guiding the surviving population wherever they may be.

Federal authorities and local and State civil defense directors, under the Federal Civil Defense Act, have a responsibility to provide direction and guidance to the public in an emergency. Such communications can best be achieved by radio broadcasting. Survivability of radio broadcasting in an emergency is best achieved by multiple station (redundancy) dispersion, mobility, and diversity of means for broadcast origination. In addition, to provide a fail-safe means of broadcasting after a nuclear attack, the following are required:

1. Fallout shelter for radio transmitter operating personnel.
2. Radio links between the State and local authorities and the broadcast transmitters. (See item below.)

Civil defense funds will be expended at those stations which are required by Federal and local authorities. Each of these users requires the same broadcast emergency operating capability. It is apparent that the Nation will be served exceedingly well by these funds and that the communication capability obtained would be greatly advantageous in proportion to cost.

Emergency communication capability provided under this concept would be substantially independent of common carrier facilities and each station provided with an emergency operating capability by civil defense funds would be a component part of the Federal communication system, and local communications systems.

(*c*) *Radio communications with broadcast stations ($585,000)*.—As part of the total objective of providing an emergency radio communications with the public, there must exist reliable programing circuits between the transmitter locations of the stations selected under the protection of broadcast stations program described above, and protected civil defense control centers.

In fiscal year 1962, plans were made to install radio circuits to those stations selected for inclusion of fallout protection. Funds requested for fiscal year 1963 will equip 130 stations with radio link equipment. As funds become available in subsequent fiscal years, additional radio circuits will be established, supplanting or providing backup to wirelines.

5. Damage assessment, $2,500,000

This amendment is requested in order to meet the responsibility of an operational damage assessment capability assigned by Executive Order 10952.

The basic needs in damage assessment are:

(*a*) Development of a data base which will provide information on location and amount of people, facilities, and resources essential to civil defense.

(*b*) Provision of techniques, including computer support, for preattack studies on the effectiveness of various civil defense programs and for the rapid assessments of casualties and damage to essential facilities and resources once an attack is underway.

This work was begun in fiscal year 1962 with obligations of $1.2 million. Projects were initiated to collect data on the essential elements for emergency survival and reconstitution, e.g., food stocks, petroleum stocks, power systems, water supply systems, etc. In addition, fiscal year 1962 funds provided for 4 months of computer support from the Ordnance Industrial Data Agency on a reimbursable basis.

The $2.5 million requested for 1963 would complete a number of the projects started with fiscal year 1962 funds; would support additional data base projects; would integrate the data being developed by the national shelter survey into the damage assessment computational system; and would provide computer support for a full year.

If the funds are not available to complete outstanding projects started in fiscal year 1962, a substantial portion of the investment in these projects will be lost. Specifically, these projects are:

(*a*) *Quality check of the population statistics obtained in the national fallout shelter survey.*—These statistics give information on the accuracy of the daytime and nighttime population across the country obtained in the NFSS and are essential for measuring the distribution of shelter located by the survey program, as well as for the assessment of casualties in event of an attack. Contractor is the Census Bureau. Fiscal year 1963 request is for $35,000 (fiscal year 1962 obligation was $40,000).

(*b*) *Surveys of food stocks in the hands of wholesalers, retailers, and consumers.*—These surveys should yield essential information on the location and quantity of those food stocks on which the Nation will most likely depend in the immediate postattack period. The contractor is the Department of Agriculture. Fiscal year 1963 request is for $190,000 (fiscal year 1962 obligations were $95,000).

(*c*) *Inventory of elementary and secondary schools; study of water supply systems; and study of health departments and clinics.*—The school study would yield a complete listing of the location and facilities of elementary and secondary schools which for the first time will permit estimates of the effects of an attack on our school population and system. The water systems study will locate the critical facilities in the water supply systems of our Nation and give the basis for intelligent planning to protect these systems or to provide suitable alternatives. The health clinic study will provide planning information on an essential health resource. The contractor for these three studies is the Department of Health, Education, and Welfare. The fiscal year 1963 request is for $173,500 (fiscal year 1962 obligation was $354,500).

(*d*) *Study of secondary petroleum storage.*—This study will locate the bulk petroleum products in the hands of local distributors and dealers. These supplies would be those on which local and State civil defense officials would make first call to support survival operations. The contractor is the Department of Interior. Fiscal year 1963 request is for $81,500 (fiscal year 1962 obligation is $41,000).

The following additional projects should be undertaken in fiscal year 1963:

(*a*) *Survey of private shelter construction; abstract of civil defense statistics; preparation of equal value "dot" maps.*—The survey of private shelter construction will take advantage of existing surveys conducted by the Census Bureau to develop information on numbers of home shelters being constructed or planned. The statistical abstract will provide in one place selected statistics needed by State and local civil defense officials for their operational planning. The "dot" maps will show a simplified graphic distribution of population and survival essentials across the country, to be used by local and State officials for manual assessment of attack. The contractor for these three projects will be the Census Bureau. Fiscal year 1963 request is for $258,000.

(*b*) *Survey of State-owned medical stocks; location of health laboratories.*—These projects will locate the medical stocks which are State-owned, and the numerous health laboratories scattered throughout the United States. The contractor will be the Department of Health, Education, and Welfare. Fiscal year 1963 request is for $22,000.

(*c*) *Developing computer information based on national fallout shelter survey.*—This project will reduce the data obtained in the national fallout shelter survey to computation factors, and computer input tapes to provide physical vulnerability and fallout protection factors of buildings in a metropolitan area, county, State, or region. Fiscal year 1963 request is for $180,000.

(*d*) *Nuclear phenomena and manual damage estimation publications.*—These 2 publications will be revisions of 2 previous documents which are now obsolete. Thousands of copies of the earlier documents have been issued. The 2 publications together provide simple damage assessment techniques for use by State and local officials. Contractor will be Defense Atomic Support Agency. Fiscal year 1963 request is for $125,000.

(*e*) *Electric power study.*—This study would identify substations and power generators with the communities they serve. These data would be the basis for determining which portions of our country might be without power in the event of an attack. The contractor is the Federal Power Commission. Fiscal year 1963 request is for $125,000.

In addition the foregoing data base projects, approximately 5,000 hours of electronic computer time (costing $1,250,000 will be required to support the proposed fiscal year 1963 program). These computer services will be used to organize the resource data for distribution to State and local officials for use in their planning; to apply hypothetical attacks to the population and resource base of the United States in order to test the effectiveness of our shelter program, survival stockpile dispersal plans, and other civil defense programs; test new damage assessment programs such as programs for estimating the effects of fire spread; to make immediately available computer capacity to rapidly estimate the effects of an actual attack in the event this eventuality befalls us.

6. Training, education, and public information, $20,885,000

(a) Training and education ($16,047,000).—Effective State and local civil defense requires qualified professional leaders who direct trained personnel to perform emergency skills under stress and a public informed on actions to be taken in support of community emergency plans and to enhance chances for individual survival. Without trained people and an informed public emergency plans won't work and preparatory measures come to naught.

Activation of community and personal survival measures requires large-scale and complex community training programs. According to reports from the 50 States, instruction is required, overall, for 8 to 10 percent of the total population. Of this number approximately 3.5 million require high level skills, including highly specialized training for 407,000 county and municipal employees who have major civil defense assignments; 948,000 persons trained to manage shelters; and 1,098,000 radiological monitors; and 918,000 persons trained in decontamination. Meeting such requirements demands the careful preparation of technical instructional materials, the training of instructors to use them, and the establishment of comprehensive training programs in communities.

The effect of the House appropriation bill if allowed to stand would be to stunt and place on a caretaker basis the State and local training effort needed to make civil defense effective. If expenditures are limited to fiscal year 1962 level, the increased training and education requirements resulting from the national shelter survey and the collateral strengthening of State and community emergency capabilities cannot be met. The national shelter survey, the first program to provide a tangible degree of protection for a large segment of the American public in 12 years of civil defense effort, has generated large-scale local training requirements which must be met if protection is to be real.

Civil defense training and education efforts must be coordinated carefully with the development of fallout shelters, the improvement of community capabilities in emergency operations and the fundamental requirements of essential recovery measures. To keep training and education in phase with the growing shelter capabilities and requirements, it is planned to devote major resources and effort in fiscal year 1963 to the development of instructional materials which will be used by the States and their political subdivisions. Failure to appropriate the funds identified below will delay essential training and will deny the effective use of protection already available to people in all communities.

(1) OCD schools ($850,000): Present capacity of the 3 OCD schools is 8,000 students per year. The schools are run on a most austere basis as indicated by the average total cost of $68 per student. Of the $850,000 requested, $300,000 is reserved for the student travel expense program. Fifteen hundred State and local civil defense professionals and instructors attended the five new, shelter-oriented courses given by the schools in the last 4 months of fiscal year 1962.

OCD schools must continue this instruction so that State and local civil defense organizations will not be deprived of the leadership and instructor training which is the necessary first step in creating a civil defense training capability within their political subdivisions. Because this leadership training is available nowhere else, local civil defense will remain untrained for emergency operations and service even in natural disasters unless the funds requested are made available.

(2) Training analysis and instructional support ($5,850,000): States and communities must do a large share of essential civil defense skills training. The Federal Government provides direct training of civil defense directors and of instructors in radiological monitoring and shelter management. The main civil defense skills training effort of the Federal Government is, however, to provide instructional materials to support State and community training work. These materials are used in local courses, financed in part by the Federal Government under the contributions program.

In support of State and local training efforts, the Office of Civil Defense plans to prepare training material for 22 courses in technical civil defense areas. Preparation of the training material will be accomplished largely by contract with State land-grant colleges and universities. Unless the full request is appropriated, these 22 supporting courses will be reduced to those courses that are within the capability of the OCD schools to produce; that is, civil defense management, shelter management, and radiological monitoring.

Failure to provide sufficient funds to get these course packages ready in fiscal year 1963 will mean at least a year's postponement of effective survival training throughout the communities of the Nation.

If local civil defense organizations are requested to prepare course materials on their own, such procedure would consume time, manpower, and moneys which should be devoted to other essential civil defense activities. Such diversion and diffusion of local effort will be avoided if standardized training courses are made available by the Federal Government.

A collateral important result of OCD preparation of these training materials is the improved quality of training and standardization of such training throughout the country.

If this skills training is not conducted, States and their political subdivisions will lack the trained manpower required to carry out emergency operational responsibilities, not only for the shelter program, but also for the operational activities collateral to shelter living, the all-important radiological monitoring functions, recovery operations, and for natural disasters.

(3) Public education ($9,347,000): (*a*) Adult education: The Office of Civil Defense sponsors a civil defense adult education program to inform citizens on civil defense, nuclear hazard, and protective action that can be taken. The program is administered by the U.S. Office of Education, which contracts with the chief State school officers on behalf of OCD. Instruction of adults is by regular instructors of the public school systems. At the beginning of fiscal year 1962, 15 States were in the program full time and 262,000 adults completed the 12-hour course during fiscal year 1962. During the year 22 additional States joined the program, making a total of 37 now under contract. The course has excellent community reception and 10 additional States have requested entry into the program as soon as supporting funds are available.

Unless the full amount requested is approved, OCD will be faced with the bleak choice of selecting a few States in which adult education is to be maintained, or keeping it going at a greatly reduced, uneconomical level in all the States now under contract. In either of these cases, it will be difficult for the States to understand the action and to put much faith in the continuity of the Federal intentions in regard to civil defense. Adult education for all 50 States will require $5.2 million.

(*b*) Medical self-help: The medical self-help program has been 2½ years under development in cooperation with the Public Health Service. The ultimate aim of the program is to qualify one member of each family in the Nation to perform medical and health measures that can and should be taken in an emergency situation when a doctor may not be available. The medical self-help project has been endorsed by 22 medical and health associations, including: The American Medical Association, Association of State and Territorial Health Officers, American Hospital Association, American Osteopathic Association, American College of Surgeons, and American College of Radiology. The course itself has been field-tested in all 50 States and the results reviewed by a special committee of physicians and education specialists. The committee has recommended modification in certain units, realinement of lessons, and the uninterrupted presentation of the course as a community program. Revision is underway and materials will be ready for full implementation in all States in fiscal year 1963.

The U.S. Public Health Service, American Medical Association, and State and local civil defense officials are committed to this program, and expect its implementation in fiscal year 1963. If funds are not available, it will be necessary to cancel the program or, at best, to operate it on a selective, greatly reduced, uneconomical scale. To implement this highly desirable program will require $1.9 million in fiscal year 1963.

(*c*) Special instruction program: Successful implementation of a basic survival program and other civil defense measures requires the special, technical instruction of key community groups through programs of instruction and supporting technical publications. Within this category are county and munic-

ipal officials, property owners, industrial managers, school administrators, and civil planning groups. The fiscal year 1963 request of $2.2 million is to support 10 such special instructional programs and 6 supporting technical publications.

In the absence of these funds, OCD will be unable to support these instructional programs. Community organizations and key industrial groups influence the final success of community programs, failure to instruct them will delay action on many essential community protective measures.

(*b*) *Public information* (*$4,838,000*).—The full amount requested is required for the following purposes:

(1) To widen the extent of civilian preparedness, both in the home and in the community, by presenting to the American people evidence that lives can be saved in significant numbers through effective shelter against radioactive fallout.

(2) To encourage building owners to cooperate in this lifesaving program by making available existing shelter space for protection of the public in the event of attack.

(3) To improve public knowledge of attack warning signals, and also inform the people on the manner in which they will receive official information and instructions immediately before and after an attack.

(4) To enlist the talent and manpower of local organizations—professional, business, civic, fraternal—in assisting local officials who face a complex management job in the community shelter program.

(5) To multiply examples of industries which have already taken steps to protect their employees and their ability to restore productive capacity after attack by intelligent preattack planning.

Civil defense is unique in that, to be effective, it must enlist widespread public acceptance and active participation. If the amount requested is not approved, OCD will be unable to carry out to the extent necessary the mandate of Congress in Public Law 920 to "publicly disseminate appropriate civil defense information by all appropriate means."

To carry through the second phase of the administration's national shelter program, the cooperation of building owners with potential shelter space is indispensable. Building owners cannot be expected to make space available for public shelter unless they understand the program and, most important, feel it has the support of the community. If the funds requested are not available we will be severely handicapped in enlisting this support.

Warning signals can have little effect in terms of stimulating protective action unless people understand what they mean. This requires constant repetition. If the funds requested are not appropriated, we will not be able to maintain this repeat-impact education campaign. Also, changes in the conelrad system of emergency broadcasting, resulting from military relaxation in restrictions on the system, will require new information to the public on how they will get official information and instructions in the event of attack.

Organizations, composed of the leaders in local communities, can render valuable assistance in carrying out the many jobs of developing and preparing to use a community shelter system. But they need guidance and tools to work with. Without the funds requested we would be unable to furnish organizations with the guidance and informational tools they need to support the civil defense program.

Although industry generally has been outstanding in its support of civil defense, constructive action has been limited to the few hundred companies which it has been possible to reach with existing materials. New materials are urgently required to extend this area of constructive action by industry in support of civil defense. Unless funds are provided for this purpose, we not only forgo the opportunity of obtaining this but run the risk of losing what we already have.

7. *Financial assistance to states, $32 million*

Section 2 of the Federal Civil Defense Act of 1960, as amended, states: "The Federal Government shall provide necessary direction, coordination, and guidance; * * * and shall provide necessary assistance as herein authorized." Financial assistance for materials and facilities are authorized in subsection 201(i) of the act. Financial assistance for State and local civil defense personnel and administrative expenses are authorized in section 205 of the act.

The objectives of financial assistance are to assist the States in the procurement of materials and facilities for civil defense purposes and to make contributions for necessary and essential State and local civil defense personnel and

administrative expenses in support of the policy declarations of the President and the Congress.

This $32 million figure reflects the participation of all 50 States. In addition to the tangible materials and facilities these contributions have provided to the States, the personnel and administrative expenses program assists in paying for State personnel costs required to administer and support the surplus property donation program.

The funds requested are to continue programs and products initiated in previous fiscal years in accordance with the policy and intent of Congress as stated in the act, and as demonstrated by previous appropriations for these purposes. The financial assistance programs have been a vital factor in the development of State and local civil defense in consonance with national objectives established by the President and the Congress.

The Governors of the 50 States have indicated their serious interest in civil defense. In the 1962 Governors' conference, they resolved, in part, "As Governors, we share a primary responsibility for the safety and well-being of our people. As Governors we shall continue to do all that is within our ability to protect our citizens from the hazards of nuclear attack. Our success in this task, however, will be greatly determined by the quality and firmness of the leadership at the national level." The Governors have, almost without exception, initiated personal correspondence throughout their States in relation to the shelter survey and initiated nationwide efforts to solicit the cooperation of building owners for emergency use of valuable shelter space and for immediate use of space for the storage of shelter supplies.

House action would reduce funds requested from $32 million to a maximum of $18 million by limiting personnel and administrative expenses to $12 million and by recommending that no funds should be applied to emergency operating centers. This reduction of funds to match State and local expenditures involved in carrying out the increased responsibilities placed on them by the Congress and the administration will not only limit or prevent the accomplishment of essential programs, but will result in severe reaction in both legislative and executive branches of State and local governments against the entire effort to survive and recover as a nation from a possible nuclear war. Legislatures will take the position, as they have in the past, that if Congress does not think survival is worth the effort, neither do they.

(*a*) *Survival supplies, equipment and training* (*$6 million*).—The supplies, equipment, and facilities program, combined with the surplus property program, provide communities with needed supplies and equipment available for immediate emergency use. Additionally, the contributions program supports essential local skills training and information activities which provide the knowledge necessary to survive a nuclear attack.

If it is necessary to curtail this program due to congressional action reducing the full amount requested, both the acquisition of essential civil defense equipment and conduct of essential local training in civil defense skills will be severely curtailed in most areas and completely halted in others. The maintenance of a local civil defense capability cannot be attained or maintained with personnel and administrative activities alone, as local plans and preparations will inevitably require the acquisition of special hardware and the conduct of essential training.

(*b*) *Emergency operating centers* (*$8 million*).—The purpose of this program is to develop protected facilities which will provide for effective functioning of elected officials and maintenance of existing Government and order during an enemy-caused emergency; including both the construction and provision of the facility with essential equipment and emergency power and water supplies. The ability of State and local governments to perform essential emergency functions is basic to adequate national civil defense. To insure this capability, there is a need for protected facilities from which governmental agencies can operate.

In furtherance of the policy and intent of Congress embodied in section 2 of the Federal Civil Defense Act, the Office of Civil Defense has encouraged and supported the construction of the emergency operating centers to facilitate the functioning of State and local governments during and after an attack. An increasing number of State and local governments have recognized their responsibility for preparing for such emergencies and have appropriated funds for the development of emergency operating centers.

In prior years, Federal contributions in the amount of $6,700,000 have been obligated toward the planning, construction, and equipping of these emergency operating centers. As of June 30, 1962, 28 emergency operating centers had

been completed, 7 for State government, and 21 for local government. There are an additional 67 emergency operating centers under design and development with the assistance of Federal matching funds; 15 by State, and 52 by local governments. Because of the manner in which the construction of these emergency operating centers, and the obligation of Federal funds is phased, the amount presently obligated will not complete these 67 emergency operating centers under development. It is estimated an additional $6,900,000 of Federal funds will be required to bring these facilities to completion. An additional $1,100,000 is required for developmental projects anticipated during fiscal year 1963.

Failure to appropriate funds for emergency operation centers means that many of those under development will not be completed nor equipped and Federal funds already invested could well be lost. Few, if any, new facilities will be developed without Federal assistance. A key element in the national civil defense objectives will be unrealized, and the ability of many State and local governments to function in an emergency will be seriously threatened.

(c) *Personnel and administrative expenses ($18 million).*—There is increased civil defense activity throughout the country. This increase is reflected in legislative action at the State and local level in terms of increased budgets. As an example, in response to a DOD inquiry in January 1962, the States reported a figure of $23 million as an estimate of State and local appropriations for personnel and administrative expenses for fiscal year 1963. The DOD budget request is the minimum required for the Federal Government to match this response by State and local authorities essential to carrying out the President's civil defense program at the local level.

At the close of fiscal year 1962, 916 States and political subdivisions were participating in the personnel and administrative expenses program. During the last fiscal year 213 of these entered program under DOD leadership; 500 additional jurisdictions have indicated a desire to participate in the program in fiscal year 1963. Without the full amount requested, these 500 communities across the Nation cannot be accommodated.

The benefits of the personnel and administrative costs program are just now becoming apparent due to the time lag involved in securing State and local appropriations, establishing merit systems, conducting examinations, and organizing staffs. If the House appropriations bill limitation of $12 million is sustained, these fundamental preparations will be lost.

(1) *State civil defense ([$5,500,000]).*—The State civil defense organization has the responsibility of directing and coordinating civil defense activities at the local level. It must, therefore, engage in the direction of planning, organizations, training and public information at the local level and bring National and State objectives, priorities, and standards to local units throughout the country. In addition, State governments have the responsibility to make emergency plans for statewide survival operations and resources management.

State responsibilities include the administration and direction of the entire State surplus property program. The civil defense part of the program has been one of the most active, and perhaps the most productive in providing support for civil defense. Surplus property donated by the Federal Government has often provided the focal point around which local civil defense organizations have been built. From fiscal year 1957 through fiscal year 1962 original acquisition cost of surplus property donated for civil defense has totaled about $215 million.

Should the reduction in funds for contributions to the States reduce State organizations to the point where they do not meet the Federal standards for program administration, the result could be severe curtailment of the donation of surplus property for civil defense.

(2) *Local civil defense ($12,500,000).*—The fallout shelter survey program being conducted by the Federal Government will have the concomitant effect of increasing the planning, organizational, training, and operational activities of political subdivisions now participating in the program and will bring new subdivisions into the program. Local civil defense staffs will be called upon: (1) To secure from building owners agreements for use of space as shelter; (2) to receive and deliver federally procured survival supplies in the shelters; (3) to certify to the necessity of shelter spaces at the location concerned; (4) to make available technical information and guidance to building owners and architects and engineers developing shelter spaces; (5) to assist in monitoring commercial shelter and shelter suppliers to protect the public from fraudulent operations;

(6) to revise operational survival plans to reflect the change in basic tactics from evacuation to shelter, including the development of plans for movement of the population to shelter; (7) to develop shelter management plans; (8) to revise communications plans to permit the local government to issue guidance and instructions to their citizens in shelter; (9) to undertake a greatly stepped-up public information and education program to prepare the people to make effective use of the shelters; and (10) to train a large number of people as shelter managers and shelter staff personnel such as communicators and radiological monitors.

In addition to the above new tasks, considerable ongoing work in civil defense at the local level must be continued, such as the improvement of warning systems, the improvement of the radiological monitoring system, the updating of survival item inventories, and the recruiting, training, and assigning of local government employees and volunteer auxiliaries to essential emergency services.

If funds are not available to support the efforts of local governments to meet these obligations, few city councils and commissions will continue to authorize expenditures for civil defense preparations on the basis that "if the Congress doesn't consider this program important then neither do we." This would not only have a detrimental impact on our survival capability and national morale, but would also result in making the Federal funds already spent on the national shelter survey program an almost complete waste since it would not result in licensed, marked, and provisioned shelters ready for use in an emergency.

Limiting the Federal matching funds available to local governments to present levels, while asking the communities to take on the many additional duties involved in the shelter programs, will result in the stretching both ongoing programs and the shelter survey and supporting programs over a much longer period of time. In addition, it will prevent many additional communities from undertaking an effective civil defense program, stimulated by the results of the shelter survey. The net result will be fewer shelter spaces available to the American people than those which could potentially be made available.

8. Management, $14,600,000

The $14.6 million requested for salaries and supporting expenses for the Office of Civil Defense will provide for the management and related administrative expenses associated with the continuation of programs established during fiscal year 1962. The action recommended by the House committee report includes only $7.3 million for such salaries and support costs, or one-half the budget estimate. While the House report recognizes the continuation of established programs of civil defense at the same general level as in fiscal year 1962, it has failed to recognize the same general level in the single budgetary program that provides for the direction and supervision of all civil defense programs. Management activities, despite the expansion of program activities, are being held down to the approximate level of fiscal year 1962, which is consistent with the stated objectives of the House committee report on the level of operations. The expanded program, initiated during fiscal year 1962 to improve the civil defense posture of the United States, provided for increased emphasis in all areas. Much of our obligations during the last fiscal year was accomplished by placing contracts with other governmental agencies and private industries. These contracts, for the most part, call for delivery of services, supplies, and material during fiscal year 1963. Hence, the impact of these actions in terms of work effort and contract administration will not be fully realized until fiscal year 1963. In order to give meaning to the program objectives of civil defense and to realize full benefit from funds expended during fiscal year 1962, it is essential that the technical and administrative staff within the Office of Civil Defense be maintained at its budgeted level. To live within the $7.3 million would require a reduction of more than 50 percent for the remainder of the year in view of the continued level of employment authorized under the joint resolution for continuing the appropriation. Failure to restore the entire budget request would not only cripple the Federal direction of the civil defense effort but would also lose gains previously made in coordination of State and local activities as outlined below.

IMPACT ON STATE AND LOCAL GOVERNMENTS

The House committee action to reduce the management budget by 50 percent will have detrimental impact on State and local governments. The reorganization of the national civil defense structure under the Department of Defense has recognized State and local needs for additional technical staff support. To this

end we have diverted headquarters staff to the field and are at the present entering the final phase of reorganizing the eight regional offices to increase their ability to provide the necessary technical assistance to State and local governments. Local governments have demonstrated a very favorable response to previous Federal appropriations and assistance programs. Previously, direct professional assistance to State and local governments averaged less than 2 man-years per State. We are in the process of increasing this to three to six per State. Any personnel reduction will preclude us from making this needed increased assistance available, thus failing to meet the needs of increasing State and local preparedness capabilities, generated by previous congressional appropriations.

DEPARTMENT OF DEFENSE—OFFICE OF CIVIL DEFENSE

RESEARCH, SHELTER, RESEARCH AND DEVELOPMENT, AND CONSTRUCTION

(Estimate, $568,755,000; 1962 act, 0[1]; H.R. 12711, $10,000,000)

(House hearings, p. 168)

RECOMMENDED AMENDMENT TO H.R. 12711

Page 4, lines 1, 2, 3, and 4, strike out the words:

"RESEARCH

"For expenses, not otherwise provided for, necessary for studies and research to develop measures and plans for civil defense, $10,000,000, to remain available until expended" and insert in lieu thereof the following:

"SHELTER, RESEARCH AND DEVELOPMENT, AND CONSTRUCTION

"For expenses, not otherwise provided for, necessary for studies and research to develop measures and plans for civil defense, continuing shelter surveys, markings and stocking, providing fallout shelters in existing Government-owned or leased buildings, including existing facilities at military installations, $108,755,000, to remain available until expended: *Provided*, That such amounts of this appropriation as may be determined by the Secretary of Defense may be transferred to such appropriations of the Department of Defense available for military construction as he may designate."

HOUSE REPORT NO. 2050

"Research.—The Committee believes that before the Nation embarks on an extensive fallout shelter construction program involving billions of dollars more study and research should be applied to the vast and complex problems involved. Accordingly, the Committee is recommending $10,000,000 for research in this area. The budget estimate proposed $460,000,000 for a new program of shelter incentives in the form of grants to cover a portion of the cost of constructing fallout shelters in certain nonprofit institutions, $35,000,000 for fallout shelters in existing Federal buildings, $56,000,000 for research stocking supplies in shelters, and $17,755,000 for research and development. As yet there is no legislative authority for the inventive grant program of shelter construction."

JUSTIFICATION

Restoration of language included in requested amendment will provide for the following program and project increases over the House action:

1. Shelter in Federal buildings	$35,000,000
2. Shelter survey, marking, and provisioning	56,000,000
3. Research and development	7,755,000
Total increase	98,755,000

This request includes all items in the President's budget with the exception of $450 million (plus $10 million for administration) for the shelters incentives

[1] Financed under "Civil defense, Department of Defense" appropriation and from funds transferred from Office of Civil and Defense Mobilization pursuant to Executive Order 10952 dated July 20, 1961.

program. The request for funds for the incentives program is being deferred pending congressional consideration of the authorizing legislation contained in H.R. 10262.

This requested amendment includes funds for the carrying out of authorized, ongoing programs. Of special significance in connection with this appropriation, it should be noted that the House action does not provide any of the $568,775,000 included in the President's budget for this appropriation, but did provide $10 million under a "Research" appropriation title. Under authority of the continuing resolution approved by the Congress authorizing obligation of funds in July 1962, by all agencies of the Federal Government (H.J. Res. 769, 85th Cong., 2d sess. (Public Law 87-513)), obligations have already been made for continuing operations in two areas which would be financed within this appropriation in fiscal year 1963: (1) The continuing costs of supervision and administration of the survey and marking activities, financed from fiscal year 1962 funds, by the Corps of Engineers and the Bureau of Yards and Docks are being met; (2) under the program for provisions for initial requirements continuing costs are being met in connection with the transportation, warehousing, and distribution of the $90 million worth of shelter supplies, including radiological monitoring instruments, procured with fiscal year 1962 funds.

Accordingly, the requested language and the appropriation account should be preserved to permit the orderly meeting of obligations authorized under the continuing resolution.

1. Shelter in Federal buildings, $35 million

(*a*) *Nonmilitary structures ($20 million)*.—The shelter program is based on the premise that, in the event of nuclear attack on this country, fallout shelters would offer the most practical nonmilitary defense measure for the protection of the greatest number of people. Shelter space in Federal buildings is essential evidence of Federal leadership and example. Incorporating fallout shelters in appropriate new and existing Federal buildings provides valuable cost and design data for public use.

Where the need for shelter exists and the cost is reasonable, it is planned to modify existing Federal buildings to provide fallout shelter space. In fiscal year 1963, the Department of Defense is requesting $20 million for shelter in existing nonmilitary Federal buildings. Agencies and departments have requested funds for protective features in their new structures and are not covered in this request.

This $20 million is an estimate based upon the GSA report, "Inventory Report on Real Property Owned by the United States Throughout the World." Although over 400,000 buildings are enumerated in this report, only about 80,000 are under civil agencies. Further, about 10,000 of these structures can be readily modified at minimum cost to include shelter. This represents about 200 million square feet of floor area. Five million square feet are available for immediate conversion to shelter and the unit conversion cost would average about $4 per square foot. These estimates have been verified by the national shelter survey data.

In fiscal year 1962, $17.5 million was appropriated by the Congress and obligated by the Department of Defense to provide shelter in existing and new nonmilitary Federal buildings. These funds are estimated to provide 536,000 shelter spaces. In addition, this effort provides information essential to any ongoing program; that is, data and experience on shelter design and shelter contruction and modification costs. This knowledge can be passed on to the entire Nation so that they can gain from Federal experience. The fiscal year 1963 request for $20 million will carry forward this work, started last year.

(*b*) *Military structures ($15 million)*.—The protection of military families and resident civilians at military installations is an integral part of this program. Military personnel perform relatively short tours of duty at each post of assignment and do not own permanent homes on military posts. They cannot be expected to construct fallout shelters on Federal property at their own expense. Yet, the knowledge that they and their families are protected against the effects of nuclear weapons is necessary to the morale and effectiveness of our fighting forces.

To provide leadership to the entire national shelter program, it is necessary that the Federal Government do as it is asking others to do. It is essential that the Department of Defense, the agency which administers the program, recognize its responsibilities for the servicemen, their dependents, employees, and the public living near these facilities. Further, this program, under the direct

control of the Department of Defense, will provide a particularly useful opportunity to gain additional experience in design and cost control for modification of the types of structures included in our program.

The total population at military nonindustrial installations in the United States is estimated at 2.5 million. This includes military and civilian strength. and an estimated number of onbase dependents. Off-base dependents of the military forces are not included in this estimate; they are cared for in other programs for civil defense. It is proposed to provide shelter spaces for this population and others who live nearby within a 5-year period.

The fiscal year 1963 program would provide approximately 375,000 shelter spaces (3,750,000 square feet) in existing military structures. This estimate of shelter spaces for planning purposes was arrived at by analysis of an inventory of existing military permanent and semipermanent structures considered suitable for modification to include shelter space. A total of 1.88 million spaces was estimated which when spread over a 5-year program, results in the 375,000 estimate for fiscal year 1963. Subsequent engineering surveys made by the Armed Forces support this estimate.

The incremental costs for protective features for 375,000 spaces in existing military buildings for fiscal year 1963 are estimated at $15 million at an average cost of approximately $4 per square foot. This figure was developed from experience in prototype programs with allowances through engineering analyses for present more austere standards.

This program will be administered so that it will create shelters in relation to local population requirements as indicated by the results of the national survey.

Wherever location and military operations permit, community shelters on military bases will be made available to the general public in accordance with local civil defense planning.

2. Shelter survey, marking and provisioning, $56 million

(*a*) *Shelter survey and marking ($8 million*).—The objective of the national shelter program is to develop adequate shelter space for every person in the United States by 1967. As a part of the program the national fallout shelter survey was inaugurated during fiscal year 1962, centered on the identification and marking of public shelter spaces immediately available in existing structures and buildings.

The fiscal year 1962 program, at a cost of $61.1 million, resulted in the identification of some 60 million shelter spaces meeting Federal criteria. Unless this inventory is kept current it will deteriorate in value to Federal and local plans. It is therefore essential that adequate provision be made for the continuing identification and addition of suitable shelter spaces brought into being by new construction or the modification of existing buildings, and for the deletion of those shelter spaces located in buildings which have been destroyed, razed, or for some reason withdrawn from the shelter program since the initial survey was completed.

Funds herein requested will meet the supervisory costs of Corps of Engineers and the Bureau of Yards and Docks to administer the contracts with architect and engineering firms awarded in fiscal year 1962 to complete the initial survey. Obligations have already been made under authority of the continuing resolution for this purpose and there is a requirement for additional obligations over the next several months in order to complete the administration of contracts and obligations made in fiscal year 1962. Unless funds are provided in this appropriation, it will be necessary to provide for this essential requirement out of the Operation and Maintenance appropriation, which would further reduce our capabilities in the O. & M. activities.

The requested funds will also provide for continuing the survey of new construction, including the identification and marking of an estimated additional 4 million shelter spaces during fiscal year 1963. This continuing effort will bring into being additional low-cost shelter space and serve to keep the national shelter inventory current and usable for any potential emergency.

(*b*) *Shelter provisions ($48 million*).—Shelter space required to protect the population from the effects of nuclear fallout is being located and identified by the current shelter survey program. In an emergency, such space would have to be occupied for periods ranging from a few days to 2 weeks, depending on the concentration of fallout in the area.

The shelter provisioning program has been developed, with the advice of competent authorities in the medical and nutritional fields, through research, and

with the assistance of industry, to provide essential survival items for maintaining the lives and health of shelter occupants during the time they may be required to remain in the shelter. Needed supplies and equipment must be stored in the shelter areas in advance in order to be available for immediate use in an emergency. It would not be possible in the short period of time following an alert to locate such supplies and move them to shelters. Without provisioning, available shelter space cannot be effectively used and tens of millions of persons who need not die would be casualties in the event of a massive nuclear attack.

The original estimate of the number of shelter spaces to be developed through the current survey was 50 million. The survey has identified over 55 million acceptable spaces in existing buildings. Taking into account space to be located in mines, tunnels, caves, and subways, it is now estimated that a minimum of 60 million spaces will be identified by the survey. It is also estimated that, during fiscal year 1963, adequate space for 4 million people will be identified in new buildings being constructed resulting in a minimum of 64 million acceptable spaces identified by the end of fiscal year 1963.

Funds were requested and appropriated in fiscal year 1962 to provision 30 million spaces. Economy in the survey operation has made it possible to undertake procurement of supplies sufficient to provide balanced provisions for 37 million spaces from fiscal year 1962 funds. The funds requested herein would permit stocking an additional 22 million spaces of balanced stocks for a total of 59 million spaces from fiscal years 1962 and 1963 funds. Allowing for the unavailability of a small, but as yet unknown, part of the surveyed space, it is anticipated that the requested $48 million will enable the available space to be provisioned in fiscal year 1963.

The House action eliminated the funds for this program. This would—

(1) Deny the funds necessary for receiving and warehousing shelter supplies already under procurement in Government-owned warehouses, and for distributing these supplies to local governments for placement into available shelters.

(2) Delay by at least 1 year the procurement of additional supplies for provisioning of 22 million shelter spaces, which have already been identified.

(3) Interrupt the orderly procurement process now underway, resulting in the conversion of production lines to other items after delivery of procurement started in fiscal year 1962, with a consequent increase in future procurement costs to provide for reestablishment of lines for producing these same shelter provisions.

(4) Result in the inability to provide transportation costs of certain items.

(5) Anticipation of interruption of supplies can be expected to deter municipal government from assuming responsibility for obtaining the participation of building owners and installing supplies in shelter areas.

Even if funds for completing the survey, marking and provisioning of existing shelter space are not restored, it should be pointed out that substantial costs of bringing this activity to a close cannot be avoided. Fiscal year 1963 funds have been obligated for continuing essential operations under authority of the continuing resolution, and additional funds will be required over the next 6 to 9 months to finance the transportation, receiving, warehousing, and distribution of the approximately $90 million worth of shelter supplies, including radiological monitoring instruments, procured with fiscal year 1962 funds. It is too late at this time to stop the flow of supplies. The items are already on order and are beginning to be shipped to warehouses throughout the country and funds must therefore be provided from any source available in order not to disrupt the entire shelter-provisioning program. Some additional procurement would be required to balance shelter supplies to avoid waste of items on which procurement has moved most rapidly. Without the requested amendment, these costs will have to be absorbed in the O. & M. appropriation, which would further impair essential ongoing programs.

3. Research and development, $7,755,000

Funds in the amount of $17,755,000 are being requested for Research and Development. To be applied against this request is $10 million approved by the House under the research appropriation, leaving an additional requirement of $7,755,000. Requested amendment will restore the full amount of $17,755,000 under the shelter, research and development, and construction appropriation, and would strike out the appropriation research as contained in the House approved bill. Restoration of $7,755,000 to the program is essential to meet the following high-priority research program in four major areas: (*a*) Shelter research—testing of shelters under nuclear weapon effects, increased experimental study of protection against fires, application of biological warfare defense techniques, and

development of washdown or other fallout removal methods would be undertaken; (*b*) support systems research—needed research on radiation detection, communications and warning, increased experimental study of fire ignition and spread, fire control, rescue, and reduction of vulnerability, and increased study of evacuation, movement control, and transattack medical support would be undertaken; (*c*) postattack research—badly needed analysis and experimental study of decontamination, damage repair, postattack health problems, sociological and psychological recovery problems, and contamination of water and foodstuffs will be undertaken; and (*d*) systems evaluation—needed analyses of civil defense operational requirements, functional studies, and systems integration will be performed.

To insure high performance with maximum economy, research and development must be an integral part of any program designed to meet the changing hazards of modern warfare. Technology is never static, particularly in the weapons development field. Such research must keep pace with and anticipate changes if a reliable basis for civil defense is to be maintained. The House committee report states, "more study and research should be applied to the vast and complex problems involved." This objective cannot be satisfied by a reduction of about 40 percent in the current level of effort in civil defense research. Since the demands of the current program of fallout protection for improved data and methods is continuing, a major effect of the House reduction will be to curtail the investigation of the subjects of nuclear blast, fires, and immediate radiation, and of effective means of protection of the population against these effects. Improved understanding of the total nuclear attack environment and of the effectiveness and costs of providing protection to the public in the future is a requirement for which research and development must be undertaken now. Approval of the amendment will restore in whole or in part essential elements of the research program detailed below.

(*a*) *Shelter research.*—Failure to restore the funds requested will result in deletion of planned shelter studies in connection with field testing of nuclear weapons, deletion of experimental studies on the incorporation of water sprays or other devices on structures for the removal of fallout, curtailment of planning for experimental test of shelters and shelter components under mass fire conditions, curtailment of studies of the application of biological warfare defense measures to shelters in existing buildings, and curtailment of simulated and human occupancy experiments needed to develop management and operational data for effective use of shelters and to proof-test current environmental and habitability criteria.

(*b*) *Support systems research.*—Failure to restore the funds requested will result in deletion of planned research projects in radiation detection, communication, and warning that are expected to be needed to exploit major analyses of operational requirements in these areas that were undertaken in fiscal year 1962. The funds reduction will also result in curtailment of planning and preparations for large-scale experiments in fire ignition and spread, damage control, rescue, and reduction of vulnerability to the thermal effects of nuclear weapons; curtailment of research on the medical support systems for civil defense, which is being undertaken in close cooperation with the Department of Health, Education, and Welfare; and curtailment of planned studies of strategic evacuation and movement of populations.

(*c*) *Postattack research.*—Failure to restore the funds requested will result in deletion of a planned doubling of the fiscal year 1962 research effort in the postattack survival and recuperation area. The need for better information on the postattack environment and on effective means of coping with this environment is especially critical, not only for civil defense operations, but also for an understanding of the total civil defense problem. Of special importance is the lack of information on decontamination in cold weather; on the effect of terrain roughness on radiation exposures, both inshelter and subsequently; on the efficient repair of facilities that may be damaged by blast and fire; and on the postattack medical problems and rehabilitation requirements that must be planned for. The lack of sound research data and methodology in these areas is delaying the development of appropriate action plans and programs, and is delaying the upgrading of current undesirably low levels of technical competence in training efforts. Finally, an important area of research on contamination of water and foodstuffs must be taken under study to quantify the degree of hostility of the postattack environment and to determine effective countermeasures.

(*d*) *Systems evaluation.*—Failure to restore the funds requested will result in deletion or curtailment of planned research projects designed to provide informa-

tion on the total civil defense environment—strategic, physical, and social—and on the integration of various civil defense actions into effective systems. In particular, reduction of the proposed level of effort will result in deletion of studies of the damaged social system from which definitive statements of performance requirements for civil defense are anticipated, curtailment of the functional analysis of civil defense systems to assure program balance and economy, and curtailment of studies of civil defense systems in future environments so as to assure that short-range programs will have as long a useful life as possible.

DEPARTMENT OF DEFENSE—OFFICE OF CIVIL DEFENSE

General Provisions

REQUESTED AMENDMENT TO H.R. 12711

Page 4, line 18, after the words "fallout shelters" insert the following parenthetical clause: "(except for fallout shelters resulting from minor modifications to design, construction, or building equipment, which provides fallout shelter space primarily serving the normal peacetime purposes of the facility)"

(H.R. 2050)

"*Research.*—The committee believes that before the Nation embarks on an extensive fallout shelter construction program involving billions of dollars more study and research should be applied to the vast and complex problems involved. Accordingly, the committee is recommending $10 million for further research in this area. The budget estimate proposed $460 million for a new program of shelter incentives in the form of grants to cover a portion of the cost of constructing fallout shelters in certain nonprofit institutions, $35 million for fallout shelters in existing Federal buildings, $56 million for stocking supplies in shelters, and $17,755,000 for research and development. As yet there is no legislative authority for the incentive grant program of shelter construction."

JUSTIFICATION

The requested amendment would modify the restriction on the use of funds appropriated to any agency in the Independent Offices Appropriation Act, 1963, for the purpose of construction of fallout shelter (a broader provision with the same general effect appears in sec. 303 of the general provisions of the act). An amendment has been requested to restore funds to the Office of Civil Defense, Department of Defense, in the amount of $35 million for fallout shelter purposes in existing Government-owned or leased buildings. Moreover, other agencies (GSA, VA) included in this act have requested funds for incorporating fallout shelter in proposed new construction, which the House committee deleted.

It is essential to the success of the Nation's civil defense program that the Federal Government take the lead in the creation and use of shelter space in its buildings. We urge the committee to adopt the requested amendment, in order that State and local governments, as well as private organizations, whose efforts and cooperation will determine the degree of success of the Nation's civil defense program, will not have the impression that the Congress has prohibited fallout shelter protection in Federal buildings, while funding the first extensive shelter system the Nation has ever had; namely, the shelter spaces found in the survey for about 60 million people.

For a more complete justification of the requested amendment, attention is invited to the justification for the requested amendment to section 303 of the general provisions (p. 56, line 15, of the act).

DEPARTMENT OF DEFENSE—OFFICE OF CIVIL DEFENSE

General Provisions

REQUESTED AMENDMENT TO H.R. 12711

Page 56, line 15, after the words "fallout shelters" insert the following parenthetical clause: "(except for fallout shelters resulting from minor modifications to design, construction, or building equipment, which provides fallout shelter space primarily serving the normal peacetime purposes of the facility)".

JUSTIFICATION

The requested amendment to this restriction is urged in order to permit a very important part of the civil defense program to be executed. The Department of Defense, Office of Civil Defense, has requested the restoration of $35 million for fallout shelter in existing Government-owned or leased buildings. Furthermore, under this bill the GSA and Veterans' Administration requested funds for fallout shelter in select new construction. These funds were deleted by the House committee, and restoration of the funds for fallout shelter in the proposed new construction is being requested. Modification of the restraint would remove any doubts on the part of agencies covered by this appropriations act or other appropriations acts, controlling existing Federal buildings (e.g., GSA, Post Office, Interior, military construction and civil works, Veterans' Administration) as to their authority to accept and expend funds made available by direct appropriation or transfer for approvable fallout shelter purposes.

The Department of Defense believes the language in section 303 to be primarily directed at expensive, single-purpose fallout shelters in Federal buildings. The Department of Defense does not intend to use funds under this act for that purpose, but rather to adapt the corridors, rooms, and basements which serve normal peacetime purposes to provide, incidentally, protection against fallout radiation. Minor modifications in design of new construction and minor structural changes or additional equipment in existing buildings can accomplish this purpose at low cost.

The advantage of making these funds available to the Department of Defense, without specific authorization applicable to individual buildings, is to permit the Department to use these funds exclusively for the lowest cost opportunities to create fallout shelter space in places where it is clearly needed. The determination of need will be made on the basis of the national shelter survey results and the advice of local governments.

Some of this shelter space will cost nothing. The shelter survey has found over 3 million public shelter spaces already in existence in Federal buildings, which we intend to bring into use and make available for the local public under civil defense plans of the local government for the use of this space.

Furthermore, it should be noted that in most large multistory buildings it is a practical impossibility to construct the building without some fallout shelter space. The funds requested are to upgrade the protection factor to meet the criteria we have set, and to increase the capacity where low-cost opportunities are present.

It is essential to the success of the Nation's civil defense program that the Federal Government take the lead in the creation and use of shelter space in its buildings. We urge the committee to amend section 303 as requested in order that State and local governments, as well as private organizations, whose efforts and cooperation will determine the degree of success of the Nation's civil defense program, will not have the impression that the Congress has prohibited fallout shelter protection in Federal buildings, while funding the first extensive shelter system the Nation has ever had; namely, the shelter spaces found in the survey for about 60 million people.

If the proposed amendment is not adopted, the committee's attention is called to a technical difficulty presented by section 303. Reference to "expenditure" might or might not be intended to place a restriction on funds appropriated in fiscal year 1962 in the Defense Appropriations Act. These funds, amounting to $17,500,000, have been obligated and partially expended. From the standpoint of the Department of Defense, all of these funds have been expended by transfer to various Government agencies. To construe this language as a restriction on an appropriation in a prior year requires the assumption that the House Appropriations Committee intended the restriction to constitute legislation and to have retroactive effect on a prior appropriation. Even if this were the intention of that committee, it is respectfully submitted that such legislation is unsound and unwise in that the effect on our operations would be to waste funds applied to design work, require the cancellation of certain contracts and require new expenditures to modify plans to eliminate shelter space.

The committee's attention is also invited to an additional question which can arise under the section, with respect to the intended meaning of the phrase "authorized by appropriate committees of the Congress." House Report 2050 contains no indication or guidance as to the method of determining the "appro-

priate committee of the Congress," or the import of the term "authorized." Clarification of this element would be helpful.

General Statement

Mr. Pittman. I have, in addition to the justification that was submitted last week, a statement which undertakes to put the position in a little better perspective.

Senator Magnuson. All right, go ahead.

Mr. Pittman. I would like to either read it or put it in the record. Suppose I read it, and you can interrupt me if you wish.

Senator Magnuson. All right.

Mr. Pittman. This is my first appearance before your subcommittee and the first presentation of the President's civil defense program before any committee of the Senate.

This comes at a time when the newspapers report that a body blow or a blockbuster has hit the civil defense program. These references to the House civil defense appropriation are somewhat overstated.

House Action

What has happened, in a word, is the appropriation of about one-third of the funds requested for the current civil defense activities.

The only new element in the program requires legislation and, therefore, is not at issue. Rejection of two-thirds of the funds requested for current activities would, in my judgment, postpone for a year or indefinitely the first real prospect this Nation has yet had of achieving a capability to save large numbers of lives under nuclear attack.

I think it is worth digressing to point out that the President's program was initiated by an appropriation last August. There were no appropriation hearings at that time. It was acted on very rapidly. The Government Operations Committee put out a report in September 1961. There were no other hearings on the President's program on the House side and there were none on the Senate side last year.

This year there have been no hearings of any Senate committees up until this point.

House Government Operations Report

Hearings were held on the new civil defense program last February by the House Government Operations Committee, which put out a very full and complete report as to what we were doing. That is the only substantial information which has been put out from congressional sources on this program.

I make the point because I feel that the Congress has not yet had the benefit of a report by a committee with action jurisdiction covering the general objectives of the program and its method of achieving long-term objectives.

For that reason, I want to be a little broader than perhaps is customary in this hearing, and explain the program more basically than as an appeal of the House action——

Senator Magnuson. Well now, this is your first appearance here, and I want to suggest something.

This is not just an appeal committee. We may cut the House, too. So you just tell us what you have to say.

Talking about appeals, we might cut the House, which we do on occasion, but everybody comes over here as if we are going to accept the House figure and then they appeal for something else.

So you just go right ahead and just file the program. Next year we will have you over here first, and then we will not have to worry about appeals.

Mr. PITTMAN. Well, that is exactly whatI would like to do.

Senator SALTONSTALL. Did I understand you to say that the House reached their conclusions on this without any hearing?

Mr. PITTMAN. There was a hearing before the Thomas subcommittee.

My point was that there has been no descriptive report, except the Government Operations Committee report. The report of the Appropriations Subcommittee, I believe, has one sentence in it which goes to the merits of the program.

Senator ELLENDER. You did not appear?

Mr. PITTMAN. Yes; we had a hearing, and I made an appearance before the House Appropriations Subcommittee.

Senator ELLENDER. Have you anything different to offer to us?

Mr. PITTMAN. Yes. That was almost 5 months ago. The new elements of the program have been in active operation for about 8 months.

The hearings before the House were at the time when the program was 3 months old, and it is now 5 months later, so that there are some changes in the situation, which I will allude to.

SHELTER INCENTIVE PROGRAM

Senator ELLENDER. Well, in your shelter research and development, I notice you are asking for restoration of $108 million instead of the budget estimate of $568 million.

Why is that?

Mr. PITTMAN. The principal item that is not included is $460 million for what we have called a shelter incentive program.

This would be Federal financial assistance to new fallout shelters created by schools and hospitals and colleges and similar institutions. That requires authorization, and there have been no hearings by the authorizing committees. For that reason, we have not requested that this committee address itself to that item.

Senator ELLENDER. Well, have you abandoned it?

Mr. PITTMAN. We have not. I wonder if it would be appropriate, Mr. Chairman, to refer to or, perhaps, read into the record a letter which the President addressed to——

LETTER FROM THE PRESIDENT

Senator MAGNUSON. Well, you may put that in the record in full. I have it right here.

(The letter referred to appears on p. 1.)

Mr. PITTMAN. I bring it up at this time because it is responsive to Senator Ellender's question.

Senator MAGNUSON. Yes. Well now, let's get this straight——

Mr. PITTMAN. Would you like me to read it?

Senator ELLENDER. If you will cover it in time, I do not want to anticipate you.

I would like for you to proceed in order, but I was curious to find out why it is that you did not ask for the requirement of 568.

Mr. PITTMAN. Because it is unauthorized and the President has requested that hearings on that item be requested early in the next Congress.

BUDGET REQUEST

Senator MAGNUSON. Well now, let's get this straight. You asked the budget for $695 million?

Mr. PITTMAN. Correct.

Senator MAGNUSON. And that included $569,755,000 for the shelter program?

Mr. PITTMAN. No, $460 million—some of that was research, survey and stocking and fallout shelter in existing Federal buildings; otherwise your statement is correct.

SHELTER PROGRAM

Senator MAGNUSON. How much was included for the shelter program?

Mr. PITTMAN. For the unauthorized portion of the shelter program, which is to create new shelter space, there is $460 million.

In addition, there is $56 million which is requested to complete the job of surveying, stocking, and marking the existing shelter space which was a program started last year.

RECAPITULATION OF BUDGET ESTIMATE

Senator MAGNUSON. Well, how much have you taken out of the $695 million?

Mr. PITTMAN. $460 million.

Senator MAGNUSON. $460 million?

Mr. PITTMAN. Plus——

Senator MAGNUSON. So that—wait a minute. So that leaves us five——

Mr. PITTMAN. $235 million.

Senator MAGNUSON. $235 million, and now, what have you taken out of that?

Mr. PITTMAN. $1.3 million for—

Senator MAGNUSON. $1.3?

RADIATION DETECTION INSTRUMENTS

Mr. PITTMAN. For radiation detection instruments, which we were able to procure out of fiscal 1962 funds and, therefore, did not need to——

Senator MAGNUSON. So there is $233.7 million which is in the program now suggested, and the House gave you $75 million?

Mr. PITTMAN. That is correct.

Senator MAGNUSON. So the difference is about $156 million?

Mr. PITTMAN. Yes—it's $159 million.

Senator MAGNUSON. $159 million?

Mr. PITTMAN. Yes.

Senator MAGNUSON. All right.

SHELTER IN FEDERAL BUILDINGS

Senator SALTONSTALL. Mr. Chairman, if I might respectfully say so, the Department of Civil Defense, Department of Defense's general provisions on page 4, you may see there they put except for fallout shelters resulting from minor modifications and so forth and so on, which provides fallout shelters now serving the normal peacetime facilities.

So that would all come in, would it not, to this discussion and the dropout also on the amount of money?

Mr. PITTMAN. I am not clear as to what you are referring to.

Senator SALTONSTALL. I am referring, I assume, to your assignment——

Mr. PITTMAN. Yes.

Senator SALTONSTALL. Based on page 4 of the act.

FUNDS FOR SHELTERS AND BUILDING RECONSTRUCTION

Mr. PITTMAN. The $35 million in the $233.7 million that we have pinned down here, $35 million is to go to shelter construction in Federal buildings which would be prohibited or restricted by the language referred to.

Senator SALTONSTALL. So you have eliminated that.

So how much money does that eliminate?

Mr. PITTMAN. We, of course, are asking for a change in that provision. Section 303 would eliminate $35 million if it stays as passed by the House.

Senator SALTONSTALL. Only $35 million?

Mr. PITTMAN. Only $35 million. That $35 million, incidentally, is $15 million for military buildings and $20 million for civilian Federal buildings.

Senator SALTONSTALL. So, Mr. Chairman, if I may ask one more question——

Senator MAGNUSON. Yes, of course.

RESTORATION REQUEST

Senator SALTONSTALL. When the House cut out two hundred and seventy and six hundred thousand, you are requesting that with this change in the law with this amendment, which you ask us to put in the law, you are requesting that $35 million?

Mr. PITTMAN. We are requesting the $35 million and the change in the law, correct.

Senator SALTONSTALL. And the 35 would go into the 108, or would that be a separate figure?

So that there is fifty-nine million nine for operation and maintenance and one hundred and eighty-seven and fifty-five for shelter, research, and development, and then you are planning another 35 million?

Mr. PITTMAN. No, that is part of the $108.8 million.

Senator SALTONSTALL. That is part of the 108?

Mr. PITTMAN. Yes.

Senator ELLENDER. If we allow you what you are asking, 75 from the House, plus this, it would be a total of two hundred and thirty-three six hundred and seventy-three?

Mr. PITTMAN. Correct.

ALLOCATION TO SHELTERS

Senator ELLENDER. How much of that would be used for shelters?

Mr. PITTMAN. $35 million for shelters in existing Federal buildings, $8 million to continue surveying shelters; that is, locating existing shelter space, and $48 million would be for stocking shelter space that already exists.

RESTORATION OF FUNDS FOR RESEARCH

Senator ELLENDER. How about research?

Mr. PITTMAN. Research, which of course, is not limited to shelter, would be a restoration of $7.8 million to bring that back up to our request.

Senator ELLENDER. Well, how much did the House allow you in that category?

Mr. PITTMAN. In the category of research they allowed $10 million.

Senator ELLENDER. You are asking for the entire amount?

Mr. PITTMAN. We are asking for the entire amount. We requested $17.8 million.

CEILING ON EMPLOYEES

Senator ELLENDER. To what extent have you increased or decreased the number of employees that are now working in this department since it has been separated from OCDM?

Mr. PITTMAN. We established for ourselves an arbitrary ceiling of the number of people who were transferred to us from the old OCDM, plus 42 Defense Department people, then being used as a nucleus to get going.

Senator ELLENDER. So that you have all those who were under OCDM, plus——

Mr. PITTMAN. Forty-two more people.

Senator ELLENDER. Making a total of?

Mr. PITTMAN. 1,148.

Senator ELLENDER. 1,148?

Mr. PITTMAN. Yes.

Senator ELLENDER. Now, those that you are getting or the 44 that you are getting from the military, are they——

SOURCE OF FUNDS FOR SALARIES

Mr. PITTMAN. I should say this is not really the military. We started with a small nucleus of people who were brought in from outside, such as myself, with some key people in the Defense Department who were made available to pick up this responsibility and get going.

Senator ELLENDER. Well, who is paying their salaries?

Mr. PITTMAN. That is out of the civil defense budget.

Senator ELLENDER. So that how much do you get out of Defense, that is by way of assistance?

Mr. PITTMAN. We get a good deal out of Defense by way of assistance. I do not think I can give you a short answer to this question, but I plan to cover it as I go along.

CONTRIBUTION TO DEFENSE

If you wish, I will give you information in detail on the different parts of the Defense Establishment that directly or indirectly contribute to the civil defense program.

Senator ELLENDER. And the expenses for that part came in from the Department of Defense.

Mr. PITTMAN. In large part. In some cases it did and in some it did not.

Senator ELLENDER. What do you mean?

Mr. MCKINNEY. Primarily it's on a reimbursable basis.

Senator ELLENDER. You mean out of the amount of two thirty-three six seventy-three, should we give it all to you?

Mr. MCKINNEY. Yes, sir.

Senator ELLENDER. You did not get anything out of the Defense Department except the reimbursable area?

Mr. PITTMAN. I think my answer was the correct answer and it was that some of the services and support we get from the Defense Department are reimbursable and some are not.

Senator ELLENDER. Why is that?

Mr. PITTMAN. We are, in effect, contracting to get a job done. A good example would be the Corps of Engineers on this survey—this was a new mission for them—they have no funding available for that purpose.

Senator ELLENDER. They are short of funds now?

Mr. PITTMAN. We pay them to get that job done.

We have access to the Defense Atomic Support Agency, which provides expertise on nuclear weapons' effect. They give us this free; they also make studies for us. Smaller undertakings do not cost us anything.

There are a number of instances of that kind where we are assisted by being in the Defense Department without having to pay for it.

DEFENSE REQUEST COMPARED TO HOUSE ACTION

Senator SALTONSTALL. Mr. Chairman?

Senator MAGNUSON. Yes, Senator Saltonstall?

Senator SALTONSTALL. What you are asking, instead of this $568,755,000 you are asking for this $108,755,000 and you are changing the language where the House put in research, and you are putting in "shelter, research and development and construction," and the construction, as I read this thing, is to go into existing facilities of military installations and permit the Department of Defense to make it available for military construction as they may designate.

So what you are doing, in substance, is to take that or include, instead of research, or, in addition to research, an actual development of shelter construction, a program such as that.

That is the way you broadly differ from the House, is it not?

Mr. PITTMAN. In addition to research, yes; that is correct.

Senator SALTONSTALL. And you are asking for that amount instead of the whole five hundred and sixty-eight.

This would be construction, as I read this amendment—this would be construction in the military facilities purely?

Mr. PITTMAN. Well, that is only $35 million of the $160 million difference between us and the House. So there is a good deal more at stake than the fallout shelter space in Federal buildings.

What this all boils down to, in a word, is that we feel that any effective, realistic civil defense program has to be oriented around the requirement for shielding our population against fallout radiation.

I think the House report's conclusion was a clear difference with this judgment. The House action knocked out everything in the budget that went to meet that requirement.

This may be an oversimplification but, in general, that is what has happened.

SHELTER IN FEDERAL BUILDINGS

Senator SALTONSTALL. Well, the way this is worded now, as I see it, it would not necessarily limit the Secretary of Defense in his military construction to fallout shelters purely, would it?

It could be used for additional military construction or it could be used for fallout shelters, presumably.

It would be used for fallout shelters, but as I read this amendment.

NEED FOR QUALIFICATION OF PROPOSED AMENDMENT

Mr. PITTMAN. The amendment that we are proposing?

Mr. SALTONSTALL. Yes, the amendment which you are proposing. It could go into any military construction?

Mr. PITTMAN. No.

Senator SALTONSTALL. That language would have to be qualified still more, if we are going to put that language back in, as I see it.

SECTION 303 PROPOSAL

Mr. PITTMAN. We have proposed that section 303 and a counterpart, general provision, in the House bill be modified to permit us to build protective features into new construction and modification of existing buildings.

Senator MAGNUSON. Well, what new construction? Government?

Mr. PITTMAN. Federal buildings, both military and civilian.

Senator MAGNUSON. Well, the GSA builds the Federal buildings.

Mr. PITTMAN. Well, of course, the three services are also engaged in constructing buildings.

Senator MAGNUSON. Yes, but what I am trying to get at is this:

Is this for military construction or is it for Federal construction?

FUNDS FOR MODIFICATION OF EXISTING BUILDINGS

Mr. PITTMAN. In the civil defense appropriation request there are funds only for modifying existing buildings.

There are no funds for new construction of any kind.

Senator MAGNUSON. And GSA is authorized, if we give them the money, to modify or put into a new building civil defense features?

Mr. PITTMAN. Correct.

Senator MAGNUSON. So the Senator from Massachusetts and I are trying to find out if this amount is only for the military?

Mr. PITTMAN. The $35 million?

Senator MAGNUSON. Yes.

Mr. PITTMAN. No, it is $15 million for the military and $20 million for Federal buildings of a civilian type.

Senator MAGNUSON. Well, do you turn that over to GSA then?

Mr. PITTMAN. Some of it. Of course, there are other agencies involved, the Veterans' Administration and other agencies besides GSA, construct buildings or own buildings which might require modifications.

Senator MAGNUSON. Well, agencies come before us every year and ask us for certain moneys and new buildings and for remodeling buildings for the civil defense features, and we are trying to get this placed.

Where is this now?

NEW CONSTRUCTION IN AGENCY BUDGETS

Mr. PITTMAN. Mr. Chairman, the Bureau of the Budget decided late last year that new construction should be in the budgets of the agencies who had control and ownership of the buildings, and that modification of the existing buildings should be in the civil defense budget.

AMOUNT FOR MILITARY AND CIVIL BUILDINGS

Senator MAGNUSON. I see. Now, we are getting it straight. So part of this would be for modification of existing Federal buildings and part of it for military buildings——

Mr. PITTMAN. Right.

Senator MAGNUSON. And you have broken it down?

Mr. PITTMAN. That is correct, all of it.

Senator ELLENDER. Well, how much of it would be for the civilian?

Mr. PITTMAN. $20 million.

Senator ELLENDER. You mean out of the $35?

Mr. PITTMAN. Out of the $35 million.

PERSONNEL NEEDED

Senator ELLENDER. Well now, assuming you obtain 460 that you had eliminated, how many more people would you require?

Mr. PITTMAN. To operate the program?

Senator ELLENDER. Yes.

Mr. PITTMAN. We anticipate——

Senator ELLENDER. In other words, is your budget so presented to us that you ask for the number of people required in the event you get the 460 that is authorized?

Mr. PITTMAN. The number of people that we are assuming in this budget request does not take into account the shelter incentive program. It would be a fund of $450 million.

The extra $10 million requested is to meet the administrative costs of the shelter incentive program. So there are additional funds requested in connection with the new shelter program, new construction of privately owned shelters, which would be considered at the time of the hearings on that item, and which are not at issue in this hearing.

Senator ELLENDER. Well, how many people have you now employed in anticipation of getting this $460 million?

Mr. PITTMAN. None.

Senator ELLENDER. None? And if this amount is given you the $10 million you speak of would be used in order to hire people to carry out the program?

Mr. PITTMAN. We are going to do——

Senator ELLENDER. Is that right?

WORK BY OTHER ORGANIZATIONS

Mr. PITTMAN. A good deal of this we feel will be done outside of our office by other organizations in the Government and, therefore, we will be——

Senator ELLENDER. Such as?

Mr. PITTMAN. Well, the Corps of Engineers will be increasingly active, if we get into this——

Senator ELLENDER. Well, is that for civilian as well as military?

Mr. PITTMAN. We are now using the Corps of Engineers on our entire civilian shelter program.

They have developed an expertise on this subject which will be extremely useful if we get into the new program.

The Hill-Burton element in HEW, is another example. They are already engaged in direct relations with hospitals on new construction. We would anticipate that they would do a great deal to carry the slight increase in the administrative burden of building in protective features in this new construction.

FUNDS FOR PARTIAL REIMBURSEMENT

Senator ELLENDER. Since you mentioned the HEW and the Hill-Burton Act, how will any part of this 460 be used by way of contributions, that is, putting in shelters that you recommend?

Mr. PITTMAN. It is a financial contribution.

Senator ELLENDER. Is it——

Mr. PITTMAN. It is a financial contribution to the institution that owns the building.

Senator ELLENDER. Well, is it a part of the cost or is it the whole cost?

Mr. PITTMAN. In most cases it will meet a part of the incremental shelter costs.

CONTRIBUTION OF AGENCIES INVOLVED

Senator ELLENDER. So that the hospital would have to put up quite a bit in order to comply, I assume, with the requirements that you make, so as to make them available to a part of this 460?

Mr. PITTMAN. Our purpose is to provide the funding that we make available to the hospital in a way that will encourage them to use some ingenuity to change design, to find a low-cost solution to the fallout problem.

We are proposing to offer $2.50 a square foot toward creating new shelter space.

Senator ELLENDER. You mean, in the whole hospital, of $2.50?

Mr. PITTMAN. Well, to whatever portion of it will be accepted as qualified as shelter space and which will meet our standards.

There are some who say that this is a totally inadequate contribution and that it will cost a great deal more than that. However, we believe that there will be instances where the ingenuity in development of design and lowering costs can be covered by that $2.50 a square foot.

Of course, if they can do it for less than that, we would not give them $2.50. We would give them the actual cost.

ELIGIBILITY OF PRIVATELY OWNED INSTITUTIONS

Senator ELLENDER. How about privately owned buildings or shelters?

Mr. PITTMAN. The incentive would apply to privately owned hospitals, schools, colleges, as well as public institutions.

Senator ELLENDER. No privately owned home or——

Mr. PITTMAN. No; it applies to no institution that is a profitmaking organization. It is only for nonprofit institutions.

We have selected types of institutions which, we feel, have community responsibilities and that are managed by civic leaders, partly because we anticipate the impact of this will lead to a good deal of unsubsidized shelter construction.

Senator ELLENDER. Well, that probably will incorporate public schools?

Mr. PITTMAN. Yes.

Senator ELLENDER. Private schools?

Mr. PITTMAN. Private schools, sectarian and nonsectarian schools.

Senator ELLENDER. Thank you.

CONSTRUCTION OF FALLOUT SHELTERS

Senator MAGNUSON. Well, let's—again, I am trying to get this in perspective.

The House put in section 303——

Mr. PITTMAN. Right.

Senator MAGNUSON. That says that no part of any appropriation contained in this or any act or any funds available for expenditure by a corporation or agency shall be used for the construction of fallout shelters unless the specific projects have been authorized by the appropriate committees of Congress.

So, with this language, you cannot do anything about any fallout shelters, modification of any building, Federal building or otherwise, without the authorization of the committees of Congress?

Mr. PITTMAN. I would make one exception or, at least, point out that you cannot build a great many of the buildings that are proposed to be built in the next fiscal year without creating fallout shelter space.

This building we are in today will protect some 18,000 people. It was not designed for fallout shelter protection.

INTERPRETATION OF LANGUAGE

Senator MAGNUSON. Well, how do you interpret this language?

Mr. PITTMAN. It is very difficult to interpret.

Senator MAGNUSON. Well, I interpret it to say that they tell you not to build any fallout shelters unless the committees of Congress would tell you where and when to build them.

Mr. PITTMAN. Well, I would hope that it does not say that no one can build buildings that, incidentally, provide fallout protection at no cost.

It might——

Senator MAGNUSON. Well, I would like to see a building that there wasn't some extra cost to put this in.

Mr. PITTMAN. Well, we are in one. There are many such buildings. The survey found shelter space for 60 million people in buildings that were designed and built without any thought to fallout shelter space.

Senator MAGNUSON. Well, that is all done. They are there.

You do not need the money for that.

Mr. PITTMAN. That is right. But I am making the point that it is not as simple as it appears on the surface to determine whether a design was created in order to provide fallout shelter space or not.

SHELTER SURVEY

Senator MAGNUSON. Well, I think we had better start back here.

Go to page 9 of your statement, which I have read. This is your first request.

The rest of the justification of the program and what you are doing is here. Is that not your first request on page 9?

Mr. PITTMAN. Yes, it is.

Senator MAGNUSON. Yes. There you say, $207 million was appropriated in fiscal 1962; $140 million was authorized by Congress for the initiation of a program to survey and mark shelter space in existing buildings, and to provision these shelter spaces on an austere basis.

1963 FUNDS TO COMPLETE SURVEY

The fiscal 1963 year has presented a request of $56 million for the completion of this phase of the Federal civil defense program and for continuing the survey for new buildings as they are constructed.

Now, you are asking for—how much did the House give you for this program, first?

Mr. PITTMAN. Zero.

Senator MAGNUSON. Zero. And you are asking for $56 million to complete the survey, which is being done by the Army Engineers.

Is that correct?

Mr. PITTMAN. And the Navy Yards and Docks.

Senator MAGNUSON. And Navy Yards and Docks, to complete the survey.

STAGE OF COMPLETION

How far completed is it now?

Mr. PITTMAN. The survey of the space that existed in 1962 and before has been virtually completed.

FUNDS FOR SURVEYING NEW BUILDINGS

We want $8 million to continue the process of surveying new buildings as they come into existence; next year and thereafter.

Senator MAGNUSON. For what buildings? New buildings?

Mr. PITTMAN. Yes, new buildings that are being constructed all the time.

Senator MAGNUSON. Any new buildings, Federal, private, or what, institutions or whatever they are——

Mr. PITTMAN. Correct. We want a complete inventory of all buildings that will serve this shielding purpose.

Senator MAGNUSON. And $8 million will do that?

Mr. PITTMAN. $8 million will do that.

Senator MAGNUSON. All right. What is the other $56 million?

SHELTER SPACE PROVISIONS

Mr. PITTMAN. To provision the shelter space.

Senator MAGNUSON. What is it? Forty-four—no——

Mr. PITTMAN. $48 million.

Senator MAGNUSON. What is the $48 million for?

Mr. PITTMAN. To provision the shelter space that we found, 60 million odd spaces that we have found to date, and the additional spaces that we will find during the coming fiscal year.

Senator MAGNUSON. So the $48 million will be used, as I understand it, or whatever amount the committee may see fit to give, to go to the places that have already been surveyed, and to provision them on this basis, this criteria which you have set up?

Mr. PITTMAN. Correct.

Senator MAGNUSON. And that would be all kinds of buildings, would it?

Mr. PITTMAN. All kinds of buildings. There would be some exceptions, where sensitive areas, military buildings, would make them ineligible for practical reasons.

But wherever the building owners agree to make them available they would be provisioned, provided the need exists.

In some cities there could be an excess of space. We would not stock the space that is not determined to be needed in relation to population.

Senator MAGNUSON. Would 48 million furnish the amount of provisions for all the shelters that have been surveyed?

Mr. PITTMAN. Yes; because that is added to what we have procured from fiscal 1962 funds, which is most of it.

Senator MAGNUSON. That would clear it up?

Mr. PITTMAN. Yes.

Senator MAGNUSON. And then with the 8 million you will probably find some more, but you would have to come back and ask for more?

Mr. PITTMAN. No; we have included——

Senator MAGNUSON. That is included?

Mr. PITTMAN. Yes; we have included 8 million for that purpose.

Senator MAGNUSON. So that makes up your 56 million?

Mr. PITTMAN. Correct.

Senator MAGNUSON. For that purpose?

POSSIBLE TIME TO COMPLETE PROJECT

How long will it take the Army Engineers to finish the project?

Mr. PITTMAN. Well, verifying the 60 million spaces that have been found already—which we call phase 2 of the survey—this will be completed within the next month or two.

The survey that will be financed by the 8 million will be going on through the winter, and we would——

Senator MAGNUSON. And who will do that?

ADMINISTRATIVE MANAGEMENT BY NAVY AND ENGINEERS

Mr. PITTMAN. The Army Corps of Engineers and the Navy Yards and Docks will continue to take administrative management responsibilities for that, using architectural engineers.

Senator MAGNUSON. And will you reimburse them for the 8 million? Is this a reimbursable item——

Mr. PITTMAN. Yes.

Senator MAGNUSON. For the work that they are going to be doing?

Mr. PITTMAN. Yes.

Senator MAGNUSON. Over and above——

Mr. PITTMAN. That will be the principal charge against the 8 million.

LIMITATION ON LANGUAGE APPLICATION

Senator MAGNUSON. Now, why do you want to go ahead and survey new buildings when this language says you cannot do it?

You are assuming that if the language is knocked out or changed you will do this?

Mr. PITTMAN. No; first of all, that language clearly goes only to Government-owned buildings and the survey, of course, covers all types of buildings.

Senator MAGNUSON. So that if this language stayed you would use a part of that $8 million for continuing the survey of all types of buildings being built?

Mr. PITTMAN. Yes.

Senator SALTONSTALL. Well now, Mr. Chairman, will you yield there?

Senator MAGNUSON. Yes.

IMPORT OF LANGUAGE ON "CORPORATION OR AGENCY"

Senator SALTONSTALL. This says any funds available for expenditure by any corporation or agency.

Now, does that not go outside of the Government?

Mr. PITTMAN. Well, in the context of that act, I am advised by counsel that it means Government agencies or corporations.

Senator MAGNUSON. I think they meant Government corporations.

Senator SALTONSTALL. Yes.

DIFFERENCE BETWEEN CREATING AND SURVEYING SHELTER SPACE

Mr. PITTMAN. I also would like to say that I do not interpret that language to preclude the survey of Federal buildings.

I believe that language goes to creating new shelter space with identifiable costs in Federal buildings I do not think——

Senator MAGNUSON. Well, that comes under General Services?

Mr. PITTMAN. And other agencies.

Senator MAGNUSON. Defense and General Services?

Mr. PITTMAN. And the Veterans' Administration in the case of hospitals.

Senator MAGNUSON. Yes; in the case of hospitals.

Mr. PITTMAN. I am making a distinction between creating new shelter space and surveying existing shelter space.

Senator MAGNUSON. Now, if this language stays in, and you are not permitted to survey Government buildings, how much of the $8 million will you need for other surveys?

PERCENTAGE TO GOVERNMENT BUILDINGS

Mr. PITTMAN. The Government buildings would be a very small part of the total.

Senator MAGNUSON. Well, what would you say? Seven or six?

Mr. PITTMAN. Well in terms of——

Senator MAGNUSON. That is, to furnish this nationwide survey.

Mr. PITTMAN. It would be a few percent and no more.

Senator MAGNUSON. Well, would you say 7? Seven decimal five?

Mr. PITTMAN. No. Of the 60 million spaces we found so far, it would be about 5 percent.

Senator MAGNUSON. So that would be 76 which would be the amount to finish this survey if this language stayed in?

HOUSE LANGUAGE

Mr. PITTMAN. Well, again, Mr. Chairman, I do not believe that the members of the House committee would interpret their own language to apply to the survey of Government buildings.

On the face of it, I think it is quite clear that they were talking about creating new shelter space and construction costs.

Mr. MANNING. It runs to construction, Mr. Chairman.

Senator SALTONSTALL. It is for construction?

Mr. MANNING. Yes.

Senator MAGNUSON. Construction. So then the 8 million, under your interpretation, would not be prohibited by this?

Mr. PITTMAN. That is correct.

STOCKING OF SHELTERS

Senator MAGNUSON. And the 48 million would take care of the stocking.

Now, tell us what you stock these places with in general.

Mr. PITTMAN. The most important items are food and water. We are providing water containers which would be filled on the spot in the buildings, 17½ gallon metal——

Senator MAGNUSON. Now, just a minute right here, so that we will get this straight.

You say supplies for 37 million of the 60 million spaces. Are you talking about supplying 37 million——

APPLICATION OF 1962 FUNDS

Mr. PITTMAN. Funds for fiscal 1962 have already been obligated to take care of 37 million spaces.

Senator MAGNUSON. And these would be the additional?

Mr. PITTMAN. These would be the additional.

ITEMS OF SUPPLY

Senator MAGNUSON. All right. Tell us how you are going to supply them.

Mr. PITTMAN. In a word, it is water stored in containers, all of which would have a shelter life exceeding 5 years.

The food would be a wheat-based wafer, a hardtack item, which would provide 10,000 calories per person sheltered, which would be enough to sustain them for a 14-day period, if necessary.

The medical equipment would be essentially items that would be of the kind that people who are not doctors could use.

Radiation-detection equipment, which is most important, would be there to assist people in finding their way out of the shelter space when the radiation levels have died down, but are still quite hazardous.

This would permit the occupation of the other parts of the building well short of the maximum period of 14 days——

Senator MAGNUSON. In other words, it is the bare necessities to keep a person going?

Mr. PITTMAN. It is the bare necessities.

Senator MAGNUSON. How about oxygen?

Mr. PITTMAN. No oxygen.

Senator MAGNUSON. Is that too costly?

Mr. PITTMAN. I will go into this at greater length, if I may.

A number of items of equipment and methods of building shelters, which would make them very much more expensive if you were trying to protect people against all of the hazards of nuclear attack, can be built. We have deliberately bitten off what we think is the most manageable part of the problem, fallout radiation, and are not attempting to build shelters which would preserve people in firestorms and extreme heat——

5-YEAR LIFE OF SHELTER STOCK

Senator MAGNUSON. Now, if you say this will sustain them for a 5-year stock——

Mr. PITTMAN. The shelter life of the stock would be in excess of 5 years.

Senator MAGNUSON. So if they are not used next year you will not come back here and ask for any more money?

Mr. PITTMAN. We would not.

Senator MAGNUSON. Can we depend on that?

Mr. PITTMAN. Yes. The only thing that I would like to reserve is that we would have to work out with the State and local governments the best arrangements we can for them to take responsibility for replenishing stock, if something goes wrong.

Senator MAGNUSON. Well, I would not limit it.

If we are going ahead with this program there might be some deterioration which you do not know of right now——

Mr. PITTMAN. We would like to put this responsibility on the State and local governments, if they are able to do it.

Senator MAGNUSON. But this would be the initial big expenditure for this?

Mr. PITTMAN. That is right.

Senator ELLENDER. Senator Magnuson, will you yield?

Senator MAGNUSON. Yes.

PREPARATION OF STORAGE SPACE

Senator ELLENDER. Tell me, who prepares the spaces within the building around which food and water are stored?

At whose expense is that prepared?

Mr. PITTMAN. The owner of the building has been asked to provide the space for storage with no compensation.

Senator ELLENDER. Do you find any difficulty in having them do that?

Mr. PITTMAN. Some have been surprised at the favorable response we are getting.

Senator ELLENDER. And they provide the space and everything necessary to protect it during the period that it is there for use in case of necessity?

Mr. PITTMAN. Well, they are not responsible for the supplies. The local government is responsible for the supplies.

The building owner merely provides the space.

Senator ELLENDER. Rent-free?

Mr. PITTMAN. Rent-free. This will work if the country is led to believe that this is a serious and necessary undertaking.

It will not work if there is any doubt about that.

Senator ELLENDER. I think you have a lot of people beating the drums now to make sure that it is necessary.

Mr. PITTMAN. Well, we are trying to communicate——

Senator ELLENDER. They have been doing that for 7 or 8 years now.

Mr. PITTMAN. I think it is a little different message right now, but we are trying hard to communicate the judgment that was made by the President and the Secretary of Defense on the need for this.

It has been a matter of some controversy, as you know.

Senator HOLLAND. Mr. Chairman?

Senator MAGNUSON. Yes.

LOCATION OF CENTERS

Senator HOLLAND. These shelters are located in communities where they will serve 100 percent of the needs of the population in them?

Mr. PITTMAN. Well, we will not create shelter space that exceeds the population requirements and, of course——

Senator HOLLAND. I understood that part, but what I am asking you now is, are these shelter spaces, which you are stocking, suffi-

cient to serve 100 percent of the population in these particular communities?

Mr. PITTMAN. No. In some communities this is true, but I would say in most, it is not true.

SELECTION OF SHELTER OCCUPANTS

Senator HOLLAND. How do you go about selecting personnel who will be entitled to shelters?

Mr. PITTMAN. You raise there a complex problem which we are working out with State and local civil defense organizations.

A shelter utilization plan, as we call it, is necessary in each of these communities. Our concept has been that each community must project ahead several years, at least 5 years, as we have, then use the block of shelter space that has been found under the survey as the start and make plans for creating additional shelter space that is to take care of the entire population of the community.

If we were to come forward with the second phase of this program, which is the shelter incentive program, not yet authorized, we would provide them with an additional block to help develop a total community solution.

Part of the answer is going to have to come from industry taking care of their employees, from other institutions which will not be eligible for Federal help, and some of it from home shelters, which would be a much livelier subject, I think, once there is a local system of community shelters to tie into.

METHOD OF CHOOSING COMMUNITIES

Senator HOLLAND. How are the communities chosen as to which this fallout shelter program, which is, in some cases, adequate and in some cases not adequate?

Now are those communities chosen out of all the communities?

Mr. PITTMAN. By the accident of where the buildings are.

Senator HOLLAND. Are we to understand that this shelter for 60 million individuals represents substantially all of the shelters available without additional construction from buildings now in existence?

LIMITATION IN SIZE OF SHELTER

Mr. PITTMAN. Some buildings we believe—well, let me say "no" to that. We have limited ourselves to shelter space for 50 or more people. There is additional shelter space in smaller places, most of the residential shelter which will provide added protection, because of the nature of the construction, for groups smaller than 50 people.

We allow 10 square feet per person. So this is space under 500 square feet.

In addition, there is a good deal of shelter space—enough for another 68 million people—which does not fully meet our standard, which we have arbitrarily set as a protection factor of 100. This means that the radiation is cut a hundred times, so it is a hundred times greater on the outside.

We found 60 million shelter spaces which measure up to somewhere between a 40 and 100 protection factor. This is good space

that could save lives in a nuclear attack in large areas of moderate radiation levels.

We are giving this information to local civil defense organizations so that they can use it for interim planning to help meet the problem that you raised.

What about the rest of the people? New shelter space must be created. Some of this space can be improved to bring it up to a 100 protection factor at low costs.

Senator HOLLAND. It is additional space of 60 million spaces or 68 million spaces, such as to include the space that is available in private residences?

Mr. PITTMAN. No. Our survey has been confined to shelter space for 50 or more people. So we have not picked up space in the smaller buildings.

We believe this should be done with the principal responsibility and work on local organizations and local governments. We plan to provide technical assistance in helping them get at the job.

AVAILABILITY OF SMALLER SHELTER SPACES

Senator HOLLAND. Do you have any estimate of the amount of shelter space available in spaces smaller than 50?

Mr. PITTMAN. I do not have any estimates that are worth talking about.

PROTECTION FACTORS

Senator HOLLAND. What did you mean by "shelter space"?

From what kind of radiation would this kind of shelter space be adequate to protect?

Mr. PITTMAN. Most of it would be adequate only against fallout radiation. It will cut, as I said the radiation levels by a hundred times.

Some of it will provide a good deal more protection against radiation. In this building much of the space would cut the radiation by a thousand times.

In downtown areas of cities, there are quite a lot of heavily constructed buildings, in which you also have incidental protection against blast and heat—5 to 10 pounds per square inch—which is significant blast resistance.

It would be enough to save lives at a certain distance from the point of detonation.

You get an incidental bonus here, but we are planning the program on more minimal protection for as many people as possible against fallout radiation throughout the Nation.

FINDINGS OF DEFENSE DEPARTMENT STUDIES

Of course, our reason for doing this is based on the results of the systematic and elaborate studies we have been making in the Defense Department which show that pretty much the whole country is exposed to this risk—most of it would be under a blanket of fallout.

We have roughly estimated that 75 percent of the land would be under fallout radiation, whereas only 4 percent of the geography would be exposed to the blast heat.

SHELTER PROVISIONS

Senator HOLLAND. On what basis do you figure that the 14 days' supply is adequate?

Mr. PITTMAN. This has been closely calculated on the basis of our knowledge of the rate of decline of radiation intensity.

It drops off very rapidly. In 2 days it would be about 1 percent of what it was at the beginning. The residual radiation, of course, is more dangerous to people who have already absorbed some radiation than those who have not.

So it is a very complex matter to instruct people as to how to come out of shelters and when to come out.

But taking account of all that is known, the range of shelter occupancy should be somewhere between 3 days and 14 days, depending on where you are located in relation to the explosions.

DURATION OF SHELTER OCCUPANCY

Senator HOLLAND. Well, obviously, you think that 14 days is long enough and adequately enough to protect against this particular menace?

Mr. PITTMAN. Yes, for almost all of the territory. There will be some hot spots which would make it inadvisable to come out, even for short trips, unless there has been some decontamination work done.

Part of the program goes to developing techniques for decontamination which would shorten the period for shelter occupancy.

Senator SALTONSTALL. Will the Senator yield? Are you through?

Senator HOLLAND. I will yield.

COST OF STOCKING SHELTERS

Senator SALTONSTALL. I would like to ask this question:

On page 6 of your proposed amendment you stated, following up what the chairman said, "Permit the total stocking of 59 million spaces for fiscal 1962 and 1963" and you estimate $48 million for stocking these.

Now, that would mean how much money for each space?

UNIT COST FOR STOCKING

Mr. PITTMAN. The unit cost for stocking the space is running a little over $2.

Senator SALTONSTALL. $2?

Mr. PITTMAN. Yes.

Senator SALTONSTALL. All right. Then you assume, for instance, in my State of Massachusetts we have 50 spaces. That would mean Massachusetts would get about $100 from the Federal Government for stocking those spaces.

Is that correct?

Mr. PITTMAN. Massachusetts would get the full cost of buying the stocks and moving them into warehouses nearby.

The burden on the cities of Massachusetts would be picking them up in the warehouses and obtaining the permission of the building owners to permit their space to be used as fallout shelters.

Senator SALTONSTALL. And then you expect after that there will be no request from the Federal Government for that purpose?

CONTINUOUS STATE RESPONSIBILITY OF INSPECTION

Mr. PITTMAN. In terms of the burden on the cities of Massachusetts there would be a continuing responsibility for inspecting the shelter supplies and, in the case of radiation detection equipment, recalibrating them every 6 months. There are continuing responsibilities in connection with this problem.

Senator SALTONSTALL. What I am getting at is that several of us, who have been sitting here today, have been Governors and if the Federal Government once goes into a program it is going to be mighty difficult to get the State Governors to take it over.

DIVISION OF RESPONSIBILITY SOUGHT

Mr. PITTMAN. What we have tried to do is define a division of responsibility here which will stand up over the years.

The Federal Government is making most of the capital investment in this project. We are asking the State governments to take on the responsibility for recurring costs and continuing operations.

Now, these are not monumental costs. They would not be the only costs of an effective civil defense program, but I would not think that they would be as large as some of the current civil defense expenditures in the States.

Senator SALTONSTALL. Well, I just wanted to add this.

I think that that is the point that we have got to consider here in making any statement and decision on appropriations and once they make that appropriation or decision to undertake the service to the States, it is going to be very, very difficult to get the States to take over that service.

Mr. PITTMAN. Yes. I think that it makes a lot of difference what functions we are talking about.

As far as surveying goes, we do not propose to ask the States to do what remains to be done. It will not be much of a job.

STATE FUNCTIONS OF INSPECTING AND MAINTAINING STOCK

We think it can be done rather cheaply in years ahead.

As far as inspecting, maintaining, and looking after the shelter stocks, we plan State and local governments picking that job up at the outset and continuing to do it for some years.

Senator MAGNUSON. This is about $2 a shelter?

Mr. PITTMAN. About $2 Federal cost for a shelter space for initial stocking.

Senator MAGNUSON. Why would not 50 people get together and chip in and pay for that?

Mr. PITTMAN. I do not think they could do it for anything approaching that price. We have been able to bring the cost down, really quite phenomenally, through nationwide procurement and being extremely systematic about it.

The development of requirements for this unique purpose is a very difficult task, which could not have been done by small groups of people separately.

VARYING REQUIREMENTS

Senator MAGNUSON. Of course, some shelters will require more than others?

Mr. PITTMAN. That is right.

Senator MAGNUSON. I mean, they will vary?

Mr. PITTMAN. That is right, depending on the size of the shelter area.

Senator MAGNUSON. But this is a small amount for local contribution if they buy it for them.

14-DAY RATION OF WHEAT WAFERS

Senator HOLLAND. How many pounds of this hardtack, that you described, of wheat or whatever it was, would be included in each ration for 14 days?

Mr. PITTMAN. Five pounds.

Senator HOLLAND. And that involves 300 million pounds, 5 pounds for each of the 60 million spaces, and you add additional millions of spaces which you say are partially——

Mr. PITTMAN. Substandard spaces, yes.

Senator HOLLAND. And those in homes, it might easily double that amount or come to something like 300,000 tons of wheat to be used for this purpose alone?

Mr. PITTMAN. I think that gives some idea of the size of the market. But the Federal share of financing this, under our program, is limited to public shelters. This excludes a good deal of the smaller buildings and homes that you mentioned.

If we go into the second phase of the President's program, the shelter incentive program, where we would put some Federal money into creating new shelters, we would stock those shelters at Federal cost. That would add a continuing requirement for shelter stocks for perhaps 5 years.

EFFECT ON SURPLUSES

Senator HOLLAND. 300,000 tons of wheat, diverted from any ordinary market use would be a substantial help toward the reduction of the surplus now on hand, would it not?

Mr. PITTMAN. Yes. I think that the amount of wheat that would be contributed to the immediate task of stocking these 60 million spaces will probably be noticeable in those terms.

Senator HOLLAND. In addition to that, there will be, of course, the cost of transportation and of——

Senator MAGNUSON. And processing.

Senator HOLLAND (continuing). And distribution.

Senator MAGNUSON. Well, could I ask this question?

Could I ask whether they plan to use surplus grains furnished to the people for processing or are you going out and buy them?

Mr. PITTMAN. We are contracting with the processors to provide the wafers.

It would be impractical for the Defense Department to go into the grain buying business and then turn the items over to the processors.

Senator MAGNUSON. The Government would be buying back its own grain.

Is that right?

Mr. PITTMAN. Well, I think it contributes to the problem of surplus grain only indirectly, that is——

Senator HOLLAND. Wherever it comes from, it comes from the stocks on hand, does it not?

Mr. PITTMAN. That is correct.

Senator HOLLAND. So it does contribute to that amount in a reduction of the surplus stock?

Senator MAGNUSON. We are buying it back?

Senator HOLLAND. Yes. I do not know whether this was conceived as a matter of reduction of an agricultural surplus, but it seems to have distinct possibilities in that field.

Mr. PITTMAN. I can assure you that it was not conceived that way, but there are many byproducts of this program that will make a contribution in directions that did not originally justify it.

Senator ELLENDER. And to the whole economy?

Mr. PITTMAN. And to the whole economy. Of course, to the underemployed steel, concrete, and construction part of the economy, the second phase of the program would provide the most stimulus.

Senator MAGNUSON. Senator Monroney, do you have any questions on this item?

FACTORS IN SAFETY, VARIOUS WEAPONS' EFFECTS

Senator MONRONEY. One thing I would like to ask is: How far away from the blast heat area, target area, do you consider would be safe for people who would still be able to get in the shelters?

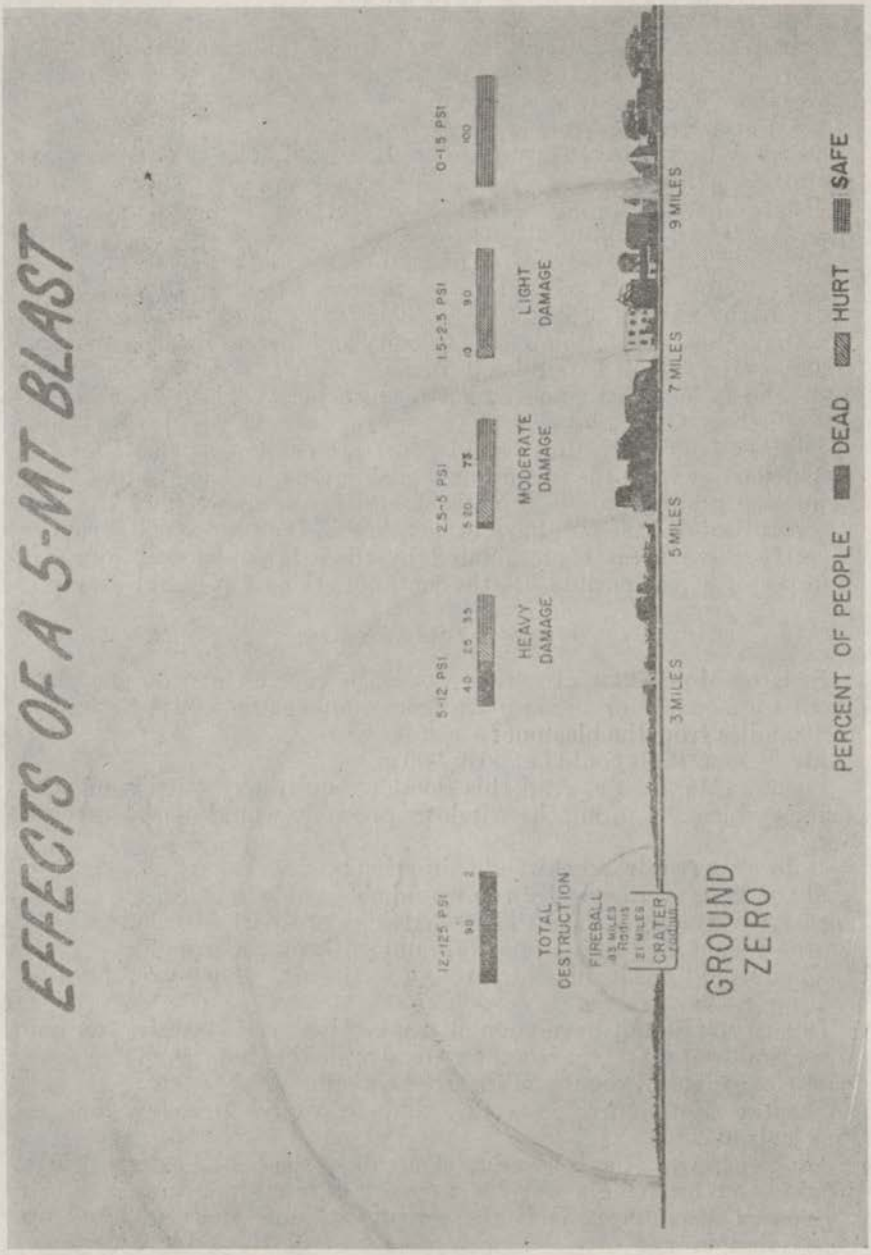
Mr. PITTMAN. It depends, of course, on the size of the nuclear explosion.

We have figures on a 5-megaton explosion and on a 20-megaton explosion, which I can give you.

The 5-megaton is the one we have used as a reference point for public information purposes. In spite of all the talk about the high-yield weapons, we believe that a practical packaging is in the 5 megatons and under range for a variety of purposes.

Now, for 5 megatons, the number of miles from a ground burst, where there would be nearly total survival in the fringe blast and heat, I would put at about 5 miles. A significant proportion might survive at 3 miles. I have a chart to show this which you may wish to have in the record.

(The chart referred to follows:)



EFFECTS OF A 5-MT BLAST
12-125 PSI
90
5-12 PSI
40 25 15
2.5-5 PSI
5 20 75

HURT
SAFE

SPREAD OF FALLOUT

Senator MONRONEY. A 5-mile radius?

Mr. PITTMAN. A 5-mile radius; yes.

Senator MONRONEY. That is a 5 megaton?

Mr. PITTMAN. Yes.

Senator MONRONEY. Then the intensity of the fallout would vary in direct proportion, I guess, to the nearest to that 5-mile radius where there would be people left alive?

Mr. PITTMAN. That is generally correct.

Senator MONRONEY. How far out then would the fallout go from the primary blast?

The ordinary clean bomb, or do you call them clean or dirty bombs now, is what I am talking about.

Mr. PITTMAN. We talk about ground bursts and air bursts.

For ground bursts, as you know, there are tons of earth scooped up into the earth's atmosphere, which comes down within several hundred miles, depending on the velocity and direction of the wind.

This is the fallout I would call wartime fallout. It is quite different from the fallout that comes from testing where you have the fallout dust circling the globe several times over several weeks and losing the kind of intensity that would penetrate the body.

The danger from the test fallout—also present in local fallout from a nuclear ground burst—is in the long-life isotopes left in the soil. A great deal of care will have to be taken in the postattack period to identify those areas contaminated by these low-intensity, long-life isotopes such as strontium 90—the contamination of milk, for example.

EFFECTS OF 5-MEGATON BLAST

Senator MONRONEY. In other words, in your estimation one place from a 5 megaton or a safe place from a 5 megaton would be 5 miles to 100 miles from the blastout?

Mr. PITTMAN. It could be 200 or 300 miles.

Senator MONRONEY. And this doesn't require any outside of your primary blast. I mean, the windows probably would not be knocked out.

It does not require any airtight situation?

Mr. PITTMAN. Physically you would not be able to detect any difference from a normal day. These particles are perhaps the size of a grain of sand, and they would fall and settle on the ground.

They would not be blowing around in the air. They would not be coming in the windows.

But if you do not have enough mass of material between you and those grains of sand lying on the ground or on the roof, rays from these particles could kill you if you absorbed enough.

Senator MONRONEY. So your windows would probably not be knocked out?

Mr. PITTMAN. That is correct. Outside of the blast-heat area there would be no broken glass problem or lack of oxygen or air.

Senator MONRONEY. It is the settling of dust that is kicked up that is dangerous?

Mr. PITTMAN. That is correct.

Senator MONRONEY. If you have a high wind, that would probably churn it up?

Mr. PITTMAN. It is conceivable that a high wind could churn it up. Of course, here we are dealing with a very imperfect solution to a tremendous problem, and if the condition we are able to meet can be said to be generally prevailing that is good enough to justify the effort.

Senator MONRONEY. Under the general climatic conditions and the ground dust, if it settled, you have to deal with that?

Mr. PITTMAN. That is correct.

SHELTER IN FEDERAL BUILDINGS

Senator MAGNUSON. All right. Now, on page 10, at the bottom of the page, you say this. You say that——

In fiscal year 1962 the Federal Government has led municipal governments and building owners into bringing into use shelter space for 60 million people; has provided encouragement in many forms of industry, local governments, and homeowners, to create fallout shelters at their own expense, and has expanded a shelter-oriented civil defense program.

It is vital, therefore, that the Federal Government do, in its own buildings, what it is leading public and private organizations around the country into doing.

Apart from the obvious damage to the President's program which results from the failure of Government to do what it ask others to do, a valuable opportunity will be lost to develop low-cost design and innovations for the benefit of owners of buildings.

I strongly urge the restoration of $35 million for the continuation of this portion of the civil defense program.

Now, what did the House give you for this program?

Mr. PITTMAN. Zero.

Senator MAGNUSON. And you are asking $35 million to develop low-cost designs, innovations for the benefit of the non-Federal owners of buildings?

Now, explain that.

Mr. PITTMAN. To do what we are telling others to do, and to shelter people in the communities around these Federal buildings——

Senator MAGNUSON. Is this part of the $35 million to be used for Federal buildings, too?

Mr. PITTMAN. Yes, only for Federal, including military.

Senator MAGNUSON. Oh, this is the one we are talking about?

Mr. PITTMAN. Yes; right.

Senator MAGNUSON. I got misled here when you said non-Federal owners of buildings.

Mr. PITTMAN. The thought is that the experience the Federal Government accumulates——

Senator MAGNUSON. Yes; we understand that.

Mr. PITTMAN. Can be made available to others.

Senator MAGNUSON. Now, in view of the language, if it should stay in the bill as it is, you could not use any part of this unless a committee directed you to.

Is that correct?

NEED FOR ACTION REGARDING HOUSE LANGUAGE

Mr. PITTMAN. My counsel has told me that there is some question about the language, but it appears to me that the intent of the House—of course, if they put the $35 million back and agree to it, I presume that would have a bearing on what their intentions are in 303, but——

Senator MAGNUSON. Well, the point I am trying to make is this: If this committee is going to recommend $35 million for this portion of the program, then we had better first consider what we should do with this language.

Mr. PITTMAN. That is correct.

Senator MAGNUSON. Would that be a fair statement?

Mr. PITTMAN. That is a fair statement.

Senator MAGNUSON. Either to modify it or clarify it or cut it out entirely.

Mr. PITTMAN. Yes.

Senator MAGNUSON. But before that is done, there is no use of the $35 million——

Mr. PITTMAN. Those are companion requests.

Senator MAGNUSON. Yes; the two go together?

Mr. PITTMAN. Right.

Senator MAGNUSON. And that would be, as I understand it, a modification of the existing Federal buildings——

Mr. PITTMAN. Correct.

Senator MAGNUSON. But not new?

Mr. PITTMAN. Not new.

Senator MAGNUSON. Not new.

Mr. PITTMAN. They were all built out of prior-year appropriations.

NEW BUILDINGS

Senator MAGNUSON. Because the new ones will come in with the GSA and the other agencies in their fiscal 1963 construction budget.

Now, this is a matter that has been before the committee on many occasions——

Mr. PITTMAN. Yes.

Senator MAGNUSON. And denied?

Senator HOLLAND. Mr. Chairman, will you yield there?

Senator MAGNUSON. Yes.

FUNDS FOR GSA

Senator HOLLAND. Am I correctly informed that on its construction projection for the last 2 years the GSA has been including this shelter feature in many buildings?

Mr. PITTMAN. In the last year, since we had $7.5 million for new construction and $10 million for modification of existing buildings, we have made funds available to GSA, which is now under contract or being applied to creating shelter space in new and existing buildings.

Now, prior to that time, I am not informed as to what they were doing.

Senator HOLLAND. Well, the new buildings that are now being constructed, which is of such design as to make it appropriate, are including shelter arrangements, are they not?

Mr. PITTMAN. With the exception of the new funds that were appropriated for this purpose last year, I think the answer is "No."

In general——

SECTION 303 LIMITATION

Senator MAGNUSON. Well, what right did you have to give the GSA money to do this when the Senate and the House committees have both told them on new buildings, no?

Mr. PITTMAN. We had an appropriation last year for this purpose of $17.5 million.

The old section 303 was on the books. But we had a legal opinion which said that section 303 did not prohibit it.

The Veterans' Administration was concerned about it and they, with the assistance of the Department of Defense, consulted the GAO to determine whether or not they were authorized to go ahead and use this $17.5 million, and the decision was, yes, they were.

Senator MAGNUSON. After we told them not to do it?

Mr. PITTMAN. Well, the interpretation was the Congress did not tell them not to do that.

Senator ELLENDER. Well, Senator Magnuson, do you not know that Defense is all-powerful?

I think that is why the transfers were made.

PROHIBITION AGAINST NEW FALLOUT SHELTERS

Senator MAGNUSON. Well, we had the argument. First we had to not build the shelters in the new buildings. Then they asked and we had a breakdown.

The costs run about 6 to 10 percent more in the new buildings. We had it building by building, and we said, "Don't build fallout shelters."

Then they came in and asked us if we would allow them, in designing a new building, to so design it that if you wanted to put a fallout shelter in later that they could; in other words, maybe the foundations would be thicker or something of that kind, the design, and we said "all right" as to that, and we broke that down.

But that is as far as we allow GSA to go.

Veterans, as I understand it, did not even ask about it. That is the way I remember it, but we can get the record.

Now, you come along, after we have said that and give them money to put fallout shelters in these buildings.

QUESTION OF PERMISSION UNDER SPECIFIC LAW

Senator ELLENDER. What law did they find that they could do that by?

Could you put that in the record? I guess that is something we overlooked.

Mr. PITTMAN. Yes.

Senator MAGNUSON. I am not discussing the merits of whether we should or should not do it, but this is——

GAO OPINION INSUFFICIENT

Mr. PITTMAN. I wonder if the best way to handle this is not to put in the record the legal opinion that we acted upon and the statement as to GAO's position?

Senator MAGNUSON. Well, we don't care about GAO's position.

Mr. PITTMAN. Well, all right. You are asking why we did it and the basis on which we went ahead was the legal opinion and GAO——

Senator MAGNUSON. Yes, GAO might say that you could do it, but the committee said, as a matter of policy, "No."

Senator ELLENDER. Senator, I have long contended that we pay too many lawyers around here to find loopholes in all of the laws that are passed.

BOMBPROOF VERSUS FALLOUT SHELTERS

Senator MONRONEY. As I recall the testimony, they were asking for bomb explosive-proof shelters in that program, and in this one they are asking, as I understand it, for fallout shelters which is an entirely different breed of cat.

Senator MAGNUSON. No; all we said they could do was design the building at a little extra cost so that in the future, if they wanted to make a fallout shelter, a shock shelter, or whatever kind of shelter they had, the building would be so designed that they could do that.

And the House would not allow a nickel even for that.

INTENT OF APPROPRIATIONS COMMITTEES

Mr. PITTMAN. Would you like to hear from our counsel on why he felt that we not only could, but should go ahead and do that?

Senator MAGNUSON. Well, let's assume that you could legally do this.

Mr. PITTMAN. We are also concerned with the intent of the Congress as a whole.

Senator MAGNUSON. Well, the intent of the two appropriations committees is about as clear as the English language can be when we left here last fall, but you never can tell when we leave what happens after we have gone.

SHELTERS IN FLORIDA BUILDINGS

Senator HOLLAND. My understanding, and I may be wrong, as to certain quite large and expensive buildings being built in my State, is that the fallout shelter is being included, and that involves a small additional payment of, let's say 5 percent.

Am I wrong or correct?

Mr. PITTMAN. If you are correct, I would think it came out of this $17.5 million.

COST FOR ADDING SHELTERS

Senator HOLLAND. Is it your understanding that about 5 percent additional costs is involved in the adding of this new feature?

Mr. PITTMAN. That sounds high to me.

Large buildings could be less than 1 percent. Smaller buildings, could run higher.

Senator HOLLAND. Well, an office building in a city such as Miami or Jacksonville, what would the added percentage, over and above the ordinary construction cost involved, be, to make the shelter construction from the standpoint that you are discussing now?

Senator MAGNUSON. We have got the list of all the buildings. We will get it out of there.

Senator HOLLAND. Well, we have his construction man here. Maybe we can have a statement from him.

Mr. PITTMAN. Mr. Visher, my deputy, is best informed on this part of the program.

I would like to ask him if he would give you some information about the cost increments on the $17.5 million program.

VARIATION IN COST

Mr. VISHER. I think we have gone through and looked at about 1,700 different buildings, and it varies a great deal.

There is one office building in New York we looked at with some 18,000 spaces which cost less than 1 percent to add shelters.

We have found some small post offices in smaller communities where it is running in excess of 5 percent.

So it depends a great deal of the actual size of the building as to how much it costs to add protective features. You have some buildings in Jacksonville, where it is running at $25 to $30 a space, which is an extra $2.50 to $3 per square foot in building costs to add shelter space.

Senator HOLLAND. What percent of the total cost would that be?

Mr. VISHER. That varies.

Senator HOLLAND. Have you got an average?

Mr. VISHER. The average runs about 3 percent, but it varies from less than 1 percent to over 5 percent.

Senator HOLLAND. Thank you, sir.

Senator SALTONSTALL. Mr. Chairman, might I ask several questions for the record?

Senator MAGNUSON. Yes.

Now, we are talking about this $35 million item.

Mr. PITTMAN. Before we go off of this subject I would like to state the position that was taken in deciding to go ahead and use the $17.5 million. This item was specifically authorized by the Appropriations Committees last August when they went ahead with this $207 million amendatory appropriation, following the President's statements on civil defense.

Senator SALTONSTALL. All new buildings?

Mr. PITTMAN. This is new and existing.

Senator SALTONSTALL. New and existing buildings? Existing?

Mr. PITTMAN. Yes, $7.5 million for new construction and $10 million to modify existing buildings.

I just wanted to say for the record that that was the basis for our interpretation.

Senator SALTONSTALL. May I see that?

Senator MAGNUSON. All right. Let's put in the record, on page 10 of the House report, the statement which was agreed to in conference.

The committee has generally reduced the amount for each project by 5 percent which was less than the savings which had been made by the GSA in construction costs, contracts on projects already completed.

FUNDS DISALLOWED FOR FALLOUT SHELTERS

Funds are also specifically disallowed for installing fallout shelters in each project.

That is pretty plain, is it not?

Senator SALTONSTALL. What you say, by reading this, is that it says no in the Defense Department appropriation bill and then there later on it said yes.

PERMISSION FOR SHELTER DEFENSE BILL

Senator MAGNUSON. Let's get this clear. We said no, and the Defense Appropriation Act of August 17, 1961, Public Law 87–144 said—

for expenses not otherwise provided for, necessary for carrying out civil defense activities, including the hiring of motor vehicles and the providing of fallout shelters in existing or new Government-owned or leased buildings, as authorized by law, $207 million.

So it is prohibited in one and allowed in another.

Mr. PITTMAN. Yes.

Senator ELLENDER. See how they can slip things in there?

Senator MAGNUSON. And both laws were signed, I understand, on the same day, August 17.

Mr. MANNING. Mr. Chairman, I will point out for you the number of the Defense Appropriations Act is 144, and is subsequent to the number of the Independent Offices Appropriations Act which is 141.

BREAKDOWN ON $35 MILLION REQUEST

Senator MAGNUSON. All right, let's continue with the $35 million, and I think we understand that if we are going to discuss it we must discuss the problem of modifying, excluding, or changing or clarifying the language that the House put in the bill.

And this is—what would this include, this $35 million?

Have you got any breakdown on that as to projects, as to Government projects, or is that too difficult?

Would we have to get that from GSA?

Mr. PITTMAN. We can give you the basis on which we made the estimate.

This would be a correct amount——

Senator MAGNUSON. You must have had some buildings in mind.

Mr. PITTMAN. Yes.

Senator MAGNUSON. And I wish you would put that in the record.

Mr. PITTMAN. We will put that in the record.

FLEXIBILITY IN APPLICATION OF FUNDS

Mr. PITTMAN. May I just point out we have concluded that we can get this done at much lower cost if we do not approach it on a line-item basis on a particular project. Flexibility to apply funds only to those opportunities which permit us to create shelter space at very low cost buys the best results. Therefore we have asked that this portion of the funds be made available without identification with particular projects in appropriation or authorizing language.

Senator MAGNUSON. But you must have some basis for arriving at $35 million.

Mr. PITTMAN. We have a basis for the estimate.

Senator MAGNUSON. For the Government building program, or the prospect of what we intend to do.

Mr. PITTMAN. If these all were tied into specific projects, we would lose the opportunity to do it at extremely low cost.

(The information requested on "Shelter in Federal buildings," follows:)

INCORPORATION OF FALLOUT SHELTER IN FEDERAL BUILDINGS

In many instances Federal buildings—both military and nonmilitary—are among the most substantial and permanent construction in a community. As such, they inherently provide most of the essential elements of shielding from fallout radiation including heavy wall, ceiling, and floor construction.

Inclusion of the bare essentials of fallout protection features in Federal buildings under close coordination by the Defense Department will provide well-documented cost information concerning a variety of methods and techniques for incorporating protective features. Design and cost experience will benefit Federal agencies, State and local government, and private construction in the development of low-cost, and in some cases cost-free, ways to include protective features.

Society has historically responded to potential safety hazards such as fire, water, and earthquakes, in construction practice and design. Fallout radiation must be added to the list of hazards and the Federal Government has an obligation to develop and contribute its know-how in adapting construction to protection of this type.

The Defense Department criteria will hold costs well below proposals for shelters in Federal buildings which have been previously before the Appropriations Subcommittees:

(*a*) Protective features will be designed to provide a protection factor of 100 (former OCDM requirements were 1,000; protection in Federal buildings would now be held down to the more minimal standards used in the national shelter survey);

(*b*) Natural or forced ventilation of protected areas at the rate of 3 cubic feet of fresh air per person;

(*c*) At the present, no auxiliary power is being incorporated in shelter areas in Federal buildings pending a systematic evaluation of essential needs and the flexibility and vulnerability of the supply of electric power under attack conditions;

(*d*) No additional plumbing is included;

(*e*) Local shelter needs must be evaluated before expending dollars for protective features in Federal structures. The fallout shelter survey will be used for this evaluation. In Washington, D.C., for example, there are areas of surplus space.

It is intended to apply such funds as are available under the above criteria to select buildings offering the best protection at lowest cost. Detailed cost estimates will be made after selection of buildings which must follow a decision on the amount of funds available and how best to allocate them for maximum results. The basis for the fiscal year 1963 request for $35 million is the result of the survey mentioned above and average cost estimates based on fiscal year 1962 experience:

(*a*) The national shelter survey included all Federal military and nonmilitary facilities. As a result, we have identified over 3 million shelter spaces in 3,700 nonmilitary buildings and approximately 700,000 shelter spaces in 1,600 military buildings, with a protection factor of 100 or above. In addition, the survey has identified potential shelter space with protection factors down to 40 for which cost estimates are being developed for minor modifications to bring such space up to the standard protection factor of 100. These are the buildings in which we propose to continue to provide protective features through minor modifications. The survey has identified over 3,500 potential shelter spaces in Federal buildings in this lower protection factor range suitable for such modification. This space is distributed throughout the Nation, over 2,500,000 in nonmilitary buildings and over 1 million in military facilities. This space was located in over 4,000 buildings. With fiscal year 1963 funds, it is proposed to modify nonmilitary facilities to provide 5 million square feet of protected space (500,000 spaces) and military facilities to provide 3,750,000 square feet of protected space (375,000 spaces).

(*b*) Construction bids covering modification of 14 representative existing Federal buildings showed an average cost of $3.73 per square foot to be modified. (See attachment A.) We have also considered preliminary engineering cost

estimates developed for about 600 representative buildings for which bids have not yet been received. These estimates average $3.26 per square foot to be modified. (See attachment B.) As fiscal year 1962 funds were applied to the lowest cost opportunities for modification, it is estimated that the average modification cost in fiscal year 1963 will be somewhat higher: $4 per square foot.

ATTACHMENT A

Incorporation of protective features in existing Federal buildings (representative buildings from fiscal year 1962 program)

Location	Building type	Square feet of protected space	Bid	Cost per square foot
Alabama: Tuscaloosa	Post office and courthouse	2,650	$6,543	$2.47
Alaska: Anchorage	do	4,940	11,882	2.41
Florida: Ocala	Federal office building	4,000	17,961	4.49
Georgia: Gainesville	Post office and courthouse	3,900	8,753	2.24
Louisiana: Alexandria	Office building	1,200	5,622	4.69
Mississippi:				
Jackson	Post office and courthouse	2,000	8,165	4.08
Do	Hospital	33,000	123,500	3.74
Tupelo Heights area	Visitor center	2,250	10,320	4.59
New York: Saratoga National Historical Park.	do	1,750	7,800	4.46
North Carolina: Asheville	Post office and courthouse	5,000	27,272	5.45
South Carolina: Bamberg	Post office	1,500	5,657	3.77
Tennessee:				
Greenville	Post office and courthouse	3,500	7,400	2.11
Great Smoky Mountains National Park.	Visitor center	1,450	8,450	5.83
Canal Zone	School complex	70,000	262,000	3.74
Total, 14 projects		137,140	511,325	3.73

ATTACHMENT B

Incorporation of protective features in existing Federal buildings, fiscal year 1962 summary

Primary building use	Total buildings	Square feet of protected space	Estimated cost of protection features
Post office	483	2,217,520	$7,394,965
Federal office building	47	1,549,350	4,049,135
Federal courthouse	7	113,150	278,300
Miscellaneous	46	518,610	2,609,800
Total	583	4,398,630	14,332,200

Average cost per square foot = $\frac{\$14,332,200}{4,398,630}$ = $3.26 (estimated).

RESEARCH

Senator MAGNUSON. Are there any other questions?

Senator SALTONSTALL. I have another item.

Senator MAGNUSON. Your next item, on page 11, is a budget request for $17.8 million for research and development, which is slightly less than fiscal year 1962. You explain why you want that in the rest of the paragraph. The House action reduced this program to $10 million, approximately $8 million less than the fiscal year 1962 level, or $7.8 million from the budget estimate.

This in effect would limit the value of the research and development already undertaken, in that a considerable portion of the funds re-

quested is to complete work started in fiscal year 1962. It is an item where you request $17,800,000 and the House gave you $10 million. What would that curtail if we stuck with the House figure?

Mr. PITTMAN. We believe we have a very carefully and well conceived program and I can go into any detail you want. First, let me say——

CIVIL DEFENSE ITEMS

Senator MAGNUSON. Let us take the items here. There must be additional research on systems directly related to civil defense, such as warning, communications, radiation monitoring, supporting utilities, and shelter supplies, and the management and health of potential shelter inhabitants, and the postattack surviving population. You have to conduct studies, you say, on a large scale, and you must have decontamination experiments. You must continue your research to minimize the cost of the current program.

Are there any of these you want to talk about? I think the Senator from Massachusetts has some questions first.

Senator SALTONSTALL. I have several questions on this.

Senator MAGNUSON. All right. Go ahead on them.

Senator SALTONSTALL. May I ask him those?

Senator MAGNUSON. Yes. Ask him any of them.

RADIOLOGICAL DEFENSE EQUIPMENT

Senator SALTONSTALL. They will be very brief. These questions were suggested to me, Mr. Pittman. Last year Mr. Ellis, who was your predecessor, told this committee that the program objective was 100,000 monitoring stations. The chairman just discussed it a little bit. He said they would be in place and ready by December 31, 1963.

How many stations are now activated, and why has the figure been changed from 100,000 to 150,000, and when will the 150,000 be ready if we gave you the money?

Mr. PITTMAN. The procurement to equip the 150,000 stations can be accomplished in fiscal year 1963. The completion of the training and organization that is necessary to bring them all into active operation, I would anticipate, would go beyond fiscal year 1963 into 1964.

Senator SALTONSTALL. Why did he say there were 100,000 stations necessary and you say there are 150,000 necessary?

CHANGE IN REQUIREMENTS

Mr. PITTMAN. The Defense Department has reviewed the entire program and come up with certain changes in what the OCDM required in this area. In our judgment, 150,000 stations is the minimum necessary to accomplish the several purposes of the monitoring system.

Senator SALTONSTALL. And it would still be in readiness by December 31, 1963? Is that what you just said? The equipment would be in readiness then?

Mr. PITTMAN. Yes, but the completion of training and putting these stations into operation could, I believe, extend beyond that date.

Senator SALTONSTALL. But you believe 150,000 now, from your further study of this, is necessary?

Mr. PITTMAN. Yes. We are convinced this is necessary. I would like to say, Senator, next to the shielding to protect life, radiation de-

tection is the most important item in any realistic civil defense program. Radiation-detection instruments spread around the country where they are needed is the only way people will have to know how to move, and how much freedom of action they have, in the immediate postshelter period.

STOCKPILE MAINTENANCE

Senator SALTONSTALL. On stockpile maintenance, you ask for $1,700,000 restoration. If you do not receive the $935,000 requested restoration under warehouse operations to provide for warehouse operating personnel and radiological instrument technicians, will the distribution of the instruments be seriously held up?

Mr. PITTMAN. Yes. If we do not receive the funds for warehousing and distribution, there will be a delay in moving these instruments into the hands of the States.

PURCHASE CONTRACTS LET

Senator SALTONSTALL. Have they been ordered? Are they under contract today and is the Government responsible for buying them?

Mr. PITTMAN. Yes. We have, under contract today, enough instruments to make up 200,000 sets.

Senator SALTONSTALL. So what you are telling us is at one place you have these orders and the Government is going to pay it out, and if we do not give you enough money, $935,000, to store them in these various States, then the instruments we bought will have to be wasted, so to speak?

Mr. PITTMAN. It would be a waste of procurement already underway from fiscal 1962 funds.

QUESTION OF NECESSITY OF FUNDS

Senator SALTONSTALL. You figure $935,000 is necessary for that purpose?

Mr. PITTMAN. Some of that would go to warehousing and distributing the procurement that would take place under fiscal 1963 funds. So it is not true as to the entire amount, but as to the major part of it.

ANNUAL COST OF INSTRUMENT STORAGE

Senator SALTONSTALL. Senator Ellender says it is going to cost $935,000 to store this instrument program year after year.

Mr. PITTMAN. No. It would not be a continuing item at that level. You understand this also includes engineering stockpiles such as water pumps, and so forth. It is not just radiological equipment. But the equipment would be distributed and put into operation. This would be a declining item in the budget over the years.

Senator SALTONSTALL. It will be a continuing expense every year if you have these instruments with you, to keep them in operation.

Mr. PITTMAN. Yes, but we anticipate a very substantial part of this expense will be on State and local governments.

Senator ELLENDER. You mean storage?

COSTS TO STATES AFTER DISTRIBUTION OF SETS

Mr. PITTMAN. Once we distribute those in State and local government hands, the storage costs are on them, and we transfer title to the State and local governments.

Senator ELLENDER. Do you keep them in the warehouse before you do that?

Mr. PITTMAN. Yes, sir.

FINANCIAL ASSISTANCE TO STATES

Senator SALTONSTALL. A third question, Mr. Pittman, is this: You asked for $32 million to be restored for financial assistance to States. What is your total request for States for funds under your financial assistance to States program?

Senator MAGNUSON. May I ask, let us stay on the other items here.

Senator SALTONSTALL. All right. I will withdraw that question for the time being.

TIMETABLE ON MONITORING STATIONS

Senator MAGNUSON. In last year's hearings Senator Allott and myself were both here. We asked Mr. Ellis about the 100,000 monitoring stations to be established by 1963. He gave us a timetable stating that by June 1961 there will be 25,000; by June 1962 there will be 52,000, and by December 1963 the total of 100,000, which is the objective set for the program. You, I understand, have raised this to 150,000. Is that correct?

Mr. PITTMAN. That is right.

Senator MAGNUSON. How many are there now?

Mr. PITTMAN. 31,000 stations in operation.

Senator MAGNUSON. So that by June 30, 1962, there were not 52,000?

Mr. PITTMAN. That is correct.

Senator MAGNUSON. Why?

Mr. PITTMAN. I am not in a position to analyze the basis for that prediction, because I do not know how it was made, but it seems to me we could have said some months ago that it was unlikely that we would arrive at that number of stations in operation by that time.

Senator MAGNUSON. But this was the original program with the original amount asked for, and we accelerated this amount so he could go ahead, because it was said it was not a question of production capacity, but a question of money.

Mr. PITTMAN. We have moved at perhaps a slower pace than he anticipated, but one of the results of this is we procured the major instruments for about half the price he estimated. I gave you a unit price of——

Senator MAGNUSON. About $100 a kit, I believe, he said.

Mr. PITTMAN. Yes. We have come out to about half of that cost on the larger items in the kit, and we have been able to come to a much lower——

Senator MAGNUSON. If you cut the cost down and he could have about 100,000 in June 1962, why couldn't you have that much then?

Mr. PITTMAN. I think we can and did stay on schedule, as far as procurement goes, but what may have been overlooked in his predic-

tion is the complexity of organizing and training to make these stations operative.

PRESENT STATUS OF INSTRUMENT DISTRIBUTION

Senator MAGNUSON. But the amount in the budget last year would provide approximately 48,000. We ended up with that sum, but you haven't 48,000. You say you got it cheaper, but you didn't reach the 48,000 mark.

Mr. PITTMAN. We have—the 48,000 that were procured in fiscal 1961 and prior years we have in the inventory we are now using. The procurement for fiscal year 1962 was larger in the last 2 months of the fiscal year. It was a very much larger amount and covers 150,000 sets.

Senator MAGNUSON. You spent all your money by June 30?

Mr. PITTMAN. Yes, all funds for this equipment.

Senator MAGNUSON. And he says he can't reach 48,000 with that money and you say you got it cheaper than he did, but you didn't reach 48,000.

Mr. PITTMAN. His 48,000 we had as a base to move from, and we procured an additional 150,000.

Senator MAGNUSON. How many do you have now?

Mr. PITTMAN. We have nearly 200,000 sets, including those on order. We have a requirement for approximately 300,000. Two of these sets go in each monitoring station, so it would take care of 150,000 monitoring stations when we have 300,000 of these sets.

COST OF ADDITIONAL SETS

Senator ELLENDER. How much more money will you need to do that?

Senator MAGNUSON. Yes.

Mr. PITTMAN. To acquire the additional 100,000 sets will take $8.9 million.

Senator ELLENDER. Do you remember how much you provided last year for what Mr. Ellis said could be done in a certain period?

Mr. PITTMAN. You mean the cost of procurement last year?

EXPENDITURES IN 1962

Senator MAGNUSON. How much did you spend last year in this program? That is what we want to know.

Mr. PITTMAN. Yes. I am getting you that. On the monitoring stations alone it is $8.3 million.

Senator MAGNUSON. That, according to our report, would be the accelerated procurement of the instruments and training program. We gave them $2.5 million over the amount for the national fixed station monitoring network in order to insure the establishment of at least 100,000 stations by June 30, 1963.

Mr. PITTMAN. That is correct. And we have really no opportunity to have that many stations by that date.

Senator ELLENDER. What became of that money?

NUMBER OF SETS PAID FOR

Mr. PITTMAN. It has gone into the procurement of the equipment, and the equipment is on hand or on order and will be available.

Senator ELLENDER. Is it paid for? Don't you have to get additional money to pay for it?

Mr. PITTMAN. The 200,000 sets I referred to, procured out of fiscal 1961 and 1962 funds, are paid for.

Senator ELLENDER. That is the 200,000?

TOTAL INSTRUMENT SET NEED

Mr. PITTMAN. The 200,000. We need a total of 300,000 to take care of 150,000 stations. That is why we are asking for the additional funds to continue procurement for this item.

Senator MAGNUSON. How much of this increase is involved in the $17,800,000?

PRESENT REQUEST NOT FOR RESEARCH

Mr. PITTMAN. None of this. The $17,800,000 you referred to are research and development funds.

Senator MAGNUSON. You mention as a justification for that that there must be monitoring listed here, that is, research for monitoring.

Mr. PITTMAN. Equipping of the monitoring stations is an item which comes under operation and maintenance, which is part of the $124.9 million item.

Senator MAGNUSON. All right. That is $17 million for research. What other kind of research are you doing?

Senator HOLLAND. May I ask a question there?

Senator MAGNUSON. Yes.

INFORMATION SECURED AT MONITORING STATIONS

Senator HOLLAND. Just exactly what information is to be secured at the monitoring stations, specifically?

Mr. PITTMAN. The primary information is the level of radiation at various points around the country. There are two requirements. One is to feed that information back to State, regional, and national damage assessment points.

Senator HOLLAND. That is communications.

Mr. PITTMAN. It will be done by communications, but the source of information will be these monitoring stations. I think it is obviously necessary in order to do any State, regional, or national planning for rescue and recovery work.

In addition, there is a requirement for local information. It is not practical in our judgment to bring information of this type to the national level or regional level and feed it back into the isolated communities of survival who have to stand on their own feet for several weeks. They must have their own sources of information. So we anticipate the monitoring stations will also serve local community needs without being funneled up the line and back down again.

MANNING STATIONS

Senator HOLLAND. The monitoring is a monitoring of the radiation at the points where the monitoring is had. Who mans the monitoring station?

Mr. PITTMAN. We are trying to locate these stations where there are 24-hour duty police stations, fire stations, and installations like airports—wherever there are personnel who are susceptible to this kind of technical training, on 24-hour duty, we will locate these stations there. One of the delays that perhaps was not fully anticipated when the OCDM estimate was made, was the problem of finding the right place and drawing the particular people who are working on airports and police and fire departments into this, and getting them trained and organized to do the job.

SHELTER PROTECTION AT STATIONS

Senator HOLLAND. The station has to be out in the open air and not sheltered in any way?

Mr. PITTMAN. No. We anticipate there will eventually be fallout shelter protection for these people, in order for them to be alive to do their work. The most important work would come after the first few days when the key question is how much has the radiation died down.

Senator HOLLAND. They would be inside and have the chance to observe outsiders?

Mr. PITTMAN. They would be inside and go outside, exposing themselves to some absorption of radiation. They would have dosimeters that would tell them how much they have absorbed and how much they can take. They would have to expose themselves if they undertake readings on streets and places where decontamination would start.

Senator HOLLAND. Monitoring instruments would have to be on the outside in exposed places.

Mr. PITTMAN. That is right. But initial information can be taken from within a shelter by locating it just outside.

COST PER MONITORING PIECE

Senator HOLLAND. What is the cost per monitoring piece of equipment?

Mr. PITTMAN. There are a number of pieces of equipment involved in a set. The two principal instruments come very close to $50.

Senator HOLLAND. Is that the two, or a full set?

Mr. PITTMAN. No, for a single set.

Senator HOLLAND. It takes two of those instruments to equip a monitoring station?

Mr. PITTMAN. Two of those and certain others.

Senator HOLLAND. What is the cost of those other instruments?

Mr. PITTMAN. We package these in different ways for different purposes. Let me get you a figure on the unit cost of a monitoring set. That includes dosimeters. The $50 figure I mentioned does not include other equipment.

Senator MAGNUSON. Then you ought to be able to buy twice as many as Ellis says you could buy.

Mr. PITTMAN. That is right. Of course, we cut the price so it will be approximately $100 a station for major equipment items.

Senator HOLLAND. $100 would cover the two pieces of monitoring equipment and the additional equipment needed in the monitoring station. Is that right?

Mr. PITTMAN. If that is clear I would like to complicate it a little further by saying——

Senator HOLLAND. Is that it?

REMOTE READERS

Mr. PITTMAN. Yes. I do not know how far you want to get into this, but we do need another piece of equipment which would be procured out of fiscal 1963 funds, which has not yet been procured. This is a remote reader which would take readings at much greater distances. It has been under development and is now available, and proved out. We want one of these in each station. There will be a requirement for 150,000 of these remote readers.

Senator HOLLAND. What is the cost for a remote reader?

Mr. PITTMAN. The unit cost for that is $28.10.

Senator HOLLAND. The $128.10, according to what I understand, is the cost of equipment you need at the standard measuring station.

Mr. PITTMAN. That is correct except for minor items. That does not complete the job.

Senator MAGNUSON. Ellis said $100. You are over him now.

AERIAL MONITORING

Mr. PITTMAN. Mr. Ellis was referring to sets, not stations. But we have added a new piece of equipment.

There is also a requirement for some aerial monitoring, which requires somewhat different types of equipment, and it would not be tied to the 150,000 stations, but presents a tremendous opportunity to expand this sort of information by collecting it from the air, and we are proposing to procure the equipment for that purpose.

Senator HOLLAND. Would one of those be available at each of these 150,000 stations?

CIVIL AIR PATROL AND AIRCRAFT STATIONS

Mr. PITTMAN. No, it would not be. It would be tied to Civil Air Patrol activities and available aircraft.

Senator HOLLAND. How many of those stations would you probably have?

Mr. PITTMAN. 360 units.

Senator HOLLAND. And at an average cost of how much?

Mr. PITTMAN. $650 per unit.

Senator HOLLAND. Then there is about $250,000 of that equipment.

Mr. PITTMAN. $234,000. Yes.

Senator ELLENDER. How about the operation of these units? Who will do that?

EXPENDITURES TO DATE

Senator MAGNUSON. Let's not leave these figures. It is quite confusing. You have $128 for 150,000 units and only have half of them installed, which would cost you around $18 million for the full amount in rough figures, and you have about half of them installed, which is $9 million. How much have you spent to date?

Mr. PITTMAN. Covering all of these items, our expenditures to date are $21.6 million.

Mr. MAGNUSON. That will be a $42 million program.

Mr. PITTMAN. I misspoke. Procurement through 1962 is $12.7 million. $21.6 million includes the $8.9 million requested for fiscal year 1963.

Senator MAGNUSON. That is $17 million and it is for 2 years; 150,000 are only $8 million and you are only half through. Where does the rest of the money go?

Mr. ROMM. $21.6 million is the total program through fiscal year 1963, Senator.

Senator MAGNUSON. I understand, but where does the rest of the money go?

Mr. PITTMAN. Let me add it up. There are a couple of items we have not mentioned yet. Calibration units. We have to maintain these and recalibrate them periodically. That is an item totaling $347,000. That completes all of the fiscal year 1963 items, so it should add up.

FULL DATA ON EXPENDITURES FOR MONITORING

Senator MAGNUSON. We will not take the time, but you put in the record the amount of money you spent to date on this agency or your predecessors did, on this monitoring program.

Mr. PITTMAN. Yes, sir.

Senator MAGNUSON. And how many of them you have to date.

Mr. PITTMAN. We will give you the procurement of 1961 and before.

Senator MAGNUSON. The whole business.

Mr. PITTMAN. And last fiscal year, and our proposal this year.

Senator MAGNUSON. Whenever you started, with how much money you spent on this program. I want how much you have already spent. If it is $128, you spent it already and have not even gotten half of them. Also the amount of monitors now in operation, and how much you spent. That is what we want. Also how many instruments you have in the stockpile.

Mr. PITTMAN. Right.

Senator MAGNUSON. This will run up to about $500 a unit before we are done.

Mr. PITTMAN. No; it will be $139 for a complete equipping of a monitoring station with two sets, and a rather lesser cost for the aerial monitoring and for the calibration.

Then in addition to that there is, quite apart from the monitoring stations, the requirement which I mentioned earlier, which is the stocking of shelter spaces and public shelters—there will have to be radiation detection equipment there, which was not included when I was talking about monitoring stations in the last 5 or 10 minutes.

Senator MAGNUSON. But you want 150,000 units, don't you?

Mr. PITTMAN. Monitoring stations.

Senator MAGNUSON. Yes. What we want is the amount you spent already, and how many you have. Then we can divide it and see how much they cost.

Mr. PITTMAN. In that category we have 200,000 sets, and we need 300,000. We are asking for funds to buy the other 100,000 sets.

Senator MAGNUSON. Put all that in the record and break it down for us.

Mr. PITTMAN. All right.

Senator MAGNUSON. Because there is a little bit of discrepancy between what we have been told for 2 years and what the program accomplished.

Senator HOLLAND. May I ask a question here?

Senator MAGNUSON. Yes.

COST OF SHELTER DETECTION UNITS

Senator HOLLAND. What was involved as to the cost of detection units which must be present in each of the shelters?

Mr. PITTMAN. The unit price?

Senator HOLLAND. Yes.

Mr. PITTMAN. It comes to a unit price of $47.65. We have estimated it at about 19 cents per person sheltered.

Senator HOLLAND. Then that would be around $12 million for that equipment for 60 million people, wouldn't it?

Mr. PITTMAN. From 1962 funds, $9.5 million was spent for this purpose.

Senator HOLLAND. And that is already distributed.

Mr. PITTMAN. That has already been procured.

Senator HOLLAND. You have that stock and it is ready to be put around.

Mr. PITTMAN. Yes; some of it is still to be delivered.

Senator ELLENDER. Will you say a few words to us about the operation of these after you have them established?

Senator MAGNUSON. I was going to cover operation and maintenance.

Senator ELLENDER. Yes.

Senator MAGNUSON. We will get the report on the monitoring stations because we are adding more every year, and every year there is a different cost figure. So clear it up for us. We are still not up to schedule.

Mr. PITTMAN. Mr. Chairman, we have clearly expanded the requirement. We have expanded it for reasons which we think are vital.

Senator MAGNUSON. Put it in the record so we have some justification of it.

(The information requested follows:)

RADIOLOGICAL DETECTION AND MONITORING PROGRAM

The elements of the program are as follows:
(*a*) Radiological monitoring stations.
(*b*) Shelter monitoring instruments.
(*c*) Instruments for civil defense workers.
(*d*) Aerial monitoring equipment.
(*e*) Calibration and maintenance equipment.
Each of these is discussed below:

87888—62——13

(a) Radiological monitoring stations

1. *Requirement.*—That requirement for 150,000 monitoring stations was developed after a detailed research analysis of the problem by Technical Operations, Inc. The results of this research effort were adapted to the entire Nation, as shown by State in the attached table. The total of 150,000 stations is divided between 144,000 State and local, and 6,000 Federal monitoring stations.

Upon assumption of civil defense responsibilities on August 1, 1961, the DOD established a technical review team to evaluate this requirement, the instruments, and specific plans for meeting the requirement. Radiation technicians from the Army Chemical Corps, Army Signal Corps, Naval Radiological Defense Laboratory, and the Defense Atomic Support Agency carried on this review, and recommended approval and accelerated action on the program.

In order to be fully operational, each monitoring station will require two sets of monitoring instruments as detailed in the following section 2.

2. *Instrument sets.*—The two sets of monitoring instruments required for each monitoring station consist of the following items, and associated unit costs:

Item	Unit cost	Fiscal year 1962 procurement	1st set	2d set
Low-range Geiger counter	$19.35	CDV-700	1	1
Food and water comparison standard	.31	CDV-787	1	1
High-range gamma radiation instrument	15.97	CDV-715	2	1
High-range gamma radiation instrument—remote reading.	28.10	CDV-715B		1
Dosimeter	4.21	CDV-742	2	2
Dosimeter charger	3.60	CDV-750	1	1
Total cost			$63.62	$75.75

Large-scale procurement in fiscal year 1962 reduced the unit cost per set from an average cost of $89.06 in fiscal year 1961 to $63.62 in fiscal year 1962. The actual cost of the major items (CDV–700 and CDV–715) are one-half of the estimated costs provided to the subcommittee by OCDM in last year's hearings.

The CDV–715B is a new item, developed during 1962 which is scheduled for procurement in fiscal year 1963 at one instrument per monitoring station, to substitute for one CDV–715 (nonremote gamma radiation instrument) in the second set at each monitoring station.

3. *Procurement of instruments for monitoring stations.*—Procurement actions taken in fiscal year 1961 and prior years provided for 2.6 million training instruments and 49,608 operational monitoring sets. Procurement during fiscal year 1962 provided for the acquisition of 150,392 operational monitoring sets, bringing the total operational sets on hand or under procurement to 200,000, sufficient to equip 100,000 monitoring stations. This leaves a requirement to procure monitoring sets for the remaining 50,000 stations of the total 150,000 national requirement, or a net remaining initial equipping requirement of 100,000 instrument sets.

It should be noted that procurement in fiscal year 1961 and prior years, and issues of training equipment to the States and local governments resulted in imbalances of stocks on hand at the time DOD assumed responsibility for the program. These imbalances have been corrected by fiscal year 1962 procurements, and when all deliveries of instruments from the procurement are received, the asset position presented in the preceding paragraph will be realized.

The value in thousands of dollars of actual procurements for fiscal year 1961 and prior years, for fiscal year 1962, and projected for fiscal year 1963 follow:

	Fiscal year 1962 and prior years	Fiscal year 1962	Fiscal year 1963
Training instruments	$13,646	$570	0
Monitoring station operational sets	4,418	8,294	$8,911

The fiscal year 1963 procurement is requested for 100,000 operational monitoring sets with only one CDV–715 instrument per set ($4,696,000) and for 150,000 remote reading instruments, CDV–715B, one for each monitoring station ($4,215,000).

4. *Delivery of monitoring sets.*—These instruments, although relatively simple to produce, require precision production and quality control, resulting in substantial production leadtime. Deliveries of instruments procured in fiscal year 1962 are scheduled into Federal warehouses which will provide for the following availability of operational sets:

	Number of sets
By September 30, 1962	25,000
October 1 through December 31, 1962	30,000
January 1 through March 31, 1963	30,000
April 1 through June 30, 1963	35,000
July 1 through October 31, 1963	30,392
Total	150,392

Calibration, checkout, and packaging will add approximately 1 to 2 months to arrive at a date when the equipment can be issued to State and local governments.

3. *Monitoring stations.*—Against a national requirement of 150,000 stations, the actual operational capability as of June 30, 1962, consisted of 3,475 Federal monitoring stations and 27,926 State and local operational stations, for a total of 31,401 operational monitoring stations. These stations have only minimal equipment; i.e., one set per station. Issue of a second set is being delayed pending procurement of the remote reading gamma radiation instrument, CDV–715B, from fiscal year 1963 procurement.

OCDM last year reported to this subcommittee that 25,000 stations would be in operation on June 30, 1961. This is not a comparable figure in that it included all high school training sets as operational stations. State inspection of these sets has demonstrated that these training instruments have no operational monitoring capability as a result of constant use and rough handling in the training process. There were approximately 15,000 school training sets issued, and included in the 25,000 figure provided in testimony before this committee last year. Therefore, there were only 10,000 operational stations on June 30, 1961, of which 2,900 were Federal stations. During the past year, under DOD administration, an additional 21,000 monitoring stations were brought into operation.

Based on the projected availability from the preceding section 4, it is expected that an additional 70,000 stations could be brought into operation by December 31, 1963, for a total of approximately 100,000 stations. Because the operational training and organization of station management is a State and local responsibility, we are not in a position to predict with certainty the operational dates of these stations.

(b) Shelter radiation detection instruments

The shelter survey has located approximately 60 million shelter spaces in 113,000 buildings. These buildings contain approximately 230,000 shelter areas, and 1 shelter radiation detection kit is required for the occupants of each shelter area. Each kit consists of the following instruments:

	Unit cost (average fiscal year 1962 procurement)
1 CDV–700 low-range geiger counter	$19.35
1 CDV–715 high-range gamma radiation instrument	15.97
2 CDV–742 dosimeters at $4.21	8.42
1 CDV–750 dosimeter charger	3.60
1 CDV–787 comparison standard	.31
Total cost	47.65

The fiscal year 1962 procurement program included 200,000 shelter monitoring kits at a total cost of $9,530,000 to be completely delivered by June 30, 1963. One-half of this quantity will be available for issue by December 31, 1962, and the remaining portion of this total quantity will be issued as shelter supplies by mid-1963.

No procurement funds have been requested for this purpose for fiscal year 1963.

(c) *Instruments for CD workers*

A requirement exists to supply dosimeters to a total of 5 million civil defense workers so as to be capable of measuring the accumulated doeses of radiation to which essential tasks would expose them.

The fiscal year 1962 program included the procurement of 1 million dosimeters at a unit cost of $4.21 for a total of $4,210,000 and 30,000 dosimeter charges at $3.60 for a total of $108,000. The fiscal year 1963 projected procurement will be for an additional 2 million dosimeters at an estimated unit cost of $4 for a total of $8 million. The lower unit cost estimate is based on larger procurement quantities. No dosimeter chargers are expected to be required in fiscal year 1963 or subsequent years for this purpose, as adequate numbers will be available in shelter monitoring kits which can be used to recharge CD worker dosimeters.

(d) *Aerial monitoring*

To provide the most rapid method of estimating the degree and extent of fallout contamination over large areas and agricultural lands in the early postattack period, an aerial monitoring capability is required to supplement the monitoring stations. An instrument specially developed for this purpose by Oak Ridge National Laboratory is available for procurement in fiscal year 1963. Our total requirement is based upon the need to place aerial monitoring instruments at approximately 5,000 municipal airports in the country. This placement will exploit the capability of many small private aircraft and the Civil Air Patrol. As only 3,000 of these airports are manned around the clock, our first effort will be to furnish instruments for these from procurement planned over a 3-year period. At an estimated unit cost of $650 per instrument, the fiscal year 1963 request includes $234.000 for the initial procurement of 360 instruments.

(e) *Calibration and maintenance*

To be effective in protecting lives and to provide a basis for postattack operational decisions, radiation detection instruments must meet minimum standards of accuracy and sufficient spare parts must be available to assure operability of instruments at all times.

The electronic components of radiation detection instruments are subject to changes in circuit elements and must be calibrated periodically to insure meeting prescribed standards of accuracy.

To assure maintenance of these standards of accuracy 2 calibration units per State, 1 per civil defense region, and 12 for radiological equipment warehouses are required.

For this purpose, OCD procured 95 calibration units during fiscal year 1962. The fiscal year 1963 budget request included $82,895 to procure the remaining 25 units at a unit cost of $3,315 for our total requirements.

Based on past experience, the requirement for initial spare parts has been at the rate of 5 percent of the initial instrument cost. Procurement of instruments planned for fiscal year 1963 which require spare parts is slightly over $8 million. Applying the 5-percent experience factor, our requirement for fiscal year 1963 is $404,912.

Required operational monitoring stations by State

OPERATION AND MAINTENANCE

On page 13, the next item. The House report identified only three specific reductions in arriving at the $65 million recommended for operations and maintenance. That is all they gave you for operation and maintenance. Is that right?

Mr. PITTMAN. That is right.

Senator MAGNUSON. You state your requirement requested was $125 million.

Mr. PITTMAN. That is correct.

Senator MAGNUSON. And when the $65 million is deducted it leaves $60 million in round figures.

Mr. PITTMAN. That is correct.

HOUSE RECOMMENDATION

Senator MAGNUSON. The House report recommends $65 million to continue the established programs at the same general level as in fiscal 1962. What is the difference now, and the same general programs and levels in 1962?

Mr. PITTMAN. Depending on what they mean by that language, "the general level in 1962," we could make an assumption and estimate.

Senator MAGNUSON. How much did you get in 1962? I forget the exact figure for this.

Mr. PITTMAN. Yes. $82.8 million. $46.2 million was transferred from OCDM and $36.6 million was appropriated to DOD for operation and maintenance.

Senator MAGNUSON. No. I meant from this committee.

Mr. PITTMAN. It is about $46 million.

Senator MAGNUSON. About $46 million.

Mr. PITTMAN. That was divided between OEP and the Defense Department at the time the budget divided up their funds.

Senator MAGNUSON. But the total was about $46 million and the House gave you $65 million. What they mean by "the same general level" is about the same as what they gave you last year, I suppose.

Mr. PITTMAN. It is a little hard to look at it that way because we have the amendatory $207 million merged with it which financed most of the warning, communications, training, and other major items under "Operations and maintenance."

Senator MAGNUSON. What we want to know is why this extra $65 million? What more are you doing or do you plan to do in fiscal 1963 than we allowed you money for last year?

Mr. PITTMAN. Yes. I list on the next page a series of programs.

Senator MAGNUSON. All right. Let us get into these programs.

NATIONAL EMERGENCY ALARM REPEATER SYSTEM

The National emergency alarm repeater system, designed to bring warning into every home, office, and factory in the land, would be postponed. How much would that cost?

Mr. PITTMAN. That is $25 million, which was to be applied as follows: $2.5 million to run an engineering survey on most of the utility systems of the country, to find out what equipment would be needed to operate NEAR in particular utility systems, and $22½ million, which would be applied to the generators—the basic unit of equipment to trigger the warning signal—for utility systems which would

be used for pilot purposes to learn more about the operating problems of the system.

Senator MAGNUSON. It is to blow a whistle.

Mr. PITTMAN. It is to set up a buzzer in every home and factory.

Senator MAGNUSON. I meant that. A buzzer. Can't you do that by radio now?

Mr. PITTMAN. We have explored intensively competing systems of radio, using the telephone system, and found there is nothing competitive with the electric power system for a low-cost solution to that problem.

PAYMENT FOR ALARM INSTALLATION

Senator MAGNUSON. Who will pay for putting these in every home and every office?

Mr. PITTMAN. We have stated on the record at the time of the hearings before the Government Operations Committee, a year ago, that the cost of home receivers would be borne by the consumer of electric power. We have since become concerned about the problems of consumer purchasing of an item of this kind because of the difficulty of assuring reliability. Therefore, we have had under discussion with the utility systems the possibility of their handling the procurement, possibly financing it and recovering it from their charges, or possibly acting in a service capacity. The answer to this has been postponed until we have experience with these pilot projects.

PILOT PROJECTS

Senator MAGNUSON. That will cost $25 million, approximately, you say?

Mr. PITTMAN. The pilot projects will cost $22.5 million.

Senator MAGNUSON. But that is just the beginning, though; is it not?

Mr. PITTMAN. That is just the beginning.

Senator SALTONSTALL. Will the Senator yield?

Senator MAGNUSON. Yes.

PROSPECTIVE ACTION UNDER HOUSE ALLOWANCE

Senator SALTONSTALL. There is a broad general question on this subject. The total you requested was $124,918,000, and the House allowed you $65 million, which left $59,900,000, which is the figure the chairman just brought out.

Let me ask a broad general question. You divide it into eight different categories. If we went along with the House and did not give you any of this $59,900,000, would you go forward in a smaller way with all of these categories, or eliminate some of the categories?

Mr. PITTMAN. In the short time since the House acted we have had a chance to do a little thinking about what we would do. It would call for a major revision of the whole program. I do not think it would be wise to do half a job on all of the projects we have underway. We would have to eliminate, I think, or postpone, a very substantial number of these eight projects.

Senator SALTONSTALL. If the chairman will permit me, let us very briefly, so as not to go into detail, cover this. You have warning and alerting, $25 million. Would you go into that in full?

NATIONAL EMERGENCY ALARM REPEATER SYSTEM

We are looking at your page 14. The national emergency alarm repeater system, which would cost, as I see it, $25 million.

Mr. PITTMAN. This, we believe, would have to be postponed a year. Whether we would completely postpone it or run several of the pilot projects is a judgment we have not yet made. But substantially it would be postponed.

Senator SALTONSTALL. The Senator from Washington and all of us sitting here know when we get into a conference with the House—and assume we gave you the whole $59,918,000—after we did that we would have to compromise that with the House. What I am trying to get at is, assuming we have to compromise, are there some of these programs you would give up altogether or, as I asked you already, would you cut them down percentagewise?

Senator MAGNUSON. Or which priority?

REQUEST FOR PRIORITY LIST

Senator SALTONSTALL. Or which priority. On No. 1, the national emergency alarm repeater system warning device, it would cost $25 million. I think it would help us to reach a decision.

Mr. PITTMAN. I understand.

Senator SALTONSTALL. If you could say yes or no as to whether you are going to put it in or take it out, it helps us to get a figure.

Mr. PITTMAN. I understand the need for doing it.

Senator SALTONSTALL. It is a tough question.

Mr. PITTMAN. You realize what you are asking. What we want to do is to keep this thing together so that this totally new civil defense program, which has been thoroughly redirected, can continue current activities. If we can prevail on the next Congress to go forward with the new unauthorized element, we should not be in a position where it would be much more costly to pick up and go forward. So we want to hold the ground gained by completing what we have started.

I can give you some ideas of what it would take to hold it on course.

Senator MAGNUSON. That is not what we are asking. We are asking, or Senator Saltonstall is, a simple question. Which would you abandon and which would you give priorities to?

Senator SALTONSTALL. That is right. You have eight programs here.

Mr. PITTMAN. I think then, to answer that question, if Congress decides to defer the survival capability I refer to in my opening statement, we have to postpone, or eliminate from this budget completely, some of the priority elements here and go ahead and do others as completely as we can. In this case I think that most of the NEAR operation would have to be postponed. The first one.

Senator MAGNUSON. The first one.

Senator SALTONSTALL. All right. The second one we have already talked about at quite some length.

RADIO BROADCAST STATIONS

Senator MAGNUSON. No. This is for radio broadcast stations.

Senator SALTONSTALL. Yes. Needed for Government authorities to

communicate with the public immediately following an attack. That is a different one than you have here.

Mr. PITTMAN. This is providing fallout protection at key radio broadcasting stations and a radio circuit shortwave hookup between broadcasting stations.

Senator MAGNUSON. How much would that cost?

Mr. PITTMAN. It is about $6.9 million.

Senator SALTONSTALL. That is $10.1 million.

Mr. PITTMAN. Yes. But $3.2 million of that is for recurring costs of operating the Federal communications system. Not deferrable.

Senator SALTONSTALL. That is communication and control.

Mr. PITTMAN. Yes.

Senator MAGNUSON. So you go to a fellow who has a radio station and say, "We will give you some money to modify your station." Is that correct?

Mr. PITTMAN. That is right. We would contribute to the cost of putting protective features into the key station.

Senator MAGNUSON. Contribute to the cost?

Mr. PITTMAN. Yes.

Senator MAGNUSON. Of course, you know that the Federal Communications Commission could order them to do this now anyway without any cost to the Government.

Mr. PITTMAN. I am not sure whether they can be compelled to spend their money for this purpose.

Senator MAGNUSON. As a condition. They can put any condition they want on their license.

Mr. PITTMAN. It has been thoroughly discussed with the Federal Communications Commission.

Senator MAGNUSON. Of course it has been discussed with them. They do not want to do it, but they want you to do it. We know that story.

Mr. PITTMAN. Yes.

Senator SALTONSTALL. Would that be top priority or not?

Mr. PITTMAN. I think it is one we would be forced to put off a year.

Senator SALTONSTALL. Put off?

Mr. PITTMAN. Yes, sir.

TRAINING, EDUCATION AND PUBLIC INFORMATION

Senator MAGNUSON. No. 3: The capability of local governments to train necessary skilled personnel in the management and operation of existing shelter space could not be developed during this year. Without specialized skills in each community shelter, successful occupancy could not be expected.

Senator SALTONSTALL. $20,885,000. Is that correct?

Mr. PITTMAN. Yes. That includes public information, but they tend to merge. A good deal of the training and information is, of course, for the public. Here we would cut this down and do it more slowly, but a very substantial part of this projected activity would have to be done this year if the 60 million shelter spaces are to be effective.

Senator MAGNUSON. You will do a part of that anyway?

Mr. PITTMAN. We are just starting to make the capital investment for large-scale training and getting a major effort going now.

Senator MAGNUSON. But this would only be an enlargement of the program you are going to do anyway.

Mr. PITTMAN. Functionally we have been doing it.

Senator MAGNUSON. You have been training the people all the years it has been in operation. Then all these millions of dollars we have now has been wasted.

Mr. PITTMAN. What we are doing now is orienting this training around shelter systems growing up in certain parts of the country and around techniques for mass production of the needed skills.

Senator HOLLAND. If you have a shelter system developed in many places, it does make sense to have trained people who can make it operate. It seems to me this is a must, Mr. Chairman.

Senator MAGNUSON. I am not saying it isn't a must. How would you do it? Hire local people and put them on the Government payroll, or let the States and local subdivisions pick them and you would reimburse them?

Mr. PITTMAN. We have three schools in which we are training instructors, who are available to State and local governments.

Senator MAGNUSON. They are Federal employees?

Mr. PITTMAN. We train State and local employees too.

EXPENSES OF TRAINEES

Senator MAGNUSON. Do you pay their expenses to come back? Do they go to Federal schools?

Mr. PITTMAN. We pay one-half travel and subsistence expenses and we train them. Then they go back to their local Civil Defense organizations.

Senator MAGNUSON. This is a little different part of it, but it has been going on for some time.

Mr. PITTMAN. Yes. The courses have been changed, but the schools have been going on for some time.

Senator SALTONSTALL. The next one——

ADULT EDUCATION PROGRAM

Senator MAGNUSON. The adult education program in 37 States would have to be curtailed and the program could not be offered to the remaining 13 States.

What program is that?

Mr. PITTMAN. The adult education program.

MEDICAL SELF-HELP

Senator MAGNUSON. Medical self-help?

Mr. PITTMAN. No. That is another one. There are two training courses that go to the general public. One is on general civil defense knowledge and the other is medical self-help.

Senator SALTONSTALL. Would that be $20,885,000?

Mr. PITTMAN. Not that much.

Senator MAGNUSON. Break that down. How much is it?

Mr. PITTMAN. $5.2 million.

Senator MAGNUSON. But you are doing some of that now?

Mr. PITTMAN. That is for adult education. Medical self-help is $1.9 million.

Senator MAGNUSON. But you are doing some of that now?

Mr. PITTMAN. Some of the adult education is going on. Medical self-help is only just getting off the ground.

Senator MAGNUSON. I have seen items in the paper where they have been meeting on it for years. Local people and civilian defense officials at home.

Mr. PITTMAN. The medical self-help program is a new program, stimulated by voluntary support. It requires voluntary help so there has been a good deal of publicity put into it.

Senator MAGNUSON. It is a general program to educate people to do what they can do to survive, is it not?

Mr. PITTMAN. Yes; that is right, health measures.

Senator MAGNUSON. That is the way the civil defense thing started.

Mr. PITTMAN. That is right. I think these programs are more characteristic of what has been going on in the past.

Senator MAGNUSON. Yes.

RADIOLOGICAL DEFENSE EQUIPMENT

Senator SALTONSTALL. The next one is the development of the projected radiological monitoring net.

As I see it from the figures, $18,133,000. What would you do on that one?

Mr. PITTMAN. I think we would have to postpone some part of the extension of this system and make do with a smaller or less fully equipped monitoring net until we have a chance to complete the job.

Senator SALTONSTALL. All right.

FINANCIAL ASSISTANCE TO STATES

The next one is the express deletion of one-third of the requested funds for Federal contribution for State and local government personnel and administrative costs.

As I see it, it is financial assistance to the States for $32 million, broken down into survival supplies, $6 million; emergency operating centers, $8 million; personnel and administrative expenses, $18 million. What would you do with that?

Senator MONRONEY. I want to tell you about that item. It is the come-on to get in, because every member will be wiring us and every local official. That is what we have gone through every year.

Mr. PITTMAN. And I think there may be more of it this year because the Federal Government has put heat on to get things done, and they have painfully turned around and done what is necessary, assuming they would have matching funds for certain parts of their costs. We are in pretty deep.

Senator MONRONEY. But that would be cut one-third? If the $35 million were not restored, that would be cut one-third?

Mr. PITTMAN. No. The one-third referred to here is just P. & A.—personnel and administrative costs.

Senator MONRONEY. But you are doing some of this now.

Mr. PITTMAN. Yes, we are.

EFFECT OF HOUSE CUT

Senator MONRONEY. The House cut would mean that you couldn't do more of it. Isn't that it?

Mr. PITTMAN. The House cut would mean that the additional costs of the survey operation and bringing the surveyed space into use would have to be managed by the State and local governments without any additional matching funds.

Senator MONRONEY. "Bringing the surveyed shelter space into use." Maybe they ought to be doing some of that.

Senator SALTONSTALL. May I ask this, Mr. Chairman? How much money has been asked by the States and Federal Government? You put in here $32 million. How much has been asked?

Mr. PITTMAN. Their estimates exceed our budget request.

Senator SALTONSTALL. That I expected, but how much?

Mr. PITTMAN. Personnel administrative funds they estimated at $23 million and we cut it down to $18 million, and we think our guess is pretty accurate. It looks like they have budgeted, or are about to budget for that amount in their own appropriations.

EMERGENCY OPERATING CENTERS

Senator SALTONSTALL. Emergency operating centers.

Mr. PITTMAN. That presents a different problem. Most of the $8 million we requested—about $6.9 million—is going to complete the projects already started. We think it would be very difficult to withdraw from the projects we have started.

SURVIVAL SUPPLIES

Senator SALTONSTALL. Survival supplies.

Senator HOLLAND. This is underground offices, in effect, is it not?

Mr. PITTMAN. Many of the emergency operating centers are not office space. They are hardened to provide some blast protection.

Senator HOLLAND. Some what?

Mr. PITTMAN. There is some blast protection provided in the emergency operating centers.

Senator HOLLAND. But aren't they mostly underground?

Mr. PITTMAN. Yes. Underground, but not office buildings. They are special-purpose structures.

Senator HOLLAND. I understand.

Senator SALTONSTALL. $6 million for survival supplies.

Mr. PITTMAN. We would have to try to defer what we could there. These supplies are tied into State and local programs and plans. I am sure there would be some very potent cases made for us to provide equipment they feel is vital in their planning.

Senator SALTONSTALL. That boils it down to the fact that you would have to cut personnel by around one-third if you are going to go forward fully, or nearly fully, with survival supplies and emergency operating centers, because that is $14 million right there.

Mr. PITTMAN. If we must stay within the House action, that is right.

DAMAGE ASSESSMENT

Senator SALTONSTALL. Yes. Now, you mentioned stockpile maintenance. We have talked about that, which leaves damage assessment. What does that mean, $2½ million?

Mr. PITTMAN. Damage assessment is the development of a data base and a computer program so that, if an attack ever happens, it will be possible in a matter of hours to get information on what has happened throughout the country at the national level. When the job is done for that purpose, it is also available for preattack planning.

Senator SALTONSTALL. That could be eliminated then. Would that be a high priority?

Mr. PITTMAN. I think it can be something we would partially defer. It would be something which would be absolutely vital if this ever happened, but deep cuts would impose this risk and some of it would be put off a year.

MANAGEMENT

Senator SALTONSTALL. The last item, $14,600,000 for management. What is that, and how high a priority is that?

Mr. PITTMAN. The reference of the House committee report to the 1962 going rate does not seem to apply to management costs. We were running at an annual rate of about $13.6 million last year on management costs. We have asked for $14.6 in this year because of the expansion of the program.

I would like to point out that most of the activities in 1963 will be as a result of the obligation of funds in 1962. We cannot hold the organization together certainly at less than last year's going rate with an expanded program. So this goes to the question of whether we would be organized for a continuing program if it is to be permitted to continue in a subsequent year. If the organization is disbanded, there would be a good deal of time wasted, and money, in trying to gear up again to do the job.

SUMMARY OF HOUSE ACTION AND RESTORATION REQUEST

Senator SALTONSTALL. Senator Ellender, as acting chairman, may I ask if it can be summarized in this way: You put in a total of $124,918,000, which is the meat of your request. The House gave you $65 million, which left $59,918,000 to be restored. Breaking those eight items down, the warning and alert I understand you postponed. Radiological detection and monitoring, $18 million, which you would postpone and do some of it. Stockpile maintenance, $1,700,000, we have discussed pretty fully, and you will have to go into that fairly fully. Communication control you put off; $10 million, and you have put it off.

Mr. PITTMAN. On communication and control, $3.2 million of that is current operations which we could not put off. It would be possible only to postpone $6.9 million that goes to hardening radio stations and providing shortwave radio circuits for them.

Senator SALTONSTALL. Then damage assessment of $2½ million you defer. Training and education and public information of $20,885,000 you would cut down, but go forward with some. On financial assist-

ance to States of $32 million and survival supplies, you would hold it. On the emergency operating centers, you would presumably hold most of that $8 million. If there was a cut you would have to cut the personnel and administrative expenses of $18 million. You would have to cut it a third or more. Then management of $14,600,000 you said you would have to have $13,600,000, which is the amount you had last year.

That would give us an indication then, Mr. Chairman. I would say if Mr. Pittman wants to revise those figures, it would be helpful. I hope he would write you a letter or communicate in some way, because it seems to me it is the nub of this whole subject.

Mr. PITTMAN. I would appreciate the opportunity to submit a letter on this point, because as I said, we have not attempted to reprogram on the basis of the $75 million House appropriation.

(The letter submitted by Mr. Pittman follows:)

ASSISTANT SECRETARY OF DEFENSE,
Washington, D.C., August 7, 1962.

HON. WARREN G. MAGNUSON,
Chairman, Subcommittee on Independent Offices,
Committee on Appropriations,
U.S. Senate.

DEAR MR. CHAIRMAN: At yesterday's hearing on the civil defense part of the independent offices appropriation bill, I was asked to supplement the record with a statement regarding priorities of the program elements in order to assist the subcommittee in its work.

In our judgment, $233.7 million is required to continue the President's new civil defense program which was initiated last year following the two civil defense appropriations resulting in a 1962 budget of $256 million. The major portion of the rest of the $695 million request for the fiscal year 1963 civil defense budget would finance the shelter incentive program and the cost of its administration. This element is separable and can be deferred without impairing the current activities.

Further reductions in the fiscal year 1963 civil defense budget would defer the realization of an integrated civil defense system, built around existing shelter space, with a capability of saving large numbers of lives under nuclear attack and, therefore, entails some degree of unnecessary risk to the American people.

If it is the judgment of the Congress that further cuts nonetheless be made in this budget, and if the Defense Department were permitted the option to apply these cuts so as to best preserve the long term objectives of the program, reductions would be applied to the following budget items in the order of priority mentioned below:

Priority:	*Reduction (millions)*
1. Radiological instruments: Reduce $18,100,000 to $10,000,000	$8.1
2. Communications and control: Reduce $10,100,000 to $3,200,000	6.9
3. Warning and alert: Reduces $25,000,000 to $7,500,000	17.5
4. Shelters in existing Federal buildings: Reduce $35,000,000 to $20,000,000	15.0
5. Training, education, and public information: Reduce $20,900,000 to $16,700,000	4.2
6. Damage assessment: Reduce $2,500,000 to $1,500,000	1.0
7. Management: Reduce $14,600,000 to $13,600,000	1.0

I wish to take this opportunity to emphasize that the first year of operation of the new civil defense program has placed the Federal Government in a position of leading State and local governments and private building owners into a difficult undertaking. The essence of the new element of this year's work has been the location of shelter space for about 60 million people, the procurement of provisions for a large part of that shelter space, and the groundwork for Federal assistance to local governments in the difficult task of organizing and training people to use this shelter space. Surveyed shelter areas will protect people at a cost of roughly $3.50 per person, including the cost of survey, marking, and stocking.

Interrupting integral elements of this new program threatens to waste fiscal year 1962 funds and to undermine confidence in Federal leadership in civil defense. It is believed that the above-listed reductions would permit completion of the central features of the first phase of the President's civil defense program, but would fail to provide the supporting systems essential for fully effective use of the surveyed shelter space.

Protective features in Federal buildings have a new meaning. Maintaining this year's progress in a new nationwide civil defense effort is to a very real extent a matter of confidence on the part of State and local governments and building owners. The two provisions of the House Independent Office Appropriation Act requiring specific authorization for fallout shelters in Federal buildings have been interpreted by the press and others as a bar to the Federal Government doing in its buildings what it is calling on State and local government and private building owners to do in theirs. This restriction strikes at the heart of the new program, which is oriented around fallout protection for as many people as possible. The President has expressed his personal concern about this point in his recent letter to you and other congressional leaders.

It is vital that a less sweeping method be found to assure that protective features can be included in Federal buildings under conditions satisfactory to the Appropriation Committees. The experience which can be gathered in the months ahead in designing and modifying Federal buildings will make a significant contribution to the growing body of design technique and cost data which can reduce the size of the task of shielding large numbers of people from fallout radiation. This experience is needed in the development of the new civil defense program; it is needed to assist State and local governments, industry and other building owners; and it is needed to improve the capability of government operations to function under nuclear attack.

Sincerely,

STEUART L. PITTMAN.

CAPABILITY FOR NUCLEAR WARFARE

Senator HOLLAND. Senator Monroney made a suggestion a while ago that I think is well worthwhile. Since we are spending so very much on our ability to wage nuclear warfare, it is rather senseless not to recognize the fact that we are subject to the results and should make some provision to protect against it. I wonder if there is any place where we can turn for an exact statement of the amount of money we have appropriated this year to increase and carry on our capability for nuclear warfare.

Mr. PITTMAN. The capability for waging nuclear warfare?

Senator HOLLAND. Yes.

Senator MAGNUSON. You can get it out of the Defense Department.

Senator HOLLAND. No, you cannot. We can't tell. I have looked at it. I think even an approximate figure on which we could rely here would contrast our two activities in a way which would be helpful to the general public, and perhaps also to Members. I realize that when we are recognizing the possibility of such warfare by making such tremendous investments from the public wealth, we might as well recognize we too are subject to such attack.

FUNDS FOR RESEARCH

Senator MONRONEY. This would be particularly true, Mr. Chairman, in research, because I do not know how many hundreds of millions of dollars we are spending to make our weapons more efficient. Yet we are asking for $10 or $12 million for research on survival.

I do not know how we will ever acquire this in figuring that these things are one-way monsters. They are two-way monsters, and we

have to realize that. If we are fairly going to estimate the capability, that is, because nobody doubts Russia's capability, or our capability.

Senator HOLLAND. It is a very colorful way, I think, and a very understandable way, to emphasize the nature of this question. I saw as soon as Senator Monroney mentioned it, that it would be a very helpful thing for the public and Congress to see, because it would help them to understand if the two figures can be presented.

Mr. PITTMAN. We can provide you with figures.

Senator MAGNUSON. You can do that because you are from the Defense Department itself in a general way. Or else the Bureau of the Budget would know.

Mr. PITTMAN. Of course, there is some problem on providing figures on how much of the Defense budget is allocable to capacity for nuclear war.

Senator HOLLAND. He is in the Defense Department.

Senator MAGNUSON. Yes.

Mr. PITTMAN. We will give you figures on this and on research. I would guess that our research request is under 1 percent of the total defense research budget. Let me say on this point, if there is one area on which all of the scientific community are united on the subject of civil defense, it is that a far larger research effort is needed than has been yet undertaken, that it would be contributing in many directions, and that it has been the missing link in civil defense planning for many years.

(The information requested follows:)

ASSISTANT SECRETARY OF DEFENSE,
Washington, D.C., August 8, 1962.

Hon. WARREN G. MAGNUSON,
Chairman, Subcommittee on Independent Offices,
Committee on Appropriations, U.S. Senate.

DEAR MR. CHAIRMAN: This is in response to the request of your committee at the civil defense hearings for comparative data on the appropriations allocable to developing a capability to wage nuclear war and the proposed civil defense budget pending before your committee.

Any such estimate requires certain rough allocation judgments, because many defense budget items contribute to a capacity to wage nuclear war and to other defense purposes. However, a conservative estimate would put the cost of a nuclear war capability at a minimum of $12 billion for fiscal year 1963. The $233.7 million requested of the Senate Appropriations Committee for civil defense is less than 2 percent of the nuclear war cost.

With regard to research and development, the total DOD effort amounts to approximately $7.1 billion for fiscal year 1963. The civil defense research request totals $17.8 million, or 0.2 percent of the total defense research and development appropriations for fiscal year 1963.

I trust that this is responsive to the committee's request.

Sincerely,

STEUART L. PITTMAN.

EMPLOYMENT

Senator MAGNUSON. We have heard figures around here, but how many people do you now employ in civil defense in the Defense Department? In total?

Mr. PITTMAN. 1,148 is our present ceiling, and 1,041 is the present strength.

Senator MAGNUSON. 1,041?

Mr. PITTMAN. Yes, we could not recruit to our full ceiling strength as we were required to carry people remaining in Battle Creek on our payroll, until picked up by the Defense Supply Agency.

TOTAL EMPLOYEES IN WASHINGTON AND IN FIELD

Senator MAGNUSON. How many are here in Washington, and how many in the field?

Mr. PITTMAN. 432 are here in Washington, and 505 in the 8 regional offices, and 76 in the 3 schools, and 28 assigned to the Federal warning centers.

NATIONWIDE PERSONNEL SUPPORTED IN PART

Senator MAGNUSON. How many people do we support nationwide in the program that we pay part of the salary for, or reimburse the States for, or whatever we do?

Mr. DURKEE. 4,422, as of June 1, 1962.

Senator MAGNUSON. There you have a figure of about 5,500 in that, salarywise.

Mr. DURKEE. Salarywise only part of the salaries.

Senator MAGNUSON. Salarywise in the State and Defense effort?

Mr. DURKEE. Yes.

Senator MAGNUSON. Does it include volunteers?

Mr. DURKEE. No. All of these personnel are covered by the merit system.

Senator MAGNUSON. Yes. In the States most of them are.

Mr. DURKEE. There were 1,796 in the States and 2,626 in the political subdivisions as of June 1, 1962.

Senator MAGNUSON. Any further questions?

ADMINISTRATIVE COSTS OF STATE AND LOCAL GOVERNMENTS

Senator SALTONSTALL. The only question I have, Mr. Chairman, is just to make sure you asked to restore $6 million for section 205. What is that? I think we have said it, but I can't remember.

Mr. PITTMAN. That is the personnel and administrative costs of the State and local governments.

Senator SALTONSTALL. Oh, that is that part we talked about of $18 million.

Mr. PITTMAN. The $18 million.

Senator SALTONSTALL. Yes.

Senator MAGNUSON. That is the one on which we have had extensive floor debate.

RADIOLOGICAL DEFENSE EQUIPMENT

Senator ELLENDER. I would like to revert to the question I asked awhile ago, Mr. Chairman.

Senator MAGNUSON. Yes.

Senator ELLENDER. Once the monitoring stations are completed or constructed, how will they be manned? Will it be a continuing operation?

Mr. PITTMAN. Yes.

Senator ELLENDER. What will be the cost of it, and who will bear that?

Mr. PITTMAN. Most of the network will be the responsibility of the State and local governments. We will provide equipment and they will pay the cost of operating it. We will contribute some of the

training costs in that we will provide instructors and material for training.

Senator ELLENDER. Is that by agreement?

Mr. PITTMAN. No, we will just do it.

Senator ELLENDER. I am talking about the costs to be borne by the local people.

Mr. PITTMAN. How do we know they will do it?

Senator ELLENDER. Yes. How do you accomplish that?

Mr. PITTMAN. We have no recourse against them if they do not do it, except that we are engaged in a continuing joint project in which we have financial contributions to make. For the first time this year we are using our financial leverage, you might say, to bring about a coherent program at State and local, as well as on a national level. We require program papers to be submitted to see what they will do in their local program, and if they fail to carry out their share of the monitoring, or stocking of surveyed shelters, it will be grounds on which to deny funds.

Senator ELLENDER. In other words, in order to get their assistance to pay their share of the monitoring stations, you say to them, "If you do not do that we will deprive you of other moneys to operate other facets of this."

Senator HOLLAND. Will the Senator yield?

Senator ELLENDER. Yes.

LOCATION OF STATIONS

Senator HOLLAND. Didn't I understand you to say these monitoring stations will be located at spots like police stations and fire stations and airports, or installations where we have 24-hour personnel service already being rendered?

Mr. PITTMAN. That is correct.

Senator HOLLAND. So as to minimize the personnel duties and the extra personnel costs?

Mr. PITTMAN. That is correct. And the burden on the State and local governments for this purpose would not be intolerable by any means.

Senator ELLENDER. They like it if they do it that way.

Mr. PITTMAN. I would like to say in the reorienting of the civil defense program in the last year, we have had the problem of bringing State and local plans into coordination with Federal plans. The response has been excellent in most places. I am very concerned about the appearance, or the fact, at this juncture, that having painfully turned the nationwide civil defense effort around, we appear to be reverting to conditions of a year ago. There has been too much shifting in civil defense planning over the years, and it has undermined confidence in civil defense and in civil defense leadership at the Federal level. We are in danger, I think, of again creating doubts as to whether the Federal Government means what it says when it undertakes to set the national course in a certain direction. We have clearly set a course during the last 8 months.

Senator MAGNUSON. Any further questions?

HOME SHELTERS

Senator MONRONEY. Do I understand the rush to build a large number of individual fallout shelters, which were being built on the time-payment plan, and so forth, has pretty well tapered off in relationship to the bigger program you have now?

Mr. PITTMAN. Yes. Certainly the home shelter preoccupation of last fall has faded. I think it will show itself again, and in a somewhat more sensible fashion, as some people act on a preference for finding a solution in their backyards and basements rather than walking some blocks to a community shelter.

Of course, it is very much alive, with the rural population, where distances are too great to solve their problem with a system of community shelters, so home shelters would be the best answer in some areas.

Senator MONRONEY. You could possibly put out a do-it-yourself program.

PAMPHLETS ON DESIGN OF HOME SHELTERS

Mr. PITTMAN. We have done it. We have distributed 8 million pamphlets containing eight designs which bring down the cost to $100 and $200. As you know, the home shelters offered on the market by manufacturers a year or two ago have been running more like $1,500. We found you can do it at very much lower cost if you know how and are willing to do some work yourself.

Senator HOLLAND. Is there much difference in detail between a shelter in plains country for this purpose, and a tornado shelter? Is there very much difference in cost?

Mr. PITTMAN. It is a very similar problem. I would guess the costs would be rather close.

Senator HOLLAND. Could not the same excavation and construction take care of both needs?

Mr. PITTMAN. I believe in some parts of the country one of the motives of people building these shelters will be incidentally to protect themselves against natural disasters.

ROOT CELLARS

Senator MAGNUSON. When I was a kid we called it the root cellar, where we stocked all of our vegetables and put dirt on top of it.

Mr. PITTMAN. Yes. That is where the Russians have an advantage over us. They apparently have a tremendous number of these so-called root cellars in their rural areas. We used to, but now we have ice boxes.

Senator SALTONSTALL. In New England we still have root cellars.

Senator ELLENDER. You are behind the procession.

Senator SALTONSTALL. Oh, no.

Senator MAGNUSON. Thank you very much.

Mr. PITTMAN. Thank you, Mr. Chairman.

Senator MAGNUSON. I wish one or two of you Department of Defense officials would stay if you can, when we hear the Department of

Health, Education, and Welfare, on this medical stockpile, so if we have any questions as to overlap or liaison, we can ask them.

Off the record.

(Discussion off the record.)

COMMUNICATIONS

Senator MAGNUSON. Along with other members of the subcommittee and Senate, I have received a considerable number of telegrams, letters, and communications on the subject of civil defense. These come from throughout the country and represent the thinking of our Governors, State and local civil defense officials, and interested citizens. I think they reflect the concern of the country on this most serious problem and will place them in the record at this point.

(The communications referred to follow:)

AUGUST 4, 1962.

DEAR SENATOR MAGNUSON: We urge you to concentrate your efforts toward securing adequate civil defense funds for the State of Washington civil defense program. Thank you.

Mrs. VIRGINIA DALLAM,
Civil Defense Chapter, Department of Washington American Legion Auxiliary, Wenatchee, Wash.

WASHINGTON STATE DEMOCRATIC COMMITTEE,
Olympia, Wash., August 2, 1962.

Hon. WARREN G. MAGNUSON,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MAGNUSON: I've been discussing the matter of the civil defense appropriation with General Llewellyn, State civil defense director, and I am personally concerned that there are contradictions in our program if we do not maintain a strong civil defense appropriation.

It seems to me that at the same time we push a strong foreign policy abroad that we have to be prepared to protect our citizens at home.

I am sure you will do what you can to restore drastic House cuts to provide civil defense funding more in line with President Kennedy's program; but as a minimum to maintain past levels of expenditures and continue ongoing programs.

Sincerely,

HERB LEGG.

CIVIL DEFENSE,
Yakima, Wash., August 2, 1962.

Hon. WARREN G. MAGNUSON,
U.S. Senate, Washington, D.C.

DEAR SENATOR MAGNUSON: The lack of appreciation of the Congress for the necessity of continuing the civil defense shelter program is a matter of great concern to me. In Yakima there are less than 10,000 shelter spaces with a protection factor of 100 or more. Protection for any appreciable part of the population can be achieved only through the shelter incentive program.

Your assistance in having the cuts that were made in the DOD–OCD budget restored in its entirety, will be greatly appreciated.

Sincerely,

A. E. EVERIST,
Director, City of Yakima Civil Defense.

YAKIMA COUNTY CIVIL DEFENSE,
Yakima, Wash., August 2, 1962.

Hon. WARREN G. MAGNUSON,
U.S. Senate, Washington, D.C.

DEAR SENATOR MAGNUSON: There is a principle in military planning to the effect that one must be prepared to protect himself against any action that the enemy is capable of taking. I think no one questions the capability the Russians have of bombing, either with manned bombers or ICBM's all vital areas in our country. Having this capability we should take such steps as are necessary to protect the population and property of the Nation.

Civil defense, being in its infancy, is not generally understood by the public nor by lawmakers. It is the only agency that is committed solely to the task of protection of the civilian population in time of war. Shelter is the only protection from fallout. Without funds to continue the work started in the shelter program, it will die on the vine.

Your support is requested, to have the funds which were cut from the DOD-OCD budget restored in their entirety. I believe this is vital to the defense of our Nation.

I am enclosing comments that I made to the U.S. Civil Defense Council regarding the function of civil defense.

Sincerely,

L. G. CRONKHITE, *Director.*

COMMENTS OF L. G. CRONKHITE, DIRECTOR, YAKIMA COUNTY CIVIL DEFENSE, YAKIMA, WASH., APRIL 4, 1962

Attention is invited to the many annexes to the national plan for civil defense which specifically assigns to the many departments and agencies of the Federal Government certain responsibilities. In many cases these departments can and do perform these functions within the scope of their day-to-day operations. In order to coordinate the activities of these departments and utilize their services to the best advantage, liaison at the local level will have to be established. If these departments do not recognize that their effectiveness in a national emergency would be greatly impaired by not operating as part of a team, they will not attempt to become part of the team. National drills should incorporate problems to be solved by each department and that they report through local civil defense.

As things now stand, it is like an army unit of several components, each having the general plan but each operating without coordination. The artillery fires when it feels like it—air support is furnished at points and times it decides are best and the poor doughboy gets hell because the attack does not progress satisfactorily. We in civil defense are the doughboys in today's deal and I'm getting tired of having to keep a pillow strapped on my rear end to absorb the kicks because others do not recognize or put into practice the principle of "a coordinating agency for existing services."

ARLINGTON, WASH., *August 2, 1962.*

Hon. Senator MAGNUSON,
Washington, D.C.

DEAR WARREN: Since I sponsored the bill in the house for the continuity of government as a part of civil defense I am vitally concerned about supporting appropriations, which I notice has been substantially reduced.

I believe I am correct in that you are a member of the committee who will consider the appropriations in the Senate. It is vital and concerning to us on the Pacific coast that we are not left wanting in the area of defense.

You are undoubtedly aware of the strategic position and therefore the need of this program. People I have contacted feel the urgency and necessity of full support in appropriating the money needed for continuance of this department's activities.

I feel confident you will give this your considerate attention and support.

Sincerely,

HENRY BACKSTROM.

PACIFIC COUNTY CIVIL DEFENSE COUNCIL,
South Bend, Wash., August 2, 1962.

Hon. Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.

DEAR SIR: Pacific County commissioners go on record favoring the restoring of President Kennedy's request for financing the civil defense program including the incentive shelter program eliminated by the House Appropriations Subcommittee.

Yours truly,

D. J. GILLIES, *Director.*

KITTITAS COUNTY CIVIL DEFENSE OFFICE,
Ellensburg, Wash., August 1, 1962.

Hon. WARREN G. MAGNUSON,
U.S. Senator, Washington, D.C.

DEAR SENATOR MAGNUSON: As civil defense director of Kittitas County, I want to urgently request that you do everything in your power to have the national civil defense budget restored in its entirety.

A great deal of work, and considerable expense, has already gone into the new shelter program in this county. To have it curtailed now would be a serious blow to public acceptance of civil defense itself, which has reached a gratifying new high since the inception of the national shelter program.

Our local office here has received much adverse comment from the general public to the recent action of the House Appropriations Committee. Apparently, the feeling is that they have been badly let down by this action.

This action will also greatly impair our local civil defense program and operation, in that former plans and ideas have been completely revised over the past months in favor of the new concept of community shelters.

I know that all of us in civil defense, and a majority of our citizens in this county will greatly appreciate every effort you can put forth to keep the national shelter program going the way our President intended it to.

Respectfully yours,

J. AL JOHNSON,
Director, Kittitas County Civil Defense.

OLYMPIA, WASH., *July 31, 1962.*

Hon. WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.

DEAR SENATOR: We are concerned to hear that "shelter area plans are doomed by bill defeat."

This will affect a number of schools, hospitals, and other public buildings which could include fallout shelters if this bill were passed by Congress.

Our group of women believe firmly in fallout areas in Thurston County—thus our concern.

Very truly,

Mrs. F. N. DAVIS,
Chairman, Thurston County
Women's Civil Defense Committee.

VANCOUVER-CLARK COUNTY CIVIL DEFENSE,
Vancouver, Wash., August 3, 1962.

Re Senate Budget Subcommittee.

Hon. WARREN G. MAGNUSON,
U.S. Senate Office Building,
Washington, D.C.

DEAR SENATOR MAGNUSON: As civil defense director of Vancouver and Clark County, Wash., I have received inquiries as to the effects of the recent action taken in the House in regard to the drastic reduction in the proposed civil defense appropriations and the withholding or withdrawing of funds which had been previously budgeted for civil defense.

Many of these people who have contacted me feel that it is desirable that funds be available to continue the national shelter survey and the stocking of existing shelters and that public support of a practical fallout-protection program predated the Berlin crisis. I believe that in Clark County a majority of the people want us at the Federal, State, and county levels to continue to develop a community shelter program.

Therefore, I would like to ask you, as chairman of the Senate budget subcommittee, to consider the restoration of funds which have previously been made available to civil defense.

Sincerely,

JOHN H. RODMAN,
Director, Vancouver-Clark County Civil Defense.

AMERICAN LEGION AUXILIARY,
DEPARTMENT OF WASHINGTON,
Kennewick, Wash, August 1, 1962.

Senator MAGNUSON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MAGNUSON: Our Department of Washington, American Legion Auxiliary, is very interested in civil defense. We urge you to place concentrated action to secure favorable acceptance of the civil defense program for the State of Washington so that that program can be continued with adequate funds to carry on in the State.

Sincerely,

Mrs. MERRILL SIMMELINK,
Department President.

SEATTLE ARCHDIOCESAN COUNCIL OF CATHOLIC WOMEN,
Olympia, Wash., August 2, 1962.

Hon. WARREN MAGNUSON,
Senate Office Building, Washington, D.C.

DEAR SENATOR: In behalf of the Seattle Archdiocesan Council of Catholic Women, the Governor's Advisory Council for the State of Washington, and the county civil defense council, of which I am a member, we would like you to endorse the bill now in front of Congress concerning funds for civil defense and the future safety of our country.

I sincerely hope you will take our request into consideration. Thank you kindly for your time and effort.

Yours truly,

Mrs. GEORGE BARLOW,
Civil Defense Chairman.

WAHKIAKUM COUNTY,
DEPARTMENT OF CIVIL DEFENSE,
Cathlamet, Wash., August 2, 1962.

Re President Kennedy's proposed budget for civil defense.

Hon. WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.

DEAR SENATOR MAGNUSON: As you likely well know, we out here in Washington are well aware of the importance of a strong civil defense organization, and naturally a well-financed one.

I am writing particularly in regard to the recent action of Congress when the President's proposed budget for civil defense was drastically cut. We here at home in the State civil defense program, from the State director down to the county civil defense directors are really concerned over this action and we earnestly request that you use your best effort for the restoration of that part of the President's proposed budget which was deleted. As one Army officer put it, "The Army could not long endure without a strong civilian support."

Sincerely and respectfully yours,

R. M. BUNN,
Wahkiakum County Civil Defense Director.

WASHINGTON, D.C., *August 8, 1962.*

Hon. WARREN G. MAGNUSON,
Chairman, Subcommittee on Independent Offices, Senate Committee on Appropriations, Senate Office Building, Washington, D.C.:

The House of Delegates, American Bar Association, today at San Francisco passed the following resolution:

Whereas the American Bar Association has, since 1957, urged the Federal Government to assume responsibility for the development of adequate plans for survival and continuity in the event of atomic attack upon the United States; and

Whereas civil defense is an essential and inseparable part of national defense: Now, therefore, be it

Resolved, That the American Bar Association respectfully urges the President and Congress to initiate a comprehensive civil defense program, providing leadership and appropriate financial support to State and local authorities as may be necessary, to the end that in the event of atomic attack upon the Nation (1) traditional functions of law and government are continued without interruption, (2) martial law and military force may support but shall never supplant civilian authority in governing the civilian population, (3) sufficient protection is provided for the moment of attack to assure survival of a citizenry in mass, and (4) careful and adequate plans are made for postattack survival, readjustment, and reconstruction.

JOHN C. SATTERFIELD,
President, American Bar Association.
RUFUS KING,
Chairman, American Bar Association Committee on Atomic Attack.

U.S. SENATE, COMMITTEE ON COMMERCE,
Washington, D.C., August 7, 1962.

Senator WARREN G. MAGNUSON,
Chairman, Appropriations Subcommittee on Independent Offices, Senate Office Building Intramural.

DEAR SENATOR MAGNUSON: Mr. W. A. Kengla, director of civil defense of Austin, Tex., is very much concerned over the action of the House committee in reducing the amount of funds requested by the President for the civil defense program for the coming year.

He has furnished me the attached statement of his own views and those of other citizens of Austin, Tex., who he has interviewed.

I submit them for the consideration of yourself and the other members of your subcommittee.

Yours very sincerely,

RALPH W. YARBOROUGH.

A local community must turn to its Federal Government for consistent guidance, leadership, information, and support if it hopes to be correct and significant in providing a practical survival capability for its citizens.

All of the guidance which we have received from the President, the Joint Chiefs of Staff, the House Committee on Government Operations, and the Office of Civil Defense, Department of Defense, assure us that our national civil defense program is essential to the survival of our Nation—as a highly significant factor of our national defense.

Hence, when the same Federal Government is unwilling to financially sustain the guidance, leadership, and information which it promulgates—the entire program stands to lose a decidedly major portion of its significance in the minds of our citizens. I assure you that these minds are confused enough already concerning civil defense.

The following comments, made by Austin-Travis County citizens, concerning this reduction are quite revealing. Some of them are also difficult to refute.

1. "Our President and our Congress have access to more, and better information, than any man, organization or nation within the free world—on the subject of nuclear attack. They certainly must lack confidence because they both go to extremes to avoid facing the issues of a survival capability for the American people."

2. "We seem to be doing plenty about putting our missiles in underground silos. We protect our officials with underground control centers. What are we doing to protect our people?"

3. "The Federal Government knows civil defense is hopeless—it just doesn't have the courage to admit it to the people."

4. "Civil defense is just a political 'kicking can.' The Federal Government is afraid to face the people with the facts. They just hope the people will accept the panacea of an incomplete civil defense program and forget about the threat of nuclear attack."

5. Nothing can be done. Our Federal Government can't decide where to start, in the development of a survival capability for our people."

6. "We can't develop an adequate survival capability here. Our Federal Government can't, or won't, produce the kind of guidance and support we require."

7. "Civil defense is a Federal boondoggle. They use it as an 'adjuster for budgets.'"

8. "The Federal Government is as frightened and confused as we are."

9. "Where can we find the truth about the feasibility of an effective survival capability for our people? Our Federal Government has been working on it for years with no significant results—we have been—and will, probably, continue to be—'sitting ducks' in the interim."

10. "Congress is taking another means to humiliate and 'discipline' our President—through crippling his proposal."

11. "Must the President and Congress bicker and procrastinate while the people stand unprotected?"

12. "This redutcion is callous political expediency with no consideration for the protection of the American public."

13. "What did the Holified committee have to say about this reduction? Were they consulted in detail?"

U.S. SENATE,
COMMITTEE ON LABOR AND PUBLIC WELFARE,
August 6, 1962.

Hon. WARREN G. MAGNUSON,
U.S. Senate, Washington, D.C.

DEAR SENATOR MAGNUSON: Governor Notte and other important officials in my State have informed me of their strong belief that the $18 million requested by the President for personnel and administration of the civil defense program be approved.

I am writing to endorse their views and to express my own personal hope that your subcommittee will restore the cut made by the House for these particular funds.

Warm regards.

Sincerely,

CLAIBORNE PELL.

U.S. SENATE,
Washington, D.C., August 2, 1962.

Hon. WARREN G. MAGNUSON,
Chairman, Independent Offices Appropriations Subcommittee,
New Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: I know you will be interested in the enclosed copy of a wire which I have just received from Gov. Richard J. Hughes of New Jersey. I know that you and your subcommittee will want to give the Governor's views every consideration.

Kind regards.

Sincerely,

CLIFFORD P. CASE, *U.S. Senator.*

AUGUST 1, 1962.

Hon. CLIFFORD P. CASE,
Senate Office Building, Washington, D.C.:

Congressman Albert Thomas' subcommittee report on the Federal civil defense budget will affect adversely every local county civil defense program in New Jersey as well as the State program. Secretary Pittman goes before Senate subcommittee headed by Senator Magnuson on August 6 to request restoration of cut. Request your assistance in this matter.

RICHARD J. HUGHES,
Governor of New Jersey.

MILITARY OPERATIONS SUBCOMMITTEE
OF THE COMMITTEE ON GOVERNMENT OPERATIONS,
Washington, D.C., August 6, 1962.

Hon. WARREN G. MAGNUSON,
Chairman, Independent Offices Subcommittee,
Committee on Appropriations, U.S. Senate,
Washington, D.C.

DEAR SENATOR MAGNUSON: I strongly urge your subcommittee to reinstate civil defense funds deleted by the House in voting out the independent offices appropriation bill.

In the course of the House debate on H.R. 12711, I was allowed a few minutes to discuss the unfortunate consequences of cutting the requested civil defense budget from $235 to $75 million, a 68-percent cut. Congressman Price, of Illinois, also presented an important statement along this line. Our remarks will be found at pages 13995–13996 and 14003–14005 of the Congressional Record for July 30, 1962.

As chairman of both the Joint Committee on Atomic Energy and the Military Operations Subcommittee of the House Committee on Government Operations, I have studied civil defense matters intensively and extensively over a period of years. Within the past 7 years, these two committees have issued about a dozen reports in this field.

Civil defense has been, for the most part, an unpopular and neglected subject. It is my strong and sincere conviction, however, that the Federal Government must act decisively in this field to give the American people a chance to survive and continue the Nation's existence in case of nuclear attack.

President Kennedy, who wrote to you a few days ago on the civil defense budget, recognizes the crucial importance of civil defense. The program he set in motion last summer is well underway, effectively operated, and producing results. A budget cut would merely delay and disrupt what must be done, sooner or later, for the protection of the people; and in my view, delay is dangerous.

It should be emphasized that the House cut in civil defense funds directly affects ongoing programs. As you know, authorizing legislation for the shelter incentive program has not yet been enacted, and consequently, $460 million of the original $695 million proposed for civil defense this year are not now before your subcommittee. The remaining $235 million are necessary to continue important programs underway and to complete the national shelter survey largely financed with 1962 funds.

In equipping the shelters already identified for effective use by the public, a great deal more must be done, particularly by State and local civil defense organizations, who will not be able to respond to the challenge of large and continuing tasks unless the necessary funds are forthcoming. At this stage,

with the substantial amounts of time, money, and effort already invested in a fallout shelter program, it is not good business or good sense to fail to exploit the resources that are at hand for shelter purposes.

I should make one other point. The House committee deleted the bulk of the funds in the expressed belief that more research is needed for so costly and complex a problem. As Congressman Price pointed out on the floor, research is needed in certain areas, but research is not needed to establish the fundamental fact that shelter is the only feasible means of protection against radiation. Using existing structures or increasing fallout shelters in new buildings depends on techniques well known in architect-engineering circles. In fact, the national shelter survey is being conducted by some 2,000 architect-engineer firms under the supervision of the Army Corps of Engineers and the Navy Bureau of Yards and Docks.

Enclosed is the most recent report on civil defense issued by the Military Operations Subcommittee under my direction. While we have been critical in certain respects of the administration's program, our criticism has been in the interest of an improved and broader program, encompassing protection against blast and thermal as well as fallout effects. However, our report recognizes that the present program is a valuable start, and certainly we owe it to the American people to take civil defense seriously and to provide congressional support for an effective program.

Sincerely yours,

CHET HOLIFIELD,
Chairman, Military Operations Subcommittee.

MARICOPA COUNTY AND CITY OF PHOENIX
CIVIL DEFENSE JOINT COUNCIL,
Phoenix, Ariz., May 15, 1962.

Hon. CARL HAYDEN,
U.S. Senate,
Washington, D.C.

MY DEAR SENATOR: Congressman Carl Vinson, the Armed Services Committee, is scheduled to commence his hearings soon on the Department of Defense appropriation which will include recommended funds for civil defense.

As chief deputy director, Maricopa County and city of Phoenix civil defense-joint council, it is urged that you give your support toward obtaining the full amount of the appropriation recommended in the current budget.

Federal guidance and the required financial support are badly needed to acquire the strong nonmilitary defense posture needed to insure the survival of the civil population. It appears to me that only the Federal Government can adequately provide the direction for the common defense of the country. The command administrative structure of civil defense could follow those lines now used with the operation of the National Guard in its relationship to the State and local levels. Such an arrangement would greatly enhance its status and provide for posture and firm direction in attaining its mission.

My kindest and most cordial personal regards,

Sincerely yours,

WILLIAM G. ELDRIDGE,
Chief Deputy Director.

GREENVILLE, ALA., *August 2, 1962.*

Senator WARREN G. MAGNUSON,
Washington, D.C.:

This is to urge you to oppose the report which goes before the House within the next few days to cut the civil defense budget. As a citizen it is my opinion that this program is a necessity to the future protection and well being of our country, and it should be termed as such at all costs.

Any action you can take to defeat this cut will be a step toward preserving the people of this great country.

Sincerely,

HOWARD HAYGOOD.

GOVERNOR'S OFFICE,
Sacramento, Calif., August 6, 1962.

HON. WARREN G. MAGNUSON,
Chairman of Subcommittee on Appropriations for the Senate,
Senate Office Building, Washington, D.C.:

My radiological defense advisory committee has informed me regarding the urgency of the matter now pending before your committee concerning appropriation for continuation of the civil defense shelter program. I strongly urge your committee to restore this appropriation to the level recommended by President Kennedy.

EDMUND G. BROWN, *Governor.*

ALAMEDA, CALIF., *July 31, 1962.*

HON. WARREN G. MAGNUSON,
U.S. Senator, State of Washington,
Senate Office Building, Washington, D.C.

DEAR MAGGIE: As you may recall, I have been with the national civil defense program since July 1961. I went from Olympia to the national operational headquarters in Battle Creek and then to Washington, D.C., when the offices were transferred there. In February, I transferred to the civil defense training center here in Alameda.

During this past year, I have studied intensively the history, programs, and development of civil defense in our country; as I have been working—in the national office and in the civil defense training center—I have become very much convinced that Secretary Pittman has presented a sensible, attainable program to carry out the President's plan for civil defense for all the people. This is actually the first time that such a comprehensive, long-range program has been presented by the national civil defense agency.

The city of Alameda is typical of many other cities in the United States, I am sure. It has never seemed to support civil defense as such; the local paper has been very critical of the national program in the past. The Pittman proposals did make sense, and people were just beginning to be sold on the idea. Enclosed are some articles you might like to read. I would tend to believe that they are examples of what other local papers are printing, in all parts of the United States.

Although this is not Washington State, I am sure that the recent action of the House Appropriations Committee will be just as confusing and disheartening to the people of our own State as it is described in these articles. As the Elmo Roper poll showed, people have become interested in civil defense to the extent that they will support it nationwide.

I understand that your Appropriations Committee will consider this matter next Monday. I certainly hope you will do all you can to restore as much of the President's program as possible, especially the funds for providing shelter in Federal buildings. If Congress, representing the people's government, does not lead the way by making provision for shelters in the Federal buildings, then it does not believe in civil defense. This is tragic for all of us.

Best wishes to you and all your staff.

Sincerely,

GRACE BELL.

[From the Alameda (Calif.) Times-Star, July 30, 1962]

Coordinator Ward Says—

JFK SHELTER PLAN BAN "DISASTROUS"

The House appropriations committee's action in rejecting President John F. Kennedy's $568 million mass shelter construction was termed "disastrous" this morning by William Ward Jr., region II coordinator for the California Disaster Office.

Unless the budget bill is overruled when it is reported to the House, this would kill the proposed "shelter incentive" program, according to Ward.

The funds would be used for construction of a 1,000-person fallout shelter in the basement of the school's new gymnasium on which construction is expected to begin by the end of the year.

Under the shelter incentive program the bill would provide $25 per shelter space or for the construction of the shelter, whichever is less.

The bill was designed to encourage the construction of shelters in schools, public buildings, hospitals, and other nonprofit organizations.

Current studies under the national fallout shelter program have revealed that at present there is shelter for only an estimated 1,056 persons in Alameda, excluding those who might find shelter in the Posey Tube and at the Alameda Naval Air Station.

Civil defense authorities had hoped that under the incentive program the number would greatly increase.

At present NFS surveys are in the phase II stage during which buildings found to meet basic shelter requirements in phase I are being studied in greater detail.

A. L. Warren, contract project engineer for Indenco Engineering, of San Leandro, the firm conducting the Alameda study, said this morning that phase II has been completed, except for the Posey Tube and the Naval Air Station.

However, he said that results won't be available for several weeks until the Navy processes data compiled by the survey team.

During phase I, Indenco found 34 Alameda structures that loomed as potential shelters, but closer studies have narrowed this number down considerably.

Neil Clark, city shelter representative, said that the estimate of 1,056 spaces is based on 7 structures which have met the requirements for providing the minimum protection against radioactive fallout without alterations.

He added that fallout shelter licenses—permission to use the structures for a shelter—have already been executed with five.

Under the fallout shelter program Federal funds would be used to bring other buildings up to the minimum fallout protection standards.

DEPARTMENT OF DEFENSE,
OFFICE OF CIVIL DEFENSE,
CIVIL DEFENSE TRAINING CENTER,
Alameda, Calif.

[From the editorial page of the Alameda (Calif.) Times-Star, July 28, 1962]

WHY WAS JFK'S FALLOUT SHELTER PROGRAM REJECTED?

The action of the House Appropriations Committee yesterday in rejecting the President's fallout shelter program had as its excuse the following statement:

"The committee believes that before the Nation embarked on an extensive fallout shelter construction program involving billions of dollars, more study and research should be applied to the vast and complex problems involved."

Such reasoning as this is peculiar indeed in the light of what is already known about the effects of atomic weapons and the protection that can be taken against them. In fact, it is so peculiar that it makes sense only if the committee has acquired knowledge which the President and his advisers did not have when the President's program for shelter construction was announced.

And that possibility is so remote and so improbable as to be completely fantastic. For if such new knowledge did exist, it would certainly be known to the President, and in that case it is a virtual certainty that another course would have been taken than to have the House committee kill the program by means of a vote.

Why then did the committee kill the program? What was the true reason?

It doesn't make sense that the committee really felt the serious need for more study and research before approving the program for building fallout shelters.

It has been long established that if an atomic war did break out, our people—if there were enough shelters—could survive in far larger numbers than would otherwise be the case. Even though millions would die, there would be more millions able to carry on.

It is also now well established that the Russians, who have been disclaiming any shelter program, have actually been constructing shelters in sufficient quantity to provide protection for many of their citizens.

And at the same time, Communist agents have been agitating in this country against any shelter program whatsoever on a variety of grounds, one of the most novel of which is that if we had a truly effective shelter program, it would actually contribute to a war psychology by giving us a feeling of security.

Such a thought as that is amusing in a way. Translated into more personal terms the logic of it is that a man should not know how to defend himself with his fists because if he does, then he will be more likely to get into fights. And that, of course, is nothing other than a conditioning for the "better Red than dead" attitude which, if the majority of us were to have it, would result in the quick surrender of the country to communism.

In view of such facts as these the action of the committee becomes so extraordinary that one cannot help wondering how many of its members will be retired to private life in the election this fall. For whatever the real reason behind the committee's rejection may be, it cannot be a sound one.

JULY 25, 1962.

Re civil defense appropriation.

Senator CARL HAYDEN,
U.S. Senate, Washington, D.C.

DEAR CONGRESSMAN: I am writing you and a few other key congressional leaders, to express a point of view which needs expressing, and do so as a very active CD chairman for a homeowners association (800 to 1,000 persons), a shelter owner, the wife of a nuclear engineer, and a busy mother of four young children. Although I am not from your State, I feel that this matter is above and beyond regionalism.

Are most people in favor of CD expenditures? Definitely yes, and my answer has basis in fact. Many people of my acquaintance are putting food, clothing, camping supplies, and radiological equipment in a shelter area, while awaiting congressional approval of CD funds for community shelters. They feel that community shelters are the answer, and are waiting for them to be built, regardless of what the vocal minority has to say. The resumption of Russian testing might be an additional catalyst for the indecisive.

Is Congress in doubt as to the public's feelings on this matter? Perhaps. Most folks are not strongly motivated to write urging approval of a matter they are so sure will be passed, and which is so in accordance with their wishes. However, with a little urging from you, they might be persuaded to write.

Are shelters accepted as a part of our way of life now? Again, yes. Previously, the subject was a touchy one, but not so much so now, for a number of reasons:

(1) There is still great interest in shelters and shelter "stays"; I speak from practical experience. Since the construction of our backyard underground shelter, our ordinarily quiet street is very busy. People are always asking us about our shelter, wherever we go. (When are you having an open house? What is your ventilating system like? How are you stocking it? Is it readily accessible? etc.) Interest has been steady and sustained. In fact, people have bordered on being pesky at times.

(2) Most of the individuals with whom I have spoken are in favor of shelters, both private and community. In fact, I would conservatively estimate that the "anti" element composes less than 5 percent of the total. People think shelters are sensible, and a Gallup poll a year ago indicated that 65 percent of the population favored them—I would venture to say that the percentage would be even higher now.

(3) Just as TV had opportunists blocking its progress, so have shelters. Now the shelter salesmen have settled down to steady respectable business practices, thanks to the establishment of Government standards, and a balance of sorts has been achieved. The fakes have been weeded out, and thrown by the wayside. Building permits are no longer an accurate gage of interest in shelters, since Yarmolinsky's yellow book featured prominently the sandbag shelters, which I cannot believe require permits for construction. People are just beginning to be less reluctant to buy (New York CD show coming up this fall will tell the tale) and they are a little more confident about getting a good product.

(4) For a bit of levity, might I comment that when shelters reach the comic strips they are "in" as part of our way of life. Witness "Hubert" of the Sunday papers a fews weeks ago, as one of many examples.

The point of my letter is this: I would hate to see legislation that I believe most people honestly favor be defeated because Congress was in doubt as to the public's real feelings; in all sincerity, I hope you plan to back CD appropriations.

Very truly,

Maral A. Johnson,
Mrs. LOERING M. JOHNSON.

Tariffville, Conn.

ST. JOHNS COUNTY CIVIL DEFENSE COUNCIL,
St. Augustine, Fla., August 6, 1962.

Hon. Senator MAGNUSON,
U.S. Senate Office Building,
Washington, D.C.

DEAR SIR: I am very disappointed with the action taken by the House Subcommittee on Appropriations with reference to the administration's budget for civil defense. I appeal to you to take a careful look at this and to use your influence to restore these appropriations. Unfavorable action by Congress at this time will further decrease public interest in civil defense and will have adverse effect on State and local appropriations.

I think that the following is very good and expresses my views:

"What reasonable action can we take now to assure the survival of our Nation should that dark day of nuclear attack ever come? An essential part of the answer to that question is a system of fallout shelter space in every community of our Nation including, certainly, our community. And this is the reason for a fallout shelter program: To provide a shield across the Nation that would save millions of lives if we should be attacked with nuclear weapons * * *. American lives that could save and rebuild the United States."

Thanking you for your attention to this matter, I remain,

Yours truly,

FRED V. WILLIS, Jr.,
Director, Civil Defense, St. Johns County.

I am enclosing several extra copies of this for your subcommittee. I strongly urge you to take a careful look at the facts before you consider any reductions in the proposals discussed above.

BOARD OF COUNTY COMMISSIONERS,
BROWARD COUNTY,
Fort Lauderdale, Fla., August 3, 1962.

Hon. Senator MAGNUSON,
Chairman, Senate Subcommittee, U.S. Senate,
Washington, D.C.

DEAR SENATOR MAGNUSON: Unfavorable action by Congress on the civil defense budget requests at this time will certainly curtail the program at the local level.

Lack of interest at the Federal level can prevent completion of local objectives and responsibilities, while action at the State and local level is a necessary ingredient in any effective civil defense effort.

The goal of truly nationwide protection cannot be achieved without a meaningful Federal program.

I, therefore, wish to urge you to give the proposed Federal shelter incentive and civil defense program your full and vigorous support.

Sincerely,

OLIVER F. LOVENDAHL,
Director, Broward County Civil Defense Coucil.

OFFICE OF CIVIL DEFENSE,
Town of North Andover, Mass., May 29, 1962.

Senator CARL HAYDEN,
Chairman, U.S. Senate Committee on Appropriations,
Senate Office Building, Washington, D.C.

DEAR SENATOR: I am a volunteer local civil defense director who has been associated with the civil defense program for many years, probably motivated by a sincere concern for the welfare of the people of my community and the need for a strong local civil defense in terms of supporting a national interest.

It is my strong conviction that the current leadership in the Pentagon is headed in the right direction. For the first time policies and programs are being developed which, in my opinion, will make civil defense a more meaningful organization with real operational capability.

I could elaborate at greater lengths as to my reasons for making such a statement; however, let me assure you that my view is the well-founded view of an experienced director who also has some 19 years of military background and a successful business career.

I do not come to these conclusions quickly nor make comments such as this lightly.

May I urge you and your committee members to lend every support to this program as it is currently being constituted. Your interest and leadership is most deeply appreciated.

Yours sincerely,

DEWEY A. DYER,
Director, Civil Defense.

MINNEAPOLIS, MINN., *August 8, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

Minneapolis officials urge restoration of Defense Department's recommended civil defense appropriation. Imperative that complete civil defense program be accomplished at the local level. Your support will assist us in meeting our total responsibility during civil defense emergency.

Mayor ARTHUR NAFTALIN.

CITY OF ST. PAUL BUREAU OF CIVIL DEFENSE,
St. Paul, Minn., August 3, 1962.

Hon. WARREN G. MAGNUSON,
Chairman, Senate Subcommittee on Independent Offices Appropriations,
New Senate Office Building, Washington, D.C.

DEAR SENATOR MAGNUSON: Mr. Steuart L. Pittman will appear before your subcommittee on August 6 to testify concerning the administration's budget and support of the national shelter program.

As a local civil defense director who is now engaged in carrying out the Federal program, I have a vital concern to see that the Federal Office of Civil Defense, Department of Defense, budget is increased over fiscal year 1962 so that my city council is aware that the Federal Government is taking the lead not only in the program but in appropriations in support of that program.

I hope that you will support Mr. Pittman's request to restore the cuts made by the House Subcommittee on Independent Offices Appropriations.

Sincerely yours,

L. W. MARSH,
Director, St. Paul Bureau of Civil Defense.

COUNTY OF RAMSEY,
DEPARTMENT OF CIVIL DEFENSE,
St. Paul, Minn., August 3, 1962.

Hon. WARREN G. MAGNUSON,
U.S. Senator,
Senate Office Building, Washington, D.C.

DEAR SIR: Please be advised that I support Secretary Pittman's civil defense program and request that his proposed budget be favorably considered by your subcommittee.

We on the local level cannot hope to develop a fallout shelter capability without the necessary Federal financial support which the Thompson committee deleted.

Respectfully yours,

LORIN S. ALLEN, *Director.*

STATE OF MISSOURI,
CIVIL DEFENSE AGENCY,
Jefferson City, August 2, 1962.

Hon. WARREN G. MAGNUSON,
U.S. Senator, Washington, D.C.

DEAR SENATOR MAGNUSON: The Missouri Civil Defense Agency and civil defense agencies of the political subdivisions of Missouri will strongly support the position of Stuart Pittman, Assistant Secretary of Defense for Civil Defense, in seeking restoration of House cuts in civil defense appropriations.

If allowed to stand, the House action will wipe out all gains made in the civil defense field in Missouri in the last 2 years. I am sure the same situation would be true in your home State and many other States.

It is sincerely hoped that your subcommittee will do its best for our total civil defense program by urging the restoration of the civil defense appropriations which were slashed by the House of Representatives.

Sincerely,

DEAN LUPKEY, *Director.*

NUCLEONICS,
New York, N.Y., August 8, 1962.

Hon. WARREN G. MAGNUSON,
Chairman, Independent Offices Subcommittee, Senate Appropriations Committee, Senate Office Building, Washington, D.C.

DEAR SENATOR MAGNUSON: I enclose a statement for the consideration of your committee in connection with the public hearings on the civil defense budget requests to be held August 14. The statement contains my personal views as a physicist and a private citizen in a opposition to the appropriation of public funds for a national shelter program. I would welcome the opportunity to appear before the committee in person to present the statement and to answer any questions the committee might have with respect to it.

Respectfully yours,

HAROLD L. DAVIS, Ph. D.
Associate Editor, Nucleonics.

STATEMENT OPPOSING OFFICE OF CIVIL DEFENSE APPROPRIATIONS

Mr. Chairman and members of the committee, my name is Harold L. Davis, and I reside at 61 Morton Street, New York, N.Y. I am a graduate of Carnegie Institute of Technology and have a Ph. D. in nuclear physics from Cornell University. For the last 5 years I have held the position of associate editor of Nucleonics, a monthly journal covering the atomic field. I offer the following statement to the committee which contains my views as a physicist and a private citizen concerning the proposed civil defense program.

In brief, I am concerned that the numbers of people the Defense Department claims would be saved by a fallout shelter system are "idealized" estimates that would prove to be tragically overoptimistic should we ever be confronted by a real nuclear catastrophe.

I maintain that a more realistic evaluation of the usefulness of a nationwide fallout shelter program would lead us to conclude that the enormous amount of money and effort contemplated for this program could better be spent in other ways.

The Department of Defense envisions a fallout shelter program built over a period of 5 years at a total cost of $5–6 billion providing 235 million shelter spaces. The Department bases its justification of this program on predictions that such a shelter system would save something like 50 million lives in the event of a nuclear attack on this country. For instance, in his testimony before the House. Secretary Pittman stated that in a representative attack of 6,000 megatons 90 million people might be killed by the blast and fire and 50 million by fallout leaving 30 million survivors. A fallout shelter system, it is argued would protect the 50 million people that would otherwise die from fallout and thus make possible 80 million rather than 30 million survivors.

I believe these estimates of the numbers that would be saved by fallout shelters are grossly overoptimistic. The Defense Department numbers assume that everyone in the country not killed outright by the direct effects (blast and fire) of the nuclear explosions will be able to take advantage of the fallout shelter system as needed to avoid a lethal radiation dose. In other words these figures assume the shelters are 100-percent effective. In any practical situation a number of factors would conspire to limit the actual effectiveness of a shelter system to a value far short of the theoretical 100 percent assumed in the Defense Department figures. Some of these factors include:

Shelter access time.—Fallout of radioactive particles can commence 15 minutes after a nuclear burst at distances of 10 miles from the burst (and this early fallout is the most radioactive). Some fraction of the population, residing within 10–15 miles of the 10-megaton burst, may not be able to reach the shelters in time to avoid fatal radiation doses. This is especially true if the people have to make their way on foot through streets made impassible by debris piled up by the blast wave.

Fallout hotspots.—The fallout pattern would not be uniform across the country but would be considerably more intense in some regions compared to others. In a nuclear attack the fallout in some regions will be so intense that shelters with a protection factor of 20 (the minimum acceptable to the Defense Department for stocking and marking) will fail to protect occupants from sickness and death. I have made estimates based on data from Government reports that for a 10,000-megaton attack consisting entirely of surface bursts, in almost a third of such shelters across the country half of the occupants would fall seriously ill with radiation sickness.

Within the time scale contemplated for the shelter program a 10,000-megaton attack is not, by any means, out of the question. By 5 years from now, we are scheduled to have more than 600 hardened missile sites. To have a reasonably good chance of knocking out one of these sites an enemy would have to attack with two 10-megaton missiles. Hence, an enemy launching a counter force strike (which, everyone agrees, is the most "rational" kind of attack an enemy might carry out) would have to use 12,000 megatons ($2 \times 10 \times 600$) on the hardened missile bases alone.

In addition to these physical limitations of shelters, one can point to the following "human factors" that, in my opinion, pose even greater limitations on selter effectiveness:

Information and training.—It is common knowledge from experience with information campaigns that even the most intensive, nationwide program on the locations and proper use of the proposed shelters would fail to reach half of the families in the United States. Although the Government might have 235 million shelters ready and wating when the attack came, more than half of the people would not know where the shelters were or how to use them. One might imagine a very ambitious program in which adult citizens are required under penalty of the law to attend orientation sessions and demonstrate through tests that they are adequately informed. Even if such a thing were feasible, it would certainly be rejected by the American people as an infringement on personal liberty. Also, the end value of such training is questionable in view of the following point:

Panic reactions.—Even in instances where people are fully informed beforehand, many people, because of psychological reasons, fail to act appropriately in time of crisis and will be unable to take proper advantage of the protection offered by public shelters. Psychologists have found that in situations of extreme emergency (i.e., under enemy fire in combat) only one soldier out of six can be expected to act in an effective way (i.e., find good protective cover and fire his rifle in the general direction of the enemy). Others may be unable to move at all or may walk around and expose themselves in irrational ways to enemy fire. This is the behavior that can be expected with well-trained troops—troops who have undergone intensive combat training—crawled under machine-gun bullets and participated in maneuvers with artillery and mortar fire.

There is little reason to expect a higher percentage of rational behavior in a nuclear attack from the civilian population whose preparation for the experience could never approach anything like the intensive training given combat troops. This factor alone might reduce the number of people actually receiving protection from 50 million to below 10 million.

These limitations on human performance are every bit as real and unavoidable as the fallout that would accompany a nuclear ground burst and must be considered in any realistic evaluation of the effectiveness of a fallout shelter system.

Taken together, the above factors might easily reduce the 50 million the Defense Department expects to save with shelters down to a figure closer to 5 million. In addition, there are attack situations not considered in the Defense Department estimates in which fallout shelters would be completely useless. Examples are an attack in which an enemy exploded all or most of his nuclear bombs in the air rather than on the ground or an attack in which chemical or bacteriological agents were deliberately employed against the population.

In view of the serious questions as to the soundness of the Defense Department's claims for the effectiveness of a fallout shelter system, I would urge the committee to withhold its approval of the funds requested to provide fallout shelter spaces. There are too many things we need to spend money on that we are certain will be useful to risk investing public funds in a program of such dubious value.

(Appendix filed with the committee.)

CITY OF WINSTON-SALEM, N.C.,
August 7, 1962.

Hon. WARREN MAGNUSON,
U.S. Senate,
Senate Office Building,
Washington, D.C.

DEAR SIR: The purpose of this letter to you is to ask that you give careful consideration to the President's proposal for civil defense, specifically with regard to providing matching funds for equipment and Federal support for shelters.

Without Federal help and support we see little or no likelihood of providing reasonable and necessary civil defense facilities.

We shall appreciate your consideration of these matters.

Sincerely yours,

JOHN R. SURRATT, *Mayor.*

RALEIGH-WAKE COUNTY CIVIL DEFENSE AGENCY,
Raleigh, N.C., August 3, 1962.

Senator WARREN G. MAGNUSON,
Senate Office Building,
Washington, D.C.

DEAR SIR: The deletion of provisions of the civil defense budget for providing matching funds to local counties and communities for emergency operating centers and related essential civil defense equipment is a serious blow to the civil defense program in Raleigh and Wake County. Plans are underway for the construction of a city-county emergency control center in the Raleigh Memorial Auditorium with the use of Federal matching funds. This vitally essential project will not be realized without Federal assistance.

City-county officials and the citizens of Wake County join me in urging your committee to restore the vital items of the civil defense program pertaining to matching funds for emergency control centers, communications equipment, and rescue equipment.

Sincerely,

JOHN C. THORNE,
Colonel, U.S. Army (Retired).

STOKES COUNTY CIVIL DEFENSE AGENCY,
Walnut Cove, N.C., August 3, 1962.

Senator WARREN G. MAGNUSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MAGNUSON: The Stokes County Civil Defense Agency is in the process of completing its operational survival plan which we had hoped to get approved by the State civil defense agency and set up a complete civil defense organization in Stokes County.

However we have been informed by the State director, Mr. Edward F. Griffin, that a cut in funds which will be essential to us as a county organization has been cut or recommended for cutting and we as a new local governmental unit will be prevented from participating in the matching fund item, communication equipment, rescue equipment, etc.

May we urge you to do your best to restore these vital items to the program so that we may carry out a successful civil defense program in Stokes County.

Yours truly,

JAMES H. MITCHELL,
Stokes County Civil Defense Director.
RALPH R. MILLS,
Chairman of Stokes County Board of Commissioners.

CHARLOTTE-MECKLENBERG COUNTY,
OFFICE OF CIVIL DEFENSE,
Charlotte, N.C., August 3, 1962.

Senator WARREN G. MAGNUSON,
Appropriations Subcommittee,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MAGNUSON: We have just been advised that the House of Representatives has reduced civil defense operations and maintenance funds from the recommended $126,245,000 to a total of $65 million. Also deleted was the matching funds item for "Hardware program," emergency operating centers, etc. In addition to the above no new funds were included for the "Shelter marking program" beyond January 1, 1963.

If the above funds are not restored, the civil defense organization throughout the Nation will be unable to carry on a well-rounded program, and this will mean that much of the value, which should result from the millions already spent, will be irrevocably lost.

We urge your committee to do everything possible to restore these vital appropriations, making it possible for the dedicated people in civil defense throughout the Nation to carry on and continue to expand this vital program.

Yours truly,

KENNETH D. WILLIAMS, *Director.*

DAVIS COUNTY CIVIL DEFENSE,
Farmington, Utah, August 3, 1962.

Hon. WARREN G. MAGNUSON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MAGNUSON: I sent you a telegram Saturday, and I am sending this letter by special delivery airmail because there is much more I would like to say than could be included in my telegram.

For a number of years, I have been county director here, and just about the time we get a good civil defense program started, somebody comes along and throws a monkey wrench in the machinery. The trouble, in my way of thinking, is that we have never had what you could call a definite goal to follow, and when we do get one started, it is suddenly changed, which throws our previous work into a "cocked hat."

I think this community shelter program is very good as far as it goes, but it covers shelter to be used by only a small part of the people. I have felt all along that our big program is to get every family under shelter with a protection factor that is necessary, and prepared for an emergency if it arises. The present medical self-help program is a most necessary addition to our civil defense, and we are encouraging it very much.

I do not urge that the Government should build a shelter for every family, but feel that all people should consider self-preservation of their own family first, which could very easily be done if we gave publicity and encouragement from the Government, that home shelters should be a must for every family.

It is my hope that in the very near future our civil defense will get underway with a definite program, without reversals every few months which not only lead people to losing faith in civil defense, but cause confusion, so that they wonder if anybody knows what should be done. It is most certainly discouraging to all those volunteer workers in civil defense. No wonder our people are in a state of confusion and complacency. I hope that you and your committee will give the most careful consideration to Assistant Secretary Pittman's appearance before your committee.

Sincerely yours,

B. M. ANDERSON,
County Civil Defense Director.

CITY OF WATERTOWN,
Watertown, Wis., August 7, 1962.

Senator MAGNUSON,
Chairman, Independent Offices Appropriations,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MAGNUSON: I am writing in regard to bill H.R. 12711 which is now before your committee.

The city of Watertown, in good faith, entered into an agreement with the Federal civil defense office for the construction of a control center in the proposed new city hall building. This agreement took place in the month of May. Phase 1 of the project application was approved by the Federal authorities and phase 2 was just about completed when the House voted to eliminate the $8 million that was earmarked for this type of shelter purpose. We have already committed ourselves, with approval of the Federal officials, to the architect and he has almost completed the plans for the building according to civil defense requirements. If this $8 million is not returned by Senate action, the city of Watertown will lose about $10,000, plus the loss of a great deal of time and effort. To bring the building up to civil defense requirements the cost would be $260,000 more than we had planned. We stood ready, and still do, to pay our share—50 percent—of this increased cost and in good faith we thought the Government would stand their respective share. To go back to our original idea would mean to scrap the almost complete plans and develop new ones; this is where the loss of time and money would take place. If we could continue with the project as planned, there would be no loss. The city council, at a meeting last night, decided to wait before scrapping the plans to see if the Senate would restore the $8 million.

It is my belief that the Federal Government should stand back of their departments' commitments and that we should not be required to suffer a loss that we cannot afford. Therefore, I urge you to support the restoration of the $8 million and/or any other funds that the Government has formerly committed themselves to. I am not asking for restoration of the $412 million, but only that which if not restored would cause undue hardship on this city or any other cities who are deeply involved in such a project.

R. P. WHITE,
Mayor of Watertown.

OFFICE OF THE GOVERNOR,
Madison, Wis., August 7, 1962.

SENATOR WARREN MAGNUSON,
Chairman, Senate Appropriations Subcommittee,
Senate Office Building, Washington, D.C.

DEAR SENATOR MAGNUSON: I would appreciate your help in restoring the funds cut by the House from the Office of Civil Defense request for fiscal 1963. The major cut was some $460 million for the proposed shelter incentive program for schools and hospitals. I understand that this new program will not be funded until the Armed Services Committees have acted on the authorizing legislation, which may not be until early next session.

Other cuts, however, have the most serious impact on present as opposed to proposed future programs. As you know, an extensive program is now underway to identify, stock, and make usable shelter space in existing buildings. This worthwhile and inexpensive program has generated extensive workloads for local organizations, with the real impact beginning to be felt this spring and summer. In anticipation of this load, Wisconson cities and counties have been urged over the last year to expand their budgets, organizations, and effectiveness. They have responded by approximately tripling the number of effective organizations in the State, to over 40 counties and 25 municipalities.

This local expansion was made, however, in the expectation that Federal matching funds would be available for personnel and administrative expenses. These were cut by the House from the $18 million request to $12 million, last year's level, which will probably mean that a number of Wisconsin counties and

municipalities which this year expanded their budgets will be denied Federal matching fund aids. The effect would undoubtedly be to eliminate a number of the new local programs, and with them the ability to improve shelter space in existing buildings. Wisconsin's program, which over this last year has become one of the four best in the country, would be put back close to where it started.

I would, therefore, appreciate your help in restoring the P. & A. matching moneys to the $18 million level requested by Secretary McNamara.

Also, Watertown and Brown County have begun projects to install emergency operating centers (seats of government) in new public buildings. They committed time and money in fiscal 1962 in expectation that matching funds for such operating centers would be available in fiscal 1963. These funds were eliminated by the House. Watertown and Brown County will lose the funds already committed if the $8 million is not restored. I would, therefore, appreciate your help in restoring the $8 million requested by Secretary McNamara for emergency operating centers.

Sincerely yours,

GAYLORD A. NELSON, *Governor.*

WISCONSIN STATE AFL–CIO,
Milwaukee, Wis., August 6, 1962.

HON. WARREN MAGNUSON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MAGNUSON: I would like to request your help in restoring House cuts in Office of Civil Defense appropriation request for fiscal year 1963. The major cuts related to the proposed incentive grants for school and hospital shelter construction, but other cuts affect current programs.

The present program for identifying, marking, and stocking shelter space in existing buildings will be seriously affected if personnel and administrative matching aids are not restored by Senate action. Wisconsin counties and municipalities have counted heavily on these aids in expanding their own programs and will be in poor shape to bear their part of the load if these funds are not increased from previous $12 million level to near the $18 million request by Secretary Pittman for fiscal 1963.

I would appreciate your supporting the low-cost program to provide shelter in existing structures and request that funds to continue this worthwhile current project be restored by the Senate, including aids to local governments to help them fulfill their missions in the national shelter survey.

Sincerely yours,

JOHN W. SCHMITT,
Member of State Civil Defense Committee.

SEATTLE, WASH., *August 4, 1962.*

SENATOR WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

Imperative you fight for restoration of civil defense appropriation that has been cut by the House. This is most essential to civil defense and the shelter program for schools, hospitals, institutions, and public buildings.

MRS. FRANCES M. GAMRATH,
Democratic State Committeewoman, King County, President Seventh Congressional Federated Democratic Women's Club.

TACOMA, WASH., *August 6, 1962.*

U.S. Senator WARREN G. MAGNUSON,
U.S. Senate, Washington, D.C.:

DEAR SENATOR MAGNUSON: Citizens on this part of west coast view extreme reductions in civil defense fund with alarm, hope you can help restore them.

Sincerely,

GEO. W. KUPKA, *State Senator.*

R. W. BECK & ASSOCIATES,
Seattle, Wash., August 6, 1962.

Senator WARREN G. MAGNUSON,
Senate Office Building,
Washington, D.C.:

Urge you lend full support to restoration of Office of Civil Defense budget and administration's civil defense incentive program for construction of shelters in schools and other public institutions.

R. W. BECK,
Managing Partner.

SEATTLE, WASH., *August 4, 1962.*

Hon. WARREN G. MAGNUSON,
U.S. Senate, Washington, D.C.:

Understand future of State civil defense in jeopardy from much too drastic House cut in Federal funds which are lifeblood of State civil defense. Vitally important to retain activities and public confidence that 1962 budget be more in line with 1962 appropriations. Association of Washington Cities heartily behind defense program also as a personal member of Governors Civil Defense Council much concerned that all effort possible be made toward more realistic civil defense budget. Sincerely appreciate anything you might do.

ASSOCIATION OF WASHINGTON CITIES.
CHESTER BIESEN.

SEATTLE, WASH., *August 4, 1962.*

Senator WARREN G. MAGNUSON,
Washington, D.C.:

Greatly alarmed at drastic House cut in Federal funds on Civil Defense; future of Washington State CD in jeopardy. Urgently request your full cooperation to retain activities and public confidence in CD. We appreciate very much your assistance in keeping 1963 appropriations on realistic basis.

TAK KUBOTA,
Member State CD Advisory Council.

BREMERTON, WASH., *August 2, 1962.*

Senator WARREN G. MAGNUSON,
U.S. Senate,
Washington, D.C.:

Urge your immediate attention to cutback on civil defense appropriations. Will do much to destroy public confidence in this program in the State of Washington, and leave us exposed and unprepared for thermonuclear war.

FRANCIS HADDON MORGAN.

SEATTLE, WASH., *August 3, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building,
Washington, D.C.:

As a member of Washington State Civil Defense Advisory Council I am vitally concerned that we secure restoration of substantial amounts of 1963 budget for Office of Civil Defense which was stricken by House. I note actual operations moneys for shelter program was stricken out, leaving only research money. We need action, not research, on a good shelter program.

JOE DAVIS,
President, Washington State Labor Council, AFL–CIO.

SPOKANE, WASH., *August 2, 1962.*

WARREN G. MAGNUSON,
Washington, D.C.:

Urge House cut on OCD budget be reviewed and reinstated if at all possible. If budget remains as is it will have drastic effect on the civil-defense program.

CLYDE H. FRIEND,
Director of Civil Defense of Spokane; President-elect, U.S. Civil Defense Council.

OKANOGAN, WASH., *August 2, 1962.*

Hon. WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

We strongly urge the Senate to give favorable consideration to President Kennedy's bill regarding his national fallout shelter program.

HARRY RASMUSSEN,
Okanogan County Civil Defense Director.

SHELTON, WASH., *August 2, 1962.*

Senator WARREN G. MAGNUSON,
Senate Building, Washington, D.C.:

Suggest appropriation for shelter program be favorably considered. In event of denial serious adverse comment would result.

HARRY CALON,
Director, Meson County Civil Defense.

WILBUR, WASH., *August 2, 1962.*

Hon. Senator WARREN MAGNUSON,
Old Senate Office Building, Washington, D.C.:

We in Lincoln County urgently request you do all in your power to have House cuts in OCD budget reinstated in line with request and recommendation of President Kennedy. This cut will do serious damage to current civil defense effort throughout country.

Respectfully yours,

VERN ST. JOHN, *Mayor.*

CLE ELUM, WASH., *August 4, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

House cut in Federal funds for civil defense leaves State civil defense project in jeopardy. I believe most officials and leaders know why we must retain and improve our civil defense. Please use your influence in getting 1963 budget in line with 1962. World tension has not lessened.

SAM E. TALERICO,
Treasurer, Kittitas County-State Civil Defense Council.

SPOKANE, WASH., *August 6, 1962.*

Hon. WARREN G. MAGNUSON,
Old Senate Office Building, Washington, D.C.:

Office of Civil Defense appropriation certainly should not be less than the minimum program of past year. We in Spokane appreciate the splendid cooperation shown thus far. Please give consideration.

HENRY B. NABERS,
City Manager.

SPOKANE, WASH., *August 2, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building,
Washington, D.C.:

Unless recent cut in civil defense budget items is restored, it will have drastic effect on civil defense effort in the Spokane area.

C. J. CHAFFINS,
Director of Civil Defense, Spokane County.

MONTESANO, WASH., *August 3, 1962.*

WARREN G. MAGNUSON,
U.S. Senate, Washington, D.C.:

This is to assure you that the majority of the people in Grays Harbor expect the Government to provide community shelter protection. The building owners are volunteering their buildings and are expecting affirmative action in Congress now. If this program is not carried out now you can expect their support late. If the Senators do not pass this budget now it may later prove that they are not interested in the people's welfare.

Yours truly,

ROGER MCCREA,
Civil Defense, Grays Harbor County.

CHEHALIS, WASH., *August 3, 1962.*

Hon. WARREN MAGNUSON,
Senate Office Building,
Washington, D.C.:

Your influence to help restore President Kennedy's civil defense budget when it is presented to the Senate is vital. Its effect will be felt throughout this county. A nationwide shelter program is not only an act of humanity but a valuable deterrent to aggression itself.

PHILLIP A. ROEWE,
Deputy Director of Lewis County Civil Defense.

WENATCHEE, WASH., *August 1, 1962.*

Hon. Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

We ask that you do all in your power to assure that the civil defense appropriation now before the Senate is approved. If passage of this appropriation should fail it would be exceedingly detrimental to the security of our country; could serve a severe setback to a very necessary defense program.

JACK W. HARRINGTON,
Civil Defense Director, Chelan County.

EVERETT, WASH., *August 1, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

Respectfully request you urge reconsideration of proposed President's civil defense budget. Curtailment of civil defense program Snohomish County will be greatly curtailed.

WILBERT A. CROSS,
Director, Snohomish County Civil Defense.

KELSO, WASH., *August 1, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

May we have your cooperation in requesting action to restore at least large portion of President's $568 million request to launch fallout shelter program. Not only do we in civil defense realize the importance to the Nation of the President's recommendation, but the turndown also results in disastrous situation, a slap in the face, in the very worthwhile civil defense effort in which so many are giving talent, time, and effort for the protection of our Nation. Public confidence in civil defense is threatened by Tuesday's congressional action. Your influence in action requested herein is earnestly solicited.

R. M. ANDERSON,
Director, Cowlitz County Civil Defense.

OLYMPIA, WASH., *August 1, 1962.*

Hon. WARREN G. MAGNUSON,
U.S. Senate Office Building, Washington, D.C.:

Civil defense budget cut by House much too drastic. Vitally important 1962 budget be more in line with 1962 appropriations. Urge you act for restoration of funds in line with President's budget. Request strings attached to $10 million Shelton research funds be eliminated.

E. M. LLEWELLYN,
Director, State Civil Defense.

OLYMPIA, WASH., *August 2, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington D.C.:

Will appreciate support of the $3 million item for grant to the State for post-attack planning in connection with the comprehensive program for survival of government and management of resource. This item is in the Office of Emergency Planning budget request in the independent offices appropriation bill.
Regards.

Gov. ALBERT D. ROSSELLINI.

GENEVA, ALA., *August 3, 1962.*

Hon. WARREN G. MAGNUSON,
Chairman Senate Appropriations Subcommittee,
Senate Office Building, Washington, D.C.

Federal civil defense funds imperative if we are to continue and expand program in our area. Respectfully request you endeavor have restored all appropriation cuts for civil defense that were adopted by the House. Geneva County program will suffer materially without the funds requested. Your support to restore deleted funds will be greatly appreciated.

RALPH P. WEEK,
Coordinator, Geneva County Civil Defense Corps.

GENEVA, ALA., *August 3, 1962.*

Hon WARREN G. MAGNUSON,
Chairman, Senate Appropriations Subcommittee,
Senate Office Building, Washington, D.C.:

Local municipal efforts in civil defense program bordering on radical retrenchment without further assistance to program by Federal Government. It is imperative that funds contained in original proposal, drastically reduced by House, be reinstated. Our municipality unable to shoulder more than half cost and your efforts to have funds reinstated will be greatly appreciated.

WILBUR PRIDGEN,
Mayor, City of Geneva.

SELMA, ALA., *August 3, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

Earnestly urge your active and full support and influence for passage of appropriation of civil defense shelter program funds as requested by the President.

CHRIS B. HEINZ, *Mayor of Selma.*
BERNARD A. REYNOLDS, *Probate Judge.*
GEORGE B. QUARLES, *Director.*

BIRMINGHAM, ALA., *August 3, 1962.*

Hon. WARREN G. MAGNUSON,
Chairman, Senate Appropriations Subcommittee,
Senate Office Building, Washington, D.C.:

It has come to my attention that a portion of civil defense funds necessary for the continued expansion of this very important program has been deleted in the House conference by the Thomas subcommittee. As one of the county commissioners of Jefferson County, Ala., and cochairman of the Birmingham-Jefferson County, Civil Defense Corps I respectfully seek your assistance and influence in restoration of these funds so essential to this great project.

THOMAS B. PINSON,
Commissioner, Jefferson County, Ala.

BIRMINGHAM, ALA., *August 3, 1962.*

Senator WARREN G. MAGNUSON,
Chairman, Senate Appropriation Subcommittee,
Senate Office Building, Washington, D.C.:

Have just been informed that a portion of civil defense funds essential to the continued expansion of this very important program has been deleted in the House conference by the Thomas subcommittee. As mayor of city of Birmingham and general chairman of Birmingham-Jefferson County civil defense I urge your assistance and influence of your high office in restoration of these funds so essential to our national civilian survival training project.

ARTHUR J. HANES,
Mayor.

TUSCALOOSA, ALA., *August 4, 1962.*

Hon. WARREN G. MAGNUSON,
Chairman, Senate Subcommittee on Civil Defense Appropriation,
Senate Office Building, Washington, D.C.:

Respectfully urge restoration of funds which Congressman Thomas' subcommittee recommended cut from civil defense budget. Federal aid is urgently needed if we are to support our folks in civil defense now.

RUFUS T. STRICKLAND,
Coordinator-Director, Tuscaloosa County Civil Defense Corps.

MONTGOMERY, ALA., *August 2, 1962.*

Hon. WARREN G. MAGNUSON,
Chairman, Subcommittee on Independent Offices Appropriation, Senate Committee on Appropriations, Senate Office Building, Washington, D.C.

Urge your favorable consideration on restoring administration request for appropriations for the Office of Civil Defense, Department of Defense. Understand that H.R. 12711 as passed by the House dealt destructive blow to civil defense program. This department has assumed responsibility for civil defense welfare services. We cannot adequately discharge these obligations without requested Federal appropriations.

ALVIN T. PRESTWOOD,
Commissioner, Alabama State Department of Pensions and Security.

BIRMINGHAM, ALA.,
August 2, 1962.

Senator WARREN G. MAGNUSON,
Chairman, Senate Appropriations Subcommittee,
Senate Office Building, Washington, D.C.:

As the immediate past president of the Alabama Civil Defense Association of Local Directors, it is urgently requested that restoration by your subcommittee on all proposed appropriations for civil defense that were deleted by House conference in the Thomas subcommittee report proposed funds essential to properly continue an expansion of a developed civil defense program emergency operations incentive to survival of the people will be greatly reduced and untold damage inflicted on the overall civil defense program. Without these funds Federal programing to date incorporated in State and local operations is the basic cause for existing precarious conditions making it almost impossible to adopt retrenchment that will become mandatory if funds not provided. Your cooperation and assistance in restoring these funds will merit commendation for you and your committee throughout this country.

U. N. JAMES.

PHENIX CITY, ALA.,
August 2, 1962.

Hon. WARREN G. MAGNUSON,
U.S. Senator,
Senate Office Building, Washington, D.C.

DEAR SENATOR MAGNUSON: I am genuinely alarmed at reports of action turning down the national fallout shelter program and jeopardizing the entire program for civil defense activities. The funds requested by President Kennedy and Secretary of Defense McNamara to build a strong nonmilitary defense are vital to the actual survival of our Nation. Please use your influence in support of Secretary Pittman's plea for restoration of all funds requested for civil defense programs.

Sincerely yours,

OTIS W. TAFF,
Chairman, Russell County Commission.

PHENIX CITY, ALA., *August 2, 1962.*

Hon. WARREN G. MAGNUSON,
U.S. Senator, Senate Office Building,
Washington, D.C.

DEAR SENATOR MAGNUSON: I am genuinely alarmed at reports of action turning down the national fallout shelter program and jeopardizing the entire program for civil defense activities. The funds requested by President Kennedy and Secretary of Defense McNamara to build a strong nonmilitary defense are vital to the actual survival of our Nation. Please use your influence in support of Secretary Pittman's plea for restoration of all funds requested for civil defense programs.

Sincerely yours,

LUCIAN BROWN,
Civil Defense Director.

PHENIX CITY, ALA., *August 2, 1962.*

Hon. WARREN G. MAGNUSON,
U.S. Senator, Senate Office Building,
Washington, D.C.

DEAR SENATOR MAGNUSON: I am genuinely alarmed at reports of action turning down the national fallout shelter program and jeopardizing the entire program for civil defense activities. Mayor, City of Phenix City, Ala.

MONTGOMERY, ALA., *August 1, 1962.*

Hon. WARREN G. MAGNUSON,
Chairman, Senate Appropriations Subcommittee,
Senate Office Building, Washington, D.C.:

Urgently request restoration by your subcommittee of proposed appropriations for civil defense that were deleted by House concurrence in the Thomas subcommittee report. Proposed funds essential to proper continuance and expansion of developed civil defense program. Emergency operations incident to survival of the people will be greatly reduced and untold damage inflicted on the overall civil defense program without these funds. Federal programing to date incorporated in State and local operations basic cause for existing precarious conditions making it almost impossible to adopt retrenchment that will become mandatory if funds not provided. Your cooperation and assistance in restoring these funds will merit commendation for you and your committee throughout this country.

BOBBY J. BLALOCK,
Director, Civil Defense Department,
State of Alabama.

ANCHORAGE, ALASKA, *August 6, 1962.*

Hon. WARREN G. MAGNUSON,
U.S. Senate, Washington, D.C.:

Congressman Thomas' subcommittee report on civil defense budget will affect all civil defense programs in Alaska, including all contributions. Request that you oppose this report.

JOHN I. DISNEY,
Assistant State Director, Civil Defense, Alaska.

SACRAMENTO, CALIF., *August 6, 1962.*

Hon. WARREN G. MAGNUSON,
Chairman of Subcommittee on Appropriations,
Senate Office Building, Washington. D.C.:

My radiological defense advisory committee has informed me regarding the urgency of the matter now pending before your committee concerning appropriation for continuation of the civil defense shelter program. I strongly urge your committee to restore this appropriation to the level recommended by President Kennedy.

EDMUND G. BROWN, *Governor.*

SACRAMENTO, CALIF., *August 3, 1962.*

Senator WARREN MAGNUSON,
Senate Office Building, Washington, D.C.:

For protection of civilian population, we urge immediate favorable action on legislation for nationwide community shelter program. Survival Advocates Associated is a group of citizens advocating preparedness for survival and recovery in case of national emergency.

JAMES D. WALSH,
President, Survival Advocates Associated.

SACRAMENTO, CALIF., *August 1, 1962.*

Hon. WARREN G. MAGNUSON,
U.S. Senate, Washington, D.C.:

Congressman Thomas' subcommittee report on civil defense budget could seriously affect the President's civil defense program. Curtailment of existing shelter survey funds will cause havoc with heavily involved local government and business community leaders. Recommend funds to complete the national fallout shelter survey, marking, and stocking program, and at last minimum financial support of shelter incentive program.

ALLAN K. JONAS,
Director, California Disaster Office.

COCOA, FLA., *August 3, 1962.*

Senator MAGNUSON,
U.S. Senate, Washington, D.C.:

We would greatly appreciate your assistance in restoring cuts in civil defense funds in order to carry on work. Civil defense very necessary in Brevard County, as well as the whole country.

SAM AND EMY HARPER.

COCOA, FLA., *August 3, 1962.*

Senator MAGNUSON,
U.S. Senate, Washington, D.C.:

Please do everything possible to aid our civil defense program by voting funds to carry on the work. The drastic cut approved by House subcommittee will nullify our program. You help is urgently requested.

Kindest regards.

LOUISE C. GIBBONS,
Director, Brevard County Civil Defense.

MELBOURNE, FLA., *August 3, 1962.*

Senator WARREN MAGNUSON,
Washington, D.C.:

Request your aid and support of the President's civil defense program. I do not believe the time to cancel an insurance policy is while the patient is still sick.

Yours sincerely,

FRANK WOLCOTT.

SALINA, KANS., *August 6, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

In order that this country may survive and recover after a nuclear attack, please support President Kennedy's and Secretary Pittman's recommendations for civil defense.

Mrs. A. MARIE WEBB,
President, Kansas State Civil Defense Council of Directors.

COCOA, FLA., *August 3, 1962.*

Senator MAGNUSON,
U.S. Senate, Washington, D.C.:

Please do everything you can to restore cuts in civil defense funds. We need your help to carry on this urgent work.

BILL J. WOOD, *Automotive Auto Parts.*

ATLANTA, GA., *August 6, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

Urge your support of Secretary' Pittman's request for restoration of funds for civil defense.

ORIS H. STEPHENS, JR.,
Mayor, East Point, Ga.

COLUMBUS, GA., *August 3, 1962.*

Hon. WARREN G. MAGNUSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MAGNUSON: I urgently request support of the civil defense budget for 1963. The funds for shelter program are vital. I urge your committee to restore entire amount deleted from civil defense budget by House action. The money required by Office of Civil Defense is essential.

D. L. MEADOWS,
Chairman, Columbus Muscogee County Civil Defense Council.

COLUMBUS, GA., *August 3, 1962.*

Hon. HERMAN EUGENE TALMADGE,
U.S. Senate, Senate Building,
Washington, D.C.

DEAR SENATOR TALMADGE: I have just wired Senator Magnuson, chairman of the Senate Subcommittee on Appropriations, urging that his committee restore the entire amount deleted from the civil defense budget for 1963 by House action.

I understand that Secretary Pittman goes before Senator Magnuson's committee on Monday, August 6, to ask for restoration. Request your cooperation and assistance in seeking retsoration of these funds which are essential. Continued public interest and support of the civil defense program at the local level requires strong indication of support in the U.S. Congress.

D. L. MEADOWS,
Chairman, Columbus Muscogee County Civil Defense Council.

HONOLULU, HAWAII, *August 1, 1962.*

SENATOR WARREN MAGNUSON,
Washington, D.C.:

We strongly support budget Department of Defense/Civil Defense which permit completion of national fallout shelter survey and stocking program as well as funding for shelter incentive program.

W. M. BOWMAN,
Acting Director, Hawaii Civil Defense Division.

HONOLULU, HAWAII, *August 3, 1962.*

Senator WARREN MAGNUSON,
Washington, D.C.:

Strongly urge support of budget Department of Defense-Civil Defense to permit completion of national shelter program as well as funding for shelter incentive program. House action leaves States and cities to carry burden of program started by Federal Government. Federal leadership essential for program to protect civilian population.

NEAL S. BLAISDELL,
Mayor of Honolulu.

HONOLULU, HAWAII, *August 3, 1962.*

Hon. WARREN MAGNUSON,
U.S. Senator,
Washington, D.C.:

Hawaii vitally interested in completion of national shelter program. Our civil defense activities progressing but Federal guidance and assistance essential to success of civil defense program.

WILLIAM F. QUINN,
Governor of Hawaii.

LEWISTON, IDAHO, *August 6, 1962.*

Hon. WARREN MAGNUSON,
U.S. Senator,
Washington, D.C.:

The Nez Perce County Board of Commissioners believing the civil defense program to be indispensable to the protection of the life and liberty of this Nation; strongly urges the restoration of Secretary Pittman's budget request.

OTTO BRAMMER,
Chairman.

LEWISTON, IDAHO, *August 6, 1962.*

Hon. WARREN MAGNUSON,
U.S. Senator, Washington, D.C.:

The Nez Perce County Democratic Central Committee believing that President Kennedy's national civil defense program to be vital to the public interest and to the survival of this Nation; respectfully requests that favorable consideration be given to Secretary Pittman's plea for the restoration of the budget request for civil defense.

TOM W. BOISE, *State Committeeman.*
JOE NICHOLSON, *Chairman,*

DES MOINES, IOWA, *August 4, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

The Iowa Civil Defense Administration unanimously supports the position of Assistant Secretary of Defense, Office of Civil Defense, regarding the unjustifiable cuts in the civil defense appropriation for 1963 made by the appropriations committee for the House of Representatives stopping a vital defense program in midcourse jeopardizing the defense and security of the American people. We sincerely recommend that your committee return to the civil defense budget those moneys requested by the Office of Civil Defense as presented by Secretary Pittman.

RAY C. STILES,
Director, Iowa Civil Defense Administration.

MINNEAPOLIS, MINN., *August 6, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

As a municipal civil defense director I urge you to support the restoration of Defense Department's recommended civil defense budget appropriation. In order to carry out an effective civil defense program on the State and municipal level this budget should be adopted. Your support on this action will assist in developing total responsibility for the survival of our citizens throughout the United States.

RAY T. OLSON,
Director, Bloomington Civil Defense.

MINNEAPOLIS, MINN., *August 6, 1962.*

Senator WARREN G. MAGNUSON,
Department of Civil Defense,
Washington, D.C.

DEAR SENATOR: Request your leadership and support for restoration of civil defense budget as presented by Department of Defense.

WALLY CARYL,
Director of Civil Defense, Village of Golden Valley, and City of Robbinsdale.

MINNEAPOLIS, MINN., *August 6, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

As a municipal and county civil defense director, I urge you to support the restoration of Defense Department recommended civil defense budget appropriation. In order to carry out a complete civil defense program on the State and local level, this budget should be adopted. Your support on this action will assist in developing the total responsibility for the survival of our citizens throughout the United States.

WALTER P. HALSTEAD,
Director, Minneapolis, Hennepin County Office of Civil Defense.

AUSTIN, MINN., *August 6, 1962.*

Senator WARREN G. MAGNUSON,
Senate Chamber,
Washington, D.C.:

If civil defense is to mean anything in this country, we need P and A funds to support it. If civil defense is going to develop a practical shelter capability, the Federal Office of Civil Defense must have funds to carry out the program. We in the hinterland are working at considerable odds to keep people thinking about civil defense. You work for civil defense—so will I.

R. R. ROACH,
Mower County Civil Defense Director.

JOPLIN, MO., *August 6, 1962.*

Senator WARREN G. MAGNUSON,
Washington, D.C.:

Please support restoration of the civil defense budget appropriation by Mr. Pittman. This is essential.

Presiding Judge J. BYRON FLY,
Jasper County Court.

JOPLIN, MO., *August 6, 1962.*

Senator WARREN G. MAGNUSON,
Washington, D.C.:

We urge you to support Secretary Pittman's recommendation in regards to the civil defense budget appropriation.

Mayor C. C. HAYNES.

JOPLIN, MO., *August 6, 1962.*

Senator WARREN G. MAGNUSON,
Washington, D.C.:

Without restoration of the civil defense budget appropriations, several years of our work is wasted plus jeopardizing the home defense of our country. Please help us with your support.

LEA KUNGLE,
State Representative, Missouri U.S. Civil Defense Council.

COLUMBUS, NEBR., *August 6, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

Urgent you lend full support to restoration of Office of Civil Defense budget and administration's civil defense incentive program for construction of shelters in schools and other public institutions.

R. W. BECK,
Managing Partner, R. W. Beck & Associates, Seattle, Wash.

CARSON CITY, NEV., *August 2, 1962.*

Hon. WARREN MAGNUSON,
U.S. Senator From Washington,
U.S. Senate Office building, Washington, D.C.:

I urge you to support Department of Defense budget for civil defense, permitting completion of national fallout shelter survey marking and stocking program, as well as minimum funding for shelter incentive program, together with adequate budget for other civil defense operating costs.

CLAUDE U. SHIPLEY,
Director, Nevada State Civil Defense Agency.

WINSTON-SALEM, N.C., *August 6, 1962.*

Hon. WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

Would appreciate your action in accomplishing restoration of 1963 funds for civil defense operations and maintenance recently cut by House. Consider imperative the continuation of emergency equipment matching funds and shelter marking and stocking program.

FRANK W. DECKER,
Chairman, Advisory Council, Western Electric Co.

LEXINGTON, N.C., *August 3, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

Request that your committee restore the vital items to our civil defense program which were deleted by the House of Representatives July 30.

DAVIDSON COUNTY CIVIL DEFENSE.

FAYETTEVILLE, N.C., *August 3, 1962.*

Hon. WARREN G. MAGNUSON,
U.S. Senate, Washington, D.C.

DEAR MR. MAGNUSON: Deeply shocked action of House on civil defense budget. Responsible heads, my large community, approved without question civil defense budget calling for increase of 126 percent over last year. Sincerely and respectfully urge you do all in your power toward passage original civil defense budget. No personal ax to grind having been civil defense director at monthly salary $100 for years. Please protect our citizens.

COL. HANS CHRISTIAN LARSEN,
Director, Fayetteville Cumberland County Civil Defense Agency.

WHITEVILLE, N.C., *August 3, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

Requesting that you and your committee restore funds for vital items to our civil defense program which were deleted.

L. R. WAYNE,
Director, North Carolina Columbus County Civil Defense.

DURHAM, N.C., *August 3, 1962.*

Senator WARREN B. MAGNUSON,
Senate Office Building, Washington, D.C.:

Hope full budget for civil defense can be restored. Feel this phase of our defense is as important a deterrent as any other military expenditure for the Army. Proper civil defense takes a long time to get ready and we cannot afford to take a year off while our enemy temporarily relaxes.

MAYOR E. J. EVANS.

WINSTON-SALEM, N.C., *August 3, 1962.*

Senator WARREN B. MAGNUSON,
Senate Office Building, Washington, D.C.:

Urge your favorable action in restoration of $60 million cut from civil defense budget by House of Representatives. These funds are required for communications, rescue, and other vital equipment, plus emergency operating centers, personnel, and administration, and continuation of public shelter marking and equipping.

HAMILTON W. HOWE,
Director of Civil Defense.

WILSON, N.C., *August 4, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

Frankly I am very disappointed that the House of Representatives cut the civil defense appropriations so severely. As a part time local civil defense director most of my accomplishments have been on a volunteer basis. My volunteer workers have expected a program that will not be possible by the deletion of matching funds. This is particularly true in the area of communications and rescue programs which are most beneficial in natural emergencies as well as a nuclear attack. Your support in reinstating these funds through the Appropriations Subcommittee would be appreciated.

JAMES E. ELLIS.
Second Wilson County Defense Director.

WINSTON-SALEM, N.C., *August 6, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

Do not cut civil defense appropriations. It keeps citizens aware of Russian attack.

JANET BLUM SEIPPEL,
President, UDC.

ROANOKE RAPIDS, N.C., *August 3, 1962.*

Hon. WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.

DEAR SENATOR: We urge that every effort possible be made to restore the cut of civil defense funds for 1963 made by the House of Representatives of Appropriations Committee. The cut precludes many areas of effort so vital to a well-rounded civil defense program.

CARL E. PEEBLES.

CANTON, N.C., *August 4, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.

DEAR SENATOR: Any decrease in funds for the civil defense program would certainly be a hazard for the Government program of civil defense.

MORRIS MITCHELL,
Director of Civil Defense, Canton, N.C.

SALISBURY, N.C., *August 3, 1962.*

Senator WARREN MAGNUSON,
Chairman, Committee on Appropriations,
Senate Office Building, Washington, D.C.:

We are deeply hurt over the news of the House of Representatives reducing the 1963 funds for civil defense operations to $65 million. We of the Rowan County civil defense agency, Salisbury, N.C., urge you and members of your committee to restore the money needed to carry on the vital civil defense work. Local governments cannot and should not be expected to bear the full expense of an adequate civil defense program.

WILLIAM J. WYATT,
Director of Rowan County Civil Defense Agency.

ELKIN, N.C., *August 3, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

We strongly urge that your committee restore the vital items to the civil defense program which were deleted by the House. The civil defense program urgently needs these items to continue operations.

ROY H. KANE,
President, North Carolina Civil Defense Association.

EDENTON, N.C., *August 3, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

Please be informed that I feel civil defense is vital to our future well-being. I am in favor of expanding the program rather than cutting off much-needed appropriations as many who are ignorant of the implications and hazards are advocating. Please act to restore these necessary funds.

GEORGE E. BURDICK.

EDENTON, N.C., *August 3, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

The action taken by the House Appropriations Committee July 27 regarding proposed civil defense budget for fiscal year 1963 was a severe blow to the survival planning for the Nation. In view of continuing world tension I sincerely urge all effort to restore these much-needed funds to continue a progressive civil defense program.

MURRAY D. ASHLEY.

FAYETTEVILLE, N.C., *August 3, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

Urgently request serious consideration for the passage of the original civil defense budget. Our local budget for civil defense has been increased over 100 percent and we need Federal leadership in this serious matter.

ROBERT H. BUTLER, *Mayor.*

BREVARD, N.C., *August 3, 1962.*

Senator WARREN G. MAGNUSON,
Chairman, Appropriations Subcommittee,
Senate Office Building, Washington, D.C.:

Urge your committee vote favorably to restore matching funds for hardware program, emergency operating centers, shelters, marking, and stocking program.

F. L. (BUCK) MCCALL,
Director, Transylvania County Civil Defense.

NEWBERN, N.C., *August 3, 1692.*

Hon. WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

Unless we plan to eliminate civil defense entirely, we feel imperative continue personnel administrative and hardware programs for fiscal 1963. We feel civil defense now removed from scare basis is making stable progress. Request your committee recommend restoration of original $126,245,000 for operation and maintenance.

W. J. EDWARDS,
Director, Civil Defense, Craven County, N.C.

DURHAM, N.C.,
August 3, 1962.

Senator WARREN G. MAGNUSON,
Senate Office Building,
Washington, D.C.:

Recent House action on national civil defense program is detrimental to the defense of this Nation. Citizens of this area urge your committee to restore requests as made by Department of Defense so that all citizens may have the defense they are entitled to.

GEORGE F. KIRKLAND,
Chairman, Board of County Commissioners,
Durham County, N.C.

ROCKY MOUNT, N.C.,
August 3, 1962.

Senator WARREN G. MAGNUSON,
U.S. Senate,
Washington, D.C.:

The effectiveness of local civil defense programs will be seriously reduced as a result of the action by the House of Representatives in cutting the civil defense appropriation. The items deleted are necessary for a well-rounded civil defense program. Request that your appropriation subcommittee restore the items and funds deleted by the action of the House.

ELMER R. DANIEL,
Director, Edgecombe-Nash Civil Defense Agency.

WINSTON-SALEM, N.C., *August 4, 1962.*

Senator WARREN G. MAGNUSON,
Senate Building,
Washington, D.C.:

North Carolina Daughters of American Revolution ask that all civil funds as original restored. Our own national life and safety depends on information and education upon preparedness and protection. Therefore we urge this restoration of funds. With real confidence in you.

ELIZABETH FEARRINGTON CROM,
North Carolina State DAR Civil Defense Chairman.

BURGAW, N.C., *August 4, 1962.*

WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

Civil defense program in this county is in process of reorganizing. Active countywide rescue squad and emergency unit is being formed. Proposed cut in civil defense appropriation when projected nationwide could seriously hamper efforts in this area. Strongly urge your support of original recommendation particularly the matching-fund item for the acquisition of communication and rescue equipment. Civil defense plays important peacetime role in this coastal area; proximity to Camp Lejeune, Fort Bragg, and Seymour Johnson Field add further significance in event of war or near war.

R. R. DEES,
Captain, Penfer County Rescue Squad.
Dr. JOHN T. DEES,
Chairman, Pender County Democrat Executive Committee.

JACKSONVILLE, N.C., *August 6, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.

HONORABLE SIR: The mayor and council of the city of Jacksonville, N.C., and the board of commissioners of Onslow County, N.C., urge you to use your influence in restoring the fund cut from the 1963 budgetary request for civil defense operation and maintenance.

W. TOM COX,
City Manager.

WINSTON-SALEM, N.C., *August 5, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

On behalf of hundreds of Winston-Salem citizens spending thousands of hours working with civil defense for survival in nuclear disaster, strongly urge restoration vital funds cut for civil defense program. Please give millions for protection of 180 million Americans priority over billions for foreign aid, especially that going to Communist countries.

WOMEN'S CIVILIAN DEFENSE COUNCIL.

SALISBURY, N.C., *August 2, 1962.*

Senator WARREN MAGNUSON,
Chairman, Committee on Appropriations,
Senate Office Building, Washington, D.C.:

We are greatly disturbed by the news that the House approved a bill reducing the civil defense appropriation from the requested $126,245,000, to the unbelievably low figure of $65 million. This would cripple every phase of the civil defense program, including the completion of the national shelter plan. Local government cannot and should not be expected to bear the full cost of an adequate civil defense program.

We urge you and the members of the Senate who will consider this appropriation to carefully weigh the inevitable results before reducing the funds needed to implement a sound, realistic civil defense program. If the request is reduced as in the House bill, the end result could be disastrous to our country.

CHARLES L. LINEBACK,
President, North Carolina League of Municipalities.

SANFORD, N.C., *August 2, 1962.*

Senator WARREN G. MAGNUSON,
Chairman, Senate Appropriations Committee,
Senate Office Building, Washington, D.C.:

I wish to support Secretary Pittman's request that the cut of Office of Civil Defense requested funds be restored.

L. L. BECKHAM,
Second Vice President, North Carolina Civil Defense Association.

GOLDSBORO, N.C., *August 3, 1962.*

Senator WARREN G. MAGNUSON,
Chairman, Appropriations Subcommittee for Civil Defense,
Senate Office Building, Washington, D.C.:

It is imperative that have a strong and realistic civil defense throughout our country. We urge that your subcommittee and the Senate restore the funds for that portion of the program which were deleted in the House of Representatives. Civil defense serves as a deterrent against aggression and enhances our overall military posture.

CLAUDE H. IRBY,
Director, Wayne County Civil Defense.

DURHAM, N.C., *August 3, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

The staff and volunteers of Durham and Durham County Civil Defense Agency, Durham, N.C., earnestly request that you restore those vital items that have been deleted from the appropriations bill when this matter comes up for hearing before your committee in the Senate Monday, August 6. Without these funds the civil defense program will be badly crippled and much hard-earned ground may be lost. We desperately need your help to enable us to carry on the program you have delegated to us.

LEE C. GOODWIN, *Director.*

GREENSBORO, N.C., *August 6, 1962.*

Senator WARREN G. MAGNUSON,
Chairman, Senate Appropriations Committee, Washington, D.C.:

Request your committee support Secretary Pittman's request for restoration of civil defense operational funds, fiscal year 1963 deleted in House version. Civil defense to be meaningful must have full governmental support.

McGOUGH,
Director, Greensboro, Guilford County, Civil Defense Agency.

CHARLESTON, S.C., *August 6, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

We who live in an area of this Nation where by reason of terrain and building characteristics fallout protection is at a minimum urge that you give favorable consideration to a reasonable continuing development of such protection under Federal leadership. Further we urge that Congress continue to provide the matching funds for local civil defense personnel administration and equipment which has been the major factor in our recent growth to an effective capability for saving thousands of lives in natural disasters.

SOUTH CAROLINA ASSOCIATION OF CIVIL DEFENSE DIRECTORS,
E. J. DILLON, *President.*

HARRIMAN, TENN., *August 4, 1962.*

Senator WARREN G. MAGNUSON,
Chairman, Senate Subcommittee on Civil Defense, Washington, D.C.:

I urge you to recommend favorable action on Secretary Pittman's plea for restoration of civil defense funds. The loss of these funds will sound the death knell for civil defense at all levels. The need for civil defense is greater now than ever before. A firm stand by the Federal Government, supporting civil defense, will provide a needed boost at the State and local levels.

JOHN C. GOWER,
Secretary, Region 111, U.S. Civil Defense, Kingston, Tenn.

EL PASO, TEX., *August 3, 1962.*

WARREN G. MAGNUSON,
U.S. Senate, Washington, D.C.:

It is my understanding that Mr. Pittman of the Defense Department will appear before your committee August 6, 1962, seeking funds for civil defense purposes. Much progress has been made throughout El Paso County the past year in all phases of civil defense. After several years of stagnation the program is back on its feet. On behalf of all local government officials I strongly urge that you favorably consider the request for civil defense funds in order that we may carry on this worthwhile program.

A. E. SNYDER,
Director, El Paso City-County Civil Defense.

SALT LAKE CITY, UTAH, *August 4, 1962.*

Hon. WARREN MAGNUSON,
Senate Office Building,
Washington, D.C.:

Congressman Thomas' committee report on civil defense budget put a very sad note on our county civil defense program. Our Utah Governor and this county commission are back of civil defense and feel it a most necessary part of our national defense and protection. All these reversals of policy are very detrimental. We hope a definite program can be set up and that will eliminate the confusion in people's minds as to what civil defense stands for.

We sincerely hope your committee will give careful consideration to Assistant Secretary Pittman's appearance.

DAVIS COUNTY, UTAH, COMMISSIONERS.

OGDEN, UTAH, *August 3, 1962.*

Senator MAGNUSON,
Senate Office Building, Washington, D.C.:

The delay in congressional approval of civil defense programs and budgets is a matter of grave concern to everyone in this area. We, the Weber County Democratic Central Committee, desire to go on record supporting to the utmost Secretary Pittman in his plea.

To your committee to give favorable consideration to his program.

CALVIN GOULD, *Chairman.*

SALT LAKE CITY, UTAH, *August 4, 1962.*

Hon. WARREN MAGNUSON,
Senate Office Building, Washington, D.C.:

Congressman Thomas' subcommittee report on civil defense budget put a very sad adverse effect on our county civil defense program. Our Governor and our Davis County commissioners are back of civil defense and we hope some definite program can be set up. These pro and con actions surely confuse and continually kill the good work of civil defense organizations. It leaves the question, "Does anyone know what they are doing?" This action has surely been confusing and discouraging to all our workers in civil defense. What we need is a publicity program that our people can have confidence and depend upon. A most careful consideration we hope will be given Secretary Pittman's appearance before your committee.

B. M. ANDERSON,
Davis County, Utah, Civil Defense Director.

OGDEN, UTAH, *August 6, 1962.*

Senator WARREN G. MAGNUSON,
Senate Office Building, Washington, D.C.:

Concerned about proposed cut in civil defense appropriations. Groundwork has been laid in Utah schools for use of incentive program moneys to strengthen existing buildings and build underground shelter areas for our children. Also to implement proposed adult education program NCD. Please support Secretary Pittman's request.

Mrs. BERNARD L. CRAGUN,
Director, Region 3, Utah State Congress of Parents and Teachers.

GREEN BAY, WIS., *August 6, 1962.*

WARREN MAGNUSON,
U.S. Senate, Washington, D.C.:

Most urgently request your support of Secretary Pittman's civil defense program. We cannot build survival capability overnight and must start now.

ARTHUR E. NORGAARD,
Director, Brown County Civil Defense.

MADISON, WIS., *August 6, 1962.*

Hon. WARREN MAGNUSON,
Senate Office Building, Washington, D.C.:

DEAR SENATOR MAGNUSON: The House recently cut Office of Civil Defense request for fiscal 1963 by some 90 percent. Proposed shelter incentive program for schools and hospitals was eliminated.

Funds to continue present program for surveying, marking, and stocking shelter in existing buildings were also cut. Most critical cut from standpoint of counties and municipalities was in personnel and administrative expense matching funds, cut by House from $18 million request to fiscal year 1962 level of $12. Over 40 Wisconsin counties and 25 municipalities have this year sharply expanded civil defense budgets and greatly increased effectiveness of staffs, to cope with sharply increased local duties imposed by current program to survey and stock usable shelter in existing buildings. (The program is independent of proposed school-hospital incentive program.)

Local budget increases were made in reliance of Federal matching aid in fiscal year 1963. If personnel and administrative matching funds are not available at $15 to $18 million level requested by Secretary McNamara and Assistant Secretary Pittman, county boards and city councils will feel betrayed and cut back own programs. Potential to save 3 to 4 million lives in Wisconsin, in possible time of need, may thereby be largely lost.

Would therefore deeply appreciate your support to restore at least personnel and administrative matching fund cuts to $15 to $18 million level, from House $12 million, also other ongoing programs requested by Assistant Secretary Pittman. Personnel and administrative funds matter in particular is of fundamental importance to Wisconsin and U.S. counties and cities.

Sincerely,

W. K. CHIPMAN,
Director, Wisconsin Civil Defense Bureau.

MADISON, WIS., *August 5, 1962.*

Hon. WARREN MAGNUSON,
Senate Office Building, Washington, D.C.:

Madison Civil Defense Commission deeply concerned about national civil defense program budget recommendations of Secretary Pittman are basic for national survival. We recommend their adoption by your Senate subcommittee.

PROF. LLOYD RADER,
Chairman, Madison Civil Defense Commission.

SUPERIOR, WIS., *August 6, 1962.*

Senator MAGNUSON,
U.S. Senate Chambers, Washington, D.C.:

Respectfully urge you to support Secretary Pittman and oppose Thomas subcommittee report on civil defense budget.

RICHARD MCGRATH,
Superior-Douglas County Civil Defense Director.

CHEYENNE, WYO., *August 4, 1962.*

Hon. WARREN MAGNUSON,
U.S. Senator,
Senate Office Building, Washington, D.C.:

Federal appropriation to place emphasis on local civil defense is a necessity. The amount of money appropriated for nuclear weapons as opposed to that lesser amount which has always been appropriated for civil defense does not balance. Our citizens at the local level are entitled to protection. Facts indicate our enemy possesses nuclear ability. Without protection it is understandable that some misguided citizens contemplate "better Red than dead." Until a nuclear defense exists with protection for our citizens, we are exposed to destruction and nuclear blackmail. Historically, only the aggressor is ready for war. Defending nations lack knowledge of aggressor intentions, and must plan for the worst while hoping for the best. A few Federal programs have been ill conceived, and misguided, but does our country need to experience a nuclear attack before we have an all-inclusive, totally effective program? State, county, and city civil defense directors agree that an effective program can be implemented at the grassroots level, using commonsense, and application of funds based on local conditions.

Maj. Gen. GEORGE O. PEARSON,
State Civil Defense Director.

U.S. SENATE,
COMMITTEE ON AGRICULTURE AND FORESTRY,
August 10, 1962.

Hon. WARREN G. MAGNUSON,
Chairman, Subcommittee on Appropriations for Independent Offices, Senate Appropriations Committee, New Senate Office Building, Washington, D.C.

DEAR WARREN: I have received letters from the Governor of Wisconsin, from the Wisconsin director of civil defense, from the mayor of Watertown, Wis.,

and from the vice president of the Wisconsin State AFL–CIO, as well as telegrams from civil defense and civic officials in Wisconsin, asking that all or part of the requested funds for civil defense be restored by the Senate.

I would appreciate it very much if you would make these communications to me, as well as this letter, part of the record of the hearings conducted on this subject.

Warm regards.

WILLIAM PROXMIRE,
U.S. Senator.

OFFICE OF THE GOVERNOR,
Madison, Wis., August 7, 1962.

Senator WILLIAM PROXMIRE,
Senate Office Building, Washington, D.C.

DEAR BILL: I would appreciate your help in restoring the funds cut by the House from the Office of Civil Defense request for fiscal 1963. The major cut was some $460 million for the proposed shelter incentive program for schools and hospitals. I understand that this new program will not be funded until the Armed Services Committees have acted on the authorizing legislation, which may not be until early next session.

Other cuts, however, have the most serious impact on present as opposed to proposed future programs. As you know, an extensive program is now underway to identify, stock, and make usable shelter space in existing buildings. This worthwhile and inexpensive program has generated extensive workloads for local organizations, with the real impact beginning to be felt this spring and summer. In anticipation of this load, Wisconsin cities and counties have been urged over the last year to expand their budgets, organizations, and effectiveness. They have responded by approximately tripling the number of effective organizations in the State, to over 40 counties and 25 municipalities.

This local expansion was made, however, in the expectation that Federal matching funds would be available for personnel and administrative expenses. These were cut by the House from the $18 million request to $12 million, last year's level, which will probably mean that a number of Wisconsin counties and municipalities which this year expanded their budgets will be denied Federal matching fund aids. The effect would undoubtedly be to eliminate a number of the new local programs, and with them the ability to improve shelter space in existing buildings. Wisconsin's program, which over this last year has become one of the four best in the country, would be put back close to where it started.

I would therefore appreciate your help in restoring the P. & A. matching moneys to the $18 million level requested by Secretary McNamara.

Also, Watertown and Brown County have begun projects to install emergency operating centers (seats of government) in new public buildings. They committed time and money in fiscal 1962 in expectation that matching funds for such operating centers would be available in fiscal 1963. These funds were eliminated by the House. Watertown and Brown County will lose the funds already committed if the $8 million is not restored. I would therefore appreciate your help in restoring the $8 million requested by Secretary McNamara for emergency operating centers.

Sincerely yours,

GAYLORD A. NELSON, *Governor.*

THE STATE OF WISCONSIN,
BUREAU OF CIVIL DEFENSE,
Madison, Wis., August 1, 1962.

Hon. WILLIAM PROXMIRE,
Senate Office Building, Washington, D.C.

DEAR SENATOR PROXMIRE: I am writing to ask your aid in a matter of critical importance to Watertown and to Brown County, relating to the Office of Civil Defense appropriations for fiscal year 1963. As set forth in the enclosed letter to Assistant Secretary of Defense Pittman, in fiscal year 1962 Watertown commenced a project to construct in the new city hall a civil defense emergency seat of government (an "emergency operating center" or EOC).

The Office of Civil Defense approved a project application providing for $10,000 of Federal fiscal year 1962 funds for the design of the EOC, to be matched by $10,000 of local funds. The actual construction, however, would involve a fur-

ther sum of some $150,000 of OCD matching funds on a fiscal year 1963 project application.

As you undoubtedly know, the House deleted $8 million requested by OCD for fiscal year 1963 EOC projects. If at least some of these funds are not restored by Senate action, Watertown will lose $15,000 to $20,000, plus approximately a month of time, by proceeding with the EOC project in reliance on fiscal year 1963 funds being available for actual construction. (Watertown would have to foot all the bill for the wasted detailed design of the EOC plus the added cost of completely redesigning the city hall structure without the EOC.)

Brown County is also in an extended position with regard to an EOC to be built under the new county jail in Green Bay. A project application is in the final approval stage at the Pentagon for $12,000 for EOC design, with the requested Federal share being $6,000. (This initial stage was to have been funded out of fiscal year 1962 funds, but OCD requested they be changed to fiscal year 1963.)

The best solution would of course be a Senate restoration of at least some of the EOC moneys for fiscal year 1963. It would appear that in fairness to the cities in Wisconsin and elsewhere which have EOC projects in process, and thus stand to lose by their cancellation, a sum sufficient to complete these pending projects should be made available by Senate and conference committee action.

I understand that the Senate Subcommittee on Independent Offices Appropriations will be hearing the OCD fiscal 1963 request on Monday, August 6. I should therefore deeply appreciate your doing everything possible to secure favorable consideration of the OCD request for EOC funds, for fiscal year 1963.

As little as $1 million might serve to complete the EOC projects pending in the country, though I of course do not have exact figures on pending projects. A much smaller sum, probably on the order of $250,000, would suffice to complete the in-process Watertown and Brown County projects.

In view of the crucial importance of this EOC funding matter to Watertown and to Brown County, I know that Mayor Robert White of Watertown and Mr. Arthur Norgaard of Green Bay, Brown County civil defense director (Brown County Courthouse), would apprecite hearing from you as to Senate appropriation action.

In more general terms, the Nation must look to the Senate for restoration of other House cuts in the OCD requests for 1963. Secretary McNamara has testified that DOD regards a balanced, effective, civil defense program as essential in the 1960's. With increasing numbers of thermonuclear weapons in existence, there is always the possibility of the great powers slipping over the brink into war, perhaps largely unintended, as in 1914. It would be grossly imprudent not to have taken the modest steps which could save scores of millions, in the unhappy event of a war so occurring.

With thanks for your help in these matters, I am,

Sincerely yours,

WILLIAM K. CHIPMAN, *Director.*

CITY OF WATERTOWN, WIS., *August 7, 1962.*

Senator WILLIAM PROXMIRE,
Senate Office Building, Washington, D.C.

DEAR SENATOR PROXMIRE: As you probably know the city of Watertown entered into an agreement last spring with the Federal Government Civil Defense Office to include in its new city hall a civil defense control center. Phase 1 of the project has been completed and approved by the Federal authorities and phase 2 is almost complete. Now that the House voted to eliminate the $8 million for this purpose the council has decided to wait until the Senate acts before scrapping the project. Senator, if this money is not restored we stand to lose about $10,000 in committed architect fees plus the loss of time and effort. With the approval of the Federal civil defense authorities we entered into an agreement with the architect to draw the plans according to civil defense requirements. We would not build the building if we had to go it alone because of the increased costs for civil defense purposes only. The increases amount to $260,000 over and above what we had planned. We stood ready to pay our share, 50 percent of this increased cost and took the Governments word in good faith that they would pay the other $130,000. To go back to our original idea for a building would mean to scrap the present plans and develop new ones; this is where more cost and delays would come in.

It is my belief that the Federal Government should stand back of this commitment and that we should not be required to suffer a loss when we acted in good faith. I am not asking the restoration of the whole $412 million but the $8 million for this purpose or any other funds that have been committed. I urge your support of this feature of bill H.R. 12711.

Sincerely,

R. P. WHITE, *Mayor of Watertown.*

WISCONSIN STATE AFL–CIO,
Milwaukee, Wis., August 6, 1962.

HON. WILLIAM PROXMIRE,
Senate Office Building, Washington, D.C.

DEAR SENATOR PROXMIRE: I would like to request your help in restoring House cuts in Office of Civil Defense appropriation request for fiscal year 1963. The major cuts related to the proposed incentive grants for school and hospital shelter construction, but other cuts affect current programs.

The present program for identifying marking and stocking shelter space in existing buildings will be seriously affected if personnel and administrative matching aids are not restored by Senate action. Wisconsin counties and municipalities have counted heavily on these aids in expanding their own programs and will be in poor shape to bear their part of the load if these funds are not increased from previous $12 million level to near the $18 million request by Secretary Pittman for fiscal 1963.

I would appreciate your supporting the low-cost program to provide shelter in existing structures and request that funds to contniue this worthwhile current project be restored by the Senate, including aids to local governments to help them fulfill their missions in the national shelter survey.

Sincerely yours,

JOHN W. SCHMITT,
Member of State Civil Defense Committee.

SUPERIOR, WIS., *August 6, 1962.*

Senator WILLIAM PROXMIRE,
Senate Chambers, Washington, D.C.:

Respectfully urge you to oppose Thomas subcommittee report on civil defense budget. This report will adversely effect the Superior Douglas County civil defense program as well as the civil defense program nationally.

RICHARD MCGRATH,
Superior Douglas County Civil Defense Director.

[Western Union telegram]

MADISON, WIS., *August 6, 1962.*

HON. WILLIAM PROXMIRE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR PROXMIRE: The House recently cut Office of Civil Defense request for fiscal 1963 by some 90 percent. Proposed shelter incentive program for schools and hospitals was eliminated.

Funds to continue present program for surveying, marking, and stocking shelter in existing buildings were also cut. Most critical cut from standpoint of counties and municipalities was in personnel and administrative expense matching funds, cut by House from $18 million request to fiscal year 1962 level of $12 million. Over 40 Wisconsin counties and 25 municipalities have this year sharply expanded civil defense budgets and greatly increased effectiveness of staffs, to cope with sharply increased local duties imposed by current program to survey and stock usable shelter in existing buildings. (This program is independent of proposed school-hospital incentive program.)

Local budget increases were made in reliance on Federal matching aid in fiscal year 1963, if personnel and administrative matching funds are not available at $15 to $18 million level requested by Secretary McNamara and Assistant Secretary Pittman, county boards and city councils will feel betrayed and cut back

own programs. Potential to save 3 to 4 million lives in Wisconsin, in possible time of need, may thereby be largely lost. Would therefore deeply appreciate your support to restore at least personnel and administrative matching funds cuts to $15 to $18 million level, from House $12 million, also other ongoing programs requested by Assistant Secretary Pittman. Personnel and administrative funds matter in particular is of fundamental importance to Wisconsin and U.S. counties and cities.

Sincerely,

W. K. CHIPMAN,
Director, Wisconsin Civil Defense Bureau.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

PUBLIC HEALTH SERVICE

STATEMENT OF DR. JAMES M. HUNDLEY, ASSISTANT SURGEON GENERAL FOR PLANS; ACCOMPANIED BY GABRIEL P. FERRAZZANO, CHIEF, DIVISION OF HEALTH MOBILIZATION; DAVID S. BRUNSON, CHIEF, STOCKPILE MANAGEMENT BRANCH; RICHARD W. BOWMAN, EXECUTIVE OFFICER; AND JAMES F. KELLY, DEPARTMENT BUDGET OFFICER

EMERGENCY HEALTH ACTIVITIES

Senator MAGNUSON. All right. Dr. Hundley, the Assistant Surgeon General for Plans of the Public Health Service, Department of Health, Education, and Welfare, is here.

HOUSE ACTION

The appropriation for this civil defense medical stockpile activity was $13 million in 1962. The budget has a $41,445,000 item for 1963, and the house gave you $5,500,000.

Dr. HUNDLEY. That is correct.

Senator MAGNUSON. Which is $35 million minus from the estimates of the budget.

Then there is some stockpile procurement language involved.

We will put your letter in the record in full, and the statement on the justification. You have a short statement here for the committee. Do you want to put that in the record in full and discuss it informally with us?

Dr. HUNDLEY. I will proceed in any way you wish.

Senator MAGNUSON. All right. You proceed in that way and we can save time, and we can ask questions as we go along.

(The letter and statement referred to follow:)

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE,
PUBLIC HEALTH SERVICE,
Washington, D.C., August 3, 1962.

Hon. WARREN G. MAGNUSON,
U.S. Senate, Washington, D.C.

DEAR SENATOR MAGNUSON: This is in response to your letter of July 27, 1962, requesting comments on the House action as it relates to the civil defense activities of the Public Health Service. We are deeply appreciative of the opportunity which you have afforded to us to comment on this action and to present to your committee our view as to the health emergency preparedness and medical stockpile requirement in 1963 to fulfill the important Federal responsibility in this area.

The President's budget for 1963 emergency health and medical stockpile responsibilities of the Public Health Service requested $41,445,000, an increase of $4,700,000 over the $36,745,000 available in 1962 for these purposes.

The House proposes to allow only $5,500,000, a reduction of $35,945,000 from the budget estimate and $31,245,000 below the funds available in 1962.

The House allowance would provide for only the most modest program of stockpile management and health training and community preparedness activities. It deletes in its entirety the funds requested for procurement of new and replacement of medical supplies and materials to carry out the planned program of establishing an adequate prepositioned stockpile of emergency hospitals and related medical requirements and severely restricts the Service's capability of adequately managing the stockpile and preparing communities and training health personnel in the effective utilization of these medical resources. To carry out the apparent intent of the House, it would be necessary to broaden the appropriation language to cover all of the Public Health Service responsibilities in civil defense preparedness. In this connection there is attached appropriation language designed to accomplish this.

A review of the House action in the light of current developments and the current status of the medical stockpile and the health training and community preparedness program leads us to feel that such a restrictive program in 1963 would be a risky and unwise course of action. We believe that the program recommended by the President for this purpose was designed to more nearly fulfill the Federal responsibilities and that its enactment is in the public interest. No change in conditions has occurred in our judgment that would warrant a significant change in our civil defense preparedness.

It is therefore respectfully requested that the Senate restore the $35,945,000 disallowed by the House. There is attached a statement of specific changes in the House bill which are proposed together with a more complete description of the program and the requirements for this activity.

Sincerely,

JAMES M. HUNDLEY, M.D.,
Assistant Surgeon General.

AMENDMENT REQUESTED BY DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE TO H.R. 12711, 87TH CONGRESS, 2D SESSION, IN THE SENATE OF THE UNITED STATES

On page 4 commencing with line 23 and ending on page 5, line 3, delete the entire section pertaining to "Civil Defense Medical Stockpile Activities" and insert in lieu thereof the following:

"EMERGENCY HEALTH ACTIVITIES

"For expenses necessary for carrying out emergency planning and preparedness functions of the Public Health Service, and for procurement, storage (including underground storage), distribution, and maintenance of emergency civil defense medical supplies and equipment authorized by section 201 of the Federal Civil Defense Act of 1950, as amended (50 U.S.C., app. 2281), $41,445,000, of which $33,174,000 shall remain available until expended for procurement and distribution of medical supplies and equipment."

STATEMENT OF EMERGENCY HEALTH REQUIREMENTS AND EFFECT OF HOUSE ACTION

The House reduced the budget estimate of $41,445,000 by $35,945,000, approving $5,500,000 for all emergency health activities of the Public Health Service. In addition, in recommending the language as contained in the bill, the purposes for which the appropriation may be used are restricted to those associated with maintaining the stockpile of medical supplies. Other vital emergency health activities, including additional procurement, updating of obsolete and deteriorated materials, emergency health training, and community preparedness activities cannot be supported. Specific results of the House action are detailed below:

ACQUISITION OF STOCKS

The President's budget for this purpose proposed $25,500,000 for the purchase of an additional 750 civil defense emergency hospitals to reach a total of 3,430 at the end of 1963. It also proposed an estimate of $5,750,000 for replacement of a portion of the obsolete and deteriorated materials known to exist in current inventories. The House eliminated entirely the amounts proposed for these purposes.

INVENTORY MANAGEMENT AND PLANNING AND ADMINISTRATION

The budget contained an estimate of $8,750,000 for management activities concerned primarily with the medical stockpile program. The action of the House would permit continuation of activity at the 1962 level in providing $4,600,000. The allowance would not permit support of (1) increased requirements for storage, testing, and rotation of drugs stored by manufacturers, reprocessing of serum albumin, and processing of gamma globulin stored in bulk form to immune globulin to make it available for immediate use; (2) expansion of quality control in sampling and testing of antibiotics and other items sensitive to deterioration; (3) expansion of depot management operations associated with storage, inspection, inventory, maintenance, and reconditioning of hospitals; and (4) assignment of five positions to strengthen the stockpile management activities to provide essential maintenance and administrative operations.

EMERGENCY HEALTH TRAINING AND COMMUNITY PREPAREDNESS

The budget estimate for these purposes totaled $1,445,000. This activity relates to the vital functions associated with training and the development of community capabilities to operate in disaster situations. The $900,000 recommended by the House restricts the program to the 1962 level and would not permit support of (1) an additional 29 positions in the regions and States to provide for emergency community health plans, assignment of civil defense hospitals, inspection of storage locations, and maintenance and accountability of hospitals at the State and local levels; (2) an additional five positions to support and strengthen training activities associated with training of professional medical and allied health personnel to assume emergency medical responsibilities; and (3) an additional three positions to provide for necessary coordination of plans with the Joint Blood Council and its member agencies, essential coordination and administration of the Ready Reserve Corps, and strengthening of the present emergency health service programs.

It is respectfully requested that the Senate restore, in full, the reduction of $35,945,000 recommended by the House.

EMERGENCY HEALTH ACTIVITIES

Amounts available for obligation

	1962	1963
Appropriation	$13,000,000	$41,445,000

STATEMENT BY ASSISTANT SURGEON GENERAL FOR PLANS, PUBLIC HEALTH SERVICE

Mr. Chairman and members of the committee, I appreciate the opportunity of appearing before you to present the program of the Public Health Service in the provision of emergency health services. For the first time, the total program of the Service can be presented to you in terms of the funds required exclusively for carrying out delegated responsibilities of the Public Health Service.

During the past year a major change took place in the assignment of civil defense and emergency preparedness functions. The former OCDM and its functions have been replaced by separate Executive-order assignments to the Department of Defense, the Office of Emergency Planning, and to each of nine other departments and agencies.

The responsibility for the provision of adequate health services for the civilian population in a national emergency very logically was placed upon the Secretary of Health, Education, and Welfare to be carried out through the Public Health Service.

The President's budget for fiscal year 1963 proposed an appropriation to the Public Health Service for emergency health activities totaling $41,445,000 including $40 million for medical stockpile procurement and related resources management and planning.

The only absolute protection against modern warfare is to prevent its occurrence, but as long as the threat exists, the United States must reach and maintain a maximum potential of survival and ability to recover. The devastation and chaos made possible by present-day weapons is massive. Use of these weapons would produce millions of fatalities and, in addition, millions of civilian casualties urgently in need of medical care. In developing measures to meet such a catastrophe, health resources are the foundation upon which survival and recovery plans must be based.

87888—62——17

The goal of the Public Health Service is to prepare a readiness program that will assure to the greatest possible extent that the health needs of the civilian population will be met in the event of a national disaster. This entails effective mobilization and utilization of all the health resources of the Nation, and particularly, the achievement of emergency health preparedness on a community basis. To attain maximum preparedness, each community must train the people in medical self-help and give them the ability to take care of their own health needs when deprived of the services of a physician; develop capabilities for the most effective use of the available health manpower, hospital and health facilities, and medical supplies and equipment; provide for an emergency supply of potable water; and prepare standby plans for the rehabilitation of damaged health services facilities and restoration of peacetime standards of medical care and sanitation.

MEDICAL STOCKPILE

The goal of the medical stockpile program is to have adequate medical supplies and equipment available for civilian needs at the community level in the event of a national emergency.

The medical stockpile consists of bulk materiel stored in 24 depots and 1,930 civil defense emergency hospitals located at carefully selected sites throughout the country. An additional 750 hospitals authorized in fiscal year 1962 are in the process of component procurement and functional assemblage.

The Public Health Service program of inspection of civil defense emergency hospitals, conducted through contract with the General Services Administration, is designed to correct existing deficiencies and establish quality control measures to prevent their occurrence.

The program includes inspection of storage facilities; inventorying of stocks; testing, servicing, and making minor on-spot repairs of equipment; replacing, to the extent possible, obsolete and deteriorated material; training of custodians in mechanical and physical characteristics of care and maintenance; preparing reports and evaluations indicating corrective action required.

The program for inspection of existing civil defense emergency hospitals, together with other quality control measures, has the added benefit of providing knowledge which is used to apply high standards for procurement, packaging, and storage of all components involved in the assembly of new civil defense emergency hospitals.

COMMUNITY PREPAREDNESS TO USE THE STOCKPILE

Having resources available, but not planning for their utilization is impractical. Communities must be educated to incorporate these resources in their disaster plan and to practice using them to their maximum capacity. There must be further preparation of professional personnel and the general public to ensure human resources being available to use the material resources.

The justification, therefore, contains estimates for emergency health training and community preparedness. Two programs will serve to illustrate what I mean, namely, the medical self-help program and the program for expanded training of allied health personnel.

MEDICAL SELF-HELP TRAINING PROGRAM

The budget before you for consideration accelerates the training program for communities. Vital to this effort is the medical self-help program developed by the Public Health Service and initiated in January 1962, to teach families how to survive a national emergency and how to manage their own health needs when deprived of a physician's services. The situation with which we will be confronted after an attack will include isolation of individuals and small family groups for extended periods of time; radioactive fallout conditions that will delay resumption of organized health services; the reduction of the physician population to half its present size; and requirements for professional services and other health resources by the casualty and noncasualty survivors which will exceed many times the capability of the community to provide these services and resources in the usual manner.

The individual must be able to substitute for this lack of services in an emergency. The American Medical Association worked with the Public Health Service to develop medical self-help training, and is lending its full support to the conduct of the program. The American National Red Cross and all major

allied medical professional associations also have endorsed it and are providing assistance in program implementation.

The goal of the medical self-help program is to train at least one member of every family in a minimum possible time.

Self-help, however, is only one form of training essential for survival preparedness.

Training must be provided in (1) the management and use of the civil defense emergency hospital, (2) mass casualty care, (3) austere medical treatment, (4) fixed hospital disaster operation, (5) community disaster health planning, and (6) expansion of health and medical care functions of physicians, nurses, hospital administrators, environmental health workers, and other allied health professions.

Since time does not permit review of each training activity in detail, I will present only one of them—expanding the functions of members of the health professions.

EXPANDED TRAINING OF ALLIED HEALTH PERSONNEL

A basic requirement of the community health preparedness program is to overcome the postdisaster disparity between the numbers of sick and injured requiring medical care and the numbers of physicians available to provide treatment. The most effective method of overcoming this disparity is by expanding the responsibilities of the allied health professional to include the performance of medical, surgical, and environmental health procedures not normally a part of his everyday practice in peacetime. In this way and by this method, the physician's services can be extended to a much larger number of patients. Let me illustrate: In normal practice, the physician diagnoses disease, prescribes treatment, and personally performs the more intricate procedures, such as cleaning wounds, suturing lacerations, applying plaster splints, administering intravenous fluids, and so forth. In a major disaster, nurses and other allied health personnel will have to be prepared to examine patients and institute many of these procedures with only general supervision and direction by the physician. If they are to accept these responsibilities, standardized medical procedures must be developed and prescribed by the physician and adequate training given. In this way the "hand" of the physician can be applied to the great number of patients who will require his care, and the disparity between the number of physicians available and the need for their services can be overcome.

PROGRAM ASSISTANCE TO COMMUNITIES

Overall assistance to communities in achieving emergency readiness must be given on a direct and continuing basis. This can most effectively be accomplished by the assignment of program representatives to regional offices and States.

These representatives will provide program direction and assistance to communities in their efforts to develop and implement emergency health preparedness measures that make the most efficient use of available health resources. This will include assistance in planning and instituting effective emergency program plans, in determining needs and managing health resources, in conducting local training activities, and in coordinating emergency health program with other civil defense activities.

EMERGENCY HEALTH REQUEST FOR FISCAL YEAR 1963

The estimate for 1963 of $41,445,000 provides (1) $40 million for the medical stockpile, an increase of $4,136,000, and (2) $1,445,000 for emergency health training and community preparedness, an increase of $564,000.

The $40 million for the medical stockpile will provide for the acquisition of an additional 750 civil defense emergency hospitals, increasing the total to 3,430. It will also permit substantial replacement of medical supplies and equipment which have deteriorated beyond usability both in warehouse stock and in prepositioned civil defense emergency hospitals that were acquired between 1952 and 1957. The increase of $4,136,000 provides for transportation of materials and hospitals procured in 1962 to prepositioned community sites, relocation of stocks, reconditioning of 400 existing prepositioned hospitals, and the costs necessary in connection with maintenance and reworking of materials in depots and in manufacturers custody. For example, during 1963, reprocessing of serum

albumin stocks will be required to reduce the accumulated deterioration and to restore the original stock to a usable condition with a 10-year dating period.

Within the increase of $564,000 for emergency health training and community preparedness an amount of $250,000 is being requested for regional and State personnel assignments. This increase will provide for 21 additional State program representatives, bringing the total State coverage to 32 and the District of Columbia. Experience in States where these personnel have been assigned demonstrates that they are extremely effective in developing emergency health preparedness capability at the community level.

In addition, it is proposed to assign a resources management officer to the DHEW regional offices to provide guidance and assistance to States in locating and maintaining prepositioned civil defense emergency hospitals; developing plans and administrative procedures for use of established health facilities in emergencies; determining needs for community emergency medical supplies and equipment; and assessing community emergency health manpower requirements.

Increased program emphasis on training includes not only the extension of the medical self-help program to additional areas, but the development and institution of the other training activities necessary to achieve community emergency health preparedness. An increase of $235,000 is being requested for these activities.

An increase of $70,000 is requested for program planning and technical services that will make possible the (1) development of an emergency blood program plan that will insure adequate supplies for mass casualty care; (2) expansion and coordination of a ready reserve program through which specialized health personnel will be selected and trained for emergency health services in local communities; and (3) expansion of program evaluation to measure and guide the achievement of emergency health preparedness.

An increase of $9,000 is requested for the Public Health Service share of the medical education for national defense program. This cooperative activity, with the three military services branches (total Public Health Service cost, $189,000), provides grants to assist all 87 medical schools in the United States to incorporate disaster training in their curriculums.

The Public Health Service is dedicated to the goal of attaining the most effective emergency health capability among our entire population. Activities to achieve this goal can be grouped into three major program areas: (1) preparation of the civilian to meet his own health needs when deprived of the services of a physician, (2) assistance to State and local communities to develop their capabilities to implement effectively their emergency health operational survival plans, and (3) development of a coordinated emergency program for Federal agencies having health or health related responsibilities.

EFFECT OF HOUSE ACTION

Mr. Chairman, I am sure you are aware that the House drastically reduced the funds available to the Public Health Service for the activities I have just summarized. The House appropriation provides $5,500,000 in contrast to the $41,445,000 requested in the President's budget and the $36,745,000 actually available in 1962. Furthermore, the language in the House bill is not entirely clear as to the purposes for which the $5,500,000 may be used. The language of the House report provides the $5,500,000 "to maintain the present stockpile of medical supplies and emergency hospitals." Our budget request shows under the heading of "Medical stockpile" an item of $881,000 for emergency health training and community preparedness activities which are not medical stockpile, per se, but which represent a closely related and companion activity to create the capability to use effectively these medical stockpiles should the need arise. We assume that the House intended that the emergency training item of $881,000 was to be included in the $5,500,000 authorized, since this would approximately maintain this program at the 1962 level after eliminating all procurement of new or replacement items for the medical stockpile. I have had prepared an amendment to the language of H.R. 12711 which would clarify this point and three tables which in summary and in detail present the effect of the House action which are attached to my prepared statement. Mr. Chairman, we believe strongly that the original budget estimate of $41,445,000 is fully justified in the national interest and represents a program level commensurate with the national and international situation as it now exists. We believe that the drastic reduction which would result from the House action is not in the national interest and earnestly urge the Senate to provide the full amount originally requested.

PUBLIC HEALTH SERVICE

Emergency health activities [1]—Obligations by activity

	1962 appropriation		1963 estimate		1963 House allowance	
	Positions	Amount	Positions	Amount	Positions	Amount
1. Medical stockpile:						
(a) Acquisition of stocks: Procurement of new hospitals	------	$28,500,000	------	$25,500,000	------	------
Replacement of deteriorated materials	------	2,815,000	------	5,750,000	------	------
(b) Inventory management	86	4,549,000	91	8,750,000	86	$4,600,000

RESPONSIBILITIES FOR EMERGENCY PREPAREDNESS FUNCTIONS

Dr. HUNDLEY. To summarize very briefly, Mr. Chairman, the longer statement that has already been provided to the committee presents our position. I am sure this committee knows that during the past year there has been a major change in the assignment of responsibilities for emergency preparedness functions. The Department of Health, Education, and Welfare until recently derived its civil defense responsibilities from Emergency Preparedness Orders 4 and 5. However, on August 14, 1961, the President, in Executive Order 10958, directed the Secretary of Health, Education, and Welfare to assume full responsibility for the medical stockpile functions, and on February 16, 1962, directed the Secretary of Health, Education, and Welfare in Executive Order 11001 to assume other functions formerly conducted and financed under the OCDM authority. I have copies of these two Executive orders.

Senator MAGNUSON. We will put those in the record in full.

(The information referred to follows:)

PRESIDENTIAL DOCUMENTS

TITLE 3—THE PRESIDENT

EXECUTIVE ORDER 10958

DELEGATING FUNCTIONS RESPECTING CIVIL DEFENSE STOCKPILES OF MEDICAL SUPPLIES AND EQUIPMENT AND FOOD

By virtue of the authority vested in me by Reorganization Plan No. 1 of 1958 (72 Stat. 1799), and as President of the United States, it is ordered as follows:

PART I. MEDICAL STOCKPILES

SECTION 101. *Delegation of functions.* Certain functions under the Federal Civil Defense Act of 1950, as amended (which were transferred to the President by the provisions of Reorganization Plan No. 1 of 1958 (72 Stat. 1799)), are hereby delegated to the Secretary of Health, Education, and Welfare, hereafter in this Part referred to as the Secretary, as follows:

(a) All functions (including, as used in this order, powers, duties, and authority) under section 201(h) of that Act, 50 U.S.C. App. 2281(h), to the extent that they pertain to the stockpiling of medical supplies and equipment.

(b) To the extent that they are incidental to or necessary for the performance by or under the Secretary of the functions delegated by the provisions of section 101(a) of this order, other functions under the Federal Civil Defense Act of 1950, as amended, excluding, however, functions under sections 102(a), 201(b), and 402 and Title III of that Act.

SEC. 102. *Redelegation.* The Secretary may redelegate any of the functions delegated to him by this order to any of his subordinates.

PART II. FOOD STOCKPILES

SEC. 201. *Delegation of functions.* Certain functions under the Federal Civil Defense Act of 1950, as amended (which were transferred to the President by the provisions of Reorganization Plan No. 1 of 1958 (72 Stat. 1799), are hereby delegated to the Secretary of Agriculture, hereafter in this Part referred to as the Secretary, as follows:

(a) All functions under section 201(h) of that Act, 50 U.S.C. App. 2281(h), to the extent that they pertain to the stockpiling of food.

(b) To the extent that they are incidental to or necessary for the performance by or under the Secretary of the functions delegated by the provisions of section 201(a) of this order, other functions under the Federal Civil Defense Act of 1950, as amended, excluding, however, functions under sections 102(a), 201(b), and 402 and Title III of that Act.

SEC. 202. *Redelegation.* The Secretary may redelegate any of the functions delegated to him by this order to any of his subordinates.

PART III. GENERAL PROVISIONS

SEC. 301. *Relationships with other agencies.* The responsibilities of the Director of the Office of Civil and Defense Mobilization in respect of the functions delegated by the provisions of Parts I and II of this order shall be those stated in section 2(a) of Executive Order No. 10952 of July 20, 1961 (26 F.R. 6577).

SEC. 302. *Property, personnel, and records.* Subject to law, property, personnel, and records of the Office of Civil and Defense Mobilization shall be transferred as follows:

(a) To the Department of Health, Education, and Welfare, so much thereof, related to the functions delegated by the provisions of Part I of this order, as may be determined jointly by the Secretary of Health, Education, and Welfare and the Director of the said Office.

(b) To the Department of Agriculture, so much thereof, related to the functions delegated by the provisions of Part II of this order, as may be determined jointly by the Secretary of Agriculture and the said Director.

SEC. 303. *Funds.* There shall be transferred to the Department of Agriculture and to the Department of Health, Education, and Welfare so much of the appropriations, allocations, and other funds (available or to be made available)

of the Office of Civil and Defense Mobilization as shall be determined in pursuance of the provisions of section 202(b) of the Budget and Accounting Procedures Act of 1950 (31 U.S.C. 581c(b)) and section 1(k) of Executive Order No. 10530 of May 10, 1954.

SEC. 304. *Prior Executive orders.* Exclusive of Executive Order No. 10952 of July 20, 1961, all prior Executive orders (including Executive Order No. 10773 of July 1, 1958, as amended, and Executive Order No. 10902 of January 9, 1961) are hereby superseded to the extent that, immediately prior to the issuance of this order and in respect of the functions delegated by the provisions of Parts I and II of this order (to the extent there delegated), they delegate or otherwise assign, or authorize the delegation or other assignment of, functions or subject, or authorize the subjection of, the performance of functions to supervision, direction, control, or coordination.

SEC. 305. *Other prior actions.* Except to the extent that they may be inconsistent with the provisions of this order, and except to the extent revoked, superseded or otherwise rendered inapplicable before the date of this order, all determinations, authorizations, regulations, rulings, certificates, orders, directives, contracts, agreements, and other actions heretofore made, issued, or entered into with respect to any function delegated by the provisions of Part I or of Part II of this order (to the extent there delegated) shall continue in effect until such time as the Secretary of Health, Education, and Welfare or the Secretary of Agriculture, as the case may be, under the authority of this order, shall amend, modify, or terminate them. The status of prior Executive orders shall be governed by the provisions of section 304 of this order.

JOHN F. KENNEDY.

THE WHITE HOUSE, *August 14, 1961.*

[F.R. Doc. 61–7909; Filed, Aug. 15, 1961; 9:51 a.m.]

[From the Federal Register, Feb. 20, 1962]

Executive Order 11001

ASSIGNING EMERGENCY PREPAREDNESS FUNCTIONS TO THE SECRETARY OF HEALTH, EDUCATION, AND WELFARE

By virtue of the authority vested in me as President of the United States, including authority vested in me by Reorganization Plan No. 1 of 1958, it is hereby ordered as follows:

SECTION 1. *Scope.* The Secretary of Health, Education, and Welfare (hereinafter referred to as the Secretary) shall prepare national emergency plans and develop preparedness programs covering health services, civilian health manpower, health resources, welfare services, and educational programs as defined below. These plans and programs shall be designed to develop a state of readiness in these areas with respect to all conditions of national emergency including attack upon the United States.

SEC. 2. *Definitions.* As used in this order:

(a) "Emergency health services" means medical and dental care for the civilian population in all of their specialties and adjunct thereapeutic fields, and the planning, provision and operation of first aid stations, hospitals, and clinics; preventive health services, including detection, identification and control of communicable diseases, their vectors, and other public health hazards, inspection and control of purity and safety of food, drugs and biologicals; food and milk sanitation; public water supplies; sewage and other waste disposal; registration and disposal of the dead; prevention and alleviation of water pollution; vital statistics services; preventive and curative care related to human exposure to radiological, chemical, and biological warfare agents; and rehabilitation and related services for disabled survivors. It shall be understood that health services, for the purposes of this order, do not encompass the following areas for which the Department of Agriculture has responsibility: plant and animal diseases and pest prevention, control and eradication, protection of meat and meat products, and poultry and poultry products in establishments under continuous inspection service by the Department of Agriculture, veterinary biologicals, agricultural commodities and products owned by the Commodity Credit Corporation or the Secretary of Agriculture, livestock, agricultural commodities

owned or harvestable on farms and ranches, agricultural lands, and registration of pesticides.

(b) "Health manpower" means physicians (including osteopaths); dentists; sanitary engineers; registered professional nurses; and such other occupations as may be included in the List of Health Manpower Occupations issued for the purposes of this Executive Order by the Director of the Office of Emergency Planning after agreement by the Secretary of Labor and the Secretary of Health, Education, and Welfare.

(c) "Health resources" means manpower, material, and facilities required to prevent the impairment of, improve, and restore the physical and mental health conditions of the civilian population.

(d) "Emergency welfare services" means feeding; clothing; housing or lodging in private and congregate facilities; registration; locating and reuniting families; care of unaccompanied children, the aged, the handicapped, and other groups needing specialized care or service; necessary financial or other assistance; counseling and referral services to families and individuals; aid to welfare institutions under national emergency or post-attack conditions; and all other feasible welfare aid and services to people in need during a civil defense emergency. Such measures include organization, direction, and provision of services to be instituted before attack, in the event of strategic or tactical evacuation, and after attack in the event of evacuation or of refuge in shelters.

(e) "Education," as used in this order, means the utilization of formal public and private school systems, from elementary through college, for the dissemination of instructional material guidance, and training in the protection of life and property from enemy attack.

SEC. 3. *Health Functions.* With respect to emergency health services, as defined above, and in consonance with national civil defense plans, programs and operations of the Department of Defense under Executive Order No. 10952, the Secretary shall:

(a) *National program guidance.* Develop plans and issue guidance designed to utilize to the maximum extent the existing civilian health resources of the Federal Government, and with their active participation, assistance, and consent, the health resources of the States and local political subdivisions thereof, and of other civilian organizations and agencies concerned with the health of the population, under all conditions of national emergency. Maintain relations with health professions and institutions to foster mutual understanding of Federal emergency plans which affect health activities.

(b) *Professional training.* Develop and direct a nationwide program to train health manpower both in professional and technical occupational content and in civil defense knowledge and skills. Develop and distribute health education material for inclusion in the curricula of schools, colleges, professional schools, government schools, and other educational facilities throughout the United States. Develop and distribute civil defense information relative to health services to States, voluntary agencies and professional groups.

(c) *Emergency water supply.* Prepare plans to assure the provision of usable public water supplies for essential community uses in an emergency. This shall include inventorying existing supplies, developing new sources, performing research, setting standards, and planning distribution. In carrying on these activities, the Department shall have primary responsibility but will make maximum use of the resources and competence of State and local authorities and of other Federal agencies.

(d) *Radiation.* Develop and coordinate programs of radiation measurement and assessment as may be necessary to carry out the responsibilities involved in the provision of emergency health services.

(e) *Biological and chemical warfare.* Develop and coordinate programs for the prevention, detection, and identification of human exposure to chemical and biological warfare agents as may be necessary to carry out the responsibilities involved in the provision of emergency health services including the provision of guidance and consultation to Federal, State, and local authorities on measures for minimizing the effects of biological or chemical warfare.

(f) *Food, drugs, and biologicals.* Plan and direct national programs for the maintenance of purity and safety in the manufacture and distribution of food, drugs, and biologicals in an emergency.

(g) *Disabled survivors.* Prepare national plans for emergency operations of vocational rehabilitation and related agencies, and for measures and resources necessary to rehabilitate and make available for employment those disabled persons among the surviving population.

(h) *Salvage and rehabilitation.* Develop plans for salvage of supplies and equipment and rehabilitation of health services, supplies, and facilities after attack.

SEC. 4. *Welfare Functions.* With respect to emergency welfare services as defined above, and in consonance with national civil defense plans, programs and operations of the Department of Defense under Executive Order No. 10952, the Secretary shall:

(a) *National program guidance.* Develop plans and issue guidance for an integrated national program for emergency welfare services and, working with other Federal departments and agencies, provide for extending guidance and technical assistance to State and local welfare departments in the development and operation of their plans for the community organization of emergency welfare services.

(b) *Federal support.* Cooperate in the development of Federal support procedures, through joint planning with other departments and agencies, including but not limited to the Post Office Department, the Department of Labor, and the Selective Service System, the Housing and Home Finance Agency, and resource agencies including the Department of Agriculture, the Department of the Interior, and the Department of Commerce for logistic support of State and community welfare services in an emergency.

(c) *Emergency welfare training.* Develop and direct a nationwide program to train emergency welfare manpower for the execution of the functions set forth in this order, develop welfare educational materials, including self-help program materials for use with welfare organizations and professional schools, and develop and distribute civil defense information relative to emergency welfare services to States, voluntary agencies, and professional groups.

(d) *Financial aid.* Develop plans and procedures for financial assistance to individuals injured or in want as a result of enemy attack and for welfare institutions in need of such assistance in an emergency.

(e) *Professional liaison.* Maintain relations with national voluntary welfare organizations and related national professional and business organizations to foster mutual understanding and support of emergency welfare plans and activities.

SEC. 5. *Education Functions.* With respect to education as defined above, and in consonance with national civil defense plans, programs and operations of the Department of Defense under Executive Order No. 10952, the Secretary shall develop and issue through appropriate channels instructional materials and provide suggestions and guidance to assist schools, colleges, and other educational agencies to incorporate emergency protective measures and long-range civil defense concepts into their programs. This involves assistance to various levels of education to develop an understanding of the role of the individual, family, and community for civil defense in the nuclear age, as well as the maintenance of relations with educators, national and State education associations, foundations, and other related organizations to foster mutual understanding and support of civil defense activities.

SEC. 6. *Facilities Protection and Damage Assessment.* In consonance with the national civil defense plans, programs and operations of the Department of Defense under Executive Order No. 10952, the Secretary shall:

(a) *Facilities protection.* Provide industry protection guidance material adapted to the needs of health, welfare, and education facilities and promote a national program to stimulate, guide, and assist facilities such as hospitals, clinics, public water plants, waste disposal plants and facilities for other emergency health services, welfare institutions, and schools in methods of disaster preparedness and control in order to minimize the effects of overt or covert attack and maintain continuity of capacity to serve the public in an emergency. Guidance and assistance shall include but not be limited to: organizing and training facility employees, employee shelter, evacuation plans, records protection, continuity of management, emergency repair, deconcentration or dispersal of facilities, and the organization of mutual aid associations for emergency.

(b) *Damage assessment.* Maintain a capability to assess the effects of attack on health, welfare, and education facilities and personnel both at national and field levels and provide data to the Department of Defense.

SEC. 7. *Resources.* The Secretary shall periodically assess assigned resources available from all sources in order to estimate availability under an emergency situation, analyze resource estimates in relation to estimated requirements in order to identify problem areas and develop appropriate recommendations and

programs. Provide data and assistance before and after attack for national resource evaluation purposes of the Office of Emergency Planning.

SEC. 8. *Relative Urgencies.* The Secretary shall develop standards and relative urgencies for emergency health and welfare services for guidance of Federal agencies, States, and communities in providing maximum protection to survivors, and for the purpose of conserving, improving availability, and allocating such resources.

SEC. 9. *Requirements.* The Secretary shall periodically assemble, develop as appropriate, and evaluate requirements for assigned resources and services, taking into account the estimated needs for military as well as civilian purposes. Such evaluations shall take into consideration the geographical distribution of requirements under emergency conditions.

SEC. 10. *Claimancy.* The Secretary shall prepare plans to claim materials, manpower, equipment, supplies and services needed to carry out assigned responsibilities and other essential functions of the Department, from the appropriate agency and work with such agencies in developing programs to insure availability of such resources in an emergency.

SEC. 11. *Stockpiles.* The Secretary shall assist the Office of Emergency Planning in formulating and carrying out stockpiling of strategic and critical materials and survival items. The Secretary shall also plan and direct the procurement, storage, maintenance, inspection, survey, distribution, and utilization of essential supplies and equipment for emergency health services.

SEC. 12. *Research.* Within the framework of Federal research objectives, the Secretary shall supervise or conduct research in areas directly concerned with carrying out emergency preparedness responsibilities for health, education, and welfare programs. With respect to the emergency health and welfare services assignment, this is defined as, but not limited to (1) development of medical means for the prevention and care of casualties (including those from thermonuclear weapons, radiation exposure, and biological and chemical warfare, as well as from other weapons); (2) research in preventive medicines, basic biology and environmental sanitation directed to maintaining the health of noncasualty population; (3) pre-attack and post-attack target research in health services; (4) protection of resources and protocol essential to carrying out long-term basic and applied research in the post-attack period; and (5) the development of techniques for the most efficient utilization of civilian health manpower. Designate representatives for necessary ad hoc or task force groups and provide advice and assistance to other agencies in planning for research in areas involving the Department's interest.

SEC. 13. *Functional Guidance.* The Secretary, in carrying out the functions assigned in this order, shall be guided by the following:

(a) *Interagency cooperation.* The Secretary shall assume the initiative in developing joint plans for the coordination of emergency civilian health services and welfare services programs of those departments and agencies which have responsibility for any segment of such activities. He shall utilize to the maximum those capabilities of other agencies qualified to perform or assist in the performance of assigned functions by contractual or other agreements.

(b) *Presidential coordination.* The Director of the Office of Emergency Planning shall advise and assist the President in determining policy for, and assist him in coordinating the performance of functions under this order with the total national preparedness program.

(c) *Emergency planning.* Emergency plans and programs, and emergency organization structure required thereby, shall be developed as an integral part of the continuing activities of the Department of Health, Education, and Welfare on the basis that it will have the responsibility for carrying out such programs during an emergency. The Secretary shall be prepared to implement all appropriate plans developed under this order. Modifications and temporary organization changes, based on emergency conditions, will be in accordance with policy determination by the President.

SEC. 14. *Emergency Actions.* Nothing in this order shall be construed as conferring authority under Title III of the Federal Civil Defense Act of 1950, as amended, or otherwise, to put into effect any emergency plan, procedure, policy, program, or course of action prepared or developed pursuant to this order. Such authority is reserved to the President.

SEC. 15. *Redelegation.* The Secretary is hereby authorized to redelegate within the Department of Health, Education, and Welfare the functions hereinabove assigned to him.

SEC. 16. *Prior Actions.* To the extent of any inconsistency between the provisions of any prior order and the provisions of this order, the latter shall control. Emergency Preparedness Orders Nos. 4 and 5 (heretofore issued by the Director, Office of Civil and Defense Mobilization) (26 F.R. 656–658), are hereby revoked.

JOHN F. KENNEDY.

THE WHITE HOUSE, *February 16, 1962.*

[F.R. Doc. 62–1807; Filed, Feb. 19, 1962; 10:47 a.m.]

MEDICAL STOCKPILE

Senator MAGNUSON. Let us go to page 3. I think the committee is fairly cognizant of the change in this whole approach of the Department of Health, Education, and Welfare to this particular item.

Dr. HUNDLEY. Yes, sir.

Senator MAGNUSON. We come to the medical stockpile. You say there it consists of—

bulk materiel stored in 24 depots and 1,930 civil defense emergency hospitals located at cerefully selected sites throughout the country. An additional 750 hospitals authorized in fiscal year 1962 are in the process of component procurement and functional assemblage. The Public Health Service program of inspection of civil defense emergency hospitals, conducted through contract with the General Services Administration, is designed to correct existing deficiencies and establish quality control measures to prevent their occurrence.

How much is that item, or is it just an explanation of the stockpile?

TOTAL BUDGET REQUEST

Dr. HUNDLEY. The total budget request was $40 million for the medical stockpile program.

Senator MAGNUSON. The total?

Dr. HUNDLEY. That includes new procurement for the 750 hospitals and all items related to maintenance, inspection, and replacement of deteriorated stocks, and so on.

HOUSE REDUCTION

Senator MAGNUSON. The House says you only need $5 million.

Dr. HUNDLEY. Yes, sir.

Senator MAGNUSON. What do you envision you have to do over and above the $5 million?

Dr. HUNDLEY. In the first place, it is not entirely clear to us, Mr. Chairman——

Senator MAGNUSON. Let us take the procurement of items. What other items do you have to get?

Dr. HUNDLEY. There are some tables in the back of my statement, Mr. Chairman.

Senator MAGNUSON. Let us get at them. In the justifications?

Dr. HUNDLEY. In my printed statement.

Senator MAGNUSON. In this statement?

Dr. HUNDLEY. Yes, sir. In the back.

Mr. KELLY. Mr. Chairman, you will note that with the $5,500,000 the House made available, we would conclude that none of it—and this is in accord with the House report—would be available for any procurement, and we had proposed——

Senator MAGNUSON. In other words, there would be no further procurement?

Mr. KELLY. No further procurement.

Senator MAGNUSON. Other than what you now have?

Dr. HUNDLEY. No new procurement and no replacement of deteriorated stocks. There would be none under the House provision.

Senator MAGNUSON. Is the bulk of the $36 million that is cut, is that for procurement?

Mr. KELLY. $31,250,000 is for procurement.

Senator MAGNUSON. What items would that be?

Dr. HUNDLEY. For new procurement?

Senator MAGNUSON. Yes. We are talking about $31 million for new procurement and replacing of deteriorated items in the stockpile.

MOVABLE EMERGENCY HOSPITALS

Dr. HUNDLEY. It includes funds for 750 new 200-bed emergency hospitals.

Senator MAGNUSON. 750. They are not mobiles? They are emergency?

Dr. HUNDLEY. Emergency type.

Senator MAGNUSON. Are they mobile?

Dr. HUNDLEY. Pre-positioned, but can be moved any place.

Senator MAGNUSON. How many of those do we have now?

Dr. HUNDLEY. We have 1,930 plus 750 currently being procured.

Senator MAGNUSON. This is for 750 more?

Dr. HUNDLEY. This would be 750 more, which would bring the total to 3,430.

Senator MAGNUSON. Is that the end?

Dr. HUNDLEY. No, sir.

Senator MAGNUSON. How many more do you need?

Dr. HUNDLEY. Our goal eventually, to meet current strategic assumptions, is 9,500.

Senator MAGNUSON. One-third of the program?

Mr. KELLY. Yes, sir. Approximately.

EQUIPMENT AND SUPPLIES FOR EMERGENCY HOSPITALS

Senator MAGNUSON. All right. What else will it include?

Dr. HUNDLEY. It will include $3 million to supplement and rehabilitate, that is, to place fresh stocks of equipment and supplies in some 400 of the emergency hospitals we already have.

Senator MAGNUSON. What is the nature of the stocks? Drugs?

Dr. HUNDLEY. It is tape that won't stick and cans that develop holes, and ether evaporates from it; generators that don't work; anesthesia machines in which rubber tubing deteriorated, and quite a variety of items. You appreciate some of these materials were purchased 10 years ago.

Senator MAGNUSON. Does it have anything to do with the blood bank?

Dr. HUNDLEY. No, sir; not directly, except that there are blood derivatives in these units.

Senator MAGNUSON. You have to constantly replace that.

Dr. HUNDLEY. The hospitals include some supplies of blood plasma, serum, albumin and items of that nature which deteriorate. Antibiotics also deteriorate with time.

Senator MAGNUSON. How much would you say that amount would be, $3 million?

Dr. HUNDLEY. $3 million for 400 existing hospitals.

Senator MAGNUSON. What do the 750 emergency hospitals now cost?

Dr. HUNDLEY. They cost $25,500,000.

Senator MAGNUSON. So that is $28 million.

Dr. HUNDLEY. Yes.

Senator MAGNUSON. And you have 3 million more?

Dr. HUNDLEY. $2.750 million, I believe.

Senator MAGNUSON. Yes. What is that for?

REPLACEMENT OF DETERIORATED BULK STOCKS IN DEPOTS

Dr. HUNDLEY. That is to replace deteriorated bulk stocks in the 24 depots where we maintain our bulk stocks. It represents only a beginning in replacing deteriorated stocks in the stockpiles which have accumulated over a period of years.

Senator MAGNUSON. Define for the record what you mean by "a bulk stock." What would be the nature of the items involved?

Dr. HUNDLEY. The medical stockpile consists of two kinds of things. The emergency hospitals are located in communities ready for use if they are needed. The 24 depots contain the backup of expendable supplies. The 1930 emergency hospitals contain expendable supplies sufficient only for 3 or 4 days of operation. Backup supplies in the depots would be used to supplement the limited expendable supplies in the prepositioned emergency hospitals.

LOCATION OF DEPOTS

Senator MAGNUSON. Put in the record where these deopts are located.

Dr. HUNDLEY. Yes, sir.

Senator MAGNUSON. It is all right to do that, is it not?

Dr. HUNDLEY. Yes, sir.

(The information referred to follows:)

Twenty-four depots are located in the following States:

	Number		*Number*
Massachusetts	1	Ohio	1
New York	2	Iowa	1
Pennsylvania	4	Missouri	1
New Jersey	1	Nebraska	1
Virginia	1	Texas	1
Mississippi	1	Utah	1
Tennessee	1	California	2
Illinois	2	Washington	1
Indiana	1		
Michigan	1	Total number of depots	24

RENT FOR STORAGE SPACE

Senator MAGNUSON. Do you rent storage space, or put it in Government storage?

Dr. HUNDLEY. It is mainly in Government storage space managed by the General Services Administration.

Senator MAGNUSON. It has it available?

Dr. HUNDLEY. The depots are mainly in Government space, some free and some rented.

Senator MAGNUSON. Is that all of the 24?

Dr. HUNDLEY. The 24 depots. Yes, sir.

Senator MAGNUSON. They are all in Government buildings?

Dr. HUNDLEY. Mostly, yes, sir; mainly managed by the General Services Administration.

Senator MAGNUSON. So we do not have to pay rent for them?

Dr. HUNDLEY. Yes. Some of them we do pay rent and other charges.

Senator MAGNUSON. Do you mean you pay rent to the General Services Administration?

Dr. HUNDLEY. Yes, sir.

Senator MAGNUSON. But you don't pay rent.

Dr. HUNDLEY. Not to a private corporation, so far as I know.

Mr. BRUNSON. There are a few commercially leased sites which are leased through the General Services Administration and occupied by our organization and others, and we pay a pro rata share.

Dr. HUNDLEY. But our payment is always to the General Services Administration, I believe.

Mr. BRUNSON. Yes, sir.

LOCATION OF EMERGENCY HOSPITALS

Senator MAGNUSON. Where are these so-called mobile hospitals set up—the hospitals themselves?

Dr. HUNDLEY. They are not set up generally, except a few for training purposes. They are stored.

Senator MAGNUSON. They are in storage too and they can be whipped out quickly?

Dr. HUNDLEY. In general they are stored very close to the point where they would be expected to be used.

Senator MAGNUSON. What kind of buildings do we use to store those? Government buildings?

Dr. HUNDLEY. They are in quite a variety of buildings. I have the exact breakdown, but the most frequent kind of place is a health facility like a hospital or clinic.

Senator MAGNUSON. Do we pay rent for those?

Dr. HUNDLEY. No, sir; we do not.

Senator MAGNUSON. They are just there?

Dr. HUNDLEY. The local community has to arrange to take care of them.

Senator MAGNUSON. But it might be stored in a hospital unit?

Dr. HUNDLEY. Yes, some of them. Or it might be in a courthouse. Many of them are in schools, and public buildings of various sorts.

SUPPLIES AND EQUIPMENT

Senator MONRONEY. Are these stocks all prepared?

Dr. HUNDLEY. Yes, sir. They are complete.

Senator MONRONEY. Ready to go?

Dr. HUNDLEY. As soon as the equipment and supplies can be unpacked. A team of trained people can do it in 4 hours.

SERVICES OF OTHER AGENCIES

Senator SALTONSTALL. May I ask two questions. What do you mean by, "services of other agencies"? The House cut you down in half on that. The chairman brought out you have supplies and equipment. Of the $36 million that was cut out, it comes out of four items: Transportation of things—and, of course, if you do not buy anything you do not have transportation; services of other agencies, which they cut by half; and equipment and supplies.

What are the services of other agencies?

Mr. KELLY. The General Services Administration serves as the agent of the Public Health Service in the conduct of the maintenance of the supply depot operation. We pay them to perform the work which is needed in the maintenance of the basic inventory and warehousing operation. So this reduction in the amount of funds available to pay the General Services Administration is for that activity.

TESTING OF ANTIBIOTICS

Dr. HUNDLEY. Also it includes some other things, like payments to test antibiotics which may be out of date, or materials may be deteriorated beyond usability. We contract for these services wherever we can find the capability.

Senator SALTONSTALL. What we have to determine is how much of this $13,800,000 and $17,500,000 we want to put back. Is that correct? And you will be glad to take whatever we put back in?

Dr. HUNDLEY. Obviously, sir, we will take whatever Congress sees fit to give us.

Senator SALTONSTALL. Yes; but it is a question of a buildup of these emergency supplies in these emergency hospitals. That is what it amounts to.

Dr. HUNDLEY. I think I could help to clarify how we would see this.

Senator SALTONSTALL. With the chairman's permission I would be very interested in having that.

Senator MAGNUSON. Surely. Go ahead.

APPLICATION OF REDUCTION IN REQUEST

Dr. HUNDLEY. In the first place, we made it clear, I hope, that we feel the entire request is fully justified in view of the international situation in which we find ourselves, and in view of the fact that we are a long way from having what we feel we need. However, assuming an amount is to be appropriated which is less than the $41.5 million, we would look at it in this way:

NEW HOSPITALS

The first item we think would go in whole or in part would be the 750 new hospitals. I say this not because we do not think they are needed, but because in part it is a strategic decision as to whether we need these now, or next year, or never. This decision is based on things over and above strictly health considerations, such as the international situation. This is something that could be postponed. You are probably aware last year was the first time since 1957 that we procured any

new hospitals. So we believe this item should be at the top of the list, in whole or in part, if a reduction is to be made.

Senator MONRONEY. Could I ask a question there? Are these existing ones, the ones that have been procured this year, somewhat geographically located, and you would merely place the new ones to reduce the expense of the present hospitals now serving?

Dr. HUNDLEY. I want to be clear on this. The 1,930 we already have, almost every one of them are already located in communities.

Senator MONRONEY. All through the 50 States?

Dr. HUNDLEY. All through the 50 States, the Virgin Islands, and Puerto Rico.

Senator MONRONEY. That would mean a greater density of them if we gave you the increase or increment?

Dr. HUNDLEY. The 750 new hospitals now being procured and put together, would be used to fill gaps and supplement capability, depending on the need of the different target areas and communities.

AVAILABILITY OF MEDICAL SERVICES AND DRUGS

Senator MONRONEY. Let me ask a simple question. What is the difference in mortality between the availability of medical services and drugs, and nonavailability? Supposing a strike occurs where there is no needed service available whatever, and where you do have a reasonable medical service?

Dr. HUNDLEY. I cannot honestly answer the question because we have never had an attack of the kind we are talking about here. There is no experience on which to give you an adequate answer. A sort of generic answer would come from the experience of the military forces in World War II compared to World War I or say the Crimean War or the Civil War. The effect of good medical and surgical services is very, very striking in reducing mortality. I cannot give you the precise figures.

CHANCES OF SURVIVAL

Senator MONRONEY. If an estimate is available, I wish you would put it in the record. I have seen printed statements making careless estimates that the chances of survival are on a ratio of 10 to 1, if you have adequate medical treatment, as compared with the absence of medical treatment.

(The information referred to follows:)

Table showing reduction in mortality rates following improved early and adequate medical care:

Percent mortality among wounded in action of total wounded in action

Crimean War	16.7
World War I	8.2
World War II	4.5
Korean War	3.6

Source: "The Cost of Delayed Medical Care," John M. Howard, M.D., and Michael E. DeBakey, M.D.; Military Medicine, April 1956, pp. 343–357.

ATTACK PATTERN CASUALTIES

Dr. HUNDLEY. I can provide another type of answer to your question. Our whole plan is based on an attack pattern which would result in 60 million casualties out of a population of 180 million in this country. We estimate that about 40 million of those would die within a period of 6 months. There would be about 12 million killed outright and another 28 million that would die within 6 months. So you are dealing with attempts to save, or being able to save those who would not be killed outright, and the other 20 million who would be injured but probably would survive.

Senator MAGNUSON. Is this considered an allout attack?

Dr. HUNDLEY. This is a natural plan that has resulted from an assessment of the enemy's capabilities.

Senator MAGNUSON. Off the record.

(Discussion off the record.)

Senator MAGNUSON. On the record.

REPLACEMENT OF DETERIORATED SUPPLIES

Dr. HUNDLEY. The second item would also relate to procurement, but this would relate to replacement procurement for deteriorated, out-of-date, nonusable supplies. We would place highest priority on funds to rehabilitate and replace deteriorated items in the hospitals already out on the firing line, if I may use that term.

Senator MAGNUSON. The 1930?

Dr. HUNDLEY. Yes, sir.

Senator SALTONSTALL. Would the chairman permit me to ask another question?

Senator MAGNUSON. Yes.

DISPOSITION OF DETERIORATED SUPPLIES

Senator SALTONSTALL. Dr. Porterfield stated last year concerning medical stockpile items nearing the end of their shelf life, that he has asked they be given to a charitable and nonprofit institution or institutions rather than be thrown away. Senator Allott asked that question. Referring now to that, are you making any progress, or doing anything about that?

Dr. HUNDLEY. No, sir; we are not.

Senator SALTONSTALL. Shouldn't you?

Dr. HUNDLEY. No, sir. We have given it some very careful study and we simply do not feel it is feasible.

Senator SALTONSTALL. In other words, it is better to let them be wasted right on the shelf rather than be given to a State hospital, or a private hospital that could use those supplies?

Dr. HUNDLEY. In part we already do what you are suggesting. For example, we have about $5.5 million worth of antibiotics, vaccines, and sera which manufacturers hold for us and rotate before they get out of date. We eliminate deteriorating in this way. Most of the other materials which deteriorate would be too unusable. I am afraid we would be in serious difficulty if in our public institutions we were giving out second-rate drugs, or drugs in which there was a likelihood of reactions——

Senator SALTONSTALL. From the Government point of view it is better to let them be spoiled than to give away a second-rate material which might lead to an accident later for which the Government would be held responsible?

Dr. HUNDLEY. That is correct.

Senator SALTONSTALL. I get it.

Dr. HUNDLEY. And also from the practical standpoint, we have not had funds with which we could do it, even if it were feasible.

ROTATION OF DRUGS IN MANUFACTURERS' POOL

Senator MAGNUSON. Do the manufacturers take those and sell them to the public when they rotate them?

Dr. HUNDLEY. The manufacturer keeps a pool of which we have an identified part on call at any time, and keeps the pool fresh by rotating it.

Senator MAGNUSON. So he has a certain amount there that we own?

Dr. HUNDLEY. That is right.

Senator MAGNUSON. Which belongs to us.

DETERIORATED STOCKS IN DEPOTS

Dr. HUNDLEY. Always, in a fixed amount. As I said, we would give a high priority to replacing these deteriorated materials in the communities where these hospitals exist. Also we would give a high priority to replacing some of the deteriorated stocks in our 24 depots, although this I would say would be somewhat lesser in priority. From there on we begin to come down pretty much to the hard core and the bone of our program, as we see it. I can go on and indicate degrees of essentiality, if the chairman wishes it.

QUALITY INSPECTION AND REPLACEMENT PROGRAM

I do want to make one general observation. Leaving aside funds for procurement, and assuming that the House allowance would barely enable us to maintain our activities at the fiscal 1962 level, there are a number of programs which we have started, such as the quality inspection and replacement program you were reading about just a moment ago, Mr. Chairman, which we feel are very, very important, and essential as a means of keeping these supplies in a state always ready for use.

Senator SALTONSTALL. That ought to go at the top, shouldn't it?

Dr. HUNDLEY. Yes, that has been in the past a deficiency in the program, and we are very anxious to maintain these stocks better, keep them in better condition, to get rid of useless material, and to institute a program which would enable us to maintain these stocks in usable condition at all times.

Senator SALTONSTALL. May I ask one more question, Mr. Chairman?

Senator MAGNUSON. Yes. Go right ahead.

HOUSE BILL PROVISIONS

Senator SALTONSTALL. You would want the committee to rewrite the provisions that are in the House bill in order to permit you to buy equipment and so on. In other words, the House bill as it is

now written struck out the original language and left out all opportunity to buy any equipment, and simply allowed maintenance. So you would ask this committee, even if they put back a small amount of the funds, to rewrite the language of this section?

TRAINING AND COMMUNITY PREPAREDNESS PROGRAMS

Dr. HUNDLEY. If you put back the funds for new procurement, or for replacement procurement, then the House bill would have to be modified. Also, it would have to be modified in another way, because it does not provide for training and community preparedness programs to teach people how to use these hospitals. We believe this is essential. The language of the House could be interpreted to eliminate this part of our program. Whether the House intended this or not, we do not know.

Senator MAGNUSON. You could not train people to use these hospitals. The only people that could use them are people who were trained to assemble them and get the management together, is it not?

Dr. HUNDLEY. No, sir. It is much more than that.

Senator MAGNUSON. Do you mean the average doctor could not go in there and do what he should do?

Dr. HUNDLEY. Well, he could eventually, I suppose.

Senator MAGNUSON. He would have to have some further training than his medical training?

Dr. HUNDLEY. It is a little more complicated than this, as we see it. In the first place, a community must have a health plan, in which it would know how it is going to use its regular hospitals if they are still standing and its emergency hospitals. It must know which medical personnel are to go to the regular health installations and which would take over other health facilities including the emergency hospitals.

Senator MAGNUSON. All right. They have the plan.

PRACTICE OF MEDICINE UNDER DISASTER CONDITIONS

Dr. HUNDLEY. Secondly, they have to be trained for a very different kind of medicine from what is practiced in peacetime. A doctor in normal civilian practice usually has plenty of time to take care of his patients with hospitals having all kinds of diagnostic aids, specialists, and consultants, and so forth. What we are talking about is a disorganized disaster condition where you cannot practice this kind of medicine.

Senator MAGNUSON. How will you train him?

Dr. HUNDLEY. You have to do several things. It is not just training doctors. Nurses, veterinarians, dentists, pharmacists, medical corpsmen—all of those that have some capacity to do the things the doctor normally does must be trained to help in ways for which they are not normally trained.

Senator MAGNUSON. Is this your medical treatment program?

Dr. HUNDLEY. It is part of it. Yes, sir.

Senator MAGNUSON. How does that conflict with the civil defense program?

Dr. HUNDLEY. It does not conflict, sir. It is a part of it.

Senator MAGNUSON. It is just a part of it. In other words, your program is to teach them how to do it and their program is medical self-helf?

Dr. HUNDLEY. Oh, you are talking about medical self-help?

Senator MAGNUSON. Yes.

MEDICAL SELF-HELP PROGRAM

Dr. HUNDLEY. Medical self-help is not aimed at the physician or health worker, but aimed at the layman.

Senator MAGNUSON. But you have a program of medical self-help.

Dr. HUNDLEY. Yes.

Senator MAGNUSON. And so has civil defense.

Dr. HUNDLEY. Yes.

Senator MAGNUSON. Are they not duplications?

Dr. HUNDLEY. No, sir, they are not. The funds in the Department of Defense, OCD budget are for procurement of training kits and backup supplies, the physical units necessary for the training. The funds in our budget are for staff that are needed to work with the States and localities to get these courses organized, evaluate how effective they are, and to promote the program. Essentially our budget is for the personnel that are necessary from the Federal level to participate in the medical self-help program.

Senator MAGNUSON. So one complements the other. Is that it?

Dr. HUNDLEY. They are jointly planned together.

CONTROL OVER EXISTING INVENTORY

Senator MAGNUSON. The House says that the committee is not recommending funds for further acquisition until the Department has better control over its existing inventory. What do you have to say about that?

Dr. HUNDLEY. That is basically the point I was making a moment ago when I was discussing priorities. We have funds in our proposed budget for quality control, testing, inspection, replacement, and surveillance to improve control of what we now have. This is something to which we give a very high priority.

Senator MAGNUSON. But the House says you should wait a little bit with these funds until you get better control.

Dr. HUNDLEY. Mr. Chairman, last year was the first year we were delegated the responsibility for the medical stockpile. It became evident immediately that control of inventories was urgently needed and that much of the stock had deteriorated and required replacement. We have achieved an appreciable degree of control over current inventories, and have commenced a program for updating of materials. The stocks in the warehouses have been surveyed and realistic valuations determined. A large number of the prepositioned hospitals have also been inspected. We have accomplished to a substantial degree the purposes desired by the House committee.

Senator MAGUNSON. And they suggest you go a little slower on this until you get more of your ducks in a row.

Are there any other questions?

Senator SALTONSTALL. Yes. Off the record.

(Discussion off the record.)

MEDICAL SELF-HELP PROGRAM

Dr. HUNDLEY. Could I make one more point which concerns Mr. Pittman? We feel the medical self-help program is one of the most important things we have instituted in the civil defense area for many, many years. It is going very well thus far. We hope that Mr. Pittman's appropriation will not be cut so far that he could not provide the training kits which we have to have to keep the program going.

Senator MAGNUSON. At this point there will be placed in the record letters from Senators Hugh Scott and Joseph S. Clark, of Pennsylvania supporting the restoration of funds to this item.

(The letters referred to follow:)

U.S. SENATE,
COMMITTEE ON THE JUDICIARY,
August 8, 1962.

Hon. WARREN G. MAGNUSON,
Chairman, Independent Offices Appropriation,
New Senate Office Building, Washington, D.C.

DEAR SENATOR MAGNUSON: The House, in passing H.R. 12711 (independent offices appropriation) drastically reduced from $41,445,000 to $5,500,000 the request of Public Health Service for the civil defense medical stockpile and related activities.

In the 10 years since this program was initiated, I am advised, roughly only one-fifth or $200 million of the total stockpile objective of $950 million has been achieved.

Accordingly, I wish to express to you and the members of your committee my conviction that the total request of the Public Health Service seems essential and well-merited and therefore has my support for full restoration.

I would appreciate the committee's approval in making this letter a part of the record of these hearings.

Sincerely,

HUGH SCOTT.

U.S. SENATE,
Washington, D.C., August 2, 1962.

Hon. WARREN G. MAGNUSON,
Chairman, Independent Offices Subcommittee of Senate Appropriations Committee, U.S. Senate, Washington, D.C.

DEAR MAGGIE: Enclosed is a letter from Congressman Frank M. Clark, representing the 25th Pennsylvania District, calling my attention to the drastic cut made by the House in HEW's request for funds for their civil defense medical stockpile activity.

You will note from the Congressman's letter that this is a matter of substantial importance to western Pennsylvania which, as you know, is presently suffering from substantial and chronic unemployment.

I would hope that you would feel able to restore some part of the cut made by the House in HEW's request for funds.

My understanding is that this matter will come before your subcommittee on Monday, August 6.

With kindest regards,

Sincerely yours,

JOE.
(Joseph S. Clark).

HOUSE OF REPRESENTATIVES,
Washington, D.C., August 1, 1962.

Senator JOSEPH S. CLARK, Jr.,
U.S. Senate, Washington, D.C.

DEAR JOE: The House today, in passing H.R. 12711, drastically cut HEW's request for funds for their civil defense medical stockpile activities.

Any support which you can exert toward even modest restoration of the cut would in my humble judgment be a service to our State and to all our fellow citizens throughout the Nation.

The present Public Health medical stockpile approximates $200 million whereas Public Health Service has adjudged a stockpile level of $950 million as necessary in the event of an attack on this Nation.

Very wisely, I believe, PHS seeks maximum protection for a portion of this inadequate stockpile by placing it in underground depots. Our State alone at this time has been favored by issuance of an invitation to bid from PHS, through GSA on developing two such underground facilities, each facility to cover 250,000 square feet of space.

Should the Senate fail to restore any of the requested funds to HEW the opportunity to develop these underground sites in Pennsylvania will be jeopardized, and the medical procurement program will come to a halt.

On Monday, August 6, 1962, I am advised, Senator Magnuson's Committee on Appropriations will take up this matter, among others.

I am confident you will do all you can, for which I extend my warm regards and deep thanks.

Sincerely yours,

FRANK M. CLARK,
Member of Congress.

COMMITTEE RECESS

Senator MAGNUSON. All right. The committee will recess until 10 o'clock tomorrow morning.

(Whereupon, at 4:55 p.m., Monday, August 6, 1962, the subcommittee recessed until 10 a.m., Tuesday, August 7, 1962.)

INDEPENDENT OFFICES APPROPRIATIONS FOR 1963

TUESDAY, AUGUST 7, 1962

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, D.C.

The subcommittee met, pursuant to recess, at 9:55 a.m., in room F–37, the Capitol, Hon. Warren G. Magnuson (chairman) presiding.

Present: Senators Magnuson, Ellender, Robertson, Monroney, Allott, Young, Kuchel, Cotton, and Saltonstall.

CIVIL SERVICE COMMISSION

STATEMENT OF JOHN W. MACY, JR., CHAIRMAN, ACCOMPANIED BY WARREN B. IRONS, EXECUTIVE DIRECTOR; ANDREW E. RUDDOCK, DIRECTOR, BUREAU OF RETIREMENT AND INSURANCE; AND W. B. UHLENHOP, CHIEF, BUDGET AND FINANCE DIVISION

Senator MAGNUSON. The committee will come to order.

We have the Civil Service Commission here today, and its Chairman, Mr. Macy, is here.

You have a short statement, I see, Mr. Macy, and a letter. We will put your letter and summary justification in the record in full, which explains the items you have.

Mr. MACY. Yes, sir.

(The letter referred to follows:)

U.S. CIVIL SERVICE COMMISSION,
Washington, D.C., August 2, 1962.

HON. WARREN G. MAGNUSON,
Chairman, Subcommittee in Charge of the Independent Offices Appropriation Bill for 1963, U.S. Senate.

DEAR SENATOR MAGNUSON: This is in reply to your letter of July 27, 1962. We appreciate the opportunity to provide your subcommittee with information regarding the effects of the action taken by the Committee on Appropriations of the House on the several appropriations and funds of the Commission as provided in H.R. 12711, the independent offices appropriation bill, 1963.

The Commission has made a careful review of H.R. 12711 and Report 2050 accompanying the bill and has given attention to each item in the light of the recommendations of the committee. We appreciate the consideration given to our budget requests by the House committee and have determined that their action is acceptable to the Commission except for four items: (1) Salaries and expenses, (2) investigation of U.S. citizens for employment by international organizations, (3) payment to civil service retirement and disability fund, and (4) Government payment for annuitants, employees health benefits fund.

(*1*) *"Salaries and expenses" appropriation*

Page 6, line 11, $21,349,000; request change to $21,845,000 of which $3,153,000 shall be derived by transfer from the civil service retirement and disability

fund: The House bill provides the same amount for salaries and expenses as appropriated for fiscal year 1962, representing a decrease of $841,000 from the budget request. The increase requested in the budget was primarily to provide additional funds for certain workloads and to provide for the replacement of old and worn furniture and equipment prior to the move of the Commission's central office into a new building (Federal office building No. 9).

Based upon a careful analysis of the current status of workloads and trends in receipts, and in the light of economies we have been able to achieve in our operations, the Commission accepts the action of the House except for the budget request of $496,000 for new furniture and equipment. These funds should be provided prior to the move into the new building in order to avoid the expense of moving worn and substandard items which should be replaced.

Also, the budget request provided that administration of the civil service retirement system be financed out of the retirement fund by the transfer from that fund to the "Salaries and expenses" appropriation. The Commission believes that this represents a logical method of financing consistent with the financing of administrative expenses of social security, railroad retirement, and the Commission's group life insurance and health benefits programs. In accordance with our decision to request no increases for personal services, we are reducing the request for transfer from the retirement fund.

Accordingly, the Commission requests your committee to restore $496,000 of the $841,000 cut made by the House committee and to provide that $3,153,000 of the total authorized be derived by transfer from the civil service retirement and disability fund.

(2) Investigation of U.S. citizens for employment by international organizations

Page 7, line 4, $430,000; request change to $512,000: The House committee recommended $430,000 for this appropriation, the same as appropriated for 1962 and a reduction of $82,000 from the budget request. These funds are used primarily for investigations by the Civil Service Commission and the Federal Bureau of Investigation. The workloads are increasing and the Commission has no control over the number of requests received. Because of a lack of funds during the closing weeks of fiscal year 1962, it was necessary to backlog 136 of these cases costing approximately $48,000. There is every indication that receipts will continue at a level which, with the carryover from last fiscal year, will require at least the total amount requested. The Commission requests that your committee restore the full amount of the reduction made in this item by the House committee.

(3) Payment to civil service retirement and disability fund

Page 8, delete lines 4 through 9: This item would provide for the payment of $41,959,000 to the civil service retirement and disability fund for financing certain annuity benefits and increases. Since legislation (Public Law 87–114) was passed in 1961 making these annuities and increases permanent without annual appropriations to cover the additional cost and since the administration has determined that additional appropriations to the fund are not required at this time, the Commission requests that the item be deleted.

(4) Government payment for annuitants, employees health benefits fund

Page 8, line 15, $3,000,000; request change to $5,400,000: The recommendation of the House committee provides $3 million for this item, a reduction of $2,400,000 from the budget request. These funds are used to pay the Government's share of the cost of the Federal employees health benefits program for those participants who have retired since the beginning of the program and for the survivors of deceased employees and annuitants. The amount required increases from year to year as the number of covered annuitants and survivors increase. Based on our most current information, there is every indication that payments to cover contracts of the insurance carriers will require the full amount requested for fiscal year 1963. Therefore, the Commission requests that your committee restore the full amount of the reduction made in this item.

I am advised that a hearing has been scheduled for the Commission before your committee on August 7. We shall be happy to discuss these matters at that time in as much detail as you may desire.

By direction of the Commission:

Sincerely yours,

JOHN W. MACY, Jr., *Chairman.*

U.S. Civil Service Commission—Justifications of estimates of appropriations for fiscal year 1963

Appropriation or fund title	Fiscal year 1962	Fiscal year 1963	Changes (+ or −) 1963 estimates over 1962
Salaries and expenses	$21,349,000	[1] $22,190,000	+$841,000
Investigation of U.S. citizens for employment by international organizations	430,000	512,000	+82,000
Annuities under special acts	2,248,000	2,113,000	−135,000
Government payment for annuitants, employees health benefits fund	4,500,000	5,400,000	+900,000
Government contribution, retired employees health benefits fund	19,000,000	9,200,000	−9,800,000
Payment to civil service retirement and disability fund	44,637,000	0	−44,637,000
Administrative expenses, employees health benefits fund (limitation only)	1,074,000	1,527,000	+453,000
Administrative expenses, employees life insurance fund (limitation only)	260,000	265,000	+5,000

[1] Of this amount $3,275,000 shall be derived by transfer from the civil service retirement and disability fund.

GENERAL STATEMENT

Mr. MACY. Thank you, Mr. Chairman. I appreciate the opportunity to appear before you to discuss the budget request of the Civil Service Commission for fiscal year 1963. The Commissioners have reviewed the actions of the House in H.R. 12711 and the recommendations contained in the House committee's Report No. 2050 in relation to appropriations in support of Commission programs. After review we accept House action on all but four items. In the interest of conserving your time I will center my remarks on these items.

ITEMS IN RESTORATION REQUEST

Senator MAGNUSON. Yes. Very good.

Mr. MACY. (1) Salaries and expenses appropriation; (2) investigation of U.S. citizens for employment by international organizations; (3) payment to civil service retirement and disability fund; and (4) Government payment for annuitants, employees health benefits fund.

SALARIES AND EXPENSES

First, with respect to salaries and expenses, the House allowed $21,349,000, the same as appropriated for fiscal year 1962 and a reduction of $841,000 in the fiscal year 1963 budget request.

Senator MAGNUSON. For the record, let us put this in.

APPROPRIATION, 1962, AND ESTIMATES, 1963

The 1962 appropriation for salaries and expenses was $21,349,000. The budget estimates for 1963 were $18,915,000, plus trust funds of $3,275,000.

Mr. MACY. That is correct.

Senator MAGNUSON. The House recommended $21,349,000.

Mr. MACY. Yes.

Senator MAGNUSON. Which is the amount of 1962.

Mr. MACY. That is correct.

Senator MAGNUSON. How do the trust funds figure into that?
Mr. MACY. The trust funds figure, as I will explain in a moment.
Senator MAGNUSON. All right.

NEW RESPONSIBILITIES

Mr. MACY. During the past 18 months, the Commission, under direction from President Kennedy, has assumed new responsibilities in certain areas of personnel management. Some of these are:

(1) A new workload of appeals from nonveterans under Executive Order 10988;

(2) More comprehensive inquiry into agency manpower utilization activities; and

(3) Participation in the President's Commission on the Status of Women.

In addition, increased workloads have been experienced in postmaster examining and investigations and through the implementation of the new Federal employment statistical program started last year.

IMPROVEMENT IN ORGANIZATION AND ADMINISTRATION

In an effort to perform these added responsibilities effectively and to improve and strengthen existing programs without increasing personnel strength, Commission management has taken certain steps to improve organization and reduce administrative overhead. For example, we closed the Cincinnati regional office, placing the States of Kentucky, Indiana, and Ohio under the Chicago office and the State of West Virginia in the Philadelphia region. During recent months we have completed reorganization in the 10 remaining regional offices by combining the recruiting, examining, and inspections functions in a single division and by providing more effective operations and leadership through the assignment of civil service representatives at 50 selected locations.

FURNITURE AND EQUIPMENT, FEDERAL OFFICE BUILDING NO. 9

In the light of the operational and organizational economies achieved, the Commission can accept the House action of no increase in the salaries and expenses appropriation for 1963 except for one item—the budget request of $496,000 to provide new furniture and equipment for the new building, Federal Office Building No. 9, to be occupied by mid-1963. In recent years the Commission has requested funds to replace outmoded furniture and equipment in its central office. The House Appropriations Committee has, in the past, recommended that replacement be delayed until the new building is ready for occupancy. Approximately 50 percent of the total requirement for furniture and miscellaneous equipment for the new building would be purchased to replace substandard items now in use. The other 50 percent would be moved to the new building by the General Services Administration. In order to have the equipment available upon occupancy and thus save the expense of moving the undesirable items, it is necessary that funds be available early in this fiscal year so that purchase orders can be placed 90 days in advance.

In summary, Mr. Chairman, the Commission requests favorable consideration of the restoration of $496,000 on that one furniture item.

DATE OF OCCUPANCY

Senator MAGNUSON. When do you expect to move into that building?

Mr. MACY. The General Services Administration indicates the building will be completed some time between July and October of next year, so that we are in a position of having to purchase this furniture before then.

QUESTION OF SUPPLEMENTAL

Senator MAGNUSON. Why would you not put that in a supplemental in January or February? Why not put it in the first appropriation supplemental bill when you would have a better date?

Mr. MACY. The date appears to be in the first——

Senator MAGNUSON. How long have they been building that?

Mr. MACY. Longer than I care to recall.

Senator MAGNUSON. Off the record.

(Discussion off the record.)

Mr. MACY. I understand from the Administrator of the General Services Administration that he has a firm date.

Senator MAGNUSON. I think you would be better off until you get a firm date and make replacements.

Mr. MACY. It would not be possible if we follow the pattern this year.

Senator MAGNUSON. As we show up in January, I have never seen it to fail, there is always an appropriation bill with some items in it for the different departments, and these are perfectly legitimate items for a supplemental when you are moving into a new building.

Mr. MACY. But our feeling is if it could be appropriated at this time we would have better planning.

Senator MAGNUSON. We will see what the committee thinks about it.

FINANCING RETIREMENT SYSTEM (TRUST FUND)

Mr. MACY. On the item you raised, about financing the Commission recommended in its 1963 budget request that the administration of the civil service retirement system be financed out of the civil service retirement and disability fund instead of through direct appropriation as in the past. It was proposed to accomplish this by providing that $3,275,000 of the "Salaries and expenses" appropriation be derived by transfer from the retirement fund. This is a desirable change in financing since it conforms to the practice followed in similar programs such as social security and railroad retirement. In fact, the Commission presently finances its administrative operations for the group life insurance and health benefits programs in this fashion. In view of these precedents, the Commission recommends that your committee give favorable consideration to financing the administration of the civil service retirement system in this manner.

ADMINISTRATIVE COST RECOMMENDATION DENIED

Senator MAGNUSON. Let us get this straight. The $3,275,000 is the administrative cost of this?

Mr. MACY. Of the retirement program.

Senator MAGNUSON. So instead of appropriating it, you are taking it out of the fund?

Mr. MACY. That was the recommendation. The House action was not to do that.

HOUSE SUGGESTION

Senator MAGNUSON. They say, and I quote from their report, "The proposal to tap the fund is denied," and they suggest that this is a better way to do it.

Mr. MACY. The suggestion is this is a better way to do it and it conforms with the practice in administering programs of this type which are financed through funds.

Senator MAGNUSON. This would come technically from the funds paid in by the employees?

Mr. MACY. And by the agencies.

Senator MAGNUSON. The Government has not paid any in either, has it?

Mr. MACY. The agencies are paying an equivalent to the 6½ percent contributed by the employees through annual appropriations. This has been the case since 1956, when an amendment provided that requirement. So this would be paying for administrative operations out of employee——

Senator MAGNUSON. If you do not have it, put this in the record. What would be the percentage administrative expense, percentagewise, of the fund?

Mr. MACY. Of the fund?

Senator MAGNUSON. It would be very small, would it not?

Mr. UHLENHOP. Infinitesimal.

PERCENTAGE OF FUND USED FOR ADMINISTRATION

Senator MAGNUSON. Why not put that in the record to show that the administration of the fund is right down to a minimum?

Mr. IRONS. About three-hundredths of 1 percent.

Senator MAGNUSON. And you are tapping the fund for a very small amount. Percentagewise, as you say, it is infinitesimal.

Mr. MACY. The fund at the moment is about $12 billion.

Mr. IRONS. Three-hundredths of 1 percent.

Mr. MACY. We are asking for roughly $3 million.

Senator MAGNUSON. I think you will find the administration of this fund is so much lower than the administration cost of other funds, it would be justifiable and would be one of the reasons why you could tap it for this small amount.

Mr. MACY. We will provide a specific percentage figure on that.

Senator MAGNUSON. Yes.

(The information referred to follows:)

The percentage relationship of fiscal year 1963 estimated administrative expenses ($3,153,000) to the balance in the fund as of June 30, 1962 ($12,084,622,000) is twenty-six one-thousandths of 1 percent.

REDUCTION IN SALARIES AND EXPENSES

Mr. MACY. In accordance with our decision not to request restoration of funds for personal services, the amount required for administration of the retirement system has been reduced. Accordingly, it is recommended that $21,845,000 be provided for salaries and expenses of which $3,153,000 be derived by transfer from the civil service retirement and disability fund.

It is a somewhat smaller figure in view of the acceptance of the House reduction.

TOTAL RESTORATION REQUEST UNDER SALARIES AND EXPENSES

Senator MAGNUSON. What is the total on the salaries and expenses above the House $21,349,000, that you are asking in that category, including the $3 million tap?

Mr. MACY. $496,000, which is represented by that furniture item.

Senator MAGNUSON. I'm sorry. I did not catch that. The furniture was what?

Mr. MACY. $496,000. The entire difference that is requested here, above what was approved by the House, is for the furniture.

LANGUAGE REQUEST

Senator MAGNUSON. The furniture, and then the language?

Mr. MACY. Then the language with respect to——

Senator MAGNUSON. On the difference there of tapping the fund.

Mr. MACY. Yes.

That is correct.

Senator MAGNUSON. All right.

INVESTIGATION FOR INTERNATIONAL EMPLOYMENT

Mr. MACY. The second item we wish to appeal is the appropriation "Investigation of U.S. citizens for employment by international organizations." The House action with respect to this item allowed $430,000, the same as the 1962 appropriation and $82,000 less than the budget request. These funds are used primarily for investigations conducted by the Civil Service Commission and the Federal Bureau of Investigation.

Senator MAGNUSON. I think you can put that in the record. It is an old story.

Mr. MACY. It is a familiar story.

Senator MAGNUSON. It is a familiar story with us and we will take a look at it.

NO CONTROL OF WORKLOAD BY CSC

Mr. MACY. The Commission has absolutely no control over the workloads in this program. They result from requests for employment of U.S. citizens by the United Nations and other international organizations. There has been a consistent upward trend in the number of these requests. The number of investigations have doubled since 1956.

The prompt processing of these investigations is an important factor in determining whether or not the United States is properly

represented on the staffs of the international organzations of which it is a member. However, because of lack of funds during the closing weeks of fiscal year 1962, it was necessary for the Commission to backlog 136 cases costing approximately $48,000 to complete.

ADDITIONAL INTERNATIONAL ORGANIZATIONS

Senator MAGNUSON. I think you ought to put in the record also here, if you haven't already, any additional international organizations, since last year, that is, fiscal year 1962.

Mr. MACY. I do not believe there are any, but I will include it, if there are.

Senator MAGNUSON. All right.

Mr. MACY. May I invite your attention to the final sentence in the second paragraph? I think it is pertinent.

Senator ALLOTT. On what page?

BACKLOG OF INVESTIGATIONS OF U.S. CITIZENS

Mr. MACY. The second paragraph on page 4 in the center, under the second item here. This is with respect to the investigation of U.S. citizens. Our experience during the past year has been one of an increased workload in these cases. Because of the lack of funds during the closing weeks of fiscal year 1962, it was necessary for the Commission to backlog 136 cases costing approximately $48,000 to complete. The processing of these cases in 1963 together with a 15-percent increase in new cases estimated by the State Department will certainly require the full amount of the budget request, if not more before the end of the fiscal year. Therefore, I strongly urge that this committee recommend the full amount of $512,000, as requested for this vital program.

Senator MAGNUSON. If there has not been an increase in these international organizations, or the creation of new ones, let's say—and, of course, this is not your responsibility.

Mr. MACY. This is a State Department responsibility.

Senator MAGNUSON. Yes. Is it because they are adding more people to the present organization?

PRESENT ORGANIZATIONS EXPANDING

Mr. MACY. The present international agencies, as I understand it, Mr. Chairman, are expanding in size, and there is a decided effort to assure that there is U.S. representation in these agencies to the extent that it is permitted. This is the basis for the 15-percent increase.

Senator MAGNUSON. Of course, they may be expanding in size through no fault of the United States, which is only one member.

Mr. MACY. That is correct.

Senator MAGNUSON. It may be the rest of them are expanding and we have to follow along.

Mr. MACY. That is right.

Senator MAGNUSON. But there does not seem to be any end to these things, does there?

Senator ALLOTT. There is no end to it. They keep getting bigger and bigger every year.

Senator MAGNUSON. But this Commission had to do the job regardless.

Mr. MACY. In this appropriation we are a service agency for the international organization.

Senator MAGNUSON. In this matter we had better take it up with the State Department when they come up and see what happens.

NOT INVESTIGATION OF FOREIGNERS

Senator ALLOTT. To make the record clear, this is not investigation of foreign people, but an investigation of U.S. nationals who are to serve with international agencies.

Mr. MACY. That is correct, sir. Right. These are American citizens who have applied.

Senator ALLOTT. The reason why I say that is because so many times in the discussion of this on the floor of the Senate and other places the chairman and I have gotten into the situation where people think we are investigating foreigners and carrying out an investigative process in foreign places. There is a confusion about this function.

Mr. MACY. These are strictly U.S. citizens who have applied for employment.

FIFTEEN PERCENT WORKLOAD INCREASE

SenatorALLOTT. Let me ask you one question. Where do you get the 15 percent?

Mr. MACY. It is a figure supplied to us by the State Department. It is their estimate of the change in workload anticipated for 1963. Each year we receive a letter from the Secretary of State indicating what the anticipated volume of the cases is going to be under this program from which we formulate our estimate for appropriation. Shall I proceed, sir?

LIST OF ORGANIZATIONS

Senator ALLOTT. One other question, Mr. Macy. This would include what organizations? Let us put it in the record.

Mr. MACY. I can provide for the record the full list of organizations, if you wish.

Senator ALLOTT. How many of them are there? Do you know?

Mr. UHLENHOP. About 50, I think.

Mr. MACY. About 50 of these agencies.

Senator ALLOTT. I think it would be a good idea to put that in the record.

Mr. MACY. I believe we have it right here and can provide it as an exhibit.

Senator ALLOTT. All right. Fine.

Mr. MACY. The chairman asked that we provide the names of any additional organizations since last year. I do not believe there are any, but if so, we will supplement the record with them.

(The information referred to follows:)

There is one new international agency since last year. It is the Organization for Economic Cooperation and Development, Paris, France.

Senator ALLOTT. But this list you have just handed me we will insert in the record at this point. That is essentially the list?

Mr. MACY. It is a current list.

(The information referred to follows:)

INTERNATIONAL ORGANIZATIONS CONSIDERED BY THE DEPARTMENT OF STATE AS PUBLIC INTERNATIONAL ORGANIZATIONS INSOFAR AS COVERAGE UNDER EXECUTIVE ORDER 10422, AS AMENDED, IS CONCERNED

United Nations Seretariat:
Voluntary program of the United Nations:
- United Nations International Children's Fund.
- United Nations High Commissioner for Refugees.
- United Nations Relief and Works Agency for Palestine Refugees in the Near East.

Specialized agencies of the United Nations:
- Food and Agricultural Organization, Rome, Italy.
- International Civil Aviation Organization, Montreal, Canada.
- International Labor Organization, Geneva, Switzerland.
- United Nations Educational, Scientific, and Cultural Organization, Paris, France.
- Universal Postal Union, Bern, Switzerland.
- World Health Organization, Geneva, Switzerland.
- World Meteorological Organization, Geneva, Switzerland.
- International Telecommunication Union, Geneva, Switzerland.

Inter-American organizations:
- Pan-American Union, Washington, D.C.
- Pan-American Health Organization, Washington, D.C.
- Inter-American Defense Board, Washington, D.C.
- Inter-American Children's Institute.
- Inter-American Indian Institute, Mexico, D.F.
- Inter-American Institute of Agricultural Sciences, Turrialba, Costa Rica.
- Pan-American Institute of Geography and History, Mexico, D.F.
- Pan-American Railway Congress Association, Buenos Aires, Argentina.
- Postal Union of the Americas and Spain, Montevideo, Uruguay.
- Inter-American Development Bank, Washington, D.C.

Bilateral commissions:
- International Pacific Salmon Fisheries Commission, New Westminster, British Columbia, Canada.
- International North Pacific Fisheries Commission, Vancouver, British Columbia, Canada.
- International Pacific Halibut Commission, Seattle, Wash.

Multilateral commission: Inter-American Tropical Tuna Commission, San Diego, Calif.

Other international organizations:
- Intergovernmental Committee for European Migration, Geneva, Switzerland.
- The Interparliamentary Union, Geneva, Switzerland.
- Intergovernmental Maritime Consultative Organization, London, England.
- International Union for the Protection of Industrial Property, Bern, Switzerland.
- International Bureau for the Permanent Court of Arbitration, The Hague, Netherlands.
- International Bureau of Weights and Measures, Sevres, France.
- International Council of Scientific Unions and Associated Unions, Brussels, Belgium.
- International Hydrographic Bureau, Monte Carlo, Monaco.
- International Sugar Council, London, England.
- International Whaling Commission, London, England.
- International Wheat Council, London, England.
- International Commission for the Northwest Atlantic Fisheries.
- Permanent International Association of Navigation Congresses, Brussels, Belgium.
- South Pacific Commission, Noumea, New Caledonia.
- Central Commission for the Navigation of the Rhine, Strasbourg, France.
- International Cotton Advisory Committee, Washington, D.C.

International Wool Study Group, London, England.
International Rubber Study Group, London, England.
General Agreement on Tariffs and Trade, Geneva, Switzerland.
International Monetary Fund, Washington, D.C.
International Bank for Reconstruction and Development, Washington, D.C.
International Finance Corporation, Washington, D.C.
International Atomic Energy Agency, Vienna, Austria.
Organization for Economic Cooperation and Development, Paris, France.

DELETION OF LANGUAGE ON ANNUITY BENEFITS

Mr. MACY. Third, it is requested that lines 4 through 9 on page 8 of the bill be deleted. This item would provide for appropriation of $41,959,000 to the civil service retirement and disability fund for financing certain annuity benefits and increases. It has been and is the position of the administration that the retirement fund does not require this appropriation at this time. The need of an additional appropriation to the fund was considered before submission of the President's budget, and it was concluded that such action was not required. This conclusion is clearly supported by legislation passed in 1961 making certain annuity benefits and increases permanent without annual appropriations to cover the additional cost. The House report itself acknowledges the intent of this legislation even though it called for an additional appropriation for this year. It would appear that the Congress, in passing that legislation (Public Law 87–114) intended that no appropriation to the fund for this purpose was necessary. Deletion of this item would fulfill that intent.

GOVERNMENT PAYMENT FOR ANNUITANTS' HEALTH PROGRAM

The fourth item, "Government payment for annuitants, employees health benefits fund," provides the Government's share of the cost of the Federal employees health benefits program for those participants who have retired since the beginning of the program and for the survivors of deceased employees and annuitants. This program began in July 1960 for active Federal employees and the contributions required from this appropriation increase from year to year as additional employees retire or die and leave survivors. These funds are necessary to pay the carriers of the health benefits insurance contracts; they may not be used for other programs; and any balance not required in the current year remains available for the subsequent fiscal year.

HOUSE ACTION

The House bill provides $3 million for this item, a reduction of $2,400,000 from the budget request. Experience to date demonstrates the need for the full amount of $5,400,000 requested in the President's budget, plus the carryover of $1,623,000 from fiscal year 1962. This amount will be required to maintain contracts with carriers in effect during fiscal year 1963. If funds are not available to pay the premiums to the carriers the policy contract will lapse and the retired annuitants will be without health benefits protection.

Therefore, the Commission urges that the budget request of $5,400,000 be provided for this item.

Senator MAGNUSON. As I understand it, you only use it when you have to.

Mr. MACY. That is correct.

Senator MAGNUSON. And you have to have it to use it at that time.

Mr. MACY. We have to have it to meet the contract obligations.

Senator MAGNUSON. Yes. Some years it is different. The money is there and it is not used for anything else.

Mr. MACY. That is right.

Senator ALLOTT. You have to have enough there to cover what might occur during the year.

Mr. MACY. And we are in the process of gaining experience. It is only the second full year.

Senator MAGNUSON. And you can gage it then a little bit better.

Mr. MACY. That is correct.

CARRYOVER AND ADDITIONAL REQUEST

Senator ALLOTT. You had a carryover of $1,600,000 for last year and you are asking for that——

Mr. MACY. That is right.

Senator ALLOTT. And you are asking for——

Mr. MACY. $5,400,000.

Senator ALLOTT. $5,400,000 in addition to that.

Mr. MACY. In addition to that. That is correct.

Senator ALLOTT. So this is a total of $7 million?

Mr. MACY. $7 million.

Senator ALLOTT. To what extent is this increase over last year accountable to increases in Federal employment? How many new employees do you have in the Government?

APPROPRIATION, 1962; AND ESTIMATES, 1963

Senator MAGNUSON. For the record there, Senator Allott, the appropriations for 1962 were $4,500,000. The budget estimates for 1963 were $5,400,000, and the House made it $3 million.

Senator ALLOTT. This year.

Senator MAGNUSON. So they are up $900,000 from the budget estimate of last year.

RETIRED EMPLOYEES

Mr. MACY. But let me say, Mr. Chairman, in response to Senator Allott's point, I think it should be clear that what we are talking about here are retired employees. These are the retired employees who are covered by this program, and not the active employees. So the increase is based upon the additions to the retirement rolls.

Last year there was an addition of about 50,000 on the retirement rolls.

Senator ALLOTT. There must be an error on our sheet because the next item is the Government contribution to the Retired Employees' Health Benefits Fund.

Mr. MACY. The Government payment for annuitants in this item—annuitants being the retired Federal employees covered by this program—the active employees are also covered.

Senator MAGNUSON. In health programs too?

Mr. MACY. In health programs too, but they are financed by contribution of the employee and the Government on an active basis.

Senator MAGNUSON. Yes.

COSTS UNDER HEALTH BENEFIT CONTRACTS

Mr. MACY. Once the employee is retired and becomes an annuitant, it is necessary to have this appropriation in order to meet the current costs under the contracts with the health benefits carriers.

Senator ALLOTT. The Government contribution to those is included under the individual agency's salaries?

Mr. MACY. That is correct. It is difficult to comprehend, because there is also a program for retired employees health benefits. Those are the employees who were already retired at the time the legislation was enacted. The appropriation we are discussing is increasing in amount because there are an increasing number of individuals going on the retirement rolls, whereas the other category, the category of retired employees, goes down, because the number on the rolls that retired prior to 1960 is a diminishing group due to death.

Senator ALLOTT. Then what you are actually asking for in these two categories is in the retired employees, $9,200,000.

Mr. MACY. That is correct.

Senator ALLOTT. Plus the $7 million in round figures.

Mr. MACY. Yes.

Senator ALLOTT. Which makes $16,200,000.

Mr. MACY. That will go for retired employees of these two different categories.

Mr. RUDDOCK. And survivors, Mr. Chairman.

Mr. MACY. And survivors. Thank you.

This program covers survivors of annuitants as well.

My final paragraph reads:

ADMINISTRATIVE COSTS FOR RETIRED EMPLOYEES HEALTH BENEFITS

I would like to call to your attention one additional item which was not in our original budget request, but which was added by the House committee at our request. This involves the administrative expenses for the retired employees health benefits program. Due to increasing costs of hospital room rates and other health care services, it will be necessary to increase premium rates for the retired employees uniform plan by approximately 15 percent effective July 1, 1963. The administrative work required in fiscal year 1963 in preparation for this rate increase will make it impossible to operate within the 2-percent limitation for administrative expenses provided in the Retired Federal Employees Health Benefits Act. The application of this limitation would permit expenditure of approximately $282,000 for 1963. Therefore, the Commission requested the House committee to insert language in the appropriation bill to provide a limitation for administrative expenses for this program in the amount of $400,000 for 1963. The House has provided a limitation of $375,000 for this purpose which we believe at this time will meet our needs. Steps have been initiated to amend the basic legislation to deal with this situation in future years.

This concludes my opening statement, gentlemen. We shall be glad to answer any questions the committee may have.

Senator MAGNUSON. Off the record.

(Discussion off the record.)

INCREASING NUMBER ON RETIREMENT ROLLS

Senator MAGNUSON. What the chairman is posing, and I am sure the committee wants to explore this too—and maybe you fellows could give us some advice on it—is this: I am reading as follows: The Retirement Division of the Civil Service Commission advises us that 50,228 employees of the Federal Government were added to the retirement rolls in fiscal 1961; that 53,500 were estimated for fiscal 1962, and that 57,000 are estimated for fiscal 1963. These figures include all types of annuitants including mandatory, on disability and optional. Table 9 of the budget shows civilian employment in the executive branch totaling 2,407,029 at the end of fiscal 1961, and it is estimated to be 2,492,345 at the end of fiscal 1962, and 2,538,390 at the end of fiscal 1963. For the current year, even though Federal employment has been reduced by 53,500 retirements, the total number by June 30 is expected to increase by 85,316, and for 1963, even though reduced by 57,000 retirements, the total number at the end of the fiscal year is expected further to increase by 46,045.

To me this demonstrates that Parkinson's law still operates continuously to balloon the employment of Federal civilian personnel.

CONTROLLING EXPANDING EMPLOYMENT BY RETIREMENT ATTRITION

The Independent Offices Appropriation bill provides funds amounting to $1.8 billion for personnel compensation, to employ some 300,000 civilians, which is more than 12 percent of the total Federal employee payroll. While it may not add up to a huge saving, it seems to me one way of slowing down the effects—and I quote again Parkinson's law—is to get greater benefit from the savings created through retirements. When an employee with years of service retires, usually there is an assistant ready and able to take over those duties, without the necessity of immediately employing somebody else to fill that vacancy. Of course, the tendency after such vacancy is filled by the assistant is to hire one or two or three of lower grades, and thus to use up the potential saving created by retirement.

In other words, what happens when an employee retires topside at an average salary of, let us say—let us say he retires at the salary of $15,000 to $20,000 a year and his assistant moves up to that position, or the No. 2 man does—instead of hiring one man down below or one person, they split the $15,000 to $20,000 up and hire two. We were hopeful that we could try this out and cut down the number of people employed, because when one top employee retires and goes out of the 50-some-thousand, you would only hire one down below. This is my idea of——

Mr. MACY. How to control it.

Senator MAGNUSON. Of how to control the huge increase in payroll. I offer it as a suggestion and I add this question: Could you try it out between now and the next session and maybe use these agencies as guinea pigs and see how it works out?

LIMITING SUCCESSION TO FILLING VACATED POSITIONS

Mr. MACY. The thought would be you would limit the succession merely to filling the position from which the retired individual had moved?

Senator MAGNUSON. Yes. But supposing an employee at the top side retires and he is getting, let us say, $16,000 a year.

Mr. MACY. Yes.

Senator MAGNUSON. So you technically put another man in his spot and as they move up, instead of hiring one person down there at $6,000, or at $8,000, or whatever it may be, or two people, to fill that money gap, you would hire one down below.

Mr. MACY. Of course, in my view this would be the accepted practice at the present time.

Senator MAGNUSON. But we find it is not.

Mr. MACY. You find it is not, from your information?

Senator MAGNUSON. According to these charts it is not. Now, not being facetious, I think it is what Parkinson talked about when he devised our now famous Parkinson's law.

Mr. MACY. We are all trying to repeal Parkinson's law, and we are certainly sympathetic to that view.

Senator MAGNUSON. Yes.

INCREASE DUE TO EXPANDED PROGRAM

Mr. MACY. The increase you see reflected on this sheet is probably largely attributable to the increase in certain agencies where there has been an expanded program. For example, over here on the Space Agency.

Senator MAGNUSON. Yes. I understand that. I understand a lot of these——

Mr. MACY. There are 9,000 positions.

Senator MAGNUSON. We have a lot of agencies that have been given expanded duties.

Mr. MACY. The Federal Aviation Agency is up 5,000 over this period of time. It is attributable to increased program operations.

Senator MAGNUSON. My suggestion is when you lop off $16,000 at the top, you do not go down and hire two $8,000 people below that, but you hire one.

Mr. MACY. I have no problem with that as a process. I would not have too much confidence in how much we can save that way, but certainly the plan you enunciate is a good one.

Senator MAGNUSON. I was putting it out as what I thought was a good idea.

Senator ALLOTT. May I put it in another context? The point is if you have a retiree at $16,000 you have created a $16,000 gap in your salary in the agency.

Mr. MACY. You have a vacancy created.

Senator ALLOTT. You save $16,000 for the balance of the year, whatever it is.

The chairman's point, and it is one that is well taken, is that the Administrator of the agency sees this and says we have $16,000 more in salary, so fill this up. Well, they move up everyone and take up the slack with two new employees at the bottom.

Senator MAGNUSON. And you have two more people instead of one.

GROWTH IN FAA

Senator ALLOTT. And you have two instead of one. We go through these things, and of course both of us know the reasons for the FAA—these are the initials for the "Friendly Aviation Association"—figures.

Mr. MACY. The "Friendly Aviation Association."

Senator ALLOTT. The growth is from 38,000 to 43,000 there in 3 years. My eyes do not light on the Space Agency figures.

Mr. MACY. It is over on page 3, I believe. You will see there is growth there from 17,000 to 26,000.

Senator ALLOTT. 17,000 to 26,000.

Mr. MACY. Those two are the bulk of it.

PROPOSED PLAN GOOD MANAGEMENT

Senator MAGNUSON. The actual dollar savings will amount to hardly anything, but when you get two people down below and have to take care of them, and that goes on, and the following year you shove up the pressure to get more money for your personnel because you have two instead of one, you just cannot help it. It goes along that way. Once they get on the payroll I mean you cannot help it.

Mr. MACY. I think your plan is a good management plan.

Senator MAGNUSON. It is a sort of attrition idea. Rather than the committee saying we will cut off 5 percent of the people, or something like that. Maybe there are some bugs in it, but it seems to me that is the only way you can do it, that is, when they hire down below. You cannot stop them from doing these things up above because they need these people, and they are valuable.

REPLACEMENT ONLY IN RELATION TO RETIREMENT

Mr. MACY. If the position is justified with the man in it who is going to retire, it is still justified and ought to be filled.

Senator MAGNUSON. That is right.

Mr. MACY. And the assumption ought to be that is the only position that will be filled in relation to that particular retirement. Of course, retirements are one feature of the problem.

Senator MAGNUSON. Another way to do it would be when the fellow up here retires to just move everybody up and do not hire anybody, and the two people down below can do the work that maybe they might hire another two people for and add two to it.

Senator ALLOTT. Another way of putting the point is that retirement is not used as a basis for cutting back of personnel, but always used as a basis for increasing personnel.

Senator MAGNUSON. Yes.

Senator ALLOTT. Retirement should be used, going by good management practices, to clean up your personnel situation and strengthen it, but instead of that we are just adding more.

Senator MAGNUSON. No matter when a person retires. You are right.

EXAMPLES OF EXPANSION

Senator ALLOTT. As long as this committee will keep on adding more and more each year every time an agency comes up and makes a showing, then each one of these agencies will continue to ask for

more. Even the small National Aeronautics and Space Council yesterday came up and asked for an increase from 24 to 32 employees. I am afraid as long as this committee will appropriate we will get caught in the bind that the retirement will not be used for the purpose of decreasing personnel or cleaning up personnel structures, but rather for increasing them as they are used now.

Senator MAGNUSON. You see, you people and we can keep a fairly good watch on the people up above, but when you get down to hiring at the bottom it is just an impossible task even to try unless you have some kind of a rule. Surely, if an agency had 100 people employed and one of them retires, it might be possible they could clean things up and get a long with 99, but instead of that they use the money to go down here and sometimes make it 101, because they can split it.

Senator ALLOTT. That is right.

MANAGEMENT REVIEW FOLLOWING EACH RETIREMENT

Mr. MACY. On the occasion of every retirement there should be a management review to see if, as a result of that action, there cannot be an improvement in organization and some saving in personnel. This is certainly the effect that we endeavor to put across to the agency.

Senator MAGNUSON. It is much easier for the Government to start with this policy. Supposing somebody looked at the 100 people in that agency and said, "You can get along with 98 or 99." Then you have to let two people go, and as you know, it is a difficult job when they get under civil service.

Mr. MACY. Yes.

Senator MAGNUSON. But when one retires and you have 99 left, you can do as Senator Allott suggests, and take a look at it.

NO JURISDICTION OVER HIRING BY NEW OFFICIALS

Senator ELLENDER. What jurisdiction has the Commission in preventing a newcomer in Government from hiring employees of his own choosing, and then letting those already there who served his predecessor, go and sit in a corner and fiddle around. That has been done in Government since I have been here.

Senator MAGNUSON. They have no jurisdiction.

Mr. MACY. We have no jurisdiction.

Senator MAGNUSON. What I am doing here is talking with them about this because they are experienced in personnel matters, and it might be a policy we could recommend to the departments.

Senator ELLENDER. Judging from your question, though, I assumed that both of us, and particularly the Commission, would have the jurisdiction to act on this.

Senator MAGNUSON. No, no. I started out that way explaining it was just an idea of mine.

Mr. MACY. This would just be a way to do it.

Senator ELLENDER. It is common knowledge when a new administration comes in every new person, who is not on civil service, will want his own stenographer and his own this and that around him. Under the civil service rules and regulations, the former employees cannot be discharged and thrown out. So the new man will pick out

his own and let the others just fiddle around. That is what makes these agencies grow so fast, and there ought to be some way to stop it.

Mr. MACY. I certainly hope there is a minimum of that condition.

Senator MAGNUSON. I said at the beginning, Senator Ellender, we are discussing this just as an idea.

Senator ELLENDER. Yes.

Senator MAGNUSON. I know a lot of good businesses that do it that way, as Senator Allott pointed out. When they have a retirement, instead of thinking immediately of hiring somebody else to complete a certain number of people, they look around to see if they cannot consolidate and work it out that way. It is the only way we will get the Government employment down.

IMPROVED MANPOWER UTILIZATION

Mr. MACY. I think one thing we could do along this line is make this very point with the agencies we work with in the course of our efforts at improved manpower utilization. It is one of the programs we are giving emphasis to in our efforts at this time.

Senator MAGNUSON. And this is surely the most—I should not say the easiest way, but the most humane way. You are not firing people and it will cause less trouble. When you get an average of over 57,000 people retiring in 1963, it seems to me at least you could cut Government employment in these departments quite a bit, could you not, out of that 57,000?

NUMBER OF PRESENT YEAR'S RETIREES

Senator ALLOTT. I would think so. How many retirees did you have this year?

Mr. MACY. 50,000.

Senator ALLOTT. Out of how many?

Mr. MACY. Out of 2,400,000.

REEXAMINATION OF EMPLOYEES

Senator ELLENDER. Let me ask you a question here. Is there some way under the rules and regulations that you can have people who have been working in Government, let us say, for 5 or 6 years, or 10 years, take examinations to see whether they are still qualified? Because a lot of them, I understand, are clock watchers and they do not perform as they should.

It strikes me there ought to be some way to eliminate people of that character and that kind.

Mr. MACY. This is a management responsibility in the agency to take action where individuals are not meeting the needs. Once they have met the competitive qualifications through examination——

Senator ELLENDER. The first time.

Mr. MACY. The first time.

Senator ELLENDER. Then it is promotion of personnel.

Mr. MACY. Then in some instances there are further examinations on promotion. But in any event, they have to be reviewed competitively in connection with any promotion that is authorized. But there are no further levels of examination to retain a job.

PERIODIC EXAMINATIONS

Senator ELLENDER. What would you think of your being able to have periodic examinations for all jobs if necessary, in order to weed out incompetents?

Mr. MACY. This would be a possibility, but it would impose a tremendous administrative burden. It seems to me in a large number of instances where employees are qualified it would really be superfluous to the need. I feel that the responsibility is that of supervision and management within the agencies to assure that at the present time they are getting full productivity out of the people they have. This is a responsibility that goes with a supervisory job, and they should exercise it.

Senator ELLENDER. Of course, many of them do not.

Mr. MACY. When they do not, then in turn action should be taken on them by a higher level of supervision.

Senator ELLENDER. You mean by those who are going to pay these incompetents? That is us?

Mr. MACY. It seems to me it is a management responsibility with the heads of the agency and his heads of management accepting their jobs.

Senator MAGNUSON. What I am thinking about in this respect is that there must be some way to use the retirements as a method to hold down or cut down Federal employment.

REVIEW BY SEPARATE AGENCIES

Mr. IRONS. I was hoping that the chairman would have this same kind of discussion with each agency that comes before you.

Senator MAGNUSON. Oh, yes.

Senator ALLOTT. I do not think you need to worry about that.

Senator MAGNUSON. Yes. I am just giving this to you people because you are experts in these matters and I want to know what you think about it. You may want to send us a little note. There may be a lot of bugs in this.

Mr. MACY. I would be interested in giving you further comment on this after I study it.

Mr. IRONS. I would like to see the committee urge this same kind of review for every vacancy that occurs—not just retirement, but those who resign, or leave the service for other reasons.

Mr. MACY. There are about 300,000 separations every year.

Senator MAGNUSON. That is the average.

Mr. MACY. Of which 50,000 are retired.

Senator MAGNUSON. Yes, 50,000 are retired.

Mr. MACY. So there are departures for a variety of other reasons.

As Mr. Irons points out, sound management practices would call for reviewing every time you have a vacancy, regardless of what the reason is.

Senator MAGNUSON. But when you get into the retirements you are getting moneywise into the higher brackets, and I do not see any reason why they should use the full amount to complete a whole complement.

ELIMINATING INCOMPETENTS

Senator ALLOTT. Getting back, if the chairman will yield, to Senator Ellender's question.

Senator MAGNUSON. Yes.

Senator ALLOTT. Is it not a fact that there is really in the civil service no adequate way of getting rid of incompetents?

Mr. MACY. The system is one that protects the individual on the job. There is no question about that. There is tenure.

Senator ALLOTT. This is not quite an answer to my question.

Mr. MACY. But let me develop it a little bit because a categorical answer one way or another is perhaps misleading. There are grounds for dismissal or removal. There are about 15,000 Federal employees discharged for cause every year, for a variety of reasons. Some for failure to meet performance standards, and some for misconduct and other reasons. The employee has the right to appeal that separation. Because of the appeal and the procedures involved there is a reluctance on the part of many managers to take this action.

I think this would be my response to your point. So it is difficult to remove employees, but I think to say it is impossible is an overstatement.

REMOVALS FOR INCOMPETENCE

Senator ALLOTT. Do you have any figures, for example, that would indicate how many people or what percentage of the people who have retired, have been removed for incompetence?

Mr. MACY. Of the people who retired?

Senator ALLOTT. Or those who are discharged. I beg your pardon.

Mr. MACY. No, I do not have a breakdown. I see figures here that in fiscal year 1961, 14,065 people were discharged. I do not have a breakdown of the substance of the charges made in each case, but I would assume a significant portion of this would be those who were discharged for inefficiency, or failure to perform.

Senator ALLOTT. Why would you make such an assumption? I doubt if it is backed up by the facts.

Mr. MACY. Because we see a portion of these cases on appeal that come to the Commission.

QUESTION OF MISCONDUCT

Senator ALLOTT. Are not the majority of your inventory separations by reason of misconduct? And that could take a dozen different forms. It could be refusal to obey an order, dishonesty, or any one of a dozen things. If you eliminate the actual cases of misconduct, I would be interested in how many you have left there that you actually discharge, or any agency discharges in the course of a year, for actual inefficiency or inability to do a job.

Mr. MACY. I do not have those figures with me.

Senator MAGNUSON. You can get those figures.

Mr. MACY. If the information is available we will provide it for the record.

Senator ALLOTT. I would be very much interested in that. I really would be. Because it is my understanding not only from the contact I have had with this, but from reports of previous members of the

Commission, that this is just about the situation. The combination of the difficulty of proving incompetency charges, plus the combination of an appeal with the long drawn out hassle over it, have almost resulted in a complete breakdown in the administration as far as removal for incompetency is concerned.

Mr. MACY. I would not reach as drastic a conclusion as that, but let us see if facts are available and we will discuss it with you further.

Senator ALLOTT. I will be very interested in that.

(The information requested follows:)

The information requested is not available as statistics have not been collected on "Removals for inefficiencies"—as an item separate from all other types of firings.

As one product of our Federal employment statistical program, which has just been initiated, such data will be available in future years on a sample basis.

The total firings in the Federal service in all areas for the past 3 years are:

Fiscal year 1960	14,503
Fiscal year 1961	14,065
Fiscal year 1962	14,479

PAYMENT TO RETIREMENT AND DISABILITY FUND

Senator ALLOTT. Mr. Chairman, I would like to go back, if I may, to this $41 million figure in your budget.

Senator MAGNUSON. Go right ahead.

Senator ALLOTT. On your payment to the civil service retirement and disability fund. There is no budget estimate on this amount that the House included in this, is there?

Mr. MACY. That is correct. The recommendation in the President's budget was in line with the legislation passed last year, that these benefits and increases would be paid on a permanent basis without appropriation.

Senator ALLOTT. You requested a deletion of this amount.

Mr. MACY. That is right. I am in the unusual position, Senator, of recommending that you delete something that is appropriated by the other House.

Senator ALLOTT. And your position is you contend with the President that the law is that this amount can be deducted from the trust fund?

Mr. MACY. That is correct.

Senator ALLOTT. By means of the present law and, therefore, it is unnecessary and it should not be included.

Mr. MACY. That is my position.

HOUSE LANGUAGE

Senator ALLOTT. Can you explain to me, because I cannot quite understand it, the House remark—and I will read the last sentence of their report on page 5:

There is no budget estimate, but the Congress has clearly intended that these added costs shall be financed on a current basis.

In view of the reasoning as you have stated it here, and as I understand it to be, do you know what this sentence means, that the Congress clearly intends these added costs shall be financed on a current basis?

Mr. MACY. No, sir, I do not. My view is that the intent of Congress as expressed in Public Law 85–465 last year eliminated the necessity for an annual appropriation to cover these incremental benefits authorized back in 1958 on a temporary basis, and made permanent by that law.

Senator ALLOTT. I think that is all I have on that, Mr. Chairman.

Senator MAGNUSON. Are there any other questions of Mr. Macy?

Senator COTTON. I have just one minor question.

Senator MAGNUSON. Senator Cotton.

EXCESS OVER ADMINISTRATION LIMITATION

Senator COTTON. You conclude your statement by saying that because of a particular situation this year the increased rates may exceed the 2-percent administrative limitation in your Retired Employees Benefits Act for this year, and you had asked the House to retain a sum of money to do that. Then you say that steps have been initiated to amend the basic legislation to deal with this situation in future years.

Do you mean that it is going to be necessary to increase this? That 2 percent is not going to be enough and you are going to increase that percentage in administration?

Mr. MACY. Yes. The recommendation is that the basic statute be amended to permit an annual limitation for administrative expenses in administering that particular program by appropriate action in the same fashion as limitations are provided in other operations, and legislative language to that effect has been forwarded to the Congress.

OPERATION UNDER 2-PERCENT LIMITATION

Senator COTTON. How long has that 2-percent limitation been in effect?

Mr. MACY. This is the second year of operation.

Senator COTTON. Has it been insufficient in both years?

Mr. MACY. This is the first full year. It was a fractional year before. Perhaps Mr. Ruddock can give more precise information on this.

Mr. RUDDOCK. We operated under the law during the first year of the Retired Employees Health Benefits Act without a limitation. No one could predict at that time what it would cost to set up the act and put it into effect. So there was no limitation applicable for the first year. The 2-percent limitation would be applicable for the first time this fiscal year 1963, and the amount available is insufficient to keep that act in effect.

Senator COTTON. But you say it is insufficient because of a peculiar situation necessitating added work.

Mr. RUDDOCK. Yes.

Senator COTTON. Because of the increase in rates.

Mr. RUDDOCK. That is right, sir.

Senator COTTON. It has not yet been demonstrated that under ordinary conditions the 2 percent would not be sufficient, has it?

ADEQUACY OF PERCENTAGE AMOUNT

Mr. RUDDOCK. Sir, I am sure that the 2 percent would be adequate for some years, depending on how much activity there is, and whether or not there is a rate increase. It will not be sufficient for this fiscal year 1963. It very definitely will not be sufficient at some point in the future. This is a diminishing group—these are all persons who retired before 1960 and their survivors from that group—so as they die off the group of eligibles will diminish. At the present time the number of eligibles is about 400,000, but as this group is reduced in size the Commission's administrative cost in connection with the Retired Federal Employees Health Benefits Act will come down, but not in the ratio as the number of eligibles decreases. So if we do not correct this situation we will have this recurring problem in different years. Sometime in the future we will have it definitely every year.

Senator COTTON. But you have it less instead of more then. Two percent will be too much then.

Mr. RUDDOCK. I do not think so.

Mr. MACY. No. Because as the number of employees covered drops, the unit of administrative expense is going to become greater because you have a smaller number actually to admiinster, although the dollar value will be less.

Senator COTTON. Oh, yes. Two percent will be less in dollars and cents.

Mr. RUDDOCK. Very definitely.

Senator COTTON. But do you think it is necessary to throw it out the window yet without a little more trying?

PREFERENCE FOR ANNUAL ESTIMATE ON LIMITATION

Mr. MACY. Our view was it was more appropriate for us to come before this committee and the committee in the House with an annual estimate as to what the limitation ought to be than to be rigidly fixed to the 2 percent. That was our view from the experience we have had to date.

Senator COTTON. Thank you.

Senator ELLENDER. May I ask a question?

Senator MAGNUSON. Go ahead.

INCREASED PERSONNEL IN 1963

Senator ELLENDER. I noticed that the number of employees has apparently decreased in 1963 over 1962, but when you look in the fourth column, the average number of all employees increased 47. Why is that? In other words, in 1962 you had 2,799 employees. This year you apparently have a permanent number of positions amounting to 2,770, or a decrease of 27. But you go down to the third column and you have average number of employees increased by 47. Why is that?

Mr. MACY. I believe that the 47 increase is correct.

Senator ELLENDER. So that your number of permanent employees will increase in 1963 over 1962?

Mr. MACY. By the 47 figure. I believe that is the final figure.

REFLECTION IN FUNDS REQUESTED

Senator ELLENDER. Is that reflected in the amount of money? Is it reflected in the more money you are asking for 1963 over 1962? Does that account for it, or is that partially due also to increased salaries, and other reasons?

Mr. MACY. No. This is the first time I have seen these tables. What we are proposing, Senator Ellender, is that the appropriation for salaries and expenses which is reflected here, be the same in 1963 as 1962, with the exception of $496,000 for furniture, which does not involve additional personnel.

Senator ELLENDER. But you said total personnel compensation in that column, according to the table before us, for 1963 is 17,702, and last year you had a total of 17,418. It does not say anything about furniture or anything like that, but seems to refer primarily to personnel. That, of course, as I have just pointed out, indicated that this increase means, or will evidently be used, to pay for the larger number of average employees you are going to have in 1963 over 1962.

NO INCREASE IN 1963 FOR STAFFING

Mr. MACY. Actually the figures in here are drawn from the budget document, and in agreeing to accept the House action on salaries and expenses, I think the answer to you is that there will be no increase in employees under "Salaries and expenses" in 1963 over 1962. These figures were based upon a somewhat larger request that was in the budget, which we now have conceded we do not have to have. We have gone along with the House position.

So my answer to your question is, there should be no increase in 1963 over 1962 for the staffing covered by the salaries and expenses appropriation.

HOUSE CUT ON SALARIES

Senator ELLENDER. How much has the House cut you back on salaries, that is, personnel compensation?

Mr. MACY. They cut us back $283,000, which eliminated 47 positions; and that is the 47 positions you have identified in column No. 3. Do you see what I mean?

Senator ELLENDER. I see. The 47, as I understand it, is——

Mr. MACY. Forty-seven was what we originally requested. The House struck it out and we have accepted the House reduction.

Senator ELLENDER. Why did you make it so that the House would have to do that? Why couldn't you have seen that yourself? That is the trouble with a lot of these agencies.

Mr. MACY. Senator Ellender, the reason was this: We developed our estimates a year ago and in the intervening period we have undertaken a number of management improvements and reduction in overhead, so it is possible through the experience we have had since the first of the calendar year to say that we do not require the increases we originally requested.

Senator ELLENDER. And the House brought that to your attention, evidently.

Mr. MACY. Yes. Apparently the House also viewed this as a condition.

INCREASE IN WORKLOAD

Senator ELLENDER. To what extent, if any, has your workload been increased, or will it be increased during 1963 over 1962?

Mr. MACY. The principal increase that is identifiable is in the increase in appeal workload that will come about through added appeal benefits that have been given to nonveteran employees under Executive Order 10988.

Senator ELLENDER. And you will be able to do this extra work without increasing?

Mr. MACY. We can do it because of the management economies we have effected in our operation.

Senator ELLENDER. As Senator Magnuson pointed out, I do not know of too many agencies which come here and ask for less. It is always more—always more. I wish there would be some way to stop that.

Mr. MACY. We feel that we have taken on additional workload without an increase in staffing, and that constitutes the same thing as asking for a reduction.

Senator ELLENDER. I am glad you saw the light after the House pointed it out.

Mr. MAY. The House is always very helpful.

Senator MAGNUSON. And the Commission will be helpful with us on these other matters.

Senator ELLENDER. Our Government is getting topheavy. There is no doubt about that. We must do something; otherwise it is going to smash us.

Senator MAGNUSON. The Commission is restricted by law, of course, in many cases, but I will say this for this Commission: They have been trying to suggest and be persuasive in having good management policy with the other agencies.

Mr. MACY. That is our prime objective.

Senator MAGNUSON. The law is pretty strict on you folks.

Are there any further questions of Mr. Macy?

If not, thank you very much, gentlemen.

Mr. MACY. Thank you, Mr. Chairman.

CIVIL AERONAUTICS BOARD

STATEMENT OF ROBERT T. MURPHY, VICE CHAIRMAN, ACCOMPANIED BY MORRIS CHERTKOV, EXECUTIVE DIRECTOR; JOHN B. RUSSELL, CHIEF, OFFICE OF ADMINISTRATION; IRVING ROTH, DIRECTOR, BUREAU OF ECONOMIC REGULATION; JOHN H. WANNER, GENERAL COUNSEL; WARNER H. HORD, CHIEF, OFFICE OF CARRIER ACCOUNTS AND STATISTICS; FRANCIS W. BROWN, CHIEF HEARING EXAMINER; JOSEPH C. WATSON, DIRECTOR, BUREAU OF INTERNATIONAL AFFAIRS; LEON H. TANGUAY, ACTING DIRECTOR, BUREAU OF SAFETY; AND ROBERT BURSTEIN, ASSOCIATE DIRECTOR, BUREAU OF ENFORCEMENT

AMENDMENTS AND JUSTIFICATIONS

Senator MAGNUSON. All right. The Civil Aeronautics Board. The committee will come to order and we will proceed with the Civil Aeronautics Board.

For the purpose of the record, in salaries and expenses the 1962 appropriation was $8,900,000. For fiscal year 1963 for the Board it was $9,900,000, an increase of $1 million. The House recommended $8,900,000, the same as last year. The Board has $881,000 that they want to discuss over and above the House allowance.

We will put your letter and budget summary in the record in full, Mr. Murphy.

(The letter referred to follows:)

CIVIL AERONAUTICS BOARD,
Washington, D.C. August 6, 1962.

Hon. WARREN G. MAGNUSON,
Chairman, Subcommittee in Charge of the Independent Offices Appropriation Bill for 1963, Committee on Appropriations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: In response to your letter of July 27, 1962, the Board believes that the public interest does require changes in H.R. 12711, the independent offices appropriation bill for 1963, as passed by the House.

The Board requests that the bill be amended in three respects: (1) To restore $881,000 of the $1 million reduction for salaries and expenses; (2) to restore $11,178,000 of the reduction of $12,678,000 for payments to air carriers; and (3) to restore the reduction of 875,000 in the limitation of subsidy for helicopter operations.

These changes are explained in the separate statements attached covering each of the Board's two appropriation accounts.

We appreciate the opportunity afforded the Board to appear before your committee to explain more fully the changes requested in the House bill and to answer any questions which you or other members of the committee may have.

Sincerely yours,

ROBERT T. MURPHY, *Vice Chairman.*

CIVIL AERONAUTICS BOARD

SALARIES AND EXPENSES

(House hearings, pp. 967 to 1209)

(P. 5, line 6, of H.R. 12711 as reported to the House)

1962 appropriation	$8,900,000
1963 budget estimate	9,900,000
1963 House allowance	8,900,000
Increase (+) or decrease (—) 1963 estimate over 1962 appropriation	+1,000,000
Increase (+) or decrease (—) House allowance from 1963 estimate	—1,000,000
Restoration requested	881,000

AMENDMENTS REQUESTED

The Board requests the following amendments:
Page 5, line 13, strike out "$8,900,000" and insert "$9,781,000".

HOUSE REPORT

"The committee is favorably impressed with the Civil Aeronautics Board. The Board members are outstanding, dedicated public servants. The committee recommends $8,900,000 which is the exact sum the Board had last year. At the time of the hearings there were 73 vacant positions in presently authorized staff and the $1,000,000 requested for 75 new positions is deferred until the results and savings from a current reorganization can be evaluated. If further investigation indicates a need for additional staff they can be provided next year."

STATEMENT

The House report gives two reasons for the reduction of $1 million and 75 positions in the budget request: (1) The existence of 73 vacant positions in the Board at the time of the hearing last February; and (2) a then current reorganization which could not be evaluated. The report goes on to say that "if further investigation indicates a need for additional staff they can be provided next year."

The Board is requesting that $881,000 of the $1 million reduction be restored in the bill. The difference of $119,000 is made up of $100,000 for contract studies and $19,000 for two new positions for economic enforcement activities.

The restoration requested includes $156,000 for annualization of the 71 new positions added in 1962. This amount for annualization is necessary if the Board is to maintain the 873 currently authorized positions through 1963. The amount is roughly equivalent to the full year cost of 15 positions. If the annualization funds are denied, the 873 positions authorized in 1962 would have to be reduced.

The reference in the House report to a current reorganization must come from statements in the justifications relating to Reorganization Plan 3 of 1961 and the delegations the Board hoped to make thereunder. The Board took this factor into consideration in constructing its budget for 1963. As pointed out in the justifications, the Board has pledged its staff and facilities to a substantially greater effort in 1963. The budget was constructed on the general assumption that improved procedures, increased utilization of positions, increased productivity of personnel, additional delegations of authority and other improvements in operations would result in increased efficiency and production in a general order of magnitude approximating 20 to 25 percent in 1963 over 1961. It was pointed out that this goal may be too optimistic, but that every effort would be made to meet it.

The 73 vacant positions, where and why they existed, is explained below.

Nine of the vacancies were field auditor positions. The Board did not request any new auditor positions for 1962, so all of these vacancies were the result of turnover. Also, no additional auditor positions are requested for 1963. Auditors are very difficult to recruit and retain. The Board was able to obtain auditors only by sending a man to a number of universities to recruit replacements. He was successful in interesting enough young men in the work of the Board to fill the auditor and accountant vacancies, although some of these did not enter on duty until they completed their schooling in June.

Having had these vacancies at the time of the hearings did not, and does not, lessen the need for auditors. In fact, the audit workload has increased during the year as a result of increased emphasis on the financial status of the supplemental air carriers and the field audits required under the local service subsidy class rate. Even if it were possible to keep all auditor positions filled during 1963, the Board would not be able to accomplish the planned audit program. It is not believed that more than half of the 24 nonsubsidized certificated air carriers can be audited during 1963. The budget estimates did not provide for performing any audits on airfreight forwarders.

Five of the vacancies were hearing examiner positions, also due to turnover. Each of the hearing examiners has a secretarial assistant so a total of 10 of the 73 positions was involved. Recruitment had to be delayed because the Civil Service Commission had opened the hearing examiner register and placed a temporary freeze on employment of hearing examiners pending the establishment of a new register. Three of the examiner positions have since been filled. Considering the state of the Board's docket, it does not have a surplus of hearing examiner positions.

Eighteen of the vacancies were safety investigator positions. This is another area where recruitment is difficult, particularly in the engineering and other specialist categories. All but six of these positions have since been filled. The Board needs every one of these positions and is requesting additional staff in this area for 1963.

Twenty-one of the vacancies were stenographers, typists, and other clerical positions. For the most part, these positions were temporarily vacant because of turnover. A few were associated with the technical positions mentioned above and their filling was purposely delayed pending the filling of such technical positions. The Board, like other agencies, has a never-ending problem to recruit people to perform these service functions.

A total of 58 of the 73 vacancies has been accounted for above. The remaining 15 were scattered throughout the Board's organizational units and were largely the result of turnover. They consisted mostly of air transport examiners and attorneys.

As of June 30, 1962, the end of the fiscal year, the Board had a total of 836 employees on the payroll. By comparison, the 1963 budget estimates projected that year-end employment—that is employment at the end of 1962 fiscal year—would be 851, a difference of 15.

For 1963, we requested an increase of 75 positions, distributed to the Board's various activities as follows: 35 are for economic regulation, of which 6 are related to route matters, 6 for rates work, 2 are for economic enforcement, 5 are for electronic data processing work, and 16 for economic research and statistical studies, technical analytical assistance to the hearing examiner staff, initiation of a cargo origin-destination survey, and integration and improvement of the domestic and international passenger origin-destination survey; 37 are for safety activities, of which 7 are related to the projected increase in number of accidents and reduction of backlog, 10 are for providing additional field investigation assistance with emphasis on maintenance and wreckage reconstruction factors; 15 are to provide for attaining an adequate level of training, and 5 are to perform special studies and investigations pertaining to safety in air navigation and prevention of accidents; and 3 are for administrative support services. The need for these positions is explained in the attached statement "Explanation of Staff Increases Requested for the Fiscal Year 1963."

EXPLANATION OF STAFF INCREASES REQUESTED FOR THE FISCAL YEAR 1963

1. For accelerating the processing of route cases, three positions

The program for 1963 provides for a continued increase in the output of route cases to reduce the number of pending route applications to a more reasonable figure, and to implement the Board's program for stabilizing the financial position of the trunkline carrier group, which is a major objective of the Board in 1963. This will require prompt consideration of expected merger proposals and expedited hearings on route adjustments including those cases concerning consolidated services at regional airports. The expected merger proposals and related route adjustment considerations will add considerable work. The handling of formal route proceedings is not yet on a current basis and will not achieve that basis in the immediate future without an appreciable increase in staff. However, it is expected that a reduction in the backlog can be achieved

by the increase requested and the implementation of additional new procedures and techniques, including EDP assistance, provided that the receipt of new applications continues at the present rate.

The new positions requested are:

	Number
GS–13 air transport examiner	1
GS–12 air transport examiner	1
GS–9 air transport examiner	1
Total	3

2. For increase in supplemental and specialized air carrier authorizations, three positions

The budget request for 1963 included three additional positions which were designated for the Board's program for handling applications of supplemental and specialized air carriers. Congress enacted legislation which was signed into law on July 10, 1962, providing for permanent certification of supplemental air carriers. Pending permanent certification the Board is empowered to grant interim authority for supplemental air service, but such authority must be granted, if at all, within 90 days of the enactment of this legislation. The excessive workload demands of the next 3 months brought about by the need to act on the interim authority and the long-term demands for the processing of permanent certification will make the burden on the existing staff exceptionally heavy for some time to come. Over and above the applications expected from carriers currently authorized to provide supplemental air service, the Board has on its docket numerous applications by persons seeking supplemental authority. In all there were approximately 125 such applications pending as of June 30, 1962. Many of these applications have been on file for a considerable period of time and it was hoped that with additional manpower it would be possible to reduce this backlog.

Included among the three positions requested was one which was to be allocated to work in the air freight forwarder field. As of June 30, 1962, 45 applications for air freight forwarder authority were pending. With an additional position it was hoped that this backlog could be reduced and, in addition, much needed research into the regulatory policy applied to air freight forwarders was to be undertaken. Failure to obtain an additional position for this work will not only adversely affect the Board's ability to keep abreast of current applications filed for air freight forwarder authority, but will result in neglect of a study of vital problems affecting the air cargo industry in general and the air freight forwarder segment of that industry in particular.

If the three positions requested for supplemental and specialized air carrier work are not provided, the Board's program for fostering the development of the supplemental air carrier and air freight forwarder industries will suffer irreparably and many applicants seeking authority in these fields will no doubt be denied an opportunity solely because the Board will not be in a position to move expeditiously on their applications.

The new positions requested are:

	Number
GS–13 air transport examiner	1
GS–12 air transport examiner	1
GS–11 air transport examiner	1
Total	3

3. For handling increase in commercial rate and tariff work, six positions

The basic objective in this area for fiscal year 1963 is to assure a financially sound commercial air network, for commerce and national interest purposes, by maintaining insofar as possible a current docket as regards domestic and international cargo and passenger rates, compensation for priority and non-priority mail, and rates paid by the Military Establishment, and by processing as many important backlog rate matters as the Board's resources will permit.

This will include (1) continuing review of the domestic passenger fare structure; (2) cargo rate investigations; (3) review and analysis of IATA agreements which involve fare and rate matters on a worldwide basis; (4) analysis and presentation of recommendations to the Board with respect to new tariff filings which present substantive problems regarding fares, rates, rules, and related matters; (5) processing through the formal hearing procedure of fares

and rates which raise problems with respect to their lawfulness; (6) processing of IATA resolutions with respect to conditions of carriage which govern the rights of shippers; (7) investigation of cargo tariff rules concerning air cargo liability; (8) continuing review of the rates at which planeload and individually ticketed military traffic are to be transported by the commercial air carriers; (9) review and revision of rates for the carriage of U.S. mail, both priority and nonpriority; and (10) expedited analysis of the increasing number of tariff filings.

Since this period will see the continuing acceleration of commercial jet aircraft operations, both domestically and internationally, many of the commercial rate matters which come before the Board will involve entirely new problems and require entirely new solutions. The basic framework of the present passenger and cargo rate structures will necessarily be critically and carefully reviewed. Each of these items is critical to proper development of air transportation by broad segments of the industry, in the public and the national interest.

The trunkline industry is free of subsidy and depends for its financial health on passenger, property, and service mail revenues during these critical years of transition to turbo-jet services. As a result, commercial rate proceedings concerning domestic passenger fares, cargo rates, and international rate matters are increasing in number, scope, and complexity. Included among these proceedings are those involving fair minimum rates, on an industrywide basis, for commercial carriage of military traffic. In addition, continuing attention must be devoted to the service mail rate areas in order to obviate backlogs since it is essential that such rates not be open (that is, not final) for any considerable period of time.

The volume of work in this field is essentially beyond the Board's control since it originates in large part by statutory filings by carriers or other members of the public.

Six additional positions were requested for this area of activity on the basis of (1) an upward trend in the volume of tariff filings and the expectation that such trend would continue in the future, and (2) the need to process new commercial rate investigations on a current basis and to substantially reduce the backlog of pending cases.

Subsequent experience has demonstrated that the forecast of workload units for 1962 and 1963 was unduly conservative. For example, it was estimated that there would be approximately 38,500 tariffs filed in 1962 and 42,000 tariffs filed in 1963. The 1962 estimate was based on the then current volume of filings and represented an increase of 24 percent over the actual volume of filings in the preceding fiscal year. Fiscal 1962's actual total, however, reached 42,800 about 11 percent more than estimated and 38 percent above the total for fiscal 1961. On the basis of this volume of tariff filings, we are now estimating for 1963 that a total of 52,000 tariffs will be filed with the Board. This volume is approximately 24 percent above the level estimated in connection with the 1963 budget request.

The increase in tariff filings, as well as other factors, is translated directly into an increasingly greater burden of substantive work in the form of formal (and informal) proceedings resulting from such filings. The passenger and property rate proceedings involving the suspension of particular tariffs must be accorded a high priority so as to complete the proceedings within the 6-month maximum suspension period. Thus, the resources of the staff assigned to rate investigations other than suspension cases are for the most part those which are left over from other activities such as the tariff review, IATA agreement activities, and the military exemption areas. As a result there is a sizable backlog of investigations pending which there are no reasonable prospects of getting underway in the foreseeable future with the current staff.

The number of formal rate proceedings processed is also running substantially ahead of the estimates made in conjunction with the requested increase of six positions for the commercial rate area of activity. The actual total for 1962 was 63, as compared with the estimate of 53. We now estimate 80 such work units for 1963, as compared with the 59 estimated earlier. The additional personnel requested is essential for this activity so that future proceedings may be

handled on a relatively current basis and to permit a reduction in backlog cases.

The six new positions requested are:

	Number
GS–14 trial attorney	1
GS–13 air transport examiner	1
GS–11 trial attorney	1
GS–11 air transport examiner	1
GS–11 tariff examiner	1
GS–5 clerk-stenographer	1
Total	6

4. For increased economic enforcement investigations, two positions

The Board believes that the future enforcement program should be devised to give emphasis to an intensified investigative program and to the development of techniques for preventive enforcement via voluntary compliance. With such a program and improvements in investigative techniques, prompt and thorough investigations of suspected violations can be made before they develop into serious and widespread problems. Investigations so handled will serve as a more effective tool for making settlements of violations without the necessity for hearings. However, in the case of recalcitrant violators, the most effective sanction is to resort to court actions both civil and criminal, to enjoin and punish such violators. Therefore as part of the intensified investigative program, the Board proposes to direct greater staff emphasis to undertaking more court actions, and will consequently reduce the number of Board proceedings which are much more time-consuming and much less effective. It is also envisaged that the investigative staff will be used to assist in an overall program of educating the industry to bring about a higher degree of preventive enforcement.

Field investigations have become more complex for the following reasons: (1) evidentiary problems have become more involved and frequently require travel to more than one office and company to obtain information and material which in the past has been available at one source; (2) assertion of privileged communication has become more and more frequent, resulting in appreciable delays in the completion of investigations; and (3) foreign air carriers and ticket agents are refusing access to their records so that essential information and material must be obtained indirectly through secondary sources.

The two new positions requested are:

	Number
GS–13 air transport examiner	1
GS–9 air transport examiner	1
Total	2

5. For implementation of electronic data-processing (EDP) program, five positions

The program proposed for 1963 is focused primarily upon the conversion from manual to centralized electronic machine processing of the major systems of data used in the regulatory processes through the Board. During fiscal 1961, electronic equipment, compatible with the needs of the Board, was marketed for the first time by several manufacturers. The program for boardwide application of EDP accordingly accelerated with a view toward attaining an operational status by early fiscal 1963. Under this accelerated program, a preliminary feasibility study was conducted by a committee of Board staff during the first quarter of calendar 1961 and a further feasibility and equipment selection study was conducted under contract during the second quarter of calendar 1961. On the basis of the recommendations resulting from this study, an order was placed with IBM for delivery by June 1, 1962, of a model 1401 tape system, since installed.

Plans were for the immediate mechanization of form 41 and origin-destination information. These projects represent distinct, well-defined data systems, and constitute the predominant areas of burden in data processing. Requirements for data in other areas have not yet been sufficiently well defined to permit their inclusion in the initial program. It is estimated that the developmental period of the overall program will continue for several years and into fiscal 1964 at least. Under the program now started, it is planned to develop a facility for the centralized processing, by mechanized methods, of virtually all cost findings and similar end products based on form 41 and O. & D. data required throughout the Board.

In order to attain these objectives, fiscal 1962 was devoted to the developmental aspects of the program. This included training, through the manufacturers' facilities, of key subject area staff, and EDP technical staff, respectively, in the principles of machine processing generally, and the IBM 1401 processing systems, specifically. In addition, during fiscal year 1962, the main systems for processing origin-destination and form 41 data were designed, and machine programs developed, for the actual production of the more basic and readily identifiable end products required to meet the Board's informational needs. The basic systems for processing both origin-destination and form 41 data are scheduled for completion early in fiscal 1963. However, actual programming for machine processing of the variety of different end products to which such information is applied will continue for several years.

Fiscal 1963 will be devoted largely to the conversion from manual to electronic data processing systems. This will entail training of Board staff in the affected subject areas in the new processing methods and the improved analytical techniques made possible by the machines. In order to prove out the new system, parallel machine and manual operations must be run for short periods to detect and rectify gaps or inconsistencies in the designed system through the development of new machine programs or improvements in initially designed programs. Since the developmental and conversion activities must continue at a rapid pace, at least through fiscal 1963, significant increases in staff productivity will not be realized before fiscal 1964.

As the program moves forward, it is anticipated that greater and greater demands will be made for machine-processed end products which will require a sharp acceleration in the volume of data to be cast into machine-oriented form. To meet these demands it is planned to recast, to the maximum reasonable extent, carrier reporting procedures to a form compatible with machine processing. Nevertheless, virtually all EDP input data originating within the Board, some carrier-reported data, and all corrections of input data must be handled by this facility. In addition, the volume of machine programs involved will require preservation in a form which will serve to control operating procedures and schedules. These problems will become acute in fiscal 1963.

The new positions for this activity are essential to furtherance of the program in which the Board has made a very substantial investment. If the additional staff is denied, the rate of conversion to electronic procedures will be delayed and our hopes for increased productivity in other areas of the Board's work must suffer accordingly.

The new positions requested are:

	Number
GS–12 accountant	1
GS–5 clerk-typist	1
GS–3 card punch operator	3
Total	5

6. For increase in technical, statistical, and analytical assistance, four positions

This assistance is provided by the Research and Statistics Division of the Board's Office of Carrier Accounts and Statistics.

Under the Administrative Procedure Act, the technical staff that participates in formal proceedings cannot also provide technical assistance in the decisional processes. To meet this problem on the most economical basis, the Board has centralized in the statistical activity all technical assistance of a nonadvocate nature. The assistance that is provided cuts across the entire decisional process, including the hearing examiners, the opinion writing division of the General Counsel's office, and the Board members themselves. It likewise extends to all classes of cases decided through formal proceedings, including fare, route, merger, and adequacy-of-service cases.

In these formal proceedings, the exhibits are the chief strength of the arguments in the case. They often consist of complex and highly technical presentations of economic and statistical data and analyses. Each party in a case presents those exhibits that best support his individual position. In the very nature of the situation, the exhibits do not tend to be objective or disinterested. The decision in a case must, then, be determined by analyzing a great mass of often conflicting economic and statistical data accumulated during the course of the proceeding. The hearing examiners are primarily legal experts who, even

though they may be well informed on economic and statistical matters, are often faced with difficulties in evaluating the validity and significance of economic and statistical material presented in various cases. These difficulties stem both from a need for a high level of specialization in highly technical fields and the lack of time on the part of the examiner to personally perform the necessary technical evaluations. This is also true, to a large degree, in respect to the opinion writers and other areas. Unless the exhibit material can be properly and thoroughly analyzed, the decisions reached could be at serious fault. It is, therefore, imperative that staff technically qualified in the fields of economics, costs, accounting, and statistics be available to assist in the decisional processes.

The four additional positions requested are necessary to meet the needs for competent technical assistance at the various decisional stages under the accelerated pace at which formal proceedings have been planned in the various substantive areas of the Board. The new positions are:

	Number
GS–13 air transport examiner	1
GS–12 analytical statistician	1
GS–9 air transport examiner	1
GS–7 air transport examiner	1
Total	4

7. For economic studies and forecasts, four positions

Fundamental to all phases of the Board's work is an improved understanding of current and anticipated air transportation problems and probable solutions thereof. Essential to this improved understanding is up-to-date trend data, special studies and forecasts, and interpretations thereof. The forecasts and studies to be performed by this staff will be coordinated with the overall needs of the Board through the planning office. In this connection, the Board is requesting an increase in the staff of the research and statistical activity to more adequately meet the Board's needs for this type of specialized assistance.

The Board's planning office became operational during the fiscal year 1961. The functions of this office include initiating, conducting, or coordinating studies of Board operations and industry conditions in order to recommend to the Board policies and programs designed to speed the Board's work, meet the needs of the aviation industry, and serve the public interest. This office is currently operating with a total staff of five positions and it is planned to continue the staff at the same level in 1963.

The planning office, because of its size, must rely heavily on other activities of the Board, and in particular the statistical and research activity, for assistance in the gathering and furnishing of data and the performance of studies and forecasts. The increase in staff requested for the statistical and research activity is, in part, directly associated with the planning office program.

In this connection, the Board's 1963 budget estimates contemplated that it would be necessary to have certain types of studies performed on a contract basis. For this purpose, a total of $100,000 (an increase of $50,000 over 1962) was requested. Industry technology is advancing with increased rapidity; the position of the industry relative to the total transport market is undergoing continual change; and the problems resulting from such changes permeate all facets of the air transport industry. The ability to anticipate problems and to find adequate and timely solutions depends in large measure upon an effective research program. In many respects, the effectiveness of the Board's regulatory program depends on accurate forecasts, on identification of significant problems before they arise, and on an understanding of the probable consequences of alternative solutions.

Failure to maintain an adequate research facility will severely hamper effective prosecution of the Board's regulatory program. Wise and forward-looking decisions on rate, route, merger, and adequacy-of-service problems cannot be made without access to basic economic research and forecasts developed independently of particular adversary proceedings. For example, the Board has a continuing need for up-to-date forecasts of such items as (1) types of equipment that will become available at various dates and the probable characteristics and unit operating cost of such equipment; (2) the impact of new equipment on demand, service pattern, and operating cost; (3) the capacity that will be operated in various markets under changing circumstances of

equipment availability; (4) conditions required for a satisfactory rate of return on investment with newly available equipment types; and (5) demand for air transportation in different types of markets under alternative fares, anticipated income levels, and probable general economic conditions. Moreover, the development of such forecasts depends, in turn, upon specialized research studies. For example, forecasts of traffic at different fare levels depend upon prior studies of price elasticity of demand, i.e., the response of demand to price changes.

In brief, a strong research program is no luxury. Rather, it is an essential ingredient needed to provide the foundations for sound policy decisions. The present staff is simply not sufficient to perform the basic research required to accomplish this important purpose.

The new positions requested are:

	Number
GS–13 transportation economist	2
GS–13 analytical statistician	1
GS–12 analytical statistician	1
Total	4

8. For planning and initiating collection of aircargo origin-destination statistics, five positions

The Board is experiencing increasing activity in the aircargo field. There are pending before the Board today applications from aircargo and air passenger carriers concerning both rates and routes for aircargo transportation. The Board at this time does not have available to it the aircargo statistical information so vital in the processing of these cases.

The Board does not now make aircargo (i.e., freight and express) O. & D. surveys, nor are aircargo O. & D. data compiled on a regular or comprehensive basis by any other organization. Lack of such data, although not serious heretofore, now represents a major gap in the statistical information absolutely essential for both route and rate purposes.

Substantial sums of money are being expended by both the industry and the Government in the development of breakthrough types of cargo aircraft. As a result, at least five major manufacturers have in production, or have plans for the production of, large turboprop or turbofan cargo aircraft that have been designed with the need for low unit-cost operation as a basic requirement. Unfortunately, there is virtually a void of reliable factual information available as to the nature and scope of the aircargo markets in which these aircraft must operate.

The Board requires cargo O. & D. data to develop an aircargo route pattern adapted to the specialized needs of such traffic, as distinguished from the existing routes which are designed primarily to serve passenger traffic. The Board also needs aircargo O. & D. statistics to reach decisions on rate levels and structure. For these purposes, it is important to know the origin, destination, and routing of aircargo movements, and also to have information on the characteristics of the traffic carried, such as the kinds of commodities, number of pieces, weight and size of shipments, value of shipments, etc. It is also necessary to have information on the directional movement of aircargo, since directional imbalances by commodity are inherent in the transportation of cargo. Data on the seasonal patterns of aircargo movements, by commodity type, are also greatly needed. Precedent in respect to a regulatory agency's need for cargo O. & D. statistics is found in the Interstate Commerce Commission, which has had a highly successful rail-cargo O. & D. statistics program for a number of years.

The five positions in this activity have been provided in an attempt to meet in part the lack of factual information on aircargo. The program would first apply to the domestic field. Later, it would also embrace international operations. No early progress can be made in starting a program of aircargo O. & D. statistics if the requested five positions are not provided. The Board will be faced with regulating this rapidly growing segment of the airline industry without benefit of factual statistics about operations in this area.

The new positions requested are:

	Number
GS–13 analytical statistician	1
GS–12 air transport examiner	1
GS–11 analytical statistician	1
GS–9 air transport examiner	1
GS–7 statistical assistant	1
Total	5

9. For integration of domestic and international O. & D. statistics, three positions

The Board now conducts both domestic and international O. & D. surveys of air passenger traffic. The domestic passenger survey has been conducted on the basis of a 10-percent continuous sample since the beginning of 1959. The international survey, however, is still being conducted on the basis of a March-and-September sample.

This latter method of sampling is outmoded and is no longer a representative measure of international travel. The differing collection methods, together with the overlapping of many trips between domestic and international areas, result in complexity in the survey procedures, duplication in collection work by the carriers, as well as being conducive to serious reporting errors. Many of the procedures used have not been changed since 1946, and have long outlived their usefulness as a result of the tremendous growth and changes in the air transportation industry since the end of World War II.

A comprehensive reevaluation and overhaul of both the domestic and international O. & D. surveys of air passenger traffic is required to integrate the separate domestic and international procedures, improve the quality of the statistics, provide additional detail information needed by the Board such as new breakdowns by fare classes (first class, coach, economy, etc.), a more complete description of trip routings (by adding cities to intraline transfer), a better method for classifying international trips in terms of freedoms (needed for bilateral negotiations with foreign countries), improvement in edit and verification of source data, and overall improvement in efficiency in the survey procedures that will benefit both the carriers and the Board. A joint CAB-industry plan for bringing about such complete reevaluation of, and improvement in, the passenger O. & D. surveys is under consideration. The additional positions requested in 1963 are:

	Number
GS–13 analytical statistician	1
GS–9 analytical statistician	1
GS–5 statistical clerk	1
Total	3

10. For accident investigation, 37 positions

The Board, under the Federal Aviation Act of 1958, has the responsibility to "assure the highest degree of safety in air transportation." It carries out this responsibility through the investigation and analysis of accidents involving civil aircraft; the holding of public hearings, developing probable causes, and issuing reports; conducting research and special activities directed toward disclosing deficiencies and enhancing safety; and making appropriate recommendations for effective corrective action on deficiencies disclosed by the investigations, research, or special activities.

The safety problems have multiplied manyfold during the past few years, with planes flying faster and higher, carrying many more passengers and more complicated automatic equipment, powered by new types of engines, and with improvements in all areas of the aviation industry taking place at a very rapid pace. This is true over a wide range of aircraft—from the small private and executive-type planes to the large transcontinental jets. Safety in air transportation takes on added importance with these developments.

The Board's safety program for 1963 anticipates accomplishment of an increased number of field investigations incident with a projected increase in the total number of accidents related to the estimated increase in the number of planes and miles to be flown, a reduction in the accumulation of incomplete accident reports, improvements in coverage and quality of accident investigations, particularly with respect to maintenance factors, increased accident prevention activities, and expansion in training of technical personnel to an adequate level.

The 37 new positions requested for 1963 are for the following purposes:

(*a*) Fifteen of the positions were to be utilized to permit the implementation of a 5-year training and career development program for the technical people.

(*b*) Ten of the positions were requested in order to expedite and improve the quality of our investigations.

(*c*) Seven of the positions were requested in order for the Board to cope with the additional workload we anticipate will develop from future accidents and to assist us in dealing with the increasing complexity of aircraft accidents.

(*d*) Five of the positions were requested for the purpose of further expanding the accident prevention activity.

A. Training.—With respect to training, the conduct of the Board's safety investigation activities requires highly specialized personnel. They must be kept reasonably current with the changes which are constantly occurring in the aviation industry—kept abreast of the complicated systems built into new aircraft and their performance in different operational environments, along with the changes in air traffic control and air navigation procedures and equipment.

During the past several years the Board has not had sufficient personnel to handle investigations, even though many thousands of overtime hours have been worked, and therefore has not been able to undertake any appreciable amount of training. It is not conceivable that any group of men can maintain their proficiency and acquire the knowledge necessary to keep abreast of such a broad and ever-changing technical field without substantial training assistance.

Accordingly, the Board is proposing to undertake, commencing in 1963, a training program which is designed to provide each member of its technical safety staff with training in the fields of aircraft operations, structures, powerplants, and electronics.

More specifically, the training program would provide for each technical safety staff member to receive the equivalent of 6 weeks training during each fiscal year. This training will take several forms. It will include on-the-job training, assignment to formal training courses (both flying and nonflying technical courses), attendance at technical seminars, conferences, and meetings, and time for review of technical papers and reports.

When the wide variety of operations, services, aircraft, aircraft systems, powerplants and air navigation and air traffic control aids which the investigators must study and analyze in the performance of their duties are considered, this training program we believe is a modest one.

The 15 positions involved are:

	Number
GS–13 structures engineer	2
GS–13 air safety investigator	7
GS–12 air safety investigator	3
GS–11 air safety investigator	3
Total	15

B. Improve quality of investigation.—A total of 10 positions are requested for field assistance in the maintenance and wreckage reconstruction area to permit us to expedite and improve the quality of the investigations. We have deemed this particularly important in the general aviation area since there has been a marked increase in the number of multiengine aircraft, helicopters, and the more complicated single-engine aircraft. This has created a need for an invesigator with a broad airplane and engine maintenance-type background to assist in the investigations. It is also planned to utilize these personnel on the mockup (reassembly) of wreckage on the large complicated accidents to expedite the investigations. The new positions are:

	Number
GS–13 air safety investigator	5
GS–12 air safety investigator	5
Total	10

C. Reduction in overtime and backlogs.—For this purpose, the Board requests seven positions in order for it to meet its objective of improving the quality of accident investigations in both air carrier and general aviation and reducing the time factor between the occurrence of an accident nad the issuance of the final report. During fiscal year 1962 the Bureau of Safety staff performed approximately 22,958 hours of uncompensated overtime.

Nevertheless, at the close of the fiscal year 1962 there were 625 uncompleted accident investigations on hand. In addition, also on hand awaiting disposition, were 2,206 investigation reports received from the FAA and requiring determination of probable cause and final processing.

The new positions requested are:

	Number
GS–13 systems engineer	2
GS–13 powerplant engineer	1
GS–13 air safety investigator	1
GS–12 air safety investigator	3
Total	7

D. For increase in research and studies for accident prevention, five positions.—The facts, conditions, and circumstances determined through field investigations, investigations of potential hazards, and from special studies, projects, and research are translated into positive recommendations for effective corrective action with a view to eliminating the possibility of or preventing the recurrence of accidents.

The Board is responsible for making special studies and investigations, pertaining to the safety in air navigation and the prevention of accidents, to ascertain what will best tend to reduce or eliminate the possibility of or recurrence of accidents. These investigations originate from studies of the factfinding information developed by specific accidents and incidents, accident and incident trends developed from accident statistics, safety recommendations from various sources and from the study of aeronautical hazards. Currently, it is impossible to devote more than a token effort to the Board's safety promotional activities due to reqirements for staff to perform accident investigation factfinding and related work. The accident investigation prevention work is of primary importance since it results in the form of practical recommendations to the industry (transport, general aviation, and manufacturing), the Federal Aviation Agency and other Government agencies. These recommendations are made for effecting corrective action and will prevent the occurence of future accidents or incidents with the resultant savings in equipment and lives. The determination of facts, conditions, and circumstances in accident investigation is wasted unless these factors are evaluated through further investigation, research, and study and developed into sound practical recommendations for effective corrective action. The five positions requested for this function are:

	Number
GS–13 powerplant investigator	1
GS–13 human factors investigator	1
GS–13 structure specialist	1
GS–12 air safety investigator	1
GS–11 air safety investigator	1
Total	5

11. For supporting administrative services, three positions

One GS–5 voucher examiner to handle increase in travel and other payment activities resulting from increased staff requested throughout the Board.

One GS–11 photographic specialist to provide photographic services in connection with accident investigation and other reproduction services.

One GS–1 messenger to handle increase in mail and messenger work resulting from the overall projected increase in the Board's staff.

CIVIL AERONAUTICS BOARD

PAYMENTS TO AIR CARRIERS

(House hearings, pp. 1068 to 1209)

(Page 5, line 14 of H.R. 12711 as reported to the House)

1962 appropriation	$78,250,000
1963 budget estimate	84,578,000
1963 House allowance	71,900,000
Increase (+) or decrease (—) 1963 estimate over 1962 appropriation	—6,350,000
Increase (+) or decrease (—) House allowance from 1963 estimate	—12,678,000
Restoration requested	11,178,000

AMENDMENTS REQUESTED

The Board requests the following amendments:

Page 5, line 19, strike out "$71,900,000" and insert "$83,078,000", and on page 5, line 20, strike out "$4,975,000" and insert "$5,850,000".

HOUSE REPORT

"The committee compliments the Board on the performance of its very vital functions. It is glad to see more detailed attention being given to subsidies to air carriers than was done in the past. For the first time the committee brought in local carriers and held hearings which it thinks were beneficial to the committee, the Board, and the carriers, and believes economies will be made. The committee is confident the Board can reduce subsidies without hurting the effective operation of the carriers. The bill provides $71,900,000 for payment of such subsidies including $4,975,000 for helicopter operations."

STATEMENT

The House bill provides $71,900,000 for payment of subsidies in 1963 and is a reduction of $12,678,000 from the budget estimate. Also, the language of the bill contains a limitation on the amount available for subsidy for helicopter operations. The budget estimate provided $5,850,000, as compared with $4,975,000 allowed by the House, a reduction of $875,000.

The Board has been studying its needs for subsidies since the February hearing, and is currently engaged in making the studies and forecasts as to subsidy requirements for its 1964 budget estimates, which, of course, will involve a complete review of 1963 subsidy requirements. There are indications that the payment estimates for 1963 may be subject to downward adjustment somewhere in the range of $1 to $1½ million.

Accordingly, the Board is proposing to reduce its request for subsidy by $1,500,000, and is, therefore, requesting that the House bill be amended to restore $11,178,000 of the $12,678,000 disallowed by the House. The Board is also requesting that the limitation on subsidy for helicopter operations be restored to $5,850,000, the full amount of the estimate.

While there are many variable and influencing factors involved in making a subsidy forecast, the estimates have been made as accurately as possible, and, therefore, represent the Board's best estimate of the funds that will be required to pay the carriers' bills as they become due under rate orders now in effect, or expected to be in effect, during the fiscal year 1963.

With reference to the assurance given during House consideration of the bill that needed service to small communities was not intended to be curtailed, the Board does not see how a cost of saving of anywhere near a magnitude of $12 million could possibly be achieved without cutting into needed services of the smaller communities, and in some instances, entirely cutting out needed services.

The Board is in full accord with the objective to reduce subsidy and has an established and operating four-point program for reversal of the upward subsidy trend.

Achievement of this program depends upon: (1) The suspension or curtailment of service, under the Board's use-it-or-lose-it policy, at points where traffic genera-

tion is inadequate; (2) the strengthening of the carriers' route systems so that revenues will increase more rapidly than costs, thus resulting in a corresponding reduction of subsidy needs; (3) the integration of services for various cities through the regional airport concept, which will reduce costs and accordingly reduce subsidy; and (4) the realization of the full potential of the more modern aircraft purchases by the smaller carriers, many of such aircraft being covered by Government loan guarantees.

In addition, as directed by the President's transportation message of April 5, 1962, the Board's staff is working on a top priority basis on a report to the President before June 30, 1963, setting forth a comprehensive program aimed at gradual but significant subsidy reductions on a scheduled basis. In this connection, the Board has been assured of industry cooperation in this endeavor, with the appointment, under auspices of the Association of Local Transport Airlines, of a committee of industry officials to work with and advise the Board's staff on various aspects of the program. The benefits of such programs cannot—for reasons of due process, and practical considerations—be realized until after July 1, 1963. Route actions, whether suspensions of weak points or addition of strong traffic generating centers, must follow statutory hearing requirements which take time. The same is true of the regional airport concept. The reequipment cycle is well advanced, but the full integration of such equipment into the carriers' systems is not concluded: 1964, not 1963, should be the year of realization of substantial benefits of such aircraft in terms of subsidy reduction.

It is the Board's view that the reduction comes 1 year too early in point of time and is too great in amount and that such reduction now: (1) Will be disruptive of the Board's program for reducing subsidy each year, commencing with fiscal 1964; and (2) will be so restrictive at this time as to create serious problems for many smaller communities all over the United States in the form of premature withdrawal of air service.

A class subsidy rate is now in effect for all 13 local service carriers. The class subsidy rate is a uniform rate formula applicable to the local service carriers as a class. Amounts payable are determined from a scale of rates based upon volume of carrier operations per station, whereby as revenue plane-miles flown per station increase, the unit subsidy rate per available seat-mile is reduced. It affords each carrier advance knowledge of the amount of subsidy support to be received for particular operations and creates stronger incentives for greater operating efficiency, cost controls, optimum fare levels, and economic scheduling than have heretofore existed under the individually determined subsidy rates. It is expected that the strong incentives to managerial efficiency will serve as contributing factors in the Board's overall program to reduce subsidy.

The Board is now in the process of evaluating the results of the first full year of operation under the class rate. In this connection, the Board and the local service industry are studying ways to improve the class rate formula. The Board plans to revise the class rate as soon as the required studies are completed with an effective date no later than next January 1.

The Board's 1962 appropriation included a provision, inserted by the Congress, limiting the amount of subsidy that could be paid for helicopter operations during the 1962 fiscal year to $6 million.

In order to maintain the subsidy bill for fiscal 1962 within the ceiling amount, the Board conducted informal discussions with the carriers aimed at the curtailment of their services in order to permit them to operate successfully with an equitable distribution of the $6 million subsidy available for that purpose. These discussions failed and the matter was then promptly set by the Board for formal hearing. During the pendency of such hearings, however, the carriers took action to eliminate service to various points and also did not institute service to a number of communities to which their authority extended; and, in addition, discussions continued among all the parties as to ways and means for conducting operations within the budgetary limitation for fiscal 1962.

By motion filed formally with the Board on January 18, 1962, the carriers have stated that, in effect, they have, in conjunction with the staff of the Board, worked out plans whereby their subsidy need for 1962 will not exceed the $6 million limitation. On this basis the carriers have asked the Board to cancel the hearings as regards 1962, and to defer further proceedings as regards 1963.

The $5,850,000 subsidy requested for helicopter operations in fiscal year 1963, a reduction of $150,000 from the amount allowed in 1962, will support the presently certificated helicopter operators only on a substantially curtailed basis. With this subsidy limit, the carriers have curtailed the scope of their

operations by not instituting service to new points; reducing or eliminating the relatively less productive services, including mail/cargo or mail only schedules, and by effecting such other economies as are feasible.

The recent introduction into service of the turbine-powered, twin-engine helicopter is as near a true technological breakthrough as we have seen in recent years. High operating cost has been the greatest deterrent to rapid growth in this phase of aviation. However, it is anticipated that the turbocopter will make substantial inroads in direct operating costs and should prove a major factor in ultimately reducing subsidy requirements.

Two of the three helicopter carriers have acquired turbine-powered equipment under the loan guarantee program.

We should not overlook the fact that the helicopter carriers were certificated for three specific purposes: (1) To expedite metropolitan mail deliveries to the central post office; (2) to assist in the development of rotary-wing aircraft for national defense purposes; and (3) to determine the feasibility of transportation of passengers, in addition to mail and property, between the centers of cities or their airports to suburban and outlying areas.

The services of these carriers have been utilized continuously by the Post Office Department. The Department of Defense has recognized their contributions to the development and operation of the military helicopter aircraft. Recently it has been estimated that the cash savings to military operators resulting from the service experience of the scheduled helicopter carriers is quite substantial. Without attempting to assign a precise dollar figure, it is clear that the minimum savings to the military are substantial in relation to the subsidy cost for the service. Apart from the military support for the service, civil defense authorities have also testified in helicopter renewal cases of the value of their services to civil defense, especially in the event of an emergency.

It is the Board's present view that the appropriation should be in an amount sufficient to enable it to pay the carriers on a timely basis. In any event, the Board will be before the House subcommittee again in just about 6 months from now in connection with its 1964 budget. As the committee is aware, this appropriation is of the no-year liquidation of contract type and is therefore to provide the Board with funds required to pay subsidy to the carriers as the subsidy becomes due. It is the Board's hope that should any further adjustment in 1963 requirements be called for, such adjustments will be taken into account at the time the 1964 estimates are considered rather than having it come back for a supplemental appropriation, which it surely must do if the amount now in the House bill prevails.

Summary of budget estimates, fiscal year 1963

Requirement for 1963, by activity:		
Local service operations	$71,653	
Helicopter operations	5,863	
Alaskan operations	7,894	
Hawaiian operations	1,000	
Gross payments, 1963	86,410	
Less estimated refunds from carriers	1,832	
Net payments, 1963		84,578
Total estimate of appropriation, 1963		84,578

GENERAL STATEMENT

Senator MAGNUSON. Do you have a statement, Mr. Murphy?

Mr. MURPHY. Yes, I do, Senator. I can summarize that for you, if you want me to summarize it.

Senator MAGNUSON. I want to point out that Mr. Murphy, the Vice Chairman of the Civil Aeronautics Board, is appearing here. The Chairman of the Board is on a very important official mission out of the country. So we are glad to have Mr. Murphy and other members of the staff here. All right, Mr. Murphy.

RESTORATION REQUEST

Mr. MURPHY. First I would like to say we are delighted to have this opportunity to meet with the committee and review our needs, and also to get, if we may, some very valuable policy guides.

As an independent agency we recognize, of course, that we are an arm of the Congress, and are down there to carry out the policy as the Congress lays it down.

HOUSE ACTION

First I would like to address myself to the item of salaries and expenses.

The House approved, as you know, $8,900,000, but disallowed the entire $1 million increase requested in our budget estimate. We are now deleting before this committee two items totaling $119,000. $100,000 is for contract studies, which is out, and $19,000 is for two new positions in the Enforcement Bureau. We are requesting that the balance, or $881,000, be restored.

The reasons given by the House for the disallowance of our requested increase were twofold:

REASONS FOR HOUSE DISALLOWANCE

First, at the time of our hearings over there in February we had 73 vacant positions; and, secondly, the House indicated in its report it felt the current reorganization of the Board was underway, the results of which could not be evaluated. They indicated if further investigation indicates the need for additional staff it could be done next year.

CURRENT REORGANIZATION

I assume that by "current reorganization" the House had in mind the Reorganization Plan No. 3 of 1961, and the delegations of authority permitted thereunder. However, I would like to say in estimating this budget and constructing it, the Board took that into consideration. The budget was formulated on the premise that improved procedures, as well as delegations of authority under Reorganization Plan No. 3, would result in increased efficiency and productivity approximating 20 to 25 percent in 1963 over 1961.

POSITIONS NEEDED

We feel this is an optimistic goal. But we need 73 positions to maintain production even with this increased efficiency, and even with Reorganization Plan No. 3, the philosophy of which was really to expedite the discharge of our work, rather than relieve the staff burdens.

VACANCIES AND NORMAL TURNOVER

So the fact that there were 73 vacant positions as of February 16 of this year is not necesarily a true index of our need for additional employees in fiscal 1963. As we all know, naturally, there is at any given point in time a number of vacant positions due to turnover or difficulties in recruitment. I have noted this in the detailed statement I filed.

Senator MAGNUSON. Put that detailed statement in the record in full.

Mr. MURPHY. Yes, sir. Thank you.

(The prepared statement of Mr. Murphy follows:)

We appreciate very much this opportunity to appear before the subcommittee today in support of the Board's appropriation request for the fiscal year 1963. The first is a request for salaries and expenses. The House of Representatives approved $8,900,000, and in so doing disallowed the entire $1 million increase we sought in our budget estimate. We are requesting that $881,000 of this amount be restored. We are thereby deleting from our original request two items; namely, $100,000 for contract studies and $19,000 for two new positions for economic enforcement activities.

The House report gives two reasons for not allowing any increase: (1) the number of vacant positions at the time of our hearing last February; and (2) a then current "reorganization," the results of which could not be evaluated. The report goes on to say that "if further investigation indicates a need for additional staff they can be provided next year."

The reference to a "current reorganization" must come from our statements relating to Reorganization Plan No. 3 of 1961 and the delegations we hoped to make thereunder. The Board, however, took this factor into consideration in constructing its budget for 1963. As pointed out in the justifications, the Board has pledged its staff and facilities to a substantially greater effort in 1963. The budget was constructed on the general assumption that improved procedures, increased utilization of positions, increased productivity of personnel, additional delegations of authority and other improvements in operations would result in increased efficiency and production in a general order of magnitude approximating 20 to 25 percent in 1963 over 1961. We estimated that we would accomplish more work per position as well as more in total. We said that this goal might be too optimistic, but that we would strive hard to meet it. Without the additional help we requested, however, it would not be a matter of too much optimism, but foolish optimism.

I would now like to turn for a moment to the 73 vacant positions noted in the House report. The point in time to which we are referring was February 16, 1962.

Nine of the vacancies were field auditor positions. First, let me note that we did not request any new auditor positions for 1962. All of those vacancies were the result of turnover. And, we are not requesting any new auditor positions in 1963. Auditors are very difficult to recruit and retain. In fact we had to send a man to a number of universities to recruit replacements. He was successful in interesting enough young men in the work of the Board to fill our auditor and accountant vacancies, although some of these did not enter on duty until they completed their schooling in June.

Having had these vacancies at the time of the hearings did not, and does not, lessen our need for auditors. In fact, our audit workload has increased during the year as a result of increased emphasis on the financial status of the supplemental air carriers and the new type field audits required under the local service subsidy class rate. Even if we could keep all auditor positions filled during 1963, we would not be able to accomplish our planned audit program. We do not see how we can audit more than half of the 24 nonsubsidized certificated air carriers during 1963. Also, you may be interested to know that we cannot plan to perform any audits on air freight forwarders.

Five of the vacancies were hearing examiner positions. Each of our hearing examiners has a secretarial assistant so a total of 10 positions was involved. Here, again, positions became vacant through turnover (mostly retirement). Recruitment was delayed because the Civil Service Commission had opened the hearing examiner register and placed a temporary freeze on employment pending the establishment of a new register. We have since filled three of the examiner positions. We do not have a surplus of hearing examiner positions, considering the state of our docket and the greater speed with which you want us to move.

Eighteen of the vacancies were safety investigator positions. This is another area where we experience recruitment difficulties, particularly in the engineering and other specialist categories. We have since been successful in getting all but six of these positions filled. We need every single one of them. Safety is an area where we are requesting additional staff for 1963, and I will cover this in more detail a little later.

Twenty-one of the vacancies were stenographers, typists, and other clerical positions. For the most part, these positions were temporarily vacant because of turnover. A few were associated with the technical positions mentioned

above and their filling was purposely delayed pending the filling of such technical positions. The Board, like other agencies, has a never ending problem to recruit people to perform these clerical functions.

I have so far accounted for 58 of the 73 vacancies. The remaining 15 were scattered throughout the Board's organizational units and were largely the result of turnover. They consisted mostly of air transport examiners and attorneys.

Naturally, at any point in time we will have vacant positions. Normally we anticipate that about 2½ percent of our authorized positions will be vacant. On this basis, our 1963 budget estimates projected that year-end employment—that is, as of June 30, 1962—would be 851. By comparison, the number of employees on our payroll as of June 30, 1962, was 836. We missed, but everything considered, including such unusual situations as I mentioned earlier with respect to hearing examiners, we did not do too badly. We expect to do much better in recruiting people, however. Our supervisors are not only more impressed than ever with their responsibilities for recruiting, but we are better organized to do the job.

In this connection, you will be glad to know that we did not go out and spend the money from these vacant positions foolishly. As a matter of fact, we did not spend it at all. We turned back almost $400,000 from our 1962 appropriation.

Before going into the new positions we have requested for 1963, I would like to call attention to the fact that the $1 million increase we requested for 1963 included $156,000 for annualization of the 71 new positions added in 1962. This amount for annualization is necessary if we are to continue our 873 authorized positions through 1963. The amount is roughly equivalent to 15 positions. In other words, if we are denied the annualization money we will even have to effect a reduction in the number of positions we had last year.

Next, I would like to address myself to the 75 new positions we requested for 1963. They are distributed among the Board's various activities as follows:

Thirty-five are for economic regulation activities, of which—

Six are related to route matters, including three for handling supplemental and specialized air carrier authorizations;

Six are for rates work;

Two were for economic enforcement. These two positions (total $19,000) were requested to permit increasing the number of investigations of alleged or suspected violations. We have determined that we will not seek restoration. We will do the best we can with what we have;

Five are for electronic data processing work; and

Sixteen are for economic research and statistical studies, technical analytical assistance to the hearing examiner staff, initiation of a cargo origin-destination survey, and integration and improvement of the domestic and international passenger origin-destination surveys.

Thirty-seven are for safety activities; and three are for overall administrative support services.

With respect to the 12 new positions requested for the route and rate areas of our work, our efforts in these two areas have a substantial bearing on the industry's financial condition. While convinced that fare increases, alone, cannot restore earnings to reasonable levels, the Board recently permitted a passenger fare increase of 3 percent. No one expects this action to do more than alleviate the immediate financial situation. The Board recognizes that the attack must be made on many fronts and in long-range proportions. It is working closely with the airlines on such problems as no-shows, pooling of facilities and reduction of unnecessary and costly cabin frills to effect a reduction of operating costs.

Also, the Board can and is directed to control competition between carriers as it related to the number permitted to serve a given market or area. We have embarked upon a broad reassessment of the overall pattern of air carrier operation in this country. No one would dispute that the size of the jets, their operational characteristics, and the burdensome cost of their acquisition, may entail a revolution in the accepted concept of adequate and efficient service. The Board is approaching this problem from several facets.

To name only two—we are reevaluating the need for multiple-carrier certification in those markets now receiving services from three or more carriers. This requires striking a valid balance between the need for an adequately competitive airline system and the increased cost which is frequently the result. The Board is also pursuing a program designed to streamline the provision of air

service through the use of centrally located regional airports. This, in turn, requires a delicate evaluation of the relative public interest in the availability of airline services at individual communities as compared with the establishment of a service framework which will permit the economical use of larger aircraft or more frequent services.

We expect that we can meet these problems in the routes area and that a reduction in backlog can be achieved with the increase requested and by the implementation of additional new procedures and techniques, including EDP assistance.

With regard to the supplemental air carriers, Congress enacted legislation which was signed into law on July 10, 1962, providing for permanent certification of supplemental air carriers. Pending permanent certification the Board is empowered to grant interim authority for supplemental air service, but such authority must be granted, if at all, within 90 days of the enactment of this legislation. The excessive workload demands of the next 3 months brought about by the need to act, within 90 days, on the interim authority and the long-term demands for the processing of permanent certification will make the burden on the existing staff exceptionally heavy for some time to come. Over and above the applications expected from carriers currently authorized to provide supplemental air service, the Board has on its docket numerous applications by persons seeking supplemental authority. In all, there were approximately 125 such applications pending as of June 30, 1962. Many of these applications have been on file for a considerable period of time and it was hoped that with additional manpower it would be possible to reduce this backlog.

We have somewhat similar problems in the airfreight forwarder field, where, as of June 30, 1962, 45 applications for airfreight forwarder authority were pending. With an additional position it was hoped that this backlog could be reduced and, in addition, much needed research into the regulatory policy applied to airfreight forwarders was to be undertaken. Failure to obtain an additional position for this work will not only adversely affect the Board's ability to keep abreast of current applications filed for airfreight forwarder authority, but will result in neglect of a study of vital problems affecting the aircargo industry in general and the airfreight forwarder segment of that industry in particular.

In the commercial rate and tariff area, our basic objective for fiscal 1963 is to assure a financially sound commercial air network, for commerce and national interest purposes, by maintaining insofar as possible a current docket as regards domestic and international cargo and passenger rates, compensation for priority and nonpriority mail, and rates paid by the Military Establishment, and by processing as many important backlog rate matters as the Board's resources will permit. The volume of work in this field is essentially beyond the Board's control since it originates in large part by statutory filings by carriers or other members of the public.

Six additional positions were requested for this area of activity on the basis of (1) an upward trend would continue in the future and (2) the need to process new commercial rate investigations on a current basis and to substantially reduce the backlog of pending cases.

Subsequent experience has demonstrated that the forecasts of workload units for 1962 and 1963 were unduly conservative. For example, it was estimated that there would be approximately 38,500 tariffs filed in 1962 and 42,000 tariffs filed in 1963. The 1962 estimate was based on the then current volume of filings and represented an increase of 24 percent over the actual volume of filings in the preceding fiscal year. Fiscal 1962's actual total, however, reached 42,800—about 11 percent more than estimated and 38 percent above the total for fiscal 1961. On the basis of this volume of tariff filings, we are now estimating for 1963 that a total of 52,000 tariffs will be filed with the Board. This volume is approximately 24 percent above the level estimated in connection with the 1963 budget request.

The increase in tariff filings, as well as other factors, is translated directly into an increasingly greater burden of substantive work in the form of formal (and informal) proceedings resulting from such filings. The passenger and property rate proceedings involving the suspension of particular tariffs must be accorded a high priority so as to complete the proceedings within the 6-month maximum suspension period. Thus, the resources of the staff assigned to rate investigations other than suspension cases are for the most part those which are left over from other activities such as tariff review, IATA agreement activities, and military exemptions. As a result, there is a sizable backlog of investi-

gations which there are no reasonable prospect of getting underway in the foreseeable future with the current staff.

The number of formal rate proceedings processed is also running substantially ahead of the estimates made in conjunction with the requested increase of six positions for the commercial rate area of activity. The actual total for 1962 was 63 compared with the estimate of 53. We now estimate 80 such work units for 1963 as compared with 59 earlier estimated. The additional personnel requested is essential for this activity so that future proceedings may be handled on a relatively current basis and to permit a reduction in backlog cases.

Very important to our plans and expectations for 1963 is the implementation of the electronic data processing system initiated in 1961. In 1962, we sought and were provided funds, and have since devoted our efforts to the developmental aspects of this program. We are well along in this developmental phase, having accomplished the design of the main processing systems for the passenger origin-destination survey and form 41 financial and operating data. We are now in the machine programing phase of these systems. We have reached the point where we will commence to get some benefits within the next few months. Fiscal 1963 is the year of conversion, and we are now between the old process and the new. We cannot go back but must continue on the course which has been set. This is the direction we want to go, because once this conversion is accomplished, route and rate cases can be materially expedited through the electronic processing of voluminous exhibits now prepared manually. However, we cannot expect to obtain the potential benefits of this system unless we can get production from it. Denial of the five positions requested for this work will deprive the Board of one of the most important elements by which it will be able to bring about an increase in efficiency. If we are unable to obtain the needed personnel, our hopes for increased productivity and production must suffer accordingly.

Fundamental to all phases of the Board's work is an improved understanding of current and anticipated air transportation problems and probable solutions thereof. Essential to this improved understanding are up-to-date trend analyses, special studies, and forecasts. The forecasts and studies to be performed by this staff will be coordinated with the overall needs of the Board through the Planning Office. In this connection, the Board is requesting an increase of four positions for the research and statistical activity to more adequately meet the Board's need for this type of specialized assistance.

The Board's Planning Office became operational during the fiscal year 1961. The functions of this Office include initiating, conducting, and coordinating studies of Board operations and industry conditions in order to recommend to the Board policies and programs designed to speed the Board's work, meet the needs of the aviation industry and serve the public interest. This Office is currently operating with a total staff of five positions and it is planned to continue the staff at the same level in 1963.

The Planning Office, because of its size, must rely heavily on other activities of the Board, and in particular the statistical and research activity, for assistance in the gathering and furnishing of data and the performance of studies and forecasts. The increase in staff requested for the statistical and research activity is, in part, directly associated with the Planning Office program.

In this connection, the Board's 1963 budget estimates contemplated that it would be necessary to have certain types of studies performed on a contract basis. The estimates included a total of $100,000 for this purpose. We are withdrawing our request for such funds. Instead, we now propose to accomplish such studies with our own staff. In withdrawing this request, we realize that we will not be able to do all of the studies or to move as fast as we had hoped.

Four of the new positions are for providing an increase in technical, statistical, and analytical assistance. Our projected accomplishments in 1963 of greater output and reduction in accumulated backlogs is also based upon the provision of increased specialized analytical and technical assistance to the hearing examiner staff by the Board's statistical and research activity. The increased need for such technical assistance arises from the characteristics of today's cases. For example, exhibits and other evidence introduced in cases are numerous, detailed, and technically complex. They involve such complex data as passenger costs by fare classes, such as first class, coach and economy, by plane type, and cargo costs by commodity, shipment size, and weight, and so forth. Experience has demonstrated that the use of the specialized knowledge and skills of the statistical and research staff in this manner not only expedites the

processing of cases but enables the hearing examiners and other activities of the Board to perform their work more effectively as well as increase their productivity.

The 1963 work program includes planning and initiating origin-destination (O. & D.) surveys of aircargo traffic that will provide information required by the Board and the carriers to anticipate and resolve route, rate, and other problems created by the new activity and growth developing in the aircargo field. The Board does not now make aircargo O. & D. surveys, nor are aircargo O. & D. data compiled on a regular or comprehensive basis by any other organization. Lack of such data is of increasing concern as it represents a major gap in the statistical information so essential for both route and rate purposes and for which an immediate need exists. Five of the new positions are for this program.

There also is an urgent need for a comprehensive reevaluation and overhaul of both the domestic and international O. & D. surveys of air passenger traffic, to integrate the separate domestic and international procedures, improve the quality of the statistics, provide additional detail information needed by the Board such as new breakdowns by fare classes (first class, coach, etc.), a more complete description of trip routings (by adding cities of intraline transfer), a better method of classifying international trips in terms of freedoms (needed for bilateral negotiations with foreign countries), and overall improvement in the efficiency of procedures that will benefit both the carriers and the Board. Many of the current procedures have not been changed since 1946 and have long outlived their usefulness. A joint CAB-industry plan for accomplishing this is under consideration. Three of the new positions are for this work.

With respect to the 37 new positions requested for our safety work, our safety problems have multiplied manyfold during the past few years, with planes flying faster and higher, carrying many more passengers and more complicated automatic equipment, powered by new types of engines, and with improvements in all areas of the aviation industry taking place at a very rapid pace. This is true over a wide range of aircraft—from the small private and executive-type planes to the large transcontinental jets. Safety in air transportation takes on added importance with these developments.

Our safety program for 1963 anticipates accomplishment of an increased number of field investigations, a reduction in the accumulation of incomplete accident reports, improvements in coverage and quality of accident investigations, particularly with respect to maintenance factors, increased accident prevention activities, and expansion in training of technical personnel to an adequate level.

Fifteen of the new positions for safety are to permit the implementation of a 5-year training and career development program for the technical people. The conduct of the Board's safety investigation activities requires highly specialized personnel. These personnel must be highly qualified when initially employed and then afforded an opportunity to stay abreast of the state-of-the art since they must supervise and direct the activities of highly qualified Government and industry specialists in the various phases of an accident investigation. To do this, an opportunity for training must be provided on the various new types of aircraft with their complicated systems, advances in the air traffic control and air navigation field and on the new techniques and procedures constantly being developed and incorporated in aviation operations.

During the past several years the Board has not had sufficient personnel to handle investigations, even though many thousands of overtime hours have been worked, and therefore has not been able to undertake any appreciable amount of training. It is not conceivable that any group of men can maintain their proficiency and acquire the knowledge necessary to keep abreast of such a broad and ever-changing technical field without substantial training assistance.

Accordingly, the Board is proposing to undertake, commencing in 1963, a training program designed to provide each member of its technical safety staff with training in the fields of aircraft operations, structures, powerplants, and electronics.

More specifically, the training program would provide for each technical member of our safety staff to be in training for a total time approximating 6 weeks each year. This training will take several forms. It will include on-the-job training, assignment to formal training courses (both flying and nonflying technical courses), attendance at technical seminars, conferences and meetings, and review of technical papers and reports.

When a wide variety of operations, services, aircraft, aircraft systems, powerplants, and air navigation and air traffic control aids which the investigators must study and analyze in the performance of their duties are considered, this training program, we believe, is a modest one.

A total of 10 positions is requested for field assistance in the maintenance and wreckage reconstruction area to permit us to expedite and improve the quality of the investigations. We have deemed this particularly important in the general aviation area since there has been a marked increase in the number of multiengine aircraft, helicopters and the more complicated single-engine aircraft. This has created a need for an investigator with a broad airplane and engine maintenance type background to assist in the investigations. It is also planned to utilize these personnel on the mockup (reassembly) of wreckage on the large complicated accidents to expedite the investigations.

Seven of the positions were requested in order for the Board to cope with the additional workload we anticipate will develop from future accidents, and to assist us in dealing with the increasing complexity of aircraft accidents. These positions will permit us to reduce overtime and backlogs and enable the Board to meet its objective of improving the quality of accident investigations in both air carrier and general aviation, and to reduce the time factor between the occurrence of an accident and the issuance of the final report.

During fiscal year 1962 the Bureau of Safety staff performed approximately 22,958 hours of uncompensated overtime. Nevertheless, at the close of the fiscal year 1962 there were 625 uncompleted accident investigations on hand. In addition, also on hand awaiting disposition were 2,206 investigation reports received from the FAA and requiring determination of probable cause and final processing.

Five of the new safety positions are requested for the purpose of increasing our accident prevention activity.

The Board is responsible for making special studies and investigations pertaining to safety in air navigation and the prevention of accidents, to ascertain what will best tend to reduce or eliminate the possibility of or recurrence of accidents. These investigations originate from studies of the factfinding information developed by specific accidents and incidents, accident and incident trends developed from accident statistics, safety recommendations from various sources and from the study of aeronautical hazards. Currently, it is impossible to devote more than a token effort to the Board's safety promotional activities due to requirements for staff to perform accident investigation factfinding and related work. The accident investigation prevention work is of primary importance since it results in the form of practical recommendations to the industry (transport, general aviation, and manufacturing), the Federal Aviation Agency and other Government agencies. These recommendations are made for effecting corrective action and will prevent the occurrence of future accidents or incidents with resultant savings in equipment and lives. The determination of facts, conditions, and circumstances in accident investigation is wasted unless these factors are evaluated through further investigation, research, and study and developed into sound practical recommendations for effective corrective action.

In total for salaries and expenses, we are requesting that the bill be amended to provide an appropriation of $9,781,000 in 1963. This represents an increase of $881,000 over the 1962 appropriation. It also represents a decrease of $119,000 from the budget estimate.

With respect to our second appropriation, "Payments to air carriers," the estimates request an appropriation of $84,578,000 for 1963. The House bill provides $71,900,000 for payment of subsidies in 1963 and is a reduction of $12,678,000 from the $84,578,000 requested in the budget estimate. Also, the language of the bill contains a limitation on the amount available for subsidy for helicopter operations. Under this limitation, the budget estimate provided $5,850,000, as compared with $4,975,000 allowed by the House, a reduction of $875,000.

We have been studying our needs for subsidy since the February hearings and are currently engaged in making the studies and forecasts as to subsidy requirements in connection with the preparation of our 1964 budget estimates, which, of course, involve a complete review of 1963 requirements. We have determined that our prior estimates could be adjusted downward by $1,500,000.

Accordingly, we are requesting that the bill be amended to restore the appropriation to $83,078,000. This represents an increase of $11,178,000 over the House allowance, and a decrease of $1,500,000 below the budget estimate.

In constructing subsidy estimates, we are confronted with many variable and influencing factors. We have made our estimates as accurate as possible and, therefore, they represent the Board's best estimate of the funds that will be required to pay the carriers' bills as they become due under rate orders now in effect, or expected to be in effect, during the fiscal year 1963.

During House consideration of the bill, assurance was given that needed services to small communities was not intended to be curtailed. However, the Board does not see how a cost saving of anywhere near a magnitude of $12 million could possibly be achieved without cutting into needed services of the smaller communities, and in some instances, entirely cutting out needed services.

The Board is in full accord with the objective to reduce subsidy and has an established and operating 4-point program for reversal of the upward subsidy trend. This program is not, however, of sudden crash proportions. Its achievement depends upon (1) the suspension or curtailment of service, under the Board's use-it-or-lose-it policy, at points where traffic generation is inadequate; (2) the strengthening of the carriers' route systems so that revenues will increase more rapidly than costs, thus resulting in a corresponding reduction of subsidy need; (3) the integration of services for various cities through the regional airport concept, which will reduce costs and accordingly reduce subsidy; and (4) the realization of the full potential of the more modern aircraft purchased by the smaller carriers, many of such aircraft being covered by Government loan guarantees.

This 4-point program is well underway, but its benefits cannot—for reasons of due process, and practical considerations—be realized until after July 1, 1963. Route actions, whether suspensions of weak points or addition of strong traffic generating centers, must follow statutory hearing requirements which take time. The same is true of the regional airport concept. The re-equipment cycle is well advanced, but the full integration of such equipment into the carriers' systems is not concluded; 1964, not 1963, should be the year of realization of substantial benefits of such aircraft in terms of subsidy reduction.

In addition, as directed by the President's transportation message of April 5, 1962, our staff is working, on a top priority basis, on a report to be submitted to the President before June 30, 1963, setting forth a comprehensive program aimed at gradual but significant subsidy reductions on a scheduled basis.

In this connection, the Board has been assured of industry cooperation in this endeavor, with the appointment, under the auspices of the Association of Local Transport Airlines, of a committee of industry officials to work with and advise the Board's staff on various aspects of the program.

Our 1962 appropriation included a provision, inserted by the Congress, limiting the amount of subsidy that could be paid for helicopter operations during the 1962 fiscal year to $6 million. This limitation was met by the carriers who, in conjunction with our staff, worked out plans whereby their subsidy need for 1962 will not exceed the $6 million ceiling.

The $5,850,000 subsidy requested for helicopter operations in fiscal year 1963, a reduction of $150,000 from the amount allowed in 1962, will support the presently certificated helicopter operators only on a substanially curtailed basis. With this subsidy limit, the carriers have curtailed the scope of their operations by not instituting service to new points; reducing or eliminating the relatively less productive services, including mail/cargo or mail only schedules, and by effecting such other economies as are feasible.

The recent introduction into service of the turbine-powered, twin-engine helicopter is as near a true technological breakthrough as we have seen in recent years. High operating cost has been the greatest deterrent to rapid growth in this phase of aviation. However, it is anticipated that the turbocopter will make substantial inroads in direct operating costs and should prove a major factor in ultimately reducing subsidy.

It is our view that the appropriation should be in an amount sufficient to enable us to pay the carriers on a timely basis. We will be back before the House subcommittee just about 6 months from now in connection with our 1964 budget. It is our hope that any further adjustment in 1963 requirements can be taken into account at that time rather than having us come back for a supplemental appropriation which we surely must do if the amount now in the House bill prevails.

That completes my statement and I will attempt to answer any questions you may have.

RECRUITMENT PROBLEMS

Senator MAGNUSON. As I understand it, when you appeared at the hearings—that was in February, was it not?

Mr. MURPHY. February 19.

Senator MAGNUSON. The 73 vacant positions were positions authorized, but not filled?

Mr. MURPHY. Yes, sir.

Senator MAGNUSON. How many of those have you filled since that time, if any?

Mr. MURPHY. I will say the majority of them have been filled, Senator. Maybe Mr. Russell can give you the exact amount.

PRESENT PERSONNEL STRENGTH

Mr. RUSSELL. As of June 30, we had 836 employees on the rolls against our 873 authorized positions. If I figure that correctly, it is 37 still vacant.

Senator MAGNUSON. Is that due to problems of recruitment?

Mr. RUSSELL. It is due to problems of recruitment. In addition, there are about 10 of those 37 positions that we have not filled for, I will say, special purposes. For example, in the hearing examiner area, last February we had five hearing examiner positions vacant, and temporarily we were frozen on employing new hearing examiners because the Commission reopened the examination and was establishing a new one. At this time we have filled three of the five vacancies. With those, with each one of the examiners, goes a secretarial assistant.

WORKLOAD OF MERGER APPLICATIONS

Senator MAGNUSON. Would it be a fair statement to say that just as it was mentioned here informally, the applications for mergers which have been quite frequent in the past 18 months, require more work for examiners, or longer periods of time? They are bigger cases, are they not?

Mr. MURPHY. I would say, of course, we have only one pending.

Senator MAGNUSON. Yes, but you have a lot of them.

Mr. MURPHY. There have been many rumors, but actually only one rumor that resulted in the actual presentation of a merger proposal to us. That is a very complex case. It is the biggest merger proposal in the history of the air transportation business, and therefore a big proposal in the entire transportation field. It takes the time not only of an examiner, but a good deal of our staff's time—the Bureau Counsel, who intervenes in these cases, and our economists, and analysts, and so forth, that work along with him. We have tried to expedite procedurally a case of that character, but the expedition would extend only to procedural matters and would certainly have nothing to do with substantive consideration.

ANNUALIZATION COSTS

Senator MAGNUSON. The $881,000 would supply how many of the 73 vacant positions which were authorized, but not filled, when you appeared before the House? Do you have those figures?

Mr. RUSSELL. The $881,000—maybe I can put it this way: The $881,000 is intended to cover what we will say is a full year's cost of the 873 positions authorized for 1962. In addition, it would cover 73 new positions for 1963. In the $881,000, for example, is $156,000 for annualization of the 71 positions we added in 1962.

RECRUITMENT PLANS

Senator MAGNUSON. But you would try to recruit the full complement of the 73, if this amount were restored?

Mr. RUSSELL. We would certainly hope our recruitment efforts would enable us to hit what we say should be normal employment. By "normal" I mean our experience has been that we would have about 2½ percent of our positions vacant at any point in time on the average. That is simply as a result of turnover.

Senator ELLENDER. Since you did not employ all of these people in 1962 with the shortage of 73 positions, or whatever it is, what became of the money appropriated for that purpose?

AMOUNT RETURNED TO TREASURY

Mr. MURPHY. I have been advised, Senator, and I stand to be corrected if I am wrong, we turned back about $400,000 to the Treasury for last year.

Senator ELLENDER. You say the $881,000 you are now asking for is to pay the remaining employees that you could have hired last year, plus 70-some-odd?

Mr. MURPHY. Seventy-three. Yes, sir.

Senator ELLENDER. To what extent has your workload increased in order to justify the 72 more than you had last year?

INCREASE REQUESTED FOR SAFETY ACTIVITIES

Mr. MURPHY. If I may, I would like to address myself to the two basic phases of our work—air safety and economic regulation.

We are asking for 37 new positions for air-safety activities. This is not necessarily due to an increase in work burden as such, although I think it is prudent to anticipate that there will be an increased work burden on the Bureau of Safety. The greater number of hours of flying and greater number of aircraft in the air and greater number of passengers, and so forth, would require it. However, of these 37 new positions which we are asking for the Bureau of Safety, 15 of them are to permit us to implement what we believe is a modest but quite necessary training program. It is quite important that our safety inspectors and the specialists in the Bureau of Safety be highly qualified when they are employed, but equally important that they maintain a certain level of current familiarity with new types of aircraft, engines, and so forth.

Senator ELLENDER. How long do they remain in school for training?

Mr. MURPHY. I believe it is a training program we propose to implement. We have not had it up to this time, and if we get these 15 positions, I think we can.

Senator MAGNUSON. About 6 weeks each year?

Mr. MURPHY. It will be about 6 weeks each year.

Mr. RUSSELL. That will be the combined time of training involving several different types of training.

Senator ELLENDER. I understand, but more than 15 people?

Mr. RUSSELL. Oh, yes. It would be the entire technical staff of the Bureau of Safety. But we say that it would take the 15 people to give us this 6 weeks time which is necessary for each of the total technical staff to take the required training.

Senator ELLENDER. I can see the House's position. We provided you last year with sufficient money to hire X number of people, and you were short by 73 in February. And here you are asking to implement that and asking for 73 more.

AUDITORS' POSITIONS

Mr. RUSSELL. I would like to remark we are talking about different positions in part now. In our 1963 budget we do not request any additional positions for auditors. In fact, we show a reduction of two auditors in our budget. Last February, when we appeared before the House, we had, as I recall it, 14 positions vacant in our Audit Division. They were vacant because we couldn't find auditors to put into those positions. Today, or I should say in the meantime, we have been faced with the audits of the supplemental carriers, in part, related to the legislation that the Congress recently passed. We have also had to expend extensive audit effort in going ahead with our subsidy class rate. So we have a shortage of auditors—not an excess. We had 14 of those jobs vacant. We need every one of them. In fact, it looks like, in 1964, we are very apt to be coming back here and saying that we need more than we now have in terms of positions.

INCREASE IN TOTAL EMPLOYMENT

Senator ELLENDER. I would not be surprised, because that is usual. Every year you build it higher and higher and that's the way it has been ever since I have been here.

Mr. MURPHY. That is correct, Senator. It is generally the history of all Government organizations.

Senator ELLENDER. That is correct.

Mr. MURPHY. I do not think the Civil Aeronautics Board is different from any other organization, but I am a little proud of the fact that if you look at the historic trend, the growth in the Civil Aeronautics Board, you will see a very small growth, and that we are one of the tiniest of all the Government agencies, and yet our responsibility for regulation, safety, and so forth and so on, encompasses the activities of a pretty big industry.

STATISTICS ON GROWTH

Senator MAGNUSON. Let us put in the record just how you have grown. In 1961 you had 802 permanent positions; in 1962 you had 873; and in 1963, 948.

Mr. MURPHY. That is, if we get the new positions.

Senator MAGNUSON. Yes. No, I think this figure is not including the new ones.

Mr. RUSSELL. Yes; 948 would include the 73, or 75 actually, that we are requesting for 1963.

INCREASES FOR SAFETY BUREAU FIELD OFFICES

Mr. MURPHY. I believe, with respect to the Safety Bureau, that about 10 of the new positions, of these 37 I am speaking of now, would be for additional personnel in our field offices. We have 10 field offices ranging from Anchorage, Seattle, San Francisco, Los Angeles, Fort Worth, Chicago, Denver, and so forth. There we have noticed a tremendous workload in these field offices, not only in connection with commercial accidents or accidents in commercial aviation, but also in general aviation. This is where there has been a tremendous growth in recent years.

TOTAL AIRCRAFT AND ACCIDENT RATE

For example, there are 73,000 registered general aviation aircraft in the United States, and there has been a rather marked increase in the number of accidents and the number of fatal accidents in general aviation. We have a responsibility for the investigation of these accidents and the determination of probable cause of a fatal accident involving general aviation aircraft. We do the best we can, and we have a backlog in that area. I would like to make some inroads on it. We think we have a duty to the public to do that, so we would be able to put another man in these various field offices, and probably move ahead in that direction.

INVESTIGATION OF GENERAL AVIATION ACCIDENTS

Senator MONRONEY. May I ask a question there?

Senator MAGNUSON. Surely.

Senator MONRONEY. For quite a while you bucked that over to FAA, did you not? You did not investigate general aviation accidents unless there was something unusual, or there was something different about them. The routine way of handling general aviation accidents was by report to you from FAA. That was changed on the urging of the Aviation Subcommittee that you give more attention to the general aviation fleet, which now is by far the largest—about 73 to 75,000.

DIVISION OF INVESTIGATION FUNCTIONS

Mr. MURPHY. I think that is correct, Senator. Under the present arrangement the FAA at our request conducts investigations of nonfatal accidents in the general aviation category.

Senator MONRONEY. Do you make all fatal accident investigations?

Mr. MURPHY. All fatal. If we were to come before this committee and ask for the personnel to do that job, I am afraid the numbers in comparison to the number of people we have now would be so substantial that the committee might take a dim view of it. But it is a responsibility which the Congress entrusted to us which we would like to discharge. The FAA cooperated in that regard, but when they send reports over, Senator, we have to screen and analyze every one of those reports.

Senator MONRONEY. Many times in these accident investigations, and there are also some nonfatal ones, you find minor defects which can easily be corrected, and contribute a great deal to air safety.

Mr. MURPHY. Incidents, as you pointed out, many times are productive of more sound safety practices than accidents—many times. You have the aircraft and the people surviving and are able to get the facts much better than if you are running around picking up little pieces of a tangled wreck, with everybody dead. So from that standpoint the investigation of incidents from a safety and preventive point of view are equally important, and maybe more important, than the investigation of fatal accidents.

METHOD OF REPORTING ACCIDENTS

Senator MAGNUSON. How are accidents reported to you? By the FAA, or do they come to you initially? I am talking about accidents or near accidents.

Mr. MURPHY. Mr. Tanguay, the Chief of our Bureau of Safety, is here, and I am sure he will give us the detail on that.

Senator MAGNUSON. Come up here, Mr. Tanguay. I am asking the procedure.

How do you operate? Suppose there is an accident this morning some place. When will the Civil Aeronautics Board get the report of that, and how would they get it?

Mr. TANGUAY. I can use as an example the accident that occurred in Knoxville last evening.

Senator MAGNUSON. Right; that is up to date.

Mr. TANGUAY. As soon as the accident occurred at 17:31 eastern standard time—at 19:15 eastern daylight time I had received a note from one of the boys over at the United Press office, and about 5 minutes later we got a note from the FAA Communication Center. This is the way they usually come to us. Most of the time it is direct, either from the local police, the State police, or through the FAA Communications Center, or through the newspaper boys here in Washington.

Senator MAGNUSON. But officially and technically the FAA reports the accident to you people first?

Mr. TANGUAY. They report it to us first, if they get it. I would not say that was officially, though. They do have a system of communications throughout the United States.

Senator MAGNUSON. And that gets to you.

Mr. TANGUAY. And, of course, their people usually give the notification to the office and we get it in turn.

Senator MAGNUSON. Yes.

NUMBER OF CAB PERSONNEL IN WASHINGTON

Senator ELLENDER. How many of your people are hired in Washington?

Mr. MURPHY. In the Safety Division?

Senator ELLENDER. No, in the entire complement.

Mr. MURPHY. I would say roughly probably 90 percent are here.

Senator ELLENDER. Ninety percent?

Mr. MURPHY. Of course, we have auditors on the road. These fellows live out of suitcases generally.

Senator ELLENDER. Is that the 10 percent?

Mr. MURPHY. Well, plus our 10 field offices, safety offices, and what else do we have, Mr. Russell?

Mr. RUSSELL. We have our auditors, our safety people, and we have the little liaison office in Anchorage. Out of our total staff today of 873 positions, we have 118 in the field.

Senator ELLENDER. And the rest in Washington?

Mr. MURPHY. The rest are in Washington. We are all housed in the Universal Building at the corner of Florida and Connecticut Avenues. I think we have six floors.

Senator ELLENDER. The Cafritz Building.

Mr. MURPHY. Yes; we have six floors there.

Senator ELLENDER. A beautiful building.

Mr. MURPHY. Quite adequate.

Senator MAGNUSON. Are there any further questions on salary and expenses?

BACKLOG IN ACCIDENT INVESTIGATIONS

Senator KUCHEL. Mr. Chairman, in connection with the comments which Mr. Murphy is using today in which he has stated that at the end of fiscal year 1962 there were 625 uncompleted accident investigations on hand, will you state for the record whether this is an unusually high number and in addition, what is the average number of uncompleted accident investigations which you would have on hand at any one particular time?

Mr. MURPHY. First of all, I believe it is an unusually high number, Senator, to have on hand at any one time.

(The following was later submitted:)

With respect to the question concerning average number of uncompleted accident investigations on hand, it is believed that approximately 150 would represent a reasonably current workload status. The figure of 150 would be equivalent to about 2 months receipts.

INCREASE IN ACCIDENTS

Senator MAGNUSON. Can you answer that? You can put in the record the exact amount. But generally speaking, are the number of accidents increasing in the recent past, or are they less?

Mr. TANGUAY. The total number of accidents and incidents in the past year has increased approximately 17 percent. Is that the answer you want?

Senator MAGNUSON. Yes. You can put in the record the exact figures.

(The information referred to follows:)

The total number of aircraft accidents and incidents, requiring direct investigation by the Civil Aeronautics Board, was as follows:

Number during fiscal year:	
1960	871
1961	791
1962	926
Percent increase:	
1962 over 1960	6
1962 over 1961	17

The Board, in constructing its 1963 budget estimates, used a 5 percent increase factor based on trend data beyond the fiscal years shown above and believes that 5 percent is a more realistic projection than the percentages shown above.

PERSONNEL RETIREMENT AND EMPLOYMENT REDUCTION

The Chairman is trying out an idea here and it just is an idea. This committee is quite concerned with the growing number of people in Federal employment and the apparent inability to repeal Parkinson's law. We can, of course, only discuss the agencies we have under our jurisdiction, which are many. I am going to ask the Vice Chairman to have the Board consider this.

In 1961 you had 16 retirements. In 1962 you had six retirements, and in fiscal 1963 you will have six more. We are going to suggest as a trial run that when these people retire you naturally will move people into their particular jobs, but you do not hire anybody else and see how long you get along.

Mr. MURPHY. We will be very happy to comply with that request, Senator. I don't think that would place any——

Senator MAGNUSON. In other words, retirement, instead of being used just to reevaluate as in good business where retirements are often used to reevaluate the operation, is not being used for the same purpose here. You will be amazed at how many times you will see you can get along. Of course, it does not involve the fact that you need new people for new positions, but as these people move out, and it is a small number, they move somebody else in. When a fellow retires from a $16,000 job you move another fellow in, and instead of hiring one fellow down below you hire three. That is where Parkinson's law comes in.

See what you can do with it. We will have six coming up this fiscal year. There are 50,000 people retiring for age from the Federal payroll every year. We are just hopeful that we can use this as a method, and it surely is the best way to go at it. It is the most humane way, because you do not fire anybody. See if you can hold it at a plateau or tighten up on some of this. You need new employees in many cases for new positions, but in the normal run of your administrative activity I mean.

Mr. MURPHY. It sounds like a good suggestion, and a very sensible one.

Senator MAGNUSON. If we can even get six we will be making some kind of a dent.

ADMINISTRATIVE CHANGES OF EMPLOYEES

Senator ELLENDER. Mr. Murphy, when were you appointed and qualified?

Mr. MURPHY. In March 1962, Senator.

Senator ELLENDER. March of 1962?

Mr. MURPHY. I mean of 1961. I'm sorry. I have been there about a year and a half.

Senator ELLENDER. To what extent have you changed the number of the people who worked directly under you, that is, in your office? Did you keep those your predecessor had, or did you move in new ones?

Mr. MURPHY. I brought in—I have three employees.

Senator ELLENDER. And you brought them in with you?

Mr. MURPHY. I brought two from Capitol Hill.

Senator ELLENDER. What became of those who served in the capacity of those you brought in?

Mr. MURPHY. Well, both were secretarial employees.

Senator ELLENDER. Where did they go? Whom did they work for?

Mr. MURPHY. They stayed in the agency.

Senator ELLENDER. Stayed in the agency. So you brought in two and stuck those other two somewhere else. That is what I have been complaining about here for a long time. Whenever new people come in under civil service, you are supposed to use the same personnel, but every new man who comes in brings in his own people, and those who serve under his predecessor are usually stuck in a little corner somewhere and kept on the payroll, instead of either discharging them or doing something about them.

Mr. MURPHY. That is true. That could happen, I assume, Senator, in many cases. However, the displacement of the secretarial people did not create new positions. The confidential secretary is one, and I think a man is entitled to select his confidential secretary. The other secretarial position did not create any new job at the Board.

Senator ELLENDER. Could you say the same thing happened to other of the personnel who are appointed as Board members?

Mr. MURPHY. That I do not know. There have been no other new Board members since I have been there. There was reappointment of existing present incumbents. I think, speaking philosophically, from time to time it is well to get into any agency some new blood.

Senator ELLENDER. Yes, but you ought to get the old bad blood out in some way.

Mr. MURPHY. That is the way you get fresh blood in.

Senator ELLENDER. That is the way they pile up.

Mr. MURPHY. That may be true.

INCREASE THROUGH RETENTION OF PERSONNEL

Senator ELLENDER. And whenever a new administration comes in, I daresay that 90 percent of the newcomers get their own personnel immediately beneath them, but the agency keeps the ones that served the predecessor of these appointees. So that is how the personnel, in my opinion, is increasing in these Departments.

Mr. MURPHY. I am happy to say I selected as my Administrative Assistant a career employee of the Board, Mr. James Deegan, and I am very happy about it.

Senator ELLENDER. I am not arguing about that. I am trying to point out what happens when a new administration or a new employee comes in. He wants to get his own people and there is no way in which the people who worked under a predecessor can be put out. So the rolls are increased. Little nooks and corners are found for them and the first thing you know the staff becomes overloaded, which is what is happening now.

I imagine we could take away 10 or 12 percent, or maybe 15 percent of the Federal employees, and do a better job.

That is all the questions I have.

Senator MONRONEY. May I ask a question?

Senator MAGNUSON. Yes.

PERSONNEL FOR SUPPLEMENTAL AIR CARRIERS BILL

Senator MONRONEY. Do we have adequate personnel to carry out the supplemental air carriers bill which the Congress passed this year, requiring close inspection, checking, and certification of the supplementals which have been regulated rather vaguely in the past because of lack of auditors and other requirements imposed on the Civil Aeronautics Board under the new law?

Mr. MURPHY. To answer your question specifically, Senator, I believe that part of our request for new employees in our Economic Regulatory Branch is for specifically handling the anticipated burden of the supplemental carrier legislation. We can do the job. We are addressing ourselves to it with our present staff. But because of the policy of the supplemental legislation we think we need at least three new positions for work just in that field alone.

Senator MONRONEY. It puts a heavy burden on you to maintain a constant check on the physical and economic ability of theses lines.

Mr. MURPHY. Exactly.

Senator MONRONEY. In other words, we relate the consideration of their economic standing to their deteriorated equipment and lack of proper maintenance. We relied very heavily on that and required them to carry surety bonds for the performance of their contract, liability insurance, and many other things which they have not been required to do in the past.

CONSTANT SURVEILLANCE OF DEVELOPMENTS

Mr. MURPHY. And I gather from the excellent report of the committee, Senator, on the legislation, that Congress wishes us to maintain constant surveillance, as it were, and constant awareness of trends or developments, in the field of the supplemental carriers, so we never have a situation exist again that existed possibly in the last 12 to 18 months. This naturally means additional staff work.

I have touched on this in my prepared statement, Senator. We have asked for six new positions in the Routes Division, and three of those were specifically for work in this field of supplemental air carriers.

Senator MONRONEY. I see.

Senator KUCHEL. Mr. Chairman, off the record.

(Discussion off the record.)

IMPLEMENTATION OF REGIONAL AIRPORT CONCEPT

Senator KUCHEL. Would you submit for the record your present plans of the agency for implementing your regional airport concept? The Senator from Massachusetts, Mr. Saltonstall, was interested in it yesterday, and I must say I am, too.

Mr. MURPHY. I will be very happy to do that, Senator. I may not have a document handy at the moment, but would you mind if I furnished it later today?

Senator KUCHEL. I ask consent.

Senator MAGNUSON. Yes, you do that.

(The information referred to follows:)

PLAN FOR IMPLEMENTATION OF REGIONAL AIRPORT PROGRAM, FISCAL 1963

In March 1962 the Board instituted the first broad area airport investigation. At that time, when instituting the *New England Regional Airport Investigation*, docket 13493, the countrywide programed series of such investigation was announced.

In June 1962 the *North Central Airlines Area Airline Service Airport Investigation*, docket 13743, was instituted to consider points located principally in Wisconsin and served exclusively by North Central. Subsequent broad area airport investigations will include pairs of points served within the area contained by local service carriers' authorizations, whether served exclusively by the specific local service carrier or other air carriers.

In addition to these local carrier area investigations in implementation of the area airport program, the Board is considering appropriate area airport issues in "use it or lose it" investigations, and, as well, on the basis of civic petitions or other situations which may involve only one or a limited number of pairs of points.

The current approach in this relatively new program is an exploratory one in which the Board has set forth certain factors which it believes may be controlling; for example, airport accessibility, available surface transportation, community of air interest of the traffic, highway and surface transportation, etc. However, it will remain for the development in the evidentiary proceedings of all views of all parties before the Board can develop definitive standards for designation of area airports through which airline services would be provided to a pair or complex of points.

Individual or limited area airport issues have been decided during fiscal 1962 in certain cases on the basis of records developed respecting these limited situations. (*Pacific Air Lines Service to Red Bluff and Redding, California*, case, docket 12929; *Pacific Southwest Local Service Area* case, docket 5645).

It is estimated that the first of the broad area airport investigations, that covering the New England States, will be submitted to the Board for decision in December 1962 and that decision will be issued before the end of fiscal 1963. It is also possible that the second of the broad area airport investigations, that involving the Wisconsin points served by North Central, will be decided by the end of fiscal 1963. In connection with the forthcoming decision in the *Frontier Airlines "Use It or Lose It" (7-States) Investigation*, docket 12078, decision on the limited area airport issues therein considered will be reached in the relatively near future. In addition, it is anticipated that specific area airport issues will be decided during fiscal 1963 in the *Service to Ogdensburg, N.Y.*, case, docket 13335, and the *Service to the Sheboygan and Manitowoc, Wisconsin Area* case, docket 9767. In addition, appropriate area airport issues will be considered in connection with pending petitions and forthcoming "use it or lose it" investigations which will be instituted durng fiscal 1963:

Mohawk Airlines "Use It or Lose It" Investigation.

North Central Airlines "Use It or Lose It" Investigation (Great Lakes area).

Central Airlines "Use It or Lose It" Investigation (Kansas-Oklahoma).

Lake Central Airlines "Use It or Lose It" Investigation (Great Lakes).

The staff have been authorized by the Board to compile and obtain directly from the air carriers pertinent information so that preliminary evaluation may be made by the Board in order to initiate further board area airport investigations throughout the country. The local air carriers will be contacted during fiscal year 1963 in this connection.

Senator MAGNUSON. The Chairman has several questions here based on your statement. Many of them are technical, but I think we should have it in the record. So I am going to give them to you to answer, if they are not answered in the course of the testimony.

Mr. MURPHY. All right, sir.

PREVENTIVE ENFORCEMENT VIA VOLUNTARY COMPLIANCE

Senator MAGNUSON. One thing that has been suggested that I ask about is on page 6, reference is made to the development of tactics for preventive enforcement via voluntary compliance. I assume what you have in mind is the new part 305. It is my understanding that the Board will have the right to issue subpenas to get certain facts from suspected violators. I want to ask, will these facts so obtained then be used against the persons, and will the persons involved get a full and impartial hearing before a hearing examiner? I think that was the subject of the editorial I had here.

Mr. MURPHY. I saw that yesterday.

Senator MAGNUSON. Which authorized secret investigative hearings. I have the order which I will put in the record in full.

Mr. MURPHY. All right, sir.

(The information referred to follows:)

UNITED STATES OF AMERICA,
CIVIL AERONAUTICS BOARD,
Washington, D.C.

(Procedural Regulations; Docket No. 13593; Dated: May 10, 1962)

PART 305—RULES OF PRACTICE IN INFORMAL INVESTIGATIONS BY THE BUREAU OF ENFORCEMENT

NOTICE OF PROPOSED RULEMAKING

Notice is hereby given that the Civil Aeronautics Board has under consideration the proposed enactment of new part 305 of the Board's procedural regulations.

The principal features of the proposed part are explained in the attached explanatory statement, and the text of this new part is set forth in the attached proposed rule. This regulation is proposed under the authority of sections 202(a), 204(a), 411, 1001, 1002(b), 1004, and 1007 of the Federal Aviation Act of 1958 (72 Stat. 741, 743, 769, 788, 792, 796; 49 U.S.C. 1322, 1324, 1381, 1481, 1482, 1484, and 1487).

Interested persons may participate in the proposed rulemaking through submission of 10 copies of written data, views, or arguments pertaining thereto, addressed to the Docket Section, Civil Aeronautics Board, Washington 25, D.C. All relevant matter in communications received on or before June 29, 1962, will be considered by the Board before taking final action on the proposed rule. Copies of such communications will be available for examination by interested persons in the Docket Section of the Board, room 711, Universal Building, 1825 Connecticut Avenue NW., Washington, D.C., upon receipt thereof.

By the Civil Aeronautics Board:

[SEAL] HAROLD R. SANDERSON, *Secretary.*

Vice Chairman Murphy dissented.

EXPLANATORY STATEMENT

In the course of enforcement of the act and orders and regulations of the Board, it is frequently necessary to undertake an informal investigation of all relevant facts and circumstances for the purpose of determining whether the institution of a formal compliance proceeding is warranted. Such investigations can be conducted most efficiently and expeditiously if witnesses and persons whose activities are the subject of investigation voluntarily cooperate with the Board's investigative staff by disclosing facts and producing documents upon request. However, experience has shown that the Bureau of Enforcement has been severely handicapped in such preliminary informal investigations by the refusal of many such persons to cooperate in any manner or their insistence upon surrounding their voluntary disclosures with unreasonable restrictions and delays. Accordingly, while the Board will continue to adhere to its established policy of actively seeking and promoting such cooperation in the

interests of all concerned, it also believes it necessary to establish appropriate procedures which can be used to compel the disclosure of information prior to the commencement of a formal enforcement proceeding when such information cannot otherwise be obtained, without undue delay, and the requested facts or documents appear to be relevant to the matter under investigation.

To this end, the Board proposes to adopt appropriate rules for the purpose of implementing its statutory powers to institute investigation, issue subpenas calling for the attendance and testimony of witnesses and the production of documents and to seek judicial enforcement of such subpenas. Numerous court decisions have sustained the reasonable exercise of such investigatory powers by the Federal regulatory agencies.[1]

The proposed new part would be applicable in all informal investigations, as distinguished from adjudicatory proceedings and from inquiries and investigations under sections 407 and 415 of the act, undertaken by the Bureau of Enforcement. Informal investigations would be commenced by the issuance of an order of the Board which would be an internal Board document and, as such, not available to the general public. Such an order would designate an attorney on the staff of the Bureau of Enforcement as investigation attorney for the purpose of conducting a specified informal investigation in accordance with the provisions of this new part. The investigation attorney would preside over the investigational hearing, which would be informally conducted, for the purpose of receiving the testimony of witnesses and documents relating to any subject of investigation. Such hearings would either be tape recorded or stenographically recorded, and a transcript of the proceedings, testimony, and documents furnished would be made a part of the record of the investigation.

Investigation subpenas directing a named person to appear before the investigation attorney and testify or disclose documentary evidence would be issued by a member of the Board who has been duly designated to perform that function. Every subpena will advise the person named therein of the purpose and scope of the investigation insofar as it pertains to the phase of the investigation to which the evidence required of him relates.

Any person subject to such a subpena could, within 7 days after the date of its service, file a motion to quash or modify the subpena. Such motion would be supported by written evidence and argument but no oral argument would be heard thereon, unless the Board so orders. A subpena would be quashed or modified when the Board believes that the evidence sought is not reasonably relevant to the matter under investigation or that the demand made does not specify in sufficient detail the information sought or that the subpena is unlawful or unduly burdensome for any other reason. The filing of a motion to quash or modify an investigation subpena will stay the return date of such subpena until the Board grants or denies such motion. All orders initiating informal investigations, motions to quash or modify investigation subpenas, orders disposing of such motions, documents, and transcripts of testimony forming part of the record in such an informal investigation would become internal Board documents which are not open to inspection by the general public. Attendance at such investigations would normally be confined to witnesses and their respective counsel. Any person who has been compelled to testify or depose could obtain a copy of his own testimony and a person required to submit documentary evidence would be entitled to procure a copy of such document. Such persons could be accompanied and advised by counsel of their own choosing who would not, however, be otherwise entitled to participate in the investigation.

Since the purpose of informal investigations is to enable the Bureau of Enforcement to gather the information necessary to determine whether there is reason to believe that acts have been committed in violation of law and that such acts are within the jurisdiction of the Board, the record of each such completed investigation will be reviewed with a view to determining whether remedial action is appropriate. Consequently, if the facts indicate that no corrective action is warranted, the investigation files will be closed. On the other hand, if the law appears to have been violated, the Director of the Bureau will take appropriate steps to initiate formal compliance proceedings by issuance of a complaint and petition for enforcement under Part 302; negotiate a cease-and-desist stipulation or take other appropriate action.

---

PROPOSED RULE

PART 305—RULES OF PRACTICE IN INFORMAL INVESTIGATIONS BY THE BUREAU OF ENFORCEMENT

Sec.

305.1 Applicability.
305.2 Definitions.
305.5 Initiation of investigation.
305.6 Conduct of investigational hearing.
305.7 Issuance of investigation subpoenas.
305.8 Investigation depositions.
305.9 Rights of witnesses.
305.10 Nonpublic character of proceedings.
305.11 Procedures after investigation.
305.12 Motion to quash or modify an investigation subpoena.

§ 305.1 *Applicability.* The provisions of this part shall govern informal investigations, as distinguished from adjudicatory proceedings and inquiries or investigations under Sections 407 and 415 of the Act, undertaken by the Bureau of Enforcement with a view to obtaining information from any person. While the Board seeks and encourages voluntary cooperation and believes that it is in the best interest of all parties concerned, it will utilize the procedures provided by this part to compel the disclosure of information from any person where the Board wishes to determine whether such person, or any other person, has been or is violating any provisions of Titles IV, VII, or Section 1108 of the Federal Aviation Act of 1958, as amended, or any rule, regulation, order, certificate, permit or letter of registration issued thereunder by the Board and when the information appears to be relevant to the matter under investigation.

§ 305.2 *Definitions.* For the purpose of, and as used in, this part,

Deposition order means an order of the Board or the Director, Bureau of Enforcement, directing that an investigation deposition be taken in the course of an investigation.

Investigation means a nonadjudicatory, informal investigation, exclusive of inquiries under Sections 407 and 415 of the Act.

Investigation deposition means the taking of the deposition of a witness, pursuant to a deposition order, before any person designated in the deposition order, other than an officer or attorney of the Board, who has power to administer oaths.

Investigational hearing means a nonadjudicatory hearing before a duly authorized officer or attorney of the Board, conducted in the course of an investigation, at which evidence is received.

§ 305.5 *Initiation of investigation.* An informal investigation may be initiated by the issuance of an order of the Board. Each such order shall designate a staff attorney of the Bureau of Enforcement as Investigation Attorney for the purpose of conducting such investigation pursuant to the provisions of this part. Investigation Attorneys are hereby authorized to exercise and perform their duties and functions under this part in accordance with the provisions of the Federal Aviation Act of 1958, as amended, and the rules and regulations of the Board. They are authorized to administer oaths and affirmations.

§ 305.6 *Conduct of investigational hearing.* Investigational hearings may be held before any designated Investigation Attorney for the purpose or receiving the testimony of witnesses or receiving documents or other data relating to any subject under investigation. Such hearings shall be recorded or stenographically recorded and a transcript thereof shall be made and incorporated in the record of the investigation.

§ 305.7 *Issuance of investigation subpoenas.* Upon request of the Director, Bureau of Enforcement, any Member of the Board, when duly designated by the Board for such purpose, may issue a subpoena directing the person named therein to appear before a designated Investigation Attorney at a designated time and place to testify or to produce documentary evidence relating to any matter under investigation, or both. Each such subpoena shall advise the person required to testify or submit documentary evidence of the purpose and scope of the investigation insofar as it pertains to the phase of the investigation to which the evidence required therein relates. Witnesses summoned to attend an informal investigation shall be paid the fees and mileage prescribed in § 302.21 of the Rules of Practice in Economic Proceedings. Service of such subpoenas shall be made in accordance with the provisions of § 302.8 of the Rules of Practice in Economic Proceedings.

§ 305.8 *Investigation depositions.* The Board or the Director, Bureau of Enforcement, may order an investigation deposition to be taken in any investigation at any stage thereof. Each such order shall designate a person who will, on behalf of the Bureau of Enforcement, ask questions of the witness. In addition, such order shall designate a person authorized to administer oaths and affirmations at the place of the deposition, before whom the deposition is to be taken. The testimony shall be reduced to writing by the person taking the deposition, or under his direction, and shall then be subscribed by the deponent. Any person may be compelled to appear and depose and to produce documentary evidence in the same manner as witnesses may be compelled to appear and testify and produce documentary evidence as provided in § 305.7 of this Part.

§ 305.9 *Rights of witnesses.* Any person required to testify or to submit documentary evidence shall be entitled to procure on payment of lawfully prescribed cost, a copy of any document produced by such person and of his own testimony as stenographically reported or, in the case of depositions, as reduced to writing by or under the direction of the person taking the deposition, except that in a confidential proceeding a witness may for good cause be limited to inspection of his testimony. Any party compelled to testify or to produce documentary evidence may be accompanied and advised by counsel, but counsel may not otherwise participate in the investigation.

§ 305.10 *Nonpublic character of proceedings.* Unless otherwise directed by a Member of the Board, all investigatory proceedings shall be attended only by witnesses and their counsel. All orders initiating informal investigations, motions to quash or modify investigation subpoenas, orders disposing of such motions, documents and transcripts of testimony shall be part of the record in an informal investigation. The records of such proceedings shall constitute internal Board documents which shall not be available to the general public except as ordered by the Board. The use of such records in Board proceedings subject to Part 302 of the Procedural Regulations shall be governed by §§ 302.19(g) and 302.39.

§ 305.11 *Procedures after investigation.* Upon completion of investigation, where the Director, Bureau of Enforcement, determines that no corrective action is warranted, the investigation will be closed. Where remedial action is appropriate, the Director will proceed pursuant to Subpart B of Part 302 of the Rules of Practice in Economic Proceedings.

§ 305.12 *Motions to quash or modify an investigation subpoena.* Any person upon whom an investigation subpoena is served may within seven (7) days after such service or at any time prior to the return date thereof, whichever is earlier, file with the Board a motion to quash or modify such subpoena. Such motions shall be made in writing in conformity with §§ 302.3 and 302.4 of the Rules of Practice in Economic Proceedings; shall state with particularity the grounds therefor and the relief sought; shall be accompanied by the evidence relied upon and all such factual matter shall be verified in accordance with the provisions of § 302.202 of the Rules of Practice in Economic Proceedings. Written memoranda or briefs may be filed with the motions, stating the points and authorities relied upon. No oral argument will be heard on such motions, unless the Board directs otherwise. The Board will quash or modify a subpoena when it believes that the evidence whose production is required is not reasonably relevant to the matter under investigation, or that the demand made does not describe with sufficient particularity the information sought, or that said subpoena is unlawful or unduly burdensome. The filing of a motion to quash or modify an investigation subpoena shall stay the return date of such subpoena until the Board grants or denies such motion.

PROPOSED RULE

Mr. MURPHY. I would like to say to that that first of all it is merely a proposed rule or regulation. The Board has not adopted it. We put it out for public comment and are very happy to have a comment, for example, as appeared in the editorial columns of the Washington Post yesterday.

In answer to your question, Senator, the rule would not contemplate that there would be a hearing before a hearing examiner, and certainly whatever facts were obtained through the use of this special subpena process would be used against the suspect, or eventually

the accused. It was for these reasons that I personally voted against even the promulgation of the rule. However, I am sure that the Board will not act hastily in this field. We will wait and evaluate the criticism and suggestions and certainly take all of these factors into consideration before we would adopt it as an official part of our enforcement armament.

PEAKING OF SCHEDULES

Senator MAGNUSON. I will submit these questions to you. The Senate Commerce Committee and this committee constantly, as you know as well as anyone else, because you had some concern with this when you were with the Senate Commerce Committee, we are concerned about these things. I think you ought to put something in the record as to what the Board is doing, if anything, about this constant peaking of schedules.

Mr. MURPHY. I will be very happy to do that.

Senator MAGNUSON. It seems to be causing more trouble rather than less trouble.

Mr. MURPHY. I think the Board, at the request of the Senate Commerce Committee, you and Senator Monroney and Senator Smathers, a few years ago looked into that and got a number of carrier comments and sent them up here.

Senator MAGNUSON. If you can get these answers up here sometime this week, we will be very appreciative of it. There is a lot of it which is technical and I do not want to take up the time of the committee with it. It is a lot of technical administration. Actually, the Senate Commerce Committee and this committee are both concerned about these questions.

(The information referred to follows:)

SUMMARY AND HIGHLIGHT STATEMENT

1. On page 3, you state the Board, in implementing Reorganization Plan No. 3, is now delegating or intends to delegate certain Board functions.

(*a*) Aside from delegation in the hearing examiner area, in what specific instance has the Board delegated work?

(*b*) You indicate that the Board intends to delegate work in the "safety field." Does this refer to determination of probable cause, or what is it you have in mind?

(*c*) To what extent has Reorganization Plan 3 been utilized to increase efficiency; reduce costs; and cut personnel requirements?

Answer 1(a). It is believe that this question can best be answered by reference to part 385 of the Board's regulations, as follows:

[Reprinted from Federal Register, Dec. 22, 1961]

CIVIL AERONAUTICS BOARD, ORGANIZATION REGULATIONS, EFFECTIVE JANUARY 20, 1962

SUBCHAPTER E—ORGANIZATION

[Reg. No. OR–1]

PART 385—DELEGATIONS AND REVIEW OF ACTION UNDER DELEGATION; NON-HEARING MATTERS

Adopted by the Civil Aeronautics Board at its office in Washington, D.C., on the 18th day of December 1961.

Reorganization Plan No. 3 of 1961 confers upon the Board authority to delegate "by published order or rule" any of its functions to any of its employees.

Among the categories of functions which the Board thus may delegate are those which may be performed without notice and hearing and need not be based on an evidentiary record. Part 385 has been adopted by the Board to implement this aspect of the Reorganization Plan.

Part 385 consists of three subparts. Subpart A contains general provisions applicable to delegations; Subpart B contains the delegations; and Subpart C contains provisions governing the procedures on Board review of action under delegated authority. Though such a regulation could be issued as a final regulation without public notice, the Board deemed it desirable to solicit comments with respect to Subpart C—Procedure on Review of Staff Action, and issued proposed Subpart C as a notice of proposed rulemaking. Docket 13021, dated September 7, 1961, published in the Federal Register (26 F.R. 8567) on September 13, 1961. Comments thereon were received and due consideration has been given to all relevant matter presented.

Though comments received covered a wide range of matters dealing with delegated authority, the paramount concern pertained to the procedural rights of the individuals having a substantial interest in the staff action. Questions were raised whether such persons would be aware of the staff action taken or would have sufficient time within which to prepare petitions and answers; and whether or not the staff might be able to discharge its authority in such a manner as to render useless the discretionary right of review by the Board.

The public and interested parties will be made aware of the staff action taken under delegated authority in the same manner as if the Board itself had acted. The basic period within which petitions for review and answers are to be filed will be 10 days. The Board feels that such periods will provide sufficient time as to the majority of staff action taken. The staff may, in its discretion, extend or shorten such period.

When the staff member finds that the public interest so requires, or that there will be insufficient time for discretionary Board review of his decision upon petition as provided in Subpart C, he shall, in lieu of exercising the delegated authority, submit the matter to the Board for decision.

Decisions by the Board upon review of staff action will be final and will not be subject to petitions for reconsideration. Thus in any case where the staff takes action to dispose of a nonhearing matter and interested persons have been made aware of such action, the action shall be subject to no more than one subsequent consideration by the Board upon request of an interested party, and any further requests for a reconsideration will be dismissed.

Several comments sought a broadening of the basis upon which review of staff action could be sought. Upon review of these suggestions, the Board finds that the four limits proposed should be expanded to include a fifth, namely, where staff action is substantially deficient on its face (e.g., omission of necessary findings, failure to dispose of issues, etc.).

Section 385.51 as proposed, stated that petitions could not exceed 10 pages in length. It is felt that the staff should have authority to allow for greater length where they deem it necessary, and the section has been altered accordingly.

Proposed § 385.55 permitted the staff member to reconsider his action upon the filing of a petition for review by the applicant. Upon consideration of comments, this provision was extended to petitions by opponents to the application (§ 385.53).

In promulgating new Part 385, the Board hereby establishes a new Subchapter E, Organization Regulations, and changes the designation of present Subchapter E to F.

In consideration of the foregoing, the Civil Aeronautics Board hereby enacts new Part 385 of the Organization Regulations (14 CFR Part 385) effective January 20, 1962, to read as follows:

SUBPART A—GENERAL PROVISIONS

Sec.

385.1 Definitions.
385.2 Applicability.
385.3 Scope of staff action.
385.4 Form of staff action.
385.5 Procedures prescribed in other regulations.
385.6 Referral to the Board.
385.7 Exercise of authority by superiors or the Board.
385.8 Exercise of authority in "acting" capacity.
385.9 Effective date of delegations and procedures.

SUBPART B—DELEGATION OF FUNCTIONS TO STAFF MEMBERS

385.10 Delegation to the Chief Examiner, Bureau of Hearing Examiners.
385.11 Delegation to the Hearing Examiners, Bureau of Hearing Examiners.
385.12 Delegation to the Director, Bureau of Economic Regulation.
385.13 Delegation to the Chief, Routes and Agreements Division, Bureau of Economic Regulation.
385.14 Delegation to the Chief, Rates Division, Bureau of Economic Regulation.
385.15 Delegation to the Chief, Tariffs Section, Rates Division, Bureau of Economic Regulation.
385.16 Delegation to the Chief, Subsidy Division, Bureau of Economic Regulation.
385.17 Delegation to the Alaska Liaison Representative, Bureau of Economic Regulation.
385.18 Delegation to the Chief, Office of Carrier Accounts and Statistics.
385.19 Delegation to the Chief, Regulations and Reports Division, Office of Carrier Accounts and Statistics.
385.20 Delegation to the General Counsel.
385.21 Delegation to the Associate General Counsel, Rules and Legislation.
385.22 Delegation to the Director, Bureau of Enforcement.

SUBPART C—PROCEDURE ON REVIEW OF STAFF ACTION

385.50 Persons who may petition for review.
385.51 Petitions for review.
385.52 Effective date of staff action.
385.53 Review by the staff.
385.54 Decision by the Board.

AUTHORITY: §§ 385.1 to 385.54 issued under sec. 204(a), 72 Stat. 743; 49 U.S.C. 1324. Interpret or apply sec. 1001, 72 Stat. 788; 49 U.S.C. 1481, and Reorganization Plan No. 3 of 1961, 26 F.R. 5989.

SUBPART A—GENERAL PROVISIONS

§ 385.1 Definitions

Board means the Civil Aeronautics Board.

Petition for review means a petition asking the Board to exercise its discretionary right of review of staff action.

Staff action means the exercise of a function of the Board by a staff member pursuant to delegation under this part.

Staff members means officers and employees of the Board who receive delegated authority under this part.

§ 385.2 Applicability

This part describes the organization of the Board insofar as, pursuant to authority conferred on it by Reorganization Plan No. 3 of 1961, 26 F.R. 5989, the Board has delegated any of its functions of making orders or other determinations which are not required to be made on an evidentiary record upon notice and hearing, and the Chairman has assigned Board personnel to perform such functions. The delegations set forth herein do not apply in instances where applicable law or due process requires that decision be based on a record made at an evidentiary hearing. This part also sets forth the procedures governing discretionary review by the Board of action taken under such delegations.

§ 385.3 Scope of staff action

Applications for relief which, pursuant to this part, may be granted by staff members under delegated authority, and proceedings on such requests shall be governed by applicable rules in the same manner as if no delegation had been made, (see § 385.5). In such proceedings, each staff member may determine any procedural matters which may arise, including, inter alia, service of documents on additional persons; filing of otherwise unauthorized documents; waivers of procedural requirements; requests for hearing; requests for additional information; dismissal of incomplete or otherwise defective applications; and extensions of time. Such determinations, except those which would terminate the matter, shall be subject to review only in connection with Board review of the staff member's decision on the merits. The dismissal of incomplete or otherwise defective applications under authority set forth in this part shall be without prejudice except where under otherwise applicable law the time for making application has run out or where the defect is not corrected within a reasonable time fixed by the staff member. Under the authority delegated to the staff as set forth in this part to approve, disapprove, grant or deny, relief may be granted or denied in part and grants may be made subject to lawful and reasonable conditions. Moreover, where applicable, the authority to grant relief also includes authority to renew or extend an existing authorization.

§ *385.4 Form of staff action*

Unless otherwise specified in the delegation, staff action shall be by order or informal writing (letters, telegrams, decision marked on copy of application form, etc.). Such orders or informal writings shall contain a recital that action is taken pursuant to delegation; shall, in cases where there are "parties or interveners," contain a brief reference to the right of aggrieved parties to petition the Board for review pursuant to applicable procedural rules, including a statement of the time within which petitions must be filed (§ 385.51); and shall be signed by the person exercising the delegated function. They shall contain all findings, determinations and conclusions which would be required or appropriate if they were issued by the Board. Orders or informal writings so issued which have become the action of the Board (§ 385.52) shall be published in the same manner as if they had been issued by the Board in the first place, and upon request the Secretary shall attest thereon that they constitute the action of the Board.

§ *385.5 Procedures prescribed in other regulations*

Procedures set forth in this part shall not supersede procedures applicable to matters on which decision has been delegated unless otherwise specifically provided herein: *Provided, however,* That any provisions in other regulations which provide for reconsideration of nonhearing determinations made by the Board shall not be applicable to decisions made under authority delegated herein or to Board decisions made upon review thereof.

§ *385.6 Referral to the Board*

When the staff member finds that the public interest so requires, or that there will be insufficient time for discretionary Board review of his decision upon petition as provided in Subpart C of this part, he shall, in lieu of exercising the delegated authority, submit the matter to the Board for decision.

§ *385.7 Exercise of authority by superiors or the Board*

Any delegation of authority to a staff member below the rank of Bureau or Office Head shall also be deemed to be made, severally, to each of such staff member's superiors in the respective Bureau or Office. In accordance with the Board's principle of management responsibility in the Bureau or Office Head, the superior may choose to exercise the delegated power himself in any case. Moreover, the Board may at any time itself exercise any authority delegated herein.

§ *385.8 Exercise of authority in "acting" capacity*

Unless the delegation provides otherwise, staff members serving in an "acting" capacity may exercise the authority delegated to the staff members for whom they are acting.

§ *385.9 Effective date of delegations and procedures*

The delegations and procedures set forth in this part shall be effective thirty days after publication in the FEDERAL REGISTER.

SUBPART B—DELEGATION OF FUNCTIONS TO STAFF MEMBERS

§ *385.10 Delegation to the Chief Examiner, Bureau of Hearing Examiners*

The Board hereby delegates to the Chief Examiner, Bureau of Hearing Examiners, the authority to:

(a) Consolidate, upon recommendation of the Director, Bureau of Economic Regulation (or such staff member of the Bureau of Economic Regulation as he may designate), into one proceeding cases involving the investigation of a tariff or of complaints concerned with related tariffs.

(b) With respect to matters to be decided after notice and hearing: Dismiss applications or complaints (except those falling under Part 302, of this chapter), (Subpart B of the Procedural Regulations) when such dismissal is requested or consented to by the applicant or complainant, or where such party has failed to prosecute such application or complaint; and dismiss proceedings upon his finding that the proceeding has become moot or that no further basis for continuation exists.

§ *385.11 Delegation to the Hearing Examiners, Bureau of Hearing Examiners*

The Board hereby delegates to the Hearing Examiners, Bureau of Hearing Examiners, the authority to take the following actions in matters to which they are respectively assigned:

(a) Grant or deny intervention in formal proceedings.

§ *385.12 Delegation to the Director, Bureau of Economic Regulation*

The Board hereby delegates to the Director, Bureau of Economic Regulation, the authority to:

(a) Approve or deny applications of certificated route air carriers for exemptions to serve a point certificated on one segment of its route in place of a point certificated on another segment of its route whenever no substantial competition to other lines will result, and to perform single flights outside the authority contained in the certificate.

§ *385.13 Delegation to the Chief, Routes and Agreements Division, Bureau of Economic Regulation*

The Board hereby delegates to the Chief, Routes and Agreements Division, Bureau of Economic Regulation, the authority to:

(a) Approve or disapprove Airport Notices which indicate an intention to serve regularly a point through any airport not regularly used by a holder of a certificate of public convenience and necessity; and grant or deny requests for an effective date earlier than 30 days subsequent to filing such Airport Notice.

(b) Approve or disapprove nonstop notices which indicate an intention to inaugurate a scheduled nonstop service between any two points nonconsecutively named in the certificate of public convenience and necessity; and grant or deny requests for an effective date earlier than 20 days subsequent to the filing of such Nonstop Notice. Approval may be granted if such nonstop service is not found: (1) To be adverse to the public interest; or (2) to involve a substantial deviation from the shortest course between such points as determined by the route described in the certificate; or (3) to involve a schedule designated for the transportation of mail where the inauguration of such service on such dates would be prohibited pursuant to the provisions of section 405(b) of the Act.

(c) Approve or disapprove issuance of foreign aircraft permits provided for in §§ 296.45 and 297.36 of this chapter (Economic Regulations).

(d) Approve or disapprove applications for operating authority filed pursuant to Parts 296 and 297 of this chapter (Economic Regulations).

(e) Approve or deny applications for approval of relationships prohibited by §§ 296.45 and 297.36 of this chapter (Economic Regulations).

(f) Cancel any operating authority upon the filing by a domestic or international Air Freight Forwarder of a written notice with the Board indicating the discontinuance of common carrier activities.

(g) Approve or disapprove interchange schedules. Approvals may be granted when such schedules appear to conform to the service plan contemplated by the Board's orders approving the basic interchange agreements.

(h) Approve or deny applications for authorization to conduct off-route charter trips filed pursuant to Part 212 of this chapter (Economic Regulations).

(i) Approve or disapprove applications of certificated helicopter carriers requesting amendments of Flight Patterns operated under the carriers' area exemption authorizations.

(j) Issue revised operating authorizations, Letters of Registration, and Exemption Orders when revisions thereof are made necessary due to a change in name of the carrier specified in the document, provided that no issue of substance concerning the operating authority of a carrier is involved.

(k) In respect of service patterns: (1) Approve or disapprove all applications filed under § 202.4 of this chapter (Economic Regulations) by local service carriers for authority to effect temporary or seasonal changes in service patterns; (2) revoke, modify, or renew, prior approval of temporary or seasonal changes in service patterns; (3) dismiss applications for changes in service patterns when such dismissal is requested by the applicant, or when such application is moot.

(l) In respect of temporary suspension of service: (1) Approve or disapprove applications filed under Part 205 of this chapter (Economic Regulations) for authority to temporarily suspend service; (2) revoke or modify orders authorizing the temporary suspension of service; (3) dismiss applications to temporarily suspend service when such dismissal is requested by the applicant, or when such application is moot.

(m) With respect to section 412 Contracts and Agreements: (1) Approve or disapprove any contract or agreement, or modification, termination, or cancellation thereof, filed by air carriers under section 412 of the Act, except the following:

(i) Contracts or agreements involving (*a*) the establishment of rates, fares, or charges; (*b*) standardization of equipment; (*c*) schedules; (*d*) substantial

limitations on competition; or (e) interchange of equipment and "Trackage rights."

(ii) Contracts or agreements which are industrywide or substantially industrywide in effect, other than those on which there are Clear Board precedents, or which do not involve substantial questions of policy.

(2) Dispose, without action, of contracts and agreements which, prior to review thereof, have expired, been terminated, or been superseded.

(n) With respect to interlocking relationships: (1) Grant or deny applications for approval of interlocking relationships filed under section 409(a) of the Act; (2) Dismiss applications for approval of interlocking relationships where the termination of the interlocking relationship in question has been effected.

(o) Upon application, grant or deny exemptions from section 408 of the Act.

(p) Grant or deny an air carrier authority to conduct a specific charter operation, other than a MATS operation, in overseas or foreign air transportation, imposing such conditions as exclusion of one-way passengers or limitations on payments for labor in arranging the charter; and approve or disapprove minor changes prior to flight date in charters previously authorized by order (e.g., changes regarding flight dates, departure or landing points, aircraft, persons authorized for one-way passage, intermingling of passengers, or substituting another carrier in cases of emergency).

§ 385.14 Delegation to the Chief, Rates Division, Bureau of Economic Regulation

The Board hereby delegates to the Chief, Rates Division, Bureau of Economic Regulation, the authority to:

(a) In the absence of a protest from a person disclosing a substantial interest, effect issuance of final orders with respect to International Air Transport Association (IATA) agreements filed with the Board pursuant to section 412 of the Act or pursuant to Board Order E–9305 of June 15, 1955, as follows:

(1) Disclaiming jurisdiction with respect to IATA agreements which do not affect air transportation within the policy set forth in Order E–12304, dated March 31, 1958.

(2) Disposing of IATA agreements relating to specific commodity rates as follows:

(i) Approving or disapproving agreements within an area which name additional rates under commodity descriptions for which rates are currently in effect in that area and have been approved by the Board.

(ii) Approving or disapproving agreements which readopt rates which are currently in effect and which have been approved by the Board, except where revalidation of the basic commodity rate structure is proposed.

(iii) Approving, disapproving, or approving subject to condition to insure proper tariff publication, agreements which amend commodity descriptions under which rates are currently in effect, consistent with Part 221 of this chapter (Economic Regulations).

(iv) Approving or disapproving agreements which name rates under commodity descriptions not currently in effect where the description does not conform to Part 221 of this chapter (Economic Regulations).

(3) Approving or disapproving amendatory agreements which do not directly affect air transportation, involving adjustment in agreed fares and rates or specification of additional fares and rates to be integrated into the previously approved overall structure.

(4) Approving or disapproving agreements reached by unprotested notice pursuant to the following creative fares resolutions: Resolution 084 (TC1, JT23), and Resolution 084a (JT31).

(5) Approving or disapproving agreements adopted by unprotested notices pursuant to the provisions of Resolutions 014a and 014b, which prescribe the construction rules for passenger fares and cargo rates respectively.

(6) Approving or disapproving agreements proposing delays in inaugurals.

(b) Grant or deny air carriers authority to conduct MATS charter operations in oversea and foreign air transportation, and air transportation between the 48 contiguous States on the one hand and the States of Hawaii or Alaska on the other hand, imposing conditions.

§ 385.15 Delegation to the Chief, Tariffs Section, Rates Division, Bureau of Economic Regulation

The Board hereby delegates to the Chief, Tariffs Section, Rates Division, Bureau of Economic Regulation, the authority to:

(a) Reject any tariff, supplement, or revised page which is filed by any United States air carrier or by any foreign air carrier, and which is subject to rejection because it is not consistent with section 403 of the Act or with Part 221 of this chapter (Economic Regulations).

(b) Approve or disapprove any application for permission to make tariff changes upon less than statutory notice, filed pursuant to § 221.190 of this chapter (Economic Regulations).

(c) Approve or disapprove applications made pursuant to Subpart Q of Part 221 of this chapter (Economic Regulations) for waiver of the provisions of Part 221 of this chapter.

(d) Permit cancellation of a tariff in instances when an investigation of a tariff is pending, or the tariff is under suspension, or when a complaint requesting investigation or suspension of a tariff has been filed.

(e) In instances when an investigation of a tariff is pending, or the tariff is under suspension, or where a complaint requesting investigation or suspension of a tariff has been filed, dismiss the investigation or complaint, or terminate the suspension, provided the tariff to which such investigation, complaint or suspension relates has been canceled, ordered canceled, modified so as to remove the grounds for the investigation or complaint, or has expired.

(f) Institute an investigation of, or institute an investigation and suspend the effectiveness of, a tariff or change in a tariff which:

(1) Is substantially similar to a prior tariff under investigation or suspension; and

(2) Is filed by or on behalf of one or more of the carriers party to the prior tariff; and

(3) Is filed within 90 days after the expiration, modification, or cancellation of the prior tariff, or within 90 days after the effective date of an order requiring its cancellation or modification.

(g) Extend the period of suspension of a tariff under suspension when the proceedings concerning the lawfulness of such tariff cannot be concluded before the expiration of the existing suspension period, provided that the aggregate of such extensions may not be for a longer period than permitted under section 1002(g) of the Act.

(h) Approve or disapprove applications filed under section 403(b) of the Act and § 223.8 of this chapter (Economic Regulations) for permission to furnish free or reduced rate air transportation in overseas or foreign air transportation.

(i) Grant or deny to a certificated all-cargo air carrier an exemption, pursuant to section 416(b)(1), from the provisions of sections 401 and 403(b) insofar as said sections would prevent such carrier from providing transportation to persons between points in its certificate on regularly scheduled cargo flights for the purpose of collecting data for preparation of feature news, pictorial, or like articles provided that:

(1) The transportation is limited to the writer, journalist, or photographer engaged in the preparation of data for use in feature news, pictorial, or like articles which are to appear in newspapers or trade magazines and which will publicize the regularly scheduled cargo operations of the carrier;

(2) The exemption shall be granted only upon the condition that the all-cargo air carrier shall collect from each person transported not less than the lowest fare in effect by carriers authorized to transport persons in regularly scheduled passenger service between the points involved.

(j) Grant or deny to a carrier an exemption and/or one extension thereof, pursuant to section 416(b)(1), from the provisions of section 403(b) insofar as the latter section would prevent the carrier from providing free transportation for the purposes of engaging in technical in-flight observations necessary or desirable for meteorological purposes or in other cases substantially similar to cases previously acted upon by the Board; provided that:

(1) The free transportation is limited to technical personnel regularly engaged in duties directly related to the purposes for which the free transportation is authorized and is provided only when they are engaged in the specific technical in-flight activity and does not include other transportation;

(2) The exemption or the subsequent single extension thereof shall be for a period not to exceed six months; and

(3) The exemption shall be granted only upon the condition that the carrier file with the Board, within ten days after the close of each month, during which the exemption is in force, the name of each person provided free transportation thereunder, his company affiliation and the dates, flights and points between which such free transportation was provided.

§ 385.16 Delegation to the Chief, Subsidy Division, Bureau of Economic Regulation

The Board hereby delegates to the Chief, Subsidy Division, Bureau of Economic Regulation, the authority to:

(a) Issue letters approving or disapproving waivers of provisions in guaranteed loan agreements; approval to be granted in cases where it is believed that the grant of such approval will not adversely affect the obligation of the Board under the guarantee and will not increase the risk that the Board will have to make payment on the guarantee.

§ 385.17 Delegation to the Alaska Liaison Representative, Bureau of Economic Regulation

The Board hereby delegates to the Alaska Liaison Representative, Bureau of Economic Regulation, the authority cited in § 385.15 (a), (b), and (g) insofar as it relates to Alaskan Air Carriers.

§ 385.18 Delegation to the Chief, Office of Carrier Accounts and Statistics

The Board hereby delegates to the Chief, Office of Carrier Accounts and Statistics, the authority to:

(a) Waive any of the accounting, reporting and record-retention requirements as warranted, to meet temporary or local conditions.

(b) Interpret the Board's accounting, reporting, and record-retention requirements.

(c) Establish detailed standard accounting, reporting and record-retention practices required to achieve conformance with regulations promulgated by the Board.

(d) Grant or deny with the concurrence of the General Counsel and the Director, Bureau of Economic Regulation, requests for confidential treatment of preliminary year-end financial reports.

(e) Grant or deny individual requests by air carriers for permission to use their own continuous-feed machine reporting forms, where Board approval for the use of such forms is required by the Economic Regulations.

(f) Establish classification of aircraft types for reporting financial data and traffic capacity statistics.

(g) Prescribe, in specific instances, different passenger weight standards to approximate variations in actual experience, for reporting passenger ton-miles and available ton-miles.

§ 385.19 Delegation to the Chief, Regulations and Reports Division, Office of Carrier Accounts and Statistics

The Board hereby delegates to the Chief, Regulations and Reports Division, Office of Carrier Accounts and Statistics, the authority to take any or all of the following actions in administering the accounting report or record-retention regulation of Part 249 of this chapter (Economic Regulations):

(a) Extend, with the concurrence of the Director, Bureau of Enforcement, the time period for the preservation of records relating to errors, oversales, irregularities and delays in handling of passengers § 249.13(f) of this chapter (Category No. 303(a) of the Schedule of Records to Part 249 of the Economic Regulations).

§ 385.20 Delegation to the General Counsel

The Board hereby delegates to the General Counsel the authority to grant or deny by letter requests submitted under § 302.11(b)(1) (i) and (ii) of this chapter (Procedural Regulations) by persons who have been formerly associated with the Board, for interpretations of facts under § 302.11(b)(1)(i) of this chapter and for leave to represent a party to a proceeding or matter before the Board under § 302.11(b)(1)(ii) of this chapter.

§ 385.21 Delegation to the Associate General Counsel, Rules and Legislation

The Board hereby delegates to the Associate General Counsel, Rules and Legislation Division, the authority to:

(a) In accordance with the provisions of Part 311 of this chapter (Board's Procedural Regulations) approve or disapprove requests for testimony of Board employees, with respect to their participation in the investigation of aircraft accidents.

(b) Grant or deny any motion made by an air carrier association pursuant to § 263.3 of this chapter (Economic Regulations) for leave to participate in a Board proceeding in which no formal hearing is held.

§ 385.22 Delegation to the Director, Bureau of Enforcement

The Board hereby delegates to the Director, Bureau of Enforcement, the authority to:

(a) Compromise civil penalties being imposed for violation of the Board's Safety Investigation Regulations when the penalty does not exceed $100.

SUBPART C—PROCEDURE ON REVIEW OF STAFF ACTION

§ 385.50 Persons who may petition for review

Petitions for review may be filed by the applicant; by persons who have availed themselves of the opportunity, if any, to participate in the matter at the staff action level; and by persons who have not had an opportunity to so participate or who show good and sufficient cause for not having participated: *Provided*, That such persons disclose a substantial interest which would be adversely affected by the respective staff action.

§ 385.51 Petitions for review

(a) *Time for filing.* Petitions for review shall be filed and served within ten (10) days after the date of the staff action to which they relate, but a different period may be fixed in such staff action consistent with effective preservation of the right to petition for discretionary Board review.

(b) *Contents.* Petitions for review shall demonstrate that (1) a finding of material fact is clearly erroneous; (2) a legal conclusion is contrary to law, Board rules, or precedent; (3) a substantial and important question of policy is involved; (4) a prejudicial procedural error has occurred; or (5) the staff action is substantially deficient on its face. The petition shall briefly and specifically state the alleged grounds for review and the relief sought. If persons who participated at the staff action level set forth any new facts, arguments, or other new matter, an explanation must be furnished as to why said matter was not previously adduced at the staff action level. In the absence of a valid explanation, the Board may disregard such new matter.

(c) *Form and filing.* Petitions shall comply with the form and filing requirements of §§ 302.3 (a), (b), and (c), and 302.4 of this chapter (Board's rules of practice in Economic Proceedings.) Petitions shall not exceed 10 pages in length. A greater length, however, may be specified in the staff action taken. The petitions shall be accompanied by proof of required service. However, persons who seek review of a civil penalty proposed by the Director, Bureau of Enforcement, pursuant to § 385.22(a) may submit their request therefor by letter to the Board, with a copy to the Director, Bureau of Enforcement, and need not comply with the above form and filing requirements.

(d) *Service.* A petition filed by a person other than the applicant shall be served on the applicant. Petitions shall also be served on any persons who have served documents on the petitioner at the staff action level, and on such other persons as may be directed by the Board or the staff member who took the action to be reviewed.

(e) *Answers.* The applicant and such other persons as disclose a substantial interest which would be adversely affected by the relief sought in the petition may, within ten (10) days after filing the petition, file an answer thereto. A different period for the filing of answers may be fixed in the staff action. Such answers shall comply with the form and filing requirements applicable to petitions and shall be served on the applicant and any other person who has theretofore served a document in the matter on such respondent.

§ 385.52 Effective date of staff action

Unless, within the time provided by or pursuant to this regulation, a petition for review is filed or the Board gives notice that it will review on its own motion, staff action shall, without further proceedings, be effective and become the action of the Board upon the expiration of such period. A timely

petition for review filed in accordance with the provisions of this section, or notice given by the Board of review on its own motion, shall stay the staff action pending disposition by the Board, unless the Board determines otherwise. However, in cases where the Board's regulations provide that permissions or approvals are granted, or that other legal effects result, within a stated period from the filing with the Board of a prescribed document, unless the Board gives notice to the contrary or takes other action within said period, such notice given or action taken by a staff member under delegated authority shall toll the running of such period.

§ *385.53 Review by the staff*

Where a petition for review is duly filed, the staff member may, upon consideration of all documents properly filed, reverse his decision. In such cases the petition for review will not be submitted to the Board. This staff action shall be subject to petition for Board review as any other staff action.

§ *385.54 Decision by the Board*

(a) *Decline of right to review.* If the Board declines its right to exercise discretionary review, its order will determine the effective date of the staff action stayed by the petition for review.

(b) *Exercise of right to review.* The Board will exercise its discretionary right of review either upon petition or on its own motion if two or more Board members so desire. The Board may by order provide for interlocutory relief pending its decision on the merits and may limit the issues on review. It may affirm, modify, or set aside the staff action, may order the matter remanded, or may order further submittals or other proceedings before making its decision on the merits. Decisions by the Board under this part are final and will not be subject to petitions for reconsideration.

By the Civil Aeronautics Board.

[SEAL] HAROLD R. SANDERSON, *Secretary.*

[F.R. Doc. 61–12136; Filed Dec. 21, 1961; 8:47 a.m.]

[Regulation No. OR–2]

UNITED STATES OF AMERICA,
CIVIL AERONAUTICS BOARD,
Washington, D.C.

(Organization Regulations, Amendent No. 1 to Part 385, Effective: August 2, 1962, Adopted: August 2, 1962)

DELEGATIONS AND REVIEW OF ACTION UNDER DELEGATION PURSUANT TO REORGANIZATION PLAN NO. 3 OF 1961—NONHEARING MATTERS

ADDITIONS TO AND DELETION OF DELEGATED AUTHORITY

Reorganization Plan No. 3 of 1961 confers upon the Board authority to delegate to any of its employees "by published order or rule" any of its functions, including those which may be performed without notice and hearing. Part 385 was adopted by the Board to implement this aspect of the Reorganization Plan. In further implementation of the Plan, the Board is herein making additional delegations authorizing staff designees to approve or disapprove (1) applications of persons seeking approval of a consolidation, merger, purchase, lease, operating contract, or acquisition of control which does not affect the control of an air carrier directly engaged in the operation of aircraft in air transportation, does not result in creating a monopoly, and does not tend to restrain competition, (2) applications of air carriers or foreign air carriers to do business in names other than those already authorized, and (3) applications of air carriers for changes in approved service plans for foreign air transportation.

In addition, the Board is expanding the scope of existing delegations authorizing staff designees to approve or disapprove (1) applications of air carriers for changes in service patterns for local service air transportation, (2) applications of air carriers for operating authorizations by exemption from certificate limitations, (3) contracts or agreements filed pursuant to Section 412 of the Act, (4) requests of air carriers to use their own reporting forms, and (5) applications pertaining to modification of guaranteed loan agreements.

With respect to the delegation last mentioned, the change is, essentially, to provide express authority herein, in lieu of existing implied authority, for passing on modifications of loan agreements which for merely technical reasons should be accomplished by amendment of agreement provision(s) rather than by waiver thereof.

Further, the Board is withdrawing its delegation of authority to the Alaska Liaison Representative, Bureau of Economic Regulation, to extend the period of suspension of a tariff filed by any Alaskan air carrier. As a result, this authority is now included in the delegation under § 385.15(g).

On the occasion of these amendments, two minor amendments of a clarifying nature are being made in the general provisions of Part 385. Section 385.3 now provides that "each staff member may determine any procedural matters which may arise, including *inter alia* * * * dismissal of incomplete or otherwise defective applications." This provision is being clarified by addition of express authority to dismiss applications at the applicant's request or to dismiss applications which are moot. Section 385.4 now provides that staff action under delegated authority "shall be *signed by* the person exercising the delegated function." In practice it has been found desirable that staff action taken in the form of letters shall be signed by the delegatee while orders under delegated authority are issued in the name of the delegatee and signed by the Secretary. To remove a seeming inconsistency, the quoted phrase is being reworded to read "shall be *in the name of* the person exercising the delegated function." This more general language will cover the form of letters as well as that of orders.

Since these amendments are not substantive rules but rules of agency organization and procedure, notice and public procedure hereon are unnecessary, and the amendments may be made effective immediately.

In consideration of the foregoing, the Civil Aeronautics Board hereby amends Part 385 of the Organization Regulations (14 CFR 385) effective August 2, 1962, as follows:

1. By amending the second sentence of § 385.3 through adding after the words "dismissal of" the words "applications upon the applicant's request, moot applications, or," so that it reads as follows:

"In such proceedings, each staff member may determine any procedural matters which may arise, including, *inter alia*, service of documents on additional persons; filing of otherwise unauthorized documents; waivers of procedural requirements; requests for hearing; requests for additional information; dismissal of applications upon the applicant's request, moot applications, or incomplete or otherwise defective applications; and extensions of time."

2. By amending the second sentence of § 385.4 through substituting the words "in the name of" for the words "signed by" so that said sentence reads as follows:

"Such orders or informal writings shall contain a recital that action is taken pursuant to delegation; shall, in cases where there are 'parties or interveners,' contain a brief reference to the right of aggrieved parties to petition the Board for review pursuant to applicable procedural rules, including a statement of the time within which petitions must be filed (§ 385.51); and shall be in the name of the person exercising the delegated function."

3. By amending § 385.12 through adding a new subparagraph (b) after subparagraph (a) as follows:

"(a) * * *; or

"(b) Approve, when no person disclosing a substantial interest protests, or deny applications of certificated route air carriers for exemptions to perform any other operation prohibited by a term, condition or limitation in a certificate."

4. By redesignating §§ 385.13 (j), (k), (l), (m), (n), (o), and (p) as §§ 385.13 (k), (l), (m), (o), (p), (q), and (r), respectively, and adding new §§ 385.13 (j) and (n) to read as follows:

"(j) Approve or disapprove applications of air carriers or foreign air carriers for permission to do business in names other than those authorized pursuant to regulation or order of the Board."

"(n) Approve, when no person disclosing a substantial interest protests, or disapprove applications filed under § 203.2 of the Economic Regulations by air carriers certificated to engage in foreign air transportation to a general area, for authority to effect changes in approved service plans."

5. By amending redesignated § 385.13(l) to substitute new subparagraphs (2) and (3) so that said section reads as follows:

"(l) Approve or disapprove all applications filed under Section 202.4 of the Economic Regulations by local service carriers for authority to effect temporary or seasonal changes in service patterns; (2) approve, when no person disclosing

a substantial interest protests, or disapprove such applications to effect any other changes in service patterns; and (3) revoke, modify, or renew, prior approval of (i) temporary or seasonal changes, or (ii) in the absence of protest by third persons disclosing a substantial interest, any other changes in service patterns."

6. By amending redesignated § 385.13(o) through modifying the qualifications in subparagraph (1) by amending said subparagraph, adding a new subparagraph (2), and renumbering former subparagraph (2) to (3) and amending the same to read as follows:

"(o) With respect to Section 412 contracts and agreements:

"(1) Approve contracts or agreements, or modifications, terminations, or cancellations thereof, filed by air carriers under Section 412 of the Act, except:

"(i) those which are concerned with the establishment of rates, fares, or charges; or

"(ii) those protested by a person disclosing a substantial interest and which are concerned with (a) standardization of equipment; (b) schedules; (c) substantial limitations on competition; or (d) interchange of equipment and 'Trackage rights'; or

"(iii) those protested by a person disclosing a substantial interest and which are industrywide or substantially industrywide in effect, other than those on which there are clear Board precedents, or which do not involve substantial questions of policy.

"(2) Disapprove contracts or agreements, or modifications, terminations, or cancellations thereof, filed by air carriers under Section 412 of the Act, except those involving the establishment of rates, fares, or charges.

"(3) Terminate matters relating to contracts and agreements (except those concerning rates, fares, or charges) which, prior to review thereof, have expired, been terminated, or been superseded."

7. By amending redesignated § 385.13(q) through adding a second subparagraph and revising the section to read as follows:

"(q) With respect to consolidations, mergers, purchases, leases, operating contracts, and acquisitions of control:

"(1) Grant or deny applications for exemption from Section 408 of the Act; and

"(2) Grant or deny pursuant to the third proviso of Section 408(b) of the Act applications for approval of transactions which are found not to affect the control of an air carrier directly engaged in the operation of aircraft in air transportation, not to result in creating a monopoly, and not to tend to restrain competition."

8. By amending § 385.16 through substituting the words "approve or disapprove" and "found" for the words "issue letters approving or disapproving" and "believed," respectively, in subsection (a) and otherwise revising said section, so that it reads as follows:

"§ 385.16 *Delegation to the Chief, Subsidy Division, Bureau of Economic Regulation.* The Board hereby delegates to the Chief, Subsidy Division, Bureau of Economic Regulation, the authority to:

"(a) Approve or disapprove waivers and amendments of provisions in guaranteed loan agreements; approval to be granted in cases where it is found that such waivers or amendments will not adversely affect the obligation of the Board under the guarantee and will not increase the risk that the Board will have to make payment on the guarantee."

9. By amending § 385.17 through deleting the reference to § 385.15(g) [extension of tariff suspension periods], so that it reads as follows:

"§ 385.17 *Delegation to the Alaska Liaison Representative, Bureau of Economic Regulation.* The Board hereby delegates to the Alaska Liaison Representative, Bureau of Economic Regulation, the authority cited in §§ 385.15(a) and 385.15(b) of this Part insofar as it relates to Alaskan air carriers."

10. By amending § 385.18(e) to read:

"(e) Grant or deny requests by air carriers for substitution of their own forms or adaptation of Board forms to meet special needs where Board approval of such forms is required by the Economic Regulations."

(Section 204(a), 72 Stat. 743; 49 U.S.C. 1324. Interpret or apply Section 1001, 72 Stat. 788; 49 U.S.C. 1481, and Reorganization Plan No. 3 of 1961, 26 F.R. 5989.)

By the Civil Aeronautics Board:

[SEAL] HAROLD R. SANDERSON, *Secretary.*

Part 385 last printed January 20, 1962.

Answer 1(*b*). The reference in the budget justifications was to safety enforcement proceedings. This delegation has since been issued, as amendment No. 3 to part 301 of the Board's procedural regulations and was effective February 1, 1962. The delegation was to each hearing examiner to make the agency decision, subject to discretionary review, on appeals from actions of the Administrator of the Federal Aviation Agency.

Answer 1(*c*). Reorganization Plan 3 and the delegations issued by the Board thereunder have been in effect a relatively short period. The primary objectives of Reorganization Plan 3 were (1) to reduce the volume of individual cases requiring decision by the members of the Board and thereby free some of their time for consideration of major policy and planning; and (2) to expedite the work of the Board. The individual delegations extend, at least in effect, to virtually every area of the Board's work. No ready means is available to measure the effect on efficiency or costs. However, the making of the delegations was one of the more important factors considered when the Board constructed its 1963 budget estimates on, "the general assumption that improved procedures, increased utilization of positions, increased productivity of personnel, additional delegations of authority, and other improvements in operations would result in increased efficiency and production in a general order of magnitude approximating 20 to 25 percent in 1963 over 1961."

2. On page 4, and elsewhere throughout the budget estimate, reference is made to "immediate formal consideration of expected merger proposals." I do not understand the phrase "immediate formal consideration."

(*a*) Does not the Board consider merger applications in accordance with section 408 after notice and hearing?

(*b*) Does this phrase represent conjecture on the part of the staff or fact?

The Board does consider merger applications only on the basis of an evidentiary record developed after notice and hearing as required by section 408. Only one merger application is pending; however, the trade and public press have reported that other air carriers have been discussing possible mergers. The phrase "expected mergers" is based on these reports.

The term "formal consideration" means the setting down of an application for an evidentiary hearing, in accordance with procedures established pursuant to the Board's rules of practice and the Administrative Procedure Act. In the case of merger applications, the Board has made it clear that it will give such applications procedural priority and set them down for prompt hearing.

3. On page 4, reference is made to the intention of the Board to adopt "additional exemption regulations wherever feasible." As you of course know, the Senate Commerce Committee as well as the Senate-House conference committee on S. 1969 took very strong issue with the Board's excessive use of its exemption authority. In the quoted phrase, is the Board referring to exemptions under section 416?

Our comment on page 4 relative to the adoption of "additional exemption regulations wherever feasible" refers to exemptions which relieve carriers of certain requirements imposed by sections 408, 409, and 412 of the act. Such exemptions are issued because of the absence of factors which require strict conformance with the provisions of the aforesaid sections, i.e., the agreements, transactions, and relationships involved are not of regulatory significance and are otherwise burdensome to the Board and the industry. Such exemptions are not involved in the excessive use of the Board's exemption powers as cited by the mentioned Senate committees. It is our understanding that such statements pertain to exemptions granted in section 401 certificate proceedings. We know of no criticism of the Board relative to the issuance of exemptions by means of economic regulations.

4. On page 5 the budget suggests that there are or will be many commercial rate matters which will be presented to the Board for consideration. What new rate matters are presently before the Board?

There are today pending before the Board seven rate investigations which have been instituted since submittal of our budget estimates in January 1962. One is a major investigation of the tariff refund rules applying to the so-called bus-type air fares; another proceeding involves the refund rules relating to another type of promotional fare now in effect; two others relate to charter rates; one to a carrier request for review of the minimum rate for a certain type of charter service for MATS; and one involves certain reduced fares for night coach services. The seventh case is an investigation of the lawfulness of the practices of certain carriers in providing private "club" facilities to selected passengers.

In addition to these cases, however, 17 other proceedings were initiated and disposed of during the first 7 months of calendar year 1962. These cases covered a wide range of matters including specific cargo rates, rules limiting carrier liability, excursion fares, charter rates, and a proposal for a general passenger fare increase. Some of these cases were resolved by agreement among the parties, some by informal investigation procedures by our staff, and some by cancellation of the tariff provisions by the carrier concerned.

5. On page 6 it is stated that international aviation problems are becoming more acute, in part, because of the "entry of airlines of new nations." To what new nations do you have reference?

This statement refers primarily to the newly independent African countries which are establishing or preparing to establish international airlines. It also includes other new countries where aviation problems are anticipated such as Indonesia, Jamaica and Trinidad/Tobago.

A recent study indicated that 13 African airlines were serving other international routes. The U.S. Government is presently considering problems with respect to Air Afrique, which will be involved in negotiations with Senegal this fall. Countries participating in the Air Afrique consortium are Chad, Central African Republic, Congo (Brazzaville), Dahomey, Upper Volta, Niger, Ivory Coast, Senegal, Mauritania, Gabon, and Cameroun. In addition to formal negotiations with Senegal, formal requests have been received from Nigeria, Ghana and Congo (Léopoldville), for bilateral negotiations in the future.

In addition, Austria, Iraq, Turkey, and the United Arab Republic desire to discuss routes to the United States. No routes were described for the airlines of these countries during the negotiations of our bilateral agreement since they were not at that time able to undertake long international routes. Yugoslavia, with which we now have no air transport agreement has recently indicated its desire for a bilateral.

6. On page 6 reference is made to the "development of techniques for preventive enforcement via voluntary compliance." I assume what you have in mind here is new part 305. It is my understanding that the Board will have the right to issue subpenas to get certain facts from suspected violators. Will these facts so obtained then be used aaginst such persons? Will the persons involved get a full, impartial hearing before a hearing examiner?

The "development of techniques for preventive enforcement via voluntary compliance" does not refer to the proposed new part 305. "Preventive enforcement via voluntary compliance" refers to various methods of calling to the attention of air carriers certain practices which are in contravention of the act and Board regulations. It is hoped that warnings via industry letters or similar means will make the Board's views available to all air carriers, and result in voluntary compliance with the act and regulations.

Procedures pursuant to proposed part 305 are detailed in the explanatory statement accompanying the notice of proposed rulemaking which has been made part of the record.

Specifically, the subpenas which would be issued in the event that the proposed part 305 is adopted would be utilized to secure factual information from persons who have knowledge of the facts. These persons would include not only persons thought to be violating the act but also persons who are in possession of information regarding violations and who will reveal such information only in response to a subpena.

Regardless of the information obtained by such subpenas under part 305, no findings of violations could be made or enforcement sanctions be imposed on a respondent without a full impartial hearing before a hearing examiner in a formal compliance proceeding under section 1002 of the act.

OPERATING AUTHORITIES AND PRACTICES

1. Turning to charts on pages 18 and 19, using a straight ratio of work units to position requirements, if you were able to handle 578 hearing cases in 1961 with 14.2 people, you should be able to handle 475 cases in 1963 with 11.65 people, and handle all route cases with a total of 61 people (an increase of 2 rather than 3). With respect to individual flight authorizations, if you handled 924 units in 1961 with 7.6 people, is it not possible to handle 785 with 6.5 people rather than 8.6 people indicated in the budget? Totaling your requirements, it would seem that your estimated 1963 workload would require three as opposed to six additional positions. Route cases plus two; individual flight authorizations minus two; supplemental carriers plus three.

In the area of route cases and related matters, it is true that 578 cases were handled by 14.2 people in 1961 and in 1962 a position requirement of 13.9 is reflected for 475 cases, as opposed to 11.7 which would be required if the 1961 ratio were used. During fiscal 1962 (and equally applicable in 1963) complex proceedings, such as "use it or lose it," and area airport investigations, stem from exhaustive preliminary analyses performed in part by staff who also process nonhearing cases. Results of these analyses form the basis for Board-instituted investigations. Also, in an increasing number of instances, occasioned by the shift of authority for certain points or segments from trunkline to local service carriers, applications for temporary suspension or exemption are converted to formal investigations. In most of these a tentative Board conclusion is determined, in order to pinpoint the issues and speed the formal consideration. As a result, much more detailed analysis is required to support the Board's tentative findings in the show-cause orders. Therefore, although the number of applications is estimated to be lower, the time required for processing many of them is increased substantially. This fact, together with the analytical work required for Board-instituted investigations, justifies the position requirement indicated.

Although the anticipated decrease in individual flight authorizations would appear to indicate a reduction in position requirements, the figures indicating number of applications standing alone fail to portray accurately the work situation related to this activity. The handling of 924 applications in 1961 was, in fact, accomplished only through extensive overtime, and even absent other considerations, some increase in positions would be required to handle the anticipated load in 1963 without resorting to overtime. However, a significant workload requirement relating to the individual flight activity but not reflected in the number of applications, is the marked increase in correspondence with the general public relating particularly to charter flights and group fare travel. For example, in fiscal 1961 the staff component responsible for processing individual flight authorizations handled approximately 750 letters, while in fiscal 1962 this number jumped to approximately 2,000.

2. On page 21 you indicate a reduction in workload of 53 units in the processing of U.S. carrier exemptions. You then add 58 work units to the workload requirements in processing section 1108(b) foreign carrier permits and part 212 off-route foreign carrier charter applications. With the use of seasonal exemptions, I can understand the decrease in the processing of U.S. carrier exemptions, but I do not understand why the workload will increase with respect to foreign carriers under section 1108(b) and part 212. Have you simply deducted 53 work units and then turned around and added 58 in order to save 1 position?

The projected increase in foreign civil aircraft flight permits (sec. 1008(b)) and off-route charter applications (pt. 212) is not related to the reduction in workload in processing exemption applications of U.S. carriers, but reflects, rather, a growth trend. For example, in the past 3 fiscal years (1960, 1961, and 1962) the number of part 212 applications received were 361, 381, and 408, respectively. For the same years, the number of 1108(b) applications were 243, 273, and 274, respectively. While the latter appears to have stabilized, an analysis of receipts for a longer period indicates a steady increase. The figures for 1962 do not appear to be a sufficient basis for concluding that this growth has stopped.

3. On page 22, with reference to position requirements in connection with supplemental air carriers, I assume that with the passage of S. 1969 this portion of the budget justification is out of date.

On the contrary, the position requirements for work on supplemental air carrier application are more immediate and urgent now than at the time the budget estimates were prepared originally. The legislation signed into law on July 10, 1962, provides for permanent certification of supplemental air carriers. Pending permanent certification the Board is empowered to grant interim authority for supplemental air service, but such authority must be granted, if at all, within 90 days of the enactment of this legislation to avoid any lapse of authority. The excessive workload demands of the next few months brought about by the need to act, within 90 days, on the interim authority and the long-term demands for the processing of permanent certification will make the burden on the existing staff exceptionally heavy for some time to come. Over and above the applications expected from carriers currently authorized to provide supplemental air service, the Board has on its docket numerous applications by persons seeking supplemental authority. In all, there were approxi-

mately 125 such applications pending as of June 30, 1960. Many of these applications have been on file for a considerable period of time and it was hoped that with additional manpower it would be possible to reduce this backlog.

4. On page 23, it is stated: "During 1960 a regulatory exemption was adopted by the Board to eliminate the filing of certain routine agreements, and further expansion of this exemption is contemplated." I assume reference is made to sections 408 and 412 having to do with antitrust provisions, mergers, pooling, and filing of certain agreements. What do you mean by "routine" and what "further expansion" do you have in mind?

Our comment on page 23 relative to exemption by regulation (pt. 289) from the filing requirements of section 412 with respect to "certain routine agreements" refers to those which have little or no regulatory significance, the filing and processing of which is burdensome both to the industry and the Board. Such "routine" agreements are mainly those which pertain to ground (airport primarily) facilities, services, and equipment. Concrete examples would be those covering airport station functions such as joint use of ramp equipment, refueling facilities, building space, and the rendering of such items as aircraft loading and cleaning services. The exemption does not apply if the dollar amount of the transaction involved exceeds $50,000 annually. The contemplated expansion of this regulation was made effective March 8, 1962, to include certain free or reduced-rate transportation agreements and also to include cargo pickup and delivery agreements between air carriers and surface motor carriers.

We also have a section 408 exemption regulation (Part 299) which exempts air carriers from the necessity of filing for and securing prior Board approval of certain aircraft sale and lease transactions which are of little or no regulatory significance. The regulation reserves for Board review specific kinds of significant transactions. The exempted transactions are of the kind frequently consummated by the industry in the usual course of a day-to-day operation. The exemption has the effect of expediting the business of air carriers without detriment to the exercise of the Board's regulatory responsibilities. No further expansion of the exemption is presently planned.

Also available to the industry is part 287 which exempts direct and indirect air carriers from section 409 with respect to certain classes of interlocking relationships which also have little or no regulatory significance. These would include, for example, an interlock between a direct air carrier and a surface common carrier engaged only in pipeline or communication operations. The exemption also approves in advance the participation of individuals in specified classes of interlocking relationships.

We believe these actions are consistent with the policy of the Congress and of the President as stated in his transportation message that detailed regulation should be minimized where consistent with the overall public interest.

RATES AND FARES

1. Turning to the charts on pages 25, 26, again using a straight ratio basis of work units to position requirements, it would seem that 41 rather than 43 positions are needed in connection with subsidy rates and guaranteed loans or a reduction of 2. Commercial rates, similarly, would appear to require 53 positions, or an increase of 4 rather than the estimated 6. In other words, the total number of new positions should be 99 (rather than 103), for an increase of 2 (rather than 6).

While the number of work units in the subsidy rate and guaranteed loan area is estimated to decrease from 81 units in 1962 to 77 in 1963, the nature and scope of the cases to be processed in 1963 will require many more man-hours. In fiscal 1963 we will process cases which will require extensive formal proceedings involving major carriers such as the TWA 1946–54, Northwest–1954, Northwest–1951, and the Eastern-Colonial case. In addition, now that the results for the local service operations for the calendar year 1961, the first year under the class rate, are available, the review, analysis and workload related to the profit-sharing determinations together with our intention of revising the class rate plan effective January 1, 1963, will require substantially more man-hours than was expended on this type of work during fiscal year 1962. The workload data does not reflect these important factors.

The commercial rates work unit data set forth in the table on page 30, upon which the comparisons with the position requirements are based, have been outdated by the passage of time. As explained in Vice Chairman Murphy's state-

ment, dated August 7, 1962, the volume of tariffs filed in 1962 was 11 percent above the expectation for that year. On the basis of this volume we are now estimating that a total of 52,000 tariffs will be filed in 1963, which is 21 percent above the 1962 total.

The upward trend in tariff filings results in an increase in other related activities such as the processing of formal and informal proceedings. An increased flow of tariffs generates an increased volume of complaints by competing carriers and air transportation users and a greater volume of rate and fare investigations. On the basis of current volumes and trends, we now estimate that we will be involved in 80 formal rate proceedings during 1963. This is an increase of one-third over 1962. Some part of that total represents a reduction of backlog carried forward from previous years.

The anticipated increases in 1963 work units in these two areas, which represent the most important portions of the Board's commercial rate and fare activities and the great majority of the work units, would normally require more than the six positions requested in this budget. We contemplate getting more work units completed per person during 1963 than we did in 1962.

2. On page 29, 10 areas of work, suggesting detailed regulation in the rates and fares area are cited. Do you not feel that this is inconsistent with the President's transportation message calling for less detailed regulation?

No, we do not believe so for the following reasons. The 10 basic areas of work in the commercial rates field reflect, of course, the Board's regulatory responsibilities under the present statute. Although future amendments of the Federal Aviation Act may well modify the Board's areas of responsibility, we cannot now assume just what those changes will be or just when they will occur. As a matter of fact, however, the Board's regulation in the rate and fare area is much less detailed than it may seem from the summary of activities on page 29. Only a tiny percentage of the thousands of tariff filings, we estimate 52,000 in 1963, are subject to investigation. The vast majority of tariff filings are permitted to become effective without investigation provided that such filings meet the technical requirements of our tariff regulations as to form.

Some of the President's proposals would tend to reduce the Board's regulatory responsibilities. The President has recommended bulk commodities and agricultural and fishery products be exempted from minimum rate regulation. But these commodities are of comparatively minor importance in air transportation today. We do not believe that this change in the statute would materially affect our current volume of work. The President has also recommended that the control of intercity passenger rates be limited to the establishment of maximum rates. In the case of air transportation, however, the President's transportation message notes that it may be preferable to initiate this change on a gradual basis under existing authority. Actually, the Board's regulatory activities in the passenger fare area in recent years have been predominantly concerned with maximum rate regulation. Only in comparatively few and isolated instances has the Board found it necessary in the public interest to prevent reductions in rates.

Others of the President's proposals would tend to increase the volume of the Board's work in the rate and fare area. For example, the President has urged that the regulatory agencies be directed to sanction experimental freight rates and new kinds or combinations of service. In addition, greater emphasis is to be given to new combined services and rates as between carriers representing the various modes of transportation.

3. On page 29, in connection with rate matters, it is stated that commercial rate matters "will involve entirely new problems and require entirely new solutions." This phrase seems to be very popular in this budget estimate, since it appears to have been used on a great number of occasions. What new problems and what new solutions do you have in mind?

The attainment of a substantial degree of maturity by the U.S. air carrier industry has been accompanied by a marked reduction in the rate of growth of passenger traffic, the major source of air carrier revenues, and a chronic imbalance between available capacity and traffic carried. This latter has resulted in declining passenger and overall load factors and has contributed in major degree to the current unsatisfactory carrier earnings situation.

Ways and means must be found to expand air carrier markets both in the carriage of passengers and cargo. At the same time, approaches must be developed, in part at least in the rate and fare area, which will improve the economics of air transportation. The Board is now engaged in studies of market

demand in relation to differing fares or rates changes in order to obtain a better insight into the responsiveness of traffic volumes to fare or rate levels. We are also conducting a comprehensive study of airline costs of transporting cargo. This study will, it is hoped, provide the Board and the industry valuable guidelines for purposes of developing a future economic cargo rate structure.

Increased emphasis on joint air-surface carrier services and rates represents another avenue, litle explored up to now, which may well offer many benefits to the traveling and shipping public as well as to the carriers involved. We at the Board are giving increasing amounts of attention to this area.

SUBSIDY

1. What efforts is the Board making to reduce subsidy to the local service carriers?

The Board has an established and operating four-point program for reversal of the upward subsidy trend. This program is not, however, of sudden crash proportions. Its achievement depends upon (1) the suspension or curtailment of service, under the Board's use-it-or-lose-it policy, at points where traffic generation is inadequate; (2) the strengthening of the carriers' route systems so that revenues will increase more rapidly than costs, thus resulting in a corresponding reduction of subsidy need; (3) the integration of services for various cities through the regional airport concept, which will reduce costs and accordingly reduce subsidy; and (4) the realization of the full potential of the more modern aircraft purchases by the smaller carriers, many of such aircraft being covered by Government loan guarantees.

This four-point program is well underway, but its benefits cannot—for reasons of due process, and practical considerations—be realized until after July 1, 1963. Route actions, whether suspensions of weak points or addition of strong traffic-generating centers, must follow statutory hearing requirements which take time. The same is true of the regional airport concept. The reequipment cycle is well advanced, but the full integration of such equipment into the carrier's systems is not concluded. The year of realization of substantial benefits of such aircraft in terms of subsidy reduction should be 1964, not 1963.

In addition, as directed by the President's transportation message of April 5, 1962, our staff is working, on a top-priority basis, on a report to be submitted to the President before June 30, 1963, setting forth a comprehensive program aimed at gradual but significant subsidy reductions on a scheduled basis.

In this connection, the Board has been assured of industry cooperation in this endeavor, with the appointment, under the auspices of the Association of Local Transport Airlines, of a committee of industry officials to work with and advise the Board's staff on various aspects of the program.

2. With respect to subsidy to local service carriers, does this not involve a contractual obligation between the Government and the particular carriers involved? In other words, if Congress failed to appropriate the amount of money which you have requested in your budget, and assuming that such amount is necessary to fulfill your contractual obligations, would the carriers have a legal right to collect the difference from General Treasury receipts?

Congressional failure to appropriate funds sufficient to pay subsidy awards would not affect the Government's liability therefor. The Board's power to obligate the Government to pay subsidy derives from section 406 of the Federal Aviation Act, and does not depend upon the existence of appropriations (34 Comp. Gen. 158, 160 (1954)). An obligation incurred pursuant thereto "is not avoided by the omission on the part of Congress to provide the money with which to discharge it." *Shipman* v. *U.S.* (18 Ct. Cl. 138, 146–7). The liability "exists independently of the appropriation, and may be enforced by proceedings in the Court of Claims." *Collins* v. *U.S.* (15 Ct. Cl. 22, 25); *Ralston* v. *U.S.* (91 Ct. Cl. 91); *Seatrain Lines, Inc.* v. *U.S.* (99 Ct. Cl. 272). It is not quite accurate to say, however, that the carriers have a right to satisfaction out of "General Treasury receipts." Their remedy would be by suit against the United States in the Court of Claims under the Tucker Act and, of course, even judgments of the Court of Claims cannot actually be satisfied in the absence of an appropriation therefor.

INTERNATIONAL AVIATION

1. "In the second paragraph (p. 32 the Board's budget estimate) you state that the Board participates in IGIA—has primary responsibility for preparation of U.S. positions on economic matters involving ICAO, NATO–CAPC, ECAC, and similar international aviation bodies. With respect to these activities is

the Board acting under specific statutory jurisdiction—is it acting in this capacity as an independent agency or is it acting on behalf of the President in an advisory capacity?"

Each of the international aviation organizations referred to regularly deals with problems involving the economics of international air transportation. The studies, resolutions, recommendations, and multilateral agreements promulgated by these organizations can have a significant effect on the international environment within which the Board's statutory responsibilities are exercised. Representation of the United States on these bodies is a foreign relations function and the responsibility of the Department of State, but machinery is needed whereby the coordinated views of the Civil Aeronautics Board and other agencies having responsibility in the field of international aviation can be made available to the U.S. representatives.

This need is met by the Interagency Group on International Aviation (IGIA), which was created pursuant to instructions from the President by agreement dated December 9, 1960, between the heads of five Federal agencies with primary responsibility in the field of international aviation (CAB, State, FAA, Commerce, and Defense).

In view of the importance of the work of the international aviation organizations and the relationship of such work to the Board's statutory functions, this agency has actively participated in the interagency coordination machinery. This participation is authorized pursuant to the general powers conferred upon the Board by section 204 of the Federal Aviation Act to perform such acts as it shall deem necessary to exercise its powers and duties under the act, and pursuant to the provisions of section 802 of the act which requires that the Board be advised by the Secretary of State and consulted by him concerning the negotiation of any agreement with foreign governments for the establishment or development of air navigation.

The function of IGIA is to advise the Secretary of State on international aviation matters. The Board, therefore, participates in IGIA in a capacity of adviser to the executive branch rather than in the capacity of an independent administrative agency acting as an arm of Congress as it does in the domestic field. The Board's advisory role in IGIA is consistent with its functions in the international field under the scheme of the act.

BUREAU OF INTERNATIONAL AFFAIRS

2. On page 33, the permanent position requirement totals 20 persons. Could you give us a breakdown as to the makeup of these 20 positions by title and GS grade?

Positions authorized for 1962 and requested for 1963

GS–17—Director.
GS–16—Associate Director.
GS–13—Attorney-adviser.
GS–7—Secretary (stenographer).
GS–7—Secretary (stenographer).

Eastern and Special Programs Division:

GS–16—Chief.
GS–14—Assistant Chief.
GS–13—Liaison officer.
GS–12—Transportation economist.
GS–12—Air transport examiner.
GS–9—Air transport examiner.
GS–9—Air transport examiner.
GS–6—Secretary (stenographer).
GS–5—Clerk (stenographer).

Western division:

GS–15—Chief.
GS–14—Assistant chief.
GS–13—Air transport examiner.
GS–13—Air transport examiner.
GS–9—Air transport examiner.
GS–5—Clerk (stenographer).

3. As you of course know, a special Presidential study group is conducting an overall review of international aviation policies. It was apparently for this reason that the Board did not wish to take a position during the recent hearings before the House Commerce Committee on this subject. On page 34, reference is made to Board policy review and development studies in international aviation matters. Are the Board's efforts overlapping those of the special Presidential study group?

(*a*) To what extent is the Board participating in and cooperating with this study group?

(*b*) Do you have any plans to utilize this report or implement its recommendations? Will it affect the Board's workload in this area—i.e., with respect to policy review and development cited in the budget estimate?

First, it would be well to explain what the special Presidential study group is doing. Two contractors, Robert R. Nathan Associates, Inc., and Systems Analysis & Research Corp., are conducting the study under contract to the Budget Bureau. Their final report will not make recommendations for Government action. It will be limited to presenting considerable background material, and outlining a range of possible policy alternatives from which the governmental agencies will presumably choose.

Policy direction for this study comes from a Steering Committee of Government agencies. The Chairman of the CAB is a member of this Steering Committee. This Committee provides guidance in the form of policy decisions, and receives periodic reports. At present, the initial confidential draft has gone to Mr. Boyd as member of the Steering Committee, and has not come before the Board for review or approval. Mr. Boyd has, of course, called upon a few members of the staff for assistance on this project.

(*a*) Board personnel contributes to this project as follows:

Provides assistance to Mr. Boyd on all matters brought up at Steering Committee meetings or interagency discussions of these matters.

Helps work out the proposed contract.

Helped evaluate the eight contract bids, and participated in the Steering Committee selection of the final contractor.

Meets on numerous occasions with the contractors. In this connection, Mr. Boyd agreed to provide, in addition to other participation, the equivalent of two men for the duration of the contract study, to provide actual study report material and other basic information to the contractors for their use.

Meets on numerous occasions with the contractors and with other Government agency personnel to discuss information available, approaches possible, policies involved, analysis of problems, review of drafts of various substudies, etc. Mr. Boyd is now providing comments to the study group on the first working draft, and in addition staff comments are being transmitted to the contractors for such use as they may wish to make of them.

(*b*) The Board should utilize this report fully. It will, of course, not implement the recommendations of the study directly, since the study will not make recommendations. Following the completion of the study, it will be the duty of the Board and other Government agencies to analyze the report and its underlying studies, consider the range of policies presented, and to select among them, or to modify them, or to study further any particular problems that it considers not adequately covered in the study. This is not a criticism of the study, but obviously, limitations of funds and time will not allow any study to deal fully with all the practical problems facing the Board and other Government agencies in the broad range of complex policies and actions involved in international air transportation.

The study will provide the Board and others with raw material and sets of alternative policies. Considerable work will be necessary for the Board and other Government agencies to carry on from this point. Policy will still have to be established. Action will still have to be taken. The Board's further actions should be considerably assisted by the results of this study, but the study will not relieve the Board of the responsibility for making decisions, or establishing policies, or for carrying out these policies in specific actions in the years to come. It is expected that the Board's workload in this area will increase. However, without the study, either the Board's workload would have increased much more rapidly, or the Board would have to take its actions with less adequate background and crystallization of policy alternatives.

4. On page 35, in item 5, reference is made to recommending action on applications before other Government agencies for loans to foreign carriers. How do

you make these recommendations—what guidelines or standards are employed? Specifically, what recommendations, if any, have been made?

The recommendations on applications for loans to foreign carriers are made through the participation of the Civil Aeronautics Board in the Interagency Group on International Aviation (IGIA), which has the responsibility for coordinating such matters with the various departments and agencies of the Federal Government. The policy governing Government review of these applications, which is contained in the U.S. Civil Air Policy Statement of 1954, in general is to encourage the sale of civil aircraft and other aeronautical equipment to purchasers in friendly foreign countries. In its review of applications submitted for IGIA comment, the Board comments on whether or not the routes over which the applicant intends to operate the equipment to be purchased are authorized by outstanding permits or covered by effective bilateral agreements. Comment may also be made as to timing of action on applications in relation to international route negotiations.

The Board's recommendation on the majority of the loan applications has been for approval but in several instances such recommendation has been tied to certain conditions. Since the inception of the Eximbank loan program in 1945, 59 individual loans have been granted for purchase of U.S. aviation equipment from $115,000 to $30 million for a grand total of more than $400 million.

EXECUTIVE STAFF

1. On page 71, five positions are requested for an overall Planning Office. On page 24, in connection with Operating Authority and Practices, you have 10 positions involved in overall planning. On page 31, five positions are utilized in connection with Rates and Fares for "policy and administrative guidance * * * and planning." On page 40, in connection with Economic Enforcement, four positions are cited as necessary in connection with planning, etc. Since most of the Bureaus on the Board have a number of personnel devoted to planning, why do you need an overall Planning Office? To what extent do these people overlap one another? You have some very highly qualified people in this Planning Office and I want to be sure that their talents are properly utilized.

(*a*) Specifically, what has this Planning Office accomplished?

(*b*) What is the makeup of this office by title and grade?

Answer 1. The positions shown under the heading of "Overall Program Direction" in the several activities are engaged primarily in the provision of policy and administrative guidance to the staff of the particular activity, planning and scheduling the processing of the work, conducting special purpose projects and studies, and other work which serves the various functions of that activity.

The Planning Office has been in operation for 16 months through July 1962. Its Chief was employed for the entire period, a second man for 10 months, and a third man for 3 months. This is an average of 1.8 men; eliminating manhours assigned to other agencies, listed below, this represents an average of 1.5 professional personnel.

The purpose of the Planning Office is to help the Board in strategic planning of major substantive policies and action programs. Its major functions are—

(1) Assist the Board in establishing broad objectives within the Federal Aviation Act.

(2) Identify all present and probable future problem areas in air transportation.

(3) Assure the complete analysis of each major problem area, drawing on resources within its own office, other Board bureaus, other Government agencies, industry working groups, etc.

(4) Recommend the best courses of action for the CAB, the air transportation industry, other Government agencies, etc., as appropriate.

(5) Periodically review the results of Board and industry actions and recommend modifications if necessary.

Answer 1(*a*). Specifically, the accomplishments of the Planning Office are as follows:

1. *Goals of the CAB.*—The first major task of the Office was the drafting of a preliminary statement of long-range goals for the CAB, amplifying the declaration of policy in the act. This project has required very considerable thought and wide staff discussion. It is still in draft form and has not yet been presented to the Board or the staff for review.

2. *Problem areas of the CAB*—A second major task now underway is the identification of present and probable future air transportation problem areas.

This includes a listing and description of proposed projects, including either study or action or both, required to reach timely and practical solutions.

3. *Air taxi program.*—A "do it yourself" program was initiated to encourage air taxi operations. The primary purpose of the program is to encourage a healthy and economic growth of air taxi operations. In this way, it is hoped that maximum satisfaction of public need for small-aircraft transportation can be provided without Government subsidy, using existing small business organizations. The major problem as now seen is that, although air taxi operations are known within their own local areas, they are almost completely unknown to out-of-area airline personnel, traffic managers, and travel agents. The first step of this program is to encourage air taxi operators to produce a simple and effective air taxi guide, possibly as a supplement to the present scheduled air transportation guide used by the airlines, so that thousands of air transportation personnel outside the area of the air taxi operator will have readily available a complete listing of air taxi points served, fares charged, and equipment used, so that complete through air transportation can be sold to the ultimate destination. As a result of Board activity, air taxi operators are now working on this program.

4. *Air cargo cost study.*—A study contract for $47,800 was signed with Systems Analysis & Research Corp., and the final report was recently submitted to the Board. Within the next few weeks, the report and staff comments will be presented to the Board, including a proposed program for further action. It is a first attempt to produce an industrywide logical analysis of air cargo costs. The report is expected to provide a basis for a comprehensive review of cargo ratemaking principles using costs as a point of departure.

5. *Elasticity of demand—Passengers.*—This project is an attempt to evaluate the relative change of air passenger traffic volume with changes in fares. This is essential since the Board must approve or disapprove many fare proposals. The airlines presently have widely divergent opinions as to the effects of fares on traffic volume and on shifting of traffic from one class to another, and, from one destination to another. The investigation will attempt to evaluate the effect of other factors modifying the fare-volume relationship such as the amount and type of promotional advertising, sales effort used, limitations on promotional fares such as day of week or time of day or type of passenger, changes in aircraft type and scheduling, changes in other air competition, changes in surface transportation competition, etc. This project has been discussed with the staffs of four airlines, and all seem to feel that its successful completion is of great importance. Letters have now gone out to all airlines requesting that, for each special fare tried since January 1, 1957, the airlines, if they have information readily available, send in their experience including traffic and revenue statistics before, during, and after the special fares were tried. It is hoped that, by pooling the experience of the entire airline industry, valid quantitative estimates can be made of the primary relationship and its modifying factors.

6. *Local service aircraft.*—The Planning Office prepared the information for Chairman Boyd's speech on this subject in Seattle on April 24, 1962. Thus far, we have received replies from eight manufacturers, including oral and written presentations to the Chairman and staff members, brochures, letters, etc. This entire matter requires considerable analysis of the public service requirements for short-haul aircraft and its economic features.

This Office is also working with the ALTA committee created to tackle this same problem, and with the FAA which is also studying the developmental needs of such an aircraft.

7. *Air cargo problems.*—This Office is participating in a Board-wide staff effort to analyze the complete range of all problems in the air cargo field.

8. *Long-range area airport planning.*—This Office is cooperating with another Board staff group trying to improve the coordination between the CAB route certification process, the FAA airport planning and grant-in-aid programs, and the individual airport authorities' physical and financial planning. This has a considerable potential for long-range savings in direct subsidy to local service carriers, in Federal grants, and in Federal operation and maintenance expenses at airports which might be consolidated into area operations, with due consideration to be given to public service needs and the requirements of the localities which might be affected. This is in addition to the Board's program of formal area investigations to produce specific actions for individual airports.

9. *Liaison functions.*—The Planning Office has been designated as the Board's liaison with other Government agency planning activities. This has included:

(*a*) Participation in Project Horizon, "Report of the Task Force on National Aviation Goals," released September 1961 by the FAA.

(*b*) Presentation of CAB views and assistance to the Department of Commerce in its study of transportation that preceded the President's transportation message to Congress on April 5, 1962.

(*c*) Participation in the three-man committee established by the Secretary of Commerce to develop a transportation research program pursuant to the President's message. This program is still in the draft stage being reviewed within the Department of Commerce.

(*d*) Participation in the U.S. International Aviation Policy Review Study. Chairman Boyd is the Board's representative on the Governmental Steering Committee establishing policy for this project, and this Office was staff liaison for the very extensive assistance provided by the Board Bureaus and the Planning Office in the form of study material produced, initiation or review of drafts, formulation of proposed contract, recommended selection of Contractors, and discussions with the Contractors and with other Government agencies.

10. *Special assistance.*—One member of the Planning Staff is currently assigned to AID on a high priority mission to Africa involving U.S. international air transportation policy.

Answer 1 (b)

Planning Office positions authorized for 1962 and requested for 1963

Grade:	*Title*
GS–17	Chief.
GS–16	Planning officer.
GS–15	Planning officer.
GS–7	Research assistant (stenography).
GS–5	Secretary (stenographer).

2. You have requested $50,000 to permit the Board to contract out one study. You have $50,000 in carryover funds which have not been utilized to contract out an additional study. On page 71 you state that two studies will be selected from one of the following three: (*a*) passenger cost finding; (*b*) merger principles; (*c*) adequacy of service. I want to point out in connection with studies, that with rare exception, I do not believe they should be contracted out. I think the Board should have the in-house expertise to evaluate major problem areas and not have to rely on outside consultants. However, even assuming there is a need for such studies, I am completely unable to fathom why the Board states that it will select two out of three. If you need only two, you should request two; if you need three, you should request three.

We agree that the Board should have in-house expertise wherever possible, and not have to rely on outside consultants. With the recent acquisition of a highly competent planning staff, even though small; this becomes more practical. It will also become much more feasible if additional personnel are approved as requested for other bureaus of the Board; although the number of man-years to be assigned to Planning Office projects will be small, this should enable us to assign a far greater number of individuals within the Board with more specialized abilities. In addition, the acquisition by the Board of an electronic data processing capability has filled one of the major previous deficiencies of the Board requiring outside expert services.

The Board is therefore not appealing the elimination of contract funds and will attempt studies within its own capabilities.

On page 72, in further connection with the proposed study of merger principles, section 102 of the act gives the Board general authority in this field. Section 408 of the act provides some very specific standards and guidelines for the Board to follow in connection with merger applications. Why does the Board have to conduct a study as to which principles should be applied in deciding merger cases? Is the Board of the view that the statute is not clear?

The Board believes the statute and the decided cases are clear. Section 408 of the act lays down certain guidelines. These include "the public interest," and "monopoly or monopolies and thereby restrain competition." These standards are subject to considerable interpretation when related to the facts developed in a particular case.

Since it is important to achieve finality in a case such as this because of employee morale, stockholders' interests, etc., the record might not include such important factors as the impact of the merged airline on fare levels, service levels, ability of competing carriers to provide effective competition or to merge defensively, etc. It was thought a broad policy study would delve into all essential matters on an objective basis not subject to narrower issues or time limits because of procedural deadlines thus insuring that the record in any merger case is fully developed to permit a decision with assurance that all public interest factors are considered.

PEAKING

As you of course know, this committee has on a number of occasions expressed deep concern in connection with the matter of the peaking of aircraft operations during certain hours of the day. These operations generally peak during those hours just prior to or following normal working hours. That peaking occurs during these hours is understandable—these hours are the most convenient.

This situation presents problems which I think we should focus attention on and make every effort to resolve. It affects the users of the airways, the public, and the Government.

1. The public too frequently is inconvenienced to find scheduled departures substantially delayed because of air traffic control delays resulting from traffic congestion.

2. Such delays prove extremely costly to the airlines as well as to private aircraft users and amounts to many millions of dollars per year. Such costs to the airlines must be borne, at least in part, by the passengers in terms of higher fares.

3. The Government, in particular, the Federal Aviation Agency, must incur expenses in staffing air control facilities to meet the relatively short periods of peak use.

4. The local communities and the Federal Government (in connection with the aid-to-airports program) must bear additional expenses in terms of passenger facilities to accommodate efficient passenger movement.

5. The noise problem is certainly not alleviated by peaking.

Question. With particular reference to the airlines, I am not unmindful that competition forces carriers to schedule during these peak periods. However, for the reasons outlined above, it does seem to me that every effort should be made to alleviate this situation.

Is there any answer which would not result in Government interfering in management prerogatives. That is, I do not think the Board should dictate schedules, equipment, etc. For example, would the Board look with sympathy on fare adjustments which would reflect the added costs of providing service during these peak periods—at the same time savings, in terms of fare reductions, might be passed on to the passengers who did not travel during the peak periods. Perhaps a surcharge, something analogous to the difference between matinee and evening theater prices might be a possibility. What are your thoughts on the subject?

The Board and the air carrier industry have for many years recognized that the economic impact of traffic peaks and valleys can be mitigated in some measure by differential pricing techniques. So-called night or offpeak coach fares have often been employed in markets at a time of the day when operations would be uneconomical at regular fares so as to make use of facilities and personnel which would otherwise be idle. These offpeak special rates and fares have also been used to develop traffic in off seasons of the year and days of the week when traffic is lighter than average. In airfreight transportation, the carriers have developed reduced directional rates to combat imbalances in traffic flows and reduced rates for deferred service to afford the carriers greater flexibility in moving traffic over a series of flights.

We cannot recall any air carrier proposing the exact type of price structure suggested for the onpeak versus offpeak daytime hours of travel. In principle and objective it would appear consistent with earlier policies and practices in this regard. Neither can we say that such price structure appears on its face to be unlawful.

Schedule peaking was the subject of an informal investigation by the Board several years ago. At that time the carriers were queried as to their scheduling practice. The carriers responded that the major factor in peaking is the market demand, and that concentration of express schedules occurs in noncompetitive

as well as competitive markets. Special surveys conducted by the airlines solicit passenger views on scheduling, and an attempt is made to conform to the passenger's desires. Analysis of schedules in high-density markets at that time revealed that while express schedules were concentrated at peak hours, presumably due to the demand, there were a reasonable number of flights, usually not nonstop, available throughout the day. A spot review of current schedules reflects no substantial change in the carrier's scheduling practices.

The peaking problem will certainly be one of the i...portant considerations in our study of elasticity of demand for passenger services referred to in connection with an earlier question.

ECONOMIC ENFORCEMENT

1. On page 36—using a straight ratio, it would seem that you need 37 rather than 39 permanent positions—in other words, no increase appears necessary (rather than the estimated increase of 2).

HEARING ACTIVITIES

I have no problem whatsoever in this area. I believe the hearing examiners have performed very well. I might mention, however, that under Reorganization Plan No. 3, hearing examiners will have a great deal more responsibility, and I know that they will execute this added responsibility faithfully.

ACCOUNTING REGULATIONS AND AUDITS—STATISTICAL AND RESEARCH

I have no questions with respect to these divisions, and I have no objection to the additional personnel which they have requested.

PAYMENTS TO AIR CARRIERS

Mr. MURPHY. Would you like me to summarize our view on the payments to the air carriers?

Senator MAGNUSON. I was going to ask you if there were any further questions on the salary and expense item.

Senator ALLOTT. Just one question.

REORGANIZATION PLAN NO. 3

You are undergoing a reorganization now?

Mr. MURPHY. We have Reorganization Plan No. 3 available to us, Senator, for such use as we may see fit to make of it. There was a reorganization of the Board, the staff of the Board, and so forth, a year ago, just before I went over to the Board. We have not had any reorganization since that time.

REDUCING BACKLOG

Senator ALLOTT. How is that working out as far as accomplishing anything, or catching up on your backlog is concerned?

Mr. MURPHY. From everything I can see, it is working out very well. We have made a dent in the backlog. I have heard no serious criticism of justice delayed as far as the Civil Aeronautics Board is concerned.

Senator ALLOTT. I want to ask you this one question and if I am traversing ground that has been gone over, please say so. Have you put in the record any general report as to your carrier hearings and the status of these hearings?

Senator MAGNUSON. They are in these questions I submitted in detail.

Senator ALLOTT. All right. Then I will defer any further questions, Mr. Chairman.

STATUS OF LIAISON BETWEEN CAB AND FAA

Senator MAGNUSON. I want to ask one further question. You probably are going to answer it generally.

What is the status of the liaison between the Civil Aeronautics Board and the Federal Aviation Agency on accidents? I am talking about both small craft and large craft, fatal and nonfatal, or near misses. What is the status? There is a constant controversy over this.

As you know, Mr. Vice Chairman, we tried to get at it 2 or 3 years ago and 4 or 5 years ago, and I feel there still seems to be some question as to just how to operate. I know there is no reflection on the people involved.

Mr. MURPHY. Senator, first of all, I think a good starting point in trying to summarize on this is the statute itself. It is the intent of Congress itself in the statute that the Civil Aeronautics Board and to the Civil Aeronautics Board alone there be entrusted the responsibility for determining the probable cause of accidents.

At the time that that legislation was adopted, as Senator Monroney and you can well recall, there were many advocates who wanted the entire accident investigation function lodged in the Federal Aviation Agency, with the Board to act in a quasi-judicial capacity only in making a determination of probable cause. But, because of the possible conflict of interest which would arise in connection with the Federal Aviation Agency's discharge of this responsibility where FAA has the responsibility for maintaining the airways and maintaining the air traffic control towers, and promulgating air safety rules, and certificating the aircraft, and certificating the crews, and so forth, the Congress said:

> No, the accident investigation function will be retained in the Civil Aeronautics Board and the finding of probable cause responsibility will be retained in the Civil Aeronautics Board, but those two agencies should cooperate. You should cooperate in the conduct of your investigation in the field.

AVAILABILITY OF TRAINED FAA PERSONNEL

In other words, the scientific personnel, the trained personnel of the Federal Aviation Agency, is available to the Civil Aeronautics Board for the search of the wreckage, the area, for reconstruction of the aircraft, and making special studies, and so forth, but the Congress intended that the Board ought to be in charge of the investigation and to reserve its independence, if you will, so it can always call the tune on the finding of probable cause of an accident.

We have worked it out very well. Since I have been over there I have never seen or heard of any acrimony between the two agencies, and I have been out in the field on at least one accident shortly after it happened, and so forth, and I haven't seen any great or serious problems there, at the moment. I think at times, as we drift away from the days of 1958 when the statute was enacted, a lot of us forget maybe what the intent was, and how we are supposed to act. Maybe we forget at the Board and maybe they forget over at the FAA, but probably we should sit down once in a while and go over these things.

DISPATCHING OF PERSONNEL TO ACCIDENTS

Senator MAGNUSON. Take the accident that happened last night. You have probably dispatched your people there already, have you not?

Mr. TANGUAY. Yes, sir.

Senator MAGNUSON. Do the FAA dispatch a group there too?

Mr. TANGUAY. Yes, sir. They are dispatching people.

Senator MAGNUSON. So you have two groups looking at the thing that happened last night?

Mr. TANGUAY. Yes, sir.

CONTROL OF ACCIDENT INVESTIGATIONS

Senator MAGNUSON. Well, who is the boss?

Mr. TANGUAY. The Civil Aeronautics Board is the boss. We control the investigation. They work on our groups.

Senator MAGNUSON. And you have the opportunity to call in such expertise as they may have in a particular thing, but they, the Federal Aviation Agency, just come in there to make themselves available to you?

Mr. TANGUAY. Yes, sir. And they work on our teams, on our various group teams.

Senator MAGNUSON. And so far as you know, that has been working out fine?

Mr. TANGUAY. Very good.

Senator MAGNUSON. Recently?

Mr. TANGUAY. Yes, sir.

Senator ALLOTT. Could I interject here?

Senator MAGNUSON. Yes.

Senator ALLOTT. Does this lead to conflicts, or is this a smooth operation? I think that is what we want to know.

Mr. MURPHY. I will answer it, and Mr. Tanguay can make his views known to you too, Senator. Whatever you wish.

Speaking from my own knowledge, personally, since I have been there I think it is working out very well. It is working smoothly and cooperatively, but we must always remember that the Civil Aeronautics Board must maintain, what shall we say—sort of a wall of separation—a polite, respectful aloofness, because of the responsibility that Congress has given us for making the independent judgment as to the probably cause. If, in a given accident, the probably cause lies over in the field of the FAA activities, we always have to be in the position of saying so. It does not mean we cannot work like brothers, and we have as Federal Government employees.

ISSUANCE OF STATEMENTS TO NEWSPAPERS ON ACCIDENTS

Senator MAGNUSON. For example, in the Tennessee case, who issues the statements to the newspapers? The Civil Aeronautics Board, or the Federal Aviation Agency, or both? Naturally the press are going to ask you what do you think cause this.

Mr. TANGUAY. We will not be able to tell them what caused it today, that's for sure. But if the newspapers ask us for the facts we know about, we tell them right then and there.

Senator MAGNUSON. Then do they ask the FAA people?

Mr. TANGUAY. Yes, sir. They probably ask them.

Senator MAGNUSON. Supposing they say something different?

Mr. TANGUAY. Usually the group of people that work with us don't say anything different.

Senator MAGNUSON. I do not mean different. It is not the right term. Supposing the FAA fellow thinks it might have been something else, honestly. He honestly thought it was something else.

Mr. TANGUAY. The group of fellows that work on it in our echelon, the senior specialists like we are, work in teams. Each team is headed by the Board group leader, and there is an investigator in charge for the Board, and they get together and decide what to say. If we get people from higher up, topside, we do not have control on that.

FAA DISPATCHING OF PERSONNEL TO ACCIDENTS

Senator ELLENDER. How does the FAA know how many people to send? Who directs that?

Mr. TANGUAY. Who directs the assignment?

Senator ELLENDER. The number of people to be sent. Let us take the accident last night.

Mr. TANGUAY. They have a unit here in Washington.

Senator ELLENDER. Do they consult you before they send anybody up there?

Mr. TANGUAY. No, sir. They usually send them out right away when they hear about an accident, but tell us about it later.

Senator ELLENDER. Aren't you likely to send people who do the same work?

Mr. TANGUAY. Well, sir, we certainly do send people who do the same work, but it is our responsibility to find out what is happening and what happened. The FAA people send specialists along those lines, so if there is anything wrong they can immediately advise the Administrator, so corrective action can be taken right then and there.

Senator ELLENDER. You mean the FAA.

Mr. TANGUAY. Yes, sir.

Senator ELLENDER. Advises the Board?

Mr. TANGUAY. No, no. The FAA checks material there at the scene—the Coordinator. If our people, along with their people find something wrong, then the FAA Coordinator tells the Administrator something is wrong, and corrective action should be taken. That is really the purpose for the FAA being there more than anything else.

JURISDICTION OF FAA IN DECIDING CAUSE OF ACCIDENT

Senator ELLENDER. What jurisdiction has the FAA in deciding any of the matters involved?

Mr. TANGUAY. Deciding the cause of an accident?

Senator ELLENDER. Yes.

Mr. TANGUAY. None.

Senator ELLENDER. You have?

Mr. TANGUAY. Yes.

Senator ELLENDER. Exclusively?

Mr. TANGUAY. Yes.

Senator ELLENDER. But they have to gather the facts?
Mr. TANGUAY. Yes, sir.
Senator MAGNUSON. They help.
Senator ELLENDER. If you did not have those people to help you in gathering facts it would probably mean you would have to increase the size of your agency in order to be able to continue.
Mr. TANGUAY. Very much so.
Senator MAGNUSON. But there is no official finding on the cause of the accident until you, the Board, release it.
Mr. TANGUAY. That is right.
Senator MAGNUSON. That is the way it should be.
Mr. MURPHY. If I may, that is the way Congress stated it should be.
Senator ELLENDER. How long have you been with the Board?
Mr. TANGUAY. I have been with the Board since April 1943.

COMMENDATION OF BOARD'S WORK

Senator MAGNUSON. He has been down there a long time.
Senator ELLENDER. I have seen him many times.
Senator MONRONEY. The Board performs its duties very well. They may be cautious, and this caution sometimes delays the reports, but each major airplane wreck is a combination of many factors. Certainly they maintain their standards and are not being pressured into quick findings just to get the reports out. I think it is to their great credit. The technicians they have are competent, and they also use competent technicians, without reimbursement, from the FAA, who are specialists in airframe construction, and specialists in air traffic control. So we get all of that, but it still has to meet the final test of accuracy and logic when it filters through the CAB examiners, who are also specialists in that field, but not in the numbers required for a major accident investigation.

RECOMMENDATIONS TO FAA

Senator MAGNUSON. If they find officially that something there was wrong that caused the accident that would require some action by the FAA in tightening up safety regulations, or things of that kind, then you would recommend to the FAA that procedure? That is, the Board would recommend it?
Mr. TANGUAY. Yes, sir. We would make a verbal recommendation, and follow it through with a letter.
Senator MAGNUSON. And they may or may not put it into effect. They review that.
Mr. TANGUAY. That is right.
Senator MAGNUSON. But would it be true to say when you have found something that required a tightening up or change in regulations, they have followed the recommendation of the Board?
Mr. TANGUAY. I would say the greatest percentage of time they have followed the recommendations of the Board. At other times they have made further studies and it has balanced itself off.
Senator MAGNUSON. Yes. Sometimes they have even gone further than the Board suggested.
Mr. TANGUAY. Yes.

DIVISION OF RESPONSIBILITY

Senator ELLENDER. Suppose you make an investigation jointly with the FAA.

Mr. TANGUAY. They are not joint.

Senator ELLENDER. You work together, don't you?

Mr. TANGUAY. Yes, but we cannot consider it a joint investigation. One agency is responsible.

Senator ELLENDER. You make it more complicated. If you make certain recommendations as to an accident, as to what ought to be done, you transfer that to the Administrator of the FAA?

Mr. TANGUAY. Yes, sir.

Senator ELLENDER. If he does not put it through, you don't have to?

Mr. TANGUAY. That is right.

Senator ELLENDER. I mean, he does not have to put those recommendations through. He can make further investigations and come to his own conclusions.

Mr. TANGUAY. Right.

Senator ELLENDER. You do not go into that extra examination.

Mr. TANGUAY. If he does not go through with what our recommendation was and we feel he should, then we will go back to him again and tell him more in detail why we think he should make it, but if he decides against it, that is his responsibility.

Senator ELLENDER. Who has the final word on that?

Mr. TANGUAY. The FAA on the corrective action.

Mr. MURPHY. You see, the Federal Aviation Agency has the complete jurisdiction in the executive field, and the safety rulemaking field.

Senator ELLENDER. You are somewhat of an adviser. That is all you are.

Senator MAGNUSON. Yes.

Mr. MURPHY. I would say we are a proponent of safety improvement.

Senator ELLENDER. Yes. Thank you.

PAYMENT TO AIR CARRIERS

Senator MAGNUSON. All right. Are there any further questions on this "Salaries and expenses"? Now, on the question of "Payment to air carriers." For the record, the 1962 appropriation was $78,250,000. The budget estimates for 1963 were $84,578,000. The House recommended $71,900,000, or minus $6,350,000 over fiscal 1962 and minus $12,678,000 over the present budget amount. Would you direct yourself to that, Mr. Chairman?

APPROPRIATIONS REQUEST

Mr. MURPHY. Yes, sir. As you have noted, Senator, we requested $84,578,000, and the House bill provides $71,900,000, or a cut of $12,678,000.

The House bill also limits the amount available for subsidy for helicopter services in fiscal year 1963 to $4,975,000. We asked for $5,850,000 for that purpose. Hence, there has been a reduction of $875,000 for that particular item.

RESTORATION REQUESTED

We have reviewed our subsidy forecost and have determined that our prior estimate, prepared last year, could be adjusted downward by $1,500,000. We ask, therefore, that this bill be amended to restore the appropriation to $83,078,000. This is an increase of $11,178,000 over the House allowance, but a decrease of $1,500,000 below the budget estimate.

ASSURANCE AGAINST CURTAILMENT OF NEEDED SERVICES

It is interesting to note that during the consideration of the bill on the floor of the House assurance was given that needed services to small communities were not intended to be curtailed. The Board, however, sincerely believes that a sudden subsidy cut of $12 million can only result in a reduction of the present quantity and quality of local air service to the small communities.

SUBSIDY REDUCTION PROGRAM

I would like to emphasize that the Board is in full accord with the objective of reducing subsidy. We are taking steps to bring this about, but our program is not a crash program since we have to comply with all the requirements of due process of law in implementing our use-it-or-lose-it policy, or the regional airport program that Senator Kuchel was interested in. We have to follow the procedures of the Administrative Procedure Act.

The reequipment cycle, whereby more modern aircraft is being integrated into the fleets of the local service carrier, is well advanced, but the realization of substantial benefits from all of these factors designed to reduce subsidy is still a few years away and will be gradual rather than sudden.

Moreover, our staff is working on a top-priority basis in accordance with the recommendation contained in the President's transportation message, on a report to be submitted to the President before June 30, 1963, for a comprehensive program aimed at gradual, but significant, subsidy reduction on a scheduled basis. We are receiving industry cooperation through the Association of Local Transport Airlines, and a committee of industry officials is cooperating with our staff in this endeavor.

PRESIDENT'S TRANSPORTATION MESSAGE AND REDUCTION OF SUBSIDY

Senator MAGNUSON. Right there, the President in his transportation message submitted June 30, detailed a program for future annual reduction of subsidy payments to airlines, and then I understand that ALTA offered the independents cooperation to the CAB by telegram on April 26, recommending a joint committee.

Mr. MURPHY. That is correct.

Senator MAGNUSON. And Mr. Boyd, the Chairman of your Commission, answered the letter and you sent it up to the committee.

Mr. MURPHY. That is correct, Senator. It has been organized.

SUBSIDY TO LOCAL SERVICE CARRIERS

Senator MONRONEY. Are you through, Mr. Chairman? Do you have some more questions?

Senator MAGNUSON. Are you through with that?

Mr. MURPHY. I was going to discuss the helicopter subsidy question.

Senator MAGNUSON. Before you do that, could I ask one question?

Senator MONRONEY. Yes.

Senator MAGNUSON. I will read this so we are clear what it is about. With respect to subsidy to local service carriers, does this not involve a contractual obligation between the Government and the particular carriers involved? In other words, if Congress failed to appropriate the amount of money which you have requested in your budget, and assuming that such amount is necessary to fulfill your contractual obligations, would the carriers have the legal right to collect the difference from the General Treasury receipts?

Mr. MURPHY. Senator, that is a very good question. I am glad I have my General Counsel with me. I think there is such an obligation, but what the ramifications of it are, I do not know. Mr. Wanner could speak to that.

Mr. WANNER. We have always so considered it.

Senator MAGNUSON. You considered that would be the legal status of this. Now go ahead, Senator.

DEVELOPMENT OF LOWER COST PLANE FOR LOCAL SERVICE AIRLINES

Senator MONRONEY. Have you been able to make any progress on the efforts, to get a lower cost plane, with lower operational costs to serve within the reach of the service points of some of these local airlines?

Mr. MURPHY. I believe a few months ago in a speech to the American Society of Automotive Engineers, our Chairman projected what I think he called an economic profile of a desired local service aircraft, Senator. This I believe was as a result of some studies made by our Planning Office. Of course, we are not in the technical field, but from an economic point of view our planners are certainly interested in this, and have come up with this so-called economic profile of what the aircraft should be and how many passengers it should be able to carry, and how much cargo, and the length of the stage hops, the per-mile cost and direct operating cost, and so forth. But to go beyond that we have neither the funds nor the staff to do anything in the way of——

Senator MAGNUSON. You have a planning staff.

PROTOTYPE PLANE

Mr. MURPHY. Yes. But I mean, in the technical field of promoting the development of a prototype, Senator, or something of that sort.

Senator MONRONEY. The aircraft would have to be either designed by an airframe company, or sponsored by the Federal Aviation Agency. You can tell what the economics of the picture are and insist that it be a plane that would be more suitable for modern-day transportation than the DC–3. One of the causes, I feel, of the high subsidy cost, and the inability to get it down is the fact that 250 of the

present fleet are DC–3's and the cost of operation and maintenance is very high. Yet no American plane designer has come up with a plane which would have a suitable use and still be of the low-cost operation type.

Mr. MURPHY. That is very true, and we are very mindful of that. I believe since the time of this speech of Mr. Boyd and the work of our Planning Office, we have received a number of brochures and requests for conferences from various aircraft manufacturers who are interested in submitting designs, and plans, for an ideal local service aircraft.

DIFFERENCE IN NEEDS

Of course, in talking to the actual operators you will find there is a difference in their needs for aircraft, depending on their route structure and the place in the country they may be serving; whether they are flying over mountains, or flat terrain, or bush operations in Alaska, and so forth. Maybe there is no one airplane like the DC–3 that seemed to answer all of these problems.

ASSOCIATION OF LOCAL TRANSPORT AIRLINES

Senator MONRONEY. At this point I would like to state the ALTA organization, the Association of Local Transport Airlines, appointed a committee, and are also trying to get the idealized local service airplane. I would like to put into the record at this point a letter from them of June 7 as to their progress in this field. They do not report much progress yet.

(The letter referred to follows:)

ASSOCIATION OF LOCAL TRANSPORT AIRLINES,
Washington, D.C., June 7, 1962.

Hon. A. S. MIKE MONRONEY,
Chairman, Senate Aviation Subcommittee, Senate Commerce Committee, New Senate Office Building, Washington, D.C.

DEAR SENATOR MONRONEY: This letter concerns the development and use of small aircraft economically adaptable for service to communities now threatened with loss of scheduled airline service resulting from rigid application of the Civil Aeronautics Board's present use-it-or-lose-it criterion.

As evidence of our real concern and interest in this subject, the Association of Local Transport Airlines, at its quarterly meeting in Atlanta, Ga., last April, unanimously determined to study this matter and to formulate specific recommendations on all pertinent aspects of this most complex and vital subject. A copy of this resolution is enclosed.

As many have previously concluded, it is evident that an aircraft capable of meeting the objective is not available today. Nor does it appear that such an aircraft is being actively or earnestly planned or developed by any major domestic aircraft manufacturer. Moreover, it must appear, at least initially, that some major breakthrough in aircraft design concept is required if direct operating costs are to be kept within limits of the objective.

Use of the Boundary Layer Control (BLC) principle appears to be the most fruitful area for exploration and development. It is appreciated that BLC is a highly complex and controversial concept; yet it appears to be the only avenue holding promise of a major breakthrough in aircraft design and lower direct operating costs.

A set of performance and specification summaries for a standard 15 to 18 passenger configuration is now being prepared. These specifications will be based upon the BLC principle. We intend to work closely with the Federal Aviation Administration to this end.

Obviously, developmental funds will be required to develop an aircraft type envisaged for the use suggested here and in other places. Whether the necessary funds should be provided by the manufacturers, the military, one or more

Government agencies, or a combination, is of little moment here. But, provision of funds to develop prototypes of the aircraft suggested by the above-mentioned summaries is urged.

Should developmental funds be made available and as a result of their application prototypes of the aircraft described be produced, then it is further suggested that one or more be assigned to a local service airline east of the Mississippi, a local airline west of the Mississippi, and an Alaskan airline. They would be used in scheduled service preparatory to their being manufactured in volume. The names of the airlines willing to be so committed will be supplied at your request, although as a practical matter, final selection should be made at a lated date.

Development of a short-haul aircraft is alone not enough. If the aircraft is to be given a fair chance, major changes in concepts and practices relating to other significant cost areas are also required.

Ground and indirect costs particularly must show improvement similar to that sought in the airplane. Recent technological advances, particularly in the field of communications, make reductions in certain important cost categories a reality. But, maximum economy requires the full cooperation by communities—particularly in the area of rentals, landing fees and services. ALTA's committee will undertake to do this.

Labor unions, representing both air and ground personnel, must be realistic in their demands. This particularly refers to application of scope rules, wage demands, and so-called working rules. ALTA's committee will develop the objectives sought in this area and will confer with representative groups where it is appropriate to do so.

Both FAA and CAB regulatory provisions and concepts must be realined to conform to a practical mixture of safety, economy, and uniformity predicated on aircraft types as opposed to class of operator. We anticipate the full cooperation of both the FAA and CAB in this area.

It would most certainly be inaccurate to represent that the members of ALTA, consisting of Alaskan, Hawaiian, and local service airlines, are at this time in complete accord with the views and suggestions expressed here. Indeed, they are not; but a significant majority are. Without exception, however, we are all deeply concerned with the problem you have so ably brought into sharp focus on numerous occasions over the past several months.

Time has not permitted other than preliminary study of both the potential and the problems inherent in this subject. But, a preliminary analysis indicates that, assuming the development of an aircraft generally meeting specifications tentatively set forth here, then all related problem areas lend themselves to a satisfactory solution with the cooperation of the FAA, the CAB, personnel groups, and the communities served.

ALTA's committee will be undertaking detailed study of all pertinent areas very soon after the middle of this year. We anticipate completing all phases of the study before the yearend. The full report, together with our recommendations, should be in your hands by not later than December 31 of this year.

On behalf of our segment of the industry, please be assured of our appreciation for your continued interest and support of the concept we represent.

Respectfully yours,

LESLIE O. BARNES,
Chairman, ALTA Low Cost Plane Design Committee.

[Enclosure A]

ALTA POLICY STATEMENT, APRIL 27, 1962[1]

The problem of continued scheduled airline service to smaller intermediate cities over relatively low density routes has been ably noted by Senator A. S. Mike Monroney, chairman, Aviation Subcommittee, Senate Commerce Committee, Congressman John Bell Williams, chairman, Subcommittee on Transportation and Aeronautics, House Interstate and Foreign Commerce Committee, and other congressional aviation leaders. Continued service to such cities is at issue as is an expansion of scheduled airline services to other deserving cities not now being served. In this regard, the construction of a new, more economic short-haul aircraft has been advocated in order to provide continued and ex-

[1] Adopted, ALTA spring regional meeting, Atlanta, Ga.

panded service to such affected communities at a minimum cost and at a minimum level of Federal support.

The members of ALTA have carefully considered this problem and have concluded that full exploration of this matter should be made by the industry, and ALTA will work cooperatively on this problem with all interested parties in the Congress, the CAB, and the FAA.

We anticipate, however, that in order to meet this objective, the following matters must be reviewed among others:

(1) The sound economic development of an aircraft adaptable to low density routes and the small volume of commercial use anticipated at the smaller cities.

(2) Adaptation of civil air regulations now applicable to nonairline operators to airline operation of such aircraft by presently certificated scheduled carriers.

(3) Promulgation of Civil Aeronautics Board rules and regulations adapted to the type of operation here contemplated.

The question is an intricate one and vital to the public interest. To the end that all influencing factors may be brought together and considered by the Congress, the Civil Aeronautics Board, the Federal Aviation Agency, and the industry in the development of an effective and equitable plan, we have formed a committee of ALTA under the chairmanship of Leslie O. Barnes. This committee is directed to expedite its review and study, to confer with appropriate congressional leaders and pertinent Government agencies and to contact the aircraft manufacturers, and to draw upon such resources of its members as may be necessary to complete its study and report at the earliest possible date.

SUGGESTIONS FOR TYPE OF PLANE

Mr. MURPHY. I want to assure you and other members of the committee, Senator, that we will be very happy to have your views and guidance and suggestions as to what more we may and should do in this field.

Senator MONRONEY. A low-cost operational plane would be the final answer to our subsidy cost, would it not? Under present technical limitations with FAA equipment it is almost impossible to do away with subsidy or to reduce it, unless we have more modern and efficient planes.

Mr. MURPHY. That is right. There is no question it is a very, very important factor in the overall picture.

Senator MAGNUSON. Senator Monroney, you and I got the figure the other day. How many DC–3's are there in operation?

Senator MONRONEY. Worldwide there are about 1,500 but here there are about 250. We have still to come up with the kind of plane that will cut operating costs.

Senator MAGNUSON. Which would make it financially feasible for one company to find the right plane, if they have a potential of 250 orders.

FINANCIAL OBLIGATION OF FEDERAL GOVERNMENT

Senator MONRONEY. In line with the chairman's question, if we do not appropriate the amount the Board considers necessary, which would be $1,500,000 under the budget request, but leaving about $83 million, then your testimony is we will still owe this money because we have not stopped the lines from operating into these local points under the "use it or lose it" policy and, therefore, would have to pick up whatever we are short in a supplemental bill at some point later on.

NOTICE AND HEARING BEFORE ELIMINATION OF SERVICE

Mr. MURPHY. That is correct, Senator Monroney. I suppose the only other thing one could do would be to bring some moral suasion of some sort on the local service operators to cut back their service. In other words, to try to live within the subsidy ceiling. But we have no statutory authority to do that, you see.

Senator MONRONEY. You cannot abandon a service point without going through a Board hearing, and a decision is made to discontinue it.

Mr. MURPHY. That is right.

Senator MONRONEY. Therefore, you cannot limit their schedules, and experience shows the fewer the schedules the greater the losses, particularly under the revenue points. If you cut from three schedules a day to one, people will not use even one schedule because it is not adaptable to the traveling needs. Therefore you must either cut off unprofitable points or continue them in the subsidy picture and try to find new equipment or management techniques as best you can to lower the sudsidy.

Mr. MURPHY. That is true.

SUBSIDY PLATEAU

Senator MAGNUSON. We were given to understand when the Senator from Oklahoma and I obtained the passage of a bill allowing permanent certificates and the guarantee of loans, that as they moved along they would reach a plateau on this and then finally go down. They predicted maybe this year they would be less, but apparently the subsidy is more. Would that be because in the meantime they have been required to serve more cities?

Mr. MURPHY. That would be one very, very important reason, Senator.

Senator MAGNUSON. They were basing their prediction on their service at that time.

SUBSIDY REDUCTION

Mr. MURPHY. At that time. Although I think, if my recollection is correct, that the Board chairman, Mr. Boyd, said last year in the hearing on the House side that the subsidy payment would rise in fiscal 1963, the year to which we are now addressing ourselves, and the decline or plateau would start showing up in 1964, a modest decline, and a trend then very definitely down from there.

Senator MAGNUSON. But in line with the Senator from Oklahoma's questions, unless we come up with an economical airframe as a substitute for the DC–3's—that type of airframe—maybe they will not be able to come down.

Mr. MURPHY. I think that is a very, very important ingredient and factor in the overall subsidy picture.

IMPROVEMENT IN LOCAL SERVICE PROFIT MARGINS

Senator MAGNUSON. Here is one airline, I noticed in this morning's paper, Allegheny, which is doing much better. Their profit margin reflected a 15-percent increase in operating revenues, while their

operating expenses in 6 months rose only 5.7 percent. This is the sort of performance that will start getting these down. I think maybe I might put this in the record. It shows what one airline has been doing, and maybe others might be up too.

(The newspaper article referred to follows:)

[From the Washington Post, Aug. 7, 1962]

ALLEGHENY AIRLINES PROFITS SET RECORD

(By Frank C. Porter)

Allegheny Airlines posted its best second quarter profit in its 13-year history, President Leslie O. Barnes reported yesterday.

The Washington-based carrier earned $457,963 or 53 cents a share during the 3 months ended June 30 after providing $311,000 for taxes. This compares with the previous second quarter record, $347,881 or 48 cents a share, earned last year when no tax provision was made.

Barnes said the "favorable profit trend is expected to continue through the third quarter with the trend leveling somewhat during the last quarter."

A seasonal loss in the first quarter reduced net income in the first half of the year to $346,944 or 40 cents a year, a record nonetheless. In the first 6 months of 1961, Allegheny suffered a deficit of $223,832.

For 12 months ended June 30, the carrier earned $701,764 or 81 cents a share.

The number of passengers carried rose 19 percent to a record 463,263 in the 6 months. Cargo, up 42 percent to 994,739 ton-miles, also set a record.

Strengthened profit margins reflected a 15 percent increase in operating revenues to $11,127,626 while operating expenses in the 6 months rose only 5.7 percent to $10,532,076.

FRONTIER AIRLINES AND WEST COAST LINES

Senator ALLOTT. Might I say out of a matter of local pride that the experience of Frontier Airlines is decidedly brighter than last year. Isn't that true?

Mr. MURPHY. Yes, I believe that is true.

Senator MAGNUSON. And West Coast is, too, because there is a little thing going on out there that has helped them a little bit. But other than that it is all right.

Mr. MURPHY. It is hard to get a seat out there. West Coast Airlines is very happy with the F–27's they have. For their routes and the type of terrain they serve it seems to be fitting in pretty well.

Senator MAGNUSON. In connection with our discussion at this time I would like to place in the record a letter received from Senator Hubert Humphrey dated August 4 supporting the restoration of funds in this item.

(The letter referred to follows:)

U.S. SENATE,
COMMITTEE ON FOREIGN RELATIONS,
August 4, 1962.

Senator WARREN G. MAGNUSON,
Chairman, Independent Offices Subcommittee, Committee on Appropriations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Over the years, the Civil Aeronautics Board has seen fit to encourage local air transportation to the smaller communities in my State and other States throughout the country. This encouragement has been pursuant to the Civil Aeronautics Act of 1938 and the recently passed Federal Aviation Act of 1958. Subsidies have been regularly paid for the benefit of these smaller communities.

As you know, the Civil Aeronautics Board beginning in 1944 certificated a new class of carrier, the local service carrier, in order that this type of operation could be performed by specialists. Congress has seen fit to permanentize these certificates which the Civil Aeronautics Board granted. Each year, pursuant to the applicable legislation, Congress has appropriated subsidy for this service. The Civil Aeronautics Board has administered this subsidy, apportioning it as required by the needs of the local service carriers.

This year the House reduced the budget request of $84,578,000 to $71,900,000, approximately a 15-percent reduction. This large reduction cannot be absorbed from the local carriers' profits. Therefore, this reduction must come from the volume of service that each of these carriers is required to render. If this amount of subsidy is denied the carriers, local service in my State and in other States will have to be curtailed, or possibly terminated to some extent. This matter is of concern to the State of Minnesota which serves as the home base of North Central Airlines, one of the largest of the local service carriers, serving the entire north-central area with 2,000 employees. I earnestly request that your subcommittee restore the funds to the amount as requested in the budget message.

Sincerely yours,

HUBERT H. HUMPHREY.

ACCURACY OF SUBSIDY ESTIMATES

Senator MAGNUSON. The chairman of the House subcommittee, on page 1086 of the hearings, stated there was always considerable guesswork in the amount requested by the Civil Aeronautics Board. For the year 1961, the Civil Aeronautics Board overestimated its needs by around $13 million in this particular item.

On page 1392 of the record, which Senator Allott has here, that is the House record, for July 30, it indicates that the justification for the cut was again based on the fact that in one previous appropriation; namely, 1961, the Civil Aeronautics Board had given it more money than it used. Is that a fair statement?

Mr. MURPHY. I think it is a fair statement, and a very accurate one. I am glad the "chancellor of the exchequer" is here, Mr. Russell, who prepares these estimates.

Senator MAGNUSON. But normally you hit it pretty well on the nose, as I recall it, particularly with the growth in service.

Mr. RUSSELL. That is correct. As I recall it, in the 1961 fiscal year that was the year when we closed out a lot of what we call our past period rates. There were some international carrier rates we closed out in that year. So we had, I will say, on these back rates more of an opportunity to miss how the rate would finally turn out.

Senator MAGNUSON. But you are catching up now?

Mr. RUSSELL. Today we do not have this margin. Today most of our rates are current. We still have a few that are back period, but no substantial sums involved.

Senator MAGNUSON. Is it not true that some of the local carriers do not operate with large reserves, and that prompt payment means a lot to their whole fiscal condition?

Mr. RUSSELL. That is true. Also the locals are under the class rate, but you can see the prospective in its entirety. There is nothing retroactive here with the exception of the profit sharing, and at this

point in time it is still small in size. So there is nothing behind us that can throw our estimates out appreciably. About the only thing that can affect them downward is what is happening from here forward. If we find economies this can be reflected, but we have to find more economies in the carriers' operations.

UNCERTAINTY OF SUPPLEMENTAL APPROPRIATIONS

Senator MAGNUSON. If you had had a lot to pay to local carriers and had to come up for a supplemental last year, the local carriers would have been waiting a long time to get their money, wouldn't they?

Mr. RUSSELL. They would.

Senator MAGNUSON. Yes. I do not like to see this go to supplementals because they are so uncertain, and the Board only pays what it has to pay. If they miss a little bit, there is no harm done one way or the other. That is, if they miss on the over side a little bit, I mean.

EFFECT OF CASH CARRYOVERS ON SUBSEQUENT YEAR APPROPRIATION REQUESTS

Mr. RUSSELL. As we point out in our statements, we will be back to the Congress in about 6 months from now with our 1964 budget. If we have missed, and I do not think that the miss is going to be of any sizable proportions—but if we have missed we can take it into account in connection with our 1964 program.

If we are overstated here by $1 million, in other words, our 1964 request will be reduced by that $1 million. It is a continuing appropriation.

Senator MAGNUSON. What happened to the money you did not need for fiscal 1962?

Mr. RUSSELL. For fiscal 1962 we carried over $471,000. That is a part of the $1½ million we are saying we will reduce this estimate by.

Senator MAGNUSON. Then you apply that to your next estimate?

Mr. RUSSELL. We apply that to payments this year, and are saying now the $1½ million we are giving back or not appealing—a part of the $1½ million is $471,000 we did not spend or did not pay out in 1962.

Senator MAGNUSON. All right. Are there any further questions on that item?

Senator ALLOTT. Then the amount you would want is the $84,578,000 adjusted by that $1,500,000?

Mr. RUSSELL. Yes. That would make it $83,078,000.

ADVERSE EFFECT OF DELAY IN PAYMENT OF SUBSIDY

Senator ALLOTT. I have been reading the testimony of the distinguished chairman of this committee in the House, which appears on page 13982 of the Congressional Record, and he apparently bases his figure on the fact that at one time there was too much appropriated completely, and that this can be taken care of in a supplemental. However, if the supplemental should get bogged down in the first part of next year, as I have a faint recollection one supplemental got bogged down this year, then let's answer this question for the record:

What position would these supplemental air carriers find themselves in?

Mr. RUSSELL. The best way I can answer that, sir, is to say that we still today have local service carriers that are having a hard time meeting their payroll. The fact of the matter is, I have a letter on my desk which came in about 10 days ago from a carrier, requesting if there was not some way that I could make him a payment ahead of time. We do not pay them ahead of time. We will not pay him before the end of the month in which he performs the operations. This we have assured him we will do in this case. We still get these. I would say hardly a month goes by where one or the other of the carriers does not make some request to speed up their payment. They have a banknote coming due, or a payroll to meet. A supplemental in the proportions we are talking about here of $11 million would simply mean roughly 2 months' payment would be withheld at the end of the year until we got the new Appropriation Act to have some cash to make a payment to them.

Mr. ROTH. Can I supplement that answer?

One of the things that happens is a carrier without prompt payment of subsidy, unless it is able to borrow cash from banks on reasonable terms, will forgo various opportunities to economize; for example, to take advantage of cash discounts, or other opportunities to minimize the cost of doing business, which in the long run will help to improve the subsidy situation. But a carrier in healthy financial condition is in better condition to conduct his operation at maximum efficiency than one who has to work with a makeshift type of arrangement to carry him over on a day-to-day and week-to-week basis.

Senator ALLOTT. Of course, it is the personal view of this Senator that your view of this is correct. I think it is the view of the chairman, too, and the view we have taken before. But I wanted to get it on the record as to just exactly what happens when these payments are not made.

In addition to this they have to go and finance themselves as best they can, and then they have the added burden of the cost of money, which in turn reflects itself in increased subsidies.

Mr. ROTH. Yes, sir.

SUBSIDY LIMITATION ON HELICOPTER SERVICES

Senator MAGNUSON. All right. Of the $71,900,000, or whatever amount the committee decides on, there are $4,975,000 for helicopters.

Mr. MURPHY. With respect to helicopter subsidy, I would like to say that the limitation of $6 million which Congress placed in the appropriation last year has been respected and complied with, but only through reduction in operations of the helicopter carriers. The $5,850,000 request for fiscal 1963 will support them only on such a substantially curtailed basis. It is our opinion that they need the amount estimated in our budget if they are to continue at a reasonable level of service. This is particularly important since some of them have recently introduced turbine-powered, twin-engine helicopters which they anticipate will make substantial inroads in reducing direct operating costs and should prove a major factor in ultimately reducing subsidy.

That is all I have to say on that item.

RESTORATION OF REDUCTION IN HELICOPTER LIMITATION

Senator MAGNUSON. Are you suggesting that we add to the amount that the House put in?

Mr. MURPHY. I am suggesting that really we need the $5.85 million.

Senator MAGNUSON. Here is the House language on page 5 of the bill. Let us put this in the record. The House puts $71,900,000 down and then they say:

* * * of which not to exceed $4,975,000 shall be available for subsidy for helicopter operations during the current fiscal year, to remain available until expended.

This, as I recall it, is the same limitation language they had last year.

Mr. MURPHY. Yes.

Senator MONRONEY. That all comes out of the lump sum for the subsidy.

Mr. MURPHY. Yes. It is included in the $83 million.

Senator MAGNUSON. I will ask the question again. Have you any suggestions as to whether we should add to the $4,975,000?

Mr. MURPHY. Yes. We are asking, Senator, that this committee restore the figure to $5,850,000.

Senator MAGNUSON. Which is below last year's figure.

Mr. MURPHY. Which is below last year's figure, but is the figure contained in our budget estimate. That figure is based on curtailed operations which the carriers undertook last year in order to meet the desire of the Congress and the command of the Congress that not more than $6 million be expended for their operations during fiscal year 1962.

NEW HELICOPTERS PUT INTO OPERATION

Senator MAGNUSON. How many of them have done what they said they thought they could do or would try to do since last year in new equipment?

Mr. MURPHY. I believe two of them.

Senator MAGNUSON. Which two?

Mr. MURPHY. New York Airways and Los Angeles Airways.

EFFECT OF NEW EQUIPMENT ON SUBSIDY

Senator MAGNUSON. Has the New York Airways subsidy been really coming down as a result of the new equipment, or going up?

Mr. MURPHY. I am going to ask Mr. Roth to answer that, but it is too early to draw any conclusion, I think. They have just introduced those planes in their fleet.

Mr. ROTH. Yes, sir. They have just come in, and we have to work out a new final rate for the current fiscal year's operation on each of the three carriers. The rate per mile will depend considerably on the volume of operations that the Board permits them to conduct with subsidy.

SUBSIDY COST PER MILE FOR HELICOPTERS

Senator MAGNUSON. I have some figures here. The subsidy per mile for the Chicago operation on the $6 million appropriated—from your consolidated Helicopter Mail Rate Pay Docket—was $2.39 for Chicago, $2.44 for Los Angeles, and $5.87 for New York.

Mr. ROTH. Yes, sir.

Senator MAGNUSON. Then the statistical breakdown of the Civil Aeronautics Board's proposal for break-even needs plus allowance to meet interest payments for the first half of fiscal year 1963, showing the influence of congressional limitation, was $3.36 for Chicago, that is up $1; $2.90 for Los Angeles, that is up about 50 cents; and $6.02 for New York as against $5.87.

Mr. ROTH. Yes, sir. These are all relating to a sharply decreased mileage base.

Senator MAGNUSON. That is due to the limitation of service.

Mr. ROTH. Yes, sir.

Senator MONRONEY. It is a bigger load factor too and you have new equipment.

Mr. ROTH. Ultimately there should be a bigger revenue load. Yes, sir.

Senator MAGNUSON. We also have for the record the financial statements of all three of them. We will keep it in the file, if anybody wants to look at it. I do not want to put it all in the record.

Are there any further questions?

Senator ALLOTT. I have one question, Mr. Chairman.

Senator MAGNUSON. Yes, Senator.

FUTURE SUBSIDY REQUIREMENTS FOR HELICOPTER OPERATIONS

Senator ALLOTT. Last year in the hearing I asked Mr. Boyd about the estimates of subsidy in the future for these three operations. He said:

> I would estimate that for fiscal year 1963, $8 million; for fiscal 1964, $7,200,000, or $7,500,000; for fiscal 1965, $6,900,000; and for fiscal 1966, $5 million.

If this were projected on the same basis as it was then, and not upon the congressional limitation which was enforced upon you last year, would your answer still be about in the same range of figures?

Mr. MURPHY. Senator, I imagine it would be. I imagine it would be because the operations would not have been curtailed.

Senator ALLOTT. In other words, this figure on these three can be expected to go up through 1964 and not decrease at all before fiscal 1965?

Mr. MURPHY. That was the projected estimate at that time.

Senator ALLOTT. I think this was the testimony also of all three carriers, was it not? That provided they got into their turbine equipment they could not foresee a decrease until they got it operating and established.

Mr. MURPHY. Exactly.

Senator MAGNUSON. I think they used the words "they would reach a plateau," a fiscal plateau, at that date you mentioned.

DELAY IN DIMINISHING SUBSIDIES

Senator ALLOTT. May I ask one further question, and this may be important.

Upon the basis of these limitations that Congress placed last year, and which might come into effect this year, is this going to set back further the time when we can or may expect a diminishing of the subsidies on the helicopter services?

Mr. MURPHY. Speaking for myself, I am speaking philosophically, I guess, rather than as an economist—I wouldn't think so.

Senator ALLOTT. You do not think it would change it? It would go up to a plateau and start cutting back in about 1965?

Mr. MURPHY. Mr. Roth may have a different view on that because he lived with this problem in depth.

EFFECT OF LIMITATION ON COMMUNITY SERVICE DEVELOPMENT

Mr. ROTH. The problem, Senator, I think is that there are certain communities that were certificated for helicopter air service by the Civil Aeronautics Board following the regular hearing process. As a result of the appropriation limitation various of these communities have not been able to have helicopter service inaugurated by the particular air carrier. Likewise, in some instances communities which had had service for several years have lost that air service. The carriers and the Board have both received many complaints from Congressmen, Senators, mayors, and chambers of commerce, and so on, about the failure of the certificated services that the Board found required by the public convenience and necessity to be performed because of the current limitations. But I think this is the real problem: That the required services are not being performed; but I could not disagree with Mr. Murphy's statement that it is difficult to say what the ultimate effect on the long-range subsidy trend would be because I think that the Board and carriers would try to see to it year by year that we can achieve a gradual reduction in subsidy, notwithstanding the limitation on the appropriation.

Senator ALLOTT. Thank you.

PERSONNEL RETIREMENTS AND EMPLOYMENT REDUCTION

Senator MAGNUSON. I have one more question. Do not forget the six people that retire next year.

Mr. MURPHY. No, we won't.

REEVALUATION OF LUGGAGE ALLOWANCE FOR MEN AND WOMEN

Senator MAGNUSON. And report back to us with the figures. If we can do it in every agency we will be able to accomplish something. Then one last question. I suggested to the Civil Aeronautics Board on many occasions that they reevaluate the luggage allowance that airlines permit and what they charge for as between men and women.

Mr. MURPHY. Yes. I well remember that.

Senator MAGNUSON. What is gross weight now? Forty or forty two pounds?

Mr. MURPHY. It depends on whether you are traveling tourist or first class.

Senator MAGNUSON. The gross weight of a man or a woman with that allowance is a great deal different. You were going to study the problem, and I have not heard anything about it.

Mr. MURPHY. I raised that subject shortly after I went down to the CAB, because I was mindful of your great interest in this area, Senator. However, we got some very unpopular responses from the air carriers.

Senator MAGNUSON. From the air carriers?

Mr. MURPHY. And I ceased my activity, but I will be very glad to renew it.

Senator MAGNUSON. I will help you with the air carriers, some of whom I know very well. Even if we had to cut down on the other a little, so there would be some kind of equitable arrangement and it would average out when they get aboard.

Mr. MURPHY. I think it would be a noble experiment.

Senator MAGNUSON. We will recess until 2:30 when we will hear the FAA.

(Whereupon, at 12:45 p.m., the hearing was recessed to reconvene at 2:30 p.m. the same day.)

(AFTERNOON SESSION—2:35 P.M., TUESDAY, AUGUST 7, 1962)

(Present: Senators Magnuson, Ellender, Monroney, Young, Saltonstall, Robertson, and Allott.)

Senator MAGNUSON. The committee will come to order.

I apologize for being late.

If the FAA won't mind, we have not heard two doctors from Oklahoma who wanted to testify on the civil defense program under HEW, and they have a specific interest in the research program. They are both here. If the committee will agree, we will hear them briefly. It shouldn't take very long.

STATEMENT OF KIRK T. MOSLEY, COMMISSIONER OF HEALTH, STATE OF OKLAHOMA; AND DR. PETE KYLE McCARTER, VICE PRESIDENT, UNIVERSITY OF OKLAHOMA

PUBLIC HEALTH AND CIVIL DEFENSE

Senator MAGNUSON. You are Dr. Mosley.

We will put your statements in the record in full and maybe one or both of you can tell us about it briefly.

This is Dr. Kirk Mosley, director of the Oklahoma State Health Department, and Dr. Pete Kyle McCarter, vice president of the University of Oklahoma.

Mike, you can introduce your constitutents here.

Senator MONRONEY. Dr. Mosley, as you said, is in charge of our State public health department, one of our most distinguished officers in the United States, and Dr. Pete McCarter is vice president of the University of Oklahoma in charge of research.

We have a very active program for the Public Health Service in relationship to civil defense, and I do appreciate very much the chairman giving them an opportunity to submit their statements and briefly outline them at this time.

Senator MAGNUSON. All right. Go ahead. I will turn the meeting over to the distinguished Senator from Oklahoma.

Senator MONRONEY. You may proceed, Dr. Mosley.

Are you going to lead off?

Dr. MOSLEY. Senator, there are two propositions before us, if we could just have enough time to go through it.

LOCAL MANPOWER AND RESOURCES EMERGENCIES

The immediate proposition is the proposal at the University of Oklahoma to make available to the defense purposes of our Nation a training proposal whereby we can prepare communities to take full advantage of the local medical manpower, local health resources and meet the communities' needs in a time of a national emergency.

This I would like for Dr. McCarter to explain more fully, the capabilities of the University of Oklahoma to do this very thing.

With the Senator's permission, I would like to expand the real necessity and the need for a proposal of this sort, not only for the University of Oklahoma but this does have nationwide importance because unless the local communities have the capability of organizing themselves to meet their needs in time when communications and transportation are disrupted, the fate of the country will be in serious jeopardy.

Senator MAGNUSON. Go right ahead.

Dr. McCarter. Mr. Chairman, the University of Oklahoma proposes to establish what we call a center for civil defense health studies. The idea is that once established this center would become a prototype for such other centers as may be needed over the country. This will operate with the primary purpose of training 10-man teams of specialized and professional people in the community to move in with their special and professional knowledge and take over in case of a nuclear attack or nuclear disaster of some kind.

TRAINING PROGRAM

We think that in 4 years we can train about 300 of these teams. That will give us about 3,000 such people trained in that and also we will in these 4 years have developed a program that will be tested and will be firm and will be refined and it can be turned over to the other universities and colleges to use, especially through their adult education programs.

I do have a prepared statement, Mr. Chairman, which I will be glad to leave with the committee, of course, and I will be glad to answer any questions or develop this basic idea in any way in which the committee is interested.

ATTITUDE OF DEFENSE, CIVIL DEFENSE BRANCH

Senator Monroney. Doctor, I believe you have letters from the Department of Defense, the Office of Civil Defense, and HEW endorsing a pilot plant study of this program which you outlined.

Dr. McCarter. That is true, sir.

Senator Monroney. And they would be happy to have such a program instituted.

Dr. McCarter. Yes.

PERSONNEL FOR PILOT STUDY

Senator Monroney. How many people would it require to get the pilot plant in operation?

Dr. McCarter. Senator, do you mean how many of our own staff?

Senator Monroney. Yes, the question and magnitude.

Dr. McCarter. The budget we have proposed calls for six professional people and three clerical people and provides also for supplements to be brought in from time to time as needed.

Senator Monroney. What do you figure the cost would be?

AMOUNT NEEDED

Dr. McCarter. The proposal for training program, a total of $775,060 to be spent over a 4-year period. That is nearly $194,000 plus, per year.

Senator Monroney. This would give you a chance to bring people in from other States, train them and send them back competent to train others in their States?

Dr. McCarter. Yes. We would start with the local people and after research has been done, experimentation has been worked out, we would start bringing in people.

EXPERIMENTAL EMERGENCY HOSPITAL

The proposal also includes an experimental civil defense emergency hospital and the request is for $600,000 for that purpose and a fund of $50,000 for architectural engineering research on this hospital before any construction of it starts.

Senator MONRONEY. How would this fit in with the hospital program that we now have?

Dr. MCCARTER. Dr. Mosley will have to answer that question.

NEED FOR EMERGENCY TRAINING

Dr. MOSLEY. There is still a tremendous need to train people in the use of the emergency civil defense hospitals. There is also a great need to train people in the concepts of survival and shelter areas. We feel that having a laboratory where you simulate the conditions we might live in is the very best way to teach people. You can do this much better than reading it out of a book.

So not only would the civil emergency hospital be housed, but this also provides space for training various professional people who will also be concerned with our survival programs, not only medical people but the lay folks who would have to be used in many, many capacities and exert capabilities for the survival.

So, it is more of a teaching laboratory for the other aspects of civil defense than simply the medical aspects of the program.

SOURCE OF TRAINEES

Senator ELLENDER. Where would those trainees come from, all over the United States?

Dr. MCCARTER. They would start by coming from around us in the Southwest. Eventually, we would hope that this program would extend over the whole Nation.

NUMBER OF TRAINEES

Senator ELLENDER. Do you propose to train 300——

Dr. MCCARTER. 750 would be the average. We propose to train 3,000 in 4 years.

Senator ELLENDER. How much would that cost?

Dr. MCCARTER. $194,000.

Senator ELLENDER. Would the 700-some be 4 years?

Dr. MCCARTER. Yes.

COST PER TRAINEE

Senator ELLENDER. Well, then, the cost a person would be roughly $800?

Dr. MOSLEY. I think there are other things that would come into this.

Senator ELLENDER. How much would you have to add to the existing plant to put this into operation?

Dr. MOSLEY. Nothing.

Senator ELLENDER. Would the Government have to contribute anything to the hospital?

REQUEST FOR HOSPITAL

Dr. McCARTER. We are asking for an experimental hospital to experiment with as a hospital.

Senator ELLENDER. The Government would have to put that up?

Dr. McCARTER. Yes, sir.

Senator ELLENDER. How much money would be required for that?

COST OF HOSPITAL

Dr. McCARTHY. We estimate a total of $650,000.

Senator ELLENDER. And that hospital would be established in order to train people to help others survive in case of atomic attack?

Dr. McCARTER. That would be part of it; yes.

Senator ELLENDER. You don't have any such training centers anywhere in the country?

Dr. McCARTER. As far as we know, none exists and none is being planned anywhere in the country.

RELATION TO UNIVERSITY

Senator ELLENDER. What would the university do?

Dr. McCARTER. Our contribution in dollars would be about $35,000. This would be chiefly in supplies and some clerical help.

Senator SALTONSTALL. Are there any hospitals there now that you could use so you would not have to establish a new hospital?

Dr. McCARTER. Of course, we do have hospitals, but we do not have any experimental hospital. As far as we know, none have been developed.

STUDY ON TYPE OF HOSPITAL FOR EMERGENCIES

Part of the idea here is to study what kind of hospital installation one would need in this kind of emergency, how much of it would have to go underground.

Senator SALTONSTALL. So part of the research would be establishing hospital facilities.

Dr. McCARTER. Yes, sir; that is right.

PROTOTYPE HOSPITAL

Senator MONRONEY. This would be a prototype perhaps.

Dr. McCARTER. This would be a prototype; and if I may emphasize, basic to the whole idea is the team concept of taking professional people, that is, health workers, communications people, warehousing people, and so on, who already have 80 or 90 percent of the knowledge that they need and putting them through a concise, systematic training program with the equipment, to take over, move in, in case of this kind of emergency. The training that has been done so far, I think, for civil defense has been chiefly on the administrative side. These other people who would move in and do the work in the community, a team of 10 people for every unit of 10,000 population.

EXPERIMENTATION WITH INSTRUCTION

Senator SALTONSTALL. So it is the training of men and women, rather than experiments and research on what to do regarding the people.

Dr. McCARTER. The experimentation, Senator, would be with instruction itself, how it should be given.

Senator SALTONSTALL. I see.

Senator ELLENDER. That would be for medical care only.

Dr. MCCARTER. Yes, sir.

Senator ALLOTT. May I inquire, have you discussed this with the civil defense people?

Dr. MOSELY. Yes, sir.

Senator ALLOTT. Did they bring this up yesterday afternoon?

QUESTION OF COMMITTEE JURISDICTION

Senator MAGNUSON. No. I am just wondering what we have to do with it here. We have an appropriation in front of us for the HEW of $41 million, of which $40 million is for the acquisition of a medical stockpile and an additional 750 of these mobile hospital units, which would bring the total in the United States up to 3,430.

Now, there is a house figure, they now have 1,930 emergency hospitals and they put an additional 750 in this fiscal year. They are asking for additional money to add 750, but only suggest that they have out of the $41 million—that will cost $40 million. They only suggest $564,000 for emergency health training and community preparedness. Is this the item you were addressing yourself to?

Dr. MOSLEY. No, sir.

Senator MAGNUSON. What item?

SPECIAL PROJECT GRANT

Dr. MOSLEY. This is over and above the funds that are being asked for health mobilization of the Health Service. This is a special project grant we are interested in.

Senator MAGNUSON. They haven't suggested anything to us.

Senator ALLOTT. It hasn't been cleared by the Budget, referred to the Budget?

Senator MAGNUSON. We could ask them about it.

Dr. MCCARTER. We were encouraged to propose this to be financed through the Public Health Service by a supplementary appropriation over and above the regular appropriation.

Senator MAGNUSON. Well, obviously if we should give this additional amount and we had 750, we will have 3,430 of the so-called mobile emergency hospitals and they should have some kind of training program to operate them.

Dr. MOSLEY. May I answer that question?

Senator MAGNUSON. Yes. But now we can't be the fathers of the thought too much. You should clear it with them and have them come and ask us about it.

OBLIGATION OF STATE HEALTH OFFICER

Dr. MOSLEY. You put your finger on a very sore point, addressing it to me as a State health officer. It is my duty and responsibility to see that these 20 hospitals we have in our State already are operational, but I am given the direction but am given no assistance, no support, no guidelines to carry out my basic duty as the health commissioner of our State. What we do need—and this is the point—if we do not start training our medical people how to use the resources we have available you might as well not have them. We have stockpiles; we

do not know where they are. We do not know how to get a hold of them. We have doctors, we have nurses, who are anxious to be told things.

NEED FOR TRAINING

Now the health mobilization has a real responsibility to organize and put our resources into a functional capacity. You cannot do it except by training. You can't wait until the game is started before you train your team members. This is what we are getting at. Actually, the cost is $790, the 3,000 people, and it is rather incidental. What we need to do is expand this thing to where the whole United States, all the doctors and nurses and paramedical people have a chance to enlist the aid and support to make their contribution when the chips are down. Once the bomb is dropped, you have the communities cut off from everybody, and you have to count on people who are left to coalesce and form the teams and get the job done. In the 30-day period in which I think our whole country hangs on the fate of what the local people know and the initiative of the individual to survive and want to live——

PART OF CIVIL DEFENSE PROGRAM

Senator MAGNUSON. This is part of the civil defense program.

Dr. MOSLEY. Yes.

Senator MAGNUSON. But the medical education for national defense program is the total amount, is $189,000, which provides grants to assist all 87 medical schools in the United States to incorporate disaster training and their curriculum. So I would think that you would have to go down and see them about how they are going to split the pie here of $189,000, if we give it to them.

Dr. MOSLEY. Yes; but, Senator, there is a factor here. I am very well acquainted with the program. I was associate dean of the University of Oklahoma. I was instrumental in getting the money there, and it is being used very well indeed, but there is a training plan need to organize local resources and help the personnel to be functional and make use of the local resources when the event occurs. The program does not do this. This is why the University of Oklahoma proposition is so significant.

POSITION OF COMMITTEE ON REQUEST

Senator ALLOTT. Let me say this: I think there is a misunderstanding here. What we are speaking of is a function of the Office of Civil Defense. This is the Appropriations Subcommittee which deals with the activities of the Office of Civil Defense. Without any recommendation from them, this committee is hardly in a position to set up a separate appropriation for this activity solely aside and apart from the Office of Civil Defense; at least, this would be my point of view. I think it is talking to the same purpose but not talking about the same thing because whatever your activity would be, as I see it, would have to be carried on through coordination with and through the program of the Office of Civil Defense.

Dr. MOSLEY. You are right. We are talking about two different things and two different appropriations. You are exactly right. One is a supplementary which your committee was not aware of.

JURISDICTION OVER SUPPLEMENTAL REQUESTS

Senator ALLOTT. Even if it were a supplementary appropriation, may I say for the benefit of you gentlemen, the supplementary appropriation does not come within the scope of this committee's activities at the present time.

Would you say that is correct, Mr. Chairman?

Senator MAGNUSON. No. This is fiscal 1963.

Here is Dr. Huntley's statement. You can take it with you and see what he proposes. He gave it yesterday.

We will ask him about it and find out what plans they have, if any.

Senator ELLENDER. Did you get any support at all from Civil Defense?

SUPPORT FOR CIVIL DEFENSE

Dr. MOSLEY. Yes. We have been in very close correspondence with Civil Defense and this was the approach that we were advised to take. We were turned down by the Office of Civil Defense in DOD. They said, as you say, they could not handle this. The suggestion was the Public Health Service could handle it if moneys were made available for the specific purpose. This is why we happen to be here today.

Senator MAGNUSON. We are very glad to have you.

Dr. MCCARTER. Thank you, sir.

Senator MONRONEY. Will the committee submit copies of their statements to the Department of Health, Education, and Welfare for comment in connection with their consideration of the supplemental bill?

Senator ALLOTT. I would like to say, even though Public Health Service is undertaking this particular part of the program, it is wise to keep in mind that in this instance the Offices of Civil Defense still has jurisdiction over the Public Health Service.

Mr. MOSLEY. We went to DOD first. We are going down the line.

CONCERN OVER COMMUNITY NEEDS

Senator, may I make one statement: The boys at the grassroots like I am, Civil Defense goes up and Civil Defense goes down, the interest of Congress seems to be this way, but the people who are going to win this next war are the individuals in the communities who are going to have to survive by themselves and that is why I am so deeply concerned with this whole business and the real significance this committee meeting today has terrific impact upon our survival.

Senator MAGNUSON. Thank you.

(The prepared statements of Kirk T. Mosley and Dr. Pete Kyle McCarter follow:)

My name is Dr. Pete Kyle McCarter. I am vice president of the University of Oklahoma, and I am representing Dr. George L. Cross, president of the university, who was unable to attend this meeting because of illness.

I will move immediately into the substance of this statement.

The University of Oklahoma proposes to establish a Center for Civil Defense Health Studies, which will become a prototype for similar centers as they may be needed elsewhere in the Nation, and hopes that the Congress will finance this experiment through the Public Health Service by a supplementary and earmarked appropriation for the purpose.

The basic and primary aim of this center will be to develop the most practical and effective method of training certain professional and specialized citizens

in each community to look to the emergency health needs of the community in case of a nuclear attack or nuclear disaster.

The idea that members of our faculty and staff have conceived and wish to experiment with is to select for every unit of 10,000 population a team of 10 people who already have training and experience that will be immediately needed in such an emergency. These would include a public health specialist, a physician or dentist, a nurse, a mortician, a food service manager, a housing manager, a communications specialist, a warehousing manager, a records specialist, and a public information specialist.

Each of these people, as you see, already has a great deal of the knowledge and perhaps a good bit of the training that he needs. We believe that a course of study and training can be evolved that will quickly and systematically prepare them to adapt their knowledge to a Civil Defense emergency.

We propose to do this job in complete cooperation with the regular Civil Defense directors and officials.

We estimate that in 4 years we can train 300 of these teams, or about 3,000 people, in civil defense health. By that time we should have the program ready for other universities and colleges to offer through their divisions of adult education, and then the number of trained people will quickly begin to multiply geometrically.

We do not know of any place where this kind of training is now being offered or even being planned.

We believe that this kind of experimentation and instruction should be carried on in our universities and colleges, where the knowledge already exists, where the methodology already exists, and where the organizational and physical facilities already exist.

We believe that the pilot work should be done at the University of Oklahoma, where the faculty and administration are known to be committed to adult education as an integral part of our mission, where there is now in operation one of the finest adult education centers in the world—a fair-sized campus in itself—where we have one of the most imaginative public health education programs in the country, and where this idea that I am introducing to you was conceived.

We estimate that we can do this job with Government support in the amount of $193,765 a year for 4 years, or a total of $775,060, for the training program itself; plus an estimated $600,000 for the construction of an experimental civil defense hospital and a grant of $50,000 to be used for architectural and engineering research on the hospital before construction begins. The grand total requested is $1,425,060 over a period of 4 years.

I am Kirk T. Mosley, commissioner of health, State of Oklahoma, professor of preventive medicine and public health, University of Oklahoma School of Medicine, and consultant to the Public Health Service, Division of Health Mobilization.

As one considers civil defense with special reference to health mobilization, since this is the aspect of civil defense with which I have been closely associated for several years, only two points of view seem tenable. One point of view is that health mobilization is of the utmost importance and deserves top priority in the conduct of affairs at all levels of government. The other point of view is that health mobilization is of no importance at all and any time and energy devoted to it is of questionable value.

The first point of view is the only tenable one on the basis of the following premises:

Premise 1

History bears record of the fact that war has been and continues to be one of man's methods of settling conflicting interests. As yet, war has not been successfully outlawed. The most cursory glance at military budgets certainly denies that war is outmoded. It would seem that we are continuing the truth of H. G. Wells' remark that "Human history is becoming more and more a race between education and catastrophe."

Premise 2

Modern war (hot or cold) is waged against the strongest support and underlying power of a nation—the civilian population. The greatness of a nation is often measured in terms of natural resources or evaluated in terms of

standards of living and degree of prosperity. However, the real strength of a nation lies not in these material resources but in the people themselves who give to the nation its true strength; whose integrity and loyalty determine the potentiality of a nation to survive and resist.

Premise 3

Modern weapons are particularly effective against industrial centers and metropolitan areas. Part of the huge expense of modern arsenals is a direct indication of the military necessity of destroying an enemy's productive capacity which is usually located in thickly populated industrial centers. The prime target areas of the United States contain over 50 perecnt of the total population. Magazines and newspapers carry illustrations of new weapons capable of demolishing urban centers by the square mile. In addition, other weapons in the modern arsenal include chemical agents and biologic agents which, in many instances, can serve an enemy best if these agents are used to attack large concentrations of civilian population rather than troops on the battle-front.

Premise 4

This premise is more or less a conclusion based upon the first three. If the first three premises are logical, it becomes apparent that civil defense is as important as military defense as far as national survival is concerned. If the weapons of war are to be directed against communities, then it is most essential that communities be prepared for such attacks and be ready to do their share in assuring national survival. Likewise, the weakest link in the defense of a nation might readily be its civil defense. An essential war plant not operating because the workers are incapacitated due to an ineffective health program which allows outbreaks of dysentery or other severe infections may be just as damaging to our resistance and to the enemy as the loss of some vital outpost or strategic airbase.

Premise 5

This premise is concerned with our hope of survival in the event of any future attack upon our Nation. This premise is that civilian casualties will occur and must be included in any plans for the defense of our country in case of an attack. Under the assumption that an attack against our country will be resisted, the necessity to plan and to prepare for anticipated medical and health problems is obvious. This planning and preparation is in essence the purpose of health mobilization. In view of the weapons of modern war there is every reason to believe that the price of survival may be high and must be considered in all preparations and all planning.

However, the underlying objective of health mobilization is to minimize as much as possible—

1. The number of casualties.
2. The useless loss of lives.
3. The amount of avoidable suffering.
4. Delay in reestablishing and relocating civilian communities.
5. Interference with productivity and the Nation's ability to wage a successful war.

Health mobilization—Its significance and intrinsic value.—The acceptance of the principle of health mobilization is of immeasurable significance to the welfare and future of our counrty. Health mobilization in itself has certain intrinsic values far beyond the dollar value of funds appropriated for its support.

Health mobilization in itself represents our confidence in the integrity of our people. It represents our earnest money or our wager that we as a nation will survive. It is a measure of our vigor and ingenuity as a nation to meet any situation regardless how insurmountable it may seem. It represents our immediate answer to any foe which would threaten us that we are not ready to surrender or that we believe that we can be defeated. Health mobilization gives evidence that we appreciate the reality of this world in which we live. It represents one of the best mechanisms to enlist the average citizen to active participation and thereby to express his faith in our present way of life.

Health mobilization, the necessity for preplanning and preparation.—In recent years scientific developments in modern warfare have overcome the great natural barriers that have served to protect us from threats of invasion or destruction. Our silent impregnable allies for over a century were time and distance. Our reliance upon time and distance in this modern world of ours would

be about as effective as relying upon bows and arrows to fight a modern war. The only possible replacement or substitution for time and distance is preplanning and preparation.

1. Philosophy of preparation: One of the basic elements in preparation is that of establishing a reason for preparation in hearts and minds of all those who are being prepared. In this situation it means every citizen in our country. The very act of preparation will serve as a constant reminder why we are citizens of the United States and exactly what it means.

2. Depth and quality in preparation: The depth and quality of preparation is the measure of importance given to health mobilization by leaders at the various levels of government. Preplanning and preparation in quality and in depth appears to be expensive. This is why those who have to exercise decisions in the cost of government have to fully weigh the significance of the value of health mobilization. It may be compared to the decision that a man would have to make if he were buying insurance for a piece of property. If the property were very valuable and irreplaceable, he would cheerfully pay a high insurance rate, and he would have no objection at all to pay the premiums as long as his property is safe. On the other hand if the property had a low value in the eyes of the man, he may not take out any insurance at all or insure it at a very low rate. Health mobilization is a premium that must be paid for our security.

Major health problems to be faced in health mobilization planning.—1. The overwhelming number of casualties following a nuclear weapon attack on the larger cities. This will be an immediate problem.

2. Identification and burial of dead.

3. The huge number of injured survivors—many will die within first month, but many others will require prolonged periods of hospitalization. Major types of casualties will include:

(*a*) Traumatic injuries.
(*b*) Burns.
(*c*) Radiation injuries.

4. The masses of uninjured evacuees. Although welfare needs may be the immediate problems, this group will become the focus of long-term health and medical problems.

5. Health problems in the stricken area will be aggravated by:

(*a*) Shortage of trained personnel to care for emergency medical conditions.
    1. Problem as to when public health personnel should be released from caring for casualties and return to public health duties and responsibilities.
(*b*) Shortage of medical supplies and equipment.
(*c*) Inadequate facilities for treating wound survivors.
    1. Tremendous shortage of hospitals—since many will be destroyed.

6. Medical conditions to be expected as a natural course of events:

(*a*) Obstetrical cases.
    1. Normal and premature deliveries.
(*b*) Childhood diseases and other infectious diseases, TB, typhoid, VD, etc.
(*c*) Chronic diseases of all sorts.
    1. Heart attacks.
    2. Cancer.
    3. Diabetes.
    4. Arthritis, etc.
(*d*) Appendicitis, ruptured ulcers, strangulated hernias, intestinal obstruction, etc.
(*e*) Dental emergencies.
(*f*) Mental illness.
(*g*) Nutritional disorders, etc.

7. Special public health and sanitation problems—as a consequence of mass evacuation, when most of the barriers which guard against the spread of diseases have been destroyed, when routine procedures and measures are impossible, when trained personnel are extremely scarce.

8. Protection against radiological, chemical, and biological warfare agents.

PERSONAL AND COMMUNITY INITIATIVE AND DISCIPLINE

For the first 15 days following a thermonuclear attack the fate of our country will be determined to a large extent by the initiative of individuals to take care of themselves, their families, and their immediate neighbor. The expression "to take care of themselves," involves all the basic requirements for living and preser-

vation of life and health without any assistance through community effort or from outside agencies.

Medical self-help training programs will stimulate initiative by giving the individuals confidence that survival is possible even in adverse circumstances. This confidence plus knowledge about how to make the best possible use of one's resources and what types of hazards can be expected will do much to replace fear and despair with hope and desire—the wellspring of initiative.

As a matter of principle, the individual has the same basic right to be as fully prepared as possible to survive these initial days of danger, when he is strictly on his own, as the soldier who is given extensive training in how to take cover and use protective measures when exposed to heavy enemy action.

Training in medical self-help will do much to prepare this individual to increase his chances for survival of himself and his family.

Communities will be isolated and will be called upon to make decisions, pursue a course of action and be prepared to meet all of its own needs in terms of health protection and medical care as well as the other basic elements necessary for living. The protective shield of medical science and public health measures will be stripped away and the only feasible substitute will be that of individual initiative and community initiative to preserve and protect the lives of household members and citizens of the community.

Assisting communities in preparing to meet their health and medical needs is a basic responsibility of the heatlh mobilization program. Community needs will have to be met in the face of shortages of medical manpower, medical supplies and equipment.

Stockpiling of supplies and equipment is part of the answer. Inventorying medical manpower is a part of the answer. Capabilities of medical manpower can be expanded by training. The critical factor, however, is organization and assignment of medical manpower so that medical and health resources are utilized as effectively as possible and supplies and equipment are expended where the most good will be accomplished.

Under the circumstances of complete breakdown of transportation and communications for several weeks after a thermonuclear attack, medical and health resources must be so trained and organized that at the earliest moment possible there will be the automatic formation of health mobilization teams with the capability of protecting the health, preventing outbreaks of disease, providing medical care for specific areas or population groups.

Devising organization and training programs which will provide local communities with capabilities of meeting their health needs during the first few weeks after an attack is one of the major responsibilities facing the health mobilization effort. The proposal submitted by the University of Oklahoma to establish a prototype center for civil defense health studies center is designed to help solve this problem.

In concluding this testimony on the importance of health mobilization, there is a basic truth which has a most pertinent application to this whole matter. The truth is: "A people without vision will perish." Vision to understand that:

1. All will be participants

We must as a people have the vision that in an all-out war everyone will be a participant; there will be no spectators. Each of us will be as much in the front lines as any soldier in uniform.

2. There is no substitute for preplanning

We must have the vision to see the need for preplanning. Most everyone is quite willing to come to the aid of a friend in need during times of trouble, so the desire to help is a part of our American instinct. Unfortunately, good intention alone will not be enough. Unless there is preplanning, help offered after disaster strikes may be too little and too late.

3. All must cooperate

This vision must enable us to see the total picture of civil defense and not only the small segment which is of some personal interest. It will be essential that all learn how to cooperate with other disciplines in the medical field, also with many disciplines in the fields not related to medicine. We may have to depend upon someone else for shelter, food, gas, supplies, and for many other services essential to our own active participation in the war effort. Success in the war effort will require the fullest cooperation and understanding at all levels of operation and in all categories.

4. New perspective

The vision must show the highly trained and specialized professional person a new perspective of how their talents and skills can be best used in a modern war effort. The highly skilled person must learn how to channel specialized services to masses of people through aids and auxiliaries. This means, of course, that skilled and highly trained workers need to enlist and train large reserve forces of aids and auxiliaries to perform the direct services which ordinarily would be performed by professional people. For example, the public health nurse may have 50,000 to 100,000 people for whom she is responsible instead of the usual 5,000 to 10,000. Somehow she will have to get her role and particular skills exercised through her aids and auxiliaries to meet the problems which she will be faced.

The same thing will be true of sanitarians and engineers. The number of people they will be responsible for will be so large that the greatest use of their talents will be seeing that things are done instead of rendering the service themselves as might be expected in times of peace. It is necessary that this vision be obtained now, for now is the time to select and train reserves of aids and auxiliaries who will be responsible for performing the direct services.

5. Personal, family, and community responsibilities

Finally, each person who with any awareness of the heritage which is his should have the vision to see his responsibility for the preservation of himself, his family, his community, and his Nation. The health aspects of civilian defense must begin with each person, include each home, reach out to the community, and when you add all these together, you will have a nation prepared for any disaster.

(The attached letter from Dr. Kirk T. Mosley, commissioner, Oklahoma Department of Health, with reference to the testimony beginning on p. 387 was subsequently received by the subcommittee:)

STATE DEPARTMENT OF HEALTH,
STATE OF OKLAHOMA,
Oklahoma City, August 8, 1962.

Hon. WARREN G. MAGNUSON,
U.S. Senate, Senate Office Building,
Washington, D.C.

DEAR SENATOR MAGNUSON: I am not sure about the protocol of this letter, but I would like to express my sincere appreciation for the courtesy as well as the forebearance of your committee during the hearings at which Dr. McCarter explained the proposal of the University of Oklahoma to establish a prototype center for Civil Defense Health Studies and I placed before the committee testimony concerning certain other aspects of health mobilization. If some of my remarks did not seem to bear directly on the specific purpose of the committe hearing, I trust that you will overlook this error on my part and accept it as my deep and sincere concern about the civil defense and particularly the health mobilization problems facing our country.

I hope the written statement given to the committee will help in clarifying my views and be of assistance to the committee in their deliberations on the support to be given to the health mobilization effort of our country.

Sincerely,

KIRK T. MOSLEY, M.D.,
Commissioner of Health.

FEDERAL AVIATION AGENCY

STATEMENT OF NAJEEB E. HALABY, ADMINISTRATOR, ACCOMPANIED BY LT. GEN. HAROLD W. GRANT, DEPUTY ADMINISTRATOR; ALAN L. DEAN, DEPUTY ADMINISTRATOR FOR ADMINISTRATION; ROBERT J. SHANK, DEPUTY ADMINISTRATOR FOR DEVELOPMENT; CLARKE HARPER, DIRECTOR OF BUDGET; DAVID D. THOMAS, DIRECTOR, AIR TRAFFIC SERVICE; JOSEPH D. BLATT, DIRECTOR, SYSTEMS RESEARCH AND DEVELOPMENT SERVICE; NATHANIEL H. GOODRICH, GENERAL COUNSEL; DONALD S. KING, ACTING DIRECTOR, INSTALLATIONS AND MATERIEL SERVICE; G. WARD HOBBS, DIRECTOR, BUREAU OF NATIONAL CAPITAL AIRPORTS; DR. JAMES L. GODDARD, CIVIL AIR SURGEON; GEORGE C. PRILL, DIRECTOR, FLIGHT STANDARDS SERVICE; AND COLE MORROW, DIRECTOR, AIRPORTS SERVICE

LETTER FROM AGENCY AND JUSTIFICATIONS

Senator MAGNUSON. All right, the Federal Aviation Agency. Mr. Halaby is here.

We will place your letter to the committee in the record and in full and the justifications.

(The information referred to follows:)

FEDERAL AVIATION AGENCY,
Washington, D.C., August 3, 1962.

Hon. WARREN G. MAGNUSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MAGNUSON: Reference is made to your letter of July 27, 1962, regarding the action of the House of Representatives on H.R. 12711, the Independent Offices appropriations bill, as it affects the Federal Aviation Agency. This bill, as approved by the House, includes $739,625,000 in appropriations for the FAA, a reduction of $71,175,000 from the $810,800,000 requested by the President. The House allowance will provide us $719,625,000 in new obligational authority and $20 million to liquidate obligations incurred in the prior year's authorizations. The new obligational authority approved by the House is approximately $10 million less than the $729.8 million authorized for the 1962 fiscal year program.

The bill, as passed by the House, would thus require the Federal Aviation Agency to meet the growing needs of aviation with less funds than the Congress approved for the 1962 fiscal year.

We are requesting restoration of $70,733,000 of the $71,175,000 reduced by the House. There is $442,000 included in our estimate for the "Operations" appropriation which will not be required, and we will discuss this in more detail in the enclosed justification.

The funds requested of the Congress for fiscal year 1963 are sufficient to support only the most essential programs of the Agency. The House action on the appropriation requested will retard our progress in providing for the needs of civil and military aviation and will require us to: (1) "mothball" new facilities available for service; (2) delay the implementation of new services required to provide for safety in aviation, such as radar handoffs and area

87888—62——26

positive control; (3) further delay procurement of needed equipments; (4) impair our vital research and development effort; (5) prevent the strengthening of our program for establishing and enforcing safety regulations; (6) reduce our aviation medical resources to below the 1962 level; (7) delay the start of the operation of the new Washington International Airport; and (8) seriously limit the program for developing a civil supersonic aircraft at a time when we are in serious competition with the Soviet Union, Britain, and France.

Over the past several years, the Congress has demonstrated in many ways that it recognizes the urgent need for the improved management of air traffic and that more adequate facilities and services must be installed, manned, and maintained if we are to advance air safety. The House Appropriations Committee recognizes that aviation is expanding and that our problems are becoming increasingly complex, as indicated in the report on our bill. The mixing of high-speed jets with aircraft of low and medium speed and range presents a challenge which can only be met by providing improved, but costly, equipment. Congress has provided increased appropriations, starting in 1957, to finance the first stages of the program to close the gap between the capability of FAA to perform services and the expanding needs of civil and military aviation. The reduction approved by the House will gravely retard the FAA in its efforts to cope with air safety needs at a critical period.

We realize that the providing of safety and reliability in aviation is more costly than any of us would like. The budget estimates for the FAA were, therefore, given the most thorough screening before their submission to the Congress. Nonessential and marginal requirements were eliminated and only those funds were included which are needed to provide a balanced, hard-core program to meet undeferrable needs in a planned and orderly manner.

Our 5-year budget program, which was prepared in the spring of 1961, projected a need for the 1963 fiscal year of $880 million in new obligational authority and did not include the provision for the recent air traffic controller pay reclassifications, military flight inspection, and increased travel allowances. The inclusion of these requirements brings the total to $895 million. This 5-year budget program is an internal planning document that is subject to careful review by the top management of the Agency, and is in the main a reliable projection of our requirements. Through a combination of a most critical review of our estimates and changes in program direction, our 1963 estimate submitted to the Congress for new obligational authority of $790.8 million was over $100 million below our projected requirements of a year ago. I urge that the committee recognize and give consideration to the sincere efforts of the executive branch to prepare an estimate at an absolute minimum level. It has taken several years to bring our services to aviation to the current level of effectiveness and to provide a capability of further improvement in our programs. These additional improvements are badly needed, but they simply can't be provided without the funds requested by the President for the 1963 fiscal year.

The aircraft users, including the commercial air carriers and the military, have based their plans on our ability to operate new facilities as they come into existence and to continue to improve the safety and efficiency of aviation.

We are confident that after you have examined the effect of the House reduction on the Agency's program you will support the restoration of $70,733,000 of the amount reduced by the House. I have enclosed a more detailed justification, and I shall furnish any additional information you may require.

Sincerely,

N. E. HALABY.

Summary of 1963 estimates, House reductions and requested restoration

Appropriation title	Budget estimate	House		Requested restoration
		Allowance	Reduction	
Operations	$492,500,000	$463,400,000	−$29,100,000	$28,658,000
Facilities and equipment	135,000,000	120,000,000	−15,000,000	15,000,000
Grants-in-aid for airports (liquidation of contract authorization)	20,000,000	20,000,000		
Grants-in-aid for airports	75,000,000	75,000,000		
Research and development	50,000,000	35,000,000	−15,000,000	15,000,000
Operation and maintenance, Washington National Airport	3,725,000	3,225,000	−500,000	500,000
Operation and maintenance, Dulles International Airport	3,675,000	3,000,000	−675,000	675,000
Construction, Washington National Airport	2,500,000	2,000,000	−500,000	500,000
Construction and development, additional Washington airport	3,400,000	3,000,000	−400,000	400,000
Civil supersonic aircraft development	25,000,000	15,000,000	−10,000,000	10,000,000
Total	810,800,000	739,625,000	−71,175,000	70,733,000

FEDERAL AVIATION AGENCY

OPERATIONS

(House hearings, pp. 743–833)

(P. 10, line 7, of H.R. 12711)

1962 appropriation	$434,300,000
1963 budget estimate	492,500,000
Increase (+) or decrease (−), 1963 estimate over 1962 appropriation	+58,200,000
1963 House allowance	463,400,000
House reduction from 1963 estimate	−29,100,000
Restoration requested	28,658,000

AMENDMENTS REQUESTED

(1) On page 10, line 15, delete "$463,400,000" and insert "$492,058,000".

(2) On page 10, lines 16 to 20, delete "That total costs of aviation medicine, including equipment, for the Federal Aviation Agency, whether provided in the foregoing appropriation or elsewhere in this Act, shall not exceed $4,920,000 or include in excess of 304 positions: *Provided further*,".

HOUSE REPORT

"*Operations.*—The committee recommends $463,400,000 to operate the national system of air traffic control and other facilities and programs of the FAA. Appropriations for this activity have rapidly grown in recent years, but there is a rise in air traffic to warrant an increase in appropriations. The scope of FAA operations has broadened in that a progressively greater proportion of flights are being controlled and the mixture of air traffic is more complex. The committee recognizes these developments and is providing $29,100,000 over 1962, or one-half the increase proposed in the budget estimate.

"The bill last year contained a limitation of $2 million on the total cost of aviation medicine research. A change in language is recommended to broaden the limitation and include all expenses of aviation medicine, including medical research, equipment, medical standards, operation of the Civil Aeromedical Research Institute, supervisory and other related costs. Other agencies are doing similar research and the bill limits the activities of FAA in this field to $4,920,000 and 304 positions, which is $946,000 and 20 people more than in 1962, or half of the increase requested.

"The committee wants to caution the Administrator, Mr. Halaby, and his staff, who are dedicated public servants and do an outstanding job of trying to protect the public interest, not to spend too much time on new programs of marginal value. The committee has its doubts on the value of training 100 employees

each year how to fly at an annual cost of $340,000. No funds have been provided for this type of activity."

JUSTIFICATION

The request for the "Operations" appropriation was thoroughly screened and found to be basically sound, well conceived, and reflecting the minimum needs to carry out our current program. This appropriation, which finances the bulk of the operations of the Agency, provides primarily for—

(1) The operation on a 24-hour daily basis of a national air traffic management system.

(2) The maintenance of a national system of aids to traffic control and air navigation, and the direction and engineering for the establishment of air navigation facilities.

(3) The direction, evaluation, and administration of the research and development program.

(4) Flight standards activities to assure airworthiness of aircraft and safety in air operations through the continuing development and enforcement of civil air regulations affecting an increasing complex industry.

(5) The administration of a program of financial assistance to State and local governments in the development of a national system of safe and adequate airports.

(6) The development of standards, rules, and regulations governing the physical fitness of airmen, and the direction and administration of an aviation medical research program.

(7) Flight inspection of all civil and military navigation and traffic control facilities.

We requested $492.5 million for 1963, which is an increase of $58.2 million over the $434.3 million appropriated for fiscal year 1962. The requested increase included $19.9 million to finance the program authorized on a part-year basis during 1962, for a full year in 1963, and expanded program items costing $38.3 million. With the House allowance of $29.1 million we must still provide the $19.9 million required to continue the June 30 level of operation. Moreover, $5.5 million of the increase is to finance the flight inspection of military air navigation facilities, a program which had previously been funded by the Defense budget. The Defense Department will depend upon our providing for this service on a scheduled basis during the 1963 fiscal year and it must, therefore, be financed out of the increase requested in our "Operations" appropriation. Thus, it will cost the Agency a total of $25.4 million in additional funds simply to carry on activities at the June 30, 1962, level. Therefore, the increase of $29.1 million allowed by the House leaves only $3.7 million to operate and maintain new facilities and to meet total requirements for improved services for which we need $32.8 million.

Therefore, within the House allowance we will not be able to (1) commission the majority of the new facilities that will be available for service and in which the Government has invested over $125 million; (2) provide new services such as radar handoff and area positive control to provide for improved safety and reliability; (3) strengthen the program of developing and revising the regulations and standards established by the Agency to enhance safety in flight; and (4) make full use of our modern facilities at the Civil Aeromedical Research Institute.

There follows a list of the major facilities, the construction of which is funded under prior years' authorizations, that will be installed and ready for operation during the 1963 fiscal year. Within the House allowance we will not be able to commission most of these facilities when they are available for service during the 1963 fiscal year.

Long-range radars	18
Air traffic control radar beacons (for long-range radar)	18
Airport traffic control towers	13
Airport surveillance radars	5
Precision approach radar	1
Airport surface detection equipment	1
Air traffic control radar beacons (for airport surveillance radar)	24
Directional finding equipments	10
International flight service station	1
Very high frequency omnidirectional radio range	49
Very high frequency Doppler omni radio range	10
Distance measuring equipments	181
Flight service stations	2
ILS's	22
Standard approach lights	53
Runway and identification lights	11
Visual glide slopes	42

In addition to the above-mentioned facilities that cannot be commissioned within the House allowance, most of the following new services must be abandoned for the 1963 fiscal year:

1. Broadening the scope of the area positive control program designed to control all aircraft within specific areas above 24,000 feet so as to enhance safety.
2. Improve radar arrival handoff procedures. The purpose of this program is to provide constant radar surveillance to each arriving flight rule aircraft in certain high density terminal areas so that positive control identification and separation may be maintained by control at all times after entry into the terminal area.
3. Fully implementing our national flight data center designed to provide a comprehensive flight-information service for the entire aviation community.
4. Conduct an increased number of airport obstruction surveys and studies that are an essential part of air safety. Provision of this data is particularly critical for jet aircraft, and the accuracy of such data has a significant impact on the payload and safety of aircraft during takeoffs and landings.
5. Strengthening the program for the development and adequacy of safety standards covering the type, procedures, and original airworthiness certification of aircraft, engines, propellers, and appliances, and the day-to-day operation and maintenance of aircraft.
6. Improving our capability to verify the reliability of air navigation and air traffic control facilities through increasing our flight-inspection program.
7. Providing needed spare parts for aircraft procured during 1962.

You are requested to restore the $28,658,000 of the $29.1 million reduced by the House so that the above-listed programs can be carried out and the new facilities that will be available can be commissioned. We are not requesting restoration of $200,000 we had included for civil defense functions as this has been provided for in part under another appropriation, and we are not requesting restoration of $242,000 for the rental of the CARI building, as our request overstated our requirements by this amount.

One of the most serious actions taken by the House in our appropriation request was placing a limitation of $4,920,000 and 304 positions on our aviation medical program, which includes both the program financed under this appropriation and the program financed under our Research and Development appropriation. We have kept this program under tight control but it is one of the most essential programs we have for providing for safety in aviation, particularly that portion dealing with the aviation medical research program. We would like to have the limitation completely removed as an unnecessary singling out of a small but vital program for restrictive treatment. Just administering limitations of this type creates an unnecessary workload within the agency in maintaining records to enable us to certify these costs where we have joint programs. A more important issue, however, is the amount of this limitation. Our budget estimate presented to the Congress provided a total of $6,111,000 for administer-

ing the medical standards program and medical research. This amount has been revised to correct an overestimate of rental for the new CARI building, and the requirements for medical purposes now total $5,869,000. Of this amount, $825,000 is required for part-year operation and maintenance of a new Civil Aeromedical Research Institute building which will soon be in full operation. This is an increase of $720,000 over the 1962 level for rents and building maintenance for the medical program. The balance of the increase is requested for making effective use of the Institute, including the procurement of the necessary equipment and for strengthening our medical standards program. With the funds specifically allowed by the House, and the limitation, we cannot finance the Government lease of the building and still fully utilize the facilities provided by this building. You are urged to either remove the limitation or increase it to $5,869,000 and 324 positions.

The House report states that all new programs are funded for a full year during 1963 so that the request for annualization will not be considered in 1964. Our estimate, as submitted to the Congress, anticipated an average of 6 months for all new programs. Our new programs cannot be implemented on a full-year basis because: (1) the appropriation will not be available for the full year; (2) new facilities are commissioned as they are completed, and this is on a staggered basis during the year; and (3) prudent management dictates that we recruit new employees in an orderly manner throughout the year. If we were to attempt to finance our new program items for a full year in 1963, we would require an appropriation of $517.8 million, or $25.3 million more than the amount requested. We are not asking for these additional funds, as they could not be effectively used and would only lapse at the end of the fiscal year, but we are advising you that we will have a requirement in 1964 to finance the part-year cost for new programs for 1963.

Facilities and Equipment

(House hearings pp. 907–935)

(Page 11, line 1, of H.R. 12711)

1962 appropriation	$120,000,000
1963 budget estimate	135,000,000
Increase (+) or decrease (—) 1963 estimate over 1962 appropriation	+15,000,000
1963 House allowance	120,000,000
House reduction from 1963 estimate	—15,000,000
Restoration requested	15,000,000

AMENDMENT REQUESTED

(1) On page 11, line 11, delete "$120,000,000", and insert "$135,000,000".

HOUSE REPORT

"*Facilities and equipment.*—The committee has approved $120 million for new facilities and equipment, the same amount of appropriation as in 1962, and $15 million less than the budget estimate. In addition to new funds provided in the bill, a balance of $105,261,000 will be brought forward, making a total of $225,261,000 available for equipment expenditures."

The committee's attention has been directed to that fact that family housing is being constructed by the Government of American Samoa at a cost considerably less than that proposed by the FAA and other Federal agencies having personnel stationed there. The committee is informed that there is no record of typhoon winds at American Samoa, and facts do not indicate a requirement for houses to withstand such forces is necessary. Every effort should be made to obtain maximum cooperation with the local government to assist in constructing any needed houses at the lowest possible cost, and the cost of any such housing should be limited to not to exceed $15,000 per unit.

JUSTIFICATION

The House allowance for Facilities and Equipment was $120 million, which is $15 million less than the $135 million requested. Funds requested for this appropriation have been carefully screened and substantially reduced within

the executive branch so that the $135 million requested provided for a minimum program. It is true that we have over $100 million in unobligated balances but, while these funds are technically not obligated, they are committed to complete the funding of high priority projects previously approved by the Congress. Most of this committed, but unobligated, money will be used for on-site installations of equipments currently on order. To divert these funds to new projects would leave many projects now underway incompletely financed. These funds cannot, therefore, be used for the new program items included in our 1963 estimate.

We are making a major change in the air route traffic control center areas in the continental United States in order to provide for more safety and reliability in aviation. We, therefore, are reducing the number of air route traffic control centers from 29 to 21 over the next 2 years. This program will save the taxpayers over $100 million during the useful life of these centers. However, some short-term capital costs will be incurred during 1963 which have not been provided for in our budget estimate. This program is so important to safety and efficiency in aviation as to give it higher priority than some of the items included in our estimate.

The action of the House and the need to defer some items included in our budget estimate to provide funding for the consolidation of air route traffic control centers will require the elimination from the 1963 program of proposed facilities totaling some $23 million.

The most significant items that must be deferred include—

Providing single channel VHF transmitters at 97 FSS's.
Providing automatic error-correction equipment at five locations.
Establishing three ATC voice circuits.
Establishing 27 terminal VOR's.
Modifying seven VOR's to doppler VOR's.
Establishing 29 approach lights.
Establishing 40 runway end identifier lights.
Establishing 40 visual glide slope indicators.
Improving the usefulness and the reliability of 14 existing ILS by adding waveguide localizers.
Establishing six airport surveillance radars.
Providing 27 direct center pilot air/ground communications.
Improving the technical communications required for controlling air traffic.

In light of the careful review by the FAA of its needs before submission to the Congress and the critical nature of the items denied as a result of the House action, complete restoration of the reduction is requested.

The House committee report stated that the cost of housing on Samoa should be limited to $15,000 per unit. Funds to construct this housing have already been appropriated and we are making every effort to comply with the provisions of the House report regarding construction of the houses. We are also endeavoring to obtain maximum cooperation with the local government in constructing these houses. They will be constructed by contractors under the sealed-bid procedure and we cannot assure the committee at this time that the construction can be accomplished within the limitation of $15,000 per unit, but will make every effort to do so.

Restoration requested	15,000,000

AMENDMENT REQUESTED

On page 12, line 16, delete "$35,000,000" and insert "$50,000,000".

HOUSE REPORT

"*Research and development.*—The Committee recommends $35,000,000 for research and development related to modernizing the national aviation system. This is $25,000,000 below the appropriation for 1962 and $15,000,000 less than the budget estimate. A carryover of $21,503,000 will be brought forward, making a total of $56,503,000 available for such research."

JUSTIFICATION

The House allowance of $35 million is a reduction of $15 million from our request and a reduction of $25 million below the 1962 fiscal year appropriation for research and development. As stated in the committee report, we have approximately $21.5 million carried from funds authorized in previous fiscal years. Therefore, within the House allowance we could only support a $56 million pro-

gram in the 1963 fiscal year to finance the work carried over from 1962 and the new 1963 program. Our known requirements for 1963 are $65 million and, as a result of the beacon design team study and certain other studies currently underway within the executive branch, it is clear that a program of at least this magnitude will be required.

Our program presented to the Congress anticipated a carryover of some $6 million to the 1964 fiscal year. A carryover of this magnitude will be needed during 1963 to give essential flexibility to our research effort. These funds are an integral part of the 1963 program that we will be in the midst of obligating on June 30, 1963. During 1962 we obligated approximately $54 million and as of June 30, 1962, we had an additional $7 million in contracts under active negotiation. The House allowance would reduce our program level at a time when expansions in the program are needed to modernize the national system of aviation facilities with new equipment, techniques and procedures necessary to keep pace with the rapid evolution of military and civil aviation.

Additionally, there is a clear recognition of our need to stress the aircraft safety and development program in several key areas, including collecting technical information and providing the research support for standards and regulations relating to aircraft structures and systems. There is also a need to increase our activity in airports research and development, particularly regarding the traffic handling capacity of airports and the lighting and marking of airports to improve safety and efficiency in the airport complex. It is important that the Congress realize that there will be a continuing need for a level in our research and development effort, for other than medical research, of at least $63 million. A minimum of $2 million annually for a medical research program brings the total Agency research and development requirement to $65 million annually. This amounts to an annual research program of about 8 percent of the total planned program of the FAA for 1963.

Within the House allowance we will need to eliminate 27 important projects, 18 of which relate to air traffic control, 3 to air navigation, 3 to aircraft safety, and 3 to airports. The effect of the House action on the medical research program is to eliminate all of our contract research and to reduce below the 1962 level the available personnel required to effectively use the Civil Aeromedical Research Institute building that will soon be commissioned and available for use.

You are requested to restore the entire $15 million reduction approved by the House, so that we may make effective use of the knowledge obtained to date from our previous research efforts and can conduct necessary studies of the airways system of the future.

Operation and Maintenance, Washington National Airport

(House hearings, pp. 935–938, 952)

(P. 12, line 17, of H.R. 12711)

1962 appropriation	$3,225,000
1963 budget estimate	3,725,000
Increase (+) or decrease (—) 1963 estimate over 1962 appropriation	+500,000
1963 House allowance	3,225,000
House reduction from 1963 estimate	—500,000
Restoration requested	500,000

AMENDMENT REQUESTED

On page 12, line 25, delete "$3,225,000" and insert "$3,725,000".

HOUSE REPORT

"*Washington National Airport.*—The bill includes $3,225,000 for operation and maintenance of Washington National Airport. This is the same amount or appropriation as in 1962 and $500,000 less than the budget estimate. The bill also includes $2 million for construction at the airport, a reduction of $500,000 in the request."

JUSTIFICATION

The House action reduced the request, $3,725,000, to $3,225,000 for the 1963 fiscal year. The amount authorized by the House will not enable us to continue the level of staffing authorized for June 30, 1962, and, in addition, would deny the procurement of critically needed snow removal and runway cleaning equipment. There is a direct relationship between the ability of an airport to keep its runways clear of debris and snow and airport safety. Without this additional equipment, in the face of the need to increase the frequency of runway, taxiway, and aircraft apron area cleaning activities, the Agency will be extremely handicapped and, from the safety aspect, such cleaning operations will be accomplished at best in a marginal manner.

In view of the age of the airport, there is annually an increasing need for substantial maintenance projects. Within the House allowance we are unable to revitalize deteriorating roofs of the newer hangars or renovate the roof of the International Terminal Building, which has not received major attention since construction 15 to 18 years ago. We will not be able to repair cracked and deteriorating facing on the main terminal building or weatherproof passageways to prevent further damage. We must also defer the installation of sorely needed street lighting, the development of additional parking lots and our program for expansion and improvement of our existing parking lots. The latter revenue-producing activities are of major significance to the economic welfare of the airport.

You are requested to restore the $500,000 reduced by the House from our request.

Operation and Maintenance, Dulles International Airport

(House hearings, pp. 719–736, 943–946)

(P. 13, line 1, of H.R. 12711)

1962 appropriation	$1,975,000
1963 budget estimate	3,675,000
Increase (+) or decrease (−) 1963 estimate over 1962 appropriation	+1,700,000
1963 House allowance	3,000,000
House reduction from 1963 estimate	−675,000
Restoration requested	675,000

AMENDMENT REQUESTED

On page 13, line 9, delete "$3,000,000" and insert "$3,675,000".

HOUSE REPORT

"*Dulles International Airport.*—The committee has approved $3 million for operation and maintenance of this new airport which is expected to open this fall. This is $675,000 less than the budget estimate, but should be adequate for the initial year of operation. The bill also contains $3 million for construction, including a two-bay hangar and other minor items. The committee expects the cost of these improvements, including interest, to be amortized through fees and rentals."

JUSTIFICATION

We requested $3,675,000 for this appropriation in anticipation of this airport being available for use in early fall. The House reduced this amount by $675,000.

The preparation for the opening of an airport of this size requires the advance training of many categories of technical employees. The key employees in a skeleton operating organization were recruited during the late months of fiscal year 1962, and are currently undergoing necessary training and participating in the development of detailed operating plans. As opening day nears, it is necessary to complete the recruitment of the operating staff required for initial operations, in advance of the opening date. Similarly, it is also necessary to provide utilities and communications service during the preopening period substantially at a full operating level. Thus the substantial reduction to our direct operating expense as required under the House allowances, dictates a slippage

of our planned recruitment and hiring schedule which would delay the opening of the airport until at least January 1, 1963.

You are requested to restore the total reduced by the House so that this airport can be made available for use as soon as it is completed.

CONSTRUCTION, WASHINGTON NATIONAL AIRPORT

(House hearings, pp. 938–942)

(Page 13, line 10, of H.R. 12711)

1962 appropriation	$4,200,000
1963 budget estimate	2,500,000
Increase (+) or decrease (—) 1963 estimate over 1962 appropriation	—1,700,000
1963 House allowance	2,000,000
House reduction from 1963 estimate	—500,000
Restoration requested	500,000

AMENDMENT REQUESTED

On page 13, line 12, delete "$2,000,000" and insert "$2,500,000".

HOUSE REPORT

"*Washington National Airport.*—The bill includes $3,225,000 for operation and maintenance of Washington National Airport. This is the same amount of appropriation as in 1962 and $500,000 less than the budget estimate. The bill also includes $2 million for construction at the airport, a reduction of $500,000 in the request."

JUSTIFICATION

The House reduction of $500,000 from the $2.5 million requested for this appropriation will require us to eliminate important improvement projects from our 1963 program. The 1963 estimate provides for the implementation of the third phase of a long range modernization and rehabilitation program of this 22 year old airport. This program is directed toward eliminating general deficiencies in the structure and systems as well as hazardous and congested conditions in airport operation and passenger facilities. Even though the Washington International Airport will be available for use this fall, we anticipate continued high activity at Washington National Airport.

Within the House allowance we will need to eliminate the portion of the program intended to expand and modernize the taxiway and aircraft apron system. We will not be able to resurface the apron area between the existing north and south finger buildings from the terminal out to the finger end. Underlying silt and inadequate subsurface conditions in this area, coupled with the greater weight of the newer and larger aircraft, are continuing to cause pavement breakage and settling.

We will also need to eliminate the major part of the program providing for the establishment of general aviation aircraft parking areas. Existing facilities are inadequate for the airport's current needs, and will be grossly inadequate to meet the anticipated increase of such activity in the future.

Full restoration of the $500,000 reduced by the House is requested to improve and strengthen taxiway and apron systems and provide for additional aircraft parking.

CONSTRUCTION AND DEVELOPMENT, ADDITIONAL WASHINGTON AIRPORT

(House hearings, pp. 947–953)

(Page 13, line 14, of H.R. 12711)

1962 appropriation	$20,100,000
1963 budget estimate	3,400,000
Increase (+) or decrease (—) 1963 estimate over 1962 appropriation	—16,700,000
1963 House allowance	3,000,000
House reduction from 1963 estimate	400,000
Restoration requested	400,000

AMENDMENT REQUESTED

On page 13, line 17, delete "$3,000,000" and insert "$3,400,000".

"*Dulles International Airport.*—The committee has approved $3,000,000 for operation and maintenance of this new airport which is expected to open this fall. This is $675,000 less than the budget estimate, but should be adequate for the initial year of operation. The bill also contains $3,000,000 for construction, including a two-bay hangar and other minor items. The committee expects the cost of these improvements, including interest, to be amortized through fees and rentals."

JUSTIFICATION

The House reduced our requested $3.4 million to $3 million. The airport, which will be in operation this fall, will not have a hangar available for any purpose. Our request includes provision for a two-bay hangar to be used by the air carriers, the Government and others to provide shelter and service for aircraft undergoing emergency repair, overnight or turnaround maintenance and protection from severe weather conditions.

Our request includes funds to provide appropriate utility services, shops and office space, and apron area related to the structure. Funds are also included for a waste treatment plant which, in addition to serving this hangar, has the capacity of serving additional hangars anticipated to be erected by private capital. As stated in the House committee report, the cost of this hangar and improvements will be recovered through fees and rental. The House reduction will require us to curtail the size of the aircraft apron, the amount of shops and office space to be available and strictly limit the capacity of the waste treatment facilities to the needs of only this hangar. Ultimately, these deficiencies will need to be provided at a greater cost than they could be provided for at this time. In order to realize the economy that may be achieved by performing all this necessary work at the same time, restoration of the $400,000 reduced by the House is requested.

CIVIL SUPERSONIC AIRCRAFT DEVELOPMENT

(House Hearings pp. 953–964)

(Page 13, line 19, of H.R. 12711)

1962 appropriation	$11,000,000
1963 budget estimate	25,000,000
Increase (+) or decrease (—) 1963 estimate over 1962 appropriation	+14,000,000
1963 House allowance	15,000,000
House reduction from 1963 estimate	—10,000,000
Restoration requested	10,000,000

AMENDMENT REQUESTED

On page 13, line 24, delete "$15,000,000" and insert "$25,000,000".

HOUSE REPORT

"*Civil Supersonic Aircraft Development.*—The budget estimates include $25,000,000 to continue the feasibility study of the development of a civil supersonic aircraft. The Committee is recommending $15,000,000 for this purpose. The 1962 bill provided $11,000,000 to initiate this research and the Committee is hopeful that the study can be completed during fiscal year 1963. The National Aeronautics and Space Administration and the Department of Defense will also be engaged in related research for supersonic jet aircraft."

JUSTIFICATION

The $25 million requested in the fiscal year 1963 budget is intended to continue the research program started with the fiscal year 1962 funds of $11 million, most of which has been committed.

Last year I told this committee that we would be able to limit cost of this research phase of the program to $50 million. However, we now believe that

we can reach an important objective with the $36 million budgeted for fiscal year 1962 and fiscal year 1963.

This objective is to have sufficient data at hand to make important decisions which may be forced upon us within the next 2 years.

The House reduction of $10 million will significantly retard the date at which we can have this confidence in our understanding of the problems involved and may cause us to make decisions based on insufficient data which could prove very costly in future years.

This research program is aimed at providing answers in two important areas where the present military developments (principally the RB–70 and the SFX programs) cannot provide all the necessary answers. These are—

1. Safety and handling considerations compatible with commercial transport operations.
2. Economic considerations both in initial cost of the aircraft and direct operating costs compatible with commercial transportation.

There is a very real interplay between some rather basic research work and the answers to the above two question areas. For example, the extremely high wingloadings of the present crop of SS aircraft causes them to require long runways and very high takeoff and landing speeds. This problem is further aggravated by the noise problem which means the aircraft may be required to take off at substantially reduced power.

The study programs undertaken have included the examination of variable wing configurations, laminar flow control, as well as a wide variety of conventional and nonconventional fixed configurations.

The results from these studies are encouraging and we expect to be able to go to industry during fiscal year 1963 for configuration studies of the more promising approaches where landing speeds and low-speed handling characteristics will be specified, which will represent a substantial step forward in safety and maneuverability over the present generation of jet transports.

Another example of the interaction of the research program on the preceding questions is in our engine program. We will place very definite noise specifications on the powerplant. If we go to a variable swept-wing configuration, we will want to specify an engine capable of operating efficiently at subsonic speeds and also as high as mach 2 or 3.

None of the present military programs is adequate for this purpose. What is more unfortunate is that the basic development in powerplants has not been pursued with sufficient emphasis in recent years. We are thus in the position of needing to undertake basic studies in compressors, inlet exhaust-thrust reversers, pressure seals, and other techniques before we can get to the necessary engine cycle and configuration studies.

Based upon the work started in fiscal year 1962, we expect to contract for configuration studies in fiscal year 1963.

One further example of the basic research program needed is in structural and fabrication techniques. The cost per pound of the RB–70 is estimated to be running $200. A 150,000 pound empty transport would cost $30 million. Obviously, an economically feasible transport requires very real achievements in the technology of structures and materials. These are only three of many illustrations of the need for a well-conceived research program, fully coordinated with DOD and NASA on the technical side and with the airframe and air carrier industries on the requirements and economic side.

A third area of concern is beyond the immediate scope either of technical or direct economical considerations but may have an even more profound effect upon decision as to when to commit such a program. This has to do with foreign challenge to the present U.S. position both as an aircraft supplier and as a carrier. The economic implications of losing the world market for transport aircraft and being forced into a buyer's position could mean as much as $2 billion in balance of payments over the decade of the seventies. It would also mean a corresponding difference in employment of as much as 40,000 jobs over that decade. These are manufacturing figures only and do not include possible loss of air carrier business.

While these numbers don't have a direct bearing upon air transportation direct-operating-cost studies, they have a profound bearing upon our decisions of when to proceed and how to proceed.

In order to fully understand the need for the $25 million requested and the importance of these funds to the national interest, it should be made clear that the development of a commercial supersonic transport aircraft appears certain.

The question at issue here is whether this aircraft will be developed first by the United States, by one of our allies, or by Russia. Due to the tremendous productivity of such an aircraft, the free-world market will be limited and the first country to develop a safe, reliable, and economically competitive supersonic transport aircraft will undoubtedly capture this free-world market.

In the light of these factors, it is of paramount importance to not lose the technical initiative we now have. We must be in a position where we can move expeditiously in the right direction, supported by the knowledge and the facts necessary to make correct decisions. Viewed in this light, the fiscal year 1963 FAA budget of $25 million will buy not only 1 year's research effort on an important aircraft, but it will also prepare us to make meaningful decisions in an area where billions may be at stake.

You are urged to restore the full amount deleted by the House so that we will be in a competitive position in developing this airplane which is in the national interest.

PREPARED STATEMENT

Senator MAGNUSON. Do you have a statement?

Mr. HALABY. Yes, sir.

Senator MAGNUSON. Here is the statement.

How do you want to handle this now? Do you want to put it in the record in full and proceed with the items involved?

Mr. HALABY. If it is agreeable to you sir, I could put it in the record in full and hit the highlights.

Senator MAGNUSON. Yes, I think it would be better if you take it item by item that you want to talk about.

(Mr. Halaby's statement follows:)

I appreciate the opportunity to present to you the Federal Aviation Agency's program and budget requirements for the 1963 fiscal year. We are here to help you evaluate the needs of our Agency and to set forth the reasons why the reductions approved by the House should be restored.

As you know, I have been Administrator for approximately 17 months and this is the first budget estimate prepared by the current administration. I wish to assure you that this is a conservative estimate based on a thorough review of the funding which the Federal Aviation Agency will require in 1963 to carry out the responsibilities assigned it by the Congress.

The House of Representatives approved appropriations for the FAA totalling $739,625,000, a reduction of $71,175,000 from the $810.8 million requested by the President. The House action provides the Agency with $719,625,000 in new obligational authority, a reduction of $10 million from the $729.8 million authorized by the Congress for the 1962 fiscal year.

We believe that the House made an effort to understand and support the essential activities of the Agency. However, we may not have made it clear that we came to the Congress with a hard-core program and that reductions in our estimate will have a serious impact on services essential to safety and efficiency in aviation.

We are requesting restoration of $70,733,000. In a letter to the committee, dated August 3, we explained in some detail the effect which the House action would have on our activities planned for 1963. We would like in this statement to stress why the House cuts will be so damaging to essential aviation programs.

The gap between our services and public requirements was permitted to widen dangerously during the decade following World War II and only within the past few years has a wholehearted effort been made to close this gap. It is still necessary to include in our budget programs, not only items required to keep up with the growth of aviation, but also projects to help overcome the accumulated deficiencies of the past.

We have daily evidence that we do not yet have a system with the modern equipment and procedures which today's aircraft and aviation activity demands. Two sources of information are available on near midair collisions. One is the reports to the FAA which are carefully investigated. The other is from a contractor that receives anonymous, unevaluated reports from pilots, passengers, and others. The numbers vary widely, but both show we have the same critical,

continuing problem. But that is not new to you or me. In a December 1955 report, which I helped write, the danger was clearly stated. At that time it was considered that it takes 10 years to develop and install a new system of the complexity and scope required to serve modern aviation safely and efficiently. It can take much longer if the development is poorly managed or weakly supported. The United States has been trying hard to produce and install an adequate system for only 5 years. For this reason the existing air traffic control and navigation network still fails to provide sufficient navigational guidance and air traffic control in the altitudes and areas where jet-powered, turboprop and other modern planes are operating and mixing. The effects of this situation include: (1) a lower level of safety than the air traffic control system can be made to provide; (2) limitations on military air training and practice missions that are necessary to our national defense; and (3) costly delays to all users of air space.

Our planning provides for a national airspace utilization system which requires the installation of urgently needed equipments to add to the capacity of our present network; recruiting and training sufficient manpower to operate navigation and communication facilities and to provide safety services; and expanding our research and development activities. Implementation of these plans will require that we continue to operate available facilities effectively in the face of expanding workload while also using funds to operate new equipment and to initiate new services.

OPERATING PROGRAM

The House reduced our requested increase of $58.2 million for the "Operations" appropriation by 50 percent. It might appear from this allowance that we could initiate about one-half of the new programs proposed in 1963. This is not the case. Of the $29.1 million increase allowed by the House, $25.4 million is required to fund for the full 1963 fiscal year programs approved by the Congress for June 30, 1962, including $5.5 million needed to support the flight inspection of air navigation facilities formerly financed under the Department of Defense appropriations. Stating it another way, only $3.7 million of the increase will be available to finance new or expanded activities that will cost $32.8 million.

We realize that the Congress has frequently been concerned by the increases in appropriations needed to finance for a full year programs funded for only a part of the previous fiscal year. However, these costs are of such magnitude that they cannot be absorbed without deleting established programs of higher priority than most of the new items requested for 1963. When we presented our 1962 program to the Congress we made it clear that we were asking for only enough money to finance the new activities for part of the year. This was recognized by the House committee and is covered by its current report. Our new facilities and services are phased into operation throughout the year, the timing being dependent upon a capability to recruit personnel, the availability of technical communications and supplies, and the construction schedules of new facilities. We therefore plan and request funds for new positions and related needs for a 6-months average in the initial year of operation. To do anything else would simply not make management sense, for the choices would be to recruit all new employees on the first day of the fiscal year or to leave new facilities inoperative until the beginning of the following fiscal year. But our practice of asking for only the funds actually needed the first year results in a need for substantial additional money for a full year's operation. We endeavor, where possible, to absorb a portion of these costs. The 1963 estimate was reduced by $4.5 million before we presented it to the Congress as a result of decommissioning and the combining of facilities, cost reductions and the curtailment in low priority programs. We cannot, however, absorb the additional $19.9 million requested of the Congress.

Within the House allowance I would have no alternative but to defer the commissioning of many new facilities that will be available for service and delay the implementation of new services such as radar handoff and positive area control. It must be made patently clear that if the House cut stands, it will not be possible for me to carry forward, in an effective manner, a program which the administration feels is necessary for the safety of aviation.

KANSAS STATE UNIVERSITY LIBRARY
SEP 10 1962
MANHATTAN, KANSAS

RESEARCH AND DEVELOPMENT

The President requested $50 million for this activity for 1963, $10 million less than was appropriated for the 1962 fiscal year.

Upon assuming the Office of Administrator, a very hardheaded review of the past 2-year effort was made. You had given the FAA a total of $113.2 million for the 1960 and 1961 fiscal years. My review convinced me that the research and development effort was not system oriented, was poorly organized and badly managed. So, we did something about it. We canceled contracts and projects that were not in step with our system concept, we deferred action on others thereby reducing our 1961–62 program by $21 million. We immediately started to develop an integrated system plan. A system plan to meet aviation's airspace utilization requirements. We got a new manager for our research and development organization and recruited from industry an acknowledged authority for Deputy Administrator for Development.

The House reduction would curtail the level of research and development just as we have completed a fundamental reorientation of the Agency's research and development effort and are entering a critical 18-month period which will be devoted to providing a laboratory model of the system of the future. We will desperately need the funds to make up for the lost time and to finance a stepped-up effort to modernize the national system of aviation facilities.

The taxpayers have a capital investment of over $1 billion in the FAA. Our research and development effort must be measured against the task of modernizing and maintaining this type of investment in line with the rapid changes in technology and the increasing complexity of the air traffic control problem. Five percent per year for research and development is barely enough.

You are requested to restore the $15 million reduced by the House.

CIVIL SUPERSONIC TRANSPORT AIRCRAFT DEVELOPMENT

The House reduced the $25 million request to $15 million. With this lesser amount we cannot achieve our 1963 objectives. These, as you know, are to learn enough to determine whether the Government should continue to help industry in the development of an SST. Let me emphasize the importance of this. We believe, someone, some day is going to develop one of these long-range aircraft Other nations are allocating very substantial funds to SST development.

If we are not to be shut out of this area we must do much more work—in powerplant technology, in metals, in the sonic boom. This work is completely coordinated with the valuable basic research being done by NASA, and the Department of Defense's RS–70 program. Only then will we know to what extent the Government should assist industry in its development. If we do not do this research, we will shortly have to answer this very crucial question without adequate background knowledge.

AVIATION MEDICINE

The House action on our appropriation request for this program not only substantially reduced the funds requested, but placed a limitation in the appropriation language on the total funds that could be spent for aviation medical activities within the Agency. We previously had a limitation on aviation medical research but this year's limitation also encompasses our medical standards activity. This activity involves assuring the medical fitness of airmen, air traffic controllers, and other aviation-related personnel; the essential Agency medical participation in accident investigations on which CAB is dependent; and the promulgation and enforcement of the rules and regulations for mental and physical fitness of airmen.

Our adjusted request provided for an increase of $1.9 million over the 1962 fiscal year program level for all aviation medical activities, including $720,000 for operation and rental of the new Civil Aeromedical Research Institute building at the Aeronautical Center.

A limitation of this nature in a selected program of this size does not appear necessary or desirable. In fact, the yield in aviation safety per dollar spent is very high in this medical program. Some flexibility is needed to enable us to solve unforeseen problems. I urge you to remove the limitation from the appropriation language and to accept my assurance that a tight control will be kept on this program.

Rather than repeat or expand further on the data included in my appeal letter, I would like to review for you gentlemen some of the things we have done to help us chart our course and also some of the improvements which we have made in our managament.

WASHINGTON INTERNATIONAL AIRPORT

With respect to the appropriation of operating funds for the new International Airport, I urge your restoration of the House reduction of $675,000. As I indicated in the letter transmitted to you last week, the House reduction would force a delay in our planned opening date. When we were before your committee last year, we assured you that we would complete an operable airport with the additional funds we were then requesting, and set a target date of the fall of 1962, for start of operations.

We are now working up a dedication program for a lovely, cool weekend when the public will be invited to inspect the world's newest, best and most beautiful jet airport. At that time, you will be able to drive out the George Washington Parkway, along the newly completed McLean Bypass (which the State of Virginia is constructing), and along the 14 miles of access highway built as part of this airport project. Automobile parking lots will be completed and many of the terminal building facilities will be operational. By that, I mean that ticket counters will be finished; newsstands, the coffee shop and other key concessions will be operating; and six mobile lounges and their "docking" gates will be in service.

Runways, taxiways, aircraft parking aprons, navigation aids, traffic control facilities, fire-crash equipment, and the aircraft fueling system will be service tested and in operation. Airport limousine, bus and taxicab service will be available, along with baggage checking, flight insurance, rent-a-car, and banking services.

The airport will not be in a completely finished, polished, and turn-key status, however. There will be no hangars. Several concessionaires will not have completed their installations. Airlines will still have some of their installations to finish. Some of our own construction such as utility extensions to the hangar area, our permanent warehouse and maintenance shops and the aircargo building will not be completed. But all essential facilities and services for both passengers and air carriers will be available.

Last year I described two studies which the President had directed and which were expected to have a substantial impact on the policies and operations of the FAA. One was the national aviation goals study (Project Horizon) and the other, the study of the safe and efficient use of airspace (Project Beacon). These studies have been completed and their findings emphasize that the United States has not yet developed the national aviation system required to meet the need for public safety, for efficiency in the use of the airspace, for a strong national economy, and for the national security.

These studies and their findings have a direct bearing on what we shall be doing in the months and years to come. It has been a period of reexamination and rededication as well as day-to-day operations.

PROJECT HORIZON

The report of this study group, which was submitted to the President on September 5, 1961, contains a useful analysis of the problems and prospects of aviation in the decade ahead. It also sets forth 24 national aviation goals with recommendations as to how they might be attained. Throughout the report we find the theme that the United States must maintain a position of world leadership in all phases of aviation, with safety as the aim and watchword. The report deals with many controversial questions and some of its proposals will require further resolution in the executive branch. It is, therefore, being reviewed by the responsible departments and agencies and plans of action are in some areas still to be formulated. It is also being used as a stimulant to sound perspective and policymaking.

PROJECT BEACON

The report of the task force on air traffic control uses was submitted to the President on November 1, 1961. This study entailed a thorough review of the present air navigation and traffic control facilities and associated research

and development programs by some hard-thinking systems engineers. In general, the task force found that current efforts to assure safety and efficiency in aviation were proceeding well. It also concluded that the present system was being expertly operated by highly skilled operators. It was, however, unable to find evidence of a unified system plan that would meet onrushing requirements of safety, and concluded that major improvements must be made to assure safety while accommodating the traffic growth which will be experienced during this decade.

Because we are now tolerating risks in the airspace that a modern system would minimize, because a projection of this risk into the future is unacceptable for the Nation in the sixties, the President has asked me to begin at once to carry out those recommendations of the report which would move the airways program forward rapidly and efficiently. He also requested that in the course of implementing the recommendations of the report that I prepare a plan and design a system to utilize those elements of the air defense system which can be advantageously used in meeting air traffic control requirements. Accordingly, a system design team has been established to recommend a plan for implementing the appropriate recommendations of the task force. We are currently evaluating the team's preliminary report, a report, incidentally, which for the first time for the Agency compiles in one document a unified system plan and design together with the logic, the limitations, and the assumptions behind the design.

As a matter of urgent national policy we are moving toward positive control and assured separation. In the congested areas and particularly where civil and military aircraft mix at higher altitude and at airports, we are moving away from the permissive attitude of the past and the dangers of see and be seen. The next step will be for our research and development personnel to devise experimental working prototypes of each element of the system.

NORTHERN TIER

I am happy to tell you that an agreement has been reached on the joint use of three U.S. Air Force SAGE Direction Centers at Great Falls, Mont., and Minot and Grand Forks, N. Dak., for conducting both air traffic control and air defense operations.

Availability of these three SAGE center radar facilities will help FAA to serve an area not now adequately covered by existing FAA radar and will, in conjunction with additionally programed FAA radar, speed up the Agency's plan to expand positive control service over the 48 contiguous States during 1963.

IMPROVED MANAGEMENT

As an executive and lawyer fresh from my own firm, I told you last year that I considered my job as a massive management task. In any program that is as large and has expanded as rapidly as that of the FAA, opportunities exist for improving management in a manner that will result in savings to the taxpayer without lowering standards of service. I told the committee last year that I would carefully review the use of our resources with the objective of conserving funds and obtaining the most effective use of appropriations. I again wish to assure you that if the Congress appropriates the funds requested for 1963, that money will be prudently managed so as to provide necessary services to aviation at the lowest possible cost.

In order that you may have greater assurance that our good intentions are being matched by action, we would like to indicate briefly how we are attempting to strengthen our management and to tell you of some of the results to date.

Our most important single act has been the decentralization of responsibilities for local operations, including a complete reorientation of the role of the top officials of our regions. The head of each of our seven regions is now an Assistant Administrator of the Federal Aviation Agency, reporting to me. He is fully responsible for carrying into operation our national policies and programs within his region. To assure the success of the decentralization, we have placed the most capable managers in the entire Agency in Assistant Administrator posts. The Washington office officials will henceforth concentrate on establishing policies, defining program objectives, formulating standards, evaluating the effectiveness of regional operations, and helping me hold our field managers fully accountable for the men and money you make available to them.

SOUTHERN REGION

Along with the realinement of responsibilities, it has been necessary to establish a new regional headquarters in Atlanta, Ga., to manage the programs of the FAA in seven of the Southern States formerly included in the southwest region. A region spread from Panama to North Carolina, from Puerto Rico to Texas—12 such States were too large to assign to one Assistant Administrator. Studies made prior to the establishment of the new region indicated that if we accepted prevailing methods of operation in other regions, an additional 350 to 400 positions would be required to staff the regional headquarters of the southern region.

The decision was made that we would use the new region for an experiment in streamlined administration. I am pleased to report that the southern regional headquarters became fully operational on July 1, and we have achieved our objective of limiting our additional requirements for regional headquarters personnel to 100 positions.

Concurrently, all other regional Assistant Administrators are using the experience gained in establishing the southern region to reexamine their headquarters operations.

SAVINGS DURING 1962

During the 1962 fiscal year, within the funds appropriated for the operations appropriation, through improved management, we have absorbed over $8 million for items that otherwise would have required a supplemental appropriation. We needed $1 million to finance the increased cost of travel due to the enactment of Public Law 87–139, which increased the per diem rates for employees. We needed $7 million to implement a reclassification of certain of our air traffic controllers and maintenance technicians authorized by the Civil Service Commission. It took some real belt tightening, but we carried out our programs without seeking supplemental funds of any kind. In the process, 610 positions were eliminated from our 1962 program, with the emphasis being given to the elimination of overhead positions in the Washington and regional headquarters.

CONSOLIDATION OF ACTIVITIES

One of the most significant steps we have taken and one which will result in substantial savings in current and future years, is the development of a comprehensive plan for the consolidation of air route traffic control centers. Over the next 2 years we will reduce the number of such centers in the 48 contiguous States from 29 to 21. This plan, which is now being implemented, was adopted primarily for operational reasons. As the number of centers that handle aircraft is reduced, the possibility of error and threat to safety is also lessened. While this program will require us to spend, within the next year or so, approximately $8 million more than we have programed for the total center program, the Government will, over a 16-year period, realize a saving of approximately $7 million a year, and our requirements for personnel will be reduced by 541 positions. A total 16-year saving in excess of $100 million will result from this program. A reduction of 168 positions and the related savings have already been achieved. The 1964 and 1965 estimates will reflect the amount of these savings.

Four flight service stations are being removed during fiscal year 1962, with a savings of 17 positions. It also should be noted that FAA has assumed the entire military flight service function with available personnel.

During 1963, my program of consolidation and collocation of Agency field facilities and offices will be vigorosuly pursued into other areas, and we have accounted for our expectations herein.

OTHER SAVINGS

We have also kept our facilities and equipment program under careful scrutiny. We have canceled the procurement of a DC–8 aircraft that would have cost $7 million, renting instead the hours we need to qualify our inspection personnel, while we determine the most sensible long-term method of keeping our flying inspectors qualified.

Finally, we have negotiated new landing fees and space rental rates at Washington National Airport which will add more than $500,000 a year to revenues deposited in the Treasury. In addition, we have reached agreement with the airlines for the use of Washington International Airport on a basis which will recover all out-of-pocket operating costs after an initial startup period and per-

mit the retirement of construction costs over the useful life of the Government-provided facilities.

REVIEW OF ESTIMATES

In developing our 1963 estimates we subjected each item to a most careful review. The process we use in evaluating our budget estimates is thorough and is administered by long-experienced officials whose sole objective is to develop a firm program that will provide the most safety and efficiency per tax dollar. Each top official is responsible for personally evaluating the estimates for the functions for which he is responsible before they are submitted to the Agency Review Board. Most of them are with me here today and are accountable to you as well as me. The Review Board then scrutinizes, and frequently reduces, the requests of program offices. Finally, the Administrator meets with the Review Board and assures himself that the budget is one which he is prepared to support. Thus, the estimate before you is one that has been carefully reviewed by me with the help of a staff who are constantly made conscious of their responsibility for conserving the Government's resources. As a result of this review, many desirable projects were eliminated because they could not stand the test of essentiality. Therefore, we believe that we have submitted a budget which calls for only the minimum funds required if we are to keep pace with the imperatives of public safety, the growth of aviation and the demands of an advancing technology.

It is important we keep in mind that, to a degree not common to Government service, our requirements are not controllable by the Agency but rather result from the demands of national defense, air safety and the growing aviation sector of the national economy.

We have a dedicated, largely professional, staff of employees whose efforts have made possible the establishment of a high standard of air safety. They cannot, however, provide for long the services expected of them if they must rely upon procedures and equipments which are unable to cope with the growing volume and complexity of air activity.

SUMMARY OF ESTIMATES

We are requesting $790.3 million in new obligational authority of which $75 million is for airport aid grants for the 1964 fiscal year. In addition, our request includes $20 million to pay obligations that will become due during 1963 under prior years' contract authorization for the Federal-aid airport program. Our request for appropriations (as opposed to new obligational authority) thus totals $810.3 million.

FAA appropriations for the 1962 fiscal year totaled $799.8 million, of which $729.8 million was for new obligational authority and $70 million to liquidate prior years' contract authorization. Although our 1963 request represents an increase of $61 million in new obligational authority, a reduction of $50 million in our requirements for liquidating prior years' contract authorization holds the increase in appropriations to $11 million. The funds requested will finance 47,751 permanent positions, an increase of 3,998 over the 43,753 programed for the 1962 fiscal year. This increase is primarily for field services concerned with improving safety and reliability in aviation, mainly for the following programs:

1. One thousand three hundred and twenty-six positions for the operation and maintenance of new facilities that will be available for commissioning during the 1963 fiscal year. These facilities were constructed from funds authorized by the Congress in prior years.

2. Four hundred and seventy-seven positions to further implement a program of providing constant radar surveillance of each arriving IFR aircraft.

3. Two hundred and fifty-six positions to expand our program of providing positive control over all airspace above 24,000 feet.

4. Two hundred and twenty-five positions to strengthen our program for developing, promulgating, and administering the safety standards, regulations, and rules applicable to aircraft and airmen, and checking the reliability of our facilities.

5. Five hundred and forty positions to enable us to assume responsibility for flight inspection of military facilities.

6. One hundred and ninety-one positions for the installation of facilities procured primarily under prior years' authorizations.

7. One hundred and fifty-three positions for our increased level of research and development.

8. Two hundred and forty-one positions for the National Capital airports, primarily for the operation of the International Airport at Chantilly, Va.

SUMMARY

In summary, the work we are performing includes a wide range of services necessary to serve the common needs of civil and military aviation in the United States and abroad. Many of our requirements are not controllable by the Agency but result from workloads imposed by the growth in the volume and complexity of aviation activity and defense needs. The full and effective operation of new facilities and an energetic research and development effort are essential if we are to achieve optimum utilization of the airspace. The progress we can make in coping with the problems facing aviation, many of which have caused acute public concern, will be in direct proportion to the resources we have available.

We will try in this hearing to answer your questions and will provide the committee with any additional facts which you may desire.

APPROPRIATIONS 1962 AND ESTIMATES 1963

Senator MAGNUSON. For the purpose of the record, the total appropriations were $874.8 million last year. The budget for this year is $810.8 million—$64 million difference. The House recommended $739,625,000, or minus $135,175,000 over the 1962 appropriations and minus $71,175,000 over the 1963 estimates, and they involve several items.

Now, let us take "Operations" first.

OPERATIONS

Operations, $434 million last year, $492 million for this year, and the House recommended $463 million.

HOUSE ACTION

Mr. HALABY. The House reduced our requested increase of $58.2 million for the "Operations" appropriation by 50 percent. It might appear from this allowance that we could initiate about one-half of the new programs proposed in 1963 but this is not the case.

Senator MAGNUSON. Where are you in your statement?

Mr. HALABY. Page 4, sir.

Senator MAGNUSON. Page 4, all right.

All right, on page 4 this deals with the operating program. You might as well read that and then we will get it in.

EFFECT OF HOUSE CUT

Mr. HALABY. The House reduced our requested increase of $58.2 million for the "Operations" appropriation by 50 percent. It might appear from this allowance that we could initiate about one-half of the new programs proposed in 1963. This is not the case. Of the $29.1 million increase allowed by the House, $25.4 million is required to fund for the full 1963 fiscal year programs approved by the Congress for June 30, 1962, including $5.5 million needed to support the flight inspection of air navigation facilities formerly financed under the Department of Defense appropriations. Stating it another way, only $3.7 million of the increase will be available to finance new or expanded activities that will cost $32.8 million.

FINANCING FULL-YEAR AFTER PART-YEAR PROGRAM

We realize that the Congress has frequently been concerned by the increases in appropriations needed to finance for full year programs funded for only a part of the previous fiscal year. However, these costs are of such magnitude that they cannot be absorbed without deleting established programs of higher priority than most of the new items requested for 1963. When we presented our 1962 program to the Congress we made it clear that we were asking for only enough money to finance the new activities for part of the year. This was recognized by the House committee and is covered by its current report.

HALF-YEAR FUNDS REQUESTED

Our new facilities and services are phased into operation throughout the year, the timing being dependent upon a capability to recruit personnel, the availability of technical communications and supplies, and the construction schedules of new facilities. We therefore plan and request funds for new positions and related needs for a 6-months average in the initial year of operation. To do anything else would simply not make management sense, for the choices would be to recruit all new employees on the first day of the fiscal year or to leave new facilities inoperative until the beginning of the following fiscal year.

ABSORPTION OF ADDITIONAL HALF-YEAR COSTS IMPOSSIBLE

But our practice of asking for only the funds actually needed the first year results in a need for substantial additional money for a full year's operation. We endeavor, where possible, to absorb a portion of these costs. The 1963 estimate was reduced by $4.5 million before we presented it to the Congress as a result of decommissioning and the combining of facilities, cost reductions, and the curtailment in low priority programs. We cannot, however, absorb the additional $19.9 million requested of the Congress.

HOUSE CUT DELAYS IMPLEMENTATION OF SERVICES

Within the House allowance, I would have no alternative but to defer the commissioning of many new facilities that will be available for service and delay the implementation of new services such as radar handoff and positive area control. It must be made patently clear that if the House cut stands, it will not be possible for me to carry forward, in an effective manner, a program which the administration feels is necessary for the safety of aviation.

LIST OF FACILITIES TO BE DELAYED

Senator MAGNUSON. Now, are these new facilities you are talking about, we will go into this later, but are they in the general field of aid to safety and navigation?

Mr. HALABY. Yes, they are.

I think if you wish to turn to page 4 of the appeal letter, I can give you a list of them.

Senator MAGNUSON. All right, I think we ought to have that in the record.

Mr. HALABY. Just one word of introduction, sir.

PRESENTATION TO HOUSE

You will recall that we put together a program, reviewed it carefully within the Agency, and then presented it in about 6 inches and several hundred pages to the Senate and House Appropriations Committees. The estimate lays out all of the requirements that were developed the previous fall and winter and presented to the Budget Bureau, the President approved them, and then they are presented to the Congress.

We gave the House Appropriations Committee everything it asked for in the name of the Congress.

As you know, we in this Agency live in a very clear fish bowl. There is no intent or ability to hide anything because we have a free press and an open society and a very active and skeptical Congress. So we gave the House Appropriations Committee all the information it requested and it is their prerogative and procedure to make the necessary information available to the full committee, and to the House, and we do not have control over the data that is released for our program, facility by facility, and item by item.

In the ensuing months since this program was put together, of course, changes take place. We have new equipment coming in. We have new procedures that are improvements on the old. So until the appropriations are made and we take a new look almost a year later—in light of the existing situation at that time, do we know exactly which pieces of equipment will be required at which localities for what purpose.

LIST OF FACILITIES

Here is a list that we would have to drop out if the total cut of $71 million made by the House were to stand.

For example, we couldn't operate 18 long-range radars, the construction of which was funded under prior year congressional authorizations. They will be installed and ready for operation during the 1963 fiscal year. If the House cut stands, we will not be able to commission most of the facilities when they are available, and in addition to long-range radars there are 18 air traffic control radar beacons, 13 airport traffic control towers, 5 airport surveillance radars, and the remainder of the list on pages 5 and 6.

Senator MAGNUSON. We will put that in the record in full.

Mr. HALABY. That is 4 and 5 of the appeal letter.

(The information referred to follows:)

There follows a list of the major facilities, the construction of which is funded under prior year authorizations, that will be installed and ready for operation during the 1963 fiscal year. Within the House allowance we will not be able to commission most of these facilities when they are available for service during the 1963 fiscal year.

Long-range radars	18
Air traffic control radar beacons (for long-range radar)	18
Airport traffic control towers	13
Airport surveillance radars	5
Precision approach radar	1
Airport surface detection equipment	1
Air traffc control radar beacons (for airport surveillance radar)	24
Directional finding equipments	10
International flight service station	1
Very high frequency omnidirectional radio range	49
Very high frequency Doppler omni radio range	10
Distance measuring equipments	181
Flight service stations	2
ILS's	22
Standard approach lights	53
Runway and identification lights	11
Visual glide slopes	42

RESTORATION REQUESTED

Senator MAGNUSON. Then, in addition, on page 5, you have seven other programs that you say would have to be cut out.

Mr. HALABY. Yes, sir.

I think this——

Senator MAGNUSON. But on page 6–A you are requested to restore $28,658,000 on the above listed programs.

Is that a correct figure?

Mr. HALABY. Yes, sir; that is a correct figure.

Senator MAGNUSON. So that if $28,658,000 of the House cut is not restored, the items beginning on page 4 and the programs beginning on page 5 to the middle of page, you cannot proceed with those programs this year?

Mr. HALABY. Yes, sir.

Senator MAGNUSON. What is the rest of the amount?

RELATION OF RESULTANT DELAY TO PROGRAM

Mr. HALABY. In a moment, when you are prepared to receive it, I would like to show you the relationship between these services that we would not be able to provide and our total program.

Senator MAGNUSON. All right.

LIMITATION ON AVIATION MEDICAL PROGRAM

Mr. HALABY. But the next most serious item is the limitation on the aviation medical program.

Senator MAGNUSON. Now let's get this in perspective.

The items we talked about involved $28,658,000. The next item you come to involves $4,920,000 limitation and 304 positions which was placed in by the House.

Mr. HALABY. Yes, sir.

Senator MAGNUSON. And it is suggested that we either remove the limitation or increase the amount to $5,869,000 and 324 positions?

Mr. HALABY. That is correct.

Senator MAGNUSON. Twenty more positions.

Is this an old story?

NEED FOR MEDICAL RESEARCH

Mr. HALABY. Yes, sir; I think it is. I believe it is fair to say that there is a continuing question as to whether or not we need to do aeronautical medical research and conduct medical surveillance over the pilots, engineers, mechanics, and our own controllers.

We are absolutely convinced that the only way we will be able to improve our regulations, improve the pilot and airmen safety, and controller durability and safety, is through this research program. We have had quite a bit of cooperation in this work from most of the people of the aviation community. One of the increases in this program is to finance the rent of a very fine civil aeronautical research institute building which will open this fall. The 1963 cost of this building in which we will have the major American aeronautical medical research for civil aviation, is about $825,000 including rent, maintenance, and utilities. This limitation, in effect, says, if you want to continue the rest of your program you had better not pay the rent on that building. The alternative is to cut the rest of your program and pay the rent. We feel that we have been conservative in this program and we are determined to see that it does not duplicate the military medical work which is mostly concentrated on space now or the National Institutes of Health program or any other public health program.

We have a committee to oversee this program and prevent duplication, and I personally feel that we can get more productive, creative work with fewer people than having a whole horde of white-coated medical researchers.

DIFFERENCE BETWEEN 1962 AND PRESENT LIMITATIONS

Senator ALLOTT. What did you tell us last year, Mr. Halaby? It is my understanding that you objected to the limitation that was placed on it last year, which was what, 130 personnel?

Mr. HALABY. This is a different limitation than that. This limits the entire program. There is a research program and then there is an operating medical program.

Senator ALLOTT. Yes, and we went into this in some considerable detail last year, you and I, as I recall it.

Mr. HALABY. Yes, sir.

Senator ALLOTT. Are you saying here on page 7 of your letter that you think there should be no limitation on this at all?

Mr. HALABY. That is correct.

Senator MAGNUSON. Either one or the other?

Mr. HALABY. Here is the problem: The bill last year contained limitations of $2 million on the total cost of aviation medical research. The change in the language recommended to broaden the limitation include all expenses in aviation medicine including medical research, equipment, medical standards, and other costs. Other agen-

cies are doing similar research and the bill limits the activities of FAA in this field to $4,920,000 and 304 positions which is $946,000 and 20 people more than they had in 1962.

Senator ALLOTT. This is what I was coming to.

Senator MAGNUSON. Yes.

Senator ALLOTT. Well——

ARBITRARY CEILINGS

Mr. HALABY. I think this should be treated like other essential parts of the program. We come to you with what we believe to be required. You examine it and you authorize an appropriation and we are left some discretion, but only within the total authorization, and it is in that manner that I think we can get the most out of this program, rather than picking this out and saying there is an arbitrary ceiling on the number of medical employees and the dollars they may spend.

Senator ALLOTT. Of course, we do put limitations on other areas, too, repeatedly, as to number of personnel.

Mr. HALABY. Yes, sir. They are exceptional, but there are numerous other limitations.

APPLICATION OF LIMITATION

Senator MONRONEY. Is it not true that this limitation applies not only to medical researchers but also to custodial employees? Even though their salaries would be much less you would still have to sacrifice many of the people who have been working in this program for 2 or 3 years, and that would cripple it. I am informed that three Ph. D.'s in medical research have left in the last few days because of this limitation, figuring that the Congress was not going to maintain an adequate research laboratory for these necessary studies in aviation medicine.

Certainly the least we could do would be to remove this limitation on the janitorial and custodial employees that would be required to maintain this new research laboratory which exists now, nearing completion.

Further, I understand that this cut must be restored to buy the necessary equipment for the laboratories. They have the building and they have paid for the building.

Is that a fair statement?

Mr. HALABY. Yes, sir.

The limitation, Senator Allott, has now been placed over the entire program.

PERSONNEL NEEDED IN RESEARCH

Senator MAGNUSON. All right, let's take it a different way. How many people do you want in your research team down there? I am talking about the medical facilities itself.

Mr. HALABY. The Oklahoma City civil medical research program—I am going to have to ask Dr. Goddard, who is our civil air surgeon, to back me up on this—requested 120 people. Out of that 120 people, I believe 18 or 20 are janitorial and maintenance support for the building, 25 are for research supervision, and 75 are direct researchers.

We had a limitation on medical research last year. Now it is proposed to put the whole medical program under limitation.

Senator ALLOTT. Including your general medical research, medical standard?

WORK OF MEDICAL PERSONNEL

Mr. HALABY. Yes. Let me just give an example of the medical standards program.

We have the question of examining pilots and our own personnel to see if they are physically qualified for air transport rating or air traffic controller rating. We also examine private physicians and designate them as medical examiners so the airman whose annual physical or semiannual physical or biannual physical comes up will get his examination through a designated medical examiner. This is part of our aviation medical standards program.

Senator MONRONEY. How does the personnel break down, Mr. Halaby?

SUMMARY OF MEDICAL SERVICES REQUEST

You said 125 medical researchers and 75 technicians in the medical research field; is that correct?

Senator ALLOTT. That is what I would like to get.

Mr. HALABY. I don't believe they have a summary in front of them, so I will read from it, if I may.

The total request for both categories, for 1963 is 324 at $5,869,000.

The research portion, the people working at the aeronautical research center in Oklahoma City, 120.

Senator ALLOTT. Now, this is a part of the 324?

Mr. HALABY. Yes, sir; 120 at $2,572,000.

In Washington and at Georgetown University, we have an additional 25 at $370,000 and 10 to plan and supervise the entire program, making a total number of personnel of 155 for medical research. There is also a request for contract research of $206,000. The total request for aviation and medical research is 155 persons, and $3,326,000.

Senator MONRONEY. They have to train all medical examiners who examine pilots, transport pilots, and air traffic controllers and prepare for the examinations, as well as appeals from private flyers, is that correct?

Mr. HALABY. If I could just finish the answer to Senator Allott's question, the number in the nonresearch area, the operating area for 1963, the total request is how much?

Mr. HARPER. 169 positions and $2,543,000.

Mr. HALABY. Those are the men who work in our seven regions with the customers of the Agency, rather reluctant customers often, because they are being physically examined. These are the employees who help train doctors to be aeromedical examiners. They are the ones who supervise the appeals as they come up to me for exceptions to our medical standards.

Most of those exemptions are cases where a man has had a heart attack, has diabetes, or has had some kind of psychosis or neurosis. We would appreciate it if you would give these funds and positions, and believe, I guess, a little on faith that we are going to hold this program down. We both know that we will face you again next year and you have a constant check on us, but we request that you not put a

limitation so that if we need to go up $5,000 or $10,000 because we are on the trail of something very important that we can do it.

NEED FOR RAISING LIMITATION

If you feel there must be a limitation, we would appreciate it if this limitation were raised to $5,869,000, in order to give us what we need.

Senator ALLOTT. Either in terms of positions or money or both?

Mr. HALABY. I presume if you raised it you would do both.

Senator ALLOTT. You would like to have both.

Mr. HALABY. Yes, sir.

Senator SALTONSTALL. Mr. Chairman—are you through?

Senator ALLOTT. Yes, for the moment.

CHOICE OF FACILITIES

Senator SALTONSTALL. May I ask this question, on the broad general subject you list on page 4 to the top of page 5, a very substantial number of facilities that have been authorized and funded and already put into operation during fiscal 1963.

You say you are going to need the $28,600,000, or a substantial amount of it, if you are going to put these facilities into operation. Now, my question is this: Will the facilities go to waste if we don't give you the money to operate with? The House has included $15 million for equipment and facilities. All these bills, as you well know, are a compromise to a great degree. If we had to compromise with the House from the point of view of safety in aviation and service in aviation by this Agency, it would be much wiser to try to insist on the operation of these facilities that are now being authorized and built rather than to build new facilities.

Am I correct in that statement?

Mr. HALABY. Well, sir, that would be a judgment for the Congress to make. We believe we must go forward with both and that this is the worst possible time to make what, I think, would be an unwise choice.

Senator SALTONSTALL. I am not saying I am in favor of it. It would seem to me it would be very unwise for us to have 18 long-range radars or 49 very high frequency omnifrequency directional range which you exempt and which are already built and ready to be installed that we can't operate rather than to say build something new that will require additional operations a year from now.

I am not saying I am in favor of it, but if you would like to compromise, it is much wiser to compromise that way than the other way around, is it not?

Mr. HALABY. Well, sir, I just feel that we need both of these items so badly that the choice can be readily made by restoring the full amount.

CRISIS IN AIRSPACE

If we weren't in the midst of what I feel very strongly is a crisis in the airspace and if we weren't going to be in the midst of it for at least 3 or 4 or 5 more years, then I think we could juggle choices like that, but knowing what I knew before I came to this job and having grown much older and a little bit wiser in the last 17 months, I just

am very certain that this is not an area in which to compromise or curtail yet. I can assure you that that day is coming and we have a very definite step-by-step systematic program for bringing it to you as soon as we can, but it is not here yet.

I think the path is smooth compared to that of a political executive who seeks to close down some facility.

CONSOLIDATION OF ROUTE TRAFFIC CONTROL CENTERS

We have in the last few months consolidated 8 out of 29 air route traffic control centers. We consulted all of those involved. We convinced most of them that this was in the interest of economy and safety and that we will, over the coming 16 years—the useful life of a center—that we will save over $100 million.

Now, we are not just figuring out ways to spend money. We are figuring out ways to save big money, but we don't do it as we see it by cutting back on equipment needed or by leaving the already installed equipment inoperative.

OPERATION OF PRESENT FACILITIES VERSUS CONSTRUCTION OF NEW ONES

Senator SALTONSTALL. I wouldn't expect you to take the position you are advocating, but we have got to be practical and be realistic. What I want to try to find out is which would be the desirable way to compromise if we had to compromise.

If we had to compromise, it seems to me it is perfectly clear we have got to operate what we have built first and then decide what to do, how much new building to establish.

That is a fair statement, is it not?

Mr. HALABY. There is very great logic in that, Senator. I guess, as you say, I am an advocate and as such I could not admit that this was a fair choice.

Senator SALTONSTALL. I respect you for that opinion. You would not be any good on your job if you didn't have it.

MEDICAL FACILITY IN OKLAHOMA CITY

Senator ELLENDER. Mr. Halaby, as I understand it, what you are trying to do is to carry out what Congress helped the Agency to establish and that is this hospital or whatever facility you call it, Oklahoma City.

Mr. HALABY. Yes, sir.

Senator ELLENDER. Now you speak of rental of the amount of $700,000-some-odd.

Mr. HALABY. Yes, sir.

Senator ELLENDER. Who owns the hospital, the facility?

OWNERSHIP OF HOSPITAL

Mr. HALABY. There is a rather unique arrangement between the Government and the Oklahoma City Airport Trust. It is a public corporation set up under legislative authorization in the State of Oklahoma. This airport trust which has public members as trustees has bond authority and issues bonds at the going rate and then builds

and leases on a reasonably long-term lease to the Government various buildings at the aeronautical center.

This building called the Civil Aeromedical Research Institute is the latest in what is the outstanding civil aviation center of the world. We pay them rent on a long-term lease at about the most economical rate of any rental in any Government building anywhere.

Senator ELLENDER. Was the building in question constructed for these purposes?

Mr. HALABY. Yes, sir.

PAYMENT OF RENT

Senator ELLENDER. And we are obligated to pay this rent?

Mr. HALABY. Yes, sir.

Senator ELLENDER. And if we don't pay it? I mean if we fail to pay it, there would be an obligation against us?

Mr. HALABY. Well, we would not default because we are obliged to pay it.

Senator ELLENDER. Well, you would have to close it, would you, if you didn't have the money to operate it?

Mr. HALABY. We would have to cut into the staffing to maintain it, the equipment to put into the laboratory and the number of people who would man it.

RELATION TO ARMED SERVICES

Senator ELLENDER. To what extent is there cooperation between your Agency and, let's say, the armed services—they get millions of dollars for research in the same field that we are talking about now.

Mr. HALABY. Yes, sir.

If I may, I would like to refer to our expert on that, the Civil Air Surgeon, who is Dr. James Goddard. He is a very highly respected member of the Public Health Service and he is in overall charge of both the medical standards operating program and the research program.

I would like him to tell you what safeguards he has built into this program, some of which he is not too happy about because he feels he could spend more money wisely and he can tell you just what we do to avoid any duplication.

Senator ELLENDER. What I would like to have is the relation to facilities already constructed. We have made studies in the past through the armed services and NASA, and I am just wondering why couldn't it be handled together?

COST OF BUILDING

Senator MAGNUSON. Before we do that, how much did the building cost that you are in?

Mr. HALABY. $5.9 million, approximately $6 million, and it will be completed and ready to open this fall.

Senator MAGNUSON. And you are paying them $750,000 a year?

Mr. HALABY. $825,000, including utilities and maintenance.

Senator MAGNUSON. Why would that be lower than any rental?

Mr. HALABY. Well, this is laboratory space and it has special construction and facilities.

Senator MAGNUSON. Well, it doesn't make any difference what it has.

Mr. HALABY. It has 215,000 square feet of space.

Senator ELLENDER. One percent a month.

Mr. HALABY. It is special purpose research laboratory space.

Senator MAGNUSON. I want to know what it cost them to build the building.

Mr. HALABY. I see what is troubling you. We have got maintenance and utilities in this figure. The actual rent——

ANNUAL PAYMENTS

Senator MAGNUSON. How much are you paying?

Mr. HALABY. To the landlord?

Senator MAGNUSON. Yes.

Mr. HALABY. $541,000 annually.

Senator MAGNUSON. All right. On a $6 million building?

Mr. HALABY. Yes, sir.

Senator MAGNUSON. That pays it off in 11 years.

Mr. DEAN. The amortization for the building as a whole would be 20 years, but specialized equipment built in the building will be amortized within 10 years.

Senator MAGNUSON. But they put in $6 million and you are giving them $540,000 a year.

Mr. DEAN. In annual rent. That is correct.

Senator MAGNUSON. Yes. It doesn't make any difference what is in it or what it is. They are getting back in 11 years what they put in.

Mr. HALABY. The rent drops at the end of the amortization period to——

Mr. DEAN. To mere cost of insurance.

Senator MAGNUSON. Let's have it clear. You are paying them for the building.

Mr. DEAN. This is correct. The only way in which the airport——

Senator MAGNUSON. Why didn't we build it ourselves?

ARRANGEMENTS WITH MUNICIPALITY

Mr. DEAN. The aeronautical center, Mr. Chairman, is a major facility which Oklahoma City has provided for our school purposes, and hangars, because they own the airport. They set up a trust to accomplish this.

Senator MAGNUSON. This is a kind of peculiar lend-lease bill with the FHA and which we abolished.

Senator ELLENDER. Senator Magnuson, I just remarked to my good friend Senator Monroney that the two doctors that we heard seem to want to put up something along the same line, to have a center for civil defense training.

Senator MAGNUSON. I don't say it is a bad deal for the Government, but it is not any particularly good deal financially to pay for the building in 10 years, 11 years.

Mr. HALABY. We took into consideration what it would cost to lease the building elsewhere and what it would cost to build the building.

CONGRESSIONAL PROHIBITION AGAINST LEASING

Senator MAGNUSON. The Congress about 2 years ago, both Appropriations Committees, said no more of this leasing business. If you need a Federal building, come in and let it stand on its merits and build it. We cut it all out. We still have a few hanging along that we had contracts with but we abolished the whole principle of lend-lease that got started with post offices and rentals because we found—we had the figures. You remember, Senator Ellender, it cost us about 40 to 45 percent more in the long run. So we said let's build them and then we own them.

Mr. HALABY. If I could go back a little bit, well before my time, but when the Senator——

Senator MAGNUSON. Yes, it was before your time. It was a peculiar arrangement. We kind of eased into it, got into it and couldn't get out.

Mr. HALABY. Well, I am not sure if I were running a corporation but what I wouldn't regard this as a good one to stay in, Mr. Chairman. I don't want to go back and explain why it was conceived this way, but here was a field, here was a city willing to put up the dollars at cost, build the whole complex in one compatible, integrated center.

Senator MAGNUSON. If you paid them $500,000-some a year, there are a lot of cities that are willing to do that.

Mr. HALABY. Well, it is a cost. They are not making anything on it.

Senator MAGNUSON. No, but a lot of cities to get the facilities there——

Mr. HALABY. Yes, sir.

HIGHER COST OF LEASING

Senator MAGNUSON. This is a good place for the facilities because I understand that weatherwise and all this business but I don't think we should create the impression that there has been any great deal of generosity in this Oklahoma Trust group in this building. I mean I don't say it is a bad deal and there were good reasons for going there in the beginning, but we did ease into this. It is too bad that 4 or 5 years ago we didn't build our own building and we are through with it on a regular public building program. In the long run, it costs a little more.

AGREEMENT WITH OKLAHOMA TRUST GROUP

Senator MONRONEY. Mr. Chairman, let me just say this. This committee went into this thoroughly at each level. We had had millions of dollars worth of radar equipment stored in tar paper shacks there in World War II. They needed storage facilities and needed training facilities. The Trust agreed that the Government will get some of the buildings, I think it is at the end of 10 years.

Senator MAGNUSON. We had the right to take title on this lend-lease business, some 10, some 15, some 20, but Senator Ellender and I went into it in great detail and found this cost up from 40 to 48 percent more, so we abolished the whole thing, and I am not complaining where it is located. I think it is good reason for it to go through and you had all these other facilities around, but I just want the record to

show the Oklahoma Trust Co. is going to get their money back to the tune of over $500,000 a year.

Mr. HALABY. Right, and I am fraid I didn't make clear that that cost per square foot was $2.05 for building rent and 48 cents amortized labor equipment. The equipment is on a 10-year amortization base.

Senator MAGNUSON. And I think in all fairness, too, remember, we had General Services go over this on comparable cost figures, but it was just the same as any other lend-lease building we have had.

Mr. HALABY. We have had a similar proposal from at least one other city.

Senator MAGNUSON. Well, I didn't want to belabor the point. I just wanted to bring these figures down.

Doctor, you were going to answer Senator Ellender.

PREVENTION OF DUPLICATION OF SERVICES

Dr. GODDARD. Yes, I am Dr. Goddard, Senator Ellender.

There are three ways in which we work with the military services so that we have no duplication. The first way is that we have appointed representatives from the office of the Surgeon General to our Council of Research Advisers. These are men who are knowledgeable as far as the military programs in medicine are concerned. They review our research programs and point out to us areas where practically we won't have to initiate an activity because they are conducting this type of research.

The second method is that, we are a founder and participant in the National Science Foundation. This is a foundation which is a nonprofit group here in Washington where all research groups are encouraged to submit reports of their projects at the time they initiate them. So here again we have early knowledge of what people in universities and industries are doing that is applicable to our field.

The third method of avoiding duplication is through our participation in professional meetings where we work with the Air Force, the Navy, and the Army.

I should point out at this juncture that the services have most of their investment in aerospace medical research on the space side and this is appropriate. This is the direction their mission is pointed. Yet, we in civil aviation continue to have problems that require solution.

ABANDONMENT OF FORMER PROGRAM

Senator ELLENDER. But this space problem came up not too long ago. Before that, they were doing the work that you are now contemplating doing, using the facilities—did they abandon that?

Dr. GODDARD. Yes, sir.

Senator ELLENDER. And you are taking it over?

Dr. GODDARD. Yes, sir. Up to 1935, the civil authority could rely on the work of the civil aviation work of the School of Medicine both in Texas and in Pensacola.

Senator ELLENDER. Have they abandoned those facilities?

Dr. GODDARD. They are there but are working in space medical research and not carrying out the programs which they did in civil aviation, and we have asked the Surgeon General for cooperative

projects to save the cost of large pieces of fixed equipment. To the extent that these are available to us, we make use of them, but in most instances these facilities are completely tied up with space medical research projects.

OTHER FACILITIES IN USE

Senator ELLENDER. Have you any facilities at all other than the one we are now talking about, and if so where is it located?

Dr. GODDARD. We are now housed, Senator, in a temporary facility in Norman, Okla., some World War II barracks which do not give us the heavy equipment, the type of facilities, the laboratories that are needed and provided in this new building. We think we can do a much better job. We are proud of the contributions we have made in the last year and are looking forward to producing even more when we get into our new building.

WORK WITH UNIVERSITY OF OKLAHOMA

Senator ELLENDER. Now this work you contemplate doing, is it in conjunction with a university or professors at a university?

Dr. GODDARD. I would point out, Senator, that we have 32 of our staff who hold appointments at the Medical School of the University of Oklahoma, so we have a close tie-in and we think this is very advantageous.

RESEARCH AT GEORGETOWN MEDICAL SCHOOL

Additionally we have a research facility located here at Georgetown Medical School, which is a clinical research facility directing its efforts mainly toward solving the problems of a physiological age rating.

You will recall we had this problem of age 60 with our air carrier pilots and as physicians we didn't really like to say when you reach your 60th birthday chronologically that means you have to quit.

Senator ELLENDER. Personally.

Dr. GODDARD. Right, but being practical we said this is the best we can do. Now, we are doing research which we hope can enable us to get around that.

SPACE AND PERSONNEL ARRANGEMENT WITH UNIVERSITIES

Senator ELLENDER. If the Congress gives you the money you now request, will you continue the one in Georgetown?

Dr. GODDARD. Yes, sir, that is scheduled for continuation.

Senator ELLENDER. Is that in conjunction with the university also?

Dr. GODDARD. Yes, they work very closely with us.

Senator ELLENDER. How much did you contribute toward the payment, let's say, of the operation of Georgetown or Oklahoma, the University of Oklahoma?

Dr. GODDARD. Sir, we operate a facility housed in a portion of Georgetown Medical Center. We simply lease that space from them. We do not contribute.

Senator ELLENDER. And use their professors?

Dr. GODDARD. And use their professors and, in turn, we permit some of our staff to carry out visiting rounds and lecture occasionally.

RESEARCH CONTRACTS WITH COLLEGES

Senator ELLENDER. The reason I am asking you, Mr. Halaby, is this: I also served on the Subcommittee on Armed Services and it is in the record of Armed Services of this year's hearings that except for the fact that we contributed heavily to operate Princeton University, Princeton University would have closed. Harvard is another one. Yale, I think, is in it too. In other words, the contributions of our research money are just growing like Topsy. A lot of universities are becoming dependent on research grants. I believe there ought to be some way to end that.

Mr. HALABY. Neither of these is an instance of that sort where you let a research contract to a university, then they add their overhead and divert their staff from teaching.

Senator ELLENDER. I know, but you pay the professors there.

Senator MONRONEY. No.

Senator ELLENDER. Yes, you do.

Senator MONRONEY. No.

Senator ELLENDER. Well, you are contributing rent.

Who pays the professors at Georgetown for the time they devote to your work? Don't you contribute?

Mr. HALABY. To the individual.

Senator ELLENDER. Certainly. That is what I am talking about.

Dr. GODDARD. Sir, we do have a number of professors who act as consultants to us.

Senator ELLENDER. And you pay them for it.

Dr. GODDARD. And we do pay them as we pay any consultant in the Agency.

Senator ELLENDER. And that pays to operate the university, which is all right, I guess, but I find and—I believe Congress ought to look into it a little deeper—I find that we are going a bit too far in indirectly assisting many of these universities. I want to do it directly if we do it at all, but just doing it through the back door, I don't like.

ADVISORY COMMITTEES

Senator MAGNUSON. Let me ask you, Doctor, do you still have your advisory committee?

Dr. GODDARD. Yes, sir. This is an ongoing activity, the Council of Research Advisers. The next scheduled meeting is October 14, 15, and 16.

Senator MONRONEY. And they contribute a great deal to that whole——

Dr. GODDARD. Yes, indeed, and also we have the Civil Air Surgeons Advisory Council which further pull us together.

Senator MAGNUSON. All right.

Any further questions on Oklahoma?

Senator ALLOTT. Yes, sir.

Senator ELLENDER. Off the record.

(Discussion off the record.)

Senator ELLENDER. One more question I want to ask you:

FLIGHT INSPECTION OF AIR NAVIGATION

Outside of this medical business, I notice that you took over what the Department of Defense did in supporting flight inspection of air navigation. When did you take that over?

Mr. HALABY. It is a progressive program, Senator. The first step was to do some—first let me explain what it is.

The facilities on the grounds have to be inspected and tested to see that they are sending out a signal and that it is being sent in an accurate manner, the way it says it is going to on the chart. It is kind of calibration and constant testing. We do it at high altitude as well as low altitude on approach.

We found that the military were doing this with their airplanes and crews sometimes right alongside of our facility. I would say 3 years, there has been—I am going to ask General Grant, the Deputy Administrator, to supplement this, because here you have the man who set up the Air Force Communications Service and who has been both in the Air Force and in FAA helping to get this military flight inspection into one coordinated program.

INITIATION OF FUNCTION

Now, when did we first start doing this work, General Grant?

General GRANT. It starts on the 1st of September. We are budgeting for it for this year. This would be the first time that we will assume financial responsibility for any portion of the military flight inspection.

Senator ELLENDER. When you say "we," you mean——

General GRANT. I mean the FAA.

Mr. HALABY. We started doing this for the Navy and Army on a reimbursable basis about 2 years ago, didn't we?

General GRANT. I think it was 2 years ago, yes.

TRANSFER FROM AIR FORCE

Mr. HALABY. Now, this $5.5 million would enable the Air Force who are quite willing to transfer some of their aircraft and on a temporary basis some of their crews. We will gladly assume the responsibility and the same airplanes, the same crewmen, the same engineers would do it for all the navigation facilities assigned to both of our programs.

Senator ELLENDER. Your outfit would do it for all concerned, Army and Navy?

Mr. HALABY. Yes, sir. Instead of us being reimbursed by Army and Navy, you would, we hope, appropriate the funds requested, and then all of the appropriations for this purpose would be made to the FAA.

Senator ELLENDER. But I notice you are including their $5.5 million. Does that cover the entire cost that was done by the Army, the Navy, and the Air Force?

General GRANT. This is the amount required to finance the Army and Navy flight checking which we are doing and to take over this function from the Air Force.

Senator ELLENDER. But how much more would you need in the future?

Mr. HALABY. This is a part-year cost. I think the full-year cost is approximately $9 million, isn't it?

Mr. PRILL. It is $9.5 million.

ORIGIN OF FULL-YEAR FIGURE

Senator ELLENDER. Where do you get the figure $9.5 million? Is that what it costs the Army and Navy?

Mr. PRILL. This is the full-year cost.

Senator ELLENDER. But where would you get your figure of $9.5 million? Is that what it costs the Army and Navy to do the work?

Mr. PRILL. No. I can't speak very well for the Army and Navy.

Senator ELLENDER. No, but we are all getting it from the same pocket, you know, Uncle Sam, and I am wondering the extent to which the Army and Navy are reducing their budget in order that you may get this.

Mr. HALABY. They told us what facilities they wanted inspected and how frequently and that gave us a facility and total flying hours count. That was added to the already in progress civil program and the total then for their full-year program was $9.3 million. Because it wouldn't be a full-year program in 1963, we subtracted $3.8 million and we got this $5.5 million.

Now, what it was costing them to do it is a question we will try to ascertain from the Department of Defense so that you will have figures.

DEDUCTION BY ARMED SERVICES

Senator ELLENDER. Well, are they getting out of this picture altogether? Will you have entire charge of it?

General GRANT. That is the plan; yes, sir.

Senator ELLENDER. We are going to find out whether or not they deducted any of this from the other budget.

Mr. PRILL. We have worked on this with them, Senator.

Senator ELLENDER. How is that?

Mr. PRILL. We have worked with the Department of Defense closely on this and we are not naive about this question. The big difficulty for us would be separating out the costs of the large Military Establishments for this particular part of the work. It is our belief that we will do this at a considerably reduced cost because we are incorporating it into our own workload.

Senator ELLENDER. I know that.

Mr. PRILL. So that there will be overall intermediate and high altitude programs. The military inspection for these altitudes is almost done free of charge because you can read it on our automatic processing tapes.

Senator MAGNUSON. You want to make a bet it is still in their budget?

Senator ELLENDER. Sure it is. I am surprised they will even permit you to do this, give up the power they have. I wouldn't be at all surprised that this amount is still in the budget. So we will just look into that a little later.

Senator MAGNUSON. I hope the committee will stick to these regular items here. This is on operations now.

Senator ELLENDER. That was a regular item.

FLIGHT INSPECTION DUTIES, 1962

Senator MAGNUSON. Yes. That is on operations.

Senator ALLOTT. First of all, my recollection is—and if I am wrong I would like to be corrected—last year you testified you had already taken over Alaska and somewhere else. Is this correct?

Mr. HALABY. You are talking about military flight inspection?

Senator ALLOTT. I am talking about flight inspection.

It is my understanding that you either at that time had taken over part or wanted immediately to take it over. What I want to know is what is the exact status of this now. Have you taken it over or not?

General GRANT. This was the military advisory service that we took over in Alaska and have now taken over throughout the United States. We are discussing the facility checking service which is the one I am talking to.

Senator ALLOTT. Right. Where are we today on the flight inspection service we are going to take over?

Mr. HALABY. Let me go back very briefly.

COMMON CIVILIAN-MILITARY SYSTEM

You recall when you passed the Civil Aviation Act you said you wanted a common system so it would cover civilian military aviation. That meant that traffic control navigation and communications facilities to the extent that the military were willing would be financed and operated by the Federal Aviation Agency.

Now, one of the first steps that was taken was in what we generally refer to as the communications service. This is a flight plan and flight following service the responsibility for which has been completely assumed by the Civil Aviation Agency.

Senator ALLOTT. As of this year. Completed this year.

Mr. HALABY. I believe it was completed last year.

Senator ALLOTT. Last year.

Mr. HALABY. Additionally, the tower here at Andrews Air Base which is about to become the busiest airport in the world is operated by the Federal Aviation Agency staff. We also operate and maintain radar approach controls at some military bases.

Then last year I believe your recollection is correct, we were about ready to take over the military flight inspection in Alaska as the first step in the program.

After Alaska, because that is a largely FAA-military operation we would go on into other areas and do some of this work abroad as we now do for civil aviation in Germany, in Lebanon and in Egypt.

Senator ALLOTT. Did you take over Alaska?

Mr. PRILL. No, sir.

General GRANT. This is programed for September 1. Everything is all set.

Senator ALLOTT. The whole system of inspection is programed for September 1 if you get the appropriation?

General GRANT. It is to be phased in starting in September and it will be completed by next spring.

Mr. HALABY. That is why we are asking for only part-year funds.

Senator ALLOTT. So if these funds are accredited, we could expect from here on out, this program would be funded entirely by FAA and by the end of this year you would have taken over the operation of inspection of facilities completely. Is this correct?

INSPECTION FUNCTIONS

Mr. HALABY. Yes, sir. You realize there will still be a great number of military facilities operated by the military, that we are not taking over to operate. We are simply inspecting the calibration and alinement and slope of their facilities, as well as the civil facilities.

Senator ALLOTT. I am talking about calibration and inspection of the navigation facilities themselves.

Are we talking about the same thing?

Mr. HALABY. Yes, sir. I was concerned that you thought we were taking over the actual towers and radar approach controls.

Senator ALLOTT. You are in some instances.

Mr. HALABY. Only in a few, yes.

Senator MAGNUSON. Why can't you take them all over?

Mr. HALABY. Well, that is the intent of the Federal Aviation Act. There are several reasons. I am sure you do not want me to spend the whole day explaining them.

We are not capable of taking over some of them. We do not have the equipment, procedures, people. In other cases they do not want us to take them over, for instance, Strategic Air Command bases.

Still other cases we just have not advanced that far in our system.

I feel we ought to be going faster in this direction. But we are going apparently as fast as it is interdepartmentally feasible to do so.

Senator ELLENDER. As you will be permitted, I guess, by the Armed Forces.

Senator ALLOTT. There probably will be some areas that they will never want you to operate.

OVERLAPPING IN MEDICAL RESEARCH

Now, can we go back to the Medical Research Center for just a moment?

I expressed my doubts last year, after sitting on the Labor-HEW appropriation involving research, and the NSF appropriations involving research, the Defense appropriation involving research, and this appropriation involving research, all in the same field I do not want to overstate the case, but I think that there is still a tremendous overlapping of the effort here, Dr. Goddard. And if you had sat and listened to the testimony of the military people this year, as Senator Ellender and I did, you would have found they talked a great deal also about general aviation medical research, and it was not all confined to space.

This is an area I feel ought to be looked at.

Beyond that, I do not want to say anything.

OPERATING METHOD OF ATLANTIC CITY CENTER

Then I would like to ask you this, on "Operations."

I have heard, and I would like to know about it, whether or not the Research and Development Center at Atlantic City is planned or programed under a lend-lease purchase arrangement thing such as we have at Oklahoma City?

Mr. HALABY. We have been offered what you refer to as a lease-purchase proposition like the one at Oklahoma City, by a comparable organization in Atlantic City. We have not accepted that offer.

We have been advised by your colleagues in the other body that if we wish to modernize that facility, which was built for the Navy in the middle of World War II, and which is now pretty dilapidated, that we should come and get appropriations to build a center that would probably cost about $35 million. We were told that we should not accept the same kind of deal that we have at Oklahoma City.

Senator ALLOTT. Now, I am still on "Operations."

Now, you stated that your justification here, and I think I understand this, of the $29 million, that you need $25 million of this merely to operate the facilities that are in operation right now.

Do I understand this correctly?

Mr. HALABY. Yes, sir; that is correct.

OPERATION OF NEW FACILITIES

Senator ALLOTT. You say this will cost the Agency $24.4 million to carry on activities at the June 30, 1962, level. So that of the $29 million allowed you by the House, you would be able—you would have left only $3.7 million to operate the new facilities.

Now, with respect to the items shown on pages 4 and 5 of your statement, are these items, you say, that will be installed and ready for operation—are these on order? Are these on order? Are they in the pipeline?

Mr. HALABY. Yes, sir.

Senator ALLOTT. All of them?

Mr. HALABY. Yes, sir.

Senator ALLOTT. And how much do you say will be required additional—you have disposed of the $37 million in one way or another. How much is going to be required additionally to operate these facilities which you intend to put into service this year?

Mr. HALABY. Approximately $14 million.

ADDITIONAL FUNDS REQUIRED

Senator ALLOTT. So that $14 million would have to be added on to the $29 million.

Mr. HALABY. That is right.

Senator ALLOTT. In order to provide for the operation of our present facilities and for the operation of the facilities which you now have in the pipeline scheduled for construction during this year.

Mr. HALABY. Yes, sir.

AIR ACCIDENTS

Now, you have brought us back to where we were a moment ago in regard to the services. And I think particularly for those who are concerned—and I think we all are—about the near misses and incidents

that we are having in the airspace, these new services set forth at the bottom of page 5 would have to be abandoned for the coming year.

Senator ALLOTT. And that would be in addition to the $14 million.

POSITIONS AND FUNDS NEEDED

Mr. HALABY. Yes, sir. And they would total for this year about 750 positions and $3.7 million. They are the areas of positive control, radar handoff, the national flight data center, and related facilities and services.

Senator YOUNG. Would you deal with that point?

Does that include the omnirange facilities?

Mr. HALABY. Yes, sir. There are 49 very high frequency omnidirectional ranges that we would not be operating, either because of lack of operating or maintenance personnel. The last category I discussed are additional services that we wish to put into effect this year, and they do not include VOR's or omnidirectional ranges, such as you have in mind.

OMNIRANGE FACILITY, DEVILS LAKE, N. DAK.

Senator YOUNG. I would like to ask Mr. Thomas about an omnirange request for Devils Lake, N. Dak., by the civil aeronautics commission of the State, which is also supported by the National Guard and the North Central Airlines. I understand you are going to furnish me with information.

Mr. THOMAS. Yes, sir.

Senator YOUNG. Would this be a part of these funds that were deleted by the House.

Mr. THOMAS. Sir, if the Devils Lake omnirange were on the list of 49, we would not operate it. I did not find it on the list. So I will have to check on its status.

Senator YOUNG. It would come under this appropriation, though, that you are talking about now.

Mr. THOMAS. Yes, it would come under this appropriation if it were on the list. I didn't find it on the list.

Mr. HALABY. It falls into this category. But you are saying you are not certain whether Devils Lake VOR is in this program or not.

Mr. THOMAS. The Senator showed me a letter dated in May I am not familiar with, and I will have to check to see the status of the request.

CORRESPONDENCE ON FACILITY

Senator YOUNG. Mr. Chairman, could I at this point have inserted in the record a letter from the adjutant general of North Dakota, Heber L. Edwards, to the director of the North Dakota Aeronautics Commission, and one from Mr. Wallis, of the North Central Airlines, also, to the director of our aeronautics commission. These letters indicate the use which would be made of such a facility.

Senator MAGNUSON. Very well—without objection.

(The letters referred to follow:)

NORTH CENTRAL AIRLINES, INC.,
Minneapolis, Minn., May 31, 1962.

Mr. HAROLD G. VAVRA,
Director, North Dakota Aeronautics Commission,
Bismarck, N. Dak.

DEAR MR. VAVRA: We are enclosing a copy of the number of instrument approaches made at Devils Lake since we began keeping records there in June of 1959.

If you require any other informaton regarding our operations at this station, please let us know.

Yours very truly,

NORTH CENTRAL AIRLINES, INC.,
G. F. WALLIS,
Director, Flight Operations.

North Central Airlines instrument approaches, Devils Lake, N. Dak.

STATE OF NORTH DAKOTA,
OFFICE OF THE ADJUTANT GENERAL,
Bismarck, May 24, 1962.

DIRECTOR,
North Dakota Aeronautics Commission,
Bismarck, N. Dak.

DEAR MR. VAVRA: We request every consideration be given the installation of a terminal VHF omnirange (TVOR) navigation/approach aid, at Devils Lake, N. Dak.

The North Dakota National Guard and other State and Federal agencies have a vital requirement for an approach aid at Devils Lake. Among other agencies located in this area, Camp Gilbert C. Grafton is a vital military installation that requires access by military aircraft in all kinds of weather.

The importance of this military installation is witnessed by some of the following functions performed at Camp Grafton:

Annual field training site for the North Dakota Army National Guard.
Secondary headquarters for the adjutant general of North Dakota.
Emergency headquarters for the North Dakota National Guard.
Emergency headquarters for top State government agencies.
Emergency headquarders for State civil defense agency.
National Guard field maintenance shops.
National Guard State maintenance headquarters and military and civil conference site.

The North Dakota National Guard is estimated to have a yearly requirement of 170 instrument approaches at the Devils Lake Airport.

The importance of the facility requires constant aircraft support and transportation. Access to Devils Lake Airport at any time, during all kinds of weather, is of vital importance to the state of preparedness of North Dakota military and governmental agencies.

Prompt consideration given this matter will be greatly appreciated.

Very truly yours,

HEBER L. EDWARDS,
Major General, the Adjutant General.

EXPANSION OF ACCIDENTS BRANCH

Senator ALLOTT. Now, on the point you just made, Mr. Halaby, it is my understanding that your Accidents Branch is to be expanded with 102 new positions.

We just had your sister agency or brother agency, the CAB, here this morning, with respect to investigation of accidents, and where the responsibility for these accidents lies.

How do you justify, if this figure is correct, 102 new positions for accident investigation?

Mr. HALABY. I do not recognize the figure, Senator. Could you give me a little more detail on it? I do not believe we have either authorized or requested any such number.

There is a rumor floating around town that we have elaborate plans for expanding the training of our inspectors. But——

Senator ALLOTT. No, this has nothing to do with that. This is investigation. If I am wrong on that, we will forget about it.

"FLIGHT STANDARDS SAFETY PROPOSAL"

Senator MAGNUSON. Well, would you yield just a moment there.

It is my understanding that you have got an in-house proposal circulating which is entitled "Flight Standards Safety Proposal" which would establish a staff level branch of 32 aircraft accident field investigators, 58 new positions in Accident Investigations, to be located in Washington, D.C., and 12 clerk-stenographer positions. It has also been reported that the proposed table of organization for this new branch will be almost an exact duplicate of the CAB's Bureau of Air Safety, including powerplant specialists, air frame specialists, and so forth. But your budget estimate makes no such suggestion.

Is that correct?

PROPOSAL DISAPPROVED

Mr. HALABY. Well, Senator, you have been advised of something that may be circulating in part of the 3,000-man FAA staff in Washington that has not come to my attention. And on those terms, if it were presented to me, it would be disapproved.

Senator MAGNUSON. That is what I would think, you would disapprove it.

PROVISIONS OF CIVIL AVIATION ACT

Mr. HALABY. Now, let me tell you what we do have under discussion.

The Chairman of the Civil Aeronautics Board and I have labored, I think, quite industriously to operate under the Federal Aviation Act, which not only permits but directs a certain amount of duplication. And I believe it was the thought of the Congress that there should be

some check and balance here, particularly in the area where we might be at fault, in the operation of a center or a tower—it was not proper to have us investigating ourselves. And although, as I understand the legislative history, this was debated pro and con, it was decided to give the formal judicious or semijudicious responsibility to the CAB for finding the probable cause of the accident.

They also have within their authority studies in the prevention of accidents.

PROCEDURE AT KNOXVILLE

Now, I am sure you realize, and I am told that this Knoxville accident was used as an example, that the Civil Aeronautics Board man was there, I believe, this morning, and he was designated as the accident investigator in charge.

I have a man down there, in fact, I had a man there on the powerplant of the Electra.

Dr. Doddard has pathologists too. If there had been fatalities they could have gone to work.

All of these men are there to do two things. One, to assist the CAB investigator in charge in the finding of the probable cause.

Second, to report back to me immediately if there is anything they find that we ought to do different next time an airplane lands. If we made a mistake, and we could correct it, it would be my responsibility to take action immediately.

CAB FUNCTION TO RECOMMEND

Now, the Civil Aeronautics Board does not take action in these matters. The sharpest action they take is to write or acquaint me with their recommendation. So they have a judicious kind of finding responsibility. But the responsibility for action falls on the FAA. So these men go down there and they report back.

AMICABLE ARRANGEMENTS WITH CAB

Now, if you will recall 2 years ago there was quite a bit of elbowing and friction and a lot more heat than light on this subject. I think in the last 18 months Mr. Boyd and I, and other members of the Board, and most of our staff associates, have worked arm in arm rather than fist against fist in this area.

There have been one or two misunderstandings, but remarkably few.

In our judgment, this has been helpful.

Now, I do not think there can be too many people working on safety. I think that if you are going to err in this matter, it would be better to err on the side of having a few more making the sky and the airport and the neighborhood around it safe, than to have too few.

SINGLE ACCIDENT INVESTIGATION TRAINING CENTER

We are discussing right now, Mr. Boyd and I, a plan for having a single accident investigation training center. It would be under the leadership of a man designated by Mr. Boyd. It would utilize the facilities and resources of both CAB and FAA, and both the CAB personnel and FAA personnel would be eligible to go there.

The CAB would get a kind of Ph. D. in accident investigation, because they are going to lead these investigations. Our fellows would get an AB, so to speak.

But I know of no plan for 102 new slots with substantial additional support. And if one were presented, I would look at it very hard, and I would be sure that it was in formation with the Board, not in collision with it.

Senator ALLOTT. Well, I do not think the CAB was critical this morning in any sense of their present relations with you. You ought to understand that.

REORGANIZATION AND REALINEMENT

Mr. PRILL. May I say a word on that, because the chairman mentioned the flight standards proposal. I am very familiar with this. As the Administrator said, this is not a proposal for new positions, not at all. This is a proposal for a reorganization, and realinement which will reduce our workload in accident investigation. We presently spend thousands of man-hours on this.

Senator MAGNUSON. I think the record is clear on that now.

Senator ALLOTT. Well, I just have one other thing here.

NEWS ARTICLE

Here is an article in the News where you are quoted, April 30th:

FAA Administrator Najeeb Halaby, discussing the 3-D radar and other altitude reporting systems under current study says the two have been technologically available for the past 15 years. He blamed the lack of money appropriated by Congress for FAA research in the lack of attention paid to runway safety improvements for the "almost intolerable situation that we as a Nation have been permitting."

Well, I cannot feel that Congress has been negligible in appropriating money for research for FAA, or that they have been very niggardly in providing the personnel and the money for the development of the navigational systems.

Do you feel that they have?

Mr. HALABY. Certainly, Senator—may I have those charts—this committee has been fair and properly skeptical, in, I think, fulfilling the great responsibility that we all have in this area.

I think there is a certain feeling that maybe the FAA might have been given too much too soon. And I would like to attack that idea, if I could, for just a moment, Mr. Chairman. This relates directly to the Senator's question.

I do not recall this statement. I have very frequently said that we are in an intolerable situation. But I do not recall having blamed it on the Congress. I would blame it on the United States, the way we have failed to wake up to this problem until a series of crashes hit us, and subsequently, to the way we have managed the people and money you give us, which has not been of the highest quality.

Now, if you will just look at this briefly with me, I would point out that this shows——

APPROVAL OF BUDGET BUREAU RECOMMENDATIONS

Senator MAGNUSON. Before you leave that—Congress—and I have been on this committee quite a while—Congress, before you came and before the rest of them came—Congress, I think, has pretty near always, in this field, safety and moving ahead, given the FAA or its predecessor practically what the Budget has recommended. And we have always done that, as far as I know. There might be some variance here and there. But in this field of operations, I think we have. We are not experts. We have to take the advice of people who are. We have done so in this whole field.

I think that probably some of the criticism is this thing has grown so fast, because it did not move up under budgetary restrictions, that it looks somewhat awfully big.

Mr. HALABY. Yes, sir. That is exactly right. And that is what I prepared these charts to show.

Senator MAGNUSON. When you get to a point where you have the military and the FAA a few years ago working on two systems of ground control and air traffic control, and then one of them, spending something over a billion dollars, and having not only duplication, but abandoning it, and neither one can use the other, we had better start to take a look at these things once in a while.

Mr. HALABY. Mr. Chairman, I was vice chairman of a group that studied this problem in 1955.

Senator MAGNUSON. Yes.

1955 REPORT ON ACCIDENT SITUATION

Mr. HALABY. The report here dated December 31, 1955, which I helped to write, described the situation which we still have with us today.

There is a picture, for example, of two aircraft on a collision course, and the problem of seeing and being seen and avoiding each other we still have with us—because we still mix civil and military aircraft in the upper air space.

At that time we published a report that there were approximately four near misses each day on the airways. That was December 1955. We have reported faithfully and candidly this crisis in the air space year after year, I believe. Any suggestion that we are trying to hide it, hide the difficulties we face is completely irresponsible.

This study, which was done in 1954–55, showed these near misses.

FAILURE TO REPORT NEAR MISSES

Last year I found that the reports of these near misses had dried up. We were not getting them, because fear of punishment caused those involved not to report. And so in an effort to get as much candor shed on this situation as possible, we let a contract to the Flight Safety Foundation and they have been giving us interim reports.

Now, those reports are unverified, uninvestigated, and in many cases unverifiable and uninvestigable, because they are anonymous.

They report a substantial number of encounters which one or two pilots, or passengers, regard as a near accident.

We have our own reports. We get a report from a pilot that he almost ran into another plane—we then consider all the details from the radio conversation, and where we can we have an inspector at the point of destination meet the pilot, get further details, and then we try to find the other pilot and pin down what happened. If there is a violation, we take enforcement action. That is a much smaller number. There has been a suggestion made that we have refused to disclose all of these instances, that we are hiding something. This is absolutely 180 degrees from the truth.

We want you to know what the problem is—not to get big appropriations, but so that you will know the risks which we are accepting in the airspace.

RISE IN PASSENGER-MILES

Now, the chairman is absolutely right. Most of the shortfalls were a failure to request funds at a time when the public and the executive branch were, I think—and this is not any one particular administration, it spreads over two administrations—were unaware of this tremendous rise in passenger-miles, from 1947, and this tremendous increase in speed and complexity occurring in 1958 and 1959 with the coming of the jet.

Now, there should have been a steady appropriation for research and development, new facilities and equipment, and this period of 10 years from 1947 to 1957, when we knew how to do it, as we had the radar technology, we had the communications technology, we knew here and there, as the Senator pointed out, in the military and elsewhere how to do this. But you were not asked, and on some occasions the appropriations were neither asked nor given. We had substantial growth in aviation activity and right at the moment we were reporting to President Eisenhower in December 1955, the amount of money for research and development, and new facilities, sunk to almost zero.

Now, there was a kind of gulch, or canyon from 1950 to 1957 in terms of money and personnel.

If there had been a steady rise from 1950 consistent with the rise in traffic and complexity of traffic, we would not be asking you for these large sums.

Now, on this chart we try to show just the air traffic control part of the problem. The year 1954 is 100 percent on this chart, and we are, as you can see, up to about 250 percent—2½ times in the 7 years intervening.

We would only need about 18,500 positions to operate the basic system. This chart brings in the elements of the added functions which will require an additional 12,000 positions through 1963.

You can see here, in this request before you, that we are asking for new positions to do these things—positive control, radar handoff, and so forth. That means having, as we have in one experimental area over Chicago, all aircraft within the region at an altitude under constant radar surveillance and positive control.

NEW POSITIONS FOR POSITIVE CONTROLS

We give the pilot directions rather than just information.

Now, in addition, as you have just explored with us, we will take over the flight inspection responsibility of the military.

Finally, we would install in certain very congested centers and areas what we call radar handoff, and this means that where a jet is penetrating, usually at high speed, from one center or facility to another, we have a man and the equipment, communications and radar, to see that there is no gap between the man who is controlling him over here on his approach to New York and the man who is taking him on into Idlewild. And to do that, we need these additional positions and the additional money.

Now, we can go into any amount of detail you want.

I would like to just take 1 more minute, if I may, on one of these other charts to show you that we are not trying to figure out ways to spend money, but we are trying to figure out ways to make sense here.

CENTER CONSOLIDATION PROGRAM

This center consolidation program has generated quite a bit of interest.

Now, long before we had all of the knowledge we have today, we had a United States with sparse aviation activity. Then over the years, particularly with the coming of the long-range jet, we had this kind of traffic pattern on what you might call a typical day. It is concentrated out West, along the coast, Los Angeles-San Francisco, San Francisco-Portland-Seattle.

Then it is very heavy across the transcontinental Atlantic routes, extremely dense Chicago-New York, New York-Boston, Boston-Washington, quite dense on the Atlantic seaboard. And then you can see these other concentrations here. New Orleans is a hub. Dallas-Fort Worth is a big hub. Oklahoma City and Tulsa. Seattle is not only domestic, but international.

Flying out in here in the North Central area is sparser, particularly by the air carriers. But that is not the important thing out here. The important thing is the farmer, the duster, the individual rancher, who is more dependent on the airplane now than he ever was before.

Now, that is the way the traffic looks as you sit at my desk and try to figure out what to do about it.

FORMER TRAFFIC CONTROL CENTER PROGRAM

Here was the way these Air Traffic Control Centers were set up when I came into office.

There are 29 of them. They were set up for reasons I am not quite clear about in the locations where you see by these black dots.

Now, I asked Mr. Thomas and Mr. Blatt and the career men in this agency to tell me if there were no external considerations, only the technical operational efficiency of the system involved, how many centers would we need.

Now, they came back with an answer that said you could probably operate a system with only a handful of centers, maybe 8 or 9, but it would not be efficient. And the efficient number lies somewhere between 18 and 22 centers. And I said in that case, because these costs are rising so fast, the number of people required are so numerous, we should take a step of economy right now.

DISADVANTAGE OF EXISTING SYSTEM

It is not just saving money. Right now, if a man wants to fly from Los Angeles to New York he has to go through seven centers, and every time he is passed off from one center to another, there is a possibility—not a likelihood, but a possibility of error. And therefore there is a safety consideration of great importance here.

Every time we set up a systems maintenance outfit that has to go to work at a center that is unnecessary, we incur new costs and new positions.

So the men came back, on a strictly technical operational basis, and you can see what we have done.

We have tried to make these centers flow with the traffic.

Now, this conclusion, technical as it was, I felt was sound, honest, and objective. We proceeded with the action involved.

As I say, it is not an easy thing to do.

EMPLOYMENT SITUATION

This area up in here has a very substantial amount of unemployment.

Many friends of mine are involved in this, and I had to go and tell old friends that we were going to close the center in their area. And that is not a pleasant thing to do.

POSSIBILITY OF SAVINGS

In any case, we are in the process of consolidating eight of these centers. I believe there are possibilities of further consolidations. But we need to work this out and get the whole system back into balance, and in good spirit, and in good efficiency, before we go any further.

Over a 15-year period, we will save over a hundred million dollars that we would otherwise have had to come and get.

CONCENTRATION OF DEFENSE ACTIVITIES

Now, the last item I would like to point out to you here is we found, and I think Senator Young particularly you might be interested, although there is not much traffic up here in Montana and North Dakota from the air carriers, Northwest and North Central, and Frontier and others I guess get up in here, there is a very heavy concentration of military air defense, surveillance, radar and communications.

Senator YOUNG. On maneuvers right now?

Mr. HALABY. Well, they are in constant maneuver, particularly the Strategic Air Command, and the Air Defense Command. And yet there is a high concentration of radar communications for the Russians coming over the top.

AREA CENTERS

We have two centers in this area—Great Falls and Minneapolis.

Now, again, the easy thing to do would be to just hold everything and pay for the equipment going into them. But the thing we are doing is to join up with the Department of Defense, Air Defense

semiautomatic ground environment centers here, and put our people into these centers, and work side by side with the military and get some additional or double duty out of these defense dollars.

PHOENIX PROBLEMS

Now, you say why can't you do that elsewhere—take Phoenix, for example. The problem in Phoenix is that the flow of traffic is so heavy down here that we cannot move into the Phoenix SAGE Direction Center, because they do not have enough capacity to handle their defense job and they are very congested airways.

So we are starting here, we are consolidating 29 centers into 21, and out of it we believe we will get not only more efficiency, but more safety.

SAVINGS AS AGAINST FORMER PLAN

Now, with all the jobs we save on that, we still are asking you for more positions. I am afraid we will be doing so until we get this system installed.

I am proud to say that another inheritance that I got when I came in showed that we would have to come to you this year for $895 million on a 5-year plan prepared before I came into office. We have pared that whole period for a 5-year increase down, and we are asking you for $100 million less than under this old plan you would have been asked for this year.

Finally, we are not 5 years from our asking for 57,750 employees, as was the plan, but we are holding it to some 4,000 less than the old 5-year plan.

FEWER POSITIONS

Now, I am not trying to make myself out as a hero here. What I am trying to tell you is that while we are asking for some hard operating jobs, we are also cutting back through these savings, including 610 positions that I have cut out in the last year, a number of them here in Washington.

Senator ALLOTT. May I ask—where have those gone? Have they been transferred to other functions of the Agency, or have they been eliminated from the payroll?

Mr. HALABY. We have approximately 44,000 positions now manned and about 3,000 in Washington. The attrition and turnover will absorb those 610. But there are that many fewer positions. And I cannot tell you without giving it to you for the record just how many of those actually left the payroll and how many of the positions were reduced.

Senator ALLOTT. But there are that many less positions.

Mr. HALABY. Yes, sir.

I think it is 610 less positions. But I do not want to mislead you. We do not have 610 less positions today than we did a year ago, because we have been increasing the men under Mr. Thomas and Mr. Prill, and they are out on the microphones in the centers doing maintenance work.

Senator ALLOTT. Personally, I think I understand this. I understand you are going to have to add some more if you put these facilities into operation. There is only one choice. If you put them in,

you have to add the men. Otherwise there is no point in putting them in.

ABSORPTION OF PAY RAISES AND PER DIEM COSTS

Mr. HALABY. We absorb, I think you will notice, the controller pay raises, and the additional per diem that was authorized during 1962. And there are quite a few other savings we can tell you about.

I did want to particularly introduce you not only to General Grant, who is the Deputy Administrator, and who has been the father of the Air Force Communications Service, but Robert Shank, who has just come to us from the presidency of American Systems, Inc., previously vice president of research and development of Hughes Aircraft, where he was the father of many of their very successful electronic systems.

These men have seen our problem, are challenged by it, and are coming in to help out.

And I think—I may be immodest—but I think we have a darn good management here, and that we can give you more per dollar in the coming 3 years than you would otherwise have.

Senator MAGNUSON. We will recess now until 10 o'clock tomorrow morning, and then go into the other items.

(Whereupon, at 4:40 p.m., Tuesday, August 7, 1962, the subcommittee recessed, to reconvene at 10 a.m., Wednesday, August 8, 1962.)

INDEPENDENT OFFICES APPROPRIATIONS FOR 1963

WEDNESDAY, AUGUST 8, 1962

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, D.C.

The subcommittee met at 10:25 a.m., pursuant to recess, in room F–37, the Capitol, Hon. Warren G. Magnuson (chairman) presiding.

Present: Senators Magnuson, Hill, Ellender, Holland, Pastore, Monroney, Allott, Young, Cotton, Saltonstall, and Mundt.

FEDERAL AVIATION AGENCY

STATEMENT OF NAJEEB E. HALABY, ADMINISTRATOR, FEDERAL AVIATION AGENCY, ACCOMPANIED BY LT. GEN. HAROLD W. GRANT, DEPUTY ADMINISTRATOR; ALAN L. DEAN, DEPUTY ADMINISTRATOR FOR ADMINISTRATION; ROBERT J. SHANK, DEPUTY ADMINISTRATOR FOR DEVELOPMENT; CLARKE HARPER, DIRECTOR OF BUDGET; DAVID D. THOMAS, DIRECTOR, AIR TRAFFIC SERVICE; JOSEPH D. BLATT, DIRECTOR, SYSTEMS RESEARCH AND DEVELOPMENT SERVICE; NATHANIEL H. GOODRICH, GENERAL COUNSEL; DONALD S. KING, ACTING DIRECTOR, INSTALLATIONS AND MATERIEL SERVICE; G. WARD HOBBS, DIRECTOR, BUREAU OF NATIONAL CAPITAL AIRPORTS; DR. JAMES L. GODDARD, CIVIL AIR SURGEONS; GEORGE C. PRILL, DIRECTOR, FLIGHT STANDARDS SERVICE; AND COLE MORROW, DIRECTOR, AIRPORTS SERVICE—Resumed

OPERATIONS

Senator MAGNUSON. The committee will come to order. I apologize for being a little late, but I was in another committee, marking up another bill.

We were still on Operations when we recessed last night, and I wonder if there are any further questions by the committee on that particular phase of this?

PERSONNEL INCREASES

Senator ELLENDER. There was only one question I wanted to ask, Mr. Chairman.

I noticed that the number of employees had been increased from 39,963 to 43, 376. Is that strictly in Operations, Mr. Halaby, or is it overall in the whole Agency?

Mr. HALABY. It is for Operations. It is primarily, sir, for the operation and maintenance of air navigation, communications, and traffic control facilities, and the flight standards people, who go out and conduct the tests of pilots and mechanics. Those are the principal increases.

CATEGORIES OF INCREASES

On page 21 of my statement, you will find a breakdown of most of the increases in positions. There are eight different categories on pages 21 and 22.

TOTAL EMPLOYEES

Senator ELLENDER. The question is, though, whether this amount of 43,376 contains all of them.

Mr. HALABY. Yes, for the Operations appropriation.

Senator ELLENDER. In other words, the total amount of employees that you would have, provided the money was made available?

Mr. HALABY. For the operations of the Agency. Yes, sir.

Senator ELLENDER. What else could there be?

TOTAL EMPLOYEES BY DIVISIONS

Mr. HALABY. Well, the budget is broken up into several different items. For Operations, the total number is 43,376. For Facilities and Equipment, 2,274. For Research and Development, 1,295. For maintaining and operating the Washington National Airport, 417.

Senator ELLENDER. Mr. Halaby, what I had in mind particularly was——

Mr. HALABY. The total, I think, is what you are trying to get. That is 47,751 positions for 1962, and for fiscal year 1962, 43,753.

LOCATION OF NEW EMPLOYEES

Senator ELLENDER. When you addressed yourself in your statement to the committee yesterday, which was very effective to me, I wanted to ask this question: Are the employees you are asking for in order to put in this new program that you envision; are they included in this?

Mr. HALABY. Yes, sir.

Senator ELLENDER. That is all I want to know.

Mr. HALABY. The biggest batch is for new facilities and the radar surveillance.

Senator ELLENDER. I understand.

Mr. HALABY. The positive control area. That is almost 500 people.

Senator ELLENDER. That is all, Mr. Chairman.

INCREASE IN FLIGHT STANDARDS PERSONNEL

Senator MAGNUSON. In the flight standards service personnel there is an increase of 765 people. Is that correct?

Mr. HALABY. That sounds high, Senator. Let me just doublecheck that.

For our fiscal year 1963 request, we requested 5,677 employees, which is a total of 247 new employees over the approved fiscal 1962.

Senator MAGNUSON. You have 540, according to my figures, new people in flight inspection for military facilities.

Mr. HALABY. Oh, oh. Yes, sir.

Senator MAGNUSON. And you have 225 people to be engaged in developing safety standards and rules and checking FAA facilities. Is that correct?

Mr. HALABY. Is this the military flight inspection?

Senator MAGNUSON. We have 540 there, and 225 in your own.

Mr. HALABY. I think that would bring it up to 765.

EMPLOYEES TO CHECK RELIABILITY OF FACILITIES

Senator MAGNUSON. Put in the record, if you do not have this, how many of the 225 people will be used in connection with checking reliability of FAA facilities, and also what facilities you have reference to.

Mr. HALABY. We have, as we explained yesterday, a plan to combine the military flight inspection and the FAA flight inspection of all facilities.

Senator MAGNUSON. I am not talking about the military. I am talking about the 225.

Mr. HALABY. So these men would inspect both military and civil facilities.

Senator MAGNUSON. Both facilities?

Mr. HALABY. Yes. And it would be very difficult to segregate the number, once the program is underway, because each will be inspecting all. You may have a breakdown of the additional people required. I think that is 122 people, is it not?

Mr. PRILL. The complete package is 69 for the flight inspection aspect of it. We have requested an increase of 122 people for the total aircraft program.

Senator MAGNUSON. But they are all involved in this whole project of our original horizon report in this general field. Would that be a correct statement?

Mr. PRILL. Yes, Mr. Chairman.

Mr. HALABY. All of these men are combined civil-military flight inspection function.

Senator MAGNUSON. Then put in the record how many will be used to inspect the adequacy of general aviation and commercial aircraft operators.

Mr. PRILL. That is 39.

Senator MAGNUSON. All right.

PERSONNEL IN TRAFFIC CONTROL

In your air traffic controllers—this is involved in your project SCAN—how many air traffic controllers are presently employed by the agency? If you do not have it, put it in the record.

Mr. THOMAS. I have that.

Mr. HALABY. Go ahead. This is Mr. Thomas, Director of the Air Traffic Service.

Mr. THOMAS. In the air route traffic-control centers we have 6,665 positions.

Senator MAGNUSON. 6,665.

Mr. THOMAS. We are requesting 568 additional positions in this budget for centers.

In our terminals, which are the towers, radar approach control facilities, we now have 5,809 positions, and are requesting 414 more.

Senator MAGNUSON. More?

Mr. THOMAS. 414 in this budget.

FLIGHT SERVICE STATIONS

And we have a third category of facilities—the flight service stations—where we have now 4,471 positions and are requesting a net increase of only 2. We are requesting 33 people for the national flight data center, making a total fiscal year 1963 request of 1,017 additional positions. This raises the total in the air traffic control service from 17,911 to 18,928.

FIELD PERSONNEL AND COORDINATORS

Senator MAGNUSON. Of that about one-third generally of your personnel is in the field, generally speaking?

Mr. HALABY. I believe that over 9 out of every 10 of these people are in the field.

Senator MAGNUSON. How many of these are coordinators?

Mr. THOMAS. Sir, I do not have that information available.

Senator MAGNUSON. Will you put that in the record?

(The information referred to follows:)

Number of coordinators in FAA (air traffic) facilities

	As of June 30, 1962	Proposed for fiscal year 1963
In centers	933	990
In towers	375	422
Total	1,308	1,412

COMPLEMENT OF TYPICAL TERMINAL

Mr. THOMAS. The ratio in the terminals is not more than 1 out of 4—not more than 25 percent—and in the centers of the controllers not more than 3 in 10.

Mr. HALABY. Could you take a typical terminal and describe the complement, because I think the Senator would like to know how many of them are controllers and how many of them are radar controllers, and how many are coordinators, and what the hierarchy is. I think they all see these towers——

Senator MAGNUSON. And we do not know just how they operate. Put that in.

Mr. THOMAS. All right, sir.

PROBLEM OF EXCESSIVE COORDINATION

Senator MAGNUSON. It has been suggested in connection with your problem of near misses, it might be possible that excessive coordination is self-defeating, and too much time is devoted to keeping other con-

trollers advised as to one another's activities, as opposed to accomplishing the basic mission. I am sure you will agree that some of that happens.

Mr. HALABY. I am concerned with that, Senator. We have done two things about it, and Mr. Thomas will tell you how we got here.

STUDY IN TIME AND MOTION

First we have within FAA a very penetrating study of many of these centers and towers. Secondly, I have brought in Gordon Bain, who used to be vice president of Northwest Airlines, and who was formerly with the Bureau of the Budget several years ago, to appraise with a completely fresh approach just whether or not we have reached the point of diminishing returns from these numbers of people. So we have that actively underway.

Senator MAGNUSON. Good.

DIFFICULTY OF OBSOLETE EQUIPMENT

Mr. HALABY. But in the meanwhile I think Mr. Thomas will explain to you that with the manual posting of these flight strips with what is obsolescent display equipment, with the slow introduction of computerization into these centers we have had to put people in place of equipment, and we have had to patch the system to keep up with the traffic, and we are far from a system in this business to date. Dave has had to sweat it out day after day, worrying about the near misses, and having additional people as the only tool available to do the job.

EXCESSIVE LAYERING

Senator MAGNUSON. What I am thinking about is the tendency of too much layering. That is a good term to use. That might cause more confusion than what you are attempting to correct in these particular cases. But I understand you and I am hopeful, and I am sure you are doing this, that there will be some streamlining of the manual of operations. This causes enough confusion.

Mr. HALABY. These are two things——

Senator MAGNUSON. These are two things you are working on?

Mr. HALABY. These very serious problems we are working on. Dave, will you supplement what I said?

Mr. THOMAS. I would like to, sir.

In the first place, if a man has his full attention on a radarscope, it is very difficult for him to communicate with other controllers on the telephone and to do calculations on flight progress.

NEEDLING CONTROLLERS

Senator MAGNUSON. While we are at that, there is a lot of evidence of a great deal of "yapping" back and forth about something that is not their business. A little heckling and things like that that go on.

Mr. HALABY. Needling.

Senator MAGNUSON. Yes. "Needling" is a good word.

Mr. HALABY. By pilots of controllers, and I think a little more rarely, controllers of pilots, that does go on. Because often they are

impatient and eager to keep going and keep a schedule. I have been at the end of a runway, like you have, waiting for my turn to take off.

Senator MAGNUSON. And I have listened to them.

Mr. HALABY. And you get the boys in a warm cockpit and eager to meet their schedules, and they start needling the controllers, and in a sense put themselves in the towers as well as the cockpit.

SPRINGFIELD INCIDENT

We have talked to the airline pilots personally and in groups and request their cooperation through their pilots association, and have told our people not to be provocative or answer back, but just take it. In the Springfield incident, we had, through a mistake of our FAA system, and one of the individuals, two airplanes circling out there for 42 minutes. We went back with all kinds of hardheaded people and a couple of psychiatrists and psychologists to see if we could find some reason why that came about. One of the things we found was that two pilots had been needling this particular controller for several minutes. That is no excuse for his making a mistake, but it does give us some inkling as to what the cause of the mistake was.

Senator MAGNUSON. He can put in the record just the outline of how you operate one of these towers, and if there are any proper remarks you think should be made regarding this layering sometimes causing confusion, you can make them.

(The information referred to follows:)

FUNCTIONS AND STAFFING OF AIRPORT TRAFFIC CONTROL TOWERS

Airport traffic control towers are facilities responsible for the safe and expeditious movement of air traffic on and in the immediate vicinity of an airport. In addition, towers may have approached control service which provides control service to arriving and departing air traffic operating on instrument flight rules (IFR) and, on occasion, visual flight rules (VFR), within a designated control area surrounding the airport.

Where air traffic volume warrants, radar is employed by the approach control tower to move air traffic by use of radar separation instead of standard (time) separation. A radar approach control tower is made up of two elements, a tower cab and an IFR room. The tower cab controls the traffic on the ground as well as VFR flights in the immediate vicinity of the airport. The IFR room provides radar separation service for aircraft arriving, departing, and transiting the airport area.

The organization of a large radar approach tower is depicted in the chart below. There follows also a listing and brief description of the basic operating positions:

Tower cab

Local control.—This position is primarily responsible for issuing information and clearances governing all air traffic and vehicular traffic operating on the landing area, and VFR air traffic operating in the control zone. Duties include formulating and issuing clearances and instructions to IFR traffic released to tower control.

Flight data.—This position is primarily responsible for assisting in the operation of the facility as directed. Duties include receiving, posting, and relaying air traffic control clearances, control messages, and flight data concerning IFR traffic.

Ground control.—At locations where the volume of traffic warrants, this position is established to assist other positions by handling both taxiing aircraft and vehicular traffic on the landing area. At locations where airport surface detection radar equipment (ASDE) is employed, that position is designated as ground radar (GR).

Clearance delivery.—Some locations, because of a heavy volume of traffic, require a separate position which is used primarily for the delivery of departure and en route clearances. These duties are then separate from the ground control or flight data positions.

IFR room

Arrival control.—The duties of the arrival radar position(s) are to expedite the movement of arriving aircraft by providing vectors to final approach courses and to provide radar separation from other aircraft.

Precision approach control (PAR).—It is the duty of this position to assist pilots to approach to the instrument runway during IFR conditions using precision radar equipment; to monitor ILS approaches and issue advisories, or serve as a landing aid (GCA) at pilot request.

Departure control.—The duties of the departure radar position(s) are to expedite the movement of departing aircraft by providing radar separation between successive departures and between the departing aircraft and arriving aircraft.

Flight data.—The primary duties of this position are to assist in operation of the radar functions of the facility by copying and relaying clearances and messages and maintaining records as directed.

PROCEDURE OF CONTROLLERS

Mr. HALABY. I think I would like just 1 minute on that.

Senator MAGNUSON. All right.

Mr. HALABY. Go ahead.

Mr. THOMAS. In our center staffing each controller, including the coordinator in the complement, has some 4 minutes per airplane. We have the coordinators to talk between the sectors to see all is clear to move traffic and to be sure there is operational coordination between sectors handling the same aircraft. We do not go into excessive layering. The point I would like to make is that the controllers are very busy on their separate sectors, and coordinators supervise the traffic flow between the separate sectors.

UPGRADING CONTROLLERS

Senator MAGNUSON. You put that in and put in the record this snafu you had on controller upgrading. Can you do that with an explanation?

Mr. THOMAS. Yes.

(The information referred to follows:)

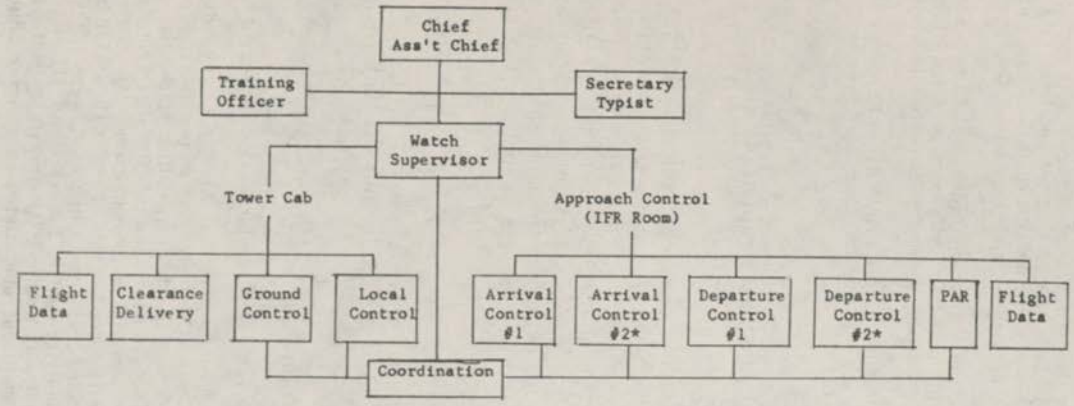
AIR TRAFFIC CONTROL TOWER COORDINATOR (SUPERVISING CONTROLLER) POLICY

In response to a request by the Federal Aviation Agency to promote air traffic service personnel in recognition of the increasing responsibility, knowledge, competence, and pressure involved in the demanding work, the Civil Service Commission, in June 1961, approved new standards for air traffic service positions which permitted grade increases for many employees. As of October 1, 1961, 6,896 air traffic service specialists were upgraded under these standards.

Among the various kinds of specialists who were upgraded were 1,280 performing coordinator duties in high-activity control towers (level III and IV). A level III tower is one which handles at least 80,000 aircraft operations annually, including 20,000 or more instrument operations, or a tower handling 100,000 or more operations including at least 15,000 instrument operations. A level IV tower is one with at least 100,000 instrument operations a year.

The Civil Service Commission found that "The function of coordination of the control of traffic through the use of radar equipment is new in nonsupervisory positions. This coordination involves the integration of the activities of the control functions of arrival control, departure control, radar handoff, surveillance

RADAR APPROACH CONTROL TOWER



* As required

NOTE: A typical large radar tower is Atlanta (Municipal), Georgia, which employes a total of 59 people as follows:

Title	Number
Chief	1
Assistant Chief	1
Training Officer	1
Secretary	1
Watch Supervisors	5
Coordinators	8
Controllers	37
Assistant Controllers	5
	59

of holding patterns, and precision radar approach control. The correct level for the function (whether as a full-time position or as a segment of a position) is as follows:

"Level II tower	Level III tower	Level IV tower
Combined with shift supervision GS–12.	GS–12 ($8,955 per annum).....	GS–13 ($10,635 per annum)."

Prior to the new CSC standards, many FAA towers had coordinators. However, those who performed coordinator duties were paid the same salary as controllers. The new standards recognized the increased complexity of coordinator duties in the level III and IV towers and established a pay differential between the coordinator and controller, that is, coordinators were to be paid a higher grade. The new standards permitted payment at the higher grade based upon either full- or part-time assignment to the coordinator positions. The different FAA regions promoted various proportions of controllers to the coordination grade based on their individual concepts of operational effectiveness in the performance of this function. All controllers promoted were qualified and performed coordination duties as required, but in the aggregate the regional actions resulted in different patterns of pay and staffing between towers of the same general character.

As a result of the above differences among regions, the Administrator of FAA directed an intensive review of the coordination function in level III and level IV towers. This resulted in the determination that coordination duties should be assigned to substantially full-time supervising controllers (coordinator) in all regions rather than on the rotation basis as used in certain regions. The determination was made in order to assure maximum specialized competence in this important traffic-control activity. The effect of this change was to decrease the number of employees assigned to coordination duties, while at the same time the number of employees classified as "controllers" were correspondingly increased. Total numbers of employees at individual facilities were not affected by this action, since the aggregate amount of coordination and control work to be performed remained the same.

Each region was instructed to review its facilities to determine how many supervising controller (coordinator) positions it needed for full-time assignment. This number could not exceed one supervising controller (coordinator) for every four controllers. Wherever there was an excess number of employees performing the coordination function, the regions, effective May 13, 1962, placed these extra employees at the top of the grade held immediately prior to the last promotion. These changes in work assignments and salaries were made in accordance with the retention standing of competing employees as prescribed by civil service rules and regulations.

Of the 1,280 employees in coordinator positions in level III and IV towers, about 905 were reduced to the appropriate controller grades (GS–11 and GS–12) and reassigned to purely controller functions. The remaining 375 were assigned full-time coordination duties and retained the higher coordinator grade. Individuals demoted are eligible for consideration for vacancies that occur in the higher grades.

CONTRACT WITH UNIVERSITY OF MICHIGAN

Senator MAGNUSON. Also I would like in the record the reason why you contracted or made that contract with the University of Michigan, when you should be doing it yourself on the flight standards on flight service stations.

Mr. HALABY. Flight service stations?

Senator MAGNUSON. Yes. You made a contract for on-site survey which furnished an air-traffic survey that cost $100,000. Right?

Are there any further questions on operations?

Mr. HALABY. When was that contract made?

Mr. BLATT. The contract was made about 8 months ago.

Senator MAGNUSON. Put in the record the justification.

Mr. BLATT. Yes, sir.

(The information referred to follows:)

A requirement exists for a determination of the long-range functions, missions, and responsibilties of flight service stations. A determination of the role of flight service stations in the system of the future and an analysis of current procedures are essential to the system design. A contract was negotiated with the University of Michigan because it was our desire to inject as much objectivity into this program as possible, and to utilize the specialized personnel in the university uniquely equipped to carry out the statistical and industrial engineering aspects of this project. The contract provided us for the first time with a basis for determining the optimum number of stations required, manning requirements, and criteria for measuring system efficiency.

TIME TRACK SURVEY BY STANFORD RESEARCH INSTITUTE

Senator ALLOTT. I would also like in the record a justification with respect to the time track survey made by Stanford University on jet flights across the country. I would like to know two things: How these tasks that are contracted to Stanford differ from what they have done in the past, and what precise benefits, if any, occurred.

Mr. HARPER. We will submit those.

(The information referred to follows:)

The contract referred to is a study of minimum time paths of aircraft operating in the North Atlantic Ocean and of an effort to analyze the economic advantages and disadvantages of using the jet streams and other wind effects on the North Atlantic as an aid in flight progress. In addition, the envelope of these tracks shows the area wherein navigation, communications, and ATC services are required. The original contract awarded to Stanford Research Institute was a study of the winter months. A subsequent contract was awarded to cover the summer months in an effort to analyze differences which appear during this extremely heavy traffic flow period on the North Atlantic.

OTHER CONTRACTS

Senator ELLENDER. I wonder if there are any other contracts that are entered into with the colleges. As I pointed out yesterday, that is becoming a serious thing to me. The money is being used indirectly here for the operation of these colleges. If you want to do that, let us do it openly—not in a devious way like this.

Mr. HALABY. We will advise you of any other contracts we have in process at universities. I doubt that we have many more than the University of Michigan, and possibly Cornell Aeronautical Laboratory.

(The information referred to follows:)

The following contracts are with universities or with organizations associated with universities. None of the contracts are for aviation medicine.

FAA/BRD–116: Ohio State University Foundation. This is the university proper, $141,438. No fee.

FAA/BRD–340: Syracuse University, $27,484. No fee. However, $22,090 of amount is subcontracted to Syracuse University Research Corp., an independent organization established by Syracuse University. The corporation received a fee of 6 percent.

FAA/BRD–407: Ohio State University Foundation. This is the university proper, $72,000. No fee.

FAA/BRD–413: University of Michigan. This is the university proper, $100,000. No fee.

ARDS–434: University of California. This is the university proper, $155,000. No fee.

ARDS–436: University of Michigan. This is the university proper, $70,800. No fee.

ARDS–450: Colorado State University Foundation. This is the university proper, $25,270. No fee.
ARDS–487: University of Michigan. This is the university proper, $72,800. No fee.
ARDS–499: University of Michigan. This is the university proper, $26,450. No fee.
ARDS–506: University of Michigan. This is the university proper, $90,820. No fee.
ARDS–533: Syracuse University Research Corp. An independent organization established by Syracuse University, $153,431. 6-percent fee.

STANFORD RESEARCH INSTITUTE

Mr. BLATT. We have a contract with the University of California also.

Mr. HALABY. If there are only a handful, we will put them in the record. As you know, Stanford Research Institute is a separate and independent thing from Stanford University, and a nonprofit corporation. It does have some Stanford faculty people who are consultants, as you pointed out yesterday, to Stanford Research Institute, but it just happens to be located in Menlo Park, Calif.

Senator ALLOTT. And also happens to have some of the same trustees.

Mr. HALABY. Yes. That is right, Senator.

RESEARCH AND DEVELOPMENT BUDGET

Senator ELLENDER. Is this work being done in connection with the money you are asking for research and development?

Mr. HALABY. The two contracts you are talking about here have been in the research and development budget.

Senator ELLENDER. Are there any contracts entered into that use money from other ones than the budget for research and development?

Mr. BLATT. With universities?

Senator ELLENDER. Yes.

Mr. BLATT. No, sir.

ECONOMICAL FEATURE OF CONTRACT WORK

Senator MONRONEY. If you have a specific job to do, isn't it less expensive to contract with universities, rather than fly in with your own technicians? That way you do not have any liability for continuing employment.

Mr. BLATT. That is correct, sir. Very, very specialized personnel exists at the universities for the studies that are required.

Senator ELLENDER. But once we start it, this never ends.

Senator MONRONEY. That is a point I want to be more thorough on. It is the advantage of not continuing on and on as a Government program. You make a firm contract, and it is performed for a lump sum. That is the way the contracts are worded. When they are completed, a report is made.

Mr. HALABY. The staff research projects like the Michigan reports are one-shot affairs. You have the choice here of two evils, I guess you would say. One is a one-shot contract to a research institute, whether it is a university or nonuniversity. You do pay some overhead as you were suggesting yesterday. The other is to hire somebody to do it, and you almost never fire anyone in this business, I find. So the long-haul costs may be very much greater that way.

UNIVERSITY MEDICAL RESEARCH CONTRACTS

I neglected, when I said a handful of these contracts, to mention, as I think we mentioned yesterday, that that does not include the university medical research contracts. Those are not in the research and development budget he is talking about. They are in the medical research budget and there are, I think, 15 or 16 of those to individual universities where there is a special, particular kind of research going on that we do not want to or are set up to do in Oklahoma City.

Mr. BLATT. It is carried under the same appropriation.

UNDUE GROWTH OF CONTRACT CASE

Senator ELLENDER. Mr. Halaby, I am not objecting so much to the way they are employed, but this is becoming a habit. In my opinion once you start they always find something new to do, and get the Government simply keeping on furnishing the money to them.

I go back to what I said yesterday about Princeton, Harvard, Yale, and many others. Some of them are actually sustained, more or less, by moneys they get from the Government. It is just a growing cancer.

Mr. HALABY. I guess, Senator, I have to disagree about the cancer part of it. What we are doing here as a matching——

Senator ELLENDER. Let us make it "evil" instead of "cancer."

SOURCE OF UNDUE GROWTH

Mr. HALABY. We are paying for brainpower wherever we need it and find it. I think that the cancerous part is that the overheads and the inflated allowances and fees are making this a very serious problem for the Government when you get into a total research and development budget in the order of $12 billion. The idea of paying for brains is a good one, and I think it is one we have adopted awfully late in relation to what the Soviet Union and a lot of other cultures are doing, but the way we go about it is not very hardheaded, and I think we are paying a little too much in overhead and permitting competitive inflation of some of these scales of compensation.

If we could get at that, we could make some real savings. We are getting into a situation where one pays more and then the other pays more and then the other pays more, and we are all going to pay for about three-quarters of it in the end.

Senator ELLENDER. But, on the other hand, you have some colleges that have better friends in the science division or research division, and you know they pass it on to them.

Mr. HALABY. I am sure there is some of that.

Senator ELLENDER. I am positive of that. From the information I was able to get before the Armed Services Committee, most of their work is done in that way.

RESEARCH GRANTS, 1962

Senator ALLOTT. I procured from you last year a list of the research projects which have been granted from the FAA, and I examined that list. Unfortunately, I did not have a chance to go over it with you, but I was concerned in examining the list that there were matters and

items being projected out which really should have been within the knowledge and capacity of your own people.

We can really spend, in this committee, a complete day on the examination of the research contracts of the Federal Aviation Agency. I might say I believe it is just as true in every other department of the Government, Mr. Halaby. I am not seeking out the FAA particularly. I think sometimes executive decisions are postponed or hidden behind a research project, or a so-called research project. Some of these projects on your list certainly seemed to be matters that the people you have, the skilled people you have, should have had the know-how to conduct; it appeared that farming them out was just a way of avoiding compiling, or putting together, or assuming the responsibility for making a decision.

Mr. HALABY. It is one of the perils of a big organization of any kind. It happens in industry, as I am sure you know. If you don't know what to do, study it.

Senator ALLOTT. Who has the responsibility, ultimately, for it?

Mr. HALABY. The management-consulting firms of the United States expanded very rapidly in the past 10 years, partly because of the human tendency not to want to face up to a decision, but use someone else's brainpower to study it and maybe get an inspired answer, or again to permit you a course that does not require a hard decision. But I do not believe you will find this as prevalent in this Agency as you will in many others, and even in some private enterprise. Certainly the university itself is the place where you do the most studying and the least deciding of any organization in American culture. So we have a problem, but all we can do is decide the ones that need to be decided and study the ones within house that we can, and go outside only when we need to, which is our management philosophy.

ULTIMATE RESPONSIBILITY

Senator ALLOTT. Who has the ultimate responsibility? Each one of these research projects would not come to you, would it?

Mr. HALABY. Well, I have asked all my fellows to send to me those that they think I should see. Now, I must confess, I don't know about the University of Michigan study of our flight-service stations, but if I didn't see it, that was undoubtedly because it was felt that project needed to be done and did not need to be referred to me for a decision. I do not know how much money is involved in it.

Mr. BLATT. I do not know the value.

Senator MAGNUSON. $100,000.

Mr. HALABY. It is $100,000.

Senator ALLOTT. In the event one of these did not come to you, Mr. Halaby——

Mr. HALABY. Yes.

Senator ALLOTT. And in the event I had a question about a particular so-called research, whom in your Department would I go to for an answer?

RESPONSIBILITY FOR RESEACH AND DEVELOPMENT PROGRAM

Mr. HALABY. The research and development program—the installation and maintenance program and, in fact, the entire developmental

effort of the Agency, is now concentrated in the hands of one man—Mr. Robert Shank. Mr. Blatt reports to him on systems research, and Mr. King on his left reports to him on installation and procurement business, Mr. Gough on aircraft development problems, and Mr. Vierling on maintenance problems. The only part of this research and development effort in the sense you are talking about of letting contracts at universities and institutes that are not directly controlled by him, are those in the civil air medical area of Dr. Goddard. So I hold them responsible for those research contracts in those areas, and you in turn hold me. So whatever they do wrong, I am responsible for. Whatever they do right, they are responsible for.

Senator ALLOTT. You mean, whatever they do right you are responsible for.

I want to make the record perfectly clear. In asking these questions which the distinguished chairman raised, I do not think that the situation here is any worse or any different than in any other agency of the Government, but it is a problem which is getting greater and greater all the time. I would say in many instances, as the Senator from Louisiana says, it is out of hand completely.

Mr. MAGNUSON. All right.

Now, Mr. Administrator, we will get to research in a minute.

AIR TRAFFIC CONTROL CENTER CONSOLIDATION

The air traffic control centers, the consolidation feature. I think you cleared that up a great deal yesterday and if there is any more you want to put in the record we will have it open.

There has been quite a bit of talk about the New Orleans center, where you were lucky enough to get NASA to take it over. There have been some complaints about the lack of planning in this consolidation, but I think you explained yesterday how it has to work, and how you hope it will work in the future.

LIMITED LOCAL VIEWS

Mr. HALABY. It is very hard for anyone, particularly a neighbor of one of these centers, to think you could not use a new building, or not continue under a recent lease and still save money. They see the local part of it and they do not see the national part of it. Even if NASA had not come into the Slidell, La., area—and this will surprise some—we could have absorbed the cost of roughly more than $2 million, and still have saved money over the next 15 or 16 years by having one instead of two centers. You just have to go down through a painful analysis of this. There are differences on any cost analysis of anything, but the lowest figure I have heard anyone throw at me is that we would only save $200,000 a year by combining at Houston, the San Antonio, and New Orleans centers.

Senator MAGNUSON. We won't go into the San Antonio at this time.

Mr. HALABY. I would love to go into it. I am very ready to go into any angle and any aspect that this committee and Congress may want to. Any number, or any chronology——

Senator MAGNUSON. I know that.

Mr. HALABY. I would love to go into it.

Senator MAGNUSON. But I am saying, if there is anything you want to add to this, we will put that in the record.

PHASING CONSOLIDATION

Senator ALLOTT. May I ask one thing on that?

On this system that you explained yesterday, this is in effect now? The newest one?

Mr. HALABY. The consolidation. That is phased month by month and year by year, and it will not be completely in effect for two and a half years, but the first steps are from Norfolk up into Washington, and from Pittsburgh up into Cleveland, and then the rest are consolidated step by step.

Which would be next after that, Mr. Thomas?

QUALITY AND TRAINING OF PERSONNEL

Senator ALLOTT. I am not so much interested in the sequence of phasing as the personnel to operate these. These are being drawn from the other centers that you now have, or will be drawn. I am concerned about the quality of the personnel to operate these, and the training of the personnel. Do you have them?

Mr. HALABY. We have them in the system now. I think quite a bit of the static you will hear and complaints you will receive is that something over 1,000 people will have to move. They will change their residence. Their families will have to move, and they are the victims of what I guess is popularly known as automation.

I don't like this one bit. I have gone out to each of these centers and I have talked to these people. They tell me their problems on schools. In some cases at Phoenix we have some men and women who were there out of compassion, because they have asthma and other respiratory problems, and it is not going to be easy for them to move over to Albuquerque, although that is a pretty dry climate too. But you didn't ask me or authorize me to hold down a job to run a popularity contest. This is not a position from which one runs for any office, I can think of, perhaps except in purgatory. I was put in here to run an efficient, economical system. So I have to think about those people and their convenience and happiness, but they are being dislocated and we are going to get, and I guess you will too, a series of complaints that question my motives; but I do not believe they can prove that this is not in the interests of economy and safety.

Senator ALLOTT. The question I am really interested in—and I appreciate knowing that we are going to have to face this—but the thing I am really interested in is whether or not if you do combine these you will have the skilled and qualified personnel to handle them.

FEWER POSITIONS IN SYSTEM

Mr. HALABY. Yes, sir. We will after it is all completed have approximately 540 fewer positions in the system than we would otherwise have had.

Senator ALLOTT. So you will skim off the cream for this particular process?

Mr. HALABY. Through retirement, death, disability, and going to other jobs, there will be approximately 540 fewer people, and we

will save in the order of $6 or $7 million a year over what otherwise would have been the cost to the U.S. Government, after this is completed. But we will not lack good people. Our training program goes on. Our people are getting more experienced, and we will have more people who are unhappy than we have ever had before, because they will have had to move.

PEAKING PROBLEM

Senator MAGNUSON. All right. This is in the nature of a suggestion. I asked this of the Civil Aeronautics Board yesterday morning and I know the Federal Aviation Agency could be helpful. I do not think we should dictate schedules to the commercial operators and equipment people, but I think that the two agencies can join with the operators and see if we cannot do something about the peaking problem, which becomes your worst problem in these airports, and becomes the problem of the airports.

I do not know, but peaking seems to be getting worse instead of better. I just pass it out as a suggestion.

FLIGHT TRAINING FOR CONTROLLERS

One more thing. The House, under Operations, says:

> The committee has its doubts on the value of training 100 employees each year how to fly at an annual cost of $340,000. No funds have been provided for this type of activity.

Can anybody comment on that?

Mr. HALABY. On the face of it, as it is stated there, it does not make any sense at all. What we had in mind, Senator, and I confess it got a little out of control, is that some of our controllers should know the problem of the airman in the cockpit as well as the problem he has over the scope and at the microphone. The idea there was to select some of our most promising young buck controllers and give them—on an austere basis—not a $3,400-a-year basis, a private pilot's license. This was a combination of training and incentive. There were a handful of others who I felt should not become desk- and chair-bound bureaucrats, but should be actively out in the system, because they had a share in the management of the system, and they needed to have some pilot training.

The House has taken a whack at this, and the way it came to them was not the way I intended it. I still think it is a good idea and on a limited basis I think we ought to be allowed to do it, but a very limited basis.

Senator MONRONEY. How much do you need to carry out the minimum program?

Mr. HALABY. I would say about 25 percent of that, about $80,000 to $100,000.

FAMILIARITY OF CONTROLLERS WITH COCKPIT PROBLEMS

Senator MONRONEY. I feel it is absolutely essential to have some of the key personnel know the problems of the man in the cockpit.

Senator MAGNUSON. I do too. That is why I wanted it explained.

Senator MONRONEY. If it can be held to a reasonable minimum, I am highly in favor of having selected personnel taking some pilot training.

SHARING COST OF TRAINING

Mr. HALABY. One idea I have had since I first put this idea into the staff process was that we would share the costs with the individual. In other words, if we had the right man who wanted to fly and he was willing to put in a buck for every two bucks we put in, that might be a good limitation and a good sensible way to do it.

Senator MAGNUSON. And then you would get the type of fellow who really wanted to do it and had the desire to do it.

Mr. HALABY. Yes, the eager beaver.

Senator MONRONEY. It is still selective from your point of view, whether the man would actually ever use the training.

Mr. HALABY. If the committee is willing to receive the suggestion, it would be some way—in a conference or otherwise—not to have this completely knocked out, but either through a limitation, or through an understanding of the committee that we would not exceed so much money, or so many people. We do not want it to get out of hand and do not want to have a whole group of pilots who are no longer really pilots. We just want a handful of people who need to know the pilot's point of view—people in key spots.

Senator MAGNUSON. All right. Is there anything further on operations?

FACILITIES AND EQUIPMENT

Now we go to facilities and equipment.

The House committee approved $120 million for new facilities and equipment and the same amount as appropriated in 1962, but $15 million less than the budget estimate. They go on to say,

> In addition to new funds provided in the bill, a balance of $105,261,000 will be brought forward, making a total of $225,261,000 available for equipment expenditure.

Where is your statement on that?

Mr. HALABY. In the appeal letter, Mr. Chairman.

Senator MAGNUSON. In the letter?

Mr. HALABY. In the letter on page 8, and following.

Senator MAGNUSON. All right.

LONG LEADTIME ITEMS

Mr. HALABY. I think the first point is that some of this or much of this equipment is long leadtime items. Therefore, the reason why we have a total of $225 million available for the facilities-and-equipment expenditures is that, in the first place, some of the radars and displays and communications items take a considerable amount of time to write specifications, put out for bid, and award bids, produce, deliver, and install. This is not an exceptional amount to have available at any one time. It is all committed and programed, but it is not all obligated and spent.

EQUIPMENT FOR CENTERS AND AIR SAFETY COMPLEX

Senator MAGNUSON. All right. The bulk of this amount, regardless of what is in either bill, is for furnishing equipment to these centers and the air safety complex, is it not?

Mr. HALABY. Yes, sir. At the bottom of page 9 you will see the list, and the most significant items that must be deferred include providing single-channel VHF transmitters at 97 flight service stations; providing automatic error correction equipment at 5 locations; establishing 3 ATC voice circuits; establishing 27 terminal VOR's.

Senator MAGNUSON. We will put all of those in the record.

Mr. HALABY. Fine.

(The information requested follows:)

The most significant items that must be deferred include:
Providing single-channel VHF transmitters at 97 FSS's;
Providing automatic error correction equipment at 5 locations;
Establishing 3 ATC voice circuits;
Establishing 27 terminal VOR's;
Modifying 7 VOR's to Doppler VOR's;
Establishing 29 approach light;
Establishing 40 runway end identifier lights;
Establishing 40 visual glide slope indicators;
Improving the usefulness and the reliability of 14 existing ILS by adding waveguide localizers;
Establishing 6 airport surveillance radars;
Providing 27 direct center pilot air/ground communications; and
Improving the technical communications required for controlling air traffic.

OTHER ITEMS UNDER REQUEST

Senator MAGNUSON. How much of this amount for fiscal 1963 is for other items than that? Housing is one. Is that right?

Mr. HALABY. There is an item of $4,870,000 for housing, utilities, and miscellaneous facilities.

Senator MAGNUSON. Is there a breakdown on that?

Mr. HALABY. Yes, sir.

Senator MAGNUSON. Put that in the record.

(The information referred to follows:)

HOUSING, UTILITIES, AND MISCELLANEOUS FACILITIES

This program provides for general housing for FAA personnel in areas where adequate rental housing is not available, utility services on islands having an aviation-connected function, and miscellaneous needs not directly connected with a specific type of facility or service. The 1963 request of $4,870,000 will provide additional and improved utility systems and 15 service buildings at remote locations.

Provide and improve utilities	$4,569,000
Provide powerplant facilities	1,303,000
Improve water supply systems at 7 locations	525,000
Provide miscellaneous facilities	1,755,000
Provide 15 service buildings	986,000
Restore funds for emergency projects	91,000
Pay tort claims	210,000

COST OF HOUSING IN SAMOA

Mr. HALABY. We will submit it for the record. Right.

Senator MAGNUSON. The House paid a lot of attention to the cost of housing in Samoa. I am sure you are familiar with that item.

Mr. HALABY. We have dropped it out.

Senator MAGNUSON. You dropped it out?

Mr. HALABY. Wait just a second. I may be wrong about that. We got the money in 1962 for it. It is not in the current fiscal 1963 budget.

Senator MAGNUSON. They make a point about your spending too much because there may be typhoons or something there, and somebody found out there were no typhoons there.

Mr. KING. We have been in consultation with the Pacific region on this and they want to move ahead, hopefully doing this within the limitation that they have set. This may mean we will have to cut out some of the typhoon-proof construction.

Senator MAGNUSON. Are there typhoons in Samoa?

Mr. KING. It is on the southern edge of the typhoon belt.

DUPLICATION OF WEATHER REPORTING WITH THE MILITARY

Senator MAGNUSON. While we are on the weather, and you can answer that question, do you still have the duplication of weather reporting with the military?

Mr. HALABY. There is duplication.

Senator MAGNUSON. Are we working on that?

Mr. HALABY. We are working on it.

Senator MAGNUSON. You?

General GRANT. Yes, sir.

Senator MAGNUSON. The general is the fellow who was working on it.

Mr. HALABY. He is. He is the very one working on that, and I think he feels he is making progress.

General GRANT. I think we are. This is a part of the integration process we are going through now.

Senator MAGNUSON. Yes. All right.

Is there included in this amount any new equipment, or aircraft, or things for the agency, also?

Mr. HALABY. Yes, sir.

Senator MAGNUSON. What are the aircraft?

AIRCRAFT AND SPARE PARTS

Mr. HALABY. The total for aircraft, spare parts, training, and all of the related items for an aircraft program is $7,912,000. There are five training aircraft.

Senator MAGNUSON. What kind are they? Are they specially built or are they identifiable?

Mr. HALABY. Do you have page 1137 of our justification there?

Mr. PRILL. And on page 74 of the summary.

Mr. HALABY. But he wants to know the type.

Mr. PRILL. We have DC–7's actually. We planned DC–6's, but are leasing DC–7's because they are cheaper.

Senator MAGNUSON. You are leasing some?

Mr. PRILL. No, we want to buy them.

Senator MAGNUSON. Are you leasing any?

Mr. PRILL. At the present time these airplanes are on lease, but we would prefer to buy them, because they are cheaper and they are in this budget on that basis.

Senator MAGNUSON. Break it down first as to items.

Mr. HALABY. Could we put in a page of aircraft and related equipment that breaks it down?

Senator MAGNUSON. Yes.

(The information referred to follows:)

AIRCRAFT AND RELATED EQUIPMENT

Aircraft and related equipment provides for the procurement of agency aircraft and avionics related to the operations of the various services and offices. The 1963 request of $7,912,000 will provide for the procurement of equipment associated with the flight inspection of military facilities, the acquisition of six aircraft by purchase or lease-purchase agreement and the retrofit of various flight inspection, flight training, logistic and administrative aircraft.

Facilities flight inspection	$3,356,000
Procurement of equipment associated with flight inspection of military facilities	508,000
Retrofit Constellation and DC–4 aircraft	915,000
Replace and improve TACAN equipment in 5 Convair aircraft	1,345,000
Provide panoramic equipment for 32 facility flight inspection aircraft	588,000
Training	3,174,000
Procure and modify 5 training aircraft	2,944,000
Provide integrated flight systems	55,000
Retrofit 6 training aircraft	175,000
Research support	40,000
Procure 1 aircraft and related equipment	40,000
Logistic and administrative	1,342,000
Procure 1 North American Sabreliner-type aircraft	1,142,000
Convert 1 DC–3 aircraft to cargo configuration	75,000
Retrofit 4 administrative and logistic aircraft	125,000

BUYING VERSUS LEASING AIRCRAFT

Senator MAGNUSON. One of the things we have discussed here on many occasions is whether it is cheaper, as you say, to buy these aircraft you need, or lease them. I have had broken down for me, for example, your Gulf Stream G–159 is used only 460 hours per year, or at least it was last year. Yet your maintenance cost is $242 per hour. Whether you could rent such aircraft poses a question, I guess. Your maintenance cost of a Beechcraft that you own is $44 per hour while you lease two Beechcraft and pay only $78.30 an hour operation on these.

With respect to your Boeing C–135, based on a 10-year life with a 15-percent residual value at the end of that period, your depreciation and maintenance cost per hour operation is around $916, whereas trunk carriers' depreciation and maintenance costs for operating aircraft in 1960 was $385.

You believe it is cheaper to buy them than to lease them in some cases? I do not know. I am just posing the question. I just do not know, but these are pretty high costs for maintenance.

TYPES OF LEASES

Mr. PRILL. We have two types of lease, Mr. Chairman. A wet lease and a dry lease, so-called in the business. On a wet lease you will get the pilots and fuel and maintenance, and in a dry lease you do all of the work. We do both of these, whichever is the cheapest.

Senator MAGNUSON. There is no use in arguing the point because I know the cost of what you own. It may be there is nothing you can do about that, because you now own them, but what I am saying is, you might consider the problem and look at leases and the costs, and you will still have adequate aircraft.

Mr. HALABY. Could we take your question and submit for the record our analysis and reasoning for so doing?

Senator MAGNUSON. Here it is right here.

LEASE VERSUS PURCHASE OF AIRCRAFT

While the Agency has a need for additional replacement aircraft it evaluates the economies to the Government involved in procuring or leasing such aircraft, as well as the availability of the particular type of aircraft required from leasing sources.

There follows a specific policy regarding the conditions under which aircraft for training will be procured or leased. This policy is based on a thorough study in depth of the advantages of the acquisition of each type of aircraft.

1. *Purchase conditions.*—The following criteria will pertain to the purchase of aircraft by the Agency for training purposes. These criteria are based upon the assumption that the costs of operation will be the same whether the aircraft be leased or purchased:

(1) The nonavailability of suitable aircraft from the military will be determined prior to considering purchase.

(2) The requirement for the type aircraft must equal or exceed 500 hours of training flight time per year for each aircraft purchased.

(3) The requirement for flight time must be concentrated geographically to a degree where it can be economically met by the number of aircraft being purchased.

(4) The projected requirement for training flight time must continue for such a length of time that it is more economical to buy than to lease the aircraft.

In applying this last condition, the number of years for which the training requirement is projected must exceed the purchase cost of the aircraft, plus spares, divided by the annual cost of the exclusive use lease of the aircraft on the planned utilization basis. For example, if the purchase cost is $1,100,000 plus 30 percent for spares (or $1,430,000), and the annual exclusive use lease cost on a 500 hours per year utilization basis is $300,000, the breakeven point (1,430,000÷300,000) is 4.77 years. Hence, in this case, the projected requirement would have to exceed 500 hours of training flight time per year for 5 years to justify purchase of the aircraft.

2. *Nonpurchase procurement.*—If the projected training requirement does not warrant the procurement for full-time use of the aircraft by annual exclusive use lease or by purchase, the following criteria will govern:

A short-term lease is warranted only if—

(1) The requirement for flight hours is concentrated geographically to a degree where it can be met by the number of aircraft whose lease is contemplated.

(2) The requirement for flight hours is concentrated in time to a degree where it can be met by short-term lease of the aircraft.

(3) Aircraft maintenance can be arranged on an economical basis.

(4) Lease is more economical than rental.

AIRCRAFT UTILIZATION

Mr. HALABY. We would like to go into the whole aircraft utilization record and give you reasons.

Senator MAGNUSON. We have had a lot of discussion on that and the types of aircraft you have. Your technical people know better than we do, but we want to get it as cheap as possible.

Senator ALLOTT. I have a list of these aircraft, Mr. Chairman.

Senator MAGNUSON. Yes.

Senator ALLOTT. Many of these have a very low utilization. This schedule you have put in the record from the Federal Aviation Agency shows that the Boeing C–135——

Senator MAGNUSON. That is the biggest.

Senator ALLOTT. Has a daily utilization of 3.15 hours. The Convair 880 has 2.2 hours. The Boeing 720 has 3.12, and the Lockheed L–188—what is that?

Mr. PRILL. The Lockheed Electra.

Senator ALLOTT. At 3.21. The Convair Allison, that is your converted Convair, converted to turboprop?

Mr. HALABY. Yes, sir.

Senator ALLOTT. 2.93. But many of these run down to as low as 0.33. The two Grummans are 0.33. That is a third of an hour a day.

RESEARCH AND TEST PLANES

Mr. HALABY. There are two aspects of this, Senator. One is that several of these aircraft are research and test airplanes, and one-third of an hour is not bad for airplanes that have to be instrumented and equipped for testing. I think that you will find that is true in manufacture and in NASA and the Air Force and Navy test centers. We could break those out and show them to you.

Three of the Grummans are in the test program.

PLANE FOR EMERGENCY USE

Senator ALLOTT. I can understand that.

Mr. HALABY. Another Grumman is used by me and our headquarters staff, and occasionally the Civil Aeronautics Board. It is an airplane that spends a lot of time, and does the job of a fire engine, waiting for an emergency use, such as going to an accident. It is also an airplane that is about as economical as you can get for that number of passengers. We are not running an airline, and any comparison with airline utilization is wholly fallacious. Their whole purpose is to get every hour out of the airplane they can, because that is the number of seat-miles they carry. Our whole purpose is to carry out the duties and missions for which we have the aircraft, and we do not just fly around in order to run up the hours.

BEECHCRAFTS

Senator ALLOTT. You have six Beechcrafts in Washington here, for example.

Mr. HALABY. No, sir.

Mr. PRILL. No, sir.

Senator ALLOTT. That is what this list shows.

Mr. HALABY. This document is a FAA document, you say?

Senator ALLOTT. I see it is broken down. Two in Washington and four in Atlantic City.

DC–4 AT ATLANTIC CITY

You also have a DC–4 at Atlantic City that has a utilization of 1.6 hours. It does not show what that is used for.

Mr. HALABY. This airplane has installed in it a blind landing system, and it has a very complicated test and other instrumentation and it is working here and in England to try to develop, and that is its sole purpose, the most efficient and safest blind landing system we can get, but it can only fly when everything else, all of the electronics, ground system and everything else, and the weather, are right. So utilization is very low. Is that correct, Mr. Blatt?

Mr. BLATT. Yes. For a great period of time it was down for installation of the equipment, the airborne equipment. It was necessary to install the equipment before we could do any flight work with the aircraft, but it was very limited in utilization. It is a test aircraft, and as the Administrator indicated, the objective is not to get many flying hours, but to get specific flying hours under specific meteorological conditions.

Mr. HALABY. The number of flying hours on the X–15 would probably amaze you too, because it is strictly a research airplane.

LOW USE FIGURES ON PLANES

Senator ALLOTT. On your DC–7 at Atlantic City you only use it 0.5, which is a half an hour a day daily utilization. My point on this is, I understand that you cannot put the same criteria to work on these that you do on airlines, because an airline is interested in keeping its airplane in the air as many hours a day as they can. When they start falling off, their profits start falling off.

But certainly these low figures on some of these planes here would indicate, for example, the 1.6 at Honolulu on the DC–4 and the 0.5 on the DC–7 at Atlantic City—would certainly lead an ordinary man to think that a lease might be a better method than investment.

Mr. PRILL. Mr. Chairman, on some of these airplanes they call DC–4's, these were military surplus C–54's. For example, the airplane kept at Honolulu is now being surveyed out of the fleet. It has not flown for some time. The corrosion in the airplane is so bad it will cost $100,000 to repair it, and we do not consider it a worthwhile investment of the Agency's funds. So that airplane is not in flying status.

Each of these airplanes, if we feel they must come to the fleet, are reviewed as to whether to lease or buy. It is part of the standard process and we always recommend the cheapest, which, by definition to us, is the best.

Senator ALLOTT. You have a Fairchild up in Alaska with 1.27, or an hour and a quarter, which you have described as logistic flying. It would certainly indicate there might be a more feasible lease method.

Mr. PRILL. I think that this airplane was given to us by the Air Force.

Senator ALLOTT. Given or not, it costs a lot of money to keep it up and keep them operating.

The only point I raise in connection with this is your low hours of utilization, even outside of things that are strictly so-called tech-

nical planes like the Grumman F–9–F, I suppose, and the Gruman SA–16. I don't know what that is.

Mr. HALABY. That is an amphibian.

Senator ALLOTT. What is its use?

Mr. BLATT. It is an amphibian aircraft and we have to use it for search and rescue work.

Mr. HALABY. It is an amphibian basically on rescue work.

Senator ALLOTT. The low utilization of these indicates, to me at least, that this thing ought to be given a real hard look for the purpose of cleaning out a number of these planes, because as long as you have them, you will have people spending time and money on maintenance and this can run into an awful lot of money.

Mr. HALABY. We agree with you. It is worth a continuing hard look.

One of our problems that we are now cleaning up is, we have not had as good a central management of this whole fleet as we should. We are in the process of getting a man from private industry who has some airline experience to provide the necessary central management, and better utilization. This has not been an easy recruiting task, but we are on to it.

I am sure you realize that the Alaskan C–123 has only limited seasonal use. It goes out and supplies and supports a lot of our remote facilities, and has limited activity during certain seasons of the year. Also that airplane has had a problem with the wing skin, and it has been under repair and modification for over 3 months, I think. Is it back on the line now?

Mr. PRILL. It is back on the line now, but it was in Oklahoma City being rebuilt. That rebuilding, incidentally, is one that the Air Force worked many hours on getting a better wing skin on it, and we are working with them closely.

EXPENSE OF OPERATION OF BEECHCRAFT

Senator ALLOTT. What are these Beechcrafts that are simply described as Beechcrafts? Are they DC–18's?

Mr. PRILL. They are C–45's, which is similar.

Mr. HALABY. I have a personal campaign to get rid of those airplanes because they are one of the most expensive per unit of work done, and also are not very easy to land or take off. Finally, repair and rebuilding work on them is very expensive. So I appreciate your wanting me to get rid of those.

INSTALLATIONS AT JOHNSON CITY, TEX.

Senator ALLOTT. I would like to ask this then: I understand that there is a radio beacon costing $22,115, and a landing light costing $7,150, installed at Johnson City, Tex., which has a population of 600.

Mr. HALABY. Johnson City, Tex., is a city in the State of Texas with only 600 population, but it happens to be adjacent to a location where the Vice President of the United States and the Chancellor of the Federal Republic of Germany, and various other official visitors of state fly in and out. It is about as austere a coverage as we dare permit there.

PROTECTION OF VICE PRESIDENT AND VISITORS

You will recall, a little over a year ago, the personal plane and personal crew, financed by the Vice President, crashed while approaching the Johnson City Airport. That gave us, it seems to me, confirmation enough that we would not want our Vice President nor state visitors to be subjected to that kind of danger. So we have a minimum, austere—and, in fact, I feel we should have more protection in there in some respects if we could afford it for this purpose. This airport is open to the public. It is not a private airport. It is not on the Vice President's ranch. It is a public facility.

If the President had a farm in Gettysburg, or some other location, I believe we would have installed, as was done before, more elaborate equipment for the utilization of one or more of our two top leaders. When the Vice President is no longer the Vice President, the Federal facilities there will be removed, and they will go back into our inventory or some other location.

This was done, by the way, not at the request of the Vice President, but because of our belief that we should provide this minimal protection to the No. 2 man in our executive branch of the Government, and to the various dignitaries of the world who come there and whom he entertains at his own expense and in his own way.

COMPLIANCE WITH COMMITTEE DIRECTIVE

Senator ALLOTT. I can't agree with the criteria you select in putting it there. I do not think it is justified. I wonder how far this might go in providing landing aids for other various important personages.

Senator MAGNUSON. If the committee directed you to take it out, you would take it out, wouldn't you?

Mr. HALABY. If the committee directed me to take it out I would have a hard time in refusing to do anything that the committee directed, but I would feel it most unwise, and I would feel we owed the President and Vice President of the United States some protection when they are on official trips to and from various locations.

I would be glad to submit for the relative cost of special facilities in the Federal Aviation Agency budget in the last two administrations, if that is desired.

TYPE OF BEACON

Senator ALLOTT. Is this an OMNI beacon?

Mr. HALABY. No, sir.

Senator ALLOTT. What is it?

Mr. HALABY. It is a low-frequency, directional homer, and there is a light there, isn't there? A single-light beacon. I tell you, Senator, you are a pilot, and you would not be very happy in a low ceiling with low-visibility conditions, making your way over to Johnson City, particularly if you had a chief of state or some other prominent visitor on board.

Senator MAGNUSON. I am a passenger, and I flew in there once. I hope it was safe.

REPORT ON CRASH OF VICE PRESIDENT'S PLANE

Senator ALLOTT. Do I gather from your testimony you are implying that the crash of Vice President Johnson's plane was due to lack of landing facilities there? I never saw any reports on the cause of that crash.

Mr. HALABY. We will be glad to give you the report on that accident. The Civil Aeronautics Board has reported on that accident and we will give it to you personally if you are interested. We will give you a copy of that report.

Senator ALLOTT. I am very much interested.

Mr. HALABY. And I would be hard put, right now, although I saw the first report of the accident, to tell you what the findings of probable cause were, and what proportion was due to navigation from the cockpit, and what proportion was due to lack of navigational and communication facilities, but we did not put in a VOR like the one we put in at Gettysburg, which is a very costly installation.

How much is the total cost of the installation of the VOR?

Mr. KING. I would estimate $120,000; the VOR at Gettysburg was a mobile VOR.

Mr. HALABY. Yes; and we took it out when the national need was no longer present.

Mr. KING. Yes, sir.

Mr. ALLOTT. Can I move to another phase of the facilities?

Mr. MAGNUSON. Are we staying on facilities and equipment?

Senator ALLOTT. Yes.

INSTRUMENT LANDING, ANDREWS FIELD

I understand that you provided, out of your appropriation, an instrument landing system at Andrews. I would like to know the circumstances of that, as to why this was not a military item, rather than an FAA item.

First of all, is this true?

Mr. HALABY. Yes, sir, it is.

Senator ALLOTT. What is the facility? What kind of a facility is it?

Mr. HALABY. At Andrews Air Force Base there is an instrument landing system, and the cost of that installation will be given in just a moment. This base is a military base. It is now used by the Air Force, Navy, Marine Corps, and by a surprisingly large number of the contract carriers, civil aircraft, coming in and out for various reasons. Also it is the home base of the Special Air Mission Group that flies the President and Vice President and other dignitaries, and it is the locale where most of the chiefs of state arrive by jet. It is not just a military base in the regular sense. This is one of the places where selectively we have been inching forward with the common system manned by a single career service. Therefore, the tower and the principal navigation communication facilities are manned and maintained by FAA personnel. The ILS there was needed for safety. It is needed for safety.

Mr. KING. It costs $276,470.

QUESTION OF RELATION TO MILITARY BUDGET

Senator ALLOTT. Let me get rid of some outside chaff here. I do not question the necessity for it, but the question I am asking is, Why was this in your budget, rather than in the Department of Defense budget, in which I think it belongs?

Mr. HALABY. I think I know the answer, but I would prefer Mr. Thomas to answer. You might have more confidence in it from him.

Senator ALLOTT. No, I do not question the need of this out there. I know what the base is used for, but I do question whether this is a thing that should have been paid for by you rather than the military, even though you supervised its installation.

Senator MAGNUSON. All right, Mr. Thomas.

RELATION OF ANDREWS' OPERATIONS TO OTHER AIRPORTS

Mr. THOMAS. Mr. Chairman, the total operations at the Andrews Air Base are interwoven with the operations at the Washington National Airport and with the new airport at Chantilly when it opens. We are responsible for the total traffic. This instrument landing system is to provide a southern approach to Andrews.

We are responsible for providing communications and traffic control and navigation into the Washington area, including the operation of the tower, the associated radar, and landing aids. As Mr. Halaby says, this is the first step in the provision of a common system of air navigation in this area.

RESPONSIBILITY FOR PLACEMENT IN FAA

Senator ALLOTT. This does not mean you will provide navigational facilities. My point is not a picayunish one about the need for navigational facilities here, or the fact that you will ultimately take over control of all these navigational facilities, but just a question of where this belongs in the budget. I seriously question that this does belong in the Federal Aviation Agency's expenditures, but belongs over in the Department of Defense's expenditures. This is the only question I have in this respect.

Senator MAGNUSON. Did the Bureau of the Budget do this? Maybe it is a prerogative of the Bureau of the Budget as to where they put this.

ANDREWS A UNIQUE SITUATION

Mr. HALABY. Of course, the military will not duplicate this equipment in that airport. This is a unique situation. I think you want the assurance we are not going around installing, on military bases, FAA equipment out of this budget. That is certainly the case. I do not think there is any other airport like this one.

Senator ALLOTT. Not only the assurance it would not be done, but also I would like to know why it was done here, and why you did not say in your negotiations with the Air Force, "You operate Andrews even though the Navy and the Marines and the other people use it, and why it was not taken out of their budget rather than yours. Your budget is already blown up about as high as we can stand it anyway, and we want to keep it down as low as we can."

FACILITY BEGINNING OF IMPLEMENTATION OF FEDERAL AVIATION ACT

Mr. HALABY. I appreciate that very much. The principal reason here is, sir, that this is a facility at which we are beginning to implement the Federal Aviation Act, which calls for one agency to have a common system to research and develop and install equipment for the common system of air navigation, communication, and traffic control. This is a unique place and location where in agreement with the Department of Defense we provided the ILS.

Senator ALLOTT. And it will be unique?

Mr. HALABY. Certainly at the present time, we feel a Strategic Air Command base has its own navigation, communication facilities, and its own ILS and radar approach control, and we have neither been asked nor would it be agreed by the Air Force that we put in an ILS at such a base.

Senator ALLOTT. I think the record is clear, Mr. Chairman. I just want to be sure of this. I do not think this should have been handled this way in the first place, and I just want to be sure that this is not a precedent. If we have an understanding it is not a precedent for the establishment of these, or for the payment of these facilities by the Federal Aviation Agency on military bases, because properly it does not belong in their budget, I am satisfied.

FORMER METHOD OF HANDLING TRAFFIC

Senator ELLENDER. How was the traffic handled in there before?

Mr. HALABY. By the military.

Senator ELLENDER. What became of that facility?

Mr. HALABY. We moved in and manned their facilities and several of their facilities require modernization at the present time, and we wanted to proceed with that modernization.

Senator MAGNUSON. We can ask the Bureau of the Budget and they can make this change so it would not be in there.

Mr. HALABY. It is a fundamental point.

ATTEMPT TO REACH STATED OBJECTIVE

Senator MAGNUSON. I still think where you go in and achieve this consolidation, that properly where you are actually doing that, I do not think you should be stymied and not be allowed this kind of appropriation in your budget where you see a chance to move in.

Mr. HALABY. Exactly.

Senator MAGNUSON. And reach our objectives and what we are trying to do here.

Mr. HALABY. That is exactly what I am trying to do.

Senator MAGNUSON. Because we are trying to consolidate in a systematic fashion, and where you have a chance to move in you ought to have the opportunity to put this on the table in your budget.

Mr. HALABY. I think what Senator Allott is concerned about is that they not duplicate——

Senator ALLOTT. No; this is not my concern. I am not concerned with your moving in, and I am not concerned with the program, and I am not concerned with the necessity of it, but I am only concerned with the items in here of 200-and-some-odd-thousand dollars, on an

Air Force base, that do not belong in the Federal Aviation Agency budget, but belong in the military budget. It is on an Air Force base. That is the only question I raise.

Senator MAGNUSON. All right. Are there any other questions on facilities and equipment?

GRANTS-IN-AID FOR AIRPORTS

If not, we go to the grants-in-aid for airports program. I read from the House report on page 7.

The House bill includes the $20 million budget estimate to liquidate contracts with municipalities for airport construction under the Federal Airport Act before it was amended last year. The committee also recommends $75 million to finance the fiscal year 1964 program, authorized by Public Law 87-255. About 10 percent of the grants each year are for new projects and the balance is for improvements to existing airports.

The Federal Aviation Agency have submitted a breakdown of the airports in the United States in which they are doing work under either one or both of these programs. For the benefit of the committee, it will be too long to put in the record, but they have broken them down by States.

Senator ALLOTT. Where is that?

Senator MAGNUSON. Do you have any more copies of this? It is the FAA press release which was released recently.

Mr. HALABY. Yes. I think he has one there.

Senator MAGNUSON. We will put the Agency's letter in the record in full.

(The information referred to follows:)

FAA ANNOUNCES FEDERAL AID FOR AIRPORTS FOR FISCAL YEAR 1963

The Federal Aviation Agency has allocated $74,283,719 for the construction and improvement of 419 airports under the Federal Airport Act for fiscal year 1963.

The allocation is the largest in the history of the program and was developed from requests by local communities amounting to $164,692,892. The local communities will match the Federal grants generally on a 50-50 basis.

A total of 202 of the airports to be developed under the program are for general aviation (nonairline) use exclusively. Included are 46 new airports, and improvements to 156 existing ones. The total Federal money for these projects is $18,688,915.

The remaining 217 airports—involving $55,594,804 in Federal-aid money—are used by both general aviation and the airlines. Funds are included for 4 new airports and improvements to 213 others. The 4 new airports are Sitka, Alaska; Grand Canyon, Ariz.; Sacramento, Calif.; and West Yellowstone, Mont.

At 391, or 93 percent, of the airports included in the program, the number of general aviation operations is larger than the number of airline operations. At the remaining 28 locations, general aviation averages approximately 44 percent of airline operations.

Of 419 airports in the program, 109, or 26 percent, are being allocated Federal aid for the first time. This includes the 50 new airports and improvements at 59 existing ones. Ninety-four of the 109 airports are general aviation fields.

Emphasis during the past year on fire and crash capabilities is reflected in the allocation of funds to construct buildings for fire and rescue equipment at 30 locations. The largest part of the total allocation, however, $39,009,801 (52 percent) is for the construction and improvement of runways and taxiways. An allocation of $17,718,303 (24 percent) has been made for acquiring land for clear zones and for airport development. The remaining money is for lighting, obstruction removal, and other safety items.

The 46 new general aviation fields listed in the program are:

Arizona: Phoenix-Northeast; Arkansas: Malvern, Mount Ida, Osceola; Colorado: Loveland, Salida; Florida: Boca Grande, Live Oak; Georgia: Blairsville, Thompson; Illinois: Pekin; Indiana: French Lick, Tell City; Kansas: Holton, Stockton; Kentucky: Bardstown; Massachusetts: Bourne, Hadley; Mississippi: Forest, Macon, Magee, Wiggins; Missouri: Branson, Carrollton, Trenton; North Carolina: Ahoskie, Long Beach—Southport; North Dakota: International Peach Garden; Oklahoma: Overbrook, Pryor; Oregon: Brookings, Cottage Grove; Pennsylvania: Lehighton; Tennessee: Camden, Dickson, Fayetteville, Gallatin, Jacksboro, Waverly; Texas: Yoakum; Vermont: Island Pond; Virginia: Grundy, Leesburg, Manassas; Wisconsin: Park Falls, New Richmond.

1963 Federal-Aid airport program—State summary of projects and funds

State	Number of projects	Federal funds	State	Number of projects	Federal funds
Alabama	6	$620,586	New Mexico	1	$48,617
Alaska	14	3,745,951	New York	12	7,950,274
Arizona	8	2,344,257	North Carolina	8	1,482,438

New Hampshire	3	287,311			
New Jersey	2	27,100			

BREAKDOWN OF STATE APPORTIONMENTS

Senator MAGNUSON. Here is a State apportionment breakdown of the amount of money going into the States for either improvement of the airports or grants for new construction, where the States have bonded it and there has been a local contribution.

Mr. HALABY. Yes, sir.

Senator MAGNUSON. Does anyone have any questions on that?

FUNDS FOR CONTRACT COMMITMENT

Senator MONRONEY. In other words, you get $20 million out of the old bill, which is an authorization for contract commitment.

Mr. HALABY. Yes The $20 million is not for new obligations, but to pay the bill for what we have already obligated; $75 million is the new obligation authority under the authorization in the act.

Senator MAGNUSON. The Senator from Oklahoma, of course, is so familiar with this program that I would defer to him to ask any questions about the progress of the program, or how they are coming out in it, or whether this money will be sufficient to carry out the intent of the act.

ACTUAL NEED ABOVE REQUEST

Senator MONRONEY. I think we actually need more than $75 million a year due to the requests we had for modernization of many of our major airports, and the needs of our general aviation airports, but if this is all the authorization allowed, it will carry the program 1 more year.

Mr. HALABY. Yes, sir.

Senator MONRONEY. In other words, the current program is financed out of money already in the budget.

Mr. HALABY. The President proposed last year a program of 5 years at $75 million a year, and Congress authorized last year 3 years at $75 million, and appropriated $150 million for 2 of those years. This is an additional $75 million to cover the third year authorized.

Senator MONRONEY. You will require another authorization next year?

Mr. HALABY. Yes, sir.

Senator MONRONEY. To keep you up with the funding already planned.

REASON FOR PROGRAM

Mr. HALABY. The reason why the President proposed such a program was that from all the States, cities, counties, and airport authorities of the United States, we had a very tight estimate of about $1,200 million in requirements over a 5-year period. The President's proposal called for meeting a little less than half of that through Federal matching grants and through the very wise and helpful counsel and guidance of the Senator from Oklahoma this money was to be concentrated on the safety features of the airport and not the comfort features. We feel a great deal of progress has been made because the airport is, after all, the start and the end of a flight, and it is the narrow point in the system, if not the bottleneck we are trying to build. If there are not enough runaways and if there are not enough airports and for light-plane, slow-moving traffic, it is a constant menace with heavy passenger-laden, high-speed traffic, and we have a great source of danger.

It was particularly Senator Monroney's amendment that drew or was designed to draw small-plane traffic out to general aviation airports and away from big jet airports, which was a very important step in this matter.

VIRGIN ISLANDS IMPROVEMENTS

Senator MAGNUSON. Could I ask one thing here? It is probably a minor item, but it intrigued me. In the Virgin Islands you are going to spend $91,000 to relocate an access road and build a security fence. What do you need a security fence around a municipal commercial airport for?

Mr. HALABY. The security fence is to keep animals, trespassers, hotrodders, and unattended children off the runways. That is a way of preventing accidents on the runway itself.

Senator MAGNUSON. I just was wondering why that was on a commercial airport. I know they have them around military airports.

Senator ALLOTT. Has that runway been extended outward, or how is it coming? The one at St. Thomas.

Mr. HALABY. The one at Alexander Hamilton Field, St. Thomas. It has been programed from 1961 and 1962 unused apportionment funds.

Senator MONRONEY. There is only one way you can extend it because there is a mountain on the other end. It is a very bad airport.

Mr. HALABY. It is a close decision because of the number of the usages of that airport per year and the question of whether there is any place to expand it after a small expansion for aircraft that are now being used in that area.

Senator ALLOTT. I have flown in there and question just a matter of interest as to how you were managing.

LOGAN INTERNATIONAL AIRPORT, BOSTON

I understand from Senator Saltonstall that there was a misunderstanding between the FAA and the Boston authorities that resulted in the temporary elimination of a projected $920,106 worth of land acquisition and airport improvements at Logan International Airport in Boston. This has now been rectified and the Federal-Aid airport program now lists Logan Airport.

Senator Saltonstall asked me to ask this: He would like to know if the work projected for Logan will be started in fiscal year 1963.

Mr. HALABY. The answer is yes, sir. Just one paragraph of background. We found on coming to this job that we were permitting monopolies to build up at quite a number of airports where a single man in a company would service, repair, and fuel aircraft. He had an absolute monopoly. No one else could come in and repair or service or maintain and sell fuel. In reviewing with our General Counsel, Mr. Goodrich, the interpretation of the Federal Aviation Act and the Federal Airport Act and the Surplus Property Disposal Act, I felt and so decided that this was not the intention of Congress. So we are now moving against these trusts at airports.

It happened we had some complaints about the monopoly at Logan, and we took that one up first.

Off the record.

(Discussion off the record.)

TEST CASE AT BOSTON

Mr. HALABY. We did have a test case there and they now have a competitor in there. As a result of that we are no longer withholding the aid because they have set up free and open competition there.

Senator ALLOTT. I think the question contemplated that the matter has been resolved.

Mr. HALABY. Yes.

Senator ALLOTT. You are doing this in other places too?

Mr. HALABY. Yes.

Senator ALLOTT. And I wholly approve of this policy.

MONOPOLY PROBLEM

Senator MAGNUSON. Can you get to the taxicabs too?

Mr. HALABY. No, sir, we cannot. That is the problem of earning some money.

Senator MAGNUSON. This is the real trust that goes on.

Mr. HALABY. But we earn money and lower the appropriations we need to ask you for, for Washington National Airport by giving one company the concession for tens of thousands of dollars a year. We are going to come to the Congress for an amendment to the Surplus Property Disposal Act as there is a unique little provision in there that says if it is a surplus property airport you may have a monopoly for fuel. That was passed during the war period, but in these days it is out of order, in my judgment, and we would like to ask you to amend that act so that an airport, if there is a surplus property airport nextdoor to a Federal-aid granted airport, there is no discrimination.

Senator ELLENDER. Do you not think it could be easily handled if and when a transfer is made to whoever desires it? I do not think you need legislation for that.

Mr. HALABY. I guess I am a little out of order here. This is before another committee, but I want to tell you that we cannot——

Senator MAGNUSON. The main man from that committee is listening to you down at the end of the table, so this is the right place to take it up.

Senator ELLENDER. On the legal aspect.

MONOPOLY ON FUEL

Mr. HALABY. The point is, if there is a surplus property airport transferred to a community under the Surplus Property Act, they may permit a monopoly on the dispensing of fuel, whereas if there is another airport which gets Federal grants they may not have a monopoly, and that is, you might say, an anomaly that I think you ought to clean up.

Senator MONRONEY. Almost every surplus airport that has been given to a city, if it has any commercial value whatever, has now received Federal aid under the Federal Aid Airport Act, which brings it under your control as far as the competitive situation is concerned.

GRANT TO BARROW, ALASKA

Senator MAGNUSON. Mr. Halaby, I have not been to the Virgin Islands and I have no intention to go there, but these other Senators seem to be very familiar with the Caribbean. However, I have been to Barrow, Alaska, on several occasions, and I see they are going to spend $403,000 there in a grant, and part of it is to acquire land.

What reason would you need to acquire land for in Barrow? There is nothing but Federal land up there, as I remember it—naval oil reserves, and Navy land. It may be the town of Barrow might have acquired some land. I do not know.

Senator ELLENDER. You have a few people there, Senator. I was up there.

Senator MAGNUSON. Yes. A few people own land. Maybe that is it. I was curious about another thing.

LAND ACQUISITION AT SITKA, ALASKA

At Sitka, Alaska, you are going to acquire land. I wish somebody would find out, because we are talking about the use of facilities and there is that old naval base up there, and as I recall it, the other land-

ing field is right next to it. I would like to have somebody find out and maybe they can save a lot. There is an old amphibious base up there where they had quite a large runway at Sitka, Alaska. The Navy has a skeleton operation, or will declare it surplus. There is an old amphibious PBY base there.

Are there any further questions on the grants-in-aid to airports?

RESEARCH AND DEVELOPMENT

We come now to research and development. The House committee recommends $35 million, and I quote from the report at page 7, "For research and development related to modernizing the national aviation system. This is $25 million below the appropriation for fiscal 1962 and $15 million less than the budget estimate. A carryover of $21,503,000 will be brought forward, making a total of $56,503,000 available for such research." When you add the House $35 million, that is.

Mr. HALABY. The President requested $50 million.

RESEARCH PROBLEMS

Senator MAGNUSON. We have discussed this business of farming out research problems. I do not think we need to go into that, because the record is complete on that.

Don't I have a list here of those research projects?

Mr. HALABY. You have a very substantial report on which we spent a great deal of effort.

Senator MAGNUSON. Here it is. Right here.

Mr. HALABY. Yes. That is part of it.

SYNOPSIS ON RESEARCH

Senator MAGNUSON. We will put in the record here the synopsis on research that you sent up to us, and the value of the plans, for the purpose of the committee. It is too long to put in the record, but there is a great variety of research programs. They have explained them in detail and the Agency has done one other thing which the committee would be interested in. They have a column alongside of all these on the results as to what has happened. It shows what is pending, and everything else. The committee can look at that.

HOUSE ALLOWANCE

You can address yourself now to the House amount. Are those figures correct—the carryover of $56 million?

Mr. HALABY. Yes.

Senator MAGNUSON. With the $35 million.

Mr. HALABY. That is correct.

Senator MAGNUSON. All right.

Mr. HALABY. The President requested $50 million for this activity.

OVERSEA EMPLOYEES

Senator MAGNUSON. Put in the record the number of people you have employed overseas.

Mr. HALABY. Oversea Federal Aviation Agency employees?

Senator MAGNUSON. And where. You mentioned England as one place.

OVERSEA EMPLOYEES OF OTHER NATIONS

Mr. HALABY. That is right.

Senator MAGNUSON. Put in the record, if you know, whether other countries have similar people over here.

Mr. DEAN. Do you wish to include Hawaii in the overseas?

Senator MAGNUSON. No, I mean just overseas outside of the United States, and where they are located.

Mr. HALABY. If other nations send people overseas?

Senator MAGNUSON. Does Air France, for instance, or BOAC, have some control people at Idlewild?

Mr. HALABY. Flight inspection or control people?

Senator MAGNUSON. They do?

Mr. HALABY. I do not know. I will find out.

(The information referred to follows:)

Foreign governments do not maintain inspector personnel in this country comparable to those we have abroad. There are two reason for this: First, practically all of the foreign international carriers are state-owned, and the crew personnel are government employees. Secondly, U.S. civil aviation standards are the highest in the world, and foreign crews and aircraft landing here must meet our standards.

Most foreign governments operating aircraft into the United States do have on their embassy staffs those who might be called commercial air attachés. Also, from time to time, they may bring in specialists when specific problems arise. However, these people are more concerned with what might be termed the diplomatic aspect of international aviation, and do not delve into the routine operation and maintenance of aircraft as do our personnel abroad.

STATE DEPARTMENT EMPLOYEES

Senator MAGNUSON. It seems to me we are going overseas and taking care of our problems.

Senator ELLENDER. Not only ours, but theirs.

Senator MAGNUSON. It seems to me we ought to take a look at this.

Senator ELLENDER. The people you have overseas are under the State Department.

Mr. HALABY. No, sir.

Senator MAGNUSON. No, sir. They are under FAA.

Mr. HALABY. He is referring to FAA employees overseas, giving assistance and surveillance over our own air carriers. For example, in Rome, I think, we have five or six people. They oversee the operation at TWA and Pan American, and the operators that go through Rome. If they have an engine burn out, or something like that, they have to get a change of engine and get approval of the modification. We have them at Beirut.

Senator MAGNUSON. And some in Panama.

Senator ELLENDER. You have some in State assigned by your office.

Mr. HALABY. We assign people to State and they have just a handful of people.

FAA OVERSEA DUTIES

Senator ELLENDER. It is quite a big handful when you toss them all over the world. The people Senator Magnuson is talking about are independent from the State Department.

Mr. HALABY. Yes, sir. They are in the country team, but they are Federal Aviation Agency employees assigned to these flying and inspection and surveillance duties.

Senator ELLENDER. What is the difference in what they do as compared to those in State?

Mr. HALABY. These are technicians who are inspecting aircraft or inspecting operations.

Senator MAGNUSON. And control.

Mr. HALABY. Of U.S. aircraft and U.S. airmen, and repair facilities that service U.S. aircraft. I think there are five men working on research and development in London and in Frankfurt, Germany. The total number of FAA employees for oversea operation is 78. Those are the FAA people that we fund.

Senator ELLENDER. Those are the ones you furnish?

Mr. HALABY. I think what you were referring to was the technical assistance fellows, who are under ICA.

Senator ELLENDER. For each large embassy.

STATE DEPARTMENT AND AID EMPLOYEES

Mr. HALABY. The total number funded by either State or AID is 160. Those are people who are in South America or the Middle East or African countries, and install a VOR, or a transmitter, or a receiver. They do this work and then come home.

Senator ELLENDER. But the ones I have in mind give assistance to the local people there.

Mr. HALABY. Yes.

Senator MAGNUSON. Yes, they do.

Senator MONRONEY. That is not charged to FAA. The 78 are there as technicians to advise on outages of navigational systems, and to inspect the angle on American aircraft, and other things.

Mr. PRILL. Not to advise. Senator Monroney said, "to advise." It is not to advise.

Senator ELLENDER. Those who work with the State Department are really under them.

Mr. HALABY. I am sorry.

Senator ELLENDER. You have no jurisdiction over those who work with State.

Mr. HALABY. They are assigned to AID.
Senator ELLENDER. And they are paid by——
Mr. HALABY. By AID reimbursing us.
Senator MAGNUSON. Not the technicians though.
Mr. HALABY. No.
Senator MAGNUSON. They are FAA.
Mr. HALABY. Technicians are FAA throughout.
Senator MAGNUSON. For instance, do we have some in Tokyo too?
Mr. PRILL. Yes.
Mr. HALABY. We have a five-man office.
Senator MAGNUSON. But the Japanese lines would not have one at Seattle, or Anchorage.
Mr. HALABY. I am not sure of that.
Senator MAGNUSON. Let us find that out.
Mr. HALABY. There is an important thing here we have to bear in mind. Almost all of the foreign air carriers are the nationalized carriers. So almost any man they send over can be said to be a Government man, in effect.

U.S. TECHNICAL ADVISERS AT FOREIGN AIRPORTS

Senator MAGNUSON. What I am talking about is we furnish technical advice at foreign airports for our aircraft. We also aid, I suppose, in an indirect way, the foreign aircraft. I am wondering whether the foreigners deem it desirable to have technicians to aid their aircraft landing in the United States, or counterparts of this?
Mr. HALABY. It is not just aircraft, but it is U.S. passengers we are primarily interested in; and, secondarily, the aircraft and the crewmen; and, thirdly, some of these foreign carriers coming into the United States want to know whether they are complying with the civil air regulations of the United States.
Senator MAGNUSON. Sure. I suppose the Japanese Air Lines have some Japanese people at the desk there, administrativewise.
Mr. HALABY. Yes.
Senator MAGNUSON. But I am wondering if the relationship of technicians is a reciprocal one.
Mr. HALABY. I think what we need to dig into is to see, for example, in Seattle, what Japan Air Lines do about seeing that Japanese air regulations are complied with when Japan Air Lines is in Seattle. I think we have to get into that.
Senator MAGNUSON. You should dig in to see if there is some reciprocity here. Now we go back to research and development.

CHANGE IN ORGANIZATIONAL PROJECTS

Mr. HALABY. If I could refer to pages 6 and 7 of the statement, I will just make two points there to save your time.
Senator MAGNUSON. All right.
Mr. HALABY. We have taken a very hard look at the whole research and development program. I think it is fair to say, and objective to say, that the program was not oriented toward a whole system but was going off into individual projects. It was not well organized, and it was poorly managed. We have done something about it. We canceled some contracts and projects. We deferred action on others, and

we have come a long way since we were last before you, on an integrated system plan. We have a new manager of research and development, Mr. Blatt. Then we have centrally, under one of my three deputy administrators, Mr. Shank, a whole new management of this program. We are not out of the woods and into the forest yet on this, because there are still too many projects, and we are still trying to tighten the whole thing up, but I submit it is not time to curtail the level of research and development just as we complete this new management and new organization and new approach.

RESTORATION REQUEST

Therefore, we request that you restore the amount reduced by the House. I point out it is only 5 percent of our capital investment that would be devoted to research and development.

TYPE OF RESEARCH

Senator MONRONEY. May I ask you another question? It all deals with hardware and such things, not the human element. Is that correct?

Mr. HALABY. Almost all is on hardware. In the medical research portion there is some. But I think it is only $2 million out of the $50 million we are requesting. You see, this $50 million is below last year's level. We requested $10 million less than last year.

Senator MAGNUSON. Yes, $35 million is $25 million below the 1962 amount, and $15 million less than the budget estimate.

Mr. HALABY. Yes.

AMOUNT IN PIPELINE

Senator MAGNUSON. But what the pipeline shows is $56,503,000. Is that higher or lower than last year's pipeline amount?

Mr. HALABY. Mr. Blatt.

Mr. BLATT. Lower than last year.

Senator MAGNUSON. You mean you had more?

Mr. BLATT. In last year's pipeline we had 76.

Senator MAGNUSON. That is right.

Mr. HALABY. Would you briefly summarize the situation as you see it?

Mr. BLATT. Yes, sir.

ESTABLISHING CAPABILITY IN RESEARCH

Mr. HALABY. Mr. Blatt is one of the top career officials of the agency and has been in charge of this for several months now. Mr. Shank has been with us only for 60 days.

Mr. BLATT. Mr. Chairman, and gentlemen, I think it is important to realize that prior to 1958 there was virtually no effective integrated inhouse or contractual research and development capability in the air traffic control and navigation field. The first effort of the Airways Modernization Board and the Federal Aviation Agency, after it became established, was to try to establish this capability. We established this capability through the management of the contract program, and through the manning of our research and development or-

ganization—we feel now that by the end of 1962 we have created both an inhouse and a contractual research and development capability, uniquely competent to meet our needs.

DEPARTMENT LIAISONS

We have done many other things, I think, that are effective in our research and development effort. We have established liaison with the Department of Defense, with the Department of Commerce, with NASA—liaison that should provide good program coordination; should provide for the establishment of complementary programs; and should provide us with some guarantee that there would not be waste from duplication.

We have made organizational changes within the Federal Aviation Agency and have provided a mechanism for the receipt and interpretation of military requirements which will guarantee the integration of military requirements for airspace research and development with the requirements of other users of the airspace.

TECHNICAL ADVISORY BOARD

We have established an Agency Technical Advisory Board. This is a Board that serves without compensation and reports to the Administrator with respect to the technical adequacy of our programs and the technical efficiency of our programs. It should provide us with a means of assuring that we are utilizing the current state of the art.

SYSTEM DESIGN TEAM

During the past year, as an in-house activity, we have established a system design team. We drew together from the Agency what we considered were the 13 most competent specialists and systems engineers. We put them into a separate team organization and asked them to develop a total airspace utilization concept. On June 30 this concept was produced. We feel that with the publication of this system design team report the Agency will have for the first time both a technical and operational description of the system of the future. This will provide us with the research and development guidance that we need. It must be understood that the conception, the research, the development, the test, the experiments, and the evaluation cycle—this very cycle for the development of subsystems and major components, for systems of the magnitude and complexity of an airspace utilization system, is approximately 5 years. If you would add the implementation phase to this cycle from a total system concept, from development, through implementation—and I am now talking about implementation on a total national basis—it will be approximately a 10-year cycle.

CRITICAL PERIOD IN RESEARCH EFFORT

I believe that the next 18 months are critical to this research and development effort. This 18 months' period that began with July 1, 1962, is the period in which we will be developing the breadboard laboratory model of this National Air Space Utilization System of the future. It is our plan, and we are quite confident we will meet this

plan, that by January 1, 1964, we will have functioning an operating laboratory model of the system that will reflect the concepts of this system design team. I think we must have these funds to carry out the total program.

FORMER EFFORTS SCATTERED

Senator MAGNUSON. All right. When you talk about the 5-year and 10-year concept I think that this is not necessarily due to anyone here, but this is the way this thing started, and I think we are a little bit at fault in it because in the beginning of the Federal Aviation Agency we encouraged outside contracts. If you look at this list, some of them were pretty scattered, like scattering buckshot, without the concept you are talking about. What happened was that the whole program was not very satisfactory. There was too much emphasis placed on trying to get the ultimate in these particular cases. You would have a project that would be 50 percent completed and you would scrap it and start all over again. It was a case sometimes where the right hand did not know what the left hand was doing. You could have planned, but rather it was an attempt to see what we could do for today's operation rather than what you got out of your project. I think that is a fair analysis of what happened. You cannot point your finger at anyone person, but when you look at this and go over it you see there is a lot of buckshot that has been scattered and shot around.

Mr. HALABY. That is absolutely right.

Senator MAGNUSON. And this is the whole program. Everyone was trying to think, what will the airplane be 10 years from now. If a fellow had something for right now, a lot of times the plan was lost of trying to reach the ultimate, but you still have to have the plan you are talking about.

THREE SUBPROGRAMS

Mr. BLATT. Mr. Chairman, we have to conceive of our research and development program as functioning with three subprograms. One subprogram is the in-service program. What do we do immediately to take advantage of the state of the art?

Senator MAGNUSON. That is right.

Mr. BLATT. You have a second program, or subprogram, which is the next generation's system. You have a third program, which is small, in which you are trying to keep an interest and knowledge of the state of the art in future developments. What are the techniques of the future? For example, what will be the replacement acquisition system for radar?

Senator MAGNUSON. But that program has to be a small part of the real workload.

Mr. BLATT. That is correct. It is small.

Senator MAGNUSON. Because a good corporation wants to carry out research on what they can sell now.

Mr. BLATT. That is correct, but you must have these three definable subprograms.

TYPES OF CONTRACT

Senator MAGNUSON. That is right. Before the rest of the committee begins, I want to ask these questions for the record. On these contracts—this myriad group of contracts—do you award fixed fees, or cost-plus fixed fees?

Mr. BLATT. Our research and development contracts are normally awarded on a negotiated basis—a competitively negotiated basis—for a cost-plus fee contract; not necessarily a fixed fee. We are going more and more into incentive fees, trying to associate the amount of the contractor's fee with whatever it is that is most urgent in the project, be it time, quality of end product, or some other factor.

REQUEST FOR BREAKDOWN

Senator MAGNUSON. Maybe if it would not be too much trouble, you could break down, for us, the number of cost-plus fees and the number negotiated, and so forth. We can get it out of here, but maybe you have it.

Mr. BLATT. We can give you an outline.

(The information referred to follows:)

Seventy percent of the funds for our R. & D. programs are expended by the use of cost-plus-fixed-fee contracts. We have many fixed-price contracts for our smaller programs involving R. & D., studies, and services. We also have a large number of fixed-price contracts for supplies and standard equipment. The following is a list of the contracts we have used since the establishment of the Airways Modernization Board:

Type of contract	Number	Percent of funds
Cost plus fixed fee	210	70
Fixed price (R. & D., studies or services)	322	12
Fixed price (supply and equipment)	590	9
Incentive	7	7
Cost type	12	1
Other (maximum price, time and material, etc.)	9	1
Total	1,150	100

Even though only 7 percent of our funds have been obligated on incentive contracts, we are now moving in the direction of this type contract.

CONTRACTS WITH PENALTY CLAUSE

Senator MAGNUSON. How many contracts have ever contained a penalty clause?

Mr. BLATT. In research and development, sir, I do not believe we have ever had a penalty.

Senator MAGNUSON. You never had a penalty clause?

Mr. BLATT. We use penalty clauses in contracts for our construction work at NAFEC, but not for our R. & D. contracts. We average 20 penalty clause contracts per year.

Mr. HALABY. We have some mean ones in the procurement of facilities, though, that are causing screams of anguish from various contractors, and Mr. King has a list of those if you want them.

Senator MAGNUSON. I think we would like those.

Mr. HALABY. It is a substantial list, and it is making us very unpopular in industry.

(The information referred to follows:)

PENALTY CLAUSES IN CONTRACTS FOR OTHER THAN RESEARCH AND DEVELOPMENT

During the 1962 fiscal year the Federal Aviation Agency let approximately 1,220 contracts for activities financed by the "Facilities and equipment" and "Operations" appropriations. Of this number, 488 contained liquidated damages. Many of the contracts not containing liquidated damages were for studies, training, rental and stock items of supplies and equipment so that liquidated damages were not appropriate.

CERTIFICATES OF EQUIPMENT

Senator MAGNUSON. Do you ever require a manufacturer to have a certificate of equipment?

Mr. BLATT. A manufacturer?

Senator MAGNUSON. I mean, to certify that this is it.

Mr. BLATT. No, sir. Most of our research and development contracts are what might be considered best effort contracts. You cannot normally get a guarantee of production on something that has not been invented yet.

Senator MAGNUSON. Are there a lot of contracts where this would not be necessarily possible?

Mr. BLATT. That is correct, sir.

Senator MAGNUSON. How much time do you have to spend on looking at new equipment? Somebody has a new idea, or something like that, for example.

Mr. BLATT. I would say approximately one-third——

Senator MAGNUSON. You are not ordering anything, but just looking at something.

Mr. BLATT. That is right. I would say approximately one-third of our effort results from what we call unsolicited proposals, that is, the proposals of industry where these are not ideas that are generated within the organization, but ideas they have generated as a result of research and development in industry.

CONSULTATION WITH AIR OPERATORS

Senator MAGNUSON. Yes. There has been some complaint—I should not say that, but I think there has been some justifiable discussion that in the research and development there is too little consultation with the air operators themselves. That is a hard question to answer.

Mr. BLATT. No, sir. It is a very, very valid statement. I would like the opportunity to answer it.

Senator MAGNUSON. They do not know, sometimes, what is going on, and maybe they could be helpful in helping you to simplify these problems. I just put that out as a thought. I think it has come to me on many occasions.

Mr. HALABY. Yes, sir. It has come to my attention also and it is prevalent. We have a Technical Advisory Board made up of objective nonpressure group interests who are aware of the needs of the various parts of the community.

Secondly, we have a series of conferences, discussions and exposures. Just the other day Mr. Shank and Mr. Blatt had a meeting with about 500 people who had been involved in this system design, and it is our intention to disclose, a discussion; but it is very difficult to do that and have people satisfied with what they hear.

Senator MAGNUSON. Of course, I do not think you should get yourself in a position where they should start to dictate what you should do. You have to be independent.

Mr. HALABY. That is right.

Senator MAGNUSON. But you know they can be very helpful in this business if they know what you are trying to do and have some knowledge of it.

REORGANIZATIONS EFFECTED SINCE 1958

Put in the record how many reorganizations have been effected in research and development since 1958.

Mr. BLATT. Number of reorganizations?

(The information referred to follows:)

Since the initiation of the Research and Development organization in the FAA in 1958, there have been four major reorganizations. They have been initiated by the Service Directors in order to adapt continually the organization of the Service to changing research and development needs. The National Aviation Facilities Experimental Center has been regarded as an integral part of the Research and Development organization and has been involved in each of these reorganizations.

It should be noted that during this period the Research and Development organization grew from a small nucleus of the Air Navigation Development Board and Technical Development Center of the Civil Aeronautics Administration to an organization of approximately 1,600 people, with an established National Experimental Center and a contract program of approximately $38 million. Reorganizational alinement has been a continuous necessity in adequately adapting these growing resources to our research and development problems.

Senator MAGNUSON. And how many reorganizations have occurred in the Atlantic city sector. Also your personnel turnover. I do not know whether you want to explain it, but what happened to the electronic radar handoff device? Was that a failure?

Mr. BLATT. No, sir.

Senator MAGNUSON. Put that in the record, because there has been some question about that.

Mr. BLATT. All right.

(The information referred to follows:)

The present research and development efforts in perfecting electronic handoff devices for application to air traffic control are oriented toward the system aspect approach—this approach is being taken with due consideration to results obtained from prior radar handoff projects. During the last 2 years a total of $262,000 has been expended in direct contractual effort on the radar handoff project. Of these funds, $213,000 was expended for development of a prototype handoff device for use with scan converted TV equipment. The remainder of the funds was expended for two parallel system analysis studies to determine the impact on the overall system by the application of the handoff equipment. The prototype electronic handoff device has been tested at the National Aviation Facilities Experimental Center. The results of this testing and the study reports received from two individual contractor sources show the performance of this type handoff equipment to be marginal. The device cannot be applied to the existing system without extensive modification and change to other elements of the system. For these reasons, the present research and development effort is directed toward incorporating handoff features into the systems being developed wherein total system errors can be controlled.

Provisions are being made in establishing experimental test facilities to incorporate electronic handoff features so that functions and techniques may be analyzed for application to the National Airspace Utilization System. When perfected, electronic handoff techniques will provide greater precision in the location of aircraft for handoff between sectors within a center area, between centers and control towers, and between adjacent centers. Electronic handoff techniques will also greatly reduce the verbal communications between controllers in the performance of aircraft handoff, thus freeing more time for other controller functions.

In fiscal year 1962, a total of 63 controllers (center, 38, towers, 25) was authorized to provide radar handoff functions. In fiscal year 1963, it is anticipated that 477 (centers, 260, towers, 217) additional controllers will be required to provide the radar handoff functions. Projections for personnel requirements beyond the next 2 years are not available at the present time; however, it is possible that the 540 controllers will be sufficient for the next several years. If a satisfactory electronic handoff device is developed and installed it is expected that nearly all manpower directly employed in this activity can be released to other tasks.

DATA PROCESSING CENTRAL COMPUTER

Senator MAGNUSON. And one more thing here. Mr. Halaby and all of you mentioned the data processing central computer system on many occasions. It is my understanding over $50 million in outside contracts alone has been spent on this development. You can put in the record what is the present status of the system, and when we can expect the working hardware to be placed in operation, and all of the features of it, because this is a big, big expenditure.

Mr. BLATT. Yes, sir. We will give you the complete story in the record.

(The information referred to follows:)

The data processing central system per se, as originally designed, does not exist today, and its proposed evaluation as an integral system has been terminated as a direct result of recent Agency conclusions resulting from component evaluation and system analysis.

The experimental data processing and display facility now being assembled at National Aviation Facilities Experimental Center will make use of DPC equipment. It will be used for evaluation of procedures, techniques, and equipment being developed to meet the concepts currently being specified by the system design team. The DPC system included techniques that necessarily are an integral part of any future air traffic control system. DPC equipment by direct use as is, and by modification, will significantly expedite the establishment of this new experimental facility. Data processing central's contribution to the new system will, however, be far greater than the use of DPC equipment in the experimental environment. Through DPC very real and substantial gains have been made in the advancement of techniques essential to any automated ATC system. Examples of fundamentally important areas are—

1. Flight plan acceptance and extrapolation.
2. Generation and display of alphanumeric and pictorial information for control purposes.
3. Terminal area traffic sequencing and control.

The basic ATC system will be modular in design and, as such, will be implemented at the different facilities with varying capability according to operational and economic considerations. A realistic projected cost estimate of final implementation of the complete automatic system is not yet available and is contingent upon the prototype system to be specified.

There are now five off-the-shelf type rental computer systems in operation at five air route traffic control centers. They are Washington, New York, Cleveland, Boston, and Indianapolis. The annual rental cost of these systems varies, from $408,000 to $506,000. The average annual rental cost for the five systems is $459,600.

87888—62——32

The Agency originally had plans for leasing five additional computers, operation to begin in late fiscal year 1961. However, the adjusted fiscal year 1961 Agency expenses program did not provide for rental funds for these additional systems. Funds in the amount of $179,994 for ancillary teletypewriter equipment to support these five additional systems was appropriated by the Congress in the fiscal year 1960 facilities and equipment program. This equipment was purchased and later diverted to the communications teletypewriter program.

Senator MAGNUSON. I do not have any further questions. Are there any questions?

Senator ALLOTT. I have just one thing.

BENEFIT OF PATENTS

In looking through your research projects here, my eye finally lit on this one on the DME phase. I noticed the contractors here were Stromberg-Carlson and I.T. & T., Narco, Haseltine.

Senator MAGNUSON. It is a big spread. There is no monopoly involved there.

Senator ALLOTT. The thing I am concerned about in these research projects you give to these people, and which are financed by the Federal Government, is who gets the benefit of the patents, or what would develop into patents that come out of these ideas? I will ask this question and give you the context of it, so you will know what I want.

I have long thought that the cost of ordinary navigational equipment and other equipment for light commercial planes is far in excess of what it ought to be in this country. I know the Federal Aviation Agency has done a lot of work in the past to try to bring this down, but nevertheless the newest piece of equipment I saw advertised the other night by King, which is a one and a half system, still runs for the one and a half somewhere around $1,500.

My point is, if we are financing this, are these patents then available to the public domain, or are they the property of the people who get the benefit of the research contracts?

FEDERAL TITLE TO PATENTS IN FEDERALLY FINANCED PROJECTS

Mr. BLATT. Sir, I cannot answer just yes or no on this question. If the contract is wholly financed by the Federal Government, and you must understand that some contracts we enter into are on a cost-sharing basis, we have a fixed policy. So first let me answer your question concerning a contract where the contract is wholly funded by the Federal Government. It is our present patent policy, the policy of our Agency, that where we pay for the total research and development, one of the products we have procured is the title to any patentable concept that comes out as a result of that research and development. The answer is, on federally financed research and development of this Agency we get title to the patent itself. We license the developer at a royalty that would return to the Federal Government the cost of the research and development. In other words, we attempt to receive back into the Treasury of the United States the cost of development. Once we have received back this cost, then the license is in the public domain and we will freely license any manufacturer of this product.

JOINTLY FINANCED PROJECTS

Senator ALLOTT. What about the ones that are jointly financed? What understanding do you have about patentable ideas on those?

Mr. BLATT. This is done on a contract-by-contract basis, depending upon the state of the art and the background of the particular development. To determine whether or not the specific patent or patentable concept is a direct result of the Federal financing is difficult and there is no single way that this can be done.

It is dependent upon the percentage of financing that the Government is doing. In many cases we are just a token financer, just to keep an interest in the development and to have a voice in the development of the product.

COST OF SAFETY FEATURES

Mr. HALABY. The Senator is interested in how you get the cost of safety features like transmitters and receivers on small-plane pilot equipment.

Senator ALLOTT. I am thinking of the automatic pilots, and all of these things.

Mr. HALABY. It is fair to do so. Most of the contracts in that list are directed toward major components such as radar, or some ground-based equipment, rather than the competition between Narco and King and New Orleans and the other makers of small-plane equipment. I really feel, as you have mentioned, we can do a little research work. We did do it on a transceiver, and we did it on a poor man's test-measuring equipment, and then we put that out. That is out in the public domain. Anybody can build it, and the data is available. We have helped in that respect, but the only thing that will really help is for the manufacturers to get their costs down and for the customers to come in such volumes that volume production will reduce the costs. All of those products for general aviation continue to rise here so the volume market must be there so there will be a little hope. But the costs of building this equipment to the precise standards required for safety is the toughest part.

Senator ALLOTT. Are we going to talk about the supersonic plane or not, Mr. Chairman?

Senator MAGNUSON. Yes.

Senator ALLOTT. I would like to go into it a little bit.

Senator MONRONEY. I have some on this too.

Senator MAGNUSON. We will come to all of these. I am taking them one at a time.

NEW DESIGN FOR COMMERCIAL PLANES

Senator ELLENDER. How much of this research, if any, is used to design new planes for commercial aviation?

Mr. BLATT. None of the funds in this budget are for the design of new aircraft.

Senator ELLENDER. It is only equipment?

Mr. BLATT. Primarily air navigation. We do aircraft research in the determination of standards and requirements, and to determine the use of those standards and parameters for our Flight Standards Service in the development of the civil air regulations, but we are not developing any aircraft under this appropriation.

Senator MAGNUSON. Go ahead, but I think you evaluate aircraft design.

Mr. BLATT. Not under this appropriation.

Senator MAGNUSON. Not under this appropriation?

Mr. HALABY. We are doing what we call feasibility studies there, and the time of our people goes into such things as how can we get a cheaper operating local service air carrier, but we have no airplane designers designing an airplane.

Senator ELLENDER. That is what I had in mind.

Mr. HALABY. On the supersonic transport work, it is a special program set out separately from the research and development, and whenever you are ready we can come to that subject.

Senator ALLOTT. I asked about that because it was in your statement.

QUESTIONS FOR RECORD

Senator MAGNUSON. Yes. Then to finish research and development, here is a group of questions you can answer for the record. A lot of these I know. There are some older ones here, but there are some dillies in here.

Mr. HALABY. Mr. Chairman, we will answer anything you want for the record, but do you want these answered before the record is closed? Because this would take some time—just zipping over them, to answer these would perhaps require everybody in the research organization to turn to this.

(The information referred to follows:)

GENERAL QUESTIONS

RESEARCH AND DEVELOPMENT

GENERAL

Question. I understand that the Agency has been devoting considerable energy to the development of an all-weather landing system. What progress has been made to date?

Answer. Considerable progress has been made. Our present development program is aimed toward providing the lowering of ceilings from 200 to 100 feet and the reduction of visibility minima from one-half to one-quarter of a mile. The lighting developments to provide the above described operational performance have been carried on in three different areas. These are approach lighting, touchdown zone lighting and runway centerline lighting. Lighting equipment has been developed and is available for installation at the present time. Many improvements have been made on a system to provide electronic guidance to 100-foot elevation with one-quarter mile visibility on the landing approach. Work has been carried out on ground guidance and self-contained techniques, monitoring, airborne displays, flight computer, and autopilots. Waveguide localizers and far field monitoring to provide azimuth guidance are now being commissioned. It is envisioned that we will be able to demonstrate consistent and safe 100-foot ceiling with one-quarter mile visibility landings at the National Aviation Facilities Experimental Center by fiscal year 1964. Simultaneous with the above effort, we aimed at an integrated all-weather final approach, flare, and landing system with all-weather takeoff capability for both manual and fully automatic operation. This is a longer range objective and will be accomplished by a thorough examination of the various guidance techniques available and the deliberate choice of optimum ones to synthesize the all-weather system.

Question. What consideration, if any, has been given to charging manufacturers for certification of equipment—in a manner analogous to that of the Food and Drug Administration with respect to medicines?

(*a*) In this line, the FAA devotes a substantial amount of time to evaluating various proposals, equipment, and other air safety devices. There is no question that in certain instances this is primarily to the advantage of the Government; in other instances, however, the advantage accrues primarily to a manufacturer desirous of selling a product. Do you now have a program, or have you given consideration to the possibility of charging such people for performing this service—under what circumstances?

Answer. The possibility of charging manufacturers for the certification of equipment has been under active discussion within the Agency for considerable time. To date the facilities at the National Aviation Facilities Experimental Center, due to the press of our program activities, have not been available for such purposes and there has been very little demand by industry for such service. If these facilities are to be used for the certification of equipment, it is our opinion that such use must be on a time-available basis with full reimbursement made to the Government for costs incurred.

When it is determined that the evaluation of proposals and equipment furthers our research and development efforts and are not for the purpose of certification we could do such evaluation without reimbursement.

Question. It is my impression from discussion with various users of the airspace—and this includes general aviation people, the commercial airlines, and the airframe manufacturers—that they have been consulted to a very limited extent with respect to the various contracts funded under the research and development progam. These people, of course, are necessarily greatly interested in the Agency's research and development activities.

(*a*) Would you comment as to what extent the Agency does consult with airways users, and to what extent it keeps them advised as to the progress being made on the various projects that are undertaken?

Answer: Consultation with representatives of the aviation community is a continuing activity. Frequent informal discussions between individuals in the Agency and in the industry are routine. Formal meetings are less frequent but do occur on an intermittent basis, as the occasion demands. Illustrative of this are a weeklong meeting this past March between the research and development system design team and industry representatives, and an Agency-wide meeting in February with industry relative to airborne equipment. There also exists an industry-Government committee on collision prevention which meets on a scheduled basis. Through these formal and informal contacts the aviation community has the opportunity to discuss areas of interest, as well as to keep abreast of current research and development work. At the completion of projects printed reports are, of course, available to all through normal channels.

The handling of individual research and development contracts in terms of bid proposals, award, and performance is in accordance with applicable Government regulations. As such they are not subject to individual discussion with industry.

The above should not be taken to indicate that we are content with present methods and procedures for liaison with airspace users. We are constantly investigating mechanisms for improving our relations with all segments of the aviation community. We recognize the need for receiving the comments and suggestions of the aviation industry and the need to keep it informed with respect to our activities.

Question. How many people employed in research and development?

Answer. 1,555 people were employed in research and development on June 30, 1962.

Question. What is the personnel turnover?

Answer. Personnel turnover has averaged 1 percent per month over the 30-month period from January 1960 to June 1962. This includes employees in both Washington and the National Aviation Facilities Experimental Center. The Civil Service Commission advised us on a recent inspection at the National Aviation Facilities Experimental Center that its turnover rate compared favorably with the average found at other field installations.

Question. What people were involved in the turnover?

Answer. Twenty-five percent of the turnover involved professional employees, and 75 percent involved nonprofessional employees.

Question. The Agency previously had plans to place additional rental computers into operation, and the Congress had appropriated funds for this purpose. Were they placed into operation? If not, how were the appropriated funds employed; and if employed, under what authority?

Answer. The Congress did not specifically appropriate funds for the rental of additional computers. The 1961 budget estimates for the "Expenses" appropriation of FAA as submitted to the Congress included funds to rent three additional computers for air route traffic control centers. The appropriation as approved by the Congress for the "Expenses" appropriation was approximately $10 million less than the amount requested by the President. The decision to defer installation of the computers at Atlanta, Jacksonville, and Oakland for which funds had been requested from the Congress was made shortly after the funds for the 1961 fiscal year were appropriated. The funds requested for computers were applied to this $10 million reduction. Therefore, they were not used to finance other FAA programs, but rather were dropped from the 1961 program as a part of the reduction resulting from the congressional action on our estimates.

DETAILED ANALYSIS OF FAA'S 78-PAGE REPORT ON RESEARCH AND DEVELOPMENT

PART I. AUGUST 1957–MARCH 3, 1961

Question 1. Air defense air traffic control integration, page 8: Subitem 4 indicates that $3,742,100 was spent on a contract with Mitre Corp. to determine the possible integration of air traffic control for defense needs. Doesn't this program in certain respects duplicate other FAA and Air Force work? Do you not believe that the operation of this work could just as well have been done through analysis rather than by heavy expenditure of funds for evaluation and experimentation? Were the funds expended for this purpose shared jointly by FAA and DOD?

Answer. The contract with the Mitre Corp. resulted directly from a Department of Defense/Department of Commerce agreement dated January 9, 1958. It called for a determination of the extent and nature of integration of air defense and air traffic control facilities and functions that would minimize duplication of resources. In no way did this program duplicate other FAA or Air Force programs. On the contrary, its purpose and effect was exactly the opposite. As a direct result of this program, the FAA now has detailed technical knowledge of the techniques and facilities employed in the air defense system as well as their applicability to air traffic control. This knowledge enabled the FAA to plan intelligently the use of certain of these facilities and techniques. This knowledge could not have been gained by analysis alone, since many of the interface and joint use problems required development effort as well as experimental data. The Mitre contract was funded 60 percent by FAA and 40 percent by USAF. In addition, the USAF provided the use of the Evaluation SAFE Sector on a no-cost-to-FAA basis. The $3,742,100 represented FAA's share of the contract cost.

Question 2. Procure FLIDEN (flight data entry equipment), drum recorder and spares, page 10, subitem 6: Do you feel that the expenditure involved in the FLIDEN program was justified? Please explain.

Answer. The economic utilization of any real time automatic data processing system is dependent to a very large degree on the ancillary input/output devices with which it is associated. The FLIDEN was one such device. In its functional role of providing error-free formatting, visual and electronic error checking, and correction of computer input messages, it offered one of the more promising developments for this requirement.

The FLIDEN was envisioned for application in the more complex situations, where the volume of data-entry activity would be conducive to a reduction in manpower with the application of the more sophisticated and expeditious machine.

In view of the system design requirements and the expected payoff, seeking a solution to these problems through the development and evaluation of FLIDEN is considered essential and justified as an integral part of the overall air traffic control subsystem development program.

Question 3. Air height surveillance radar, page 18, subitem I: Do you feel that the expenditure involved in this project was justified in terms of results?

Answer. Definitely yes. This program demonstrated the technical feasibility of obtaining vertical separation information on aircraft in the terminal area to the fineness required by the airspace configuration, without requiring the addition of equipment in the aircraft. Prior to this effort, such a capability did not exist and the technical feasibility was doubtful. Further, as a result of this

development we can ascertain, with a good degree of certainty, the costs of implementing equipment based on the principles involved. In view of these costs, prudence dictates that we examine other approaches less costly to the Government, such as the air traffic control radar beacon system. Once the several approaches are demonstrated feasible and the capabilities and limitations are established, they can then be balanced against costs to arrive at the practical solution for implementation to provide height information to the air traffic controller. The costs of development, whether the results are positive or negative, are but a small portion of the costs of implementation in a nationwide system.

Question 4. Development of 5,000-hour K-band transmitting tube, 107–1—page 19, subitem 5: It is my understanding that industry has broad experience in achieving higher reliability electron tubes by direct work with the suppliers. I wonder if this isn't an instance where Government in-house development was inappropriate?

Answer. We agree that industry is in the best position to perform this development work and, in fact, industry is doing just that in this program. We also felt that specialists in the electron tube field were necessary to manage and monitor such an industry-development program. Rather than add electron tube specialists to our staff, we contracted with the U.S. Army Signal Research and Development Laboratory (USASRDL) at Fort Monmouth, N.J. Their electron tube specialists are managing the actual development work being conducted by industrial suppliers, in this case Microwave Associates and S.F.D. Corp. No in-house development is being conducted in this program.

Question 5. Evaluation of loran C—page 27, subitem 3: Was this evaluation needed from a technical standpoint?

Answer. Loran C is under evaluation as a potential long-distance navigational aid for civil aviation. This evaluation was suggested by DOD, since the system was being installed for military use.

There are some technical factors which required determination, such as range capability and susceptibility to atmospheric noise. However, the accuracy of the system was accepted, and the greatest part of the evaluation is concerned with the operational suitability of loran C for use by civil air carriers. The evaluation is required for the determination of both technical and operational unknowns.

Question 6. Evaluation of VORTAC for oceanic flights—page 27, subitem 5: It is my understanding that ocean station vessels are not considered required navigation aids by the airlines. If this is true, of what value was this project?

Answer. The purpose of this program was to determine the possibility of providing transoceanic navigation service through the use of shipboard mounted VORTAC facilities. If it were technically, economically, and operationally feasible to install VORTACS on ocean station vessels, we could increase the utility of these vessels. This project proved the technical operational feasibility of the plan; however, the question of economics has not yet been answered.

Question 7. Development flight control equipment for landing—page 33, subitem 8: Specifically, what segment of the aviation community benefited from this development, was it needed for general aviation aircraft, for commercial airlines, for whom?

Answer. The primary purpose of this program is to increase the performance and reliability of autopilots, which will be necessary to operate in future all-weather systems. Since we anticipate that commercial airlines will first employ the all-weather landing system, the benefits of this program will accrue primarily to that segment of the aviation industry. Some byproducts of the program, such as studies on autopilot reliability, will, however, benefit all users.

Question 8. Test and evaluate BLEU landing system—page 34, subitem 9: Was there any need to test this system from a technical standpoint? (Note: Here again, apparently, the move was for international political purposes.)

Answer. The United Kingdom has completed in excess of 8,000 successful landings, utilizing the BLEU landing system. We here in the United States are now demonstrating this same reliability in our tests. However, we believe we have sound reasons for continuing this test program. First, the consensus of FAA, and many airline engineers, is that the BLEU system requires modification. Azimuth guidance is initially provided by the conventional localizer. At a later time in the landing cycle, when the aircraft is very low, guidance is transferred to a system established by two electrical cables laid parallel to the runway. We are currently testing an improved waveguide localizer which will provide azimuth control without transfer from one system to another.

Thus, our tests on the BLEU will be performed on a composite system which we believe to be superior. In addition, our studies have shown that the cable technique employed by BLEU would be uneconomical to install in many U.S. airports, especially where approaches lie over salt water.

Question 9. Development of the automatic meteorological observing station (AMOS IV), page 36, subitem 3: Do you not believe that this project should have been halted at an earlier date than it was? Is it not true that it soon became obvious that AMOS IV would prove too costly? I understand that AMOS V may develop from this effort. Do you believe that it will prove to be a satisfactory device at reasonable cost?

Answer. The AMOS program is designed with the objective in mind of producing a relatively inexpensive and operationally suitable automatic weather observing station for national implementation. The AMOS IV project is evaluating the operational feasibility of incorporating automatic sensors in the aviation weather subsystem. Further development programs will be geared into reducing equipment cost.

Question 10. Structural problems and strength of materials, subitem 1, parameters affecting airworthiness of turbine-powered aircraft, page 40: Do you feel that this matter is more appropriately one for the manufacturers and airlines to work on and that Government participation was unnecessary? Certain people with whom I have talked feel that this contract was a waste of time and effort.

Answer. The establishment of airworthiness standards is the responsibility of the FAA. Approved maintenance and overhaul procedures generate a variety of views between aircraft manufacturers, the airlines, and the FAA; and there is a need for a more objective and factual approach to the regulation of maintenance. The development of such an approach becomes an FAA responsibility.

Successful maintenance airworthiness recorders could make a significant reduction in the cost of commercial air transportation and increase safety by programing maintenance and overhaul of systems and components on the basis of need, rather than time, and by predicting system failures.

The initial feasibility study indicated that there was little hope of achieving this goal except in the propulsion systems. We are presently considering a reorientation of the program in this direction.

Some foreign governments are sponsoring similar programs through their flag carriers. The military has made intermittent efforts in this field.

Question 11. Aircraft collision prevention, analysis and comparison of visual pilot warning systems, page 40, subitem 5: Do you feel that the potential benefits to be realized from this project justify the expenditures?

Answer. We fully expect the benefits to be realized from visual collision warning aids for pilots to justify the research expenditures for such work. For at least the next 15 years pilot vigilance will be required to "see and avoid" other aircraft in uncontrolled airspace, as well as in much of our controlled airspace. Today the large majority of midair collisions and near misses occur under conditions of good visibility, and therefore improved visual warning is essential.

Question 12. Runway deceleration aids, page 48: If such a system is developed, what is your estimate as to the total expenditure which would be involved in installing such an aid throughout the United States? Is this not perhaps an area where the cost involved might far outweigh the benefits to be realized? I take no position on the matter, but I would like your views.

Answer. We are as concerned as you must be with the overall cost of implementing such a program.

At the present time we do not have an overall estimate of the total cost for installation of deceleration aids throughout the United States. As a first step we have been concerned with demonstrating the feasibility of such an aid for stopping the large commercial jet aircraft in emergency situations, such as an overshoot on landing or from an aborted takeoff.

If we are successful in demonstrating technical feasibility, then we will be in a better position to determine the financial impact of establishing deceleration devices and determine funding and operational responsibility.

A successful arresting gear will probably save many lives and many millions of dollars of aircraft. The potential also exists that the amount of runway construction required may be reduced at airports equipped with the gear and thereby offset a great deal, or possibly all, of the installation costs.

Part II. March 4, 1961–March 23, 1962

Question 1. Test and evaluation of DPC, (a) precision approach radar bright display, page 5, subitem 3: Is there a real need for continued work on precision approach radar (PAR equipment)? Do you believe that additional PAR's above those installed some years ago should be made a part of the common system for airline needs?

Answer. Weather minima restrictions on the operation of turbojets are currently creating serious financial loss to the airlines, and therefore there is a need to permit operations to lower ceiling and visibility conditions than exist at present. Present turbojet minima of 200 feet and one-half mile are predicated on a requirement for PAR. The use of the PAR as a monitor of the ILS is required for the conduct of such operations with the highest degree of safety. This will require the installation of some additional PAR's at selected airports. However, the equipment as it now exists is not suitable for low altitude monitoring with aircraft having high vertical stabilizers, such as the Boeing 707. Therefore, further development and refinement is necessary to achieve the required vertical resolution.

Question 2. Data handling equipment for video data recorder, page 6, subitem 3: Do you believe that work on this project should have been canceled? Do you not believe that video data from FAA radars should be recorded since it might prove of great value in connection with accident investigation? Do you feel that it might have been of value in connection with the tragic TWA-United crash on Staten Island, December 16, 1960?

Answer. Work on this project has not been canceled. The statement indicating project cancellation is in error and should have indicated cancellation of a planned procurement of commercial video recorder equipment used by the television industry, but adjudged to be too costly for nationwide implementation.

A current research and development project is aimed at providing the operating services of FAA with an economically feasible radar data recorder for investigation of traffic incidents, personnel training, and analysis of system operational problem areas. The project is planned to take advantage of the rapid advances being made in the state of the video recording art.

A recording of radar video data would certainly have provided additional information, and it might have been of value in the December 19, 1960, accident investigation.

Question 3. Development of an international language for aviation lexicon, page 9, subitem 2: If this program was really necessary, don't you think it could have been accomplished just as well in-house? I have heard some expressions that this is a wasteful contract.

Answer. Even though English is the accepted international language for aviation, American pilots have difficulty understanding foreign air traffic controllers and our controllers have difficulty understanding foreign pilots. A lexicon containing the major ATC communication phrases as they are enunciated in the foreign accents of the major aviation countries will materially assist pilots and controllers to reduce communication delay and misunderstanding and attendant ATC hazard, as well as contribute to the fulfillment of our commitments to ICAO in this area. The specialized trained personnel and facilities required for this task were not available in-house at the time the requirement for this program was imposed.

Question 4. Evaluation of VORTAC for oceanic flights, page 12, subitem 1: Going back to an earlier question, since ocean station vessels are not considered required navigation aids by the airlines, of what value is this project?

Answer. See answer to part I, question 6.

Question 5. Develop flight control equipment for landing, page 15, subitem 1: Do you feel that it might have been better to limit this item to an evaluation of flight control equipment for landing rather than development of such equipment?

Answer. This project is associated with efforts to attain an all-weather landing capability for both civil and military aircraft. The aircraft flight control system is an intimate part of such a capability. There was no attempt to develop complete autopilot systems, but rather to modify existing systems to make them suitable for control of the aircraft to touchdown. As an example, this requires the incorporation of throttle control, split-axis operation, and automatic decrab and flare-out to existing autopilot systems.

Although the first use of all-weather landing systems will be in military aircraft and large civil carriers, the capability will gradually become applicable to general aviation, and therefore, all users benefit from this area of activity.

It was not possible to limit this project to evaluation, since equipment modification was necessary to accomplish our objectives.

Question 6. Test and evaluate BLEU landing system, page 15, subitem 2: Why was this necessary from a technical standpoint?

Answer. See answer to part I, question 8.

Question 7. Common aviation weather system development program, page 17, subitem 2: It is my understanding that the Weather Bureau, as well as the commercial airlines, have considerable doubts as to the wisdom of this program.

Answer. The Agency has not received any negative indications from either the Weather Bureau or the commercial airlines as to the wisdom of the common aviation weather system program. In fact, the Agency received correspondence on April 25, 1962, from the Chief, U.S. Weather Bureau, indicating that the CAWS design developed by the Agency is basically along the lines he visualized as necessary to meet the needs of aviation. In addition, the President's Science Advisory Committee's Panel on Atmospheric Sciences has reviewed the CAWS program. They have not formally reported as yet; however, there has been no adverse comment to date.

At present, the Department of Commerce, the Department of Defense, and the Federal Aviation Agency, are using the CAWS design as a basis for joint weather system planning.

Question 8. Pilot-to-forecaster service test, page 18, subitem 1: Do you believe that a more economical method might be adopted? For example: Could a phone patch for forecaster use be employed during those times when the flight service station cannot provide appropriate forecasting information?

Answer. Yes. In our pilot-to-forecaster test and evaluation program we are attempting to determine the most economical and efficient method of providing this service. In the Los Angeles area, we will test the use of a phone-patch as a supplemental service.

Question 9. Weather data processing, page 18: I understand that some meteorological experts are not impressed with the use of statistical techniques for forecasting. Do you have any comments?

Answer. It is true that some people in the meteoroligcal descipline are not impressed with the use of statistical techniques for forecasting. However, a significant segment of the research scientists in the discipline are of the opinion that statistical techniques offer much promise, particularly for use in shorter period forecasting for aviation, where other techniques are not useful today. Our development work is intended to resolve this question. Significant developments and operational techniques for the use of the multiple descriminant analysis statistical methods for aviation terminal forecasting were reported to and discussed with the President's Science Advisory Committee Panel on Atmospheric Sciences at their Woods Hole meeting on June 30, 1962.

Question 10. Structural problems and strength of materials (aircraft safety), item 1. Laminar flow control, page 20: Isn't this primarily a military matter? Is there any value insofar as civil aircraft is concerned?

Answer. The program was conceived by and is being supported primarily by Air Force funds. If successful this program will have direct benefits to civil aviation. FAA's participation, demonstrates civil support of the program.

If the program proves the operational feasibility of laminar flow control theoretical performance gains, civil aviation will gain substantial benefits from reduced drag and increased range, efficiency, and economy. The practical application of laminar flow control could prove to be one of the great advances in modern aeronautical development.

Question 11. Effect on takeoff performance of runway slush and standing water (aircraft safety), page 22, subitem 4: These studies apparently provided a full-scale measurement which you did not have before. However, didn't they simply prove that the aircraft manufacturers were right all the time? What specific tangible benefits accrued from this program?

Answer. Prior to the test program, there was no valid data on slush drag of aircraft equipped with 4-wheel truck-type landing gears. Theoretical approaches to predicting slush drag used in the United States and Europe were based on NASA 2-wheel data and were in error by approximately 100 percent because two basic assumptions were in error: that rear wheel drag and impingement drag were zero. In reality, they were very significant factors.

One takeoff test conducted by Boeing with a KC–135 at Seattle provided some data prior to the FAA tests but the conditions were not established to the accuracy required.

The FAA program was established to determine the maximum depth of slush consistent with safe operations. Had the existing ½-inch limitation been increased without the tests it may have resulted in serious aborted takeoff accidents.

Question 12. Airport deceleration aids development, page 25: This is a matter which was discussed previously. (Note: See pt. 1, question 12.)

Answer. See answer, part I, question 12.

Question 13. Test feasibility of techniques for dissipation of fog and low clouds, page 26, subitem 1: I understand that techniques in this area were tested in Los Angeles some time ago. Do you not think that it might perhaps be futile to engage in further testing in this area?

Answer. The techniques tested by the Agency at the National Aviation Facilities Experimental Center were not the techniques tested in Los Angeles some time ago. We agree that there is very little promise in this area at the present time and we have no active program underway. However, due to the importance of this problem, the Agency must be alert to any suggestions that seem to have a good chance of success.

COMMITTEE RECESS

Senator MAGNUSON. No, they do not require too much. On several of them you can say either the program looks good or bad. You can just say bad.

Mr. BLATT. One word?

Senator MAGNUSON. Yes. Or good.

Mr. HALABY. Just use three-letter words.

Senator MAGNUSON. We will recess until 2:30.

(Whereupon, at 12:25 p.m., the subcommittee recessed until 2:30 p.m. of the same day.)

(AFTERNOON SESSION—3:00 P.M., WEDNESDAY, AUGUST 8, 1962)

RESEARCH AND DEVELOPMENT

Senator ELLENDER. The committee will come to order, please.

I think the last item that we considered was research and development. Are there any further questions as to that part of the appropriation?

OPERATION AND MAINTENANCE, NATIONAL AIRPORT

If not, we come to the operation and maintenance of the National Airport.

Mr. HALABY. I notice the House struck from the budget estimate $500,000. Are you stating your requirement for that amount?

Mr. HALABY. Yes, sir.

Senator ELLENDER. Will you proceed to tell us why?

EFFECT OF HOUSE ACTION

Mr. HALABY. The House report, as you know, cuts $500,000 out of the request, from $3,725,000 to $3,225,000, for fiscal 1963. The amount authorized by the House will not enable us to continue the level of staffing authorized for June 30, 1962. In addition, it would deny the procurement of critically needed snow removal and runway cleaning equipment. There is a direct relationship between the ability of an airport to keep its runways clear of debris and snow, and airport safety. Without the additional equipment, in the face of the increased need of runway, taxiway, cleaning activity, such cleaning operation would be accomplished at best in a marginal manner.

In view of the age of the airport, there is annually increasing need for substantial maintenance projects. Within the House allowance we are unable to revitalize the deteriorating roofs of the newer hangars, or renovate the roof at the International Terminal Building, which has not received major attention since construction 15 to 18 years ago.

We would not be able to repair deteriorating facing on the main terminal building or weatherproof passageways to prevent further damage.

PERSONNEL INCREASE FOR 1963

Senator ELLENDER. To what extent have you increased the number of personnel, or will you increase, 1963 over 1962?

Mr. HALABY. The number of additional personnel from 1963 was 385. We would increase to 417.

Senator ELLENDER. Is that due to more traffic, and other conditions that you just mentioned?

Mr. HALABY. Mr. Hobbs, who is in charge of the airport, if you will, will answer that question.

Mr. HOBBS. Senator Ellender, the 32 people requested include 9 for Bureau Headquarters, and 23 for the Washington National Airport in the maintenance area—electricians, carpenters, general cleaning.

PERSONNEL FOR MAINTENANCE

We have at Washington National Airport, sir, a 21-year-old airport, which, like me and everybody else, is getting older, and it has to be maintained and kept up, particularly after a volume of 4 million people passing through it annually.

INCREASE IN AIRLINE LEASES

It may be of great interest to the committee at this time to know that since our last meeting, we have been fortunate enough to increase our airline leases by nearly 100 percent; where they formerly paid 7 cents a thousand pounds, they now pay 13; where they formerly paid $1.20 to $3 a square foot, they are now paying $2.50 to $6.50 a square foot.

Senator ELLENDER. What are the receipts per year at the airport?

RECEIPTS PER YEAR AT AIRPORT

Mr. HOBBS. Well, sir; the tentative figures we have for the close of 1962, indicate we grossed $4,522,000 for return to the Treasury—representing an estimated $700,000 excess of revenues over expenses.

Senator ELLENDER. That was over and above the operating expenses?

Mr. HOBBS. Yes, sir.

Senator ELLENDER. Which included maintenance and everything else?

Mr. HOBBS. Yes, sir; that was deposited into the Treasury.

Now, we have got to maintain our program of keeping this airport and facility up to date. If we lose this money, sir, we have got to give up in such areas as repaving the parking lot.

You are quite aware of the problem of parking when you come to the airport. We are now removing the buildings of the old WAC headquarters out there, and making more parking areas.

PARKING LOT FEES

It may be interesting to the committee to know that we receive an average of $300,000 a year in our parking lot—fees to Uncle Sam.

Senator ELLENDER. Now, I notice you are asking——

BEST YEAR FOR REVENUE

Mr. HALABY. This is our best year in revenues, and one of our best years in net revenues.

Senator ELLENDER. Well, as I understood, there were a few years you did not collect enough to pay all expenses. In that correct?

Mr. HALABY. That is correct.

Mr. HOBBS. That is right, sir.

Mr. HALABY. And of course we need this revenue, because the new airport will operate at a deficit for some time before it is in the black.

CONSTRUCTION

Senator ELLENDER. Well, I notice a request here for construction of $2.5 million, budget estimate, and the House allowed $2 million. What is that for?

Mr. HOBBS. That, sir, is new construction.

I do not know whether you are aware of our airport.

In the area of the North Terminal we have a small cargo building. The parking in that area is extremely restricted for general aviation aircraft and cargo parking. We are cleaning it out and putting a new cargo building at the south end of the field.

We want to increase the general aviation parking area, and strengthen and resurface existing aircraft ramps.

That is what these expenses are for, sir.

DULLES INTERNATIONAL AIRPORT

Senator ELLENDER. There is an item also of construction and development, Washington Airport—I notice that the budget estimate is $3.4 million, and the House allowed you $3 million.

Mr. HOBBS. That is the construction at our new Dulles International Airport, sir, in which we asked for these funds to construct the hangar.

Senator ELLENDER. That is for the Dulles Airport?

RESTORATION REQUESTED

Mr. HOBBS. Yes, sir. And we specifically requested they be restored. If you take that much money away from me, and give me just the $3 million, it is like you buying a house without adequate sanitary facilities.

Senator ELLENDER. Well, I notice here the operation and maintenance of the Dulles Airport.

Mr. HOBBS. Yes, sir.

Senator ELLENDER. The House allowed you $3 million.

Mr. HOBBS. Yes, sir.

Senator ELLENDER. And below that you have another item of $3 million for construction and development.

Mr. HOBBS. Yes, sir.

COST OF AIRPORT TO DATE

Senator ELLENDER. Will you tell us how much that Dulles Airport is costing us up to now?

Mr. HOBBS. Yes, sir; $105 million, sir.

Senator ELLENDER. What was the original estimate?

Mr. HOBBS. The original estimate on Dulles was $60 million.

Senator ELLENDER. Why the difference in cost?

Mr. HOBBS. Well, sir——

Senator ELLENDER. If you do not have it there, give it to us for the record, will you?

Mr. HOBBS. Yes, sir; I certainly will submit it for the record.

Senator ELLENDER. Unless the Senators desire to hear it now.

REASON FOR RISE IN COST

Senator PASTORE. You asked a very pertinent question. I think you ought to allow him to pursue it. What accounts for this—just a thumbnail explanation.

Mr. HOBBS. The $66 million first estimate, sir, of the 1958 and 1959 period, did not provide an access road, nor did it provide a sewage system, nor at that time was the direction given as to how we would proceed in this installation—was it to be a finger airport, separate satellite airport, or a mobile-lounge concept.

As the years progressed, and the investigation went into it, it was found more feasible to go to this mobile-lounge concept.

Therefore, the progressive cost.

But I would like to point out at this time, Senator, if I may—we are at $105 million right now for this airport—starting from scratch, the condemnation of property, building and creating the world's greatest airport, at this figure. It might be interesting to know that Chicago did have a fundamental airport, and they have just spent $155 million on terminal facilities.

So someone in this Government, before my time, did a very good planning job.

Senator ELLENDER. Well, I am sorry they got so far off of the estimates.

ROAD TO AIRPORT

Senator MONRONEY. You said the "access road." You did not mean the main transit road from downtown to Dulles, did you?

Mr. HOBBS. Yes, sir——

Senator MONRONEY. The parkways.

Mr. HOBBS. Yes, sir. The first estimate, Senator, of the $66 million, there was no provision for the access airport highway.

COST OF ROAD

Senator ELLENDER. What did that cost, now? Let's get down to figures.

Mr. HOBBS. $17 million.

Senator ELLENDER. For the access road?

Mr. HOBBS. Yes, sir.

Senator MONRONEY. It is four double lanes, with an outside right-of-way, and inside right-of-way?

Mr. HOBBS. Exactly. Enough right-of-way for eight lanes.

QUESTION OF TOLL ROAD

Senator MONRONEY. What have you done about putting a toll on that? I have urged this for several years as the only way you are going to make this road fast enough to bring this airport within reasonable reach of Washington. If you are going to make it a suburban road, all of the resolutions you have now are going to be invalidated once this is opened as a free road, because you are going to have to have access to the newly built cities of the size of Alexandria or Arlington which the subdividers say they are going to build there.

Now, if you can put a toll road on this, you can liquidate the cost in 20 years, and it won't be charged to the airport.

Mr. HOBBS. Senator, we have completed a study on the feasibility of making this a toll road, and it can be done, sir. We figure the 25 cents can return our investment in about 25 years.

Senator MONRONEY. What is being done on it? You have had a study. Now, how do we get it into gear?

You are going to have, as I understand it, the availability of rights-of-way on the two outer double lanes that you can give—I think you plan—to the State of Virginia. They can surface it and have all the access they want. But the center lanes would be an express highway to and from the airport.

BILL PERMITTING TOLL ROAD

Now, is the corporation bill that is now pending in the House—does that settle this, or is it still left open?

Mr. HALABY. There is a bill before the House—I believe it is nearing completion in the Commerce Committee—authorizing a National Capital Airport Corporation, which would be like several other Government corporations—the owner and operator and manager of all of the airports in the Washington area; namely, Washington National, the International Airport, and if there are any heliports in the future, heliports.

The bill permits making a toll road.

Now, our problem, in converting this into a toll road, is as follows: We have the authority; you have granted us the appropriations needed for the road. We are not road operators or road managers. We had planned to turn this right over to the National Park Service and have them operate it, because they are operating the George Washington National Parkway and other park roads now. They have told us recently two things. One, they could not take this roadway off our shoulders and put it on the National Park Service and still guarantee the availability to the State of Virginia of the outer lanes for commuter roadway.

Second, I believe it is against their policy to set up as a toll road one of their Park Service roads.

Now, if you direct us, or if you—if the Congress feels we should, we can convert it into a toll road. But we have so many activities that are in addition to our main center of activity, that I am not anxious to get into the business of running a toll highway.

QUESTION OF OVERBUILDING ROAD

Senator ELLENDER. Mr. Halaby, was that road overbuilt—that is, insofar as the airport is concerned?

Mr. HALABY. It was designed for a period well ahead. In other words, for the first year I would guess that the road would be lightly traveled. There would probably be some peak hours when all of the schedules in the airlines put in there, where it will be quite crowded. But there will be other hours—midmorning, midafternoon, late night, where it will be very lightly traveled, and the problem that creates for the neighbors is they want to get on it and commute on it. And I think Senator Monroney's point is if you make it a toll road, it will enable you to keep its single high-speed purpose so that you and the other air travelers will be able to get out to the airport and back in less than an hour.

Senator ELLENDER. How many miles of this road are constructed?

Mr. HOBBS. 14.8, sir.

TEN-YEAR PERIOD OF NO RECOVERY OF INVESTMENT

Senator ELLENDER. Of course, you have not had any opportunity to gage your intake as contrasted with the cost to operate as yet, have you?

Mr. HOBBS. At Dulles, sir?

Senator ELLENDER. Dulles.

Mr. HOBBS. We expect to receive our out-of-pocket expenses and part of the interest expense only for the first 10 years.

Mr. HALABY. That means no recovery on the investment.

WASHINGTON AIRPORT SHOWING RETURNS

Senator ELLENDER. Well, that is the same thing as out at the Washington Airport.

Mr. HALABY. No. We are recovering our investment there and having a net revenue.

Senator ELLENDER. You do not put interest in, do you?

Mr. HOBBS. Yes, sir, interest and depreciation.

Mr. HALABY. We are running it like a business.

Senator MONRONEY. $500,000 is plus, after all that.

Mr. HARPER. Amortization, interest, expenses—and over $500,000 profit at Washington.

REASON FOR ADDITIONAL CONSTRUCTION FUNDS

Senator ELLENDER. Since this is a new airport, why is it that you are putting in more money for construction?

Mr. HOBBS. We have, Senator Ellender—we will have the most modern, the most beautiful, the most complete jet airport in the country. We have not provided a hangar, based on the past administration philosophy, that the airlines would build their own hangars. This has not come to pass. They have shown an indication of interest in exploring what we would charge for ground rent. Mr. Halaby and I believe that it is to our best benefit to have a hangar as soon as possible that we can lease to take care of winter operations, taking

the snow and sleet off of airplanes, and doing turnaround maintenance—until the airlines decide to build their own hangars.

We at that time can rent it to a second fixed base operator and still get our money back. It would not be a lost investment.

Mr. HALABY. A substantial amount of that revenue at Washington National is on hangar rental.

This committee, last year had before it a request for a four-bay hangar, I believe, at $6 million. The House approved that hangar, and this committee knocked it out and admonished me to press the airlines to build their own hangars. We have done that.

They, because of their financial condition, because of a variety of problems facing them, have not come forward with private capital to build it.

So we have this project—it would be the only hangar on the airport.

Mr. Hobbs was talking about an "uncanny" house. This is going to be a hangarless airport, until somebody steps up and builds a hangar.

We feel that we can make money off this $3 million if——

Senator ELLENDER. You mean get your money back. Let's not say make money.

Mr. HALABY. Yes, you are right.

HOUSE CUT IN TREATMENT FACILITY

Senator ELLENDER. Now, I notice the House lopped off $400,000 from the budget estimate. Are you putting in a requirement for this?

Mr. HOBBS. That $400,000 of the construction estimate, sir, is mainly for the waste treatment facility of the hangar. It is part of the hangar.

You see, the kind of sewage around a hangar, oil rags, waste oil, must be run through this treatment before it enters into a regular sewer. That is why I spoke that if that $400,000 is left out, I am building a hangar "uncanny" as the Administrator spoke of it. We need that facility. It goes with the hangar like running water would go with it.

SEWER SYSTEM COST

Senator ELLENDER. Now, I meant to ask you this question a while ago in connection with the road.

You say in addition to the road you constructed a sewer system out there. What did that cost?

Mr. HALABY. I think you may be referring to the sewer interceptor that was $25 million.

Senator ELLENDER. He said a while ago in his testimony that the reason for the cost going up to $105 million was road construction and the sewer.

Mr. HOBBS. Oh, no, sir, I correct that, sir. I do not mean to associate the sewer being installed by the District of Columbia Government with the $105 million.

Senator ELLENDER. So that actually, then, the airport construction cost was $22 million over and above the estimate.

Mr. HOBBS. The original estimate, yes, sir.
Senator ELLENDER. Any further questions?
Senator PASTORE. May I ask one question?

POSSIBILITY OF HANGAR TENANT INSTALLING FACILITIES

Would you say that you need this sewage disposal or treatment for this hangar? What if you don't get that money? You don't build a hangar?
Mr. HOBBS. You mean if we just got the $3 million, sir?
Senator PASTORE. Yes.
Mr. HOBBS. We would go ahead with the hangar and see if the tenant would not put in his own. It is just like as if I sold you a home, sir, without adequate facilities in it. I would rent the hangar, or endeavor to rent the hangar and have them put in the treatment facility.
Senator PASTORE. And what if they do not put in the facility and you cannot rent it?
Mr. HOBBS. I do not have any fear I won't be able to rent it, Senator.
Mr. PASTORE. Even without the treatment facility?
Mr. HOBBS. Yes, sir.
Senator PASTORE. He says it is absolutely essential to have this treatment apparatus. The question is if he doesn't get it, does he build a hangar there anyway.
Mr. HOBBS. I would say yes, because I am optimistic enough to think I can rent it. What it is is just like you give somebody a house without the main facility in it. You are asking him to do something that you should do, as part of the hangar.

DETAIL OF HOUSE CUTS

Mr. HALABY. I think, Senator Pastore, Mr. Hobbs is attempting to bring out that our estimate was $3.4 million. We estimated the cost of the hangar at $2,246,000. It is a slice of $100,000 off it. We estimated the aircraft parking would cost $411,000. The cut would slice $100,000 off our estimate.
We estimated that waste treatment, utility services, would cost $718,000. They sliced $200,000 off. There is an arbitrary slice of $400,000 off an estimate of $3.4 million.
Senator PASTORE. But the House did not deliberately eliminate the treatment plant.
Mr. HOBBS. No, sir.
Senator PASTORE. I do not blame you for dramatizing your case, but that is what I am trying to establish.
Senator ALLOTT. Mr. Chairman, we now have the report by the Office of the Comptroller General from last year, which was made to this committee as a result of a request. I want to get these figures straightened out.

SUMMARY OF COSTS AND EXPENDITURES

We now have $105,070,000 as the cost of the airport. Does that include the road or not?
Mr. HALABY. It does.

Senator ALLOTT. Now, this is an increase of $39,070,000 over the 1959 estimate.

Now, the figure they came up with for us, for the cost of the access highway, was $13,058,000. You have given us $17 million. Which is correct?

Mr. HALABY. We have spent $17.1 million?

Mr. HOBBS. Your figure is construction costs, and our figure is entire construction, land acquisition, landscaping, et cetera, Senator Allott.

Senator ALLOTT. All right. Now, they have got additional costs of $26 million. I presume that is on the airport itself. Is that correct?

Mr. HALABY. The additional cost.

Senator ALLOTT. Over the original.

Mr. HALABY. $26 million is for the airport itself.

Mr. HOBBS. Yes.

Senator ALLOTT. And then $2,530,000 increase in costs for other than terminal facilities. What were those?

Mr. HALABY. Do you recognize that figure of $2.5 million?

Mr. HOBBS. Let me supply that, Senator, if you please, sir. I do not have that available.

Mr. HALABY. We do not have your breakdown of the $39 million.

Senator ALLOTT. Well, let's go at it the way you have it.

ACTUAL ADDITIONAL COST OF AIRPORT

Senator ELLENDER. I wish to point out the answer to Senator Allott's question, as to the increased cost, is at variance with what I asked a while ago. I suggested the additional cost of $22 million, and now you say it is $26 million. Which is correct?

Mr. HOBBS. The first estimate, Senator Ellender, was $66 million we asked for in 1958 and 1959, sir. We got $62.5 million. In 1959 and 1960 we asked for $27.5 million. That brought it to a total of $90 million.

We got $22.5 million which—which brought it to a total of $85 million. That is 1959 and 1960.

Now, this provided for the road——

Senator ALLOTT. Mr. Hobbs, just a moment. Those figures do not jibe. The first figure you gave us was $62.5 million, which you said Congress appropriated.

Mr. HOBBS. That is right, sir.

Senator ALLOTT. Then you said they appropriated $27.5 million.

Mr. HOBBS. We asked for $27.5 million, Senator, and they gave us $22.5 million.

Senator ALLOTT. All right. You have $22.5 million.

Mr. HOBBS. That makes a total of $85 million, sir.

Senator ALLOTT. Yes.

Mr. HOBBS. That brings us up to 1959–60.

Now, you want a breakdown of what that included that year?

Senator ALLOTT. No. What I am interested in personally is we have $105,070,000. I have the report of the Comptroller in front of me, whose figures apparently are not based upon the same ones as yours.

COMPONENTS OF TOTAL COST FIGURE

Now, what I want to know right now, so I can put it right down here is what does this $105,070,000 consist of—where is it? How much is in the cost of the airport, the construction, the grounds, how much is in the cost of the terminal facilities, how much is in the cost of the access road, and the land? Can't we get it that way?

Mr. HALABY. Yes, Senator. We will accept the GAO figures. They got them from us and we reviewed them. So this table at the bottom of page 14 of the GAO report is as accurate as you may desire to have it. There are about 11 titles there. We will go right down each one of them, if you wish, sir.

Senator ALLOTT. All right.

Mr. HALABY. Land acquisition, $11,157,000.

Engineering and supervision, $10,075,000.

Site preparation, $12,719,000.

Paving and lighting, $20,904,000.

Do you want me to read the rest of it or just put it in the record?

Senator ALLOTT. No, we can put this in the record, I think. I will use this basis, as long as you have it.

(The information referred to follows:)

COST ESTIMATES TABLE FROM PAGE 14 OF THE REPORT TO THE CONGRESS OF THE UNITED STATES

Review of financial and administrative activities relating to the development and construction of the Dulles International Airport, Federal Aviation Agency, September 1961, by the Comptroller General of the United States, March 1962

COST ESTIMATES

The cost estimates supporting FAA's 1959, 1960, and 1962 appropriation requests and the cost estimates as revised to give effect to the reprograming, based on the available appropriations, are shown in the following tabulation by major project categories and in appendix II by major project and subproject categories.

[In thousands]

Projects	Cost estimates					
	1959		1960		1962	
	Original	As reprogramed	Original	As reprogramed	Original	As reprogramed [1]
Land acquisition	$8,282	$8,282	$9,132	$9,676	$10,515	[2] $11,157
Engineering and supervision	7,010	7,010	7,648	7,960	8,567	10,075
Site preparation	8,560	8,560	10,337	10,575	11,015	12,791
Paving and lighting	18,838	16,738	17,588	16,773	20,824	20,904
Terminal building and control tower	9,750	9,750	10,687	12,303	14,355	15,533
Service buildings	3,215	3,215	4,170	2,605	4,664	5,239
Mobile lounges			2,600	3,926	6,387	6,387
Access highways			15,429	12,056	12,969	[3] 13,058
Utilities systems	5,216	4,216	7,786	6,385	7,855	8,507
Automobile parking, interior roads, and airport fencing	1,723	1,723	1,280	1,335	1,989	[4] 1,419
Operating equipment	400					
Provision for contingencies	3,006	3,006	3,343	1,376	5,930	
Total	66,000	62,500	90,000	84,970	105,070	105,070

[1] The reprograming included an allocation of the provision for contingencies to the various projects.
[2] Adjusted to include land acquisition costs of $642,000.
[3] Adjusted for items [2] and [4].
[4] Adjusted to exclude access highway costs of $450,000.

AUTHORITY FOR TOLL ROAD

Senator ALLOTT. Now, on this matter of the road I think the question raised by the Senator from Oklahoma has a great deal of merit.

I agree with you that you don't have any business running a toll road out there. You have your hands full.

I do not know why—and I will say this to the Senator from Oklahoma—if the Park Service can charge entrance fees into its parks, many of which consist of long access roads, such as Yellowstone, such as Mesa Verde and so many others, I do not know why this cannot be operated as a toll road.

Now, this documentation of the GAO—does this constitute an accurate reflection of the investment we have in Dulles?

Mr. HALABY. Yes, sir.

Senator MAGNUSON. What are we on? Chantilly?

Senator ALLOTT. We are on Dulles.

While we are on that, I have talked to numerous airline people who have raised the question of the FAA referring to this airport as an international airport, Washington International, and a number of other titles. I noticed one of your witnesses referred to it as Chantilly. Is there going to be an effort or is there an effort to abandon the name of Dulles?

Mr. HOBBS. No, sir.

Mr. HALABY. The Congress may name it as it wishes. It has called it the additional Washington airport at Chantilly, Va. But President Eisenhower named it the John Foster Dulles International Airport a few days after Mr. Dulles died, and also the President issued another proclamation that the name would remain that.

Senator ALLOTT. Well, of course, this would be his privilege—or Congress could do it. But in the interim, wouldn't it avoid a lot of confusion if we use the name Dulles, which apparently is the right name for it now?

Mr. HARPER. Sir, that appropriations item you referred to is placed on it by the Congress. I don't know why.

Senator ALLOTT. I don't know either.

Senator MAGNUSON. We started out that way with it, and it has not been changed since.

REACTION OF AIRLINES TO MOVING

Senator ALLOTT. What has been the reaction—and we ran into this last year—by the airlines to moving in there? I have talked with numerous air people. Many seem to think, and I think you made this statement, that it would be a very expensive operation, that there was a good deal of reluctance to move to Dulles. What is the attitude generally of the airlines now toward moving their operations from Friendship?

Mr. HALABY. The attitude, I think, is positive in that they have given us letters of intent to proceed with their installations based on agreements regarding the landing fees, and the rental rates for space, for ticket counters, and other airport operations.

COST UNDERESTIMATED

As you know, this site was chosen several years ago. The design and cost were estimated several years ago. When I came into this position I got three men who had actually built an airport of this dimension. They came in and gave me an estimate that the airport had been underestimated in cost by roughly $20 million, and the opening date was optimistic by 18 or 20 months. So we projected this opening this fall, and we came to you, and told you we needed an additional $20.1 million, as I recall the figure.

DATE OF OPENING OF AIRPORT

Then we have expedited everywhere we could. If there are no strikes, if there are no labor shortages, if there is no unexpected weather, and if the airlines proceed with the construction of their ticket counters and the like in an expeditious way, we believe we can fly out of there before the snow flies out there. All our contracts are gaged to October. If those deadlines are not met, we are going to apply the penalty provisions which are as high as $5,000 a day—because we have $105 million of the taxpayers' money in there and we want to start earning some return on it as soon as we can.

Now, that airport will not be a complete, smooth, finished article this fall. It will be without any hangars, it will be without a complete restaurant, it will be with a lot of edges that have to be polished off. But we think we can open it and we can start getting some return on this huge amount of money.

ATTITUDE OF AIRLINES

Senator ALLOTT. All right. My question was directed to the present attitude of the airlines toward moving in there. I assume your answer to mean that the reluctance which they displayed at the time this committee was meeting last year has been to a great extent overcome?

Mr. HALABY. I think so, Senator.

We talked about it last year. And I told you it was going to be a hard negotiation.

Mr. Hobbs and his staff have completed this negotiation, I think, in record time, and we have satisfactory results to the Government.

THIRTY-YEAR PERIOD FOR EARNING BACK INVESTMENT

We have met our commitment to you to earn back the investment in a 30-year period, at a loss the first 10 years, at about break even the second 10 years, and in the black for the third 10 years. That is going to be a very difficult job, but we can do it.

Now, some of the airlines are sort of watching the others, because they are always in a highly competitive race. At least two or three of them are ready to go right in there and lead the race, and I think the others will follow.

But a lot will depend upon the state of the economy, how fast you can get access to that airport, how it strikes the public fancy. We are trying to make it a very attractive place.

Senator ALLOTT. All right.

DATE OF AVAILABILITY OF ACCESS ROAD

When will the road facility be opened and completely available? I am talking about the access road.

Mr. HALABY. The access highway, which is 14.8 mile portion of what is roughly a 29-mile trip is almost complete now. The landscaping is not complete. The marking of the road is not complete. But I have driven back and forth on it several times with Mr. Hobbs in the last few weeks. The problem is getting from the end of the George Washington National Highway to the beginning. And there are two ways to do it.

One way is to go through McLean, the new bypass road there is to be completed in the next two months, and the other is to go over to the circumferential highway, that comes across the Cabin John Bridge. That won't be complete until about the first of the year. That will make it even faster. We will go all the way up to that road, turn left about 3 miles, and then go out the highway.

Senator ALLOTT. If it is open this fall, there will still be a gap in the access highway of some 12 miles?

UNCOMPLETED PORTION OF ROAD

Mr. HALABY. No, sir. The access highway is complete right now—except for about 2.5 miles to be built for connection to Interstate Highway 66 when it is constructed in 3 or 4 years.

Senator ALLOTT. Well, what is the difference between the 17 miles of the access highway and the 29 miles of the total trip?

Mr. HALABY. The largest portion of it—let's assume we are leaving from here. The largest portion is some, I would say, 10 miles out to about where CIA is, and then there is a gap in there of a few miles. We will have that new Route 123, the McLean bypass in a few weeks, and a throughway via the circumferential later in the winter.

CHOICE OF DATE FOR OPENING AIRPORT

Senator ALLOTT. Now, have you set a date for the opening?

Mr. HALABY. No, sir. We intend to very shortly. I said in my statement, and very carefully, that we have a choice. We can wait until everything is just right and then dedicate it and open it, because that would probably be next spring. We can get it operational before the snow flies, and we will be ready to set a date very shortly. I think we ought to go ahead and open it—even though everything is not all smooth and perfect, because we will begin to earn some return on our money. I hesitate to ask the President to go out and perhaps President Eisenhower and the Dulles family and others unless it is in good shape. But we are going to try to set a date. We are going to try to make it worthy of America in the 1960's, and try to get some dynamic action by the airlines to use it.

Senator ALLOTT. Thank you.

EFFECT OF DULLES AIRPORT ON WASHINGTON AIRPORT

Senator ELLENDER. There was one question I would like to ask. To what extent will the opening of this new airport affect the receipts at the National Airport?

Mr. HALABY. We have some pretty hard estimates of the receipts there for the next several years and the receipts out of the Dulles Airport for the next several years. I think it is fair to say that it depends on how rapidly the carriers move from Friendship out to Dulles, and which of their flights they move from Washington National to Dulles. That will depend largely on the public demand.

So we are in a——

Senator ELLENDER. You are still hopeful, though, that the Washington Airport will collect enough fees to maintain itself.

Mr. HALABY. That's right.

Mr. Hobbs, do you have an estimated figure for fiscal year 1963?

Mr. HOBBS. We expect Washington Airport, sir, to maintain better than 4 million passengers to 1964, and then in 1964 it could drop about a half million, then build up again.

"BRIEF CASE" TRAFFIC

The airlines are going in for the brief case traffic, and the brief case traffic will never move to DIA. It will be out of Washington National. That is your coach services. Eastern, as you know, is getting heavily into that business. But we are optimistic to believe we will continue to show good results at Washington, Senator.

Senator ELLENDER. I hope you have not overbuilt.

Senator HOLLAND. Your plans for the operation of the two airports here will require the use of its maximum capacity of the National Airport facilities, won't it, because of its closeness and its accessibility?

Mr. HALABY. Yes, sir. I think—this is just a personal speculation—you will find the heavy, longer range flights leaving from and coming to the new airport, and the shorter range flights leaving and coming from the old airport, and a buildup of the general aviation traffic, which is one of the principal reasons we want this additional construction money for Washington Airport, will, in terms of number of aircraft handled, though not in terms of passengers carried, flow into that airport.

So we will have a lot of shuttle flights, a lot of short-range flights, and we will have the long-range jet, turboprop flights, the international flights out of the new airport.

OBJECTIVE OF UTILIZATION OF WASHINGTON AIRPORT

Senator HOLLAND. We were told at the time that we set up the airport now called the Dulles Airport that the primary objective of the FAA, then the CAA and the CAB, was to keep Washington National operating to reasonable maximum capacity at all times because of the nearness to Washington. Is that objective still part of your flight plan?

Mr. HALABY. Yes, sir.

Senator MONRONEY. But the jets cannot land there.

Senator HOLLAND. I understand. The next question was this.

PRINCIPAL DEFLECTION OF FLIGHTS

The principal deflection of present flights will be from Friendship to Dulles, rather than from National to Dulles, would it not?

Mr. HALABY. I think that is a proper estimate; yes, sir, an accurate statement.

Senator HOLLAND. Let me ask you this.

ANACOSTIA AND BOLLING FIELDS' TRAFFIC

How are they moving on your two military fields across the river from National?

Mr. HALABY. Well, Anacostia and Bolling have ceased airplane operations and are now conducting helicopter operations.

Senator HOLLAND. How does this cessation affect the capacity at National to serve a larger number of people who are flying?

Mr. HALABY. You are thinking of the air traffic control, mainly, I expect.

Senator HOLLAND. That is right.

Mr. HALABY. We believe it will not have a major effect. It is a little harder to feed aircraft through Washington approach controls to all three of those fields than it is just to Washington, but Mr. Thomas has worked out patterns which give a very high acceptance rate at Washington National.

Would you comment on that, Dave?

EFFECT OF CESSATION OF MILITARY OPERATIONS ON NATIONAL

Mr. THOMAS. I think it will have some effect. The demand on Washington National was and still is up to its peak capacity. As it was, we divided the traffic by the Potomac, keeping the military traffic to the east and the civilian traffic to the west. The cessation of airplane operations at Anacosta and Bolling has greatly expedited our circling of Washington National, and has made traffic handling easier. But I believe the peak hours are about the same; that is, 80 to 100 under visual flight conditions.

There is so much demand that this change has not created a measurable difference.

Mr. HALABY. The wider area is still very congested due to the very high rate of operations at Andrews Air Force Base to which the Navy and the Air Force moved their aircraft operations.

Senator HOLLAND. At that time we were told that continued operation of Bolling and Anacostia at that time was an impediment to the fullest use of the airspace around National.

Mr. HALABY. Right.

Senator HOLLAND. My question is, To what degree of improvement has that situation been accomplished by the moving from Anacostia, considering the use of the airspace around the airport?

Really, my question is this: Where do you plan to service the private aircraft and other planes of that type?

We know MATS moved out of Andrews but where do you, in this whole contract, plan to take care of now the private planes?

ENLARGING GENERAL AVIATION AREA

Mr. HALABY. The principal reason for this construction is to enlarge the general aviation area of Washington National because, as you pointed out, that is most accessible and convenient to the business and private aircraft.

As we go ahead, over the years, with the Dulles Airport there will be general aviation facilities there for those who want to fly in and catch a jet for long-range operation.

Senator HOLLAND. Well, the real use, to try to promote this money that you are asking for now, is for additional parking space and other facilities at the closest end of the terminal, or the closest end of the field, to take care of more private flying.

Is that right?

Mr. HOBBS. That is exactly right, yes, sir.

SIZE OF ACCESS ROAD RIGHT-OF-WAY

Senator HOLLAND. And a question about your access highway, now: Is your right-of-way wide enough to take care of the parallel public roads which are being discussed so freely around here these days, or will it require widening of your right-of-way?

Mr. HALABY. The answer is that specifically it is wide enough and the question is whether the State of Virginia will step up with a plan and the money to do some fairly complicated excavating and building work as not to interfere with traffic on the red ball express highway there.

Senator HOLLAND. Will it be all on one side or on both sides?

Mr. HALABY. On the outer sides. The two lanes out to Dulles and in from Dulles are in the inner portion and fairly close with an island in between, and the parallel commuter lanes would be on the outer edges of the 400-foot strip.

Senator HOLLAND. Thank you.

Mr. HALABY. And we have had very good discussions with the Virginia highway people.

There is no big argument, but there is a serious question about when they will be able to finance these commuter roads for Herndon and the other cities building up out there.

Now, we have been very tough, and hard nosed, about not converting what you all authorized and funded as a high-speed airport access road even temporarily for commuters.

Not a day passes but we get a request to put a temporary ramp on to the highway so that the commuters in Herndon can use it.

We have to say that the Congress authorized, funded, and directed us to make this airport accessible by having this single-purpose 17-mile span, and we are not going to depart from that.

TIME DIFFERENCE BETWEEN DULLES AND FRIENDSHIP TRIP

Senator HOLLAND. Taking the Capitol as the point of objective, leaving or arriving, which is going to take a longer time? To go to Friendship or go to Dulles?

Mr. HALABY. I think, sir, the answer will depend upon where you leave from.

If it is the Capitol, that is one point. The second thing is what time you leave.

Senator HOLLAND. The Capitol is the point that I asked about.

Mr. HALABY. Leaving from the Capitol at the peak afternoon outgoing traffic, it takes you about an hour and 10 minutes now.

Senator HOLLAND. To get to Dulles?

Mr. HALABY. No, to get to Friendship.

So you may have had the experience of an hour and a half, I think it will take about the same time, peak hour, out to Dulles but I cannot prove it because we only guess what the situation would be and, as you know, the first 5 miles are the slowest, and that will be so in either case.

You have to go through the heavy traffic to get out on to the Baltimore expressway and to Dulles you will have to go through the bridge traffic until you get onto the George Washington Parkway. You are just bumper to bumper in those peak hours.

At the off hours, mid-morning, mid-afternoon, and night, I think it will be a little faster to Dulles, but I cannot prove it.

TIME FROM NATIONAL AIRPORT TO BOTH FIELDS

Senator HOLLAND. How about from National to those two places, considering the construction of the Jones Point Bridge which is going to be the quickest?

Mr. HALABY. From National to Dulles, I would think it would be in the order of 15 minutes faster than from National to Friendship, but that is another guess.

Senator HOLLAND. You mean even considering the construction of the Jones Point Bridge?

Mr. HALABY. Well, a bridge means to me, during traffic hours, a long delay. You do not have to go——

Senator MAGNUSON. We will have to recess for about 5 minutes.

(At this point a short recess was taken.)

Senator MAGNUSON. All right. Any more questions on Dulles Airport?

Senator MONRONEY. I have one.

Senator MAGNUSON. All right, the Senator from Oklahoma.

CONSTRUCTION OF TURBOPROP PLANES

Senator MONRONEY. There are no more commercial transports being built at the present time in the United States that are turboprop, are there?

Mr. HALABY. That are turboprop?

Senator MONRONEY. Yes. In other words, the Electra is no longer being made and there is nothing else in the prop driven line being made by our American manufacturers, such as a transport?

Mr. HALABY. There is a capability for some to be built out at Hagerstown, Fairchilds, for F–27's, but I think your statement is substantially correct.

Senator MONRONEY. The type I am talking about is the modern, heavy, trunkline aircraft, and there is none. While I would be the first to protest against jets coming into Washington National, eventually you must face the fact that you are going to have to either use it or lose it, you might say, to jet aircraft, probably the smaller type, such as the Caravelle?

JETS AT WASHINGTON NATIONAL AIRPORT

Mr. HALABY. It is physically possible to land and take off a Caravelle or Boeing 720 at Washington National Airport. We have done it. I have done it. So it is not a physical problem. It is a question of the neighborhood, the airspace, the traffic density, and the suitability of the airport.

You have already authorized and funded $105 million for the most modern, safest, jet airport in the world, and the neighborhood in and around Washington National Airport is not eager to have jet noise and the associated problems.

We have such a high density of aircraft there now and at Andrews that if we can have the jets at Dulles we would much prefer it. We have a rule that no regular jet operations into Washington National Airport will occur. That rule will be increasingly difficult to hold to, as you suggest, as the fleet goes from DC–6's, DC–7's, Convairs, et cetera, into the pure jet aircraft.

There is nothing inherently dangerous about a jet airplane. In fact, the turbo-powered aircraft accident rate which was fairly high at first, has steadily descended until turbo-powered aircraft and propeller reciprocating aircraft are at a comparable rate of safety. And it is very encouraging.

The engine is not the probable cause of accidents. It is some other part of the system or the manner in which they are maintained or operated, more often than not.

So at some point, and this is true of LaGuardia, for example, as well as Washington National, we will have to face the question probably with the Boeing 727 of whether or not in addition to Dulles they are to be permitted into Washington National.

In my judgment that is several years off.

CONTINUED USE OF PROPELLER-DRIVEN PLANES

Senator MONRONEY. Well, have the airlines given any thought about converting an all-jet-powered operation?

As I understand it today, American Airlines has put on many jet flights between Friendship and Chicago and then found that they could lure business away from the other airlines with Electras from Washington National to O'Hare. It seems to me, with this investment we have in Washington National, that we should have somebody watching that to see how long a reasonable number of propeller-driven aircraft will still be in use, and what we are going to do about it. I would think offhand that you are not going to allow, and the Government is not going to allow, jet planes into Washington National.

Mr. HALABY. It is going to be a balance between Washington National and the Dulles Airport, and the public will decide the balance, because they will exert pressures on the airlines for the kinds of schedules they want.

The airlines will reflect that and then they will move schedules in or out of Washington National or Dulles.

And we will have to be ready to adjust with their changes in schedules.

Senator MONRONEY. But, coming back to this problem, you say the public will be the one to decide.

Traffic today is as high as it has ever been at Washington National, strictly with prop-driven aircraft.

Yet Friendship has been quite busy, and has found that it could make money from jet operations with no diminishment of prop-driven aircraft here.

The question is:

DURATION OF USE OF PROPELLER PLANES

How long will the prop-driven aircraft continue to utilize this convenient downtown airport? Or what we will have to do with it. Are we going to have to get ready to noise-proof the congressional office buildings and the Federal Government's buildings and the White House against the noise?

Mr. HALABY. I could not give a definite date, but I think you are right, sir, in saying that this time is approaching.

For example, the shuttle, which as I understand it, has been profitable and has certainly offered a great deal of convenience to the public between here and New York and Boston, is using a fully depreciated Constellation model.

I think this would have been a surprise to most people 3 years ago if someone had forecast this, but in fact, the airplane is fully depreciated, it has a reasonable direct operating cost and it has been a successful operation.

It will probably be shuttling for some time ahead. Maybe the Electra will become the shuttle 10 years from now and the 727 will become the Electra of the present day.

The British and French are quite active in this short-haul field, as I believe you know. The Germans are coming in, also. There is nothing fixed about aviation. Changes are the way of life in this business.

Mohawk Airlines placed an order 2 weeks ago for the BAC–111, which is a twin-jet airplane.

The Caravel is being operated by United Air Lines now, and this is a problem, and we are ready to meet it at either airport but I believe we ought to keep jets out of Washington National for the present.

Senator MONRONEY. Thank you.

Senator MAGNUSON. Well, we will recess for 5 minutes.

(A short recess was taken.)

Senator ELLENDER (presiding). The committee will come to order. I understand that Senator Young desires to ask a question.

INTERNATIONAL PEACE PROGRAM

Senator YOUNG. I would like to ask you a question here.

On page 46 of the news release there are three North Dakota projects. One of them I am particularly interested in is the International Peace Garden Airport. When do you plan to start work on that?

Mr. HALABY. We do not have the man in charge of the airports program with us, Senator, but if you do not mind a general answer I will give you a quick one, and then we will get you the specific one and put it in the record.

Whenever the local sponsor or community comes to us they have to show us that they are ready to go, that they have got their part of

the money and they can accept matching Federal money. And I believe the answer is that very shortly and presumably, during the fiscal year 1963 they will proceed with that project.

Senator YOUNG. And in the case of all three you feel that they will go as soon as the money is available?

Mr. HALABY. Yes, sir.

Senator YOUNG. Thank you.

Mr. HALABY. Our money is available and ready as soon as they have met the requirements, and we believe by announcing the program that it will help a lot.

DUPLICATION OF AIRPORTS

Senator ALLOTT. While we are on that subject could I ask you this: You have used the words "hard nosed" several times here today. Are you being real hard nosed about duplication of airports? I have in mind situations in my own State, and other States I know of, where in the past we were in the midst of financing two airports to satisfy two civic prides when one would have done just as well.

Mr. HALABY. It is not a pleasant job to be hard nosed, but I was born and raised in Dallas, Tex.

In fact, the first time I ever saw an airplane I was about 3 years old, it happened at Love Field, and it was a silk-scarf-and-helmet type of thing, an old beat up "Jennie."

It was a mud strip along the road. You could go up for 50 cents on Sunday.

We have refused to put another nickel of grant-in-aid funds in that airport because there is a darn good jet airport halfway between Dallas and Forth Worth.

Senator ALLOTT. And that is——

Mr. HALABY. Amon Carter Field. It is a pure, unadulterated case of civic pride, costing the Federal taxpayer many millions of dollars, and we are not going to duplicate it so long as I am in this job.

Now, my reputation in Texas is not very good as a native son, but I say again that we are not trying to get popular.

Senator ALLOTT. Well, the occasions and the places that I was thinking of were not under you, anyway, but I do think that it is a place where we cannot afford to spend the taxpayers' money, and I am happy to hear your answer because I do not think we ought to continue spending money——

Mr. HALABY. It is not just in the Federal grant costs, sir. It is also in the facilities' money.

People forget that we have to put several million dollars into towers, lighting, instrument landing systems, radar approach controls, and all of these other facilities that also mount up.

Senator ALLOTT. Plus continued operations?

Mr. HALABY. That is one reason why this operation's budget has gone up.

Here is a really steadfast policy that we will not duplicate in cases like that, simply for civic or political purposes.

Secondly, if they are under the use-it-or-lose-it rule of the CAB we will not put any money in it.

If an airport can serve more than one community and the CAB has an original airport study underway we will hold money until we have determined which is to serve the community.

This is the case in many of the New England States and these are hard-and-fast policies that we are holding to.

PROVISIONS OF FEDERAL AIRPORT ACT

Now, you know in the Federal Airport Act there is a formula based upon population and size which we have to adhere to and make available funds within that formula.

Senator ALLOTT. Thank you.

CIVIL SUPERSONIC AIRCRAFT DEVELOPMENT

Senator MAGNUSON. All right. Now we come to the last item, the civil supersonic aircraft development.

And I quote again from the House report:

> The budget estimates include $25 million to continue the feasibility study of the development of a civil supersonic aircraft.
>
> The committee is recommending $15 million for this purpose. The 1962 bill provided $11 million to initiate this research, and the committee is hopeful that the study can be completed during fiscal year 1963.
>
> The National Aeronautics and Space Administration and the Department of Defense will also be engaged in related research for supersonic jet aircraft.

Mr. HALABY. Senator, I know how pressed you are for time——

Senator MAGNUSON. No, go right ahead. This is an important subject.

Mr. HALABY. If I can whip through this we can make available the appropriate parts for the record later on.

Senator MAGNUSON. Yes.

Mr. HALABY. This, as you know, is a new program, and it is not our primary interest or primary responsibility in relation to air traffic control, in relation to flight standards and all the other things.

The previous planning, that occurred before the new administration came into office, envisioned a $5 million study and my predecessor proposed that there be such a program.

The Budget Director knocked it out and it never came to Congress. We came last year with a $12 million program, and we got $11 million, and we ask this year for an additional 25, and the House permitted 15.

We believe——

EXPENDITURES TO DATE

Senator MAGNUSON. Now, right there, how much has the FAA spent on this program to date?

Mr. HALABY. Very little spent but all but several hundred thousand of the $11 million is obligated.

Senator MAGNUSON. All right, but to date you have obligated or have had appropriated to you $11 million?

Mr. HALABY. Roughly, yes, sir.

Senator MAGNUSON. And the $25 million would make the total program for the 2 years $26 million?

Mr. HALABY. $36 million.

Senator MAGNUSON. $36 million.

Mr. HALABY. Yes, sir, which is $14 million less than we estimated last year.

Senator MAGNUSON. Now, would this complete the feasibility studies?

Mr. HALABY. Yes, sir.

Senator MAGNUSON. So that we are to understand that if we should put the 25 in, or recommend it rather, that that would be then a cost to us of $36 million for this portion of the civil supersonic program——

Mr. HALABY. Yes, sir.

Senator MAGNUSON. As it relates to FAA?

Mr. HALABY. Yes, sir.

Senator MAGNUSON. OK.

Mr. HALABY. This is a very quick and rather generalized presentation.

WORLD SUPERSONIC TRANSPORT

It is kind of a world supersonic transport and it goes back to 1952 with the piston aircraft, to 1962, the today's jet and the Mach-3, the 2,000-mile-an-hour supersonic air transport.

A flight from New York to Paris took 14 hours and 7 minutes for a piston powered transport. It will now take 2¾ hours with this airplane, that is, of course, now a paper plane.

Seattle to Tokyo, was 21 hours for the piston aircraft—all these flights on the west-bound Seattle-Tokyo run are one-stop, presumably at Anchorage—today it takes 10½ hours supersonic air travel, will take 3¾ hours.

Senator MAGNUSON. I want to suggest that since I have been chairman of this committe Seattle has more air service on paper and charts than any city in the world. That is all right.

Mr. HALABY. This is the same.

A west-bound hop in the United States with a DC–6, you can go in 1 hour and 50 minutes out to Columbus, Ohio.

With the 707 you could get to St. Louis in the same time, while the mach 3 would take you to San Francisco or Seattle. Of course, you get to Seattle an hour and 15 minutes before you leave New York, which may be the best plane on paper yet, because of the 3-hour time difference.

NEW TYPE PLANE

Now, this airplane is not the child, even the stepchild, of the B–70, and I am afraid that we did not make it clear in our presentation to this committee last year that this was not like the Boeing 707, which was the grandchild of the B–47, and the son of the B–52, and the KC–135.

Our RS–70 will teach us a great deal on how to produce this airplane. It will teach us how to fabricate the steel and titanium alloys into the structure, but it is not comparable in any respect to a civil supersonic transport and, therefore, instead of just going from the RS–70 into, let's say, the North American (NA–1000) supersonic transport, you will have to expend a substantial amount of money in development costs.

Now, the DC–6, without engine development, cost about $14 million to develop back in the late 1940's, and the DC–8 excluding en-

gines, cost about $112 million to develop. The engines used on the DC–8 were produced for the B–52's and also used on the KC–135 aircraft.

If you had an engine figure it would probably be another $100 million or so, but it was low in comparison to developing an engine for the supersonic transport.

PRESENT STATUS OF COST ESTIMATES

Now, we cannot honestly tell you how much it will cost to develop this airplane. We have an estimate from one manufacturer that he can produce two of these if we, the Government will provide the engines, for about $150 million.

But the engine is the problem.

We have an estimate from another manufacturer that he can produce two for $85 million if we provide the engines. We are a little dubious about that one.

NEW POWERPLANT NEED

Now, this whole development would include a new powerplant and that is where most of this $36 million request would go.

Why do we need a new powerplant when we are spending all of that money on the RS–70?

The answer is that it makes too much noise because it uses afterburners for take-off. It goes into mach 1 flight at too low an altitude. It has to refuel because the fuel consumption is so great.

Now, here are the capital resources of the four principal parties at interest.

The General Dynamics Corp., has indicated recently that they are, in fact, interested but their resources are in the same average as this.

Boeing has total capital resources—and this is net worth plus long-term debt for 1961—of $324 million; Douglas, $222 million; Lockheed, $165 million; North American, $230 million.

So it is obvious that Government support will be necessary for the development cost which is estimated in the range of $500 to $600 million.

After that there would be a cost for tooling, preproduction, and then you would get the first manufactured airplane.

NATIONAL PRESTIGE IN PRODUCTION

Now, a great deal is at stake here, such as national prestige.

It is obvious that getting to mach 3 first is quite important, although maybe not as important as getting to the moon first. But it is terribly important and very tangible.

You can see the passenger getting off of the airplane in an hour and 50 minutes from New York to Seattle. Of the turbine-powered aircraft fleet of the free world airlines, we sold most of the exported airplanes until the turboprops came along and then we only manufactured about 210 of the 900 total that were built.

The British and the French, with the Viscount and the Caravelle, scooped us in that market.

The two to three engine jet—I am sorry—I should not have included the Caravelle in here. I should have included the Viscount, and there is at least one other.

And that one is the Britannia, I suppose. Here is the Caravelle here.

And then the four-engine jets came back with a rush and we got most of that market except the Comet four-engine jet market.

Now, we believe there is a market for at least 150 of the supersonic jet airplanes in the period of 1970–75.

We have heard that it may be as high as 350. We have heard as low as 100.

POTENTIALITIES OF PROJECTED PLANE

Determining the market is full of difficulty, but you can see why there would be an economic advantage if we can develop an airplane at the right price.

While the DC–6B can carry 50 million seat miles per year and the 707 can carry 170, this airplane will carry 525 million seat miles.

In terms of dollars the DC–6B costs about $1.5 million; the 707, about $6.5 million. No one knows exactly what the price of the supersonic transport airplane would be.

The lowest estimate we have seen is around $10 million and the highest we have heard is around $30 million.

You would have to know how you came out on development, what the size of the market was, what we learned about fabricating with steel, before you could know the price, but $20 million is a conservative figure.

ITEMS INCLUDED IN COST FIGURE

Senator ELLENDER. In that $20 million is that the cost of research?

Mr. HALABY. You mean is this the production cost including the development cost?

Senator ELLENDER. Yes.

Mr. HALABY. Here is the way we pictured that.

First, let's say it would cost $450 million worth of development costs. We think we should recover some of that cost, so we would add a royalty, a Government royalty, onto the purchase price of the airplane. Now, if they could sell it at $18 million and we put $2 million more on, we then would recover $300 million on 150 planes for an order of that type.

So we would recover two-thirds of that development cost.

Now, if we sell 200 aircraft, you would have a higher figure.

PRECEDENT FOR RECOVERY FIGURE

Senator ELLENDER. Is there any precedent for our adding that? That is the whole——

Mr. HALABY. For an airplane? I think not.

If the Government has done it, Senator, it would have been credited against some military contracts but on a straight royalty basis I know of no precedent for it; but I know of no precedent for this airplane or the economic and financial benefits it creates.

Senator HOLLAND. The precedent for it, I should think, would apply to precedence in patents or new processes which were discovered by the hundreds and then either obtained by the Government or granted to the Government and made public use processes in order to make better service to our people.

I know of no precedent for anything like this.

For instance, there was the citrus fruit patent, and it was discovered as a very useful process to make millions of dollars and more fruit available all the year round, and it was granted as a public-use patent, and there are many such precedents but here you start something rather difficult and try to impose a penalty on the very industry that you are trying to build up is something that you——

RECOVERY OF SPECIAL SUBSIDY

Mr. HALABY. I do not think of it as a penalty. I think of it as a recovery of what would be regarded by many as a very special subsidy.

And it would seem to me that we might plan on recovering about half or two-thirds of those developmental costs.

Senator HOLLAND. I hope the Senators, who are talking against this communications satellite, do not hear of this.

It might put new ideas in their minds of how the Government would be compensated in that field.

Mr. HALABY. Well, I hope they do not, either, Senator.

EUROPEAN PLANS FOR SUPERSONIC PLANE

The supersonic transport development plans in France and Britain are moving along. In the Soviet Union the plans are not quite as definite as these.

In France they have a pretty firm program. They are shooting for 1966 or 1967 or somewhere along in there for a first flight.

They think of putting it into service 3 years later and have set aside $25 million, and we understand that it is with General De Gaulle's backing.

And they seek to build a kind of Caravelle of the supersonic world, mach 2, aluminum construction.

They think they might sell 350 of them. They have not priced it but I think they estimate a price of about $7 million per airplane.

We are very dubious about their ability to build the airplane at that price. They would use British engines.

The British and French have been collaborating on these studies. The British have, at least, two engines that they would provide.

They think of a transatlantic airplane, a longer range airplane, a bigger airplane, and naturally, with their nationalized airline, they would want to get the first civil supersonic transport aircraft across the Atlantic, and then they would want to sell it to us for British pounds.

Then they would want to earn dollars by selling to our airlines, Pan American and TWA, a Franco-British airplane.

SOVIET CONSTRUCTION ACTIVITY

We do not know what the Soviet Union is doing.

General Lognvov, who is the head of Aeroflot, told me that they were working on two models, one a version of a military bomber, the "Bounder," which is something comparable to our B–58 and then he said "Probably, they will build me one for Aeroflot later."

We do not know whether that is so or not.

They could fly one in a month and it should probably be a kind of tricked up bomber for propaganda purposes, but they are quite capable of doing it.

We think that if they do it that way they may be the first with the worst.

PLANE BASED ON NASA RESEARCH

Our idea is to get the best one that will be economically competitive, safe, and profitable to the carriers.

One version of the airplane is this model here, which is based upon the work of NASA, which is doing complementary basic research in the field of supersonic technology.

Now, they have a very unique design where the wings fold forward for takeoff and you get a more controllable takeoff at a lower speed. At approximately an altitude in excess of 40,000 feet you would fold these wings back and go from the subsonic speeds of the current jets, about mach .8 or .85, through the transsonic speed range to mach 1 and beyond.

This airplane would cruise at about 75,000 feet, at 2,000 miles an hour, with four engines, carrying anywhere from 125 to 150 passengers.

DISCUSSION OF B–70

I come back again to the B–70 because it is very much on your minds, as so much has been invested in it. It has an afterburning engine. You cannot take off from Los Angeles or New Orleans or Seattle with an afterburning engine because of the amount of noise it makes.

Secondly, the B–70 airplane is designed for long runways, high speed takeoff, and landings at military airports which our airline pilots are not accustomed to and to which we do not believe we would want to subject revenue-paying passengers.

The B–70 goes through mach 1 at an altitude lower than we believe would be tolerable by the populace due to sonic boom. The B–70 has to be refueled because it has a very high specific fuel consumption in those engines and could not make these long hops that we are talking about here.

So we will learn a great deal from it. We certainly support this development and there will be a lot of technological fallout, but it is neither the grandfather or the father of a civil supersonic transport.

Senator MAGNUSON. For the record, who recalls how much we put in the Defense bill for the B–70?

(No response.)

Senator MAGNUSON. Well, we will get that figure. I think it was around $300 million.

Mr. HALABY. It was more than that, sir.

Senator ALLOTT. It was more than that.

Senator MAGNUSON. It was more than that, 300 or 400 million.

AMOUNT FOR NASA

How much is being asked for by NASA?

Mr. HALABY. NASA will be coming up before you——

Senator MAGNUSON. I know it.

Mr. HALABY. A total program of aeronautical research of $51 million. This is subject to correction by them, of which approximately $20 million is for basic research on supersonic technology.

Senator MAGNUSON. Now, I ask you: Would there be any duplication between what you plan to do and what NASA is doing?

I think you have made your statement regarding the military.

Mr. HALABY. Right.

Senator MAGNUSON. Now, what about that?

EFFORT TO AVOID DUPLICATION OF RESEARCH

Mr. HALABY. We have a former Director of Flight Research at NASA, Mr. Gough, who is our Director of Aircraft Development Service.

We have Col. Lucian Rochte, assigned to us by the Secretary of Defense, and we then have a working level committee with men from NASA and Defense that they deal with.

Mr. McNamara and Mr. Webb and I are the steering committee for this project. We met last Friday on it and it is our purpose to see that there is no duplication between NASA's end laboratory research and our contracted work among the airplane and powerplant corporations in the country.

Senator MAGNUSON. That clears that up.

TOTAL FOR AERONAUTIC AND SUPERSONIC RESEARCH

Mr. HALABY. Those NASA figures were a total of $52,500,000 for aeronautical research of which $18 million is for supersonic work.

Senator MAGNUSON. So their program is a type of program somewhat similar in dollars and cents, in a general way, as yours, and that is NASA's?

Mr. HALABY. Yes, sir. That is for all——

Senator MAGNUSON. And, for the record, $362 million was put in and is, indeed, for the——

Mr. HALABY. For the RS–70.

Senator MAGNUSON. Yes.

Mr. HALABY. Yes.

ESTIMATE OF TOTAL COST OF PLANE

Senator ELLENDER. What is your estimate of the cost of a plane of this kind, that is in research, up to a point where you get it ready to fly?

Mr. HALABY. Well, I will give you a personal estimate, which is based upon listening to all of the airplane manufacturers.

All of them have been in, the British, French, and American powerplant manufacturers, and then the "guesstimates" of the airlines are in, too, as to what it might cost, and it is in the order of $600 million.

Senator ELLENDER. Do you think it is worth spending that money?

Mr. HALABY. Well, let me say——

Senator MAGNUSON. Well now——

Senator ELLENDER. That is, just to cut off a few hours of going to Europe or to Seattle?

SOURCES OF FUNDS

Senator MAGNUSON. I think we ought to clear that up, that this would be the Government's expenditure.

Mr. HALABY. Yes, sir.

Senator MAGNUSON. Now, there are all kinds of other expenditures in which the aircraft people, themselves, would contribute, and do contribute in this working up to make it.

Is that correct?

Mr. HALABY. That is correct.

Senator MAGNUSON. It might be almost $300 or $400 million there?

Mr. HALABY. I think they would risk very substantial quantities of their money when they got to the production phase.

I think they would pay a small fraction in the developmental phase.

Senator MAGNUSON. It is not all governmental in this?

Mr. HALABY. No; in fact, all manufacturers have spent some money to date and for every dollar's worth of Government money we tried to get $2 worth of effort.

Senator MAGNUSON. As a matter of fact, the Boeing crowd did not get a couple of them because they did not put in enough of their own money?

Mr. HALABY. Yes, sir. I think——

Senator MAGNUSON. Or they did not say they put in as much money.

Mr. HALABY. Well, all right. There are two things there. I believe——

Senator MAGNUSON. Well, we need not go into that.

Mr. HALABY. I believe it is fair to say that some of the companies know more about doing this than others, and they did not want to disclose their proprietary information, and they did not feel they needed to share the costs so much.

Also two companies—two major aircraft companies—got together and teamed up.

So we are getting from that particular contract 50 percent cost sharing.

We get $2 worth of work for a dollar's worth of labor. Now, I am sure someone is thinking to himself, "Well, where did their dollar come from?"

It would take some very sharp analyst to go through and try to find where that dollar came from, but, in any case, they are giving us twice as much for our dollar.

SUPREMACY IN AERONAUTICAL FIELD

Now, Senator Ellender asked why is it worth it.

First, I think we have supremacy in the aeronautical field and we ought to keep it.

Senator ELLENDER. You mean, civilian?

Mr. HALABY. Yes, sir.

Senator ELLENDER. Why?

Mr. HALABY. How did we get it or——

Senator ELLENDER. Why? I said why should we have it?

Mr. HALABY. Why should we have it?

Senator ELLENDER. Yes, it strikes me that this ought to be worked in conjunction with the Air Force.

Mr. HALABY. Yes, sir; it is.

Senator ELLENDER. They are spending millions of dollars, as was pointed out, and I just do not see these huge expenditures in the light of our present expenses of the Government.

Mr. HALABY. They build bombers and reconnaissance bombers, and they have some fighters that are supersonic. They do not have a transport.

The second reason, aside from prestige, is that it will earn foreign dollars as there will be a very large export market. We need to earn foreign currencies in our export market.

Thirdly, it will create something like 30,000 jobs a year for 10 years in the airframe and powerplant industry.

And, finally, it has some economic advantage to get from Seattle to Tokyo in a very short time, and to get from New York to Paris in a very short time, not only in communications, but in economic benefits to those who travel.

Senator HOLLAND. Mr. Chairman, can I ask one question?

FUNDS REQUESTED FOR FEASIBILITY STUDIES

Senator MAGNUSON. Yes; go ahead.

Senator HOLLAND. Do I understand that this $10 million item here is primarily for use upon this development?

Mr. HALABY. It is a request for $25 million, sir, and the House cut it by $10 million to $15 million.

Senator MAGNUSON. The House cut it by $10 million to $15 million.

Senator HOLLAND. And you are proposing $10 million more?

Mr. HALABY. We are requesting that you restore the amount cut.

Senator HOLLAND. And the 15, if it were left in there, would it be applied to this purpose?

Mr. HALABY. Yes, sir.

Senator HOLLAND. So if we enter into this we are entering into a project that you think now will cost us $600 million?

Mr. HALABY. I did not say that, sir.

This money is solely limited, and the President has limited me to conducting feasibility studies to determine if this can be done and whether the airlines use the airplane without subsidy.

And all we are saying is that if you give us the $36 million we will know whether or not to go forward with it and, if so, how.

Thereafter, there would be the need for a prototype, and that contract could very well be let, Senator Ellender, through the Department of Defense, because they have the experience in aircraft procurement.

The airlines would want to indicate the specifications and the economics for the airplane.

And, of course, the FAA will want to see that it is certifiable and NASA would feed in the work that they are doing to the engines and the airplane itself.

DEVELOPMENT COST

Senator ELLENDER. You gave me a figure a while ago in response to a question. I think it was something in the neighborhood of $600 million. What was that?

Mr. HALABY. That was the developmental cost.

Senator ELLENDER. That is what Senator Holland is asking you about.

That would be the cost of it?

Mr. HALABY. If this feasibility work proves out.

Senator ELLENDER. You know it will.

Mr. HALABY. Well——

Senator HOLLAND. Let me ask another question.

TIMELAG IN ACHIEVING U.S. TURBOPROPS

When turboprops were brought out the first commercial airplane was the Viscount, was it not?

Mr. HALABY. Yes, sir; I think the first commercially acceptable one was the Viscount.

Senator HOLLAND. Manufactured by Rolls-Royce, a British manufacturer.

How long did it take our manufacturers——

Mr. HALABY. Vickers manufactured the airplane and Rolls-Royce, the engine.

Senator HOLLAND. Vickers manufactured the airplane and Rolls-Royce manufactured the engine.

How long did it take our manufacturers to equal and exceed that with the turboprops that we now have, such as the Electra?

It did not take very long, did it?

Mr. HALABY. I could give you that in months but it was in the order of a couple of years and, unfortunately, I think the Lockheed Aircraft Co. will tell you that they anticipated a much larger market than they got, and they had to write off substantial losses in the development, partly due to the availability and comparative competition of the Viscount.

USE OF SUPERSONIC PLANE

Senator HOLLAND. And we might find the same sort of experience even if we produce something in this field.

Is that not true?

Mr. HALABY. I doubt it seriously.

Senator HOLLAND. You do not know whether the people will use it or not, do you?

Mr. HALABY. I think if you can get from here to Los Angeles in an hour and 50 minutes the people will use it.

I think also, sir, the Viscount analogy is not a good one, because I do not think that once we are settled to go ahead that any other country, except the Soviet Union, would compete with us because of the cost of developing a supersonic transport.

And, therefore, the importance is to go ahead and capture this market and produce this kind of air traveling service, and we are in competition with the Soviet Union on this.

From my own personal point of view, $36 million to study this and, even $636 million to study and then develop it, is not very much when I see $3.8 billion this year and a substantial additional amount next year, not for going mach 3 or even mach 2, but for going to the moon.

Senator HOLLAND. People do not stop traveling in DC–7's when jets were available from Friendship, did they?

As a matter of fact, didn't one line come back in here to National and take almost the whole Miami trade by sticking to the DC–7's and by sticking to the regular prop trade?

Mr. HALABY. I do not know the proportion of jets out of Friendship to Miami versus propeller out of Washington National to Miami, but I would guess they were both fairly substantial fractions.

I do not think it is 90–10 or any such ratio as that.

Senator HOLLAND. There is still a great preference, as far as numbers are concerned, to travel in prop planes, is there not, on that run?

Mr. HALABY. On that run? I would have to get you the answer to that. I do not know.

Senator HOLLAND. Would you supply that for the record?

Mr. HALABY. Yes, sir; I will.

(The information referred to follows:)

There are from 1 to 3 jet schedules daily from Friendship to Miami, depending upon the season; and 13 flights daily from the Washington National Airport to Miami for propeller aircraft.

RELATION TO RS–70

Senator ALLOTT. Mr. Chairman, I quoted Mr. Halaby sometime ago.

Mr. Halaby, I quoted your last year's testimony during fiscal year 1963 Defense appropriation hearings. I told the Air Force I would like to have their comment on the supersonic transport plane development. They said:

It is their contention—

speaking of you—

that development of a supersonic passenger plane has to proceed on substantially independent lines.

This is your point of view, is it not?

Mr. HALABY. Independent of?

Senator ALLOTT. Independent of RS–70.

Mr. HALABY. Well, they are interdependent, but——

Senator ALLOTT. Well, they are interdependent, but you made the point——

Mr. HALABY. If we had no RS–70, we would have a much tougher job.

Senator ALLOTT. That is right. They are interdependent to the extent of structures, materials, and the like, but in the construction of the supersonic transport plane you made it clear last year, and you have repeated it again this year, that you cannot construct a supersonic plane around the airframe of the RS–70?

Mr. HALABY. Yes, sir.

Senator ALLOTT. And you used your grandpa analogy?

Mr. HALABY. And North American Aviation, who builds the RS–70, I am confident, would say to you, sir, that to produce this civil supersonic transport they would need around $700 million, and around 7 or 8 years.

And, of course, they are as anxious to build it as anyone else.

Senator ALLOTT. Well, I wanted to be sure that this point was clear, because there has been a great deal of confusion about it.

Mr. HALABY. Yes, sir.

TESTING PROGRAM FOR RS–70

Incidentally, sir, we are going to be in on the first test airplanes that the military is buying, the first RS–70, in various test programs that will help get the answers for this airplane, the sonic boom, and a variety of other interrelated projects.

This airplane, going at mach 3, has something called "sonic fatigue."

You may have it right now from listening to me, but this sonic fatigue is the compressibility effects on the structure of the airplane and it may reduce the useful life so far as the temperature effects in various parts of the airplane.

Maybe one of those airplanes could be assigned to NASA to conduct research and tests at some point in the life of the experimental program.

EFFECT OF BEING LIMITED TO HOUSE ALLOWANCE

Senator ALLOTT. Well, I know you will not like this assumption, but, even assuming the favorable action of this committee upon your request in this category, it is unlikely that we would come out with all of what you have requested in conference with the House.

Now, just what would be the effect if you were limited to the $15 million that the House has given on this program?

Mr. HALABY. Well, sir, we would have to reprogram the efforts and it would reduce it, obviously, by $10 million, and the effect would be that we would lose time in relation to what the Soviet Union or the French and the British may be doing.

Senator ALLOTT. How much would it slow it down? That is what I really wanted to know.

Mr. HALABY. Well, sir, I do not know.

Senator ALLOTT. A year?

Mr. HALABY. I just honestly do not know how it would slow us down. I think it would simply reduce the amount of knowledge we could acquire as a basis of determining whether we should continue with this program.

The RS–70 is going to teach us a lot. If the Department of Defense proceeds with the TXF, that is the triservice fighter project, that will be very instructive. The engine development is the critical item for the supersonic transport. We need a non-after-burning engine for takeoff: one that would go through mach 1 above 40,000, a sonic boom amelioration: one that would have lower fuel consumption: getting that engine is the most critical item.

We would tend to put most of our money, as we did this year, on engine research.

I wish I could give you a finite answer but I can only tell you that I do not know.

Senator ALLOTT. What about the size of airports?

AIRPORTS FOR SUPERSONIC PLANE

I believe you testified last year that it was contemplated that a supersonic transport would operate out of the jet airports that we have at the present time. It would be so constructed?

Mr. HALABY. Yes, sir. We would require, before proceeding, that it operate out of current jet airports with no more noise than is presently made, and less if possible, and that it have direct operating costs at or slightly above the subsonic jets we are now operating.

We do not think we could bring on with this airplane a whole additional Federal airport program, more noise complaints, and less profits for the airlines.

AERIAL REFUELING NEEDED

Senator ALLOTT. Did I understand or misunderstand you to say you said that this plane would require refueling?

Mr. HALABY. The RS–70 would require aerial refueling, and we do not believe at this time that we would want to subject the passengers to the aerial refueling.

Senator ALLOTT. You are referring to the RS–70, then?

Mr. HALABY. Yes, sir.

Senator ALLOTT. And not the supersonic?

Mr. HALABY. No, sir; this would have to be nonrefueled in the air.

Senator ALLOTT. I think that is all I have.

Senator MONRONEY. Mr. Chairman?

Senator MAGNUSON. Senator Monroney.

COMMITMENT TO DEVELOPMENT PROGRAM

Senator MONRONEY. If we provide this money to complete your planning and studies then for what amount are we committed for the development of this plane?

The reason I am asking this question is, I think the committee ought to know here and now that we are buying a $400 or a $600 million development program for this plane. It is my judgment, from what you have said, that there are no U.S. airplane manufacturers, who are the greatest in the world, that would be prepared to put their own money into it.

Now, I think we ought to understand this. We are not going to put another million dollars worth of plans on the shelf and wait until somebody comes along some happy day and say "I am ready to put $600 million of my money into this."

So let's not kid ourselves that we are not committing $400 million of developmental cost or, perhaps, $600 million, for this plane.

Mr. HALABY. Well, Senator, I guess one rather unfortunate example, or perhaps I should say an example of sort of dragging along with a program, would be the aircraft nuclear propulsion program.

You remember, year after year you appropriated funds in the belief that there would be a breakthrough in the very serious problem

of shielding the effects of the airborne nuclear reacator and, finally, I believe, last year the program was canceled without having gone into a prototype airplane.

Now, we say we have learned from that and we want to know whether a supersonic transport airplane is economically feasible. Senator Monroney, I know you realize we are talking about both technical and economic feasibility—there is no question as to whether we can build it. There is absolutely no question on that.

It takes manpower and money to build the airplane.

Boeing can do it, or any one of these companies can do it. The question is whether you can build it and then put it into operation safely, economically, and outdo the competition, because unless we can do that all we are doing is buying another big subsidy bill and that does not make any sense.

ESTIMATED COST OF DEVELOPMENT

Senator HOLLAND. If I understood your testimony, it is that if the research is successful it will take you $600 million to develop the airplane toward which you are working. Is that right?

Mr. HALABY. If this $36 million phase proves that it is economically and technically feasible then it will cost you an additional amount, and I have given you a very conservative estimate of $600 million.

I notice the Senator said from $400 to $600 million, but I think he was looking at the other end.

Some say this thing will cost $750 million and others say $250 million.

I am trying to be very conservative in saying that it is in the order of $600 million that it would cost.

Senator MAGNUSON. But that is a decision that has to be made then?

Mr. HALABY. Exactly.

Senator MONRONEY. But what we have to do now, Mr. Chairman, if we go forward with it, is to be ready to spend $600 million for this plane unless you want to "wash it out" in the economic phase.

Now, Russia is probably going to come out with a supersonic.

We could convert the Convair Hustler, and we could have a transport plane highly uneconomical and noisy and breaking windows all across the country and call it the same, if the Russians are probably calling their supersonic transport.

We do not choose to do that because it could not be economical

SUGGESTED DELAY PENDING RS–70 STUDY

I just wonder, and I have to be so doubtful of this thing, if we could slow this down a bit on research until we see what lesson we are going to learn from the RS–70.

This is going to teach you a number of things, as you say. It is going to be the basis, just like the Wright Brothers' plane was basic to the 707 jet, perhaps.

But I do think we are foolish if we do not consider that the followon from this is in the neighborhood, as you say, of $600 million.

Senator MAGNUSON. If he finds it feasible.

Senator MONRONEY. Now, the Government's development will produce two prototype planes. Then, if we find anybody to build them, we may be the first in the world with a new supersonic aircraft.

This is a risk that I think the country will have to decide whether or not it should run.

Mr. HALABY. Well, Senator, if you will apply the logic of the space program here you would then have never authorized and appropriated money for the Apollo and Gemini until the Mercury theory was fully completed.

We have to go forward if these studies show that we should go forward, and I appreciate your reservations but everything we know about the RS–70 is going into this airplane.

This airplane would not even fly for the first time before 1966 or 1967, and it would not be ready for the airlines for at least 9 or 10 years.

So everything we learn going down the road will go into it, just as we have in Mercury, as well as in a lot of shots in the coming months, applies to Apollo and Gemini.

VALUE OF MILITARY STUDY

The programs of the RS–70, the TXF, and any other supersonic work that they are doing in the Pentagon will apply to this and could bring the price down.

The biggest item right now, Senator Ellender, is the cost of fabricating this structure that will go through the heat thicket without softening or melting or disintegrating.

If the military builds a substantial number of steel airplanes the cost will surely come down for this steel airplane.

It may be that as a result of our study, we will not go for a mach 3 airplane but will be satisfied with a mach 2 airplane in which case the cost would not be $600 million. It would be substantially less and much more nearly within our grasp, and then the risk will be a matter of whether we should build this interim plane when maybe somebody else will build the steel airplane.

FEASIBILITY OF SPEEDS PAST MACH 3

Senator MONRONEY. But is it not a fact that all we now know indicates that it could go to mach 2 and go to mach 3, because this is the natural speed of a jet with the least resistence and least propulsion requirements?

Mr. HALABY. Well, the maximum lift over drag, and the higher productivity of the airplane par out in the speed of mach 3 and the nautical range of about 3,500 miles.

The longer this thing flies the more productive it becomes, and that is why we talk of mach 3 because it is a maximum within reach that we see now.

To go to mach 6 or 7, which is technically within our reach—as we have grown into mach 6.5 or so in the X–15 by increasing power, we will be able to add more powerful engines to the civil supersonic airplane and go on past mach 3.

They will be different engines and probably have a different cycle, such as the turbofan ramjets.

When you go to mach 2 you encounter temperatures of 250° F. When you go to mach 3 you start picking up temperatures along the forward surfaces of 550° F.

PLANES IN INTERNATIONAL AND DOMESTIC USE

Senator MONRONEY. Well, how many of these planes would you estimate would be in international use and how many in domestic use?

Mr. HALABY. Of the 150 figure I gave you which, I believe, is really conservative, just as the cost is perhaps on the high side, about two-thirds would operate transcontinental and one-third overseas.

Senator MONRONEY. I would suggest that you take that model around and poll the old ladies from Dubuque and see how many would like to travel transcontinental in that.

I happen to be a pretty dedicated air traveler, and I still think it is nice to fly, but I do not believe you are going to get the yield you think you are going to get from that in domestic service.

Now, when you are talking about transoceanic, I think it is very important, perhaps, to cut the term down a little, although when I pay $210 tourist class for a jet flight from here to New York to London, I get there in about 4 hours.

But I think you are going to find that this is going to be the answer to your airline financial difficulties.

Senator HOLLAND. Do you mean that you think the people would like to have a peaceful drink and time for dinner between the time of departure and the time of arrival?

Senator MONRONEY. Yes, you can hardly serve them now. You have a hard time serving an hour and a half transatlantic.

I mean, unless you take off——

Senator MAGNUSON. This is off the record.

(Off record discussion.)

Senator HOLLAND. Mr. Chairman, I would like to make one comment.

Mr. Halaby likened this next step in the field of aviation to the Apollo and Gemini efforts in the space effort.

COMPARISON WITH APOLLO AND GEMINI EFFORTS

That is not a proper comparison because Apollo and Gemini have always been, along with Mercury, calculated steps toward an objective which is still further ahead.

There have not been any necessary buildup toward this kind of thing.

Mr. HALABY. Well, sir——

Senator HOLLAND. And it has not been so regarded, and I think there is no basis for the comparison at all in this space effort to say that because we began Apollo and Gemini from Mercury that we should do that same thing in this field.

Mr. HALABY. Well, Mr. Webb may say that my use of his project as an anology here is wrong and, since I know very little about them, it is a risky analogy. But, sir, we are flying right now several airplanes at or above mach 2.

SPEEDS ALREADY ATTAINED

I had 2 hours in a B–58, out of Fort Worth and flew for 5 minutes at 1,300 miles an hour.

We have several other airplanes that are flying at this speed, and we are on the way toward mach 3 flights in the RS–70 and later in the TXF, if we proceed.

Before we are all dead we are going to have mach 4, 5, 6, 7, and 8 flights. And the question is, and I think, Senator Ellender put his finger right on it, Senator Monroney, is it worth it and "can you do it safely and with economic feasibility" and that is why we want the money to find out.

If we come back to you and say, no, sir, we cannot do it, then you would not be asked for any such figure as $600 million.

If we say mach 2 is all we can see then it would be a much lower amount.

Senator ALLOTT. Mr. Chairman, I want to say this, that I agree with the Senator from Oklahoma.

FULL COMMITMENT NECESSARY

We are doing more than appropriating or planning on appropriating an extra $10 million here, or, if we are really appropriating or planning on appropriating an extra $10 million, we really have to be prepared to commit ourselves, in the event of the findings of economic and practical feasibility to a program ultimately of $600 million.

I, perhaps, am more by myself than anybody else on this committee, for somebody that is regarded as a conservative, but I believe that if you pursue this research with complete objectivity and with complete objectivity find that upon the basis of structure and economic feasibility that it can be done, that there is going to be a demand for this plane by the time it can be put on the line, which will be somewhere around 1970, 1971 or 1972.

Now, I may stand alone in my thoughts in this, but I think of how a great many people regarded the jets as short a time ago as 4 years, that nobody, nobody in their right mind was going to put $6½ million in an airplane that just would not pay off. I believe they now think about it differently.

When I think that we regarded, well, the DC–6 in somewhat the same category, and then the DC–7, I cannot help but feel that the forces of this world are such and the forces of our American way of life in the world, are going to be such that if we go ahead in this, provided you make objective findings in your research, that by the time we are ready to go ahead with it, that there is going to be a market.

But your research has been or has to be, and your appraisal has to be, coldly objective and what the Senator from Oklahoma says, I think, is true.

We are really not making up our minds about $10 million here. We are making up our minds about $600 million, if you find the feasibility.

Mr. HALABY. Yes, sir, if we find that it is feasible.

On objectivity I may sound like I am selling this airplane but I do that because I think there are so many doubts and, as you say, there is a certain loneliness in being in an advanced position on this. But we would have to certificate any such airplane.

We would have to authorize the pilots and crew members to fly it. We would have to give an assurance to the public that it was airworthy, so we are going to be absolutely objective about it.

But I do not think we should shrink from studying the economic feasibility of it, but we will come back to you and tell you very candidly about it.

In fact, that is all the President has authorized me to ask you for.

Senator MAGNUSON. Well, if it turns out to be economically feasible, why, whether we are here or not we are going to build it, and we probably should.

Mr. HALABY. I read an article just a couple of days ago that we were going to be charged with going too slowly with this project——

Senator MAGNUSON. Well, that author has never been a member of one of the committees.

VIEWS OF ADVISORY GROUPS

Mr. HALABY. One other thing, Senator: We do have a pretty hardheaded advisory group consisting of members with backgrounds in the airlines, manufacturing, financing, airline pilots, and an experimental test pilot, who are looking over our shoulder on this.

It is not just our views, but it is the whole works overseen by some pretty tough-minded guys.

Senator ALLOTT. Maybe I should know the answer to this but I would like to ask you the question anyway:

Why is NASA doing the research work on the frame?

Mr. HALABY. Sometimes it is hard to recall but NASA did almost all the basic aeronautical research in this country until it became the Space Agency.

It is still doing aeronautical research, and they will come to you shortly for about $50 million worth of aeronautical research in fiscal year 1963.

Senator ALLOTT. Is that the old——

Mr. HALABY. NACA was the nucleus of——

Senator ALLOTT. That is under NASA?

Mr. HALABY. Yes, sir.

Senator MAGNUSON. It has folded in.

Well, if there are no further questions we will come back from Cloud 9 or come back to mach zero.

LETTERS FROM SENATOR BYRD OF WEST VIRGINIA

For the record, Senator Byrd, of West Virginia, has sent me letters which I will give to the Agency to take a look at, and you can answer it for the record if you wish or you can send a letter back.

(The reply and letters referred to follow:)

The Charleston, W. Va., office was closed March 1, 1962, in keeping with Agency policy of decentralization and consolidation of district offices. This particular phase of the decentralization program will include delegation of additional authorities to general aviation district offices, and will enable per-

sonnel in these offices to make immediate decisions and resolve problems at the local level. Qualified and well-trained specialists in all phases of general aviation are required in a general aviation district office to assume these additional authorities. Larger, centrally located offices, properly staffed with aviation specialists, will enable us to provide this type of service to the public. In summary, the establishment of larger geographic areas permits the staffing of a decentralized office with a variety of specialists capable of making a variety of technical decisions. This, in turn, will improve the effectiveness of our programs and provide a more complete service to the entire aviation community.

The current workload in the area which was assigned to the Charleston office justified a staffing of only one operations inspector, one maintenance inspector, and one clerk-stenographer. The amount and complexity of this workload was such that the technical positions could be classified only at grade GS–12. This classification resulted in a situation whereby qualified inspectors assigned to this activity bid on and were assigned to higher positions elsewhere, resulting in a continuous turnover of personnel. Our experience has been that the somewhat isolated field office does not receive desired supervisory attention. This is not due to reluctance on the part of our supervisors, but rather to the fact that the span of control is excessive. Our eastern region is responsible for the management of 321 facilities. Accordingly, we firmly believe that we must phase out the less efficient offices, and continually seek consolidations designed to improve the efficiency of our field operation. There are definite indications that the staffing of the FAA regions has reached a leveling off point which compels us to look for improved managerial and organizational efficiency to absorb increased workload requirements.

The Charleston office served 64 airports, 4 certificated repair stations, 12 air taxi operators and 8 flight schools. These are located throughout the State and in many instances are equally or more accessible to district office locations out side West Virginia.

In considering the requirement for an office of this type, it must be realized that regardless of where the district office is located, the personnel assigned there serve an area, not just one location. As a result, they are in frequent travel status. For example, even though an inspector is stationed at Charleston, he would be traveling much of the time and his services would not be immediately available at that location. We have found that a larger office, staffed with at least five technical specialists, can operate much more efficiently and economically and provide better service to a given area as a whole than can a smaller office with only one or two assigned inspectors. In addition, the larger office has the essential capabilities for providing continuing service during periods of annual and sick leave, training and other absences whch materially reduce the effectiveness of the small office.

In order to keep pace with the steady and rapid development in general aviation activities, it is necessary to adjust the organization of our field facilities from time to time. The Agency is continually appraising operating methods, looking for ways to improve service to aviation communities and keep costs to a minimum. The decision to close the Charleston office was based on these principles and in full consideration of the interests of the aviation community in Charleston.

U.S. SENATE,
COMMITTEE ON APPROPRIATIONS,
June 6, 1962.

Hon. WARREN G. MAGNUSON,
Chairman, Subcommittee on Independent Offices, Committee on Appropriations, U.S. Senate, Washington, D.C.

DEAR SENATOR MAGNUSON: You will recall my having contacted you some time ago and again recently, when you suggested that I write you this letter concerning consideration by your subcommittee of the provision of funds in the 1963 budget to allow the resumption of operation of the Federal Aviation Agency's General Aviation District Safety Office at the Kanawha County Airport in Charleston, W. Va., which was discontinued as of March 1, 1962. Federal Aviation Agency officials, including the Administrator, have refused to recognize the factors which dictate the existence of this office in West Virginia outlined below.

Since 1957, the FAA has maintained this facility in Charleston to provide airworthiness inspection services for aircraft based in West Virginia. At present there are approximately 600 privately owned airplanes operating in

West Virginia, serviced by the FAA. Because of its terrain, West Virginia's citizens are greatly dependent upon air transportation, and the number of aircraft owned and based in the State is on the increase. Approximately one-half of the some 600 airplanes licensed in West Virginia are located within 30 air minutes of the Kanawha Airport. Many of these are vital to the commercial interests of the State, as the principal manufacturing companies, more and more, are relying on company aircraft to provide the quick transportation so often needed. Further, many multiengine private craft not based in West Virginia use the Charleston airport on a regular basis. This area possessing the largest concentration of base chemical manufacture in the country, there is considerable traffic on the part of privately owned aircraft providing executive travel to and from the large plants situated there.

Only five other States now have no FAA district office, each of them possessing less than half of the area of West Virginia and, with one exception, less than half of West Virginia's population. Moreover, as an indication of the relative commercial activity, the value of West Virginia's manufactured products greatly exceeds that of the other five States, with one exception. The exception in both instances is the State of Connecticut, where all parts of the State have quick access to nearby large aviation centers and FAA services.

The Federal Aviation Agency has charged its Pittsburgh office with the provision of inspection services in West Virginia, but experience with this same arrangement in the past has demonstrated the inefficiency involved. Service rendered was found to be wholly inadequate and unsatisfactory, with aircraft frequently grounded for hours and days, awaiting inspection service by personnel sent from Pittsburgh.

I might mention further that the availability of this FAA service in the State of West Virginia could well prove to be a factor in inducing new enterprises to locate in this very depressed area. The State's economic posture demands the availability of every possible advantage to commercial activity, and the provision of this small service on the part of the Federal Government could contribute to an improved economy in the State.

Thanking you for your subcommittee's consideration of this item, I am,

Sincerely yours,

ROBERT C. BYRD.

U.S. SENATE,
COMMITTEE ON APPROPRIATIONS,
March 12, 1962.

HON. WARREN G. MAGNUSON,
Chairman, Subcommittee on Independent Offices, Committee on Appropriations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: When your subcommittee considers the 1963 budget for the Federal Aviation Agency, I would appreciate consideration being given to the addition of funds to provide for the continued operation of the FAA General Aviation District Safety Office which has been operated for some years at the Kanawha County Airport in Charleston, W. Va., and which has been discontinued as of March 1, 1962. Federal Aviation Agency officials, citing reasons of economy and efficiency, have adamantly refused to recognize the factors which dictate the continuance of this office in West Virginia—outlined below.

Since 1957, the FAA has maintained this facility in Charleston to provide airworthiness inspection services for aircraft based in West Virginia. At present there are approximately 600 privately owned airplanes operating in West Virginia, serviced by the FAA. Because of its terrain, West Virginians are greatly dependent upon air transportation, and the number of aircraft owned and based in the State is on the increase. Approximately one-half of the some 600 airplanes licensed in West Virginia are located within 30 air minutes of Kanawha Airport. Many of these are vital to the commercial interests of the State, as the principal manufacturing companies, more and more, are relying on company aircraft to provide the quick transportation so often needed. Further, many multiengine private craft not based in West Virginia use the Charleston airport on a regular basis. This area possessing the largest concentration of base chemical manufacture in the country, there is considerable traffic on the part of privately owned aircraft providing executive travel to and from the large plants situated here.

Only five other States now have no FAA district office—each of them possessing less than half of the area of West Virginia and, with one exception, less than half

of West Virginia's population. Moreover, as an indication of the relative commercial activity, the value of West Virginia's manufactured products greatly exceeds that of the other five States, with one exception. The exception in both instances is the State of Connecticut, where all parts of the State have quick access to nearby large aviation centers and FAA services.

The Federal Aviation Agency has charged its Pittsburgh office with the provision of inspection services in West Virginia, but experience with this same arrangement in the past has demonstrated the inefficiency involved. Service rendered was found to be wholly inadequate and unsatisfactory, with aircraft frequently grounded for hours and days, awaiting inspection service by personnel sent from Pittsburgh.

I might mention further that the availability of this FAA service in the State of West Virginia could well prove to be a factor in the inducing of new enterprises to locate in this economically depressed area. The State's economic posture demands the availability of every possible advantage to commercial activity, and the continued provision of this small service on the part of the Federal Government could contribute to an improved economy in the State.

Thanking you for your subcommittee's consideration of this item, I am,

Sincerely yours,

ROBERT C. BYRD.

OPERATIONS AT KANAWHA COUNTY AIRPORT, W. VA.

Mr. HALABY. Yes, sir.

Senator MAGNUSON. You know the story on West Virginia?

It is the general aviation district safety office at Kanawha County Airport, Charleston. Who knows about that? That is the resumption of operations?

Mr. HALABY. Yes, sir. We have, as you know, been consolidating not only——

Senator MAGNUSON. Well, I think it is best to leave this off the record. This is a special thing.

Mr. HALABY. All right, sir.

Senator MAGNUSON. Are there any further questions?

Mr. HALABY. On the supersonic transport?

Senator MAGNUSON. Well, on the whole business here. We are now at the end of the list.

Any further questions of the Agency? (No response.)

If not, we thank you very much.

Mr. HALABY. Can I——

Senator MAGNUSON. Oh, excuse me.

Mr. HALABY. If I could have literally 1 minute——

Senator MAGNUSON. All right, go ahead.

RECAPITULATION OF FUNDS REQUESTS

Mr. HALABY. We have gone so fast and so high here that I do want to come back to what is our real meat and bread and butter operation here.

Of the operations increase, $20 million is for funding for a full year the program that you gave us last year and $5.5 million of operations is for the new DOD military flight inspection. There is $32 million for facilities and services available and needed. This is the hard core.

Regarding the $15 million for R. & D., we feel, is just the wrong time to tighten us here as we are just, I think, getting going good under new management.

Senator HOLLAND. The first two items have to do with your safety——

Mr. HALABY. Yes, sir.

Senator HOLLAND (continuing). And flight direction facilities?

LEASING OF AIRCRAFT

Mr. HALABY. Yes, sir. There was quite a bit of discussion of leasing an aircraft. I wanted to give one example.

If you did write in a limitation on our leasing of aircraft, Senator Allott, it would have this effect.

Last year there was a DC–8 for approximately $7 million in the program. I knocked it out because I felt we could lease DC–8 time to better advantage.

Now, there was a choice of leasing some DC–8 time or buying $7 million worth of airplanes.

I hope we can keep that flexibility and, finally, I want you all to know that we are not deterring from our primary job, which is the airways' safety by this kind of project.

That is a new project. It is set out as such, but our prime job is to keep at this airspace problem.

Senator MAGNUSON. All right.

We thank you all very much.

Mr. HALABY. Thank you.

(Subsequently the subcommittee received the letter set forth below from Lt. Gen. Harold W. Grant, Acting Administrator, dated August 14, 1962, requesting a further language amendment:)

FEDERAL AVIATION AGENCY,
Washington, D.C., August 14, 1962.

Hon. WARREN G. MAGNUSON,
U.S. Senate,
Washington, D.C.

DEAR MR. MAGNUSON: You are requested to amend the Federal Aviation Agency portion of the independent offices appropriations bill for the fiscal year 1963 by inserting after the end of line 11, page 14, the following language:

"Leases and concession agreements covering buildings and properties at Washington National Airport and Dulles International Airport may be entered into without regard to the provisions of section 321 of the Economy Act of June 30, 1932, as amended (40 U.S.C. 303b), unless otherwise deemed appropriate by the Administrator."

The need for this language generates from a decision of the Comptroller General, No. B–125035, dated February 1, 1962. The cited decision is based on an interpretation of title 40, United States Code, section 303b, which reads as follows:

"Except as otherwise specifically provided by law, the leasing of buildings and proprties of the United States shall be for a money consideration only, *and there shall not be included in the lease any provision for the alteration, repair, or improvement of such buildings or properties as a part of the consideration for the rental to be paid for the use and occupation of the same.* The moneys derived from such rentals shall be deposited and entered into the Treasury as miscellaneous receipts." [Italic supplied.]

The Comptroller General's decision was rendered to the Secretary of the Interior and held that concession agreements of the Department of the Interior are leases within the meaning of the code, which prohibits the inclusion in Government leases of any provision for the alteration, repair, or improvement of Federal property.

The decision has a far-reaching effect on operations at the two Washington airports. Throughout the 20 years of operations at the Washington National Airport the Agency has entered into a number of leases and concession agree-

ments which call for substantial investment by the tenants and concessionaires in improvements, alterations, and repairs to the airport property which they occupy. The same arrangements are used at the new airport. Rates, fees, and charges at the airports are established on the basis of contribution, in varying degrees, of alteration, repair, and improvement by tenants and concessionaires. If these provisions are held to be improper, FAA would require substantially increased appropriations. It is also possible that the tenants and concessionaires would gain a substantial windfall in the form of relief from obligation for repair, alteration, and improvement.

The Office of the General Counsel of the FAA has rendered an opinion that this language would not be subject to "point of order" objection. A copy of this opinion is enclosed for your information.

Your favorable consideration of including this language in the Federal Aviation Agency's general provisions of the Independent Offices Appropriation Act is requested, as it is in the public interest. The Bureau of the Budget has recently approved our requesting this language change.

Sincerely,

HAROLD W. GRANT,
Lieutenant General, U.S. Air Force, Acting Administrator.

MEMORANDUM

JUNE 25, 1962.

Subject: Proposed amendment to the General Appropriation Act for Washington National Airport and Dulles International Airport.
From: Associate General Counsel, General Legal Services GC–10.
To: Director, Office of Budget, BU–1.

Reference is made to your request of this Office for an opinion as to whether or not an amendment to the subject cited General Appropriation Act which, in essence, would require the Administrator to enter into leasing or concession agreements without regard to the provisions of section 321 of the Economy Act of June 30, 1932, as amended, unless he deemed otherwise appropriate, would be subject to "point of order" objection in the House and the Senate.

The language proposed for inclusion as an amendment to the Appropriation Act is as follows:

"Leases and concession agreements covering the buildings and properties at Washington National Airport and Dulles International Airport shall be entered into without regard to the provisions of section 321 of the Economy Act of June 30, 1932, as amended (40 U.S.C. 303b) unless otherwise deemed appropriate by the Administrator."

It is our opinion that an amendment so cast is not subject to a "point of order" objection by either the House or the Senate. House Rule 21, section 2, forbids in any general appropriation bill a provision changing existing law or a provision proposing to construe existing law (see Jefferson's manual and Rules of the House of Representatives, 87th Cong., H. Doc. No. 459, pp. 432, et. seq.). Although the referenced House rule forbids in any general appropriation bill a provision changing existing law, the House practice has established the principle that "certain limitations" may be admitted (see Jefferson's cited, supra). Senate Rule 16 is similar to the recited House rule in import (see Senate manual containing standing rules, orders, laws, and resolutions affecting the business of the U.S. Senate, 84th Cong., 1st sess., S. Doc. No. 9, p. 22, et seq.).

The suggested amendatory language is in the nature of a "limitation" and does not purport to either change or construe existing law. The acts of June 29, 1940, and September 7, 1950, as amended, respectively, authorize the expenditure of appropriations for the construction of the airport. This authorization would permit the Administrator to expend appropriated funds for the construction, maintenance, and provision of facilities at the respective airports. The proposed amendment to the General Appropriation Act would, in effect, limit the availability of funds appropriated to the Administrator to do so in that it would require him, unless he otherwise deemed it appropriate, to accept consideration other than money, viz: the construction or providing of facilities and maintenance at the airport from lessees or concessionaires. It is, in effect, a limitation on his use of appropriations under the General Appropriation Act and does not interpret or alter his authority under the Second Washington Airport Act, the act of June 29, 1940, as amended (WNA Act) or section 321 of the Economy Act.

ROBERT P. BOYLE.

VETERANS' ADMINISTRATION

STATEMENT OF J. S. GLEASON, JR., ADMINISTRATOR; ACCOMPANIED BY W. J. DRIVER, DEPUTY ADMINISTRATOR; A. H. MONK, ASSOCIATE DEPUTY ADMINISTRATOR; C. F. BRICKFIELD, GENERAL COUNSEL; J. M. HANSMAN, CONTROLLER; AND J. D. SHYTLE, DIRECTOR, BUDGET SERVICE

PREPARED STATEMENT

Senator MAGNUSON. The committee will come to order, and we are putting the Veterans' Administration in between some of the scheduled agencies because the general has to go to a very important meeting next week which, I understand, I was invited to myself, but I cannot go.

My post made me the chairman of the legislative committee. I do not know why, exactly, but I hope he will pay my regrets to the VA.

General GLEASON. I certainly will, Mr. Chairman.

Senator MAGNUSON. Well, now, you have a short statement, and we will put the statement you have in the record in full.

General GLEASON. All right, sir.

(The statement referred to follows:)

Mr. Chairman and members of the committee, as always I and the members of my staff appreciate this opportunity to appear before you to present the program of the Veterans' Administration and explain its budgetary requirements. As stated in our letter of August 1 to the chairman, we accept the action of the House of Representatives on our appropriation request. However, we will be pleased to discuss with you any or all of our budgetary requirements and will endeavor to answer any questions you may have.

I have a statement which highlights our operations and estimates for fiscal year 1963. I will be happy to read it or offer it for insertion into the record, as you desire. This statement and the justification of our estimates which we have previously furnished you contains rather complete details.

Mr. Chairman and gentlemen of the committee, thank you for the opportunity to discuss with you today our fiscal year 1963 appropriation requirements. We deeply appreciate the continued interest of this Committee on Appropriations and the assistance we have received from you in caring for our Nation's veterans and their dependents.

The House of Representatives approved our total fiscal year 1963 request of $5,248,833,000 without change. We are gratified by that expression of confidence and support of the mission of service to the American veterans entrusted to us

by the Congress. A revised statement comparing fiscal year 1962 appropriations with our fiscal year 1963 request is as follows:

Appropriation	Appropriated, fiscal year 1962 [1]	Estimate, fiscal year 1963	Decrease (−) or increase (+)
General operating expenses	$161,773,000	$157,669,000	−$4,104,000
Medical administration and miscellaneous operating expenses	43,876,500	13,772,000	−30,104,500
Medical and prosthetic research		28,000,000	+28,000,000
Medical care	989,371,000	1,017,892,000	+28,521,000
Construction of hospital and domiciliary facilities	76,250,000	75,500,000	−750,000
Compensation and pensions	3,500,000,000	3,832,000,000	+332,000,000
Readjustment benefits	135,000,000	91,500,000	−43,500,000
Veterans insurance and indemnities	39,200,000	32,000,000	−7,200,000
Grants to Republic of the Philippines	1,000,000	500,000	−500,000
Total	4,946,470,500	5,248,833,000	+302,362,500

[1] Includes the following 1962 supplementals:

Medical care	$2,200,000
Readjustment benefits	55,000,000
Total	57,200,000

The amount approved by the House of $5,248,833,000 represents an increase over fiscal year 1962 appropriations (including supplementals) of $302,362,500. This increase in appropriated funds between the 2 years is attributable primarily to the fact that we entered fiscal year 1962 with an unusually large unobligated balance in the "Compensation and pensions" and "Readjustment benefits" appropriations of $227.6 million, thus reducing our needs in fiscal year 1962 for new appropriations by that amount.

GENERAL OPERATING EXPENSES

We are requesting $157,669,000 under this appropriation heading which finances the activities of staff services, including my immediate office, and the Departments of Insurance and Veterans Benefits.

This request is $4,104,000 less than the $161,773,000 Congress appropriated for these activities in fiscal year 1962 and is $6,681,000 below the fiscal year 1961 level. A substantial portion of our decreasing requirements in this appropriation is attributable to declining overall workloads as some of the veterans benefits programs, such as vocational rehabilitation and education, phase out. However, there also has been and is a constant, diligent effort on our part to provide improved service at a lesser cost.

Under this title we asked the Congress for a representation allowance for my office of $1,000, which was not approved by the House. I do not wish to specifically appeal this item, although in my judgment the need for such an allowance does exist. This need has been recognized by the administration which authorized the inclusion of this request in the budgets of practically all major agencies.

STAFF SERVICES

The fiscal year 1963 estimate exceeds fiscal year 1962 estimates by 38 average employment. All of this net increase in average employment is for the Board of Veterans Appeals. By reason of enactment of Public Law 87-97, the Board is now required to separately state findings of fact and conclusions of law in every decision. This has resulted in a considerable increase in professional time required to write decisions and an increase in the length of decisions which requires more transcribing personnel. The increase of 38 personnel will enable us to handle this extra workload.

DEPARTMENT OF VETERANS BENEFITS

The Department of Veterans Benefits will require $118,501,000—an amount $4.2 million below the fiscal year 1962 level. Improved efficiency of operations, organizational and functional changes, decline in vocational rehabilitation activities, and the closing of one-man contact offices, have made possible this substantial reduction of costs.

Vocational rehabilitation and education will continue to decline, with an estimated decrease of 46,000 average Korean veteran trainees in fiscal year 1963. The estimated average personnel reduction in this progrm from fiscal year year 1962 to fiscal year 1963 is 158.

Our fiscal year 1963 projection for the loan guarantee program provides for an increase over fiscal year 1962 of 97 average employment and $936,000. Most of this increase is planned in our property management activity, which at this time has an extremely heavy workload. Operational responsibilities to date have represented an initial contingent liability on the part of the Government of over $28.4 billion on loans guaranteed or insured aggregating almost $53 billion, a mortgage loan portfolio with an asset value of $1.8 billion, and property holdings having a value in excess of $160 million. These figures are cited to emphasize the importance of the effective management of this program through a strong, properly staffed, well-trained property management function.

We estimate that the direct loan activity of this program will be maintained at the approximate level of 25,000 loans.

We also envision that our chief attorney program will be maintained at approximately the current employment levels, even though workloads continue to increase.

We estimate our compensation and pension employment will decrease by an average of 68 employees in fiscal year 1963. At present we are giving particular attention to the quality of adjudicative actions to assure fair treatment to the veteran, as well as to protect the interest of the Government. A management program of statistical quality control has been installed for the purpose of assuring that our field offices maintain a high degree of review uniformity and high quality of adjudicative actions.

We are making substantial gains in the effectiveness of our office services. The average employment level in fiscal year 1963 is expected to decrease 146 from fiscal year 1962.

DEPARTMENT OF INSURANCE

I am particularly impressed with the progress we have made in recent months in the Department of Insurance. Our estimated average employment in fiscal year 1963 is down 196 from fiscal year 1962 levels. Progress has been made in all operational areas. Employee productivity is increasing, systems continue to improve, and our automatic data processing system is beginning to pay dividends. I sincerely believe that our insurance operation is an excellent example for the entire industry and more progress can be expected in the future in this area. Our total fund requirements in this area have been reduced $359,000.

AUTOMATIC DATA PROCESSING

One of the major factors contributing to our increased efficiency in our operations is in the area of automatic data processing. We have made significant gains in this field in both the Department of Veterans Benefits and in the Department of Insurance. By September all of our regional offices will be converted to automatic data processing in the area of compensation and pension payments at our Hines Computer Center. At this center we have recently installed a fully transistorized automatic data processing system with greatly improved speed and capacity so that other functions now can be programed into this system.

The Department of Insurance likewise has converted to a similar system at the Philadelphia Insurance Center and further substantial gains in efficiency can be expected. The Department of Insurance fiscal year 1963 budget provides for an average employment of 3,311, which is 2,135 less than the employment required in fiscal year 1957. This is a striking reduction, when you consider that workloads have remained relatively constant. Automatic data processing will continue to figure prominently in most of Veterans' Administration activities in the future.

The purchase price of an automatic data processing system such as that now in use at our Hines and Philadelphia Centers is a little over $2 million for each system. The net rental savings per year from purchase versus lease is approximately three-fourths of a million dollars for each system. Therefore, the purchase price can be amortized in approximately 3 years. Based on this substantial savings to the Government by purchase, I ordered the curtailment of all possible expenditures early in fiscal year 1962 in an attempt to accumulate funds necessary to purchase the Hines computer system. I am most happy to report that our

efforts were successful. It is my intention to purchase the second computer system at Philadelphia as soon as possible. As the result of these two purchases, I can assure you that the taxpayers will save approximately $1½ million per year after fiscal year 1963.

We also are exploring the potential advantages of automatic data processing applications to our medical care operations. Naturally, we shall move most cautiously in this area, but I am convinced that in time substantial improvement in our research and medical care processes will be possible.

MEDICAL ADMINISTRATION AND MISCELLANEOUS OPERATING EXPENSES

An increase of $395,500 and 26 average employment are requested in fiscal year 1963 over fiscal year 1962 estimated levels. These increases are necessary to render both staff and operational support to our growing medical care programs.

The 26 average employment increase is needed in Medical Administration. This increase is essential to enable us to strengthen our long-range planning effort for determining hospital construction, equipment, and staff requirements, and to exploit to the maximum improvement in medical and administrative practices in the system. The total administrative staff which is responsible for overall direction of the medical program represents an overhead of but seven-tenths of 1 percent.

The employment level of the office of the Assistant Administrator for Construction is estimated to remain at current levels for fiscal year 1963. Funding requirements are up $5,000 to cover increased salary and travel costs.

Included also is an increase of $125,000 in fiscal year 1963 for education and training of the professional and technical staffs of our hospitals and clinics. The rapid advancement of new concepts and treatment techniques in the medical field make it essential that our training efforts maintain pace with the expansion of our medical care staffs.

MEDICAL AND PROSTHETIC RESEARCH

Our request is for $28 million for this purpose in fiscal year 1963. One million dollars of this is for our prosthetic research activities and $27 million for the medical research program. Our research program is vital to the medical mission of the Veterans' Administration. It is responsive to our clinical needs. It also helps attract exceptionally well qualified professional personnel to our patient care staff. It results in the development of greater knowledge of medical ills and the treatment thereof. It not only improves the quality of care for our veterans but also contributes in full measure to medical knowledge and care for all.

MEDICAL CARE

The House approved our total request under this title of $1,017,892,000 for fiscal year 1963. This represents an increase over the fiscal year 1962 annual appropriation of $30,721,000. This appropriation finances both our "inpatient" and "outpatient" activities. This requested appropriation will enable us to:

(*a*) continue to improve the quality of medical care provided increased numbers of patients in both our hospitals and clinics;

(*b*) reduce substantially the equipment replacement backlog which has developed over the past years in our hospitals and clinics;

(*c*) provide for an increased usage of drugs and medicine in the treatment of patients;

(*d*) provide for the increase experienced in average salary costs; and

(*e*) provide for the increased per diem rate in contract hospitals.

The amount of funds requested for these activities in itself is indicative of their scope and complexity. Costs related to medical care activities continue to increase and many of these are beyond administrative control. Just to stand still in our medical care programs requires an annual increase in dollars of almost $18 million ($7 million for average salary increases, $7,500,000 for wage rate increases, and $3,500,000 for increased utilization of drugs, medicines, and utility services). I expect this trend to continue.

However, I do not intend that we stand still in the field of medical care of our veterans. I am sure you agree that we must continue to improve the quality of our services and our 1963 request provides for what we consider a modest rate of improvement.

The staffing increases the Congress has approved for our hospitals during the past few years have enabled us to care for increasing numbers of patients each year with approximately the same number of beds. It is through further increasing of patient turnover by reduction of length of stay that we hope to contain the increased demand in future years within the presently authorized 125,000-bed hospital system.

Indicative that our efforts in this area have borne fruit is the fact that we have treated on an inpatient basis from 24,000 to 30,000 more veterans in each of the last 2 years. We will try to continue this improvement but cannot expect it to increase that much each year indefinitely. Concurrent with the improvement in patient turnover rates has occurred a leveling off, and even some slight decrease, in the average daily patient load level. This is to be expected as each of our hospital beds is used by more patients during the year.

Our 1963 request envisions increasing average employment in our hospitals by over 900. Over half of this is for neuropsychiatric hospitals where we are faced with a growing problem of psychiatric patients who have developed medical and surgical disabilities which independently require hospitalization and are more demanding of staff than ambulatory psychiatric patients. To fully meet this problem we no doubt will need to ask your help in providing for further increases in staff in future years.

Of particular significance in this year's request is the provision for funding the backlog of equipment replacement needs that developed over the years in our hospitals and clinics. A study we made jointly with the Bureau of the Budget disclosed that at the end of fiscal year 1961 the backlog of equipment needing replacement amounted to over $22 million at current cost levels. We are asking an increase of $9 million in 1963 to apply against this backlog. I earnestly seek your support of the House action in approving our request for this purpose.

Within the funds recommended for medical care a total of $94,693,000 will be used in our outpatient care activities. This represents an increase over fiscal year 1962 of $1,439,000.

This increase will permit:

(*a*) the care and treatment of 27,400 more patient visits of veterans with service-connected disabilities in Veterans' Administration clinics. This will be partially offset by a 20,800 decline in fee visits;

(*b*) the opening of two new audiology clinics;

(*c*) the establishing of five new day care centers; and

(*d*) a reduction of the existing backlog of replacement equipment requirements in our clinics.

COMPENSATION AND PENSIONS

The House recommended our full request of $3,832 million for this appropriation for fiscal year 1963. Our request to the Congress for fiscal year 1963 proposed that the two appropriations, "Compensation and Pensions" and "Readjustment Benefits," be consolidated into a single appropriation titled "Veterans Direct Benefits." The House has expressed a preference that these activities continue as separate appropriations. It is my desire to comply with their preference in this matter.

COMPENSATION

The estimate for fiscal year 1963 represents a decrease from fiscal year 1962 operating levels of $15,973,000. We are estimating a caseload average of 2,356,930 for fiscal year 1963, which represents a decrease of some 15,600 cases over fiscal year 1962. This downward trend in service-connected compensation cases is expected to continue, due primarily to the death of veterans now on the rolls. In addition, there is proposed for later transmission an estimate of $64,400,000, to cover a projected rate increase for our more seriously disabled veterans.

PENSION

Our pension rolls are expected to continue to increase, due to the advancing age of the veteran population. These rolls are expected to increase to an average of 2,011,411 for fiscal year 1963, which represents an addition to the rolls of 139,000 cases over fiscal year 1962. This estimate for fiscal year 1963 represents an increase of $135 million over fiscal year 1962, excluding the original proposed supplemental for fiscal year 1962.

BURIAL ALLOWANCES

The estimate for fiscal year 1963 of $47,190,000 provides for 179,800 burial awards, 5,500 more awards than that estimated for fiscal year 1962. The cost, of course, can be expected to increase with the advancing age of our veteran population.

OTHER MISCELLANEOUS BENEFITS

Included in this category are retired officers (emergency officers' retirement), adjusted service and dependents' pay, special allowances—dependents, subsistence allowance, and invalid lifts. Our estimate of funds required for these benefits in fiscal year 1963 is $7,831,000. With the exception of invalid lifts and special allowance—dependents, the trends in cost and caseload are downward.

READJUSTMENT BENEFITS

The House has recommended our total request of $91,500,000 under this title, which represents a decrease from the fiscal year 1962 amount available of $58 million. Substantially all of this decrease is attributable to a continuing decline in our education and training program.

The Korean conflict education and training load is projected at 52,000 for fiscal year 1963, which is 46,000 below the estimated fiscal year 1962 level. The war orphan load is expected to continue to increase. The fiscal year 1963 estimate provides for a training load of 15,000, an increase of 2,000 over the estimated fiscal year 1962 level.

Special assistance to disabled veterans, which includes (*a*) vocational rehabilitation, (*b*) housing grants for disabled veterans, and (*c*) automobiles for disabled veterans, is estimated to cost $7,425,000 in fiscal year 1963. This represents a decrease from fiscal year 1962 of $1,230,000.

LOAN GUARANTEE REVOLVING FUND

Because of the uncontrollable factors involved in this area, our initial request proposed funding of these activities on a permanent indefinite basis. A revised estimate of expenditures was provided the Congress in the amount of $220,545,000. House Resolution 12711 establishes our revised estimates as a limitation.

I do not disagree with the desire of the House to continue the requirement of annual review by the Congress of the operational level of this fund.

However, I do wish to alert you to the possibility we may need to come back to the Congress later in the year for an incerase in the limitation amount which is based on an estimate involving many complex and uncontrollable considerations.

During the past 3 years, the number of serious defaults on guaranteed loans and claims paid have doubled, as have properties acquired. As a result, our average monthly expenditure rate has increased from $10 million to $25 million. Should this trend continue or even level off at the current rate, the limitation amount of $220,545,000 will be insufficient to carry us through all of fiscal year 1963. However, there has developed during the past few months a trend that we hope portends some improvement in this area. Recently, the number of new defaults reported has turned slightly downward. I am hopeful this is an indication of a reversal of what has been a steady upward trend for some time.

The financing of the loan guarantee revolving fund during fiscal year 1963 is predicated upon our ability to sell to private investors a substantial portion of our Veterans' Administration-owned mortgage portfolio. To date, we have made two offerings—one of approximately $100 million and the second of approximately $188 million. Of the first offering of $100 million, we were able to sell approximately $38 million of mortgage loans. We do not yet have the final figures on the results of our second offering. If we are unable to effect the sale of the amount of our mortgages, on terms advantageous to the Government, required to fund our loan guarantee revolving fund operation, we also will have to request a supplemental appropriation later in the year.

CONSTRUCTION

The House approved our fiscal year 1963 request of $75,500,000 under this title with some qualifications. I am sure you share my agreement with the desires of the House to update our hospital system at minimum cost without sacrifice of operational efficiency.

With the funds we have asked for this purpose, we will achieve further progress in modernization of our pre-World War II hospital facilities, plus some immediately necessary work at our other facilities for research and other necessary purposes.

Major projects that we propose to accomplish within the funds we are requesting under this heading are:

(*a*) Construction funds for replacement hospitals at Atlanta, Ga.; Memphis, Tenn.; and Miami, Fla.;

(*b*) Technical services for a replacement hospital at Temple, Tex.;

(*c*) Technical services for a new hospital at Gainesville, Fla., which will be affiliated with the University of Florida's Medical School; and

(*d*) The continuation of our scheduled modernization of our neuropsychiatric hospital at Downey, Ill.

The House has directed that none of these funds be used for fallout shelter construction in our hospital projects. The deletion of fallout protection funds is not in accordance with the policy of the President which calls for the Federal Government to take the lead in demonstrating the importance of adequate protection policy for our civilian population in these times of international crises.

Gentlemen, this concludes my formal summary to you of the highlights of our request and the House action on them. The details of our request have been set forth in the budget justification previously submitted to you. In this statement, I have limited myself to what I considered the highlights of our request and the House action thereon. I and my staff will be happy to provide any additional information you need to pass judgment on our request to you.

Thank you for this opportunity to discuss our problems and needs with you.

GENERAL STATEMENT

Senator MAGNUSON. And then, with the understanding that next week, if the committee has any further questions on this portion of it we will call some of your people back and then we will put the medical part of it off in a separate category until next week—we will proceed.

General GLEASON. All right.

Mr. Chairman, I certainly appreciate your kindness in doing this for me because, as you know, I am on active duty for about 15 days at Fort Leonard, Mo., and I flew in today so that I could appear before you. I just want to say that we accept, in its entirety, the House report.

Senator MAGNUSON. Well, now, let's get the record straight here.

HOUSE ACTION

I am going to read from the House report, and I quote:

The committee has approved $5,248,833,000 for the Veterans' Administration as proposed in the budget estimates.

This includes $157,669,000 for general operating expenses, a reduction of $4,104,000 from the amount appropriated for 1962.

Now, that is the item, I understand, that you are not asking for a restoration on that particular amount?

General GLEASON. No, sir.

GENERAL OPERATING EXPENSES

Senator MAGNUSON. So that your general operating expenses out of the $5 billion-plus will remain at $157,669,000?

General GLEASON. Yes, sir, that is correct.

Senator MAGNUSON. Yes. Now, the medical matter we will go back into later. Now, that is about it. If we put this statement into the record that is about all you have to put in?

General GLEASON. That is correct, sir.

MEDICAL SERVICES

Senator MAGNUSON. The rest involves the medical matter, outpatient and inpatient, and all of that?

General GLEASON. Yes.

Senator MAGNUSON. All right. Well, I guess there is nothing further. Maybe you did not even need to fly in.

General GLEASON. Well, it is always nice to have the opportunity to come before the committee, anyway, Mr. Chairman.

Senator MAGNUSON. Now, is there any particular item in this operating expenses that you wanted us to look at? Anything particular?

General GLEASON. No, sir.

FIXED OBLIGATIONS OF AGENCY

Senator MAGNUSON. Now, the difference between the $5 billion-plus and $157,669,000, I assume, was mainly for a certain amount of fixed obligations that the Veterans' Administration has. Is that correct?

General GLEASON. That is correct.

LEGISLATIVE INCREASE IN FIXED CHARGES

Senator MAGNUSON. Now, is there any veterans' bills pending or on the verge of being passed, and I am an optimist in this Congress, that would add any to your responsibility in the field of fixed charges?

General GLEASON. Yes, sir. If the increase in compensation is passed, that——

Senator MAGNUSON. Is that the increase in the disabled compensation?

General GLEASON. Yes, sir.

Senator MAGNUSON. Now, that is apt to be passed——

General GLEASON. Yes, sir.

Senator MAGNUSON. Because the policy committee, of which I am a member, in that committee we agreed to put it on the calendar yesterday.

General GLEASON. Yes, sir.

Senator MAGNUSON. So that will come out, but I suppose that you could take care of that and you would have to come in with the first supplemental.

General GLEASON. That is correct.

Senator MAGNUSON. Would that be correct?

General GLEASON. That is correct.

Senator MAGNUSON. Now, is there any other legislation?

General GLEASON. None other than the $250,000 that we have already mentioned in our statement, Mr. Chairman.

And this in order to carry on our——

Senator MAGNUSON. Would a bill which would increase the availability of VA life insurance make any changes——

General GLEASON. No, sir, not at all.

Senator MAGNUSON. In this budget?

General GLEASON. No, sir.

HOUSE ALLOWANCE FOR INSURANCE AND INDEMNITIES

Senator MAGNUSON. The House bill contains $32 million for veterans' insurance and indemnities, a reduction of $7.2 million from 1962, and $500,000 for grants for the Republic of the Philippines.

General GLEASON. Yes, sir.

Senator MAGNUSON. Now, apparently, from this and from your statements, the VA insurance is in pretty sound physical shape?

General GLEASON. Very excellent.

Senator MAGNUSON. Do you still pay dividends?

General GLEASON. Every year, sir. Of course, this is a misnomer because this is actually a return of an overcharge of premium. That is what it is, exactly.

Senator MAGNUSON. That is right. We get a return because you fellows overcharged us, and we apply it, if we want to, to the same premium.

General GLEASON. Yes, sir.

Senator MAGNUSON. Off the record.

(Discussion off the record.)

MEDICAL EXPENSES, PHILIPPINES

Senator MAGNUSON. Now, we have had a lot of trouble up here, and there has been a lot of trouble on the floor about this Philippine business.

There is another bill up there which the policy committee has passed out which would extend hospitalization care for another 3 years.

Is that right, Doctor?

Dr. MIDDLETON. Yes, sir.

Senator MAGNUSON. Would that add to any——

Dr. MIDDLETON. We have not reported favorably on that.

Senator MAGNUSON. Well, what is the $500,000?

What is that for?

Mr. MONK. That is to pay the bills for the veterans who are hospitalized in that Philippine hospital.

That is the hospital we built and gave to the Philippine Government.

Senator MAGNUSON. And the bill that we have pending applies to admission to that particular hospital?

Mr. MONK. Yes, sir, payment, continuation of payment.

Senator MAGNUSON. We are extending it. It expires——

Mr. MONK. For 3 years, that is right.

Senator MAGNUSON. It expires next year, and the proposal is to extend it. Well, one has five and one has three——

Mr. MONK. Three years.

Senator MAGNUSON. And that involves this particular hospital?

Mr. MONK. That is right.

Senator MAGNUSON. And these are for Philippine veterans that served with us?

Mr. MONK. Yes, sir.

POSSIBLE ADVANCE FOR INSURANCE ADMINISTRATION

Senator, on that insurance bill, the bill, as it is written, would have the policyholder pay the administrative expense, but if it is enacted we might have to come to get an advance temporarily for the initial administrative cost.

General GLEASON. But we will pay it back. That is the only difference.

Senator MAGNUSON. All right.

Any questions from the committee on this?

Senator SALTONSTALL. Yes, I have some.

Senator HOLLAND. I have some questions.

Senator MAGNUSON. The Senator from Massachusetts.

General GLEASON. Yes, sir?

VETERANS HOSPITAL, MASSACHUSETTS

Senator SALTONSTALL. General Gleason, I know you have been advised on this. We have some questions regarding the veterans hospital in Jamaica Plain, Mass.

General GLEASON. Yes, sir?

Senator SALTONSTALL. Now, there have been a number of newspaper articles about this, and there are two types of questions that I would like to ask you.

Senator MAGNUSON. Can I interrupt you there?

Senator SALTONSTALL. Yes, sir.

Senator MAGNUSON. Off the record.

(Discussion off the record.)

NUMBER OF OPERATING BEDS

Senator SALTONSTALL. Now, just very briefly, General, it is my understanding that you show that the average number of operating beds is 920, whereas the average patient load for each year is approximately 100 less.

General GLEASON. I would imagine that it would be. Dr. Middleton?

Senator SALTONSTALL. So you are not fully utilizing——

Dr. MIDDLETON. We are utilizing about 90 percent, sir, which is a fair utilization.

CONDITION OF BUILDING

Senator SALTONSTALL. Now, the principal question that I would like to ask is this: It is my understanding that they have part of this hospital all roped off because the bricks are falling out.

General GLEASON. Yes, sir, that is correct.

Senator SALTONSTALL. The hospital was built in 1952?

General GLEASON. That is right.

ORIGINAL COST

Senator SALTONSTALL. What was the original cost of the hospital?

General GLEASON. The original cost of the hospital—I cannot give it to you right now, but I could, for the record, Senator. It is a

14-story and basement building, reinforced concrete frame and brick facing. The cost of the Boston hospital was $14,275,000 including site, technical services, and equipment.

Senator SALTONSTALL. I have been in it. I know.

SERIOUSNESS OF DETERIORATION

General GLEASON. In 1953 the exterior face of brick began cracking and chipping, and the Corps of Engineers, who built the hospital for us, investigated the problem and emergency repairs were made.

Now, despite these and other continuing repairs, the deterioration has progressed until now it has become dangerous.

Bricks are falling from the outside and dropping to the ground, and there is a very serious hazard of life and property.

The metal windows likewise do not fit properly and they leak air and water and are poorly anchored.

CORPS OF ENGINEERS STUDY

In 1961 we authorized the Corps of Engineers to make a complete investigation of this defective brickwork with the primary objective of determining, first, the reasons for the condition; second, the responsibility of those involved; and, third, how the defects can be permanently corrected.

Weiskopf & Pickworth, consulting engineers of New York City, were employed by the Corps of Engineers to make this investigation.

Senator SALTONSTALL. How much did you pay for that?

General GLEASON. I believe it ran approximately $25,000.

The consultant's report indicates many omissions and departures from the original contract drawings and specifications by the contractor. They recommend removal of all face brick and replacement with an insulated metal curtain wall type of construction as the only practical method of correction.

They have also recommended that all windows be removed and replaced, as they are basically unsatisfactory and require excessive maintenance and cannot successfully be repaired. The total estimated cost of these corrections is $4.4 million, including technical services and contingencies.

METHOD OF FINANCING WORK

Now, we plan to finance this work within our fiscal year 1963 construction appropriation, using funds requested for projects which have subsequently been reduced in scope. Supervision of this work is being assigned to the Corps of Engineers at their request so that they may accumulate information to document and, subsequently, take action against the contractor and architect and engineer for faulty construction and faulty construction supervision.

Senator SALTONSTALL. All right. Now, my question is: Is it the responsibility of the Veterans' Administration or the Corps of Engineers to bring a suit for the Government?

General GLEASON. Well, we believe, Senator, that it will be the Corps of Engineers who will do it because they built it for us on a contract basis, and they are the ones who let the contract.

And they are as desirous as we are of correcting it.

COST OF RECONSTRUCTION

Senator SALTONSTALL. It is going to cost $4.4 million to put it back in shape?

General GLEASON. That is correct.

Senator SALTONSTALL. And the building is only 10 years old?

General GLEASON. That is correct. Right.

Senator SALTONSTALL. It is my understanding, from newspaper reports and, as I say, the letters I get criticizing it, that this building is today unsafe and that you cannot go in the front door.

Is that correct?

General GLEASON. That is correct. It is safe enough on the inside. It is the outside that is unsafe. If you are walking on the outside the bricks are liable to fall.

Senator SALTONSTALL. Well, now, it is a $4 million——

General GLEASON. Almost $4.5 million.

Senator SALTONSTALL (continuing). That is, to put a 10-year-old building back in shape?

POSSIBLE SUIT AGAINST CONTRACTOR

General GLEASON. I just feel confident myself, from a personal viewpoint, that there will be a suit instituted by the Government.

Senator SALTONSTALL. Now, who is the architect, do you know?

General GLEASON. The building was designed by Coolidge, Shepley, Bulfinch & Abbott, architects, and Charles T. Mane, Inc., engineers. And the construction was completed in 1952, by McClosky & Co., the general contractors.

Senator SALTONSTALL. So that there is a suit or, rather, the suit by the Government would lie against either the architect or the contractor or both?

General GLEASON. The liability would have to be determined. There are subcontractors also.

Senator SALTONSTALL. Let me ask you this additional question: Will you, as Administrator and being in charge of the Veterans' Administration, see to it that the Government is protected in this thing?

Is it your job or is it the job of the Corps of Engineers?

General GLEASON. We feel that it is the job of the Corps of Engineers, Senator, because they are the ones who built the building.

Senator SALTONSTALL. Have you got anything in writing to show that they will take that responsibility?

General GLEASON. Yes, sir.

Senator SALTONSTALL. Would you be willing to put that in the record?

General GLEASON. Surely.

Senator SALTONSTALL. All right. Thank you very much.

(The information referred to follows:)

HEADQUARTERS, DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, D.C., June 1, 1962.

Mr. WHITNEY ASHBRIDGE,
Assistant Administrator for Construction,
Veterans' Administration, Washington, D.C.

DEAR MR. ASHBRIDGE: Pursuant to your requests of February 2, 1961, and June 19, 1961, the Corps of Engineers has investigated the defective construction of the brickwork and windows at the Veterans' Administration Hospital, Boston, Mass. This investigation was conducted under the jurisdiction of the Division Engineer, U.S. Army Engineer Division, New England, who employed the firm of Weiskopf & Pickworth, consulting engineers, of New York City, to perform onsite investigations and report its findings. These findings are contained in the enclosed documents titled "Final Report Investigation of Brickwork" and "Final Report, Investigation of Windows," both March 30, 1962.

The Chief of Engineers agrees with the conclusions and recommendations contained therein but considers the attached estimates more realistic than those prepared by the architect-engineer.

At a meeting in Mr. Hoglund's office May 22, 1962, between representatives of the Veterans' Administration and the Corps of Engineers, it was indicated that the Veterans' Administration might accomplish the corrective work through its own resources. However, it is believed that the Corps of Engineers, having supervised the original construction, should supervise the remedial work. This will permit us to obtain precise and detailed data of the actual condition of the brickwork. This detailed information is necessary to support legal actions that may be taken against the architect-engineer and/or the construction contractor to recover the costs of this corrective work.

We estimate that the preparation of detailed design for remedial work will require about 6 months and that that the construction time will be from 12 to 18 months. We would expect to accomplish design by contract through an architect-engineer firm other than the one, of course, which performed the original design. It is to be expected that some disruptions to the hospital activities will be encountered during construction. Until more precise data have been developed as a basis for design, we are not in a position to estimate the extent of these disruptions; however, we will make every effort to minimize them.

This letter has purposely avoided any discussion of possible legal action that may be in order against the architect-engineer and/or construction contractor. The development of information upon which to base such action is obviously time consuming. Therefore, we feel, and believe you concur, that the first order of business is to implement as quickly as possible the remedial measures needed to repair the deficiencies and place the hospital in a safe condition.

If any further data are needed on the technical aspects of this report, please feel free to call upon us.

Sincerely yours,

J. B. LAMPERT,
Major General, U.S. Army, Director of Military Construction.

General GLEASON. Mr. Chairman, this is quite an issue——

Senator MAGNUSON. Yes, I understand.

Senator SALTONSTALL. It is a shocking state of affairs where a 10-year-old building is falling down.

Senator HOLLAND. Mr. Chairman?

Senator MAGNUSON. Yes. The Senator from Florida?

NO RESTORATIONS REQUESTED

Senator HOLLAND. Looking at this worksheet here I note that there are no requests for restorations from the VA. Am I correct in that?

General GLEASON. That is correct.

Senator HOLLAND. And I understood you to say in the beginning that you approved and accepted the findings and recommendations of the committee from the other House.

General GLEASON. Yes, sir.

HOSPITAL AT BAY PINES, FLA.

Senator HOLLAND. I wanted to question you briefly about that part of the report which deals with the veterans' hospital at Bay Pines, Fla. You are familiar with that?

General GLEASON. Yes, sir; I am.

Senator HOLLAND. And the report of the committee there reads as follows:

The committee recommends that $1,722,000 previously appropriated for technical services for Bay Pines, Fla., remain earmarked looking toward new construction at that site if and when the Administrator deems it in the public interest to begin such construction.

Florida veteran population is growing rapidly and the probabilities are more hospital facilities will be needed shortly in that area.

The Veterans' Administration has received no contractor estimates on the 1963 projects and the costs ought to be reduced 10 to 12 percent and still provide good, functional facilities that observe sound, safe efficiency criteria and omit unnecessary frills and decorations.

Then it continues on down to the bottom of a long paragraph.

I ask that that be put in the record.

Senator MAGNUSON. That will be put in the record.

(The information referred to follows:)

Under no circumstances should local architects be permitted to build monuments to themselves. A portion of savings in such estimates is to be applied to the cost of technical services at Gainesville.

APPROVAL OF RECOMMENDATION

Senator HOLLAND. From what you have said I assume that you accept that recommendation?

General GLEASON. Yes, sir.

Senator HOLLAND. That is, the recommendation by the House committee.

EARMARKED FUNDS

You will keep this $1,722,000 heretofore appropriated for that work at Bay Pines or for the technical services, looking to the construction earmarked for that?

General GLEASON. Yes, sir.

Senator HOLLAND. Now, I note from your own testimony, which is very full, and I commend it and the testimony of your assistants, who were with you at the House hearing, Mr. Monk, is he here today?

Mr. MONK. Yes, sir.

Senator HOLLAND. There is also another gentleman's name here.

NEED FOR BEDS IN FLORIDA

In this you very fully set forth the facts with reference to the veterans' situation in Florida, and I know that you made this statement:

We are really in dire need of beds in the State of Florida.

It is the situation, is it not?

General GLEASON. It certainly is.

Senator HOLLAND. I know that you inserted in the record at the hearings this information, and I quote from page 279 of the House hearings:

> The latest information available indicates that of approximately 1,000 neuropsychiatric patients with Florida residency, 88.3 percent are hospitalized outside the State

and so forth and so on.

Is that still substantially the situation? Is that still substantially true?

General GLEASON. Yes, sir.

Senator HOLLAND. Then it is substantially 900 veteran patients from Florida that are hospitalized in distant points, some of them which are several hundred miles away from the State and even as much as a thousand.

General GLEASON. From their home.

Senator HOLLAND. I mean, away from their home.

And you also set forth a waiting list at Bay Pines.

Mr. Baker, I believe—is he here today?

Mr. BAKER. Here, sir.

WAITING LIST AT BAY PINES

Senator HOLLAND (continuing). Testified that the November waiting list at Bay Pines is 464. This is on page 279. And the seven psychiatric patients are approximately the same.

Did I understand you to say that it was approximately the same on the date of this testimony?

Mr. BAKER. The waiting list is now 284 at July 31, none of which are psychiatric.

Senator HOLLAND. I see. Well, that indicates a long waiting list that has not been——

General GLEASON. Well, it has been reduced, Senator.

Senator HOLLAND. It has been reduced some, and that is due, no doubt, to the fact that the Lake City new beds are now available?

General GLEASON. Well, I believe, there were 165 or 167 beds that we took on a temporary basis and put at Bay Pines to reduce this.

Senator HOLLAND. That is correct. Those two factors both added together helped to take care of the critical waiting list of emergencies?

General GLEASON. That is correct.

Senator HOLLAND. But you still have a long waiting list at the Florida hospital, do you not?

General GLEASON. Yes, sir, that is true.

LAKE CITY HOSPITAL

Senator HOLLAND. The one at Lake City serves not only the northern part of our State but also the southern part of the State of Georgia, does it not?

General GLEASON. That is right.

HOSPITAL NEAR UNIVERSITY MEDICAL SCHOOL

Senator HOLLAND. I know from your testimony that you proceeded last year to move ahead because you could move ahead more speedily for the planning of the hospital adjacent to the Medical School at the University of Florida?

General GLEASON. Yes, sir.

Senator HOLLAND. You are moving ahead with all expedition to complete that, are you?

General GLEASON. We are, sir. The technical services' money is provided in the 1963 budget for it.

Senator HOLLAND. And when do you anticipate that that will be completed?

General GLEASON. I hope, Senator, within 3 years.

CANCELLATION OF PRIOR HOSPITAL

Senator HOLLAND. And that, of course, replaces the hospital which had been approved and for which money had been appropriated as early as 1946?

General GLEASON. Yes, sir.

Senator HOLLAND. It was canceled by President Truman in 1947 though the physical property is not being used and, incidentally, was not deeded back; that being the only exception in the long list that was canceled at that time.

Is that correct?

General GLEASON. Yes, sir.

INTEREST IN BAY PINES PROGRAM

Senator HOLLAND. Well, speaking only for the delegation in a brief way, I want to say that we are very much interested in the Bay Pines program.

It happens to be in my own part of the State and I know a great deal about it.

I served as a service officer in my own American Legion area for several years, and I was county judge, and I know how deeply attached veterans are in that area to Bay Pines which is, as you know, a most pleasant place, and a place——

General GLEASON. It is a beautiful place.

Senator HOLLAND. Where people pay thousands of dollars every year to come on vacation to.

And it is beautifully located among the pines with ample area for enlargement of the building.

We are exceedingly anxious that that move forward in the least possible time, because we are being pressed by the veterans and the veterans' families every day, or night and day, on account of shortage of beds.

And you have, yourself, described the critical situation in a very appropriate way, and we do ask you not to think of abandonment of that facility, but instead, to move forward with all possible speed.

General GLEASON. Well, Senator, we would never abandon it without making ample provision to expand in the central Florida area under any circumstances, because we need the hospital beds in that area.

Senator HOLLAND. This, of course, is on the west coast of Florida.

General GLEASON. That is right.

Senator HOLLAND. And it is in an area where there is about 1,900,000 people and where the veterans' population is probably as great, in proportion to the total population, as anywhere because so many veterans have come there for health reasons just as in the case for other citizens, and we are extremely anxious that there be no thought of abandonment of this program for an enlarged facility where it is needed and where the very facts, as testified by yourself and your assistants, shows so clearly that it is needed.

Mr. Chairman, I apologize for taking so long.

Senator SALTONSTALL. This is off the record.

(Off the record discussion.)

Senator ALLOTT. Mr. Administrator, I have one or two short questions.

PERSONNEL AT DENVER OFFICE

I do not know whether you are advised of this or not, but in the Denver area there have been some discussions about delay in the applications on home buildings.

And the information that I have here is that the authorized strength of the Denver office is 58 people and it was 45 people a year ago.

Now, the answer that they have given to my people in Denver is that they cannot process things any faster unless they get two additional personnel, at least, from Congress this year.

Dou you know anything about that situation out there or why this is so?

General GLEASON. No, I do not, but I am sure that Mr. Brownstein here could answer your question.

Mr. BROWNSTEIN. Our reports do not indicate, Senator, that we have any backlog in Colorado.

But we will certainly look into it and we will also take a look at their staffing pattern.

Senator ALLOTT. Will you take that up with me then when you obtain this information?

Mr. BROWNSTEIN. I will be happy to.

Senator ALLOTT. I have one other question.

You are going to be on duty how long?

General GLEASON. Just until Sunday, Senator, but from there I go to the Veterans of Foreign Wars convention in Minneapolis and St. Paul.

Senator ALLOTT. Could I ask then if at that time, when you return from the convention, if we could then discuss the Abe Bolotin matter, about which we have exchanged correspondence?

General GLEASON. I would be delighted to, Senator.

AMOUNTS PAID TO PHILIPPINES

Senator ALLOTT. Then I would like to have you put in the record, if you will, one item, and that is the total amount paid to either agencies of the Philippine Government or to Philippine individuals during the last fiscal year by the Veterans' Administration.

General GLEASON. Well, Senator, because of your question, a year ago I had all of those figures together and sent them to Secretary Rusk for his information and use because as I recall a year ago, you did bring up this question.

Senator ALLOTT. And I would——

General GLEASON. In 1961?

Senator ALLOTT. Yes.

General GLEASON. Would you like to see them?

I will insert the statement in the record. We paid a total sum of $60,055,000 in 1961.

Senator ALLOTT. The reason I asked this is that, having served over there a little while, the various kickbacks we get about Uncle Sam not doing anything for us recently or otherwise seems to rub this Senator a little bit the wrong way, when I realize that.

General GLEASON. Well, we sent this to Secretary Rusk and told him of your concern about this matter and gave him all of the figures.

Senator ALLOTT. Now I have just been handed a list or a table from 1946 through 1961, and that would include the last fiscal year which shows a total claim for the Philippines by the Veterans' Administration of $932,450,378.38.

I wonder if I could have this inserted in the record?

General GLEASON. We will bring it up to date for you, too, if you desire.

We will add 1962 when it is available.

This would be the last final report that we will have available for several months.

Senator ALLOTT. All right. Then——

Senator MAGNUSON. We will put this in the record.

(The table referred to follows:)

U.S. Veterans' Administration disbursements by fiscal year in the Philippines

Year	Totals	Year	Totals
1946	$1,299,513.90	1955	$69,104,082.55
1947	14,912,883.41	1956	65,499,164.26
1948	37,856,760.23	1957	62,076,953.09
1949	58,641,896.14	1958	62,929,557.00
1950	57,942,940.46	1959	63,601,735.00
1951	65,644,384.74	1960	65,609,980.00
1952	86,082,904.48	1961	60,055,607.00
1953	88,132,546.78		
1954	73,059,469.34	Total[1]	932,450,378.38

[1] Includes benefit payments, salaries, and other administrative expenses, and grants-in-aid disbursements.

HOSPITAL CONSTRUCTION COST

General GLEASON. This table shows the cost of construction of the hospital plus a breakout of the grants-in-aid that were paid, both of which are included in the table that you just inserted.

Senator ALLOTT. And this item I now have in my hand entitled "Grants-in-Aid Disbursements" that have been made in the past year—is that right?

General GLEASON. Yes, sir; a separate tabulation for hospitalization expenses, plus previous payments for the same purpose plus the cost of the hospital itself.

Senator ALLOTT. I would like to have this in the record.

(The table referred to follows:)

Grants-in-aid disbursements, Republic of the Philippines (Public Law 865, 80th Cong., as amended)

Construction of Veterans' Memorial Hospital	$9,399,961
All hospitalization expenses including contract hospital care from inception of program 1950 through fiscal year 1960	14,505,111
Hospitalization expenses including contract hospital care, fiscal year 1961	498,890

General GLEASON. Now, other than that, the only moneys we would have spent there would be salaries and I am sorry, but I do not have that figure.

Senator ALLOTT. That is all right. Since the distinguished senior Senator from Florida is here I wanted to tell him why I did not raise the matter of the Bay Pines Hospital.

Your colleague, Congressman Cramer, called me about this, but I know you know a lot more about it than I do.

REPRESENTATION EXPENSES

Senator MAGNUSON. All right. Now, just one thing, General, the House cut out language not to exceed $1,000 for official reception and representation expenses.

You are not appealing that?

General GLEASON. We would like to have it, Senator, but we are not officially appealing it, no, sir.

Senator MAGNUSON. Well, maybe I might ask the committee to put it back in. It is a small amount and maybe we might catch the House, in conference, on a good day and something might happen to it.

But I do think you have to have something down there——

General GLEASON. It is——

Senator MAGNUSON. Other agencies do, and this is a very small amount.

General GLEASON. Well, many foreign countries send——

Senator MAGNUSON. I mean, for the amount of work that you have to do.

General GLEASON. Representatives over to see us and when they are here, and you take them to lunch or something like that, it does get a little expensive.

CANADIAN AND OTHER VISITORS

Senator HOLLAND. Well, may I ask a question?

Is it not true that there is some crossing of responsibilities for instance, between yourselves and the Canadians by men who, from our country, served in the Canadian Forces and vice versa, and you have visits with them and they visit you?

General GLEASON. We have them from all over the world.

Senator HOLLAND. And the same thing is true from France and Great Britain and the Chinese?

General GLEASON. And the Chinese, yes.

Senator HOLLAND. Well, I think you should have that.

General GLEASON. The only way we can do it is to take it as a tax deduction which does not always help.

Senator HILL. You might even give them some Florida orange juice, is that right, General?

General GLEASON. That always helps.

Senator MAGNUSON. It is a small amount compared to what you have to do and what other departments get, and I think it is a modest request.

Senator MUNDT. Mr. Chairman?

Senator MAGNUSON. Senator Mundt.

SITUATION IN SOUTH DAKOTA

Senator MUNDT. My problems, involving the VA in South Dakota are not very major in terms of money, but they are rather significant, concerning a reported breakdown in service, and I wanted to discuss with you the correspondence we had last April following an announcement that there was a consolidation of the administrative and supervisory conditions under the Loan Guarantee Act.

At that time you decided to move the technicians out of the Royal Johnson Hospital in Sioux Falls, S. Dak., and out of that area up into Minneapolis and St. Paul.

We have about 900 veterans on the loan waiting list. As I understand it this program primarily has been designed to help the veterans secure financial assistance from private institutions and to encourage the use of private funds instead of Federal funds to be made available in the area.

COMPLAINTS FROM VETERANS

Now, I get nothing but a long series of complaints from the veterans and the bankers, and from everybody out there since the machinery and the people have been moved up to the Twin Cities from the South Dakota area. They are unable to get the kind of service that they received formerly.

And I have a few questions to ask in that regard.

PRIVATE LOAN SITUATION

First, do you have any evidence to show whether or not there has been a speedup or a letdown in the rate of private loans which have been qualified for under this guaranteed fund since you made the switch in April?

General GLEASON. We do have that, and I know that Mr. Brownstein can answer these questions.

Senator MUNDT. All right.

Mr. BROWNSTEIN. Yes, sir, the number of guaranteed loans that are being originated, Senator Mundt, are fairly much in the status quo.

In fiscal 1962, without the last month's figures in, we estimated that a total of 178 loans would be originated for the entire fiscal year.

These are guaranteed loans. Now, probably you have gotten a good many complaints about the time that it takes to reach veterans on the waiting list for direct loans.

Let me assure you, this is not unique to the State of South Dakota. This is true in all of the areas.

We have long waiting lists in all of our direct loan areas.

EMPLOYEES INVOLVED IN SOUTH DAKOTA MOVE

Senator MUNDT. Let me ask you: As I recall, you had 16 employees involved. Is that correct?

Mr. BROWNSTEIN. Yes, sir, that is correct.

Senator MUNDT. And how many did you move to the Twin Cities and how many did you keep in Sioux Falls?

Mr. BROWNSTEIN. Well, we have a total savings in the consolidation of about four and a half people. We have stationed in Sioux Falls now, I believe, three people.

Senator MUNDT. How many in the Twin Cities?

Mr. BROWNSTEIN. I cannot tell you how many people we have——

Senator MUNDT. In other words, were these people removed from the Federal payroll or just transferred?

Mr. BROWNSTEIN. There was a combination of both, Senator Mundt. Some of them were transferred to St. Paul. Three of them remained duty-stationed in Sioux Falls, but, as I say, we have a net savings of about four and a half people at about $25,000 a year.

Senator MUNDT. Why would they be able to do more work in St. Paul than they would be able to do in Sioux Falls?

LOANS MAINLY MAIL ORDER BUSINESS

General GLEASON. When you have an extremely small workload, such as we had in Sioux Falls and in nine other stations, incidentally, where we have effected loan guarantee consolidations, it becomes almost impossible to staff an office of this size with the kind of technicians that you need to do the processing.

You have different skills that are required, of course.

In the main, also, our loan guarantee business is a mail-order business. We do not see the average veteran in one of these cases. The lender sends in all of the loan papers and it is just as easy to mail them into St. Paul as it is to Sioux Falls.

All of the consolidations that we have effected have been extremely successful, we believe; in addition to saving the Government money, it has not noticeably impaired service and generally, it has improved it.

LETTER FROM SOUTH DAKOTA BANKER

Senator MUNDT. Well, maybe so, but let me read you a letter that just came in from the president of one of the leading banks in the State, located in Sioux Falls, and he says that the Loan Guarantee Division of the Veterans' Administration was handled by the Veterans' Administration here for a number of years.

> I must say it was very satisfactory. Everybody thought they were getting splendid service. They contemplated, or when they contemplated moving this into Minneapolis, a lot of us did suggest that it be left here and, I believe, you did some work on it.
>
> It was transferred, however, to Minneapolis, the first part of this year—I must say the service is just as bad now as if they had the office in the jungles of Africa where the information would be provided by oxcart.

Now, this is written by a distinguished banker who is, obviously, motivated by a breakdown in the procedure.

TIME REQUIRED TO SERVICE LOANS

In other words, it takes about 6 weeks to process a loan.

This is a far cry from the splendid service that was rendered when the guarantee loan section was in Sioux Falls.

Mr. BROWNSTEIN. I would like him to identify his cases, Senator Mundt, and let us check them.

Senator MUNDT. Well, I shall certainly be glad to do that, but I would like to have you supply for the record whether or not it does take 6 weeks to process a loan and whether or not that is "par for the course" or whether that is longer or shorter than the customary time for handling loans.

General GLEASON. Six weeks is not an unduly long period of time, Senator. Before I came in the Government I was vice president of the largest bank in Chicago, and I have had some experience with the GI loan program.

TOTAL LOANS PROCESSED IN CALENDAR YEAR 1961

And I would just like to point out, Senator, that in the entire calendar year of 1961 Sioux Falls processed only 81 guaranteed loans.

Now, during that year we had an average of 13 people, so that in the entire year these people handled only 6 loans per person.

Senator MUNDT. Is that processed or approved?

General GLEASON. Yes, sir; processed, and guaranteed by VA. For a total of $135,517 in guaranteed loans.

Now, this is a pretty small number, Senator; to have this many people is pretty expensive.

Senator MUNDT. I quite agree. I do not know how your figures jibe with the ones I have, which is 900 veterans on the waiting list——

DIRECT-LOAN PROGRAM

General GLEASON. That is on the direct-loan program, Senator.

We have two. There is a guaranteed-loan program and a direct-loan program.

Now, the banks do not get into the direct-loan program at all, because the only reason we are in the direct-loan program, Senator, is that the banks refused to loan the money.

Senator MUNDT. People process these types of loans, do they not, bank people?

General GLEASON. Yes, sir; but the banks have nothing whatever to do with the processing of the direct loans.

The Government loans the money to a prospective purchaser of a home, who is a veteran, only because the banks and savings and loan associations refuse to loan him the money under the guaranteed-loan program.

Senator MUNDT. Now, going back to your breakdown of so much a loan, it seems to me that we ignore the fact that these same people are also handling other types of loans. Is that right or wrong?

ATTITUDE OF BANKS TOWARD DIRECT LOANS

General GLEASON. Well, Senator, may I say this: You read us a letter from a banker. Now, in Sioux Falls, in the year of 1961, there were only 81 guaranteed loans for the entire year made by those banks. Now, if you recall, we had an average of 13 people in Sioux Falls in 1961. We have taken 4½ approximately on a savings by moving to Minneapolis, leaving three people in Sioux Falls to handle direct contacts.

This is 13 people to take care of 81 loans in a year.

Senator MUNDT. Is that all those 13 people do, take care of the bank loans?

General GLEASON. No, sir, they take care of the direct loans, but the only thing that this banker can be talking about, Senator, is the guaranteed loans because he never handles direct loans.

If the banks made the loans then it would be under the guaranteed program, and the banks are refusing to do this.

And that is why there are so few guaranteed loans——

Senator MUNDT. Well, part of the earlier correspondence, which I have had with him, which resulted in this last emphatic statement, I tried to explain this to him, and his contention is that they do not have the personnel up there to process the private loans which means that they are making more of the direct loans.

General GLEASON. That is not true, Senator, because if there were more of the guaranteed loans being made the U.S. Government would not have to be in the business.

Senator MUNDT. That is right.

But he claimed one reason we are in the business so deeply is the slow processing of the loans which are made by the private lending institutions.

1955 LOAN BUSINESS AT SIOUX FALLS

General GLEASON. Well, Senator, in 1955 Sioux Falls processed 1,454 guaranteed loans. These are bank loans, guaranteed bank loans.

In 1961 there were only 81.

Now, this is before we moved the office.

Senator MUNDT. As against 1,500?

General GLEASON. You are right.

Senator MUNDT. Now, what would be the reason?

General GLEASON. Because the banks do not make the loans.

Senator MUNDT. What happened to them between 1959 and 1960?

General GLEASON. Senator, I cannot tell you. I mean, I do not know what their loan portfolio program is in the banks up there.

DECREASE IN LOANS

Senator MUNDT. That is a tremendous decrease.

General GLEASON. It certainly is. In 1956 it was 1,061; in 1957 it was 439; in 1958 it was 190.

Then it increased slightly to 249 in 1959. In 1960 it dropped to 132, and in 1961 it went down to 81. And until June 30 of this year it was 45.

Now, we certainly cannot keep the same number of personnel, Senator, any place to take care of what originally was 1,500 loans.

Senator MUNDT. Do you receive the same letters of complaints that I get from the officers of the Veterans of Foreign Wars, whom you are about to address?

General GLEASON. Yes, sir.

Senator MUNDT. And the American Legion, concerning the loan situation generally?

Now, they are not dealing only with guaranteed loans. They would be dealing with your direct loans, too.

General GLEASON. They may not be living in a direct loan area.

Now, we are prohibited by statute from going in large metropolitan areas.

Senator MUNDT. Yes.

General GLEASON. Generally speaking, our direct loan program is only in areas of approximately 25,000 or less.

SAVINGS EFFECTED BY TRANSFER

Senator MUNDT. Could you supply for the record the reflection in this budget request now before us of the savings which you made by this transfer of personnel from Sioux Falls to the Twin Cities?

General GLEASON. Surely. Mr. Brownstein just mentioned that it approximates $25,000.

Senator MUNDT. And will you pinpoint for the record where that is reflected in the budget request?

RECAPITULATION OF FUNDS REQUESTED

General GLEASON. Well, Senator, in our general operating expenses, appropriated for fiscal year 1962, it was $161,773,000.

Our estimate for fiscal year 1963 is $157,669,000 or a decrease of $4,104,000.

And this is part of it.

Senator MUNDT. Could you provide for the record a table showing the number of people employed in the Sioux Falls office for each of the last 10 years?

General GLEASON. Surely, we can supply that very easily, sir.

(The information referred to follows:)

Station employment, Sioux Falls regional office (as of Dec. 31 each year)

	Station		Station
1952	152	1958	99
1953	140	1959	86
1954	110	1960	83
1955	109	1961	84
1956	110	1962 (June 30)	68
1957	104		

Senator MAGNUSON. All right. Any further questions?

If not, thank you very much, all of you.

Off the record.

(Discussion off the record.)

Senator MAGNUSON. The committee will continue with the Federal Power Commission.

FEDERAL POWER COMMISSION

STATEMENT OF JOSEPH C. SWIDLER, CHAIRMAN; ACCOMPANIED BY LAWRENCE J. O'CONNER, JR., VICE CHAIRMAN; HOWARD V. MORGAN, COMMISSIONER; HARRY J. TRAINOR, EXECUTIVE DIRECTOR; RICHARD A. SOLOMON, GENERAL COUNSEL; CLARENCE UNNEVEHR, CHIEF, BUREAU OF NATURAL GAS; MARION F. HETHERINGTON, ACTING CHIEF, BUREAU OF POWER; S. DAVID FREEMAN, ASSISTANT TO THE CHAIRMAN; MILTON A. PILCHER, DIRECTOR OF ADMINISTRATION; AND THOMAS F. CASHELL, CHIEF, DIVISION OF BUDGET AND FINANCE

LETTER FROM AGENCY

Senator MAGNUSON. The Chairman of the Federal Power Commission has sent a letter to us which we will put in the record in full along with an itemization of the complete appropriation request.

(The letter and itemization referred to follow:)

FEDERAL POWER COMMISSION,
Washington, D.C., August 2, 1962.

Hon. WARREN G. MAGNUSON,
Chairman, Subcommittee in Charge of Independent Offices Appropriation Bill for 1963, U. S. Senate.

DEAR MR. CHAIRMAN: In reply to your letter of July 27, 1962, the Federal Power Commission appreciates the opportunity to appear before your subcommittee. We are preparing to appear before you at 11:30 a.m. on August 8, 1962.

The bill which passed the House provides $9,946,500 for the work of the Commission. This is a reduction in our budget request of $1,153,500 and will seriously impair our new programs for handling our huge workload in regulating the natural gas and electric power industries. We are therefore requesting that your subcommittee recommend an appropriation of the full amount requested. Also, in order to enable us to use consulting services as needed, we request that the limitation on the amount the Commission can spend for such services be removed.

The proposed changes would be accomplished by deleting the language in the House bill under the heading "Federal Power Commission, Salaries and Expenses" beginning with line 26 on page 14 through line 3 on page 15, and inserting in lieu thereof:

"* * * vehicles, and services as authorized by section 15 of the Act of August 2, 1946 (5 U.S.C. 55a), at rates not to exceed $100 per diem for individuals, $11,100,000."

Thank you for your consideration. I look forward to discussing the details of our request with you at the hearing.

Sincerely,

JOSEPH C. SWIDLER, *Chairman.*

ITEMIZATION OF APPROPRIATION REQUEST

Salaries and expenses, Federal Power Commission—Analysis by object

Standard classification	Estimate 1962	Estimate 1963	Increase (+) or decrease (−)
11 Personnel compensation	$7,284,000	$8,919,000	+$1,635,000
12 Personnel benefits	557,600	675,400	+117,800
21 Travel and transportation of persons	513,000	758,000	+245,000
22 Transportation of things	9,300	11,700	+2,400
23 Rent, communications, and utilities	138,000	264,000	+126,000
24 Printing and reproduction	112,700	110,100	−2,600
25 Other services	36,600	156,700	+120,100
26 Supplies and materials	74,400	84,900	+10,500
31 Equipment	67,400	120,200	+52,800
Total obligations	8,793,000	11,100,000	+2,307,000
ANALYSIS BY ACTIVITIES			
1. Non-Federal hydroelectric projects	1,656,000	1,891,000	+235,000
2. Electric power industry	1,232,900	1,696,900	+464,000
3. Natural gas industry	4,815,400	6,306,800	+1,491,400
4. Federal river development projects	395,500	440,700	+45,200
5. International Joint Commission	17,200	17,200	
6. Administration	676,000	747,400	+71,400
Total	8,793,000	11,100,000	+2,307,000

HOUSE ACTION

Senator MAGNUSON. I shall read from page 8 of the House report:

The committee recommends $9,946,500 for the Commission, an increase of $1,153,500 over 1962.

The larger amount approved in 1963 provides a staff of 1,080 on a full annual basis, or 100 positions more than the Commission had in 1962 to administer a backlog of work relating to the natural gas and electric power industries.

The committee does not expect the cost of any positions to be annualized in the 1964 budget.

This is a lump sum appropriation without any special legal limitations as far as items of expenditure are concerned.

In other words, the Commission has wide range in the expenditure of these funds. The committee, therefore, expects good management on the part of the Commission and good results.

What is the requested amount?

Mr. SWIDLER. $11,100,000.

Senator MAGNUSON. So this amount of $9,946,500 is minus $1,153,500?

Mr. SWIDLER. Exactly.

SPECIAL COUNSEL LIMITATION

Senator MAGNUSON. And then there is a language matter in there on special counsel limitations?

Mr. SWIDLER. Yes, sir. The limitation on per diem was raised to $100.

Senator MAGNUSON. Now, let's take that item first. What do you have to say about that limitation?

Mr. SWIDLER. The House increased the per diem limit to $100 which, we think, will help to make the use of consultants practical but the $10,000 limitation will only provide for a total of 100 days at $100 which is not adequate to establish a program for use of consultants in

the way that we should, in order to get their help and avoid taking on specialized employees on an annual basis.

Senator MAGNUSON. So you would suggest to the committee that we take a look at that and see whether or not we want to either delete the $10,000 or change the figures?

Mr. SWIDLER. Yes, Senator Magnuson.

Senator HILL. May I ask a question there?

Senator MAGNUSON. Yes.

Senator HILL. Mr. Chairman, you would say that by changing the figure or deleting that limitation you would save money for the Government, would you not?

In other words, you could use these consultants which would be more economical than if you had to hire a lot of full-time regular people, would you not?

Mr. SWIDLER. That is the purpose, Senator Hill.

We would use whatever amounts were available for consultants sparingly, but the limitation is now so severe that it is hard to set up an effective program to use them at all.

May I say, Senator Magnuson, that we are very appreciative of the committee's willingness to hear us so late.

We know that you have had a long and hard day and are tired, and it is a matter of great convenience to us to be able to be heard this afternoon.

Senator MAGNUSON. Well, we are glad to do it.

REGULATION OF GAS AND ELECTRIC INDUSTRIES

Now, we had better get to this item and this, of course, involves mainly personnel and the work you have down there.

The $1,153,000, you say, will seriously impair your new programs for handling your huge workload in the regulation of the gas and electrical power industries.

We have all heard, in this committee, for many years of the backlog of the so-called gas rate cases.

Mr. SWIDLER. Yes, sir.

Senator MAGNUSON. Would you discuss that, the impairment of the work in that particular field or how much of the $1,153,000 would be an impairment in that field?

What percentage would that be?

Mr. SWIDLER. Approximately two-thirds of the positions would be in the natural gas work and the other third on the power side.

The natural gas work, as you know, is very far behind——

Senator MAGNUSON. These are the rate cases that——

Mr. SWIDLER. These are rate and certificate cases.

Senator MAGNUSON. Yes.

PENDING CASES

Mr. SWIDLER. We have now pending 5,500 producer cases, rate and certificate.

There are 3,000 rate cases and 2,500 certificate cases in addition to about 275 certificate and rate cases pending involving the pipelines.

Senator HILL. About what, sir?

Mr. SWIDLER. About 275 cases involving the pipelines.

Senator HILL. Oh, yes, pipelines.

Mr. SWIDLER. Now, some of these cases have been pending for 5 years. They are most complex cases. The producer cases involve establishment of new administrative devices to regulate field prices which have not been subject to regulation before and where the manpower requirements are most severe.

The natural gas industry is the sixth largest industry in the country. It is an industry upon which 34 million consumers depend, and the work of the Federal Power Commission, in issuing certificates and establishing producer rates and pipeline rates, is the central regulatory influence on the growth of the industry and on the rates.

The distribution regulation by the States begins where our regulation leaves off, and all of the actions that we take are passed up the line to the ultimate consumers.

Senator Magnuson and members of the committee, we have undertaken a very vigorous program to catch up with our backlog on the natural gas side.

Senator MAGNUSON. Well, that is what you suggested you would do when you were first up for confirmation, and no one knows better than I or, rather, better than any member of the Senate Commerce Committee that some of these cases take a long time, and it is unbelieveable as to how long they do take to get to some point of decision.

Mr. SWIDLER. We have disposed of hundreds, many hundreds of cases. We have, I think, a great deal to show for our efforts. I would like to have the committee understand that we have taken the utmost advantage of the manpower and the facilities that we already have.

PIPELINE RATE REDUCTION ORDER

As an example, the Commission in the last year has ordered reductions of the rates of pipeline companies in the aggregate amount of $153 million.

This is money that has flowed back from the pipelines to the distribution companies and back to the consumers, $153 million.

This is only one aspect of our work in the natural gas field. If our whole natural gas appropriation was related simply to the savings to consumers in our pipeline rate cases it would be only 4 percent of the total.

DELEGATION OF AUTHORITY LEGISLATION

Senator MAGNUSON. Has the bill that we got through for you on the delegation of authority been helpful?

Mr. SWIDLER. That has not yet been passed by the House.

Senator MAGNUSON. Would it be helpful if finally passed?

Mr. SWIDLER. It would be helpful, yes, sir.

Senator MAGNUSON. Now, of course, there is always talk, and you hear it all the time, of the failure of the Power Commission to protect the interests of the consumer.

This has been going on all over the years.

PROTECTION OF INTERESTS OF CONSUMER

What has been the change in the cases before your Commission regarding the consumer being properly represented before the Commission?

Mr. SWIDLER. Well, this——

Senator MAGNUSON. I am not talking about the decisions of the Commission, but I am talking about their ability or the availability of the Commission to hear them and to have them properly represented.

Mr. SWIDLER. I think our record shows, Senator Magnuson, that this is a consumer-oriented Commission.

In order to protect the interests of consumers it is essential that the pipelines be in a healthy financial condition, and that the rates for gas in the field should be such as to encourage future production.

But we take a very aggessive consumer position.

And I think that our staff is vigilant to protect the interests of the consumers. The limitation is in having enough people.

We cannot protect them without having enough people.

Senator ALLOTT. Mr. Swidler, you disturb me very much.

Your agency acts in a quasi-judicial function.

Mr. SWIDLER. Yes, sir.

Senator ALLOTT. Now, it is true that you have an interest in the consumer but you also have, even whether it is big or smaller, an interest in the supply of gas, the rates the people are paid in the field, the rates of the transmission. I am alarmed to hear you talk as if you had only one interest in this matter because your oath of office embraces a lot more than that.

Mr. SWIDLER. I think the courts have declared that the Natural Gas Act was passed by Congress primarily for the protection of consumers.

A part of that protection, as I say, is to be sure that the pipelines and the producers are in a healthy position, and that they receive fair prices for their services.

There are administrative protections and there are judicial protections, which we observe.

When a case comes to us we decide it in accordance with the facts and the law, but we keep in mind that our responsibility is to see that the rates are no more than is required for a healthy industry which is what we understand Congress——

Senator ALLOTT. The industry is not entitled to any more than its reasonable return, but you just alarm me when you talk as if the only thing you were considering is the welfare of the consumer.

And I do not think it is the only thing.

Mr. SWIDLER. The welfare of the consumer and the welfare of the industry are intimately bound up together.

Senator ALLOTT. You cannot separate them.

Mr. SWIDLER. No, you cannot separate them.

Senator MAGNUSON. But the question I asked him was, there have been some legitimate complaints in the past of the inability of the consumer to arrive at this decision or the Commission's inability and their inability to be represented before the Commission, and I think that what he is trying to tell us, and what he does tell us, is that they are making every effort to see that the consumer does have his say in court or whatever you want to call it.

Mr. SWIDLER. We keep in mind the consumers' interest all of the time.

Senator HILL. As well as a healthy condition of the producers.

Is that right?

Mr. SWIDLER. Exactly, as well as the requirement that the producer and the pipeline, too, will be able to carry out their functions.

NATIONAL POWER SURVEY

Senator MAGNUSON. Now, right along there or right along that line, they have established a national power survey which they have included, just to follow up what he said and what you suggest, Senator Allott, from both the publicly owned and privately owned segment of the electrical power industry, so that they might get together and see how they can work their problems out.

And I understand that that has been well, has it not?

Mr. SWIDLER. Yes, sir.

I think the Commission is very happy with the way the national power survey has caught the imagination and has won the support and the endorsement of all segments of the electric power industry.

Senator ALLOTT. Could I inquire, who is represented on that survey?

Mr. SWIDLER. I would be glad to put into the record a complete list——

Senator MAGNUSON. Put in the record a list of them.

Mr. SWIDLER. Of all the members of the committee.

There are about 50 drawn from industry two-thirds or three-quarters of the total, the list is a part of my statement which I would like to put in the record.

Senator ALLOTT. Could I ask you, in general, Mr. Swidler, does this include—you have already said it included private segments of the industry?

Mr. SWIDLER. Yes.

Senator ALLOTT. Does it include REA's?

Mr. SWIDLER. It includes representatives of the REA's, representatives of the Federal agencies, representatives of the municipalities, and the majority are representatives of the private companies because, of course, the private companies account for such a large part of the industry.

We have tried to balance all of the committees so that there will be a voice from all segments at each committee level.

Senator MAGNUSON. Now, I have just one more thing:

DOWNSTREAM BENEFITS FROM HYDRO PROJECTS

In your statement you say you have some new ideas for bringing money back into the Federal Treasury as a compensation for downstream benefits on Federal, Federal hydro projects which my friend Morgan and I know, is quite a problem out in the Columbia Basin, and we are interested in those ideas.

And I would like to have you elaborate a little for the record on that.

Mr. SWIDLER. Senator, in the past the Commission's procedure has been to look at each downstream project separately and, after the event, to try to compute how that particular project benefited from

the water that came downstream as a result of upstream Federal storage projects.

The Commission's staff followed the water downstream and they figured out how much that water helped—if that water had not been there what other power sources they would have had and what it would have been worth and so forth, a very elaborate analysis.

As a result, this program moved so slowly that the administrative expenses are almost exactly equal to the total amount which has been received from the power companies for these enormous benefits from the Federal Government's investments in these upstream projects.

We are now trying a couple of short cuts.

In the latest hydro project license that we issued for the Wells project we put a formula right in the license so that when that project goes into operation the amount that is due from the project can be computed readily.

And this, I think, is a practice that we will continue, so that from now on it should not be necessary to hold expensive, difficult and complex hearings with respect to projects which we license hereafter.

Senator ALLOTT. Mr. Swidler, will you go over that again?

I missed your point somewhere along the way. I think I understand reclamation and hydroelectric projects, but I surely missed both of them on this one.

Would you go over that once again, please?

Mr. SWIDLER. Yes, sir.

PAYMENTS FROM LICENSES OF DOWNSTREAM PROJECTS

The Federal Power Act provides that the owners, the licensees of downstream projects, shall pay the United States an equitable part of certain of the costs of operating the Federal Government's upstream projects.

Senator HILL. You get a better flow of the river?

Mr. SWIDLER. That is right.

Now, in the past the procedure has been for the Commission staff to analyze the benefits year by year and project by project.

They were trying to determine how the water would have flowed past the downstream project if it were not for the dam upstream, at what seasons did the additional water come, how valuable was it, how valuable was the power that it replaced, in order to determine the net benefit, and these determinations involved a great many assumptions and calculations and a great many causes for argument and dispute and, as I say, the administrative cost was as high as the recovery.

REASONABLE FORMULA IN LICENSE

Instead of doing this in the future, what we propose to do is to establish some reasonable formulas, and such a formula was inserted directly into the last license that we granted which was for the Wells project on the Columbia——

Senator MAGNUSON. River.

Mr. SWIDLER. River.

Senator ALLOTT. In other words—maybe I can shortcut this—what you are doing is making an assessment of the benefits, in effect, at the

time you grant the license and make this determination a part of the license.

Is that right?

Mr. SWIDLER. That is right.

Senator MAGNUSON. Because it just seems impossible, and particularly let's take the Columbia River, to get people together on the equities involved but once they accept the license and accept the formula——

Mr. SWIDLER. The calculations are simple.

Senator MAGNUSON. Yes.

Mr. SWIDLER. We are also promulgating a general rule incorporating two formulas, depending upon the nature of the project, which will be applied as rules of thumb to the projects already in existence. There is flexibility in the way these rules are to be applied.

If they create an injustice in any particular situation they can be reviewed, but we start with a rule of general applicability that can be enforced without elaborate investigations and we expect, after we have had time to make these rules effective, to bring in substantial amounts of money at low administrative cost. Putting this new procedure into effect, however, will require manpower.

Senator MAGNUSON. Now, it also works the other way?

Supposing a non-Federal dam benefits a Federal dam?

Mr. SWIDLER. No, Senator, the law makes no provision for Federal payments for benefits from upstream private projects.

Senator MAGNUSON. Well, there would not be any Federal payments, I understand that, but there might be, in all equity, some payments in power——

Mr. SWIDLER. The Federal Power Act makes no provision for such payments.

Senator MAGNUSON. I know it does not, but what I am saying is there might be some equities there that you could resolve or which might be resolved in favor of power.

I do not know whether that works or not.

Out in our country it does not, or so far as I know the dams did not take shape that way, but it could happen someplace else.

Mr. SWIDLER. We also have the responsibility of determining the benefits from the project of one licensee to the project of another licensee.

Senator HILL. You mean where you have two private companies?

Mr. SWIDLER. Where you have two private projects.

Senator ALLOTT. May I ask a question?

We have gone through substantially the same thing with other boards and commissions, and I know this was discussed with your Commission last year.

ACCELERATION OF ADMINISTRATIVE HEARINGS

What have you done within your Commission to speed up the administrative hearings?

Mr. SWIDLER. Well, we have done a great many things, Senator, and if you have the time to listen to the answer at this late hour I will be glad to try to provide it.

The most important thing we have done in connection with natural gas cases was to eliminate the elaborate field investigations which we found was the greatest single source of delay.

We are now promulgating a rule, under which the pipeline companies, when they come in, will file substantially a prima facie case. The figures will be certified to by their own auditors.

We will make test checks of their books periodically but not in connection with the case so that we will not have to delay procesing a rate application by making a complete investigation of the company's books.

We will already know that their books are in good shape and that the figures are audited on the basis of those books.

This new rule for rate filings will eliminate one great area of delay.

REORGANIZATION

Another step that we have taken is to reorganize our Bureau of Natural Gas so that we can handle and process these cases quickly. Instead of having a Rate Division and a Certificate Division, which divided up the work by specialty, we now have a Pipeline Division and a Producer Division and each of these divisions in turn is subdivided so that there are a group of people who are very familiar with the companies in their area and who will be immediately familiar with the implications of any matter which comes before them involving the particular groups of companies for which they are responsible.

A parallel to the new organization in our Bureau of Natural Gas has been made in our legal staff so that they can work together closely on the basis of intimate knowledge of the companies involved.

We have streamlined our staff's preparation for hearings so that each step is planned in advance with an early deadline. We have a new management information system which enables us to know the status of our cases and move them along.

PREHEARING CONFERENCE PROCEDURE

We are also in the process of revitalizing our prehearing conference procedure which has not been helpful in the past because the conferences were held at a stage before the counsel were familiar with all of the facts or knew what the issues were, and could not stipulate out the matters which were not in controversy.

With the new types of filings that I have described and with a requirement which we are in the last stages of considering, which will provide that all of the testimony, the initial case and the rebuttal, should be served in advance of the hearing, it will be possible to hold a meaningful prehearing conference and then hold a hearing without interruption for recesses which have been a chief source of delay in our proceedings in the past.

We hope to carry through the entire hearing in one continuous session.

(Chairman Swidler's address to the American Bar Association on August 6, 1962, describing the new hearing procedures is included at the conclusion of his testimony.)

Senator MAGNUSON. Let me clear that. By that you mean if I apply and Senator Allott objected as a party to a proceeding, then I wanted to rebut what he said, we would do all of that——

Mr. SWIDLER. All that.

Senator MAGNUSON (continuing). Before we showed up at the pre-conference hearing. How long a time do you give us to do that?

Mr. SWIDLER. We are scheduling the time factor in the hope that we can dispose of these cases within the 6-month period before rates would go into effect under suspension.

I do not say we are going to be able to do this, but given enough manpower so that we do not have to pull a man off one job to put him on another we are aiming at trying to dispose of the pipeline cases within the 6-month suspension period from the date of filing. But it cannot be done, and certainly cannot be done while at the same time protecting the public interest unless we have more staff. We want speed, but we must be thorough, too. This is our problem.

INCREASE IN PRODUCER CASES

Senator ALLOTT. Has the caseload backlog grown in the past year?

Mr. SWIDLER. It has grown in producer cases. It has declined in pipeline cases.

As to producer cases, we are still working on developing the procedure for disposing of them. Many hundreds of them are consolidated in the area rate cases where we are fixing rates for a whole gas-production area in one proceeding.

We have two area rate cases underway. One of them we are pushing vigorously. The other we do not have the manpower to push. The *Permian Basin* case is making good progress. The *Southern Louisiana* case is not.

In the other areas we have not established any area rate proceedings because we just do not have the people. Until we can develop this procedure and get more manpower I am afraid our backlog of producer cases will continue to grow. But in the pipeline cases where the law is established, where we are plowing familiar ground, we have made progress and we have brought down our backlog very greatly, I think by about 40 percent, and we can get current soon on these important pipeline cases if we have more people.

Senator ALLOTT. Have you included your figures of your experience on these cases in your statement?

Mr. SWIDLER. Yes, we have.

Senator HILL. Are you through?

Senator ALLOTT. Yes. Go ahead.

Senator HILL. Is it not much to the interest of these companies and these producers to get rid of this backlog in order to know where they are?

Mr. SWIDLER. Yes. The industry——

DILATORY TACTICS

Senator MAGNUSON. Yes and no. Some of them just use every method they can for delay, hoping something will happen in the meantime.

Mr. SWIDLER. I think all in all we have had very good cooperation. I think the industry is watching with great interest the development of these area rate proceedings.

This is, to my mind, the most important experiment in regulation which has been attempted for many years. It is obvious that we are going to have to do some pioneering in this field if we are going to get a workable system of regulating prices for natural gas in the field. It is apparent we are going to have to develop this new system if we are going to be able to get rid of the backlog, but I will say that we have literally hundreds of these producer cases piled up which we would try on a conventional basis and do the best we could with that group of cases if we had more people. These are very difficult and elaborate cases.

Senator MAGNUSON. And many times in these cases in the practice they delay themselves for some reason or other?

Mr. SWIDLER. I cannot say.

Senator MAGNUSON. Of course, they do.

Mr. SWIDLER. I am sure there must be some, but I must say——

Senator MAGNUSON. All kinds of them.

Mr. SWIDLER (continuing). From my own experience I am more impressed by the cooperation we have received than by the dilatory tactics.

Senator MAGNUSON. By that I do not mean the applicant, the guy who applies wants to get the case decided fast, but the people who oppose it are the ones.

Mr. SWIDLER. Intervenors.

Senator MAGNUSON. And use every possible means within the law to delay decisions, and these are some of the cases that go on for months and years, some of them.

Mr. SWIDLER. Frequently there are intervenors.

Senator MAGNUSON. And once in a while the Commission has to take the "bull by the horns" and call them in, do something, and say, "Let's decide this matter one way or the other and get it over with."

Mr. SWIDLER. In some of our cases there may be 75 or 100 appearances. In a major pipeline certificate case every community on the line, every pipeline company that is interconnected with the particular company that is applying, all the competing fuels, coal, fuel oil, they are all in the case. These cases are difficult to try. They are long drawn out. They are expensive.

I think that the Federal Power Commission cases are not exceeded in complexity by those in any administrative agency in the country. We are in a position to dispose of them, nevertheless, but not without more people.

Senator ALLOTT. Mr. Swidler, could I ask you another question?

REDUCTION IN NUMBER OF SMALL AND WASTEFUL UNITS

At the top of the sheet I have handed you is a quotation from your testimony in the House on March 20 on the second supplemental bill. One part of this statement gives me a little concern. It says, "* * * To reduce the number of small and wasteful units," and this is in reference to the national power survey.

I am going to ask you, Mr. Chairman, that this whole statement be put in so there is not a question of taking it out of context.

Senator MAGNUSON. All right.

(The statement referred to follows:)

EXCERPT FROM HOUSE HEARING, MARCH 20, 1962, ON SECOND SUPPLEMENTAL APPROPRIATION BILL

Mr. SWIDLER. [The National Power Survey] would add a new dimension in the thinking and planning of the individual agencies, public and private, because it would help them to plan on the basis of the best possible use of their capital in regional and national integrations of power facilities so as to make the most of what we have in this country, to reduce the number of small and wasteful units, to reduce the losses in transmission by taking full advantage of the new technology and extra high voltage transmission, to maximize the pooling of reserves so it will not be necessary to add the amount of reserve capacity that is necessary in isolated or semi-isolated electric systems; that is what we propose, not a way of meeting a demand that I agree with you would be met anyway, but a better way, a more productive way, of using our resources to make power more generally available at lower cost and with better use of our capital and energy resources.

FEDERAL POWER ACT PROVISION

Senator ALLOTT. In what context do you use that? How is it within your power to reduce small and wasteful units?

Mr. SWIDLER. Section 202(a) of the Federal Power Act authorizes and directs the Commission to make local, regional and interregional interconnection studies for the purpose of contributing to the efficiency and economy of the power supply in the country. The National Power Survey is intended to outline a system of power supply in the country which will make the best possible use of our power resources, capital and fuel, of our technology, and of our equipment.

There is a great deal of difference, of course, in the efficiency of large units as compared with small units in the generating end of the business and in the transmitting end, too. You get lower costs per unit of capacity and you also get lower operating expenses as you go up in size.

Now, we are not proposing, and certainly have no authority, to attempt to close up any plants, but what we can do is suggest how the various small electric enterprises can get together and pool their resources and instead of building a lot of little units which would be wasteful and have a high capital cost, build a few big ones and bring down the cost of power for all of them.

Senator ALLOTT. Then would this be a fair interpretation of what you have said, that in this statement you have in mind with respect to the survey and the findings that would be your intention to point out the areas in which the number of units might be reduced, and such recommendation is made without any thought that the Federal Power Commission or the Government would be taking any steps to reduce them, per se?

IMPACT OF POWER SURVEY

Mr. SWIDLER. Yes, indeed. This we have made clear. The National Power Survey is merely an outline; it is a suggestion to industry with no power of compulsion, and, of course, the impact of the survey will be only the extent to which it can commend itself to the men who must make the investment decisions as being a contribution to their way of conducting their businesses.

FUNDS FOR POWER SURVEY

Senator MAGNUSON. Let us ask this on the survey in your funds how much is set aside for the survey in this budget, $380,000?

Mr. SWIDLER. Yes, but that does not include the use of employees who would otherwise be working on regional interconnection studies.

Senator MAGNUSON. This is what you call the National Power Survey, is it not? That is what you call it, a National Power Survey.

Mr. SWIDLER. Yes, sir.

TOTAL PERSONNEL INVOLVED IN SURVEY

Senator ALLOTT. How many personnel would be involved in that, Mr. Swidler?

Mr. SWIDLER. This is Marion F. Hetherington, Acting Chief of Bureau of Power.

Mr. HETHERINGTON. We are asking for an increase of 26——

Senator MAGNUSON. Talk louder so we can hear you.

Mr. HETHERINGTON. We are asking for an increase of 26 persons for the National Power Survey, and that, of course, would be in addition, to our regular staff, who are also used on the survey to the extent that they are now available. Some of the activities which are part of our regular work will be used on the survey.

Therefore, while we will utilize more engineers than the 26 additional that we request, we are able to do this tremendous job with a small additional staff because we are able to call on the staff we have already and the information which we keep current at all times.

Senator ALLOTT. One other final question. I would like to have you make perfectly clear that the statement which I handed to you and the various things that you have suggested, the interties, integration of power facilities, do not relate solely to public power.

Mr. SWIDLER. No, not at all, Senator Allott. This is a National Power Survey which includes all systems contributing to power supply in the country, the Federal systems, the municipal systems, the State system in Nebraska, the REA's, as well as the privately owned system.

Senator ALLOTT. Thank you.

Senator MAGNUSON. Are there any further questions?

HOUSE REDUCTION

Senator HILL. Let me ask one other question.

The House cut you down $1,153,000 under the budget allowance, is that right?

Mr. SWIDLER. That is right, Senator.

Senator HILL. Is that right?

Mr. SWIDLER. That is right.

Senator HILL. Did the budget allow the full amount that the Commission requested?

Mr. SWIDLER. No, they cut us about $300,000.

Senator HILL. The budget itself cut you $300,000?

Mr. SWIDLER. The Bureau of the Budget cut us $300,000.

Senator HILL. I see. That is all.

Senator MAGNUSON. All right. If there are no further questions, we thank you gentlemen.

Is there anything you want to put in the record? You had something you wanted to insert?

Mr. SWIDLER. I should like to hand Senator Allott an excerpt from a recent article in the Edison Electric Institute Bulletin which indicates the private industry support of the national power survey and their belief this will make a contribution to the industry.

Senator ALLOTT. Why do we not put this in the record?

Senator MAGNUSON. We will put that in the record.

(The article referred to follows:)

EXCERPT FROM "NEW HORIZONS IN ELECTRIC POWER TRANSMISSION," A TALK BY R. G. RINCLIFFE, PRESIDENT, PHILADELPHIA ELECTRIC CO., BEFORE THE 30TH ANNUAL CONVENTION OF THE EEI IN ATLANTIC CITY, N.J., JUNE 5, 1962

"Some months ago the Federal Power Commission announced that it was undertaking a long-range study of the Nation's power supply. I am certain this study will be useful, and we in the investor-owned companies are cooperating in it. Executives and engineers from our industry have agreed to serve in an advisory capacity in the study, and their experienced judgment will be of value to the Commission. We are providing the Commission with our industry-wide studies of power capacity and pooling, and doing all we can to be of assistance in other ways." * * *

"Chairman Swidler's announcement of the FPC study stated that 'our survey will, of course, be only a suggested plan and not a blueprint.' There has been no indication that it might be solidified into a plan that companies would be compelled to follow. On the contrary, it will be up to each individual company whether or not to follow any suggestions made in the study.

"This pattern wisely maintains responsibility and initiative where it is most natural in the American way of doing things—at the company level." * * *

"The FPC study can be a help to us. But the real progress in power in this country will continue to come, as it has in the past, from the flexible, inventive, and carefully designed plans of investor-owned electric companies that, while tailored to our customers' needs, fit the national interests of our interconnected power pools. They have brought an abundance of electricity—reliably and economically—to all Americans."

PREPARED STATEMENT

Senator HILL. Did you have some other document, too, you want to put in the record?

Mr. SWIDLER. I have a formal statement.

Senator MAGNUSON. That will go in the record in full.

Mr. SWIDLER. On account of the lateness of the hour I shall not read it.

(The statement referred to follows:)

STATEMENT OF JOSEPH C. SWIDLER, CHAIRMAN, FEDERAL POWER COMMISSION

Mr. Chairman and members of the committee, we appreciate the opportunity to appear before you today.

All five of the present members of the Commission have taken office since the Commission's 1962 appropriation hearings and I have served as Chairman only since September of 1961. This is our first opportunity to present to this committee the plans of the present members of the Commission for carrying out the Commission's broad responsibilities under the Federal Power Act and the Natural Gas Act.

The President has requested $11,100,000 for the Federal Power Commission for fiscal 1963, an increase of $2,307,000 over the $8,793,000 appropriated for 1962, to provide for an additional 195 positions.

The House has approved an appropriation of $9,946,500, a reduction of $1,153,500 below the amount requested. The reduction made by the House poses a most serious problem to this Commission and, I might add, to the Nation's natural gas and electric power consumers as well.

The Congress should be aware of what is at stake in the work of the Federal Power Commission. The Commission is the keystone in the system of Federal utility regulation. It is the national agency which regulates the first and sixth largest industries in the country—electric power and natural gas. It sets the standard for utility regulation at both the National and the State level. The State utility commissions throughout the country look to the Federal Power Commission for leadership. Thirty-four million consumers of natural gas in this country look to this Commission for protection against unjustified increases in their gas bills; and the entire Nation looks to this Commission for leadership in encouraging the electric power industry to produce electricity at the lowest possible cost and to encourage the most comprehensive development of the Nation's waterpower resources.

In recent years the Federal Power Commission has been subjected to heavy criticisms as to the way it has carried on its work, or failed to carry on its work, particularly in the natural gas field. Not all of these criticisms have been justified but unquestionably there have been serious delays in disposing of the natural gas caseload and in developing workable policies to implement the regulatory framework in that field. Our backlog of natural gas cases was so staggering a year ago that it was singled out by the President and the Congress as an outstanding example of the crisis in administrative adjudication.

I am convinced, and my associates on the Commission are convinced, that the Federal Power Commission has turned the corner. During the last year, we have adopted new policies where needed, reorganized our staff, streamlined our procedures and supplied new staff leadership. Our major emphasis has been on moving cases along toward conclusion just as expeditiously as possible. I believe that we have gone far toward putting our house in order and are now in a position to use our appropriations prudently and effectively. We can do the job for which we were created, if we have the necessary manpower.

Even those who were most critical a year ago now recognize that the Commission is making solid headway on the mountain of work before it. Dean Landis, who, in his report to the President, elect in the fall of 1960, held up the FPC as a prime example of the breakdown of the regulatory process, commented publicly in February of 1962 that the attitude of the new Commission "is one of a readiness to meet these challenges and the intention to apply a Herculean effort in doing so." He added that the Commission's "* * * record in the past 3 months of bringing about the refunding of some $35 million of excess charges, is significant." Since Dean Landis' talk last February, we have ordered additional refunds of some $115 million, bringing the total refunds in the past year in pipeline rate cases to over $150 million. This is one measure—one among many, and not the most important—of the returns in public benefits from the money appropriated to the Commission.

Our efforts to come to grips with the problems facing the Commission have also met with a favorable response from the industries we regulate and from their investors. One industry publication expressed the opinion of the natural gas industry in these terms:

"* * * they have a growing faith in the present Federal Power Commission. They don't agree with the fact of utilitytype controls, but they seem to have unexpected confidence in the New Frontier makeup of the Commission * * *. This confidence in the Commission also is marked by a sense of freedom from favoritism. Most explorers and producers had rather have an honest, if tough, commission than one which might favor one producer against another, even while siding with producers as a whole against the other segments of the industry and the consumer * * *." (Gas, June, 1962.)

The reaction of investors to our aggressive program for settling pipeline rate cases is expressed in a recent issue of Standard and Poor's:

"From the standpoint of the pipelines, a constructive development is the gradual settlement of rate cases before the Federal Power Commission, which is placing the revenues and profits of many companies on a firm basis for the first time in many years * * *."

Let me make clear at this point that our renewed activities have not been confined to the natural gas field, although the problems in that area have attracted the most public attention. The Commission's national power survey and other programs which I want to discuss in greater detail have had and will continue to have an important impact on the future course of the electric power industry. If our information is correct, there is a new determination in the electric power industry not to be caught lagging in taking advantage of any

opportunities to reduce the cost of generating electricity throughout the country and thus to anticipate, in part, the recommendations of the national power survey.

The Commission is not conducting a popularity campaign, and we are reconciled to the fact that nobody loves a regulatory agency. However, in your concern as to whether the Commission will make effective use of the additional funds we are requesting, it seems to us to be significant that the regulated industries themselves as well as students of our activities believe we are doing an effective, responsible, and constructive job. I think that the record of the Commission in the past year presents ample proof that the Commission, as presently constituted, merits the opportunity to carry out its plans for making the Federal Power Commission an effective tool for carrying out the policies of Congress in the electric power and natural gas fields.

Let me now speak in detail of the Commission's programs, beginning with our natural gas work.

The picture of the Commission's work in the natural gas field in recent years has been of a mountain of cases growing higher and higher as they accumulated faster than they were decided. Of course, we cannot stop the flood of new cases which are constantly being filed with us. In the last fiscal year, the natural gas companies filed 2,000 certificate applications and made almost 8,000 rate filings, every one requiring extensive staff consideration and many involving difficult and extended hearings lasting over a period of weeks or months, or in the past, even years, in which scores of parties participated and in which the record contained thousands of pages of testimony and hundreds of exhibits. We can, however, devise procedures to handle our work so that, given adequate staff, we can complete it on a reasonable timetable, and we have made much progress toward that end in the past year.

Our natural gas work falls into two broad categories "pipelines" and "producers," and I shall discuss them in that order. We have disposed of over 40 major pipeline rate cases in the past year, and ordered refunds of over $150 million. I am happy to report that there are no longer any pipeline rate cases gathering dust on FPC shelves. Every major pipeline rate case is moving along at some stage of the decisionmaking process.

In order to eliminate the backlog of existing cases and permit greater attention to current problems, we have placed major emphasis on securing settlements which are in the public interest. The Commission staff has participated in each of these settlement conferences to insure that the results are consistent with what reasonably could be expected through a formal proceeding. Where this can be accomplished settlements have two important advantages over Commission decision of contested cases. In the first place, the agreed-upon refunds are made at once and the new lower rates are put into effect immediately, eliminating the delays and uncertainties of litigation on appeals to the courts from the Commission's decisions. In the second place, the settlements can, and usually do, include moratoriums on future increases for stipulated periods. In the absence of a voluntary agreement, the companies could file for new increases at any time before or after decision.

Despite the success of our settlement program, there are 76 pipeline cases which are still pending, including some of the largest. The amount of money collected subject to refund in these cases still stands at the staggering figure of well over $900 million, because the accretion month by month of additional amounts in the remaining cases almost offsets the large amounts involved in the cases which have been settled or decided.

I am confident that we are in a position to eliminate this backlog, and I am willing to go on record as predicting that if the Congress will give us the manpower which we are requesting, we will completely eliminate our huge backlog of pipeline rate cases within the next 2 years, and be handling these vital cases on a current basis.

The key to effective natural gas regulation is a workable plan for regulating the natural gas producers. While many people have claimed that producer regulation is impossible, the Commission is pushing forward with a solution to the problem. We have divided the country's gas-producing fields into separate pricing areas and have established interim ceiling prices in each area. We are using these ceilings to limit the prices at which we grant certificates for new gas and we are suspending for the maximum statutory period all rate increases in excess of our ceiling prices. In the meantime, we are pushing forward vigorously with areawide rate proceedings in two of the major gas-producing

areas; one in the Permian Basin in New Mexico and Texas, and the other in southern Louisiana.

The Permian Basin proceeding is the lead case. This proceeding is well along with a target completion date for the hearing in the spring of 1963. An area rate proceeding will enable us in a single proceeding to fix the rates for the many hundreds of producers in an entire gas production area, and will thus eliminate the administrative bottleneck of company-by-company determinations which has obstructed producer regulation thus far. The evidence is presented on an area basis and the same ceilings will apply to all gas in the area, subject perhaps to some minor exceptions.

Our area ceilings have already resulted in a halt in the sharp advance of producer prices in recent years. The latest information from the Bureau of Labor Statistics shows that in the past year the average wellhead price of gas remained virtually stationary at about 16.5 cents per thousand cubic feet.

We have taken many steps to ease the burden of regulation on the small independent producers. By simplifying our rate filings, and most important of all, by our area pricing policy, we have relieved them of the burdens of individual rate proceedings which, in many cases, might cost them more money than they would receive if they were granted the full increases they seek.

We have established the Natural Gas Advisory Council, made up of industry and consumer groups to advise the Commission on current problems.

The Bureau of Natural Gas has been completely reorganized to insure that authority and responsibility are clear all the way down the line. The new organization places the emphasis on staff responsibilities by companies and proceedings.

We found that one of the major causes for delay in the past have been lengthy investigations by the Commission staff in company offices. We are revising our regulations to require the companies to file complete information with us at the time of their rate filings, which will eliminate the need for Commission personnel to spend many weeks examining company books in the field whenever rate applications are filed. We shall, however (assuming that we have the necessary manpower), periodically check the books of the pipeline companies to assure compliance with the Commission's Uniform System of Accounts.

A field office has been established in Houston, Tex., to insure closer supervision over personnel working in the field and to serve as a clearinghouse for the problems of the small independent producers in the area.

We have established an Office of Economics to assist the Commission in planning the future course of regulating the natural gas industry because economic problems go to the core of regulatory policy.

We have increased the use of electronic data processing equipment within the limits of our present budget to help us handle the huge amount of data on costs, gas supply, deliverability, and reserves, which are so vital in our area rate proceedings.

We have outlawed the so-called favored nation and other indefinite escalation clauses which, in a large measure, have been responsible for the runaway increases in producer prices in the past.

All of these measures will help but they will not make our backlog of gas cases disappear. The only sure solution is to set all of the pending cases for hearing and to push them through the decisionmaking process. This will require a substantial increase in our staff. No amount of reorganization or planning can substitute for necessary manpower.

Let me make clear that the additional staff we are requesting is not needed merely to eliminate our backlog of cases. That backlog is a product of the thousands of natural gas rate and certificate filings made with the Commission each year. We need more people to handle these new cases when they are filed, and not years later, or else we will be in much the same position as someone trying to pump the riverbed dry in a flood. Effective regulation is a mirage if it takes years to obtain a certificate or rate relief from the Federal Power Commission. The increased staff which we are requesting is to enable us to make progress not only to eliminate our existing backlog but to make sure that another backlog does not accumulate.

To come back to the figures, for our natural gas program we are asking a total of $6,306,800, or an increase of $1,491,400. This will provide an additional staff of 131 positions: 79 for rate casework, 38 for certificate cases, and 14 for an expanded program of compliance audits of pipeline company accounting practices which is basic to our accelerated system of handling the cases.

We are talking here about the sixth largest industry in the country serving 34 million consumers. The appropriation request amounts to between 15 and 20 cents per customer for an entire year. It is 4 percent of the pipeline rate reductions ordered last year, to use only this single benefit as a measure. The request is modest considered in relation to the magnitude of the industry, the difficulty of the job and the benefits to the consumers. Federal regulation of the interstate aspects of the natural gas industry is the keystone in the system of consumer protection. Without effective regulation of the cost of gas at the wellhead and also of the charges of the pipelines for transporting gas, it is impossible for the State commissions to do an effective job of regulating the price within the local communities.

I agree with the comment in a May 9, 1962, report by the Senate Judiciary Subcommittee on Administrative Practice and Procedure discussing the problem of the Federal Power Commission's backlog of natural gas cases:

Solution of such a problem is not likely to be found in criticism of the hard-working, earnest, and dedicated personnel of the Federal Power Commission.

What we need is more of these hardworking, earnest, and dedicated personnel.

I should like now to discuss our electric power activities. I think the length of time it has taken for me to give you even a thumbnail sketch of our natural gas work indicates what has happened to the Commission's power activities. The flood of natural gas work has diverted so much of the Commission's attention and the Commission's funds that the power work, which was the central function of the Power Commission for many years, has suffered a severe attrition. Our backlog in the electric power work is not one of pending cases, but of neglected responsibilities and pending ideas and programs.

We are determined to seek the funds and devote the time and energy which are necessary for the Commission to carry out its responsibilities under the Federal Power Act. We have new plans and programs which will make clear that this Commission has not forgotten that despite its natural gas responsibilities it is still the Federal Power Commission.

Let me describe first the Commission's national power survey before telling you briefly of some of the other programs for which we are requesting minimum increases in order to breathe new life into the Commission's long-neglected power activities.

One of the functions the Commission has been carrying on for many years is the preparation of interconnection studies, to point up potential savings in the cost of electricity from further coordination of individual electric systems. There have been over 30 such studies and at least half of the recommended interconnections have been built, all on a voluntary basis. However, the work in the past has been done primarily on a local scale. There was no effort within the Commission to carry out, on a broad scale, the responsibility assigned to it in section 202(a) of our statute to encourage the voluntary interconnection and coordination of power systems on a regional and interregional basis.

The Commission is now in the process of remedying the inadequacies of its previous approach by carrying out a coordinated national power survey. This survey can, I think, prove to be the greatest contribution of the Federal Power Commission to the public interest of any activity, either on the gas side or the power side, that it is carrying on. In brief, we are in process of drawing up, for 1970, 1975, and 1980, a general plan for a coordinated system of power supply for the entire country that will link our most economical hydro capacity with large and efficient new steam powerplants by the use of high-voltage and extra-high-voltage transmission lines.

The basic conception of the national power survey, the coordination of the power systems of the country to make best use of the Nation's capital, fuel, and technological resources, is not a new one, but the enormous technological strides of the last decade or two present new opportunities and incentives. The rapid advancement of the art of generation, which has resulted in doubling of the maximum capacity of steam-electric units in only a few years, and the great progress in the technology of extra-high-voltage (EHV) transmission require a new appraisal of the extent to which the national interest would benefit by coordinating the plans of the entire industry for supplying the Nation's loads.

I need not tell this committee the enormous savings in the cost of generating electricity that can be achieved by moving from a 100,000-kilowatt generating unit (and even more from a 25,000-kilowatt unit or 5,000-kilowatt unit, of which many are still being built) to the million-kilowatt unit which has just become available. Likewise, I am sure you are aware of the savings which can be

achieved if large blocks of power are transmitted by a 500- or 700-kilowatt line rather than at 165- or 220-kilovolt, or even 345-kilovolt, because the capacity of a line increases in geometric ratio with the voltage, while the cost is likely to increase in only arithmetic ratio.

In making the survey, we do not start with fixed answers. Hypotheses as to the national economies which can be achieved in various ways will be tested critically as the survey proceeds. The purpose of the survey is not to advance any single solution to the overall problem of meeting the Nation's power requirements in future years, but rather to appraise objectively every possible way of serving the national interest through coordination and integration, and to focus on the national interest in eliminating impediments which prevent effective use of the Nation's electric power resources.

Let me make clear that the Commission's survey will be only a suggested goal or plan and not a blueprint. It will be put into effect only to the extent that the ideas and suggestions in the report commend themselves to the judgment of those who are responsible for operating the various segments of the Nation's system of electric power supply.

I am pleased to be able to say that the Commission is receiving the full cooperation of all segments of the industry—public, private, and cooperative—in carrying on the survey. I doubt that the various elements of the industry have ever before cooperated on such a broad scale in any other project.

Over three score of the leading experts in the electric power field are actively at work on the special technical committees, the General Technical Advisory Committee, and the Executive Advisory Committee which are helping us with the survey. I am attaching a list of the names of these advisers for the information of this committee. More of these experts will be invited to participate as they are needed to help on particular aspects of the survey. These committees are drawn from every part of the industry and every part of the country. They are hard at work drafting reports that will be invaluable to the Commission in its survey report. I think it is fair to say that, to a man, these experts feel that the Commission's survey will be helpful to the industry and they have expressed to me the thought that the opportunity to meet and discuss these problems in groups that cover such a broad range of interests has already been most beneficial to them.

The ultimate purpose of the national power survey is to benefit the consumer. The survey is aimed at the decade beginning in 1970. For that period and beyond, we begin with the premise that low rates start with low costs, and everything that makes possible a reduction in costs by better utilization of energy resources makes possible a reduction in rates. Beyond the consideration of rates alone, the consumer as a citizen has a profound interest in low-cost energy as the foundation for this country's industrial growth and the employment opportunities and rising standard of living which go with it.

We are seeking an increase of $464,000 or 36 positions for our activities under the heading "Electric Power Industry" which includes the national power survey. This activity also includes rate cases and filings, supervision of our uniform system of accounts, the regulation of securities and of interlocking directorates, the study of power requirements and supply, the gathering and analyzing of data on the entire electric industry—interstate, intrastate, public, and private—and the publication of numerous statistical reports based on this data on which the entire industry relies for measures of its problems, programs, and achievements.

Included in this group of activities is the Commission's jurisdiction over the wholesale rates of the public utilities in interstate commerce. While wholesale sales in interstate commerce represent only a small portion of this country's electric power supply, I was surprised to learn when I became Chairman a year ago that the Commission's activities in this area were as insignificant as they turned out to be. It was apparent that wholesale customers by and large did not consider the Federal Power Commission an effective forum in which they could obtain rate relief, and that the congressional intention to regulate electric power rates in interstate commerce had become virtually a dead letter.

There is small wonder that knowledge of the FPC's rate jurisdiction has not been widespread. The Commission's electric rate work in the past has been hidden away in the Bureau of Natural Gas, or, as it was called until a few months ago, the Bureau of Rates and Gas Certificates. The electric rate group—it is not large—has now been located and transferred to the Bureau of Power, where the rate activity will receive the attention it deserves.

We have already begun to exercise our electric rate responsibilities. In recent months, the Commission has suspended several proposed rate changes which in our judgment appeared to be unjustified and several complaints have been filed with the Commission by municipalities concerning their wholesale service or perhaps more accurately their lack of service.

The Federal Power Act gives the Commission the responsibility for providing wholesale customers an effective forum to obtain relief against unreasonable rates and other inequities. In order to carry out these responsibilities, we must have an adequate staff—otherwise regulation exists in name only. This work will grow in volume as customers learn that there is an effective forum where they can obtain relief with respect to sales in interstate commerce at wholesale, and as the increasing integration of the industry leads to greater reliance on interstate transactions.

Another major area of the Commission's power activities is with respect to non-Federal hydroelectric projects. In the past year the Commission has taken major steps to channel its work in this field in a direction which will bring the greatest amount of public benefit for each dollar spent.

We have announced a new policy limiting the term of licenses granted to hitherto unlicensed projects constructed before 1935 to prevent those who have ignored the licensing provisions of the Federal Power Act from obtaining an unmerited advantage. We are making a concerted effort to bring these projects under our regulation. In addition, of course, license applications for new projects continue to be filed and we have reviewed the status of all our existing license cases in an effort to move them toward early conclusion. Actually moving cases along requires more manpower than leaving them on the shelf and as the cases are completed, the number of licensees grows and there is increasing need to supervise compliance with the license provisions.

Another neglected Commission responsibility in the past has been the determination and collection of the amounts due the Federal Government by the owners of non-Federal downstream projects for the benefits they receive from Federal headwater storage projects. We are in the process of establishing a new procedure to simplify these determinations. With sufficient manpower to implement our new ideas, I can assure this committee that in future years the downstream beneficiaries will make annual headwater benefits payments to the Government and that the Treasury will begin receiving payments in the order of millions of dollars a year rather than the trickle of money which has been collected in the past. Money spent in developing workable procedures for securing the payments due the United States for headwater benefits will pay large and continuing dividends.

We are also requesting an increase of five positions for licensed project accounting work. This work includes determinations of initial cost and depreciation and amortization reserves, and we believe it is essential to bring the workload to a more current status. We will confine our efforts to the cases which may have an impact on consumer rates or where licenses will be subject to recapture in the next few years.

For all of these non-Federal hydroelectric activities, we ask $1,891,000, an increase of $235,000. I am sure you understand that fees paid by licensees exceed the total which we are requesting. These fees will be almost $2,100,000 in 1963, exclusive of amounts which will be paid to the Commission in reimbursement of the cost of making headwater benefit determinations and to the United States for the benefits themselves. The money for this work is an investment that will not only bring a full financial return to the Treasury but will pay dividends in a more comprehensive development of the Nation's water resources.

The increased pace of Federal expenditure for river development projects, both by the Bureau of Reclamation and the Corps of Engineers, imposes the responsibility upon the Commission to make its reports and recommendations from the vantage point of its broad national outlook in time to be assimilated in project planning and design. While construction may be stretched out for budget reasons we know from programs which the other Federal agencies have outlined to us that the pace of their planning work will continue to quicken. Timely study of these reports is essential if the Federal Power Commission is to do the job which Congress has assigned it in this important natural resource field. For the Federal river development program, we ask a total of $440,700, an increase of $45,200.

The committee may not be aware of the importance of the role which the Commission plays in the development and appraisal of the hydroelectric projects constructed by the Federal Government. All project reports which are prepared by the planning and construction agencies except TVA are reviewed by the Federal Power Commission before they are submitted to Congress. These agencies rely upon the Federal Power Commission to appraise the power aspects of their projects on the basis of the Commission's broad experience and familiarity with the power economy of the country. The Federal Power Commission has been cast by the Congress in the role of custodian of the Nation's undeveloped hydroelectric resources and each project is reviewed from the point of view of assurance of the fullest use of the power potential of the site consistent with the comprehensive development of all water resource values. Inasmuch as the Commission's reports are made to the other agencies, this is a feature of our work which is little heralded but which is of great concern to present and future generations.

In conclusion I should like to mention an additional item which is extremely important if the Commission is to carry out its regulatory responsibilities effectively. The House committee has imposed a limitation of $10,000 on the amount we can spend for consultants for fiscal 1963. It would be helpful in resolving the many novel and complex problems involved in regulating the natural gas and electric power industries if the Commission could bring in consultants from time to time to counsel with us on these problems. Availability of consultants would also permit us to keep the number of full-time employees to the absolute minimum necessary to perform our work. The limitation of $10,000 imposed by the House committee would seriously impair our ability to use consultants. At the rate of $100 a day, which is about the minimum for any expert on natural gas or electric power matters, we could use only 100 man-days of consultant services for the entire year. This would virtually remove consultants as an effective tool in performing our work. We therefore urge that the $10,000 limitation on the use of consultants be removed.

FEDERAL POWER COMMISSION NATIONAL POWER SURVEY

COMMITTEE MEMBERSHIPS

EXECUTIVE ADVISORY COMMITTEE

Philip Sporn, chairman, American Electric Power Co., Inc., 2 Broadway, New York, N.Y.

G. O. Wessenauer, vice chairman, Tennessee Valley Authority, Chattanooga, Tenn.

William Webster, New England Electric System, 441 Stuart Street, Boston Mass.

Harold Quinton, Southern California Edison Co., Post Office Box 351, Los Angeles 53, Calif.

Paul N. Raver, Seattle Department of Lighting, 1015 Third Avenue, Seattle, Wash.

J. Harris Ward, Commonwealth Edison Co., 72 West Adams Street, Chicago, Ill.

E. W. Morehouse, 65 Allison Road, Princeton, N.J.

Eugene S. Loughlin, Public Utilties Commission, State Office Building, Hartford, Conn.

GENERAL TECHNICAL ADVISORY COMMITTEE

Robert Brandt, chairman, New England Electric System, 441 Stuart Street, Boston, Mass.

Eugene White, Bonneville Power Administration, Portland, Oreg.

John Hyde, Southwestern Federated Power Cooperative, Creston, Iowa.

L. M. Robertson, Public Service Co. of Colorado, 900 15th Street, Denver, Colo.

R. R. Pittman, Arkansas Power & Light Co., Ninth and Louisiana Streets, Little Rock, Ark.

C. P. Almon, Jr., vice chairman, Tennessee Valley Authority, Chattanooga, Tenn.

V. M. Marquis, American Electric Power Co., Inc., 2 Broadway, New York, N.Y.

H. A. Lott, Southern California Edison Co., Los Angeles, Calif.

H. L. Harrington, Niagara Mowhawk Power Co., 300 Erie Boulevard, Syracuse, N.Y.

Dewey J. DeBoer, Nebraska Public Power System, Columbus, Nebr.

Economic Consultant to the General Technical Advisory Committee

Kenneth J. Arrow, Council of Economic Advisers, Executive Office Building, Washington, D.C.

TRANSMISSION AND INTERCONNECTION TECHNICAL COMMITTEE

Marshall Blair, chairman, Washington Water Power Co., 1411 East Mission Avenue, Spokane, Wash.

H. V. Strandberg, Seattle Department of Lighting, 1015 Third Avenue, Seattle, Wash.

Jas. A. Rawls, Virginia Electric & Power Co., Seventh and Franklin Streets, Richmond, Va.

E. C. Brown, Hartford Electric Light Co., 176 Cumberland Avenue, Wethersfield, Conn.

T. J. Nagel, American Electric Power Co., 2 Broadway, New York, N.Y.

Ludwig F. Lischer, Commonwealth Edison Co., 72 West Adams Street, Chicago, Ill.

Kenneth E. Hapgood, Tennessee Valley Authority, Chattanooga, Tenn.

John Robuck, Texas Power & Light Co., 1511 Bryan Street, Dallas, Tex.

THE CHALLENGE OF NATURAL GAS REGULATION—AN ADDRESS BY JOSEPH C. SWIDLER, CHAIRMAN FEDERAL POWER COMMISSION BEFORE THE AMERICAN BAR ASSOCIATION, SAN FRANCISCO, CALIF., AUGUST 6, 1962

The title announced for this talk, which I selected months before I knew what I was going to say, is broad enough to cover anything remotely touching upon the Federal Power Commission's functions in natural gas regulation. Perhaps I should disclose to you now that the corner of this very large field which I shall dwell upon today is the need for improvement in hearing procedures before the Commission.

The current interest in improving administrative procedures represents a healthy reaction to the increasingly apparent need for administrative reform. On all sides there are demands that the procedures in each agency be reviewed critically and objectively with a view to putting into effect whatever reforms may be required to enable them to do their jobs in their particular areas of activities. The establishment by President Kennedy of the Administrative Conference, under the leadership of Judge E. Barrett Prettyman, is perhaps the most important and potentially useful of the many current approaches to administrative improvement. Through the Administrative Conference it is possible to bring to bear upon the problems of Federal administrative agencies the insights and talents of practitioners, judges, and scholars as well as of the responsible officials of administrative agencies.

I do not mean to slight the study and effort which were devoted in the middle forties to the problem of insuring an impartial disposition of cases before administrative tribunals. As a result of this effort, Congress passed the Administrative Procedure Act, which dealt primarily with the problem of the fairness of the administrative process, and particularly with insulating the administrative process in contested proceedings from external pressures.

The present focus is on the efficiency of the administrative process. There need be nothing inconsistent between the objective of fairness in administrative adjudication and the objective of conducting the proceeding in such a way as

to make the best possible use of agency staff and of the counsel and witnesses of the litigants, and to bring the case to a conclusion as soon as the nature of the case permits. On the contrary, a speedy trial is a basic element of fairness in any proceeding and in many types of administrative hearings it is just as true as in judicial hearings that justice delayed is justice denied.

Delay feeds on itself. After a segmented and protracted hearing the facts which were proven are likely to be out of date by the time the case is ready for decision. The "test year" upon which the case has been tried has become ancient history. According to their interests, counsel will urge disposition on a stale record or holding further hearing to consider later operating periods. The hearing examiner, or the Commission itself, is faced with the dilemma of making a decision on a record which is out of date or of starting the case on a new round of hearings.

The natural gas cases before the Federal Power Commission are too important to be permitted to drag on over the years. They are among the most important cases decided before any adjudicative tribunal in the country, judicial or administrative, except for courts of review. Natural gas rate cases involve the gas bills of 34 million consumers throughout the country. The sums of money at stake in rate suspensions in individual cases may accumulate with time so as to be the controlling factor in the financial strength of interstate pipelines and may strongly affect the value of the securities of the many thousands of stockholders in these companies. In the past year, there have been disposed of over a dozen pipeline rate cases each of which involved rate increases of more than $5 million annually collected subject to possible refund. We have still pending before the Commission one pipeline rate case in which the sums collected subject to refund over a period of years approaches the staggering figure of $400 million, and the amount increases at the rate of $9 million a month.

It is obvious that extended delay in these proceedings may cause great damage to all concerned. A company cannot plan its future with assurance and investors cannot determine the value of its securities when the potential refund obligation is equal to a large part of the equity capital. Consumers who have been forced to pay inflated gas bills for many years find little comfort in the refund prospects which are hedged with contingencies, including the ability of the consumer to survive until the refunds are ordered and paid.

The aggregate of money collected by the interstate natural gas pipelines subject to refund in cases pending before the Federal Power Commission is still over $900 million, despite the success of the Commission's settlement program, because the accretion of additional amounts in the remaining cases almost offsets the large amounts involved in the cases which have been settled or decided. There are also pending certificate applications for a billion dollars of pipeline construction. This figure has smaller significance than the refund figure because much of the pipeline construction is covered by temporary authorizations, and some of the rest may represent duplicate facilities or may be disallowed for other reasons. There can be no doubt, however, as to the necessity for speedy disposition of FPC rate and certificate proceedings which have such a broad impact on a basic industry and the consumers it serves.

I am happy to be able to report that we are moving steadily to dispose of the mountain of pending pipeline rate cases and have in recent months ordered refunds of approximately $150 million including one individual case in which the refunds exceeded $40 million. The Commission is determined to clear up its existing backlog of cases and to revise its hearing procedures to insure that future cases are handled with dispatch.

I had the pleasure a few months ago of speaking to the members of the Federal Power Bar Association to which many of you here belong. In my talk I spoke of the vital role of the examiners in moving our cases along with dispatch. The handful of men in the Office of Examiners of the Federal Power Commission are basic to the discharge of the Commission's work. I take this occasion to say that one of the most important contributions which Congress could make to the improvement in the administrative process would be to provide for adequate compensation to examiners in agencies such as the Federal Power Commission where the responsibilities of the examiners are so great and the benefits of improvement would mean so much to the public and to the great industries under FPC regulation. All of the suggestions for administrative reform assume an even greater degree of control of administrative proceedings by the examiner. Implicit in these recommendations is a basis of compensation which will make it possible to hold the excellent examiners already on our staff, and to attract

candidates for examiner positions in whom the Commission could safely lodge broad additional responsibilities.

In my talk before the Federal Power bar I also spoke of the need for the cooperation of the bar in eliminating wasted time and inflated transcripts in proceedings before the Commission. I urged practitioners to exercise restraint in introducing cumulative testimony and proof of limited or doubtful probative value. I urged a double dose of restraint in cross-examination, and especially with respect to evidence which might perhaps have been dispensed with in the first place, pointing out that there was no point to loading a record with a mountain of material which a detached appraisal by counsel at the outset would have convinced him was most unlikely to be of controlling importance in winning his case, whether before the Commission or the courts.

Let me add on this score that cases before the Federal Power Commission are not likely to be won on technicalities. The Commission is just as much impressed with a solid point of law or of administrative policy whether it is based on 10 pages of record or a thousand and its conclusions of law and findings on the facts are not likely to be swayed by cumulative testimony no matter how elaborately developed. Extended arguments with expert witnesses in an effort to persuade them of the falseness of the theories upon which they have built their professional lives add bulk but not light to a transcript. Cross-examination of an expert witness on his qualifications or his testimony, of the kind used in attempting to sway a jury to discount what he says, is wasted in an FPC proceeding.

Sometimes the Commission finds in cases which have been in hearing for many months that basic issues have not been raised and important factual areas have not been touched upon, so that the Commission is required to send the case back for further hearings. We have been forced to conclude that mass cannot be equated with thoroughness or completeness and may in fact represent a poor alternative for a carefully thought-out presentation of a complete basic case.

Let me describe for you the tortuous hearing course of one of our rate cases. The original filing was made in February of 1957. The first hearings were held in April of 1957, recessed to July and continued off and on through the remainder of 1957. Hearings were held in January and February of 1958. The hearings then recessed again to October when a further recess until December was granted, and then yet another recess was granted until January and then further postponed to March, April, and May of 1959. Hearings were finally resumed during May of 1959 and then recessed until September. Three days of hearings were held in September and then the case was recessed until November, at which time it was further postponed to December. In December of 1959 the record was closed on one issue and an examiner's decision on this issue was rendered in May of 1961. The Commission twice heard oral argument on this one issue and issued its final decision in February of 1962. The rest of this case, I regret to say, is still with us.

There is something radically wrong with this way of conducting a rate case. This was a complex case, true enough, but it was not that difficult, nor is its history unique. No one who participated has great reason for pride in the way the case has been handled thus far. I say this although all the counsel involved were able and dedicated and the examiner dealt skillfully with many issues in an elaborate record. The fault was not the fault of the individuals but of the system, or rather lack of system.

Our staff made a recent study of rate investigations, rate filings and abandonment applications. This study showed that from the date of filing to a final decision, it has taken an average of 1,782 days on rate investigations initiated by the Commission, 1,865 days on filings by pipelines for increased rates, and even in abandonment cases, which should be reasonably simple, it has taken an average of 493 days. The average rate investigation has accumulated 3,172 pages of transcript and 868 pages of exhibits. Any system which requires so much time for decision and such voluminous records must contain ample room for improvement.

What happened in these and similar proceedings is water over the dam, or perhaps to this audience I should say gas flared to the atmosphere. It becomes now our responsibility to distill the lesson from what has happened, and to avoid additional administrative monstrosities in the future.

The first conclusion one reaches from a study of the lugubrious record of the case whose 5-year history I have just reviewed, and of many similar cases, is

that they were not planned that way—they just drifted. There was no early definition of the issues; there was no broad stipulation of the readily provable facts; there was no collaboration among the parties on the presentation of proof; there was no schedule of the presentation of testimony; there was no target date for each of the steps and for completion. Without such advance planning and preparation and without advance arrangements for cooperation in the presentation of the case, it is inevitable that there will be waste motion, confusion, and delay, most of which could have been avoided by a well-organized prehearing conference at the inception of the case.

The Commission has long recognized the need for improvement in prehearing conference procedure. In November 1959, the Commission promulgated its Order No. 217 providing for the use of prehearing conferences and the early designation of the presiding examiner. However, Order No. 217 has not been invoked and the attempts to use prehearing conferences have been without great success. I do not know every factor which militated against successful use of such conferences, but I can point out some of the reasons they did not work.

In the first place, I am told that the parties who attended the few conferences that were held went into them with little preparation. Few of the parties were well enough prepared to be willing to agree to the undisputed facts, to identify the issues, or even to plan for an orderly hearing. Moreover, some of the participating counsel seemed to think of an administrative proceeding as a contest in the courtroom skills of counsel. They wanted to save their ammunition to ambush the opposition at the hearing, rather than to lay their forensic guns on the conference table and devote themselves to simplifying and expediting the process of bringing out all the relevant facts.

In addition, examiners were compelled to supervise the prehearing conference with little or no knowledge of the case and, being saddled with a predetermined hearing date, no room in which to operate with the degree of flexibility which I believe is the very essence of a successful use of the prehearing procedure. The prehearing conference was thus merely the anteroom to the hearing maze.

The Commission now proposes to revitalize the prehearing conference procedure. We are impressed by the fact that almost every group that has sought for ways to improve administrative procedures has agreed not only that the prehearing conference can be made a valuable part of the decisional process, but that they are essential to the prompt and effective disposition of complex cases, the kind which abound in the work of the Federal Power Commission. Order No. 217 was adopted as a result of suggestions by the American Bar Association and the Federal power bar. The House Subcommittee on Legislative Oversight strongly recommended that agencies make use of this procedure. Senator Carroll's Judiciary Subcommittee on Administrative Practices and Procedure also recommended it, and the existing administrative conference, on which I am serving as a member, has under consideration strong proposals for more effective use of prehearing conferences.

It appears, therefore, that there is general agreement that prehearing conferences should be beneficial if we can make use of them properly. In order to make a prehearing conference procedure work we must first understand its objectives and then determine precisely how to achieve them.

I believe the first objective of a prehearing conference is to give every party an opportunity to know and evaluate the positions of the other parties. Its purpose is to eliminate the surprise element, which, I submit, has no place in administrative proceedings, and which is being progressively restricted even in Federal court proceedings under the Federal Rules of Civil Procedure, as well as in the courts of many of the States. The obligation of the parties in a prehearing conference is to identify the genuine and substantial issues, to reject the spurious ones at the outset, to stipulate all the relevant facts which cannot honestly be controverted, to arrange for the reconciliation of factual differences where this is feasible, and to list the key matters in factual dispute which can only be resolved in a hearing. Matters which can be fully investigated and resolved without open trial should be eliminated from the hearing.

As a basic step to attaining these objectives, Prof. A. J. G. Priest, of the University of Virginia Law School, in his report to the Administrative Conference, emphasizes the importance of ideintifying the "big" case at the outset, and of the use of the prehearing conference device in these cases. His advice is especially pertinent to the FPC because we have so many big cases and also because we have already perfected techniques for disposing of the routine cases expeditiously. The big cases, once identified, must be assigned to the examiner

at once so as to enable him to provide the necessary control of the proceedings. With the examiner in control, Professor Priest suggests that there must be early definitions of the issues, confinement of discovery within the boundaries of the defined issues, and careful procedural planning.

These are excellent suggestions and I agree with all of them, but to make them work the pleadings must be adequate to permit detailed case analysis when the prehearing conference is held. This has not been required in the past in FPC proceedings, and this defect we propose to remedy. The Federal Power Commission, with the advice of all interested parties, is revising its regulations to provide that original pipeline rate filings shall contain sufficient information to allow all parties to a proceeding to identify the difficult cases, the issues therein, and to prepare their own cases with dispatch. As many of you know, our proposed new rules provide that pipeline rate filings must be so complete as to provide in substance the pipeline's case-in-chief, should suspension of the filing prove necessary. On the basis of the applicant's exhibits and the supporting testimony, our staff and all interveners should at an ealy date prepare and file their own rebuttal exhibits and testimony.

As soon as our staff is ready to present its answer to the filed information of the applicant, an examiner should be assigned but no hearing date should be set.

The examiner could then call a prehearing conference, confident that an analysis of all the submitted evidence will refine and reduce to a minimum the issues which he must decide. Once assigned, the examiner would be in control. If it appeared at the first prehearing conference that some necessary evidence was missing, he could call a short recess to obtain that evidence and then resume the conference. As soon as he felt the issues and evidence had been refined as far as possible, he could set a date for a hearing confined to those matters on which cross-examination appeared to be necessar.

Where analysis of the issues and comparison of the testimony revealed that the differences were small, or lent themselves to compromise, there would be no point to proceeding to trial. The exercise of complete control of the proceedings by a competent examiner who fully understands the unresolved issues is extremely important in deciding for the parties whether a trial or settlement conference is more appropriate as a next step.

I make a final suggestion for expediting hearings which may come as a shock to those of you who have become accustomed to recesses as a way of life in FPC hearings. I suggest a single continuous hearing directed to full cross-examination of all witnesses presented by all parties. Of course, the examiner would have wide discretion in handling the hearing and he might, where circumstances warranted, make use of "during the hearing" conferences. In general, however, once the prehearing conference has been concluded and the hearing scheduled and begun, counsel would be expected to present their entire case without substantial interruption for the preparation of testimony or cross-examination.

It seems to me that the use of continuous hearings is a logical outgrowth of the full filings now required by our regulations and of a revitalized and flexible prehearing conference procedure. Following a full presentation of a written case and an exploration of all issues in a prehearing conference, a continuous hearing should be less burdensome than in a court trial, where a continuous hearing is taken as a matter of course.

It should be clear that the procedure in which all parties will prepare their direct case in advance of a single continuous hearing will greatly deemphasize the role of cross-examination in the proceedings before the Federal Power Commission. This, in my judgment, will be all to the good. I do not mean to say that cross-examination is not an important part of the adversary process but I believe there has been far too much reliance by counsel on the use of cross-examination for making their own case. The new procedures will also have the salutary effect of forcing counsel for all parties to present their facts in a more orderly and concise manner.

Improvement in administrative adjudication means a constant search for improvement at every step of a proceeding. All who participate in a proceeding must be alert to take advantage of opportunities large or small to do a quicker or better job than we are now doing. The small improvements are important in total, but we cannot rely on them alone. We must also be willing to consider and adopt such major and radical changes as I have proposed.

Administrative reform cannot be achieved by any one device or stratagem. It can only result from an unremitting drive for excellence in every phase of the administrative process. An administrative agency is a unit. If the agency as

a whole is deeply motivated to achieve a high standard of performance the results will show at every stage of its work including the conduct of its hearings. Conversely an agency operating on slack standards is not likely to be a model in the handling of its caseload. The Federal Power Commission is aiming at a high quality of administrative performance in every aspect of its work.

I do not doubt that the practitioners before the Federal Power Commission will have their problems of adjusting to the new procedures and quickened pace, many of which they themselves have long advocated. The bar which practices before the Commission is an integral part of the machinery for the discharge of the Commission's adjudicative functions. The bar and the Commission must now help each other in the quest for a system of administrative justice in natural gas cases of which we can all be proud.

COMMITTEE RECESS

Senator MAGNUSON. Thank you all very much.

The committee will recess until 10:30 tomorrow.

(Thereupon, at 6:55 p.m., Wednesday, August 8, 1962, the committee recessed, to reconvene at 10:30 a.m., Thursday, August 9, 1962.)

INDEPENDENT OFFICES APPROPRIATIONS FOR 1963

THURSDAY, AUGUST 9, 1962

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, D.C.

The subcommittee met, pursuant to recess, at 10:40 a.m., in room F–37, the Capitol, Hon. Warren G. Magnuson (chairman) presiding.

Present: Senators Magnuson, Hayden, Ellender, Holland, Pastore, Monroney, Allott, Young, and Cotton.

Also present: Senator Gruening.

GENERAL SERVICES ADMINISTRATION

STATEMENT OF BERNARD L. BOUTIN, ADMINISTRATOR, ACCOMPANIED BY LAWSON B. KNOTT, JR., DEPUTY ADMINISTRATOR; ROBERT T. GRIFFIN, ASSISTANT ADMINISTRATOR; WILLIAM P. TURPIN, ASSISTANT ADMINISTRATOR FOR FINANCE AND ADMINISTRATION; J. H. MACOMBER, JR., GENERAL COUNSEL; ROBERT T. DALY, COMMISSIONER, PUBLIC BUILDINGS SERVICE; WILLIAM A. SCHMIDT, DEPUTY COMMISSIONER, PUBLIC BUILDINGS SERVICE; C. D. BEAN, COMMISSIONER, FEDERAL SUPPLY SERVICE; JOHN M. McGEE, DEPUTY COMMISSIONER, FEDERAL SUPPLY SERVICE; DR. ROBERT H. BAHMER, DEPUTY ARCHIVIST OF THE UNITED STATES; WALTER ROBERTSON, JR., ADMINISTRATIVE OFFICER, NATIONAL ARCHIVES AND RECORDS SERVICE; ROBERT B. CONRAD, COMMISSIONER, TRANSPORTATION AND COMMUNICATIONS SERVICE; MALCOLM D. MILLER, DEPUTY COMMISSIONER, TRANSPORTATION AND COMMUNICATIONS SERVICE; MAURICE J. CONNELL, COMMISSIONER, DEFENSE MATERIALS SERVICE; JOHN G. HARLAN, JR., DEPUTY COMMISSIONER, DEFENSE MATERIALS SERVICE; GEORGE K. CASTO, DIRECTOR, PROJECTS ADMINISTRATION DIVISION, DEFENSE MATERIALS SERVICE; L. NEAL FITZSIMONS, STAFF DIRECTOR, PROTECTIVE STRUCTURES DIVISION, OFFICE OF CIVIL DEFENSE; AND WILLIAM N. LAWRENCE, CHIEF, RESOURCES ANALYSIS DIVISION, ECONOMIC AFFAIRS OFFICE, OFFICE OF EMERGENCY PLANNING

LETTER WITH PROPOSED AMENDMENTS

Senator MAGNUSON. The committee will come to order.

We have this morning the General Services Administration. The Administrator, Mr. Boutin, is here, and several of his staff.

We will put your letter in the record in full with the proposed amendments, and justifications.

You have a statement for the committee which we can handle in any way you wish. If you would like to read it to the committee you may, or we will put it in the record in full and take it up item by item. I think that is better.

Mr. BOUTIN. Mr. Chairman, I will leave it to your good judgment.

Senator MAGNUSON. We will put this in the record in full and you can quote from it as you wish.

Mr. BOUTIN. It is a concise statement setting forth the facts as we see them.

(The information referred to follows:)

GENERAL SERVICES ADMINISTRATION,
OFFICE OF THE ADMINISTRATOR,
Washington, August 3, 1962.

Hon. WARREN G. MAGNUSON,
Chairman, Subcommittee in Charge of the Independent Offices Appropriation Bill for 1963, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: In response to your letter of July 27, 1962, we request an opportunity to appear before the committee to discuss the effect of changes in the budget estimates of the General Services Administration in the independent offices appropriation bill for 1963, as reported to the House.

At that time, we would like to explain certain amendments to the bill which we will propose. These amendments are being prepared in the customary form and will be delivered to the committee staff in a few days.

Sincerely yours,

LAWSON B. KNOTT, JR.,
Acting Administrator.

ESTIMATES OF APPROPRIATIONS, 1963

ADMINISTRATOR'S GENERAL STATEMENT

Mr. Chairman and members of the committee, it is a particular pleasure for me to come before this committee because of the support it has given to the management concept which brought about the creation of the General Services Administration in 1949. This support has made it possible for GSA to demonstrate in a convincing manner that the mission which Congress assigned to GSA was well conceived and well calculated to produce significant economy in the procurement and distribution of supplies; transportation and traffic management; management of public utility services, including telecommunications; the acquisition, construction, operation, and maintenance of public buildings, and other general purpose space; the utilization of available property; the disposal of surplus property; and records management. The increasing scope and volume of the services GSA is rendering to the agencies we serve each year testifies to its acceptance in the Federal family. Their greater reliance on GSA to perform the support functions is enabling the agencies to direct their attention to the accomplishment of their primary missions.

GSA's portion of the President's budget for fiscal year 1963 was $586,409,000, including $8.8 million to be derived from proceeds of the sale of surplus property. While this budget took into account the increasing demand for GSA's services and the increased cost of some of the commodities and services required for the total undertaking, it recognizes the basic principle that in substantially all areas of our services the unit cost declines with a corresponding increase in volume. Events occurring since the preparation of the budget have increased rather than lessened our responsibilities and have strengthened our firm belief that any reduction in most of our appropriation requests will of necessity cause agencies funded for continuing and expanded programs to provide independently the logistical support they now rely on GSA to render.

H.R. 12711 as passed by the House provides $522,082,000, including $26,500,000 to be derived from sales proceeds, or a reduction of $64,327,000 in our budget. The amendments to the House bill set forth in the documents now before this

committee will provide $586,033,000, including $41,235,000 to be derived from sales proceeds, or a reduction of $376,000 from our budget estimates. Briefly, the proposed amendments to the House bill call for the restoration of the following amounts:

PUBLIC BUILDINGS SERVICE

The amount of $12,400,000 for operating expenses, PBS, which is needed to operate and maintain our buildings, including payment of wage board salary increases, utilities, and additional leased space obtained by GSA during fiscal year 1962 on a reimbursable basis and which becomes the financial obligation of GSA in fiscal year 1963 and subsequent years.

The amount of $20,845,000 for construction of public buildings. This includes $3,340,000 for fallout shelters in public buildings, a program which has the full support of the administration. It is our firm belief that failure to restore this reduction may mean the difference between awarding construction contracts for these projects during the year and postponing them to await the appropriation of sufficient money to award contracts.

The amount of $5,500,000 for sites and expenses to permit us to move forward on all but one of the new construction projects fully authorized by both House and Senate Public Works Committees during the current session of the Congress.

FEDERAL SUPPLY SERVICE

The sharp increase in sales through our supply system is largely attributable to the expanded supply support we are now providing the Department of Defense. For the last 2 years, our supply support through stores depots has increased by about 25 percent each year. To support this activity, it is essential that the original budget estimates of $42,683,000 for operating expenses, FSS, and $17 million for capital of the general supply fund be appropriated by the Congress.

NATIONAL ARCHIVES AND RECORDS SERVICE

The critical shortage of space in the National Archives can be partly relieved through a modest annual program of microfilming. The proposed amendment would restore the $450,000 reduction by the House so as to proceed with development of an orderly microfilming program and to handle increased workload in our records centers.

TRANSPORTATION AND COMMUNICATIONS SERVICE

The TCS program is directly related to the expanded DOD supply support program in that transportation workload increases with the FSS supply support activity. For every dollar GSA spends in traffic management a savings of about $14 accrues to the agencies we serve. The $338,000 restoration would permit us to handle the workload and provide a full year's staffing for the civil agency communications system begun in fiscal year 1962.

DEFENSE MATERIALS SERVICE

We are requesting $32,735,000 for the strategic and critical materials program which is $5,265,000 less than the budget estimate. We agree with the House that this can be financed from proceeds from sales of surplus materials. However, our amendments call for $14,735,000 more than the House allowance to provide primarily for relocation and rotation of materials, and expenses of disposal activity during fiscal year 1963. In connection with these disposals, we wish to emphasize that GSA has and will continue to press for disposal of excess materials at as rapid a rate as is possible without disrupting market prices and normal trade practices.

ADMINISTRATIVE OPERATIONS

Centralized staff services for all GSA programs are provided through the administrative operations fund. Each appropriation contributes a proportionate share to the AO fund for these services. Increased program responsibilities must be matched by allowances for administrative operations if effective and necessary support of programs is to be furnished.

The ratio of staff costs to program costs has historically shown a decrease as a result of improved methods of operation and better management. This trend

was reflected in our estimates. The House approved increases in various programs for 1963 but held the limitation amount for administrative operations to approximately the 1962 level. Restoration of the House reduction in the limitation amount is necessary if we are to render the basic accounting, legal, personnel, and other staff services required by operating programs.

GENERAL PROVISIONS

The Independent Offices Appropriation Act, 1960, and subsequent years, contained a general provision enabling the Administrator of General Services to use for specified purposes the residual appropriation account for construction of public building projects accruing from successful contracting for the construction of public buildings for amounts less than the appropriation. These so-called construction savings have been used to acquire selected buildings under lease to the Government where it was advantageous to do so, to prepay purchase contracts entered into under the Public Buildings Purchase Contract Act of 1954; for the extension and conversion of Government-owned buildings, many of which were reported to GSA as excess to the needs of the Department of Defense, and for the construction of public building projects approved pursuant to the Public Buildings Act of 1959. The availability of this authority has made it possible for us, in the furtherance of good management practices, to take timely advantage of situations which afford economies where authority for immediate action exists. It was through this authority that we have been able, since our appropriations hearings before the House committee in February, to award a contract for the construction of a border station at Sault Ste. Marie, Mich., in time to coordinate its completion with the opening of a new international bridge between the United States and Canada in November of this year. Furthermore, our appropriation request for construction of public buildings pending before this committee has been reduced by $251,100, which the House included for this project pursuant to an authorization under the Public Buildings Act of 1959 obtained in June 1961. We do not believe that this authority has been abused. Its restoration will continue to make it possible to take advantage of opportunities for timely action within the framework of available appropriated funds.

The special attention of the committee is invited to the inclusion of language in the House-passed bill (lines 11–22, p. 29) which drastically affects GSA's ability to carry out in an orderly and economic manner that portion of its space management function handled through the leasing of office, warehouse, laboratory, and similar space. We believe that we should own and operate general-purpose space needed for permanent programs of the agencies we serve and, in accordance with the Public Buildings Act of 1959, we are continuously investigating and surveying the public building needs of the Federal Government and submitting to the Congress prospectuses for proposed projects in accordance with the provisions of the act. However, despite major strides that have been and are being made in the provision of Government-owned public buildings authorized pursuant to the Public Buildings Act, the funding of authorized projects for construction has not and probably will not within the foreseeable future keep pace with the critical need which had its genesis in the lack of public buildings construction during the 15 years between 1940–55. Until some of this deficit in public buildings construction is overcome, we must continue to meet a larger amount of our space needs through leasing transactions than would be our purpose otherwise.

Congress has recognized that, as in commercial transactions, the Government is able to effect economies when it enters into longer term leases and, therefore, during the past 5 years has successively amended our leasing statute so as to increase the term of leases from 5 to 10 years, and then from 10 to 20 years. This leasing statute expressly authorizes the Administrator to enter into lease agreements "on such terms as he deems to be in the interest of the United States and necessary for the accommodation of Federal agencies in buildings and improvements which are in existence or to be erected by the lessor for such purposes." The Public Buildings Act of 1959, which increased the authority for the term of such leases from 10 to 20 years, expressly provided that nothing in the act was to limit or repeal existing authorizations for the leasing of buildings by and for the use of GSA. Lease rentals agreed upon are still subject to the limitations provided in the Economy Act of 1932. As Administrator of General Services, I personally approve any lease involving a firm term of 5 years or more. We believe that much can be done to improve the efficiency of space use and

governmental operations if we can consolidate a number of our scattered leased locations in metropolitan centers. However, we believe that the crippling House amendment will make it extremely difficult, if not impossible, to render the service in space management that GSA was created to perform, and which the President expects of us under Executive Order 11035 (July 9, 1962) increasing the authority and responsibility of GSA in the field of space management. Since the amendment is pointed toward buildings to be erected by the lessor for lease to the Government, it will prolong a situation in which we are forced to lease small lots of space in Washington and elsewhere at the price space in short supply commands. We are prepared to give this or any other committee of the Congress an accounting of our stewardship in the exercise of this or any other authorities vested in the Administrator, but we believe that the imposition of roadblocks to the exercise of reasonable authority will defeat the economic objectives which prompted the creation of the agency.

Mr. Chairman, we believe our proposed amendments are well justified and we respectfully seek their approval by your committee.

Status of estimates of appropriations, 1963

(Change from budget estimate)		(12,400,000)
Restoration proposed by this amendment		+12,400,000
Bill as changed by this amendment		187,400,000

LEGISLATIVE HISTORY

GSA budget justifications: Pages I–14 to I–47.

House hearings: Part 2, pages 135 to 193.

House Report No. 2050: Page 9, "Operating expenses, Public Buildings Service.—The bill provides $175 million for the basic real property operations of GSA. This is a reduction of $12,400,000 in the budget estimate and provides about the same level of operation as in 1962.

"For several years the committee has increased its concern for the rising cost of leasing and operating space for civilian agencies of the Government. Operating expenses for the Public Buildings Service have increased from the appropriation of $103.7 million in 1956 to a requested $187.4 million for 1963. During this period Federal civilian employment has increased less than 3 percent and many new Federal buildings have been completed thus eliminating the cost of expensive leased property, yet the costs in recent years have increased sharply and the estimate for 1963 is 80 percent higher than the appropriation 7 years ago * * *."

JUSTIFICATION OF THE AMENDMENT

Based on the new policy adopted in fiscal year 1962, prescribed in Bureau of the Budget Bulletin 61–4, dated November 10, 1960, the departments and agencies are required to justify and obtain appropriations for the first year's cost of space expansion. Transfers are then made from the other agencies' appropriations to GSA appropriation "Operating expenses, Public Buildings Service."

In line with this financing policy, effective with fiscal year 1962, GSA no longer requests appropriations for first-year cost of space expansion for other agencies. The Appropriations Committees were advised of this change in financing policy in the justification of GSA's 1962 estimates, and by letter dated February 27, 1961, from the Director, Bureau of the Budget, to chairman, House Appropriations Committee. (See p. 877, pt. 1 of House hearings on independent offices appropriations for 1962.)

The 1963 OE–PBS estimate includes $12.4 million to cover the full-year cost of expansion space acquired for agencies representing: $4.8 million for cost of leases formerly paid for by other agency appropriations; $4.4 million for part-year cost in 1962 of expansion space acquired for agencies, originally paid for by appropriation transfers; and $3.2 million to provide for the cost of annualization of this expansion space for the complete fiscal year 1963.

The reduction of $12.4 million by the House committee represents the amount required to pay for this space, a major portion of which is under contract and

occupied by the agencies. This $12.4 million is not an increase requested in 1963 but represents the annualized cost of space expansion formerly financed from other agency appropriations, approved by Congress in 1962 and prior years. A comparable reduction is reflected in appropriation estimates of the other agencies involved.

All items of increase included in the 1963 estimate are mandatory cost items, such as wage board increases, increased utilities consumption, and operation of new buildings. Therefore in the event restoration of the House action is not made, drastic reductions will have to be effected in the level of services currently being provided in GSA controlled space.

Inasmuch as 50 percent of the cost of building operations are fixed items which cannot be reduced such as cost of service contracts, rents, electricity, fuel and other utilities, the $12.4 million reduction represents 14 percent of the remaining items of cost for essential building services. For example, cleaning services provided in 1962 were already more than 20 percent below the accepted commercial standards. To reduce the level of cleaning in these buildings which are currently cleaned by Government employees, to the extent that would be required if the House reduction is sustained, would result in conditions which would be intolerable to the tenants with the possible creation of health, fire, and safety hazards.

If restoration of the $12.4 million is not made, a reduction in the custodial force would be required and could approximate 3,000 in average employment for the year.

The restoration of the full $12.4 million is strongly recommended.

GSA Amendment No. 2

CONSTRUCTION, PUBLIC BUILDINGS PROJECTS

PROPOSED AMENDMENT

On page 18, line 3, of the bill as reported to the House, insert after "including" "fallout shelters therein and".

BUDGETARY DATA

None applicable, see GSA Amendment No. 3.

LEGISLATIVE HISTORY

GSA budget justifications: Page I–88.
House hearings: Part 2, pages 133–134, 214–217, 222–226.
House Report No. 2050: No mention in GSA section.

JUSTIFICATION OF THE AMENDMENT

Restoration of this language is recommended in order that fallout shelters may be provided in selected buildings, detailed in amendment No. 3. This provision in Federal buildings is consistent with the administration's position on a national shelter program.

The prospectuses approved by the Public Works Committees for selected projects include provision for fallout shelter protection in all cases except Marianna, Fla., Macon, Ga., and Charlottesville, Va. Revisions of these three prospectuses are in process.

The estimates are in line with the requirements prescribed by Office of Civil Defense, Department of Defense.

GSA Amendment No. 3

CONSTRUCTION, PUBLIC BUILDINGS PROJECTS

PROPOSED AMENDMENT

On page 18, line 3, of the bill as reported to the House, strike out "$155,325,000" and insert in lieu thereof "$176,170,000".

Westerly, R.I	284,500	459,400	743,900
Pierre, S. Dak	469,000	2,430,100	2,899,100
Sioux Falls, S. Dak	528,000	2,511,000	3,039,000
Winchester, Tenn	226,000	847,200	1,073,200
Austin, Tex	1,955,200	9,062,800	11,018,000
Del Rio, Tex.:			
BS	42,000	279,000	321,000
BPS Hq	52,000	427,800	479,800
Houston, Tex	125,000	1,295,500	1,420,500
Ogden, Utah	879,900	4,398,900	5,278,800
Charlottesville, Va	162,000	2,019,000	2,181,000
Cheyenne, Wyo	1,137,000	4,566,300	5,703,300
Small projects outside the District of Columbia	80,000	500,000	580,000
Chicago, Ill., additional		5,000,000	5,000,000
Total	25,474,115	155,325,000	180,799,115

The agency officials testified during the hearing that the projects contain a 5-percent contingency. The committee has eliminated fallout shelters and generally reduced each project by 7 percent. In the past the reduction has been from 5 to 15 percent. The budget estimates for new projects were compared with the actual costs experience for representative projects that have been completed or are under construction. The average cost per square foot of the completed projects was $20.95 compared to $25.88 for the new projects, excluding the Denver warehouse. The committee further notes that the construction cost index rose only 2.8 percent from 1959 to 1961 and there is no indication of a precipitous increase now.

"The committee notes there is too much lost space in many buildings. One big building in the planning stage has 2,376,000 gross square feet and the net assignable square feet is only 1,474,000. Better space utilization is essential. There is general talk among authoritative contractors that they can build 20 to 25 percent cheaper than the Government. There is no valid reason why the costs cannot be reduced.

"The prospectuses for all projects in the bill have received the necessary approvals required by law. As to individual projects the committee has reduced the cost of the GSA stores depot at Denver Colo., from $8.04 per square foot to $6, which the committee considers a more realistic figure for warehouse construction. The courthouse and Federal office building at Billings, Mont., has been deleted as there is adequate rental space in the locality at reasonable rates and the construction cost of the proposed building is so high as to raise serious question of its economic soundness."

JUSTIFICATION OF THE AMENDMENT

This amendment proposes an increase in appropriation above that reported to the House to reflect the effect of other amendments which GSA is proposing elsewhere under "Construction, public buildings projects," as set forth in the table below:

Project location	Amounts provided in House bill	Add		Restored or deleted projects	Proposed in this amendment
		Restore fallout protection	Restore cost levels		
Juneau, Alaska, PO, CT	$11,240,900	$203,000	$846,100		$12,290,000
Nogales, Ariz., BS	976,500		73,500		1,050,000
Bakersfield, Calif., FOB	1,283,400	64,000	96,600		1,444,000

Small projects outside District of Columbia	500,000				500,000
Total	155,325,000	3,340,000	12,132,100	5,372,900	176,170,000

The foregoing includes: (1) $3,340,000 for fallout shelter protection; (2) $10,662,100 to restore the general 7-percent reduction in cost estimates made by the House; (3) restoration of $1,470,000 in the limit of cost of the Denver, Colo., GSA stores depot; (4) $5,624,000 for the restoration of the Billings, Mont., courthouse and Federal office building project (fallout amount included in (1) above); and (5) deletion of $251,100 for Sault Ste. Marie, Mich., border station included in House bill.

The amount of $3,340,000 is recommended for restoration for providing fallout shelters in 30 construction projects. This is in line with the OCD policy of providing fallout shelters where appropriate in Federal buildings.

With respect to the general cost reduction for each project, the House Report No. 2050 on page 10 states "The committee has eliminated fallout shelters

and generally reduced each project by 7 percent. In the past the reduction has been from 5 to 15 percent." In this connection, it is to be noted that the limits of cost included in budget have already been reduced by an average of 7.8 percent below the estimates included in the prospectuses approved by the Public Works Committees. The limits of cost for improvements in the approved prospectuses for the 45 projects total $185.2 million; whereas the limits of cost as recommended in the appeal total $170.7 million, a reduction of $14.5 million or approximately 7.8 percent.

The committee report on page 10 also states "The committee further notes that the construction cost index rose only 2.8 percent from 1959 to 1961 and there is no indication of a precipitous increase now." The estimates for the projects included in the 1963 budget were prepared in the early part of 1961. The construction cost indexes indicate an approximate increase of 3.2 percent from January 1961 to July 1962. The greatest increase of the indexes has occurred since January 1962. The present rate of increase is 0.3 percent per month or 3.6 percent per year. The past increase of 3.2 percent plus the anticipated rise of 3.6 percent per year totals approximately 6.8 percent for the average time required to place the projects under contract since the estimates were prepared.

Since the latter part of May construction bids were received for five projects only two of which could be awarded within the funds available. It was necessary to reject bids for two projects; Chicago, Federal office building and courthouse; and Montpelier, Vt., Federal office building, as the limits of cost were insufficient to permit award and will require increases in the limits. An increase of 8 percent was required in the limit of cost for the Statesboro, Ga., project in order to permit award of the construction contract. The average cost per gross square foot for these five projects, based on bids received, is $28.09.

As a specific example of problems and difficulties encountered, as well as additional costs that accrue to the Government when appropriations are inadequate, we cite our recent experience in this connection with regard to the Chicago, Ill., Courthouse and Federal Office Building, approved by the Public Works Committees.

Limit of improvement costs in prospectus approved by Public Works Committees		$44,230,000
Amount in President's budget, fiscal year 1962		39,210,000
Amount appropriated		36,793,000
Foundation contract and total project contingencies		−8,235,000
Balance available for building construction		28,558,000
Bids received:		
1st low bid	$34,330,000	
2d low bid	34,340,000	
3d low bid	34,486,000	
High bid	35,785,940	
Deficiency in limit of cost		5,772,000

This deficiency exceeded the 10-percent flexibility authorized under existing legislation. All bids were rejected and drawings are being revised to reduce costs where possible in order that a contract may be awarded within the limit of cost of $41,793,000 proposed in the pending Independent Offices appropriation bill which includes a $5 million increase for this project.

A delay of 6 months in completion of this project is expected as it will not be possible to award a contract until November or December 1962 due to time required to revise the drawings, bidding time, etc.

As a result of the foregoing, the Government will incur approximately $1,100,000 in additional costs for retention of leased space expected to be given up, redesign and readvertising expenses, and increased construction costs.

The following is cited from page 10 of the House report: "The committee notes there is too much lost space in many buildings. One big building in the planning stage has 2,376,000 gross square feet and the net assignable square feet is only 1,474,000. Better space utilization is essential. There is general talk among authoritative contractors that they can build 20 to 25 percent cheaper than the Government. There is no valid reason why the costs cannot be reduced."

The following comments are submitted in this connection: A study made by GSA of the net to gross relationship for recent projects indicated that the buildings planned and constructed in our present program compare very favorably with similar buildings in private industry when figured on a comparable basis.

The building mentioned in the House committee report refers to the proposed FBI Building which reflects a net to gross relationship of 62 percent in the prospectus recently approved by the Public Works Committees. These figures were developed from the very earliest planning stage and do not reflect the efficiencies that could be gained after the complete study the plan would receive during the design stage of the architectural contract. The building in question will contain certain specialized laboratory features which reflect adversely on its net-to-gross ratio and will also have greater corridor areas to accommodate the large number of visitors who annually visit the headquarters of the FBI.

Billings, Mont., courthouse and Federal office building

In 1961 funds in the amount of $612,000 were made available under the "Sites and expenses" appropriation for preliminary expenses, including the acquisition of a site and for the preparation of drawings and specifications. A site was acquired at a cost of $239,000 and contracts were awarded for the design, surveys, etc., at a total cost of $208,000. The drawings and specifications are nearing completion and a construction contract is scheduled for award in October 1962.

The proposed building would provide a direct economic benefit as leased space currently occupied by Federal agencies costs the Government approximately $278,000 per annum. The original cost of the proposed building at Billings, plus the cost of maintenance and repair during life expectancy, would be less than the rental cost during a like period even if no increase in rental rate is assumed and if the continued availability of adequate commercial space is assumed.

Sault Ste. Marie, Mich., border station

The amount of $251,100 included in the House bill is recommended for deletion as a contract for the construction of this border station was awarded on June 6, 1962, financed from construction savings pursuant to authority contained in Public Law 87–141. It was necessary to award a contract for this project in June in order that the building could be ready for occupancy by November 1962 when the new International Bridge at Sault Ste. Marie, Mich., is scheduled to be completed and opened to traffic.

Denver, Colo., GSA stores depot

The drawings and specifications for the Denver, Colo., stores depot have been completed and bids can be solicited as soon as construction funds are made available. Funds for construction in the amount of $5,931,000 were included in the 1963 budget. In order to insure the receipt of acceptable bids, alternate deduct proposals have been included in the bidding documents. A review of the drawings and specifications indicate that it is not feasible to reduce the project requirements and provide a workable facility within the amount included in the House bill.

An allowance of $6 per square foot would permit construction of a warehouse suitable only for "static" storage use. It would provide minimum heating, lighting, and other facilities and would not include such items as paved areas for loading and unloading trucks and trackage for the accommodation of railway cars.

A warehouse-type facility adequately equipped to house an active stores distribution operation such as planned for Denver requires additional items such as 10,400 square feet of office and laboratory space, including equipment; 4,106 square feet of refrigerated storage space; 45,450 square feet of space for storage of flammable liquids; 19,200 square feet of humidity controlled storage; built-in automatic materials handling equipment; dock levelers; extensive paved areas; railway trackage; added fire protection construction and equipment; and larger areas of column-free space. These additional facilities and design requirements are the elements which render the Denver project cost slightly in excess of $8 per square foot.

Restoration of the reduction of $1,470,000 in improvement costs and $136,000 for fallout protection is recommended in order that this project may be constructed based on the completed drawings and specifications.

GSA Amendments Nos. 4 Through 49

CONSTRUCTION, PUBLIC BUILDINGS PROJECTS

PROPOSED AMENDMENT

On page 18, lines 12, 13, 15, 16, 17, 18, 20, 22, and 24, and on page 19, lines 2, 3, 5, 6, 10, 12, 14, 16, 18, 20, 21, 22, 23, and 25, and on page 20, lines 1, 2, 4, 5, 6, 8, 10, 12, 14, 16, 18, 20, 22, and 24, and on page 21, lines 2, 4, 6, 8, 10, 12, 13, 15, 17, 19, 21, 22, 23, and 24 of the bill as reported to the House, strike out the limits of cost on each public building project and insert the appropriate amounts shown in the table which follows.

BUDGETARY DATA

See amendment No. 3.

LEGISLATIVE HISTORY

GSA budget justifications: Pages I–84 to I–101.
House hearings: Part 2, pages 205 to 227.
House Report No. 2050: Pages 9–11 (quoted in GSA amendment No. 3).

JUSTIFICATION OF THE AMENDMENTS

Amendments Nos. 4 through 49 are directed toward increasing the limits of cost for certain projects to provide for the construction of fallout shelters, where appropriate, to comply with requirements of the national shelter policy (see amendments Nos. 2 and 3); restoration of the 7-percent reduction in cost estimates made by the House; restoration of the limit of cost for the Denver, Colo., stores depot; restoration of the Billings, Mont., courthouse and Federal office building, and deletion of the Sault Ste. Marie, Mich., border station (see amendment No. 3).

The individual amendments proposed are listed on the following page in numerical sequence.

Bill reported to House		Location of project	Amount in budget estimate	GSA proposed amendments		
Page	Line			Strike out	Insert in lieu	GSA No.

GSA Amendment No. 50

SITES AND EXPENSES, PUBLIC BUILDINGS PROJECTS

PROPOSED AMENDMENT

On page 22, line 7 of the bill as reported to the House, strike out "$16,500,000" and insert in lieu thereof "$22,000,000".

BUDGETARY DATA

1963 budget estimates		$22,000,000
1962:		
Appropriation in annual act	$25,000,000	
Transfer to S. & E.–OA	−51,000	
		24,949,000
Change 1963 from 1962		−2,949,000
1963:		
Bill as reported to House		16,500,000
(Change from budget estimate)		(−5,500,000)
Restoration proposed by this amendment		+5,500,000
Bill as changed by this amendment		22,000,000

LEGISLATIVE HISTORY

GSA budget justifications: Pages I–102 to I–107.

House Hearings: Part 2, pages 228 to 234.

House Report No. 2050: Page 11, "Sites and expenses, public buildings projects." The committee has included in the bill $16,500,000 for sites and expenses of the new projects approved since last year. Funds are not included for the FBI Building, GSA Records Center, or Geological Survey buildings in the District of Columbia at this time as substantial construction is planned or underway in the area."

JUSTIFICATION OF THE AMENDMENT

During the current session of Congress, the Public Works Committees of the House and Senate approved prospectuses for 45 construction projects under a total limit of cost of $235 million, including $31,479,000 for acquisition of the necessary land and design costs funded under the "Sites and expenses" appropriation. The House committee included funds for all but 3 of these 45 projects. The amounts required for these three projects for which no funds were provided in the bill are as follows:

FBI Building	$12,265,000
Geological Survey Building	2,125,000
Federal Records Center	650,000
Total	15,040,000
Rounded to	15,000,000

The omission of site and expense funds from the bill for these three projects will result in a setback to orderly accomplishment of the immediate and long-range planned program of construction for office and special-purpose space in the Washington, D.C. area. Although there is other construction planned or underway in Washington, the FBI Building is to provide necessary office space whereas the Geological Survey and Records Center Buildings are primarily needed to provide special-purpose space.

The three buildings will assist in relieving the shortage of space that exists in Washington since all three consolidate the agencies they will serve and provide space for their expansion. However, the important results beside consolidation will be the availability of 687,900 square feet of space at 6 locations by reassigning the space which FBI presently uses; the availability of over 200,000 square feet of space that Geological Survey is now occupying in the GSA and Interior buildings, and the release for disposal of 549,940 square feet of obsolete Records Center space.

The President's Ad Hoc Committee on Federal Office Space supports the need for additional construction in order to improve the accommodations of Federal activities in the Washington area. There also exists the problem of available sites for Federal buildings since it is in the Government's interest to obtain sites in the Washington area before costly renovation and/or construction takes place. This is especially true for the tentatively proposed FBI site.

For the above reasons and other justifications enumerated in the prospectuses for these buildings, it is requested that the $5.5 million reduction in this appropriation be restored. This will permit us to go forward on all projects except the one for the FBI.

GSA Amendment No. 51

OPERATING EXPENSES, FEDERAL SUPPLY SERVICE

PROPOSED AMENDMENT

On page 23, line 7, of the bill as reported to the House, strike out "$40,000,000" and insert in lieu thereof "$42,683,000".

BUDGETARY DATA

1963 budget estimate		$42,683,000
1962:		
Appropriation in annual act	$35,903,000	
Supplemental appropriation	2,900,000	
Transfers	−3,927,500	
		34,875,500
Change in 1963 from 1962		+7,807,500
1963:		
Bill as reported to House		40,000,000
(Change from budget estimate)		(−2,683,000)
Restoration proposed by this amendment		+2,683,000
Bill as changed by this amendment		42,683,000

LEGISLATIVE HISTORY

GSA Budget Justifications: Pages II–3 to II–37.

House hearings: Part 2, pages 266 to 311.

House Report No. 2050: Page 11, "Operating expenses, Federal Supply Service.—The amount recommended for supply activities in 1963 is $40 million, a reduction of $2,683,000 in the budget estimate. The comparable amount for 1962 is $34,875,500. The language of the bill consolidates into one item all supply activities which have previously been provided for under two separate appropriation headings. The increase supports the rising sales volume of the GSA supply system. Total sales are estimated at well over $1 billion in 1963 and warehouse sales are expected to rise from $220 million in 1962 to $258.5 million in the next fiscal year."

JUSTIFICATION OF THE AMENDMENT

The House report states, "total sales are estimated at well over $1 billion in 1963, and warehouse sales are expected to rise from $220 million in 1962 to $258.5 million in the next fiscal year." This statement indicates that the House committee agrees with the estimated volumes presented in the budget request. Because other activity increases are minor it would be necessary to apply the full reduction of $2,683,000 to the supply operations activities. Therefore, if these funds are not restored, the proposed sales levels cannot be achieved and this would result in a failure to fulfill the GSA commitments for supply support to the Department of Defense, including the MILSTRIP application which became operational July 1, 1962.

The total procurement program for 1962 was $1,187.9 million, based on preliminary reports, as compared to an estimate of $1,134.6 million included in the 1962 column of the 1963 budget. Warehouse sales for 1962 were $229.6 million, as compared to the estimate of $220 million in the 1962 column of the 1963 budget. The result of the 1962 operations clearly indicates that the volumes

projected in the budget estimate for 1963 are too conservative, and it is now apparent that these estimates will be substantially exceeded.

History of stores stock sales forecast

[In millions of dollars]

	Original budget	Actual	Increase
1960	$150.0	$154.3	$4.3
1961	171.7	183.2	11.5
1962	190.0	229.6	39.6

The increases over the original budget in each case had to be covered by supplemental budget requests to the Congress.

It is emphasized that even the projected 1963 increases of $28.9 million in warehouse sales and $116.6 million in total procurement, over those actually accomplished in 1962 cannot be accomplished without full restoration of the increases requested in the budget estimate for (*a*) operating a warehouse system which, in 1963, will handle well over $258.5 million in sales; (*b*) space to warehouse additional stock required by the expanding sales program; (*c*) additional buying of commodities; (*d*) increased and improved inspection of commodities to insure quality; and (*e*) administrative support for the foregoing. The budget estimate for 1963 reflects a balance between all of these elements, which years of experience have demonstrated to be essential for conducting efficient, economical operations.

It is urged that the item be restored to the full amount of the budget estimate.

GSA Amendment No. 52

GENERAL SUPPLY FUND

PROPOSED AMENDMENT

On page 23, line 11, of the bill as reported to the House, strike out "$10,000,000" and insert in lieu thereof "$17,000,000".

BUDGETARY DATA

1963 budget estimate		$17,000,000
1962:		
Appropriation in annual act	$6,000,000

Bill as changed by this amendment		17,000,000

LEGISLATIVE HISTORY

GSA budget justifications: Pages II–38 to II–59.

House hearings: Part 2, pages 312 to 320.

House Report No. 2050: Page 11, "General supply fund: A $10 million increase in capital for the supply fund is recommended instead of $17 million as proposed in the budget. Inasmuch as the volume of sales financed through the fund is growing, a limited increase in capital is necessary. The Bureau of the Budget is again urged to check to see that all agencies are paying their bills on time."

JUSTIFICATION OF THE AMENDMENT

The budget request of $17 million is essential to provide for the steadily increasing volume of stores sales and other activities financed through the General Supply Fund. The House committee did not indicate that they disagree with the projected volume. However, in allowing only $10 million, sufficient capital is not provided to meet sharply rising customer demands for supplies and services financed through this fund.

The total sales financed through the fund were estimated at $409.1 million for 1962 and $501.2 million in 1963 at the time the budget request was submitted. Actual sales for 1962 were $437.4 million, based on preliminary reports, an increase of $28.3 million over the original estimate for that year. This sharp increase and overall upward trend indicates the 1963 estimate will also be substantially exceeded. The table on the following page reflects the actual 1962 results and the revised 1963 projection for capital requirements.

The actual cash balance as of June 30, 1962, was $17 million including the $7.5 million provided by Public Law 87–545, approved July 25, 1962. In view of the fact that payables are in the magnitude of $35 million this cash balance is considered insufficient to insure prompt payment of bills, maintain good relations with industry, and take advantage of discounts offered.

To maintain even this balance, customer agencies advanced in excess of $42 million to finance the activities under this fund. Dependence upon customer agencies for advances to the extent required in 1962 is considered very dangerous since these agencies may have to withdraw them at any time for their own use. To plan on advances in 1963 beyond the $31 million contemplated in 1963 budget estimate, and which has been adjusted to $36.3 million in the following table, is not a solution to the problem of a shortage in appropriated capital, and could well result in the situation of inadequate financing which this committee criticized in its Report No. 85, dated March 24, 1961.

The House report states, "* * * The Bureau of the Budget is again urged to check to see that all agencies are paying their bills on time." In this connection GSA has been actively pursuing ways of reducing delinquent accounts, and customer agencies have been advised that any bill over 30 days old will be considered delinquent instead of 45 days as in the past. In the 1963 estimate accounts receivable are reduced to the minimum level and take into consideration procedures implemented to reduce delinquencies.

Inventory cannot be reduced below the level forecast, in the face of sharply rising customer demands, without impairing supply performance and increasing both administrative costs and price paid for merchandise. Equipment is required at the level forecast to provide for customer demands for motor pool services.

It is urged that the item be restored to the full amount of the budget estimate.

Comparative statement of capital

	1962 actual [1]	1963 estimate adjusted	Change	Explanation
1. Capital available:	*Millions*	*Millions*	*Millions*	
Appropriated	$129.2	$146.2	+$17.0	Increase required to support total sales volume of $501,200,000.
Donated	10.7	16.1	+5.4	Increase due to transfer of $5,000,000 DOD inventory and $400,000 of motor vehicles for pool consolidations.
Total	139.9	162.3	+22.4	
2. Applied financing:				
Inventory	94.8	109.5	+14.7	
In depot	88.8	106.5	+17.7	Increase required to support sales with approximate 3 times stock turn.
In transit	6.0	3.0	−3.0	
Equipment	30.5	34.0	+3.5	Increase primarily for additional motor vehicles to meet customer demand for service and activation of 9 new pools for total of 75.
Accounts receivable	80.0	71.0	−9.0	Decrease reflects improvements in collections contemplated in 1963 resulting from changes in billing and collection procedures.
Cash	17.0	19.0	+2.0	Increase to provide for minimum requirements to pay bills promptly and take discounts offered.
Other assets	.9	.3	−.6	
Total investment in assets	223.2	233.8	+10.6	
Less:				
Accounts payable	34.9	32.9	−2.0	Decrease reflects improved payment practices.
Unfunded leave liability	.1	.1		
Advance from other agencies	42.9	36.3	−6.6	Decrease reflects maximum advances obtainable from customers. $10,000,000 of the 1962 balance was an emergency advance received from customers to provide cash pending action on 2d supplemental appropriation bill. This $10,000,000 must be returned to customer agencies.
Earnings	5.4	2.2	−3.2	Decrease reflects change in prices to customers.
Total liabilities	83.3	71.5	−11.8	
Total applied (net)	139.9	162.3	+22.4

GSA Amendment No. 53

OPERATING EXPENSES, NATIONAL ARCHIVES AND RECORDS SERVICE

PROPOSED AMENDMENT

On page 23, line 25, of the bill as reported to the House, strike out "$14,050,000" and insert in lieu thereof "$14,500,000".

BUDGETARY DATA

1963 budget estimate		$14,500,000
1962:		
Appropriation in annual act	$14,000,000	
Transfer to S. & E.–OA	−32,200	
		13,967,800
Change, 1963 from 1962		+532,200
1963:		
Bill as reported to House		14,050,000
(Change from budget estimate)		(−450,000)
Restoration proposed by this amendment		+450,000
Bill as changed by this amendment		14,500,000

LEGISLATIVE HISTORY

GSA budget justifications: Pages II–85 to II–105.
House hearings: Part 2, pages 350 to 369.
House Report No. 2050: Page 11: "Operating expenses, National Archives and Records Service: Management of the Government's archives and records and operation of Presidential libraries are provided by this appropriation. The bill includes $14,050,000 to continue the same level of funding as in the past year except for minor increases requested for the Hoover and Eisenhower Libraries. It is a reduction of $450,000 in the budget estimate."

JUSTIFICATION OF THE AMENDMENT

The House committee's reduction of funds to the 1962 level of funding eliminates financial provision to meet an urgent need to initiate a disposal microfilming program to relieve the critical space problem in the National Archives Building for storage of permanent records, as well as for a modest expansion of regional records centers functions.

Microfilming

Restoration of the full amount of $340,000 of the House committee's reduction for microfilming is requested to provide minimum funds to initiate the vital program to alleviate the critical storage problem in the National Archives Building, and thus preclude possible irreparable damage to vast quantities of permanent records through storage in substandard space.

As outlined in the budget document, the microfilming program would provide for preservation on microfilm of between 12,000 and 15,000 cubic feet of records annually, equal to about 25 percent of the estimated annual increment of permanent records in the Federal Government. Disposal microfilming operations are such that it would be uneconomical to initiate this program on a scale less than an annual level of $600,000. Full restoration of the $340,000 is necessary if we are to reach this minimum level by the end of fiscal year 1963.

Regional records centers

Restoration of $110,000 of the House committee's reduction is requested to provide for handling an additional 254,000 cubic feet of records workload in accessioning, disposal, and reference services. The budget estimate sets out the workload anticipated in 1963, resulting from expanding requirements of civilian and military agencies for records centers service.

Workload data in cubic feet

	1962	1963	Increase over 1962 level of funding
Records in custody beginning of year	5,362,236	5,586,236	224,000
Records accessioned	737,000	750,000	13,000
Records disposed of	513,000	530,000	17,000
Total workload-records administered	6,612,236	6,866,236	254,000

GSA Amendment No. 54

OPERATING EXPENSES, TRANSPORTATION AND COMMUNICATIONS SERVICE

PROPOSED AMENDMENT

On page 24, line 7, of the bill as reported to the House, strike out "$4,097,000" and insert in lieu thereof "$4,435,000".

BUDGETARY DATA

1963 budget estimate		$4,435,000
1962:		
Appropriation in annual act	$2,400,000	
Transfers, net	1,276,400	
		3,676,400
Change in 1963 from 1962		+758,600
1963:		
Bill as reported to House		4,097,000
(Change from budget estimate)		(−338,000)
Restoration proposed by this amendment		+338,000
Bill as changed by the amendment		4,435,000

LEGISLATIVE HISTORY

GSA budget justifications: Pages II–108 to II–123.

House hearings: Part 2, pages 370–401.

House Report No. 2050: Page 12, "Operating expenses, Transportation and Communications Service: The committee recommends $4,097,000 for this new service to improve management of transportation, communications, and utility services for all civilian agencies. The comparable total for 1962 is $3,696,400. The increase of $400,600 in 1963 is for work related to establishing a new unified telecommunications system to be administered by GSA to connect some 8,000 Government offices in approximately 1,750 cities and towns in the 50 States and the Commonwealth of Puerto Rico and the Virgin Islands. The system is to be compatible with Department of Defense communication systems."

JUSTIFICATION OF THE AMENDMENT

1. The increase over 1962, if applied as directed by the House committee, to work related to establishing a new unified telecommunications system, will still be $62,000 short of providing for a full year's staffing and the necessary research and development required to meet phased objectives, of which several examples follow:

(*a*) All plans and requirements for a nationwide circuit switching system encompassing 350 cities must be completed by August 1, 1963, to permit the last 150 cities to be connected by January 1, 1965.

(*b*) All engineering and contractual arrangements necessary to complete the connection of 200 of the 350 cities by July 1, 1964, must be completed by August 1, 1963.

(*c*) In order to establish electronic switching centers and associated concentrators and interchange circuitry to provide a store-forward system by no later than March 1965, the precise system must be engineered and specifications prepared by January 1963, so that a contract can be awarded no later than July 1963.

Partial and total consolidations of switchboards already scheduled during fiscal 1963 in the first 12 cities of the 47 planned in that year will generate annual economies of $200,000.

Timely accomplishment of all phased objectives in both voice and record systems will result in further economies and savings in communication costs to the several Government agencies.

2. The balance of the reduction, $276,000, would have to be applied to transportation services in the regional offices where the demand for this service is constantly growing. The greatest need is in support of the rapidly expanding FSS supply program with respect to DOD, further accelerated by the institution of "milstrip."

The 1963 estimate for providing these transportation services to FSS was predicated on a stores stock sales volume of $258.5 million, which was an increase from the $220 million in 1962. Experience in 1962 emphasized again that estimates of sales volumes made a year in advance have been exceeded by actual transactions. The sales volume reported for the month of July was the highest in GSA's history and clearly indicates that the $258.5 million will prove to be too low.

In view of the fact that these volumes are developing, transportation services to keep pace with this expansion will reflect heavy increases in common carrier tariff rate quotations, rate negotiations, and loss and damage claims evaluations, which cannot be absorbed by present regional staffing. It is essential that these funds be restored to provide for additional staffing so that TCS will be able to furnish the necessary services to FSS in the regional offices to assure effective FSS–DOD supply support.

Another effect of this reduction would be to further delay traffic management assistance to an additional 32 agencies which was planned in 1963 and subsequent years. This program, which results in improved transportation practices, would also generate savings to the Government.

GSA Amendment No. 55

STRATEGIC AND CRITICAL MATERIALS

PROPOSED AMENDMENT

On page 24, line 25, and page 25, line 1, of the bill as reported to the House, strike out "$18,000,000", and insert in lieu thereof "$32,735,000".

BUDGETARY DATA

1963 budget estimate		$38,000,000
1962:		
Appropriation in annual act	$40,000,000	
Transfer to S. & E.-OA	−22,700	
		39,977,300
Change 1963 from 1962		−1,977,300
1963:		
Bill as reported to House (from proceeds of sales)		18,000,000
Change from Budget estimate, appropriations		(−38,000,000)
Restoration proposed by this amendment (from proceeds of sales)		+14,735,000
Bill as changed by this amendment (from proceeds of sales)		32,735,000

LEGISLATIVE HISTORY

GSA budget justifications: Pages III–2 to III–32.

House hearings: Part 2, pages 103–106, 108–112 and 402 to 479.

House Report No. 2050: Page 12, "Strategic and critical materials: It has been the position of the committee for some 4 or 5 years that from $3 to $5 billion worth of stockpile materials could be disposed of without crippling our national defense effort. In the hearings the Administrator stated that disposal of excess materials over and above the objectives is being given greater emphasis. He expressed the conviction that between $600 and $800 million a year could be disposed of without causing serious disruption to either the domestic or foreign markets or crippling prices. The committee is hopeful that an early decision can be made to dispose of substantial quantities and save storage and maintenance costs on materials not needed.

"To maintain the stockpile in the next fiscal year the committee recommends that $18 million of proceeds from sales of materials be used instead of $38 million by appropriation. Such amount includes $12 million for storage costs and expenses related to disposal of materials, $2 million to maintain the national industrial equipment reserve, $3 million for operating expenses and $1 million for acquisition of new materials for which there is still a defense need."

JUSTIFICATION OF THE AMENDMENT

The House committee reduced the request for funds to carry out the Strategic and Critical Materials Stock Piling Act from $38 million to $18 million, and inserted language providing that financing was "to be derived from sales of strategic and critical materials during the current fiscal year." By reference

to the House report quoted above, it is apparently intended that the upgrading and rotation of strategic materials be completely eliminated. The reduction in financing to $18 million would also drastically curtail amounts available for disposal activities, emergency repairs to warehouses and protection of materials stored, and the program for the relocation of strategic materials designed to achieve future economies. The House committee alowances, pursuant to the wording of the House report, and revised estimates, are reflected in the following table:

Activity	1963 budget estimate	House committee allowance	Amended request
1. Acquisition of materials:			
(a) New materials	$1,408,000	$1,000,000	$1,000,000
(b) Upgrading materials	1,735,000	0	1,735,000
Total	3,143,000	1,000,000	2,735,000
2. Inventory management:			
(a) Rotation of materials (gross)	14,507,000	0	10,000,000
(b) Storage of materials	13,261,000	----------	----------
(c) Disposal of materials	2,171,000	----------	----------
Subtotal ((b) and (c))	15,432,000	12,000,000	15,000,000
Total, inventory management	29,939,000	12,000,000	25,000,000
3. National industrial equipment reserve:			
(a) Transportation, processing, and storage (gross)	1,918,000	2,000,000	2,000,000
4. Operating expenses	3,000,000	3,000,000	3,000,000
Total obligations	38,000,000	18,000,000	32,735,000

1(*a*). Acquisition of new materials: The projected purchase program for 1963 provided for acquisition of only three materials: chrysotile asbestos, diamond dies, and jewel bearings, as well as transportation and handling for deliveries of materials contracted for in prior years. The reduced allowance will be sufficient to provide for acquisition of the jewel bearings. Since attempts are being made to acquire the asbestos and diamond dies through the CCC barter program, no appeal is made in this connection.

1(*b*). The proposed upgrading program for 1963 provided for processing of columbite-tantalite concentrates, and tantalite-columbite concentrates to various higher use forms of columbium and tantalum; castor oil to sebacic acid; and opium to morphine and codeine. The total estimated cost of the projected upgrading program including processing, transportation, and handling is $6,900,000, of which $5,165,000 is expected to be covered by utilizing surplus strategic materials in the national stockpile and the Defense Production Act inventory as partial payment, leaving only $1,735,000 requested as direct financing to cover transportion and handling costs, and a limited amount of the processing cost.

In accordance with the general provisions of the Stock Piling Act, the OEP has developed requirements for stockpiling upgraded forms of certain materials in order to provide a minimum readiness inventory to meet the initial surge of demand under abnormal conditions of intensive mobilization. Such upgrading is carefully limited so as not to impair flexibility of use. Provision for a minmium readiness of upgraded forms is considered essential to the national defense, and a thoroughly justifiable program, particularly since it will be accomplished mainly through the utilization of excess materials.

2(*a*). The Stockpile Act provides for rotation of materials where necessary to prevent deterioration. The optimum rotation cycle considering maximum age of usability and rotation costs is determined after careful testing and study. Based on the above, and the present status of the inventory of cordage fibers, the following program is required:

Abaca fiber (5 years or older) 23,000,000 pounds at 35 cents	$8,000,000
Sisal fiber (7 years or older) 14,300,000 pounds at 14 cents	2,000,000
Gross cost of replacement	10,000,000

Gross requirements for funding this program are $10 million; however, receipts from sales of outgoing material are estimated at $8.6 million; therefore, the

net cost to the Treasury is only $1.4 million. It is possible to decrease the original estimate of sisal to be rotated in 1963 due to heavier than anticipated rotation transactions during the latter part of 1962. We are continuing to study test results concerning the deterioration of these fibers. If such results indicate that the rotation cycle may be lengthened, the rotation program will be promptly adjusted accordingly.

2 (*b*) and (*c*). Storage and disposal of materials: The House committee allowed $12 million for these activities as compared with $14,495,000 provided in fiscal year 1962, and $15,432,000 requested in 1963. Of the total request for 1963, $10,200,000 represents fixed recurring charges for open, closed, and tank storage of strategic materials valued at more than $7 billion. The balance of $1.8 million would have to be applied to the disposal program leaving no funds available for emergency repairs of warehouses, or special care and repackaging of strategic materials due to damage from fire, storm, or flood. Proposals for relocation of materials due to deactivation of depots which would provide future economies, and to relocate materials for dispersal reasons in accordance with OEP directives, would have to be deferred. For the above reasons, it is requested that $15 million be provided for these programs. Some savings over the original estimate are anticipated through the transfer of responsibility for long-staple cotton of foreign origin to the Department of Agriculture.

GSA Amendment No. 56

STRATEGIC AND CRITICAL MATERIALS

PROPOSED AMENDMENT

On page 25, line 2, of the bill as reported to the House, strike out "during the current fiscal year".

BUDGETARY DATA

None applicable. See GSA amendment No. 55.

LEGISLATIVE HISTORY

GSA budget justifications: None applicable.

House hearings: None applicable.

House Report No. 2050: Page 12, "To maintain the stockpile in the next fiscal year the committee recommends that $18 million of proceeds from sales of materials be used instead of $38 million by appropriation. Such amount includes $12 million for storage costs and expenses related to disposal of materials, $2 million to maintain the national industrial equipment reserve, $3 million for operating expenses, and $1 million for acquisition of new materials for which there is still a defense need."

JUSTIFICATION OF THE AMENDMENT

The General Services Administration has consistently and repeatedly recommended the disposal of excess strategic and critical materials as rapidly as possible without disrupting markets or crippling prices. The House committee was assured, and this committee may also be assured, that every effort will be made to dispose of such materials as expeditiously as possible, and we have no doubt that proceeds from sales will far exceed program expenses on a cumulative basis. Therefore, there is no objection to the proposal that this program be financed from the proceeds of sales of these materials.

However, that part of the proposed language requiring that only proceeds from sales "during the current fiscal year" may be used for funding would place the entire program in jeopardy because of variations in sales volumes, and the timing of Treasury receipts. Although adequate sales might be made in July of "the current fiscal year" equal to or in excess of early fiscal year expenditures, actual delivery or pickup of materials and actual receipt of payments in some cases would not occur for a month or more after the sales actions are consummated. Thus, payrolls and payment of Government bills would have to be held up until covered by actual receipts from current year sales.

The volume of sales of strategic materials will continue to be subject to considerable variation, and could be drastically affected by the necessary time factor involved in securing concurrence of executive and legislative branches of the

Government, and changes in domestic and worldwide economic conditions. Therefore, it is strongly recommended that the words "during the current fiscal year" be eliminated from the language. This would be consistent with similar provisions for financing our Utilization and Disposal Service.

GSA Amendment No. 57

STRATEGIC AND CRITICAL MATERIALS

PROPOSED AMENDMENT

On page 25, line 19, of the bill as reported to the House, strike out all after "Treasury" and insert in lieu thereof ": *Provided further*, That during the current fiscal year materials in the inventory maintained under the Defense Production Act of 1950, as amended, and, after compliance with the disposal requirements of section 3(e) of the Strategic and Critical Materials Stock Piling Act, excess materials in the national stockpile established pursuant to that Act, shall be available, without reimbursement, for transfer at fair market value to contractors as payment for expenses of refining, processing, or otherwise beneficiating materials, pursuant to section 3(c) of the Strategic and Critical Materials Stock Piling Act, into a form best suitable for stockpiling."

BUDGETARY DATA

None applicable. See GSA amendment No. 55.

LEGISLATIVE HISTORY

GSA budget justifications: Page III–7.
House hearings: Part 2, pages 451–452.
House Report No. 2050: Page 12, "Strategic and Critical Materials. * * * The committee has omitted language contained in the bill last year authorizing materials in the inventory to be used for payment in kind for expenses of beneficiating materials pending a decision on future policies related to stockpiling."

JUSTIFICATION OF THE AMENDMENT

The House committee eliminated funds for the upgrading program and also eliminated the above language now proposed to be reinserted to provide substantive authority for use of excess materials in the national stockpile or the Defense Production Act inventory in payment for the processing costs of upgrading, in lieu of cash.

As stated above, OEP, after interagency advice, establishes requirements for stockpiling upgraded forms of certain strategic materials and issues directives each year for specific quantities to be obtained through upgrading of existing material in the stockpile. Arrangements are made with contractors, wherever possible, for payment of processing costs by transfer of surplus materials at fair market value. For example, during fiscal year 1962 more than $1 million worth of excess cathode copper, aluminum, and tungsten concentrates were covered in contracts as payment for the processing costs of columbium carbide powder, tantalum carbide powder, ferrovanadium, and oxygen-free high-conductivity (OFHC) copper.

Language permitting use of excess materials in the DPA inventory for payment for such costs was authorized by the Congress for 1962. It is proposed that the language be broadened to permit the use of excess materials in the national stockpile also, for this purpose. Use will be made of national stockpile material only when it is provided for in a published disposal plan submitted to the Congress.

Approval of this amendment, as well as amendment No. 55, is indispensable to the upgrading program.

GSA Amendment No. 58

ADMINISTRATIVE OPERATIONS FUND

PROPOSED AMENDMENT

On page 26, line 23, of the bill as reported to the House, strike out "$11,100,000" and insert in lieu thereof "$12,131,000".

BUDGETARY DATA

1963 budget estimate (limitation		$12,131,000
1962:		
Limitation in annual act	$14,566,450	
Supplementals (Public Law 87-332)	695,000	
Transfers, net	−4,189,000	
		11,071,550
Change in 1963 from 1962		+1,059,450
1963:		
Bill as reported to House		11,110,000
(Change from budget estimate)		(−1,031,000)
Restoration proposed by this amendment		+1,031,000
Bill as changed by this amendment		12,131,000

LEGISLATIVE HISTORY

GSA budget justifications: Pages III–56 to III–92.

House hearings: Part 2, pages 501 to 532.

House Report No. 2050: Page 12, "Administrative operations fund: A limitation of $11,100,000 is included for administrative, financial, and legal services for all GSA programs. The comparable amount for 1962 is $11,071,550. Automatic data processing services which previously have been included in this limitation are excluded in 1963."

JUSTIFICATION OF THE AMENDMENT

Original estimates of requirements for integrated staff services including financial, administrative and legal services were directly related to the workload and appropriation requests for the various programs. In many program areas the estimates for administrative support contemplated a decrease in unit costs or in the cost ratio in relation to program costs.
