Mrs. ROWE. When the original Cultural Center Act was passed by the Congress the Planning Commission was directed to acquire the site. It was the understanding at that time, and it is so stated in the bill, that the site is to be provided by the Federal Government. Now, the Planning Commission serves as the purchasing agent for the Federal Government for the park and playground system of the District.

The Capper-Cramton funds which were available to be used are funds that are reimbursed to the Federal Treasury by the District of Columbia government. So, in effect, the $800,000 which was originally appropriated as Federal money has been or will be repaid by the District of Columbia. In effect the site, then, up to date has been provided by the District rather than by the Federal Government.

This is in addition to the more than 4 acres which the District provides as the result of street closings and some excess land left over from the Inner Loop Freeway. Much of this had happened in the Planning Commission before I was a member of the Planning Commission and before many of its present members were appointed. It had been our understanding that this method of site acquisition was a good one and a proper one, but that it was the Congress' intention to reimburse the Capper-Cramton funds which are used for playground and park acquisition in the District of Columbia.

DEFICIENCY IN PLAYGROUND AND PLAY SPACE

The extra $95,000 that was voted was voted by the Commission with this firmly in mind. All of us know that many parts of the city are deficient in playground and play space, particularly east of the Capitol; $800,000 could go a long way to finishing the park acquisition in the Watts Branch area of Anacostia where land can still be acquired because there is a good bit of open land, but where the population is really exploding, and where recreation areas could provide a good environment for people to live and raise their families.

I would feel that I must make this plea for the restitution of funds to the District Park and Playground Act. It has certainly been the understanding of the Commission since I have been a member, that these funds would be reimbursed for the District Park and Playground program.

Senator BIBLE. Can that be done within the framework of the Capper-Cramton Act, if you have used up all of your authorizied money?

CAPPER-CRAMTON ACT FUNDS EXHAUSTED

Mr. SHEAR. No, sir, the $1,300,000 requested for land acquisition for the parkway and playground system is requested under the authority of section 2 of the act of June 6, 1924, which is the legislation authorizing the Planning Commission to acquire land in the National Capital region for such purposes within the limit of appropriations made available therefor.

The money is not sought under the authority of the Capper-Cramton Act which, as you point out, is exhausted.

Senator BIBLE. I understood you to say it was, so I was using you as my authority.

Mr. SHEAR. That is correct. The funds would be used for Capper-Cramton type purposes, namely, parks and playgrounds in the District of Columbia, but would not be appropriated under the authority of the Capper-Cramton Act, but under the authority of the act of June 6, 1924.

PLAYGROUND ACQUISITION FUNDS

Senator BIBLE. I think the record is clear on that. And your position is that those funds should be restored because you need funds for additional playground acquisition, do I understand that correctly?

Mrs. ROWE. That is correct, Senator.

Senator BIBLE. And you are short in playground acquisition funds how much money that has been reprogramed?

Mr. SHEAR. $800,000.

Senator BIBLE. $800,000 is the figure?

NATIONAL CULTURAL CENTER FUNDS

The CLERK. In fiscal 1960 the Congress appropriated $350,000 under the justification of the National Capital Planning Commission specifically for the National Cultural Center. The question is, of the $800,000, why should that $350,000 be replaced, since that wasn't appropriated for any thing but the National Cultural Center.

Mrs. ROWE. It went into the Capper-Cramton funds which were set up for the purpose of playground and park acquisition within the District. I am not a lawyer, but I thought that this was a method of making the funds available for the site acquisition, that this was an existing, going program, and those funds could be added to it.

CAPPER-CRAMTON FUNDS

Mr. DUTTON. They did use up part of the authorization of the Capper-Cramton funds. So that we are inhibited from asking further funds under Capper-Cramton to replace that.

Senator BIBLE. Will you repeat that last answer, and I think we will have the record in satisfactory shape.

Mr. DUTTON. Therefore, we are inhibited under the Capper-Cramton program from asking for these additional funds because they have been utilized already on behalf of the Cultural Center.

Senator BIBLE. So for that reason your position is that the restoration of the full $800,000 in order to meet the original stated purpose of creating more recreation areas and playgrounds in the District of Columbia; is that a correct statement?

Mrs. ROWE. That is correct.

Senator BIBLE. And because, among other things, the full $16 million in the Capper-Cramton Act that has been set aside for those purposes has been completely exhausted. I think I understand it now. And I want to get the record abundantly clear on it so that we can explain it for our colleagues.

Mr. Chairman, any questions?

Senator HAYDEN. No questions.

Senator BIBLE. Thank you very much Mrs. Rowe for a very able presentation. I hope we can be of help.

Do we have any further testimony on the National Capital Planning Commission or the Regional Planning Commission?

Mr. PICKENS. Mr. Chairman, I don't know whether you wish to hear the justification for the three positions.

Senator BIBLE. Yes, indeed I do, because I think you should at least furnish the justification for the record.

REGIONAL PLANNING COUNCIL

Mr. PICKENS. We certainly ought to justify the three.

I am sure you are familiar with the responsibility of the Regional Planning Council. And to answer your question on implementation, at the present time I think at least half of the members of the Regional Planning Council are also members of their local governing bodies. I, for example, am a member of the Alexandria City Council. And since your studies, most of this has taken place. As you know, the Planning Council moved very slowly during the early years, and it has been the last several years that it has had a much greater development, and its activities have greatly increased. And we have a general development plan now underway. We have a study of Federal facilities, a review of Federal facilities in the suburbs, and we have a review of the local and subregional plans and proposals.

JUSTIFICATION FOR NEW POSITIONS

And we also have a review of special purpose agency plans such as the National Capital Transportation Agency. We reviewed all the open-space applications, of which there have been nine in number, for a total cost of about $16 million. And we have the preparation of special studies and reports. And I would ask our director just very briefly to give you the justification for this one new urban planner, the GS–12, and two new stenographic positions, a GS–5 and a GS–6.

Senator BIBLE. Certainly. We would be very happy to have you do that, sir.

Mr. HELLER. Our staff, Mr. Chairman, is composed of three planners aside from direction, and supporting stenographic help. We are hoping this coming fiscal year to subdivide the staff internally into four functional categories: One, the Advanced Planning Division; two, a Regional Coordination Division; three, a Regional Transportation Planning Division, and lastly, a Regional Research Division.

URBAN PLANNER POSITION

The additional position is needed to fill the transportation planning needs and to head up this division. And the regional planning council has exercised a rather historic transportation planning function by

being one of the co-authors of the MTS study. We also reviewed such special purpose agencies plans as the National Capital Transportation Agency. In addition, we work with and through the local and sub-regional planning agency of which there are 14 besides ourselves of the National Capital region.

Stenographic Positions

We work with the highway departments of the various jurisdictions and the States, so that our transportation and highway responsibilities, and review responsibilities, are on the definite increase. We hope to use the present three positions to fill the other of the four divisions. In addition, we have at the present time just one secretary servicing five professionals. And this is the reason for asking for the additional two stenographers.

Senator Bible. That would seem to be reasonable. You have yourself, a deputy director, three urban planners, and one statistic clerk. And so you have one secretary in effect taking dictation from about five of you.

Mr. Heller. Yes, at present, and of course, from time to time we lean on the staff of the National Capital Planning Commission because we simply get into a bind on this.

Transportation Planner Position

Senator Bible. I can certainly understand that problem. And you are programing an additional transportation planner?

Mr. Heller. Yes, sir. And we are also in transportation, as the regional planner council, working with and through the suburban jurisdiction as well as the National Capital Planning Commission and the District of Columbia, and have been taking the lead in attempting to comply with the Federal Aid Highway Act of 1962. We have already promulgated a memorandum of agreement relative to establishing a Transportation Advisory Committee for the area as required by the Federal Aid Highway Act of 1962. Our role in this particular aspect is definitely on the increase.

The Regional Planning Council has been operating at the rate of approximately $0.04 per capita; and we are asking for fiscal 1965 only $0.06 per capita. The following table illustrates the relative position of the Regional Planning Council when compared with other planning agencies of the National Capital region which serve fewer people and have much smaller geographic areas of responsibility.

(The table referred to follows:)

Financial ranking of region's planning agencies (fiscal 1963 budgets and estimated 1963 populations)

Rank	Name	Budget	Population served	Cost per capita
1	Maryland-N.C.P.and P.C.	$964,800	770,000	$1.25
2	NCPC	467,000	795,000	.59
3	Fairfax County	379,500	328,000	1.16
4	Arlington County	228,700	175,000	1.31
5	Northern Virginia R.P. & E.D.C.	100,000	705,000	.14
6	NCRPC	83,800	2,323,000	.04
7	Alexandria	70,000	102,000	.69
8	Prince William County	45,700	62,000	.74
9	Loudoun County	33,300	27,000	1.23
10	Rockville, Md.	24,000	33,000	.73
11	Falls Church, Fairfax, and Vienna	25,900	43,000	.60
	Total, National Capital region	2,411,700	2,323,000	1.04

Senator BIBLE. I very much appreciate your testimony.

Mr. PICKENS. I will submit my statement to save time.

Senator BIBLE. The statement will be incorporated in the record.

(The statement referred to follows:)

STATEMENT BY JOHN K. PICKENS, CHAIRMAN, NATIONAL CAPITAL REGIONAL PLANNING COUNCIL

The Regional Planning Council has been in existence for 11 years, and, as the official top level planning agency for the National Capital Region, it has the broadest area of responsibility of all planning agencies in the region which encompasses approximately 2,400 square miles of area and contains two and a quarter million people.

The Regional Planning Council's primary responsibilities are to assemble and maintain a general plan for the development of the region and to reconcile the land-use requirements of the Federal installations beyond the District boundaries with the land-use requirements of/in each locality. Therefore, the Regional Planning Council's function is also that of a coordinator and catalyst serving as a central intelligence operation and clearinghouse on all planning and development matters having regional significance.

Like its sister agency, the National Capital Planning Commission, it was created by Public Law 592 in 1952. It was not until 1954, however, that the Planning Council had its own Director and budget. At the present time the Regional Planning Council has a total of seven staff people, which includes five professionals, one secretary, and one statistical clerk.

Because of the responsibility placed upon the Regional Planning Council by the enabling act, and the scope of the National Capital area and problems with which the Council must grapple, it has had difficulty over recent years in functioning as it was intended. Because of this the Council is now attempting to organize its staff internally on a functional basis in the hope of improving its performance and to serve the region and the various governmental jurisdictions more effectively. Specifically, in fiscal 1965 the Council hopes to subdivide its staff into four basic functional categories or divisions. These are (1) Advanced Planning Division, responsible for carrying out comprehensive planning and the development of a 1980, and later a year 2000, general plan; (2) Regional Coordination Division, responsible for the review of all current local, subregional, and Federal plans to guarantee the harmonious and coordinated relationship of these proposals to insure that they properly conform to the overall framework as prepared by the Comprehensive Planning Division; (3) Regional Transportation Planning Division, to carry out the traditional responsibilities of the Regional Planning Council by virtue of its participation in the 1959 mass transit study, the assistance which the Council provided in establishing the National Capital Transportation Agency, and its proposals, and to function as the continuing liaison with various other local and regional transportation bodies, to guarantee that all proposals are properly related to the comprehensive plan; and (4) Regional Research Division, to assemble and maintain adequate data on a regional basis pertaining to population, housing, land use, and the like together with projections in each to key years.

The Regional Research Division will provide the support material and data necessary for the operation of the other three divisions, and any other local, subregional, or Federal agency needing such information.

To effect this internal organization, the Regional Planning Council will need one other professional position allocated to it, and two supporting stenographers. At the present time the Planning Council functions with only one secretary and one statistical clerk. The secretary, in turn, is responsible for servicing four professionals, and also the urban planner who is allocated to the open space project when he is working on day-to-day Council responsibilities.

During the past year the staff of the Planning Council have also attempted to create greater understanding and support for regional planning and hope to promulgate a series of reports and releases, including newsletters from time to time, of vital information and material necessary for the successful overall planning of the region. In addition, the Council staff have begun to attend the meetings of the various governing bodies throughout the region, as well as those of the official planning agencies. Through these efforts a marked improvement has been noticed in the understanding of the local problems by the regional technicians, as well as an understanding and appreciation of the regional problems by local people.

The Council sincerely solicits your wholehearted cooperation and support in the approval of our 1965 fiscal submission in carrying out this next step toward improving planning and cooperation for the National Capital Region.

Senator BIBLE. Senator Young has left with me a number of questions to which he desires responses. Will you please supply them for the record.

Mr. DUTTON. Yes, sir.

(The material referred to follows:)

POLICY OF COMMISSION WITH RESPECT TO LAND ACQUISITIONS FOR CENTER

1. Q. What will be the policy of the National Capital Planning Commission with respect to land acquisitions for the John F. Kennedy Center for the Performing Arts?

A. The Commission will first attempt to acquire lands in private ownership required in connection with the Kennedy Center by negotiation at their fair market values, as established by qualified independent real estate appraisers on behalf of the Commission, and within funds available to, and programed by the Commission for this purpose. If such negotiations are unsuccessful, the Commission will acquire such property by condemnation and will, when it deems it necessary and in the best interests of the United States, file a declaration of taking and deposit into the registry of the court the estimated just compensation for the property, thereby vesting title immediately in the United States. These land acquisition policies for the Kennedy Center are identical to the policies of the Commission in all of its land acquisition programs.

2. Q. In acquiring property, what compensation will be provided to business establishements in the way of damages for loss of business?

A. No compensation can be paid for loss of business, since this is not an element in establishing fair market value for real property acquired by the United States for a public purpose.

3. Q. What compensation will be provided to holders of the leasehold interest?

A. Under certain circumstances lessees may have a compensable interest in real property acquired by the United States. Whether such an interest exists depends upon the terms of the lease and the relationship of the rent reserved under the lease to the rental value of the property if it were unencumbered by the lease.

4. Q. In instances where the lessee has made substantial improvements to the leased property, will you compensate him for these improvements?

A. Ordinarily no compensation will be paid to the lessee for improvements to the property made by the lessee, unless the lessee has retained title to such improvements under the terms of the lease. Such improvements otherwise become part of the realty and their value forms part of the fair market value of the property itself.

5. Q. Will the holders of leasehold interests be reimbursed for moving expenses and loss of tangible personal property resulting from their displacement?

A. The Commission is without authority to make relocation payments covering moving expenses and actual direct losses of property such as are made to

displacees in urban renewal areas under the authority of section 106(f) of the Housing Act of 1949, as amended (42 U.S.C. 1456).

Senator BIBLE. Thank you very much. I appreciate your appearing here.

Our next hearing will be on the National Capital Transportation Agency, Mr. Stolzenbach, Mr. Quenstedt, Mr. Seeger, and Mr. Tomey.

NATIONAL CAPITAL TRANSPORTATION AGENCY

STATEMENT OF C. DARWIN STOLZENBACH, ADMINISTRATOR; ACCOMPANIED BY WARREN D. QUENSTEDT, DEPUTY ADMINISTRATOR; EDWIN H. SEEGER, ASSISTANT ADMINISTRATOR AND GENERAL COUNSEL; AND J. NEAL TOMEY, DIRECTOR, OFFICE OF ADMINISTRATION, NATIONAL CAPITAL TRANSPORTATION AGENCY

1965 BUDGET REQUEST

Senator BIBLE. The National Capital Transportation Agency estimates its 1965 requirements for salaries and expenses at $500,000, just half of the amount appropriated for fiscal year 1964. The justification submitted in support of this request will be included in the record.

(The justification statement referred to follows:)

SALARIES AND EXPENSES

Appropriation, fiscal year 1963	$3,000,000
Actual obligations, fiscal year 1963 (includes transfer of funds for rent)	2,678,000
Appropriation, fiscal year 1964	1,000,000
Unobligated balance lapsing (estimated savings)	−100,000
Adjusted base, fiscal year 1965	900,000
Summary of differences, fiscal year 1965:	
Decrease in personnel compensation and personnel benefit costs resulting from lower staff levels	−226,000
Decrease in contracts and services of other agencies	−140,000
Decrease in miscellaneous administrative support items	−34,000
Budget estimate, fiscal year 1965	500,000

Analysis by object of expense

		Estimate, 1964	Estimate, 1965	Difference, increase (+) or decrease (−)
11	Personnel compensation	$605,000	$394,000	−$211,000
12	Personnel benefits	45,000	30,000	−15,000
21	Travel and transportation of persons	13,000	6,000	−7,000
23	Rent, communications, and utilities	24,000	15,000	−9,000
24	Printing and reproduction	10,000	3,000	−7,000
25	Other services	140,000	24,000	−116,000
	Services of other agencies	45,000	21,000	−24,000
26	Supplies and materials	15,000	6,000	−9,000
31	Equipment	3,000	1,000	−2,000
	Total obligations	900,000	500,000	−400,000

Highlight Statement

The Agency, established pursuant to Public Law 86–669 (74 Stat. 538), is responsible for preparing a comprehensive transit development program for the National Capital region to meet the projected expansion of the region's economy and population.

As required by the National Capital Transportation Act of 1960, the Agency, on November 1, 1962, submitted a report to the President proposing a regional rapid transit system and containing recommendations on finance and organization. This report was transmitted by the President to the Congress on May 27, 1963, together with recommended legislation that would authorize construction of the rapid transit system. The administration's bill was introduced in the House and in the Senate and hearings were held on the bill before Subcommittee No. 6 of the House Committee on the District of Columbia. Thereafter, the chairman of Subcommittee No. 6 introduced a bill to authorize construction of an abbreviated version of the rapid transit system proposed by the Agency and recommended by the President. This bill was reported favorably by the House District Committee. On December 9, 1963, the House voted to recommit the bill.

The President, in transmitting the present budget and in light of the vote to recommit the bill, called for a "redoubling of efforts to find an acceptable program which will permit a transit development plan to proceed." The President's message further directed the Agency, together with other Federal agencies, to work with affected local jurisdictions in order to find an acceptable program.

Discussions with the managers of the rapid transit bill and with other members of Congress, and analysis of the debate preceding the vote to recommit, indicate that in order to find an acceptable program, the Agency will in all likelihood have to alter substantially its earlier proposals.

Specifically, there are four major areas in which the Agency must consider changes or modifications:

FEDERAL-LOCAL SHARE

The Agency must consider means of decreasing the proposed Federal share of the cost of a rapid transit system and of increasing the shares to be paid by the local jurisdictions of the National Capital region.

SIZE AND COST OF THE SYSTEM

The Agency must prepare estimates for alternative rapid transit systems, including systems that would be smaller and less costly than the system previously proposed by the Agency or by the House District Committee.

OPERATION OF THE SYSTEM

Consideration must be given to the question of how the system should be operated, whether publicly or privately.

LABOR PROTECTION

The Agency must consider the question of the protection of labor's rights as contemplated by section 205(a)(2) of the National Capital Transportation Act of 1960.

In his budget message, the President also stated that he is confident "that an acceptable program can be formulated at this session of the Congress." The Agency will do everything possible to achieve that goal. The present budget assumes that if Congress does not act, the Agency's studies and its efforts to find answers to the problems outlined above must continue throughout fiscal year 1965.

Explanation of the Estimates

As noted previously, there are four main areas in which the Agency must consider possible changes in its original proposals. The work that the Agency must do in each of these areas is as follows:

FEDERAL-LOCAL SHARE

Under the Agency's original proposal the local jursidictions would have contributed $60 million in grants for the $793 million system and $21.7 million in grants for the abbreviated $400.6 million system that was approved by the House District Committee. In each case, the additional funds required were to be

raised by the public sale of revenue bonds underwritten as to principal and interest by the Federal Government. The Agency must consider ways of placing more of the financial burden of the system on the localities and less on the Federal Government. This would be accomplished either by increasing the local grant share or having the local jurisdictions share in the borrowing, and possibly both. Various formulas and methods for this sharing must be devised and thereafter be discussed with the congressional committees concerned, with representatives of the local jurisdictions and with the Bureau of the Budget, so that an acceptable revised formula can be presented to the Congress.

SIZE AND COST OF THE SYSTEM

Alternatives to the abbreviated $400.6 million system must be developed and these too must be discussed with the Congress, the Bureau of the Budget, and the localities. For each such system the Agency must prepare (*a*) capital cost estimates, (*b*) traffic estimates, (*c*) operating cost estimates, (*d*) a profit and loss estimate for a fixed future year, and (*e*) financial tables showing the estimated bond payout date.

OPERATION OF THE SYSTEM

The recommitted bill was silent on the question of how the system would be operated, whether publicly or privately and, if privately, whether or not bus and rapid transit services should be under the same management. The Agency will study the experience of other cities in this regard, with particular attention to major cities in which there is public ownership and private operation. It will consider such alternative methods of operation as leasing, fixed-fee contracts and incentive contracts, and also the financial advantages of integrated operation of bus and rapid transit.

LABOR PROTECTION

The recommitted bill did not include provisions for labor protection. Section 205(a)(2) of the National Capital Transportation Act would permit the construction of a rapid transit system without such provisions but it requires that an appropriate labor policy be approved by the Congress before operation of the system may begin. The Agency will give further consideration to the question of appropriate labor provisions, whether under public or private operation. These will be discussed with the congressional committees concerned, the Department of Labor, the Bureau of the Budget, and the interested unions.

The budget approved by the President would provide an appropriation of $500,000 and a staff of 35 full-time positions for fiscal year 1965—roughly half the Agency's budget for the current fiscal year. The distribution of the staff and the funds will be discussed by activities, as follows:

Traffic and Financial Planning

OFFICE OF PLANNING

These estimates provide for 8 full-time positions in the Office of Planning—a reduction of 10 positions below the current year authorization of 18 positions.

The Office of Planning will propose the general route configuration of the various alternative rapid transit systems to be considered and will prepare traffic estimates for each such system.

The Office of Planning will continue its efforts to cooperate with local governments and their planning bodies which are in the process of incorporating rapid transit in their plans. The Agency has received a number of requests for such cooperative efforts and it is anticipated that these will continue.

The Office is working with the area highway departments and local governments on the preparation of areawide traffic forecasts and transportation plans. The Agency will be involved in collecting and tabulating data and will consult with the area highway departments and local governments on such problems as the means of tabulating data and forecasting traffic.

The estimate of $86,084 for the Office of Planning will provide for the staff of eight full-time positions and other support costs and includes $5,000 for special computer services to be performed by other government agencies.

OFFICE OF FINANCE

These estimates provide for five full-time positions in the Office of Finance—a reduction of three positions below the current authorization of eight positions.

The Office of Finance will prepare the operating cost estimates, profit and loss estimates and the financial tables for the various alternative systems. It will have primary responsibility for the development of the alternative financing formulas and will assist in the study of public and private operation.

As time permits, the Office of Finance will continue work previously begun on (a) development of a zone fare collection system, (b) examining the feasibility of constructing parking garages at certain stations, and (c) developing the basis for a prospective future agreement between the rapid transit operator and the local bus companies concerning fare-distribution arrangements.

The estimate of $56,377 for the Office of Finance will provide for five full-time positions and includes $8,000 for contracts.

Engineering Plans

OFFICE OF ENGINEERING

These estimates provide for a staff of seven full-time personnel in the Office of Engineering, a reduction of seven positions below the number authorized for the current year.

The Office of Engineering will provide the capital cost estimates, and the schedules on which the operating cost estimates are based, for use in the analysis of alternative rapid transit systems. It will also consider the engineering feasibility of these alternative systems.

As time permits, the Office of Engineering will continue work previously begun on (a) preparing a more detailed construction schedule, including a breakdown of anticipated construction contracts; and (b) research in train control equipment, trackwork, and transit vehicle design. In addition, in order to preserve transit rights-of-way and land for future station locations, a number of agencies in the region having capital improvement programs have followed the practice of forwarding their plans to the Agency to see whether they coordinate with the Agency's plans. The plans are reviewed by the Office of Engineering and thereafter discussed with the local agencies. This work is expected to increase in fiscal year 1965, due to accelerated highway and other public works programs in the National Capital region.

The estimate of $81,840 for the Office of Engineering provides for a staff of seven full-time personnel and other support costs.

Executive Direction and Administration

The estimates provide $275,699 for executive direction activities of the Agency, including the Office of Administrator and Deputy Administrator, the Office of Assistant Administrator and General Counsel, the Office of Public Information and Community Services, and the Office of Administration.

OFFICE OF ADMINISTRATOR AND DEPUTY ADMINISTRATOR

The estimates provide $115,212 for five full-time personnel for this office, a reduction of two positions below the current authorization. This office includes the two statutory positions and three support personnel. Funds have also been included for use by the Federal representative appointed pursuant to title III of the National Capital Transportation Act to negotiate an interstate compact for the solution of problems of a regional character.

OFFICE OF THE ASSISTANT ADMINISTRATOR AND GENERAL COUNSEL

The estimates provide $49,832 for three full-time positions a reduction of five positions below the current authorization. In addition to directing the Agency's legal work, the General Counsel serves as Assistant Administrator and, as such, is responsible for coordinating the Agency's planning, finance, and engineering programs. The Office of General Counsel will have primary responsibility for the Agency's work with respect to labor and to public versus private operation problems previously discussed.

OFFICE OF PUBLIC INFORMATION AND COMMUNITY SERVICES

The estimates provide $37,165 for three full-time positions, a reduction of three positions below the current authorization. The Office of Public Information and Community Services has charge of the Agency's public information and community relations program. Its workload is generated by the various media—press, radio, and television—as well as by public organizations. The Agency has had an increasing number of requests for speakers, for statistical data, and for cooperation with community educational activities. The Office is now working

with federations and groups representing more than 500 organizations in the region. Requests for information or services are at the rate of 3,900 per year and are increasing.

OFFICE OF ADMINISTRATION

The estimates provide for $73,490 for four full-time positions, a reduction of five positions below the current authorization. The Office of Administration is responsible for all internal management services including personnel, budget and fiscal, mail and records, space, equipment, and similar matters. The estimate also includes $16,000 to reimburse the General Services Administration for payroll, procurement, disbursing, and other housekeeping services furnished to the Agency.

SUMMARY OF DISTRIBUTION BY OBJECT OF EXPENSE

PERSONNEL COMPENSATION

The estimates include $394,000 for personnel compensation consisting of $375,000 for 35 full-time positions, $17,000 for positions other than permanent such as the 5-man statutory advisory board, $1,500 for payments in excess of 52-week base (1 day in fiscal year 1965) and $500 for holiday and overtime pay, payments to other agencies for reimbursable details, terminal leave payments, and any other miscellaneous personnel costs.

OTHER OBJECTS

1. $30,000 for personnel benefits required by law, including retirement contributions, health benefits, life insurance, and social security.
2. $6,000 for official travel expenses and per diem costs for the regular staff and the part-time advisory board.
3. $15,000 for rent, communications and utilities. The principal item in this account is telephone services.
4. $3,000 for printing and reproduction services.
5. $24,000 for special contracts consisting of $10,000 for the Office of the Administrator for allocation to the Federal Representative for Interstate Compact Negotiations, $8,000 for special finance studies, and $6,000 for the Office of Administration for maintenance agreements for equipment and laborsaving devices, and other miscellaneous support items.
6. $21,000 for services of other Government agencies including $16,000 for reimbursement to the General Services Administration for housekeeping support, and $5,000 for computer services by the National Bureau of Standards, Department of Commerce.
7. $6,000 for office and engineering supplies and materials.
8. $1,000 for equipment including any replacement office equipment, laborsaving devices, drafting and engineering equipment.

Program and financing

[In thousands of dollars]

	1963 actual	1964 estimate	1965 estimate
Program by activities:

Senator BIBLE. And Mr. Stolzenbach, your statement will be incorporated in full in the record.

(The statement referred to follows:)

STATEMENT OF C. DARWIN STOLZENBACH, ADMINISTRATOR OF THE NATIONAL CAPITAL TRANSPORTATION AGENCY

Mr. Chairman and members of the committee, the estimates of the National Capital Transportation Agency provide for an appropriation of $500,000 for the fiscal year 1965. This appropriation will cover the salaries of 35 full-time positions and expenses of the Advisory Board as well as other expenses such as personnel benefits required by law, transportation and per diem costs incident to temporary duty travel of the staff, communication services, office supplies, printing and reproduction, equipment, and other necessary expenses.

The appropriation requested for fiscal year 1965 represents a decrease of 50 percent from the amount provided for these same purposes during the current fiscal year. The number of full-time positions is reduced from 70 positions authorized this year to 35 positions in fiscal year 1965.

As required by the National Capital Transportation Act of 1960, the Agency, on November 1, 1962, submitted a report to the President proposing a regional rapid transit system and containing recommendations on finance and organization. This report was transmitted by the President to the Congress on May 27, 1963, together with recommended legislation that would authorize construction of the rapid transit system. The administration's bill was introduced in the House and in the Senate and hearings were held on the bill before Subcommittee No. 6 of the House Committee on the District of Columbia. Thereafter, the chairman of Subcommittee No. 6 introduced a bill to authorize construction of an abbreviated version of the rapid transit system proposed by the Agency and recommended by the President. This bill was reported favorably by the House District Committee. On December 9, 1963, the House voted to recommit the bill.

The President, in transmitting the present budget and in light of the vote to recommit the bill, called for a "redoubling of efforts to find an acceptable program which will permit a transit development plan to proceed." The President's message further directed the Agency, together with other Federal agencies, to work with affected local jurisdictions in order to find an acceptable program.

Discussions with the managers of the rapid transit bill and with other Members of Congress, and analysis of the debate preceding the vote to recommit, indicate that in order to find an acceptable program, the Agency will in all likelihood have to alter substantially its earlier proposals.

Specifically, there are four major areas in which the Agency must consider changes or modifications:

FEDERAL-LOCAL SHARE

The Agency must consider means of decreasing the proposed Federal share of the cost of a rapid transit system and of increasing the shares to be paid by the local jurisdictions of the National Capital region. Various financing formulas

are being studied. And, since any change in the financing formula originally recommended by the Agency, will be of concern to the local jurisdictions, discussions with officials of these jurisdictions are required.

SIZE AND COST OF THE SYSTEM

The Agency is preparing estimates for alternative rapid transit system, including systems that would be smaller and less costly than the system previously proposed by the Agency or by the House District Committee. For each system, revised estimates must be made of capital costs, operating costs and operating schedules and traffic and revenues and a long-range profit and loss estimate must be prepared. The estimates must be discussed with the congressional committees concerned, with the Bureau of the Budget, and with the jurisdictions of the region.

OPERATION OF THE SYSTEM

Consideration is being given to the question of how the system should be operated, whether publicly or privately, and, if privately, in what manner and under what terms and conditions. This work includes analyses of several major cities whose public transportation systems are publicly owned and privately operated.

LABOR PROTECTION

The Agency is considering the question of the protection of labor's rights as contemplated by section 205(a)(2) of the National Capital Transportation Act of 1960. Discussions are being had with labor representatives, with Members of Congress, officials of the Department of Labor, and of the Bureau of the Budget.

In his budget message, the President stated that he is confident "that an acceptable program can be formulated at this session of the Congress." The Agency will do everything possible to achieve that goal. The present budget assumes that if Congress does not act this session, the Agency's studies and its efforts to find answers to the problems outlined above must continue throughout fiscal year 1965.

In summary, I am convinced that an appropriation of $500,000 represents the best estimate of our requirement for funds for fiscal year 1965 based on our analysis of the current mission of the Agency. Members of my staff are with me today and we will be pleased to answer any questions you have with respect to our specific programs and the appropriation request.

HIGHLIGHT STATEMENT

Senator BIBLE. And I would be very happy to have you highlight it; and obviously put particular emphasis upon the desirability of additional funds for your agency, in view of the action of the House of Representatives last year in recommiting the bill to the House committee. I can say from my only personal standpoint I hope that this agency is kept alive, so that you do have the opportunity of having another chance of attempting to save a transit bill.

I believe that inevitably we must face up to a balanced system in the District of Columbia and that some mass transit is part of the answer. But I would like to have you put your main emphasis—because this will be the hard core question that we will have to answer—on why you need $500,000 when they have recommitted the bill to the District of Columbia Committee on the House side. Before you do that, tell me this: How much has been expended by the National Capital Transportation Agency since its creation?

HISTORY OF AGENCY APPROPRIATIONS

Mr. STOLZENBACH. May I call on our Director of Administration, Mr. Tomey, for that figure?

Mr. TOMEY. Operations of the Agency began in fiscal year 1961 with an appropriation of $250,000. In that year our obligations totaled $207,000.

In fiscal year 1962 we received a regular appropriation of $875,000 and then a supplemental appropriation of $85,000, all of which totaled $960,000. That year we obligated $958,000.

In fiscal year 1963 there was an appropriation of $3 million, with obligations of roughly $2.6 million.

For the current period, fiscal year 1964, we received an appropriation of $1 million, and our best estimate at this time indicates an actual expenditure of approximately $800,000.

In preparing the estimates for 1965 and in the schedules you have before you, we indicated that there would be a savings of approximately $100,000. We now see an additional hundred thousand, so we anticipate a total expenditure of approximately $800,000 this year.

Senator BIBLE. Up to June 30 of this year, how much money will the National Capital Transportation Agency have expended or obligated, how much has the National Capital Transportation Agency cost the U.S. taxpayers?

TRANSIT STUDIES' EXPENDITURES

Mr. TOMEY. Approximately $5 million.

Senator BIBLE. And will there be some obligated funds on June 30 of this year, some contractural obligations that carry on past June 30, 1964?

Mr. TOMEY. None of any consequence.

Senator BIBLE. You have expended $5 million to date on the National Capital Transportation Agency. Prior to that time how much money has the U.S. Congress appropriated for transit studies?

Mr. TOMEY. I can only speak from general knowledge.

Senator BIBLE. You can supply it for the record. Give us a rough figure.

MASS TRANSPORTATION STUDY OF 1959

Mr. TOMEY. I believe that approximately $600,000 was expended by the National Capital Planning Commission for the Mass Transportation Study of 1959.

Senator BIBLE. That is the study I had in mind. I was under the impression that the price tag was a little higher, I may be wrong.

Mr. TOMEY. That is the figure that has been cited to me, but I have no direct knowledge since it antedates this Agency.

Senator BIBLE. Supply it for the record and correct your testimony if there is need for correction.

(The information referred to follows:)

The estimate of $600,000 for the cost of the Mass Transportation Survey of 1959 consists of direct appropriations to the National Capital Planning Commission totaling $450,000 from fiscal year 1955 through fiscal year 1959 and $150,000 representing a proportionate allocation of staff time of personnel of the National Capital Planning Commission, the Bureau of Public Roads of the Department of Commerce, and other Federal agencies engaged in preparing the study.

TRANSIT DEVELOPMENT PROGRAM

Mr. STOLZENBACH. Mr. Chairman, the 1960 act creating the Agency gave us the task of devising a transit development program for this region. Congress did that because it felt a transit system was needed. It is still needed. The Agency has gone a long way toward the ful-

fillment of this task, but it still remains to be completed. That is the purpose for the appropriation we are seeking for fiscal year 1965.

The Agency's program has been endorsed by the President and is now pending before the District of Columbia Committees of both the Senate and the House. As a result of consideration in the House thus far we are aware that some important changes will have to be made in the plan. We are working very hard on these changes, but we can't predict precisely how long it is going to take to find acceptable solutions.

HOUSE DEFEAT OF TRANSIT BILL

Senator BIBLE. May I ask one question at that point? I have divided feelings as to whether or not another effort should be made to pass a transit bill at this session, in view of the fact that it was overwhelmingly defeated by a vote of—what was that vote?

Mr. QUENSTEDT. 276 to 78, sir.

Senator BIBLE. I realize that there were many factors in it. I am for a transit bill. I would just like to have your best judgment as to the timetable that you intend pursuing before the House District Committee. This is March, and I don't know how many more months there are left in the session, but obviously time is running. When will you be in a position to present another plan to the House District Committee, or to the Senate District Committee?

CONSIDERATION OF REVISED PLAN

Mr. STOLZENBACH. We are working on a timetable that would permit consideration of a revised plan as soon as the House leaders, House District Committee leaders, and the political leaders of the region and the administration feel that we have developed an acceptable plan.

AREAS OF DIFFICULTY

Now, there are a number of problem areas where significant work has to be done. First of all, there is the question of the size and scope of the transit system.

Second, there is the question of the relative amount of Federal versus local contribution to the financing of the system.

Third, there is the question of protection for organized labor.

And fourth, there is the question of the mode of operation——

Senator BIBLE. You mean private versus public?

Mr. STOLZENBACH. The question of private versus public.

NATIONAL MASS TRANSIT LEGISLATION

Senator BIBLE. And there is also the problem of whether or not the Congress should speak on an overall mass transit plan too, isn't there? Isn't that somewhat involved in the overall considerations? What I have reference to is an overall bill to take care of mass transit nationwide pending in the House.

Mr. STOLZENBACH. You are referring to the national bill?

Senator BIBLE. The national bill.

Mr. STOLZENBACH. Certainly that does get involved in any consideration of our proposals although they are entirely separate and have no direct relationship.

Senator BIBLE. Keeping all those factors in mind I certainly want to be helpful to you, because I am for a mass transit system. But I am just wondering whether or not you will have your case prepared or a new plan perfected during this session of the 88th Congress.

Mr. STOLZENBACH. Senator, I think it is possible that we could have. I cannot sit here today and tell you with assurance that we will have.

Senator BIBLE. I don't expect you to guarantee it.

Mr. STOLZENBACH. We are doing everything that we can to be ready to present a program to Congress if the problems I have mentioned can be worked out in time.

PRESENTATION OF PLAN TO CONGRESS

Senator BIBLE. And I commend you for that, because I think we must make a further effort to do everything humanly possible to acquire a mass transit system for the District of Columbia. And my only question is to try to determine as best I can whether or not your case will be ready for presentation on either side of the Hill in 30, 60, or 90 days. This is March 1964, and I am just wondering whether or not you will be prepared within 30, 60, or 90 days.

Can you give us any timetable better than you have?

Mr. STOLZENBACH. I think we could possibly be prepared within the next 30 days.

Senator BIBLE. You think you could be prepared to make a presentation on either side of the Hill sometime in April?

Mr. STOLZENBACH. That is right.

Senator BIBLE. I would give myself a little more leeway than 30 days, because I don't think you can tie up these loose ends in 30 days, I think you are a little overoptimistic. But think what I may, I think at that time we have to judge whether or not it is best to proceed then or at a later date, because of the overall congressional situation. And I think that has to be determined in the light of the plan that you have.

Obviously I don't think we can judge it until we have seen what the plan is—attempting to meet these four areas of difficulty.

Pardon my interruption.

MASS TRANSIT JUSTIFICATIONS

Mr. STOLZENBACH. I think I can summarize our whole proposition, Mr. Chairman, by saying that we are pleading for the appropriation of the full amount in the President's budget of $500,000 on the following grounds: The region needs a rapid transit system. The program the Agency prepared is essential and is, basically, sound.

It has received a favorable reaction from the administration, from the public, and from the congressional committee that has thus far considered it.

There is every reason to believe that the unsolved problems can be effectively worked out in time for action either at this session of the Congress or at a very early date during the next session.

And finally, that the staff of 35 that the Agency would have in fiscal year 1965 under the appropriation we are requesting is essential to complete the job that Congress gave us three and a half years ago.

Senator BIBLE. I only repeat what I said at the beginning. I think it would be a calamity if we allow the Agency to die. My concern now as a member of the Appropriations Committee is to attempt to find why you need the amount of money that you need.

AGENCY OBLIGATIONS AND EXPENDITURES

How much do you have unexpended again on July 1, 1964?

Mr. TOMEY. We anticipate that obligations this year will total approximately $800,000. On the basis of an appropriation of $1 million, we will have roughly $200,000 unobligated at the end of this year.

Senator BIBLE. What you are saying is that on July 1st of this year you will have an unexpended balance of $200,000?

Mr. TOMEY. Yes.

Senator BIBLE. And you are asking for an additional $500,000?

Mr. TOMEY. No funds carryover, sir, we are on an annual appropriation basis.

Senator BIBLE. I understand that. I am just trying to get this picture in mind. I don't think I particularly have it yet. You will have unexpended on July 1 this year, and it would revert to the U.S. Treasury, the sum of $200,000?

AUTHORIZED PERSONNEL

Mr. TOMEY. Yes. And the reason for that, sir, is that we have not staffed to full strength authorized for this year. We have not been at our full strength and, in view of the recommittal action in the Congress, we do not anticipate being at this strength any time this year. As a matter of fact, we are now on a downward trend, employmentwise.

BUDGET REQUEST AND REVERSION

Senator BIBLE. You are asking for $500,000 for the year starting July 1, 1964, to run to July 1, 1965?

Mr. TOMEY. That is correct, sir.

Senator BIBLE. Now, if there is a reversion to the U.S. Treasury of $200,000, then you are in effect asking for $300,000 of new money?

Mr. TOMEY. Yes, sir; that point is well taken. I was merely pointing out that technically it would require an appropriation of $500,000 of new obligational authority.

Senator BIBLE. I understand, we couldn't appropriate $300,000 to meet your needs; we would have to appropriate the $500,000 to meet your needs? But to your credit you are reverting $200,000 to the Treasury.

Mr. TOMEY. That is correct, sir.

PERSONNEL REDUCTIONS

Senator BIBLE. Now, I would like to have you tell me why you need 35 people at a cost of $500,000, and what will they do, Mr. Stolzenbach?

Mr. STOLZENBACH. Specifically, Mr. Chairman, there are four major areas of activity, all related to working out these changes in the program, that were revealed in the consideration in the House. These

are spelled out in detail in the prepared material that you have already inserted into the record and to which I have previously adverted. However, I presume you might like to have me comment on each one of them in more detail.

Senator BIBLE. Let's explore this area first. I mean, between now and July 1 which is March, April, May, and June, you have 4 months where you are operating under your present staff.

How many members do you have now? How many do you have aboard as of today?

Mr. TOMEY. As of February 29 we had 56 on duty, sir.

Senator BIBLE. You have 56?

Mr. TOMEY. Yes.

Senator BIBLE. You intend carrying that 56 for how long?

Mr. STOLZENBACH. The number is going down, because people are finding other jobs in anticipation of an inevitable cut in staff. By the end of March, for example, employment is expected to be down to approximately 51.

DUTIES OF THE STAFF

Senator BIBLE. What will these 51 people do between now and July 1? Aren't they going to do a great deal of this work that you indicate you need the additional money and positions for? I understand you to say that within the—you did say that in the next 30 days you are going to be prepared to go back to the House committee or come to the Senate side and make a presentation of a new plan.

Mr. STOLZENBACH. That is correct.

ADDITIONAL PERSONNEL REQUESTED

Senator BIBLE. If you have this all done in 30 days why do you need 35 more people from July 1 on?

Mr. STOLZENBACH. We may not do it this year, as long as it is still necessary to work out a program and a plan that represents a consensus of the officials of the region, the administration, and the congressional committees, you will need to have this kind of minimum balanced technical staff in order to work it out.

For example, every change that you make in a transit plan involves a series of rather complicated technical computations.

Senator BIBLE. I don't question that statement. I do hope you get it worked out this year, and I will lend my best efforts to attempting to help you on the legislative side toward that end. If you do get it worked out, that is wonderful. If you don't get it worked out I am still intrigued as to why you need a staff of 35 people for the next year.

I think you need some staff. And I think it should be kept alive and you should have some of your top personnel. I have great difficulty in understanding what 35 people are going to do. And if you want to, on a case-by-case basis you could supply the staff positions, not the names, the staff positions and what you intend having each of them do from July 1, 1964, to June 1, 1965.

Mr. STOLZENBACH. Mr. Chairman, I am prepared to discuss this in whatever degree of detail you wish. We have here a list of the professional positions in each of the major offices and their principal duties.

Senator BIBLE. All right, 35 is not many, why don't you just quickly tell us exactly what they will do, and why you need them?

PROFESSIONAL STAFF POSITIONS REQUESTED

Mr. STOLZENBACH. Of the 35 budgeted positions there are 22 professional staff positions. The remainder are clerical.

Senator BIBLE. Let's get into the professional people. What will each of those 22 be?

Mr. STOLZENBACH. In the Office of the Administrator and Deputy Administrator there are three professional positions which include the two Presidential appointees. This involves, of course, the overall direction of the agency and its activities, the preparation of proposals for legislation and the review of proposals of other agencies and the Congress. We also provide administrative support to the Federal representative who is negotiating the interstate compact under title III of our act. And we have a responsibility in this Office for the coordination of the advisory committees such as the Advisory Committee on Finance.

In the Office of the Assistant Administrator and General Counsel we have two professionals. The Assistant Administrator is in direct charge of the coordination of the agency work program in the three major substantive offices which I will describe later.

COMPREHENSIVE LABOR PROTECTION PROPOSAL

One of their special problems at the moment is the drafting of a comprehensive labor protection proposal. This involves working with both the Transit Workers Union and the AFL–CIO, the U.S. Department of Labor, the Bureau of the Budget——

Senator BIBLE. I recognize this as one of your real problem areas in working this transit system out. How many people do you have assigned to that?

Mr. STOLZENBACH. Two professionals and one clerical.

Senator BIBLE. I am not worried about the clerical help. You have two professionals. Those professionals are both lawyers, are they?

Mr. STOLZENBACH. They are both lawyers.

Senator BIBLE. What other men do you need?

RAPID TRANSIT SYSTEM PLANS

Mr. STOLZENBACH. This Office is also involved in the development of plans for public and private operation of a rapid transit system, a question which we had not anticipated in our original proposal because we felt that it was one that the Congress did not necessarily have to decide now. However, it was revealed in the House debate that Congress was interested in this aspect. They actually amended the bill on the floor of the House to include a private enterprise provision. And so we feel now, and members of the House District Committee agree, that this is a subject that does demand attention.

OFFICE OF PUBLIC INFORMATION AND COMMUNITY SERVICES

Coming now to the Office of Public Information and Community Services, they have two professionals there. I am sure you understand that by the very nature of the agency we are Federal but also part local, in that we have to be in a position to communicate with the local community. We have literally hundreds of requests

for information from public organizations, news media, and private citizens.

Senator BIBLE. Those two professional positions, what are they, newspapermen?

Mr. STOLZENBACH. The functional title is "information officer." The incumbent of this position is the Director of this Office. He handles the presswork, media contacts, and directs a comprehensive community services program.

Senator BIBLE. I think I recognize that.

Mr. STOLZENBACH. The second professional is a writer position required to help prepare press releases and handle the workload of this Office.

Senator BIBLE. And how about your other professional people that you justify?

Mr. STOLZENBACH. In the Office of Administration we have Mr. Tomey, the Director of Administration, and his assistant. I don't believe that needs any further explanation.

Now, to come to what I would call the main substantive offices, we have an Office of Planning, an Office of Finance, and an Office of Engineering.

OFFICE OF PLANNING

In the Office of Planning there are five professionals.

Senator BIBLE. They are engineers, I take it?

Mr. STOLZENBACH. They are engineers, urban planners, and public transportation specialists—that is the range of occupations that we have there.

Their duties include such things as the development of the general configuration of alternative rapid transit systems. For example, if you change one leg or even one station in one of the alternate transit plans, it involves a series of very complicated interactions with the rest of the system. The preparation of traffic estimates is of fundamental importance in estimating the financial capabilities of the system.

TRAFFIC ESTIMATES

Senator BIBLE. On that point haven't we been making traffic estimates for about the last 10 years?

Mr. STOLZENBACH. A variety of specific traffic estimates will be required such as: How many people will board the train at each station on the line? If you have one line in plan A and don't have it in plan B, this will affect the amount of traffic on some other line, because the people could very well use that other line. It is not just a simple matter of going back and picking off some numbers.

Senator BIBLE. I am not unduly critical, but it seems to me that we have spent many hundreds of thousands of dollars in determining these traffic estimates in the past. And do you have to do it again, or do you just update it?

Mr. STOLZENBACH. You just take the basic material that we have gathered in all the previous traffic studies and then apply it to the new system.

Mr. SEEGER. I think I might be able to help you out on this.

REASON FOR NEW ESTIMATES

We started by recommending a $792.8 million transit system. The House District Committee raised the question of the economic possibility of a smaller version of that system.

Senator BIBLE. Around $400 million?

Mr. SEEGER. To around $400 million. In order to find that out you can't just rely on your original traffic estimates, you have to make new estimates for each station on the system. In other words, you have to make an entirely new set of station-by-station estimates.

Senator BIBLE. I think I can understand that.

Mr. SEEGER. And then new capital cost estimates must be developed.

Senator BIBLE. Of course, you are going to have to do that between now and April if you have another plan to go back to Congress with.

Mr. SEEGER. The problem is that we are looking for a system that we can get complete agreement on; that is, a system that the people in the region will want to pay for and which will be acceptable to the Congress. And we find that each time a meeting with some local jurisdiction——

Senator BIBLE. And that the Government of the United States will help finance?

Mr. SEEGER. That it will help finance.

Senator BIBLE. They will take a pretty good share of this under your plan?

REVISING FINANCING SCHEDULES TO REDUCE FEDERAL SUPPORT

Mr. SEEGER. This is one of the major things we are doing, revising the financing schedules and trying to cut down the amount of Federal support for the system.

Senator BIBLE. I realize that this is one of your problem areas, and I realize that you are going to have a large amount of Federal financing and a large amount of Federal underwriting if you are going to get the job done.

Justify the other positions.

OFFICE OF FINANCE

Mr. STOLZENBACH. In the Office of Finance we have also three professionals, and they are engaged in preparation of financial statements, profit and loss statements.

Senator BIBLE. I think that might be one of your most important problems.

Mr. STOLZENBACH. The development of alternative financial formulas.

Senator BIBLE. Three people do that. How about your other professionals?

OFFICE OF ENGINEERING

Mr. STOLZENBACH. The remaining five are in the Office of Engineering. These are the people who determine the engineering feasibility of each feature of the system both as to whether you can build it or not, what the capital costs are, how long it will take to build it, and the various engineering elements that enter into the problem.

Senator BIBLE. Very fine. If you want to supply any additional justification for the record, it will be kept open 3 days to permit you to do that.

(The information referred to follows:)

STAFF REQUIREMENTS AND OUTLINE OF WORK PROGRAMS, FISCAL YEAR 1965

Office	Staff	Grade	Duties
EXECUTIVE DIRECTION AND ADMINISTRATION			
Office of Administrator/ Deputy Administrator.	3 professionals		1. Direction of all Agency activities.
	1 Administrator	Statutory	
	1 Deputy Administrator	Statutory	2. Proposal of new legislation, and review of legislative proposals of other agencies and the Congress.
	1 special assistant	GS–16	
	2 clerical:		3. Administrative support of the Federal representative negotiating an interstate regional compact.
	1 confidential assistant	GS–11	
	1 confidential assistant	GS–10	4. Coordination of advisory committees.
Office of Assistant Administrator and General Counsel.	2 professionals		1. Coordination of the Agency work programs.
	1 Assistant Administrator and General Counsel.	GS–18	2. Drafting of a comprehensive labor protection proposal.
	1 Assistant General Counsel.	GS–15	3. Development of plans for public and private operation of the rapid transit system.
	1 clerical:		
	1 secretary	GS–9	4. Furnishing legal review of, and legal advice on, all Agency activities.
Office of Public Information and Community Services.	2 professional		1. Answering requests for information from public organizations, news media, and private citizens.
	1 information officer	GS–15	
	1 writer	GS–9	
	1 clerical:		2. Furnishing information to community organizations about rapid transit systems and benefits.
	1 secretary	GS–6	
Office of Administration	2 professionals		1. Performance of all internal management services—personnel, budget, fiscal, organization and methods, procurement, and office services.
	1 administrative officer	GS–15	
	1 administrative assistant.	GS–12	
	2 clerical:		
	1 secretary	GS–5	2. Liaison with GSA for performance of administrative housekeeping functions.
	1 administrative clerk	GS–5	
TRAFFIC AND FINANCIAL PLANNING			
Office of Planning	5 professionals		1. Development of the general configuration of alternative rapid transit systems.
	1 assistant director	GS–16	
	1 urban planner	GS–13	
	1 public transportation planning specialist.	GS–13	2. Preparation of traffic estimates for each alternative system.
	1 highway engineer	GS–7	
	1 highway engineer	GS–5	3. Cooperation with local planning bodies who request incorporation of rapid transit in their plans.
	3 Clerical:		
	1 secretary	GS–7	
	1 statistical assistant	GS–7	
	1 engineering aid	GS–4	4. Preparation of regional traffic forecasts and transportation plans, in cooperation with regional highway departments and local governments; collecting and tabulating data; programing forecasts.
Office of Finance	3 professionals		1. Preparation of financial tables, operating costs, and profit and loss statements, for alternative rapid transit systems.
	1 financial economist	GS–15	
	1 transportation financial specialist.	GS–11	
	1 economic aid	GS–6	2. Development of alternative financing formulas. financing formulas.
	2 clerical:		
	1 secretary	GS–6	
	1 statistical clerk	GS–5	3. Development of a zone fare collection system.
			4. Analysis of the financial feasibility of parking garages at certain stations.

LAND ACQUISITION APPROPRIATION

Senator BIBLE. Let me ask you just one further question. How much has been appropriated to the National Capital Transportation Agency for land acquisition?

Mr. STOLZENBACH. The total is $1,400,000, consisting of $1 million appropriated in fiscal year 1962 and $400,000 in fiscal year 1963.

Senator BIBLE. How much of the amount has been expended and what land did you acquire?

Mr. STOLZENBACH. We have expended none of this appropriation for the acquisition of land. Approximately $95,000 has been obligated for incidental construction involved in the strengthening of an abutment of a structure on the proposed Route 66, near the Capital Beltway in Fairfax County, Va.

Senator BIBLE. When do you propose to spend the remaining amount?

Mr. STOLZENBACH. At the moment we do not propose to expend it.

Senator BIBLE. I think it would be wise to have a final congressional directive on it.

SOLVING METROPOLITAN AREA TRAFFIC PROBLEMS

Two other questions. Do you see any way in which Washington traffic problems can be solved without a rail rapid transit system?

Mr. STOLZENBACH. No, sir; I do not.

Senator BIBLE. I assumed that would be your answer. I agree with you. I think we must have a rail rapid transit system balanced out with the highways.

Have the local jurisdictions in the region indicated a willingness to help finance the rapid transit system?

Mr. STOLZENBACH. There is every indication that the people of this region want a system. Most of the localities have indicated officially that they want it, and some of them have actually gone so far as to start action on how they would pay for it. During the past 2 weeks there have been under consideration in the Virginia Assembly two bills which would provide for the creation of a transit district in northern Virginia.

TRANSIT DISTRICT IN NORTHERN VIRGINIA

These bills are just about to the stage of final passage. And I think that is very good indication that the State of Virginia, which is the first State legislature of either Maryland or Virginia, that has had an opportunity to consider this question since our original proposal was sent to Congress. They are taking this action.

Senator BIBLE. Is Maryland considering comparable legislation?

TRANSIT LEGISLATION IN MARYLAND

Mr. STOLZENBACH. The Maryland Legislature does not meet in legislative session until next year. The first opportunity they will have to do this would be in the early part of 1965.

Senator BIBLE. With respect to the action in the Virginia Assembly, are you speaking about Senator Fenwick's bill?

Mr. STOLZENBACH. That is correct.

Senator BIBLE. I think that is a step forward in the right direction, and I think it will be successful.

PUBLIC SUPPORT FOR RAPID TRANSIT SYSTEM

How much public support has there been metropolitanwise for the proposed rapid transit system?

Mr. STOLZENBACH. The program has been endorsed by over 500 citizens' organizations in the region, by governing bodies throughout the area, and all interested Federal agencies. The chairman of the House subcommittee which held hearings in the House, has told us that the rapid transit program generated more public support than any program he had ever seen for the District of Columbia.

Senator BIBLE. I just hope it generates the same support when it gets to the floor on the next round on either side of the Hill.

Do we need further observations?

RAPID TRANSIT SYSTEM LEGISLATION IN VIRGINIA

Mr. QUENSTEDT. I would like to make one statement, and that is with respect to the legislation in the Virginia Assembly.

So that the record will be clear, identical bills have been passed in each house. There remains only the formality of final parliamentary procedures. There is no reason to believe that it will not be enacted into law. In other words, we wouldn't want you to feel, in the parliamentary sense, that it was at the point of passage but still had to be acted on by the assembly—both of them have been acted on.

Senator BIBLE. What was the vote in each house?

Mr. QUENSTEDT. I don't believe that there was any real challenge to it although I have no knowledge of the actual vote. When I was there on Monday of last week Senator Fenwick thought that all problems had been resolved and there would be no trouble.

Senator BIBLE. Since substantially identical bills have passed each of the two houses in the Commonwealth of Virginia, certainly you have every reason to feel that it is going to come along?

Mr. QUENSTEDT. That is right, they were identical.

(The subcommittee was subsequently advised by the agency that the legislation referred to (H–814 and H–815) was approved by the General Assembly of Virginia and is expected to be signed by the Governor on March 27, 1964, to become effective on July 1, 1964.)

LETTER URGING RAPID TRANSIT PROGRAM SPEED

Mr. STOLZENBACH. Mr. Chairman, may I submit for the record a copy of a letter which I received from Congressman Whitener, chairman of Subcommittee No. 6 of the House District Committee? This letter contains the resolution of that subcommittee urging that the National Capital Transportation Agency "proceed with all possible speed so that a rapid transit program can be presented to the Congress at an early date." This is the subcommittee which conducted hearings on our authorizing legislation and this resolution reflects the sense of urgency which the members of the House District Committee attach to our program.

(The letter referred to follows:)

U.S. HOUSE OF REPRESENTATIVES,
COMMITTEE ON THE DISTRICT OF COLUMBIA,
Washington, D.C., February 18, 1964.

Hon. C. DARWIN STOLZENBACH,
Administrator, National Capital Transportation Agency,
Washington, D.C.

DEAR MR. STOLZENBACH: For your information, Subcommittee No. 6, of which I am chairman, today adopted the following resolution which I am transmitting to you for appropriate action:

Whereas the House of Representatives on December 9, 1963, voted to recommit H.R. 8929, a bill to authorize the prosecution of a transit development program for the National Capital region; and

Whereas the President of the United States in his District of Columbia budget message has called for "a redoubling of efforts to find an acceptable program which will permit a transit development plan to proceed," and has instructed the National Capital Transportation Agency to work with other Federal agencies and the local jurisdictions to that end: Now, therefore, be it

Resolved, That Subcommittee No. 6 of the Committee on the District of Columbia urges the Agency to proceed with all possible speed so that a rapid transit program can be presented to the Congress at an early date.

With kindest personal regards,

Sincerely yours,

BASIL L. WHITENER,
Member of Congress,
Chairman, Subcommittee No. 6.

SPEED URGED IN RAPID TRANSIT PROGRAM

Senator BIBLE. Thank you very much, gentlemen.

Mr. Chairman, did you have questions on this?

Senator HAYDEN. No questions.

Senator BIBLE. Senator Bartlett, questions?

Senator BARTLETT. No questions.

Senator BIBLE. I will turn this back over to you, Mr. Chairman.

Chairman HAYDEN. Before proceeding to the next witnesses, I will place in the record a statement by the Joint Committee on Transportation for Metropolitan Washington supporting this budget request.

(The statement referred to follows:)

STATEMENT OF MILES L. COLEAN, CHAIRMAN, JOINT COMMITTEE ON TRANSPORTATION FOR METROPOLITAN WASHINGTON

My name is Miles L. Colean. I serve as chairman of the Joint Committee on Transportation for Metropolitan Washington. We are grateful for this opportunity to comment on the proposed budget of the National Capital Transportation Agency.

The Nation's Capital's civic and business leaders formed the Joint Committee on Transportation to work for a balanced system of transportation which includes adequate freeways, ample bus service, and a rapid rail transit system. Those of us who are concerned with finding a solution to Washington's pressing traffic problems were very disappointed when the legislation to authorize a rapid rail system in Washington failed to pass the House of Representatives and was sent back to the District Committee for further study.

In order to fulfill this mandate from Congress and instructions from the President, it is necessary that the National Capital Transportation Agency have adequate funds to perform its duties effectively.

There must be a continuation of an instrumentality to maintain and correlate the wealth of material related to the proposed rapid rail transit system which has been gathered already. A nucleus of competent people must also be maintained so that the organization can be expanded rapidly when the need arises.

When the interstate compact becomes effective it should inherit an up-to-date body of knowledge and data to assist it in carrying out its responsibilities.

We respectfully request that the Senate Appropriations Committee approve sufficient funds for the operation of the National Capital Transportation Agency so that we will not lose the benefits of the valuable work already completed and the services of the experts who have already been assembled.

Respectfully submitted.

MILES L. COLEAN, *Chairman.*

Chairman HAYDEN (presiding). We will now hear from the Division of Indian Health.

INDIAN HEALTH ACTIVITIES AND CONSTRUCTION OF INDIAN HEALTH FACILITIES

STATEMENT OF DR. CARRUTH J. WAGNER, CHIEF, DIVISION OF INDIAN HEALTH; ACCOMPANIED BY DR. ERWIN S. RABEAU, DEPUTY CHIEF; HENRY V. CHADWICK, CHIEF, OFFICE OF ADMINISTRATION; ROBERT A. COHEN, CHIEF, CONSTRUCTION AND MAINTENANCE BRANCH; ALBERT H. STEVENSON, CHIEF, OFFICE OF ENVIRONMENTAL HEALTH; SOL ORDEN, CHIEF, FINANCIAL MANAGEMENT BRANCH; DR. JAMES V. LOWRY, CHIEF, BUREAU OF MEDICAL SERVICES; DR. LEO J. GEHRIG, DEPUTY CHIEF, BUREAU OF MEDICAL SERVICES; G. RICHARD CLAGUE, CHIEF, BUDGET BRANCH; AND LOYAL C. FISHER, DEPUTY DEPARTMENT BUDGET OFFICER, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE.

1965 BUDGET REQUEST

Chairman HAYDEN. The budget estimate for Indian health activities for fiscal year 1965 is $61,576,000, an increase of $2,615,250 over the amount appropriated for fiscal year 1964.

There is, however, pending a supplemental estimate in the amount of $566,000 to meet last year's pay act increases.

The justification in support of this estimate will be placed in the record.

(The statement referred to follows:)

HIGHLIGHT STATEMENT

Health services for Indian and Alaska native beneficiaries are provided directly by the Public Health Service through a system of 50 hospitals, their outpatient clinics, field health centers, outpatient field stations, and at Bureau of Indian Affairs schools. Where, (1) Public Health Service facilities or services are lim-

ited or nonexistent, or (2) it is to the advantage of the Indian beneficiary, health services are provided through contractual arrangements with non-Federal hospitals, private physicians and dentists, and State and local health and welfare agencies.

Currently some 380,000 Indians and Alaska natives come within the scope of the Indian health program. Approximately 43,000 are in Alaska and the remainder in the 23 Federal Indian reservation States. These populations are young, about 57 percent are under 20 years of age, compared with 38 percent under 20 in the general population.

Birth rates among Indians and Alaska natives are twice the rate in the population as a whole. Significant service population growth is projected in the coming years, mainly in the Southwest—Arizona and New Mexico—and lesser increases in Utah, Wyoming, and Alaska. Other States are expected to level off, as migration patterns in and out of service areas continue.

The latest available data (1962) indicate significantly higher mortality rates among Indians and Alaska natives than among the general population. Indian mortality rates as compared to those for all races, for selected causes follow:

Infant deaths per 1,000 live births:

Indian, excluding Alaska native, about 2 times greater.

Alaska native, about 60 percent higher than Indian; nearly 3 times greater than all races.

Infectious diseases (death rates per 100,000 population):

Tuberculosis: Indian and Alaska native, about 6 times greater.

Gastroenteric diseases: Indian, about 7 times greater.

Influenza and pneumonia:

Indian, excluding Alaska native, over 2 times greater.

Alaska native, over 3 times greater.

Leading causes of death are heart disease and accidents. Death rates are almost the same for each. Accidental death rates are nearly three times higher than among all races.

Respiratory diseases, otitis media, measles, and other communicable diseases especially among children are reported with greater frequency than in the general population. Communicable diseases particularly gastroenteric conditions and dysentery, especially among infants, young children and young adults, cause excessive burdens of illness. Tuberculosis incidence declined slightly in 1962, but the rate still exceeds that of the general population by 7 times and in Alaska the rate is over 15 times higher.

These health deficiencies and the need for resources and methods for nurturing acceptable health practices to overcome the existing problems are recognized by both the Public Health Service and its Indian and Alaska native beneficiaries. Their growing recognition of the benefits of modern medicine and up-to-date health practices is amply demonstrated by their increasing use and acceptance of available health services and the more active participation of tribal councils and individual members in health affairs.

Hospital admissions continue at a high rate. Leading reasons for hospitalization, outside of the Alaska native hospitals are: (1) deliveries; (2) respiratory conditions; (3) accidents; (4) gastroenteric diseases; and (5) other infective and parasitic diseases. In Alaska, respiratory illnesses rank first and deliveries second.

The large proportion of the health services are for children of all ages, for mothers, and for treatment of patients for acute illness and injuries.

Pediatric workload is high, comprising more than one-third of the general hospital discharges. Readmissions, especially among the very young children up to 5 years of age, are high (attributed to a great extent to the home environment, lack of sanitary facilities, exposure to reinfections, malnutrition, neglect, accidental injuries).

Outpatient visits and workloads at all hospital clinics, field health clinics, and stations are increasing, especially the immunization workloads.

As preventive programs are further strengthened and screening activities through physical examinations and special clinical services are advanced, the hospital workloads and program requirements are expected to gradually undergo changes. Patients with disabilities (crippling conditions among children, congenital anomalies), residuals of acute conditions (eye and ear) and degenerative illnesses such as the cardiovascular diseases and those requiring long-term care, diabetes, gall bladder disease, cancer, and others, and mental illness will begin to displace the acute conditions requiring treatment.

An appropriation of $61,576,000 is requested for 1965. This compares with an estimated availability of $59,540,750 for 1964, or an increase of $2,035,250.

Hospital Health Services

The 1965 estimate provides for a program increase of $204,500. This increase will permit an increase in employment and other related costs, commensurate with increased workload.

The budget for 1965 provides for: (1) a net increase in the average daily patient census of 15 patients per day (increase of 33 general medical and surgical patients and decrease of 18 tuberculosis patients); (2) an increase in hospital admissions of 1,300; (3) workload resulting from an increase in births of 335; and (4) an increase in outpatient visits of 13,200.

Contract Medical Care

An increase of $425,000 will provide for contract hospitalization of an additional average daily load of three patients, representing an increase of three general patients and five neuropsychiatric patients, offset by a decrease of five tuberculosis patients, as well as higher per diem contract hospital costs. An increase of $88,000 is also requested to fund on an annual basis the field supervision positions authorized in the 1964 budget.

Field Health Services

The 1965 estimate provides for a program increase of $298,500. This increase will permit an increase in employment and other related costs for the extension of preventive health services to Indian communities.

Administration

The 1965 estimate provides for a minor program increase of $3,000.

Indian health activities

Appropriation, 1963	$56, 836, 250

SUMMARY OF INCREASES AND DECREASES, 1965

Hospital health services: To provide for mandatory increases, and program increases for additional staff; increased workload and change of patient load composition	+922, 250
Contract medical care: To provide for additional workload; price increases and additional professional field supervision	+514, 000
Field health services: To provide for mandatory increases, and program increases in the preventive health activities of sanitation, dental, public health nursing, and field medical services	+550, 000
Administration: To provide for mandatory increases	+49, 000
Net change, 1965	+2, 035, 250
Budget estimate, 1965	61, 576, 000

Analysis by activities

Activity	Amount available, 1963	Amount available, 1964	Estimate, 1965	Increases
Hospital health services	$34,283,628	$35,719,750	$36,642,000	$922,250
Contract patient care	10,244,587	11,324,000	11,838,000	514,000
Field health services	9,971,147	10,750,000	11,300,000	550,000
Administration	1,534,039	1,747,000	1,796,000	49,000
Unobligated balance lapsing	357,641			
Total	[1] 56,391,042	[1] 59,540,750	[1] 61,576,000	2,035,250

[1] Excludes reimbursements as follows: 1963, $667,358; 1964, $660,000; 1965, $660,000.

Hospital health services

Activity	Amount available 1963	Amount available 1964	Estimate 1965	Increase (+) decrease (−)
Hospital health services	$34,283,628	$35,719,750	$36,642,000	+$922,250

The estimate of $36,642,000, an increase of $922,250, consists of:

(1) Statutory salary promotions	$271,500
(2) Annualization of Civil Service Pay Act increase, Public Law 87–793	297,000
(3) Annualization of Uniformed Services Pay Act increase, Public Law 88–132	110,000
(4) Wage board increases from Sept. 15, 1962, through Sept. 15, 1963	102,250
(5) Payments to employees compensation fund	19,000
Total mandatory increases	799,750
(6) Program increase	204,500
Total increase	1,004,250
Less: Decrease for 1 day less pay in 1965	−82,000
Net increase	922,250

NEED FOR INCREASE

Workload in Public Health Service Indian hospitals continues to increase. In reviewing this estimate against the 1964 budget which was submitted last year, we find that in 1963 the average daily patient load exceeded our estimate by 57, and that out-patient visits were 34,000 over the estimate. Our present 1964 estimate calls for an increase of 25 in average daily patient load, and 37,800 in outpatient visits over the original 1964 budget submitted last year. Further workload increases are anticipated for 1965 as follows:

Increase in general patients	+33
Decrease in tuberculosis patients	−18
Net increase in ADPL	+15
Increase in admissions	+1,300
Increase in hospital births	+335
Increase in outpatient visits	+13,200

The program increase of $204,500, which is requested for 1965, will provide for the increased costs required to maintain the additional workload for the more expensive general medical and surgical patient, as well as funds to support an additional 53 positions (44 man-years). This increase in employment will provide for an employee/patient ratio in 1965 at approximately the same level as the 1964 program.

The American Hospital Association's Hospitals Guide Issue (dated August 1, 1963) reports 1962 ratios for patient stay and full-time employees per 100 patients in U.S. short-term general hospitals as follows:

	Patient stay	Employees per 100 patients
All short term	8.3	230
All Federal	19.9	181
Non-Federal	7.6	237
PHS Indian general hospitals	10.0	[1] 163

[1] Includes outpatient personnel.

The above ratio reported in 1962 for Indian service hospitals included personnel for outpatient operations. It is pointed out that in 1963 personnel have been prorated between inpatient and outpatient and the resulting ratio for general hospitals in the Indian service was 143 employees per 100 patients (United States excluding Alaska). The turnover of patients (patient stay) and types of cases (obstetric, pediatric, etc.) and illnesses compare with the small community voluntary hospital for which a ratio of 230 was reported (see table on p. 1251).

In comparing staffing ratios of Public Health Service Indian hospitals with other Federal and community hospitals, recognition must be given to the following factors: (1) the majority of the Public Health Service Indian hospitals are small in comparison; (2) all Public Health Service Indian hospitals have acutely ill patients, high volume of admissions, and high patient turnover (short patient stay); (3) there is a very high percentage of female and pediatric cases in Public Health Service Indian hospitals; (4) the operating requirements of Public Health Service Indian hospitals are unique due to the fact that the hospitals are isolated and many are located in areas of severe climatic conditions which require more than the normal number of nondirect patient care supporting personnel as well as supply, utility, and maintenance personnel; (5) the large and very active outpatient operation of Indian hospitals; and (6) a readiness-to-serve requirement at many small Public Health Service Indian hospital installations (to maintain hospital services requires a minimum staff regardless of size of the workload).

PLAN OF WORK

The hospital health services request of $36,642,000 for 1965 will provide (1) for the continued operation of 50 Public Health Service Indian hospitals and attached outpatient clinics, (2) for a nurse training program associated with Public Health Service Indian hospitals, and (3) for the maintenance of PHS Indian health facilities, consisting of hospitals, health centers, stations, school clinics and staff quarters. During fiscal year 1965 it is anticipated that a new replacement hospital will be opened at Fort Yates, N. Dak., and the modernization of the Crow, Mont., hospital will be completed.

The contemplated workload for 1965 and a comparison of the average daily inpatient census, admissions, births, and outpatient visits for the fiscal years 1963, 1964, and 1965 is reflected in the table that follows.

Workload data

	1963 actual	1964 estimate	1965 estimate	Change, increase (+) or decrease (−)
Average daily patient census by type of patient (excluding newborn):				
Total average daily census	2,377	2,390	2,405	+15
General patients	1,889	1,902	1,935	+33
Tuberculosis patients	488	488	470	−18
United States excluding Alaska	1,781	1,780	1,785	+5
General patients	1,501	1,502	1,525	+23
Tuberculosis patients	280	278	260	−18
Alaska	596	610	620	+10
General patients	388	400	410	+10
Tuberculosis patients	208	210	210	----------
Total admissions (excluding births)	64,749	66,000	67,300	+1,300
United States excluding Alaska	56,241	57,400	58,650	+1,250
Alaska	8,508	8,600	8,650	+50
Total births, all Public Health Service Indian hospitals	9,192	9,500	9,835	+335
Outpatient visits for medical therapeutic and preventive services at hospital facilities:				
Total visits	721,678	731,800	745,000	+13,200
United States excluding Alaska	656,165	661,800	674,000	+12,200
Alaska	65,513	70,000	71,000	+1,000

Employee/patient ratios and average daily patient loads, by type of hospital

ITEMIZATION OF ESTIMATE

Hospital health services

Obligations by objects	Actual, 1963	Amount available, 1964	Estimate, 1965	Increase (+) or decrease (−)
11 Personnel compensation	$23,377,355	$24,731,750	$25,569,000	+$837,250
12 Personnel benefits	1,942,877	2,008,200	2,064,200	+56,000
21 Travel and transportation of persons	906,675	931,600	931,600	
22 Transportation of things	522,620	536,100	536,100	
23 Rent, communications, and utilities	1,356,907	1,372,100	1,374,100	+2,000
24 Printing and reproduction	47,793	48,000	48,000	
25 Other services	1,682,605	1,699,200	1,728,200	+29,000
26 Supplies and materials	4,436,958	4,578,300	4,607,300	+29,000
31 Equipment	635,858	577,500	582,500	+5,000
42 Insurance, claims, and indemnities	12,633			
Subtotal	34,922,281	36,482,750	37,441,000	958,250
Deduct quarters and subsistence charges	638,653	763,000	799,000	−36,000
Net obligations	[1] 34,283,628	[1] 35,719,750	[1] 36,642,000	+922,250

[1] Excludes reimbursements as follows: 1963, $667,358; 1964, $660,000; 1965, $660,000.

2. Contract medical care

Activity	Amount available, 1963	Amount available, 1964	Estimate, 1965	Increase (+) or decrease (−)
Contract medical care	$10,244,587	$11,324,000	$11,838,000	+$514,000

The estimate of $11,838,000 is an increase of $514,000 consisting of:

1. An increase of $379,000 for rising costs of program operation.
2. An increase of $46,000 for the hospitalization, medical care, and transportation of an average of three additional patients per day during 1965 fiscal year.
3. An increase of $89,000 to annualize the cost of the new positions authorized under the 1964 appropriation, which includes $1,000 for annualization of Civil Service Pay Act increases, Public Law 86–793.

NEED FOR INCREASE

1. An analysis of the rates negotiated in contracts with the various hospitals clinics, physicians, and dentists with which the Division of Indian Health has continuing formal agreements reveals a steady upward trend of approximately 5 percent annually. Available published surveys of health care costs corroborate this trend and even indicate a higher national rate of increase. In order to maintain the current level of the amount of services provided under this program it is necessary to plan for this added cost and request funds sufficient to cover the probable increase. The amount of $370,000 represents about 73 percent of the total increase requested for this activity.

2. An increase of $46,000 is requested to provide for the hospitalization of an average of three additional patients per day. This increase consists of (1) $48,000 to cover hospital per diem costs for three additional general medical and surgical patients and five additional neuropsychiatric patients; (2) $5,000 for patient and escort travel; and (3) $26,000 for physicians' services, for a total increase of $79,000. This amount is offset by a $33,000 reduction which results from a decrease in the tuberculosis patient load of five patients per day.

3. The diversified contract medical program requires adequate professional supervision at the field level to assure the quality of medical care being furnished. An increase of $89,000, which includes $1,000 for annualization of Civil Service Pay Act increases, is requested to annualize the 18 additional positions authorized in 1964. The 1964 estimate provided funds for a total of 20 positions and 12 man-years. These funds will be used in providing specialized staff to professionally supervise, analyze, and qualitatively reexamine the availability of medical services, their proper utilization, and the quality of the care received.

PLAN OF WORK

The request of $11,838,000 is for the purchase of medical care through contractual arrangements and is an essential element of the Public Health Service Indian health program. Formal agreements are entered into with community hospitals, private physicians and clinics, dentists, and providers of ancillary health services to assure that quality care is obtained. Through this mechanism, medical care services are practically and effectively provided for widely scattered and small groups of Indian beneficiaries who urgently need such services. In addition, the use of contract services makes possible special diagnostic and therapeutic services which cannot be provided in the many small and intermediate sized Public Health Service Indian hospitals at economical costs. Emergency hospital and medical care services are frequently required at locations not readily accessible to health facilities directly operated by the PHS Indian health program. This division does not operate any facilities equipped to provide psychiatric care to Indian beneficiaries and therefore this type of service must be obtained through the contract mechanism.

The following table indicates the distribution of funds under the various items requested for the 1965 program. It also shows how 1963 funds were obligated and the plan of funding for 1964 operations. The actual experience of average daily patient loads are reported for 1963 together with expected levels for 1964 and 1965.

Contract medical care

	1963 actual			1964 estimate			1965 estimate		
	Average daily census	Rate	Amount	Average daily census	Rate	Amount	Average daily census	Rate	Amount
Hospitalization:									
General	491	$29.73	$5,328,061	511	$31.28	$5,850,000	514	$32.91	$6,174,000

Physicians' services (inpatient fees, office visits, consultation services)			2,200,513			2,354,000			2,380,000
Dental services (emergency services, dental, laboratory prosthesis)			380,002			430,000			440,000
Other costs (laboratory and X-ray services, pharmaceuticals, proprietary dugs for inpatients and outpatients, prosthesis, and burials)			530,741			666,000			666,000
Total			10,244,587			11,324,000			11,838,000

Field health services

Subactivity	Amount available, 1963	Amount available, 1964	Estimate, 1965	Increase (+) or decrease (−)
(a) Sanitation	$1,508,635	$1,632,900	$1,729,000	+$96,100
(b) Dental	1,670,417	1,789,000	1,888,000	+99,000
(c) Public health nursing	1,344,040	1,709,200	1,783,000	+73,800
(d) Health education	482,182	528,500	545,000	+16,500
(e) Field medical services	4,765,873	5,090,400	5,355,000	+264,600
Total	9,971,147	10,750,000	11,300,000	+550,000

SANITATION

The estimate of $1,729,000 is an increase of $96,100 consisting of:

Statutory salary promotions	$13,000
Annualization of Civil Service Pay Act increase, Public Law 86–793	10,000
Annualization of Uniformed Services Pay Act increase, Public Law 88–132	18,000
Program increase	57,300
Total increase	98,300
Less decrease for 1 day less pay in 1965	−2,200
Net increase	96,100

NEED FOR INCREASE

Lack of basic sanitary facilities and gross insanitary practices in the home and community continue to exist despite increasing attention being given by Indian tribes and their members. Unavailability of proximate water supplies for domestic use, improper or often nonexistent facilities for satisfactory storage of food and disposal of wastes, overcrowded and poorly constructed housing, and disease vectors (insects and rodents) resulting from environmental conditions favorable to their propagation, continue to be major problems. The above factors are in large measure responsible for the high incidence of preventable diseases such as gastroenteritis and infectious hepatitis and needless premature deaths, particularly among infants, occasioned by diarrhea and dysentery and respiratory ailments. These diseases continue to cause a significant patient load at Public Health Service hospitals, clinics, and contract facilities, and at the same time are the cause of sporadic epidemics on Indian reservations.

Under the authority of Public Law 86–121, the Indian Sanitation Facilities Act, a coordinated tribal-Federal attack on the correction of gross deficiencies in domestic and community water supplies, waste disposal systems, and other sanitation facilities is being carried out. Indians participate in project planning, and facilities construction, and assume responsibility for operation and maintenance of completed facilities. The staff time devoted to project engineering, technical support, and training of Indian families and groups has resulted in Indian acceptance and participation in the program to a marked extent. Of the 240 sanitation projects undertaken with 1960, 1961, 1962, and 1963 appropriations for construction of Indian health facilities, 176 have been essentially completed and 63 are in progress at this time (November 30, 1963). The final agreement is being developed with the tribe on mutual participation for the other authorized project. When completed these projects will provide basic sanitation facilities for more than 16,000 Indian and Alaska native families in 206 communities.

In 1964, $3,937,000 was appropriated for 37 sanitation facility projects under construction of Indian health facilities. Allocations for additional projects under the Public Works Acceleration Act provided $3,195,000 for 30 projects and $1,800,000 for 12 projects for obligation in 1963 and 1964 respectively. As of November 30, 1963, construction is essentially completed on 5 of these projects, 24 are under construction, and the remaining 13 are being initiated.

The sanitarian aid program, now in its 11th year, continues to be the key element in bridging the gap of cultural differences and modern environmental health practice. Selected Indians are trained in basic elements of sanitation and then impart this knowledge to their own people. Seventy sanitarian aids furnish

essential information on gross sanitation deficiencies and motivate Indian families and groups to overcome basic health problems. Under a contract with the Alaska Department of Health and Welfare, similar activities are conducted in 61 native villages in Alaska by 7 full-time and 4 part-time aids together with 5 sanitarians.

During 1963, through the educational and technical efforts of the Public Health Service staff and the construction activity, individual families and groups were motivated and assisted in obtaining improvement or installation of 2,400 domestic water supply sources, 3,200 water storage facilities, 3,300 individual sewerage systems or sanitary pit privies at Indian homes and gathering points, and 1,600 refuse disposal facilities. This represents a 42-percent increase in the construction of such facilities over the previous year.

Basic environmental health activities less directly associated with the construction effort have generally shown a 30-percent decrease in level of activity from previous years. These activities include 4,600 comprehensive surveys at Indian homes, 210 inspections of trading posts, 340 health nuisances abated, 120 insect breeding places and rat harborages eliminated, 2,260 premises sprayed for insect control, 105 immunization clinics for the control of rabies among domestic animals, 70 institutional sanitation surveys of hospitals and schools serving Indians, and sanitation work and demonstrations at 240 public meetings of ceremonials attended by more than 26,600 Indians. These activities must be strengthened and carried out at more frequent intervals if the health needs of the expanding Indian population are to be met and the incidence of preventable disease significantly reduced.

Preparatory activities at the local reservation level are essential prerequisites to development of full Indian understanding of the relationship between environment and health. Further, these activities support the preplanning required to process the sizable backlog of project requests into workable sanitation facility projects for programing.

PLAN OF WORK

The 1965 program contemplates the continuation of the on-going sanitation activities at a modestly increased level over fiscal year 1964 through the addition of one engineer, two institutional sanitarians, three sanitarian aides, and one clerical position in the field. These increases will permit sanitation services to be provided to three additional beneficiary groups, will permit the initial determination of home environmental conditions that are conducive to accidents, and it will permit a modest increase in native village sanitation services in Alaska. The increase will also augment the surveillance of institutional environments and followup on completed sanitation facilities constructed under Public Law 86–121.

DENTAL

The estimate of $1,888,000 is an increase of $99,000 consisting of:

Statutory salary promotions	$16,500
Annualization of Civil Service Pay Act increase, Public Law 87–793	13,000
Annualization of Uniformed Services Pay Act increase, Public Law 88–132	33,000
Program increase	38,700
Total increase	101,200
Less: Decrease for 1 day less pay in 1965	−2,200
Net increase	99,000

NEED FOR INCREASE

Dental decay and periodontal disease are the two most prevalent diseases afflicting the Indian and Alaska native populations. The conditions are greater among these people than among the general population because (1) there exists a tremendous backlog of accumulated neglect, (2) they have a poor understanding of the cause and effect of oral diseases and preventive measures, and (3) the available dental resources cannot adequately cope with the overwhelming amount of dental pathology. This problem is compounded by the sharp rise in the proportion of school age children in the Indian population.

In fiscal year 1963, about 27 percent of the beneficiary population was examined and received only 52 percent of its required care. These services were provided

with a clinician to beneficiary ratio of 1 to 4,200. In the general population it is about 1 to 1,900.

Every effort is made to increase efficiency of available staff by training, redesign of clinics, utilization of auxiliary personnel wherever possible and research on expanded functions for auxiliaries. In 1963 the Division had a 10-percent increase in services rendered over 1962 with a staff increase of only 3.5 percent.

The program increase of $38,700 requested for 1965 provides for one periodontist to help the progress of the periodontal program and three dental assistants for improved utilization of three dental officers.

PLAN OF WORK

The Dental Branch of the Division of Indian Health will continue its program of organizing and providing services that will improve the level of Indian dental health and its contribution to total health to the greatest extent possible within the resources provided. The program, primarily directed toward children, is designed to provide more complete service to an ever increasing segment of the Indian beneficiary population. Preventive services will be receiving additional emphasis. The following table sets forth major workload levels planned for 1965 as compared to 1963 and 1964:

	1963	estimated 1964	estimated 1965
Patients examined	90,796	92,000	92,000
Patients treated	75,530	77,500	78,200
Visits	185,996	187,500	187,500
Completed cases	43,991	44,800	45,800
Total treatments provided	335,156	338,600	341,000
Preventive treatments provided	24,914	32,000	36,000

Public Health Nursing

The estimate of $1,783,000, is an increase of $73,800 consisting of:

Statutory salary promotions	$14,000
Annualization of Civil Service Pay Act increase, Public Law 87-793	19,200
Annualization of Uniformed Services Pay Act increase, Public Law 88-132	7,000
Program increase	37,000
Total increase	77,200
Less: Decrease for 1 day less pay in 1965	−3,400
Net increase	73,800

NEED FOR INCREASE

Public health nursing occupies a strategic position in the public health program since it is the public health nurse who has the closest and most continuous contact with the patient and his family, in their own home setting. Her activities affect all areas in the health spectrum in homes, clinics, schools, and communities.

PLAN OF WORK

The program increase of $37,000 for 1965 will provide for the following six additional positions: one public health nurse, three practical nurses, one driver-interpreter, and one clerk. This will allow a modest increase in services. It is estimated that public health nursing can be extended to approximately 800 additional families, and will permit greater depth of services in some areas such as maternal and child health.

Health Education

The estimate of $545,000 is an increase of $16,500, consisting of:

Statutory salary promotions	$4,500
Annualization of Civil Service Pay Act increase, Public Law 87–793	9,300
Annualization of Uniformed Services Pay Act increase, Public Law 88–132	1,000
Program increase	3,000
Total increase	17,800
Less decrease for 1 day less pay in 1965	−1,300
Net increase	16,500

PLAN OF WORK

The program is designed to (1) provide opportunities for Indian and Alaskan native beneficiaries to learn about the cause and spread of diseases; (2) conduct education programs for the beneficiaries; (3) give technical assistance to DIH staff members in the conduct of the educational phases of their activities, this includes developing materials; (4) arrange for the beneficiaries to participate when appropriate in planning and execution of educational programs in their behalf.

STATUS OF PROGRAM

Each year more beneficiaries attend classes held for medical self-help and home nursing. There is an increase in attendance at medical care and preventive clinics. The increase in the number of local health committees is evidence of the desire of the beneficiaries to participate more fully in the health program. The program in 1965 will continue from a staff and budget standpoint at about the same level as 1964.

Field Medical Services

The estimate of $5,355,000 is an increase of $264,600 consisting of:

Statutory salary promotions	$37,500
Annualization of Civil Service Pay Act increase, Public Law 87–793	42,500
Annualization of Uniformed Services Pay Act increase, Public Law 88–132	30,000
Program increase	162,500
Total increase	272,500
Less decrease for 1 day less pay in 1965	−7,900
Net increase	264,600

NEED FOR INCREASE

Increased workload.—Current facilities have been experiencing an increasing demand for services which require additional resources in staff and supporting services. Outpatient visits in 1963 for therapeutic and preventive services at Indian health centers, schools, health stations, and satellite field clinics totaled 538,300. This exceeded the 1963 estimated load as contained in the 1964 congressional budget by 68,700. The current 1964 estimate of 549,000 visits exceeds the original estimate by 60,500 visits. To meet some of these needs a program increase of $53,500 is requested in 1965.

New replacement facilities.—Replacement health centers at Fort Hall, Idaho, Peach Springs, Ariz., and Toppenish, Wash., and health stations at Rocky Boy's, Mont., and Arapahoe, Wyo., will be completed and fully activated by the end of 1964 which will provide space for staff to render expanded services. A program increase of $60,000 is requested to provide for additional staff and supporting services for these new facilities.

Epidemiology training program.—An important need of the program is training of professional personnel in didactic and field applications in the area of epidemiology. The primary orientation of the program will be for the training of allied medical personnel. It is expected that knowledge gained through this combination orientation and skills training program will materially contribute to a fuller utilization of the manpower resources of the Division by (1) improvement of use

of DIH resources through use of epidemiological tools; (2) improvement in program planning through scientific analysis of health problems and development of new methods to overcome program deficiencies; (3) provision of epidemiological field experience for DIH personnel; (4) indoctrination of future clinicians and State and local public health workers in the Indian health program activities; (5) provision of a built-in program for development of new methods for disease control; and (6) provision of an important resource in the total plan for a PHS public health physician residency program.

This proposed training program envisions the operation of a continuing division-wide training center at the Phoenix area office for the training and application of personnel in principles and application of epidemiology.

The center will provide comprehensive basic courses of didactic training coupled with field application, plus special seminars for followup and provision for the special needs of the more advanced professional. A program increase of $49,000 is requested to facilitate this activity.

PLAN OF WORK

The request of $5,355,000 for field medical services encompass medical care and preventive health services provided at fixed field facilities, outside hospitals, and at numerous field locations as close as practicable to the widely scattered and isolated groups of Indian and Alaska native beneficiaries. Associated with this activity is the field nutrition program, medical social service and epidemiology training.

Services are provided to the ambulatory. These include diagnosis and treatment, referral of persons needing hospital care and followup by appropriate staff specialists; and the wide range of preventive health services such as immunizations, well-baby care, prenatal and postnatal care; disease detection services and screening through specialized clinics—diabetes, tuberculosis, and ear and eye.

The facilities in which these services are provided include 27 field health centers, 17 school health centers at larger BIA boarding schools, and at over 200 other locations (including the health stations).

Health center services are coordinated by a medical officer in charge. Centers are staffed with a full-time medical officer, nurses (clinical and public health), nursing assistants, pharmacists, laboratory and X-ray technicians, clerical assistants, interpreter-drivers, and maintenance staff. Medical social workers and nutritionists are among the professional specialists whose services are available on a part-time scheduled basis. The health centers and stations provide the office and clinic space as well as supporting services for other members of the health team such as sanitarians, public health nurses, dental officers and their assistants, and community health workers.

School health centers are health facilities located in the larger boarding schools operated by the Bureau of Indian Affairs. Some of these have infirmary-type facilities and more complete medical staff, but most of them are limited to nursing and clerical personnel only. Medical care and preventive health services are provided at the smaller BIA schools by scheduled visits of medical officers and other health personnel from Division of Indian Health hospitals, health centers or by medical personnel from nearby communities under contract. Almost 49,000 Indians and Alaska natives are enrolled in Federal (boarding and day schools), mission, and other nonpublic schools.

Health stations are smaller facilities usually without full-time staff where services are provided by teams of health personnel on either a regularly scheduled or an itinerant basis. These stations are located in small Indian communities where Indians would otherwise be without health services or would need to travel excessive distances. The schedule of services may vary from several visits a week to a station near a busy trading post, to once a year to a remote village in Alaska.

Through these resources and facilities the field medical services program extends preventive health services and medical care for the ambulatory of tens of thousands of beneficiaries who live beyond reasonable distance of hospitals or community medical resources.

High priority is given to directing attention to problems of and services for mothers, infants and preschool children. To attack these high-priority problems provision is made for intensification and expansion of such services as prenatal and child health clinics, immunizations and medical treatment.

There follows a distribution by major fixed facility of the outpatient visits for 1963, 1964, and 1965:

	Actual, 1963	Estimated, 1964	Estimated, 1965
Health centers	$253,000	$258,000	$265,000
BIA boarding schools	86,800	88,000	90,000
Health center and hospital satellite clinics (including itinerant clinics in Alaska)	144,300	148,000	155,000
Day schools and other clinic locations	54,200	55,000	65,000
Total	538,300	549,000	575,000

Field health services

Obligations by objects	Actual, 1963	Amount available, 1964	Estimate, 1965	Increase (+) or decrease (−)
11 Personnel compensation	$6,213,345	$6,964,000	$7,429,000	+$465,000

Administration	$1,534,039	$1,747,000	$1,796,000	+$49,000

The estimate of $1,796,000 is an increase of $49,000 consisting of:

Statutory salary promotions	$12,000
Annualization of Civil Service Pay Act increase Public Law 87–793	28,000
Annualization of Uniformed Services Pay Act increase Public Law 88–132	9,000
Program increase	3,000
Total increase	52,000
Less: Decrease for 1 day less pay in 1965	−3,000
Net increase	49,000

The Division of Indian Health Headquarters staff required to effectively direct a widely dispersed and extremely complex health service are funded under this title. This staff includes (1) positions specializing in the fields of curative and preventive health (2) staff engaged in such specialized fields as nutrition, medical records, medical social work, statistics, financial management, general services and personnel (3) staff required for engineering and construction, who review estimates, and act as liaison between the division of Indian Health and the Construction Branch of the Bureau of Indian Affairs. Within the total authorization for this activity funds and positions are included for the Office of the Bureau Chief, Bureau of Medical Services. This office provides program direction to the Divisions under its supervision. It is financed by allocating its costs among these Divisions.

The 1965 estimate of $1,796,000 for the administration activity provides for a continuation of operation in 1965 comparable to that of 1964.

Administration

PASSENGER MOTOR VEHICLES

Authorization is requested for purchase of 36 passenger vehicles of which 33 are for replacement. All vehicles to be replaced will have met the standards as to age or mileage.

The additional vehicles scheduled for procurement in 1965 are as follows:

Program and location	Number of vehicles	Type
Contract medical care:		
Billings area	1	Sedan.
Oklahoma City area	1	Do.
Portland area	1	Do.

HIGHLIGHT STATEMENT

Chairman HAYDEN. I would appreciate it if you would describe your budget request, bringing to the attention of the committee the main features of it, indicating where there are increases or decreases, and providing information to explain the desirability of these increases or decreases. Your prepared statement will be printed in the record, if you desire to highlight it.

(The statement referred to follows:)

STATEMENT BY DR. CARRUTH J. WAGNER, CHIEF, DIVISION OF INDIAN HEALTH

Mr. Chairman and members of the committee, the Indian health program of the Public Health Service is unique among Federal programs. This program encompasses a comprehensive community health services approach to meet the total health needs of the Indian beneficiary, as an individual and as a member of a community.

Currently, some 380,000 Indians and Alaska natives come within the scope of the Indian health program. Approximately 43,000 are in Alaska and the remainder in the 23 Federal Indian reservation States. They are young people; nearly 60 percent are under 20 years of age. They live in circumstances which differ from those of any other population group in the country. The majority do not have the organized community affiliations of other Americans for meeting their physical, social, and economic needs. With few exceptions, these people live in conditions of abject poverty. More than 50 percent live in one- or two-room dwellings, the majority constructed by themselves from materials indigenous to their location, and the average occupancy of this one- or two-room house is 5.4 persons. More than 80 percent must haul or carry all the water for their household use, and 70 percent of this water comes from potentially contaminated

sources. More than 80 percent have inadequate waste disposal facilities and 12 percent no facilities at all.

They are isolated, both geographically and culturally from non-Indian society. Many do not speak English. Despite the efforts of Bureau of Indian Affairs programs designed to overcome the problem, there is little employment available on reservations, and the level of education and vocational training of most of the people prohibits their competing favorably in a non-Indian work setting. The average income of the majority of these families is under $1,500 a year.

In all, they are a people confronted with tremendous obstacles in an attempt to attain a higher standard of living. Chief among these is their low health status which is about that of the general population a generation ago.

The goal of the Indian health program is to elevate the health status of the American Indian and the Alaska native to the highest possible level. To attain this goal, the Public Health Service has established the following program objectives:

1. To provide health services which assure achievement of the health goal through self-help activities conducted by and with the Indians and Alaska natives to the ultimate realization of their assumption of fuller responsibilities in meeting their health needs.

2. To manage program resources (manpower, money, and materials) in a manner that provides a coordinated and balanced preventive, curative, and rehabilitative health program through a constantly updated areawide operations plan, initiated at the service unit level and consolidated in a comprehensive division plan with Indian cooperation and consultation.

3. To provide continuing appraisal of health status to insure efficient application of effort in those areas that will have the greatest impact on achieving the health goal, coupled with continued development of additional tools for measurement, evaluation, and application.

4. To provide opportunity for total individual staff growth and development through management of manpower resources.

5. To foster and promote full and equitable utilization of all outside resources, public and private, with particular reference to State and local government responsibilities for their Indian citizens.

Accomplishments

Very definite improvements in both Indian and Alaska native health status have been realized in the past decade. We are continually striving to make further improvements as rapidly as possible. Two of the most dramatic improvements since 1954 are reflected in reductions in infant death rates of 36 percent for the Indians and 20 percent for Alaska natives, and 46 percent and 87 percent, respectively, in tuberculosis deaths in the two groups.

Satisfaction with such reductions is tempered by the still unfavorable comparisons with our population as a whole: the present Indian infant death rate is about two times and the Alaska native rate is two and one-half times greater than that for infants in the population as a whole; the tuberculosis death rates for the two populations are six times greater than the all-races rate. This same situation exists in many other categories: deaths from gastroenteric conditions, for example, where the Indian rate is over six times greater than the all races rate; and in deaths from influenza and pneumonia which are two and three times greater among Indians and Alaska natives, respectively, than the general population.

There is one highly significant development that deserves special attention since it affects the total Indian health program and mirrors the most important kind of progress. I refer to the growth in beneficiary acceptance of their health services.

There are many reasons for the Indian's and Alaska native's reluctance to accept many health services available to him. There is a basic distrust of the non-Indian and non-Indian practices which is especially prevalent in the older Indians. There is a clash of conflicting cultures; the old with its shroud of mystery, folklore and ancient customs to which the older Indian clings because it is his way of life; and the new, emerging as a result of modern education, among the young. These cultural differences make the provision of modern health services quite difficult in many areas throughout Indian country. In addition, there are other problems caused by the dispersion of Indian family units over large, often inaccessible areas, and language barriers that make communication difficult and, occasionally, impossible.

One of the greatest challenges to the Indian health staff is assisting the Indian to accept new beliefs and attitudes toward health care and to adopt better personal and community health practices. We strive constantly to provide better services, both to best utilize our resources and to encourage effective and efficient use of these services by the Indian.

In the category of hospital and clinic facilities, 5 hospitals which were inadequate and unsafe have been replaced; 2 new hospitals have been constructed; through Public Law 151, 110 beds have been added in 15 community hospitals serving Indians and non-Indians; there are contractual arrangements in some 200 communities, where we have no facilities, to provide the Indian beneficiary with hospital care; 9 field health centers and 29 field health stations have been built to provide curative and preventive health outpatient services close to the Indians' and Alaska natives' home.

We are pleased to report that the Indians are using these facilities in ever-increasing numbers. In fiscal year 1963, hospital admissions totaled approximately 87,500, 6,000 more than in 1962; and the number of outpatient visits at hospitals and clinics rose to 1,260,000 an increase of 145,000 over 1962.

This increase in acceptance of health services is being reflected in many other ways by the Indians and Alaska natives, as demonstrated by their increased participation, both tribal and individual, in other Indian health activities—sanitation projects, immunization clinics, and field testing for tuberculosis, to cite a few. As a direct result of this increased participation in modern health activities, recent data show that tuberculosis patient admissions decreased 20 percent from 1962 to 1963, and that tuberculosis is no longer one of the 10 diseases of highest reported frequency among Indian beneficiaries. At this time, the leading illnesses, in order of frequency are gastroenteritis, otitis media, pneumonia, measles, streptococcal throat, influenza, trachoma, gonorrhea, dysentery, and chicken pox. Most of these are clearly preventable, which emphasizes the need for major emphasis upon preventive health activities in the hospital and field health program.

Indian Health Activities

The Public Health Service provides direct care to Indian and Alaska native beneficiaries through a system of 50 hospitals, each with inpatient and outpatient services; field health centers; field stations; and special health centers and clinics at Bureau of Indian Affairs schools. In addition, where Public Health Service facilities or services are limited or nonexistent, health services are provided through contractual arrangements with non-Federal hospitals, private physicians and dentists, community pharmacies and State and local health agencies.

As mentioned previously in this statement, both hospital admissions and outpatient visits at clinics and field stations have shown steady increases, especially from 1962 to 1963. The pediatric workload is high, comprising more than one third of the general hospital discharges, and accounting for a large proportion of outpatient services. Another major portion of the services is directed to Indian and Alaska native mothers. Treatment of patients for acute accidents and injuries constitute another major portion.

HOSPITAL HEALTH SERVICES

The 1965 request for hospital health services will provide for: (1) the operation of 50 Public Health Service Indian hospitals and attached outpatient clinics; (2) continuance of the practical nurse school training program for Indian girls which is associated with the Indian hospitals; and (3) the maintenance of the hospitals and other Division of Indian Health facilities, consisting of health centers, stations, school clinics, and staff quarters.

The training of young women of Indian descent as practical nurses has been one of the most successful efforts of the Indian health program. At the school of practical nursing in Albuquerque, some 80 girls are trained and graduated each year. Following graduation, they take State board examinations to qualify as licensed practical nurses, and are then assigned to a hospital or field health position. Until last year, graduates were utilized only in Indian hospitals, but some dozen members of the August 1963 class were employed by the Clinical Center at the National Institutes of Health, the Public Health Service Hospital at Staten Island, and in two Alaska native hospitals.

A second practical nurse training program is conducted at the Public Health Service Experience Center at Shiprock, N. Mex., where Indian graduate practical

nurses are taught to assist graduate public health nurses in the provision of services in homes, schools, and field clinics.

A third program for practical nurses is now being instituted as a result of funds made available in 1964. Selected groups of licensed practical nurses are now being given additional clinical training and experience at Indian health facilities in South Dakota which will broaden their skills and enable them to relieve registered nurses of many less complex nursing functions.

CONTRACT MEDICAL CARE

In locations where direct medical and dental services are not available under the Public Health Service program, these services are provided through contractual arrangements with community hospitals, laboratories, pharmacies, private physicians, clinics, and dentists. In addition, only occasionally used special diagnostic and therapeutic services are purchased through contract, making it possible for the Division of Indian Health to avoid the expense of supporting these activities on a full-time basis. Emergency hospitalization and medical care in locations where an Indian hospital or clinic is not readily available are also provided under this program.

FIELD HEALTH SERVICES

All preventive health services and medical care provided outside hospitals are included in field health services. Basically, the field health program is designed to bring health services to the tens of thousands of Indians and Alaska natives who live considerable distances from Indian hospitals or community health resources. It covers services provided in homes, communities, villages, at field health stations, and at schools and health centers.

Encompassed are medical and dental diagnoses and treatment, clinical and public health nursing, referral of persons needing hospital care and followup by appropriate specialists; the wide range of preventive health services such as immunizations, communicable disease surveillance and control; followup home visits; well-baby care; prenatal and postnatal care; disease detection; screening and treatment through specialized clinics—diabetes, tuberculosis, heart, cancer, and ear and eye; medical social services; guidance in nutrition problems; health education; accident prevention; environmental health services and implementation of a cooperative Federal-tribal program to construct water supply and other sanitation facilities.

The extent of services ranges from the continuously operated fully staffed health center, to the smaller, more remote health station which may be open one, two, or three times a week, to the hundreds of villages in Alaska which are accessible only by bush plane and dogsled, and where medical aids maintain radio contact with Indian health physicians to receive advice and instructions on care of the sick or injured. Medical teams fly into these villages at least once or twice a year.

Through a new program of epidemiology training now being formulated, it is the Division's intent to provide professional personnel with formal instruction combined with intensive field experience in the application of epidemiological principles and methods, and thus increase their capabilities to fulfill assignments in the Indian health program.

Construction of Indian Health Facilities

HOSPITALS, FIELD HEALTH CENTERS, AND FIELD HEALTH STATIONS

To successfully conduct the Indian health program following conventional, up-to-date medical practices, modern fully operative, functionally arranged facilities are essential. Although considerable progress has been made in correcting some of the deficiencies which existed at the time of transfer of the program from the Bureau of Indian Affairs to the Public Health Service, inadequacies still exist due to age, obsolescence, overcrowding, outmoded functional arrangements and equipment, deferred maintenance, and unsafe conditions. Recent improvements include: completion of a 36-bed hospital on the San Carlos Apache (Ariz.) Reservation; additions and alterations completed at the Bethel, Alaska, hospital; alterations completed at the old Fort Peck, Mont., hospital to convert it to a field health center. Schematic drawings are being completed for new hospitals at Fort Yates, N.Dak. (27 beds), and Barrow, Alaska (12 beds), and for additional alterations to the Gallup, N. Mex., hospital. The design of a new 80-bed hospital at Lawton, Okla., is underway. An addition to the Tahlequah,

Okla., hospital also is under construction and a planning study is underway for the 200-bed Indian Medical Center, at Phoenix, Ariz.

Many field health facilities remain grossly inadequate or nonexistent, and, at various locations, services are being provided in school basements, mission or chapter houses, trading posts, and other dwellings, which are totally lacking in suitability or adaptability for the provision of proper medical care. Some alleviation of these inadequacies was realized during the past year with the construction of new field health stations at Jemez and Santo Domingo, N. Mex.; Dennehotso, Ariz.; Heart Butte, Mont.; and Fort Thompson, S. Dak. Three more health stations are completed or nearing completion at Arapahoe, Wyo., Rocky Boys, Mont., and Peach Springs, Ariz. Construction of three health centers at Fort Hall, Idaho, Dulce, N. Mex.; and McLaughlin, S. Dak., has been initiated. Drawings were completed for additional stations at Dennebito Dam, Ariz., and Gambell, Alaska, and planning progress can be reported for health centers or clinics at Hooper Bay, Alaska, Gila Crossing, Poston, and Shonto, Ariz., Toadlena, N. Mex., Whitehorse, S. Dak., and Toppenish, Wash.

STAFF QUARTERS

Housing for Indian health field employees in remote, sparsely settled locations where housing is unavailable unless provided by the Government, has been a constant source of concern. Without adequate quarters, recruitment and retention of professional and technical personnel is seriously hampered. Current appropriations provide for the construction of 32 new quarters. This year, 56 additional units are planned, including 4 new and 52 to replace temporary or inadequate units, at 7 locations.

SANITATION FACILITIES CONSTRUCTION

One of the most glaring deficiencies of the Indian and Alaska native physical environment is the water supply. More than 70 percent of the people drink, potentially contaminated water. Further, this water must be hauled or carried, and is in short supply. Another glaring deficiency is the inadequacy or absence of facilities for the disposal of human and other household wastes.

The deleterious effect these conditions have upon the health status of the Indian are without question. There is no doubt that they are responsible for the spread of organisms causing diarrheas and dysenteries which plague the Indian people, and contribute to the rampant spread of communicable diseases throughout Indian reservations and communities, and Alaska native villages.

Environmental health activities of the Division include motivation and education of Indians to desire a better environment, construction of needed sanitary facilities, and training of Indians in use and maintenance of these facilities. Preparatory activities at the local reservation level prior to construction are essential to development of full Indian understanding of the relationship between environment and health. Further, these activities are prerequisites to the conversion of Indian requests into workable sanitation facility projects.

Most of the construction is accomplished under the authority of Public Law 86–121. This has been augmented through the accelerated public works program authorized under Public Law 87–658. In all instances, planning and implementation of construction activities are done by the Public Health Service cooperatively with the respective Indian tribes or Alaska native groups. The tribes themselves contributed about 30 percent of the costs of the projects in labor, money, or materials.

It is estimated that upon completion of the 319 projects authorized through 1964, more than 20,000 Indian and Alaska native homes will be served in more than 250 communities. This will mean that approximately 25 percent of the total estimated needs will have been met, and that, at the current regular budget level of construction work, it will take about 15 years to meet the total current estimated need for such facilities.

Educating the beneficiaries in good environmental health practices and in care and maintenance of facilities has always been an integral part of the sanitation program. During the past year, increased emphasis has been placed on training individual homeowners in the care and utilization of their own completed sanitation facilities, and a special "Home Owner's Guide" has been developed for their use.

In summary, the appropriation request before you for Indian health activities, in the amount of $61,576,000, represents an increase of $2,035,250. In addition to the cost of mandatory items such as statutory promotions and increased pay

cost requirements in the amount of $1,118,250, the funds will provide for: (1) an anticipated increase in hospital workload; (2) a slight increase in the workload and higher costs of contract medical care; and (3) an increase in the preventive health activities consisting of sanitation, dental, public health nursing, and field medical services.

The appropriation request for the construction of Indian health facilities, in the amount of $8,643,000, provides for: (1) the construction of an 80-bed general hospital at Lawton, Okla., $1,965,700; (2) the construction of a health center and three health stations, planning funds for subsequent construction at three other locations, plus equipment funds for the health center at Toppenish, Wash., $382,100; (3) alterations projects at 12 locations and planning for subsequent alterations at 2 other sites, $864,700; (4) 56 staff quarters, $1,430,500; and (5) the construction of 38 sanitation facility and water supply projects on 23 Indian reservations, $4 million.

We believe the funds recommended this year will enable us to make further advances in improving the health status of the Indians and Alaska natives who come within the scope of this program.

Dr. WAGNER. The Indian health program is unique among Federal programs. Currently, approximately 380,000 Indians and Alaska natives come within the scope of the Indian health program. Although the Government continues to be very active in alleviating the problems of the American Indian and Alaska native, with few exceptions these people live in conditions of abject poverty.

Their housing is extremely inadequate, unsanitary, and overcrowded. Employment opportunities are either nonexistent or restricted since their level of education and acculturation minimizes their competing in a non-Indian work climate. They are isolated both geographically and culturally from the non-Indian society. They represent a people who, through no fault of their own, are unable to raise their standard of living and health status.

HEALTH IMPROVEMENT OF AMERICAN INDIAN AND ALASKA NATIVES

In the past decade, very definite improvements have been realized in the health status of the American Indian and Alaska native. Two of the most dramatic advances since 1954 are reflected in reductions in infant death rates of 36 percent in the Indians and 20 percent in Alaska natives, and reductions of 46 percent and 87 percent, respectively, in tuberculosis deaths in the two groups.

Satisfaction with such reductions is tempered by the still unfavorable comparisons with the general population: the present Indian infant death rate is almost two times, and the Alaska native rate is 2½ times greater than that for infants in the population as a whole; the tuberculosis death rates for the two populations are about six times greater than the all-races rate. This same situation exists in many other categories—deaths from gastroenteric diseases, for example, where the Indian rate is more than six times greater than the all-races rate—and in deaths from influenza and pneumonia, two and three times greater among Indians and Alaska natives, respectively, than the general population.

It is evident that much remains to be accomplished to raise the health level of the Indian to the highest possible level.

INDIAN HEALTH PROGRAM

The Indian health program resources and activities involve the operation of hospitals, health centers and clinics, where medical, nursing, and dental care is provided, and the conduct of all types of

preventive health activities, including maternal and child care, disease surveillance and control, immunization programs, special clinics, health education and environmental health services.

One of the most difficult problems encountered in the Indian health program has been the reluctance of the Indian and Alaska native to accept the services available to him. Evidence that we are making recognizable inroads on this problem is shown by the continuously increasing use of facilities and services, particularly this past year: hospital admissions rose to 87,500 in 1963—6,000 more than the previous year, and the number of outpatient visits at hospitals and clinics increased to 1,260,000—145,000 more than in 1962.

This increasing acceptance of modern health services is also reflected by the active participation, both tribal and individual, in planning and implementing Indian health activities.

Construction of Health and Sanitation Facilities

Other areas in which significant progress has been made are in construction of Indian health facilities and sanitation facilities. During the past year, a new 36-bed hospital was completed and put into service on the San Carlos Apache (Arizona) Reservation; additions and alterations were completed at the Bethel, Alaska, hospital and the Fort Peck, Mont., hospital was altered for better use as a field health center; drawings were completed for the design of two new hospitals at Fort Yates, N. Dak. (27 beds) and Barrow, Alaska (12 beds) and for an addition and alteration to the Gallup, N. Mex. hospital; and the planning for a new 80-bed hospital at Lawton, Okla., is now underway. A planning study has been initiated for a new medical center at Phoenix, Ariz.

Cooperative Efforts of Public Health Service and Indian and Alaska Groups

Under authority of Public Law 86–121, augmented by projects approved under the accelerated public works program (Public Law 87–658), sanitation projects have been constructed through the cooperative efforts of the Public Health Service and the respective Indian tribes or Alaskan native groups. Upon completion of the 319 sanitation and water supply projects authorized through 1964, more than 20,000 Indian and Alaskan native homes will be served in more than 250 communities.

Budget Request Increases

The appropriation request before you in the amount of $61,576,000 represents an increase of $2,035,250. In addition to the cost of mandatory items such as statutory promotions and increased pay cost requirements in the amount of $1,118,250, the funds will provide for (1) an anticipated increase in hospital workload; (2) a slight increase in the workload and higher costs of contract medical care; and (3) an increase in the preventive health activities consisting of sanitation, dental, public health nursing, and field health services.

The appropriation request also includes $8,643,000 for construction of Indian health facilities to provide for (1) the construction cost of an 80-bed general hospital at Lawton, Okla., $1,965,700; (2) the con-

struction of a health center and three health stations, planning funds for subsequent construction at three other locations, plus equipment funds for the health center at Toppenish, Wash., $382,100; (3) alteration projects at 12 locations and the planning for subsequent alterations at 2 other sites, $864,700; (4) 56 staff quarters, $1,430,500; and (5) the construction of 38 sanitation facility and water supply projects on 23 Indian reservations, $4 million.

We believe the funds recommended this year will enable us to make further advances in improving the health status of the Indian and Alaska native.

I would be very pleased to answer any questions that the committee may have, Mr. Chairman.

Additional Personnel

Chairman Hayden. Would you please indicate for the committee the number of additional personnel being requested for the Indian health activities during fiscal year 1965, and explain why it is necessary that your personnel complement be increased?

Dr. Wagner. Mr. Chairman, the total personnel increase for 1965 as compared to 1964 will amount to 92 man-years. This will consist of 44 man-years in the hospital health services which will provide for an anticipated increased workload both in the hospital inpatient care and in the hospital outpatient care. It will also provide 8 man-years for the annualization of the moneys appropriated last year for the hiring of professional supervision for the contract medical care program; and it will permit the hiring under the field health services of 7 additional staff in the sanitation services which deal with home environmental conditions and institutional sanitation activities; 4 in the dental services which will permit a very modest increase in the dental services; and 6 in the public health nursing area which will provide in the field health services for increased activities here; and finally, 23 in the field medical services which provides the clinic nursing, the public health medical care, and the public health activities outside of the hospital.

Training Indian Women in South Dakota

Chairman Hayden. Last year the Congress added $105,000 to your budget for the purpose of training Indian women as nurse assistants and practical nurses in facilities available to you in South Dakota. Would you please tell the committee what you were able to do with this appropriation?

Dr. Wagner. We set up, Mr. Chairman, the training program in the Rapid City T.B. Hospital. Practical nurses were enrolled in this program in November. It is anticipated that 20 students in all will have completed the course in 1964, and we are projecting that 30 more will be trained in 1965.

Chairman Hayden. You are having no trouble in finding educated persons?

Dr. Wagner. These are already trained practical nurses in our program who are given additional training which allows us to expand their function and helps alleviate the disparity we have between the numbers of doctors and professional nurses.

PREVENTIVE HEALTH TRAINING

Senator HAYDEN. What are you doing about training doctors in the preventive health field and what is your program for 1965?

Dr. WAGNER. Improvements in the health status of the Indian and Alaska natives since the transfer of responsibility in 1955 has been primarily due to strengthening of the clinical care program. Future progress is dependent upon major emphasis on the preventive care program which would seek to prevent illness before it occurs.

Programing with this type of emphasis is dependent upon the acquisition of specially trained physicians with a competency in preventive medicine. The Division of Indian Health has a need for 139 of these specialists. Of the almost 300 physicians on duty, only 10 are so trained.

Recognizing this problem, we are working on an affiliated residency with the University of Oklahoma and Oklahoma State Health Department toward the initiation of a training program which, over a 3-year period, would qualify a physician for service in this specialized field. One of the 3 years would be in the Indian health program; thus we would accrue service during training.

If we are to obtain anywhere near the number we need, we are going to have to train them ourselves.

Planning with Oklahoma was not completed in time to request funding support in the 1965 budget submission.

Senator HAYDEN. How much would you need to initiate this program in 1965?

Dr. WAGNER. The following are the costs for this training program. In the first year three physicians would be in training; in the second year, six; and in the third year, nine. All years from that point onward would involve the training of nine individuals.

Fiscal year 1965	$110,000
Fiscal year 1966	152,000
Fiscal year 1967	194,000

Chairman HAYDEN. You are planning some other new programs; are you not?

Dr. WAGNER. Yes; Mr. Senator, on the basis of evaluation of our most pressing Indian health problems and program deficiencies we have planned a number of programs designed to permit us to make more effective use of our available personnel resources in fulfilling our responsibilities and at the same time contribute to staff development.

The Epidemiology Training Center, for which funds have been requested in the fiscal year 1965 budget, is one of these.

Continued improvement in the health status of the American Indian and Alaska native will require increasing stress on the preventive health aspects of our program and reorganizing the limited extent to which most health personnel are provided epidemiological training in their basic education, this Center is essential to train our medical and allied medical staffs in the use of this most important health tool. It is our hope this training will not only provide more effective program operation in evaluation of disease patterns, program planning, and health services but will also permit further expan-

sion of responsibilities of nurses, social workers, health educators, and other allied health personnel. We plan to use this Center to train health workers from all 24 States in which we operate the Indian health program.

Home Nursing Program

A second program that shows real promise is the home nursing program which was initiated through the combined efforts of the Bureau of Indian Affairs, the American Red Cross, and the Public Health Service on the Whiteriver Apache Reservation in Arizona.

In this program activity, we have adapted home nursing and first aid construction material to meet the peculiar needs of the Indian. Courses are then presented to the Indian mothers who, in turn, become instructors and organize more classes. Our goal is to achieve a trained Indian mother in each Indian home. This will contribute significantly to early detection of illness, better infant care, and health practices in the home with resultant improvement of health status through self-help.

We have made a real effort to equip our key personnel with the skills of modern program management. This has resulted in better planning and program operations as evidenced in increased work output without increased staff. Examples of this increased production include an 18-percent increase in pharmacy services and a 10-percent increase in dental services.

Senator Hayden. Will these programs demand an increase in personnel?

Epidemiology Training Program

Dr. Wagner. For the immediate future we feel that the epidemiology training program can be effectively operated with the minor increase requested in the 1965 budget.

No additional staff will be needed for the Indian first aid—home nursing—self-help training program since this is handled by our field health education staff.

Successful operation of ongoing and new training activities will require coordination of training responsibilities at each area office. Currently only three of our area offices have directors of training. We anticipate over the next several years adding similar positions to the remaining area offices.

Affiliated Residency Training Program

The affiliated residency training program in preventive medicine for physicians will require the addition of physician instructors, the number depending upon the number of residents to be trained each year on the Indian reservation.

Senator Hayden. How much interference with the regular work of the hospitals and clinics will these training programs entail?

Dr. Wagner. None, sir. We feel the training is essential to our basic responsibility of elevating the health status of the Indian and

Alaska native and constitutes an integral part of the regular work of providing health services at hospitals and clinics.

"Attack on Poverty" Program

Senator Hayden. What part are you playing on the "attack on poverty" program?

Dr. Wagner. We have prepared several proposals by which we feel the Indian health program can play a very active role in this very worthwhile effort. One plan proposes the training of Indian medical auxiliaries. Seven hundred and fifty of these could be trained and put into program operation within 3 years. These medical auxiliaries would serve much as our nursing, sanitation, and dental assistants now do to extend the services of our professional staff to more Indian and Alaska native families and permit the more efficient use of the physician in the program.

Construction Program Justification

Chairman Hayden. There will be placed in the record the budget estimate for construction of Indian health facilities which amounts to $8,643,000, a sum $3,293,000 in excess of the amount appropriated last year. However, because of unobligated balances available last year and considering a small one available this year, the total available for obligation in fiscal year 1965 is $4,074,926 less than was available on July 1, 1963. The justification for the construction program estimate will be printed in the record.

(The justification statement referred to follows:)

Construction of Indian health facilities

Appropriation, 1964	$5,350,000
Unobligated balance from prior years	7,639,426
Total available for obligation	12,989,426
Decreases:	
Hospitals and clinics	4,918,151
Personnel quarters	1,521,870
Alterations	2,147,428
Community hospitals serving Indians and non-Indians	32,327
Construction of Indian sanitation facilities	4,098,150
Total	12,717,926
Carried into 1965	271,500
Increases:	
Hospitals and clinics	2,347,800
Personnel quarters	1,430,500
Alterations	864,700
Construction of Indian sanitation facilities	4,000,000
Total	8,643,000
Total available for obligation	8,914,500

Analysis by activities

	Amount available, 1964	Fiscal year 1965			Total available, 1965, compared to total available, 1964
		Unobligated balance from prior years	1965 budget requests	Estimated total available	
1. Hospitals and clinics	$4,978,151	$60,000	$2,347,800	$2,407,800	−$2,570,351
2. Personnel quarters	1,521,870	----------	1,430,500	1,430,500	−91,370
3. Alterations	2,158,928	11,500	864,700	876,200	−1,282,728
4. Community hospitals serving Indians and non-Indians	32,327	----------	----------	----------	−32,327
5. Construction of Indian sanitation facilities	4,298,150	200,000	4,000,000	4,200,000	−98,150
Total	12,989,426	271,500	8,643,000	8,914,500	−4,074,926

Highlight Statement

Successful conduct of the Indian health program requires modern, fully operative, functionally arranged facilities. Although considerable progress has been made in correction of deficiencies that existed at time of transfer from the Bureau of Indian Affairs to the Public Health Service, many serious inadequacies must yet be rectified. This inadequacy is a product of age, obsolescence resulting from transition to modern hospital practice, lack of facilities, and deferred maintenance.

Many of the Indian hospitals are not geared to meet the concepts of conventional up-to-date medical practices. They lack the functional arrangements and equipment to carry out an effective medical program. To aid in correcting this problem, the program for 1965 contains construction funds for a new (replacement) hospital at Lawton, Okla. Planning funds for this hospital were appropriated in fiscal year 1963. Additional funds are included under the alterations activity to plan for modernization of the hospital at Tuba City, Ariz. Funds for a feasibility study were appropriated in fiscal year 1964 for the Tuba City project. In addition funds are provided for alteration projects at 13 other locations to correct hazards or for improvements and sundry repairs to elevate facilities to an acceptable standard.

Much of the Indian health program is carried on in field health centers and stations. At many locations, services are currently being provided in school basements, mission or chapter houses, trading posts, and other nonsuitable locations which are totally inadequate to provide proper medical care (small size, layout, lack of equipment, etc.). Provision is made in this request for construction of a health center and three stations and planning funds for subsequent construction at three other locations.

The absence of or lack of suitable housing in remote areas very often limits recruitment and retention of professional and technical personnel. Based on studies at 7 locations, it has been determined that 56 additional units are necessary. This includes 4 new units and 52 to replace temporary or inadequate units.

To correct gross deficiencies in Indian and Alaska native sanitation facilities, funds are also included to provide for 38 construction projects on 23 Indian reservations and in approximately 15 communities in the States of Oklahoma, California, and Alaska.

Funds requested in 1965 and justified on a project basis in this estimate follow:

Hospitals and clinics:	
Hospitals	$1,965,700
Health centers and stations	382,100
Total, hospitals and clinics	2,347,800
Personnel quarters	1,430,500
Alterations	864,700
Sanitation facilities (Public Law 86-121)	4,000,000
Total, fiscal year request	8,643,000

Hospitals and clinics, 1965 request, $2,347,800

Public Health Service Indian Hospital, Lawton, Okla $1,965,700

TOTAL PROJECT COST ESTIMATE

Planning funds appropriated, fiscal year 1963	$115,000
Construction funds requested in fiscal year 1965	1,965,700
Equipment funds to be requested in fiscal year 1966	265,000
Total estimated project cost	2,345,700

PROPOSED PROJECT

The proposed project involves the construction of an 80-bed general medical and surgical hospital, including outpatient clinics and adjunct facilities, to replace the existing facility.

EXISTING FACILITY

The existing facility is obsolete and completely inadequate. It was constructed as three separate buildings which are now connected by corridors. The oldest unit, the east wing constructed in 1915, was condemned for patient use in the mid-1940's. Because of lack of space it has continued to be used for storage, administrative offices, a medical library and maintenance shops. The central unit was constructed in 1931 and currently houses the general medical and surgical services. Until fiscal year 1962 this unit had serious structural defects, involving failure of the roof trusses, separation of the walls, and dangerous weakening of the roof. (Emergency repairs were made to the roof trusses and the roof at a cost of $39,000.) These repairs removed the immediate threat to the safety of patients and staff.

The inefficient and inadequate arrangement of the building in general, however, remains unchanged and still poses a hazard to the efficient and safe operation of the hospital. This building does not lend itself to economical modernization and expansion. The surgical suite is obsolete, crowded, poorly located, inadequately protected against fire and explosion and poses a serious hazard to patients and staff. The pharmacy, laboratory and kitchen are overcrowded and obsolete.

The Joint Committee on Accreditation of Hospitals has repeatedly cited the poor and hazardous conditions noted above.

The third unit or west wing, built in 1937, was originally constructed as a tuberculosis sanitarium and presently houses pediatric and obstetrical services. The space provided and arrangement of these facilities is completely inadequate. The delivery room, like the surgical suite, lacks shockproof and sparkproof equipment and has no grounding precautions. These deficiencies make this room potentially dangerous to patients and staff alike.

The basement of this structure houses the outpatient and dental clinic. These facilities are crowded and obsolete and the waiting room is too small and entirely inadequate.

Considerable thought has been given to the possibility of modernizing this hospital by demolishing the east unit; replacement, alteration, and expansion of the central unit; and renovation of the west wing. Since this approach did not prove feasible, replacement of the entire facility is recommended.

PROPOSAL

A new facility of 52,800 square feet containing 80 beds and 10 bassinets is proposed. This project will be planned to: (1) Conform to the minimum requirements set forth by the Hill-Burton program, and (2) provide sufficient space for comprehensive therapeutic and preventive medical and dental services.

UTILIZATION OF EXISTING FACILITY

In spite of the obsolete, inadequate, and hazardous condition of this hospital, it has experienced consistently high utilization of both inpatient and outpatient services over the past 4 years. The table identifies the major workload elements:

	Fiscal year 1960	Fiscal year 1961	Fiscal year 1962	Fiscal year 1963
Admissions	1,889	1,761	1,734	1,680
Average daily patient census (excluding newborn)	61	52	53	58
Births	300	295	312	310
Outpatient medical visits (facility)	18,256	18,581	19,335	18,573
Dental visits (facility)	(1)	(1)	2,100	2,250

[1] Not available.

PROPOSED PLAN FOR REPLACEMENT OF LAWTON HOSPITAL

The proposed plan is to replace the existing facility with a new hospital of 80 beds and 10 bassinets. On the basis of past experience and projected availability of more comprehensive services, including preventive health activities, it is estimated that the patient load, excluding newborn, will average about 65 a day in the new facility, representing an occupancy rate of about 81 percent.

Based on the pattern of hospitalization and length of hospital stay it is proposed that the 80 beds be distributed as follows:

Medical and surgical	48
Pediatrics	20
Obstetrics and gynecology	12
Total	80

The estimated outpatient medical visits will approximate 20,000 annually, and dental visits about 2,350.

COMMUNITY HOSPITAL FACILITIES

For the two counties from which the majority of the Lawton patients are drawn (Caddo and Comanche) there are a total of 266 acceptable beds, or 64 percent of the total acceptable beds required to meet the hospital needs of these counties. According to the 1963 Hill-Burton State plan, Comanche County Hospital (128 beds) showed an 88.3 percent occupancy rate and Southwestern Clinic (128 beds) showed an occupancy rate of 77.6 percent. These two hospitals are located in Lawton and would be the major general hospital resources for the patient load presently carried at Lawton Hospital. It is doubtful that they could provide the services needed without considerable expansion.

Both hospitals have been approached as to their willingness to expand their present facilities for Indian use under Public Law 85-151. Both have indicated that they were reluctant to consider such a proposal. The Indian beneficiaries of the Lawton Public Health Service Hospital are also on record as opposing joint use of community hospital facilities.

Clinics (health centers and stations) $382,100

Two seemingly unrelated terms (1) remoteness and (2) prevention are prime factors in the Indians' struggle to attain a health plateau equal to that experienced by the general population.

The most effective means to combat costly medical and hospital care is through bringing instruction in preventive health practices as close to the Indian beneficiaries' habitation as possible. In the field health clinics immunization, physical examinations, health conferences, and other preventive health services are provided. The clinic is also the focal point for home visitations, where preventive and curative care can more readily be promoted by physicians, public health nurses, and other health specialists.

Distance, lack of passable roads, and inclement weather limit the Indian's ability to procure health services at hospitals. It is in barren and isolated areas that the clinic is most generally situated to provide health services.

Thus preventive and other health services must be made readily available to the Indian beneficiary if the goal of the program is to be achieved. The field station and health center offer the best means of providing these services since

such facilities can be constructed in close proximity to the Indian. They also offer the most effective and practical means of preventing more costly hospital inpatient care.

An amount of $382,100 for clinics is requested in 1965. This amount will provide for the planning of one school health center and two health stations and the construction of one health center and three health stations. At many of these locations limited health services are currently provided from totally inadequate facilities not suited for such purposes. Also contained in the amount is $25,000 to equip the Toppenish (Wash.) Health Center for which construction funds were appropriated in fiscal year 1964.

The definition of health centers and health stations for which funds are requested follows:

1. Health center: A facility where health services are available at least 40 hours a week and where physicians' services are available either full time or on a regularly scheduled basis, and where other health staff is stationed to provide services such as dental, clinical, and public health nursing, sanitation, health education, and medical social services.

2. Health station: A facility where, although physicians' services may be regularly scheduled, physicians are not available full time, but one or more other health services are available on a regularly scheduled basis, such as dental, public health nursing, sanitation, health education, and medical social services. Such services are available from itinerant personnel headquartered in Public Health Service Indian hospitals and health centers or on a contractual basis.

The location, need, and estimated cost for each of the proposed facilities follows:

Health centers

Laguna, N. Mex. $194,500

COST ESTIMATE

Health center construction funds requested	$194,500
Equipment funds proposed for inclusion in subsequent budget	20,000
Total estimated project cost	214,500

Laguna is located 45 miles west of Albuquerque on Highway 66. It is the population center for the Laguna Reservation and close to the Acoma, Canoncito, and Alamo Reservations. Laguna people live in six villages besides Old Laguna. These are Casa Blanca, Encinal, Mesita, Paguate, Paraje, and Seama.

The present health facility located at Old Laguna serves a population of approximately 5,300 (reservations noted above). The facility is located in a remodeled nurses' house, which is too small to accommodate the current workload and provide necessary facilities for a comprehensive field health program.

Scheduled medical and preventive health clinics are held at the Laguna Health Center and several adjacent satellite health locations: Acomita, Paguate, Alamo, Encinal, and Canoncito. In 1962 more than 6,000 visits were recorded for medical, therapeutic, and preventive services. In 1963, visits exceeded 9,100, including about 5,800 at the satellite locations. The childhood diseases and diseases associated with substandard sanitary environment are among the leading notifiable diseases reported from the service unit. In 1963, a total of almost 3,700 immunizations were completed or administered as boosters.

Public health nurses provide services at the health center, hold scheduled field clinics and visit the homes. During the last 6 months of fiscal year 1962, public health nurses reported that prenatal services had increased; well-baby clinics had an attendance as high as 90 a month and response to all types of clinics was on the increase. Particular attention is given to the problems of maternal and child health, including services to schoolchildren. The BIA operates seven day schools in the Laguna service unit and a boarding school at Canoncito. The total enrollment was over 560 in 1961. Other children attend public and mission schools in adjacent communities.

A dental officer and dental assistant are stationed in the Laguna Health Center and hold regularly scheduled clinics approximately 70 percent of the year. From this focal point they conduct an itinerant schedule for the remainder of the year at the Acomita, Paguate, Alamo, Encinal, and Canoncito reservations and villages.

In 1962 one-third of the service unit population were treated and nearly 1,800 visits for dental services were recorded (primarily school-age children) by the Laguna dental team.

Funds are requested for the construction of a new health center with facilities and space for staff to conduct more adequately the field health activities (medical care, public health nursing, sanitation, dental, health education, maternal, and child health services) and to provide the comprehensive field health services needed by the Laguna service unit Indian beneficiaries. The proposed staff for the facility follows: medical officer (1), dental officer (1), Public Health nurses (3), clinic nurse (1), nurse assistant (1), community worker (1), sanitarian aids (3), maintenance (1), dental assistant (1), and clerical (2).

In addition an estimate of $20,000 will be included in the fiscal year 1966 budget request to provide for equipment for this new (replacement) health center.

This health center was included in the 1964 President's budget but could not be funded as a result of congressional action.

Fort Wingate, N. Mex $25,000

COST ESTIMATE

Planning funds requested	$25,000
Construction funds proposed for inclusion in fiscal year 1966 budget	415,000
Equipment funds to be requested in fiscal year 1967	35,000
Total estimated project cost	475,000

Fort Wingate, located on U.S. Highway 66 approximately 16 miles east of Gallup, N. Mex., is the location of a 13-grade Bureau of Indian Affairs boarding school, with an enrollment of 1,000 students. By 1965 the enrollment is estimated to be doubled to 2,000 students.

There are no clinic services available other than yearly school physical exams, immunizations services and daily screening by a commuting school nurse from Manuelito Hall Dormitory in Gallup who refers students requiring physician's services to the Gallup Hospital approximately 20 miles away. Nonreferral and convalescing children are cared for in respective dormitories. Due to limited number of pediatric beds at the Gallup Hospital, students with common contagious diseases such as measles, chicken pox, and mumps are cared for in the dormitories. In school year 1962–63 visits to the nurse totaled 3,241. Additional visits were held to a minimum through dormitory instructional aids giving medication. In the same period 2,614 students were referred to Gallup for diagnosis and/or treatment. Some of these had subsequent followup visits.

Dental services are provided by a PHS dentist located in another building on the campus. The present clinic is overcrowded and no expansion is possible. In fiscal year 1963, 1,895 students were treated from the Fort Wingate and surrounding schools.

The new school health center will provide outpatient clinical services and allow a comprehensive school health program. In addition, provision will be made for 10 infirmary beds for short-term observation purposes. Illnesses requiring hospitalization will be referred to Gallup Hosptial.

Upon completion of the facility the expected annual workloads are estimated as follows:

Service	*Annual Visits*
Physician	4,000
Nurse	16,000
Dental	2,000

It is anticipated that there will be 1,500 days of infirmary care.

It is requested that $25,000 be provided to plan this school health center. Total estimated cost, including planning, is estimated to be $475,000.

Toppenish, Wash $25,000

Funds are included to equip the Toppenish, Wash., Health Center.

Project construction funds are contained in the 1964 fiscal year appropriation.

HEALTH STATIONS

Cherry Creek, S. Dak $41,200

Cherry Creek is a small Indian community on the Cheyenne River Reservation 40 miles south of Dupree, S. Dak., and 55 miles southwest of Eagle Butte, S. Dak. There is an estimated Indian population of 280 inhabitants.

It is the site of a Bureau of Indian Affairs day school and is served only by one substandard road leading south from Dupree.

Clinics are held on a weekly basis in an inadequate Bureau of Indian Affairs house and are conducted by staff from the PHS Indian Hospital at Eagle Butte. The examining room is inadequate. There is no nurses' work space and very little waiting room space in the makeshift facility.

During fiscal year 1963 there were over 1,100 visits to the clinic and upon completion of the new station an estimated 1,800 visits is anticipated at general medical and preventive health clinics and conferences.

An extensive program of home visiting by public health nurses and conferences is planned. The conferences will include well child, preschool, prenatal, and postpartum public health services. These conferences will be held, for the most part, in conjunction with the clinic while the physician is present. A nutritionist is to be added to the staff of the service unit and a program of community nutrition education will be inaugurated. In addition, demonstrations and group instruction will be scheduled during patient clinics.

Funds in amount of $41,200 are requested for the construction of Cherry Creek Health Station.

Kaibeto, Ariz $7,000

PROJECT COST

Planning funds requested	$7,000
Construction funds to be requested in fiscal year 1966 budget	84,000
Equipment funds to be requested in fiscal year 1967 budget	6,000
Total estimated project cost	97,000

Kaibeto is a remote community located on the Navajo Reservation 48 miles north of Tuba City, Ariz., and 26 air miles south of the Utah State border. It has an estimated local population of 675 and adjacent communities with a population of about 1,800. At present the Bureau of Indian Affairs operates a boarding school with an enrollment of 270 students. Upon completion of a second BIA boarding school (expected date of completion January 1966) the total school enrollment anticipated for the combined Kaibeto schools will approximate 930 students.

Clinics (generally once monthly during school term), formerly held in the chapter house are currently provided in the school clinic room. In fiscal year 1963 the clinic attendance averaged 37 a month. An estimated 50 visits per clinic day exclusive of school children and special preventive clinics is anticipated for a beneficiary population of 2,925.

In lieu of constructing a school clinic and a separate field health station, it is considered more economical and of greater benefit to the beneficiaries involved to combine and conduct these health services in one facility. The project now proposed is a modified field health station that will provide space for the medical program to be conducted at this location.

The program will consist of daily school health nursing services, at least weekly medical clinics for the two schools, the local population and that of surrounding communities; and full-time dental coverage. Special preventive clinics and group health conferences will be held as needed.

Except for the school nursing and dental staffs, personnel from the Tuba City Hospital will serve the station.

It is requested that funds in the amount of $7,000 be provided to plan a health station in coordination with the school construction project. Total estimated project cost, including planning, is estimated to be $97,000.

Lower Greasewood, Ariz $7,000

PROJECT COST

Planning funds requested	$7,000
Construction funds to be requested in fiscal year 1966 budget	84,000
Equipment funds to be requested in fiscal year 1967	6,000
Total estimated project cost	97,000

Greasewood is an Indian population center and location of a new Bureau of Indian Affairs 660 pupil boarding school. It is located 59 miles southwest of Fort Defiance, Ariz., on the Navajo Reservation. In the near future it is expected that an improved east-west road will join Klagetoh, Greasewood, Indian Wells, Dilkon, and Leupp and open up vast areas and population now served by poor, often impassable roads.

Weekly clinics are held in a small mission that is most inadequate. The weekly clinic attendance averages between 80 and 100 patients.

The new health station will provide field health services for 1,700 indigenous Indians and 2,000 students in and near Greasewood.

In lieu of constructing a school clinic and a separate field health station, it is considered more economical and of greater benefit to the beneficiaries involved to combine and conduct these health services in one facility. The project now proposed is a modified field health station that will provide space for the medical program to be conducted at this location.

General medical and preventive health clinics will be held weekly. Full-time nursing and dental services will be provided for students. Special preventive health clinics and group health conferences will be held as needed. Ninety visits per clinic day are anticipated. Except for nursing and dental services for students, personnel from Fort Defiance Hospital will provide the health services.

It is requested that funds in amount of $7,000 be provided to plan this health station. Total estimated project cost, including planning, is estimated to be $97,000.

Wolf Point, Mont $41,200

Wolf Point, in Roosevelt County in the northeastern part of Montana, is located on Highway No. 2, 22 miles west of Poplar, Mont. The majority of the Indian beneficiaries in the Fort Peck service unit reside in Roosevelt County.

At the present time a public health nurse carries out a generalized public health nursing program of home visiting, immunization, and other preventive health services. Weekly nursing conferences are currently being held in an Indian church. Dental services for children are provided through contractual arrangements.

In the new station, general medical and preventive clinics will be held weekly. Special preventive clinics (immunization, prenatal, postnatal, well baby, diabetic, and tuberculosis) will be held as needed. Group sessions on health education will be held in the evenings. It is estimated that there will be 4,800 clinic visits annually.

Funds in amount of $41,200 are requested for construction of this station.

Whitehorse, S. Dak $41,200

Whitehorse, a population and BIA day school center on the Cheyenne River Reservation 40 miles from Mobridge, has no public transportation or improved roads leading directly to it. The beneficiary population approximates 350.

Regularly scheduled field clinics are held at Whitehorse once or twice a month by the staff from the PHS Eagle Butte Indian hospital. In addition, clinics are held occasionally at the school. A total of 455 visits were reported for 1963. These clinics are now held in an Indian chapter house with inadequate space and facilities.

To provide adequate facilities in which to conduct a field health program, funds are requested for the construction of a modern health station for the isolated Indian population around Whitehorse.

This station was included in the President's budget for 1964 but could not be funded as a result of congressional action.

Total 1965 request for clinics (health centers and stations) $382,100
Total 1965 request for hospitals and clinics 2,347,800

Personnel quarters, 1965 request, $1,430,500

The markedly divergent facilities of the Indian health program are in remote, isolated areas. Absence of adequate, available housing compounds the critical problem of achieving the orderly and effective recruitment and retention of qualified personnel.

When the Public Health Service assumed responsibility for the Indian health program, approximately 1,900 housing units were transferred from the Bureau of Indian Affairs. Some were converted apartments and buildings with non-housekeeping rooms. Many of these units were substandard and did not meet criteria as outlined in Budget Circular A–18 governing Federal housing.

To implement an accelerated hospital and field health program in 1956, 326 surplus prefabricated housing units and trailers were acquired. These units provided a partial solution to emergency housing problems and helped sustain the crash health program. However, they were never intended, not are they adequate, for long-term use. Including 126 units authorized in hospitals and

clinics construction projects, 571 permanent units have been authorized through 1964 (excluding the 326 temporary units and 14 mobile trailers). Fifty-six units are requested for 1965; 52 of this request represent replacement of temporary or inadequate quarters and 4 represent new quarters. The extent to which additional quarters and replacements will be required in the future is under constant review.

Funds in amount of $12,000 to provide ranges and refrigerators for the 1964 program are also included.

Distribution of quarters by location, fiscal year 1965

Location	Type	Number of units	Estimated cost
Pine Ridge, S. Dak.	1 bedroom	4	$62,600
Fort Yates, N. Dak.	do	4	62,600
Chinle, Ariz.	do	6	74,040
Fort Defiance, Ariz.	do	18	222,116
Kotzebue, Alaska [1]	Single rooms (connecting baths)	10	136,644
Bethel, Alaska [1]	Efficiency	8	361,500
	3 bedrooms	2	324,000
	2 bedrooms	2	
Tanana, Alaska [1]	3 bedrooms	1	150,000
	2 bedrooms	1	
Subtotal, 1965 program		56	1,393,500
Ranges, refrigerators, washers, and dryers other than State of Alaska.			25,000
Total 1965 program			1,418,500
Ranges and refrigerators, 1964 program			12,000
Total request for 1965			1,430,500

[1] Includes furnishings, ranges, refrigerators, washers, and dryers in accordance with current policy regarding furnishings for State of Alaska.

Alterations, 1965 request, $864,700

The projects which follow represent existing Indian health facilities that require alterations and/or additions to maintain and provide optimum utilization.

ABERDEEN AREA

Winnebago Hospital, Winnebago, Nebr. $31,000

CONSTRUCTION FUNDS FOR STORAGE BUILDING AND MAINTENANCE SHOP

Existing storage space is totally inadequate. At present, medical supplies are located in vacant Camp Pickett home and storage is confined to an old barn approximately 1½ miles from the hospital. The project will provide additional space for general hospital supplies, pharmacy storage, and a maintenance shop for service to complement the hospital plant operation. Currently there are no maintenance shop facilities available.

Sisseton Hospital, Sisseton, S. Dak. $12,000

REPLACE HEATING BOILER

Boiler is beyond repair. Foundation and combustion chamber need replacing. This is one of two original installations, the other having been replaced in 1957.

Yankton Hospital, Wagner, S. Dak. $9,000

STANDBY GENERATOR AND ELECTRICAL SYSTEM IMPROVEMENT

A conductive floor has been installed in the operating room but the original electrical system is still in use. To complement revised electrical system, it is necessary to provide for an emergency electrical generating unit.

Total, Aberdeen area $52,000

ALBUQUERQUE AREA

Gallup Hospital, Gallup, N. Mex	$308,700
Construction funds	295,700
Equipment funds, 1964 program	13,000
Total 1965 request	308,700

Construction funds of $295,700 for (1) field health activities, demonstration areas, and auditorium; (2) conversion of reassigned space in hospital; and (3) storage and maintenance shops space. Funds of $30,000 were appropriated in fiscal year 1964 for planning this project.

In order to make maximum use of the new 200-bed hospital at Gallup, N. Mex., as a training center for Division of Indian Health personnel and a focal point for the field health activities in the immediate vicinity and to provide for full functional needs in the operation of the hospital, additional facilities and alterations to the existing facility are required.

CONVERTING SPACE REASSIGNED IN HOSPITAL

Space in the hospital originally designed for field health offices, demonstration, conference, classrooms, and clinical referral library will be provided in the new addition. The space freed will be used for doctors' offices, additional laboratory space, additional outpatient waiting area, and examination rooms which were not fully provided for in the hospital as constructed.

SPACE FOR FIELD HEALTH ACTIVITIES AND AUDITORIUM

During the interval while the hospital was being constructed the Gallup Clinic operation including outpatient medical care, services and field program developed additional requirements for space that aggravated the inadequate space situation and cannot be accommodated in the new facility. A total of 8 people originally planned for field health has now been increased to 14.

There is no auditorium or assembly room of any type in the hospital. An auditorium seating 125 people will be required to accommodate assemblies of various groups—patients, staff, trainees, visitors, clinical personnel, administrative conferences, demonstration, and other health and hospital activities. It is, therefore, proposed to add space sufficient to accommodate these functional uses in a building or wing adjacent to the present hospital building.

ADDITIONAL STORAGE AND MAINTENANCE SHOPS

Experience has indicated the necessity for additional storage space and provision for maintenance shops.

EQUIPMENT REQUIREMENTS

Funds in the amount of $13,000 are included for equipment requirements not provided in the 1964 appropriation. This project involved construction of training facilities and quarters.

Tuba City Hospital, Tuba City, Ariz	$180,000

PLANNING FUNDS FOR ADDITIONS AND ALTERATIONS

Cost estimate:	
Feasibility funds appropriated fiscal year 1964	$20,000
Planning funds requested fiscal year 1965	180,000
Construction funds to be requested fiscal year 1966	2,625,000
Equipment funds to be requested fiscal year 1967	225,000
Total, estimated project cost	3,050,000

PROPOSED PROJECT

The proposed project involves modernization and expansion of the existing 75-bed general, medical, and surgical hospital by (1) 50 additional beds, and (2) the functional rearrangement and proportional expansion of the supportive hospital elements.

EXISTING FACILITY

The existing hospital was opened in 1954 as a 75-bed general, medical, and surgical facility. This facility was not designed to meet the tremendous growth in population which has occurred in the last 8 years, the needed expansion in outpatient medical and dental services, comprehensive public health and laboratory services required, and the need for more comprehensive inpatient and outpatient services. Services and activities have more than doubled since the transfer of the program from Bureau of Indian Affairs to Public Health Service in 1955.

The rapid increase in activity has caused an extreme shortage of space and crowding in practically all functional areas—outpatient clinics, field health staff offices and adjunct space, administrative and professional offices, pharmacy, laboratory, X-ray, dining room, storage and supply areas.

For the past 3 years the hospital has been operating at 90 to 100 percent capacity. There is no flexibility in bed space arrangement to assure safe and adequate organization of the medical, surgical, and obstetrical services to meet the diversified character of the inpatient load (infants, young children, and male and female adults). With the limited space, it has not been possible to meet the steadily increasing need for specialty services, nor the overwhelming need for more preventive health services. Lack of space and poor functional arrangement have prevented a coordinated health program which would integrate the hospital services with the multiplicity of public health activities and services in the hospital and the field at numerous schools and satellite locations.

POPULATION SERVED

The 1960 census enumerated approximately 11,700 Navajos residing in the Tuba City land management (BIA) districts; but within the hospital service area are the Navajos around Kayenta and adjacent areas to the north and east, to the Utah border. About 3,000 are in these areas according to the 1960 census, for a total of nearly 15,000. It is anticipated that the hospital service population will reach 17,000 within the next few years. The accelerated school construction program and expanded BIA school enrollment is a factor as well as the continuing high birth rate.

The Navajo population is estimated to be increasing at an average rate of 2.5 percent a year. Because of mobility and migration, different service units are experiencing different rates of increase in population, ranging from 2.2 to 3 percent.

UTILIZATION, 1960–63

The following table includes basic information on the utilization of the hospital during the period indicated:

	1960	1961	1962	1963
Admissions	2,501	2,626	2,503	2,374
ADPL	71	70	72	67
Births	461	521	475	512
Average length of stay	10.6	9.1	10.1	10.5
Outpatient medical visits facility	27,029	28,385	35,768	34,412
Field school clinics	2,007	2,840	(1)	5,007
Dental	4,307	4,108	6,174	4,331

[1] Not available.

In developing the detailed planning program, primary emphasis will be given to the facilities and staff required for the necessary extension of health protective services, outside of the hospital facility in this area of the Navajo. The services in the outlying locations will be integrated with the hospital inpatient and outpatient program.

PROJECT PROPOSAL AND ANTICIPATED WORKLOADS

The plan involves an addition of 50 beds (for a total of 125 beds) including provision of sufficient isolation beds for care of infectious cases (tuberculosis and other conditions requiring isolation).

The following shows the bed distribution and estimated average daily census by major clinical service, after construction:

	Beds	ADPL
Total, excluding newborn bassinets	125	105
Medical	27	22
Surgical	20	17
Pediatric	60	51
Obstetrics	18	15
Bassinets	24	

Upon completion of the additional 50 beds, the expected inpatient and outpatient workload is estimated to be:

Admissions	3,825
Births	680
Average length of stay	10
ADPL	105
Outpatient medical visits, facility	42,000
Dental visits	8,600

The number of admissions and the ADPL reflect an expected hospital admission rate of 225 per 1,000 population, with an average stay of 10 days. The proportion of pediatric patients represents about half of the total load. An increased field health program (case finding, home visiting) will result in an increase in outpatient visits and also referrals for hospitalization.

COMMUNITY FACILITIES AND REFERRAL FACILITIES

The Arizona State hospital plan, 1963 lists only two non-PHS Indian hospitals in the area. These are at Page, Ariz. (25 acceptable beds), 79 miles north of Tuba City on the Utah border and Sage Memorial Hospital, Ganado Mission (47 acceptable beds under construction), 110 miles east of Tuba City and outside of the drawing area of the Tuba City service unit.

Referral of cases requiring specialized care are to the Indian hospital in Gallup, N. Mex., about 200 miles away. Specialized laboratory services and consultant services are limited and must be obtained under contract from points over 200 miles away.

The distinct health needs of the Navajo, the isolation of the Tuba City service unit, the level of acculturation, cultural patterns, and level of understanding of modern medicine require the operation of direct Federal services, through a coordinated comprehensive preventive, curative, and restorative health program.

Communication through interpreters is necessary, since 40 percent do not read or speak English. The emphasis for each of the health program activities is continuing assistance to the Navajo to increase their understanding of health problems and means of protecting themselves and their communities against controllable diseases, and potential benefits of the hospital and field health programs.

The unique health needs of these people are best met by the PHS Indian hospital and satellite field programs, with active tribal participation.

Pinon Health Station, Pinon, Ariz $29,000

EXPANSION OF HEALTH STATION TO PROVIDE DENTAL SERVICES

The Pinon Health Station, constructed in 1958, provides field health services for 5,320 Navajo Public Health Service beneficiaries and is located 47 miles west of Chinle and 37 miles north of Keams Canyon.

Dental space originally provided in the station has proven entirely unsatisfactory. Currently, dental clinics are held three times weekly in an inadequate Camp Pickett home. Dental visits total 2,000 visits a year and include service to some 2,000 students in the district served by Pinon.

An addition to the Pinon Health Station is proposed to provide for an expanded dental program.

Fort Defiance Hospital, Fort Defiance, Ariz $30,000

AIR-CONDITION SURGERY

The surgical room in the Fort Defiance Hospital is not air conditioned causing undesirable conditions for both patient and physician. In order to comply with adequate standards it is proposed to completely air-condition and provide humidity control for the surgery room.

Shiprock Hospital, Shiprock, N. Mex..... $110,000

(1) Air-condition patients' rooms $80,000; (2) install evaporative coolers in dormitory, lounge and 24 1-bedroom apartments $21,000; and (3) install evaporative coolers in 24 family quarters $9,000.

1. No air conditioning is provided in the patients' rooms. When outside temperatures are high, very often over 90° F., the interior temperatures become approximately the same by early afternoon. Due to stored heat in the masonry and concrete parts of the building, interior temperatures remain unbearably high until late in the evening. Attempts to lower temperatures in patients' rooms by means of floor fans blowing air from the air conditioned surgical corridor have not been successful. It is proposed to air-condition patients' rooms which were not included with other air conditioned areas in the hospital.

2–3. Quarters are unbearably hot during the summer months due to exposed location with no shade. In July and August 1961 a total of 475 hours were in excess of 93° temperature Fahrenheit. The estimate provides funds to install evaporative coolers in the dormitory, lounge, and quarters.

Proposed air conditioning in the hospital and quarters buildings meets Bureau of Budget criteria.

Total, Albuquerque area..... $657,700

BILLINGS AREA

Intermountain Indian School Health Center, Brigham City, Utah..... $15,000

ALTER SPACE TO PROVIDE FOR PERIODONTIST

Space is required to provide for a periodontal specialist to assist in planning' developing, and directing a divisionwide program to combat periodontal disease.

It is proposed to locate the office in building No. 61 thereby allowing accessibility to the dental waiting room.

Total, Billings area..... $15,000

PHOENIX AREA

Sells Hospital, Sells, Ariz..... $12,000

PLANNING FUNDS FOR ALTERATIONS

Project cost:

Planning funds requested in fiscal year 1965	$12,000
Construction funds to be requested in fiscal year 1966	128,000
Total, estimated project cost	140,000

CONVERTING SPACE IN HOSPITAL TO FIELD HEALTH

Conversion of the general storage and subsistence storage space, 915 square feet, in the hospital to provide necessary offices for field health personnel.

The present space available for the public health nurses in the small Public Health Service Indian Health Center building located about 1 mile from the hospital is entirely inadequate. This physical separation impedes the accomplishment of a coordinated health program for the Papago Indian beneficiaries.

ADDITIONAL STORAGE AND MAINTENANCE SHOPS

Experience demonstrates the need for additional storage space and maintenance shop facilities. The space provided in the original construction for the storage of medical and general hospital supplies was not adequate. Garage facilities located several hundred feet from the hospital have been utilized to supplement the storage area. This storage operation is inefficient and costly. The control of supplies is extremely difficult. Accordingly, it is proposed to provide an addition of 3,400 square feet for storage.

Due to the isolated location and lack of service organizations in this area, it is considered essential to provide maintenance resources to complement the hospital operation. Therefore, maintenance shop space of 880 square feet is included in the proposed addition.

CONVERTING FIELD HEALTH CENTER TO QUARTERS

The old health center building will be utilized after conversion to a three-bedroom unit to reduce the present housing shortage for hospital staff.

Total, Phoenix area $12,000

PORTLAND AREA

Chemawa School Health Center, Chemawa, Oreg. $8,000

Install automatic sprinkler system, $4,500

The building is a two-story building constructed in 1906. Approximately 50 percent of the first floor is used for ward space for patients. To overcome existing fire hazards, it is proposed to install an automatic sprinkler system in all rooms and corridors of the basement and first and second floors.

Construct garage and maintenance shop, $3,500

As a result of the lack of space, heavy equipment is exposed to the weather. One ambulance type vehicle is unshielded the year round and becomes immobile. It is necessary to provide maintenance shop services for operation of the school infirmary. It is proposed to construct a one-stall garage and maintenance shop.

Colville Health Center, Nespelem, Wash $8,000

REROOFING OF THREE BUILDINGS

The Health Center Building No. 21 and quarters buildings No. 20 and No. 22 were constructed in 1935. The roofs, due to age, have deteriorated to the point where they are unsafe and uneconomical to repair. It is proposed to install new roofs on the three buildings.

Total, Portland area $16,000

ALASKA AREA

Tanana Hospital, Tanana, Alaska $87,000

Construct sewage treatment plant, $57,000

At the present time only a septic tank is provided for all the hospital facilities and the adjacent school. The septic tank effluent is discharged into the river less than 800 feet upstream from the Federal Aviation Agency housing area. Natives habitually locate fish traps for subsistence fishing just downstream from the FAA housing area. It is proposed to construct a complete sewage treatment plant for the facilities in the hospital complex.

Construct addition to water treatment plant, $30,000

Present water storage capacity of 15,000 usable gallons in one reservoir is not adequate for normal reserve or for firefighting and does not permit necessary maintenance and cleaning of tanks without interruption of water service to the station. It is proposed to construct an addition to the water treatment plant to provide an additional 15,000-gallon water storage reservoir and a chemical storage area.

Kotzebue Hospital, Kotzebue, Alaska $25,000

INSTALL FIRE HYDRANTS AND SUPPLY LINE

The hospital complex does not have any exterior fire hose connections. The only water available is through a 1½-inch line from a hose cabinet in the new buildings. The community fire department in Kotzebue does not have enough opera-

tive equipment. It is proposed to install four fire hydrants linked to a motor powered fire pump with a drainage sump.

Total, Alaska area	$112,000
Total 1965 request for alterations	864,700

Construction of Indian sanitation facilities, 1965 request, $4 million

This cooperative Tribal-Public Health Service activity, designed to correct gross deficiencies in Indian and Alaska native sanitation facilities, is authorized under Public Law 86–121. The gross environmental deficiencies that exist are in a large measure responsible for the high incidence of preventable diseases that prevail among Indians. Provision of basic sanitary facilities for Indian homes and communities is essential in the prevention of diseases and is a basic element in the improvement of health services to the Indians. Following is a list of specific examples of health problems directly related to the lack of sanitary facilities:

1. Gastritis, enteritis, etc., rank first among reported notifiable diseases on Indian reservations; incidence rates for amebic and bacillary dysentery are more than 35 times higher than the rate in the general population.

2. The Indian infant death rate is about twice that in the general population, and for infants who have returned to their home environment after hospital birth and particularly for infants 1 month through 11 months of age, the death rate is more than three times that of comparable age groups in the general population, a condition in large part associated with the lack of sanitation facilities in the Indian home and extremely crowded living conditions.

3. Twenty percent of all reported Indian deaths in a year are infant deaths (under 1 year of age) compared with 6 percent for this age group in the general population.

4. Approximately 20 percent of the patients discharged from hospitals were treated for infectious diseases most of which are associated with insanitary conditions and the overcrowded home environment.

Contributing to these health problems is the widespread scarcity of water among Indians and Alaska natives for even elemental household purposes. Thousands of Indians on many reservations haul water in a primitive manner for distances of a mile or more. In such instances, use of water for domestic purposes is as low as 1 to 3 gallon per capita per day as compared to five times this amount for the poorest rural families in the non-Indian population. A charge of $1 to $3 per barrel for water delivered to the Indian home is not uncommon. The source of domestic water supply for a majority of homes is unsafe. Contaminated streams, irrigation ditches, stock ponds, and unprotected wells and springs are often the only available supply.

The lack of adequate facilities for the disposal of human and other household wastes, both liquid and solid also contributes to the health problem of the Indians and Alaska natives. The absence of these facilities result in (1) spread of microorganisms responsible for diarrheas, and dysenteries, (2) insect and rodent infestations both in Indian homes and communities, (3) contamination of foods and domestic water supplies, and, (4) general nuisance conditions.

Public Law 86–121 enables the Public Health Service to help alleviate the substandard environmental conditions that have been described. This law authorizes construction of domestic water supplies, waste disposal facilities, and other sanitation facilities for Indian homes, communities, and lands. The Public Health Service administers the program in consultation with Indian tribes, Alaska native groups, and State and local health agencies. Participation by the Indians in project execution is stressed and tribes are assisted in assuming responsibility for continued operation and maintenance of completed community sanitation facilities. Parallel education and training activities are conducted to assure utilization, protection and maintenance of household sanitation facilities. Projects for Indian beneficiaries include one or more of the following features: water—source development, treatment, storage facility, distribution system; waste (liquid and solid)—collection system, sewage treatment, disposal facility; household appurtenances—sanitary pit privy, or flush toilet, kitchen sink connecting plumbing; drainage—facilities for control of insects, systems to permit subsurface waste disposal.

In the 4 years this program has been underway 169 construction and 71 emergency and study projects have been authorized with funds appropriated through 1963 for construction of Indian sanitation facilities. As of November 30, 1963, 176 of these projects have been completed or essentially completed, 63 are in progress, and the remaining 1 is in the final stage of negotiation of agreement with

the tribe. In 1963 an additional 30 projects were initiated with $3,195,000 made available under the public works acceleration program. Of these 30, 5 are essentially completed and the remainder are under construction. This supplemental allotment of funds placed the program at a $7.2 million operating level in 1963.

Upon completion of all work funded through 1963, safe domestic water supply and sanitary waste disposal facilities will have been made available to more than 16,000 homes in 206 different geographical locations.

In 1964 $3,937,000 was appropriated for 37 sanitation facilities construction projects. An additional sum of $1,800,000 was made available under the public works acceleration program for 12 projects. Together, these funds placed the program operating level at $5.7 million in 1964. This will enable the provision of basic sanitation facilities for more than 4,500 Indian and Alaska native families in 48 different geographical locations.

It is noted that the results of these efforts have produced an increasing awareness of the Indian people to the advantages of adequate sanitation facilities. This has been demonstrated by the many requests from the Indians for assistance under this program and by the substantial contributions of labor, money, and materials made by the Indians to construction projects. Indian governing bodies have shown a willingness to adopt the necessary measures which are required for continued operation and maintenance of completed facilities. These include appointment of responsible maintenance individuals, establishment of water and sewer charges, and adoption of sanitary regulations. Each of these actions embrace new concepts in the Indian methods of government. Despite the slow but steady progress that has been made, the backlog of unbudgeted identifiable projects continues to mount.

The $4 million request for 1965 will permit the construction of 38 projects at an estimated cost of $3,764,000. These urgently needed projects are on 23 Indian reservations and in approximately 15 communities in the States of Oklahoma, California, and Alaska. They will meet needs in areas where (1) essential sanitation facilities are lacking or in need of major rehabilitation, (2) rates of preventable diseases attributable to gross environmental sanitation deficiencies are high, (3) work is feasible and most nearly ready to be undertaken from an engineering and economic standpoint, (4) ability and willingness of Indians to assume responsibility for maintenance and operation have been indicated, and (5) willingness of Indians to contribute to and participate in the work has been shown. The request includes $80,000 to assist Indian communities in the connection of water and sewerage services to public housing sites.

The request also includes $156,000 for investigations and planning funds for urgently needed construction projects on which additional technical information is necessary before a solution can be recommended; and for correction of emergency problems related to Indian sanitation facilities such as occur from severe drought conditions, floods, failure of well casings, and pumping equipment, and for other unforeseen conditions which may require provision of materials, supplies, and equipment for completing the construction or repair of sanitary facilities. There follows a list of projects proposed for fiscal year 1965.

Sanitation facilities projects

Reservation	Community	State	Project	Estimate
ABERDEEN AREA				
Rosebud	Horse Creek and Swift Bear	South Dakota	Individual water and waste	$53,000
Bois Fort	Nett Lake	Minnesota	Community water and sewerage	212,000
Standing Rock	Kenel	South Dakota	do	80,000
Red Lake	Little Rock Area	Minnesota	Individual water and waste	95,000

HEALTH CENTER AT MCLAUGHLIN, S. DAK.

Chairman HAYDEN. Is the health center at McLaughlin, S. Dak., in operation yet?

Dr. WAGNER. No, sir. It will be in operation soon. We were delayed because of a problem of water supply and sewerage, but this has now been solved, and we hope to have the facility in operation very shortly.

HOSPITAL AT LAWTON, OKLA.

Chairman HAYDEN. In fiscal year 1963, $115,000 was provided for planning a general surgical and medical hospital at Lawton, Okla. Has this work been completed, and, if so, when do you expect construction to start?

Dr. WAGNER. We are in the process of planning and this is well underway, sir. We feel that we will have no trouble obligating the construction funds next year.

MEDICAL CENTER IN PHOENIX, ARIZ.

Chairman HAYDEN. In fiscal year 1962, the Division of Indian Health was given $350,000 to plan a medical center in Phoenix, Ariz. As you know, there was some difficulty in your securing authority to use this money although I understand that last November $60,000 of it was made available to you. Would you please advise me of the status now of work on the plans for this installation?

Dr. WAGNER. The architectural engineering feasibility study has been initiated, and we are having a meeting down there today, Mr. Chairman, regarding this study. We will then progress through the planning phase which we feel will be completed in the next fiscal year. Construction could start the following year.

HOSPITAL FACILITIES AT BELCOURT, N. DAK.

Chairman HAYDEN. When you appeared before this subcommittee last year you agreed to conduct an immediate study of the hospital needs at Belcourt in the Turtle Mountain Reservation in North Dakota, and you indicated further that you expected to ask for funds in your budget for 1965 for improvements at this hospital. Does your current budget contain funds for this hospital?

Dr. WAGNER. No sir, it does not.

Chairman HAYDEN. Did you request these funds from the Bureau of the Budget?

Dr. WAGNER. Yes.

Chairman HAYDEN. How does the patient load at this hospital, both inpatient and outpatient as well as related services, compare to the capacity of the hospital?

Dr. WAGNER. A recent survey of floor space revealed that, based on minimum Public Health Service standards, patient bed space is adequate for only 29 beds as compared to inpatient loads varying between 35 and 60 per day. Related services are totally inadequate. The hospital laboratory is located in two small rooms in the basement which are inadequate for the many procedures required by inpatient and outpatient services and remote from the inaptient area. Many deficiencies exist in the construction and arrangement of the dietary department. There is no provision for essential substerilization facilities, surgical dressing areas, cleanup room, anesthesia storage, or janitor's closet in the surgical area. No scrub facilities, cleanup area, or utility for the obstetrical suite exists. No space is available in the nursery for a treatment room or for a suspect nursery and it is impossible to control the ventilation in this area.

The outpatient clinic consists of three examining rooms and a grossly inadequate emergency room, which by necessity is used as a fourth examining room and small waiting area. Under these extremely crowded conditions, the staff treats over 2,000 outpatients per month. Current experience in 1964 indicates a higher outpatient load for 1964 as compared to 1963.

Chairman HAYDEN. When was this hospital built?

Dr. WAGNER. The hospital was constructed in 1930.

Chairman HAYDEN. Have you experienced any difficulty in obtaining qualified doctors to serve at Belcourt, and what has been your experience in keeping doctors there?

Dr. WAGNER. There has been no difficulty in obtaining generalists. However, some difficulty has been experienced in obtaining certain specialists. Doctors have generally not stayed beyond a 2-year period.

Chairman HAYDEN. Would improved facilities ease this situation?

Dr. WAGNER. Yes, sir.

Chairman HAYDEN. What is your present schedule for making improvements on this hospital?

Dr. WAGNER. The Division's long-range plan proposes requesting planning funds in 1966, construction funds in 1967, and equipment funds in 1968.

Chairman HAYDEN. What is your schedule for the Fort Yates Hospital?

Dr. WAGNER. Bid opening, April 8, 1964; construction time, 360 days.

Chairman HAYDEN. How much are you asking for next year?

Dr. WAGNER. No additional funds for this project are requested next year (fiscal year 1966).

Chairman HAYDEN. When do you hope to start construction?

Dr. WAGNER. Construction should begin on or about May 15, 1964, providing an acceptable low bid is received that will permit the authorization of a contract award within available funds.

Chairman HAYDEN. Your construction request includes $1,430,500 for 56 personnel quarters. Fifty-two of this number are for replacement. Are the 52 quarters in such a state of repair that replacement is mandatory, that is that they cannot be used for any longer period of time?

Dr. WAGNER. No sir; they are in very bad repair, and also they are unsafe for occupancy.

CONSTRUCTION OF INDIAN SANITATION FACILITIES

Chairman HAYDEN. $4 million of your construction budget is for construction of Indian sanitation facilities. You have supplied a list of the locations at which you propose to construct these facilities. This list will be printed in the record.

(The information referred to follows:)

SANITATION FACILITIES PROJECTS

(As revised Jan. 27, 1964)

Subsequent to the preparation of the President's budget two projects included therein were undertaken with funds made available to the Public Health Service by the Area Redevelopment Administration pursuant to Public Law 87–658 the Public Works Acceleration Act. Below is a revised list to reflect substitutions made from the backlog of Indian requests for assistance under this program and other minor changes.

Reservation	Community	State	Project	Estimate
ABERDEEN AREA				
Rosebud	Horse Creek and Swift Bear	South Dakota	Individual water and waste	$53,000
Bois Fort	Nett Lake	Minnesota	Communal water and sewerage	212,000
St. Croix	Big Round Lake and Danbury [1]	Wisconsin	Individual water and waste	54,000
Upper Sioux	Granite Falls [1]	Minnesota	do	35,000
Rosebud	Reservation, general [1]	South Dakota	do	50,000
ALBUQUERQUE AREA				
San Juan	San Juan Pueblo	New Mexico	Communal water and sewerage	162,000

All Areas [4]—Assistance to Indian communities in the connection of water and sewerage services to public housing sites				100,000
Investigations, Emergency works, supplies and equipment				156,000
Total, 1965 request				4,000,000

[1] 1 of 3 projects substituted in place of 2 projects previously budgeted which were undertaken with funds made available under the Public Works Acceleration Act.

[2] Formerly listed as Pryor. Change made at request of tribe so as to conform with the long range plan for their reservation. Project description and estimate cost unchanged.

[3] Listed in President's budget as Idabel District. Change recommended to enable better use of DIH personnel and facilities. Tribe concurs in change.

[4] Amendment made on the basis of the growing interest of the Indians in public housing and to balance request in view of revisions.

ACCELERATED PUBLIC WORKS CONSTRUCTION

Chairman HAYDEN. In addition to this, could you please supply for the committee record a list of all construction accomplished through the use of accelerated public works funds? Include in this list the locations, types of facilities, total costs, the Federal costs if there was a non-Federal contribution, and the amount of that non-Federal contribution and its source.

Dr. WAGNER. Very good, sir.

(The information referred to follows:)

FUNDS ALLOCATED AND PROJECTS UNDERTAKEN, FISCAL YEAR 1963

Reservation	Community	State	Project	Federal cost
Fort Berthold	North and northeast segments	North Dakota	Individual water and waste	$65,000
Pine Ridge	Pine Ridge	South Dakota	Community sewerage	315,000
Red Lake	Ponemah	Minnesota	Individual water and waste	95,000
Standing Rock	Cannonball	North Dakota	Community water and sewerage	60,000
Leech Lake	Tract 33	Minnesota	Community water and individual waste	46,000
Laguna	Paraje-Casa Blanca	New Mexico	Community water and sewerage	48,000

Salt River	Pima-Maricopa	do	do	82,000
Nez Perce	General Reservation	Idaho	Individual water and waste	50,000
Quileute	La Push	Washington	Communal water	100,000
Total 12 projects				1,800,000
Total: 42 projects undertaken fiscal years 1963 and 1964, cost				4,995,000

NOTE.—Projects undertaken under the public works acceleration program are providing water supply and waste disposal facilities for more than 4,800 Indian and Alaska native homes, serving a population of more than 24,000 beneficiaries, located in 42 communities in 13 different States. Beneficiary contributions to the cooperative Federal-tribal construction program effort will total more than $1,900,000 in funds, equivalent value of labor provided, and materials. The tribal funds portion totals $1,530,000 to date.

RESERVATION HOSPITALS IN NEVADA

Chairman HAYDEN. Senator Bible.

Senator BIBLE. Mr. Chairman, I only have a couple of questions, and if the information is not readily available, it can be supplied for the record. Dr. Wagner, I believe you have two reservation hospitals in Nevada?

Dr. WAGNER. Yes, sir; one on Duck Valley Reservation at Schurz, and the other at Owyhee.

Senator BIBLE. Do you also have one at Stewart Indian School?

Dr. WAGNER. We have a school health center there for the BIA boarding school.

Senator BIBLE. That is a health center?

Dr. WAGNER. It does have some infirmary-type beds, but not the type for hospitals. We use our own and contract facilities for hospitalization.

Senator BIBLE. How many beds do you have at the Owyhee and how many beds do you have at the Schurz? If you don't have it readily available, you can supply it.

Dr. WAGNER. The one at the Owyhee runs around 20 beds, actual usable beds, and the one at Schurz is around 24 beds.

Senator BIBLE. And you carry how much in the school health center, how many beds?

Dr. RABEAU. Thirty.

Senator BIBLE. Is that kind of an out-patient deal?

Dr. WAGNER. No, sir; these are for students. When they get sick and we want to keep them overnight for observation, we keep them there. If they get seriously ill, we hospitalize them elsewhere. We hospitalize them in Schurz if it is a chronic condition, or at a local hospital under contract.

PERSONNEL

Senator BIBLE. At Owyhee how many personnel do you carry?

Dr. RABEAU. Twenty-six.

Senator BIBLE. That is doctors and chief of staff and your nurses?

Dr. WAGNER. That is correct, sir.

Senator BIBLE. And how many at Schurz?

Dr. WAGNER. Do you have that Dr. Rabeau?

Dr. RABEAU. Thirty-three, twenty-eight in the hospital and five field health.

Senator BIBLE. And at Stewart?

Dr. RABEAU. Seven.

NEED FOR MORE BEDS

Senator BIBLE. I visited Stewart and Schurz a number of times. I have not visited Owyhee recently. They have drawn to my attention at Schurz that they are in need of more beds. I wish you would update that and find out and supply me the information. I am giving you what they tell me. I don't know whether more beds were indicated or not; I think I took it up with you people at some earlier date. Would you give me a rundown on that? It can be supplied to my office. You don't need to encumber the record with this.

Dr. WAGNER. Yes, sir.

Senator BIBLE. I have never had that particular complaint with either Owyhee or Stewart, but I am anxious that they have sufficient beds.

PRACTICAL NURSE TRAINING PROGRAMS

Now, if an Indian girl at Stewart indicates to you that she would like to become a practical nurse or a registered nurse, what programs do you have that are of help to her?

Dr. WAGNER. For a practical nurse, Senator, we have a practical nurse school in Albuquerque for which she can apply, and we would be very happy to have her for practical nurse training.

Senator BIBLE. Would you supply me with a memorandum on that? Of course, one of our great problems in Indians has been to try to find a place for them in the economy and find some employment. And we found the vocational programs have been the most helpful. And I am wondering if the nursing plan might not be very helpful to the woman?

REGISTERED NURSE TRAINING PROGRAM

Dr. WAGNER. It certainly should be. For the registered nurse the Bureau of Indian Affairs administers a vocational training program that would also apply here.

Senator BIBLE. Would you supply that to me by letter? You do not need to encumber the record on it now.

Dr. WAGNER. I will, sir.

Senator BIBLE. I have only one further question.

INDIAN COLONIES IN NEVADA

One of the problems that we constantly have in Nevada is with our Indian colonies. I have particularly in mind Elko, Winnemucca, and Las Vegas. And I have talked to you gentlemen about it many times. What can you supply for the Indian colonies under the law? You have brought water in there, and you have given them some sanitation. Do you go beyond that?

Mr. STEVENSON. To this extent: We bring a water supply into the home and provide waste disposal facilities either in the home, if the Indians provide the bathroom space, or outside sanitary privy facilities. In some cases drainage for mosquito or insect control is provided and there is some screening done. This is under Public Law 86–121.

INDIAN COOPERATION IN THE COLONIES

Senator BIBLE. As you know, one of our problems in a growing State, and I am sure it would be true in one of these Southwestern States, is that we have an Indian colony and then a subdivision built right around it. Now, what can you do to try to help the Indian population—upgrade the Indian colony area, which, of course, as you know, is held in trust for the Indians? You can bring sewerage in there, and you can bring water in there, and you can provide their indoor facilities, and their washbasins and that sort of thing?

Mr. STEVENSON. With Indian cooperation in providing much of the physical work. We have had 11 projects in Nevada, for example. Six of them have been completed, and there are five in the fiscal 1964 program that we are just about to get underway.

HISTORY AND PROPOSED PROGRAM

Senator BIBLE. Will you tell me what you have done in the past and what you propose doing in 1965 in that area in Nevada? Simply send the letter to my office.

Mr. STEVENSON. I would like to make one other comment. We now have a survey underway in Nevada to cover all of the colony needs. This survey is to be completed by this summer. We shall then have the total job that remains to be done.

Senator BIBLE. This has been a most perplexing problem to me, and it probably has been to you men as well. If you have any suggestions to make, they are certainly welcome.

Dr. WAGNER. You know we are primarily responsible for health. The Bureau of Indian Affairs is doing quite a bit more in housing and industry and labor and that type of thing.

Senator BIBLE. I understand that a few years ago we transferred this function to HEW.

Dr. WAGNER. The housing, the economic status and ability to buy and utilize food properly all have a very significant bearing on the health status.

Senator BIBLE. I would appreciate any information that you can give me on it. You can supply it to my office, and make any suggestions you may have as to how we can be of more assistance to these colonies.

Mr. Chairman, I have no more questions.

HOSPITAL CONSTRUCTION IN PHOENIX, ARIZ.

Chairman HAYDEN. I wanted to ask for a little more information about this hospital that is being constructed in Phoenix. What area will that hospital serve?

Dr. WAGNER. It will serve the entire Phoenix area. That includes the whole State of Arizona, the whole State of Nevada, and part of California. and a little part along the border of the New Mexico area. It will be a referral center for 7 to 10 outlying hospitals.

Chairman HAYDEN. That is, to say, if an Indian becomes ill in one of these outside hospitals and it is decided that he needs further treatment and better treatment than he can receive there, he will be brought from Nevada or New Mexico or any part of Arizona to Phoenix?

Dr. WAGNER. That is correct, sir. In addition, the specialists on the Phoenix staff will visit these small hospitals and provide the type of training and stimulus for our general practice medical officers stationed in the outlying hospitals thereby improving the care of people.

Chairman HAYDEN. In other words, the staff stationed there go to outside hospitals?

AREAWIDE REFERRAL CENTER

Dr. WAGNER. Yes, sir. This will be a regular areawide referral center, a medical center which will provide a coordinated program for these small outlying hospitals which because of their size have difficulty in maintaining a type of program that a hospital normally would maintain.

Chairman HAYDEN. We have the largest Indian population in the United States in Arizona; New Mexico is next. And you have a very considerable number in Nevada.

Senator BIBLE. Correct.

Chairman HAYDEN. And this corner of the country has not had the medical attention that it should.

Senator BIBLE. Might I just follow that through by a couple of more questions.

BEDS AND PERSONNEL

How many beds will you have at this medical center?

Dr. WAGNER. 200.

Senator BIBLE. And how large a staff will you carry?

Dr. WAGNER. The staff will be around 350 to 375, counting the nurses.

Senator BIBLE. How many doctors would you have aboard, medical staff?

Mr. CHADWICK. We can provide that for the record.

Dr. WAGNER. I think roughly about 40.

Senator BIBLE. I join the Chairman, I think that is very important.

Chairman HAYDEN. Senator Bartlett, any questions?

COOPERATION IN INDIAN HOUSING PROGRAM

Senator BARTLETT. Just a few.

Doctor, what connection is there between your service and the Indian housing program?

Dr. WAGNER. We are in a cooperative working relationship with the Bureau of Indian Affairs and the Public Housing Administration. And as you know, the Public Housing Administration has earmarked some 3,200 units of Indian housing. We are trying in future planning to coordinate our planning of the sanitation and water supply facilities so that when the Public Housing Administration constructs the houses there will be a water and sewerage system available to hook the house on. At the present time there are some houses going up or planned in areas where there are no sewerage or water supply facilities. Since our program is based upon the project type of appropriation, funds aren't available at the present time to construct the water supply and sewerage for these new houses.

FUNDS FOR CONSTRUCTION OF WATER SUPPLY AND SEWERAGE

Senator BARTLETT. May those houses be put up even if the sanitary facilities are lacking under the program?

Dr. WAGNER. No, sir.

Senator BARTLETT. They have to go together?

Dr. WAGNER. I am speaking now without authority, but I think that the Public Housing Administration has to have the water supply and sanitary facility available before they have the authority to construct the house.

Senator BARTLETT. Will it be possible to build all of those 3,000 units as projected even though facilities for water and sewerage are not available in some geographic areas?

Dr. WAGNER. I think it will create a problem for the Indians, because I think that some of this housing is planned and urgently

needed and will have to be delayed, because we do not have funds authorized for that purpose.

Senator BARTLETT. You have the plans but no money, is that it?

COOPERATION WITH PUBLIC HOUSING ADMINISTRATION

Dr. WAGNER. It was only recently that the Public Housing Administration pinpointed the area where they were going to construct these houses. And, of course, we don't have the flexibility in our program that we can reprogram the moneys that are already earmarked for high priority projects to fit their immediate plans. We hope that in the future we can work together so that as housing is planned we will include in our budget the moneys for the construction of a water supply and the sewage disposal system. Sanitation facility funds are not available for the immediate housing needs of this magnitude.

LOW-RENT HOUSING AND SELF-HELP HOUSING

Senator BARTLETT. Is this housing program divided into two parts, one with respect to low-rent housing and one for self-help housing

Dr. WAGNER. Yes, sir. Now, some of this housing, Senator, will be where we have already constructed water supplies.

Senator BARTLETT. I understand that. I suppose the major portion of the housing will be in such areas. But some will not be.

Dr. WAGNER. A substantial number of homes will not be in areas where water systems are available.

Senator BARTLETT. Isn't it the determination of the agencies that the housing which will not be built is very badly needed?

Dr. WAGNER. Yes, sir.

PLANNED CONSTRUCTION OF HOUSES

Senator BARTLETT. Wasn't it planned to start construction of all of these houses in fiscal 1965?

Mr. STEVENSON. If I may speak to that, yes, sir. The agencies plan to start some units this fall, and the bulk of the rest next spring, which would be in 1965.

Senator BARTLETT. This means that some of them will not be built under the existing conditions.

RECENT DECISION ON LOCATION OF HOUSES

Mr. STEVENSON. That is correct, sir. If I might explain one item, the method that is used, applications have come into the Public Housing Administration, and it wasn't until recently that they firmed up exactly where these houses were to be located.

Senator BARTLETT. This is far too recently for you——

Mr. STEVENSON (interrupting). To put it in our regular budget; yes, sir. And our regular construction budget is based on priority of projects due to urgency of health needs, the ability and willingness of the Indian to participate, and so on. So we do not have this housing program covered.

ESTIMATED CONSTRUCTION FUND REQUIREMENTS

Senator BARTLETT. Do you have a rough estimate yet as to how much money you would require to round out this 3,100 or 3,200—which did you say it was?

Dr. WAGNER. 3,200, sir.

Senator BARTLETT. 3,200 unit program?

Dr. WAGNER. We had a recent meeting with the Public Housing Administration and the Bureau of Indian Affairs. Mr. Stevenson has the detail.

Mr. STEVENSON. Breaking it into two parts, the mutual help housing is the area where generally we do not have facilities. This would run about a million and a half dollars. The low-rent units are in effect subdivision-type developments, and bringing water to sites and away from the sites of those units that do not have service at present would run about $700,000. This would be in construction funds, Senator.

ADDITIONAL PERSONNEL

There is another aspect to this. The ongoing program is using our staff to the hilt, and we are fully staffed. Therefore we have a need for additional implementing staff at a cost of $220,000 to carry on the additional load of this magnitude.

Senator BARTLETT. Then if the program were to go forward in an orderly and planned fashion—and it would be a shock to me I must confess were I to discover that it cannot—you would need on the order of $2,200,000——

Mr. STEVENSON. $2,200,000.

Senator BARTLETT. Plus $220,000 for staff activities?

Mr. STEVENSON. Yes, sir.

IMPORTANCE OF INDIAN HOUSING

Senator BARTLETT. I want to say for the record, Mr. Chairman, that I think that this is a mighty important proposition. Indian housing, as we know, is woefully deficient. I think it is a marvelous step to build the houses with water and sewerage facilities available. And I for one want to express the hope that we won't have to delay this program for a whole year. I am glad that you developed the problems, Mr. Stevenson, for the record. I think it is vital that we must not lose any time at all. It is part, surely, of President Johnson's program of "war on poverty," it includes housing and better living conditions. I am hopeful that by way of supplemental or otherwise the request for these funds may be made.

That is all, Mr. Chairman.

Chairman HAYDEN. Senator Mundt has submitted a number of questions. Will you please prepare replies to be placed in the record.

(The material requested follows:)

RESPONSES TO QUESTIONS BY SENATOR MUNDT

WATER FOR THE COMMUNITY OF WAKPALA

Question. I have had considerable correspondence concerning the problem of providing water for the community of Wakpala. The last letter I had in January indicated that there was no immediate solution to the problem, but that most of them had been economically unfeasible. As I understand it, a study of

alternative methods is underway. How is this coming? Do you think that it will be done within the 6 months from February 1 as originally anticipated? Can you give us any encouragement at all on this problem?

Answer. Availability of acceptable quality water at Wakpala is a major problem. An engineering investigation, including test drilling, is being initiated this spring using fiscal year 1964 funds. The investigation of alternative methods of obtaining acceptable water should be completed within 6 months (by late fall 1964).

NURSES AT SIOUX SANITARIUM, SOUTH DAKOTA

Question. What do you have in the budget this year for our program of providing additional training for Indian practical nurses out at Sioux Sanitarium in South Dakota? Will you give us a rundown on the accomplishments of this program? Do you think that it is possible that we might expand this program by making funds available for graduates who have completed their additional nurses training to attend one of the many fine regular schools of nursing in South Dakota? What would be the optimum amount of money that you could use for this program next year?

Answer. Funds in the amount of $105,000 are provided for additional training of Indian practical nurses at Sioux Sanitarium, Rapid City, S. Dak., in 1965.

Ten practical nurses began their advanced training in November 1963 and it is planned that approximately 50 nurses will have had the advanced training by the end of fiscal year 1965.

In considering the expansion of this program to graduate (RN) nurse training in regular schools of nursing in South Dakota, the following should be considered:

1. The recent amendment to the Indian Vocational Training Act, August 1963, allows expansion of the act to include nursing education in a 3-year course of study leading to a diploma in nursing (RN).

2. Of the present class members at Rapid City, 2 would qualify for admission to a school of nursing and possible 6 of the potential 50 may qualify. In the past 7 years, nine girls from the Albuquerque Practical Nurse School entered professional schools of nursing.

It costs approximately $10,000 to complete a baccalaureate program in nursing. In an associate degree program such as offered in the State University of South Dakota or a diploma program as offered in two or three of the schools in South Dakota, approximately $7,500 would be required. With a maximum potential of five practical nurses from the advanced training course who qualify for admission to a professional school of nursing, the cost per year would be approximately $12,500.

SANITATION FACILITIES ON ROSEBUD RESERVATION

Question. I am interested in your $53,000 expenditure outlined on page 86 for sanitation facilities at the communities of Horse Creek and Swift Bear on the Rosebud Reservation. When will this project get underway? Do you think we can get it done this year?

Answer. This project, in the fiscal year 1965 budget, will provide domestic water supply and waste disposal to 30 Indian homes. Experience during the life of this program has been that project funds are made available to the Division in early fall, thus construction work in northern areas, other than possibly well drilling, is usually not started until spring of the fiscal year, in this case 1965. Cooperative Federal-tribal projects of this type are generally scheduled for completion in 12 to 18 months from the time funds become available for use.

WAGNER HOSPITAL BUDGET

Question. I notice that you have programed $9,000 for the hospital at Wagner. Is this all you have in the budget for the Wagner Hospital this next year?

Answer. Yes, sir.

SISSETON HOSPITAL BUDGET

Question. I am wondering if the $12,000 programed for the Sisseton Hospital on page 60 of your justifications will be sufficient. It seems to me that this is hardly enough to do the needed maintenance and repair work there.

Answer. The $12,000 programed in the fiscal year 1965 budget is for the replacement of a heating plant boiler. Regular maintenance and repair work will also be accomplished within the limits of such funds.

In the Division 5-year construction plan an alteration project is proposed for the Sisseton Hospital to provide space for outpatient and field health activities.

It is also proposed to convert existing clinic space into key staff quarters. This project is scheduled as follows:

Planning funds, fiscal year 1968	$21,000
Construction funds, fiscal year 1969	327,000
Equipment funds, fiscal year 1970	27,000

Chairman HAYDEN. If there are no further questions, we thank you for your appearance.

COMMITTEE RECESS

The committee will stand in recess until 10 a.m., Wednesday, March 4, 1964, when we will hear the Fine Arts Commission, the National Art Gallery, the Smithsonian Institution, and the Kennedy Cultural Center.

(Whereupon, at 12:10 p.m., Tuesday, March 3, 1964, the committee adjourned, to reconvene at 10 a.m., Wednesday, March 4, 1964.)

DEPARTMENT OF INTERIOR AND RELATED AGENCIES APPROPRIATIONS FOR 1965

WEDNESDAY, MARCH 4, 1964

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, D.C.

The subcommittee met at 10 a.m., pursuant to recess, in room 1223, New Senate Office Building, Hon. Carl Hayden (chairman) presiding.

Present: Chairman Hayden and Senator Young.

COMMISSION OF FINE ARTS

STATEMENTS OF WILLIAM WALTON, CHAIRMAN; LINTON R. WILSON, SECRETARY; CHARLES H. ATHERTON, ASSISTANT SECRETARY; AND JOSEPH M. BREEN, BUDGET OFFICER

BUDGET REQUESTS FOR 1965

Chairman HAYDEN. The committee will please come to order.

The budget estimate of the Commission of Fine Arts for fiscal year 1965 is $161,000, an increase of $70,000 over the amount appropriated in fiscal year 1964. The justification for this request will be included in the record.

(The justification referred to follows:)

Salaries and expenses

Appropriation, 1963	$82,850
Appropriation, 1964	91,000

SUMMARY OF INCREASES AND DECREASES, 1965

To provide for increased pay costs for fiscal year 1964 positions	2,000
To provide for 1 new GS–7 position, reallocation and within grade promotions	7,000
Increase for special studies by outside consultants, replacement of display equipment, remodeling of conference room, new exhibition and work space, preparation of special models and increase in printing and other expense items	61,000
Net increase, 1965	70,000
Budget estimate, 1965	161,000

Analysis by activities

	Fiscal year 1963 amount available	Fiscal year 1964 amount available	Fiscal year 1965 estimate	Increase (+) or decrease (−) 1965 compared with 1964		
				Total	Pay cost [1]	Program
Administration	$82,690	$91,000	$161,000	$70,000	$2,000	$68,000
Unobligated balance lapsing	160					
Total	83,850	91,000	161,000	70,000	2,000	68,000

[1] To provide for increased pay costs for fiscal year 1964 positions.

JUSTIFICATION STATEMENT

The estimate of funds needed to operate the Commission of Fine Arts during fiscal year 1965 is $161,000, which is an increase of $70,000 over the sum appropriated in fiscal year 1964. The increase is necessary to meet additional travel costs of the members; increased operating expenses; improvements to equipment; additional models, graphic and photographic studies; funds to employ outside consultants to make studies on important phases of the Commission's work; grade and ingrade promotions, and one new staff position in grade 7 (secretary series). There would also be corresponding increases in the costs of personnel benefits, and printing.

The membership of the Commission has completely changed during the past fiscal year. The magnitude of the projects now being presented for review has necessitated the introduction of new methods of reviewing them; and a gallery 90 feet long and 16 feet wide has again been made available for the use of the Commission in its work. The additional personnel, consultant services, and equipment will be used in making more intensive studies than have hitherto been possible.

1. The Commission of Fine Arts was established in 1910 to fill the need for a permanent advisory agency whose members would be qualified to make available to the Government the authority of expert opinion upon questions of art arising in the course of administration. As an independent agency, it was intended to serve a twofold purpose; first, to give free advice concerning esthetic standards and matters of civic design involved in the orderly development of the city of Washington; and, second, to furnish expert opinion on questions of art to the President, to the Congress and its committees, and to the heads of various departments and agencies of the Federal and District Governments.

The seven members of the Commission are appointed by the President and serve without pay. They give freely of their time, meeting for 1 or 2 days each month as required, with compensation only to actual expenses of travel and subsistence incurred in attending meetings. The technical and professional problems that come to the Commission fall primarily into the fields of architecture, general site planning, landscape architecture, sculpture and painting, but, in recent years, an increasing amount of time has been devoted to critical review and report of proposed legislation, whose aim is to foster production and appreciation of the fine arts.

The authorized scope of the Commission's activity covers not only Federal and District Government projects in the city of Washington and its environs, but also certain designated private and semipublic construction projects under authority as noted hereafter; and its scope often includes Federal projects outside District of Columbia and abroad, such as the World War I and World War II memorials and cemeteries, the designs for which come before the Commission by authority of Public Law 534, 67th Congress (42 Stat. 1509) as amended. During the 53 years of the Commission's existence, the 71 members who have served on it, have steadfastly insisted on the maintenance of the highest esthetic standards in the design of the Federal and semipublic projects that are referred to it by law.

The current staff of the Commission comprises an executive secretary (GS–15), a staff assistant for fine arts matters (GS–13), a staff assistant for legal matters (GS–13), a planning assistant (GS–11), an editorial assistant (GS–10), and two secretaries (stenography) (GS–7).

2. Specific functions of the Commission comprise the following:

(*a*) Under the provisions of its enabling act, Public Law 181, 61st Congress, approved May 17, 1910, the Commission of Fine Arts advises generally upon questions of art when required to do so by the President, or by any committee or Member of either House of Congress.

It advises specifically on all plans for parks and public buildings, constructed by the executive departments or the District of Columbia, which in any essential way affect the appearance of the city of Washington and its environs. Authorization has been given or is pending for the design of many new Federal and District buildings, most of which are planned for erection in the central area of the city of Washington, as part of the expansion of the federal or District Governments.

It also advises upon location and design of statutes, fountains, and monuments in the public squares, streets and parks in the District of Columbia and upon the selection of models for the statues, fountains, and monuments erected under the authority of the United States and upon the selection of artists for the execution of the same.

Rendering an opinion on the merit of designs for medals, insignia, coins, or other art projects created and produced by the executive department is also a phase of the Commission's duties.

(*b*) The Commission carries out the provisions of the Shipstead-Luce Act, Public Law 231, 71st Congress (46 Stat. 366) approved May 16, 1930, an act to regulate the height, exterior design and construction of private and semipublic buildings in certain areas of the National Capital. In this function the Commission reports its findings on the above features to the Commissioners of the District of Columbia before building permits are issued at the Permit Branch of the Department of Licenses and Inspections.

(*c*) The Commission also carries out the provisions of the Old Georgetown Act, Public Law 808, 81st Congress (64 Stat. 903, ch. 984), approved September 22, 1950, an act to regulate the height, exterior design and construction of private and semipublic buildings in the Georgetown area of the National Capital. This action also requires review and recommendations to the Commissioners of the District of Columbia on the merits of the designs submitted for building permits.

(*d*) Gifts of works of art to the Government from private individuals or foreign governments are reviewed by the Commission for artistic merit and suitability before acceptance.

(*e*) Private organizations and citizens from the entire country frequently call upon the secretary's office for advice and suggestions that vary from the authenticity of historical monuments to the procedures for establishing a municipal art commission.

(*f*) Periodic and special reports are compiled and issued as required or requested; for example, the regular reports of the Commission's activities, and a special report, to be issued in 1964, surveying the major work of the Commission since 1910.

Itemization of estimate

	Actual, 1963	Estimate, 1964	Estimate, 1965	Increase (+) or decrease (−)
Program and financing:				
Total obligations	$82,690	$91,000	$161,000	+$70,000
Unobligated balance lapsing	160			
New obligational authority (appropriation)	82,850	91,000	161,000	+70,000
11 Personnel compensation	65,240	72,000	81,000	+9,000
12 Personnel benefits	4,570	5,000	6,000	+1,000
21 Travel and transportation of persons	5,804	6,000	7,000	+1,000
23 Rent, communications, and utilities	1,021	1,000	1,000	
24 Printing and reproduction	893	2,000	3,000	+1,000
25 Other services	2,717	3,000	25,000	+22,000
26 Supplies and materials	1,373	1,000	4,000	+3,000
31 Equipment	1,072	1,000	34,000	+33,000
Total obligations	82,690	91,000	161,000	+70,000

BUDGET INCREASE

Chairman HAYDEN. Would you please explain in some detail the reasons why this large increase is required in fiscal year 1965?

Mr. WALTON. Mr. Chairman, I am William Walton, Chairman of the Commission of Fine Arts, and I have a statement which I would like to put in the record.

Chairman HAYDEN. All right, you do that and then you may highlight it.

STATEMENT OF WILLIAM WALTON, CHAIRMAN, COMMISSION OF FINE ARTS

The Commission of Fine Arts is requesting an appropriation of $161,000 which represents an increase of $70,000 over the amount available for fiscal year 1964. Of this increase nearly half would be nonrecurring nature, with funds allocated to improvements of equipment and the purchase of models and graphic studies.

The remaining funds would meet increased travel costs of the members, additional operating expenses, funds for consultants, grade and ingrade raises, and one new position at GS–7.

At the present time the Commission has seven regular employees; an Executive Secretary, and Assistant Secretary, a General Counsel, an administrative and planning assistant, an editor-writer, and two stenographers. The new position, in the secretary series, would supplement the work of the existing staff and also assist in operating a gallery which was recently restored to the Commission's use.

During fiscal year 1963, the Commission acted upon 603 formal submissions, carrying an estimated cost of many millions of dollars. A tabular listing is attached hereto showing the number of applications for the past 3 fiscal years.

The number of formal submissions to the Commission has been steadily increasing, as have the number of informal reviews and daily requests for information about Washington. The appropriations for the Commission have remained relatively small. I therefore hope the committee will favorably consider our request for the amount needed for the next fiscal year.

The members of the Commission are appointed by the President and serve without compensation, receiving only actual travel expenses incurred in attending meetings. Since the Commission was established in 1910, more than 60 distinguished architects, landscape architects, painters, sculptors, and laymen in the field of fine arts have given freely to their Government the benefit of their experience and professional skills in advising the President, the Congress, and Government agencies on matters involving the fine arts.

Number of submissions presented to the Commission of Fine Arts during the past 3 fiscal years

	1961	1962	1963
Shipstead-Luce Act (approved May 16, 1930)	107	113	102
Old Georgetown Act (approved Sept. 22, 1950)	280	273	281
Commission of Fine Arts Act (approved May 17, 1910)	196	212	220

FISCAL YEAR 1961

Commission of Fine Arts Act	220		

Source: Submitted with fiscal year 1965 budget. Compiled Aug. 26, 1963.

INCREASES IN BUSINESS

Mr. WALTON. The reasons for our increase in our budget are the increase in the business that we must do for the District of Columbia and the Federal Government. A number of projects have increased vastly. We have a list here of about 12 major Federal projects that we passed in the past year.

WATERGATE TOWN PROJECT

In addition, we passed on increasingly large private projects, particularly in the area which is referred to as Watergate over by the river in the area of the Cultural Center. We wish to increase the efficiency of the Commission by purchasing equipment that will enable us to handle the models and the designs that the architectural firms bring us. We have no equipment. We are not replacing equipment. It does not exist.

FURNISHING THE COMMISSION OFFICES

We wish to furnish the offices of the Commission. My predecessor, who had been in office a good many years, owned his own office furniture and took it with him. So, I have inherited an empty office, and I am living with borrowed furniture. I would like to buy some so it would now belong to the Commission. Most of these are nonrecurring expenses.

EMPLOYING TECHNICAL CONSULTANTS

There will be display tables, projection equipment, all sorts of the modern conveniences of architectural display. Then, we also need funds for temporary consultants on technical matters that our own staff do not have time or the particular training to obtain.

Chairman HAYDEN. This would be to employ talent?

Mr. WALTON. We would like to briefly for short reports. That, in essence, is what we need.

ESTIMATED EXPENDITURE

Chairman HAYDEN. How much do you estimate will be expended to employ outside consultants during the coming fiscal year?

Mr. WALTON. I would think it would not be more than $4,000 or $5,000.

Mr. ATHERTON. Within that range?

INCREASING BUILDING HEIGHTS IN DISTRICT OF COLUMBIA

Mr. WALTON. It would be within that range, depending on what our needs are. We, for instance, would like consultants to help us deal with the problem, a crucial one, in the District of increasing the height of the buildings. It cannot be done arbitrarily. It must be done with a very careful technical study on what effect would be had on the skyline and real estate values, and we will need technical help on this.

PAST ACCOMPLISHMENTS AND FUTURE PLANS

Chairman HAYDEN. Would you review for the committee your accomplishments in fiscal year 1964, and the problems which you foresee in fiscal year 1965?

MEMORIAL PROJECTS

Mr. WALTON. The accomplishments of the past year would break down into about three categories. We have been involved in three

large memorial projects, the Theodore Roosevelt Memorial, the Franklin Delano Roosevelt Memorial, one to Mary McLeod Bethune, and the Taras Shevchenko Memorial.

These are all ones that will have great bearing on the look of Washington. In addition, we have spent a great deal of time passing on plans for Lafayette Square, the Court of Claims Building, and the other Federal building which will, again, have great impact on the looks of the city. In addition, two large Federal office buildings have come before our Commission.

Then, we have friends in the room today, who have brought us projects, the National Cultural Center, the National Portrait Gallery, the National Air Museum, and the National Zoological Park, that have all passed across our tables in the last calendar year.

Private Industry Projects

The private business has been even bigger. Washington, as you know, is in the state of some real estate flux. As you drive around town, you have to struggle with the traffic in those areas, and they are complex projects, particularly the Columbia Plaza one and the Watergate one. We have probably spent more hours struggling to improve the design of Watergate Town than any single project and, of course, in addition, we handle a vast mass of the small business in Georgetown.

Chairman Hayden. Is that Watergate area satisfactorily settled now?

Mr. Walton. I think so. We have granted them the right to have a license to build. They compromised on the height and the principle that we set up for that part of the river is that nothing can go higher than the Lincoln Memorial. We consider that a very important civic point to establish. And we hope that all future buildings will conform to this regulation, nothing must go higher than the Lincoln Memorial.

New Methods of Reviewing Projects

Chairman Hayden. Your justification statement indicates that the projects now being presented to the Commission on Fine Arts have necessitated introduction of new methods of reviewing them. Just what are these new methods?

Mr. Walton. Well, architects are now inclined to bring much more elaborate models and much more elaborate drawings to us. We do not even have a display place for such visual aids as they are bringing us. We have acquired an extra room, because the size of our meetings increased, and the materials that the architects bring have increased, so now we need all of the equipment for this room which will also double as a gallery for the public to see the work of the Commission of the past and the future.

Estimated Cost of Furniture

Chairman Hayden. How much do you estimate your new furniture will cost?

Mr. Walton. Mr. Atherton, you are the furniture expert.

Mr. ATHERTON. Approximately $4,500. We have estimated this on the basis that most of this equipment will be of the type that is not regularly stocked by the General Services Administration, because it is special equipment.

This would include the tables, for instance, display tables, et cetera.

Chairman HAYDEN. No other member of the committee having any questions to ask, this concludes your hearing. Thank you for your appearance.

NATIONAL GALLERY OF ART

STATEMENTS OF ERNEST R. FEIDLER, ADMINISTRATOR; HUNTINGTON CAIRNS, SECRETARY-TREASURER AND GENERAL COUNSEL; PERRY B. COTT, CHIEF CURATOR; AND LLOYD B. HAYES, ASSISTANT ADMINISTRATOR

1965 BUDGET REQUEST

Chairman HAYDEN. Mr. Feidler.

Mr. FEIDLER. Good morning, Senator. I would like to introduce Huntington Cairns, our Secretary-Treasurer and General Counsel; Perry B. Cott, our Chief Curator; and Lloyd D. Hayes, our Assistant Administrator.

Chairman HAYDEN. For fiscal year 1965 the National Gallery of Art requests an appropriation of $2,147,000, some $9,000 more than the amount appropriated last year. However, this amount is $29,000 less than the total sum anticipated for 1964 inasmuch as a supplemental appropriation of $38,000 was proposed. The justifications for the budget request will be printed in the record.

(The statement referred to follows.)

HIGHLIGHT STATEMENT

The appropriation "Salaries and expenses, National Gallery of Art", is authorized by the joint resolution of Congress approved March 24, 1937 (20 U.S.C. 71–75). Appropriated funds are used only for the operation and maintenance of the gallery. Works of art are acquired by gift from public-spirited collectors or by purchase with funds donated for that specific purpose.

One new position (a research assistant, GS–7) is requested for fiscal year 1965. However, the proposed appropriation of $2,147,000 provides no increase in 1965 in the average employment of 314 estimated for the current year. The 1965 estimate also includes two nonrecurring items: (1) $8,000 for a foreign language edition of the Gallery Information Booklet, and (2) $3,000 for repointing the marble dome of the building.

In the current year $79,500 is allotted for completion of the 2-year skylight renovation project. Due to this special item in 1964, the total appropriation requested is $29,000 less than the estimate for the current year after providing in 1965 for (1) the two items mentioned above, and (2) increases in salaries and related costs which are not subject to administrative control.

Salaries and expenses

Appropriation, 1963	$2,114,000
Appropriation, 1964, including anticipated supplemental of $38,000	2,176,000

SUMMARY OF INCREASES AND DECREASES, 1965

1. To pay 1964 salary increases for full year in 1965	+21,400
2. To pay salary of 1 new research assistant GS-7, at $5,803	+5,800
3. To pay the net cost of within-grade promotions	+13,600
4. To pay increases in personnel benefits	+4,000
5. To pay salaries for extra holiday (Inauguration Day)	+2,800
6. To pay for printing of foreign language edition of Gallery Information Booklet	+8,000
7. To pay for increase in cost of replacing equipment	+2,500
8. Reduction due to increase in savings from delays in filling vacant positions	−7,600
9. Reduction due to 1 less compensable day in 1965	−6,000
10. Reduction due to decrease in building repairs	−73,500
Net change, 1965	−29,000
Budget estimate, 1965	2,147,000

NOTE.—Increases and decreases have been rounded to the nearest $100.

EXPLANATION OF INCREASES AND DECREASES

PAY INCREASE EFFECTIVE JANUARY 5, 1964

The Federal Salary Reform Act of 1962 provided a pay increase for Classification Act employees, effective January 5, 1964. This increase will be paid during the current fiscal year for 12.5 pay periods at a cost of $19,784. The cost of the increase for the full year of 1965 is estimated at $41,152—an increase of $21,368 over the current year.

ONE RESEARCH ASSISTANT, GS-7

In 1956 two additional research assistants were justified in the estimates for 1958 on the basis of the growth in the gallery's collections. With the addition in 1958 of these two employees, the staff available for research and other professional work relative to paintings and sculpture numbered six. This staff has not been increased since that time although the collection of gallery-owned paintings has increased by 22 percent. Additional paintings to be added to the collection upon the settlement of the Chester Dale estate will bring the collection to a level approximately 47 percent above the 1958 figure.

Even more significant than the growth of the collection is the phenomenal increase in the services this staff is now performing for the benefit of the general public. Pertinent statistics are tabulated below:

	1958	1963	Percent increase
Number of gallery visitors	913,481	[1] 1,793,500	96
Number of special exhibitions assembled and installed	6	15	150
Number of expert opinions on works of art owned by the general public	341	1,716	403
Number of answers to inquiries requiring professional knowledge	2,150	4,350	102

[1] The 1962 attendance of 1,332,506 is more representative of the normal increase due to the large number of visitors in 1963 who came to view the Mona Lisa.

Additionally, two completely new programs for gallery visitors have been initiated since 1958: (1) Closed-circuit radio broadcasts, now in 32 exhibition rooms, and (2) printed leaflets explaining the works of art in 36 galleries. The major portion of the professional work of writing scripts and texts for these programs must be done by this staff of curators and research assistants. Changes in paintings in the rooms of course necessitate the revision of existing material. It is hoped that with an additional research assistant, printed leaflets can be provided for many more of the galleries. These leaflets are available to visitors without charge through the use of donated private funds to cover paper and printing costs.

As a general justification in support of the total 1965 request for personnel compensation and benefits, including this new position, the following tabulation is presented. We believe that the reduction in employment realized, during this 5-year period of marked growth in all phases of the gallery's program, indicates the success of positive management efforts toward effective and efficient manpower utilization.

Average number of all employees (including full-time equivalent of part-time and intermittent employment)

	Number of permanent positions requested and approved	Requested	Approved in annual budget	Actual employment
1959	327	318.9	318.9	314.6
1960	326	317.1	317.1	306.3
1961	324	315.7	315.7	309.9
1962	323	314.7	314.7	306.5
1963	323	314.2	314.2	306.4

NET COST OF WITHIN-GRADE PROMOTIONS

The estimated net cost for within-grade promotions in 1965 (including step increases for wage-board employees) is $13,637. The turnover pattern at the Gallery due to the broad range in types and grades of positions does not result in savings sufficient to cover the full cost of within-grade and step promotions. The amount requested is derived from an analysis of each of the some 300 positions and present incumbents. This analysis takes into consideration the incumbent's past service at the Gallery, his age, general health, prospects for promotion, and the date his next within-grade or step promotion will be due.

INCREASES IN PERSONNEL BENEFITS

The cost of payments to the retirement and life insurance funds, and FICA taxes during the past year amounted to 6.8 percent of the paid employment in permanent positions. Applying this percentage to the paid employment in permanent positions for 1965, estimated at $1,700,000, gives a total for these three benefits of $116,000—$2,600 over the current-year figure. The remainder of the $4,000 increase is to cover the reimbursement to the employees' compensation fund, as required by Public Law 86–767, approved September 30, 1960, for payments from the fund made to Gallery employees during 1963. Due to the inability of the Department of Labor to make separate reports to the Gallery in prior years, the amounts of compensation payments from December 1, 1960, through fiscal year 1962, were billed to the Smithsonian Institution. Therefore, no amount was included in the 1964 appropriation for reimbursement to the fund.

HOLIDAY PAY FOR INAUGURATION DAY

Under the gallery's policy of closing to the public only on New Year's Day and Christmas, the building will be open on Inauguration Day. Premium pay for those employees required to be on duty is estimated at $2,800.

FOREIGN LANGUAGE EDITION OF GALLERY INFORMATION BOOKLET

Since World War II, Washington has become the "capital of the free world." This prominence in world affairs has resulted in an ever-increasing number of foreign visitors to the city and to the gallery as official guests of the Government, members of international organizations and professional associations, or tourists. For those visitors who do not speak or read the English language there is in Washington very little information available to them about the cultural and historical sights in our Capital City. In recognition of this condition, the gallery had printed, from savings in fiscal year 1962, a Spanish edition of its information booklet. The demand for this edition by visitors from Spanish-speaking countries justifies the printing of the booklet in an additional foreign language. This courtesy to foreign visitors is found in most of the great museums of other countries.

REPLACEMENT OF EQUIPMENT

Ten years ago a representative of the Bureau of the Budget recommended that a base amount be established in the Gallery's budget to cover the replacement of equipment items which could not reasonably be foreseen a year in advance. Accordingly, an amount of $1,500 was set as this base which was subsequently raised to $2,500. With the aging of equipment purchased new 23 years ago and with the increase in prices since the amount was established, $2,500 for this item is no longer a valid figure. The book value of capitalized equipment (equipment purchased at a unit cost of $50 or more) was $195,266.52 as of July 1, 1963. In addition, there are many items of hand tools and small pieces of office equipment in use which are not included in this figure. As a more realistic estimate of the annual amount required for unforeseen replacement of equipment items, we are requesting an increase in the base figure from $2,500 to $5,000.

INCREASE IN SAVINGS FROM DELAYS IN FILLING VACANT POSITIONS

Lapses (delays in filling vacant positions and leave without pay) for the current year are estimated at 16.3 man-years, and for fiscal year 1965 lapses are estimated at 17.3 man-years. This increase in lapses (reduction in employment in permanent positions) results in a saving of $7,608. The average number of employees in permanent positions is estimated at 308.7 in both 1964 and 1965, notwithstanding the new position justified in 2 above.

ONE LESS COMPENSABLE DAY

There are 262 compensable days in the current fiscal year; whereas, 1965 has only 261 compensable days. The 1 less day results in a saving of $6,000.

DECREASE IN BUILDING REPAIRS

In the current year $79,500 is allotted for completion of the renovation of the skylight area of the building. The net saving on building items in 1965 is $73,500 after offsetting the two new items explained below:

(a) *Elevator maintenance contract*

All three passenger elevators in the Gallery have now been converted to automatic operation. To maintain the automatic devices which operate the elevators, special skills, not employed at the Gallery, are required. The guarantee on the last elevator converted will expire in September 1964. After several years of experience with automatic elevators, we have concluded that an annual service and maintenance contract with a qualified commercial company is the most satisfactory and economical method of assuring the efficient and troublefree operation of this equipment. The amount of such a contract covering the three elevators is estimated at $3,000, based on an informal quotation from an elevator company.

(b) *Repointing of joints in dome of building*

There are approximately 5,000 lineal feet of joints between the marble blocks in the dome of the Gallery building. The caulking in these joints is in need of replacement after exposure to the elements for the 24 years since they were installed. The cost of labor and materials for this work is estimated at 60 cents per lineal foot of joint, or a total of $3,000.

STATUS OF PROGRAM

CHANGES IN MANAGEMENT REQUIREMENT

The average employment in 1963 (including the man-year equivalent of part-time and intermittent employment) was 307—5.4 man-years under the approved figure of 312.4. Savings from this reduced level of employment amounted to $26,600. Three thousand dollars of this amount was returned to the Treasury at the end of the year. The remaining $23,600 was used to help pay 1963 salary increases, the cost of an extra holiday on December 24, 1962, unplanned overtime due to an insufficient number of guards, and increased heating costs due to the severe winter. Planned average employment for 1964 and 1965 is 313.4 including two new positions in the Extension Service for the current year, and the one new research assistant requested for 1965. The prospect of being able to maintain this level is good as more veterans are becoming available for guard positions

upon their military retirement after 20 years of active service. Maintenance of employment at the planned level is imperative to reduce overtime work necessitated by insufficient guards, and to adequately protect the Nation's art treasures.

Funds were provided in 1963 and 1964 for the complete renovation of the more than 2½ acres of skylight on the Gallery building. The amount allotted for this project in the 1964 budget is $79,500. In 1965 all obligations will be for normal recurring expenses except for an item of $3,000 for the repointing of the marble dome of the building, and $8,000 for a foreign language edition of the Gallery Information Booklet.

ACCESSIONS

During the fiscal year 1963 there were 56 accessions by gifts, including 12 paintings, 1 sculpture, and 43 graphic arts.

SPECIAL EXHIBITIONS

The following exhibitions were held at the National Gallery of Art during the fiscal year 1963:

"Exhibition of the Collection of Mr. and Mrs. Andre Meyer"—continued from previous fiscal year through July 8, 1962.

"Prints with Color" from the Rosenwald collection—continued from previous fiscal year through August 23, 1962.

"Lithographs by George Bellows" from the Mellon, Rosenwald, and Addie Burr Clark memorial collections—continued from previous fiscal year through October 16, 1962.

"Water Colors by Winslow Homer from the Collection of Mrs. Charles R. Henschel"—July 6 through September 12, 1962.

"Etchings and Lithographs by Edouard Manet" from the Rosenwald collection—August 24 through December 13, 1962.

"A General Selection of Material from the Index of American Design"—September 21, 1962, to continue into the next fiscal year.

"American Prints Today, 1962" sponsored by the Print Council of America—September 23 through October 14, 1962.

"Drawings from the National Gallery of Art Collections"—October 27, 1962, through March 17, 1963.

"Etchings by G. B. Tiepolo, G. D. Tiepolo, and Canaletto" from the Rosenwald collection—October 27, 1962, through June 11, 1963.

"Old Master Drawings" from the collection of the Duke of Devonshire at Chatsworth—October 27, 1962, through November 25, 1962.

"A Selection of Christmas Prints" from the National Gallery of Art collections—December 14, 1962, through February 26, 1963.

"John Gadsby Chapman, A Retrospective Exhibition" from 21 public collections and private lenders—December 16, 1962, through January 13, 1963.

"Mona Lisa" by Leonardo da Vinci, lent to the President of the United States and the American people by the Government of the French Republic—January 8 through February 3, 1963.

"Jacques Callot": A selection of prints from the collections of Rudolf L. Baumfeld and Lessing J. Rosenwald—February 3 through March 17, 1963.

"Hercules and the Hydra" and "Hercules and Antaeus" by Antonio del Pollaiuolo, lent by the Republic of Italy—February 4 through February 10, 1963.

"Industry and Ingenuity" from the Index of American Design—February 27 through May 2, 1963.

"Landscape Prints" from the Rosenwald Collection—May 2, 1963, to continue into the next fiscal year.

"Prints and Drawings by Mary Cassatt" from the Rosenwald Collection—June 13, 1963, to continue into the next fiscal year.

Exhibitions of recent accessions: "Oysters" by Manet, continued from previous fiscal year through August 9, 1962; "Street in Venice" by Sargent, August 10 through September 13, 1962; "Duke of Wellington" by Goya, November 19 through December 27, 1962; "The Lute Player" by Gentileschi, April 5 through May 13, 1963: "Joris W. Vezeler and Margaretha Boghe, wife of Joris W. Vezeler" by Joos van Cleve, June 21, 1963, to be continued into the next fiscal year.

CURATORIAL SERVICES

Advice was given regarding 1,716 works of art brought to the Gallery for expert opinion and 25 visits to collections were made by members of the staff in connection with offers of gifts. About 4,350 inquiries, many of them requiring research,

were answered verbally and by letter. The material in the "Index of American Design" was studied during the year by 502 persons doing special research or seeking material for use by designers, and for publication.

EXTENSION SERVICE

This service circulates to the public the traveling exhibits, Gallery films, and slide lecture sets. There are 27 traveling exhibits in circulation, lent free of charge except for transportation charges. These were circulated in 230 bookings and were seen by an estimated 115,000 viewers. Two special exhibits were prepared and circulated by other agencies in 32 bookings and were seen by an estimated 16,000 viewers. Two films were circulated in 152 bookings and were seen by an estimated 45,600 viewers. A total of 1,065 sets of slide lectures on a variety of subjects were circulated in 2,749 bookings and seen by approximately 164,940 viewers. The Extension Service, this year, reached approximately 384,560 persons, an increase over last year of 143,710.

EDUCATION OFFICE

The staff of the educational office continued to give daily tours and talks in the galleries, morning and afternoon, throughout the year. The attendance for the scheduled tours was 38,837. Lectures, conferences, and tours given by special appointment served 16,567 visitors. There were 52 Sunday auditorium lectures illustrated with art films or slides, attended by 14,209 persons. Members of the educational office gave 35 radio broadcasts during the year; 33 were newly prepared talks and 2 were recordings from prior years.

LIBRARY ACQUISITIONS

During the year the gallery library acquired without expense to the Government 944 books, 1,182 pamphlets, and 1,485 periodicals. The library now has 20,324 books and 15,893 pamphlets.

PHOTOGRAPHIC LABORATORY

The photographic laboratory of the gallery made 4,910 color slides, 277 black and white slides, 1,561 negatives, 599 color transparencies; and infrared and ultraviolet photographs, in addition to the prints required for study work and sale to the public.

CONCERTS

The Sunday evening concerts in the east garden court, which are provided from private funds, were continued throughout the year. These concerts are free to the public.

ATTENDANCE AND MAINTENANCE

The attendance during the fiscal year 1963 was 1,793,500, a daily average of 4,941. During the fiscal year 1962 the total number of visitors to the gallery was 1,332,506. The increase in the past year was in large measure due to the exhibition of the Mona Lisa for a period of 27 days. In that period alone the total attendance was 673,872. The gallery was open to the public every day of the year except Christmas and New Year's Day. The gallery as a whole was maintained at a standard in keeping with the conditions of the gift of the building and the initial collection of works of art.

NATIONAL GALLERY OF ART—SALARIES AND EXPENSES

Obligations by object classification

		1963 actual	1964 estimate	1965 estimate
11	Personnel compensation	$1,638,936	$1,736,000	$1,766,000
12	Personnel benefits	121,734	130,000	134,000
21	Travel and transportation of persons	5,022	7,000	7,000
22	Transportation of things	607	800	800
23	Rent, communications, and utilities	136,278	138,700	138,700
24	Printing and reproductions	14,454	10,000	18,000
25	Other services	118,878	109,500	36,000
26	Supplies and materials	49,544	41,500	41,500
31	Equipment	9,872	2,500	5,000
32	Lands and structures	15,411		
40	Grants and fixed charges	33		
	Total obligations	2,110,769	2,176,000	2,147,000

PROPOSED PROGRAM FOR 1965

Chairman HAYDEN. Mr. Feidler, would you please discuss the planned program of the National Gallery of Art during the coming fiscal year?

Mr. FEIDLER. I have a statement I would like to make, sir. I am the Administrator of the National Gallery of Art. Our Director, Mr. John Walker, who is unavoidably out of the country has asked me to express his regrets that he is not able to be here this morning.

The 1965 appropriation requested for "Salaries and expenses, National Gallery of Art," is $2,147,000, which, compared with the 1964 estimated obligations of $2,176,000, represents a decrease of $29,000.

BUDGET REDUCTIONS

The following reductions in 1965 make possible this net decrease:

(1) $79,500 is allotted in the current year for the completion of the 2-year project of renovating the skylight roof of the gallery building; inasmuch as the program will be completed this year this item does not reappear in 1965;

(2) $7,600 is saved by a reduction in average employment; and

(3) $6,000 results from there being only 261 compensable days in 1965 compared with the 262 days in the current year.

BUDGET INCREASES

Offsetting these decreases (which total $93,100), there are the following increases which total $64,100:

(1) $41,800 results from higher salaries and personnel benefits due to pay reaises not subject to administrative control;

(2) A $2,500 increase in the amount provided for replacement of equipment; and

(3) $8,000 for printing a foreign language edition of the Gallery Information Booklet.

FOREIGN LANGUAGE EDITION OF GALLERY INFORMATION BOOKLET

If I may expand on that a moment, sir. For years and years, of course, we have had a foreign language edition of the Gallery Information Booklet which we can give to all people.

Chairman HAYDEN. In what language is that?

Mr. FEIDLER. We have had one for years in English. In almost every gallery in the world, foreign visitors who come are given an information booklet in their own language.

This is true in the great galleries of Europe. A couple of years ago, we experimented with a Spanish-speaking booklet. This has been of such great use to us and has received so many fine comments from people who have visited us from South America and Central America that we felt we ought to do something of the same kind for the benefit of the people coming from Europe.

This foreign language booklet which we now propose, the $8,000 we now propose, will be in either French of German. We are not sure yet. We are conducting a little program to see which one would do the most good and result in the greatest use of the gallery.

FRENCH- AND GERMAN-SPEAKING VISITORS

Chairman HAYDEN. Do you have more visitors from the French-speaking or from the German-speaking countries?

Mr. FEIDLER. It may be that more people will come from Europe who are able to speak French than are able to speak German, or vice versa. We are not sure yet. We are doing a little spot checking on it. It is very close, incidentally, as to which one would be the most used.

ELEVATOR MAINTENANCE AND BUILDING REPAIR

The next item is $3,000 for maintenance of three elevators under an annual service contract. Our last elevator has a guarantee that runs out this year and we feel that we had better get a contract for servicing, automatic elevators being what they are.

Item No. 5, $3,000 for repointing the joints between the marble blocks forming the dome of the building. This has not been done since the building was built 20 years ago.

ADDITIONAL RESEARCH ASSISTANT

And No. 6, $5,800 for the salary of an additional research assistant.

There has been no increase in the professional staff of the gallery since 1958, although the collection of gallery-owned paintings has grown by 47 percent since then. Also, attendance, the number of temporary exhibitions, and the number of public inquiries requiring professional knowledge to answer have increased markedly since 1958.

The new research assistant will work in the field of American art. We are increasing our American collection as rapidly as is possible and without lowering our standards of quality. I do want to emphasize, that while this position will raise the authorized number of permanent positions from 325 to 326, the total amount of money requested for personnel compensation will support an average of only 308 and a fraction, 308.7, the same as estimated for the current year.

Thank you, sir.

Chairman HAYDEN. We thank you for your appearance.

SMITHSONIAN INSTITUTION

STATEMENT OF DR. S. DILLON RIPLEY, SECRETARY; JAMES BRADLEY, ASSISTANT SECRETARY; DR. T. DALE STEWART, ACTING ASSISTANT SECRETARY; AND MISS MARIA HOEMANN, BUDGET OFFICER

1965 BUDGET REQUEST

Chairman HAYDEN. All right, gentlemen.

Mr. BRADLEY. Senator, may I introduce Dr. S. Dillon Ripley, the new Secretary of the Smithsonian Institution. Mr name is James Bradley. I am an Assistant Secretary. We have here Dr. T. Dale Stewart, Acting Assistant Secretary, and in the back is Miss Maria Hoemann, our budget officer.

Chairman HAYDEN. I will place in the record a general statement, together with items of specific information which have been furnished to the committee in connection with the budget request, fiscal year 1965, of the Smithsonian Institution.

(The material referred to follows:)

GENERAL STATEMENT

The Smithsonian Institution was created by act of Congress, approved August 10, 1846, "for the increase and diffusion of knowledge among men." Under the terms of its broad charter, the Institution conducts well-defined scholarly research activities in various areas. For example, through its Astrophysical Observatory, the Smithsonian conducts very special research in many phases of astrophysics. Because of the expertness of our staff and the current importance of this area of study, the scientific world looks to the Institution for basic research in this field. The extensive collections of the U.S. National Museum are used by our scientists and historians as well as by visitors to further research in the fields of biology, geology, anthropology, American history, aeronautics and technology. Each year the Smithsonian publishes the results of scientific investigations here and elsewhere and also answers thousands of questions in the fields of science, technology, history, and art by letter, telephone, and consultation, or by personal examination of the collections. In fiscal year 1963 approximately 485,000 such requests for information were answered, an increase of 90,000 over the previous year.

In addition to its research functions, the Smithsonian administers what is probably the world's largest museum complex, comprising three museums of science, technology, and history; three art galleries; and the National Zoological Park. It preserves and protects for our citizens many of the irreplaceable treasures of the American people. Public interest in our museums continues to grow as evidenced by the large increase in the number of visitors. During fiscal year 1963 more than 10,309,000 persons visited the Smithsonian buildings on the Mall (exclusive of the National Gallery of Art). This was over 1,386,000 more than the previous year.

The appropriation request for 1965 for "Salaries and expenses" represents an increase of $1,670,000 over the amount appropriated for 1964. The principal increases are for the operation, maintenance, and protection of the new Museum of History and Technology Building; advancing certain scientific research programs for which enlarged and improved quarters in the additions to the Natural History Building have recently been completed and more are now under construction; contributing to scientific research in the national space program and oceanography; providing a limited additional staff for the recently authorized National Portrait Gallery and the National Collection of Fine Arts to prepare their collections for exhibition in the old Civil Service Commission Building now in process of renovation; and for mandatory salary and wage increases.

During fiscal year 1963 the east wing of the Natural History Building was occupied, and construction of the west wing is in progress. These much needed additions will give the staff of the Museum of Natural History additional improved quarters for the conduct of scientific research. The Museum of History and Technology is being dedicated this month. Ten of the total of fifty halls will be

opened immediately. The remaining halls will be ready for the public as installation of exhibits is completed.

The 1965 requests reflects an increase of $1,364,000 to complete the planning for the construction of a National Air and Space Building. Planning was started with funds amounting to $511,000 appropriated in fiscal year 1964. This building will provide suitable areas to display the national collection of historic air and spacecraft as well as parking facilities for 1,400 cars and fallout shelter.

The justifications which follow also include $1 million to complete the remodeling of the old Civil Service Commission Building for art gallery purposes.

The Smithsonian Institution is requesting $1,776,000 to continue the 10-year program of constructing, remodeling, and equipping the buildings and other exhibit facilities at the National Zoological Park.

Schedule of Renovation of Exhibits

In 1965 the Smithsonian will continue its program of revitalizing the exhibits in the U.S. National Museum. This program, which was begun in 1954, has continued at a steady rate with an average appropriation of $474,800. The amount required for fiscal year 1965 is $330,000, or a reduction of $125,000 from the amount appropriated in fiscal year 1964. This reduction is the result of rescheduling the number of exhibit halls to be under construction so that fewer exhibit areas will be closed to the public.

COMPLETED AND OPENED TO THE PUBLIC BY END OF 1963

1. First Ladies Hall
2. The first American Indian Hall
3. North American Mammals Hall
4. Latin American Archeology Hall
5. Bird Hall
6. American Cultural History Hall
7. Power Machinery Hall
8. The second American Indian Hall
9. Health Hall
10. Military History Hall
11. Printing Arts Hall
12. Gems and Minerals Hall
13. Textiles Hall (first floor)
14. Jade Room
15. World of Mammals Hall
16. Agriculture Hall
17. Fossil Fishes and Amphibians Hal
18. Textiles Hall (second floor)
19. Medicine, Dentistry, and Pharmacy Hall
20. Fossil Plants and Invertebrates Hall
21. The first North American Archeology Hall
22. Numismatics Hall
23. Petroleum Hall
24. Prehistoric Mammals Hall
25. Peoples of the Pacific Hall
26. The second North American Archeology Hall
27. Ocean Life Hall (first floor)
28. Dinosaur Hall

HALLS TO BE COMPLETED AND OPENED TO THE PUBLIC BY THE END OF 1964

1. Vertebrate Anatomy Hall.
2. Peoples of Asia and Africa Hall.

CONSTRUCTION PARTIALLY COMPLETED BY THE END OF 1964

1. Reptiles and Fishes Hall.
2. Physical Anthropology Hall.
3. Old World Archeology Hall.

DURING 1964, DRAWINGS WILL BE FINISHED AND CONTRACTS AWARDED FOR HALLS

1. Economic Geology Hall.
2. Physical Geology Hall.

PROJECTS FOR 1965

1. Animals of the ice age.

REHABILITATION PROJECTS, FISCAL YEAR 1965

The following are the rehabilitation projects for fiscal year 1965, except the one for air conditioning the National Air and Space Building. The justification for this project is set forth under the activity "Museum operations."

Museum of Natural History (1911)	$27,000
1. Modification of space for Supply Division located in Natural History Building.	
Arts and Industries Building (1881)	72,000
1. Replacement of floors in 4 main halls (east, north, west, south).	
Smithsonian Building (1855)	20,000
1. Alterations to the electrical systems to provide increased capacity for additional service required for improvement of space, additional staff, and expansion of research activities.	
National Air and Space Building (1917)	23,000
1. Replacement of roof and repainting exterior surfaces.	
Freer Gallery of Art Building (1921)	18,000
1. Repair interior stonework, repoint joints, and clean surfaces, and repaint corridors	15,000
2. Initial steps in modernization of controls and safety devices on one freight elevator	3,000
Silver Hill Facility (1952)	40,000
1. Installation of a sanitary sewer system and restroom facilities	15,000
2. Installation of a security fence for improved control to reduce possibility of damage or loss of valuable museum objects	25,000
Total, rehabilitation projects	200,000

WORK PERFORMED UNDER GRANTS AND CONTRACTS FROM FEDERAL AGENCIES

GRANTS

There are listed below the agencies and the amounts of grants which the Smithsonian received in 1963 as well as an estimate of the amounts to be received in 1964:

Federal agency	Actual, fiscal year 1963	Estimate, fiscal year 1964
National Aeronautics and Space Administration	$3,595,500	$4,431,000
National Institutes of Health	271,655	10,285
National Science Foundation	427,550	1,700,000
Department of Defense	200,000	33,795
Federal Aviation Agency	50,000	----------
Total grants	4,544,705	6,175,080

The above grants from funds available to Federal agencies enables the Smithsonian Institution to collaborate with such agencies in scientific research including the satellite tracking program, the science information exchange, marine mollusks of Polynesia, lower cretaceous ostracoda of Israel, Shanidar IV–VI Neanderthals, pelagic phosphorous metabolism, tertiary echinoids of the Eastern United States and the Caribbean, revision of the genera of Paleozoic bryozoa, sharks of the tropical Pacific Ocean, cultural patterns of southwest Virginia, structures of Nan Madol, mammals and their ectoparasites from Iran, study of the biochemical effects of ionizing and nonionizing radiation on plant metabolism during development, and chronic disease in relation to social efficiency.

CONTRACTS

The Smithsonian Institution also performs research for Federal agencies on reimbursable contracts. The agencies for whom this work was performed in 1963 and the amount of reimbursement, together with an estimate for 1964, follows:

Federal agency	Actual, fiscal year 1963	Estimate, fiscal year 1964
Atomic Energy Commission	$137,714	$15,097
Department of Defense	251,403	546,000
Veterans' Administration	65,000	
National Aeronautics and Space Administration	1,646,263	1,411,700
Total, reimbursable contracts	2,100,380	1,972,797

This research was primarily in the fields of astrophysics, astronomy, psychology, aeronautics, shark repellants, plant physiology, and marine fauna of the Pacific area.

JUSTIFICATION STATEMENT

Chairman HAYDEN. The Smithsonian Institution's budget estimate for salaries and expenses is $14,794,000, an increase of $1,670,000 over the appropriations for fiscal year 1964. The justifications for this estimate will be included in the record.

(The statements referred to follow:)

SALARIES AND EXPENSES

Leadoff tabular statement	*Amount*
Appropriation act, 1964	$13,124,000
Budget estimate, 1965	14,794,000
Increase, 1965	1,670,000

Summary of increases, 1965

	Amount
1. To provide for step increases and other personnel costs:	
Employees compensation fund payments	$10,000
Step increases	279,000
Pay increases effective Jan. 5, 1964	155,000
Wage board increases effective Dec. 9, 1962, for which funds are not now provided	73,000
Less reduction of 1 day's pay above 52-week base	−25,000
Subtotal	492,000
2. To provide for the protection, operation, and maintenance of the Museum of History and Technology Building	753,000
Less nonrecurring cost for transportation, other services, and equipment	−207,000
Subtotal	546,000
3. To provide more adequately for documentation and preservation of museum collections and related activities	35,000
Less nonrecurring cost of other services and equipment	−514,000
Subtotal	−479,000
4. 1965 rehabilitation of buildings and modernization of exhibits programs	530,000
Less 1964 programs	−655,000
Subtotal	−125,000
5. Planning and preparation of art objects prior to move into the F Street galleries	70,600
6. To provide more adequately for the Smithsonian's Astrophysical Observatory's research program	200,900
7. For increased responsibilities of scientific research activities in Canal Zone biological area, and International Exchange Service	11,000
8. Strengthening efforts in oceanography	247,700
9. Expansion into new areas of research in natural history	81,700
10. Protection, operation, and maintenance of additions to the Natural History Building	214,500
11. Protection, operation, and maintenance of all other Smithsonian buildings	220,000
12. Air conditioning the National Air and Space Building	80,000
13. Increased administrative services costs	109,600
Net increase, 1965	1,670,000

Comparative summary of the 1964 appropriation with the 1965 estimates

	1964 estimate	1965 estimate	Increase or decrease	
			Step increases and other personnel costs [1]	Program
1. Museum exhibitions (including art):				
Museum of History and Technology	$2,196,000	$1,769,000	$52,000	[2]—$479,000
Museum of Natural History	1,366,000	1,276,000	35,000	[3]—125,000
National Air Museum	301,000	314,000	13,000	
National Armed Forces Museum Advisory Board	33,000	33,000		
National Collection of Fine Arts	143,000	187,100	7,000	[4] 37,100
National Portrait Gallery	44,000	80,500	3,000	[5] 33,500
Total, museum exhibitions (including art)	4,083,000	3,659,600	110,000	−533,400
2. Scientific research and exchange of scientific information:				
Astrophysical Observatory	979,000	1,205,900	26,000	[6] 200,900
Bureau of American Ethnology	127,000	132,000	5,000	
Canal Zone Biological Area	138,000	148,000	4,000	[7] 6,000
International Exchange Service	108,000	113,000		[8] 5,000
Museum of Natural History	1,415,000	1,799,400	55,000	[9] 329,400
Museum of History and Technology	809,000	839,000	30,000	
Total, scientific research and exchange of scientific information	3,576,000	4,237,300	120,000	541,300
3. Buildings Management Department:				
Museum of History and Technology Building	1,015,000	1,622,000	61,000	546,000
Natural History Building	1,480,000	1,780,500	86,000	214,500
Smithsonian Building	176,000	237,000	11,000	50,000
Arts and Industries Building	391,000	508,000	23,000	94,000
All other buildings	495,000	600,000	29,000	76,000
Rehabilitation of buildings	200,000	*280,000		80,000
Total, Buildings Management Department	3,757,000	5,027,500	210,000	[10] 1,060,500
4. General administration:				
Management	276,000	324,000	11,000	37,000
Administrative services	1,432,000	1,545,600	41,000	72,600
Total, general administration	1,708,000	1,869,600	52,000	[11] 109,600
Grand total	13,124,000	14,794,000	[1] 492,000	1,178,000

*Includes $80,000 for air conditioning the National Air and Space Building.

NOTE.—For justification see below:

JUSTIFICATIONS

PERSONNEL COSTS

(1) A net increase of $492,000 is requested for step increases and other personnel costs. Consideration was given to a nonrecurring amount of $25,000 for the cost of 1 day's regular pay above the 52-week base.

Need for increase.—This increase would be used (1) to pay the fiscal year 1965 costs of salary increases granted the general schedule employees on January 5, 1964, Compensation Schedule II of the Federal Salary Reform Act of 1962, Public Law 87–793, approved October 11, 1962 ($155,000); (2) to pay the full-year cost of salary increases granted to wage-board employees on December 9, 1962, as determined through analysis of all wage-board positions with consideration being given to representative lapse factors ($73,000); (3) for reimbursement for total benefits and other payments made from the employees compensation fund during fiscal year 1963 ($10,000); and (4) to pay for step increases in accordance with the Classification Act Amendments of 1962 (76 Stat. 844) ($279,000). The latter sum includes the portion of the fiscal year 1965 step increases to be paid in that year, the carryover cost from fiscal year 1964, and the total amount of step increases which the Institution will absorb in fiscal year 1964, but does not have in the fiscal year 1965 base. The absorption of these costs in fiscal year 1964 is possible because of savings which will occur as a result of the delayed opening of

the Museum of History and Technology Building. The apparent cost was determined through a position-by-position study, and has been reduced to real cost by offsets due to 15 percent of the employees being separated before they receive their step increase, and the salaries of those employees averaging $270 above the base of the grade.

All operations of the Smithsonian Institution have been carefully reviewed to determine whether any absorption of the above amount is possible in fiscal year 1965. No savings can be effected without seriously curtailing the daily operations of the Institution and impairing such authorized programs as staffing and servicing the new east wing of the Natural History Building and the new Museum of History and Technology.

MUSEUM OF HISTORY AND TECHNOLOGY

2. The net decrease of $479,000 for the Museum of History and Technology reflects a decrease of nonrecurring initial services, furnishings, and equipment provided in fiscal year 1964 in the amount of $514,000, offset by an increase of $35,000 for the curatorial departments.

Need for increase.—The increase would be used to employ additional staff to meet the heavy demands in the new building by the public for service in subjects presented in the building such as manufactures, heavy industries, and electricity; and to facilitate the use of the collections through restoration, documentation, and preservation of specimens.

Plan of work.—To employ one curator, one associate curator, two museum technicians, and two clerical employees and to provide for personnel benefits.

MUSEUM OF NATURAL HISTORY

3. The decrease of $125,000 for the Museum of Natural History is the result of rescheduling the number of exhibit halls to be under construction in the modernization of exhibits program so that fewer exhibit areas will be closed to the public.

NATIONAL COLLECTION OF FINE ARTS

(4) An increase of $37,100 for the National Collection of Fine Arts is requested to continue the expanded program of planning and preparing its valuable works of art for exhibition in the remodeled building.

Need for increase.—This increase would be used for additional specialists in art to inventory the permanent collections, prepare working catalogs, undertake restoration programs, plan continuing exhibits, and set up schedules of temporary shows.

Plan of work.—To employ one head curator (sculptures), one associate curator, and two clerical assistants; and to provide funds for personnel benefits; travel; contractual services; supplies and materials; and equipment.

NATIONAL PORTRAIT GALLERY

(5) An increase of $33,500 is requested for the National Portrait Gallery for planning and preparing for the exhibition of portraits and other objects in the new F Street building.

Need for increase.—This increase would be used for additional staffing and related expenses for extensive research, location, and acquisition of portraits and sculptures; restoration and care of portraits and other art objection which are acquired; the establishment of records of materials available immediately for transfer to the gallery or which may be available for loan or later acquisition; the preparation of a detailed script for each exhibit hall of the gallery, and the acquisition of related reference works.

Plan of work.—To provide for one curator, one research assistant, and two clerical employees, personnel benefits, travel, transportation of things, supplies and materials, and equipment.

ASTROPHYSICAL OBSERVATORY

(6) The Astrophysical Observatory requires $200,900 to further its unique scientific program involving specialized functions of widely acclaimed importance in this space age. This increase includes $94,000 for equipment which is a nonrecurring expense in the next fiscal year.

Need for increase.—Additional staff and related costs would be used to improve the Astrophysical Observatory's research in meteoritic science, cometry, X and gamma radiation, upper atmospheric phenomena, geodesy and celestial mechanics, properties of extraterrestrial material collected by the earth, solar and stellar astrophysics, the role of radiant energy in the maintenance of life processes, and in the spectral quality of solar radiation pertaining to specific biological processes.

Plan of work.—To provide for one astronomer, one electrical engineer, one mathematician, and one technician; full-year cost of scintific positions (2 man-years) financed on a part-year basis in fiscal year 1964; personnel benefits; travel; rent, communications, and utilities; other services; supplies and materials; and equipment.

CANAL ZONE BIOLOGICAL AREA

(7) An increase of $6,000 is requested for the Canal Zone Biological Area for expenses related to the maintenance and operation of this research facility uniquely suited for biological research on the tropics.

Need for increase.—The increase would be used for rental of more space for the enlarged staff and for the storage, packing, and unpacking of scientific equipment handled for visiting scientists; and supplies and materials to conduct research activities.

Plan of work.—To provide for travel, transportation of things, rent, supplies and materials, and equipment.

INTERNATIONAL EXCHANGE SERVICE

(8) An increase of $5,000 is requested for the accelerated program of the International Exchange Service which is the official U.S. agency for the exchange of governmental, scientific, and literary publications.

Need for increase.—This increase would be used to employ an additional clerk to perform the extra duties which will be required because of the increase in specialized scientific documents received at the Smithsonian for transmission throughout the world.

Plan of work.—To provide for one clerical assistant.

MUSEUM OF NATURAL HISTORY

(9) The U.S. National Museum will require a total of $329,400 for its Museum of Natural History, including $247,700 for the oceanography program as part of the plan of the Federal Council on Oceanography, and $81,700 to further research in those fields of science explained below in which the museum conspicuously lacks an adequate number of specialists to cover all critical areas. This increase includes $120,000 which is nonrecurring in the next fiscal year.

Need for increase.—(*a*) Additional professional, subprofessional, and clerical staff are needed to help the Smithsonian Institution keep pace with its ever-increasing responsibilities to supply information on the nature and identity of the organisms received from federally financed marine expeditions. Scientists working in this program provide identifications of marine organisms and prepare monographs to keep colleagues in Federal agencies and universities advised of findings. A part of the increase for the oceanography program is for equipment to be used aboard ship during oceanographic research expeditions.

(*b*) The Museum of Natural History has excellent facilities at long last to house in a more adequate manner its great collections and to conduct its research. This reemphasizes the importance of being able to use these scientific tools in a way that will be suitable to the needs of the scientific community. Specialists and supporting staff are needed to further research in botany, paleontology, paleobotany, and entomology. This natural history research includes inventorying, identifying, and classifying specimens and answering a large volume of information requests. A modest increase in travel funds is needed to permit the regular Museum of Natural History staff to undertake field investigations, study comparative materials at other museums and universities, consult with colleagues on special problems, and inspect and evaluate proposed donations to the collections. Additional funds for contractual services, supplies, and equipment are also required for the regular research programs of the Museum of Natural History.

Plan of work.—(*a*) To provide for five zoologists, three geologists, one botanist, and three museum specialists for the oceanography program; full-year cost of scientific positions (4 man-years) financed on a part-year basis in fiscal year 1964, personnel benefits, travel, other services, and equipment.

(*b*) To provide for one chemist, one botanist, one technician, and five clerks; and personnel benefits, travel, other services, supplies and materials, and equipment.

BUILDINGS MANAGEMENT DEPARTMENT

(10) A net increase of $1,060,500 is requested for the buildings management department to continue to provide protection, operation, and maintenance services for the several Smithsonian buildings, and to air-condition the National Air and Space Building.

Need for increase.—The major portion of this increase would be used for additional staff and related expenses to provide adequate buildings services for the Museum of History and Technology and the Natural History Buildings; for enlarging the research facilities of the Division of Radiation and Organisms; and making necessary repairs and alterations in the Arts and Industries Building to provide office space for staff now housed in temporary Government quarters and to alleviate crowded conditions in other Smithsonian buildings.

Funds will also be used to air-condition the National Air and Space Building. Installation of air conditioning in this building will contribute in a very substantial way to the comfort of the great crowds of visitors who tour it each year. It will also assist in the preservation of valuable specimens and objects which are placed on exhibition.

Plan of work.—To provide for the full-year cost of 17 guards, laborers, and mechanics (9 man-years) financed on a part-year basis in fiscal year 1964 and 182 positions (164 man-years in fiscal year 1965) to employ guards, laborers, and mechanics; provide benefits; electricity (including air conditioning), gas, and steam, and communications; contractual services for maintenance, repair, and inspection of elevators and escalators; for fire, smoke, and intrusion systems; cleaning supplies, uniforms, lamps, hardware, plumbing materials, paints, and lumber; and equipment such as desks, chairs, tables, file cases, steel storage shelving, lockers, projection equipment, pistols and holsters, wheelchairs, fire extinguishers, electrical fixtures, and new flooring.

GENERAL ADMINISTRATION

(11) An increase of $109,600 is requested for general administration to handle the increased workload in the administrative and service units of the Institution because of the step-up in museum activities and the accelerated art gallery and scientific research programs.

Need for increase.—The major portion of the increase would be used for additional staff to meet the increased demands for library, photographic, editorial, and fiscal services. Additional funds are also required for office supplies, and equipment.

Plan of work.—To provide for one special assistant, one editor, two library assistants, five clerical assistants, one management analyst, and 3 photographers; personnel benefits; other services; supplies and materials; and equipment.

SALARIES AND EXPENSES

Report on number of permanent positions by organizational unit

	1963 actual	1964 estimate	1965 estimate	Increase 1965 over 1964
Astrophysical Observatory	57	64	68	4
Buildings Management Department	509	535	717	182
Bureau of American Ethnology	11	13	13	0
Canal Zone Biological Area	13	18	18	0
International Exchange Service	12	10	11	1

Appropriation (adjusted) or estimate	11,000,000	13,124,000	14,794,000	1,670,000

HIGHLIGHT STATEMENT

Chairman HAYDEN. Dr. Ripley, this is the first opportunity you have had to appear before this committee, having just taken over as Secretary of the Smithsonian Institution. The committee welcomes you. On behalf of the committee I assure you of our cooperation at any time you believe we can be helpful.

If you have a statement concerning your budget for the coming year, the committee will be glad to have you present it, either in full or by highlighting as you think best. Inasmuch as you do have a sizable increase in your salaries and expense items, I trust that you will at least indicate the major areas where the increases are required.

Dr. RIPLEY. Yes; thank you, Senator, I have a statement which I would like to offer for the record and I would like to highlight it, if I may.

Chairman HAYDEN. All right, sir.

STATEMENT BY DR. S. DILLON RIPLEY, SECRETARY, SMITHSONIAN INSTITUTION

Mr. Chairman and members of the committee, I should like to give you a brief résumé of my background, since this is my first appearance before you. I am a former employee of the Smithsonian. In 1942, I served as Assistant Curator of Birds. I was born in New York, graduated from Yale, and received a Ph. D. in zoology from Harvard in 1943. Prior to assuming my new duties as Secretary of the Smithsonian on February 1, 1964, I was director of the Peabody Museum of Natural History and professor in the biology department at Yale University. I have also been a faculty member at Harvard and served as a professor of ornithology at Yale. For about 4 years, I served on the staff of the Academy of Natural Sciences of Philadelphia and for 2 years with the American Museum of Natural History in New York. I have participated in seven zoological expeditions and have written five books and a number of technical articles. At present I am president of the International Council for Bird Preservation and trustee or member of a number of scientific and academic institutions.

Turning now to the scope of the Smithsonian's operations, I find that it includes the newly opened Museum of History and Technology, the Museum of Natural History, the National Air and Space Museum, the Bureau of American Ethnology, the International Exchange Service, the Astrophysical Observatory, the Canal Zone Biological Area, the National Collection of Fine Arts, the Freer Gallery of Art, the National Portrait Gallery, and the National Zoological Park.

When the Institution opened in 1846, its first Secretary, Joseph Henry, said that the Institution's motto, "for the increase and diffusion of knowledge among men," implied research for increase of knowledge and education for diffusion of knowledge. The Smithsonian, with its traditional responsibilities among the

arts as well as the sciences, should continue to maintain its leadership in education and scholarship in America. Museums and their related laboratories are just entering a new era. In a time of crisis in education, museum resources are being drawn upon as never before for general education. Thirty years ago, a mere 15 percent of museums in America were connected with education in some form. This marked a catastrophic decline from a hundred years ago when museums housed the genesis of scientific research in the Western World. Today, over 90 percent of museums are involved in education, ranging from simple school extension programs to postgraduate fellowships

It has always been my belief that a museum should be considered as a center of knowledge, as a company of scholars—not a rather fossilized exhibit of curiosities. But it is not enough for a museum to act as a center of information, investigation, and research. There is the further significant responsibility to present fully to the public the cultural and scientific knowledge held in its collections. Current estimates that total annual attendance in all American museums will exceed 200 million clearly reflect this urgent need. It is this approach which can give the true value to the vast collections in the museums of the Nation and give meaning to the superb collection of over 57 million specimens at the Smithsonian. The facilities and resources at the Smithsonian are tremendous, and it is hard to realize that it was only back in 1803 that President Jefferson invited Dr. Caspar Wistar to study the newly acquired mammoth bones where they were spread out in the unfinished East Room of the White House Yet, with the phenomenal growth of the Smithsonian have come almost awe-inspiring opportunities and challenge.

The Smithsonian Institution with its widening assortment of resources, museums, galleries, priceless collections, with its superb technical and research staff, is one of the Nation's most significant assets. The Smithsonian can and should be a tremendous force for education in the world today. In the realm of the humanities, in art and the history of our culture, as well as in a variety of sciences ranging from the study of the ocean to astrophysics and the natural sciences, it is implicit that the Smithsonian should assume a commanding position in education and science as well as leadership in the museum world. We cannot afford to overlook any possibility of increasing and diffusing knowledge among our people, young and old, at all levels—from exhibits and museum lectures and demonstrations to postgraduate specialized research and the publication of the findings of scientific research. Museums and their technical resources are important as never before in these days of crisis in education.

I hope it may be possible to broaden the Smithsonian's traditional cooperation with museums and professional staffs throughout the world. I will do my utmost to help the Smithsonian to realize fully its responsibilities, reflecting not only here but also abroad our deep concern for the well-being and advancement of the museum and its associated professions.

Before discussing the "Salaries and expenses" request, I should like to discuss briefly our request for planning and construction funds.

A request for $1,364,000 is included to complete the planning for the construction of a National Air and Space Museum. In fiscal year 1964, the Smithsonian Institution was given an appropriation of $511,000 to begin this planning. The building will provide suitable areas to display the national collection of historic air and space craft, and will provide parking facilities for 1,400 visitor cars and a fallout shelter. The great public interest in air and space exhibitions is demonstrated by the large crowds visiting the existing small temporary hangar building located behind the Smithsonian Building. During the past fiscal year 2,673,618 persons visited this building, coming from every State in the Union.

We are requesting $1 million to complete the remodeling of the old Civil Service Commission Building for use by Smithsonian art and portrait galleries. This amount covers that portion of the work which could be deferred until fiscal year 1965 without slowing down the project. The 1964 appropriation was reduced by $1 million by the Congress in anticipation that the amount would be requested for fiscal year 1965. It is now expected that the invitation for bids for this remodeling will be readvertised in June of this year.

We are requesting $1,776,000 to continue the third year of the 10-year program of constructing, remodeling, and equipping the buildings and other facilities at the National Zoological Park. The amount requested for fiscal year 1965 includes a winter house for delicate hoofed stock and a modern sewer system in the National Zoological Park which is essential to eliminate pollution of Rock Creek, as urged by health authorities and the House Committee on Public Works.

Construction of the new Museum of History and Technology is substantially completed, and the building was dedicated on January 22 by the President. Ten

of a total of 50 halls were opened to the public immediately. New halls will be opened as soon as the installation of exhibits is completed. We estimate that each year 5 million visitors from every State in the Union will want to view this magnificent new building with its outstanding exhibits. Fifty-five thousand visitors were counted on Sunday, January 26, 1964, as they entered the doors of this new building.

Construction of the west wing of the Natural History Building is now underway and is expected to be completed in the fall of 1965. This will provide laboratory space for research in natural history and space for the national collections of scientific specimens.

Now I should like to summarize the programs under the "Salaries and expenses" appropriation.

Our appropriation request for 1965 represents an increase of $1,670,000 over the amount appropriated for 1964. The principal increases are for the following purposes:

1. The operation, maintenance, and protection of the newly dedicated Museum of History and Technology Building.
2. Advancing certain scientific research programs for which enlarged and improved quarters in the additions to the Museum of Natural History have recently been completed or are now under construction.
3. Contributing to basic scientific research in the national space program and oceanography.
4. Providing limited additional staff for the recently authorized National Portrait Gallery and for the National Collection of Fine Arts, and to prepare collections for exhibition in the old Civil Service Commission Building.
5. Required salary and wage increases.

Almost two-thirds of the net increase, or specifically $1,060,500, is required by the Buildings Management Department, principally for the protection, maintenance, and operation of the new Museum of History and Technology and the new east and west wings of the Natural History Building. I should say that we have had an independent survey by a competent team from the General Services Administration to assure that our estimates of staffing and other requirements for the operation of this building are correct. Because of the urgency of holding both manpower and other costs to an absolute minimum, reductions have been made in the estimates before you below the levels generally agreed upon as needed by these experts.

Included in the above increase is $80,000 to air condition the National Air and Space Building. We find that air conditioning is essential to the comfort of the great crowds of visitors who tour this small building each year. In addition, air conditioning will undoubtedly assist in our efforts to preserve valuable specimens and objects which are placed on exhibition.

You will note that there is a net decrease of $479,000 in the program costs for the Museum of History and Technology. This decrease is caused by the nonrecurring costs of initial museum furnishings and equipment provided in fiscal year 1964 in the amount of $514,000, as offset by an increase of $35,000 in fiscal year 1965 for the curatorial staff.

We believe we must request additional funds for the research programs. The Museum of Natural History requires a total of $329,400 including $247,700 for the oceanography program and $81,700 to further research in natural history fields where for years we have not had sufficient specialists. This type of research can only be accomplished at the Smithsonian, where our unique national collections of scientific specimens are housed. The Astrophysical Observatory requires $200,900 for its scientific research program of widely recognized importance in the space age.

The National Portrait Gallery and the National Collection of Fine Arts will require $70,600 to permit additions to their small staffs to continue a program of planning for the exhibition of valuable works of art and portraits of great significance to America in the remodeled building.

An increase of $492,000 is requested for within-grade salary increases and other required personnel costs. All operations of the Smithsonian Institution have been carefully reviewed to determine whether any absorption of the above amount is possible in fiscal year 1965. We believe no savings can be effected without seriously curtailing the daily operations of the Institution and impairing such authorized programs as staffing and servicing the new Museum of History and Technology and the new east and west wings of the Natural History Building.

In conclusion, may I point out that the total appropriation to the Smithsonian Institution for the present year (including an anticipated supplemental of

$67,000) is $20,442,000. We are asking for $18,934,000 in the 1965 budget before you, or $1,508,000 less than appropriated this year The reduction is due to the nonrecurrence of the construction appropriation for remodeling the old Civil Service Building.

Thank you very much for allowing me to make this statement. I shall be happy to try to answer any questions you may have about our activities. With your permission, I shall call on Mr. Bradley, Assistant Secretary, if necessary, for assistance in providing information to the committee.

Background Résumé of Secretary of the Smithsonian Institute

Dr. Ripley. Mr. Chairman and members of the committee, I should like to give you a brief résumé of my background, since this is my first appearance before you. I am a former employee of the Smithsonian. In 1942, I served as Assistant Curator of Birds. I was born in New York, graduated from Yale, and received a Ph. D. in zoology from Harvard in 1943.

Prior to assuming my new duties as Secretary of the Smithsonian on February 1, 1964, I was director of the Peabody Museum of Natural History at Yale University, and a professor in the biology department there. I have also been a faculty member at Harvard and served as a professor of ornithology at Yale.

For about 4 years, I served on the staff of the Academy of Natural Sciences of Philadelphia and for 2 years with the American Museum of Natural History in New York. I have participated in seven zoological expeditions, primarily in southeast Asia, which is my particular interest.

I have written five books and a number of technical articles. At present I am president of the International Council for Bird Preservation and trustee or member of a number of scientific and academic institutions.

Scope of Smithsonian's Operations

Turning now to the scope of the Smithsonian's operations, I find that it includes the newly opened Museum of History and Technology, the Museum of Natural History, the National Air and Space Museum, the Bureau of American Ethnology, the International Exchange Service, the Astrophysical Observatory, the Canal Zone Biological Area, the National Collection of Fine Arts, the Freer Gallery of Art, the National Portrait Gallery, and the National Zoological Park.

Smithsonian Tradition

When the Institution opened in 1846, its first Secretary, Joseph Henry, said that the Institution's motto, "for the increase and diffusion of knowledge among men," implied research for increase of knowledge and education for diffusion of knowledge. The Smithsonian, with its traditional responsibilities among the arts as well as the sciences, should continue and expand its leadership in education and scholarship in America.

It has always been my belief that a museum should be considered as a center of knowledge, a company of scholars—not a rather fossilized exhibit of curiosities. But it is not enough for a museum to act as a center of information, investigation, and research. There is the further significant responsibility to present fully to the public the cultural and scientific knowledge held in its collections.

The Smithsonian Institution with its widening assortment of resources, museums, galleries, priceless collections, with its superb technical and research staff, is one of the Nation's most significant assets. The Smithsonian can and should be a tremendous force for education in the world today.

Smithsonian's Traditional Cooperation

I hope it may be possible to broaden the Smithsonian's traditional cooperation with museums, universities, and professional staffs throughout the world. I will do my utmost to help the Smithsonian to realize fully its responsibilities, reflecting not only here, but also abroad, our deep concern for the well-being and advancement of the museum and its associated professions.

Planning and Construction

In regard to our request for planning and construction funds, a request for $1,364,000 is included to complete the planning for the construction of a National Air and Space Museum. In fiscal year 1964, the Smithsonian Institution was given an appropriation of $511,000 to begin this planning. The building will provide suitable areas to display the national collection of historic air and spacecraft, and will provide parking facilities for 1,400 visitor cars and a fallout shelter. The great public interest in air and space exhibitions is demonstrated by the large crowds visiting the existing small temporary hangar building located behind the classic old Smithsonian Building. During the past fiscal year 2,673,618 persons visited this building, coming from every State in the Union.

Art and Portrait Galleries

We are requesting $1 million to complete the remodeling of the old Civil Service Commission Building for use by Smithsonian art and portrait galleries. This amount covers that portion of the work which could be deferred until fiscal year 1965 without slowing down the project.

Chairman Hayden. The Smithsonian Institution requests an appropriation of $1 million to complete the remodeling of the Civil Service Commission Building for art gallery purposes. This is the remainder of the full amount which was asked last year but which was not appropriated. The justifications will be placed in the record.

(The justifications referred to follow:)

Remodeling of Civil Service Commission Building

Appropriated, fiscal year 1962 (planning)	$400,000
Appropriated, fiscal year 1964	5,465,000
Estimate, 1965	1,000,000

An appropriation of $1 million for completion of the remodeling of the old Civil Service Commission Building (hereinafter referred to as the F Street Building) is urgently sought by the Board of Regents of the Smithsonian Institution. The appropriation is needed now to complete the contract work of remodeling the building for art gallery purposes for which $5,465,000 was appropriated for fiscal year 1964. Work on this project will begin within 4 months and is expected to be completed in the spring of 1966.

The National Collection of Fine Arts and the National Portrait Gallery will share the building. The National Collection of Fine Arts is now crowded into

the Natural History Museum. Space is so limited that many works of art cannot be displayed to the interested public but must be placed in storage. The National Collection of Fine Arts collections are principally the works of American art. The National Gallery of Art is distinctly different in that its collections are principally European masterpieces of art. The Freer Gallery of Art is markedly different in that its collections are principally works of oriental art.

Included in the National Collection of Fine Arts is the John Gellatly collection, reputed to be worth over $10 million. Other notable collections are the Evans collection and the Ranger bequest which contain over 200 works of art. The National Collection of Fine Arts possesses a sufficient number of important works of art which are now on exhibition, in storage, or on temporary loan, to provide immediately a magnificent offering of American paintings, works of sculpture, and decorative art objects in the F Street building.

The National Collection of Fine Arts serves not only Washington but also art galleries throughout the country by circulating fine exhibitions for special shows. Proper facilities are not now available to compose and prepare such exhibitions for this nationwide cultural program. The F Street building will provide the necessary space.

The other gallery authorized to use this building is the National Portrait Gallery, created by the act of April 27, 1962. This gallery is authorized to exhibit portraits of men and women who have made significant contributions to the history, development, and culture of the United States. Thus, the portrait gallery will become a unique national hall of history and culture. There is no similar national gallery in this country.

Collections of portraits are being held by the National Gallery of Art and the National Collection of Fine Arts for the National Portrait Gallery. As soon as the gallery becomes a reality through the remodeling of this building, other collections and individual portraits will be offered as gifts to the National Portrait Gallery by both private and public agencies and individuals in order that the persons portrayed may be considered for a place of honor in the National Portrait Gallery.

The total amount of $6,465,000 needed for remodeling was requested of the Congress in the 1964 budget estimate. Since a portion of the work could be deferred until fiscal year 1965 without slowing down the project, the Congress reduced the 1964 estimate by $1 million with the understanding that it would be requested for fiscal year 1965.

The funds for remodeling are to be used for such items as replacement of the roof, repairs and additions to the plumbing, mechanical and electrical equipment, replacement of plaster and woodwork where necessary, and other building repairs and additions required for remodeling the building, originally constructed in the mid-1800's, for art gallery purposes. No substantial change in the exterior appearance is planned. The estimated cost of constructing a comparable new building is in the range of $25 million.

Bids for Remodeling

Chairman Hayden. The committee will be glad to have such comments as you care to make with regard to this item.

Dr. Ripley. The 1964 appropriation was reduced by $1 million by the Congress in anticipation that the amount would be requested for fiscal year 1965. It is now expected that the invitation for bids for this remodeling will be readvertised in June of this year.

The appropriation of $1 million is urgently needed to finance items which could be deferred from the main contract such as lighting fixtures, finish painting, double-glazed windows, rain downspouts, the exterior truck ramp, and similar items.

National Zoological Park

We are requesting $1,776,000 to continue the third year of the 10-year program of constructing, remodeling, and equipping the buildings and other facilities at the National Zoological Park. The amount requested for fiscal year 1965 includes a winter house for delicate

hoofed herd and similar animals, and a modern sewer system in the National Zoological Park which is essential to eliminate pollution of Rock Creek, as urged by health authorities and the House Committee on Public Works.

Chairman HAYDEN. Funds in the amount of $1,776,000 are requested for construction at the National Zoological Park. This sum is necessary to perform the third year of the 10-year program as capital improvement plan for this year. The justifications will be placed in the record.

(The justifications referred to follow:)

Construction and improvements

Appropriated, fiscal year 1963	$1,275,000
Appropriated, fiscal year 1964	1,275,000
Estimate, 1965	1,776,000

An appropriation of $1,776,000 is requested for the third year's capital improvement projects at the National Zoological Park and for advance planning for future projects.

Funds totaling $1,275,000 in fiscal year 1963 and $1,275,000 in fiscal year 1964 have been appropriated for the first 2 years of a 10-year program of capital improvements at the National Zoological Park.

In fiscal year 1963, provision was made for relocation of the east-west road from Connecticut Avenue to Harvard Street, construction of the bird flight cage, and remodeling the bird exhibition building.

The fiscal year 1964 projects include improvement of the principal pedestrian entrance to the park off Connecticut Avenue; exhibits in a 10-acre area of hardy hoofed stock and deer; a property yard for open and dry storage; two paved parking areas; an incinerator; regrading and surfacing of zoo service roadways; and planning and installation of utilities.

There follows a summary of the projects to be undertaken with fiscal year 1965 funds:

Planning:		
Detailed plans and designs for fiscal year 1966 projects	$145,000	
Advance planning and consultation for fiscal year 1967 projects	30,000	
		$175,000
Construction:		
Exhibits—Winter house for delicate-hoofed stock	825,000	
Parking area (lot C)	153,500	
Utilities	91,500	
		1,070,000
Sewerage system		531,000
Total		1,776,000
Planning		175,000

Detailed plans and designs for fiscal year 1966, $135,000.—Detailed plans will be made for the development of an aquatic mammal area for the exhibition of seals, sea lions, walruses, otters, tapirs, and other aquatic mammals. Through cooperation with the Department of the Interior, duplication will be avoided in this exhibit and the National Aquarium. These exhibits will be outside with minimum shelter for the animals. All viewing by the public will be from the outside.

Detailed plans will also be made for the animal hospital and other items in the service area based upon advanced planning which was accomplished last year; and other items such as parking lots, the vehicular roadway, and picnic areas.

Smithsonian Institution expenses, $10,000.—It is estimated that the Smithsonian Institution will require $10,000 in fiscal year 1965 for travel expenses and the services of consultants in connection with this program.

Advance planning and consultation for fiscal year 1967, $30,000.—Advance plans will be made for constructing new bear and goat exhibits, remodeling the elephant

house and yards, and continuing work in the service area (animal hospital and research area, gardener's area and greenhouse). Advance planning of the service roadway and utilities assigned to this phase will continue.

Construction $1,070,000

Exhibits, $825,000.—Exhibit facilities for one group of hoofed stock will be constructed in an area of approximately 4 acres between the hardy hoofed stock area for which funds were provided in fiscal year 1964 and the birdhouse area constructed in fiscal year 1963. This area consists of three buildings and paddock complex. One of the buildings will be temperature-controlled for the reversal of the tropical and arctic animals. The hoofed stock from tropical areas will be exhibited in all three buildings during the winter months.

It is planned to exhibit family groups of 12 or more different kinds of tropical antelope which cannot be adapted for all-year, outdoor exhibition in the Washington climate. The most conspicuous example is the giraffe.

The buildings, totaling 17,500 square feet, will have seven large, inside, viewing pens; visitor facilities; and service areas. In outside paddocks, with minimum shelter, members of the oxen, goat, and antelope families from cold areas will be exhibited during the winter. In the summer months, the tropical and the arctic animals will be reversed in these buildings. The roofs of these buildings will serve as a viewing platform, overlooking the outdoor paddocks.

Parking area (lot C), $153,500.—A parking lot and access roads will be constructed. This lot will accommodate approximately 220 visitor automobiles.

Utilities, $91,500.—The utility system will be expanded in relation to other construction. Included are electricity, water, service sewers, and heating.

Sewerage system, $531,000

A total of $531,000 will be required in fiscal year 1965 to modernize the main sewerage system in the National Zoological Park, including main storm sewers, sanitary sewers, and animal waste sewers, by installing the necessary trunklines and connecting to the District of Columbia sewer system. This modernization will result in the cessation of pollution of Rock Creek by the National Zoological Park.

1965 Program for the Zoo

Chairman Hayden. Will you please advise the committee what is planned in the way of work at the National Zoological Park during the coming year?

Dr. Ripley. Yes, sir. Under this appropriation for the year 1963 we have constructed a bird flight cage and remodeled the bird exhibition building. A road has been completed and the bird building will be completed this year. For fiscal year 1964 the provisions include improvement of the principal pedestrian entrance off Connecticut Avenue, an exhibit in a 10-acre area for hardy hoofed stock and deer, appropriate automotbile parking areas, incinerator, and installation of utilities.

For the fiscal year 1965, we are requesting funds for the construction of the winterhouse for the delicate hoofed stock who cannot take our Washington winters; an automobile parking lot, installation of utilities; and the installation of the new sewerage system which is essential to eliminate pollution of Rock Creek, as urged by health authorities and the House Committee on Public Works.

National Air Museum Building

Chairman Hyaden. In fiscal year 1965 there is necessary $1,364,000 to complete plans and specifications for the National Air Museum Building; $511,000 was appropriated for this purpose last year. The justifications for the request will be printed in the record.

(The justifications referred to follow:)

Planning

Appropriated, fiscal year 1964	$511,000
Estimate, 1965	1,364,000

An appropriation of $1,364,000 is requested for fiscal year 1965 to complete the plans and specifications for the National Air Museum Building. This amount is needed in order that the preparation of plans and specifications, begun with the appropriation of $511,000 in fiscal year 1964, can be continued without delay or interruption. This constitutes a first step in providing a suitable exhibition building to display the outstanding national collection of historic and modern air and space craft. The initial design work has been started.

Planning was authorized by the act of September 6, 1958. The Mall site for the building was designated by that same act, after extensive congressional hearings. The fiscal year 1964 appropriation is for financing the first year of 2 years' planning.

The tremendous public interest in air and space exhibitions is demonstrated by the great crowds visiting the existing small hangar building (1917 vintage) located behind the Smithsonian Building. This small exhibit, representing less than 5 percent of the air and space collections, was visited during fiscal year 1963 by 2,673,618 visitors from every State in the Union. On a single day, more than 36,000 visitors crowded through the building.

The new air museum building will make possible for the first time a comprehensive presentation to the public of notable air and space exhibits. It will also present the mathematics, physics, fuel chemistry, metallurgy, and broad engineering bases of aeronautics and space exploration. The educational and inspirational character of these exhibits will find a response in the interest and enthusiasm of American youth in air and space science. Only by the display of original aircraft and space craft from the national collections can the millions of visitors each year relive notable events in our national history, and gain an understanding of the underlying principles of science and technology which have made possible our achievements in this field. Included in the Air Museum's historic collections are the original Wright Brothers' "Kitty Hawk" Flyer, original Goddard Rockets, the "Spirit of St. Louis," "Freedom 7," and "Friendship 7."

The requested appropriation is the amount necessary to complete the preparation of plans, including drawings and specifications, only. The Institution will employ expert consultants to assist the planning and museum staffs in matters of historical and technical interpretation of flight history, technological and scientific developments, and museum practices. Completion of the planning will be the first step in providing ultimately a suitable exhibition building to display the national collection of historic air and spacecraft. Construction funds will be requested in fiscal year 1966.

Underground Parking Garage

Chairman Hayden. The total estimated cost of this planning has increased by $235,000 since your budget presentation last March. At that time the total estimated cost was $1,640,000, whereas the appropriation you request for 1965 brings the total cost to $1,875,000. Will you please advise the committee the reasons for this increase.

Dr. Ripley. I would like to ask Mr. Bradley, the Assistant Secretary, if he could discuss this.

Mr. Bradley. Mr. Chairman, the principal reason for the increase is to include in the project a large underground garage for the parking of 1,400 visitor cars. As an offset to that cost, we reduced somewhat the length of the structure above the ground. The net result was that the total project cost of approximately $39,500,000 has gone up to $41,920,000, overall.

The planning cost went up with the increase in the construction cost and with the more difficult construction that is involved in going underground, where they will be up against hydrostatic conditions.

So, Mr. Chairman, the planning had to go up to $1,875,000. We already have $511,000 under contract with the architect, the drawings have been started, and the work is well underway. Therefore, we must request $1,364,000 to complete the planning.

LOCATION OF PROPOSED GARAGE

Chairman HAYDEN. It is not clear to me where this is to be located.

Mr. BRADLEY. Yes, sir. We have a three-block site from Fourth to Seventh and from Independence to Jefferson, immediately south of the National Gallery of Art, which will fill out the Smithsonian complex of buildings. Under the new National Air Museum we will construct a two-story underground garage for the visitors who will come there.

Chairman HAYDEN. As it is now, they are badly crowded and many of them cannot park their cars at any nearby place.

Mr. BRADLEY. That is certainly true, Senator.

Chairman HAYDEN. Do you have any further information?

MUSEUM OF HISTORY AND TECHNOLOGY AND NATURAL HISTORY BUILDING

Dr. RIPLEY. There are two smaller items I should mention: the construction of the new Museum of History and Technology and the new east and west wings of the Natural History Building. As you know, Senator, the Museum of History and Technology building is substantially completed and on January 22 was dedicated by President Johnson. The west wing of the Natural History Building is well underway and is expected to be completed in the fall of 1965.

I think that concludes my statement.

Chairman HAYDEN. We thank you very much.

JOHN F. KENNEDY CENTER FOR THE PERFORMING ARTS

STATEMENT OF ROGER L. STEVENS, CHAIRMAN OF THE BOARD OF TRUSTEES, JOHN F. KENNEDY CENTER FOR THE PERFORMING ARTS, ACCOMPANIED BY RALPH E. BECKER, GENERAL COUNSEL

1965 BUDGET REQUEST

Chairman HAYDEN. On January 23, 1964, the President approved Public Law 260 providing an appropriation of not to exceed $15,500,000 to the Board of Trustees of the John F. Kennedy Center for the Performing Arts to be matched by gifts, bequests, and devises. There has been submitted a supplemental estimate for fiscal year 1964 for the full amount. The justification will be printed in the record.

(The justification referred to follows.)

JUSTIFICATION STATEMENT

This proposed supplemental appropriation is the Federal Government's share of the cost of constructing the John F. Kennedy Center, as authorized by Public Law 88-260, approved January 23, 1964. These funds, if appropriated by the Congress, will become available to the Center's Board of Trustees when, and to the extent that, matching contributions are received from non-Federal sources.

The Trustees proposed to proceed promptly with the construction of the Center and have tentatively scheduled the opening for late in 1966 or early in 1967. This supplemental appropriation is requested at this time in order to permit advertising for construction bids for the superstructure of the building promptly after completion of plans and specifications in January 1965.

The act renamed the Center as the John F. Kennedy Center for the Performing Arts and directed the Board of Trustees to provide for a suitable memorial within the Center for the late President.

Appropriations up to $15,500,000 are authorized which will match gifts and pledges when converted to money or other assets held by the Trustees. This authorization is the basis for this request.

The act also authorized the Trustees to issue revenue bonds to the Secretary of the Treasury, to be repaid from revenues accruing to the Board. The bonds which are to be used for financing parking facilities for the Center may not exceed a face value of $15,400,000.

The estimated cost of the Kennedy Center is $44,839,238 exclusive of the site, as follows:

Preliminary cost estimate

[Estimates compiled by Severud-Elstad-Krueger Associates, Syska & Hennessy, Inc., and Construction Survey Corp.]

Substructure, including 1,600-car garage:	
Structural	$5, 547, 855
Mechanical	4, 220, 000
Architectural	1, 337, 860
Access roads, site work, landscaping, relocation of parkway	997, 425
Total estimated construction cost	12, 103, 140
Total, including construction cost, contingencies, engineering and architectural design, supervision, and administration	13, 866, 238
Superstructure:	
Structural	4, 789, 200
Mechanical	10, 874, 750
Architectural	12, 167, 498
Total estimated construction cost	27, 831, 448
Total, including construction cost, contingencies, engineering and architectural design, supervision and administration	30, 973, 000
Substructure and superstructure, total cost	44, 839, 238

OUTLINE DESCRIPTION

SUBSTRUCTURE

Steel and reinforced concrete frame, stone facing, exterior, sprinklered, ventilated, and heated.

All building below and including level +38, access roads to parking facility, site work, landscaping, and relocation of Rock Creek and Potomac Parkway.

Includes:

1. Footings and foundations for entire building (including superstructure).
2. Three levels of parking for approximately 1,600 cars.
3. Two finished lobbies per floor with two escalators and two elevators each and toilet facilities.
4. Equipped mechanical and electrical rooms.
5. Subsurface service road and loading platforms.
6. Kitchen, freight, personnel and scenery elevators.
7. Structure of the three auditoria floors.
8. Understage of each auditorium.

9. Orchestra pits of each auditorium.
10. Space for stage entrances with offices, first aid rooms, dressing rooms for actors and musicians, chorus rooms, tuning rooms, stage hand and building personnel lockers and offices, wardrobe, and set storage areas.
11. Space for mechanical and electrical equipment rooms for superstructure, including refrigeration plant, fan rooms, and pumproom.

OUTLINE DESCRIPTION OF SUPERSTRUCTURE

Steel and reinforced concrete frame, marble exterior finish, bronze finish of window walls and exterior columns, completely air conditioned.

All building above and including the finishing of level +38.

Includes:

1. Entrance plaza, pools, fountains, and trees.
2. River terrace and podium—terrazzo finish.
3. Finishing of all areas below level +38 other than parking.
4. Two entrance galleries: 41 by 300 by 60 feet high each, marble finish.
5. Area suitable for memorial to President Kennedy.
6. Grand foyer: 45 by 630 by 60 feet high.
7. 2,750 seats, symphony hall and related facilities including offices, dressing rooms, rehearsal rooms, and storage areas etc.
8. 2,200 to 2,500-seat opera house to be used for grand opera, ballet, and musical comedy, and related facilities including offices, dressing rooms, rehearsal rooms, and storage areas, etc.
9. 1,100 to 1,200-seat theater to be used for drama, chamber opera, and recitals and related facilities including offices, dressing rooms, and storage areas, etc.
10. Projection rooms for each hall.
11. TV, radio, and light control rooms for each hall.
12. Public refreshment and reception rooms for each hall.
13. Elevators for public.
14. Opera and theater stage houses.
15. 500 seats, cafeteria-type restaurant and kitchen.
16. 150-seat restaurant with kitchen.
17. Multipurpose area on roof to be used for band concerts, exhibitions, experimental theater, children's theater, and receptions. Capacity approximately 2,500.
18. Fan rooms.
19. Electrical rooms.

FACT SHEET

Building dimensions:

To exterior walls and main roof, superstructure, 630 feet long, 300 feet wide, 69 feet high.
Penthouse, superstructure, 560 feet long, 230 feet wide, 26 feet high.
Parking facility, substructure, 700 feet long, 530 feet wide, 30 feet high.
Entrance plaza, 700 feet long, 125 feet wide.
River terrace, 700 feet long, 80 feet wide.
Side terraces (each), 300 feet long, 35 feet wide.

Building areas:

Substructure: 907,659 square feet.
Superstructure: 516,310 square feet.

Building volume:

Substructure: 9,461,314 cubic feet.
Superstructure: 17,202,620 cubic feet.

Total site area: ±17 acres of which approximately 8 acres are occupied by the building and 3½ acres are occupied by access roads.

Adjacent buildings: Kennedy Center 8 inches lower than Lincoln Memorial to the south.

The Center is being designed by architect Edward Durell Stone. It includes a 2,750-seat symphony hall, a 1,100 to 1,200 seat theater, and a 2,200 to 2,500 seat hall for opera, ballet, and musical theater. The design had been submitted to the late President Kennedy, former President Eisenhower, the Board of Trustees of the Center, the Commission of Fine Arts, the National Capital Planning Commission, the Cabinet, and the District of Columbia Board of Commissioners. In each instance the design met with enthusiastic approval.

The Center recently entered into an agreement with the General Services Administration, providing that GSA will serve as the agent for design and construction of the building. Standard GSA procedures will be followed, including the award of contracts on the basis of competitive bidding.

Architectural and engineering planning for the substructure will produce contract drawings by the end of October 1964 and construction may begin by the end of December 1964. Planning for the superstructure is estimated to be completed by the end of January 1965 and the contract could be awarded in March 1965. Construction is estimated to require approximately 2 years.

A letter from the architect is quoted below:

FEBRUARY 17, 1964.

Re John F. Kennedy Center.

DEAR MR. STEVENS: In response to your request for a time schedule for the design and commencement of construction of the John F. Kennedy Center for the Performing Arts, I submit the following:

Substructure: Working drawings completed by the end of October 1964. Construction to begin by the end of December 1964.

Superstructure: Working drawings completed by the end of January 1965. Contract could be awarded by the end of March 1965.

It should be understood, however, that this schedule is an absolute minimum and is the working procedure encountered with an individual client, and does not account for delays which may be met in dealing with Government agencies.

Sincerely,

EDWARD D. STONE.

The proposed parking facility of 1,600 cars to be located at the Center site will serve both patrons of the Center and transient parkers from the surrounding area. An economic and feasibility report prepared by the architect and consulting engineers concluded that a garage costing $13,866,238 would be repaid at 3 percent interest in 40 years with revenues derived from a charge of $1 per 12-hour period of parking. The present estimated cost of the substructure in the amount of $13,866,238 includes not only the garage but also foundation for the superstructure, vertical circulation, and space for mechanical services for the structure above. It is estimated that the substructure investment will be self-liquidating. On the basis of the favorable consultant's report on the parking garage, further study will be made of all costs and revenues in the light of the recent legislation. Determinations will be made as to the appropriate financing of the substructure from the interest-bearing bonds and from contributions; the period of repayment within the statutory limit of 50 years and with the agreement of the Secretary of the Treasury, the rate of interest as determined by the Secretary of the Treasury, and the scale of parking fees.

A statement of pledges and contributions received by the Board of Trustees as of February 14, 1964, is as follows:

JOHN F. KENNEDY CENTER FOR THE PERFORMING ARTS

Statement of pledges and contributions for period from inception Apr. 1, 1959, to Feb. 14, 1964

Outstanding pledges	$7, 893, 861. 77
Total cash income	6, 076, 213. 88
Total subscription on books	13, 970, 075. 65
Pledges from President's Business Committee (not yet received)	181, 000. 00
Total	14, 151, 075. 65
Deduct expenses to date	1, 680, 466. 05
Excess of subscriptions over expenses	12, 470, 609. 60

It is estimated that the amount of cash contributions and the conversion of current and future pledges to cash will very nearly equal the appropriation limitation of $15,500,000 by the end of the fiscal year 1964 and will equal the limitation by the end of the calendar year 1964.

An estimate of the proposed income and expenses prepared for the Kennedy Center demonstrates that the Center will be operated without a deficit and without a request for an appropriation for operation and maintenance. The present plan is to rent the halls to organizations that wish to use them. There will be sufficient rentals to cover the Center's costs. It is recognized that a great number of theaters are operated in this country that have to pay interest and real estate taxes. The Kennedy Center is financially assisted by not being required to pay real estate taxes and by not being required to pay interest on a substantial portion of the capital investment.

Referring to financial accountability, the legislative history of the Kennedy Center Act states as follows:

"Since this bill provides for the expenditure of Federal funds in connection with the Center it is clear that the Director of the Bureau of the Budget and the Comptroller General must and do have authority to examine and audit the financial records of the Board for all purposes."

The communication from the President submitting for the consideration of the Congress this proposed supplemental appropriation for the Kennedy Center also transmitted a proposed supplemental appropriation in the amount of $3,300,000 for the National Capital Planning Commission for certain land acquisition. This is necessary to provide a parklike setting for the Center and to complete the acquisition of the site. Acquisition is a responsibility of the National Capital Planning Commission under the provisions of Public Law 85–874, the original authorization act, and section 2 of the act of June 6, 1924, 43 Stat. 463.

Proposed Program for 1965

Chairman Hayden. The chairman of the board of trustees for the Kennedy Center is here to present the need for this appropriation. The committee will want to know what your plans are for this money. If you have a statement, we will be glad to have you read it or place it in the record.

Mr. Stevens. Mr. Chairman, I would like permission to file my statement together with the exhibits as part of the record and will spend a few minutes giving you the highlights.

Statement of Roger L. Stevens, Chairman of the Board of Trustees, John F. Kennedy Center for the Performing Arts

Mr. Chairman, this is the first appearance of the John F. Kennedy Center for the Performing Arts before your committee. Accordingly, in presenting my testimony as Chairman of the Board of Trustees, I have furnished the committee with legislative, historical, and financial background of our institution created by Congress, from the date of organization up to the present time.

LEGISLATION OF THE CENTER

In particular, the history of this legislation is set forth in the hearings (Document 88–17) before the unprecedented joint session of the Committees on Public Works of the House of Representatives and the Senate relating to the renaming of the Center and authorizing an appropriation therefore and for other purposes. See also report of the House Committee on Public Works (H.R. 1050).

The bipartisan legislation which created the Center had its genesis under the Eisenhower administration. It was vigorously advocated by President Kennedy and has already received substantial encouragement from President Johnson.

Briefly, the act passed in 1958 designated the land upon which the Center should be constructed, and vested in a Board of Trustees the power to maintain and administer the Center.

For the information of this committee, we operate under the statutory powers given to us by Congress, bylaws which we have adopted, and officers whom we elect annually. They consists of a chairman, a vice chairman, secretary, treaurer, and general counsel. Of the 45 trustees, 3 are members of the U.S. Senate (Joseph S. Clark, Jr., J. William Fulbright, and Leverett Saltonstall), 3 are Members of the House of Representatives (Frank Thompson, Jr., James C. Wright, Jr., and Mrs. Charlotte T. Reid; previous to Mrs. Reid's appointment, Congressman Kearns served as a trustee), and other public officials; the Secretary of Health, Education, and Welfare, the Librarian of Congress, the Assistant Secretary of State for Public Affairs, the Chairman of the Commission of Fine Arts, the President of the Board of Commissioners of the District of Columbia, the chairman of the District of Columbia Recreation Board, the Director of the National Park Service, the Commissioner of the U.S. Office of Education, and the Secretary of the Smithsonian Institution. The private citizens are appointed by the President of the United States.

Since the 1958 act specified that all building funds must be raised by voluntary contributions, we have been fortunate in having the benefit of the generosity of my predecessor, Hon. L. Corrin Strong, who has contributed more than $800,000 specifically earmarked for administrative and fund-raising expenses.

CONCEPT

At the time of my appointment in November 1961, I discussed the project, the concept of the Center and its fund-raising program, with the late President Kennedy. We felt that the existing design, involving a $75 million building, was unnecessarily extravagant and Mr. Edward Durell Stone, our then architect-consultant, provided an alternative design costing $31 million for the superstructure. This latter design was enthusiastically accepted and approved by all of the appropriate agencies and officials.

You will be interested to know that at the time of this conference with our late President, he stated that funds for the parking facilities of the Center should not form a part of the fundraising campaign, and he emphasized the necessity for the Center to be in a parklike setting at the present site.

These and other matters relating to the Center's operations during this period are set out in the annual report for 1961–62 submitted to the Smithsonian Institution and marked "Exhibit A." I request that it be made a part of the record. (Retained in committee files.)

FUNDRAISING PROGRAMS

By November 1961 the Center had raised approximately $1.2 million. However, I am happy to report that since that time, through the dedicated efforts of many individuals, our funds, including bona fide pledges, have reached upward of $14 million. These funds have come from foundations, such as the Ford Foundation (on a 3-to-1 matching basis from private funds), the Rockefeller Foundation, and the Old Dominion (Mellon) Foundation, business, industry, labor, foreign governments, and the general public. A demonstration of the interest is the response of the schoolchildren who will be among the greatest beneficiaries of our efforts.

The major fundraising programs launched in the beginning of 1963 include the President's Business Committee, under the chairmanship of Ernest R. Breech; the Seat Endowment Committee, under the chairmanship of Edgar M. Bronfman; and the Special Gifts Committee. The compositions and goals of these committees are fully documented in our annual report for 1963 transmitted to the Smithsonian Institution. At this time I request that report, marked "Exhibit B," be made a part of the record. (Retained in committee files.)

KENNEDY CENTER ACT

Immediately following the assassination of our late President, a spontaneous movement spread throughout the country to make the National Cultural Center the official memorial to President Kennedy. The proposal, it was learned, met with the approval of the Kennedy family and was endorsed by President Johnson. The action taken by Congress in January of this year emphasized the nationwide feelin : that the Cultural Center was, indeed, the most appropriate memorial to a ma : who had held the arts in such high regard.

President Johnson signed the John F. Kennedy Center Act on January 23, 1964.

The following changes have now been enacted in the basic legislation:

First: The National Cultural Center is renamed the John F. Kennedy Center for the Performing Arts.

Second: In addition to the annual report submitted by the Center to the Smithsonian Institution, the Board of Trustees will submit a similar report to Congress.

Third: The Board is directed to provide within the Center a suitable memorial in honor of the late President, and must submit details of such a memorial to Congress. The memorial must be approved by the Board of Regents of the Smithsonian Institution.

Fourth: Federal funds are authorized to match, dollar for dollar, those raised by the voluntary contributions of the American public, the sum not to exceed $15.5 million. Pledges will not be matched until they have been reduced to money or other assets actually held by the Board.

Fifth: The Board is granted authority to issue revenue bonds to the Treasury payable from revenues accruing to the Board, up to a sum of $15.4 million. These bonds are for the purpose of financing adequate parking facilities for the Center, an underground garage to accommodate approximately 1,600 cars.

Sixth: The resolution authorizes the Secretary of the Treasury to accept on behalf of the United States any gift contributed in honor of President Kennedy, and to pay the money to such appropriation or other accounts, including appropriation accounts established pursuant to appropriations authorized by this act.

Seventh: The resolution provided that this Center shall be the sole national monument to the late President within the city of Washington and its environs.

FUTURE FUNDRAISING

At the annual meeting of the Board of Trustees held on January 13, I was able to announce a revised fundraising goal as a result of the new legislation. In my opinion a further $6.5 million remains to be raised. This figure is comprised of $2.5 million expected to be raised in a single event to take place this year, details of which will be announced later; $1.5 million to be raised in the Greater Washington area; and $2.5 million from industry, labor, business, foundations, special gifts, and the general public.

On April 21, the World's Fair inaugural ball to be held in New York on the eve of the opening of the fair, will be held for the benefit of the Center's joint venture with the Metropolitan Opera Company, for a National Opera Company.

FINANCIAL STATUS

I am offering a complete financial statement prepared by our certified public accountants, Seltzer & Addabbo, of Washington, D.C., which is marked "Exhibit C." I request that it be made a part of the record. (Retained in committee files.)

The highlights show that outstanding pledges and cash income as of January 31, total $13,920,611.49 and the deductible disbursements total $2,454,355.59, leaving a balance of subscriptions over disbursements of $11,466,255.90.

It is my opinion that the amount of cash contributions and the conversion of current and future pledges will very nearly equal the appropriation of $15.5 million by the end of the fiscal year 1964, and will equal the limitation by the end of the calendar year 1964.

As to the request for an appropriation from this committee, I would like to highlight a few matters set forth in the prepared justification statement. The requested supplemental appropriation is for the Federal Government's share of the cost of constructing the Center. These funds will become available to the Center when, and to the extent that, matching contributions are received from non-Federal sources.

The Board of Trustees proposes to proceed promptly with the construction of the Center, and has tentatively scheduled the opening for late 1966 or early 1967. As a matter of fact, we are proposing to break ground for the Center on May 29, 1964, President Kennedy's birthday.

This supplemental appropriation is requested at this time in order to permit advertising for construction bids for the superstructure of the building promptly after completion of plans and specifications in January 1965. This is more fully explained in exhibit D, which I request to be made a part of the record.

Appropriations up to $15.5 million are authorized which will match gifts and pledges when converted to money or other assets held by the trustees. This authorization is the basis for this request.

The act also authorized the trustees to issue revenue bonds to the Secretary of the Treasury, to be repaid from revenues accruing to the Board. The bonds which are to be used for financing parking facilities for the Center may not exceed a face value of $15.4 million.

The estimated cost of the Center is $44,839,238, exclusive of the site, which represents $30,973,000 for the superstructure, consisting of a 2,750-seat symphony hall, a 2,200- to 2,500-seat opera house and a 1,100- to 1,200-seat theater. There will also be a multiple-use roof area for band concerts, art exhibitions, theater-in-the-round, balls, and a children's theater. This area will have a capacity of approximately 2,500. The superstructure is more fully explained in exhibit D.

A prepared estimate of present income and expenses for the Center demonstrates it can be operated without a deficit and without a request for an appropriation for operation and maintenance.

I request that this estimate, marked "Exhibit E," be made a part of the record.

The substructure consists of a three-level underground garage for approximately 1,600 cars. This parking facility will serve both patrons of the Center and transient parkers from the surrounding area.

This is more fully explained in a statement by Edward Durell Stone, the architect, which is marked "Exhibit F" and which I request be made a part of the record.

The "Economic and Feasibility Report" prepared by Edward Durell Stone, Severud-Elstad-Krueger Associates, Moran, Proctor, Mueser & Turledge, Syska & Hessessy, consulting and mechanical engineers, and Meyer Bro., indicate that this can be a self-liquidating project over a period of 40 years. However, on the basis of this consultant's favorable report, further study will be made of all costs and revenues in the light of recent legislation. Determinations will be made as to the appropriate financing of the substructure from the interest-bearing bonds and from contributions; the period of repayment within the statutory limit of 50 years and with the agreement of the Secretary of the Treasury; the rate of interest as determined by the Secretary of the Treasury; and the scale of parking fees.

I request that this study, marked "Exhibit G," be made a part of the record.

Details of these facilities are set forth in the justification statement and the fact sheet before you.

ARCHITECT AND GSA

The architect for the Center is Edward Durell Stone, and the General Services Administration is serving as our agent for design and construction. Standard GSA procedures will be followed including the award of contracts on the basis of competitive bidding.

The working drawings for the substructure will be ready by October 1964 and construction may begin 2 months later.

The working drawing for the superstructure is estimated to be completed by January 1965, and a contract could be awarded in March 1965. We have just let the contract for borings.

It is hoped that we shall be ready for occupancy by late 1966 or early 1967.

ADMINISTRATION OF THE KENNEDY CENTER

The Center is a bureau of the Smithsonian Institution and the Secretary of the Smithsonian serves as one of our trustees. Because we anticipate receiving Government appropriated funds, both through our borrowing authority from the Treasury and from Congress, we have been in consultation with the Office of the Secretary of the Treasury, the Comptroller General, the Bureau of the Budget, and the Smithsonian Institution.

I can assure this subcommittee that we will maintain, administer and carry out the obligations and duties as trustees, not only to the best of our ability, but with the same high standards of fiscal and administrative management required by these agencies and departments.

Also, I want to assure this subcommittee that our Board has decided that appropriated Government funds will be used solely for the construction of the

building and that contributed or nongovernmental funds will be used for administrative expenses and overhead.

LAND ACQUISITION

With respect to the communication from the President transmitting a proposed supplemental appropriation of $3.3 million for the National Capital Planning Commission to acquire necessary land within and without the designated site, this agency was given the mandate to acquire for the Center "lands necessary to provide the John F. Kennedy Center for the Performing Arts and related facilities" (sec. 3, Public Law 85–874). It is essential to acquire land within the designated site. Equally, it is important to acquire land in square 10 known as Watergate Inn property and Adele Ward, not only for the Center to be in a parklike setting but to provide adequate access to and from the Center's 1,600 parking garage facility to the Rock Creek and Potomac Parkway and F Street (sec. 2 of act of June 6, 1924, 43 Stat. 463).

EXHIBIT D

SUPERSTRUCTURE

Steel and reinforced concrete frame, marble exterior finish, bronze finish of window walls and exterior columns, completely air conditioned.

All building above and including the finishing of level plus 38.

Includes:

1. Entrance plaza, pools, fountains, and trees.
2. River terrace and podium, terrazzo finish.
3. Finishing of all areas below level plus 38 other than parking.
4. Two entrance galleries, 41 by 300 by 60 feet high each, marble finish.
5. Area suitable for memorial to President Kennedy.
6. Grand foyer, 45 by 630 by 60 feet high.
7. 2,750-seat Symphony Hall and related facilities including offices, dressing rooms, rehearsal rooms, and storage areas, etc.
8. 2,200- to 2,500-seat Opera House to be used for grand opera, ballet and musical comedy, and related facilities including offices, dressing rooms, rehearsal rooms, and storage areas, etc.
9. 1,100- to 1,200-seat theater to be used for drama, chamber opera, and recitals and related facilities including offices, dressing rooms, and storage areas, etc.
10. Projection rooms for each hall.
11. TV, radio, and light control rooms for each hall.
12. Public refreshment and reception rooms for each hall.
13. Elevators for public.
14. Opera and theater stage houses.
15. 500-seat cafeteria-type restaurant and kitchen.
16. 150-seat restaurant with kitchen.
17. Multipurpose area on roof to be used for band concerts, exhibitions, experimental theater, children's theater, and receptions. Capacity approximately 2,500.
18. Fan rooms.
19. Electrical rooms.

Briefly, the entrance plaza along the east side of the building is 700 feet long and 125 feet wide and is on the same level as the raised river terrace on the west or river side. The inner loop exit ramp D at the east of the plaza is approximately 2 feet lower and its closest point is 175 feet away from the southeast corner of the building. Its farthest point at the northeast corner of the building is 405 feet. The center of the main north and southbound highway of the inner loop system averages 420 feet away from the building and is located about 26 feet at its lowest point below the plaza.

The entire platform or base, including the entrance plaza, is 700 feet long by 505 feet wide and upon it is built the superstructure containing the auditoriums, etc. The dimensions of this 69-foot-high superstructure are 630 feet long by 300 feet wide, an area of approximately 4⅓ acres. It is noted that the National Gallery is 782 feet long with a maximum width of 303 feet, or some 5⅓ acres in area. Its height is 98 feet, not including the dome, the height of which is 147 feet.

Surmounting the superstructure is the penthouse measuring 560 feet in length, 230 feet in width, 26 feet high, and containing the stage houses, fan rooms, restaurants, and multiple-purpose area.

Preliminary cost estimate

[Estimate compiled by Severud-Elstad-Kreuger Associates, Syska & Hennessy, Inc., and Construction Survey Corp.]

Superstructure:	
Structural	$4,789,200
Mechanical	10,874,750
Architectural	12,167,498
Total estimated construction cost	27,831,448
Total, including construction cost, contingencies, engineering and architectural design, supervision, and administration	30,973,000

EXHIBIT E

Statement of income and expenses

Hall income:	
Playhouse (schedule A)	$251,920
Opera house (schedule B)	338,480
Concert hall (schedule C)	72,540
Total	662,940
Fixed building operating and overhead costs:	
Building operating costs (schedule D)	326,631
General overhead and housekeeping (schedule E)	209,712
Constant hall costs (schedule F)	75,920
Total	612,263
Additional costs of operating halls for 40 weeks (schedule H)	161,760
Total	774,023
Total	(111,083)
Other income (schedule I)	287,500
Total	176,417
Other expenses (schedule J)	127,000
Net income	49,417

For purposes of the income and expense estimates, the income was figured on the basis of the current booking pattern in Washington without taking into account the possibilities of a natural increase in both programing and attendance which will accrue not only from positive programing by the Center, but also from a steadily growing resident population and a continuation of the upward curve of tourism in the Nation's Capital. This growth would not appreciably increase the expenses since they are included on the basis of year-round figures. Hence, the income estimate is deliberately conservative. If more income were available, it would enable the Center to increase appreciably the public service component of its programing.

SCHEDULE A

Playhouse income

Income from plays on regular Broadway basis, 1,200 seats, 1 week, at 27 percent of average gross of $30,000 equals $8,100 less average costs of $1,802 times 40	$251,920

SCHEDULE B

Opera house income

Rental rates: 2,500 seats:	
10,000 per week, commercial; 4,200 per week, nonprofit; 1,666 per day, commercial; 700 per day, nonprofit:	
18 weeks musical comedy and light opera, renting and sharing basis: 1 week, at 25 percent of average gross of $70,000 equals $17,500 less average costs of $7,289 times 18	$183,798
6 full weeks rental, at commercial rate	60,000
7 full weeks, at nonprofit rate (Ex: Washington Opera Society, Washington Ballet)	29,400
11 separate days, International Cultural Exchange	7,700
18 separate days, nonprofit	12,600
27 separate days, commercial	44,982
Total	[1] 338,480

[1] See schedule H.

SCHEDULE C

Concert hall income

Rental rates: 2,750 seats:	
$600 per performance; $700 per performance; $800 per performance; $30 rehearsal; $100 rehearsal:	
National Symphony, 1962–63 schedule:	
19 pairs evening concerts, including 2 by Boston Symphony; 9 matinees; 3 pops; 5 workshop; 16 children's; 3 Merriweather Post Contest finals	$33,000
22 weeks of 4 rehearsals per week	2,640
Patrick Hayes, Friday Morning Music Club, 1962–63 schedule	21,000
International Cultural Exchange program, American attractions, preforeign tour	8,400
Philadelphia Orchestra, 1962–63 schedule	4,000
Rehearsal fees	3,500
Total	[1] 72,540

[1] See "Notes on Income Estimate," 2d paragraph.

SCHEDULE D

Building operating costs

Personnel:	
1 building superintendent	$12,000
1 deputy building superintendent	10,000
11 craftsmen:	
2 electricians	6,878 6,448
1 plumber	6,448
4 air-conditioning engineers	6,885 6,878 6,448 5,949
1 carpenter	6,448
2 painters	6,448 6,448
1 pipefitter	6,885
3 handymen, at $5,700	17,100
1 stenographer	4,368
Total building operations personnel	115,631
Elevator and escalator maintenance	15,000
Energy and maintenance, including materials, repairs, steam, electricity, plumbing, heating, and air conditioning (of which $130,000 is electrical in nature)	146,000
Reserve for replacement of building equipment	50,000
Total building operating costs	326,631

NOTE.—$110,000 for additional energy for performances has been added on schedule H.

SCHEDULE E

General overhead and housekeeping

Cleaning staff:	
12 porters, at $3,120 ($60 per week)	$37,440
2 cleaning women, at $2,600	5,200
Total	42,640
Guards:	
1, at $5,800	5,800
3, at $4,680	14,040
5, at $4,300	21,500
Total	41,340
Total, housekeeping personnel	83,980
Retirement, Federal Insurance Contributions Act and health, hospital and life insurance (now 7.3 percent)—8 percent of payroll, and including executive salaries, stagehands, and house managers	
Insurance:	
Unemployment on 40-week personnel (3½ percent of first $3,000)	3,990
Fire insurance	36,000
Public liability (for theater spaces), bonds for box office personnel, workmen's compensation for theater personnel	5,200
Window washing	13,000
Uniforms and cleaning	3,000
Postage	3,000
Telephone	6,000
Supplies:	
Office, 52 weeks, at $100	5,200
Janitorial	8,000
Repairs—office machinery and movable equipment	1,600
Travel	2,500
Printing and reproduction	5,000
Total	209,712

SCHEDULE F

Constant hall costs

3 house managers, at $10,000, full year	$30,000
6 stage hands, for 13 months: [1]	
3 heads of departments, at $420	23,520
3 assistants, at $400	22,400
Total	75,920

[1] As required by union regulations.

SCHEDULE G

Summary of fixed operating and overhead costs

	Salaries and wages	Other	Total
Operation of building	$115,631	$211,000	$326,631
General overhead and housekeeping	83,980	125,732	209,712
Constant hall costs	75,920		75,920
Total	275,531	336,732	612,263

SCHEDULE H

Additional costs of operating halls (for 40 weeks)

Energy and maintenance, 3 halls for 40 weeks	$110,000
5 box office:	
1 treasurer, at $150, 40 weeks	6,000
4 others, at $115, 40 weeks	18,400
Total	24,400
2 clerks, at $70 for miscellaneous assignments, 40 weeks	5,600
Contract cleaning service for theaters	16,000
Chief ushers, 3, at $48	5,760
Grand total	161,760

Additional weekly costs borne by lessees, or by NCC when operating on regular commercial basis with 8 performances per week

	Concert hall		Playhouse		Opera house	
	Number	Amount	Number	Amount	Number	Amount
Ticket takers (at $48)	2	$96	1	$48	3	$144
Extra porters (at $60)	2	120	1	60	2	120
Matrons (at $48)	2	96	1	48	2	96
Watchmen (at $50)	3	150	3	150	3	150
Doorman (at $64)	1	64	1	64	1	64
Ushers		800		500		850
Advertising		100		300		300
Tickets		100		100		100
Extra stagehands				374–691		1,500–5,385
Musicians						2,032
Total		1,526		1,644–1,961		5,356–9,241

NOTE.—These costs were included when income was calculated on schedules A, B, and C.

SCHEDULE I

Other income

Concessions: Net, including soft drinks, check rooms	$50,000
Programs: Net (revenue from advertising plus sale of souvenir programs)	37,500
Restaurants: Net (2 on roof, plus concessions in theaters: 10 percent of gross of $1,500,000)	150,00
Miscellaneous (rentals from roof, civic events, lectures, etc.)	50,000
Total other income	287,500

SCHEDULE J

Executive staff

Director	$25,000
Secretary	7,000
Assistant Director	15,000
General Manager	15,000
Secretary	6,000
Stenographer	4,500
Bookeeper	9,000
Assistant	6,000
Public information:	
Director	12,000
Secretary	6,500
Radio and TV operations	10,000
Secretary	6,000
Switchboard	4,000
Total	127,000

NOTES ON COST ESTIMATES

The figures presented in this estimate of income and expense of the National Cultural Center were arrived at after consultation with a number of officials engaged in the presentation of performances of various kinds, with officials connected with the Government in Washington, with our architects and other building operation specialists, and with businessmen. The list is given below.

The estimate is based on several assumptions. First, it is assumed that the Center will function throughout the year and that each of the three halls will be filled for 40 weeks each year.

A second assumption is that while its theater-type operations would be financially independent of any Government appropriation, nevertheless certain Goverernment services would be available to the Center, for example, the care of the grounds by the Park Service, the privilege of buying steam from the Public Building Service of the General Services Administration, and trash removal. Availability of Government services would reduce the amount of insurance required by the Center. It may therefore be possible to eliminate most of the insurance payments shown in the cost schedule, because the Government is its own insurer.

Wages for building maintenance personnel, guards, and cleaning staff are based on present civil service rates for these jobs, because the Center's wages would have to be competitive with those of the Federal Government. In the case of pay for the theater personnel, the current rates were raised to allow for anticipated increases by 1965, when the Center will open.

The estimate covers costs of operating the roof, roof resturants excluded.

Costs have been figured on the basis of the Center's being open 7 days per week. Personnel costs would be reduced noticeably if the Center were to operate on a 6-day basis, which is the basis on which income was figured.

Since the number of stagehands and musicians required in the opera house will vary greatly, it was only practical to use an average when figuring costs.

As in the case of the cost estimates, it is assumed that the three halls will be filled for 40 weeks of the year, with 8 performances per week in each. A schedule for each hall is attached.

The schedule for the concert hall uses the actual number of Washington concerts for the 1962–63 season, plus the number of American attractions touring in an average year under the international cultural exchange program. The estimated income is based on this schedule and may, therefore, be regarded as the minimum to be realized from this hall, for the presence of suitable and air-conditioned facilities, which have been lacking previously, plus the prestige of appearing at the center, will surely attract many musical groups which do not now perform in Washington.

The opera house schedule also uses the current number of productions in Washington, including those by Washington groups, plus the number of American attractions touring in an average year under the international cultural exchange program. To these have been added about seven attractions, both American and foreign, which could be expected to come to Washington if appropriate facilities were available at acceptable rates.

Income from the concert hall and opera house is calculated on the basis of fees only very slightly higher than the rentals now charged by Washington auditoria. These very low rates are proposed, keeping in mind that the Washington performing organizations, which would be the single largest group of tenants, have in the past been unable to pay more.

The theater income is calculated at 40 weeks on the regular Broadway sharing basis. Since there is no theater in Washington suitable for plays without music, it is reasonable to expect that all road companies will use the theater. The International Cultural Exchange and the foreign attractions shown on the schedule could be accommodated within the 40 weeks.

The estimate of income from the two roof restaurants (which includes estimates from the bar concessions serving the audiences) is based on the expectation that the center's beautiful setting along the Potomac and its convenience to Rock Creek Park Drive and the new bridge will attract luncheon and dinner customers from the city at large throughout the year.

No attempt has been made to estimate income from the roof, where band concerts, children's theater, theater-in-the-round, et cetera, can be staged.

Other sources of revenue in addition to those noted on the schedules may be available to the Center after it begins to operate. Some revenue will probably be realized from fees for radio and television programs originating there, and some

income may accrue to the Center from the garage. Rentals from civic activities, as provided in the legislation, may reasonably be anticipated, and possibly some from the Government. It may be feasible to produce and sell gift and souvenir items, such as recordings of some performances at the Center, or to operate a guided tour service.

There is every reason to believe that the program will expand. The population of Metropolitan Washington is growing. The very existence of the National Cultural Center will attract visitors who do not now attend performances while in the Capital, and the prestige of the Center will attract more performing groups. The increase in activities thus generated will bring in substantially more revenue but will add only moderately to costs, as the major expenses have already been figured on a year-round basis.

This leaves 12 weeks a year and some Sundays for our proposed festivals and other activities of a public service nature financed by special grants from the Federal and State governments and foundations.

Exhibit F

SUBSTRUCTURE

Steel and reinforced concrete frame, stone facing, exterior, sprinklered, ventilated, and heated.

All building below and including level plus 38, access roads to parking facility, sitework, landscaping, and relocation of Rock Creek and Potomac Parkway.

Includes:

1. Footings and foundations for entire building (including superstructure).
2. Three levels of parking for approximately 1,600 cars.
3. Two finished lobbies per floor with two escalators and two elevators each and toilet facilities.
4. Equipped mechanical and electrical rooms.
5. Subsurface service road and loading platforms.
6. Kitchen, freight, personnel, and scenery elevators.
7. Structure of the three auditoria floors.
8. Understage of each auditorium.
9. Orchestra pits of each auditorium.
10. Space for stage entrances with offices, first aid rooms, dressing rooms for actors and musicians, chorus rooms, tuning rooms, stagehand and building personnel lockers and offices, wardrobe and set storage areas.
11. Space for mechanical and electrical equipment rooms for superstructure, including refrigeration plant, fan rooms, and pumproom.

This building includes three levels of parking for approximately 1,600 cars. The lowest parking level is at elevation plus 8 feet, which means this is 3 feet below the present level of the Rock Creek and Potomac Parkway. Its exterior walls, 15 feet high, extend some 680 feet along the northbound lane of the parkway and are set back not closer than 81 feet to the Potomac River edge. This level is 434 feet wide. Its area is 295,800 square feet or approximately 6½ acres.

An identical level of parking is situated above at elevation plus 17 feet. Above this level is a third parking floor at elevation plus 26 feet. Its roof, at elevation plus 38 feet, forms the base or platform for the superstructure and includes the entrance plaza on the east side of the building.

The land on the north and the south sides of the substructure slopes up and away from the river and the parkway to join the entrance plaza level. In other words, looking at the building from the north or south, the base or platform is seen as some 27 feet above grade at the parkway, 17 feet above grade at the center of the substructure, and level or at grade at the entrance plaza.

On the south side of the building a three-lane entrance road descends from elevation plus 13 feet, or very near to the present level of the parkway, to the lowest parking floor at elevation plus 8 feet. Adjacent to this, a three-lane entrance road ascends to elevation plus 17 feet, or the second parking level. In the same manner, two 3-lane roads (one from each of these levels) exit the garage on the north side, one ascending to the parkway and one ascending to F Street. Both exit roads from the garage on the north side of the building pass through the existing site of the Water Gate Inn.

Interior exit and entrance ramps will be provided adjacent to these exit and entrance roads at level plus 17 feet for immediate access to parking on level plus 26 feet.

At the northeast end of the building, it is planned to raise the present elevation of the intersection of F Street and New Hampshire Avenue by 3 or 4 feet to elevation plus 25 feet. The road to the entrance plaza will then slope up to elevation plus 38 feet. Beneath this plaza will be a service road plus 19 feet with access off the end of New Hampshire Avenue.

At the southeast end of the building and entrance plaza, the road will slope down to meet the garage entrance and parkway levels.

Preliminary cost estimate

[Estimates compiled by Severud-Elstad-Krueger Associates, Syska & Hennessy, Inc., and Construction Survey Corp.]

Substructure, including 1,600-car garage:	
Structural	$5, 547, 855
Mechanical	4, 220, 000
Architectural	1, 337, 860
Access roads, sitework, landscaping, and relocation of parkway	997, 425
Total estimated construction cost	12, 103, 140
Total, including construction cost, contingencies, engineering and architectural design, and supervision, and administration	13, 866, 238

Flood Conditions

It is our opinion and those of our structural and foundation engineers that flooding is not a serious problem for the following reasons:

1. Construction of the building in no way obstructs the present flow of the Potomac River.

2. Records show that flooding may take place at this site once in every 5 years up to level plus 7.4 feet. This flood level is some 4 feet below the level of the parkway and one-half foot below the lowest garage level. The parkway will act as a dike and protect the entrances and exits to the lowest level of the garage at plus 8 feet.

3. The maximum flood recorded in October of 1942, if repeated, would rise to a level of plus 16 feet. This is 1 foot below the second parking level of plus 17 feet, 10 feet below the under stage areas of plus 26 feet, and 22 feet below the main orchestra and stage level of plus 38 feet. In order to protect the mechanical equipment rooms and elevator pits from this record flood, waterproof construction, bulkhead doors, and slab, reinforced against uplift, will be used.

4. Flood protection measures on the Potomac are being continually studied and can be considered as a future safeguard.

Exhibit G

Economic and Feasibility Report for Plans and Preliminary Estimate of Construction Cost for Proposed 1,600-Car Parking Facility

TABLE OF CONTENTS

Description of project.
Economic and feasibility report.
Estimated cost of project.
Site plan.

Section I. Description of Project

The proposed parking facility of 1,600 cars will be located on the John F. Kennedy Center site, bounded on the east and south by the ramps "D" and "G" of the new inner loop highway, on the west by the relocated Rock Creek and Potomac Parkway and the Potomac River, and on the north by "F" Street. The site was authorized by the U.S. Government when the John F. Kennedy Center was created by act of Congress in September 1958.

This parking facility will serve patrons of the John F. Kennedy Center and its three auditoriums and transient parkers in the surrounding area. Parking areas are on three levels, below the proposed center building, with entrances and exits to access roads on two levels. Principal ingress and egress to the facility will be New Hampshire Avenue and Rock Creek Potomac Parkway.

The estimated project cost of $13,866,238 is based upon new access roads and site work required, and the construction of the facility up to level plus 38. It will be a reinforced concrete and steel structure. The building cost includes parking space for 1,600 cars, construction of all areas eventually to be used by the Center below level plus 38, and all structural elements, that is foundations, columns, transfer beams, and mechanical services that are necessary for the future Kennedy Center building above level plus 38.

Section II. Economic and Feasibility Report

THE PROJECTED OPERATING COSTS

This operating expense estimate assumes a 7-day weekly operating schedule. The garage operating hours would be 6:30 a.m. to 2 a.m. or later, depending on the time the last show concludes.

"Labor" includes a garage manager, an assistant manager, and 10 full- and part-time cashiers, and 5 floormen or "floaters" as they are called, who control traffic on the different levels. This force may be augmented or diminished according to need.

"Special services" includes a regular bookkeeping service, surveillance, and a provision for an annual audit of the books.

Estimates for "insurance," "utilities," "housekeeping and maintenance," and "other expenses" are based on unit costs or per stall costs experienced with comparable parking garage operations.

We have assumed that there will be no real estate or property taxes charged against this operation. The concessionaire, of course, will be responsible for the normal licensing and business taxes that would be ordinary to the garaging business.

We have also assumed that the elevators will be maintained and operated by the building proper.

We recommend that this garage be operated by a professional parking concern under a management basis. Under this type of arrangement, all the receipts from parking would belong to the Center (or to whomever owns the garage). From the receipts taken in, the professional operator would pay all the expenses of the operation and also deduct a fee for such management. In this case we have estimated a fee of 6 percent.

Under maintenance and repair, we have allocated a sum of $25,000 per annum which we feel will be more than adequate to cover normal wear and tear and any emergencies which might arise. There should be an annual surplus in this category, which moneys could be accumulated toward a sinking fund.

Operating expense estimate—National Cultural Center garage

Labor:	
Manager, 1 at $600 per month	$7,200
Assistant manager, 1 at $500 per month	6,000
Cashiers, 10 full-time and part-time at $1.50 per hour	22,500
Floor man, 5 at $5,000 per year	25,000
Subtotal	60,700
Special services:	
Bookkeeping services	1,500
Audit	750
Subtotal	2,250
Insurance	6,000
Utilities:	
Power and light (ventilation)	12,000
Water	250
Telephone	500
Subtotal	12,750
Maintenance and repair	25,000
Other expenses:	
Bus transportation	10,400
Advertising (for day parking)	1,000
Office supplies and tickets	1,500
Uniforms and laundry	1,500
Miscellaneous	1,000
Subtotal	15,400
Management fee (6 percent of gross parking receipts) approximate	45,000
Total operating expense	167,000

PROJECTED INCOME

The parking revenue is estimated on three functions a day (as we have been informed) for a 365-day year, with a daily average attendance of 5,000 people. We are also including additional revenue from a percentage of transients and monthly parkers now using open lots in the immediate area who will be displaced by the new Watergate and Columbia Plaza projects. This income will be projected on a rate schedule obtainable as of 1965. It is more than likely that the trend toward increased parking and business activity through the years will produce an upward spiral in parking rates resulting in greatly increased revenue.

This projection of estimated income is based on the second year of business, beginning no sooner than the Cultural Center is in full operation, bus transportation to the State Department Buildings is provided for the daytime parking customers, and most, if not all of the open lot parking areas have been replaced (presently accommodating about 1,400 on and off-street stalls).

Parking revenue estimates (second year of operation)

	Number	Days	Rate	Revenue
Monthlies	250		$20	$60,000
Transients:				
Non-Center	300	250	1	75,000
Non-Center (Saturdays)	100	50	1	5,000
Center (weekdays)	300	250	1	75,000
Center (Saturdays)	750	52	1	39,000
Center (Sundays and holidays)	600	63	1	37,800
Center (nights)	1,300	365	1	474,500
Total				766,300

NOTE.—"Center" parkers are defined as those who come to the garage specifically to attend functions, tour the Center's facilities or to transact some specific business within the confines of the Center.
"Non-Center" parkers are those who do not fall within the above noted definition such as occupants of nearby buildings who would park at the Center and walk to or be shuttled to work.

STREET TRAFFIC FLOW

Virginia and New Hampshire Avenues will be main traffic arteries carrying over 60 percent of all traffic into the Cultural Center from South, West and downtown Washington. In the area surrounding the intersection of these two avenues, there will be a great volume of traffic generated by the projected Watergate and Columbia Plaza projects.

Completion of these projects will include parking for at least 2,500 cars, and the problem of traffic jams on Virginia and New Hampshire Avenues is inevitable. We believe the way to eliminate this situation is to stagger the starting time of events in the three halls over a 45-minute to 1-hour period. This is strictly a problem of street traffic and will not affect the interior flow within the garage.

INTERIOR GARAGE TRAFFIC FLOW

Through past experience, we have found that one car can pass by a machine every 10 seconds. With four machines (two at each entrance) it is possible to fill half of the garage in one-half hour and the entire garage in a little over 1 hour. Exiting, however, involves the reading of every ticket for correct charges and the collection of moneys. This time will be cut to a minimum by our suggested flat rate charge of $1 per 12-hour period or any part thereof.

With this system in mind, exiting is cut to 30 seconds per car. We suggest two exits with three cashiers at each (or a total of six cashiers) during peak exiting periods. This will provide for a total of 720 cars exiting in 1 hour.

Use of differential counters at the entrances and exits will act to control capacity at overflow events. When this occurs, traffic will have to be diverted to the nearby garage at the Watergate project, which will have ample room to accommodate Center cars.

We feel that these overflow events will be of a minimum number and that the projected number of stalls (1,600) is sufficient to handle 95 percent of the events.

SHUTTLE BUS

To make parking at the Center during daytime hours attractive for State Department employees, and others in nearby Government office buildings, we suggest a shuttle bus service. The driver of a car would ride free while his passengers pay a 20-cent or 25-cent round trip fare. The charges paid by these passengers should pay for the cost of the bus, which is about $40 per day.

PROPOSED FINANCING

It is our feeling that this garage should be financed through a 40-year self-liquidating bond issue bearing a 3-percent interest rate, with the revenue of the garage pledged to cover the debt service. On the basis of a $14 million cost, a 4.25-percent interest and amortization constant would require a debt service of $595,000 per annum. This figure, plus the operating cost of approximately $170,000, would leave approximately $5,000 a year for a sinking fund and would allow the entire investment to be paid back if the sinking fund is allowed to accumulate, somewhat under the 40-year period. It is theoretically possible to call the bonds before this length of time had elapsed. Consideration should

be given to the fact that interest and amortization will remain constant, but the upward trend of growth and revenue could reduce the total length of investment.

Sec. III. Preliminary cost estimate

Substructure, including 1,600-car garage:

Structural	$5, 547, 855
Mechanical	4, 220, 000
Architectural	1, 337, 860
Access roads, site work, landscaping, relocation of parkway	997, 425
Total estimated construction cost	12, 103, 140
Total, including construction cost, contingencies, engineering and architectural design, supervision, and administration	13, 866, 238

HIGHLIGHT STATEMENT

Mr. STEVENS. Mr Chairman, the bipartisan legislation which created the center had its genesis under the Eisenhower administration. It was vigorously advocated by President Kennedy and has already received substantial encouragement from President Johnson.

Briefly, the act passed in 1958 designated the land upon which the center should be constructed, and vested in a Board of Trustees the power to maintain and administer the Center.

Of the 45 trustees, 3 are Members of the U.S. Senate, Joseph S. Clark, Jr., J. William Fulbright, and Leverett Saltonstall. Since the 1958 act specified that all building funds must be raised by voluntary contributions, we have been fortunate in having the benefit of the generosity of my predecessor, Hon. L. Corrin Strong, who has contributed more than $800,000 specifically earmarked for administrative and fundraising expenses.

FUNDRAISING PROGRAM

By November 1961 the Center had raised approximately $1.2 million. However, I am happy to report that since that time, through the dedicated efforts of many individuals, our funds, including bona fide pledges, have reached upward of $14 million. These funds have come from foundations, such as the Ford Foundation (on a 3-to-1 matching basis from private funds), the Rockefeller Foundation, and the Old Dominion (Mellon) Foundation, business, industry, labor, foreign governments, and the general public. A demonstration of the interest is the response of the schoolchildren who will be among the greatest beneficiaries of our efforts.

CENTER A MEMORIAL TO PRESIDENT KENNEDY

Immediately following the assassination of our late President, a spontaneous movement spread throughout the country to make the National Cultural Center the official memorial to President Kennedy. The proposal, it was learned, met with the approval of the Kennedy family and was endorsed by President Johnson. The action taken by Congress in January of this year emphasized the nationwide feeling that the Cultural Center was, indeed, the most appropriate memorial to a man who had held the arts in such high regard.

REVISED FUNDRAISING GOAL

At the annual meeting of the Board of Trustees held on January 13, I was able to announce a revised fundraising goal as a result of the new legislation. In my opinion a further $6.5 million remains to be raised. This figure is comprised of $2.5 million expected to be raised in a single event to take place this year, details of which will be announced later; $1.5 million to be raised in the Greater Washington area; and $2.5 million from industry, labor, business, foundations, special gifts, and the general public.

OUTSTANDING PLEDGES

Chairman HAYDEN. What is the amount of contributions now in custody of the Board which can be matched against the requested appropriation?

Mr. STEVENS. Outstanding pledges of $7,901,952.40 and total cash income of $6,247,880.94, a total of $14,149,833.34.

Chairman HAYDEN. And you have to raise how much more?

Mr. STEVENS. After conversion of the pledges, approximately $1½ million. At our annual meeting on January 13 we revised our goal for $6½ million to have sufficient capital and a reserve.

Chairman HAYDEN. How much do you need to complete this?

MATCHING FUNDS

Mr. STEVENS. We should have $15,500,000 from the public funds to match the appropriation requested from Congress. However, we have had expenditures for administration, fundraising, architects and engineers fees and an advance of almost $150,000 for land to U.S. Government.

Chairman HAYDEN. You are getting very close.

Mr. STEVENS. We are very close, sir, but we still would like to have a little reserve.

Chairman HAYDEN. How long do you expect that it will take to secure the full amount of $15,500,000 in contributions to permit use of all the appropriation?

Mr. STEVENS. I expect we can have that money by the end of the year.

Chairman HAYDEN. What is the earliest date on which you definitely must have the appropriation?

Mr. STEVENS. G.S.A. is our agent for design and construction. Under our contract they cannot advertise for construction bids until we transfer the money to them. They will require money before the first of the year.

Chairman HAYDEN. Then the first of the year is the date?

Mr. STEVENS. That is the date we should have it, but we also expect to start construction of the excavation and substructure by that time.

Chairman HAYD N. Would your program actually suffer if the funds were not made available until after July 1, 1964?

Mr. STEVENS. No, sir; as long as we have the money in fiscal year 1965.

Chairman HAYDEN. Do you have any other observations you care to make?

STATUS OF FUNDRAISING PROGRAM

Mr. STEVENS. I would just like to point out that our fundraising is going along. During the month of February we increased our gifts $429,000, and I would like to make the up-to-date comparative figures as of February 29, as a matter of record. I have marked it "Exhibit H."

Chairman HAYDEN. That will be done.

(The information referred to follows:)

EXHIBIT H

FINANCIAL REPORT, FEBRUARY 29, 1964

WASHINGTON, D.C.
March 3, 1964

To the Board of Trustees of the John F. Kennedy Center for the Performing Arts, Washington, D.C.

GENTLEMEN: In accordance with your request we have examined the books and records of the John F. Kennedy Center for the Performing Arts for the period April 1, 1959, through February 29, 1964, and submit herewith the condensed statement of pledges, cash receipts, and disbursements for the period from inception, April 1, 1959, through February 29, 1964.

Our examination was made in accordance with generally accepted auditing standards and accordingly included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

In our opinion the accompanying condensed report presents fairly the results of operation of the John F. Kennedy Center for the Performing Arts for the period from inception, April 1, 1959, through February 29, 1964, in conformity with generally accepted accounting principles.

Respectfully submitted.

JOHN J. ADDABBO,
Certified Public Accountant.

Condensed statement of pledges, cash receipts and disbursements for the period from inception, Apr. 1, 1959, to Feb. 29, 1964

	Apr. 1, 1959, to Jan. 31, 1964	Apr. 1, 1959, to Feb. 29, 1964	Increase, month of February 1964
Outstanding pledges [1]	$7,645,241.77	$7,901,952.40	$256,710.63
Total cash income	6,075,369.72	6,247,880.94	172,511.22
Total subscriptions on books	13,720,611.49	14,149,833.34	429,221.85
Pledges from President's Business Committee (not yet received)	200,000.00	115,000.00	(85,000.00)
Total	13,920,611.49	14,264,833.34	344,221.85
Deduct, disbursements:			
Expenses to date	1,667,193.26	1,702,166.61	34,973.35
Capital expenditures [2]	787,162.33	840,769.70	53,607.37
Total disbursements	2,454,355.59	2,542,936.31	88,580.72
Excess of outstanding pledges and cash income over disbursements	11,466,255.90	11,721,897.03	255,641.13

[1] Outstanding pledges includes Ford Foundation grant of $5,000,000 on a 3-to-1 matching basis of nongovernmental funds.

[2] Capital expenditures during February 1964 of $53,607.37 consist of $53,045.91 in architect fees paid to Edward Durell Stone and $561.46 expended for office equipment.

ARCHITECT WORKING ON THE CENTER

Mr. STEVENS. Our architect is Edward Durell Stone, who has done many famous buildings, some for the Government, the famous Belgium Pavilion during the World's Fair and the U.S. Embassy in India. He has been working right along in order to save time even though we have not raised all the money.

HALL OF STATES

That exhibit (showing portfolio of colored photos of model) is to give you an idea. That is from our model, the way it will look along the riverbank. This picture shows the side where the cars will be coming in and discharging the people. This is what we call the Hall of States. That is between two of the theaters. We hope that each State will make a small contribution to become a member of the Hall of States; there will be a plaque and flag for each State. This would be the grand foyer running the length of the three theaters and will be looking out on the Potomac River.

1,200-SEAT THEATER

We think that we have about 120 acres of open space on the river side and the Theodore Roosevelt Island across the way gives this proposed building a great vista and will make it much more attractive. We are just fortunate to be on the banks of the river. These are just typical interiors of the three auditoriums. That would be the theater. We have proposed a 1,200-seat theater.

OPERA HOUSE AND MUSIC HALL

This would be the opera house which would be approximately 2,250 seats, and the new philharmonic or music hall will have 2,750 seats which, we would hope, would solve all of our problems for our orchestras.

ROOF AREA A MULTIPURPOSE AUDITORIUM

Then here is a roof area which can be used for many purposes. Such as a children's carousel, children's theater, theater in the round, art exhibition area, and so forth. It is a multipurpose auditorium and is a rather clever idea of the architect, because he was able to use what is normally a waste space in a theater for something useful and productive.

Thank you very much, sir.

Chairman HAYDEN. Thank you.

The committee will stand in recess until 9:30 tomorrow morning.

(Whereupon at 10:40 a.m., Wednesday, March 4, 1964, the committee adjourned, to reconvene at 9:30 a.m., Thursday, March 5, 1964.)

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS FOR 1965

THURSDAY, MARCH 5, 1964

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, D.C.

The subcommittee met at 9:30 a.m., pursuant to recess in room 1223, New Senate Office Building, Hon. Carl Hayden (chairman) presiding.

Present: Chairman Hayden, Senators Bible and Bartlett.

DEPARTMENT OF THE INTERIOR

STATEMENT OF HON. WAYNE MORSE, U.S. SENATOR FROM THE STATE OF OREGON

FOREST SERVICE AND DEPARTMENTAL ACTIVITIES

Chairman HAYDEN. The committee will be in order.

Senator Morse we will be pleased to hear from you.

Senator MORSE. Mr. Chairman and Senator Bartlett, I am pleased that you could set your schedule to hear me at this early hour.

In my capacity as chairman of the Subcommittee on Latin America, I have to participate in a 3-day parliamentary conference on Latin America. For that reason I asked to testify as early as possible this morning.

I have a very carefully prepared statement, as I always try to present to you, dealing with appropriations for the Bureau of Indian Affairs, the Forest Service, reforestation and recreation, forest management and watershed research, the La Grande, Oreg., Wildlife Habitat Laboratory, the Bureau of Land Management, the Vale, Oreg., range rehabilitation project, soil and moisture conservation, weed control, the Bureau of Land Management forestry program, and outdoor recreation development.

But I ask now, Mr. Chairman, permission to put this whole statement in the record.

Chairman HAYDEN. That may be done.

(The statement referred to follows:)

STATEMENT OF SENATOR WAYNE MORSE

Mr. Chairman and members of the subcommittee, your kindness in scheduling an early morning subcommittee hearing is deeply appreciated. I know that time is precious to the subcommittee so I shall be brief in presenting my case in support of fiscal 1965 appropriations for the Bureau of Indian Affairs, the Forest Service, and the Bureau of Land Management on items that are of special importance to the State of Oregon and the Nation. You have been very considerate of the needs of Oregon in the past and I know that, as usual, you will judge these budget requests strictly on the merits with the public interest uppermost in your minds.

BUREAU OF INDIAN AFFAIRS

Tongue Point Indian School

The fiscal 1965 budget contains an item of $2,042,000 for the second phase of a plan for conversion of the facilities at Tongue Point, Oreg., to a new high school for Indian students. The first phase of the Indian school conversion work involves the reprograming of $2,921,000 of funds appropriated for fiscal 1964, now on hand in the Bureau of Indian Affairs.

It was our late beloved President Kennedy who approved the reactivation of the Tongue Point Naval Base when he visited the base on September 27, 1963. The President saw Tongue Point at firsthand and he expressed not only surprise, but delight, when he observed a large number of permanent buildings in excellent condition at this installation. It was readily apparent to the President that we had in the Tongue Point installation a fine multipurpose Federal project having scores of years of usefulness.

In his press release of September 27, 1963, the late President made it clear that he desired prompt reactivation of the base for multipurpose use, and he indicated initially his desire that the base be used for a Weapons System Acquisition Management School and a Coast Guard Helicopter Rescue Base. I still recall the President's very wise words when he said at the outset of his press release, "I have been convinced that it would be more economical and efficient to use these facilities, and the skills available in the area, than to build new ones elsewhere."

On the return trip from Tongue Point to Tacoma, Interior Secretary Udall, who accompanied the presidential party on the visit to Tongue Point, pleased me very much when he stated to the President that he was very favorably impressed with the Tongue Point facilities, and that in view of its fine potential for Federal use, he planned, upon his return to Washington, to recommend to his assistants that they look into the possibility of using Tongue Point for a contemplated project of the Interior Department. That project turned out to be the proposed new Indian high school that is included in the budget now under consideration by this subcommittee.

In order that the subcommittee and the full committee may have complete background information on the considerations that led up to the plan to reactivate Tongue Point, I ask, Mr. Chairman, that the President's press release of September 27, 1963, and portions of my newsletter of October 7, 1963, be included as part of the record of this hearing.

Mr. Chairman, the facilities at Tongue Point are not temporary wartime structures; they include buildings that were meant to last indefinitely. They are attractive and ideally situated for an educational institution.

The Astoria Chamber of Commerce provided my office with a brochure containing a complete description of the Tongue Point Naval Base and its buildings. It contains color photographs of the buildings. These installations will, I am sure, impress you as deeply as they did our late President. I am submitting this brochure for the subcommittee's use and I hope that each member of the subcommittee will examine it.

Mr. Chairman, a new Indian high school, of the type envisaged for Tongue Point, has to be constructed someplace in the United States. I know that the members of this subcommittee, of both parties, are genuinely interested in economy in our Federal budget. From that standpoint, we cannot afford to bypass the use of this ideal base for the Indian school that has been proposed in the administration's budget.

The letter addressed by the Secretary of the Interior to the Appropriations Committees of both Houses in December of 1963, contained this extremely important observation concerning the Tongue Point location: "It is estimated that a savings of approximately $3 million in construction costs could be made over the construction of a completely new high school plant." The obvious economy to be achieved through the use of existing and permanent facilities is a consideration that Congress, in the interest of saving taxpayer dollars, should not overlook.

The new Indian high school proposed for Tongue Point will meet a growing need for a boarding school off-reservation high school for our Indian population. Indians in increasing numbers are graduating from the elementary grades. They are in need of high school facilities and no Indian child should be denied the chance for a sound basic high school education. This is what the Tongue Point Indian school would offer.

This facility is proposed as an addition to the Federal Indian high school system. It will provide amply for 1,000 high-school-age students. It is not intended to serve any particular part of Indian country, nor to replace any par-

ticular part of Indian country, nor to replace any particular existing or proposed facility. Students who will attend may come from any part of the Indian country.

Instructional programs at the Tongue Point School would provide a top quality, basic high school education for the Indian students. The program would be on a par with any in the United States; it would be geared to the demands of a modern world and at the same time would meet the particular needs of the Indian students. Emphasis would be devoted to English language capability, mathematics, science, career counseling, physical fitness, and the practical arts.

The important thing to remember is that many of the facilities needed in a boarding school are already constructed and in operating condition at Tongue Point. An inspection of the present plant indicates that the living quarters for employees can be used with a minimum of repair work and that two reinforced concrete and brick buildings, one the former bachelor officers' quarters and the other, the former administration building, would need only minor repairs to make them serviceable. Other buildings on the site are constructed of permanent materials that can be remodeled and renovated at a cost significantly less than constructing completely new facilities.

Although it will be necessary to construct a new academic classroom building and additional dormitories, it is estimated that the conversion of the base to a 1,000-student-capacity boarding school could result in considerable savings over the construction of a new high school, as indicated in Secretary Udall's letter addressed to the committee last December.

We have already invested amounts estimated at from $13 to $18 million at the Tongue Point installation. The base is no longer needed for the purposes for which it was built. The most practical use other than military is for a boarding school. The Bureau of Indian Affairs has demonstrated its ability to adapt its programs to successfully utilize such abandoned military installations for educational purposes. They operate two such installations now—the Mount Edgecumbe School at Sitka, Alaska, and the Intermountain School at Brigham City, Utah.

Enrollment of Indian children in public schools has long been an objective of the Bureau of Indian Affairs and for several generations, Indian children have attended public schools. There is no policy of segregating Indian children. On many reservations, however, public schools are not yet feasible and the Bureau accordingly continues its own day schools. In addition, the Bureau operates boarding schools for certain Indian children who have special educational and social needs that cannot be met elsewhere. Primarily, they come from isolated rural reservation areas, where both schools and roads are often lacking. Some are from broken and undesirable homes and some have failed in the public schools, or for social reasons must be removed from their homes and local communities. Almost all the children enrolled in Federal schools must learn English as a second language after they start their schooling. The goal at Tongue Point will be to keep students in attendance through high school graduation and to encourage them to continue their education or vocational training beyond high school.

It is important to bear in mind that construction of the Indian school at Tongue Point constitutes insurance for low future costs in expanding the capacity of the school. Up to this point I have dealt with the facilities necessary for educating 1,000 high school students. It would be possible to expand this school at a later date by another 1,000 students, without doubling the cost of construction. This would be possible because the basic utility systems and housing units will not be utilized to full capacity for a thousand pupils. Some additional school construction would be necessary, of course, and additional conversion work in the large hangars would be necessary to provide for shops; but another 1,000 additional students could have school facilities at an even more reduced cost than the conversion work now proposed.

Housing for administrative personnel and faculty would present no problem whatsoever at the Tongue Point School. On the hillside overlooking the base are more than a hundred homes, some duplex, some fourplex, consisting of two-bedroom units and a few three-bedroom units. These have been kept in excellent condition during the custodianship of the General Services Administration and the nucleus of fine family community is at hand within easy walking distance of the school. These are attractive homes and would be very much desired by administration and school personnel.

I urge the subcommittee most earnestly to approve the reprograming of fiscal 1964 funds and the appropriation of fiscal 1965 funds for this new Indian school.

Such approval will mean savings of up to $3 million for our taxpayers, a top-rate high school for our Indian youth, and wise utilization of a closed down base having permanent facilities ideally suited for the purpose of an educational institution.

Turning now to the budget for fiscal 1965 for the Forest Service, I should point out that the Forest Service and the Bureau of Land Management administer approximately 340 million acres of land in the continental United States plus almost 300 million acres in Alaska. They perform great conservation functions on behalf of the people of the United States and therefore the amounts budgeted for their operations are of tremendous importance in assessing how well we are progressing in conserving and developing our natural resources.

FOREST SERVICE

Program for the national forests

Several years ago the Department of Agriculture submitted its program for the national forests, which envisaged an acceleration in the funding of the important conservation efforts of the Forest Service. In part, the program called for a 5-year period wherein there would be annual increases in the Forest Service budget of approximately $40 million per year in order to get the level of funding up to desirable amounts.

I regret to observe that this year's budget does not provide for the continuation of this program at the originally planned levels. However, the situation is not completely negative. The budget for fiscal 1965 does provide for a stepped-up program of the Forest Service and thus makes some progress.

Rather than make specific requests for certain items in the budget, I would refer the subcommittee to the original schedule of the program for the national forest and its funding levels. I urge that an effort be made to provide necessary increases for all of the various proposals so that they will more nearly approximate the schedules that were indicated in the program for the national forest.

Forest research

The proposed increases in forest research are not as substantial as are needed if we are to get the answers to many of the puzzling questions which face important industries, such as the lumber industry.

I have received letters from the Soil Conservation District in Elgin, Oreg., the Oregon Association of Soil Conservation Districts, the Boise Cascade Corp. and the Western Forestry & Conservation Association. (See p. 1059.) All of these letters deal with the need for additional forest research funds. I ask that these be included as exhibits in the record at the close of my statement. They deserve serious consideration.

Reforestation and recreation

I am pleased to note that there is a substantial increase in the budget for reforestation, recreation, and public use. These programs are extremely important. Recreation use is increasing by leaps and bounds in all of our national forests. Therefore, every effort should be made to take care of this important activity. Reforestation and stand improvement are essential to building forests for tomorrow. The money that is requested here will be very well spent.

Forest research—La Grande, Oreg., Range and Wildlife Habitat Laboratory

The need for the construction of a forest service laboratory at La Grande, Oreg., is most urgent. The purpose of this laboratory is to foster the proper development of range and wildlife habitat. It will be a vaulable research facility serving all of eastern Oregon and eastern Washington. The Eastern Oregon College at La Grande has set aside property for the use of the Forest Service in establishing this laboratory and it would be extremely useful if the committee could program the money needed for the planning of this facility during the current fiscal year. It has been estimated that $28,000 could be used for designing and planning the laboratory during fiscal 1965. Citizens of the La Grande area have urged that $50,000 be appropriated for this purpose. The laboratory is long overdue and urgently needed. Therefore, I ask the committee to approve the maximum sum possible in order that we may complete the planning on this project during fiscal 1965.

Two letters I have received speak most eloquently concerning the desirability of an appropriation this year or the La Grande laboratory. I ask that the subcommittee also include these letters—addressed to me by the La Grande Chamber of Commerce and the La Grande Industrial Development Corp.—in the hearing record at the close of my testimony.

FOREST MANAGEMENT AND WATERSHED RESEARCH

Very much needed, is $120,000 for forest management and watershed research on forest lands in northeast Oregon. I hope that the committee will give very careful consideration to this item. The counties in northeast Oregon have already joined together and are about to complete a study of the natural resources of Union, Wallowa, and Baker Counties. This study cost $59,000 and demonstrates the wisdom of developing the sub-Alpine resources of this region.

BUREAU OF LAND MANAGEMENT

The attention of the subcommittee is directed to the great progress that is being made in forest and range management by the Bureau of Land Management. This is in no small measure due to the constant helpful assistance the Bureau's programs have received from this committee and from the House Committee on Appropriations. The Bureau's work has also been enhanced by the leadership of Assistant Secretary Carver and the new Director of the Bureau of Land Management, Charles Stoddard.

Vale, Oreg., range rehabilitation project

The subcommittee members deserve a brief report on the Vale project which was initiated a few years ago with the help of the committee. The project is already evidencing great promise. Last fall the National Advisory Board Council of the Department of the Interior met a Vale, Oreg., to review what has been done in the way of conservation work in this area. The Board members were greatly impressed by the progress in conservation rehabilitation that has resulted from the funds already appropriated. A number of field trips were taken and a great deal of searching examination was made into the operation of the program by people with a wide background of ranching, conservation, and other resource skills. The measure of the results at Vale can best be summed up by the statement made by one rancher out there who described to the assembled people from all over the West how the program operated from his point of view. As a rancher using BLM lands, he said that prior to the initiation of this project, his heavy degree of use of these public lands and the uncertainty of his tenure had very harmful effects upon his economic status. After the benefits of the seedings began to accrue, he indicated he was paying more taxes than he had paid previously. Thus, the project helped not only this rancher, but the Federal Government as well.

This is the type of result that we should expect from the conservation work on these rangelands. The funds your committee has made available on the Vale project has enabled BLM to begin a truly effective rehabilitation of the lands so that the ranchers can get on the range the number of livestock which they are entitled to have out there. They make money and the Government makes money and the Government makes its money two ways—it not only receives the income from grazing, but gets increased tax revenue from the ranchers who use the rehabilitated lands. The project in eastern Oregon has done a great deal to strengthen the economy of that entire area. It serves as a great indicator of what can be accomplished by wise investment of Federal funds in our western range.

Soil and moisture conservation

The budget before you contains a request for approximately $11,900,000 for soil and moisture conservation. It is my understanding that after taking into account various budgetary changes and the effect of the pay act, the amount being appropriated is essentially the same as last year. I would like to point out to the subcommittee that the results of the prior efforts of the subcommittee to provide more adequately for the conservation of public lands have been extremely useful. The acreage involved is so large and the job ahead is so great, however, that additional funds could be spent adequately on these important watershed and grazing lands. Therefore, I hope that the subcommittee will give consideration to a further acceleration of the soil and moisture conservation work of the Bureau of Land Management.

Weed control

Mr. Chairman, I ask that a copy of a letter dated February 20 from the Association of Oregon Counties, addressed to the Director of the Bureau of Land Management, be included in the record as an exhibit following my testimony.

The Bureau of Land Management owns about a quarter of the Federal public lands in Oregon. It is not providing its share of weed control funds. In fact,

Oregon's State and local governments spent $758,955 on weed control last year which is more than the BLM spent in the entire Nation. It is my suggestion that the subcommittee direct the BLM to make a comprehensive analysis of this matter. A table on page 3 of the association's letter shows how infestation of eight noxious weeds has increased in Oregon over the last 26 years. In 1937, less than 27,000 acres of infestation were reported in Oregon. Today, over 1,200,000 acres have noxious weeds.

A cooperative program is urgently needed. The Federal agencies should match, dollar for dollar, the non-Federal expenditures on weed eradication on an prorated basis.

The data just cited emphasizes the importance of a good program of range rehabilitation. Such rehabilitation provides multiple benefits. It controls weeds, increases usable forage, helps the watershed and strengthens the economy.

Bureau of Land Management forestry program

One of the most important facets of the Bureau's conservation program is its forestry program. This is of special significance in western Oregon. The subcommittee will recall that the October 1962, hurricane struck down billions of board feet of timber in Oregon and Washington State. Due to the excellent leadership provided by Assistant Secretary of the Interior Carver, a massive effort was made to salvage as much BLM timber as possible. The Bureau of Land Management has made tremendous progress in its salvage program and it comes into fiscal 1965 with the job largely completed.

As of January 31, 1964, the BLM had sold almost 1.8 billion board feet of salvage timber resulting from the 1962 Columbus Day storm. The value of this timber was over $42 million.

This is a very creditable record. Hundreds of millions of board feet of timber have been saved and put to useful purposes. Only a minor fraction of 1 percent of the timber offered has not been sold to date.

The budget for this year will provide essential funds to complete reinventories and to provide for adequate reforestation so that the conservation benefits from the management of these lands will continue to be developed properly and wisely.

Outdoor recreational development

The tremendous upsurge in the population of our Nation makes it imperative that immediate consideration be given to providing funds for the planning and construction of sites, facilities and access on the millions of acres of BLM lands having important recreational values. We owe this to ourselves and future generations.

Mr. Chairman, I ask that an excellent letter of January 31, addressed to me by the Oregon Wildlife Federation and the federation's resolution of January 12, concerning the development of recreational values on BLM lands, be set forth in the record of this hearing.

CONCLUSION

As the members of this subcommittee know, in the last several months I have waged a strong battle to curtail tne amount of money spent under the foreign aid program. I will not reiterate my views on the improvements that can be made on this program, but I wish to emphasize that some of the savings we have made in foreign aid should be used to augment expenditures for domestic conservation needs.

The action that was taken on the foreign aid program has been of positive value in helping the President keep the entire budget below the $100 billion mark. I suggest that we consider our conservation agencies as primary agencies to receive some of the funds we have saved on foreign aid. Studies that have been undertaken show that the areas of heaviest rural poverty are also areas of the largest concentrations of Federal lands. Why? Perhaps it is because the Federal lands are either in the backwater of economic activity or because the lands held by the Federal Government have been subjected to constant abuse over a long period of time, resulting in their deterioration before intensive management benefits could be provided. The Federal Government, therefore, has a tremendous job to do in building up its public land resources, particularly the rangelands of the West.

Under the circumstances, I urge this subcommittee to estimate a reasonable amount that could be added to the budget for the following types of activities on lands of the Forest Service and the Bureau of Land Management: reforestation, range revegetation, watershed protection treatment and the developing of outdoor recreation facilities. Vigorous programs in these areas would be of

great value. Additional work on reforestation would enable allowable cuts on the national forest and public lands to be moved upward. This in turn, would provide more timber to be converted by mills into lumber and other forest products.

Increased range revegetation and watershed protection would provide for a greater amount of grazing on the national forests and the BLM lands, thereby increasing the annual grazing capacity and enabling the ranchers to obtain better grazing than is now possible.

It is my recommendation that an increase of not less than $20 million be allocated to the Forest Service and an increase of not less than $10 million be allocated to the Bureau of Land Management to augment the level of conservation work on the lands under their respective jurisdictions.

In closing, I wish to thank the subcommittee, the full committee and the chairman of the Senate Appropriations Committee, Senator Hayden, for many years of help to the State of Oregon and for your fairness and understanding in passing upon appropriations requests for the Forest Service, the Bureau of Land Management, the Bureau of Indian Affairs, and other agencies within the Departments of Agriculture and Interior. I am most appreciative of the action that you have taken over the years on requests that relate to the State that I have the honor to represent in the U.S. Senate.

Again, I thank the chairman and members of the subcommittee for having taken time out of your busy schedule to consider this statement.

(The material referred to in Senator Morse's statement follows:)

STATEMENT BY THE PRESIDENT

For some time I have been concerned over the failure of the Federal Government to make use of the excellent facilities available at Tongue Point. On the basis of my talks with Senator Morse and reports by the appropriate officials, I have been convinced that it would be more economical and efficient to use these facilities, and the skills available in the area, than to build new ones elsewhere.

The best first step in reactivating this facility appears to be multipurpose use It is, therefore, a pleasure to be able to tell you that both the Department of Defense and the Coast Guard will shortly initiate activities here.

Early next year the Department of Defense will establish a Weapon System Acquisition Management School here at Tongue Point. This school will be jointly staffed by our military departments and will provide training for senior personnel and senior military officers for all the services and the Defense Department.

Shortly after this training activity begins, the Coast Guard will establish a helicopter rescue base here.

Both agencies will soon begin their planning in cooperation with the General Services Administration.

I am particularly happy to make this announcement—not only because it will enable the Government to put to effective use part of an excellent facility in which many millions of dollars have been invested over a period of years—but also because it will bring to Astoria economic benefits your community sorely needs.

The establishment of these activities at Tongue Point is a fortunate concurrence of efficient Federal use of facilities and of local needs. It is in no small way a tribute to the alertness and persistence of your senior Senator, Wayne Morse. His deep awareness of the interests of the people of Astoria—and of Oregon—and his strong advocacy of efficient Government operations are, I am sure, well known here in Oregon.

Our long efforts to bring Tongue Point back to life have shown again the necessity for persistent attention to economy in Government. Anyone who has seen Tongue Point—as I have today—knows that it makes little sense to build new facilities for new or expanded Federal activities when existing, but unused, installations can be modified to meet the need.

With this in mind, I have instructed the Director of the Bureau of the Budget to take whatever steps may be necessary to make certain that this kind of choice is made systematically and objectively—with economy and efficiency as the standards.

Again, I want you to know how delighted I am that part of Tongue Point will soon be reactivated, and I can assure you that we shall continue our efforts to take advantage of the full potential of this installation.

SENATOR MORSE'S NEWSLETTER

OCTOBER 7, 1963.

DEAR FRIEND: On September 27, President Kennedy visited Tongue Point, near Astoria, and announced the renewal of Federal activities at the former naval base; the White House Press Secretary read as follows:

* * * * * * *

"The Weapon System Acquisition Management School and the Coast Guard helicopter rescue base will not, of course, come anywhere near making full use of the available facilities. However, the President has made clear that Tongue Point is to be reactivated on a multiuse basis. It is the plan to locate at Tongue Point additional Federal activities just as rapidly as the various agencies and departments find that they have need for any of its facilities."

President Kennedy made clear such a policy when he stated: "I can assure you that we shall continue our efforts to take advantage of the full potential of this installation."

I have been assured that both the General Services Administration and the Bureau of the Budget have been instructed to work to this end. Mr. Ralph Dungan, White House aide to the President, acting under instructions from the President, has been working on the Tongue Point reactivation problem for many months. We are all greatly indebted to Mr. Dungan for his very effective work in response to the representations I have made to the White House on the behalf of the Oregon Delegation in respect to reactivation of Tongue Point.

The most important immediate effect of the President's action is that Tongue Point has been saved from being dismantled, its buildings razed, its equipment sold for salvage prices, and the real estate divided up and sold for much less than a fair return to the taxpayers. We who opposed the junking of Tongue Point pressed upon the President and his advisers the importance of retaining it as a Federal facility. This does not foreclose future lease arrangements for use of some portion of the property by Oregon municipal, county, or State governments; nor does it exclude the possibility of lease arrangements with private industry for use of portions of the facility consistent with Federal use of other portions.

The American taxpayers have more than $14 million invested in this facility. What I have sought to do in my endeavor to save it as a Federal installation has been to protect that economic interest, and by so doing, provide the best assurance to the people and business interests of Oregon and the Astoria area that Tongue Point would be put to such uses as would maximize the economic contribution of the facility to the economy of the area and of the State.

The decision to recativate Tongue Point for multipurpose Federal use does not mean that overnight, or within the next few weeks or months, Tongue Point is going to be teeming with Federal activity and personnel. It will take time to establish new Federal activities there. But the important thing is that it has been saved for Federal uses. In due course of time, it once again can become an important economic asset to our State; far in excess of any economic return that would have resulted from any of the proposed private projects or uses for the property that were proposed prior to the President's visit.

Speaking for myself, I am very encouraged about the economic potential of Tongue Point. Mr. Harry Swanson, who served as chairman of the local committee of Astoria businessmen, made a very effective statement to the President. He pointed out the varied and manifold facilities that were available, including the docks, warehouses, harbor advantages, extensive housing, administration buildings, shop repair facilities, potential stone quarry, and all the other economic advantages of Tongue Point. Mr. Swanson also submitted to the President a memorandum brief which was very effectively prepared. The President read it, and turned it over to one of his aids with instructions that it be given to Mr. Ralph Dungan for his careful consideration.

President Kennedy spoke very favorably about the brief. I want to thank most sincerely Mr. Swanson and his committee for the splendid cooperation they extended to us on the inspection tour of Tongue Point. Their efforts were very helpful to me in presenting my case on behlaf of Tongue Point to the President.

We also discussed Mr. Swanson's memorandum after we got back into the helicopter, following the President's visit. Secretary of the Interior Udall pleased me very much by stating to the President that he was very favorably impressed with the Tongue Point facility. In fact, he said, he had no idea that it had such fine potential for Federal use.

Secretary Udall expressed interest in part of the facility for possible use in a contemplated project of the Interior Department. He advised the President and me that when he got back to Washington he was going to recommend to his assistants that they look into the possibility of using Tongue Point for this particular project.

In conclusion, I express thanks again to Senator Neuberger, Congresswoman Edith Green, Congressman Ullman, and Congressman Duncan for the wonderful and cooperative assistance they have given me throughout the many months in which I have made repeated representations to the White House on behalf of Tongue Point. This is but another example of the close cooperation that prevails among the Democrats on the Oregon delegation whenever any matter involving the interests of Oregon is presented to it.

Sincerely,

WAYNE MORSE.

FEBRUARY 18, 1964.

Senator WAYNE L. MORSE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MORSE: We would like to bring to your attention a matter involving proper financing of Federal forest research in eastern Oregon. As you may be aware, there is a radical shift in forest harvests and forest product manufacturing underway in eastern Oregon. Whereas ponderosa pine lumber was the predominant forest product in the past, it is now forest products of white fir and other species from high altitude forests that are coming to the forefront in the manufacture of modern forest products. In one respect this is fortunate, for the counties of northeastern Oregon have large virgin areas of white fir and mixed species stands which are so valuable to our economy in terms of wood fiber for industry, watersheds to feed our irrigation agriculture, and as mountain recreation areas. However the multiplicity of resources and uses raises problems of forest and watershed management for which there is no body of research answers or solutions available.

We, the residents and soil conservation district members of northeastern Oregon, together with the forest product industry sorely need additional research in order to assure and sustain an orderly and multiple-use management of these pristine forests.

You may be interested to know that soil conservation districts of eastern Oregon are forming resource conservation and development committees which represent conservation districts in subregions of one to several counties per unit. And one of our first interests is this matter of obtaining harmonious, productive, and wise use of our almost untapped forests and vital watersheds through research. Specifically we see a need for new forest research on:

1. Means to achieve a type of timber management that will provide sustained production on our high-altitude forests of mixed species.
2. Means to achieve regeneration of the cutover areas despite the new type problems that have arisen.
3. Best way to preserve watershed values of high-elevation forests and avoid silty or flashy runoff waters.
4. How to carry out and coordinate management procedures for timber, water, big-game, range livestock, and recreation for these new forest situations.

We therefore request that you urge the Subcommittee on Appropriations for Interior and Related Agencies to approve funds for Forest Service research in timber management and watershed management in northeastern Oregon. In addition we urge that funds be immediately provided for design and planning of a laboratory-office to house these newly needed research workers plus the few range and wildlife research workers already assigned to northeastern Oregon.

These matters are vital to the agricultural and forest product economy of eastern Oregon. Your assistance will be greatly appreciated.

Sincerely yours,

HENRY L. SALLEE,
Chairman of the Board of Supervisors of the Elgin Soil Conservation District; Chairman of the Elgin Watershed Committee; Chairman of the Baker, Union, and Wallowa County R.C. & D. Committee.

FEBRUARY 19, 1964.

HON. WAYNE MORSE,
U.S. Senator,
Senate Office Building, Washington, D.C.

DEAR SENATOR MORSE: We again wish to bring to your attention the attached resolution passed by the Oregon Association of Soil and Water Conservation Districts at its meeting in Grants Pass, November 13–15, 1963.

As you know the OACD has supported soil and water investigations for many years. This resolution pertains to research needed in forests and ranges to assure continued production of vital water supplies and to diminish erosion of soil. We are concerned about the need for watershed management guides in Oregon, where water supplies are so essential for industrial, agricultural, and domestic growth. The Forest Service is presently conducting some watershed research in western Oregon but their force is not large enough to extend efforts east of the Cascade Range. The area east of the Cascades covers approximately two-thirds of the State and has approximately three-fourths of the public lands in the State.

On behalf of the OACD, I respectfully ask that you favorably consider this resolution and see that it becomes a matter of record in the House and Senate hearings on fiscal year 1965 appropriations for the Forest Service.

Very truly yours,

ELMER PETERSON, *President.*

PERTAINING TO ENDORSEMENT AND ACCELERATION OF SOIL AND WATER RESEARCH ON FORESTS AND FOREST RANGES OF THE PACIFIC NORTHWEST

The Oregon Association of Soil and Water Conservation Districts at its annual meeting held in Grants Pass, November 13–15, 1963, determined that:

Whereas the soil conservation district program for vast areas of both public and private timber and rangeland in the Pacific Northwest is dependent upon basic investigations of soil, water, and plant relationships on these important water source areas; and

Whereas there is need to accelerate the research program in order to better understand and interpret these relationships for better management of soil and water resources: Therefore be it

Resolved, That the OACD endorse the watershed research program of the Forest Service in the Pacific Northwest; and be it further

Resolved, That OACD through the NACD inform the Budget Bureau of their interest in this program and urge the Oregon congressional delegation to support increased appropriations for soil, water, and plant investigation on forests and forest ranges in the Pacific Northwest.

FEBRUARY 24, 1964.

Hon. WAYNE MORSE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MORSE: With reference to previous correspondence from our corporation relating to the proposed program for forest research in eastern Oregon.

Improved timber management is of the utmost importance in maintaining or expanding the timber economy in the Blue Mountains. Your continued support toward obtaining appropriations for this research program is urgently needed.

Please advise if there is anything further we can do to assist with this financial problem.

With kindest regards, I remain,
Sincerely yours,

BOISE CASCADE CORP.,
Eastern Oregon Region.
W. H. PATTERSON,
Region Manager.

FEBRUARY 12, 1964.

Hon. WAYNE MORSE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MORSE: You will recall that we corresponded with you last year about funds for construction of a U.S. Forest Service laboratory in La Grande on property set aside for this purpose by Eastern Oregon College. The laboratory

is especially important to proper development of the Forest Service program in range and wildlife habitat research for all of eastern Oregon and eastern Washington. We realize the recent drive to cut expenditures of the Government may prohibit appropriation of funds for even one-half of the proposed $500,000 falility. However we do strongly recommend that you request about 10 percent of the building cost for use this year in planning a complete and adequate structure.

You are also probably aware of the shift occuring in the lumber industry toward harvest of various types of timber stands at high altitudes and some of the numerous problems that are being encountered. Harvest of these virgin stands of true fir and other species has, for instance, created some problems of how to preserve watershed values and how to regenerate these stands after harvest. About $60,000 would be needed by the Forest Service research on the timber management problems and a like amount for research on the watershed problems. Undertaking of additional research along these lines is another reason for at least appropriating planning funds for an adequate research laboratory in La Grande.

We trust you will make appeals to the subcommittees on appropriations for the badly needed project and research.

Sincerely yours,

WILLARD K. CAREY, *President.*

FEBRUARY 13, 1964.

Hon. WAYNE MORSE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MORSE: It is our understanding that the Senate Appropriations Committee will be considering very shortly the appropriations for the U.S. Department of Agriculture and particularly those appropriations that affect the U.S. Forest Service. As you know we have a severe problem in our area in finding the proper utilization of some of our more prolific timber resources that are at the present unused.

Under these circumstances I would urge you very much to request $120,000 for forest management research and watershed research on our forest lands. This is extremely important to the economy of all of northeastern Oregon. As you will remember we have urgently requested consideration of enough funds to build the $500,000 research facility in La Grande. At the bare minimum this year should see action on a $50,000 request to carry out the necessary planning work for a laboratory, greenhouse, and office building.

I am chairman of the Northeast Oregon Tri-County group that is just completing a study of the natural resources and economic development of Union, Wallowa, and Baker Counties. This study is being completed at an estimated cost of $59,000. One of the essential points that is coming out in this study as far as these three counties are concerned is that our main raw resource is our timber and that the great unused part of this is our species that tend toward the alpine variety that cannot be used at the present. We could undoubtedly double our potential economic capacity in this area if the proper research was made. Failure to appropriate the money for this research facility in La Grande is just going to postpone the proper utilization of this resource. I urge you to do your utmost to follow these matters to a successful conclusion.

Sincerely yours,

DAVID C. BAUM,
Chairman, La Grande Industrial Development Corp.

FEBRUARY 20, 1964.

CHARLES STODDARD,
Director, Bureau of Land Management,
Department of Interior,
Washington, D.C.

DEAR MR. STODDARD: When I was in your office in September 1963, you indicated that you would like to have a position paper on the problem I mentioned concerning the level of BLM expenditures for weed control, as compared to county and State expenditures.

This letter is in reply to your request and presents information gathered by Mr. Ward Armstrong of our staff.

The control of noxious weeds is a particularly difficult problem, because weed seeds show no respect for land ownership boundaries. For this reason any weed

control program must include all lands in the State, at a similar degree of intensity, if any of the money spent is to have more than a stop-gap effect in halting the spread of noxious weeds.

The Bureau of Land Management owns 25 percent of the land in the State of Oregon. Although it is true that this Federal land is not valuable farmland, nor is it heavily populated, nevertheless it is a source of infestation for the more valuable land around it.

In a nutshell, the problem is that the Bureau of Land Management is spending approximately one-fifth as much per acre for the control of noxious weeds as the rest of the State. In fiscal year 1963 the BLM spent approximately $84,300 for the control of noxious weeds in the State of Oregon. Putting this figure on an acreage basis, this means an expenditure of $5.28 per 1,000 acres of land within the control of the BLM.

State and local governmental units, on the other hand, spent approximately $758,955 during this same period, fiscal 1963. This amounts to an average expenditure of $25.53 per 1,000 acres of land in the rest of the State not under Federal jurisdiction. It is readily apparent that there is quite a disparity in the level of weed control comparing BLM lands with State and private lands in Oregon.

The figure of $84,300 for BLM weed control expenditures is an estimate, consisting of the $23,500 budgeted plus an estimated 10 percent of the total $608,000 cost of BLM brush spraying operations in fiscal 1963.

It should be pointed out that of the $23,500 budgeted, $10,000 was given to Oregon State University for research on medusahead rye, leaving only $13,500 to be divided among the six BLM districts for direct control operations.

We are not sure how much of the $608,000 cost of brush spraying was of benefit to the weed control program, but some portion undoubtedly should be charged to control of noxious weeds (notably larkspur). After discussion with several of those working in the program, we concluded that 10 percent would be a reasonable figure.

The budgeted expenditure for weed control by county government in Oregon in fiscal 1963 was $260,312. Oregon counties have established 29 weed control districts as provided for under Oregon law. These districts employ 9 full-time and 20 part-time weed control officers.

Irrigation districts in Oregon are also developing extensive weed control programs. Information is available from 27 of the State's 55 irrigation districts and they report an expenditure of $30,627 for the control of noxious weeds during 1963.

The State department of agriculture expended $30,077 in fiscal 1963 for the control of ragweed. The Oregon State Highway Department spent $437,939 in fiscal 1963 for the control of noxious weeds and brush along road rights-of-way.

This brings the total to $758,955 expended by State and local governmental units for the control of noxious weeds in fiscal 1963. This of course does not include expenditures by farmers, private industry, utilities, or homeowners in the State, but this figure is nearly impossible to estimate. One railroad company alone, for example, budgeted $95,000 for the control of noxious weeds along its rights-of-way in Oregon during 1963.

A recital of fiscal information alone, however, gives no indication of the importance of the weed problem to Oregon's economy, nor of the urgency to take steps to stop the spread of weeds. Oregon is still primarily an agricultural State, agriculture being second in economic importance only to the timber industry. If noxious weeds cut down on the productivity of our agricultural lands the economy of the State suffers.

Oregon is an important seed-producing State, ranking first in the Nation in the raising of Merion bluegrass, chewings and red fescue, bentgrass, crimson clover, and ryegrass. This industry adds between $20 and $25 million annually to the gross farm income of the State. This industry is threatened, however, if noxious weed seed becomes mixed in with commercial seed. Under the Federal Seed Act no seed may be sold in another State if the seed contains more than certain permissible percentages of weed seeds declared to be noxious in the purchasing State.

To appreciate the urgency for doing something about the weed problem in Oregon it is helpful to look at a chart showing the spread of weeds over a given period of time. Records of weed acreages have never been very complete, nor are they today. Enough information is available, however, to indicate the alarming rate at which certain particularly noxious weeds have spread even in the past 10 years.

Weed	Acres		
	1937 [1]	1952 [2]	1963 [3]
Canada thistle	18,000	257,000	257,000
White top	5,200	20,000	30,000
Russian knapp weed	400	9,800	15,000
Halogeten	None	[4]	8,564
Tansy ragwort	Unknown	101,000	200,000
Mediterranian sage	Unknown	45,000	200,000
Gorse	Unknown	20,000	25,000
Medusahead rye	Unknown	Unknown	[5] 500,000

[1] "Noxious Weeds in Oregon": A report from the Advisory Committee on Agriculture to the Oregon State Planning Board; 1937.
[2] "Noxious Weeds in the Columbia Basin"; Columbia Basin Interagency Committee; 1952.
[3] Estimates supplied by Extension Department, Oregon State University.
[4] Less than 100.
[5] "Medusahead—A Threat to Oregon Rangeland"; Special Report No. 149; May 1963; Oregon State University, Corvallis, Oreg.

This association is on record in favor of a substantial increase in the weed control activities of Federal landowning agencies in Oregon, including the Bureau of Land Management. We believe the above data speak for themselves in support of our position. We certainly hope that this problem receives more attention at the Bureau level in submitting future budget requests, and we will do anything we can to support increases for this program.

Sincerely yours,

KENNETH C. TOLLENSA,
Executive Secretary.

OREGON WILDLIFE FEDERATION,
Portland, Oreg., January 31, 1964.

Senator WAYNE MORSE,
House Office Building,
Washington, D.C.

DEAR SENATOR: At the winter meeting of the Oregon Wildlife Federation held in Corvallis on January 10, 11, and 12, 1964, at the Oregon State University Withycombe Hall, the enclosed resolution was presented. It is our desire that you will study and consider it.

The action taken at our meeting is noted at the bottom—along with the vote tallied.

We had one of our best meetings in years, with the largest attendance—the most clubs represented and the most guests.

Thank you for your consideration on this resolution.

Sincerely,

POLLY DE TEMPLE
Mrs. Polly De Temple,
Secretary.

RESOLUTION NO. 8

Whereas the BLM (Bureau of Land Management) is administrating over 450 million acreas of our Nation's public lands, managing the land itself, grazing, minerals (gas and oil), forests, range vegetation, recreation, wildlife, soil and water; and

Whereas estimates indicate over 50 million acres of BLM lands (not including Alaska) is indicated to be of important recreational values; and

Whereas the BLM recreational outdoor planning for sites and facilities has continued, with planned sizable capital investments for recreation, with little or no money being appropriated for recreational outdoor development; and

Whereas the BLM has annually returned many millions of dollars to the U.S. General Treasury over and above the agency's yearly appropriation: Now, therefore, be it

Resolved, That the Oregon Wildlife Federation in session in Corvallis, Oreg., on the 12th day of January 1964, go on record in support of, and urging our National Congress to appropriate funds in the annual appropriation of the BLM for outdoor recreational development of sites, facilities, access, etc., making possible the complete multiple uses on BLM public lands; and be it further

Resolved, That this resolution be sent to the National Wildlife Federation meeting in Las Vegas, Nev., in March of 1964 for their approval, support, and appropriate action; and be it further

Resolved, That copies of this resolution be forwarded to the Oregon delegation to Congress, BLM, and where else deemed necessary for their support in seeking funds hereto proposed.

Submitted by:

PUBLIC LANDS COMMITTEE, OREGON WILDLIFE FEDERATION,
Fred V. Koehler, *Chairman*.

Considered by public lands committee.
Recommendation: Do pass.
Vote: Yes, 55; no, 2. Carried.

GENERAL STATEMENT

Senator MORSE. My experience of many years before this committee satisfies me that any statement a Senator puts in the record is carefully analyzed by the staff and read by the members of the committee. So I have no concern about these Oregon projects receiving meritorious treatment from this committee on the facts simply because I put this statement in the record. I need not tell you that there are some who would think I should sit here and read it, but I know that won't be necessary.

TONGUE POINT INDIAN SCHOOL

I wish to devote most of my time this morning to a discussion of the proposed Indian school at Tongue Point, and I shall supply some background information concerning Tongue Point, for the printed record to date does not contain such information. I have read and studied with great care the testimony that has been given to this committee by the Indian Bureau to date. I have studied your hearings of Friday, February 21, 1964, and the questions that the Chairman and Senator Bartlett asked Mr. Nash and the other Indian Bureau people.

This background information on the Tongue Point situation is being supplied, because I respectfully say in my judgment the Appropriations Committee has the duty to consider this request of the Indian Bureau in the light of this historic background.

TONGUE POINT NAVAL BASE

Tongue Point Naval Base, Mr. Chairman, was built as a seaplane base for the Navy during World War II. With the arrival of the jet plane it became oblolete for that use, and its deactivation was announced.

The record is perfectly clear. I was contacted immediately when the decision was reached to deactivate Tongue Point as a Navy base. I should tell the Senators on this committee it was expected by many people in Oregon that I should fight the deactivation. I did not. I studied the facts and found no quarrel with deactivating Tongue Point as a seaplane base. I have yet to vote in the Senate—and I am going on my 20th year now—to keep a Federal installation going for a purpose that has become obsolete. And there is no doubt that it was obsolete for the then Navy use.

As you recall, there were 73 installations that were deactivated, many of them smaller than Tongue Point. They were deactivated because the Defense Department found they were obsolete for their

primary purposes, and the President of the United States approved. I agreed with the President.

DEACTIVATION CREATED DEPRESSED AREA

Mr. Chairman, the deactivation of Tongue Point pulled the economic rug out from under Astoria and Clatsop County, Oreg., and put it at the bottom of the totem pole as far as depressed areas in the United States are concerned. You couldn't find an area in West Virginia or Appalachia or Kentucky or Michigan that is in worse shape than Astoria and Clatsop County. Store after store closed, hundreds of people moved out, and houses became vacant.

So I, as a Senator from Oregon, and the entire Oregon congressional delegation were confronted with a depressed area pocket. I went to the President of the United States, and I said, "Mr. President, I want you to send out someone to take a look at this situation, because you can't tell me that we can't find a Federal use for Tongue Point simply because of the nature of the facilities." You will see all this when you analyze the material that I am leaving with you this morning.

SUGGESTED FEDERAL USE FOR TONGUE POINT

There must be some Federal use for Tongue Point. This is particularly true, Mr. Chairman, and Senator Bartlett, because these are permanent facilities. I am going to leave with you this Tongue Point brochure prepared by the Astoria Chamber of Commerce. Mr. Chairman, if you could move these Federal buildings, theoretically, to Constitution Avenue in Washington, D.C., they would take their place among the other Federal buildings. These are permanent buildings. These are in excellent condition. They are going to be here for decades to come. It would be a shame to have had General Services tear down and junk these buildings.

Mr. Chairman and Senator Bartlett, there are at Tongue Point—let me say good naturedly, Navy admirals know how to build homes—there are at Tongue Point a few homes that were occupied by the top naval officers that you could move to Spring Valley in Washington, D.C. They would compare with the wonderful homes in Spring Valley. There are many, many other smaller homes of the duplex variety that would take prominent places in many of our so-called medium-class residential areas of any American city.

And so I was confronted here with a project in which the Federal Government had spent—and note my figure—somewhere between $13 and $18 million. And you say, "Why can't you tell us how much?" No one in this Government is able to tell you how much. We are trying to find out. Some of the records appear to have been lost. It is very interesting that we can't find all of these records.

HOMES AND HOSPITAL AT TONGUE POINT

I say most respectfully that the Navy overspent at Tongue Point. This became a showplace for the Navy. But it does not change the fact that the taxpayer's investments are there. We have over 400 family dwelling units at Tongue Point. We have a hospital—of course, they have taken all the equipment out—but the hospital at Tongue Point would be the equivalent of Sibley here in Washington

as far as the nature of its construction is concerned. It is not as large as Sibley, but we have a wonderful hospital at Tongue Point. We have docks and wharves, ship berths, and a railroad spur line, without a doubt, we have a great potential for a multiuse, multipurpose development at Tongue Point.

Tongue Point Turned Over to General Services Administration

As you know, President Kennedy became very much interested in the pockets of depression in this country. Tongue Point was turned over to the General Services Administration. I went through quite a battle because I found that a group of businessmen in Astoria, Oreg., were about to undertake what I characterized as a steal of Tongue Point from the General Services Administration. I received a lot of criticism from them at the time, but I proved my case. They were about to get Tongue Point for $920,000, despite the fact that we had $13 to $18 million invested in it. I happen to think the total investment is nearer to $20 million when we get all the records.

Disposal of Tongue Point

So I started an attack on the disposal of Tongue Point. The businessmen had a deal with General Services Administration under which GSA would transfer Tongue Point to the city of Astoria, and then within 30 days Astoria would transfer Tongue Point to this group of businessmen for $50,000 more—approximately $970,000.

You may recall that I made a series of speeches on the floor of the U.S. Senate disclosing what I said was a scandal. I pointed out that the General Services Administration was about to commit an illegal act; that under the law this was a subterfuge; that they had no authority to transfer property to the city as a conduit for private beneficiaries.

If the deal had gone through, what would they have done? Mr. Chairman, I am satisfied they would have dismantled Tongue Point.

I pointed out—and I was sustained by the legal counsel for the President—that the General Services Administration just couldn't do this. President Kennedy became so concerned about this—and I think if you find it necessary you ought to call some witnesses on this—that he appointed as his special assistant on the Tongue Point matter who worked on this for months, Mr. Ralph Dungan. Mr. Dungan cannot only verify what I tell you this morning, but he can supply you with many additional facts as to what he did as the representative of the President in the process of getting Tongue Point reactivated.

Reactivation of Tongue Point

On September 27, President Kennedy and Secretary of the Interior Udall and their party joined with Maurine Neuberger and myself and Congressman Duncan and Congressman Ullman—Edith Green would have been there but she had a conflicting appointment and couldn't be there—and we flew into Astoria. The President and Secretary Udall made a personal inspection of this base. I shall never forget it. The President spoke to the public there. He issued his press release—which I shall ask to have inserted in the record as part of my testimony this morning following my general statement. In this press

release he announced that Tongue Point would be taken off of the surplus property list and put back on the list of reactivated Federal property.

You will see from his statement that he verified the position that I had taken as to the importance of preserving this facility for Federal use. I can tell you—and Ralph Dungan can so testify—that in our various conferences with the President, the President found that there were many uses—Federal uses—to which this property might be put.

Many Uses of Tongue Point

The next point I wish to make, Mr. Chairman and Senator Bartlett, is that this facility will never be completely used just for an Indian school. It is too large a facility for an Indian school alone. But some department of Government has to be given jurisdiction over it for administrative purposes first. They are going to start out with an Indian school if approval is granted. But there are other facilities that can be put to compatible uses—the docks and the wharves, the warehouses, the landing strip. The President's proposal originally, as you will see from his statement, was to use it as a helicopter rescue base. But he added, in his statement:

> Early next year the Department of Defense will establish a Weapon System Acquisition Management School here at Tongue Point. This school will be jointly staffed by our military departments and will provide training for senior civilian personnel and senior military officers for all the services and the Defnese Department.

Chairman Hayden. Has it been decided that that will be done?

Senator Morse. No, this is what the press release said. The press release also noted:

> Shortly after this training begins, the Coast Guard will establish a helicopter rescue base here.

I want to point out that these are minor activities. They will make use of all those facilities that can be put to use, as Mr. Dungan will tell you if you call him up here, as soon as they can get this organized. The facilities the Indian school doesn't need will be put to other Federal uses.

Coast and Geodetic Survey Installation

The next point I wish to make, because it is a part of the situation, is one that greatly disturbed the President and Secretary of Commerce Hodges. The Oregon delegation had asked for consideration of Tongue Point for the expansion of the Coast and Geodetic Survey installation programs. This expansion will cost a huge sum of money which this committee has approved. Without the knowledge of the Secretary of Commerce, they decided to locate that expansion program in Puget Sound. The contracts were all entered into before the Secretary of Commerce became aware of it. When we were told as a delegation that everything was set, and that was the end of it, we went down to the Secretary of Commerce and protested. And he had Admiral Karo there; the admiral was then head of the Coast and Geodetic Survey. And when we got through with the presentation of our case on Tongue Point—I put it mildly, but ask the Secretary for himself—he was shocked.

The Secretary of Commerce wrote to me as senior Senator from Oregon and head of the Oregon delegation, a letter of apology for the way this matter was handled by the Department of Commerce. In fact, President Kennedy said:

Wayne, I think you are the only Senator who ever got a letter of apology from a Cabinet officer.

And the President too was concerned with it. He said:

The difficulty now is that all these contracts have been let and the appropriations approved, and we can't do anything now about locating the expanded program for Coast and Geodetic Survey in Tongue Point. But—

he said—

you were just as right about this as could be, and we have got to find another Federal use.

And so that led to the President's inspection and the President's decision.

My plea to the committee is that you have your staff or the committee itself check with Mr. Dungan about the whole history of this, and the determination on the part of President Kennedy that this project, this installation, should not be wasted.

Depressed Area Pocket

I come now to my next point. This is a poverty pocket. This is a depressed area. And we have Federal uses to which Tongue Point, within that area, should be put. I think we ought to put it to some Federal use.

That brings us right up against the Indian school proposal of the late President, and of Secretary Udall.

When we completed our inspection on September 27, we got back on the helicopter to ride to Seattle. During that whole trip to Seattle President Kennedy and Secretary Udall and I discussed Secretary Udall's recommendation to the President. He said, "I can't make a decision now, Mr. President, but I am greatly impressed." He said, "We have to build a new Indian school, we have to build an Indian school that will provide not only high school training, but we have a lot of Indian youths who, if you are ever going to really integrate them into American economic life, must have some special vocational training."

Vocational Training School

And he talked about the facilities for the development of an Indian school with vocational educational features.

May I digress a moment to say that we have also discussed—and it is a great potential, once you get these Indian school facilities developed—we have also talked about developing a vocational training school at Tongue Point in connection with the Peace Corps, both outgoing and incoming. That is, we discussed the possibility of bringing in from Asia, Latin America, and Africa certain youths whom we want to train to be community leaders with special skills—tractor skills, machinery skills, and carpentry skills.

The President was very, very much interested in that potential, too. It is still in the offing and still can come about.

But Secretary Udall said on that trip to Seattle that he thought that this was ready made for the development of the type of Indian school that they are going to have.

So that brings us now to the issue before the committee.

Recommendations for Indian School

As a result of all this, Mr. Chairman, and members of the committee, Secretary Udall did recommend this Indian school. And the Indian Bureau has submitted its recommendations to you. And that is what I wish to comment on now.

Going back, Mr. Chairman, to my discussion about the letter that I received from the Secretary of Commerce March 18, 1963, I would like to have that letter inserted in the record at the time that I was talking about.

Chairman Hayden. That may be done.

(The letter referred to follows:)

The Secretary of Commerce,
Washington, D.C., March 18, 1963.

Hon. Wayne Morse,
U.S. Senate, Washington, D.C.

Dear Senator Morse: I have reviewed in detail the decision made last year by the Coast and Geodetic Survey to locate its Northwest Pacific Ship Base and Oceanographic Laboratory in Seattle rather than Tongue Point, Oreg. I have concluded that the overall economy of the Government would have been better served if the base had been located at Tongue Point. Unfortunately, we cannot retrace our steps and revoke the contract that was entered into without my personal knowledge by GSA August 13, 1962, on behalf of the Coast and Geodetic Survey for a site in Seattle. That contract is binding and it is impossible for the Government to escape its terms.

If it had not been for your forceful presentation of the comparative advantages of Tongue Point over the Seattle location, this matter would not have been as carefully reviewed by me as it ultimately was. I may offer little comfort to you or your constituents at this late date, but it may give you some satisfaction to learn that because of the mistakes made in the Tongue Point decision, I intend to see that similar decisions in the future are more carefully made and at a much higher level than this one. I want to apologize to you for this most unfortunate incident on behalf of the Department of Commerce. I also want to apologize for the fact that you were never definitely notified that the Coast and Geodetic Survey had reached a final decision on the subject.

This was handled badly and I may say somewhat arbitrarily by Admiral Karo of the Coast and Geodetic Survey.

Sincerely yours,

Luther H. Hodges,
Secretary of Commerce.

Budget Request for 1965

Senator Morse. Now, we come to the Indian school.

As you know, the Indian Bureau recommends $2,042,000 for the Tongue Point conversion for fiscal 1965, and $2,921,000 reprograming for 1964. The Bureau's testimony stated what President Kennedy understood at the time, namely, that Secretary Udall estimated it would cost in the neighborhood of $3 million more for original construction if you built the same facility that is available at Tongue Point—$3 million more than it would cost to rehabilitate and remodel the facilities that they have there.

In your hearings, Mr. Chairman, a colloquy took place between the Chairman, Senator Bartlett, and Mr. Nash of the Indian Bureau. I quote from the hearings:

BUILDING NEW FACILITIES AND CONVERTING OLD FACILITIES

Senator BARTLETT. Commissioner Nash, how much more would it cost to build new facilities than it will cost to convert the naval facilities?

Mr. NASH. In that particular location?

Senator BARTLETT. Right there.

Mr. NASH. I would say you could not expect to build there new for less than $7,500 per seat-bed. In other words, for a thousand-child school $7.5 million instead of $5 million.

Senator BARTLETT. $2.5 million more?

Mr. NASH. Yes, sir.

Senator BARTLETT. And will the reconverted establishment be as satisfactory in every way as the new?

PREFERENCES

Mr. NASH. If we can have our druthers, Senator Bartlett, we always prefer to design and build from scratch. But we are successfully using Mount Edgecumbe, which was a Coast Guard station, for a school, although we know we are going to have to come back and ask for rehabilitation and remodeling money for Mount Edgecumbe.

We are using at Brigham City, Utah, the Intermountain School. That was not designed or built for a school but we have 2,200 students there, and are using it successfully.

Then, Mr. Chairman, you asked a series of questions in regard to maintenance cost. You said:

Is there a difference in the estimated cost of operation and maintenance between the proposed Tongue Point facility and a new school?

OPERATION AND MAINTENANCE

Mr. NASH. Yes, sir. When we took over these facilities that were not designed for school purposes, we saved a lot of money on construction costs, but the operation and maintenance cost has been somewhat higher. We estimate that the operation and maintenance at Tongue Point will run about $500,000 a year. In a school of 1,000 children, we would normally expect between $250,000 to $300,000 operation and maintenance cost.

I might add, sir, that the full facilities will not be exhausted when a thousand children are enrolled at Tongue Point. We believe that it may be possible in the course of time to develop this for another thousand children without adding greatly to the costs. The reason for that is that the Navy Heights housing development has 368 dwellings and they will not all be used for a school of 1,000 children.

And he goes on to point out that in his judgment it will cut down another thousand.

I am not going to quarrel with the figures, whatever the figures are, as the facts will show, I will stand on my figures.

MULTIPLE-USE PROGRAMS FOR TONGUE POINT

But at the beginning of my testimony this morning, Mr. Chairman and members of the committee, I pointed out that when this Indian school goes in, you haven't finished the use of tongue Point. There are other uses to which the facility can be put—multiple-use programs. When you take over the entire facility for Federal use, in my judgment you are going to find a great savings, even in excess of what Mr. Nash has indicated.

But let's put it in the worst light. Let's just take the position now that we save $2.5 to $3 million. I think you will find in the record that I have inserted here that the representation made to President Kennedy was that we would save at least $3 million, in round numbers. Just take the interest in that saving over a period of years, Mr. Chairman, and you have got about $90,000 a year there in interest saving.

I mention this because if you want to use a lead pencil on this, we have to look at every dollar that we can possibly save.

Assistance for Depressed Areas

Let's assume that there is going to be a little higher maintenance cost when all is said and done. We have to make up our mind in the Congress as to whether or not we are going to come to the assistance of these depressed areas, or just talk about coming to their assistance; whether it is in Kentucky or Appalachia or West Virginia or wherever. You have a problem in the Astoria area. As I said, it is at the bottom of the totem pole of depressed areas in the whole United States. That is the information that was submitted to President Kennedy to which he referred again and again in his conversations with Ralph Dungan and others. He had said there is no doubt about the fact that we have a terrible economic situation in Astoria.

Population of the Area

Chairman Hayden. How many people are in that depressed situation?

Senator Morse. You mean how many people are depressed?

Chairman Hayden. Yes.

Senator Morse. Including those that are still there?

Chairman Hayden. Yes.

Senator Morse. I am told that the total present population of Astoria is about 9,000 in the city itself. I would say in the Clatsop County area, which is the whole county that is in this terribly depressed area, that I would be engaging in an understatement if I said you were dealing with 15,000 to 18,000 people.

Depressed Real Estate Values

I would also point out that you are dealing with an area in which real estate values have dropped to the bottom because of the unemployment and the dependence that they had placed upon the naval base.

I am making my plea this morning, gentlemen, in support of the opportunity that this proposal gives to really come in and help a depressed area.

You can throw this one aside on the ground that you may have this problem or that problem with it, but you still haven't helped a lot of the people there.

Reprograming Effect on Alaskan Schools

Let's go to this reprograming matter. I am not one to sit here in the Senate and try to do harm to the interest of any other Senator and I don't expect that treatment on their part toward me. I was very much concerned, may I say to Senator Bartlett, as to whether or not my urging with respect to Tongue Point was going to do harm to a school that they are planning to rehabilitate and build up in Nome. All I can say is that the Indian Bureau tells me that as far as 1964 is concerned, my request for reprograming isn't going to affect that school, because they couldn't possibly, apparently for construc-

tion reasons, use that money up there until 1965, but that they have it budgeted for 1965, the school is going to go ahead in 1965. And when I found that out, I think the Senator from Alaska knows me well enough to know that I was greatly relieved that I wasn't urging something here where, with justification, it could be said that I was asking for something for Oregon that was going to be injurious to another jurisdiction that might also be in a bad economic plight.

Senator BARTLETT. I am sure that is the case.

REPROGRAMING EFFECT ON ARIZONA SCHOOLS

Senator MORSE. Then, Senator Hayden, I became concerned about Arizona. I was told about the Navajo-Hopi problem down there—they are going to have to have some school facilities down there. The reply given to me was that they are in such a litigious tangle down there that for 1964 they won't be proceeding anyway, but again in 1965 they plan to go ahead.

I was also told—and you can check the facts better than I can as an Appropriations Committee—but I was told that the facilities that the Indian Bureau is asking for at Tongue Point are going to have to be built in any event in the immediate future to supply the educational facilities that these Indian youths need, and that it is not going to affect the educational program of the Indian Bureau in regard to established schools.

So we have to make a choice as to whether or not this is a wise expenditure for all the reasons that I have testified to here this morning.

INTEGRATION OF INDIAN YOUTHS

Before I take your questions I want to say this: The old bugaboo has been raised as to whether or not Wayne Morse isn't fighting for segregation, and that this whole program is against Wayne Morse's stand on civil rights. I good-naturedly reply that those who so argue don't know their Indian law, and they don't know what the Federal statutes provide, and they don't know very much about Indian chiefs, and they don't know very much about Indian culture. They do not know that after all, Indians have rights to remain in a tribal culture if they want to. I happen to believe the sooner you can get them out of the reservation and our of the tribal culture and get them integrated, the better. But that doesn't justify our throwing a generation away, and that doesn't justify our permitting Indian youths to become juvenile deliquents and public charges. Any of us who know anything about Indian reservation problems know whereof I speak, because I have many Indians in my State.

I am fighting for the best form of integration of Indian youths, and I will tell the committee why. You prepare these youths to take their economic place in our society, and you prepare them for integration. But it they can't go out and hold jobs, if they aren't trained to hold jobs, forget about them being economically integrated in our society; they never will be, and they will continue to be the problem many of them are now.

SCHOOL DROPOUTS AND ILLITERATES

Also, don't forget that the Indian Bureau pointed out that the Bureau is dealing somewhat with some older Indian youths, school

dropouts, or those from rural areas who have reached the ages of 14 and 15 and can't speak a word of English, and to a large extent are illiterate. There must be a school for those young people.

The Tongue Point School isn't going to interfere with any Indian facility in the United States; that they assured me. I have been very careful to ascertain whether or not Wayne Morse is trespassing upon the jurisdiction of other Senators. I am satisfied that I am not; that we are dealing with a group of people, of youths who are going to have to be put in a boarding school somewhere, and brought under a considerable amount of surveillance and special training. I hope that the trade school aspects of this proposed Indian school at Tongue Point will become the dominant feature of the training, because I think that is what they need. The existing Indian schools, like the Chemawa School in my State and the schools in your State and elsewhere in the West, are doing the academic job for the Indian children who don't go to public schools. Many of them want to go to public schools, but their parents don't want them to go to public schools or won't put them in public schools, and the reservations don't supply them with the facilities that will train them.

Indian Tribes Legal Rights

And so I wanted to mention this segregation bugaboo, because there are those who want to defeat this program by saying, what we ought to do is send them all to public schools. That is fine theory, but it just can't be done. It won't solve the problem. We must not forget that these Indian tribes have their legal rights, and you can't walk into a tribe and say, this is what you are going to have to do. They have a right to get the kind of training that I am talking about.

And so long as I am in the Senate, I am going to work to provide the Indian youths with the best education that we can give them. I think this school is needed.

There are many other things I could say, but in essence this is our case, Mr. Chairman and members of the committee. I hope the Appropriations Committee will not act upon this just on a dollar and cents basis. I hope the Appropriations Committee will take into account the points that I have made here in regard to our obligation to help depressed pockets all over this country.

Social and Economic Needs

Wayne Morse is proud of one thing: In my 20 years in the Senate no Senator can show a single vote of mine in which I put the dollar sign ahead of a social need, an economic need of depressed people in any area of this country. I have fought for Appalachia, I have fought for West Virginia and Kentucky and Michigan depressed areas, and every other pocket of depressed areas that anyone has ever presented to me.

I come before you today on the merits. I think my record before this committee over the years has been one of asking you to support me only when I have a sound case. I think I have a sound case. I would be glad to take an examination on it, but I do want to read the concluding paragraphs of my prepared statement.

Domestic Conservation Needs

As the members of this subcommittee know, in the last several months I have waged a strong battle to curtail the amount of money spent under the foreign aid program. I will not reiterate my views on the improvements that can be made on this program, but I wish to emphasize that some of the savings we have made in foreign aid should be used to augment expenditures for domestic conservation needs.

The action that was taken on the foreign aid program has been of positive value to helping the President keep the entire budget below the $100 billion mark. I suggest that we consider our conservation agencies as primary agencies to receive some of the funds we have saved on foreign aid. Studies that have been undertaken show that the areas of heaviest rural poverty are also areas of the largest concentrations of Federal lands. Why? Perhaps it is because the Federal lands are either in the backwater of economic activity or because the lands held by the Federal Government have been subjected to constant abuse over a long period of time, resulting in their deterioration before intensive management benefits could be provided. The Federal Government, therefore, has a tremendous job to do in building up its public land resources, particularly the rangelands of the West.

Forest Service and Bureau of Land Management

REFORESTATION

Under the circumstances, I urge this subcommittee to estimate a reasonable amount that could be added to the budget for the following types of activities on lands of the Forest Service and the Bureau of Land Management: Reforestation, range revegetation, watershed protection treatment, and the developing of outdoor recreation facilities. Vigorous programs in these areas would be of great value. Additional work on reforestation would enable allowable cuts on the national forest and public lands to be moved upward. This in turn, would provide more timber to be converted by mills into lumber and other forest products.

RANGE REVEGETATION AND WATERSHED PROTECTION

Increased range revegetation and watershed protection would provide for a greater amount of grazing on the national forests and the BLM lands, thereby increasing the annual grazing capacity and enabling the researchers to obtain better grazing than is now possible.

It is my recommendation that an increase of not less than $20 million be allocated to the Forest Service and an increase of not less than $10 million be allocated to the Bureau of Land Management to augment the level of conservation work on the lands under their respective jurisdictions.

Appreciations for Help to State of Oregon

In closing I wish to thank the subcommittee, the full committee and the Chairman of the Senate Appropriations Committee, Senator Hayden, for many years of help to the State of Oregon and for your fairness and understanding in passing upon appropriations requests for the Forest Service, the Bureau of Land Management, the Bureau

of Indian Affairs, and other agencies within the Departments of Agriculture and Interior.

I am most appreciative of the action that you have taken over the years on requests that relate to the State that I have the honor to represent in the U.S. Senate.

Again, I thank the Chairman and members of the subcommittee for having taken time out of your busy schedule to hear my presentation this morning. And I rest my case and await questions.

Chairman HAYDEN. You have made a very impressive statement, sir.

Senator MORSE. Thank you very much.

Senator BIBLE. May I ask a couple of questions?

Chairman HAYDEN. Yes sir.

APPALACHIA OF THE PACIFIC

Senator BIBLE. As I understand the thrust of your argument, it is that Tongue Point and that area around Astoria is pretty much the Applachia of the Pacific.

Senator MORSE. It is.

Senator BIBLE. And you had said there are 9,000 people in Astoria and 17,000 or 18,000 in the area, something of that range.

Senator MORSE. Yes.

The Astoria Chamber of Commerce states that between 1960 and 1962, Astoria had a population loss of 1,354; between 1950 and 1962, the population of Astoria decreased by 5,050.

UNEMPLOYMENT

Senator BIBLE. What is the percent of unemployment? Maybe you have developed that. I should think it would be helpful to you to have it for the record.

Senator MORSE. We will supply it for the record. But it has been all this time 10 percent. But our real problem is that they are moving out, we are losing the population. And the businesses are going bankrupt, and the stores are becoming empty.

In fact, in the past few years, Astoria has lost about 2,000 population. Had these people remained, the unemployment figure would have been tremendous.

(The information supplied by Senator Morse follows.)

According to the Department of Labor, Bureau of Employment Security, the total average unemployment for Clatsop County—Astoria being the major city in Clatsop County was as follows:

	Percent
1958	10.0
1959	7.9
1960	7.0
1961	8.7
1962	7.4
1963	7.4

Senator BIBLE. I am not questioning your conclusion, I was thinking that maybe the factual background that led to that conclusion might be helpful in developing your case.

Senator MORSE. And we will supply you more statistical information on it.

OREGON INDIAN POPULATION

Senator BIBLE. How many Indians do you have in Oregon?

Senator MORSE. I do not know the total population. We have the Klamath, the Warm Springs, the Burns-Paiute and the Umatillas—we will supply that. I would guess that we probably have 10,000.

The information supplied by Senator Morse is as follows:

According to the 1960 census the total number of Indians in Oregon is 8,026. As of June 30, 1962, the Bureau of Indian Affairs estimated that there are 2,305 Indians on reservations or within the jurisdiction of reservations. The reservations are: Warm Springs, Umatilla, Burns-Paiute, and Celilo.

Senator BIBLE. And the use of this facility would be——

NATIONWIDE INDIAN VOCATIONAL TRAINING SCHOOL

Senator MORSE. I want to stress that this is not an Oregon facility, this is going to be a nationwide facility to take the special students that the Indian Bureau finds have to be boarded out, and where family conditions, reservation conditions, personal problems of the students themselves are such that they have to bring them together in boarding school arrangement for the special training they need. You just couldn't put them in an accredited public school and expect them to survive.

Senator BIBLE. I understand you point on that score. But I was wondering whether this would serve the Pacific coast area: Washington, Oregon, Nevada, Arizona, New Mexico?

Senator MORSE. It is nationwide.

Senator BIBLE. I am sorry, I missed thc original part of our statement.

Senator Morse. It is a nationwide school for this type of student.

ANTICIPATED SCHOOL POPULATION

Senator BIBLE. What is the anticipated school population?

Senator MORSE. We are starting out with a thousand, but as Commissioner Nash testified, on February 21 they hope to take it to 2,000. And I think you will find it won't be limited in the long run to 2,000, it will go beyond that.

Senator BIBLE. One last question.

Is there any comparable school in the United States to the one that you are espousing?

Senator MORSE. Not on the particular type of program that they are contemplating here. But they have testified that this kind of a school will have to be built somewhere; if you couldn't do it here you would have to have it somewhere else.

LOSS OF BASES IN NEVADA

Senator BIBLE. I am very sympathetic, Mr. Chairman. To date we have lost one base in Nevada, it looks as if we are going to lose a couple of more bases, and if there is some type of other facility that can be put in to take care of the shutdown in these areas it would be helpful, because they do pose a problem to the entire population and the economy.

Thank you very much.

Thank you, Senator Morse.

Chairman HAYDEN. Questions?
Senator BARTLETT. A question or two, Mr. Chairman.

TONGUE POINT DEACTIVATION AND DISPOSAL

When was Tongue Point deactivated, Senator Morse?
Senator MORSE. It was officially deactivated in the early part of 1961.
Senator BARTLETT. And when did General Services propose to dispose of it under the conditions which you informed the committee were intolerable.
Senator MORSE. That was early last year, I think that battle was raging around April or May.
Senator BARTLETT. Of 1963?
Senator MORSE. Yes.
Senator BARTLETT. Has the unemployment situation continued to worsen since the base was closed?
Senator MORSE. Yes, it has.

DEACTIVATION AND UNEMPLOYMENT

Senator BARTLETT. Do you know how many people were at Tongue Point at the peak? I am just trying to arrive at how many it might accommodate.
Senator MORSE. No, I do not, but I will supply it for the record. There were several thousand, but I don't want to make a guess. My guess is between 3,000 and 4,000.
(The information supplied by Senator Morse is as follows:)

The Department of the Navy indicates that in 1951 a total of 3,039 personnel were employed at Tongue Point; 2,590 were military personnel and 449 were civilian.
The Astoria Chamber of Commerce indicates that on March 25, 1952, 2,940 military and 890 civilian personnel were employed at Tongue Point. By June 1954, the totals had been reduced to 1,784 military and 436 civilian personnel.

Senator BARTLETT. It is very close to Astoria, according to the photographs?
Senator MORSE. Adjacent to the city limits.

COAST GUARD FACILITY

Senator BARTLETT. The city limits. The Coast Guard has a facility at Astoria nearby.
Senator MORSE. Not a substantial facility now, we are trying to get one in. It has a rescue base.
Senator BARTLETT. Do they have their own establishment?
Senator MORSE. They use one corner of the base.
Senator BARTLETT. I have been wondering why this was sought by way of reprograming instead of by way of a submission in the 1965 budget. But I think you have explained that. At least I inferred it was desired that this be hastened to meet the unemployment problem.
Senator MORSE. That is right.
Senator BARTLETT. I have no more questions. Thank you.

INDIAN STUDENT NEEDS

Senator MORSE. I should also mention Secretary Udall's statement to the President in the conversation I was telling you about. Due to the needs, the special needs of these special Indian students, he thought they ought to hurry it up.

Senator BARTLETT. I do want to correct the record at one point. It is my understanding that the Indian Bureau had planned to build the dormitory at Nome in the summer of 1965.

TONGUE POINT INDIAN SCHOOL EFFECTS ON OTHER STATES

Senator MORSE. I want whatever the facts are, Senator, I want them in the record. You know how we worked in the Senate. I simply said to the Indian Bureau—and knowing me, you know I would say it—I said, "I want to know if I am going to be hurting Senator Bartlett or Senator Hayden or any other Senator from any other State where there is a large Indian population. They proposed the Indian school to me, and I said, 'Fine, if you can use it as an Indian school, but I want to know what the effects of it are going to be on other States.' "

And then I got the argument that I presented this morning, that this kind of a special facility has to be built some place. And all I can say is that it is my understanding that for various reasons they weren't going to be able to use much of the reprograming money in 1964, but to whatever extent they were I want the record to show.

Senator BARTLETT. And that may be a statement of literal fact. I was just trying to produce for the record my understanding.

ECONOMY IN FOREIGN AID

Senator BIBLE. Just one closing observation. I couldn't agree with my distinguished friend from Oregon more as to one fine area that we might promote economy; and that is in the foreign aid field. I have no problem at all in trying to help those in the United States in areas such as he describes before we help somebody overseas. And I think I heard him speak yesterday on South Vietnam and certain other trouble spots of the world. And they pose problems. But they also cost a lot of money. And I think where we are up to some hard choices economywise that there isn't anything un-American about changing the American position.

Senator MORSE. It makes it very difficult for me, Senator Bible. I want to help my Government in doing the essential thing in foreign aid, and always have. I think we have overextended ourselves. But I can't meet the arguments back home. If we have a depressed area in Astoria—we have it in other places but particularly Astoria—they say, "What do you mean trying to help some depressed area in Pakistan when you have all these Oregon people out of work; how do you expect we are going to raise the taxes to help the people in Pakistan without strengthening our own economy?"

I think it is an understandable argument.

STRENGTHENING OUR ECONOMY

Senator MORSE. I am going to do what I can to bring about great savings in the program to benefit our own economy and do just the essentials in foreign aid and no more.

Senator BIBLE. The voice of the senior Senator from Oregon, as we all know, is a strong voice, and I think he knows my position on this problem.

Senator MORSE. You have been very helpful to me.

DEPENDENCY ON FISHING INDUSTRY

Senator BARTLETT. May I say, I sympathize, having as I do a particular interest in the commercial fisheries. I know Astoria has been largely dependent upon the taking and packing of salmon. The new building activity on the Columbia has caused this industry to diminish in size and volume, with resulting unemployment. Here we have a region that ought to be highly productive, in which you ought to have no unemployment, one of the most beautiful spots in the world and yet it is depressed. I want to do everything I can to help.

Senator MORSE. It is the fishing industry that is one of the principal activities supporting the economic life of Astoria. They depend upon it very much. But as you say, it is going down.

My assistant, Mr. Berg, points out that they import a lot of frozen tuna and pack it in Astoria. And those packing plants are supplying a considerable amount of employment, but not enought to take care of anywhere near the need.

You have been very gracious, Mr. Chairman.

Thank you very much.

Chairman HAYDEN. Senator Boggs.

If you have a prepared statement you may include it in the record.

SURF CLAM RESEARCH IN THE BUREAU OF COMMERCIAL FISHERIES

STATEMENT OF HON. J. CALEB BOGGS, U.S. SENATOR FROM THE STATE OF DELAWARE

SUPPORT FOR THE RESEARCH PROGRAM

Senator BOGGS. With your permission, I would like to have the prepared statement included.

(The statement referred to follows:)

Mr. Chairman, I appreciate very much the opportunity to appear this morning in support of the proposal to undertake surf clam research in the Bureau of Commercial Fisheries in the Department of the Interior.

Senator Case, of New Jersey, has already indicated the necessity for moneys to undertake this vitally needed research and I would like to give my wholehearted support to his statement and add just a few personal comments.

The Atlantic coast surf clam fishery currently produces approximately 30 million pounds of raw clam meat per year. Surf clams are known to occur in coastal waters from Newfoundland to the Gulf of Mexico. However, populations of sufficient density to support commercial fishing activities have been located only along the shores of Long Island, N.Y., and off New Jersey. Most of the fishing is conducted approximately 15 to 25 miles southeast of Point Pleasant at

depths ranging from 60 to 90 feet. There are about 30 vessels engaged in the New Jersey surf clam fishery.

The problem, Mr. Chairman, being faced by the industry is such that productive beds are rapidly being fished down to a point where they no longer can support profitable fishing. The heavy exploitation of the species. which is slowgrowing and has a low replacement rate, is resulting in rapid depletion. Knowledge is is required, Mr. Chairman, on the life span of the surf clam, the age when they first enter the commercial fishery, the ages that are important to the fishery, the annual rate of recruitment, and the growth rate before and during their period of economic importance.

Senator Case has submitted to surf clam research proposal which outlines in detail the various areas of research which are needed in order to maintain this vital fishing industry.

While most of the fishing is done off the New Jersey coast, the impact on the demise of this industry in my State of Delaware would be substantial since one of the large packing plants for surf clams is located in Lewes, Del., and employs approximately 200 persons.

I understand, Mr. Chairman, that the Bureau of Commercial Fisheries is in agreement that research in this area is needed and that there is a definite threat of depletion of the clambeds. For these reasons, I desire to go on record as supporting an additional $230,000 for the Bureau of Commercial Fisheries for sea clams research in fiscal year 1965.

Again, Mr. Chairman, may I express to the committee my appreciation for the opportunity to appear this morning and I would hope that the committee would give consideration to the inclusion of this item in the appropriations for the Bureau of Commercial Fisheries.

NEW INDUSTRY DEVELOPMENT

Senator BOGGS. Mr. Chairman and members of the committee, I do appreciate your kindness in permitting me to appear here this morning in behalf of the proposal to undertake surf clam research in the Bureau of Commercial Fisheries.

I know that the distinguished Senator from New Jersey has already provided for the record a letter and information concerning this research proposal for surf clams. I would just like to basically support that.

Chairman HAYDEN. This is something that has not been done before?

Senator BOGGS. That is right, Senator. It is a relatively new industry discovered and developed within the last 20 years.

Chairman HAYDEN. And there is no doubt but that there is a large area in which this work, can be carried on?

Senator BOGGS. I think, so. I think it would run really from Newfoundland to the Gulf of Mexico on the east coast. It has grown to be about a $10 million industry. In the small State of Delaware there is one packing plant there that employs approximately 200 people alone, not including the boats and the people that work on the boats.

So I want to commend the Bureau of Fisheries in being interested in it and starting in a small way. And I just wanted to add my support to the Bureau of Fisheries, to the industry which is cooperative, and to the Senators from the other States who recognize the importance of this and who are calling it to the attention of your committee, and I appreciate whatever consideration the committee has been able to give to it.

Chairman HAYDEN. Thank you.

Senator BARTLETT. Is this a budget item?

BUDGET REQUEST

Senator BOGGS. It was not in the budget request. This is a proposal that has been recommended by the industry, and it is under consideration by the Bureau of Fisheries. I understand previous testimony by Mr. McKernan indicated that if this request were granted the Bureau could wisely and usefully use it.

Senator BARTLETT. $230,000?

Senator BOGGS. Yes, sir.

Senator BIBLE. And is that supported? Do we have information that explains what the $230,000 will do?

Senator BOGGS. Yes. It has been submitted by Senator Case, of New Jersey, and Mr. McKernan, of the Bureau. And I suppose they would provide additional information upon request.

JUSTIFICATION

Senator BIBLE. Justification for the $230,000?

Senator BOGGS. That is right.

Senator BIBLE. My understanding is that it has not been physically put into date, but undoubtedly they will make a later submission. My only point is that the committee should have before it as to why any $230,000 or $150,000 or some other amount—Mr. Eaton, of the staff, says that he understands that we will have it, but I would suggest that you follow that through.

Senator BOGGS. That is my understanding, and I will follow it through.

Senator BIBLE. As of now we don't have it.

Senator BOGGS. Thank you very much.

ITEMS RELATING TO THE BUDGET REQUEST

STATEMENT OF HON. ERNEST GRUENING, U.S. SENATOR FROM THE STATE OF ALASKA

SUMMARY OF STATEMENT

Chairman HAYDEN. Senator Gruening.

Senator GRUENING. Mr. Chairman and members of the committee, I would say that with all this talk about improving Senate procedures there is one point that we can never improve, and that is the law of physics that provides that a person cannot be in more than one spot at the same time. I am supposed to be chairing the Subcommittee on Public Lands of the Interior Committee to hear the very important bill to create the Indiana dunes. The room is packed up there, and people are standing outside.

Likewise, at 10:30 I am supposed to attend a meeting of the Mexican Interparliamentary Union. Our Mexican friends are senstitive and their feelings might be hurt if we were not there. It is really quite a problem to have so many simultaneous official commitments.

I have a long statement which, if agreeable to the committee, I will submit for the record, and merely touch on the highlights.

Chairman HAYDEN. That will be agreeable.

(The statement referred to follows:)

STATEMENT OF SENATOR ERNEST GRUENING

Mr. Chairman, the Department of the Interior's budget for fiscal year 1965 includes a request of $35,712,664 to be spent in the State of Alaska. The U.S. Forest Service budget request for Alaska for the same period is $5,842,300.

These are sums which, if approved, will add substantially to the development of the 49th State. I am pleased to have this opportunity to appear before the Senate Appropriations Subcommittee on Interior Department and Related Agencies to comment specifically on certain items in the budget.

However, first I want to commend the subcommittee for its laudable work last year in resolving the dilemma as to how should cadastral surveys be made in Alaska by the Bureau of Land Management. As my good friend and colleague, Senator Bob Bartlett has told you, the surveying now appears to be proceeding with welcome vigor. New techniques utilizing helicopters and cameras have speeded the work. The State government has not advised the Alaska congressional delegation of any problems with this improved type of program, and I can assure the subcommittee that we are in constant touch with State officials.

Historians of the future will, I predict, comment on this positive action taken by the Senate Appropriations Committee on Interior Department and Related Agencies to help Alaska select the 103.5 million acres of Federal land allotted it under the statehood act. With but 25 years in which to make the selection of land totaling approximately the State of California, the urgency for speed was obvious.

The cadastral surveys necessary were behind schedule and the Bureau of Land Management had announced in early 1963 its intention to cut back further the cadastral surveys in the State. The situation presented was intolerable. Action was needed and the situation was brought to the attention of the subcommittee by my colleague Senator Bob Bartlett and myself.

By direction in its report on the fiscal year 1964 budget, this subcommittee and later the full Senate Appropriations Committee, and in due course the com mittee of conference, cut a 20th century Gordian knot of insurmountable entanglement.

The committee report No. 181 expressed committee concern with the complaints "relative to surveys of Alaskan land selections."

Section 6(g) of the statehood act specified:

"Where any lands desired by the State are unsurveyed at the time of their selection, the Secretary of the Interior shall survey the exterior boundaries of the area requested without any interior subdivision thereof, and shall issue a patent for such selected area in terms of the exterior boundary."

When I testified last year the Bureau of Land Management and the State of Alaska appeared to be locked in endless combat as to what constituted a proper survey.

To its everlasting credit, this subcommittee listened, researched the problem, and acted. We of Alaska thank you.

The committee report to which I have referred said:

"A reading of the statute and the committee reports on the legislation which was enacted into law leads to the clear and definite conclusion that Congress intended that so long as the State selections meet the specifically stated requirements of the act there should be an exterior boundary survey of each land selection made by the State of Alaska.

"Therefore, the committee directs that the Secretary of the Interior cause surveys of Alaskan land selections made under the terms of Public Law 85–508 (the Alaska Statehood Act) to be executed in compliance with this report. It is also the desire of the committee that the Department proceed as promptly as possible with the surveys in order that the time limitations of the act admitting Alaska to the Union will be met."

To speed work on the Alaska cadastral surveys the committee added $300,000 over the budget estimate for cadastral surveys in Alaska. That amount was retained by the conferees who also agreed, "* * * that the directive included in the report of the Senate committee with regard to surveys of Alaska land selections made under the terms of the Alaska Statehood Act (Public Law 85–508) will be satisfied by surveys of the exterior boundaries of full townships (even if composed of as many as four land selections) with monumentation at an average of 2 miles around the perimeter."

The fiscal year 1965 budget request of the Bureau of Land Management includes $1,960,000 for cadastral surveys in Alaska which I support. I am advised that the BLM, through the use of advanced methods such as tellurometer and

Hoversight, can survey almost twice the area as possible with electronic equipment and five to six times the area surveyed by teams working on the ground.

I do suggest that the subcommittee—if it has not already done so—from time to time ask for specific progress reports on the extent of acreage surveyed and accepted by the State. It would be unfortunate if the wise direction of the subcommittees were thwarted, either unwittingly or otherwise.

Since my comments thus far have dealt specifically with the Bureau of Land Management, it seems easier to complete my testimony of this particular agency budget at this time.

Forest fires have for too many years burned unchecked through Alaskan forests. Therefore, it is with pleasure that I find that the BLM forest protection program in the State has cut that acreage lost by 80 percent or from 1 million acres to an estimate 200,000 acres since its inception in 1957. The BLM has requested $400,000 to initiate construction of new State fire control facilities. Existing facilities at Elmendorf Air Force Base are unsuitable. I am told that the Air Force would like to have BLM move, that the Bureau wants to move, that the present location is bad, and that maintenance costs are high.

New quarters seem desirable and sought by all concerned.

Total cost of the facilities is estimated at $1.1 million over a 3-year period. If, as has been asked by Senator Bartlett, this construction can be done in less time with the resultant saving of the taxpayer's money, I hope the subcommittee will approve an increase in the Bureau's requested amount of $400,000.

NATIONAL PARK SERVICE

Ralph Waldo Emerson has written, "In the woods we return to reason and faith," and John Muir in 1898 wrote:

"Thousands of nerve-shaken, overcivilized people are beginning to find out that going to the mountains is going home; that wildness is a necessity; and that mountain parks and reservations are useful not only as fountains of timber and irrigating rivers, but as fountains of life."

Muir's words ring true today—66 years later. The only change I would suggest is the substitution of the word "millions" for the word "thousands," for according to the National Park Service an estimated 102 million persons will visit our national parks and monuments in 1965. In 1956 the figure was 54 million and in 1946 the visitor figure was approximately 22 million. The 1936 figure was nearly 12 million.

Yes, National Park Service, use—and concomitantly the expense of operating and improving our parks—is increasing. I support the budget request as it has been sent to this subcommittee with Bureau of Budget approval by the National Park Service.

The President's National Park Service budget for Alaska includes $1,116,800 for Glacier Bay National Monument. This amount would include the cost of a lodge building, $447,800; two three-bedroom residences, $94,000; an equipment storage building, $54,000; a materials storage building, $18,000; boat fueling facilities, $12,000; a 50-passenger cruise boat, $176,500; grounds improvement, $18,000; a communications system, $11,000; a water system, $240,000; and a sewer system, $10,000.

On earlier occasions I have described to the subcommittee the remarkable baeuty of this nearly 2.3 million acre monument with its boundaries less than 50 air miles from Juneau. John Muir and the Reverend S. Hall are credited with discovering Glacier Bay in 1879. Freeman Tilden in his book "The National Parks: What They Mean to You and Me" has written, "* * * here on the coast of southeastern Alaska, is the unrivaled place to see the life of the glacial ice on our continent. The glaciers of Mount Rainier and Glacier National Parks are impressive, but it is in Alaska that they may be studied and enjoyed on the grandest scale. For these glaciers come down to the sea, and when the great cliffs, some as tall as a building of 25 stories are broken off and sent crashing into the ocean, they put out a circle of immense waves and fill the tidal inlets with thousands of drifting bergs. Here, in the 20 tremendous glaciers and others of lesser but still great size, may be viewed all stages of activity—the fast moving ice, the slowly moving ice, the slowly dying glacier."

Geologists report that around 1700 an icecap at least 3,000 feet thick covered Glacier Bay. To a large extent the glacial ice has remained because of temperature and snowfalls. Today, John Muir's cabin is some 15 or miles from the present face of the glacier which bears his name. The forest has moved in where it can and it seems improbable that more dense thickets of alder abound anywhere.

The pristine beauties of Glacier Bay National Monument have been sheltered for far too long.

Here are monumental, snow-covered mountains which climb directly from the sea to heights of 10,000 to over 15,000 feet;

Here are emerald-green, Alpine-like pools viewed only by mountain sheep, bald or golden eagle, or the lucky visitor who is airborne;

Here are vast expanses of glacial ice which stretch as far as the eye sees even into Canada, and which in width are many miles;

Here are beauties of such size and grandeur that one wishes he could reach out and suddenly bring them before the eyes of all men.

The National Park Service proposes to do this.

The committee will recall that when I appeared before it last year, I said that the southeastern Alaska ferry system would make access to the monument easier. Information I have received from the State of Alaska's division of planning and research of the department of economic development and planning shows the remarkable use of the new Marine Highway in its first year. The use figures the first year are those anticipated in the fourth year. For example, 16,098 passengers disembarked at Juneau during the months of April through September, and in the same period 15,585 passengers embarked.

More important, perhaps, is the passenger figure of 15,699 embarking at Prince Rupert, British Columbia, where the Marine Highway starts, during the same period, and the 10,576 passengers disembarking at Haines, the city from which runs the Haines Cutoff connecting southeastern Alaska with the Alaska Highway and subsequently the interior of the State.

The subcommittee may ask if these travelers are interested in seeing Glacier Bay National Monument. Let me quote from some of the letters and wires I have received this year.

According to the Juneau Chamber of Commerce manager, Mr. Robert A. Wells, the chamber, local travel agents, and visitor information desks have received hundreds of inquiries each summer from people wishing to visit Glacier Bay. Manager Wells says the present lack of lodging plus eating facilities keeps them away because few have camping gear.

The chamber feels that lodge facilities would substantially lower present expensive boat and air charter services to the monument. Says Wells: "Without lodging there will be many more disappointed Alaska visitors each year."

The president of Alaska Coastal-Ellis Airlines, Mr. S. B. Simmons, wired me that his company has received "increasingly numerous inquiries regarding sightseeing charter flights this area (which) indicates growing interest. Believe accommodations plus cruise boat in bay would receive high summer utilization. Unique combination scenic tidewater hotel site in close proximity to seaplane ramp and jet-capable airport provides ideal transportation facilities."

Mr. Simmons says his airlines "could easily provide increased scheduling into Bartlett Cove to handle additional traffic."

The general manager of the Alaska State Chamber of Commerce, Mr. Don Dickey, confirms that the State chamber supports appropriations to provide tourist lodging at Glacier Bay. He says:

"Last year Alaskan businessmen have invested $6 million and added 375 new or improved accommodations in anticipation of growing tourist travel. Urge this Government action to keep abreast of Alaska expanding tourist industry."

The actual count of visitors in Glacier Bay in 1962 was 1,066. The number in 1963 was 845, but this count is not accurate.

The superintendent of the monument lost one of his two park rangers in midsummer, and inadequate travel funds kept the remaining ranger in the Bartlett Cove area nearly all the time.

On February 15, 1964, Superintendent L. J. Mitchell wrote:

"Even under normal circumstances, we can hope to contact only a small percentage of visitors. We have the services of two rangers to cover this area which is roughly one-third the size of the State of Maryland and nearly twice the size of Delaware. All travel is by boat, air, or cross country afoot except for the short access road leading from Gustabus Airport to Bartlett Cove * * *.

"Judging from the number of visitors arriving at Bartlett Cove, there has been a real 35-percent increase in travel to the park, not a decrease as is indicated by official statistics."

In response to my question, Superintendent Mitchell stated:

"Volume of mail inquiries, as well as individual contacts at the Juneau office indicates that there are many interested in visiting Glacier Bay. Because of the lack of public use facilities and transportation within the park, our response to inquiries would discourage all but the most persistent.

"We have no record of the number of informational folders mailed each year in response to inquiries for general information. However, the number mailed would amount to several thousand. We did prepare individual mail replies to 113 inquiries for special information not included in regular informational material."

The Juneau, Alaska, Daily Alaska Empire of May 26, 1963, contained an informative article entitled "Sleeping Giant of Alaska Visitor Potential Awaits Development." The story carried a quote by our distinguished colleague, Senator Harry F. Byrd, of Virginia, who is reported to have said after visiting Glacier Bay:

"I have visited every place in the world where they claimed to have scenery. This is the most sparkling and beautiful piece of scenery I have ever seen."

Earlier in the year on April 7, 1963, the Empire quoted editorially on the need to expand facilities at Glacier Bay National Monument. A pertinent part follows:

"Of course, the visitor count at Glacier Bay is low. There's no access except in extraordinary circumstances, no way to see the sights, no place to stay, no place to eat. The whole idea is to make it possible for people to visit what one eminent Senator has called the world's grandest scenery and the former associate director of the National Park Service has called the outstanding unit of the entire U.S. national park system. If Americans find they can visit Glacier Bay, they'll visit it, even if they have to travel thousands of miles."

Mr. Chairman, I will not read further from the editorial nor from the correspondence to which I have referred. I do request that the full text of the correspondence and newspaper material be made a part of the hearing record at this point in my remarks to permit the subcommittee and others who are interested to read them.

EXHIBITS RELATING TO FACILITIES PROPOSED FOR GLACIER BAY NATIONAL MONUMENT

EXHIBIT A

LETTER FROM DONN HOPKINS, DIRECTOR, DIVISION OF PLANNING AND RESEARCH

JUNEAU, ALASKA, *February 14, 1964.*

Hon. ERNEST GRUENING,
New Senate Office Building, Washington, D.C.

DEAR SENATOR GRUENING: Mr Morris Ford asked me to give you information on the number of travelers who used the southeast Alaska ferries during 1963, and any other information which might be of value in estimating the use that will be made of the lodge and other facilities proposed for Glacier Bay National Monument.

A summary of passengers and vehicles embarking and disembarking at Prince Rupert and southeast Alaska ports is enclosed.

Preliminary results of a traveler survey being conducted by this division, which appear to be relevant, are also given. This survey is designed for travelers leaving Alaska, and estimates given are for those persons who left the State during the 4-month period. May through August 1963.

MAY THROUGH AUGUST 1963

A total of 146,151 persons departed Alaska; 102,000 of these, or 70 percent, were tourists, either vacationers or persons who visited friends or relatives, or both.

Twenty-one percent of the tourists had been to Alaska before.

Sixty-eight percent said they planned to return to Alaska.

Eighty-five percent of the State ferry passengers disembarking at Prince Rupert were tourists.

During the same months, 13,737 cruise ship passengers visited southeastern Alaska. Information is not available on air travelers to southeastern.

When asked what additional information they would have liked, 24 percent of the tourists wanted more information on "remote places." This would seem to indicate a substantial interest by the public in visiting places like Glacier Bay.

Very truly yours,

DONN HOPKINS, *Director.*

TELEGRAM FROM ROBERT A. WELLS, MANAGER, JUNEAU CHAMBER OF COMMERCE

JUNEAU, ALASKA, *February 16, 1964.*

Hon. ERNEST GRUENING,
U.S. Senate,
Rm. 4106, New Senate Office Building,
Washington, D.C.:

Juneau Chamber wishes to stress need for visitor lodge in Glacier Bay National Monument. Local travel agent, local charters services, and our own visitor information desks all receive hundreds of inquiries each summer from people wishing to visit Glacier Bay. Lack of any overnight facilities cause most of them to be disappointed since few are equipped with camping gear. Without overnight facilities boat charter operators are limited to number of persons they can sleep aboard thus increasing cost of transportation to Monument. Lack of eating facilities forces air charter operator to offer short trips only. Lodge facilities would enable both boat and air charter services to offer much lower cost travel to Monument and provide the visitor with base from which he can enjoy Glacier Bay. Without lodge there will be many more disappointed Alaska visitors each year.

ROBERT A. WELLS,
Manager, Juneau Chamber of Commerce.

EXHIBIT C

TELEGRAM FROM S. B. SIMMONS, President, ALASKA COASTAL-ELLIS AIRLINES

JUNEAU, ALASKA, *February 15, 1964.*

Senator ERNEST GRUENING,
U.S. Senate,
4106 New Senate Office Building, Washington, D.C.:

Strongly urge Government construction tourist facilities Bartlett Cove, Glacier Bay, Alaska. Increasingly numerous inquiries regarding sightseeing charter flights this area indicates growing tourist interest. Believe accommodations plus cruise boat in bay would receive high summer utilization. Unique combination scenic tidewater hotel site in close proximity to seaplane ramp and jet-capable airport provide ideal transportation facilities. Alaska Coastal-Ellis Airlines currently serving Gustavus/Icy Straits area year round with twice-daily scheduled flights from Juneau, and could easily provide increased scheduling into Bartlett Cove to handle additional traffic.

S. B. SIMMONS,
President, Alaska Coastal-Ellis Airlines.

TELEGRAM FROM DON DICKEY, GENERAL MANAGER, ALASKA STATE CHAMBER OF COMMERCE

JUNEAU, ALASKA, *February 18, 1964.*

Senator ERNEST GRUENING,
4106 New Senate Office Building, Washington, D.C.:

Alaska State Chamber of Commerce supports the appropriation to provide tourist lodging at Glacier Bay. We urge your efforts to retain $1,160,000 proposed for this purpose. Last year Alaskan businessmen have invested $6 million and added 375 new or improved accommodations in anticipation of growing tourist travel. Urge this Government action to keep abreast of Alaskan expanding tourist industry.

DON DICKEY,
General Manager, Alaska State Chamber of Commerce.

EXHIBIT E

LETTER FROM L. J. MITCHELL, SUPERINTENDENT, GLACIER BAY NATIONAL MONUMENT

DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
SITKA & GLACIER BAY NATIONAL MONUMENTS,
Juneau, Alaska, February 15, 1964.

Hon. ERNEST GRUENING,
U.S. Senate, Washington, D.C.

DEAR SENATOR GRUENING: This will acknowledge the telephone request from Miss Olsen of your office and provide information which she requested.

My letter of May 10, 1963, gave you information requested relative to method of visitor count in this area. I indicated to you at that time that I did not consider visitor count statistics in this area valid, nor indicative of actual conditions. I said that the count obtained, better reflected the opportunity which the park staff had to make count contacts, rather than actual visitation. An analysis of visitor count for the past 2 calendar years is an excellent demonstration to support my contention that the statistics show more contact opportunity, rather than visitation to the park:

	1962 calendar year	1963 calendar year
Total visits (by actual count)	1,066	845
Total visitor-days (by actual count)	1,577	2,132
Estimated number observed in park waters inside Glacier Bay aboard boats who could not be added into count under criteria	1,828	935
Estimated number observed in park waters in coastal section of park who could not be counted under criteria	1,513	1,091

Comparison of the 2 years reflects that:

1. Loss of one of our two rangers in midsummer, and subsequent difficulty of filling the position at this area, cut our opportunity for contact of visitors by a great deal.

2. Severe restriction on amount of funds used for travel was imposed by Congress beginning in July. This practically eliminated mobility of the one remaining ranger, so that nearly all count was made at or near Bartlett Cove, the headquarters for the park.

Even under normal circumstances, we can hope to contact only a small percentage of visitors. We have the services of two rangers to cover this area which is roughly one-third the size of the State of Maryland and nearly twice the size of Delaware. All travel is by boat, air, or cross country afoot except for the short access road leading from Gustavus Airport to Bartlett Cove.

In review of the above count tabulation, the 1963 total visits number represented almost wholly those who stopped at Bartlett Cove, where the 1962 number included those contacted in outlying areas of the park. The reduced numbers observed in the bay and along the coastal portion of the park in 1963 is directly attributable to the infrequent movement of rangers on patrols, and to lack of rangers to carry out patrols. We are still convinced that the number of visitors contacted (and thus counted) is somewhat proportionate to the number of personnel we have in this area, and to the rate of mobility of these employees.

Judging from the number of visitors arriving at Bartlett Cove, there has been a real 35-percent increase in travel to the park, not a decrease as is indicated by official statistics.

Volume of mail inquiries, as well as individual contacts at the Juneau office indicates that there are many interested in visiting Glacier Bay. Because of the lack of public use facilities and transportation within the park, our response to inquiries would discourage all but the most persistent.

We have no record of the number of informational folders mailed each year in response to inquiries for general information. However, the number mailed would amount to several thousand. We did prepare individual mail replies to 113 inquiries for special information not included in regular informational material.

We are enclosing a copy of our May 10 letter, in case you may not have retained that in your files.

We sincerely hope that the information included above will be of assistance to you.

Sincerely yours,

L. J. MITCHELL, *Superintendent.*

SITKA AND GLACIER BAY NATIONAL MONUMENTS,
Juneau, Alaska, May 10, 1963.

Hon. ERNEST GRUENING,
U.S. Senate,
Washington, D.C.

DEAR SENATOR GRUENING: I am very sorry that I was unable to more fully answer your questions regarding visitor count methods in Glacier Bay National Monument during our recent discussion aboard the MV *Malaspina.*

Since returning to the office I have had an opportunity to refresh my memory by review of the files and perhaps can give you a more complete picture in this regard.

There has always been difficulty in counting visitors to Glacier Bay National Monument. Its 3,600 square miles of area is covered by two rangers, who obviously can observe only a small percentage of visitors entering the monument. The fact that visitors can enter by boat or float airplane anywhere along about 1,000 miles of coastline is contrasted to most parks and monuments where access is restricted to highway entrances, usually where checking stations are located. There are, of course, no highways making Glacier Bay accessible by car. Under these circumstances the two rangers, judging by the number of boats and aircraft observed in the area, made estimates (always carefully conservative) of the number of visitors to the monument. This method was used until 1959 when a new count method was begun. The last year's count using this method was 5,130 visitors.

In 1959 the National Park Service instituted a count method more or less standardized throughout the Service areas. This was devised to provide comparability among parks for purposes of reflecting for each park the size, character, and pattern of workload imposed, and the impact on the park by visitors. Thus, estimates were no longer acceptable. The first year's count under this new system for Glacier Bay was 1,340 visitors.

Present criteria for counting visitors is essentially as follows:

1. Visitors, to be counted, must be ashore or using park facilities when observed by park staff (two rangers). Thus, regardless of the number of boats or aircraft observed on waters within the monument, no count can be made unless the persons aboard are observed ashore.

2. Visitors may be counted only if they directly exert a perceptible workload upon the park staff, or upon facilities.

While we are currently making an attempt to improve the method for this particular area, there are a number of faults that render the above criteria of limited use.

(*a*) The number of visitors counted is roughly proportionate to the number of staff we are able to keep in the field and upon the mobility of that staff. An ability to keep our rangers mobile increases visitor count. Restriction of travel within the area, which frequently occurs, decreases visitors count. We are satisfied that increase of staff from the present two to three rangers would show an increase of about 50 percent in visitor count.

(*b*) Lack of a developed visitor use site within Glacier Bay National Monument provides no incentive for visitors who might be counted to come ashore. For example, during June, July, and August of the first year using the new count method, there were over 4,000 that entered the monument by steamship alone. Yet, during the same 3 months we reported a total of only 514 visitors entering the monument under the new criteria.

(*c*) The two rangers are kept busy with duties connected with resource management and protection, research, and administrative work, and since these duties require very long workweeks (contributed time for all over 40 hours per week), they have a tendency to overlook the importance of counting visitors, with the result that many are missed.

You asked me specifically about the effect on accessibility of the monument created by the lack of visitor facilities.

It is my personal opinion that visitor accommodations are the key factor in making this area accessible. The entrance to Glacier Bay at Bartlett Cove is 90 miles from Juneau, which is the nearest city where boats, fuel, and supplies are available, and the main arm of Glacier Bay is 60 miles in length. Ordinarily

a visitor wishing to see Glacier Bay has to charter a boat from Juneau and travel a minimum of 300 miles on a round trip, involving at least 3 days' travel to see even a portion of the monument. With no boat fuel available at Glacier Bay, a charter boat must be of the size that can carry its own fuel for a trip of 350 to 400 miles. It becomes obvious at once that only yacht owners, and the better-well-to-do visitors can enjoy seeing Glacier Bay.

It has long been apparent that to permit family vacations to Glacier Bay certain facilities would need to be provided. These would be a lodge, where beds, meals, and supplies would be available; a boat which would operate from the lodge at Bartlett Cove into the bay on day cruises; facilities for the sale of boat fuel; and a taxi or bus service between the Gustavus Airfield (10 miles distance) and the lodge.

These facilities would permit visitors to arrive via scheduled air service, stay at the lodge, engage in fishing and hiking locally, and take cruises into the bay. With this in mind we issued a prospectus inviting private business to provide the facilities, but not a single proposal was received because of the record of such small visitation.

Prospective visitors to Glacier Bay have for many years faced a classic chicken-and-egg impasse, where facilities could not be built because of the relatively few visitors of record, and where visitation could not increase because of no facilities to accommodate them.

Finally we were successful in being able to budget construction of some rather modest facilities, including a small lodge, a 50-passenger tour boat, and boat fuel facilities, for fiscal year 1964. According to local news media, however, these facilities have been eliminated from the budget by the House Appropriations Committee, for the reason that travel records to this area show only some 1,100 visitors per year.

We have never been able to answer inquiries with encouragement to visit Glacier Bay. We must, in fairness, point out to prospective visitors in effect, that unless they have independent means they should not undertake travel to this area. That to travel beyond Juneau they would have to be independent of any facilities whatever.

Glacier Bay National Monument has been said by many to be the most scenically spectacular of any of the national parks and monuments. Even so, as long as no facilities are provided there only a select few citizens can avail themselves of enjoying it. It will continue to be unavailable to the large number of citizens who inquire, but are discouraged by the difficulty of access.

If facilities were provided, both ship and air transportation companies have expressed interest in making regular stopover service available. Utilization of this outstanding area of the national park system would contribute much to American culture, and incidentally would contribute substantially to Alaskan economy.

I believe I have discussed the questions you gave me, and I hope adequately.

Representative Rivers expressed interest on these same questions, and I am taking the liberty of sending a copy to him.

Sincerely yours,

L. J. MITCHELL, *Superintendent.*

EXHIBIT F

[Article from May 26, 1963, Daily Alaska Empire]

SLEEPING GIANT OF ALASKA VISITOR POTENTIAL AWAITS DEVELOPMENT

Glacier Bay National Monument about 60 miles west of Juneau as the eagle flies—proposed for national park status by the Juneau Chamber of Commerce and others—is one of the most fantastically scenic and scientifically interesting parts of the world. Its potential importance to all of Alaska is tremendous, yet at present it isn't accessible to the traveler in a practical way.

The world standing of Glacier Bay, now little known even by Juneauites, is demonstrated by the following quotations:

Eivind T. Scoyen, upon retirement as Associate Director of the National Park Service: "During my somewhat more than 60 years of contact with national park system areas, I have always been reluctant to pass judgment on what I believe is our outstanding area. However, I am now firmly convinced that on the basis of mountains, snowfields, rivers, lakes, bays, glaciers, wildlife, and scientific interest, this can only be Glacier Bay."

Senator Harry F. Bryd, Democrat, of Virginia, respected universally for his judgment—after visiting Glacier Bay: "I have visited every place in the world where they claimed to have scenery. This is the most sparkling and beautiful pieces of scenery I have ever seen."

Famous Geographer Henry Gannett in 1899, after seeing Glacier Bay: "* * * the Alaska coast is to become the showplace of the earth, and pilgrims, not only from the United States, but from far beyond the seas, will throng in endless procession to see it. Its grandeur is more valuable than the gold or the fish or the timber, for it will never be exhausted. This value, measured by direct returns in money received from tourists, will be enormous; measured by health and pleasure it will be incalculable * * *."

AWAITING DEVELOPMENT

These words are just as true today as when they were written, yet Glacier Bay still hasn't been made accessible to the typical visitor (without wealth to own a yacht or charter a boat with accommodations to take care of needs on the trip).

The National Park Service, seeing the need, first invited proposals from private enterprise for providing hotel, transportation, and other essentials to the public, then when none were forthcoming, planned installation by the Government of necessary visitor facilities, to be leased for private operation once established. The Department of the Interior, in the pending budget for the coming fiscal year, asked an amount a little above a million dollars for the needed lodge and sightseeing craft—so as to bring Glacier Bay within the range of visitors.

The Appropriations Committee of the House of Representatives struck out the fund—arguing that past visitor count failed to demonstrate importance of the development, not understanding that the past visitor count was meaningless in view of total lack of public transportation and accommodations. Alaska's Senators were working to put the fund back into the appropriations bill, but whether or not this has been or will be accomplished this year, is not known at this writing.

There seems no reason to doubt that once reasonable accessibility for Glacier Bay is established the visitor count will climb swiftly and far, bringing millions of dollars to Alaska and bringing unforgettable pleasure to many thousands of people. Both needed development to launch the process, and publicity to speed the coming of visitors, would be immeasurably enhanced if Congress would act to make Glacier Bay a full national park—the status all who know the area have agreed it deserves.

With accommodations and sightseeing in Glacier Bay, it is not unlikely in the future that tourist cruise ships will stop there and that the southeast Alaska "Marine Highway" will have a terminal at Gustavus, connected by road with Bartlett Cove, Glacier Bay headquarters. Regular and frequent water connection with Juneau would be a certainty, and ultimately there might even be highway access from the Haines area, though such a highway would be costly to build.

TYPE OF COUNTRY

Glacier Bay National Monument contains nearly 3,600 square miles, including numerous glaciers from two of the continent's highest and most spectacular mountain ranges—Mounts Elias and Fairweather: breathtaking cliffs, fiords, bays, inlets, islands; more than 300,000 acres of splendid forest, typical of southeast Alaska; characteristic wildlife such as brown bear, black bear, glacier bear, mountain goat, wolverine, beaver, Sitka blacktail deer, some moose, innumerable birds of many kinds, salmon, halibut, seal, whales—being entirely capable of serving well as southeast Alaska's great forest and wildlife park (making unnecessary the persisent plan of some conservationists to put Admiralty Island in national park status).

At least a score of the glaciers are among the outstanding ones in the world, many of them so active as to rumble and crack like thunderstorms almost constantly, dropping great icebergs into the water, some periodically filling tens of miles of inlets with icebergs so thick a boat can't get through them.

Much land in the area has only in recent decades emerged from ice cover, adding variety to scenic and scientific interest. Some of this land is but rock and gravel, while on some plants are getting started, gradually developing into forests as new soil is created. Great cliff faces show the grooves of grinding ice. Stumps from forests of previous epochs are being studied by scientists as they emerge from cold storage.

Parties of glacier scientists have been studying the phenomena, making discoveries of varied significance, and at least one such party will be there again this year. Exploration and study of geology, wildlife and forests, and other characteristics have far to go. The area has almost unlimited potential for various kinds of outdoor recreation (hunting, of course, prohibited), being capable of accommodating large numbers of visitors without crowding, without detriment to natural conditions which are to be preserved for future generations capable of taking much pressure from the already overcrowded parks of the lower States, to their advantage, to the advantage of people everywhere who enjoy nature's beauty, and to the advantage of Alaska.

Only minimum reasonable development, with Government help, is needed to get the process started.

EXHIBIT G

[Editorial from Apr. 7, 1963, Daily Alaska Empire]

OPPORTUNITY SLIPPING

Alaska—particularly Juneau—was hurt when the House Appropriations Committee in Washington cut $1,111,800 from the Interior Department's budget for the coming fiscal year. The money was to construct a lodge, acquire a cruise boat, and create other facilities at Glacier Bay National Monument to make this area of amazing grandeur usable by the public.

We're inclinded to be sympathic with efforts to save public money, but the reason given for eliminating the funds for long-overdue development of this outstanding part of America's heritage near Juneau was: Since there were only 1,100 visitors to Glacier Bay last year "an expenditure of this magnitude does not appear warranted at this time." It shows lack of knowledge of the situation rather than an economy effort—and reminds us of an incident some years ago when construction of a highway shortcut was proposed to save 55 miles across the United States. The Federal Bureau of Public Roads said the project wasn't justified—"the traffic count is zero." The Bureau was right, of course—there wasn't any traffic count since the old dirt road had been washed out several years before and not repaired. But greater wisdom prevailed, and immediately the new highway section had a traffic count of 600 cars a day, climbing toward 1,000 and beyond.

Of course, the visitor count at Glacier Bay is low. There's no access except in extraordinary circumstances, no way to see the sights, no place to stay, no place to eat. The whole idea is to make it possible for people to visit what one eminent Senator has called the world's grandest scenery and the former Associate Director of the National Park Service has called the outstanding unit of the entire U.S. national park system. If Americans find they can visit Glacier Bay, they'll visit it, even if they have to travel thousands of miles.

The Park Service has planned the needed development and sold the Interior Department on it but apparently hasn't succeeded in making the message clear to Congress. The actual visitor count is probably so low as to fail to impress Congress, though it's nearer 5,000 than 1,100, showing the later figure only because of a statistical quirk ignoring visitors who, though getting a real experience of the grandeur from boats, can't be counted unless one of the two park men stationed in the vastness of the monument's 3,600 square miles happens to see them land. The rule isn't reasonable for Glacier Bay—even though the main cause of lack of visitors is lack of accessibility and accommodations. Nongovernment boats can't even refuel there.

Failure of busy lawmakers thousands of miles away to understand the situation isn't hard to fathom. They don't have the story, and it's hard to give it to them because most of them have no background upon which to visualize Glacier Bay and its surroundings. Harder to fathom is a shortage of drive by some people even here in Juneau to seize the opportunity firmly, apparently resulting from failure to realize the magnitude of the loss if we fail to develop Glacier Bay now as part of the Juneau region. This is the year the development should start, the year the Marine Highway has opened, the year the vacation travel patterns in Alaska begin to crystallize. Speaking moneywise—which, we must mention, is far from the only way to speak of Glacier Bay—even the minimum conceivable number of people visiting this national park area would be worth more than a million dollars a year to Juneau's economy, and it isn't fantastic to visualize a value of $5 million a year in the relatively near future—not to mention the value of the planned construction itself and other development which would follow once

the monument—which deserves to be a full-fledged national park—gets into the active travel itineraries.

Let's not allow this opportunity to be pulled away from us. Let's put up a real campaign to sell Congress on Glacier Bay development—now—at the strategic time. It's important to all of Alaska.

The need for facilities at Glacier Bay National Monument is evident. Visitors, in ever-increasing numbers, will use the Marine Highway. They will come to Juneau. Given the opportunity, many will visit the monument.

For nearly four decades since it was established by Presidential decree, this remarkably beautiful monument has been neglected. True, its glaciers are receding slowly; but sometimes, I regret to say, the Federal Government moves at a slower speed.

As we strive to develop the Glacier Bay area, so must Sitka National Monument be developed. I support the proposed expenditure of $124,500 for a visitor center there where American history in the far north began when Alexander Baranov of Russia established headquarters for his nation in Sitka in 1799.

BUREAU OF INDIAN AFFAIRS

The Bureau of Indian Affairs budget for Alaska totals $19,737,083. This includes $5,890,000 for new construction of certain facilities for eight schools. They are:

Barrow kitchen multipurpose building	$725,000
Goodnews Bay Day School	319,000
Koliganek Day School	358,000
Koyuk Day School	354,000
Mekoryuk Day School	552,000
Mountain Village Day School	300,000
Nome school facilities	2,921,000
Tuluksak Day School	361,000
Total, Alaska	5,890,000

The construction would provide 300 classroom seats (replacements) and 300 additional (new) classroom seats. Three hundred children would be given the chance to have high school and elementary schooling who have not had that opportunity previously.

The facilities at the Nome schools include dormitories, kitchen, dining room, and employee quarters. The State of Alaska is constructing a new vocational high school in Nome and the BIA in cooperation with the State is providing the dormitory facilities.

The multipurpose kitchen building in Barrow will permit feeding of 630 students immediately and can, if needed, be expanded to handle 1,000 students.

The Bureau of Indian Affairs reports that the latest school census shows 611 Eskimo, Aleut, and Indian children do not have an opportunity to attend school. The new construction will substantially cut this number.

I am pleased that the Bureau again has requested funds for the day schools at Goodnews Bay and Koliganek, the construction of which had been planned for fiscal year 1964 but subsequently delayed when the use of the Tongue Point facility in Oregon by the Bureau of Indian Affairs for school purposes was approved by the Bureau of the Budget last year. We need to utilize every facility available if we are to bring to every American the opportunity for education he should have.

Specific comment on every budget item for the Bureau is impossible. I do want to endorse the $58,867 proposed for the development of Indian arts and crafts. This sum, I anticipate, will increase as the value of the programs in progress are realized.

As we develop Indian arts and crafts, so we must pay attention to the highly successful training program of young Alaskan men as electronic technicians to man posts on the White Alice Communications System and the Ballistic Missiles Early Warning System and other installations in Alaska.

On February 21, 1962, I spoke to the Secretary of the Interior and outlined the potential savings of such a program in the terms of human and financial responsibilities. Today, the program is fact. It has expanded. I hope the committee will approve the BIA request for $9.3 million for vocational education training.

The Bureau assures me that from this sum will come the funds for the training in electronics of each Alaska native who qualifies. The cost per person for the 18-month course averages $4,000 to $4,500.

To date, 20 young Alaskans have been graduated. Ten have gone to work for the Radio Corp. of America in Alaska. The next 10 to graduate are working for the National Aeronautics and Space Administration in Alaska.

At present, approximately 40 students are in training in Los Angeles. And only last week, on February 26, 40 new students were enrolled in the RCA New York City school. The Bureau of Indian Affairs has assigned two staff members to work full time with the students in New York.

The late President Kennedy in commenting on the worth of the program on August 3, 1962, said: "The amount of money the United States advances for this course will be repaid many times over * * *. I think that the program should be expanded. I think that it can pay us dividends. It can pay Alaska dividends and most of all, the people who are directly involved."

He correctly called the students "the forerunner of an army of increasingly talented and useful citizens." He observed that the future of Alaska, in part, "* * * lies in that kind of advanced educational opportunity for its citizens."

He was right and our Nation is the richer for this investment in citizenship, in proficiency, and in education.

FISHERIES

The Advance Report on the Fisheries of the United States for 1963, as prepared by the Bureau of Commercial Fisheries, should be required reading.

In his review, Mr. E. A. Power, Chief, Branch of Statistics, quietly tells us that while the United States held fifth place among the fishing nations of the world, the percentage of the world catch taken by U.S. fishermen "continued to decline."

Most alarming, however, is the fact that for the first time in our Nation's history more than half of the U.S. supply (56 percent) of fishery products was imported. The percentage of fishery products imported in this country has doubled since 1950.

How did Alaska participate in the national fishing picture?

1. Halibut landings in Ketchikan and Petersburg dropped and depressed the national catch.

2. The herring catch, smallest since 1917, was about 31 million pounds or 8 percent less than 1962.

3. The salmon catch of red, chum, and pink salmon decreased by 60 million pounds.

4. The dungeness crab catch totaled a record 11.8 million pounds or some 3 million pounds more than in the previous year.

5. The Alaska king crab take of 77 million pounds was recordbreaking, exceeding by 24 million pounds the 1962 figure.

6. The shrimp catch of 14 million-plus pounds was 2.5 million pounds less than in 1962.

The lowered salmon catch in turn depressed the Alaska salmon pack by 708,000 cases.

Thus, in but two instances—the taking of king and dungeness crabs—has the Alaska fishermen been able to increase his catch. His halibut, herring, and shrimp catches dropped. Worse—the statistics of the Bureau of Commercial Fisheries show that fishing in all parts of the Nation could be a great deal better.

Mr. Chairman, I ask unanimous consent that at this point in my remarks be printed the world fish catch of the 10 leading nations for the years 1960, 1961, and 1962. The United States holds to fifth place but the four leading nations catch increasingly larger amounts and statistics as to the actual take of mainland China simply do not exist.

World fish catch

CALENDAR YEAR 1960

Country	Pounds (billion)	Percent	Country	Pounds (billion)	Percent
1. Japan	13.7	16.4	7. India	2.6	3.1

Source: Information supplied by the Department of the Interior, Mar. 4, 1964.

Much needs to be done.

Legislatively, the Congress can put teeth into the laws which govern the Nation's historical 3-mile territorial sea. The Senate has approved a bill introduced by my able colleague from Alaska which will enable the Government to fine and/or imprison invaders of our waters.

I have introduced S. 1816 and Senator Muskie has joined as a cosponsor of this bill which would extend our fishing waters to 12 miles.

But we must also help our depressed fishing industry. I endorse the budget requests submitted by the Department of the Interior.

I will suggest that an additional $300,000 be made available to the Bureau of Commercial Fisheries for its fish protein concentrate program.

Around the globe most men are hungry. Even as I talk more than half the world's population lacks the necessary animal protein to sustain growth and physical vitality. Those who suffer most are children.

The fisheries of this Nation, if permitted, can contribute significantly to the alleviation of the international hunger problem.

The Bureau of Commercial Fisheries with adequate funding could, I am advised, initiate large scale feasibility studies during fiscal year 1965 which will strengthen the existing research program and, hopefully, help to establish markets for specialized fish protein concentrate products that can be used here and abroad.

Were the additional $300,000 to be made available it could be spent for:

(1) Contractual research on methods of incorporating fish protein concentrate into the diets of people whose food intake is restricted by cost, social and religious customs.

(2) Control and test studies on the nutritional benefits derived by selected population as a result of inclusion of fish protein concentrate into the diet.

(3) Tests involving the inclusion of the concentrates in the diets of selected groups in the United States such as Indians, Eskimos, and migrant workers.

U.S. Forest Service

Alaska's forest service acreage totals 20,742,224 acres. Within the mighty Tongass and Chugach National Forests are unique and unsolved problems.

Do pesticides used to preserve forests harm salmon? How can logs best be removed from isolated and near-vertical areas? How can logging roads be built and are they necessary or are they habit? Can new aerial logging methods be developed? How can insects and diseases in the forests of Alaska be controlled?

I support the budget request of $5,842,300 and wish at this time to relay to the subcommittee the specific endorsement by members of the Alaska Loggers Association for funds for a research program by the Service to study erosion as it pertains to the salmon spawning area.

I thank the members of this hard-working and patient subcommittee for giving me this opportunity to appear before it today.

Highlight Statement

Senator Gruening. I want to say that I heard the concluding remarks of Senator Morse, and I am in complete accord with him. We have as serious problems in Alaska as are faced by many of the countries of the world to which we have sent millions of dollars and to which we continue to send vast sums. And if we could merely take what has been sent to anyone of a hundred foreign countries and use it to meet some of the pressing problems of Alaska, problems of unemployment, problems of inadequate school facilities, problems of polluted water, and insufficient hospital accommodations, we would go a long way. And I emphatically share the view that the domestic need should come first. It hasn't been coming first. We now have before us a war on proverty which has been declared by the President. I heartly approve of that declaration of war. But it is not going to be won unless we can evoke the same enthusiasm and support from the Executive that has been shown in the last 17 years for the foreign aid program.

Apparently this war on poverty is going to start on a low level, with a little use of existing facilities and a little "make-do" here. That isn't going to do the job. To me this is the major domestic problem, putting unemployed people to work. Poverty and unemployment are synonymous.

Cadastral Survey

Now, these provisions here in the Interior budget are all directly or indirectly related to that general question. The additional funds for cadastral surveys merely aim to rectify a situation which developed during our many years of territorialism when surveying by the Federal Government was negligible. One of the earlier hearings on statehood was chaired by Senator Clinton Anderson, who was at that time acting as chairman. He pointed out that at the rate the Federal Government was making the surveys of Alaska it would take 17,000 years to complete them. That situation remained to be rectified after statehood when the State's land program was stymied for lack of surveys.

Thanks to this committee, that situation has improved. But the State of Alaska cannot progress in its land program unless the surveys of the Federal Government by the Interior Department proceed more rapidly.

That is being taken care of in part in this bill.

Glacier Bay National Monument

One item which at first blush might seem a little extravagant, but is of the greatest importance, is to provide facilities in the Glacier Bay National Monument. The Glacier Bay National Monument was

set aside in 1926, now nearly 40 years ago. And to date the Federal Government has spent virtually nothing there whatsoever except for a small facility for the park personnel; nothing to take care of visitors.

There is a tendency on the part of people to praise their State's particular beauties and exalt them beyond those of any other region. But I was much impressed by the testimony of Elvin Thorsten Scoyen, who retired recently as Associate Director of the National Park Service, after a long and dedicated career in it. He told me that through all the years when people came to him and asked him which was the most beautiful park, he thought it was a matter of propriety and good procedure not to reply because he didn't want, as a public official, to arouse controversy. But upon retiring he felt free to give his view that by far the most beautiful of all the wonderful areas in our national park system was Glacier Bay Monument.

I have seen virtually all the national parks, and I would say that statement is pretty nearly correct. It is a unique park although designated as a monument. You go into this tremendous bay where you see some 30 tidal glaciers, surmounted by Mount Fairweather which rises 15,300 feet from the sea. Thus its full height can be seen. In no other place under the flag can one see the full light of our mountains, higher than any in the older 48 States.

VISITOR'S FACILITIES

There is no way to get to Glacier Bay National Monument except by air or chartered boat. And it is impossible to create facilities for the tourists who want to go there unless we get this appropriation.

Last year the appropriation was turned down in the House on the ground that there were so few visitors. Actually there were over 5,000 visitors—a remarkable number considering they couldn't stay there and because it was very difficult for them to go there.

MARINE HIGHWAY—FERRY SYSTEM

And in addition to that, the record is made only of those who contact the park rangers, whom the park rangers actually see when the visitors check in there. They can't do it in this area which is the third largest park area under the American flag. It is only slightly smaller than Yellowstone. The appropriation for accommodations there dovetail into an effort which the State of Alaska has performed singlehanded in order to overcome physiographic difficulties.

Upon statehood Governor Egan proposed to the State legislature that the State bond itself to the extent of $23 million to build what we call a marine highway, a great superferry system. It has built three ferries some 300 feet long which carry over a hundred cars. This compensates for the fact that there is no other way to get to Alaska on the surface. Ordinary shipping, passenger shipping, was suspended in 1954. That was the last year in which the Alaska Steamship Co. was supplying both passenger and freight traffic. We have had no regular marine passenger service since. So there was no way in which people could come up the beautiful inside passage, that unique thousand-mile waterway stretching from Puget Sound to Skagway, except that in the summertime the Canadian Pacific runs a weekly steamer, and Canadian National runs occasional

cruise boats. And then there are a couple of very fine cruise ships run by an enterprising and pioneering Alaskan named Charles West. But those are occasional.

Alaska and the Federal Aid Highway Program

Now, this ferry system, this proposal, went to the legislature; they approved it; it went to the people of Alaska, who voted this $23 million bond issue. And not 1 cent of Federal aid went to Alaska to help this great undertaking. It is significant that until 1956—for 40 years—Alaska was totally excluded from Federal aid highway participation.

During these 40 years from the passage of the Federal Aid highway legislation in 1916, Alaska was totally excluded, while that legislation was building up a magnificient network of highways in the 48 States, Alaska didn't get a cent. And beginning in 1956 when we were represented very ably in the House by a voteless delegate Bob Bartlett, who, like his predecessors, had tried ever since 1916 to get some participation in the Federal aid program but without success, we were put in on a very partial basis. So for 3 years, from 1956 to 1959, we did get a small amount. As a result today Alaska is virtually without roads, and we have a lot of catching up to do.

Tourist Facilities Budget Request

Now, this ferry system will bring beginning this year—and it runs through the year—300 or 400 people a day who will have no place to go in Glacier Bay unless the Government gives them these facilities. Private enterprise cannot do it. I wish it could. And it seems to me that that is a very proper contribution for the Federal Government to make considering its 40-year discrimination on transportation. The total cost is about a million and a half dollars. It is not comparable to what the State of Alaska has expended to enable people to get there.

So I hope very much that this item will be retained by this committee. It has now been presented by the Bureau of the Budget. It was in the budget last year and was taken out by the House, and I trust that this year the House will keep it in.

Senator Bible. And it is in the budget again this year?

Senator Gruening. It is in the budget again this year.

Indian Schools and Unemployment

Now, those are the principal things. There are appropriations for Indian schools. There again is a situation which ties in with this whole unemployment problem. We have a large unemployment among our native population, and the unemployment exists largely because they haven't had the education to take the more skilled jobs which are now coming up.

We are behind in our school program, but are making a valiant effort to catch up. And these modest appropriations provided here are very desirable. We need these schools, we need these facilities. The time must come—indeed is long overdue—when we should have every native child in the school, which has not been the case.

So I hope that the committee will approve this entire appropriation requested by the Interior Department. I think there is nothing extravagant in it; indeed it is modest considering Alaska's needs and the long history of neglect and discrimination. We can think of a lot more we should have.

EXCLUSION FROM THE FEDERAL AID HIGHWAY PROGRAM

Senator BIBLE. Might I ask only one question, Mr. Chairman?

I may not have understood him correctly, but I think he said something about the people today having to pay their own way to get up there and pay their own expenses. Maybe I didn't understand you correctly. But what is so unusual in this? You have to pay your own way in any national park.

Senator GRUENING. I think you misunderstood me.

Senator BIBLE. Maybe I didn't understand you.

Senator GRUENING. What I said in effect is that we have had as a result of discrimination from 1916 on totally until 1956, and then only very slightly for the 3 years preceding statehood, exclusion from the Federal aid highway program and while in the 48 States the magnificent networks of roads were being built, we were totally excluded from them.

Senator BIBLE. You were referring to the highways and not the park?

Senator GRUENING. Yes.

Senator BIBLE. You were using this because you were talking about the Glacier Bay National Monument?

MARINE HIGHWAY FINANCED SOLELY BY ALASKA

Senator GRUENING. I am using it because we now have invested at Alaska's own expense $23 million to make it possible for people to come up by a marine highway, which is the only way you can come up this rugged inside passage. We might have argued with the Federal Government that in this area of precipitous shore and islands in which a land highway cannot be built and where a marine highway is the only possible substitute, that we were entitled to Federal funds. We didn't do that, we didn't even attempt it. The people of Alaska dug down in their own jeans and produced this. Now the tourists are coming, as my written statement documents. As a supplement to this, as a complement to this marine highway, this magnificent park which is called a monument and has been in existence for nearly 40 years without having a nickel expended on it to make it available to the public, we request the Federal Government to make it possible for the public to enjoy it.

Senator BIBLE. I didn't understand your point earlier, and I wanted the record clear.

Senator GRUENING. Any questions?

Senator BARTLETT. Mr. Chairman, since I have no disagreement, I have no questions.

Senator GRUENING. Thank you very much, gentlemen. I appreciate your giving us this opportunity.

Chairman HAYDEN. Senator Moss.

STATEMENT OF HON. FRANK E. MOSS, U.S. SENATOR FROM THE STATE OF UTAH

Support of 1965 Budget Estimate

Senator Moss. Mr. Chairman and members of the subcommittee, I have a full statement; I would like to highlight parts of it.

Let me say that it is always a pleasure to appear before this subcommittee. I appreciate the enduring concern of its chairman, and members, for the full conservation of our natural resources, and for the continued welfare of the West as a whole. Those of us who appear here each year to testify on the appropriation requests of the Interior Department and related agencies, and who outline the special problems in these areas in our own States, do not always take time to say "Thank you" for the thought and attention you give to us.

So I want to take just a moment here today before proceeding to thank you, Mr. Chairman, and to thank the members of the committee, for your understanding and sympathy for Utah's special problems, and for your generosity to the State in the past. I am confident that the requests I make here today will be given the same thoughtful consideration.

Forest Service

I support, of course, the funds requested for the Interior Department and related agencies for the fiscal year 1965. I was pleased, as I know you all were, that the requests for the fiscal 1965 totaled $643,617,000, which is some $40 million more than the amount appropriated for the same agencies for the fiscal year 1964. I am gratified also that the amount requested for the Forest Service for the fiscal year 1965 is $253,824,000, or some $18 million more than is being spent in the current fiscal year.

This is continuing evidence that the Kennedy-Johnson administration is determined to keep resource development moving ahead at a steady pace. It is proof that despite the "tight" budget for the coming fiscal year, the needs of the West are not to be overlooked or neglected.

Budget Increases

I ask that funds be increased for two agencies: the Fish and Wildlife Service and the Forest Service. There are two items in the Fish and Wildlife Service which I feel should be augmented, and I will discuss these first.

Ouray National Wildlife Refuge

As you know, the Fish and Wildlife Service is building the Ouray National Wildlife Refuge in the Uintah Basin of eastern Utah. The total cost of the refuge is estimated at $1,300,000 and it is to be completed within a 5-year construction period. When all work is done, the refuge will provide habitat conditions capable of producing at least 1,000 geese each year with sufficient food to maintain a peak population of 3,000 during migration and an annual use-day population of 400,000.

In addition, it is expected that the refuge will produce 13,000 ducks each year, provide food for peak populations of 75,000 ducks during fall migration with overall duck use-days totaling 4,250,000.

RECREATIONAL DEVELOPMENT

The recreational development provided by the refuge will allow waterfowl hunting when populations on the refuge are sufficient to safely permit harvest. A visitors' center and an exhibition pond with an appeal to all ages is included in the long-range planning. There will be observation points, picnic tables, fire grates, and parking space for recreational users. Naturally, there is great interest in the early completion of this refuge in the Uintah Basin and in the State as a whole. Utah is a great sportmen's State, so protecting and augmenting our wildlife is most important to us.

BUILDINGS, DIKES, AND WATER CONTROL

The budget request for the refuge for the fiscal year 1965 is only $115,000 which is to be used for buildings and the construction of dikes and water control facilities. This is a "starvation" budget, Mr. Chairman—the Ouray Wildlife Refuge can never be completed on schedule if no more than this is done in the coming fiscal year. If such a snail's pace rate of development is allowed to stand it will be nearer 10 years than 5 before the refuge is a reality and the people of Utah can enjoy its benefits.

PROPOSED BUDGET USES

I asked the Fish and Wildlife officials who advised me that an additional $232,400 can be used to good advantage in the fiscal year 1965 for the Ouray Refuge. It would be expended as follows:

Boundary fencing, 33 miles	$32,400
Additional buildings, including residences, sanitary system, headquarters road and parking, oil and paint storage building, gasoline storage tanks, water supply system, electric system	86,500
Canals, dikes, water control structures, riprap, gravel surfacing dikes, pumping facilities in Leota bottoms	113,500
Total	232,400

Now, I realize that we are working on a frugal budget, and I do not want to appear unreasonable in my requests for Utah. I support only responsible and necessary spending—but I feel that development of the Ouray Refuge to protect our wildlife is in that category. I hope this important wildlife development in Utah will not be starved. I would like to see the full amount which the Service efficiently can use recommended for appropriation—at the very least, I feel that the budget request should be increased by $232,400.

SPRINGVILLE FISH HATCHERY

The second fish and wildlife amendment I wish to discuss concerns the Springville Fish Hatchery in Utah County. You may remember that when I appeared before this subcommittee last year I argued that the hatchery needs a new start in life, and pleaded for funds to do so. Because of other urgent matters the subcommittee could not see its way clear to grant my request, and I repeat it this year.

The Springville National Fish Hatchery has been a Utah landmark for many years. It is running out of water, and the hatchery building, a 47-year old wooden structure, is outmoded and badly deteriorated. The Fish and Wildlife Service estimates that a complete renovation job, undertaken in two phases, could be done for $246,000.

WATER IMPROVEMENT PROGRAM

The first phase would cover a water improvement program carried out through collection of spring flows, protection of intake facilities, and installation of pipeline facilities to provide an efficient system. This phase would also include the construction of a modern fish hatchery, which would incorporate a small aquarium display room for the education of the visiting public.

REHABILITATION PROGRAM

The second phase would rehabilitate present ponds, construct additional ponds, and build fences, roads, and sidewalks.

At present the hatchery produces rainbow and brook trout, and some warm water fish for distribution to waters in national forests, Indian reservations, and military reservations. The decreasing water supply makes it more and more difficult to meet current production levels of 75,000 pounds of trout a year, which would more adequately stock the area, and more fully preserve and enhance the fisheries resources on lands under Federal control. The first phase would cost approximately $168,000 and the second phase $78,000. If the first phase could be financed this year, the second phase could be delayed until the fiscal year 1966.

Chairman HAYDEN. Where are the fish that are grown there planted?

Senator Moss. They are planted in Federal reservoirs in projects, on Indian reservations, and some military reservations, all Federal places.

FISH HATCHERIES IN UTAH

Senator BIBLE. How many fish hatcheries does Utah have now, State and Federal?

Senator Moss. There is only one operating Federal hatchery at the present, the Springville hatchery. The Jones Hole hatchery in the Uintah Basin is under construction, but it will be some time before it is completed.

There are 12 State fish hatcheries and rearing stations, some of which are very small.

FOREST SERVICE

Senator Moss. My final request is for a modest increase in funds for the forestry research program underway at the nearly completed Forestry Sciences Laboratory on the campus of the Utah State University at Logan.

The budget request for this laboratory for the fiscal year 1965 is $252,000; essentially the same amount as was provided in the fiscal year 1964. The funds are programed for research in watershed management, range management, insect and disease control, and recreation.

WATERSHED AND RANGE MANAGEMENT RESEARCH PROJECTS

I feel very strongly that both the watershed and range management research projects should be strengthened, since they deal with one of our most pressing problems in the West, that of improving the vegetation and water yield of the high mountain watersheds above the Great Basin, which, as you know, includes parts of Nevada and Wyoming, as well as Utah. I am advised that the laboratory could accommodate an increase in the research program of $250,000, $200,000 of which could be well utilized for watershed management studies, and $50,000 for the range management studies to maintain a coordinated and balanced program for the high mountain watersheds.

I submit a recent letter which Dr. Floyd of the Utah State University recently wrote to me.

(The letter referred to follows:)

WILDLAND PROBLEMS

* * * The forest and rangelands of Utah and adjacent areas are the principal source of water used by cities, industries, and farmers. These same lands provide summer forage for the livestock industry, a significant segment of our economy. Recreation has become an extremely important activity on these mountain lands. In the face of increasing demands for the products from our wildlands, the actual productivity, under present practices, falls short of the potential.

Such practices as overgrazing, burning, and in some instance, logging, have created problems of soil instability, reduce forage production, floods, and erratic streamflow. On a lesser scale, recreation has created its own damage. Heavily used campgrounds have sustained severe impacts on vegetation and soil. The clamor for increased water yields, the necessity of reducing grazing permits, expensive treatments to stabilize watersheds, and the deteriorated condition of many recreation areas are indicative of present wildland problems.

These problems strike at the root of the livestock industry and recreational activity by reducing the value and utility of their resources. They also affect adversely our water supply, which is the limiting factor in economic development in our State. Further impairment of amount and quality of water yields would threaten the existence of some of our communities.

Some of our important tree species in Utah are being damaged by native rusts. Losses accrue from attacks by rusts that kill trees or diminish their growth. Intelligent damage appraisals and sound control measures cannot be developed until the taxonomy, life cycles, and host relationships of the causal fungi can be established by research.

Numerous forest insects cause untold losses to timber stands. Bark beetle attacks have devastated lodgepole pine stands in Utah and Idaho in recent years at alarming rates. There is a lack of knowledge on the complex relations between the insect, its natural enemies, its lodgepole pine host, stand and site conditions, weather, and other factors. Preventive measures, if known, would be better than costly direct control measures. * * *.

FORESTRY SCIENCES LABORATORY

Senator Moss. The program of the Forestry Sciences Laboratory is designed to get the answers to some of these problems, and to develop the techniques to meet them. Rather than taking the time of the subcommittee to detail the work proposed for the laboratory, I ask that background and explanatory material be included at this point in my testimony.

Chairman HAYDEN. Any objection?

(The statement referred to follows:)

FOREST AND RANGE WATERSHED MANAGEMENT RESEARCH, LOGAN, UTAH

The forest and mountain rangelands ringing the Great Basin constitute the vital water source areas that the entire economy of the Great Basin is dependent upon. The agricultural-industrial complex of the Great Basin States together with the expanding municipalities could not exist without the water from the mountain watersheds. Water needs at present exceed the dependable supplies and during years of below-normal precipitation some uses must be curtailed. Future expansion of industry and agriculture will be dependent upon assured supplies of quality water.

These same mountain watersheds pose a threat to the adjacent lowlands of possible destructive floods from steep slopes that have been denuded by overgrazing and wildfire. These floods originate from severely deteriorated areas that will not heal readily by natural means. Rehabilitation of these damaged areas is needed to retard floodflows and reduce excessive erosion and sedimentation.

The present research program carried on by the Forest Service in cooperation with Utah State University at Logan is aimed at obtaining the needed know-how to meet the most urgent problems of water-yield improvement and flood reduction. But this program is not nearly commensurate with the magnitude and urgency of the need. A greatly strengthened effort is needed to cover the complex problems represented by such a variety of soils, vegetation, geology, topography and climatic patterns and obtain usable, practical, and timely solutions.

An increase of $250,000 would provide for those studies needed to develop effective and efficient management techniques for increasing water yields, or prolonging flows into periods of drought, reducing flood runoff and sedimentation and providing adequate forage for domestic livestock.

The nearly completed Forestry Sciences Laboratory of the Forest Service on the Utah State University campus will provide the necessary facilities for the research program and the suggested increase would provide for the full and effective use of the laboratory facilities.

RESEARCH IN WATER YIELD IMPROVEMENTS AND FLOOD COLLECTION

Senator Moss. The one that I wish to make is that the need for expanded research in water-yield improvements and flood collection is most urgent, and that only by increasing the research budget for the Forestry Sciences Laboratory can we be assured the most effective use of this newly established and most important facility.

NATIONAL PARK SERVICE IN UTAH

In conclusion, I would like to emphasize that I especially support the fiscal year 1965 budget requests for programs involving the activities of the National Park Service within the State of Utah. The total requested is $5,690,000. We can use to good advantage every dollar of it.

Included in this total is not only the operation, maintenance, and construction programs for the national parks and monuments already established in Utah, but funds for the development of the new Glen Canyon and Flaming George Recreation Areas, which offer tremendous new recreation and tourist potentials in the State. I ask that a breakdown of the budget requests for the activities of the National Park Service in the State of Utah be included with this statement.

(The data referred to follows:)

Summary of funds requested for the State of Utah in the President's budget for fiscal year 1965

	Operations and maintenance	Acquisition of land and water rights	Construction		Total
			Appropriated to NPS	Transfers from Bureau of Reclamation	
Arches National Monument	$100,100		$128,000		$228,100
Bruce Canyon National Park	262,600		74,900		337,500
Capitol Reef National Monument	106,800		52,200		159,000
Cedar Breaks National Monument	38,000				38,000
Dinosaur National Monument	78,100		853,900		932,000
Flaming Gorge National Recreation Area	86,000	$5,500		$779,200	870,700
Glen Canyon National Recreation Area	449,800	27,000		1,352,600	1,829,400
Hovenweep National Monument	7,000				7,000
Natural Bridges National Monument	17,700		540,000		557,700
Rainbow Bridge National Monument	300				300
Timpanogos Cave National Monument	74,700		20,000		94,700
Zion National Park	394,300		241,700		636,000
Total	1,615,400	32,500	1,910,700	2,131,800	5,690,400

Combating Coal Mine Dangers

The Bureau of Mines: I am sure members of this subcommittee will recall the tragic mine accident which occurred in Carbon County, Utah, on December 16. Nine men died in the dark cavern of a coal mine there as a result of an explosion touched off when a continuous miner struck hard rock in the mine roof, causing sparks to ignite a coal dust methane mixture. This blast—and the loss of nine lives—pointed up the great need for a practical methane monitor and for an effective means of combating the newest danger in coal mines from deposits of extremely fine float dust created by continuous miners.

RESEARCH PROGRAMS

The Bureau of Mines has been operating under a high priority crash research program to develop equipment and means to supply this urgent need, but I am advised that a fully effective research program for the fiscal year 1965 would require the following increases:

1. Fine coal float dust explosion research, $370,000.
2. Methane detection and monitoring research, $100,000.
3. Mine ventilation research and investigation, $150,000.

This is the type of research which I feel must not be delayed. We owe it to the men who spend their lives in our mines to do what we can to make them as safe as possible. I submit to the subcommittee a statement describing in detail the three major research programs in this field. I support the requests for additional funds.

(The statement referred to follows:)

DESCRIPTION OF THE PROGRAMS

1. Fine-coal float-dust explosion research: Increase requested for fiscal year 1965, $370,000

With the tremendous progress in mechanized mining technology and concentrated loading at mine faces, problems and hazards of mine explosions and fires have greatly increased. Further dust explosion research is vital to develop basic criteria that will permit evaluation of present safety standards in modern mining, particularly as applied to fine-coal float dust. Concentrated mechanical mining has greatly intensified the float-dust problem and requires that basic rock-dust standards considered adequate for many years be improved and possibly supplemented by other means to control float-dust explosions, including rock-dust barriers. The Bureau of Mines is responsible for conducting research to reduce this hazard by determining float-dust characteristics and methods for collecting, inhibiting, or otherwise limiting deposition of fine-coal dust thereby minimizing the difficult and often poorly applied rock dust to coal mine surfaces.

The instruments presently used at the Bureau's experimental coal mine are obsolete, inadequate, and inaccurate for obtaining needed information. Present dust preparation equipment is old, hazardous to operate, and incapable of providing coal dust of the required fineness in the quantity desired for the proposed large-scale experiments. New auxiliary facilities should be provided to study the transport and deposition of float dust as affected by air velocity, particle size, type, and quantity of dust. Fundamental information is necessary for coal rock, and other dusts to facilitate meaningful large-scale mine experiments. The requested increase in funds will provide for replacing obsolete equipment, including instrumentation, and the addition of 12 new positions—4 professional, 7 subprofessional, and 1 clerical—to carry on the expanded research.

Experience from recent coal mine diasasters emphasizes that the need for fundamental research in the experimental coal mine is fully as great, if not greater, than when the Bureau of Mines was organized. Results obtained at the experimental coal mine have merited national reputation. The coal mine industry depends upon the continued development of Bureau of Mines information through exhaustive experiments which utilize technological progress toward improving safety in modern coal mining operations.

2. Methane detection and monitoring research: Increase requested for fiscal year 1965, $100,000

In coal mine operation there is an imperative need for rugged, practical devices for precise, automatic methane detection and monitoring. Additional funds are required to expand and expedite research and development of this high-priority project to provide more adequate testing and investigation of many physical principles that might be used for methane detection and to discover and develop auxiliary equipment for an automatic monitoring system that must not be affected by the rugged use of operating mining machines.

Investigations of recent coal mine explosions have disclosed that human failure to test for and detect methane buildup in the working face areas was an important contributory factor. To overcome the frailty of human nature a device is required that will continually sample the mine atmosphere in the working area,

sound an alarm when the methane content reaches approximately 1.5 percent; then, if this warning is ignored, cut off electric power from the equipment and power cables in the affected area when the methane content reaches about 2.5 percent.

Enlargement of methane detection research and field testing of methane monitors through additional personnel, consisting of six professional and one clerical positions, and development of specialized instruments and facilities will enable the Bureau of Mines to maintain its rightful leadership in preventing accidents and injuries from methane ignitions and explosions. Current research to develop a practical methane monitor has been encouraging but much more remains to be done to improve various components to provide the most reliable instrument possible.

3. Mine ventilation research and investigations: Increase requested for fiscal year 196 , $150,000

Long-range planning is required to fortify the Bureau of Mines reputation throughout the mining industry to direct and guide progress in mine ventilation—a field in which expert knowledge is limited. The Bureau's capabilities in this field should be extended to keep abreast of rapidly advancing mining methods, to maintain its high standard of leadership, and to provide the mining industry with improved technological information.

Ventilation is a foremost safety factor in all kinds of underground mining operations, and becomes progressively more difficult as coal and ores are extracted from increasing depths below the earth's surface. Even now some gassy coal mines can be operated only with the most exacting attention to ventilation to prevent dangerous accumulations of methane. Expecially vital is the need to improve ventilation in face areas to conteract the effects of rapid liberation of dangerous gas and generation of explosive dust. New methods of mining and more powerful mining machines, both developed for more rapid, economic, and efficient extraction of mineral substances, have intensified hazards in the face areas and complicated the problems of providing adequate ventilation. Increasing use of diesel-powered equipment and new types of blasting agents require careful attention of the ventilation engineer. With mining at greater depths, air conditioning and cooling are required in many instances to maintain the comfort, health, and productivity of mine workmen, with corresponding need for engineering knowledge and skill for effective design and operation. The augmented mine ventilation research program would embrace the establishment of four additional professional positions.

Ventilation studies necessitate laboratory experiments to improve instrumentation and measurements used to study fan performance and design for special face-ventilation applications, vent-tube air conductors, patterns of airflow with changes in velocity, characteristics of blowing and exhausting systems, resistance factors as they affect loss and regain of static pressure, and power needs. Such information requires supplemental trials and analyses of ventilating systems in commercial mines to appraise their effectiveness. Ventilation costs at different operations require analysis to obtain data that will assist mine management in improving ventilation of their mines thereby increasing safety, particularly in face areas of coal mines, or point the need for installing new ventilating equipment. Increased facilities and personnel are needed for detailed studies by the absolute pressure method and other advanced techniques to aid mine managements in detecting and correcting abnormalties and to increase efficiency. Field observations are necessary to keep abreast of new industrial developments in ventilation equipment; mine air conditioning; use of synthetic foams and mineral products for mine stoppings, dust collectors, and space filters; and instrumentation pertaining thereto.

APPRECIATIONS

Senator Moss. Once again may I thank you, Mr. Chairman and members of the subcommittee, for hearing me, for giving careful attention as you always do to requests that I make. I do hope that these matters that I have pointed to that seem to me to be particularly urgent will receive your careful attention.

Chairman HAYDEN. Thank you.

Senator BIBLE. Mr. Chairman, I have no questions. I simply want to commend Senator Moss. This is an unusually fine statement, and it is unusually well documented and presented.

Senator BARTLETT. I agree with that.

Senator Moss. Thank you.

Chairman HAYDEN. Senator Hart.

STATEMENT OF HON. PHILIP A. HART, U.S. SENATOR FROM THE STATE OF MICHIGAN

FOREST ENGINEERING LABORATORY, HOUGHTON, MICH.

Senator HART. Mr. Chairman and members of the committee, I couldn't find a word formula more eloquent than that used by Senator Moss to express my appreciation for your kindness in letting me come in. And I share his optimism as to the future.

Mine is a very brief statement, Mr. Chairman, and I think rather than summarizing it I would take less time if I read it.

Chairman HAYDEN. Very well.

Senator HART. I am joined by my senior colleague, Senator McNamara, in urging that an item in the amount of $372,000 be included in your bill for construction of the Forest Engineering Lab at Houghton, Mich. Last year you provided $28,000 for design and specifications. That contract has been let. It is my understanding that the plans will be completed early in fiscal 1965, and that construction could start soon if the funds are appropriated now.

AREA TO BE SERVED BY LABORATORY

May I call your attention to this map prepared by the Area Redevelopment Administration to emphasize the Upper Peninsula of Michigan and the upper reaches of Wisconsin and Minnesota, which will be the area primarily served by this laboratory. You will notice that every Michigan County in our Upper Peninsula, 15, is identified as having high unemployment.

Senator BARTLETT. That is the green area?

Senator HART. The green area—about twice the national average. The same is also true of the upper counties of Wisconsin and Minnesota.

UNEMPLOYMENT IN AREA

Senator BIBLE. Do you have any percentage figures on the unemployment in the green reaches to which you refer? Is it 7, 8, or 9 percent, something in that range?

Senator HART. It ranges about twice the national average, which would make it higher than that.

Senator BIBLE. Make it 10 or 11 percent possibly?

Senator HART. Yes, sir. Actually, the latest figure available is 11.4 percent in the Michigan Upper Peninsula.

HOUGHTON, MICH.

Senator BIBLE. Is Houghton the departure point for Isle Royale National Park?

Senator HART. It is the departure point for Isle Royale. It is also the site of what was known for some years as the Michigan College of Mining & Technology, now Michigan Technological University. The university has given 6 acres as the site for this lab, and the lab will be coordinated with the really excellent faculty of that university.

Senator BIBLE. What is the population of Houghton?

Senator HART. 3,393 according to the 1960 census. For Houghton-Hancock it is about 9,000.

MICHIGAN TECHNOLOGICAL UNIVERSITY

Senator BIBLE. And how many attend the university?

Senator HART. 3,300 attend the university. They have graduated, over the years, about 15,000. They are located in 50 countries of the world. It is an extraordinary educational institution. And as the father of eight children, I would hope that some of ours would wind up in that kind of setting. There are very few distractions.

Senator BARTLETT. It is clear that the Senator does not lack figures.

Senator HART. I am one of their honored alumni, if that is the way you put it.

Senator BARTLETT. You are of the 15,000?

Senator HART. No. They were gracious enough, although I am a Greek and history man myself, to honor me with an honorary degree.

Senator BARTLETT. They honored themselves.

Senator BIBLE. I share that.

Mining and Timber Industry

Senator Hart. Our two current major industries in this whole reach of the Upper Great Lake Basin, as you know so well, Mr. Chairman, are mining and timber.

And both of these industries face major readjustments. Strengthening timber-based industry is one good way to make better use of a natural resource native to this whole area. We have coming back rapidly in the Lake States a new second growth forest. There are over 50 million acres of marketable timber in the reach of those three States. The challenge the area faces now is to harvest and use the timber, put it to useful purposes in supporting the growth of a strong forest industry.

The proposed forest engineering laboratory would bring to northern Michigan a research effort of considerable potential which would aid immeasurably in bringing about more efficient and new mtehods of production.

Timber Reproduction

Chairman Hayden. Is the type of timber that grows there the type that can be quickly reproduced?

Senator Hart. It would depend a little on your definition of "quickly," Mr. Chairman.

Chairman Hayden. In Arizona, because of the lack of rainfall, there are trees standing now that were saplings when that country belonged to Mexico. It is very slow growth. And I didn't know but what with more abundant rainfall your timber production would be greater.

Senator Hart. It is greater. My information is that you can begin to remove some saw log material and thinning at 60 years. For pulpwood I believe you can make a commercial thinning at age 30.

Improved Timber Harvesting Systems

This laboratory program would stress development of improved timber harvesting systems. It would, for example, study how to produce more efficiently wood chips from round wood in the forest; it would study ways and means for reducing the costs for harvesting and transporting wood to pulp and other mills. Furthermore, it would provide a central laboratory where forest industries could bring forest engineering problems for study and help. All of these activities have one objective—to make for a more prosperous and a growing forest development in the north, thus bringing about a more healthy economy. In these northern counties which have suffered the adversities of underemployment and declining use of timber, technological improvements are essential and should be speeded.

Forest Engineering Project

I have commented, Mr. Chairman and members of the committee, that the Michigan Technological University is assisting in the forest engineering project, having made available the site at no cost. With construction of the laboratory the cooperative feature of the research program would be strengthened. Greater faculty and student participation would be possible as an outgrowth of the improvement of facilities.

So by making construction funds available in fiscal 1965, building of the lab could get underway, much needed employment would be provided, a program having long-range implications for improving the efficiency of the timber industry would be moving ahead, and we would be putting the resources of Michigan Technological University and of the Forest Service together in a promising research effort.

GREAT LAKES BASIN ECONOMY

Senator McNamara and I hope you will permit us to move forward with this important element in upper Michigan's economic development. And though I sound parochial, it affects intimately the economic life of Minnesota and Wisconsin and the whole Great Lakes Basin.

BUREAU OF OUTDOOR RECREATION

If I could, Mr. Chairman, express a hope with respect to one other item in the Interior budget, I would hope that the committee will act favorably on the request of the Bureau of Outdoor Recreation, for a total of $2.7 million. With the rapidly expanding population of this country, the increase in leisure time, the higher earning capacity of our people, the planning and coordinating functions of this small bureau are essential. I hesitate to say this in the presence of Senator Bible, who knows so much more about the overall problem than I, but to the extent that I can see it I feel deeply the value that can be contributed to all of us, including those whom we should represent but who haven't yet been born, by this Bureau of Outdoor Recreation.

And I ask that several letters be inserted in the record.

(The letters referred to follow:)

FOREST ENGINEERING LABORATORY

[Telegram]

HOUGHTON, MICH., *February 25, 1964.*

Hon. PHILIP A. HART,
Senate Office Building,
Washington, D.C.:

Respectfully urge that funds for construction and operation of forest-engineering laboratory on Michigan Tech campus be allocated. Present engineering laboratory on campus, as well as its annual operating budget, is inadequate. This new proposed facility would be a needed stimulus for the wood products industry throughout the entire lake States area. Would appreciate it if this message were made a part of the hearing record.

Very truly yours,

JOHN J. HOWARD,
Executive Vice President,
Houghton National Bank.

NEED FOR THE LABORATORY

FEBRUARY 25, 1964.

Hon. PHILIP A. HART,
Senate Office Building, Washington, D.C.

DEAR SENATOR HART: In conjunction with the wisest use of our natural resources in the Upper Peninsula, we have several programs of research. The Lake States Forest Experiment Station of the U.S. Forest Service very recently received money to design a laboratory to be located on the Michigan Technological University campus. However, no money has been set up in the budget for actual construction of the laboratory.

We know that wood is one of our sustaining natural resources. Research has been responsible in part for new wood-using industries in the Upper Peninsula and the expansion of several papermills and sawmills. This means construction dollars, payroll dollars, and tax dollars. We have a golden opportunity to help stimulate this business.

President Kennedy, at the Land and People Conference in Duluth this fall, said, "Our goal is the full employment of both the natural and human resources which this area still possesses in abundance."

President Johnson has endorsed this attitude and concurs with statements made at the Land and People Conference. (This is what we are trying to do with this project.)

We respectfully urge that you use your best efforts to impress the committee at the Senate hearing with the need for this facility. Would you endeavor to have this communication read into the record and included as part of the record at the hearing in the Senate.

Sincerely yours,

S. M. COHODAS, *President.*

FOREST RESOURCES INVESTIGATIONS

FEBRUARY 25, 1964.

Hon. PHILIP A. HART,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HART: A badly needed resurvey of Upper Peninsula forests is going to be started this year. Lack of up-to-date statistics on forest resources has hampered planning for wood products development here. Some of our best available figures are nearly 20 years old and are no longer representative of our growing timber inventory. You can't interest new industry with obsolete figures.

In our territory the Lake States Forest Experiment Station does the survey. Their goal is to provide new statistics at 10-year intervals but progress has been slowed by lack of funds. The State and the forest industries will contribute funds to intensify the coverage and produce good estimates by counties but the Federal part is slow in getting started.

I see that the President's budget has a $150,000 increase for forest resource investigations, nationwide. This doesn't seem like very much—we could easily use it all in stepping up the work in Michigan. I hope that it is approved and that it is distributed for work in depressed areas where resource figures are out of date. That describes our situation in the Upper Peninsula.

I would appreciate it if you would have my statement made a part of the record of the hearings before the Senate Subcommittee on Appropriations for Interior and Related Agencies. We would like to get on record as favoring an increase in this work of collecting basic facts on current timber supplies.

Sincerely yours,

WILLIAM F. WILSON, *Executive Manager.*

ESTIMATED OVERALL COST

Chairman HAYDEN. Any questions?

Senator BIBLE. Only one question, Mr. Chairman. I just want to be clear in my own mind that the total cost is $400,000.

Senator HART. $28,000 plus $372,000.

Senator BIBLE. That is the total overall cost, that is what it will cost to build it?

Senator HART. That is the building; yes.

OUTDOOR RECREATION BUDGET

Senator BARTLETT. Do you happen to know if the $2,700,000 is a budgeted item for the outdoor recreation?

Senator HART. It is my understanding it is.

Senator BARTLETT. I want to compliment you on an excellent statement, a persuasive one. It is comparable in many ways, it

seems to me, with that of Senator Morse. It refers to depressed areas in our country to which we have an obligation to pay primary attention.

Senator BIBLE. I want to say one thing, Mr. Chairman. The Senator from Michigan mentioned my work in the field of outdoor recreation, parks, and lakeshores and seashores, and I simply want to say that I don't know of a more ardent and persuasive and vigorous and unrelenting champion of attempting to get lakeshores on all of the lakes of Michigan than the junior Senator from Michigan. And I am very glad to testify to that, because he has twisted my arm until I could hardly carry it at times.

Senator HART. Senator Bible in his role as chairman of the Public Lands Subcommittee has responded very well to the needs of the present and the future.

Senator BIBLE. You were fighting for a cause, and I commend you.

Chairman HAYDEN. Senator Monroney.

STATEMENT OF HON. A. S. MIKE MONRONEY, U.S. SENATOR FROM THE STATE OF OKLAHOMA

JOHN F. KENNEDY CENTER FOR THE PERFORMING ARTS

Senator MONRONEY. Mr. Chairman and members of the committee, I appreciate your willingness to hear me testify about a matter which in the light of the amounts often requested of this committee may appear to be very small. But I know from my personal service with all of the members of this subcommittee that they are interested in trying to establish in every way possible the ultimate fairness of the Government in dealing with land acquisition in the Capital area.

I am here today because of the request for funding in two allotments of $2 million and $1,300,000 to the National Capital Planning Commission, which is a result of the $15,500,000 authorization and supplemental appropriations which will be asked for the John F. Kennedy Center for the Performing Arts.

The decision to properly make this the memorial to our late and beloved President Kennedy has undoubtedly changed the picture for many small businesses that are in this area where the cultural Center is to be located. It means that instead of waiting for several years until the donations from private citizens met the cost of acquisition and the participation in this beautiful cultural Center, that with the Government's participation now it will be speeded up, and quite properly so.

SMALL BUSINESSES RELOCATION

I am here supporting the requests for the appropriations. But in doing so I would like to point out that it will present a business hazard to many small businesses that have been operating in this area, and until the decision to participate to a greater extent in the cost of this memorial by the Government, these businesses felt they had a longer time to contemplate their moving.

Located in his area is the National Historical Wax Museum, with 20 to 25 persons regularly employed.

The Riverside Carwash with some 10 to 25 regularly employed.

The Diplomat Garage with 6 persons.

The Arlington Claggett Memorial with some 4 persons.
The Intown Liquor, Inc., with 4 persons.
And the Washington Diner, with two persons.
Plus a number in other allocations that come in with the $1,300,000 request of the Watergate, which averages about 110 employees.

TIME BEFORE EVICTION

As I say, I support the funds for this. I believe that the property should be acquired as rapidly as possible. And when the planning, design, and construction of this edifice require it, these people then should be given their notices to move. What I would deeply appreciate and what I would like to ask of this committee is that as they make the report on the funding of this money that they make it crystal clear to the authorities that the present tenants who enjoy lease rights and have no damage claims that would normally be paid to them be permitted to remain in their areas for the longest possible time before eviction, consistent with the Government's need for the actual possession of the land for construction purposes.

WAX MUSEUM

Many of these people have been searching for new areas. The Wax Museum particularly is operated by a very dear friend of mine, a former Oklahoman, Mr. Frank L. Dennis, who is president of it. He thought they had secured a site in the Southwest development area. But then when the plans were changed, as they often are, and the highways were rearranged in the shuffling of the sites, they found that the parking which was necessary for the continuation of the museum had been eliminated, and it was impossible to locate over there.

Other people will have a hard time trying to find a location, also.

TENANTS REMAIN UNTIL LAND ACTUALLY NEEDED

So I would deeply appreciate the committee considering writing into the report or having an understanding when the authorities appear that the tenants will be allowed to remain on their property until the land is actually needed for the construction project. This will be in keeping with the colloquy between Senator McNamara and me during which we referred to the following portion of the report of the House Committee on Public Works accompanying the National Cultural Center bill in 1958:

> The committee believes it would be advantageous to the Government if the present lessees of the private property to be acquired are permitted to continue their tenancies until such time as plans have been approved and funds are made available for the actual construction of the National Cultural Center.

I would like to ask that there be included in the record the colloquy that was had with Senator McNamara on Friday, August 22, 1958, from the Congressional Record.

(The colloquy referred to follows:)

> Mr. MCNAMARA. The Senator from Oklahoma is absolutely correct about the 5-year period. However, I wish to point out that the Commission now has enough money on hand to purchase the slightly more than 1 acre which is privately held. The remainder of the property already belongs to the Government. Therefore the purchase may be made at any time.

Mr. MONRONEY. The point about which I was asking the Senator was whether the tenants having small businesses—I have reference to the historic gallery, the waxworks—will be permitted to continue in that location as a lessor from the Government until such time as the property is actually needed for the construction of the Cultural Arts Center.

Mr. MCNAMARA. As I understood the action of the committee, it was that the tenants until such time as the property was actually needed; and, of course, that would involve, as the Senator from Oklahoma points out, raising the necessary funds to proceed with the project. However, I would not encourage the tenants to rely too much on that, because there is an indication that the money will be raised rapidly.

But there is no reason in the world why the tenants should not remain there. They might become tenants of the U.S. Government and continue as such on a month-to-month basis.

Mr. MONRONEY. Until the contractors are ready to go to work, and the land is needed for the actual construction, the tenants would prefer to remain there, if the property were to remain idle, until such time as construction begins. If it is the opinion of the Senator from Michigan that that will be permitted under the bill, I deeply appreciate his courtesy in extending this information to me at this later time.

Mr. MCNAMARA. That is definitely my understanding. I am sure the situation will continue in the manner in which the Senator has outlined.

LENGTH OF LEASES

Senator BIBLE. I have only one question. It may be that these tenants to whom the Senator from Oklahoma referred might possibly be appearing before this committee personally—I don't know whether they were or not—but I think it might be helpful to this committee if it could be supplied to the committee either by you or them, the length of time that these leases have to run. I am in complete sympathy with what you say. I think it is one of the toughest things in Government to disrupt businesses and private individuals, and I think we should do everything we can to protect them, consistent with their obligation to go ahead with the Cultural Center.

I don't know whether you have the length of the leases.

Senator MONRONEY. I think they are abrogated, Mr. Chairman, and Senator Bible, when the Government decides for its own purposes it needs the land. I am not objecting to that, I am merely pleading that until they actually go to work on the plot, then these tenants should be allowed to remain if they desire to do so.

Senator BIBLE. I understand the point that you are making.

Senator MONRONEY. The lease of the museum would run to 1967, but there is a 30-day clause, you see, for the termination in case it is desired by the Government.

ASSISTANCE TO TENANTS

Senator BIBLE. I have great sympathy for the position you make, and I would certainly think the Government would do everything they can to help these tenants consistent with the objective of a cultural center.

Senator MONRONEY. Sometimes we have seen the land cleared out far in advance of when the land is needed for construction. If we can have this time, it will be appreciated.

Chairman HAYDEN. Senator Aiken.

STATEMENT OF HON. GEORGE D. AIKEN, U.S. SENATOR FROM THE STATE OF VERMONT

National Maple Production Research Center

Senator AIKEN. Mr. Chairman, I come before your subcommittee this morning to suggest the appropriation of $180,000 for the establishment of a National Maple Production Research Center in Burlington, Vt. I regard this appropriation more in the nature of an investment than an expenditure. This project is of national importance to farmers living in some 13 States that produce maple products stretching from Maine to Minnesota and southward to the Appalachians. These States are in order of production volumes: Vermont, New York, Ohio, Pennsylvania, Wisconsin, Michigan, Massachusetts, New Hampshire, Maryland, Maine, Minnesota, Indiana, and West Virginia. If the forest research at Burlington is successful, maple production will not only be accelerated in these 13 producer States, but it may be developed in other States also.

Maple Sugar Industry

The maple sugar industry has always been a family operation. It is an important annual source of cash income, and many producers are processors as well and sell directly to the public. This small but important industry needs technological development. With our national income rapidly expanding, new and wider markets for maple products are unlimited. In good years our maple people are producing about one and a half million gallons annually with a wholesale value of about $7 million and a retail value of twice that amount. With stepped up research these figures can be doubled or even tripled in a fairly short time.

Much progress has been made in the research Forest Service is now conducting, but by establishing a full-scale research center the time needed to produce prospective results can be cut in half.

Support for the Center

In support of my request, I submit the following for the record: (1) A description of the present research of program at Burlington; (2) a letter from the Forest Service Chief explaining how this additional money could be effectively used; (3) letters, statements, and telegrams endorsing this project from the National Maple Council, the Vermont Maple Industry Council, the Vermont Sugar Makers Association, the New York State Maple Products Association, the Geauga County (Ohio) Maple Festival Board, the dean of the College of Agriculture, University of Vermont, the New Hampshire Maple Producers Association, the Maine Sugar Makers Association, and the Cornell University Department of Conservation.

Interest of Other States

I know that the other States are also interested, because I have had men in my office from as far away as Wisconsin to discuss this situation.

So I will submit these documents to you and not take up any more of your time.

(The documents referred to follow:)

MAPLE SIRUP RESEARCH

FEBRUARY 19, 1964.

Mr. EDWARD P. CLIFF,
Chief, Forest Service,
Department of Agriculture, Washington, D.C.

DEAR ED: I understand that all of the research work now being conducted by the Forest Service in the field of improved maple production is concentrated at the University of Vermont in Burlington where, I believe, you have five persons at work seeking ways to improve the yield per tree, tapping efficiency and other related production and management problems.

In this connection I am in receipt of the enclosed copy of a resolution adopted this month by the Vermont Maple Industry Council requesting the establishment of a national center for intensive maple production research. I also understand that if such a center should be established, the logical place would be Burlington in view of the work already in progress there.

I have been working with our maple people on the related problems of production and marketing techniques and believe that every reasonable effort possible should be made to help this industry in achieving greater efficiency. I would like to have your evaluation of such a proposal in line with the enclosed resolution. As the Interior Appropriations Subcommittee is now going into this and moving rapidly, I would like your reply as soon as possible.

Best regards.

Sincerely yours,

GEORGE D. AIKEN.

U.S. DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, D.C., February 25, 1964.

Hon. GEORGE D. AIKEN,
U.S. Senate.

DEAR SENATOR AIKEN: This is in reply to your letter of February 19 requesting our evaluation of a proposal by the Vermont Maple Industry Council for intensified research on maple sap production at Burlington, Vt.

Your information on our present program in maple production research is essentially correct. We are seeking ways to improve the yield per tree and to decrease production costs per gallon of sirup. With our present staff, however, we have not been able to work intensively toward developing techniques and systems for extraction and collection, nor toward developing the combinations of practices which will net the highest total profit per acre from sugarbush management.

The major effort to date has been in the field of improving yields per tree through selection and breeding of trees with high sap yield and sweet sap. We are progressing toward this goal at a gratifying rate, with excellent cooperation from agencies in Vermont, Maine, New Hampshire, and New York.

It appears that only a modest proportion of the present effort at Burlington could be wisely diverted from tree improvement research to intensify extraction and collection studies of the type suggested. If tree improvement research is interrupted the excellent cooperative effort in locating and selecting high sugar-yielders would probably lose its impetus, and be extremely difficult to reactivate.

Our short-range plans do call for intensified research on cheaper and better methods for sap extraction and collection and for sugarbush management at Burlington. A regional center, located at Burlington where we can continue a highly successful coordinated program with the university, would serve as a focal point to encourage and coordinate research by the universities, agencies, and industries serving the maple products belt.

The fiscal year 1965 budget now before the Congress provides no increase for the research at Burlington. An increase of $180,000, as suggested by the Vermont Maple Industry Council, would enable staffing at a level to provide for intensified research on extraction and collection of sap and sugarbush management problems. Our short-range plans call for an expansion of about this

magnitude through the regular budgetary procedure when the overall financial situation permits.

Thank you for the opportunity to comment on this problem.

Sincerely yours,

EDWARD P. CLIFF, *Chief.*
By CLARE HENDEE.

THE NEED FOR RESEARCH IN MAPLE SAP AND SIRUP PRODUCTION

The production and sale of maple sirup has been an important contributor to the rural economy of several Northeastern States. The large amount of labor necessary to collect sap, and the high cost of concentration, are among the factors which have led to a very serious decline in the production. The industry now finds itself unable to compete with the imported product on a profitable basis. This trend could be reversed if improved practices in the production and handling of maple sap led to more efficient sirup production. We believe that more research is necessary to provide these improved methods with the speed necessary to save the industry from extinction.

We are convinced that this immediate need for answers requires a national center for intensified research on these maple production problems. To this end, we recommend the additional appropriation of $180,000 to the U.S. Forest Service for research on improved production methods and related management studies. This additional appropriation would allow an intensification of the work presently being carried on in cooperation with the University of Vermont.

VERMONT MAPLE INDUSTRY COUNCIL.

FEBRUARY 12, 1964.

BURLINGTON, VT., *February 25, 1964.*

A RESEARCH PROGRAM IN MAPLE SAP PRODUCTION

A research effort to meet the needs of maple producers could be grouped into three broad areas: (1) problems of extraction and collection to lower production costs, (2) increasing sugar yield to lower production costs, and (3) problems of combining sap production with timber management for highest total per-acre income.

1. *Extraction and collection.*—The major objective would be to develop techniques and systems with minimum labor costs per gallon of sirup produced. Examples of research needed include cost studies of taphole preparation methods, methods, development of cheaper mechanized systems of tapping, time of tapping, placement of tapholes to minimize costs, and development of prescriptions to determine sugar content and rate of sap flow to eliminate submarginal trees for tapping. Comparison of costs of various collection methods, systems, and intensities for various sugarbush conditions should be made. Other examples are development of better and more acceptable methods of bacteria and fungus control in tapholes to prolong flow, and studies of the economic feasibility of late fall and winter tapping. Sap flow is related to the formation and movement of sugars within the tree as well as to environmental factors in the sugarbush. Additional research is needed on factors governing the formation and quality of sap, rate of flow, and sugar content.

2. *Increasing sugar yield.*—Sugar maple producers have known generally of sweet trees for over a century. Recent research has shown a wide and consistent variation among trees in the relative sugar content of their sap, rates of flow, and the length of period during which they flow. The long-term objective of this work would be to reduce sap handling and processing costs through development of high-yielding trees. Immediate studies are needed to determine whether sap flow and sugar content at other times of the year could be correlated with that obtained during the regular tapping season, thus speeding up the search for trees of high sap yield and sugar content. Also included would be studies to increase growth rate, and determine if some means such as fertilizing can increase sap and sugar production. Methods are needed to evaluate sugar yields from young saplings so that breeding programs can be condensed into a relatively short number of years. Dependable seeding or planting methods are needed before a tree improvement program can be of value to the maple sap producer, or even before

adequate inheritance tests can be made. Thus, research at Burlington should develop successful methods for planting sugar maple.

3. *Combining sap production with timber management.*—Studies are needed to show the particular tapping and timber culture practices that will result in the highest total profit from sugarbush management. Special problems include:

(*a*) Determining the effect of cultural practices on the quality and yield of both sap and wood products. These practices include the control of nutrition, stand density, and other stand factors.

(*b*) Developing prescriptions for minimizing reduction of timber quality from sugaring operations.

(*c*) Finding methods for fitting maple sap production into the continuous management of maple stands for valuable timber products.

The major effort in the present Federal program of research underway at Burlington has been in the field of increasing sugar yield of individual trees so as to lower production costs per gallon. Enough has now been learned about the mechanisms of controlled breeding and means of vegetative propagation to permit undertaking other studies. Selections among high yielding trees are now being made with the help of the Northeastern Tree Improvement Committee and its cooperating agencies in Maine, New Hampshire, Vermont, and New York.

Current maple tree improvement research at Burlington includes developing the scientific basis for controlled breeding of sugar maple, selection and evaluation of superior sugar-producing strains, and inheritance studies of sugar maple selected for sugar content in the sap. Seeding and planting studies include research on storage and handling of maple seed, production of healthy nursery seedlings, site preparation, planting methods, and vegetative propagation.

It appears that only a modest proportion of the present Federal effort at Burlington could wisely be diverted from tree improvement research to extraction and collection studies. If tree improvement research is interrupted the excellent cooperative effort in locating and selecting high sugar yielders would probably lose its impetus, and be extremely difficult to reactivate.

A limited amount of research in maple sap production is underway at present in the Northeastern and North-Central United States. Work at Michigan State University has emphasized studies on the effects and control of microorganizms in tapholes. The Vermont Agricultural Experiment Station, the leader in maple sugaring research for many years, has had an active program on the physiology of sap flow, and other research that has led to improved techniques. There is no unified or broad-scale research effort, however, which shows early promise of raising the efficiency of sap extraction and collection.

Intensifying and expanding the research work at Burlington, working in cooperation with the Vermont Agricultural Experiment Station, would not be a duplication of any research work done elsewhere.

(Above material prepared by Forest Service, University of Vermont, and Vermont Maple Council personnel working on the project.)

GREENSBORO, VT., *February 26, 1964.*

Hon. GEORGE D. AIKEN,
U.S. Senate, Senate Office Building,
Washington, D.C.

DEAR SENATOR AIKEN: At the February 25, 1964, meeting of the executive committee on the Vermont Maple Sugar Makers Association, Inc., it was voted to favor any means that would substantially increase research into the production of maple sap and into other maple production problems with the primary aim of reducing these costs of production.

We feel that this would be one major way in which we could attack the present problem of cheaper Canadian sirup. There also exists, as you know, a tremendous number of tappable trees that possibly would be used if the economics of maple production were more favorable, thereby enhancing the economy of Vermont.

We would appreciate any suggestions or aid you could give us in trying to get an enlarged research program established in Vermont.

Very truly yours,

MARGARET A. IGLEHEART, *Secretary.*

SIDNEY, N.Y., *March 2, 1964.*

Senator GEORGE D. AIKEN,
Senate Office Building, Washington, D.C.:

In view of severe Canadian competition in pure maple syrup we request you strongly support bill to increase research funds to Forest Service. Their work on developing sweeter sugar maples and sugar bush management would put northeastern sugar bush operators in a more favorable situation.

CHARLES F. HAGER,
Secretary, New York State Maple Products Association.
LLOYD H. SIPPLE,
Director, National Maple Syrup Council.

BURTON, OHIO, *March 3, 1964.*

Senator GEORGE D. AIKEN,
Senate Office Building, Washington, D.C.:

We in Ohio strongly urge that the request for additional funds for maple research to reduce costs of tapping and costs of processing sap be added to the budget for the U.S. Forest Service for 1964 and 1965. This will be of considerable benefit to the future of the maple industry.

TURE JOHNSON,
President, Geauga County Maple Festival Board.

THE UNIVERSITY OF VERMONT,
Burlington, Vt., February 25, 1964.

Senator GEORGE AIKEN,
U.S. Senate, Washington, D.C.

DEAR GEORGE: The Northeast Forest Experiment Station is currently asking for $180,000 of additional Federal Funds to expand the maple research program in Vermont. This sum would be allocated to the present research staff of the Northeast Forest Experiment Station which is located in Burlington.

As you know, this staff is presently working with the members of our forestry and botany departments at the university in the field of maple. The additional funds would be used to supplement projects now underway and to start new research with maple.

We at the university strongly support this request since it will help to strengthen and support the maple industry in Vermont as well as in other maple-producing States.

If you wish additional information, I suggest you contact Mr. Albert G. Snow, Research Forester, Northeast Forest Experiment Station, Federal Building, Box 968, Burlington, Vt.

Best regards.

Sincerely yours,

PAUL R. MILLER, *Dean.*

ALSTEAD, N.H., *March 3, 1964.*

Hon. GEORGE D. AIKEN,
Senate Office Building,
Washington, D.C.:

Regarding appropriation for accelerated maple research program, the need is great. Canadian competition, high production cost, labor shortage stifling U.S. maple production. New Hampshire Maple Producers Association goes on record supporting Vermont Maple Council requesting U.S. Foreign Service appropriation for maple research long overdue.

KENNETH E. BASCOM,
Director, National Maple Syrup Council,
GORDON H. GOWEN,
President, New Hampshire Maple Producers Association.

SKOWHEGAN, MAINE, *March 2, 1964.*

SENATOR GEORGE B. AIKEN,
Senate Office Building,
Washington, D.C.:

I strongly endorse the bill you are sponsoring to aid the maple industry.

T. R. HARDING,
Maine Sugar Makers Association.

ITHACA, N.Y., *March 3, 1964.*

Hon. GEORGE D. AIKEN,
The U.S. Senate,
Washington, D.C.:

Strongly urge increased research funds Northeastern Forest Experiment Station for work on sugar maple sweetness management and fertilization to enhance competitive position our 1,800 maple syrup producers respect to Canadian product.

FRED E. WINCH, Jr.,
Professor of Forestry, Department of Conservation, Cornell.

ASHFIELD, MASS., *March 3, 1964.*

Hon. GEORGE D. AIKEN,
Senate Office Building,
Washington, D.C.:

We are very anxious that an additional appropriation be made this year to the U.S. Forest Service to be used for research in maple tree sap production as a producer as well as an officer in State and national maple associations I feel a modest sum now could produce far-reaching results in an area that has had very little attention from research.

LINWOOD B. LESURE,
President, National Maple Council.

INDIANS AS SUGARMAKERS

Chairman HAYDEN. As a matter of curiosity, did the Indians make maple sugar before the white people came?

Senator AIKEN. Yes; they were the first sugarmakers in America. And they made it, I think, as far south as North Carolina, Tennessee, and Kentucky. The sugar maple grows remarkably well in Louisville where a good share of the street trees are sugar maple. But, of course, those States of Tennessee, Kentucky, North Carolina, and I suppose southwestern Virginia do not produce it commercially any more.

Chairman HAYDEN. Any questions?

BUDGET ESTIMATE, 1965

Senator BARTLETT. Only one, Senator Aiken, if I might. I am not familiar with this project. Is $180,000 the request for fiscal 1965 for the planning, designing, and start of construction, or is this the total cost? Or what is the total cost?

Senator AIKEN. I understand that they have a program now of about $74,000 a year. The university, I am advised, has made 10 acres available for the research grounds.

MAPLE SUGAR PRODUCTION

Of course, the sugar maples are all over the mountains around there. But we know that some trees will produce a much higher percentage of sugar than others. We are still producing considerable; not by

primitive methods, but by methods which have been used for the last hundred years. The market is unlimited, of course. And a lot of people who want to buy maple sirup don't know how to get it. And we find, strange to say, that there are a lot of people that produce it that do not know where to sell it at the best price. So there is a lot of work to be done.

Senator BARTLETT. Does the proposal invite any building, any laboratory? I am not clear on this point.

Senator AIKEN. I expect a laboratory should provided. The 10 acres—it is explained in Ed Cliff's letter here, and that is what I am submitting the documents for, because they go into detail.

Senator BARTLETT. They probably explain it fully, and I will read them with a great deal of interest.

Thank you very much.

Chairman HAYDEN. Thank you for your appearance.

Representative Burton.

STATEMENT OF HON. LAURENCE J. BURTON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF UTAH

UTAH WILDLIFE CONSERVATION PROJECTS

Mr. BURTON. Mr. Chairman, I have a prepared statement that I would like to submit for the record.

Chairman HAYDEN. That may be done, and you may highlight it.

(The statement referred to follows:)

BEAR RIVER MIGRATORY BIRD REFUGE ROAD

Mr. Chairman, I appreciate the privilge of appearing before this committee in support of two wildlife conservation projects within the State of Utah, and specifically within my congressional district.

I wish to inform the committee at the outset that only one of these projects is included in the President's budget, but both are projects of great merit.

The first one I want to discuss is the rebuilding of the road known as the Bear River Migratory Bird Refuge Road leading from the bird refuge to Brigham City, Utah. This committee saw the merit in the request just a year ago and the Senate did, in fact, appropriate some $105,000 for rebuilding the road. The funds were lost when the House deleted them in conference.

It is clear that there is no legal responsibility on the Federal Government to provide funds for this purpose because the road is not located on federally owned land. There is, however, a strong moral responsibility on the Federal Government to provide the funds. This moral responsibility arises from the fact that this road is the only access road to the bird refuge, and the great bulk of its use is by Federal employees and persons using the facilities. The Department of the Interior has long recognized this responsibility and moral obligation.

According to the Bureau of Sport Fisheries and Wildlife, over 20,500 people visited the refuge last year. The road has no other purpose than to provide access to the refuge.

The road leading from the refuge to Brigham City is approximately 14 miles in length. The length of road from the refuge boundary to the city is approximately 11½ miles and, in the words of the Department of the Interior Fish and Wildlife Service, it is in "very poor condition." This road needs a new base, and it needs to be widened to 24 feet and surfaced with a 3-inch bituminous top. A bridge is required across Reeder's Canal, and it should be relocated to eliminate a hairpin curve in the road. The total estimated cost of the improvement is $105,000.

The budget does contain a provision for some $12,000 for refurbishing roads within the refuge. This is 1 mile of road from the boundary to the headquarters. Our request for $105,000 is in addition to this $12,000.

The refuge encompasses some 64,000 acres which have, of course, been substantially removed from the tax rolls of Box Elder County, Utah the county in

which the refuge is located. To the best of my information and knowledge, Box Elder only receives $100 in taxes from the area.

The value of the refuge is known to the members of the committee, and there is testimony concerning these facts already in the record, so I will not burden the committee with superfluous information.

Ouray National Wildlife Refuge

The Ouray National Wildlife Refuge is also located in my congressional district some 26 miles from Vernal, in Uintah County, Utah. The committee is familiar with this refuge and the role it plays in the production of ducks and geese, and the need for additional funds to develop its full potential.

We are requesting the additional sum of $232,400 this year for the following items and facilities:

Boundary fencing, 33 miles	$32,400
Additional buildings, headquarters roads and parking, water supply and electric systems	86,500
Canals, dikes, water control structures, and pumping facilities	113,500
Total	232,400

The Ouray Refuge was established primarily because of its value in the management of migratory waterfowl. It has excellent potential for the production of both ducks and geese, and will fill an important need in that section of the intermountain West for a resting and feeding area for migrant birds. Primary management objectives are aimed at providing nesting habitat for the Great Basin Canada goose, as well as several species of the dabbling and diving ducks. It is estimated that the area will eventually produce 14,000 ducks and geese annually, and that an estimated peak of 75,000 birds will utilize the area during migration.

Parts of the Ouray Refuge will ultimately provide a fine area for public hunting of waterfowl and upland game birds. This will be of particular value as there are no privately operated or commercial hunting areas in the entire Uintah Basin, and there is only one State area within the immediate sphere of influence of Ouray. Present public hunting opportunities are thus limited, and provision of such opportunity at Ouray will be an important contribution to the public need for this type of recreation.

Other forms of recreation will also be provided at Ouray. These will include picnicking, bird watching, wildlife photography, and general sightseeing. Although the human population density of this general area is relatively low, there is still a need for wildlife-oriented recreation as there is in areas of higher population density. In recognition of this, plans have been formulated to meet this need.

Recreational development at Ouray will include the following:

Provision of a nature display and visitor center in the headquarters administration building to be constructed.

Construction of a display pond in the headquarters vicinity were representative species of waterfowl will be kept. Such a facility will provide for wildlife observation by all age groups, and will be beneficial to hunters as a place where waterfowl identification can be studied. This is particularly important with the present need for species management of waterfowl.

A tour road will be developed to provide opportunity for amateur bird watchers, serious ornithologists, and the general public to observe the variety of birds that can be found in the Sheppard Bottom area of this refuge.

Incorporated in this tour road and scenic drive will be lookout points where picnic facilities will also be provided.

The balance of the cost of the program, based on the master plan, is for the sum of $819,600. The Government has already expended large amounts of money on this project, and I respectfully request that the additional funds required to move ahead with it be included in the Interior appropriations bill.

Mr. Chairman, may I conclude these remarks by concurring in the statement submitted by Senator Bennett, requesting additional funds for the watershed research program of the Forest Service at Logan, Utah. This is another valuable and worthwhile program in Utah, and I want to be associated in support of the request.

BEAR RIVER BIRD REFUGE ROAD

Mr. BURTON. Thank you, sir.

I am sure you are familiar with this story; you have probably already heard it from Senator Moss and Senator Bennett. I appeared before your committee last year on the matter of the road to the Bear River Bird Refuge near Brigham City. To put it in a nutshell, this road is about 14 miles long, and about 11 miles of it is on private land and about 3 miles of it is in the refuge on Federal land. But the point of the matter is, that this road only services the bird refuge. The land going to the refuge produces only about a hundred dollars a year in tax benefits to the county.

The refuge itself occupies 64,000 acres of land which is, of course, removed from the tax rolls.

There were more than 20,000 people last year that used the road to go out and look at the birds. But it is primarily used really for the Federal employees to get out to the refuge itself.

Now, it is estimated that it will take about $105,000 to hard surface the road and widen it and to put in a bridge that goes across one of the canals. And I certainly have no complaint about your committee, Mr. Chairman, because you put the money in last year, and the House deleted it. If you would be kind enough to give us the consideration again this year I will take up a labor with the other body.

OURAY NATIONAL WILDLIFE REFUGE

Now, the second matter is with the Ouray National Wildlife Refuge, which is in Uintah County, also in my district, about 26 miles from Vernal, Utah.

This is an area which has great potential for the production of wildfowl. It is estimated that it can produce when it is fully developed 14,000 birds annually. And there are something like 75,000 birds that will utilize the area during migration. And I know that all of us from the West are interested in sports and hunting and are fully aware of the duck shortage we have.

This will be a step in the right direction to provide us with some more ducks, and some more wildfowl in addition to providing an available recreation facility.

In short, Mr. Chairman, we are requesting that you include an additional $232,000 for the purpose of building 33 miles of boundary fencing, building a few additional buildings, headquarters road, parking, water supplies, canals, and dikes. I would appreciate it, and I know the sportsman of the West would appreciate it, too.

That is all I have to say, Mr. Chairman. I appreciate the opportunity to appear before your distinguished committee.

BUDGET ESTIMATE

Chairman HAYDEN. Is there a budget estimate for this last item?

Mr. BURTON. This last item is the budget estimate. But neither of the two items is included in the budget in sufficient amounts. The Refuge road is not included at all, and the Ouray figure of $115,000 is $232,000 short of the amount needed.

Chairman HAYDEN. Senator Bible.

Senator BIBLE. No questions. I just want to be very clear, both of your requests are unbudgeted items?

Mr BURTON. Yes sir.

Senator BARTLETT. How large is Ouray?

Mr. BURTON. If you would like me to get that for the record I would be happy to do it.

Senator BARTLETT. Don't bother.

Chairman HAYDEN. Thank you very much.

Senator Allott.

STATEMENT OF HON. GORDON ALLOTT, U.S. SENATOR FROM THE STATE OF COLORADO

COLORADO STATE UNIVERSITY OFFICE-LABORATORY, FORT COLLINS, COLO.

Senator ALLOTT. Mr. Chairman and members of the committee, I can read my statement in 2 or 3 minutes, and I think that is the fastest way to do it.

Last year I presented to your committee a justification statement and supporting letters from W. E. Morgan, president, Colorado State University, and Edward P. Cliff, Chief of the Forest Service, for the construction of a headquarters office-laboratory for the Rocky Mountain Forest and Range Experiment Station to be built on the campus of Colorado State University at Fort Collins, Colo.

ESTIMATED COST OF FACILITY

It was estimated that this facility, which is part of a national forest research program, would cost approximately $1.5 million. And this is a part of the national forestry research program.

As a result of the deliberation, approval, and support of your committee, funds were added to the research item of the Forest Service, appropriation for fiscal year 1964 for the planning of several research laboratories, including the headquarters office-laboratory at Fort Collins, Colo. My recollection is that this was $179,000.

SCHEDULE OF CONSTRUCTION

The preparation of design and specifications for this headquarters office-laboratory at Fort Collins are well underway. I am informed that plans and specifications will be ready for bidding by, and possibly before, December 1 of this year. This would provide plenty of time to award a construction contract so that actual building could begin not later than next January.

This schedule would enable the building to be put under roof and enclosed well before the following winter. To meet this schedule it is essential that provision for construction funds in the amount of $1.5 million, less planning funds made available last year, $179,000 be added to the research item of the Forest Service, for fiscal year 1965.

NEED FOR FACILITY

The need for this headquarters office-laboratory facility, as I outlined it to the committee last year, is even more critical than before. Another year has elapsed, and the Colorado State University enrollment has again exceeded earlier estimates; thus the university space now being used by the U.S. Forest Service is needed most urgently. Moreover, laboratory facilities for Forest Service scientists are practically nonexistent. However, the university has set aside campus land for the building without cost to the Government, and utilities and services are being made available for this facility.

The research for which the building is needed is also becoming more important almost daily, as our ever-increasing population requires more water, timber, forage, and recreation from our forest resources.

I most respectfully urge that full and favorable consideration be given by the committee to this request.

Chairman HAYDEN. Thank you for your statement.

COST AND STATUS OF CONSTRUCTION

Senator BIBLE. For my information, the overall project is $1.5 million?

Senator ALLOTT. Yes.

Senator BIBLE. And the planning and design money which has been allowed to date is what?

Senator ALLOTT. $179,000.

Senator BIBLE. So we have about $1.3 million to go?

Senator ALLOTT. We are talking about $1.3 million.

Senator BIBLE. And you say that this would be ready to go to bid in December of this year, approximately?

Senator ALLOTT. The designs, the architectural work and everything will be done by that time.

Senator BIBLE. And what would be the construction period on $1.3 million? Would that be completed within the fiscal 1965?

Senator ALLOTT. President Morgan informs me that if they could get this let by January——

Senator BIBLE. January 1965?

Senator ALLOTT. January 1965—that they would be able to get this building up, or substantially completed, so that they could move students into the buildings which are now being occupied by this work.

In other words, I would say roughly 7 or 8 months, in 1965, in the fall of 1965.

NEED FOR FACILITY

Senator BIBLE. The thrust of your argument is, since you have got the $179,000 for planning and designing and you are ready to go, the sooner you go the better, because you have got a crying need, and there is no use of deferment?

Senator ALLOTT. That is exactly it, you have put your finger on it.

Senator BIBLE. Thank you, very much.

Senator BARTLETT. No questions.

Chairman HAYDEN. Thank you for your appearance.

I have received a number of communications from Members of Congress and statements by Members which I will insert in the record at this point.

(The material referred to follows:)

LETTER FROM SENATORS SALTONSTALL AND KENNEDY CONCERNING FUNDS FOR LAND ACQUISITIONS AT THE CAPE COD NATIONAL SEASHORE

U.S. SENATE,
COMMITTEE ON APPROPRIATIONS,
March 5, 1964.

HON. CARL HAYDEN,
Chairman, Appropriations Committee,
1235 Senate Office Building, Washington, D.C.

MY DEAR MR. CHAIRMAN: We are very much concerned that the budget submitted by the Department of the Interior contains no additional moneys for land acquisitions for the Cape Cod National Seashore.

In a recent letter it was pointed out that available land acquisition funds for the Cape Cod National Seashore will most likely be used up by the end of this

fiscal year. We hope that consideration can be given to this problem so that the acquisition program of the Cape Cod National Seashore which has progressed so well to date may continue.

Sincerely,

LEVERETT SALTONSTALL,
U.S. Senator.
EDWARD M. KENNEDY,
U.S. Senator.

BUDGET ITEMS AFFECTING MONTANA

STATEMENT BY SENATOR LEE METCALF

MARCH 5, 1964.

Senate Appropriations Subcommittee on Interior and Related Agencies:

Mr. Chairman, Senator Mansfield has gone over my statement and asks that it also be considered his. He may, as a member of your subcommittee, wish to elaborate on some of the items I shall mention.

With your permission I shall insert my entire testimony, some letters I have received, and a newspaper article, in the hearing record, and comment on some items of particular interest.

FOREST SERVICE

I welcome this opportunity to discuss the details of the Forest Service 1965 budget proposals.

First, while there are minor increases, this budget fails to provide the sustained buildup needed in the development of the national forests as outlined in the program submitted to Congress by President Kennedy in September 1961. This important resource development program has been lagging, and next year's budget provides an insufficient amount to put it on schedule. Timber resource activities lag furthest behind.

If the multiple-use development of these valuable national forest properties is to increase, then there must be coordinated budgetary attention given to all of our related forest resources. Attention must be given to recreation, wildlife, soil, and water management, particularly range improvement, and land adjustment functions in addition to timber resources. An additional $15 to $20 million for these purposes would help considerably in bringing the development program into balance.

Even in an economy budget year, such as this one, I am convinced that the additional funds would be a prudent investment. The fact that forested areas of this country tend in a major degree to coincide with areas of low rural income and high unemployment lends weight to the need for additional budgetary consideration at this time. The national forest program is in complete accord with the objectives of President Johnson's new economic policies.

The increase in the recreation use of the national forests, from 113 million visits in 1962 to about 125 million in 1963, illustrates the attraction of these public properties and the corresponding increase in dollars which visitors bring into these rural areas.

I hope that this committee will be able to give increased impetus to this program.

STATE AND PRIVATE FORESTRY

I am pleased to note that there is before this committee for consideration a $1 million increase for the State and private forestry cooperative program. Over the years, these programs have not moved ahead as rapidly as have other forestry programs. The increases of $250,000 for cooperative forest fire control; $500,000 for forest management and processing; and $250,000 for general forestry assistance, are very modest.

I am sure that larger amounts can be justified when we consider their contribution to the national program. For example, the fire protection covers about 440 million acres of forest land and nonforested watersheds in 49 States. These State and private forest lands produce more than 80 percent of all of our forest products and play a key role in the Nation's economy.

The provision of additional service foresters and increased technical assistance to small private woodland owners and small timber producers is aimed at those holdings where a higher level of forest management is most needed. It gives the type of assistance now lacking in many areas. Again, it ties in with the efforts

to assist the many distressed rural areas. Much of the rural area development must come from a greater productivity and use of the forests and their related resources. Since the cooperative forestry funds are matched with State funds, such appropriations have the advantage of bringing an equivalent amount of local cost-sharing funds into the program.

Forestry Sciences Laboratory, Missoula, Mont.

A laboratory estimated to cost $400,000 is needed at Missoula for research on the silviculture of western larch and Engelmann spruce, and the management of habitat for wildlife. Some phases of this research are underway, but lack of specialized facilities reduces opportunities for fully effective investigation. Modern research facilities would permit a stronger attack on the problems being studied and would hasten results.

Engelmann spruce and western larch reach their best development in the Missoula area. The timber industry in this area is to a large degree dependent on these species for raw material. Volumes available for cutting under sustained yield could be stepped up materially if delays now experienced in regeneration after harvest could be eliminated or sharply reduced. Knowledge of growth requirements under management, and effective cultural techniques also would add to the efficient use of growing stock. The proposed laboratory would speed the research necessary to accomplish these improvements in management.

Modern research facilities also would aid in obtaining the knowledge basic to improving the habitat of wildlife. Winter range for deer and elk is critical in parts of the region. Information is needed about growth requirements of food and cover plants, their response to different levels and patterns of use, and practices that add to the carrying capacity for sustained production. No laboratory facilities are now available for use in supplementing field studies of these questions. Facilities for this purpose would be included in the proposed construction.

Montana State University has made available a site for the laboratory on their campus. The location has the advantage of convenient library facilities and close cooperation with supporting scientific departments. A planned new building for the forestry school would be close by.

Architectural and engineering plans for the proposed Laboratory are now being developed with funds appropriated to the Forest Service for this purpose.

Forest Fire Research, Missoula, Mont.

Work now underway at the Missoula Forest Fire Laboratory shows great promise for developing new techniques to fight forest fires. How soon this promise can become reality depends on how quickly research will be able to provide the bases for operating practice. In the meantime, fires disasters do not wait. The Sleeping Chile Fire on the Bitterroot National in Montana burned 28,000 acres in 4 days in August 1961. It cost $1,931,070 to fight this one fire. But the loss was many times that amount; for fire damage will hamper productive management of 43 square miles of forest land for at least 20 years. Potentials for these fire disasters appear to be on the increase. Typhoon Freida in October of 1962 blew down more than 12 billion board feet of timber on the Pacific coast along with as much more unmerchantable material. This striking fuel hazard will face firefighters for at least another 20 years.

The Forest Fire Laboratory, completed in 1960, is still not fully staffed. The importance of unsolved fire prevention and control problems justified a full staff of scientists and a fullscale effort to produce and apply the needed research results. This could be done by increasing the current program by $375,000. This amount not only would step up the critically needed research, it also would provide for more rapid application of research results by Federal, State, and private forest landowners and protection agencies.

Because the laboratory offers for the first time the opportunity to bring forest fires into the laboratory under completely controlled conditions, many new things need to be tried. Some are underway. New studies of actual rate of spread of wildfires can be made with infrared mapping equipment, then related to the behavior of laboratory fire in wind tunnels. Complete information can now be collected on the physical and chemical characteristics of common forest fuels of the West and how these affect fire behavior and the difficulty of fire control. Now techniques are needed in developing better predictions of fire behavior as it is determined by weather, fuels, and topography. This will reinforce the new national system of fire danger ratings.

Several promising lines of research already underway need to be expanded and speeded up so they can start paying full dividends. These dividends will be: more effective fire control methods, less firefighting costs and, best of all, reduced fire damage. Project Skyfire, which has been unraveling the mysteries of fire-setting lightning storms and looking for ways to reduce the number of lightning fires, has already demonstrated a potential for producing the new information and techniques needed by firefighters. It should be expanded. A completely new concept of fire detection is now beyond the exploratory phases. It promises a new electronic system to locate lightning discharge areas and a new infrared heat detection system to locate small fires at night and through smoke and haze. Added to these are the potential reductions in the number of "too hot to handle" fires by controlled use of fire to reduce hazardous fuels and better use of chemical retardants and air attack to keep runaway fires from getting big. The additional funds proposed would help put each of these developments to work at the task of reducing forest fire losses.

FOREST ENGINEERING RESEARCH

An additional $200,000 is needed in the forest engineering research program at Bozeman, Mont., to develop new methods of harvesting small diameter timber from steep mountain slopes. The lodgepole pine forests of the Rocky Mountains have never yielded their full potential as a raw material source for industry. These forests can best be utilized in a multiproduct process yielding lumber, fiber products, chemicals, and energy. One of the handicaps to the establishment of new or expanded wood-based industries is the relatively high cost of handling small trees. Visionary engineering research to develop greatly improved systems for logging small timber on steep slopes has potential to solve this problem and thereby bring new industry into this region.

Research contemplated under an expanded program would include improvement in the design and pilot testing of transport of wood chips in pipelines, an evaluation of use potential of wood in steam energy production, and analysis and redesign of equipment and methods for harvesting and transporting forest products without danger of damage to valuable watershed values.

Bureau of Outdoor Recreation

The Bureau of Outdoor Recreation is asking $2,700,000 for fiscal year 1965. Of the amount requested, $1,600,000 is for planning and cooperative services, and $1,100,000 is for coordination, education, and research. The committee is urged to act favorably on this request.

The Bureau would use the $1,600,000 to prepare a national outdoor recreation plan encompassing all aspects of outdoor recreation. Activities of the Federal, State, and local governments as well as private owners would be included. By its assistance to States, the plan would help develop a nationwide effort and aid in the discovery of areas having significant recreation potential.

The $1,100,000 would go toward reviewing proposed budgets, legislation, and operations of more than 20 Federal agencies dealing in the area of outdoor recreation in order to promote a coordinated effort in this field.

It is extremely urgent that we develop as soon as possible a nationwide outdoor recreation plan so that Federal, State, local, and private programs may be coordinated and carried forward without duplication. With the population of the country expected to double by the year 2000, it is obvious that action must be taken now to meet future needs.

The Bureau's program of promoting Federal coordination should be of particular value to the Federal Government. Federal agencies currently are spending more than $300 million a year on outdoor recreation. The Bureau of Outdoor Recreation is to be one point in the Federal structure where all of these expenditures can be analyzed and evaluated. The request of the Bureau is less than 1 percent of the amount spent on outdoor recreation by these other Federal agencies. This is a small enough investment in coordination and efficiency.

East Glacier Airport

I also wish to call your attention to Senator Mansfield's and my interest in an airport at East Glacier. It is needed to provide airline service to Glacier National Park and vicinity, one of the Nation's top tourist attractions and, needless to say, a bulwark of the Montana economy.

Development of this facility has been held up because the National Park Service has not had sufficient funds with which to participate in the project. All

other participating agencies at the Federal and State levels are prepared to go ahead.

The Federal Aviation Agency has recommended a general aviation airport at East Glacier in its national airport plan.

The Montana Aeronautics Commission has advised the Federal Aviation Agency that it would be interested in acting as sponsor of the airport development at East Glacier under a contribution agreement with the National Park Service, providing the development would be under the Federal-aid airport program, in a manner similar to that being used for the airport development at West Yellowstone, Mont.

We hope that you and your committee will see fit to add an additional $400,000 to the Department of Interior appropriation bill so that construction of this vital airport might commence.

Your past support and consideration of similar matters has been most appreciated.

FISH AND WILDLIFE SERVICE

I want to mention one situation regarding wildlife research which I believe warrants your attention.

Page 26 of the justification for appropriations by the Bureau of Sport Fisheries and Wildlife shows that each of the 12 cooperative fishery units would be provided with an estimated $30,000, for 2 persons. Page 84 of the justification shows that most of the 19 cooperative wildlife research units would receive from $11,700 to $14,000, for the salary of the unit leader.

I have asked several persons engaged in fishery and wildlife research about this disparity in the funding of the two similar programs. I am told that when the cooperative fishery program was set up it provided for a second man to handle much of the administrative detail. This left the leader relatively free to direct research and work with gradute students.

I know that some wildlife research unit leaders have to spend a fair amount of time fundraising. The Wildlife Management Institute contributes $1,000 to each of the units; the State department of fish and game contributes some; and the other expenses are met by the National Science Foundation or National Park Service or perhaps some other group with a particular interest in the work of a particular unit.

All the Federal Government puts into these units is the salary of the unit leader, a few hundred dollars for gas and oil, and, every few years, money for a new car.

I know that this may not be the year to suggest that the Federal Government finance an additional position at each of the 19 wildlife research units, but I believe there is a problem here that should receive some attention from the subcommittee. I would like to suggest that you obtain the Department's views on this matter.

I have noted with interest and approval several line items in the 1965 Department of Interior budget, including the following:

NATIONAL PARK SERVICE

MAINTENANCE AND OPERATION

Glacier Park:	
Roads and trails	$382,000
Buildings and utilities	321,200
Yellowstone Park and Big Hole Battlefield:	
Roads and trails	839,200
Buildings and utilities	672,400

CONSTRUCTION

Glacier Park Visitor Center, Apgar	$257,400
Yellowstone Park:	
Boat docks and related facilities	350,000
Employee apartments	141,000
Employee residences	105,000
Big Hole National Battlefield, utility system	161,900

Park Service work budgeted for 1964–65 includes the improvement of campgrounds, roads, and parking areas at Apgar, Fish Creek, and St. Mary, work on the Camas Creek cutoff, rebuilding part of the Red Lodge-Cooke City Highway, and

an addition to the visitor center and roads and trails at Custer Battlefield National Monument.

Total proposed appropriation for park areas of particular interest to Montanans are Glacier, $2.9 million; Yellowstone, $2.8 million; Big Hole National Battlefield, $240,000; Custer Battlefield National Monument, $175,000.

Fish and Wildlife Service

OPERATION OF FISH HATCHERIES

Bozeman	$44,100
Creston	152,300
Ennis	309,200
Miles City	39,100

REFUGE OPERATION

Benton Lake	$114,600
Bowdoin	48,800
Charles M. Russell	254,300
Medicine Lake	31,000
National Bison Range and Ninepipe	101,800
Red Rock Lake	55,100

REFUGE CONSTRUCTION

Charles M. Russell National Wildlife Range, $240,000, for boundary fencing to facilitate grazing administration, waterfowl habitat improvement, construction of residence and service building.

Public Health Service

INDIAN HEALTH STATION

Wolf Point	$41,200

INDIAN SANITATION FACILITIES

Fort Belknap (Beaver Creek), individual water and waste	$45,000
Blackfeet (Babb-St. Mary), individual water and waste	139,000
Fort Peck (Wolf Point), community and individual water and waste	200,000
Crow (Pryor), community and individual water and waste	95,000

Indian Bureau

WATER SYSTEM

Fort Belknap: $50,000 for construction of a water system to serve both domestic and irrigation needs.

EDUCATION

Montana State College: $102,440 for extension work among Indians. Through this program, extension agents help Indian families develop and demonstrate improved techniques in home management, farming, and youth training through 4–H clubs, farm and home visits, short courses, tours, bulletins, achievement days, and exhibits.

IRRIGATION CONSTRUCTION

Crow Reservation: $63,713 to extend 7.9 miles of laterals and control structures.

Fort Peck: $324,788 for continued development of the Wiota (Big Porcupine) and Frazer-Wolf Point (including Little Porcupine) units.

IRRIGATION REHABILITATION AND BETTERMENT

Blackfeet: $111,484 to rebuild, enlarge, and repair main canal and laterals, Badger Fisher, Birch Creek, and Two Medicine units, repair Two Medicine Reservoir.

ROADS

Grading and draining 52 miles of road and surfacing 61 miles on the seven Montana reservations and the Wind River Reservation in Wyoming, $1,250,000.

Johnson-O'Malley contract for assistance in the education of Indian children, $100,000.

BUREAU OF LAND MANAGEMENT

Sanitation facilities in recreation areas, $80,000, Madison River and $40,000, Locate Creek (adjoining U.S. 12 in Custer County, between Baker and Miles City).

Soil and moisture conservation work in Montana, $920,000.

FOREST SERVICE

Visitor Center, Quake Lake on the Madison River, $95,000.

SUMMARY OF ADDITIONS TO BUDGET PROPOSED BY SENATOR LEE METCALF

NATIONAL PARK SERVICE

East Glacier Airport, $400,000.

FOREST SERVICE

Forestry Sciences Laboratory, Montana State University, $400,000.

Forest Fire Laboratory, increase current program to complete staff and apply research, $375,000.

Further development of the national forests, $15 million.

Forest engineering research, $200,000.

(Material referred to in Senator Metcalf's statement follows:)

AIRPORT AT EAST GLACIER PARK, MONT.

GLACIER PARK, INC.,
Tucson, Ariz., March 4, 1964.

Hon. CARL HAYDEN,
U.S. Senate,
Senate Office Building, Washington, D.C.

DEAR SENATOR HAYDEN: This will confirm my interest in the approval and construction of an airport at East Glacier Park, Mont.

This airport will serve Glacier National Park. It has the approval of the National Park Service and has been included by the Federal Aviation Administration in the national airport plan.

A site has been selected and estimates for construction have been made by FAA at the request of the National Park Service. The cost has been set at $1,030,000 for a runway 6,000 feet in length to accommodate commercial aircraft. Fifty-three percent of the construction cost will be through FAA funds and the balance through the National Park Service.

The Montana Aeronautical Commission, a State organization, has agreed to assume the incidents and cost of maintaining the airport after construction.

This airport will provide not only for passenger use to Glacier National Park but will be an invaluable asset in the fighting and prevention of fire as it will provide landing facilities for supplies, equipment, and smoke jumpers in near proximity to Glacier National Park.

This field will also provide emergency and alternate landing facilities for the U.S. Air Force and the Montana Air Guard in the event of National or State emergency. Were the Malmstrom Air Force Base to be crippled by attack, the airport would provide an emergency field.

Glacier National Park, as one of the outstanding scenic attractions of the Nation, requires these airport facilities to make this great park available to air travelers. Its remote location and inadequate public transportation now deter people from visiting the park.

Your assistance in securing an appropriation of $520,000 for the National Park Service for these facilities will be greatly appreciated.

Sincerely yours,

DON HUMMEL, *President.*

FEDERAL AVIATION AGENCY,
CENTRAL REGION,
Kansas City, Mo., January 2, 1964.

Hon. LEE METCALF,
U.S. Senate, Washington, D.C.

DEAR SENATOR METCALF: This is in reply to your letter of November 18, 1963, to Mr. Halaby regarding the establishment of an airport at East Glacier, Mont.

Development of a general aviation airport at East Glacier is recommended in our national airport plan and is, therefore, eligible for consideration under the Federal-aid airport program. The Montana Aeronautics Commission has advised us that they would be interested in acting as sponsor of the airport development at a site 5 miles northeast of East Glacier under a contribution agreement with the National Park Service, providing the development would be under the Federal-aid airport program, in a manner similar to that being used for the airport development at West Yellowstone, Mont.

Upon request from the East Glacier Park superintendent, we have prepared a preliminary estimate of costs for developing the airport. A copy of this estimate was furnished to the National Park Service, and we understand that they are considering the seeking of legislation to raise the present fund limitation with respect to construction of public airports in the vicinity of national parks.

The Forest Service has expressed interest in an airport at East Glacier if it could accommodate aircraft of the DC–3 and C–46 types. Their principal use would be in the movement of Indian fire crews from Browning. These Indian fire crews are becoming increasingly important in the Forest Service fire suppression organization, and we anticipate substantial use of these crews in the future.

West Coast Airlines has also indicated an interest in the proposed airport for their Great Falls to Kalispell flight providing the Civil Aeronautics Board would approve their application to serve East Glacier.

As you can see, there is presently considerable interest in developing the airport at East Glacier, but to date we do not have a formal request for participation under the Federal-aid airport program. Apparently the proposal is awaiting determination by the National Park Service as to the availability of their funds for such a project.

We appreciate your interest in aviation matters. If we can be of further service to you, please call upon us.

Sincerely yours,

J. M. BEARDSLEE, *Director.*

U.S. DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Washington, D.C., January 28, 1964.

Hon. LEE METCALF,
U.S. Senate, Washington, D.C.

DEAR SENATOR METCALF: This is in response to your inquiry of January 13, in behalf of Mr. Don Hummel, concerning the proposed airport at East Glacier, Mont.

Before the Department of the Interior, acting through the National Park Service, could participate in construction of a new airport at East Glacier, under the act of March 18, 1950, the existing fund authorization therein would have to be adjusted upward by legislation, and funds subsequently appropriated for the purpose. The authorization balance is not sufficient to permit consideration of financing the East Glacier facilities.

The National Park Service is conducting a nationwide survey to determine estimated future requirements for airport facilities in or near national parks. When this survey is completed, it may reveal a need for increased authorization to permit construction of airport facilities in several locations, including East Glacier.

By letter dated September 12, 1963, Mr. Charles A. Lunch, director, Montana Aeronautics Commission, advised Mr. W. B. Pearson, District Airport Engineer, FAA, Helena, Mont., of the interest of the Commission to act as sponsor with regard to maintenance and operation of the completed East Glacier Airport under a contribution agreement with the National Park Service, provided the development would be under the Federal airport program, in a manner similar to the present airport development underway in the vicinity of West Yellowstone, Mont. In the circumstance, it would appear the Commission, rather than the National

Park Service, would make application as sponsor to the FAA for matching Federal funds for the construction of the East Glacier Airport.

We hope the above information will be helpful. Please let us know whenever we can be of assistance.

Sincerely,

JOE E. JENSEN, *Assistant Director.*

U.S. DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Washington D.C., November 29, 1963.

Hon. LEE METCALF,
U.S. Senate,
Washington, D.C.

DEAR SENATOR METCALF: Your letter of November 18 requests your office be informed of any recent developments or the current status regarding the establishment of an airport near Glacier National Park, at East Glacier, Mont.

For your ready reference, the act of March 18, 1950 (16 U.S.C., 7a–7e), authorized the Secretary of the Interior, under certain circumstances to develop, or participate in the development of airports in, or in close proximity to, national parks, national monuments, and national recreational areas; and provided further an authorization of not to exceed $2 million to carry out the purpose of the act. The Congress has appropriated about $1,662,000 pursuant to the foregoing.

The 1963 national airport plan supplement proposes the construction of a new airport at East Glacier, Mont., having a runway length of 3,700 feet. However, the Department, acting through the National Park Service, is now considering a suggestion by the Superintendent of Glacier National Park, Mont., in collaboration with the District Airport Engineer (FAA), that the East Glacier development should be for a group III general aviation airport with a 6,000-foot runway, which would accommodate the general public, including charter, large executive, and all other general types of aircraft. It is estimated that construction of this type of airfield would cost approximately $939,670 (exclusive of terminal buildings), of which the FAA would bear approximately 53 percent of the cost and the balance could be furnished by the National Park Service.

By letter of September 12, Mr. Charles A. Lynch, director, Montana Aeronautics Commission, advised Mr. W. R. Pearson, District Airport Engineer, FAA, Helena, Mont., of the interest of the commission to act as sponsor with regard to maintenance and operation of the completed East Glacier airport, under a contribution agreement with the National Park Service, providing the development would be under the Federal airport program, in a manner similar to the present development underway in the vicinity of West Yellowstone, Mont.

Before the Department, acting through the National Park Service, could participate in construction of a new airport at East Glacier, under the act of March 18, 1950, the existing fund authorization would have to be adjusted upward by legislation, and funds subsequently appropriated for the purpose.

The National Park Service is now conducting a survey to determine estimated future requirements for airport facilities in or near the national parks. When this survey is completed, it may reveal a need for increased authorization to permit construction of airport facilities in several locations, including East Glacier.

Your interest in the activities of the National Park Service and especially its participation in the construction of an airport at East Glacier, Mont., near Glacier National Park, is appreciated.

Sincerely yours,

HILLORY A. TOLSON, *Acting Director.*

INTERMOUNTAIN FOREST AND RANGE EXPERIMENT STATION LABORATORY,
UNIVERSITY OF MONTANA

MISSOULA, MONT., *February 13, 1964.*

Hon. LEE METCALF,
U.S. Senate,
Senate Office Building,
Washington, D.C.

DEAR SENATOR METCALF: Since all our efforts, with your able assistance, toward improving the economy of the lumber industry in Montana by trying to

find some solution to the import problem have so far been fruitless, I have given much thought to other approaches.

One such approach would be the early appropriation of construction funds for the establishment of an Intermountain Forest and Range Experiment Station Laboratory on the campus of the University of Montana in Missoula; planning funds for which I understand have already been appropriated.

This would not, I realize, produce any immediate results but I sincerely believe that if a large part of their efforts were devoted to wood utilization studies it would benefit the entire forest-products industry in the State. I do not mean to imply that other studies in relation to silviculture, range management, etc., should be excluded; but research in utilization should result in new products and assist in combating the economic effects of competition from substitutes and other materials. In fact, from a long-range point of view, I believe expanded research is the only salvation of this industry.

Missoula—being the headquarters for region 1 of the Forest Service, having the Fire Laboratory already here, with the possibilities of cooperative efforts with the university forestry school, and the center of the forest industry—is the ideal location for such a project.

It is my hope that you concur in this opinion and if so, assist in obtaining the necessary construction funds.

Yours very truly,

R. E. SHERIDAN.

FORESTRY RESEARCH LABORATORY, MONTANA STATE UNIVERSITY

MONTANA STATE UNIVERSITY,
Missoula, Mont., February 17, 1964.

Hon. LEE METCALF,
U.S. Senate, Washington, D.C.

DEAR LEE: I understand that the appropriation hearings for interior and forestry are being held this week. Two items of special interest to us are: (1) The proposed Forestry Research Laboratory on the Montana State University campus and (2) the amount of the appropriation for forestry research in Montana.

The proposed U.S. Forest Service Research Laboratory will be a great boon to both the university and the Forest Service. We at the university are moving into a rapidly expanding research program in forestry with stronger support from the State and industry as well as new Federal matching funds under the McIntyre-Stennis Act. We are coordinating our program with that of the Forest Service in all fields and we look to this new Laboratory as the focal point for such coordination. The Forest Service will have available to it the full facilities of the university and the staff of the university can work with Forest Service scientists in Service facilities. We hope that funds for the construction of this Laboratory can be made available for the next fiscal year. From a selfish standpoint, we recognize that the authorization of this Laboratory will give impetus to the construction of a new building for the school of forestry in the near future.

The research program of the U.S. Forest Service in Montana needs greater financial support. We are lagging in knowledge of spruce reproduction, management of our important timber species, forest products, marketing, and fire control. In fire control, for example, we have an outstanding Laboratory, thanks to your efforts, but we have not been able to fully capitalize on the facilities because there have not been sufficient funds to fully staff the Laboratory or provide the equipment needed. In all these fields we at the university are closely cooperating with the Forest Service and coordinating our work with theirs. This teamwork is paying off in better research results as well as providing better opportunities for our students. The Forest Service research work is of considerable importance to our program. Many of our graduate students work on Forest Service research projects and this work is a great help in keeping them going. A number of our undergraduates also find work during the summers as well as part time during the school year on Forest Service research projects. This is a mutually advantageous arrangement. We also do some contract research work on Forest Service projects. We regard the Forest Service research program as a great adjunct to our own.

Another item of direct concern to us in forestry research is the amount of the proposed appropriation under the McIntyre-Stennis Act. This is in the Department of Agriculture appropriatons, not Interior and forestry. As you know, the McIntyre-Stennis Act passed in October 1962 received its first appropriation for $1 million this year. It was anticipated that the amount would be increased to $5 million for the next fiscal year. It now appears reasonable that the amount should be increased to at least $3 million to help provide the funds for research

needs. This valuable piece of legislation was strongly supported by industries, agencies, and universities in Montana as well as nationally. It is the basis for increasing the State appropriation for forestry research as well as financial support from industry. Without stronger national support we will not be able to undertake the programs we have proposed. Support from the State and industry may also be reduced. By law the upper limit of funds for this program is about one-half the appropriation for Federal forestry research or about $12 million. I will try and give you additional information on the value of this program in Montana before the hearings are held.

As you know, almost all forestry research in Montana is conducted by the U.S. Forest Service and the university. This pattern is true nationally. While individual industries do carry on some research and contract with us and other schools for some research, they generally have to rely on the Federal Government and the universities for this research. Part of the problem lies in the wide dispersion of the industry into many plants most of them relatively small and not financially able to afford large research departments. Only a few of the largest companies are engaged in any significant amount of research and almost none of these are represented in Montana. While we cannot hope to resolve all of industries' problems through research, the only real hope for working toward long-run solutions lies in research.

We are all sympathetic with the need for economy in the Federal budget. In the face of the proposed cutbacks in this budget many needs of individual States and groups will not be met. However, even without increasing the budget there are sure to be many changes make. In the course of these changes I hope that due consideration will be given to needs such as ours. The total money involved is relatively small but it is of intense interest to us. We feel that in each case the appropriations requested are in the form of investments which will be repaid many times over in the future.

If I can provide you with any additional information in regard to these items, I will be pleased to do so.

Sincerely,

ARNOLD W. BOLLE, *Dean.*

[The Daily Missoulian, Jan. 26, 1964]

WOOD REFUSE IS PUT TO WORK

(By A. V. Himsl)

The project is costly, but its twofold purpose, if achieved, will make it worthwhile.

That was the judgment of members of the air pollution committee of the Missoula County Study Group on Pollution following inspection Saturday of six installations in a process of converting residue from lumber manufacture into electricity.

In the process, mill operators will reduce appreciably the burning of wood refuse and the resultant output of smoke and fallout which contributes to the community air pollution problem.

Committee members Saturday inspected the hogging and storage of wood residue at the L. A. Hamilton Lumber Co., the Elk Horn Lumber Co., Intermountain Lumber Co., Missoula White Pine Sash Co., Van-Evan Co., and Waldorf-Hoerner Paper Products Co.

At the mills, the wood residue, which once was merely waste is ground or chopped in hogs into fuel destined for a specially designed boiler at the Waldorf-Hoerner plant. The ground fuel is elevated into bins which in turn empty their burdens into trucks and trailers specifically designed to handle the product.

The hog fuel is transported to the Waldorf-Hoerner mill where the trucks and trailers are emptied by hydraulic jacks into a pit which holds a 2-day supply.

From the pit the fuel is conveyed to the boiler to produce steam for the generation of 3,500 kilovolts of electricity.

The project, which involves an expenditure of more than $1,325,000, does far more than change the site of refuse burning. For combustion in the new Waldorf-Hoerner boiler is virtually complete. The revolutionary design of the bioler, one of a few of its kind in the world, makes possible the burning of fuel in suspension.

No black smoke belches from the Waldorf-Hoerner stack. All that is visible—and barely visible—is a plume slight in volume and light in color. In fact, the smoke is washed before it reaches the stack.

With such efficiency in combustion the burning of wood refuse delivered to the plant reduces the pollution load within Missoula considerably, committee members learned. Area lumber mill operators estimate that tepee burners will be used in the disposal of from only 2 to 10 percent of waste wood.

Mill operators point out, however, that the use of the residue by Waldorf-Hoerner will not eliminate the tepee burners and will not eliminate burning of wood at the mills. The tepees will be pressed into use occasionally to dispose of waste unsuitable for hog fuel, and some burning must continue to fire boilers at the mills.

Waldorf-Hoerner officials report that the hog fuel installation at their plant cost in excess of a million dollars. Trucks and trailers for the operation cost $75,000 and operators of Missoula area lumber mills have spent $250,000 in equipping their plants to participate in the project.

The operation has just started and as yet not all the mills planning participation have completed their installations. Furthermore, Waldorf-Hoerner officials expect to encounter some "bugs" in an uncharted and experimental project.

Bureau of Outdoor Recreation and Lobster Fishery Research

Statement by Senator Thomas J. McIntyre

Mr. Chairman, I am grateful for this opportunity to state my support for the fiscal year 1965 budget request of the Department of the Interior. There are two items which seem to possess special merit.

THE BUREAU OF OUTDOOR RECREATION

I support the request for an additional $800,000 requested by the Bureau of Outdoor Recreation. Many conservation, natural resource, recreation, and planning groups in my own State of New Hampshire have stated their praise for this Bureau. It is beginning to bring a degree of order to the diverse programs, budgets, and legislative requests of Federal agencies which engage in the promotion of outdoor recreation. It is setting a high standard of recreation resource planning to which our States may aspire in their own planning and development efforts. New Hampshire has embarked upon a most ambitious State planning project, under the direction of Miss Mary Louise Hancock, which will be more helpful as a result of the work of the Bureau of Outdoor Recreation. The northern New England States are particularly fortunate in having an outstanding potential in outdoor recreation so the cooperation of this Bureau is especially welcome.

LOBSTER FISHERY RESEARCH

I should also like to express warm support for efforts to amend the Interior appropriation bill to include some $350,000 for research by the Bureau of Commercial Fisheries on lobsters. I was surprised to learn that little is known about the breeding and development of lobsters in their natural environment. Our States cannot properly exercise their conservation responsibilities unless they know what to expect about the population and life cycle of lobsters. A paper was presented at the recent meetings of the American Association for the Advancement of Science in Cleveland in which the principal investigator had to state that the mechanism by which the lobster frees its eggs to the sea is entirely unknown.

The value of the American lobster fishery has been conservatively estimated at $15 million. In 1961, the fish and game department of my State of New Hampshire issued 51 licenses to fishermen to set 75 traps or more, and 129 licenses for 75 traps or less. This in-shore fishery brings welcome income to residents of our seacoast area. The lobster fisherman of New Hampshire are concerned, and legitimately so, about the impact of offshore trawling on their in-shore fishery. This is only one local problem which the research program of the Bureau of Commercial Fisheries would help to solve, in addition to increasing our fundamental knowledge. Consequently, I hope the subcommittee may appropriate an additional amount for the Bureau of Commercial Fisheries to initiate research in this significant fishery and natural resource.

STATEMENT OF SENATOR HUGH SCOTT

LAMAR NATIONAL FISH HATCHERY, PENNSYLVANIA

The Tylersville unit of the Lamar National Fish Hatchery is located about 5 miles from the main hatchery facilities. This unit occupies about 39.7 acres in Logan Township, Clinton County, and was acquired by purchase in 1931. With purchase of the property, the Government obtained exclusive water rights of Ruhl Springs. These springs flow a minimum of 3,000 gallons per minute at a nearly constant temperature and of ideal quality for fish production.

Since acquisition, it has been possible to develop only minimum facilities until fiscal year 1963. In that year, $200,000 was made available under the accelerated public works program to initiate development of this unit. Most of these funds were allocated to the construction of concrete raceways for production of trout. The balance was used to install necessary water supply and drain lines and to construct a water retaining and intake structure. With these facilities the Tylersville unit will be capable of sustaining an annual production of from 40,000 to 50,000 pounds of trout.

The water supply at this unit can support an annual production of over 100,000 pounds of fish, provided the development of physical facilities is completed. Such production is necessary in order to more adequately meet the need for hatchery-reared fish in the areas stocked by the Lamar and Tylersville units. Trout are stocked in Pennsylvania under a cooperative agreement with the Commonwealth. A large part of the production is utilized in management programs on the Allegheny National Forest, Corps of Engineers reservoirs, Department of Defense, and other Federal agencies. Warm-water species and trout fingerlings are also stocked in farm ponds in parts of New Jersey and New York. At the present time, at least 75 percent of the catchable cold water sport fishery in Pennsylvania is supported by fish stocked from State and National hatcheries.

The following is an itemization including those features required to complete the Tylersville unit into a modern, efficient hatchery capable of producing a large poundage of fish:

Funds needed for the program:	
First phase:	
Purchase additional land (4 acres) and preliminary engineering	$20,000
Hatchery and service building	155,000
Residences (2) with garages	40,000
Sewage and domestic water supply (2)	4,000
Dike, flood protection	37,000
Total	256,000
Second phase:	
Concrete raceways (2 sets) 500 feet long, 8 feet by 100 feet with water supply and drains	100,000
Residence with attached garage	20,000
Sewage and domestic water supply	2,000
Roads and hard surfacing	34,000
Landscaping	6,000
Road, access right-of-way	2,000
Exterior lighting	10,000
Fencing	7,000
Picnic area	2,000
Equipment	10,000
Total	193,000
Total estimated cost of the program	449,000

I trust this committee will see fit to appropriate funds to complete the first phase of the Tylersville project and protect the work which has already been done there, rather than to allow the unit to stand and deteriorate.

Health Program on Turtle Mountain Indian Reservation

Statement of Senator Quentin N. Burdick

HOSPITAL AT BELCOURT, N. DAK.

Mr. Chairman, I come before this subcommittee today to request financial support for the construction of a new hospital at Belcourt, N. Dak., to serve the Indian people residing on and adjacent to the Turtle Mountain Indian Reservation.

At the present time over 5,500 Indians, primarily of Chippewa and Cree descent, reside on the Turtle Mountain Reservation. The land base that these people occupy is small and totally inadequate to provide a decent living for the people. For the most part, they follow migratory labor which takes them away from the reservation for several months.

This is truly a pocket of poverty; and as such, is reflected in the health status of Indians residing within this environment.

It is to be noted that the leading causes of death in recent years among this group of people are diseases of early infancy, diseases of the heart, accidents, and malignant neoplasms. They suffer from a high rate of pneumonia, influenza, otitis media (representing complications and residuals of respiratory infections). Measles and other common childhood diseases are reported to be in the lead among the reported notifiable illnesses.

The Division of Indian Health, U.S. Public Health Service, bears responsibility for the administration of the Indian health program on the Turtle Mountain Reservation. The primary facility is a hospital that was constructed in 1930 with a recommended bed capacity of 30.

In a survey of the facility, the fire marshal of the State of North Dakota noted that it is hampered by severe safety and fire hazards which should be corrected. For example, the doors to patient's rooms are too small to move patients' beds, and corridors are considered too narrow to meet current standards. It seems incomprehensible that a facility with such hazardous deficiencies should be utilized in this day and age to treat the sick and disabled.

Although the Division of Indian Health has made several improvements to this facility during the past several years in the way of fire escapes and other safety improvements, as well as a new boiler, they advise me that the facility does not lend itself to modernization or expansion in order to meet modern medical care requirements. The need is critical and should be corrected at the earliest possible date.

Perhaps a brief review of usage of the current Belcourt Hospital for the past several years will assist the committee in its consideration of my request. As previously noted, the hospital was originally constructed in 1930 with a recommended bed capacity of 30. This was later increased to 38. The admissions from fiscal years 1961 to 1963 have increased from 1,304 to 1,841, respectively, while the average daily census for the same period increased from 26 to 35 and in March of the 1963 fiscal year, a peak census of 51 was established. The admissions during the current fiscal year have been even greater. The situation reached a critical stage in December 1963, when a peak census of 61 occurred in the hospital. This high census resulted in infants and children being placed in cribs in hallways. In many cases, two and three infants were placed in the same crib. The Indian people and others concerned with their welfare have consistently appealed to my office with the request that I seek approval for the construction of a new hospital of adequate size to serve the population group on this reservation.

In response to an inquiry I made earlier this year, the Division of Indian Health advised me that funds were requested in their fiscal year 1965 budget to plan a new 50-bed hospital to replace the current facility. This request was disapproved by the Bureau of the Budget.

While I realize there is a concerted effort on the part of the executive branch to accomplish economy in each and every agency, I personally feel the need for a new hospital at Turtle Mountain is critical. I can think of no better way to implement the President's war on poverty and disease than to authorize construction of this long-overdue facility.

The Indian people living on the Turtle Mountain Reservation are an economically depressed group and totally dependent upon the Federal Government for provision of adequate health services. The Division of Indian Health cannot be expected to meet its responsibility if they are required to conduct a program from a facility that is considered a fire hazard by the fire marshal of the State of North Dakota, that is obviously too small to serve the population base of approximately

5,500, and that cannot be expanded or modernized to meet modern medical care requirements.

Mr. Chairman, I am hopeful that the foregoing information will prove helpful to you and members of the subcommittee in coming to a decision about the need for a new hospital at the Turtle Mountain Indian Reservation in North Dakota.

Bureau of Land Management and Bureau of Indian Affairs

Statement by Senator Clinton P. Anderson

soil and moisture conservation programs

Mr. Chairman, I am appearing before your committee to request that you provide some increases in the amount of funds in the Department of the Interior budget for the Bureau of Land Management and Bureau of Indian Affairs soil and moisture conservation programs.

The Bureau of Land Management administers over 177 million acres of land in the Western States. A great deal of this land is intermingled with private, State, Indian, as well as U.S. forest lands. Highly significant is the fact that over 84 percent of these lands are in fair or bad condition. These lands are not contributing their full share toward meeting the conservation objectives of wise land stewardship. The productivity of this acreage, in terms of forage production for livestock and of water yield, directly affects the local economy throughout the States involved. In addition, the production of wildlife, recreation use, timber and woodland production, and other uses contribute much toward the well-being of the local citizens.

Much of the land has deteriorated to the point that present yields are much less than productive potential. Increased capital investments can substantially increase forage production on many ranges and can improve both the quality and quantity of water yield. I am advised that at the present rate of investments drastic reductions in grazing use are needed on many ranges to prevent permanent damage to the resource. Acceleration of the rate of range improvement and rehabilitation will substantially minimize and in many cases eliminate the need for long-term reductions in range use.

Comprehensive rehabilitation projects, set forth under the long-range plan of the Bureau of Land Management, are substantially behind planned schedules. The Bureau has recently established small resource conservation areas which effectively serve as demonstrations of effective resource management and rehabilitation programs and techniques. The expanded programs of other agencies and organizations such as soil conservation districts often require an acceleration of the BLM program on the adjoining or intermixed public land in order to properly treat the watershed, especially in connection with Public Law 566 programs.

The Food and Agriculture Act of 1962 (Public Law 87–703) authorized the Secretary of Agriculture to assist "in developing and carrying out plans for program of land conservation and land utilization * * *." Under the authority of this law the Department of Agriculture has established 10 pilot resource conservation and development projects. These projects are located in areas where the acceleration of current conservation activities plus the use of the new authorities will provide additional economic opportunities to its people. The Department of Agriculture is to provide the leadership in these projects but it is required to work with other Federal agencies (including BLM) owning land in these areas and with State and local agencies and organizations in a position to further such projects. One of these projects has been established in New Mexico and is known as the northern New Mexico resource conservation and development project. Within this project is Federal land under the Bureau of Land Management, national forest land, State land, Indian land, and privately owned lands. The area is a chronically depressed area and the one thing that will do most for the economy of the area is to accelerate the conservation of natural resources and improve farm and rural income and standards of living. It is the purpose of this project to do just that but it cannot be accomplished unless the cooperating Federal agencies have sufficient funds to participate and do the work that must be done on the Federal lands. The State of New Mexico and all of the local soil conservation districts as well as other local agencies and civic organizations are giving excellent cooperation in this project. I assume that this is true in other States where these pilot projects are located.

To my disappointment I find that the budget of the Bureau of Land Management for soil and moisture conservation work is not sufficient to permit the BLM

to carry out its regular program and provide funds required of it to participate in the pilot conservation projects being planned. Unless the Federal agencies participate in the planned projects where Federal land is involved the program will not be really effective. The real secret of success of these pilot projects will be the full cooperation between all Federal and State and local agencies to carry this work forward simultaneously.

The Bureau of Land Management budget for soil and moisture conservation work for fiscal year 1965 is $11,026,000. I do not believe that this is sufficient to permit the BLM to carry forward its regular program and participate in the pilot conservation projects. I therefore urge your committee to consider this matter and increase the funds for soil and moisture work to $15 million.

The Bureau of Indian Affairs is in much the same situation as we find the Bureau of Land Management. Their lands need treatment as badly as do the BLM lands, and they do have lands intermingled in the pilot projects. I find that there is actually a reduction in BIA soil and moisture funds for fiscal year 1965. This reduction will prevent cooperating Indians from continuing to apply conservation measures to their lands at the same rate as they did during the past year. The reduction will result in a severe cut in the technical staff presently engaged in working with the Indian people in bringing about better conservation and use of ther soil and water resources. Tribal participation depends on this technical help and on appropriated funds being available to initiate projects or to match funds which individuals or tribal groups make available for carrying out desirable soil and moisture conservation practices.

Under the reduced soil and moisture conservation budget of the Bureau it could not participate in the small watershed program (Public Law 566) except at a rate of application of practices at about the same level as would be followed on Indian lands in general whether they be in or out of small watershed program areas. With the proposed allocation of funds they certainly would not have funds to participate as they should in the northern New Mexico pilot conservation project. I understand that the Indians have land in some of the other projects and that this would hold true on these projects as well as in New Mexico. Therefore, I urge your committee to increase the soil and moisture conservation funds for the Bureau of Indian Affairs for fiscal year 1965 to $7,500,000. Funds used for this purpose in the past have yielded good dividends in improved range and water supply. I believe that the committee need have no hesitancy in approving this increase.

NATIONAL FISH HATCHERY ON MESCALERO INDIAN RESERVATION

Mr. Chairman, last year it was my privilege to appear before your committee and request funds for commencing construction of a fish hatchery on the Mescalero Indian Reservation in New Mexico. The history of this project dates back nearly 3 years when it was originally planned as a part of the overall economic development of the reservation. The purpose is to increase tourism by increasing the recreation facilities on the reservation and surrounding area. Before this project was recommended, it was determined by careful study and investigation, testing of waterflow, water quality, and temperature, that this project was feasible and would result in a real economic improvement to the Mescalero Indians. Your committee wisely approved $190,000 to start this project during the 1964 fiscal year, but for some reason no funds were included in the 1965 budget for continuation of this construction. It is hard for me to understand why we should stop this project at this point when it means so much to the Mescaleros who have probably the highest unemployment rate in the Southwest.

The present administration is advocating assistance for economically depressed areas such as this. We should be especially anxious to help people who are trying to help themselves, as the Mescaleros are doing, by furnishing land and water, and providing through various other means several hundred acres of lakes to be used for fishing by the public. They are also making available approximately 30 miles of excellent trout streams for stocking for the public.

The demand for sport fishing in this geographic area currently far exceeds even the capacity of all the proposals of the Mescaleros. This was shown by the statistics from the U.S. Forest Service and the Outdoor Recreation Resources Review Commission, of which I was a member. This current lack of sport fishing is one of the serious detriments to the development of tourism not only on the Mescalero Reservation, but in this whole area.

Mr. Chairman, this development is part of the overall economic development plan for the Mescalero Indians. As the fishing and recreation on the reservation

are developed, there will follow tourist facilities such as motels and camping facilities. This kind of development will provide permanent jobs and business opportunities for the Indians. In view of the great need to complete this project at as early a date as possible, I urge your committee to include in the appropriation for the Bureau of Sport Fisheries and Wildlife the $266,000 to complete the next phase of this fish hatchery during the 1965 fiscal year.

I appreciate the opportunity of appearing before your committee and if I can furnish additional information that will be helpful I will be glad to try and do so.

WATER DEVELOPMENT AND FENCING ON MESCALERO INDIAN RESERVATION

Mr. Chairman, the Mescalero Indians in New Mexico have one of the highest rates of unemployment in the Southwest. They have been struggling for a good many years trying to devise some sort of an economic program that will enable them to help themselves. In the past they have had a small amount of Government help which for the most part has only enabled them to exist. I believe that now they have reached a point at which the Government should accelerate its assistance in order that they may bring to fruition a program that appears will provide jobs and a greatly strengthened economy.

One part of this program is an improvement and more efficient operation of their livestock industry. The Indians have had small bands of sheep and a few cattle almost since the time they were placed on the reservation. It was not until about 1912 that a cattle herd was established on the reservation by the Government. This herd was operated under the direct supervision of the Indian agency superintendent and by use of Government personnel. The herd was run in this manner until about 1930 when the cattle were acquired by the Indians on an individual basis. From that time until the present, individually owned cattle have been operated in common over the grazing lands of the reservation.

Today, the ownership of the cattle falls into three separate catagories: (1) individually owned cattle, (2) those belonging to the Cattle Growers Association, and (3) a tribal herd. The total number of cattle being run is estimated to be between 6,000 and 7,000 head. The cattle operation has not been very profitable until the last few years, when through better management, they have made some profits. The real drawback has been the lack of capital to improve the range and water facilities so that the herd could be properly distributed on the range to make better use of the forage. Being unable to do this in the past has resulted in lightweight cattle bringing a smaller total price per-head return than should be the case under proper range management.

Over half of the winter range and parts of the summer range are either without water or have a very limited supply. These areas cannot be watered by earthen impoundments because of the nature of the terrain and soil conditions. Deep wells and paved catchments must be used. Currently most of the range is being overgrazed while other parts are not used at all. The Geological Survey made a ground water study in 1960, and favorable well sites are available and located.

Development of 26 new facilities, mostly wells, is needed at a total cost of $200,000. This will enable the development of a good management plan resulting in proper distribution of livestock and improvement of range conditions.

In 1957, the Mescalero Cattle Growers Association had a range management study made by the Western Farm Management Co. in Phoenix, Ariz. This firm is experienced in the ranch business and made some very sound recommendations to the Indians which they are making an effort to carry out. The chief factor in the increased profits from the cattle in recent years has been due to improvements made pursuant to the Western Farm Management Co. recommendations.

The Western Management study revealed that the range is carrying about 3,000 head of cattle less than its capability; that the cost of the operation was excessive; that the cattle when ready for market were much lighter in weight than those from neighboring ranches, and that in some instances prices were lower. To remedy this situation it was recommended by Western Management Co. that:

1. The Indians discontinue the operation of some 244 brands being used on the cattle and use only one brand. This could be accomplished by having one brand recorded in the name of the association. This has been done with a large saving in time and money.

2. That the association initiate a program of fencing and development of additional water in order to make more efficient use of the range and to permit an increase in number of livestock that could be grazed on the ranch. One of the

difficulties with the operation has been that there is a poor distribution of water on the range making it necessary for cattle to travel long distances and in several instances this has prevented the grazing of certain areas remote from watering places. This condition has prevented the cattle from gaining the weight that they should and also resulted in overgrazing in some areas while other areas had a surplus of forage. The Indians with the help of the Bureau of Indian Affairs have worked out a program for fencing and developing water in order to comply with the Western Management recommendation, but they have been hampered by lack of funds. They have provided some money from the ranch operation.

3. It was recommended that sales methods and marketing procedures be improved and they have been. The present manager of the ranch has inaugurated a method of selling in small lots at auction and as a result this last year the Indian cattle brought about 5 cents per pound more than neighboring cattle. At the auction of Indian cattle in 1963, more than 100 buyers from Texas, Oklahoma, Missouri, Arizona, and New Mexico attended.

The association has spent considerable in the purchase of good quality bulls in order to improve the herd and the results are evident from the interest of buyers.

If the range and water improvements needed could be made now the carrying capacity of the range could be increased from approximately 7,000 head to 10,000 head because proper distribution of stock on the range could be accomplished. Proper usage would also increase the weight of the cattle sold. These two factors would put the cattle operation in excellent condition and the ranch would provide a real boost to the economy of the Mescalero Tribe.

I want to repeat that the biggest obstacle in the way now is the lack of funds to do the proper fencing and water development, and these two items are the most urgent. The year 1963 has been a very dry year and some of the tanks and waterholes have already dried up and the situation will become worse unless some new water wells are drilled this spring. It is for this reason that I urge your committee to provide at least $100,000 in the present appropriations to get this program started.

I believe that this money, when invested in water development and fencing, will return many times the original investment and will stabilize the livestock operation on the Mescalero Reservation. I hope that your committee will give favorable consideration to this request.

Forest Service

Statement by Representative John B. Bennett of Michigan

Forest Engineering Laboratory, Houghton, Mich.

Mr. Chairman, in testimony submitted to this subcommittee a year ago, I requested an increase in the appropriation requested in the President's budget for forest research activities.

I was gratified that this committee did recommend additional money for this program. As a consequence, $28,000 was made available for the planning of a forest engineering research laboratory at Houghton, Mich. An architectural firm was selected and the detailed plans are expected to be ready early in fiscal 1965.

During the past year arrangements were completed under which Michigan Technological University will make available to the Forest Service, at no cost to the Federal Government, a very choice site of 6 acres on which the laboratory will be located.

I deeply regret the omission of this important project from the fiscal year 1965 budget. You may recall that the cost estimate for the laboratory was $400,000. This estimate, which still stands, includes the $28,000 planning cost. Thus, the amount required for construction of the laboratory is $372,000. I urge you to make this amount available so that this productive program in forest engineering research can be advanced.

The Forest Service has a small engineering staff already working on the Michigan Tech campus. The progress they have made is a compliment to their ingenuity and to the excellent cooperation given them by the university. One study dealing with the production of chip wood from round logs in the forests points to substantial economies in handling such material.

There are a number of research studies which need to be started and which could do much to open up employment opportunities in our forests, particularly those in redevelopment areas such as the Upper Peninsula of Michigan. When full laboratory facilities are available we can anticipate the development of more economical methods of harvesting and transporting timber, and the development of better equipment and systems for planting, thinning, and improving forest stands.

As evidence of the public interest in this project, I include with this statement recent communications from Mr. John J. Howard, executive vice president of the Houghton National Bank, Houghton, Mich., and Mr. S. M. Cohodas, president of Cohodas Bros. Co. & Subsidiaries, Ishpeming, Mich., and respectfully requested that they be made a part of the hearing record.

(The communications referred to in Congressman Bennett's statement follow:)

LAKE STATES FOREST EXPERIMENT STATION AT MICHIGAN TECHNOLOGICAL UNIVERSITY

HOUGHTON, MICH., *February 25, 1964.*

Hon. JOHN B. BENNETT,
House Office Building, Washington, D.C.:

Respectfully urge that funds for construction and operation of forest-engineering laboratory on Michigan Tech campus be allocated. Present engineering laboratory on campus, as well as its annual operating budget, is inadequate. This new proposed facility would be a needed stimulus for the wood products industry throughout the entire Lake States area. Would appreciate it if this message were made a part of the hearing record.

Very truly yours,

JOHN J. HOWARD.
Executive Vice President, Houghton National Bank.

ISHPEMING, MICH., *February 25, 1964.*

Congressman JOHN B. BENNETT,
House Office Building, Washington, D.C.

DEAR CONGRESSMAN BENNETT: In conjunction with the wisest use of our natural resources in the Upper Peninsula, we have several programs of research. The Lake States Forest Experiment Station of the U.S. Forest Service very recently received money to design a laboratory to be located on the Michigan Technological University campus. However, no money has been set up in the budget for actual construction of the laboratory.

We know that wood is one of our sustaining natural resources. Research has been responsible in part for new wood-using industries in the Upper Peninsula and the expansion of several paper mills and sawmills. This means construction dollars, payroll dollars, and tax dollars. We have a golden opportunity to help stimulate this business.

President Kennedy, at the Land and People Conference in Duluth this fall, said, "Our goal is the full employment of both the natural and human resources which this area still possesses in abundance."

President Johnson has endorsed this attitude and concurs with statements made at the Land and People Conference. (This is what we are trying to do with this project.)

We respectfully urge that you use your best efforts to impress the committee at the House hearing with the need for this facility. Would you endeavor to have this communication read into the record and included as part of the record at the hearing in the House.

Sincerely yours,

S. M. COHODAS, *President.*

Chairman HAYDEN. The committee will stand in recess until 9:30 a.m., Friday, March 6, when we will hear outside witnesses.

(Whereupon, at 11:15 a.m., Thursday, March 5, 1964, the subcommittee adjourned, to reconvene at 9:30 a.m., Friday, March 6, 1964.)

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS FOR 1965

FRIDAY, MARCH 6, 1964

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, D.C.

The subcommittee met at 9:30 a.m., pursuant to recess, in room 1223, New Senate Office Building, Hon. Robert C. Byrd, temporarily presiding.

Present: Senators Byrd, Bartlett, and Young.

Also present: Senators Stennis and Smith.

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES

NONGOVERNMENTAL WITNESSES

Senator BYRD. The subcommittee will be in order. This morning the committee will hear nongovernmental witnesses who desire to present testimony concerning various matters in the Department of the Interior and related agencies appropriation bill. There are many persons who are scheduled to appear today, and in view of the number, and the present parliamentary situation on the floor of the Senate which may at times cause the hearing to be recessed in order that committee members may vote, I suggest that it may be possible for the witnesses this morning to file their statements for the record, consent for which is hereby given, and summarize their positions orally.

GENERAL ELECTRIC CO.

STATEMENTS OF DR. GEORGE L. HALLER, VICE PRESIDENT, ADVANCED TECHNOLOGY SERVICES, AND VANCE R. COOPER, MANAGER, CHEMICAL & MATERIALS ENGINEERING LABORATORY

PROJECT "BOOTSTRAP" PROGRAM

Senator BYRD. Our first witness is Dr. George L. Haller, vice president of the General Electric Co., and he will be accompanied by Mr. Vance R. Cooper, manager, Chemical & Materials Engineering Laboratory, Advanced Technology Laboratories, General Electric Co.

These gentlemen are testifying for General Electric Co. in connection with the Project "Bootstrap" program of the Department of the Interior.

Dr. Haller, you may proceed in any way you wish. If you have a prepared statement, you may wish to read it, and also your associate, Mr. Cooper, may proceed to present testimony in any way you two gentlemen desire.

Dr. HALLER. Thank you, Senator Byrd. Please let me express the appreciation of the General Electric Co. for this opportunity to report the progress of our work on Project Bootstrap. We feel very strongly about the potentials of electrical processing through corona chemistry, and our work for the Office of Coal Research is one of our major efforts toward an actual application.

ADVANCED TECHNOLOGY LABORATORIES, SCHENECTADY, N.Y.

The work is being performed by members of the Advanced Technology Laboratories in Schenectady, N.Y. The ultimate goal of the project is to develop a practical, continuous method of treating coal to produce products which are valuable as hydrocarbon fuels, plus some useful chemical byproducts. We expect to achieve this in a high-voltage electrical reactor operating at atmospheric pressure. The process would be self-supporting and would lend itself to continuous operation and automatic control. The only raw material needed would be coal.

ELECTRICAL PROCESSING THROUGH CORONA CHEMISTRY

First, I will report on our progress to this point. To keep my comments in proper perspective, I will include some background on corona processing and the company's attitude toward it.

Work on corona dates back to the early 1900's. There was a period during World War II when the work virtually ceased due to technology emphasis on nuclear reactors, electron beams and radioisotopes. The level of work remained at a low point until the late 1950's. The early work in corona achieved very little of commercial utility. With hindsight, we can say that the work was premature in relation to the underlying technology. However, much of this technology was developed through other work to a higher state during the forties and fifties when the corona effort was relatively small. Four things happened of significance to corona processing:

(1) Radiation chemistry, which is virtually identical to corona chemistry, provided a solid base of understanding of free radicals and their reactions.

(2) Electrical apparatus builders, like General Electric, studied the destructive effects of corona and came to understand its nature.

(3) There was substantial improvement made in equipment for generating and controlling high-voltage, high-frequency power. This power, used in corona processing, is low cost relative to other sources of radiation energy.

(4) Several important processes for producing bulk chemicals have been developed using radiation chemistry.

CORONA AS AN INDUSTRIAL TOOL

By the late fifties, the conviction had grown in the Advanced Technology Laboratories at General Electric that they could develop corona processing into an important industrial tool. With its nucleus of men who knew both electricity and chemistry and with its wide spectrum of supporting technologies, these laboratories envisioned significant breakthroughs leading to substantial business for General Electric in corona processing apparatus. The pursuit of this tech-

nology is also in keeping with out continuing efforts to develop new applications of electrical energy.

A development program was initiated in 1960 with company funds. At the very start, we recognized the need for financial and processing-technology assistance from potential users of the corona process. We have interested a number of other companies in our work, and they have purchased corona processing research equipment from us. These include leading representatives of the petroleum, steel, and food processing fields. Also, we have continued our corona experimental work in several other fields which show promise of yielding commercial applications.

Let us move now from the broad interests of General Electric in corona technology development to the specific work which is of most interest to this subcommittee.

Research and Equipment Development Program

Under our present contract with the Office of Coal Research, we have been conducting a research and equipment development program. This has resulted in a family of corona reactors which can convert coal to liquid and gaseous hydrocarbon products by subjecting the coal to hydrogen atoms and other free radicals produced in an electric corona discharge. These include reactions between gas and dry powdered coal, gas and a liquid solution of coal dissolved in a suitable solvent, and gas and coal volatile vapors.

We have also investigated the energy required to produce the free radicals necessary for the reaction with coal. The results of these tests show promise that the radicals can be produced at a sufficiently low electrical energy consumption to make the process economically attractive.

In addition we have been successful in obtaining reactions with coal and coal tar and have produced desirable aromatic products of the benzene-toluenexylene type at energy consumption in the low range needed. These derivatives of the process would be useful as gasoline blending stock to increase the octane rating.

Yield and Electrode Material

While our development work to date has progressed well, the yield of the laboratory equipment is still small in terms of pounds of product per pound of coal. Also, we have not been able to run for extended periods of time due to problems with the equipment electrode material. We have conducted small-scale tests which show that these material problems can be solved, however.

The finished products must be removed and separated and the three essential cycling steps must be performed with the residue; that is, the char is removed to furnish corona power, the heavy hydrocarbon liquids remaining are sent to the start of the process to act as a carrier for the new coal input, and the useful light gases and fractions returned to furnish the proper corona environment.

Technical Possibility of Process

We feel that we have demonstrated that the process is technically possible, but there is much work remaining before a commercial plant can be built.

First, we must demonstrate continuous operation. Secondly, we must increase the yield of desirable products per pound of coal. And third, the process must be made self-sustaining to justify the "bootstrap" designation.

Pilot Plant Program

We see no reason why these things cannot be accomplished by the work remaining on the present contract, coupled with the work we have just recommended to the Office of Coal Research in a pilot plant program.

I will use a chart which I have here to describe the relationship of the present work to the work we are recommending for the continuation of this project. As you see, on the time basis, our present work is drawing to a close. A process and equipment development phase should be started at that time.

It is evident that we have a new tool for processing coal, one that works at atmospheric pressure, one that preserves in the liquid fuel product most of the valuable aromatic structure of the coal, and one that has flexibility for adaptation to many types of coal processing schemes.

Process and Equipment Development Phase

It is, however, also evident that our understanding of the overall process is based on incorporation of the key conversion step into a total process cycle designed to utilize the products of other process steps. We could not build a pilot plant today, as our understanding of the influence of many of the process variables and their interrelationships to each other has not yet been determined. This determination is the purpose of the process and equipment development phase of the program.

It is essential that we make longer runs in which steady state is reached—such that better material and energy balances can be made. From the corona process, we need to derive heavy oil in which to dissolve fresh coal and then react this solution in the corona reactor. There are electrode problems to be solved. Most important, we must obtain more quantitative data regarding yield, electrical efficiency, and distribution of product so that the overall economies can be known with the greater certainty necessary before investment of major funds.

Design, Construction, and Operation Phases

From this phase we would move into the actual design phase and on to construction and operation phases. These are separate and overlapping for two very important reasons. First, we feel that the separation of the pilot plant program into these distinct steps affords effective checkpoints during the work to justify further commitments. Secondly—and very important to continued success—it allows the General Electric Co. to maintain a continuity of personnel assigned to the work. For Project Bootstrap, we have brought together a diversified team of scientists and technologists—organic and polymer chemists, chemical engineers, electrical engineers, mechanical engineers—plus an able staff of technicians and the facilities of the Advanced Technology Laboratories. An interruption in work would necessitate a reassignment of these men and facilities to other projects, and it might not be possible to draw them all together again

should the work be resumed. We could lose significant technological continuity and certainly valuable time. Harder to measure—but potentially most important—we would disrupt the work of a dedicated team of investigators who are convinced that the corona process can be used to convert coal into more useful products at a lower cost than apparent in other techniques.

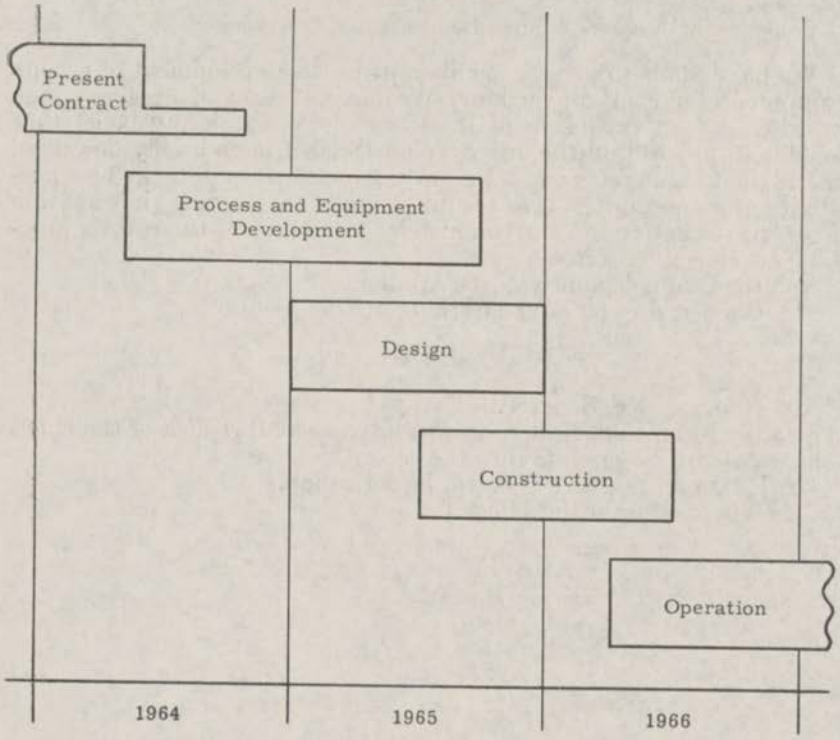
Corona Equipment for Coal Conversion

We have made some significant steps in the development of corona equipment for coal conversion. We have a team of excellent men working on the expansion of this technology. It is my belief that we should proceed on the orderly plan which I have briefly described as the pilot plant program. In our judgment, this offers the best possibility for obtaining the technical and engineering information necessary to determine the commercial feasibility of the corona process for coal conversion.

Senator Byrd. Thank you, Dr. Haller.

Mr. Cooper, do you have anything at this point?

Pilot and Operating Plants



Mr. Cooper. No, Senator.

Senator Byrd. Dr. Haller, do you have a small replica of the chart that we might incorporate into the record?

Dr. Haller. Yes, sir; that will be furnished.

(The chart referred to follows:)

PILOT PLANT PROGRAM

Senator BYRD. The chart shows the pilot plant construction completed in 1966. Does this mean that we can count on an operating plant by that time?

Dr. HALLER. The operating plant would not be finished at the same time that the pilot plant is, but the operation of the pilot plant would be going on in 1966 and I think that a large operating plant by that time could be started.

It would probably take another 2 years to get a large operating plant working.

Senator BYRD. But your pilot plant will be finished?

Dr. HALLER. Yes, it would be. It would be in operation in 1966.

Senator BYRD. Are we talking about the early part of 1966, or the latter part; and are we talking about fiscal year 1966?

Dr. HALLER. No, this is calendar year 1966 and the pilot plant would be operating early in 1966.

Senator BYRD. Early in the calendar year?

Dr. HALLER. Early in the calendar year.

Senator BYRD. Is General Electric doing all possible to expedite this work?

EXPEDITING THE PROGRAM

Dr. HALLER. I think, Senator, that we are doing all that is reasonably possible. It is a little hard to define, when we can think of such great crash programs as the Manhattan project, and so on. But we are not thinking of it in those terms.

I think we are doing all that is reasonably possible.

Senator BYRD. Is the Government funding level retarding the completion of the program?

Dr. HALLER. No, it is not. I think, however, we must be considering the negotiation of this pilot plant project, and we should be into this very soon.

Senator BYRD. Do you have indications that the Office of Coal Research is moving in this direction?

Dr. HALLER. Yes, they are, as far as I know; yes, sir.

Senator BYRD. You do not see any indications that there is going to be any delay from that end?

Dr. HALLER. I do not think so, sir.

BUILDING PILOT PLANT IN 1965

Senator BYRD. Could a pilot plant be built in calendar year 1965?

Dr. HALLER. I do not think it would be advisable. I think this is an orderly program and it has the necessary checkpoints so we do not waste a lot of money.

Senator BYRD. What would be the economic impact of this work on the Nation?

Dr. HALLER. If this work is successful as we hope, I think that it could increase the use of coal by at least 50 percent over its present use.

Senator BYRD. Over the present use?

Dr. HALLER. Over the present use of coal. I think this would have a tremendous impact.

BENEFITS TO RELATED INDUSTRIES

Senator BYRD. Do you feel that related industries would benefit, such as the petroleum industry, for example?

Dr. HALLER. Yes, certainly. All sorts of related industries would benefit and, of course, where these plants are the communities would benefit, too, because it would have increased industrial activity near the source of the hydrocarbons and near the source of the coal.

INVESTIGATION BY PETROLEUM INDUSTRY

Senator BYRD. Is the petroleum industry, for example, investigating the use of this process?

Dr. HALLER. Yes, they are. In fact, one of the large petroleum companies has bought one of our reactors for experimental laboratory use.

Senator BYRD. How much money will be required to complete the program?

Dr. HALLER. I think a total of somewhere between $5 and $10 million through the pilot plant stage.

FEDERAL GOVERNMENT SUPPORT OF THE PROGRAM

Senator BYRD. How much of the corona work is supported by the Federal Government?

Dr. HALLER. I think on a national basis that about half of the corona work going on is under Government support.

Senator BYRD. Would the General Electric Co. do this coal work, if the Government should cut off the funds?

Dr. HALLER. I think we would keep it going, but at a lower level, because there are some other very promising commercial leads which might take some precedence with regard to us over the coal work. I do not think we would go into the pilot plant operation.

Senator BYRD. So you do not think that the company would fund the pilot plant operation out of its own moneys?

Dr. HALLER. No, sir.

EXPERTS COOPERATING ON THE PROJECT

Senator BYRD. Have the opinions of others than General Electric people been solicited on the potential work of this project?

Dr. HALLER. Yes. We have the favorable opinion of several experts, Professor Gilliland of the Massachusetts Institute of Technology, and Dr. Loeb from the University of California, and several others. But those are the two most notable, I believe.

Senator BYRD. What are the full names of these two gentlemen?

Mr. COOPER. E. R. Gilliland.

Dr. HALLER. And Leonard B. Loeb, professor of physics, at the University of California in Berkeley. Professor Gilliland is professor of chemical engineering at MIT.

PILOT PLANT INSTALLATION AND EMPLOYMENT

Senator BYRD. Will this pilot plant installation create employment?

Dr. HALLER. Certainly the construction and operation of the pilot plant will create employment. The size of it, we are not quite sure yet, nor the extent that it would do that. But it would be the construction of the laboratory pilot plant with all of the services required.

LOCATION OF THE PILOT PLANT

Senator BYRD. Would the pilot plant operation lend itself to a location near an operating mine?

Dr. HALLER. It could very well, yes.

Mr. COOPER. As long as the utilities were available, electric power, waste disposal, and the like.

Senator BYRD. How much acreage would be necessary for the pilot plant operation?

Mr. COOPER. I think our block was set up on the basis of 2 to 30 acres, because it would need to accumulate coal to feed into the system and it would need to have an area to store waste products.

Senator BYRD. I suppose you would consider it advantageous or virtually a necessity that the pilot plant be located in close proximity to an operating mine.

Dr. HALLER. At least in the area of operating mines, yes.

Senator BYRD. There should be a railroad siding in the area?

Mr. COOPER. Right.

Senator BYRD. Would you want level land, or would it make any difference as to whether it was fairly level?

Mr. COOPER. It would certainly reduce the cost of construction if we had level land.

Senator BYRD. How much of the land would you envision as having to be level for the facility itself?

Mr. COOPER. You could plateau the area. As long as you could generate a plat roughly 1,000 by 500 feet, which should be level. You like to have all your pipelines and conveyor systems on a good level area.

Senator BYRD. So that would be a square footage of 500,000 square feet?

Mr. COOPER. Yes, sir.

Senator BYRD. And then the remainder of the 10 to 30 acres could vary from level to rolling?

Mr. COOPER. Providing you could reasonably terrace it. You would not want to have real abrupt breaks in the profile of the land.

COMPARISON OF PROCESSES

Senator BYRD. How does this process compare with others?

Dr. HALLER. Perhaps I can answer that. One of the others is the radiation process. The cost per kilowatt of the energy needed runs around a cent per kilowatt for the corona, about $1 for the ordinary electron beam, and for a radiation device it would run around $10, so there is an enormous advantage in cost.

Senator BYRD. I take it you feel that there is real promise, Dr. Haller?

Dr. HALLER. We certainly do.

Senator BYRD. That is, real promise of success?

Dr. HALLER. Yes; we are not positive enough to say that we should build a big plant. There are several things in the line process we want to nail down, but the first indications show real promise. I do not think we would have the good team of men assigned to this work, unless we felt there were definitely some potential.

PERSONNEL

Senator BYRD. How many men do you have assigned to the work?

Dr. HALLER. We have about nine.

Senator BYRD. How long has this team been assigned to this work?

Dr. HALLER. About 2 years.

Mr. COOPER. Yes, the contract negotiations started in January of 1962, as I recall. We really got underway in the summer of 1962 and they have gradually built up the force of people assigned to the project. You always have to have your bid people to lay the groundwork, and that is what we have done.

GOVERNMENT COOPERATION

Senator BYRD. And you do not feel the Government has been lax in its approach?

Dr. HALLER. We have been very encouraged by the help and support, both technical and administrative, that we have found from the people in the Government.

Senator BYRD. Do you feel that the Office of Coal Research has moved along as expeditiously as has been warranted?

Dr. HALLER. We think so.

Mr. COOPER. I think they have been very aggressive, Senator, in keeping track of this program and seeing that we do everything possible.

Senator BYRD. Are you pleased with the enthusiasm that is shown by the Office of Coal Research, concerning the project?

Dr. HALLER. Very much so; I have met with these people. As a matter of fact, the day before yesterday we had a meeting in Schenectady with the evaluation team. I think they show a lot of enthusiasm and able administration.

PROGRESS OF THE PROJECT

Senator BYRD. And you feel that the project is developing as rapidly as it is economically feasible?

Dr. HALLER. I think that is the best term for it.

Senator BYRD. And as rapidly as it is technologically feasible?

Dr. HALLER. That is correct.

Senator BYRD. You do not think it can be expedited, practically speaking?

Dr. HALLER. I think it is at the point where the returns of expedition might be negligible.

Senator BYRD. Diminishing?

Dr. HALLER. Diminishing, yes. You can always, as you and I know, pour lots of money into something and get a little bit more, but I do not think the amount that you would gain from further acceleration would be justified.

Senator BYRD. Do any of your associates have additional material, Dr. Haller?

Dr. HALLER. No, sir.

Senator BYRD. Senator Bartlett, do you have any questions?

Senator BARTLETT. I have no questions.

Senator BYRD. Dr. Haller, we certainly thank you for your appearance here today. We feel that your testimony will be helpful to the subcommittee. We appreciate the fact that you have been somewhat inconvenienced, and we are grateful for your cooperation in coming down.

Dr. HALLER. Senator, we appreciate the opportunity to be here today with you to discuss the subject.

Senator BYRD. And we wish you well in your further work on the project.

Dr. HALLER. Thank you.

Mr. COOPER. Thank you.

NATIONAL LUMBER MANUFACTURERS ASSOCIATION

STATEMENT OF WILLIAM T. JOBE, JR., GENERAL COUNSEL

FOREST PRODUCTS LABORATORY, MADISON, WIS.

Senator BARTLETT (presiding). Mr. Doyle and Mr. Muschler, please.

Mr. JOBE. Mr. Chairman, my name is William T. Jobe, Jr. Mr. Doyle could not be here today. I am the general counsel for the National Lumber Manufacturers Association. With your permission, I would like to submit our statement for the record in support of the expansion of the Forest Products Laboratory facilities in Madison, Wis.

Senator BARTLETT. The committee will be glad to accept the statement, Mr. Jobe. Do you have any verbal statement you care to make at this point?

Mr. JOBE. Mr. Chairman, in view of the pressure on the committee, unless there are some questions I would be very happy to have our statement stand.

Senator BARTLETT. There will be no questions. I think the Senate acted favorably on this last year?

Mr. JOBE. Yes, sir.

Senator BARTLETT. Very well, the statement will be included in the record.

(The statement referred to follows:)

FOREST PRODUCTS AND FOREST PESTS CONTROL RESEARCH

Mr. Chairman, my name is William T. Jobe, Jr. I am general counsel of the National Lumber Manufacturers Association which has its main offices here in Washington. Our association is a federation of 17 regional species and products organizations operating throughout the United States on behalf of the entire American lumber producing industry. Our industry takes pride in the fact that we rank as the fourth largest employer of manufacturing labor in the United States.

This opportunity to appear before your committee is in support of two programs which we believe to be vital not only to our industry but to our Government as well. One of these programs would greatly improve our Government's present forest products research program at the Forest Service's Madison Laboratory; and the other would advance the important work being done by the Fish and Wildlife Service's chemical screening research program for the control of forest pests.

Wood use in this country is more dependent on the Madison Forest Products Laboratory than is generally recognized.

You are probably aware that at this time the forest products industry is going through a very difficult economic period. There is intensive correlation between the areas of the country with high unemployment and poverty, and areas of the country growing commercial timber. Competitive materials, because of the greater concentration of their industries, have been able to devote more efforts to research, and thereby capture an increasing share of construction markets. These materials require much less labor to manufacture and to use. Of all the construction materials, wood is the only one that comes from a renewable resource.

The entire nation depends on the Madison Laboratory for the basic type of wood research that is needed by State, regional, and industry laboratories which do product development work. The work assigned to the Madison Laboratory generally entails very expensive basic wood research, which is not, need not and cannot be duplicated any place else. Actually, only scientists skilled and capable in these fields are assigned to the Madison Laboratory. If other laboratories tried to engage in the same type of basic research, they would have to "raid" the Madison Laboratory's scientific force and, secondly, they would have to duplicate the extremely expensive research equipment. Both measures would be harmful from a long-range wood utilization standpoint. This is why the Nation's wood industry

has given overwhelming priority to supporting expansion of the Madison Laboratory over any other wood research facility.

As early as 1957, the bipartisan Commission on Increased Industrial Uses of Agricultural Products, which had been established by former President Eisenhower, in a final report to General Eisenhower recognized the significant work being done at the Madison Laboratory, and recommended extensive expansion of its then-existing facilities.

In the last Economic Report which the late President Kennedy submitted to Congress in January of last year, he urged "new support of science and technology that directly affect industries serving civilian markets." President Kennedy explained that, in turn, this would represent "a rounding out of Federal programs across the spectrum of science." We fully agree with the late President in his conclusion that the returns from improved technology which can be made available to civilian industry "will be better products and services at lower prices," and that "a national research and development effort focused to meet our urgent needs can do much to improve the quality of our lives."

The Federal Government—in line with the late President's thinking—has, since 1910, operated a forest products laboratory at Madison, Wis., which without doubt has proven itself in the field of wood products utilization as a useful supplement to the research efforts of the forest products industry.

Unfortunately, there has been no major expansion of the Madison Forest Products Laboratory research facilities since the present structures were built some 30 years ago.

The American forest products industry has been much encouraged by President Johnson's fiscal year 1965 budget in which the President stated that "an addition to the Forest Products Laboratory in Madison, Wis., will be constructed in 1965." President Johnson explained that "this will permit expanded research on wood utilization techniques and standards resulting in benefits to the lumber industry, landowners, and consumers." We strongly support the President's intentions and urge that Congress now make the necessary funds available to carry forward this objective.

Tangible results from an expanded and accelerated research program at Madison, Wis., would also help protect the Federal Government's present investment in trees. Such protection is largely dependent on the availability of funds with which to complete construction and staffing of the departmental-approved forest products laboratory facilities currently planned and urgently needed at Madison, Wis.

At the present time, the Federal Government owns approximately 130-million acres of national forest timberland. A large portion of Federal funds is invested each year by our Government in the management of its national forests. The effective management of most of this valuable national resource has been made the responsibility of the U.S. Forest Service, which is one of the few agencies of our Federal Government that annually returns a substantial income to the Federal Treasury. This income is made possible by the wise management and the wise investment which the Congress expends on our Nation's forests.

Practically all of the income from federally owned timberlands is derived from the sale of Government timber to the lumber and wood products industry. The price received by our Government for this timber is related to the market price of the end products manufactured from timber. Protection, therefore, of the market for these end products is of major concern not only to the industry, but to the Federal Government, which in its own self-interest should protect its huge investments in growing trees.

I am sure that each of you is aware that our industry and the American communities dependent upon it for their prosperity are currently faced with difficult economic problems which have been seriously compounded by constantly mounting imports of foreign lumber. On the basis of statistics currently available, softwood lumber imports from Canada alone now supply more than 16 percent of the domestic U.S. softwood lumber market, compared to approximately 5 percent in 1958, or just 6 years ago.

In seeking to resolve its import problems, the American lumber industry has sought only that help from its Government which would bring about those conditions of equal competition that would enable it to sell its products competitively both at home and abroad.

It seems to us that the buttressing of the Forest Products Laboratory at Madison is a logical beginning where Government and the American lumber industry can join together to resolve the industry's critical problems.

We were much impressed by the remarks made last year by Under Secretary of the Treasury Fowler at the National Security Industrial Association's research and development symposium in which he stated:

"As an important aside, the new products and promotion processes from American research laboratories can be important not only in stimulating domestic demand but also in aiding the expasion of foreign markets and the alleviation of our balance-of-payments difficulties. In view of the increasing research efforts of many of our international competitors, it is vitally important that we redouble our efforts. The total of nonspace, nonmilitary research and development effort in Western Europe and Great Britain is larger in quantity than that in the United States, although their gross national product is only about half as large."

The Senate last year also demonstrated its keen interest and vital concern for advancing our Nation's scientific and technological programs by passing legislation to establish a Commission on Science and Technology. The committee report accompanying this measure noted that, among other things, it was needed so as to insure "continued national progress in an era of universal scientific and technical development" and to further insure "the maximum utilization of all available scientific know-how and information by coordinating the research and development programs of the Federal departments and agencies with those of American business and industry * * * ."

Our industry, within the limits of its capabilities, has put forth considerable effort to promote new uses for forest products at home and abroad. However, because it is basically composed of a great number of small and very small mills, an individual firm within our industry is only too often unable to finance major and complicated research and development that would result utlimately in a major technological advance.

This specific factor, we believe, deserves considerable weight in the consideration of Government research programs designed to find better and more useful lumber and wood products. The impressive gains that would accrue to the entire economy by making dynamic technological developments available to all firms do not have to be defended and detailed, particularly for this committee.

The American lumber industry believes that a request for continued expansion of the Forest Products Laboratory at Madison, Wis. dovetails with this objective.

The lumber industry has carefully reviewed the proposed three-stage program developed by the Department of Agriculture for the expansion of the forest products research facilities at Madison. In our judgment, this proposal reflects a well-conceived plan for expansion of both wood fiber and wood chemistry and solid wood products research programs, and we hope that your committee will approve the $3.8 million in funds necessary to get the program underway.

Now, briefly turning to another important appropriations item—the control of animal damage to our Nation's forests.

The Denver Laboratory of the Fish and Wildlife Service performs a singularly important task in that it tests and screens chemicals for the control of animal pests. Lumbermen are greatly impressed by a statistic developed by the U.S. Forest Service contained in its study entitled "Timber Resources for America's Future," in which the Forest Service estimated that 600,000 homes could be built each year with the timber destroyed by animal pests, mostly rodents.

Among the costs for this nationwide research program is an estimated $600,000 in capital expenditures for a necessary addition to the Laboratory at Denver. Essentially, as we understand, the request for salaries and expenses is about at the same level as in last year's budget.

Last year, as part of our statement in support of this important appropriations item, we submitted a booklet for the committee's files entitled "There's Trouble in the Woods." This booklet, which was prepared by 26 State, Federal, and private organizations in the Northwest, describes in detail the imperative national importance of controlling forest animal damage. Although based on problems faced by the Northwest, the report could have been written similarly for the Eastern, Southern, or Lake State areas of our Nation. If the committee so desires, we would be happy to make additional copies of this study available to you and your staff.

Since the release of "There's Trouble in the Woods," another study, still in preliminary form, which was also developed through State, Federal and private cooperation, is currently in the process of being completed by the Fish and Wildlife Service. This study entitled "Forest Wildlife Damage Review" contains detailed information on many of the most pressing wildlife damage problems faced by each of our Nation's geographic areas which at the present time require urgent remedial action. We plan to submit copies of this report to the committee as soon as they are available.

We strongly recommend that the animal damage control methods research chemical screening and testing program carried on by the Fish and Wildlife Service be continued in 1965 at least at their existing level. We respectfully suggest that this committee consider the desirability of increasing funds for this activity even above the present budget request, for there is at present a heavy backlog of important work which is being delayed because of a lack of sufficient funds to carry on an effective program.

The Denver Laboratory's work is essential to the proper forest management of both public and private lands. Sufficient appropriations for this activity would also help the Service to more effectively fulfill its public health and safety responsibilities in the controlled testing of potentially hazardous chemical compounds.

We urge strongly that your committee approve the funds requested for the Fish and Wildlife Service to cover the expenses of operating this very important research program seeking to control animal damage to our Nation's forest lands. We believe, however, the funds requested are at the bare minimum and fall far short of those necessary to carry forward an effective program at the Denver Laboratory.

Mr. Chairman and gentlemen of the committee, on behalf of the U.S. lumber industry, I strongly urge that you approve the current provisions of the fiscal year 1965 budget that would provide $3.8 million to cover the cost of the first stage of an estimated $10 million expansion program for the Forest Products Laboratory at Madison, Wis., which construction is proposed to be implemented over a 3-year period.

We believe also that Secretary Fowler in his timely statement of last year eloquently summarized the importance that approval of a program such as this would mean to our Government, the forest-based communities throughout our Nation, the American lumber industry, and its employees when he said:

"Expanding technology multiplies new investment opportunities by opening up new products, services, and demands; by increasing efficiency in existing products and services, it may spur defensive or competitive investment or open additional markets, increasing productivity per capita."

We also strongly urge approval of much-needed funds for the improvement and necessary expansion of the Fish and Wildlife Service's program for the control of animal pest damage.

In appearing before this committee, Mr. Chairman, we would like you to know that the American lumber industry has always appreciated and realized that this committee and the Senate have an especially keen awareness of the need for appropriations for these two significant programs, and in the past has given them overwhelming approval. This is particularly encouraging to the lumber industry which has long recognized the significance of these two programs to development of both Government and private forestry. We hope that this committee and the Senate will continue to support these important programs.

Thank you very much.

ADDENDUM

Mr. Chairman, in that part of our basic statement concerned with the wildlife studies that are helping to reduce the costs of timber growth, we overlooked mentioning that the Forest Service and the Fish and Wildlife Service are jointly cooperating with the State of Washington, at Olympia, in the conduct of some of the research. The work is done in consultation with more than a score of private, State, and Federal groups and agencies. The Forest Service share in this project is $36,000 which is most important to the industry.

In addition, we also request permission to have the following information on the European pine shoot moth control method included in the hearing record as part of our statement:

EUROPEAN PINE SHOOT MOTH CONTROL METHOD

The European pine shoot moth is a threat to the pine forests of the 12 Western States. There is no known method of control of the pest and it would make timber growing impractical on hundreds of millions of acres of our commercial timber growing land. About two-thirds of the forest land involved is in Government ownership. If this pest becomes established in the United States it could become the greatest timber destroying insect of all time. The one occurence of the insect in Washington State near Spokane was eradicated by destroying both plants and the moth. It is now known to exist 60 miles north of the border in the Okanagan Lake country in Canada. About $250,000 has been spent on

containing this pest in the past few years. There is $25,000 in the present budget to develop a practical method of control. This is not enough to even get a good start. It may be necessary to divert funds from other less urgent projects. This pest dictates that we first carefully survey constantly for the presence of the moth and that it be immediately contained and eradicated, and, second, that we go to work immediately to find a permanent solution through entomological research.

Senator BARTLETT. Mr. Muschler, please.

EDWARD HINES LUMBER CO., CHICAGO, ILL.

STATEMENT OF ARTHUR F. MUSCHLER, TECHNICAL DIRECTOR

FOREST PRODUCTS RESEARCH

Mr. MUSCHLER. I am Arthur F. Muschler, technical director of the Edward Hines Lumber Co., and also representing the Forest Products Research Society as a member of the executive board and the professional Society of Wood Science & Technology as past president. Both these societies are anxious to emphasize the critical need for increased effort in forest products research.

The Federal Government is owner of 40 percent of the standing timber in the United States and, as such, must recognize a dominant interest in forest products research which will assure future markets and maintain the value of these vast properties.

The lumber industry, for example, is made up of some 30,000 units. The 10 largest represent less than 10 percent of the total lumber production. The burden of fundamental research in processes and products, of necessity, rests almost totally with the Federal Government as the single dominant forest-land owner.

We are faced today with a declining per capita consumption of lumber and other forest product and a dramatically increasing rate of timber growth. This timber growth earlier exceeded timber harvest on a cubic foot basis.

TIMBER GROWTH EXCEEDS HARVEST

More recently, growth has exceeded harvest even on a board foot, or sawtimber, basis. The victory in growing timber may be a hollow victory, indeed.

I am particularly interested in speaking for myself and for my company in order to emphasize the need for forest products research centered at a National Forest Products Laboratory, rather than expensive fragmentation of facilities along regional lines and similar to the trend which perhaps is necessary within the Forest Service in forest management research.

Problems in forest products research are national problems. Problems in forest products research require the coordinated effort of teams of researchers in each of several fields of knowledge.

RESEARCH REQUIREMENTS

Such research requires adequate building, expensive equipment, suitable library, and constant consultation with industry. One wood technologist, one engineer, one physicist, one chemist, and one statistician, plus building, equipment, and library, will inevitably

produce in a regional forest products research situation that one more design for a better wood picnic table.

Mr. Chairman, we are blessed with an abundance of designs for a better wood picnic table. Unfortunately, these efforts will not answer industry needs today, and certainly will not answer industry needs tomorrow.

LABORATORY FACILITIES ARE OLD

The Forest Products Laboratory in Madison is housed in facilities which are 30 years old. The facilities do not do justice to the world-wide reputation of the staff, of the library, and of past accomplishments. The Laboratory is convenient to all producing regions. However, buildings and equipment are in dire need of expansion and modernization. We strongly believe funds for forest products research should be concentrated in Madison, where these funds will be most effective.

I appreciate this opportunity to appear before you in support of this important project, and want to thank you very much for granting me this opportunity.

Senator BARTLETT. Mr. Muschler, is this the largest such laboratory in the country?

Mr. MUSCHLER. Yes, sir; in the world, in fact.

Senator BARTLETT. How many other laboratories does the Forest Service have, do you know?

REGIONAL UTILIZATION LABORATORIES

Mr. MUSCHLER. The Forest Service has regional utilization laboratories which more or less, at the present time, fill the gap between the forest management and the forest products work dealing heavily in logging techniques and harvesting methods.

SURPLUS OF TIMBER

Senator BARTLETT. Granted the need for improving this Laboratory, as the Senate did grant last year, nevertheless I think we are far better off if we have a surplus of timber than a deficit, do you not?

Mr. MUSCHLER. Well, of course, we need a backlog.

Senator BARTLETT. From the national viewpoint?

Mr. MUSCHLER. Yes, sir.

Senator BARTLETT. Thank you very much, Mr. Muschler.

The distinguished minority leader of the Senate, Senator Dirksen, is accompanying Mr. Tudor, director of the Division of Area Services for Southern Illinois University on the Forest Service budget request. Do you have a statement to make, Senator?

FOREST SERVICE

STATEMENT OF HON. EVERETT M. DIRKSEN, U.S. SENATOR FROM THE STATE OF ILLINOIS

SOUTHERN ILLINOIS UNIVERSITY

Senator DIRKSEN. I thought, Mr. Chairman, I ought to make a brief statement, because I am quite interested in this whole matter. I do not know if you are acquainted with Southern Illinois University.

Senator BARTLETT. Not as I should like to be; no.

Senator DIRKSEN. We are quite proud of Southern Illinois University which has today in the neighborhood of 18,500 students. It is now one of five universities that we have in the State, Northern, Southern, Eastern, Western, and then the University of Illinois.

But it is something more than a cultural center and an educational center, because it undertakes to serve specifically all of the people and the interests and activities in the lower counties of the State particularly.

UNEMPLOYMENT ANALYSIS AND RESEARCH

It is an area where we have had difficulty. The loss of a good many marginal coal mines and that sort of thing has accounted for high incidents of unemployment and it is to that that Dr. William Tudor, the Director, Division of Area Services, gives his very particular attention.

The school was started on the theory that the best way, finally, to help in this poverty is to direct attention to the resources of an area and their development so that the youngsters do not have to move out after high school and that we can sponge up the job list.

We have a high rate of relief in that area, so that the university becomes a center for analysis and for research. To indicate how far they have gone, they have 164 majors in forestry today, and they do have something over 600 in their agricultural school that was started only a few years ago.

CONSTRUCTION OF LABORATORY AND GREENHOUSE

Now their one good resource is timber and they have been trying to bring in industries that utilize wood and wood products. I think that is one of the main hopes. And today they are asking for something in the neighborhood of $690,000 with which to construct a laboratory and a greenhouse and some additional related facilities.

I think it should be pointed out that the school is presently doing pretty well by the Government, meaning the Federal Government, because they have made storage rooms and other facilities available for our own Federal forest research people.

But that means crowding the staff, cutting the students, and they do have to have some money in order to go ahead with this. Now I equated my statement to the poverty situation.

HIGH INCIDENCE OF RELIEF

Mr. Chairman, we have thousands of people on relief, thousands of families in that area. In fact, it is one of our highest relief areas in the State. I think of $1,000 per family per year, so that actually what they are asking for is the equivalent of relief expenditure for 690 families for a single year.

In proportion as we bring industry in there, that is the way you are going to finally lick the poverty that we refer to in southern Illinois. I think it is of the highest importance, and so I am glad to accompany Dr. Tudor here and also Mr. Donald H. Gott of the Amercian Walnut Manufacturers' Association, who will probably make a statement of his own.

Black Walnut Culture

It is a rather interesting national phenomena that most of our black walnut, our American walnut, has been cultured in those six Central States like Illinois, Indiana, Missouri, and Kentucky.

The export of walnut today and the use of walnut in American industry for furniture, and so forth, has now gotten to a rate where if it goes on, let us say, another decade, we are virtually going to be out of walnut.

One of the things that they can do at this school is to dip deep into the field of genetics for a timber supply of that kind for better pruning, for acceleration of growth, and so forth, because today we are using smaller and smaller logs.

There are some 6,000 users and processors of walnut in the country today and they have to realine their industrial and technological process in order to meet it. But the point I emphasize to you, Mr. Chairman, is this: We are asking for the equivalent of what we pay 690 families for 1 year to build this additional laboratory, these greenhouses, and these related facilities. Out of that, I think, will come the durable solution in an intelligent war on poverty.

Crab Orchard Lake Plant

A new plant was created recently at Crab Orchard Lake in that area largely because they are going to use the resources. That is our hope, because fuels that are competitive with coal, the mechanization of the big mines, have put our mining industry in bad shape down there, and this is one of the self-help things that we can look forward to.

I shall earnestly hope, because of its contribution to the problem of poverty and jobless, that we strive year after year to solve, that you can look with a most sympathetic eye on this problem.

Need for Program at Southern Illinois University

We need it and we need it badly, and it is going to eventuate in savings of millions and millions of dollars in the form of made work and jobless relief. This is our one hope, and $690,000 is not only a modest amount, it is almost an infinitesimal amount when you stop to consider the ultimate benefits that will result from that.

And so with that, may I present Dr. Tudor of the Southern Illinois University.

I have to go to armed services this morning, so if you will excuse me, I will leave Dr. Tudor in your very good, sympathetic hands.

Senator Bartlett. I shall not say it to you, but to those that accompany you, that the voice of the minority leader, I know, will receive the closest attention of this committee; and I shall say to you, Senator, it is really amazing the fund of knowledge that you possess about this particular subject, especially in the light of all the problems that weigh upon you every day. Thank you.

Senator Dirksen. Thank you.

SOUTHERN ILLINOIS UNIVERSITY

STATEMENT OF DR. WILLIAM J. TUDOR, DIRECTOR OF AREA SERVICES FOR SOUTHERN ILLINOIS UNIVERSITY AT CARBONDALE, ILL., AND EDWARDSVILLE, ILL.

FOREST SERVICE RESEARCH PROGRAM

Senator BARTLETT. Dr. Tudor, please.

Dr. TUDOR. I think I will follow my usual procedures, Senator, and file my testimony, knowing that you are quite busy.

Senator BARTLETT. That will be acceptable.

(The statement referred to follows:)

Senator Hayden, members of the Senate Subcommittee on Appropriations for the Department of Interior and Related Agencies, I am William J. Tudor, director of area services for Southern Illinois University at Carbondale, Ill., and Edwardsville, Ill.

It has been my privilege and pleasure to appear before this subcommittee several times in the past to present testimony favoring a stronger Forest Service research program. You have always been most courteous to me on these occasions, and I want you to know that I appreciate the increased appropriations you have made available to the Forest Service over the past few years. These funds have enabled them to strengthen forestry research in Illinois and elsewhere in the Nation and to construct some of the laboratories needed to conduct more intensive research.

By training, I am a rural sociologist and have spent many years helping to plan and conduct programs to improve the economy of rural areas such as we have in southern Illinois and many similar adjacent areas. In fact, the past 15 years of my life have been devoted to a war against poverty in the State of Illinois. Thus, I firmly support President Johnson's declaration of war on poverty. My experience has led me to conclude that one of the soundest, most prudent steps we can take to help rural communities find permanent economic strength is to develop and make full use of their renewable natural resources. Forests are one of these resources that are not fully developed and used. Yet they are abundantly capable of making strong contributions to the local communities of distressed areas as well as to our regional and national economic and social well-being.

My purpose in appearing before you today is to recommend that you increase appropriations for U.S. Forest Services activities that will improve the economy of southern Illinois and similar adjacent areas.

It is my recommendation that $690,000 be added to the Forest Service budget for the construction of laboratories, greenhouses, and offices at Southern Illinois University.

In reviewing the President's proposed budget for Forest Service research, I find that no increases are provided for this purpose. Without these essential research facilities our Forest Service scientists will continue to be severely handicapped in their efforts to discover the new forestry knowledge so urgently needed by forest landowners, wood-using industries, and many rural communities in southern Illinois. It is my contention that in most areas of high unemployment, improvement of the forest resources, expansion of wood-using industries, and effective marketing of timber products will be a major factor in the permanent solution of this serious problem. Research is vital to these forestry activities; without it, they will be inefficient and only partially productive.

Just last week I learned with great pleasure that a new wood products plant had been established at the Crab Orchard National Wildlife Preserve. Here, two Federal agencies joined hands with a State university and private enterprise to establish a program that will help in the war on poverty. This is an example of reality of what I have been saying would happen through this important research program. It should give you gentlemen real satisfaction. It does me.

The Forest Service has for over a decade maintained and staffed a research office on our campus at Carbondale. We have furnished, as best we could, and without cost to the Forest Service, offices, laboratories, greenhouses, and similar

facilities for their scientists because we firmly believe in the fine work they are doing. For example, we now furnish a suite of eight offices and an additional classroom in our agriculture building, a building and some facilities for wood-use research, automatic data processing services for many of the studies they conduct, access to our libraries, and other related services.

We have been more than pleased to have Forest Service scientists at our university. Their discoveries have led to better methods of tree planting, of managing forests for improved timber production, of improving forest trees through genetics, of more efficient ways to harvest timber crops, of new and expanded uses of hardwoods, and of greater marketing opportunities for the owners of our timber. Application of these research results has and will continue to help woodland owners and wood-using industries and thus provide employment opportunities in many rural communities. Furthermore, Forest Service employees have made major contributions to our forestry department and research programs. They have fitted nicely into and are a highly valued addition to the university community.

Our university construction program has not been large enough to keep pace with the need for teaching and research facilities. For example, student enrollment in the university has increased from about 4,500 to nearly 18,500 in 10 short years. The enrollment in our forestry department, which was started in 1958, has jumped to 164 declared forestry majors this year. Our school of agriculture was established in 1955, with an enrollment of 204, and this fall the enrollment had expanded to 686 students. This was during a period when most colleges of agriculture were decreasing in enrollment. Release of space now occupied by the Forest Service scientists, through construction of laboratories and offices for them, would be most helpful to the university. It is becoming increasingly more difficult to move regular staff members out of the agriculture building into temporary barracks-type facilities while the Forest Service staff remains in the building. Furthermore, these fine forest scientists squeezed into such cramped quarters are sorely handicapped in their work. I am sure that adequate office space, suitable laboratories, and other research facilities, more modern and specialized than we can furnish, would enable these scientists to do more complete, detailed research that is now required to make important discoveries in forestry.

Congress has recognized the serious need for buildings in our institutions of higher learning by passing the Higher Education Facilities Act of 1963. Also, recognition of the problem has been given through granting funds to land-grant colleges for special buildings. We are in a situation where these much-needed facilities do not fit into either of these programs. In addition, Congress has included funds in Public Law 88–210 for buildings for vocational education programs at the college level. We seem, unfortunately, to fall outside this program too, which fact brings me before this committee.

Now, let me describe briefly for you the proposed research facilities that are needed:

(1) A laboratory with supporting offices and scientific equipment; estimated cost, $580,000: This building would have a gross floorspace of about 15,000 square feet, and contain laboratories and offices equipped for efficient, highly specialized research in forest soils, hardwood tree improvement through genetics, wood utilization, and timber market improvement.

(2) Greenhouses with supporting work area; estimated cost, $75,000: This research facility would consist of two 20-by-60-foot greenhouses with a headhouse for preparing tree research materials. It would be used for genetics research leading to improvement of valuable hardwoods such as black walnut, cottonwood, and yellow poplar. This work requires, for example, controlled pollination and evaluation of hybrids. Complete pollen sanitation is necessary for controlling crossing, just as is closely regulated temperature and humidity.

(3) Hardwood utilization research offices; estimated cost, $35,000: These offices would be for utilization research scientists conducting studies in new uses for hardwoods. The facility would provide about 900 square feet of space. It would be constructed of native timber and thus, in itself, provide research into and demonstration uses of our local hardwoods.

The total combined cost of the research facilities that I have recommended is $690,000—an investment in hardwood forestry research that will be repaid many times over in the future.

If funds are provided for these laboratories, we will work with the Forest Service in selecting suitable locations on university property, provide the land needed without cost to the Federal Government, and assist in all other ways possible.

It has been a pleasure to appear before you again. I am confident that you will carefully consider my recommendations, along with other needs, to strengthen our national program in forestry research.

Thank you.

UNIVERSITY GROWTH

Dr. TUDOR. I would also like to file with you a little booklet that describes the growth of our university to give further evidence of what I say in my statement that we are in a rather difficult position, as far as space is concerned at the university.

Senator BARTLETT. I am going to put this booklet in my pocket right now and thereafter I am going to read it, because I was tremendously impressed when Senator Dirksen said this was a school with 18,500 students. I did not know this. When was it founded?

Dr. TUDOR. It was founded nearly 90 years ago.

Senator BARTLETT. Has your growth in student population occurred chiefly in recent years?

Dr. TUDOR. That is right. I joined the staff nearly 16 years ago; it will be 16 years next June. We had around 3,000 students. We dropped during the Korean episode to about 2,700, then we started growing again very rapidly. We have increased at a rate better than 1,000 a year every year.

Senator BARTLETT. How in the world do you take care of them?

Dr. TUDOR. We use all kinds of temporary facilities. In fact, we have some of our staff in the school of agriculture using old barracks, buildings and houses that were on land that we bought, while we are housing the Forest Service in our agriculture building that was built to take care of these people.

INCREASES IN FORESTRY MAJORS

We feel this program is of such value that we want to see it move ahead and we actually caused some damage in our own program in order to assist the Forest Service with their research program which is so vital to the economy of southern Illinois. We have, as I indicate in my testimony, increased very drastically in both our enrollment in agriculture and in the department of forestry, those majoring in forestry.

So, where many schools of agriculture have been declining in enrollment, we have been increasing very drastically. Our forestry department was not started until 1958, and this fall—and this is majors only—we have 164 students who are majoring in forestry which is, we think, a rather remarkable development.

Senator BARTLETT. I agree to it.

DEGREE OF AGRICULTURE

Dr. TUDOR. In 1955 the State Legislature in Illinois gave us the authority to offer the degree of agriculture. We had but 204 students enrolled at that time. This past fall we had 686 students enrolled in agriculture. So you can see the approach we are following at Southern is one that is appealing to students, and others as well.

We have tried to emphasize three approaches. One is instruction, another is research, and a third is service, which is my part of the university.

We want to thank your committee for including last time some funds for this particular project. We were sorry that the conference committee did not keep those funds available.

Senator BARTLETT. How much are you asking for this year?

FACILITIES FOR HARDWOODS RESEARCH AND TRAINING

Dr. TUDOR. $690,000 is what we need for the project.

Senator BARTLETT. And this is an unbudgeted item, again?

Dr. TUDOR. That is right. It is a complex of buildings that will make for the type of facility that will let us move ahead in providing training and research to develop use of hardwoods in industrial programs in that area.

We had to go clear across the board with this program, because when you look at the management of our forests, which is not very good in that area, we recently set up a training program to train people to harvest the timber in that area.

We found not only a lack of people available who knew how, but also those who did this woodcutting needed special training as well. And this is a way of moving some of these people from our unemployed list.

WAR ON POVERTY IN SOUTHERN ILLINOIS

As the Senator pointed out, we have been waging or own war on poverty in southern Illinois. The county we are located in, Jackson County, is no longer one of the so-called depressed counties. We are no longer eligible for ARA, because of the improvement.

I am not taking credit for that in the university, but I think we have had a hand in helping develop programs to provide help for people so badly in need of it. It is a good program. It is showing results as the Senator pointed out.

We had a new industry locate just a few weeks ago at the old Crab Orchard ordnance plant area completely as a result of this particular program.

This is not the only one, but they are happening every day. That is why I mentioned this particular project. I appreciate your courtesy and your patience. We appreciate all you have done for us in the past.

EFFORTS AND APPRECIATION

We hope we have justified the faith your committee has shown in us, because we feel we have tried at least to come up with the things that we said we would do when you have granted us funds in the past.

It is a pleasure to appear before this committee. We have received courteous attention, both on the part of the committee and the staff and it makes you feel real good when you meet with the committee.

Senator BARTLETT. Thank you, Dr. Tudor. You have made a fine appearance.

Senator Stennis.

FOREST SERVICE

STATEMENT OF HON. JOHN STENNIS, U.S. SENATOR FROM THE STATE OF MISSISSIPPI

LABORATORY AT OXFORD, MISS.

Senator STENNIS. I am not going to ask to testify. I would like to note that in addition to testimony I gave here last week regarding a laboratory at Oxford, Miss., having to do with forestry research of a special kind, that you have on your rostrum today witnesses in the name of Mr. Billie Ross Brown, of Oxford, who will testify with Mr. Walter Myers, who will be here around 11 o'clock, as I understand.

Also with Mr. Brown is Mr. R. K. McLean. This is with reference to a laboratory which has been urged upon the Budget Bureau by the authorities in the Foresty Service more than once. It is one they give a very high priority to, although for this particular year it is not in the budget.

I back up everything Mr. Brown will say and would like to point out, too, that this is a project that is locally supported to the fullest extent.

LAND RECLAMATION THROUGH FORESTRY

This laboratory will be especially concerned with land reclamation through forestry. I want to, again, call it to the special attention of the subcommittee and wish I could stay here and hear this testimony.

Senator BARTLETT. Thank you very much, Senator Stennis. We will hear the witnesses with more attention, because of your prior appearance and your special interest. Thank you.

Senator STENNIS. Thank you very much, Senator.

Senator BARTLETT. Congressman Teague accompanied by Mr. Radford.

FOREST SERVICE

STATEMENT OF HON. CHARLES M. TEAGUE, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF CALIFORNIA

NATIONAL FORESTS

Mr. TEAGUE. Thank you, Senator. I will be brief and I am sure it will be satisfactory for Mr. Radford to present his statement. I am Charles M. Teague of the 13th Congressional District in California, which is to say that one of my counties is Ventura County.

There are eight counties in southern California in which four national forests are located. Los Padres National Forest is in my congressional district. However, I appear here this morning, you might say, as a spokesman for the 11 million people in southern California who are in the area where these four national forests are located.

FIRE PROBLEMS AND FLOOD CONTROL

The officials of the Watershed Fire Council of California have convinced me that they have a very meritorious case. Now this watershed fire council consists of public-minded citizens in southern California who are very much concerned about the national forests, particularly with fire problems and also flood control, all problems related to our national forests.

HOUSING OF PERSONNEL AND EQUIPMENT

This committee has been very wise, I think, in the past in dealing generously with its treatment of these forests. This year, as I understand it, Mr. Radford will elaborate a little bit; all that we are asking is some additional funds to increase the housing of personnel and equipment.

We have pictures indicating—to me, anway—that this is very substandard. These houses have outlived their usefulness and you, of course Senator, being from the West, know how important it is to have good people in our forests, to keep them there.

In order to do so, we certainly do not overpay them, and we ought to provide them with decent living quarters. Our request is for $195,000, in addition to the budgeted amounts, which would be devoted to the housing of personnel and equipment.

With that, sir, may I be excused? You can either ask Mr. Radford to elaborate now, or later.

Senator BARTLETT. Thank you very much, for your appearance, Congressman. We are glad to hear you and I think we will go ahead and hear Mr. Radford now.

Mr. TEAGUE. Thank you.

WATERSHED FIRE COUNCIL OF SOUTHERN CALIFORNIA

STATEMENT OF ROBERT T. RADFORD, PRESIDENT

FIRE LABORATORY, RIVERSIDE, CALIF.

Mr. RADFORD. Mr. Chairman, this happens to be my 10th year of coming back here in regard to our problems. I am going to elaborate on my statement. I heard Ed Cliff say at the dedication of the fire laboratory in Riverside that 50 percent of all our acreage lost has been in the southern California forests.

Senator BARTLETT. Is that the whole national forest structure throughout the country?

Mr. RADFORD. Outside, of course, of the fires you have in Alaska which are now national forests.

FUNDS REQUESTED FOR HOUSING

What the Congressman has said is true about our watershed fire council. I happen to be the president of it and have been for many years. I am not going to elaborate very much on what it has to say here, except the fact that we have appeared here year after year, and what we are asking for now is the balance of a request for supplemental funds. This can be used simply for housing.

There is a statement from the watershed fire council. I happen to be chairman of the Los Angeles Watershed Commission which is appointed under an ordinance of the county which has the same objectives as does our council, except that it is confined to one county.

I want to pass this across. I am going to leave it with you, but I just want to review it with you.

Senator BARTLETT. That and your statement will be be placed in the record.

(The statements referred to follow:)

National Forests of Southern California, Fire Protection Needs

Representing some 11 milllion people in 8 counties of southern California, the Watershed Fire Council of Southern California is a group of appointed and elected citizens organized to help reduce fire losses in the 4 national forests situated within their region. These are the Los Padres, Angeles, San Bernardino, and Cleveland National Forests.

Since its formation in 1954, the Watershed Fire Council of Southern California, in cooperation with Federal forest officials, has conducted extensive studies into causes and possible solutions of fire disasters in this region, and has presented to Congress a program explaining the need for increased funds for fire protection in these four national forests as set forth in the 10-year comprehensive fire protection plan.

Historically, the fire hazard has beset forest areas because of climatic conditions peculiar to this region. Extreme high temperatures, long periods of drought, hot winds from adjoining desert regions, and low humidity are characteristics of this area.

Congress has allowed substantial funds for improving fire protection in southern California, but we are still behind the stated minimum need of $2,375,000 annually as designated in the 1954 request.

An additional appropriation of $195,000 will be necessary this year to bring these forests up to the minimum that was established by the Forest Service officials 10 years ago. At the present time, through the use of present firefighting methods and techniques, we feel great progress has been made in the protection and maintenance in these forests. The one notable exception is the woefully inadequate housing for men and equipment used to protect these forests.

It is the feeling of our Watershed Fire Council that the additional amount of $195,000 should be added to help alleviate the substandard housing of the four southern California national forests.

In closing, we urgently petition this committee and the Congress to:

(1) Provide for the appropriation of the necessary additional funds of $195,000 in the 1964–65 fiscal year budget. These funds would be used for the specific purpose of replacing the substandard housing now provided for the U.S. Forest Service personnel within the four southern California national forests.

(2) Appropriate the necessary funds to continue the program for the national forests.

(3) Appropriate the necessary funds to implement a program of structural improvements within all the national forests of the United States including fire protection facilities and fire personnel quarters.

Angeles National Forest, Los Angeles—California Fire Protection Needs

For the past 10 years, a cooperative program has been carefully developed and nurtured to bring together the resources of the Federal Government and Los Angeles County in order to provide adequate fire protection and to preserve the watershed areas of the Angeles National Forest.

This program began with the formation of the Los Angeles County Watershed Commission in 1954, and it has progressed substantially over the past 10 years. However, there are two significant factors of a permanent nature—climate and population growth—which are directly related to the fire hazard problem of this region.

The Angeles National Forest is located in a climate which suffers long periods of drought, hot winds from adjoining desert regions, and low humidity. Because of the unprecedented population growth common to all of southern California, the Angeles National Forest is committed to extremely heavy recreational use, and residential areas have been extended into the wooded areas and mountain watershed areas adjacent to the forest boundaries.

Of equal significance is the fact that the Angeles National Forest region is a primary watershed for Los Angeles County, serving the water needs of the majority of the 74 cities within the county.

To demonstrate the willingness of local people to cooperate, studies have been conducted and programs have been outlined. The Los Angeles County Board of Supervisors has adopted a comprehensive fire protection program for foothill areas of the county and the Angeles National Forest covering the next 10-year

period. They appropriated the necessary funds to initiate this program. Under this plan, the county will provide a total of $5,238,950 of local funds for this program during the next 10-year period.

As recommended by the U.S. Forest Service, the 1954 program called for an annual appropriation of $2,375,000 special protection and maintenance funds to be used in providing essential firefighting equipment, maintenance materials, and manpower to protect the lives and properties of more than 11 million people in southern California.

An additional appropriation of $195,000 will be necessary this year to bring these forests up to the minimum that was established by the Forest Service officials 10 years ago. At the present time, through the use of present firefighting methods and techniques, we feel great progress has been made in the protection and maintenance in these forests. The one notable exception is the woefully inadequate housing for men and equipment used to protect these forests.

It is the feeling of the Los Angeles County Watershed Commission that the additional amount of $195,000 should be added to help alleviate the substandard housing of the four southern California national forests.

In closing, we urgently petition this committee and the Congress to—

(1) Provide for the appropriation of the necessary additional funds of $195,000 in the 1964–65 fiscal year budget. These funds would be used for the specific purpose of replacing the substandard housing now provided for the U.S. Forest Service personnel within the four southern California national forests.

(2) Appropriate the necessary funds to continue the program for the national forests.

(3) Appropriate the necessary funds to implement a program of structural improvements within all the national forests of the United States including fire-protection facilities and fire personnel quarters.

Los Padres Prevention Stations

Mr. Radford. I would like to go over a couple of these things. Here is Los Padres. The first picture is where we have a prevention station. And here is another prevention station of Los Padres, and this one, a two-man station, in the last year housed four men.

Cleveland National Forest Facilities

Now you turn over here and you see the Cleveland National Forest which is some surplus Marine Corps desert huts. I call your attention to the fact that they have to have tarpaulins on the roof to keep them from leaking. The shower room that they have in that forest at that point is one of the old CCC's from 1933.

San Bernardino National Forest and Angeles National Forest

Then we turn to some pictures from San Bernardino National Forest and those are 1934–35 structures. Then we come to the Angeles National Forest, which is all in Los Angeles National Forest, which is all in Los Angeles County, and on page 3 you will see some equipment.

There are some $30,000 to $35,000 worth of equipment that is housed 365 days in the year under an oak tree. We have no building for it.

Then, as you turn over, I would like to call your attention to this camp which is an old CCC camp which has tar paper on the outside to keep the wind out. I hate to bring this up to you, Senator, but do you see those stairs there on the side of the house?

The Los Angeles County Safety Department came out to the forest area and we had 1 door in that place to take 40 men out. They

made them put some doors in. I am a little ashamed to say that that was necessary.

TEXAS CANYON STRUCTURES

Now on the last page are some pictures here of the Texas Canyon structures. They are surplus Marine little sheds there.

Senator BARTLETT. It is obvious that none of these dwellings are going to receive prizes.

Mr. RADFORD. No, they are not. And to top that off, may I call your attention to these two little ones. They charge the workers $6 a month to live in them. They charge the foreman $18 a month and he furnishes his own facilities.

It is one of these things. I think maybe there are some people out of work and so on. I know there are, but the point is here is an enterprise which would be permanent for the Forestry Service.

BUDGET REQUEST FOR HOUSING

Senator BARTLETT. Is there any money in the budget for any houses at all?

Mr. RADFORD. I went and saw the Bureau of the Budget and the man there said that he would approve it if it was in. Now I cannot tell you. I have never been able to get one of the copies of the budget.

Senator BARTLETT. It is available, but it is awfully thick.

Mr. RADFORD. I know. I would rather do the thing that we have done before. If it is in there, it will go through. If it is not in there, then we kindly ask you to put it in.

Senator BARTLETT. You want it in?

Mr. RADFORD. Yes, sir.

Senator BARTLETT. Thank you, Mr. Radford.

Mr. RADFORD. Thank you, and I am very appreciative.

NATIONAL CAPITAL PLANNING COMMISSION

STATEMENT OF NATHAN POVICH MENSH, WASHINGTON, D.C.

RELOCATION OF BUSINESSES

Senator BARTLETT. Senator Young, I believe you are here with Mr. Mensh.

Senator YOUNG. Yes. Do you have anyone with you, Mr. Mensh?

Mr. MENSH. Mr. Gallo and Mr. Trepagnier from the Wax Museum.

Senator YOUNG. I know Mr. Mensh, who runs a carwash down in this area that is going to be acquired. I visited with him several times about his problem. The Government is going to acquire his land. I told him I thought the best thing for him to do is to appear before this committee and present his case. That is the reason why he is here today and some of the other witnesses also.

Senator BARTLETT. We will be glad to hear from all of you.

RIVERSIDE CARWASH

Mr. MENSH. Mr. Chairman, members of the committee, my name is Nathan Povich Mensh. I am 30 years of age, and I own the Riverside Carwash, at 523 New Hampshire Avenue NW.

I have a 10-year lease, expiring on May 21, 1969, which gives me over 5 years left on the lease. In my lease I have given up the right

to any claim to any compensation paid to my landlord, Heurich Properties, Inc., in the event of a Government taking of the property.

I have spent approximately $45,000 in equipment alone, and I submit to you as proof a copy of the cost of an exact installation such as mine.

I employ a minimum of 10 men with approximately 25 dependents, and my payroll, excluding myself, is approximately $25,000 a year.

I have worked hard for the past 5 years, having taken over a faltering business, and I have spent much time, money, and patience. I now have a successful business, along with a home, a wife, and two children, just to mention a few of my obligations.

Now a proposal is before you that might take everything from me, with no allowance for just compensation. So I sit here, gentlemen, with my hat in my hand appealing to you for just compensation in the event that the Government takes my business from me.

Relocation Cost Payments

I would also like to add that if this move is necessitated, compensation could be awarded at such time to allow for the seeking out of a location without an interruption in business. Otherwise, considerable hardship would be involved pertaining to loss of business, loss of revenue to my employees and their families and to myself and my family.

You hold the key to my future, physically and financially, so I appeal to you for your utmost and careful consideration.

Senator Bartlett. Thank you, Mr. Mensh. Do you have a question, Senator Young?

Compensation for Losses

Senator Young. The Government does not offer you anything for the loss of your business?

Mr. Mensh. No, sir.

Senator Young. You have to move to another location at your own expense?

Mr. Mensh. Yes, sir.

Senator Bartlett. Has the Government talked to you at all?

Mr. Mensh. No, sir.

Senator Young. It may be the law, but it seems to me a pretty cruel way of doing business.

Mr. Mensh. May I say something, sir?

Senator Bartlett. Certainly.

Mr. Mensh. I called up Mr. Daniel Shear in the National Capital Planning Commission.

Senator Bartlett. He is the General Counsel.

Mr. Mensh. And he said there is no provision to do anything for the people on the property.

Senator Bartlett. Did he indicate to you that some effort would be made to bring into being such a provision?

Mr. Mensh. No, sir.

Senator Bartlett. He just said nothing doing?

Mr. Mensh. Nothing, yes, sir.

PROPERTY ACQUISITION PROGRAM

Senator YOUNG. Mr. Chairman, I asked some questions of the National Capital Planning Commission with respect to the acquisition of the property. They were included in the record at the time the Commission presented its budget. Their responses bear out Mr. Mensh's testimony. I think that is all I have at this time.

Senator BARTLETT. Thank you. On the same subject, Mr. Trepagnier.

HISTORIC FIGURES, INC.

STATEMENT OF HENRY L. TREPAGNIER, JR., SECRETARY

NATIONAL HISTORIC WAX MUSEUM

Mr. TREPAGNIER. My name is Henry L. Trepagnier, Jr., and I am secretary of the Historic Figures, Inc., which operates the National Historic Wax Museum, one of the tenants of the land to be taken under request of House Document 228. This is the third item of $2 million for the National Capital Planning Commission.

With reference to the question I believe Senator Young raised, I have been working on this and raised the same question which Mr. Mensh raised with the National Capital Planning Commission.

I also attempted to have some provision put into the authorizing act with respect to this matter. However, due to the speed with which the Senate passed the authorizing bill, it was unfortunately impossible to get it.

RELOCATION COST PAYMENTS

There is authority under the Redevelopment Land Agency Act to pay tenants which are on land to be taken by the Government. Unfortunately, according to Mr. Shear, there is no provision for the National Capital Planning Commission so to do.

I have not given up efforts to have some sort of an authorization either by the House or the Senate, which would provide the National Capital Planning Commission with the authority to pay relocation costs for this particular area.

Senator YOUNG. Did I hear you correctly that another agency of the Government, if acquiring property, could come to you and pay?

REDEVELOPMENT LAND AGENCY

Mr. TREPAGNIER. Yes, sir. The Redevelopment Land Agency, as a result of the Slum Clearance Act of 1952, has authority to pay up to $20,000 to tenants. If I may digress a little bit, in Washington, D.C., no attorney who is any good will allow a client to sign a lease without a provision that the tenant may not participate in any condemnation proceedings.

All leases involved here state that position. That is, that no tenant may participate in any condemnation award. Our lease, incidentally, expires in 1967.

Senator YOUNG. You have a very popular place down there. A lot of people come there and want to see your place.

Mr. TREPAGNIER. Last year we had 487,000 visitors. Since 1958 we have paid over $208,000 in taxes to the Federal and District Governments, and expect this year, if we are allowed to remain there at

least through the year—which is another point I would like to talk about—we will estimate our payments and taxes as about $64,000 this year.

RELOCATION COSTS

Senator YOUNG. How much would it cost you to move to another site?

Mr. TREPAGNIER. Senator Young, it would cost us a minimum of $100,000. We have spent since 1958 working with the Southwest redevelopment—we were accorded a secondary priority down there about 1958 with the group.

We were planning to move into the area. There were plans drawn. In fact, some $50,000 was spent by a group which has now gone out of the window because it could never work out anything.

RELOCATION IN SOUTHWEST REDEVELOPMENT

As late as last August, we were working with the Southwest redevelopment for a parcel of land which we were either willing to purchase or lease, and the Highway Department never could make up its mind.

As late as December, we were told they could not make up their mind. We started to make an offer on another parcel of land, and they told us it would take 18 months to wind up details and have our building built.

JOHN F. KENNEDY CENTER FOR THE PERFORMING ARTS

We cannot wait that long. Since last December the Congress started considering matching funds for the John F. Kennedy Center for the Performing Arts and, of course, in January it was enacted into law. It leaves us possibly until December of this year, if I read the letter of Mr. Edward Stone, the architect, which was submitted at an earlier hearing this week, in which he said that final drawings would be completed in October of this year, and construction probably could begin late in December of this year.

RECOMMENDATION ON RELOCATION TIME

I would like to ask that this committee enter some sort of a recommendation such as was made in 1958 when this act originally was passed in which there was an exchange on the floor of the Senate between Senator Monroney and Senator McNamara.

I believe yesterday Senator Monroney referred to that language. I would like to reiterate: Please, somehow, work out that type of language to assist us.

Senator YOUNG. In effect, what did the language do?

Mr. TREPAGNIER. It said that we could remain on the site until construction made it necessary to move us. You see, we are in a slightly different position from the others in that our best season is through the summer. If we do not have our doors open through the summer, we will suffer a terrific loss each year.

Our costs run quite high.

PERSONNEL

Senator BARTLETT. How many people do you employ?

Mr. TREPAGNIER. We employ from 20 to 25 people, sir. Our yearly costs run around $200,000. The cost of operating the museum

is around $200,000 a year. To go back to your point, Senator Young, the question of authorization, I believe, is the serious one here.

RELOCATION COSTS FUNDS

There is nothing in the act which authorizes the National Capital Planning Commission to allocate any funds or request any funds. And, if I understand it, there is not request for any funds for relocation costs.

Senator YOUNG. Without authorizing the legislation, if we attempt to take care of that problem here, it would be legislation on an appropriation bill, subject to a point of order. It has been done, but you do not very often get by with it. But I think you folks have an awfully good case. I just cannot see any justice in the Government taking property from the people and causing them to lose that money that all of you folks will. There just is not any justice to it.

Mr. TREPAGNIER. Senator, if you can suggest a way to me by which I can proceed, I will be very happy to follow it out.

AUTHORIZATION FOR RELOCATION FUNDS

Senator BARTLETT. Have you gone to the Legislative Committee?

Mr. TREPAGNIER. No, sir. I have not since December. In December I spoke with the Public Works Committee, and at that time the committee in the House, particularly, was especially anxious that their bill conform to the Senate bill. Therefore, they were not anxious to have any amendments.

As you remember, on the floor of the House they beat down all amendment requests. And since then, I have been trying to work at something, but not being familiar, it is a little difficult. There may be a way of amending some bills, perhaps in the District of Columbia Committee. I do not know.

Perhaps some legislative expert might give me some assistance on this.

COMMITTEE SYMPATHETIC TO PROBLEMS

Senator YOUNG. I am sure this committee is sympathetic to your problem and will give it some thought in trying to help you.

Senator BARTLETT. Thank you very much.

Mr. Gallo, please.

DIPLOMAT GARAGE

STATEMENT OF GIULIO GALLO

RELOCATION PROBLEMS

Mr. GALLO. Mr. Chairman and members of the Appropriations Committee, my name is Giulio Gallo and I am engaged in the general automobile repair business under the name of Diplomat Garage at 523 New Hampshire Avenue NW., Washington, D.C. This location is within the area of the proposed construction of the John F. Kennedy Cultural Center. By reason thereof, I am threatened with the requirement of vacating and relocating my business at another location.

I have been a tenant in my present location for a period of 7 years. While I do not have a lease, I have an understanding with the owners that I might remain on indefinitely and there is every reason to believe

that, except for the threatened eviction due to the erection of the Cultural Center I would continue to be there for a number of years. I employ 6 men who have a total of 12 dependents, and they are threatened with loss of employment.

Equipment and Labor Investment

When I took over the building that I now occupy it was in no condition for the operation of an automobile service station and I bought equipment and performed personnally a great deal of labor to equip the building with machinery for the purpose of doing the work incident to an automobile repair business, and also made a number of alterations in the building itself to adapt it for the purpose. I consider my investment, including my own labor, to be of a value of approximately $25,000.

Most of the equipment and the labor for installing it and the alterations to the building will be almost a total loss in the event I am required to move to another location.

Relocation Costs

I also have a great amount of equipment which is movable and which might be moved to another location in which event I would have the expense of removal. The removable equipment is not included in the figure above mentioned which I consider would constitute my loss in the cost of replacing the equipment in a new location and making a new location suitable for an automobile repair business, as I have now.

I have a list of the equipment and its estimated value making up the total of the $25,000 figure which I will be glad to exhibit to the committee if the committee so desires. The aforementioned list includes the cost of moving and relocating equipment at a new location.

Anticipated Loss of Business

I also anticipate loss of business due to relocation, and if necessary to move to a new area will undoubtedly lose a number of my present customers, whose places of business are in the vicinity of my business. I am, however, making no claim for this loss of business.

There are other small businesses in the immediate area who will likewise suffer damages and loss by the threatened eviction from their present places of business.

The business which I operate is my only source of income and provides my only livelihood for myself and my family and the only means of livelihood for my employees and their families.

Compensation for Losses

I earnestly request this committee to give consideration to the threatened losses which both I and the operators of other small businesses in the area will suffer by a forced relocation, and request that adequate provision be made in the existing law to compensate me and the operators of the other small businesses for the losses which we are confronted with.

Senator Bartlett. Thank you, Mr. Gallo. The list of equipment and alterations and the figures which you attached to your statement will be included in the record.

(The document referred to follows:)

List of the equipment and alterations in the building occupied by Diplomat Garage including the cost of moving and relocation

1 steel deck and lunchroom with 488 square feet	$3, 500
3 heavy-duty truck and car lifters (hydraulic and automatic), $3,200 each	9, 600
1 air pressure system with 170 feet of pipes and lines—2 air tanks, 18 valves and 3 safety valves, filters, regulators, brackets, etc	1, 400
1 plumbing installation with 2 sinks, 155 feet of piping, 16 valves and faucets, supports, etc	800
1 fumes and gases exhaust system with 55 feet of metal ducts and 70 feet of rubber hoses, brackets, etc	450
9 hoist hangers installed on ceiling	250
1 heater system with 75 feet of gas pipes, 40 feet of 6-inch-diameter ducts and chimney, supports and controls	800
1 air-conditioning system with water installation for cooling type	700
1 complete electric installation for 21 electric motors totaling 200 amperes and 25 horsepower using approximately 600 feet of cables	3, 500
3 concrete areas, cemented outside wall, 1 outside sewer drain	1, 200
6 wall shelves	120
2 outside signs with steel pole and brackets	800
Moving expenses and relocation of heavy machinery—2 lathes, 1 drill press, 3 grinders, 2 welders, benches, shelves, jacks, horses, battery chargers, special tools and others	2, 400
Total	25, 520

Senator BARTLETT. Do you have any questions, Senator Young?

Senator YOUNG. No; did you present your figures, Mr. Mensh?

Mr. MENSH. No, sir; I presented the statement.

Senator BARTLETT. Mr. Eaton informs me that at the start of the session permission was granted to insert all of these.

Mr. Immer, please.

FISCAL RELATIONS AND TAXATION COMMITTEE
FEDERATION OF CITIZENS ASSOCIATIONS OF THE DISTRICT OF COLUMBIA

STATEMENT OF JOHN R. IMMER, CHAIRMAN

QUESTION OF PROJECT SITE

Senator BARTLETT. You might want to put the statement in in its entirety and summarize it.

Mr. IMMER. I will not read the statement. I will submit if for the record and make a brief statement in reference to the drawing that I have prepared here for the committee.

(The statement referred to follows:)

SITE FOR THE JOHN F. KENNEDY CENTER FOR THE PERFORMING ARTS

This statement has been prepared by John R. Immer, president of the Dupont Circle Citizens Association in response to concern expressed by that association on February 3, 1964, about the proposed Potomac River site for the John F. Kennedy Center for the Performing Arts. At its regular meeting of that date the association expressed its opposition to appropriations for additional land for the Potomac River site and urged a study of the site with a view of having it relocated within the downtown area with particular reference to Pennsylvania Avenue.

On February 13, 1964, the Federation of Citizens Associations of the District of Columbia expressed its opposition to the appropriation of additional funds for land for the Potomac River site. On February 14, 1964, the Committee of One Hundred on the Federal City also opposed the appropriation of additional money for this site until a study has been made for an alternate location in the downtown area.

Members of the above three organizations are concerned about the future success of the Center for the Performing Arts in a location so far from the down-

town center and so isolated. Such a location would put it out of reach of millions of visitors each year who stay in downtown hotels and who need evening activities. Such a location would further contribute to the deterioration of Pennsylvania Avenue and the downtown area about which our late President expressed his concern and interest.

The area on the river has been flooded 10 times in the last century. The Potomac River valley has never had a real cloudburst such as destroyed parts of Connecticut a few years ago. However, cloudbursts of 10 inches or more are not impossible in this area. Smethport, Pa., had over 30 inches in 1 day in 1942 and Rockport, W. Va., had 19 inches in a little over 2 hours in 1889. In 1956 Unionville, Md., had 1.23 inches in 1 minute.

As far as we can discover, no engineering study has been made of the site from a standpoint of flooding or of the foundation. A review of the foundation under the Lincoln Memorial will show this committee what problems can be anticipated in this area. I cannot find that this has been considered.

The original statutory site included only 7.7 acres. There is no authorization for the additional 10.8 acres now called for. The original legislation assured Congress that only $650,000 would be needed for additional land. It is doubtful that this requested appropriation will cover all the land now stated as needed for the project and there is no assurance that this request will be the last.

What is the legal justification for this appropriation? Has the extra land been authorized by Congress? Can this land be used for park purposes other than for the Cultural Center? Will the public have access to these park lands? The 18.5 acres now demanded is more than the Lincoln Memorial, the Jefferson Memorial and the Washington Monument put together. It is every bit of available park and recreation land on that section of the east bank of the Potomac. A sunken roadway for the park road will make it unusable in high water and flood conditions.

The entire project has been sold on the basis of a "parklike setting." Gentlemen, there is no parklike setting on this site. To the east you have a highway within fifty or a hundred feet that rises 20 feet or more above the veranda. To the south you have the Roosevelt Bridge and its approaches. To the north you have Watergate Town rising 130 feet high and across the inner loop you have Columbia Plaza also with nearly 130-foot elevation. The building line for the Watergate Town is only 270 feet from the north side of the Cultural Center. What kind of a parklike setting is this? This will be one of the most congested areas in Washington; and one of the most difficult to get to.

I can assure you that the organizations for which I am speaking have a very great interest in seeing that the Cultural Center, so large, constructed in our midst, will be a success and will be contributing to the cultural life of the Nation a decade or a century from now. We do not think this is likely in such an isolated location.

The organizations whose views I am expressing here are strong supporters of the John F. Kennedy Center for the Performing Arts. Our principal concern is that it be in a location which will be most conducive to its successful operation for many years to come and that this location will permit it to make a maximum contribution to the cultural and social life of the Capital City and the Nation. We believe that only a downtown location will accomplish this and we are fearful of the future of the Center on an isolated site on the Potomac River.

JOHN R. IMMER,
President, DuPont Circle Citizens Association, Chairman, Zoning Subcommittee, Committee of 100 on the Federal City, Chairman, Zoning Subcommittee, Federation of Citizens Associations, District of Columbia.

NEW SITE FOR THE JOHN F. KENNEDY CENTER FOR THE PERFORMING ARTS

A resolution passed by the DuPont Circle Citizens Association of Washington, D.C., on February 3, 1964.

Whereas the proposal to erect a John F. Kennedy Center for the Performing Arts should result in a working monument to our late President and one that should be a national center for cultural activities;

Whereas such a monument is a major addition to the cultural and social amenities of the Nation's Capital City;

Whereas such a monument will have a major impact on the cultural and social activities of the city with particular regard to the downtown area, the redevelopment of Pennsylvania Avenue, and the reorientation of the interests of millions of citizens who visit the Capital City from all over the Nation;

Whereas the present site is subject to flooding, involves a $15 million parking garage which will serve no other purpose to the city or the Federal Government,

will not earn any parking fees to help pay its cost, is surrounded by a maze of highways, is subject to fumes, noises and other distracting influences, does not have public transportation available to it; and

Whereas there is no possibility for expansion of the site: Now therefore,

The DuPont Circle Citizens Association, at its regular meeting in February 3, 1964, now hereby resolves, To request the President of the United States to appoint a Presidential Commission to select a site closer to the center of the city in the downtown area with particular reference to the future development of Pennsylvania Avenue;

And, That copies of this resolution be sent to the chairmen of the Public Works Committees of the Senate and the House, the Fine Arts Commission, the National Capital Planning Commission, the American Institute of Architects, the Committee of 100 on the Federal City, the Federation of Citizens Associations and the National Cultural Center.

DUPONT CIRCLE CITIZENS ASSOCIATION,
JOHN R. IMMER, *President.*

NEW SITE FOR THE JOHN F. KENNEDY CENTER FOR THE PERFORMING ARTS

A resolution passed by the Federation of Citizens Associations of the District of Columbia on February 13, 1964

Whereas the site of the John F. Kennedy Center for the Performing Arts is away from public transportation and the center of the city, is subject to flooding, and has other elements which threaten the solvency of the project over a period of years; and

Whereas additional sums of $3.3 million are being requested to buy more land for the Center which will come out of park and playground funds for the District of Columbia or out of Capper-Cramton Park Funds.

Now, therefore the Federation of Citizens Associations of the District of Columbia, at its regular meeting on February 13, 1964, resolves to oppose in the strongest possible terms the granting of any additional sums for the site of the Cultural Center on the Potomac and resolves that a new site be considered for the John F. Kennedy Center for the Performing Arts. The federation further resolves that copies of this resolution be sent to the Public Works Committees, the Appropriations Committees, and the District of Columbia Committees of the Senate and the House, to the National Capital Planning Commission, the Fine Arts Commission, and to the trustees for the John F. Kennedy Center for the Performing Arts.

NEW SITE FOR THE JOHN F. KENNEDY CENTER FOR THE PERFORMING ARTS

A resolution passed by the Committee of 100 on the Federal City of the American Planning & Civic Association on February 14, 1964, Washington, D.C.

Whereas the site of the John F. Kennedy Center for the Performing Arts is away from public transportation and the center of the city, is too far from the downtown area, involves a difficult parking problem, does not contribute to the downtown area, and has other elements which threaten the solvency of the project over a period of years; and

Whereas additional sums of $3.3 million are being requested to buy more land for the Center which will come out of park and playground funds for the District of Columbia or out of Capper-Crampton Park funds, and

Whereas Congressmen Kyle and Widnall have introduced legislation providing for a study of the best site in a downtown location with special reference to Pennsylvania Avenue.

Now, therefore, the Committee of 100 on the Federal City at its regular meeting on February 14, 1964, hereby resolves to oppose the granting of any additional sums for the site of the Cultural Center on the Potomac River until a further study has been made of the downtown site. It further resolves that copies of this resolution be sent to the White House, the Public Works Committees, the Appropriations Committees, and the District Committees of the Senate and the House, to the National Capital Planning Commission, the Fine Arts Commission, and to the trustees for the John F. Kennedy Center for the Performing Arts.

CORPS OF ENGINEERS,
Baltimore, Md., February 26, 1964.

Mr. JOHN R. IMMER,
President, DuPont Circle Citizens Association,
Washington, D.C.

DEAR MR. IMMER: Your letter of February 6, 1964, to the Chief of Engineers regarding the John F. Kennedy Center for the Performing Arts has been referred to this office for reply.

An early proposal for the Center was the subject of a public notice dated January 19, 1961. Since the project proposed at that time would have extended into the Potomac River, its sponsors applied for a permit as noted on the enclosed notice. It is understood that plans subsequently were revised in such a manner as to not require a permit. Revised plans are not on file in this office.

We have not assured the trustees of the project that there is no danger of flooding at the site, nor have we been asked to advise regarding the parking area problems.

Data regarding flood elevations of the Potomac River are noted on the public notice and may be helpful to you in this regard.

Sincerely,

WAYNE W. BRIDGES,
Lieutenant Colonel, Corps of Engineers, Deputy District Engineer, Baltimore District.

[From the Washington Post, Feb. 18, 1964]

FREEWAY TWISTS NEAR KENNEDY CENTER

Construction of the west leg of the Inner Loop Freeway through Foggy Bottom has proceeded far enough to observe its relationship with the John F. Kennedy Center for the Performing Arts.

The closest ramp of the maze in that neighborhood passes within half a block of the apparent edge of the Center building, as indicated by the two photographs below.

The panoramic view was taken from an approach ramp to the Theodore Roosevelt Bridge. The lower picture was taken from E Street NW., indicated by the arrow in the larger photo.

This closeness of the cultural facility and the freeways has aroused second thoughts among some official and unofficial backers of the Center.

The question was raised openly last week by the Committee of 100 on the Federal City, a blue-ribbon civic group which also feels the Center should be built where it would lend vitality to downtown Washington.

Similar thoughts have been attributed to members of the Kennedy Center's board and other officials close to the project. The alternative location most frequently mentioned would be on Pennsylvania Avenue.

Defenders of the present site feel the dramatic riverside location northwest of the Lincoln Memorial was one of the selling points for the Center in both the public and congressional campaigns.

They also contend that things have gone too far in land purchasing and design work to turn back now.

HIGHLIGHT STATEMENT

Mr. IMMER. My name is John R. Immer. I am presenting statements on behalf of the Dupont Circle Citizens Association, the Federation of Citizens Associations of the District of Columbia, the Committee of 100 on the Federal City, and the Washington Building Congress.

The proposed structure is 700 feet long and 530 feet wide and comprises 8.6 acres. The only authorizing legislation for this site includes only 7.7 acres. No additional land has been authorized by Congress.

ENGINEERING OR USE STUDY

I raise a question of financial responsibility for Government funds when Congress appropriates $30 million for a project on which there has been no engineering study and no study of the market or projected use of the project.

DANGER FROM FLOODING

I refer you to the attached letter from the Army Corps of Engineers which states that they have not assured the trustees of danger from flooding nor have they been asked to advise regarding the parking area problems. This letter is enclosed in its entirety.

In fact, that paragraph says:

We have not assured the trustees of the project that there is no danger of flooding at the site, nor have we been asked to advise regarding the parking area problems.

PROJECTIONS OF ATTENDANCE EXPECTED

Has this committee received any projections of attendance expected at these concerts and operas to be presented? Does it know of any independent studies that have been made to ascertain this? I do not think it does. I ask that this committee defer action until the above studies have been made.

LAND ACQUISITION LEGISLATION

Gentlemen, this is not a request for funds to provide a "parklike setting." The request is for funds to acquire land on which the structure itself is to be built. This is legislation in an appropriation bill and is subject to a point of order.

Such a point of order will undoubtedly be made if this matter is not cleared up before it is presented before the Senate and the House by one or more of your colleagues.

ROADWAY AND OVERPASS

I understand that the roadway coming at this point, that the concrete will be within 26 feet of the corner of the veranda. The large overpass you see there will be within approximately 100 to 150 feet of the corner of the veranda and will be at least 20 feet higher than the veranda.

I did not put in this drawing what I wish I had done, and I do have this included in another enclosure here. I cite in the enclosure an artist's drawing showing Columbia Plaza which is just the other side of the interloop and would be on this section right here.

COLUMBIA PLAZA

Columbia Plaza rises close to a 130-foot height. On this corner right here, within 270 feet of the north side of the Culture Center, you have Watergate Town, and that will rise to approximately 130 feet high. This is or will be actually one of the most congested areas of the city.

This building contemplated this year is twice the size of the structure at Dulles Airport. It is a huge building, gentlemen, and there just is not room enough down here for this.

CONCERN FOR SUCCESS OF PROJECT

So this is our presentation. Our real concern on this is for the success of the project. I also happen to be chairman of the Physical Relations Committee of the Federation of Citizens Committees of

the District, and we have to come before you, sir, each year to get money for the District.

I can see in 2 or 3 years having to come back and ask for $2 or $3 million to maintain the structure. We need a cultural center in the center of town where it will do some good, where the common people can get to it.

You cannot even walk to this thing, and this is what we are really concerned about.

Senator BARTLETT. Does that conclude your statement?

Mr. IMMER. Yes, sir.

Senator BARTLETT. Thank you. Do you have any questions, Senator?

PARKING FACILITIES

Senator YOUNG. How many cars could be parked there?

Mr. IMMER. They have a capacity for only 1,600 cars. Yet they have to have 2,500 in attendance for the events to be a success. They cannot hold events in more than one of the theaters at one time, because there is just not enough parking there.

When you consider that the people working there, the stagehands, those working in the cafeterias, will have cars, there will be possibly a couple of hundred cars.

BUS TRANSPORTATION

So there is not going to be space for 1,600 cars available for the patrons. There is bus transportation, but this is highly unsatisfactory, especially for an event. It is not on a regular busline.

LOCATION OF SITE

Senator YOUNG. Who made this site?

Mr. IMMER. I do not know that, sir. I do know, going back to 1959–60, there were objections to the site at that time. The Engineer Corps turned down a previous proposal for a project down there.

One of the gentlemen of the Fine Arts Commission, several years ago, protested against the site. He has since reversed that position. But our real concern is that this is a force pulling people away from the downtown area. And our main business, sir, is the tourist and people who come in from all over the country.

We have 4 million or 5 million, mostly kids, who come in here. They are looking for something to do at night. If we had a Cultural Center down on Pennsylvania Avenue, it would be a center for all of these kids coming in here. It would be something for them to do in the evening.

But they are not going to go down to the river for this thing here, and this is part of our concern.

RECOMMENDED ALTERNATE SITES

Senator BARTLETT. Has your group recommended, or is it ready to recommend, any specific downtown site?

Mr. IMMER. The groups have not acted upon any specific recommendations. I have some personal ideas.

Senator BARTLETT. Where would you put it, if you had your way?

Mr. IMMER. I would put it between 8th and 11th Streets, south of E Street, where they plan to put the FBI Building. I understand the Government is already gathering that land in there and this would be an ideal spot for it, and it would be commensurate with the concept of a monumental construction for Pennsylvania Avenue, while the FBI Building is another office building in there and will absolutely kill the downtown area.

Senator BARTLETT. Thank you very much.

Mr. IMMER. Thank you, sir.

Senator BARTLETT. The clerk has a summary statement prepared by the National Capital Planning Commission concerning a number of alternate sites, and that statement will be placed in the record at this point.

(The summary referred to follows:)

ALTERNATE SITES FOR THE JOHN F. KENNEDY CENTER FOR THE PERFORMING ARTS

(Statement submitted to the Interior and Related Agencies Subcommittee, Committee on Appropriations, House of Representatives, in accordance with request at hearings on February 24, 1964)

CAPITOL HILL AREA

The estimated acquisition cost for property in the Capitol Hill area ranges from $10 to $30 per square foot, or $500,000 to $1,250,000 per net acre. As the blocks are small, the assembly of a tract of 10 acres or more would contain around 30 percent in streets and alleys, reducing the gross acquisition cost per net acre to a range of $350,000 to $800,000. A 10-acre site of average value could probably be assembled in the Capitol Hill area for $4 or $5 million.

PENNSYLVANIA AVENUE AREA

Values in the Pennsylvania Avenue area range from $40 to $200 per square foot and average a hundred dollars per square foot. The site of the FBI Building comprises two of the lowest valued blocks in the area, with a value of approximately $12 million for the 6.5-acre site. Average land values in the area are approximately four and a half million dollars per acre. Both in this area and the Capitol Hill area considerable residential and business relocation would be involved.

SOUTHWEST URBAN RENEWAL AREA

Although temporarily vacant land exists in the Southwest Urban Renewal Area, there are no uncommitted sites of sufficient size and appropriate location.

HAINS POINT SITE

The Hains Point site, as well as any sites within the central Mall composition, represents public land upon which the Cultural Center could physically be constructed. However, planned open space in itself is s major land use function just as important, if not more so, in the central Mall of our Nation's Capital, as land developed with private or public buildings. Hains Point is a major open space within a "stones throw" of the central area. It is reclaimed land which would require expensive garage construction at grade for offstreet parking. In combination with the National Aquarium and Fisheries Center, the proposed Cultural Center would consume most, if not all, of the open recreation area in parking lots. The National Aquarium in itself can be adequately handled. With the addition of the Center and the lack of public transportation to the Hains Point area the offstreet parking problem would be accentuated and special public transportation would have to be provided during events at the Cultural Center.

Access roadways for two public institutions of this size would require complete reconstruction of the underpass and connections to and from the new Washington Channel Crossing and the R.F. & P. Railroad. In addition, a minimum four-lane road of approximately 3 miles in length would be required around East Potomac Park.

CONSTITUTION AVENUE SITE

The single available site of adequate size to accommodate the John F. Kennedy Center for the Performing Arts would be the present location of the Navy Department Building, between 17th and 21st Streets, south of Constitution Avenue. Under the McMillan plan of 1901 this area is open space to afford an appropriate setting for the Lincoln Memorial-Reflecting Pool-Washington Monument complex. With the architectural excellence of the park area west of the Washington Monument, we would consider the placement of a large structure of the dimension of the John F. Kennedy Center a major intrusion upon the most important setting in the Nation's Capital. Proper access to the structure from Constitution Avenue, which is to become a major point of access to Virginia via the Theodore Roosevelt Memorial Bridge, would require further uses of the park area for access and egress which again would be inconsistent with the long accepted plan for the use of this space.

INDEPENDENCE AVENUE AREA

A site yet not built upon is located on Independence Avenue between 4th and 7th Streets. The site is directly across the Mall from the National Gallery in close proximity to the Capitol and the downtown area. A cultural center of the presently proposed dimensions would suit it admirably. With the National Gallery presenting the arts and the Cultural Center the performing arts, a natural center for the arts would be established. However, this site is earmarked for the future Air Museum.

Senator BARTLETT. Mr. Wilkes, please.

LAW FIRM OF WILKES & ARTIS

STATEMENT OF JAMES C. WILKES, JR.

MARJORY HENDRICKS AND WATER GATE INN, INC.

Mr. WILKES. Mr. Chairman and members of the committee, my name is James C. Wilkes, Jr., a partner of the law firm of Wilkes & Artis, having offices at 500 Tower Building, 1401 K Street NW., Washington, D.C. We represent Mrs. Marjory Hendricks and Water Gate Inn, Inc., owners of lots 806 and 810 in square 10, which is a small square outside of the area prescribed by the act of Congress in 1958, in the District of Columbia, improved by Water Gate Inn.

You will not be surprised that, as owners of property proposed to be taken, we are here to voice our strong opposition.

In addition to our natural desire for self-preservation, we respectfully submit that there are compelling factors of public policy and law which lead to the conclusion that the proposed appropriation act should not be adopted.

WATER GATE INN

First, it is not in the public interest to dislocate Water Gate Inn in the absence of a showing of necessity.

Since August 5, 1942, Water Gate Inn has been a gourmet's landmark within the Nation's Capital, which has served well in a Pennsylvania Dutch-Early American atmosphere between 800 and 1,000 persons per day for over 22 years.

Over 8 million meals have been enjoyed by the local citizens and others from all parts of the country and, indeed, from all parts of the world. The existing structure is a low, attractive building of colonial design and is literally a museum of authentic Early Americana.

The building itself could not be replaced without the approval of the Fine Arts Commission. It is the intent of Mrs. Marjory Hendricks to continue operating Water Gate Inn as long as she is permitted to do so.

RECOMMENDED RELOCATION OF SITE FOR THE CENTER

Second, the public interest requires that careful consideration be given now to a relocation of the entire site for the Center. In this connection, we stress the following considerations:

The existing site is not located where it will best serve the public. This conclusion, gentlemen, is supported by the strenuous opposition voiced by citizens and civic groups who have carefully and objectively considered this issue.

UNDERGROUND PARKING GARAGE

Relocation would result in substantial savings. We suggest that you carefully examine the economics of a $15.4 million loan for three-level underground parking garages for 1,600 spaces costing almost $10,000 per car from which net income, based upon the optimistic estimate of an average attendance of 5,000 people per day, 70 percent occupancy, 7 days a week, 365 days per year, would be less than 4-percent interest on the cost of the garage. At other locations, private enterprise could very reasonably be expected to meet the off-street parking needs generated by the Center to a substantial degree.

ESTIMATES OF REVENUES FOR OPERATION OF THE CENTER

The parking garage costs would unquestionably cut into the program of the Center. Now the Center has submitted estimates of revenue to be derived from the operations of the Center and have stated at the hearing in December that on the basis of those estimates they would break even.

Very conspicuously, gentlemen, they also stated that the garage would be self-liquidating. It is abundantly clear that the garage not even being able to pay current interest on the cost could not be self-liquidating.

One must conclude, therefore, that the cultural program of this great enterprise must suffer in order to place the Center at a location which requires the installation of a $15.4 million garage.

The maximum contribution of the proposed project to culture will be attained only where the location is conducive to financial success. We question that the present site achieves this objective.

TIME TO EXAMINE RELOCATION

The time to halt and reexamine the question of relocation is now. I have heard the statement that Mr. Stone states the working drawings will be available in October of this year. Certainly next October will be too late to reconsider this issue.

AUTHORIZATION FOR LAND ACQUISITION

Third, assuming that the Center not be relocated, all of square 10 should not be acquired for the following reasons:

(1) There has been no authorization for an appropriation to take square 10. Congress, in its wisdom, by Public Law 85–874, specifically prescribed the site to exclude the part of square 10 where Water Gate Inn is located. No subsequent legislation has enlarged

the site to include square 10. An appropriation for funds without prior authorization, we submit, would be illegal.

PURPOSE OF ACQUISITION

(2) The proposed condemnation is clearly for the purpose of the Center. Notwithstanding the fact the proposal purports to be to take land for a public park, the President's request for this appropriation directly ties the land into the site of the Center. In this connection, I must state that this must be considered in the light of what has already occurred.

On November 2, 1960, the United States filed a condemnation proceeding for the acquisition of certain land in square 10 in the district court docket No. 27-60 in the U.S. District Court for the District of Columbia, ostensibly for "the comprehensive development of the park, parkway, and playground system of the National Capital" and paid therefor $146,000.

To my amazement, I have just learned that the land acquired in that proceeding is now carried as an asset on the books of the Center, notwithstanding the fact that it is beyond the bounds of the site prescribed by Congress.

SHOWING OF NEED FOR LAND

(3) There has been no adequate showing of need for additional land embracing square 10 as a "parklike setting for the Center." I refer to Mr. Stone's testimony in the hearings before the Public Works Committee. Mr. Stone stated, gentlemen—and I will summarize—that there are 85 acres of park land on the Washington side of the building measured between the buildings to the south, the east, and to the north, plus 200 acres on the opposite side for a total of 285 acres.

OTHER PROPERTY AFFECTED

Senator YOUNG. What other property is on square 10?

Mr. WILKES. There is one small building which is along the New Hampshire Avenue frontage which is, I would say, approximately 10 by 20, and there is nothing else within the square other than the Water Gate Inn itself.

PURPOSE OF CONDEMNATION PROCEEDING

The condemnation proceeding which I referred to was for, ostensibly, an adjustment of the roadway. We respectfully submit that a taking which would exclude lots 806 and 810, which is a one-story building with a half story up in the eaves, in the area along the waterfront, and between a 125-foot structure to the south, which would be the Cultural Center and the Town Center to the east, would certainly be a very pleasing transition, and we seriously question the necessity of taking this fine, colonial structure of very low height for this purpose.

OWNERSHIP OF BUILDING AND LAND

Senator YOUNG. Does your client own the building as well as the restaurant?

Mr. WILKES. The building and the land, yes, sir, the land being 806 and 810. As I say, it is just one-quarter acre.

ESTIMATED COST OF LAND

Senator BARTLETT. You say that the estimated cost of the additional land is grossly understated. What is that estimate?

Mr. WILKES. The estimate, as I understand it, is $3.3 million to acquire land which embraces, as I understand it, approximately several additional acres, on the basis of the sale of Water Gate Inn of $900,000 for less than a quarter acre.

We are talking about $3,600,000 per acre. And it is quite clear that the estimate of just compensation upon which this requested appropriation is based is conservative to the point of absurdity.

Senator BARTLETT. As a matter of fact, about $500,000 would be involved if the property which you are discussing. Is that the case? Most of the $3.3 million is within the area authorized for taking now.

Mr. WILKES. Mr. Chairman, I did not understand your question.

Senator BARTLETT. Did you not say that $3.3 million is involved?

Mr. WILKES. In the request for additional appropriations, as I understand it, sir.

Senator BARTLETT. But most of that is within the area authorized to be taken by the law?

SQUARE 10 AUTHORIZATION

Mr. WILKES. Yes. The only portion of land which is not authorized under the act of 1958, which is before you gentlemen today, is square 10.

Senator YOUNG. All the rest is authorized?

Mr. WILKES. All the rest is authorized, the properties that the other property owners have talked to you about this morning are authorized and have been since 1958. There has never, however, been an authorization with respect to square 10.

And we respectfully submit that that is a defect which would have to be cured by authorization legislation.

PROPOSED SALE OF WATER GATE INN

Senator BARTLETT. You say the inn and the land were to be sold for $900,000?

Mr. WILKES. That is correct, sir.

Senator BARTLETT. Do you know what the local businessmen intended to do with that property?

Mr. WILKES. I know that the immediate plan was to lease back to Marjory Hendricks for a continuance of the operation of Water Gate Inn.

In the event that at some later date they desired to develop that site now occupied by Water Gate Inn to its highest and best use under the existing special purpose District zoning, they would be permitted to go to a maximum height of 60 feet for a hotel-type use.

COMPATIBILITY OF INN WITH CENTER

What is the crying need for one-fourth acre more of Water Gate Inn? In any event, an examination of Water Gate Inn is proof of the fact that it is compatible with the Cultural Center itself.

The estimated cost of the additional land requested is grossly understated. The Water Gate Inn and site of our client recently sold for $900,000 to a group of prominent local businessmen. The site is less than one-fourth acre, 10,499 square feet. That is almost $90 per square foot. A complete tender of settlement under the sales contract was made by sellers to purchasers on March 3, 1964. Purchasers rejected the tender on the grounds of the pendency of the subject appropriation bill. After a declaration of taking is filed in this case, Congress would be required to make substantial additional appropriations.

OBJECT TO CONDEMNATION OF INN LOCATION

In conclusion, gentlemen, we stress that while we support 100 percent the cultural project and the memorial in honor of our beloved late President Kennedy, for the foregoing reasons, however, we respectfully urge that no provision be made for the condemnation of the part of square 10 on which Water Gate Inn is located.

Senator BARTLETT. Thank you, Mr. Wilkes. Does that conclude your statement?

Mr. WILKES. That would be subject to the approval, of course, gentlemen, of the Fine Arts Commission.

Senator BARTLETT. Yes. Thank you very much.

Mr. WILKES. Thank you, sir.

Senator BARTLETT. Mr. Hodgson, please.

CAPITOL HILL RESTORATION SOCIETY AND CAPITOL HILL COMMUNITY COUNCIL

STATEMENT OF JAMES HODGSON

LAND ACQUISITION FOR CULTURAL CENTER

Mr. HODGSON. My name is James Hodgson. I would like to thank the committee for the opportunity of testifying on behalf of the Capitol Hill Restoration Society and the Cultural Committee of the Capitol Hill Community Council.

We are property owners in this area. We are residents of the District of Columbia trying to make the Capitol area more attractive, and so we, perhaps, appear more frequently in these Halls than some of the other citizens' associations in Washington.

This is not because they are not interested, but perhaps because we have more practice. There are three major points I would like to make. I have submitted a statement which will, perhaps, stand by itself. I would like to make three additional points, some of which are contained in the statement.

LEGISLATION ON THE ACQUISITION

The first one is a comment on the legislation before the committee, that it does contemplate legislation on an appropriation bill as Mr. Wilkes just submitted. There is a 7.7 acre site which is specifically authorized by the Cultural Center as of 1958, and that portion of the

bill was not amended in December. This specifically excludes a portion of the site which is, according to the site plans, located within the site of the building.

So the building plans were drawn up for an area which exceeds the site that the Congress authorized. The appropriation bill includes moneys to acquire additional sites. This is legislation on an appropriation bill.

Operating Fund for the Center

The second question is the matter of an operating fund for the Center. This is something to which Mr. Immer referred. In the testimony before the Joint Public Works Committee, in December, figures were submitted on the garage, revenue figures for the garage.

These revenues were based on an assumption of either complete utilization at a cost of $1 per car or $1.20 per day. The cost of the building, as submitted to the committee, was $6,600 per car. There are 1,600 cars parking provided for and $15.5 million is being requested for this garage.

This is virtually $10,000 per car. This is about an additional third on the cost. Therefore, one might estimate that the cost to produce the revenue that the Center is submitting would be about $1.75 a car and $30 a month as rental.

Bus Service to Department of State

The hope of the Center is that the daytime trade will be augmented by people from the State Department. They are planning to have a bus to run people back and forth from the State Department.

The net result is that private interests could build, and probably would build, within Water Gate Town, Columbia Plaza, and close to the State Department competive parking so that the revenues are highly overestimated and the amount is not a guaranteed loan but an appropriation in support of the arts.

Location of the Center

The third point I would like to make concerns the location on the river. The Cultural Center people will state they must build there, because they have the site. I have heard ample testimony that they only have a portion of that site.

They do have to acquire additional property. Now I might point out that Mr. Cafritz offered, at one time, free of charge the Keith Center which is prime property in the center of the city. There are other proposals which have been submitted to your committee by other agencies.

The Pennsylvania Avenue people, which includes Mr. Paul Terry and Mr. Frederick Gutheim, were very much in favor of moving the Center downtown, also to be part of the Pennsylvania Avenue project.

All of this was quashed last summer, apparently because Mr. Stevens suggested to Mr. Kennedy that criticisms of the site were inhibiting his raising the funds. The Center only has between $3 million and $4 million in the bank of the $15 million that they have to raise.

This is only for the building and does not include any operating funds whatsoever. Those funds must come out of current revenue.

These people have suggested that the Cultural Center be moved downtown.

ACADEMY OF THE ARTS OR SCHOOL OF MUSIC AND ARTS

Now if the Center does not, in fact, have the site and a site would be available downtown, it is possible that greater public interest could be attained in raising funds, if an academy of the arts, a high school of music and arts, or something like that, were attached to the Center, something like the High School of Music and Arts in New York.

Congressman McDowell's suggestion of national competitions and national prizes could be looked into. It could be related to Senator Javits' bill on the National Arts Council, and the entire project could suddenly become not just a festival hall at night for people to come in and attend concerts, but it could be a living, cultural center with people there during the day, raising the general cultural level and providing public performances at reduced cost for some people who cannot afford $2 per car, and $5, $6, or $7 for tickets.

That is the end of my statement.

Senator BARTLETT. Thank you very much.

NATIONAL ASSOCIATION OF STATE FORESTERS

Senator Smith is here to introduce a witness, I believe.

Senator SMITH. Mr. Chairman, it is a privilege to come before your subcommittee and accompany a prominent member of the Maine State government, the forest commissioner of Maine, Austin H. Wilkins. However, Mr. Wilkins has appeared before this committee a number of times. Today he is not appearing as State commissioner but as national chairman of the National Association of State Foresters. I am very pleased to present to the committee Austin H. Wilkins and thank you for giving him an opportunity to testify.

Senator BARTLETT. We are glad to have Mr. Wilkins, especially under such sponsorship.

STATE AND FEDERAL COOPERATIVE PROGRAMS

STATEMENT OF AUSTIN H. WILKINS, FOREST COMMISSIONER OF THE STATE OF MAINE, AND A MEMBER OF THE NATIONAL ASSOCIATION OF STATE FORESTERS

FAVORING 1965 BUDGET REQUESTS

Mr. WILKINS. Mr. Chairman, Senator Smith, Senator Byrd, my name is Austin H. Wilkins, forest commissioner of the State of Maine, and a member of the National Association of State Foresters. I am here today in the official capacity as chairman of the legislative committee of the association.

For your convenience, I would like to suggest that I submit my statement to you, and in about 5 minutes or less I will highlight points from this report.

Senator BARTLETT. That will be fine.

(The statement referred to follows:)

Appropriations for Cooperative Forestry

To Members of the Senate Appropriations Committee, Subcommittee on Interior and Related Agencies:

Gentlemen, my name is Austin H. Wilkins, forest commissioner of the State of Maine, and a member of the National Association of State Foresters. I am here today in the official capacity as chairman of the legislative committee of this association.

I am most appreciative of the opportunity to appear before you for the fourth consecutive year. At your pleasure I should like to submit my statement for the record and then orally and briefly call to your attention a few pertinent points from it. These relate to the President's budget, page 168, for the fiscal year 1965 as presented to the Congress on January 21, 1964, covering allowances for the Department of Agriculture, U.S. Forest Service, on State and private forestry cooperation. Specifically they are: Clarke-McNary, Section 2, Forest Fire Control; Clarke-McNary, Section 4, Forest Nursery Production and Distribution; Cooperative Forest Management, Aid to Small Woodland Owners; and Soil Bank title IV, Assistance to States for Tree Planting.

Our association is indeed pleased to note the recommended increases for forest-fire control and assistance to small woodland owners, while the forest nursery production and distribution and assistance to States for tree planting figures are not less than the funds appropriated for 1964. These well-established and going programs have in the past, and will continue in the future, to contribute heavily toward the national forest economy of our country.

We are all the more appreciative of these recommended budget figures in view of the priority need of substantial funds for national security, interest on the debt, and the other sums which make up the total President's budget.

At this point I should like to call your attention to the following tabulation showing the authorizations, appropriations, and recommended increases for these most important Federal-State cooperative forestry programs:

Program	Present Federal authorization	1964 Federal appropriation	Increases		Total 1965 President's budget
			Pay costs, Public Law 87-793	Other	
Forest fire control	$20,000,000	$12,494,000	$14,000	$250,000	$12,758,000
Seedling production	2,500,000	300,000			300,000
Cooperative forest management	5,000,000	2,513,000	5,000	500,000	3,018,000
Forest tree planting		1,000,000			1,000,000
Total	27,500,000	16,307,000	19,000	750,000	17,076,000

These sums play a major role together with State and private appropriations toward programs of better protection, management, research, recreation, production, and utilization of the vast forest wealth of approximately 435 million acres of forests in State and private ownership. Coupled with this are the Federal funds and programs for the administration of the 181 million acres of national forests. Under present world affairs of rapid change, development, increased population, highway expansion, more leisure time, higher wages, urbanization, and market competition, just to mention a few, there is the need to sustain and gradually accelerate the Federal-State cooperative forestry programs now in effect if projections for future demands for wood and the development of the other related resource values are to be fully realized.

We note and support the President's message on agriculture to the Congress on shifting cropland to less intensive uses of trees, grass, wildlife habitat, outdoor recreation, and the other uses for which there is a growing demand. To this can be added the overall rural area development and other incentive programs. Many States are already participating in forestry programs to help alleviate situations in distressed areas throughout the Nation.

May I at this time state that our association and the many individual States enjoy an atmosphere of pleasant relationship with the U.S. Department of Agriculture and Forest Service representatives.

I need not go into any detailed explanation of the programs as to history, formulas, or allocations as I believe you are already familiar with them. I would, however, like to touch briefly on each.

FOREST FIRE CONTROL

The recommended increase of $250,000 for forest fire control would be used to strengthen this program which covers about 435 million acres of State and private forest land in the Nation. These forested areas produce 85 percent of all our forest products. The annual burn is gradually being reduced but still there is far too much burning each year. Under this grant-in-aid program, fire protection would be extended to new areas not receiving protection, and intensify those already in operation. Currently the States are supporting a financial burden of $55 million of expenditures, while the Federal share is $12,500,000. A recent study shows that it would cost $83,500,000 annually to provide adequate protection to the 435 million acres of State and private forests. Thus the recommended increase of $250,000 is most encouraging as another progressive step toward eventually reaching the full $20 million Federal authorization.

FOREST NURSERY

While there is no increase for growing and distributing forest seedlings, the appropriation of the same figure in 1964, $300,000, will help keep forest nurseries in operation to supplement stock which must be raised to meet demands for planting programs under soil bank, title IV; cropland conversion; Soil Conservation Service; and Agricultural Stabilization and Conservation. There is always going to be a need to grow forest seedlings to make idle lands productive and yield wooden dollars.

COOPERATIVE FOREST MANAGEMENT

The recommended increase of $500,000 would be used to provide technical assistance to an additional number of small woodland owners in the improved management of their woodlands and processors of forest products. It is significant to state that three-fourths of the 435 million acres of State and private forests is held by 4½ million small woodland owners, of which 3¼ million acres are owned by farmers. In the opinion of many, this is where the "future woodpile of tomorrow" is to be found. Therefore, the need to make these many unmanaged areas more productive is through this technical assistance program. Accomplishments since this program first started in 1950 have been most rewarding in number of owners serviced, acres harvested, trees planted, gross sale value, and primarily setting up a sound program of management.

Another significant fact is the increased authorization by the 87th Congress from $2,500,000 to $5 million, making possible the recommended increase of $500,000 for this most important Federal-State cooperative forestry program. Currently, the States are appropriating $3,700,000 as against $2,300,000 by Federal.

In my own State of Maine, where forestry is our No. 1 economy, nearly 50 percent of the forest-harvested crops come from small woodlands. Technical assistance to our 77,000 small ownerships will greatly enhance the quality and quantity of forest growth on nearly 6½ million acres.

SOIL BANK, TITLE IV

The $1 million recommended in the 1965 budget, which is not less than appropriated in 1964, would be used to continue to encourage and help finance a long-range program of reforestation of about 70 million acres of private lands. If you will pardon my second reference to Maine, we rather proudly point to the fact that our State was one of the few States to continue this program when Federal funds were not available in 1960–61. Currently 33 States are participating under the provisions of title IV of the Agricultural Act of 1955. The reforestation of burned lands, poorly stocked, and unstocked areas is most important. Under this program it has been possible for States to establish seed orchards, natural seed production areas, and collect high quality native seed.

CONCLUSION

This concludes my presentation as chairman of the Legislative Committee of the National Association of State Foresters, urging your acceptance of the President's budget for the fiscal year 1965 as related to the Federal-State cooperative forestry programs of forest fire control, forest nursery, aid to small woodland owners, and reforestation.

Our association is most appreciative of the recommended increases and that the other program figures remain the same as appropriated in fiscal year 1964.

We realize goals cannot be accomplished in one yearly appropriation, but does call for sustained and gradual accelerated increases. The working forests of this country have been good to us in many ways and for many years. Let us, therefore, the Federal and State Governments, continue to join cooperatively to furnish the needed funds to protect, manage, and utilize to the fullest this valuable heritage—our Nation's forest wealth.

Thank you again for the opportunity to appear before you and to speak favorably for these Federal-State cooperative forestry programs.

AUSTIN H. WILKINS,
Chairman, Legislative Committee, National Association of State Foresters.

SUPPORT OF PROGRAMS

Mr. WILKINS. It is a pleasure to appear before this committee for the fourth consecutive time and to speak in favor of President Johnson's budget for fiscal 1965 covering the State and Federal cooperative programs.

These deal directly with forest-fire control, the stocking of forest nurseries, they have to deal with aid to small woodland owners, and, of course, forest reforestation. We are especially pleased to note in the budget there are recommended increases for aid to small woodland ownerships.

We are particularly pleased to also note that the same figures were sustained for the proposals of established forest nurseries and also in regard to reforestation. For the benefit of the committee, I think it is well to point out that these are old-line, well-established, going programs that have been going on for many years under the Clarke-McNary Act of 1924, and we feel that these programs, as you may be aware, do contribute a major part to the forest economy of our country.

There is a need to carry on these programs, I think, in your State especially, Senator, for aid to small woodland owners and fire protection. There are approximately 435 million acres of State and private lands that do come under these programs.

AUTHORIZATIONS

I call your attention to the short tabulation on page two of the statement and point out the fact that the Congress did establish some authorization figures in 1948, $20 million for forest fire control, $2.5 million for seedling production, and essentially $5 million for aid to small woodland owners.

I think the important thing to point out here is that these programs do contribute toward the production, utilization, research, and management of these programs.

Rather than to go into detail for each, I think it is important to point out that we do support the administration's programs of cropland conversion, soil conservation service, the ARA, RAD, and other cost-sharing incentive programs.

COOPERATION WITH FOREST SERVICE

And may I point out, Mr. Chairman, that over the years we have enjoyed a very excellent relationship with the U.S. Forest Service of the Department of Agriculture.

In conclusion, I would like to read the final paragraph of the statement of which, again, calls to your mind that we would like to sustain

these figures and, then, under the authorization, ask for a gradual accelerated increase in these programs.

And so I conclude by saying that the working forest of this country have been good to us in many ways and for many years. Let us, therefore, the Federal and State Governments, continue to join cooperatively to furnish the needed funds to protect, manage, and utilize to the fullest this valuable heritage—our Nation's forest wealth.

Thank you again, Senator, for the appearance before you to plead in behalf of these programs.

Senator BYRD (presiding). Thank you, again, for appearing before our subcommittee. We appreciate your testimony and we congratulate you upon your appearing as national chairman of the Association for State Foresters.

It seems rather not strange but delightful that your distinguished Senator, the senior Senator from Maine, is also continuing to gain prominance nationwide. She is getting an even greater and broader following of admirers than ever before.

We are happy, Senator Smith, that you not only make possible the appearance of fine witnesses before the subcommittee, but you always also manage to attend with them and we appreciate your presence with them. We thank you so much for having Mr. Wilkins here today.

WEST VIRGINIA AS PARTICIPATING STATE

Senator SMITH. Mr. Chairman, you are very generous and I thank you for your fine remarks. It is a great privilege to come here, and I was especially pleased to hear Mr. Wilkins refer to your State of West Virginia as being one of the participating States.

Senator BYRD. Thank you very much, Mr. Wilkins.

Our great minority leader, Senator Dirksen, appeared earlier and expressed an interest in having the subcommittee hear Mr. Donald H. Gott. At this time the committee will call on Mr. Richard D. Behm, marketing specialist, to appear, I understand, in lieu of Mr. Gott. However, Mr. Gott's statement will be printed in the record.

(The statement referred to follows:)

AMERICAN WALNUT MANUFACTURERS' ASSOCIATION

STATEMENT OF DONALD H. GOTT, EXECUTIVE DIRECTOR

Mr. Chairman, members of the Senate Subcommittee on Appropriations for the Department of Interior and Related Agencies, my name is Donald H. Gott, and I am executive director for the American Walnut Manufacturers' Association. My purpose in appearing before you is to respectfully ask your assistance on two Forest Service activities of major importance to our association and its members. These activities and the assistance needed are (1) construction of wood utilization, timber management, and marketing research laboratories at Carbondale, Ill., and (2) expansion of the Forest Products Laboratory at Madison, Wis.

My association, founded in 1914, has its headquarters in Chicago, Ill. We are a trade association, consisting of 19 companies engaged in processing black walnut logs into veneer and lumber for a wide variety of uses; e.g., in paneling, furniture, gunstocks, and musical instruments. Our member companies produce more than two-thirds of all walnut veneer made in the United States. With few exceptions, our members and affiliated companies are located in the six central States of Ohio, Indiana, Illinois, Iowa, Missouri, and Kentucky. Although walnut occurs naturally throughout eastern United States, the growth of veneer

quality trees is concentrated largely in these same six Central States. This central area supplies the major part of the walnut timber used by domestic and foreign manufacturers.

Today large, top-grade trees sell for, as they stand in the woods, top prices by comparison to any other hardwood. American walnut is one of our most valuable native hardwoods. It is a wood highly esteemed by designers and architects for many high-quality uses because of its uniquely beautiful grain, hardness, strength and durability combined with excellent machining and finishing properties. I'm sure that these fine characteristics are well known to you.

Throughout Eastern United States, the quality of our hardwood timber resource has declined until it is in short supply. For example, 90 percent of the hardwood trees of the valuable species are too small to provide the quality of wood demanded for such valuable products as veneer and furniture. According to recent Forest Service publications: "The supply of veneer quality logs in Iowa may be expected to diminish gradually during the next 10 to 15 years. The young stands building up today do not contain as many black walnut trees as did the earlier forests * * *." In its report on Indiana's forest resources and industries the Forest Service said: "* * * the Forest Survey has found that the volume of high-quality wood is declining in each of the Central States * * *." These and similar statements show clearly that we are rapidly running out of high-quality hardwoods.

In contrast, the demand for these raw materials is increasing. The walnut situation today illustrates dramatically what is happening. In the last 10 years the total export of veneer-quality logs multiplied 32 times while domestic use increased nearly 4 times. At the current rate of foreign and domestic consumption, we are cutting over twice the amount of walnut veneer timber we are growing. In a few years, this rate of overcutting would completely exhaust our supply of walnut veneer timber.

This trend is alarming because of the adverse effects it will have on our economy. The domestic walnut veneer industry is threatened with the loss of this source of supply. If this occurs, they would cease to operate. This loss certainly would be felt by the wood furniture industries, the wood cabinet industries and the hardwood plywood industry. These American industries operate over 6,000 plants, employ over 200,000 people with an annual payroll of $850 million, and annually ship wood products valued in excess of $2⅔ billion. These dependent industries are in jeopardy and it is estimated that perhaps 10 percent or about 20,000 of the jobs they provide would be lost through the demise of our walnut veneer supply.

Our association has recognized the adverse supply trend that has been occurring over the past several years. In cooperation with State and Federal forestry programs we have taken steps to encourage the proper planting, management, harvesting and utilization of black walnut. Our industry, in cooperation with more than a dozen States, assists in collecting and distributing for planting from 3 to 5 million walnut seeds and tree seedlings annually. Undoubtedly, more attention is given to planting walnut than to any other hardwood in the United States. We have helped finance Forest Service research that will improve the quality of walnut by pruning. Last year and again this year we contributed cooperative funds to assist the Forest Service in conducting genetics research in black walnut. This work will be of value to forest land owners and to industry throughout the entire range of black walnut in the Midwest and Eastern United States.

However, not all of our efforts have been successful. For example, we are finding that only a small percent of the nuts and seedlings we have helped distribute annually over the past 30 years have actually produced young stands of walnut timber. We need research to help us locate the best parent walnut trees from which to collect seed and grow seedlings adapted to local soils and climate. We need research in breeding walnut and other valuable hardwoods to develop hybrids having the best features of several parents. And we need research that will give us cultural methods to grow the best quality trees in the shortest possible time. From my experience in the wood industry, I am firmly convinced that this same kind of research is needed for other valuable hardwoods such as the oaks, gum, and cottonwood.

The heavy demand for high quality, valuable hardwood trees has reduced severely the size of logs available to hardwood processing and manufacturing plants. This is creating new, perplexing and complicated problems for our industry: for example, in veneer cutting methods and equipment, curling of cut veneer, drying, and gluing. Furthermore, the volume of low-grade material produced increases rapidly as the size of logs decreases. This creates needs for research in product development and marketing. These are highly technical

problems that we cannot solve alone. But if they are not solved, our entire fine hardwood industry, with the jobs and payrolls it supplies, is seriously threatened.

To help the walnut and other fine-hardwood industries survive we strongly favor increasing research facilities for the U.S. Forest Service. Specifically, I recommend:

(1) Funds be provided this year for the Forest Service to construct and equip timber production, utilization and marketing research laboratories, greenhouses and offices at Carbondale, Ill.

I had the good fortune to visit the Forest Service offices and facilities at Carbondale, Ill., last spring. I was deeply impressed with the fine work their research people are doing. At the same time I was dismayed to see these competent, highly trained scientists forced to improvise equipment and facilities in their efforts to do the research so vital to our industry and economy.

(2) That you approve the funds already in the Forest Service budget you are considering for expansion of the Forest Products Laboratory at Madison, Wis. The needed expansion and modernization of this scientific institution would provide for intensive research in many technical problems facing my association and other wood-using industries throughout the Nation.

I want to assure you that my association and its members will continue to the best of our ability our cooperation in State and Federal forestry programs.

It has been a pleasure to appear before you and to recommend construction of Forest Service research facilities at Carbondale, Ill., and Madison, Wis. I trust that you will give every consideration to my recommendations as well as to other critical research needs as you prepare the Forest Service budget for next year.

STATEMENT OF RICHARD D. BEHM, MARKETING SPECIALIST

WALNUT TIMBER PRODUCTION

Mr. BEHM. Yes, Senator Byrd, thank you very much.

Senator BYRD. Mr. Behm, you may proceed.

Mr. BEHM. I have the statement which we prepared and which I do not want to repeat, but I would like to summarize a few things in there in about 3 minutes. Senator Dirksen stated part of the case, in part, of the walnut in the interest of his State.

RESEARCH AND EXTENSION FOR RESEARCH

It is one of the most important crops and it is also the top product for a $3 billion industry. It is the source of the greatest revenue per acre of any of our farm woodlots. The situation about which we are testifying today is to, No. 1, continue the splendid research at Madison, Wis., which has been instrumental in making many of our fine woodlot weed trees practical marketing products through their research.

But we think it needs an extension and the case in point at Carbondale would thoroughly explore the possibility through genetics of better woodlot tree production, timber production.

We are presently cutting our second crop of walnut from the land that Abe Lincoln split the rails on. This is the growth factor of the walnut and, of course, in West Virginia you folks are very familiar with this.

But suppose through selection and through private industry we are able to increase the growth factor and the value of that crop so we get three crops in the same period. We have then expanded that value and not only helped the area around the center States, but for every State from Maine to Texas, because walnut grows in that whole area.

AREAS FOR WALNUT GROWTH

Sure, the pine sections are Indiana, Illinois, Ohio, Kentucky, Missouri, and Iowa. This is the heart of the finest walnut growth

in the world today. But it will affect everybody, if we can improve, through the facilities which we hope can be added at Carbondale, on-the-spot facility there for a real approach to this problem of finer woodlot use.

RAILROAD USE OF PRODUCTS

I could mention one other place that is important in the development. This was an original research at Madison, Wis., on hickory and pecan wood lumber and veneers. It is of interest to know that after this development in 1933, nothing was done for about 20 years, but currently 11 of the larger railroads are using this product for lining refrigerator cars and boxcars. The performance factor from hauling hanging beef from Colorado in the Midwest to the East is three times.

In other words, these freight and boxcars will not require repairs as frequently as they used to and will last three times longer, which is a real economic value. And, of course, the farmer woodlot instead of leaving the tree out there to deteriorate is finding a market. This is the kind of research we think that Carbondale can add to the Forest Products Division, and the facilities there will supplement others throughout the country.

ADDITIONAL APPROPRIATIONS FOR RESEARCH AND CARBONDALE FACILITY

We thank you very much for the privilege of appearing here, and I think everything appears in the summarized additional appropriations for basic research and this basic facility which we hope can be added at Carbondale to pinpoint the development of faster growing trees and better utilization.

Thank you.

Senator BYRD. By the way, those were not walnut logs Abe Lincoln was splitting into rails, were they?

Mr. BEHM. Yes. We actually cut them up in World War II for gun stocks.

Senator BYRD. You are not continuing to split them into rails?

Mr. BEHM. Not at that price.

Senator BYRD. Our next witness will be Ralph C. Wible, State forester of the Department of Forests and Waters, Commonwealth of Pennsylvania. Mr. Wible.

DEPARTMENT OF FORESTS AND WATERS, COMMONWEALTH OF PENNSYLVANIA

STATEMENT OF RALPH C. WIBLE, STATE FORESTER

FEDERAL-STATE FORESTRY COOPERATIVE PROGRAMS

Mr. WIBLE. Thank you, Mr. Chairman. My name is Ralph C. Wible, State forester, Department of Forests and Waters, Commonwealth of Pennsylvania, and I am appearing before you today to present the views of the Pennsylvania Department of Forests and Waters concerning Federal-State cooperative programs in the field of forestry.

Now I realize there are several cooperative programs between the State and Federal Governments, but I will speak only on technical help to be received by small woodland owners.

PENNSYLVANIA COOPERATIVE FOREST MANAGEMENT PROGRAM

The cooperative forest management program in Pennsylvania makes professional forestry guidance available to the 277,000 citizens who own 40 percent of our forest land. Each year nearly 4,000 Pennsylvania families perform some act of good land stewardship under the watchful eye of a service forester, and each owner reaps a reward, either personal satisfaction, cash income, or both, for his trouble.

The benefits, needless to say, do not stop there, for the cash and the forest products exchanged in each transaction have an impact upon local employment and the local economy.

To be concerned about the status and welfare of this Nation's nonurban citizens is to be concerned about every influence affecting their livelihood and residential stability, and true concern demands maximum utilization of every tool and every resource at our command.

BENEFITS FROM SOUND FOREST MANAGEMENT

During 1963 the Pennsylvania Department of Forest and Waters placed on the open market 67 million board feet of timber stumpage, selected and marked by the foresters who manage our 2 million acres of State forest land. Despite the magnitude of this sales program, the sizable income it represents is only one of several direct and indirect benefits accruing from sound forest management.

The total acreage in small ownerships (holdings of 100 acres or less) in Pennsylvania is over three times as large as the total acreage of State forest, and because vast areas of the State forest are mountain land acquired by the State after all the merchantable timber had been removed, the private land is generally more productive and currently supports a more valuable timber growth.

The benefit potential from the management of the private forests, therefore, in both goods and services, is enormous.

COOPERATIVE FOREST MANAGEMENT PROGRAM BENEFITS

The cooperative forest management program makes these same benefits available to grassroots America. No single case is large, but each plays an important part in the national resource economy.

The dynamic force of the combined management efforts of individual forest landowners must of necessity lift the rural economy. Each managed wooded acre and each stable, independent, self-supporting citizen shares vitally in our national strength and progress, and the missionary work in this cause is, to a very large degree, performed in his quiet, dedicated way by the cooperative forest management service forester.

Thank you very much, Mr. Chairman.

Senator BYRD. Thank you, Mr. Wible. Our next witness will be Mr. William E. Welsh, executive director of the National Reclamation Association.

NATIONAL RECLAMATION ASSOCIATION

STATEMENT OF WILLIAM E. WELSH, EXECUTIVE DIRECTOR

DEPARTMENT OF THE INTERIOR APPROPRIATION REQUESTS

Mr. WELSH. Mr. Chairman, I would appreciate it if I might file my statement and include it in the record.

Senator BYRD. It will be included in the record.

(The statement referred to follows:)

My name is William E. Welsh, I am executive director of the National Reclamation Association and in that capacity I am appearing on behalf of the members of our association, at least 60 percent of whom are representatives of various types of water user organizations throughout the 17 Western States. I am here to support appropriations for four Federal agencies which come within the jurisdiction of your committee—Forest Service, Geological Survey, Bureau of Land Management, and the saline water conversion program.

The irrigation farmers of the West, whom our association represents, have every reason to be vitally interested in all programs of the Federal Government which will approve the irrigation water supply so important and necessary for the growing of crops in the desert areas. These farmers could not exist or remain in that area without an adequate, well sustained supply of irrigation water throughout the entire growing season. It is for that reason that we are before you in support of the appropritions for the above-named agencies.

FOREST SERVICE

The forests of this Nation occupy the highest water yielding watersheds. More than 50 percent of the water flowing in western streams originates on Forest Service lands. Thus, you can well understand the interest of the National Reclamation Association in the protection and management of the forest watershed lands.

It is this interest that prompts me to appear before you today in support of the Forest Service appropriation request for fiscal year 1965.

Particularly, we call your attention to the need for the modest increase of $800,000 requested for the improvement of recreational areas on national forest lands devoted to public use. Many of these national forest public recreation sites adjoin reclamation reservoirs and consequently make possible more complete multiple use of these facilities.

We think the multiple use program under the Forest Service is far preferable to the single purpose program which prevails under the wilderness system. Under the multiple use program of the Forest Service, adequate roads and picnic grounds are maintained for the benefit of all who wish to avail themselves of the opportunity. Wilderness areas which are without roads, picnic grounds and other desirable facilities, are necessarily limited to only a very small percentage of our population.

The request for additional funds for improvement of national forest recreation resources is one phase of the total development program for the national forests submitted to the Congress on September 21, 1961, by the late President Kennedy. The Forest Service appropriation request under consideration by you is in support of the worthy objectives of the national forest development program.

An increase of $36,000 is proposed for the strengthening of the Forest Service program in watershed management research. We strongly support this request as a part of the national effort to improve water resource related research.

The Forest Service cooperates with the States in the protection and improvement of forest lands in State and private ownership. To further these cooperative Federal-State efforts, an increase of $1 million is proposed. We urge your favorable consideration of this request. Of the requested increase in the field of cooperative Federal-State forestry work, $250,000 is requested for strengthening the fire prevention and control efforts.

We especially commend this program as it is important in protecting the western watersheds not in Federal ownership from the ravages of fire. Fires denuding these watershed lands create soil erosion and accelerate the deposition of sediment in irrigation reservoirs and works. It is to be noted that while

authorizing legislation for the cooperative fire control program authorizes a Federal sharing of $20 million annually in the program, the annual Federal share has remained far under this amount. Even with the 1965 proposed increase, it will be but $12,758,000. Also, it is to be noted that the authorizing legislation permits the Federal Government to share with the States up to 50 percent of the total program costs within the $20 million limit. However, in 1963, the States paid 82.4 percent of the total cooperative program costs and the Federal Government 17.6 percent.

Geological Survey

All agencies working in the field of water resources place great dependence upon the basic data and analysis made by the Geological Survey. Water problems are increasing faster than the needed data and knowledge available. Users of Survey data had looked favorably on the acceleration of data collection in fiscal year 1965 implied by the Geological Survey long-range plan, especially in figure 28, page 45 (Long Range Plan for Resources Surveys, Investigation, and Research Programs of the U.S. Geological Survey, 1964).

The budget presented to the House Appropriations Committee not only fails to provide this needed acceleration but the increases are probably insufficient even to meet the offerings by the States for cooperative work. Indeed, the fiscal year 1965 program for the water resources work has no increase for water quality investigations.

It is hoped that the Appropriations Committee will take into consideration the increasing needs for the data and analysis provided by the Geological Survey to try to keep abreast of the public demand for dependable water facts.

To the irrigation farmers of the West, one of the most important phases of the work of the Geological Survey is the cooperative streamflow measurement program which is carried on in practically every river basin throughout the West. The manner in which the various States or local organizations cooperate and contribute financially to the program indicates that it is very popular and it serves a very useful purpose. Based upon 24 years of experience as watermaster on the Boise River in Idaho, I can testify to the importance of this cooperative streamflow measurement program.

Oh behalf of the National Reclamation Association, I am very happy indeed to have the opportunity of supporting this program and urging that adequate funds be made available to carry on this work during the coming fiscal year.

Another phase of the Geological Survey program which we wish to strongly support and emphasize, is that of groundwater research. As we become better informed as to the increasing demands for water, we likewise realize more fully the importance of getting better information as to our groundwater supply.

Saline Water Research Program

People everywhere are looking forward to the possibility of a breakthrough in our saline water research program. If and when such a breakthrough comes, it will be extremely helpful not only to many areas of this Nation but throughout the entire world where water supplies are inadequate. That is especially true in the southwest corner of this Nation where our population is increasing at a tremendous rate, but the water supply is very limited. And, not only is our population increasing in that area and throughout the Nation, but also our demand for water per capita is increasing.

We should continue with our research in saline water conversion by all means at an accelerated rate.

Bureau of Land Management

The Bureau of Land Management has under its jurisdiction approximately 177 the million acres of public domain lands. This land is to be found in practically all of the Western States except the State of Washington. Quite a large portion of the public domain lands are in the higher altitudes, and therefore in areas contributing a great deal to the streamflows and water supplies of the major river basins of the West. For that reason the proper management and control of these areas is vitally important to the irrigation farmers in the many river basin areas.

Those who can remember back that far realize, that prior to the enactment of the Taylor Grazing Act which authorized the creation of the Federal agency which became known eventually as the Bureau of Land Management, the public domain lands of the Nation were practically uncontrolled. It is now generally conceded that the Bureau of Land Management has done a very credible job in

bringing the management and operation of these areas under control. In fact, the public domain lands of the West are now in much better condition as far as watershed protection and management are concerned than they were prior to the enactment of the Taylor Grazing Act.

We strongly support the program of the Bureau of Land Management and urge that funds up to the amount recommended in the budget, and sufficient to carry on a satisfactory program of watershed management and control, be made available to that agency for its operations for the fiscal year 1965.

Codification of Reclamation Law

A committee was appointed a number of years ago to follow through on a resolution approved by the association recommending that Congress provide for "revision and codification of the Federal laws relating to reclamation matters." Similar resolutions were subsequently adopted. All water lawyers recognize the need for such codification. Every Congress since 1902 has passed some legislation relating to reclamation. Over the years many of these laws have at least been impliedly repealed or superseded, others have been amended, and in some instances later legislation has conflicted with earlier laws. There is a real need to have in one volume of the United States Code all presently existing laws relating to relcamation.

The codification committee worked diligently on this matter for several years and completed a revised code with the assistance of the law revision counsel of the House Judiciary Committee and the Solicitor's Office of the Department of the Interior. It is now up for final review by the Solicitor's Office of the Department of the Interior. The Solicitor's Office advises us that it will take several months' work by a consultant or expert on reclamation laws to bring this up to date and in final shape for submission to Congress. We feel this is essential and are asking for an additional $25,000 to be appropriated to the Solicitor's Office to complete this very important project.

Respectfully submitted.

Wm. E. Welsh, *Executive Director.*

Need and Importance of Water

Mr. Welsh. I will not take more than 2 minutes to highlight some points.

Senator Byrd. All right, Mr. Welsh.

Mr. Welsh. I am here to represent the National Reclamation Association and to support the appropriations both for the agencies of the Federal Government which deal with the problems which are of vital concern to our people in the arid West, the irrigation farmers of the West, and to support appropriations for the four Federal agencies which come within the jurisdiction of your committee; Forest Service, Geological Survey, Bureau of Land Management, and the saline water conversion program.

In the arid West we have known of the need and importance of water since the days of the covered wagons. The work of the Forest Service is of special concern, because they deal with the high watersheds where most of our irrigation water comes from.

Geological Survey Programs

The Geological Survey has several programs in which we are interested. Of course, the research program is vitally important. We strongly support that. We also support the work that they are doing in underground water, and another phase of their work that is important to us is the cooperative stream flow measurement program. That is carried on in practically every State of the West on a cooperative basis. That is an extremely important program with us.

Saline Water Research Program

The saline water research program, of course, was brought to the attention of all of us with the increasing importance of water. The saline water research program is something that we think can mean a good deal to a great many areas, particularly in the areas along the ocean where such water is available, and particularly in the Southwest area.

Bureau of Land Management Program

The Bureau of Land Management covers an area, which, up until the time it was created along in the early thirties was pretty much a no man's land.

But the Bureau, we think, has done a remarkable job of bringing that land under control. On the last page of my statement is a statement with respect to the codification of the reclamation law.

Those two short paragraphs were prepared in collaboration with the chairman of our committee, an attorney from Twin Falls, Idaho. He, and the members of his committee, have been working for a number of years toward getting a codification of our reclamation law.

Codification of Our Reclamation Law

As pointed out there, it is simply a law that has grown by each session of Congress until it assumed a hodgepodge, and the irrigationists feel this is important due to the depth of interest.

The Solicitor's Office tells us that they do not have the funds to carry on that work. This is a request for $25,000 so that they can complete the work, and the bill be presented to the Congress.

Thank you very much, Mr. Chairman.

Senator Byrd. Thank you, Mr. Welsh, for a very fine statement.

Mr. Kenneth B. Pomeroy of the American Forestry Association.

The American Forestry Association

STATEMENT OF KENNETH B. POMEROY

Forest Service Appropriations

Mr. Pomeroy. May I commend you, first, on having such a very capable secretary. She covered a 3-day meeting for us and I might say off the record that her work for us last fall was perfect.

Senator Byrd. We are glad to have you say it and it should be in the record.

Mr. Pomeroy. I am Kenneth B. Pomeroy, representing the American Forestry Association, of Washington, D.C. In order to save a few minutes for you, I would like to submit statements for the record in support of appropriations for the Forest Service, the Bureau of Land Management, and the Bureau of Outdoor Recreation.

(The statements referred to follow:)

Mr. Chairman, I am Kenneth B. Pomeroy, representing the American Forestry Association of Washington, D.C.

It always is a pleasure to review the budget of a bureau that consistently returns a substantial dividend to the Federal Treasury. Last year the income from the national forests amounted to $135 million. This amount can be in-

creased further by activating fully the program for development of the national forests which the Congress authorized in 1961. Therefore we recommend that appropriations for fiscal year 1965 be made in accordance with the President's budget and that provisions be made in future budgets to accelerate development of the national forests.

The Forest Service also makes very substantial contributions to the national economy through its programs of forest research and cooperation in State and private forestry. The work in forest research is of particular interest to our association because it is an investment in the future welfare of the Nation. Two important items are:

1. *Forest insect and disease research.*—Insects and diseases destroy enough sawtimber each year to construct 730,000 5-room frame houses. This is a very great waste of a valuable resource. Therefore we urge that research in the control of insects and diseases be pushed as rapidly as possible.

2. *Forest products utilization.*—One of the most important resources of rural America is its timber. Full utilization of the forest would go a long way toward alleviating the current economic stress in some areas. Therefore we recommend more intensive research in utilization, including modernization of the Forest Products Laboratory at Madison, Wis.

This association is concerned over the fact that much of the public domain is in a rundown condition as a result of past abuses. The association believes that the principles of good land use and rehabilitation should receive maximum support from Federal agencies, public land users, the Congress, and the public.

Accordingly, we wish to make three specific recommendations:

1. Fire protection facilities in Alaska should be strengthened.

2. Basic sanitary facilities should be provided at recreation sites used by the general public. This is necessary for reasons of health as well as for protection of recreation resources.

3. Efforts to rehabilitate rundown ranges should be expanded greatly. The job to be done involves—

(*a*) Brush control, 31 million acres.
(*b*) Range reseeding, 12 million acres.
(*c*) Water control, 481,000 structures.
(*d*) Water development, 50,000 projects.
(*e*) Fencing, 100,000 miles.

Demands for recreational use of forest lands and associated water areas are expanding at phenomenal rates under the pressing stimuli of an increasing population, rising standards of living, increased income, more leisure time, and better appreciation of the multiple benefits of outdoor life. Meeting present and future demands requires concerted action by Federal, State, county, and municipal agencies, private organizations, and individual landowners.

This requirement was recognized by the Congress last year when it authorized the Bureau of Outdoor Recreation to assist other groups in the preparation of recreation plans, to coordinate Federal outdoor recreation programs, to conduct outdoor recreation research, to conduct recreation resources surveys, and to formulate a nationwide outdoor recreation plan.

Therefore, the American Forestry Association urges that the Bureau of Outdoor Recreation be given funds with which to carry out its assignments as recommended in the President's budget.

Insect and Disease Research

Mr. Pomeroy. There are just two or three items that I would like to direct your attention to. First, is the need for insect and disease research. This is in the Forest Service appropriation. I do not think we need to go into details.

The book "Silent Spring," and many other things have focused the public's attention on it. The fact that we lose enough timber every year to build 730,000 five-room framehouses is always a rather important item.

Forest Products Utilization

The second thing pertains to forest products utilization. One of the most important resources of rural America is its timber, and full

utilization of the forest would go a long way toward alleviating some of the country's current economic stress in some of these areas.

BUREAU OF LAND MANAGEMENT

We would like to see this phase pushed as much as possible. Under the Bureau of Land Management I would like to direct your attention to the last item, efforts to rehabilitate rundown ranges.

This should be expanded greatly. It is our understanding that at the current rate of progress it would take about 100 years to rehabilitate the range. We think it ought to be done as rapidly as possible.

BUREAU OF OUTDOOR RECREATION

The last item is the Bureau of Outdoor Recreation. We would like to see this agency get on its feet and get moving.

Thank you very much.

Senator BYRD. Thank you, Mr. Pomeroy. Your statements will be included in the record.

We will now hear from Mr. Theodore B. Hetzel. He represents the Friends Committee on National Legislation.

FRIENDS COMMITTEE ON NATIONAL LEGISLATION

BOARD OF INDIAN RIGHTS ASSOCIATION

STATEMENT OF THEODORE B. HETZEL, EDWARD SNYDER, EXECUTIVE SECRETARY, AND FRANCES NEELY

ALASKAN INDIAN COMMUNITY SOCIAL AND ECONOMIC AFFAIRS

Mr. HETZEL. I am Theodore B. Hetzel, engineering professor at Haverford College, a member of the Board of the Indian Rights Association, member of the Indian committees of the American Friends Service Committee, and of the Philadelphia Yearly Meeting of Friends.

The Friends Committee on National Legislation's executive secretary, Mr. Snyder, accompanies me, and Miss Frances Neely.

My testimony which I submit has also been read to the Board of Indian Rights. They have approved it without dissent, and they have asked me to speak for them also.

Since 1952 I have traveled widely in Indian communities. I am particularly interested in their social and economic affairs. The last three summers I have been in Alaska specifically on Indian problems. I have seen such great unmet needs that I think this budget appropriation should be expanded as being inadqeuate for the present problems.

POCKETS OF POVERTY

I know of your concern for the pocket of poverty and problems in the Appalachian region. I want to speak for what I think are worse pockets of poverty, the Indian communities where the unemployment is 49 percent, where the housing is the worst in the Nation, where the education is the most deficient, and where the health is the worst.

I have a great respect for the people I meet in the Bureau of Indian Affairs and the U.S. Public Health Service, and I think they deserve our support. Considering that the Indian population is growing so, the budget needs to be more than holding the line.

SCHOOLS AND TEACHING

There are mandatory increases in salaries and costs, so the budget request really represents a decrease in the program. The population increase is so much that the facilities need to be expanded and new teachers engaged.

Many communities have no schools, or insufficient seats for the children, and the program is not as appropriate as it really should be. More money is needed to especially train teachers and to especially equip the schools for the Indian needs.

The Indians no longer have an adequate land base to support themselves by their traditional skills, and they have not yet learned the new skills to attain well-being in our economy.

VOCATIONAL EDUCATION

Education needs, especially, to address itself to that. The present stress is too much on the academic education and the boys drop out. They are clamoring for more vocational education which is more expensive, but needs to be worked out.

HOUSING AND SANITATION

The housing is so inadequate. I have a number of photographs, if you care to look at them, of Indian housing. There is a wrecked automobile which is a bedroom for an Indian in South Dakota.

There are other examples of inadequate housing there which the Bureau and other agencies are helping to improve. I see the work of the U.S. Public Health Service, which I also admire very greatly, but the great needs are really unmet.

The study of 1957 indicated what an adequate program would be. The budget has not expanded to accomplish those needs. On the average, the lifespan of an Indian native of Alaska is about half that of the general U.S. population.

DISEASE

And the incidence of disease is very much higher. The number of new tuberculosis cases is 16 times greater, and the TB death rate is 6½ times greater. These are things that would respond to budget appropriations. We can do something about the sanitation and the water supply and the housing that is the cause of this ill health and short life.

As I said, the Indians cannot afford it for themselves and we, as a nation, cannot have our self-respect for ourselves, nor hold our position internationally, if we tolerate this kind of condition in our own Nation.

WATER SUPPLY

On the water supply, I have some photographs that illustrate that. Here in Alaska barrels are the only source of fresh water storage, and

also the only source of sewage disposal. They cast them out into the ocean.

Water is extremely deficient, especially in these villages that are increasing so rapidly. The population is increasing because of the school and good services. The water is very inadequate.

At Barrow the military installations can flush the toilets with fuel oil, but the Eskimo cannot. Some Federal help has, in the past, provided a water supply for cattle, but it is illegal for human beings to drink it. It is for sanitation, for the disposal of waste.

Many of these communities that I have visited showed these unsanitary conditions that are the cause of these troubles. I would also like to point out and speak for the need for Federal services for birth control.

Need for Federal Services for Birth Control

The birth rate is 2.1 times that of the Nation at large in Alaska. These families simply cannot support that many children—12 to 15 children is not uncommon in an Eskimo family. They do not have the resources to take care of them.

The land will not support this exploding population. School facilities are totally inadequate. People want birth control information. They should be informed it exists and it ought to be supplied to them.

I think no matter what our intentions in the matter, whether we think we ought to acculturate them, to our way of life, or whether we want to permit them to retain their own culture, it is essential that their society be maintained. This population explosion is simply destroying their society and the land base on which they attempt to live.

Services Needed To Help Indians

I think of one village in Alaska where no medical person has been until a dentist was in there this past year. No nurse had ever visited the place. There are many other services needed in helping the Indians solve their terrific accident rate, and the problem of alcohol, and this problem of vocational training to increase their employability

I see such great unmet needs, I bespeak your support for an increased budget rather than just holding the line on present requests.

Unemployment Rate for Indians

Senator Byrd. Mr. Hetzel, when you speak of the unemployment rate among the Indians as being 49 percent, are you referring merely to Aaska?

Mr. Hetzel. No, that is the public Federal figure for the United States at large.

Senator Byrd. Is their unemployment growing, or does this represent a decrease?

Mr. Hetzel. I do not know that I can quote any other statistics than the most recent ones I have read.

Senator Byrd. And the most recent statistics show that 49 percent are unemployed?

Mr. Hetzel. I would say it represents an increase, because there is much less subsistence living. Other people may not have been

engaged in a salary but have been occupied full time. The number of people now are just sitting around, because there is nothing they can do.

Alaskan Indian Unemployment Rate

Senator Byrd. Would you say that the unemployment in Alaska is higher than 49 percent?

Mr. Hetzel. Oh, much. Yes.

Senator Byrd. Now these unemployed Indians will get welfare payments?

Mr. Hetzel. In the States they qualify for the same welfare payments that anyone else could qualify for, and there is a small amount of help given them by the Bureau of Indian Affairs. If they do not yet qualify for State aid, the Bureau then tides them over.

I would not say the needs are being met.

Birth Rate

Senator Byrd. You refer to the population explosion. Can you tell us about the rate of population growth among the Indians?

Mr. Hetzel. I have the birth rate figure from the most recent Public Health statement which is 2.1 times the national average. Just what that rate comes to in terms of population growth, I would not want to say authoritatively. I would make a guess that it might be 5 percent.

Senator Byrd. Are you talking about the birth rate?

Mr. Hetzel. Yes; also about the rate of increase of population.

Senator Byrd. And, coincidentally, that is the birth rate also?

Mr. Hetzel. No; I do not know the figures except that the birth rate is 2.1 times the national average.

Senator Byrd. The birth rate?

Mr. Hetzel. Yes.

Senator Byrd. And you are saying the overall population increase is 2.1 times the national average.

Mr. Hetzel. No, that is the birth rate. I am afraid I do not have the figures. The population increase is due to the health services. I am sure that figure would be available.

Senator Byrd. Your statement, as printed, will be included in the record, Mr. Hetzel. It is a very interesting statement. Thank you for appearing.

(The statement referred to follows:)

Budgets for Indian Programs

I am Theodore B. Hetzel, engineering professor at Haverford College, a member of the board of the Indian Rights Association, member of the Indian Committees of the American Friends Service Committee and of the Philadelphia Yearly Meeting of Friends. I am here today for the Friends Committee on National Legislation. This committee seeks to represent many of the concerns of the Religious Society of Friends, but does not claim to speak officially for all Friends, for their democratic organizations do not speak with one voice, and individual Friends maintain the right to speak for themselves on issues of importance. Yet Friends are nearly unanimous in their concern for Indian welfare.

I appreciate this opportunity to speak in support of increased appropriations for the educational and social programs of the Bureau of Indian Affairs, and for the health activities of the U.S. Public Health Service.

Great Unmet Needs

During my vacations in the past 10 years I have visited Indian communities across the country for the Indian Rights Association, the Association on American Indian Affairs, and for Quaker and other Indian-interest organizations. I have seen the excellent work that has been done by the BIA and the Division of Indian Health, both in construction of facilities and in the work of personnel. But I have also seen great unmet needs. It seems to me that our worst pockets of poverty are in Indian communities, and that the most economical way to take remedial action is through the existing agencies that are in the field and are acquainted with the problems.

The Bureau of Indian Affairs Budget

I hope this subcommittee will allocate additional funds to the austerity budget presented by the Bureau of Indian Affairs (BIA). Additional funds are needed because the increase over 1964 in the Bureau's request is less than the rate of Indian population growth. Since the Bureau's budget includes mandatory salary increases or will, it represents a decrease in program to deal with America's worst poverty, worst housing, worst unemployment.

ADDITIONAL SCHOOLS IMPERATIVE

The rapidly increasing Indian population, and the Indians' realization that they must be educated to make their way in today's world, are requiring more school facilities. It is encouraging to see the many new schools, but too many children, too young, must go to boarding schools too far from home, or not go to school at all. In Alaska 700 native children each year finish eighth grade for whom there is no room in high school. And it is getting worse.

MORE VOCATIONAL SCHOOLS NEEDED

New opportunities for vocational training are excellent and are much appreciated by Indians, but the need is increasing. Not only are more vocational schools needed, but more of a vocational orientation is needed in the high schools to hold the interest of boys. It is, of course, a misfortune to the individual and a social and economic loss to the Nation when an able student drops out of school. And it is often the able student who just can't take any more of a curriculum which is deficient in meaning for him. There definitely should be a vocational high school in central Alaska.

Indian Health Services

The Division of Indian Health is to be congratulated on the quality of the is doing, but the quantity is deficient. This deficiency can only be corrected by adequate appropriations. To meet current health and sanitation needs a total annual expenditure of $80 to $85 million is probably required. To develop such a program efficiently it may be best to make an increase of only $5 or $10 million now, but I consider it uneconomical just to hold the line, or to provide only for mandatory salary increases, when an expanded program is needed.

We all know the statistics—Indian health is America's worst. Alaskan natives age at death is about half that of the general U.S. population. Their infant death rate is 2.5 times higher, their postneonatal death rate is 5.3 times the average, and their tuberculosis death rate is 6.5 times greater, (new cases 16 times). The Alaskan death rate from respiratory diseases is 3.2 times, and the birth rate 2.1 times the general average.

INDIANS CANNOT OVERCOME THESE HANDICAPS BY THEMSELVES

Most Indians have an insufficient land base for self-sufficiency with their traditional skills, and they have not yet learned the skills to achieve well-being in today's economy. They are, therefore, unable to afford medical and dental care, and few communities can afford a wholesome water supply and sanitary waste disposal.

URGENT NEED FOR EXPANDED PROGRAM TO INCREASE PURE WATER SUPPLIES AND SANITATION FACILITIES

What I have seen across the country makes vivid the reality of the dry statistics: five times as many persons per room as the national average; 80 percent must

haul household water; 70 percent of the water sources are likely to be contaminated; 80 percent have inadequate waste disposal; and 12 percent have no such facilities at all—and it's worse in Alaska. I recall a family of 13 in Wisconsin that had to fetch water a mile in a homemade wheelbarrow; a family in Oklahoma that got its drinking water from a pit in a dry streambed; families in Idaho use irrigation ditches; communities in Arizona that get water for man and beast from rain water ponds, and some which had a well and water tank provided by the Government, but only for the cattle, illegal for human use. I mention these only because they are typical. I also remember hearing a doctor explaining to an Indian that he could not be sent to a hospital, because the contract funds were exhausted for that budget period. In Alaska many villages use river water, and consequently suffer greatly from dysentery. Many communities are located on permafrost, which complicates the problems of water supply and waste disposal. Some military bases can afford to flush toilets with fuel oil, but Eskimos can't. Villages that have schools, and especially those that have hospitals, are growing rapidly. This intensifies health, water and sanitation problems.

POPULATION EXPLOSION OF CONCERN

The Division of Indian Health should inform Indians and the natives of Alaska of the availability of birth control information, and supply it if they want it. Health services have saved so many lives that families are much larger than has been the case in the past. The natural resources of the land will not support this increased population. The social structure of Indian communities cannot absorb this increase either. As a result children must be sent away for adoption, or live more or less permanently in institutions; young adults must leave the home community whether they want to or not. Education must be geared to the needs of those who must leave home, with the result that the curriculum neglects the transmission of values from the Indian's own heritage. Thus, whether we want to eradicate poverty, to acculturate Indians to succeed in our culture, or to make it possible for those who wish to preserve values from their own tradition to do so, in any case, the control of population is essential wherever the economic base is meager.

CONCLUSION

I feel that my testimony would be incomplete if I did not express my high regard for the personnel I know in the Bureau of Indian Affairs and in the Division of Indian Health, and my general approval of their policies. They merit our financial support.

Senator BYRD. The subcommittee will now hear the distinguished senior Senator from Wisconsin, Senator William Proxmire.

FOREST PRODUCTS LABORATORY, MADISON, WIS.

STATEMENT OF HON. WILLIAM PROXMIRE, A U.S. SENATOR FROM THE STATE OF WISCONSIN

FOREST PRODUCTS RESEARCH BENEFITS

Senator PROXMIRE. Mr. Chairman, I appreciate very much being able to appear before your committee. I am appearing in behalf of an appropriation for the Forest Products Laboratory at Madison, Wis.

As you know, this is far and away the most important research laboratory for forest products throughout the Nation. It has been a source not only of enormous benefit to the forest products industry, the wood industry, paper industry, and so forth, but the record shows that for every dollar that the Federal Government has put into the Forest Products Laboratory, $70 have come back in increased revenue to the Federal Government.

The merits of the Forest Products Laboratory are well known to you, I am sure, and other members of the committee, so with your

permission I will simply submit my statement for the record, and thank you very much for permitting me to appear.

Senator BYRD. Senator Proxmire, we always appreciate your appearance on behalf of this facility. We know of your great interest over a long period of time, and we know of your very strong support for it. The members of the committee are aware of the fine work done by this Laboratory and are aware of the need for additional appropriations.

Thank you, Senator Proxmire. Your printed statement will be included in the record.

Senator PROXMIRE. Thank you, Senator.

(The statement referred to follows:)

WOOD PRODUCTS INDUSTRY

Mr. Chairman and members of the subcommittee, I appear before you today in support of the appropriation request of $3.8 million for new construction at the Forest Products Laboratory at Madison, Wis.

A $200,000 appropriation was voted by the Congress in 1963 for planning of the Laboratory's expansion. These funds have been used to prepare the blueprints of the highly specialized addition to the plant facilities. The Wisconsin State Legislature and the board of regents of the University of Wisconsin have already approved the transfer of 12 valuable acres of land for the expanded facilities. Now the appropriation of $3.8 million is needed for the actual construction.

Since the planning stage for these additions is now completed construction should not be delayed. A considerable amount of research essential to the wood products industry and to the economy would be postponed or lost if the expansion were delayed. Moreover, costs of construction will presumably rise over time. In view of the fact that the land has already been committed and the plans are ready, fiscal 1965 is the time to begin work on the expansion.

The wood products industry performs a key role in our national economy and the Forest Products Laboratory has been of crucial importance in the continuing development of the industry. In 1961 the wood products industry provided direct employment for more than 1.1 million people, more than 7 percent of the total manufacturing labor force. The value of all forest products after shipment was $25 billion in 1961 or roughly 5 percent of the Nation's gross national product. Only about $1 billion of this amount was attributable to the value of raw materials. A substantial percentage of the remaining value is due to processes and techniques originated at the Forest Products Laboratory.

The wood products industry ranks sixth in terms of employment and eighth in terms of value added among American industries. However, public and private expenditures on wood products research now average only 0.35 percent of the industry's annual contribution to GNP. The national average for all manufacturing industries is 2.5 percent, roughly seven times higher.

The Forest Products Laboratory has been the primary source of research for the entire wood products industry, both in the development of new manufacturing techniques and new products. This work is widely acclaimed as being the finest and most extensive research in the field.

For example, the Laboratory has developed the basis for the use of hardwoods to produce pulp and paper products. The consumption of hardwood pulps in 1960 was 12 times that of 1920. However, continual requests are being received from industry for a new paper machine that can be used in the study of paper formation at speeds above those now used in industrial plants; i.e., 2,400 feet per minute. This area of research alone can lead to greater utilization of our low-grade hardwoods, little used species, and plant and forest residues.

The factory-built home industry has been created largely upon principles developed by the Forest Products Laboratory.

Yet the Laboratory is being severely hampered by inadequate facilities. It has an overcrowded 30-year-old plant which simply cannot do all the research work so vitally needed by the industry. For example, fundamental research on the performance of wood in fire is underway on a pilot basis, but expanded facilities must be available where large laminated beams may be loaded and their strength evaluated to obtain engineering data on strength and safety factors.

As far back as 1957, the President's Commission on Industrial Uses of Agricultural Products recognized the deficiency in wood products research and recom-

mended an expansion in the Forest Products Laboratory of more than fourfold. The Commission recommended a 10-year program in which funds for research would be increased by over a million dollars each year. Even with such an expansion the Commission estimated that the ratio of research expenditures to product value would still decline.

It is important to note that the Federal Government benefits directly from the types of research conducted by the Forest Products Laboratory. The Government is a major owner of forest lands and the principal supplier of the wood products industry's raw materials. About one-fifth of the annual cuttings in the United States in recent years have been from Government owned and managed lands. Government holdings comprise about 45 percent of the national wood resources at the stump. The value of these holdings increased with the value of the products which can be made from them and the primary function of the Forest Products Laboratory is to develop new and more valuable wood products.

Senator BYRD. Now, would Mr. J. Walter Myers, Jr., Mr. Herman E. Baggenstoss, Mr. J. V. Whitfield, and Mr. William Ross Brown, Jr., come forward?

FOREST FARMERS ASSOCIATION

STATEMENTS OF J. WALTER MYERS, JR., EXECTUIVE DIRECTOR; J. V. WHITFIELD, WALLACE, N.C.; AND WILLIAM ROSS BROWN, JR., LAFAYETTE COUNTY, MISS.

FOREST WATERSHED MANAGEMENT RESEARCH

Mr. MYERS. Mr. Chairman, I am J. Walter Myers, Jr., and Mr. Whitfield and Mr. Brown will be unable to be here today. They did ask me to file their statements for the record if that was agreeable with you.

Senator BYRD. Their statements will be included in the record.

(The statements referred to follows:)

STATEMENT OF WILLIAM ROSS BROWN, JR.

Mr. Chairman and members of the committee, my name is William Ross Brown, Jr. I am a cotton farmer, small landowner, tree farmer, soil conservation district commissioner, and member of the ASC committee in Lafayette County, Miss.

I appreciate the privilege of testifying before this committee in support of forest watershed management research. I want to endorse Mr. Myers' statement and to speak briefly in support of one item.

First, let me say that Lafayette County is located among the eroding hills of north Mississippi. Much of this area has been abandoned for agriculture and is reverting to trees. The people of Oxford, the headquarters of the largest tree-planting program in the country, call it the Reforestation Capital of the World. Some 35 million pine seedlings are planted in this area each year. As farming retreats to the bottomlands, our forests assume greater importance in our economy both as a source of sawlogs and pulpwood and as a source of water for the industries that we are trying to attract.

Our surface and ground waters are becoming increasingly important, and the need for additional research on this renewable resource is becoming critical. A stronger research program on water and watershed management is essential if the South is to maintain the necessary supplies of water for an expanding population as well as industrial use. Forest owners must learn to manage their land not only for timber production, but also for flood control and water production. To help do these things, $450,000 is needed this year to build a forest hydrology laboratory in Oxford to house and provide facilities for an expanding program of watershed management research. This laboratory not only would serve the needs of north Mississippi but of the 235 million acres in the Southern Coastal Plain, 60 percent of which is forested.

Lafayette County is an ARA county. We have a sizable labor surplus now. Construction of this laboratory and its subsequent staffing would provide much needed jobs for some of our people.

The program of the Oxford Center of the U.S. Forest Service includes research on Coastal Plain hydrology, rehabilitation of eroded soils, and management of erosive forested watersheds. Briefly, the research staff is concerned about how forests can be managed to provide optimum quantity and quality of surface and ground water; how runoff and erosion can be reduced through revegetation of eroded areas; and what the effect of cutting intensity, logging, grazing, and prescribed burning is on sediment production and surface runoff.

The Oxford research staff has been working in crowded quarters and with limited equipment for the past 10 years on the campus of the University of Mississippi. Greater stress on basic research calls for a greater investment in office, laboratory space, and in research tools. Senator Stennis has recognized this in his request. I hope that the committee will see fit to act favorably on this item and on the other items proposed for the benefit of the South.

I thank the committee for its courtesy in hearing me.

Water and Hydrology Laboratories

Mr. Myers. Thank you, sir. Mr. Whitfield, incidentally, in his statement very strongly supports the possible inclusion in the budget of a laboratory on water and hydrology at Coweeta, N.C., and Mr. Brown very strongly supports a forest hydrology laboratory at Oxford, Miss., and they have submitted some other items here that I might include with the record, showing some very graphic work that has been done in flood control and in water research.

Senator Byrd. Do you wish these to be submitted for the files of the committee?

Mr. Myers. Yes, if you would. They very graphically depict what is being done. I, myself, have prepared a statement which I would like to file for the record, and just summarize very briefly, if I may.

Senator Byrd. Surely, Mr. Myers.

Mr. Myers. It has certainly been our pleasure to appear before this committee on a number of occasions, and the committee has repeatedly demonstrated its interest in maintining a strong program of Federal forest research, and this has been most gratifying.

Federal Forest Research Program

Senator Byrd. We have been glad to have you appear on previous occasions, and we are happy that you are here today.

Mr. Myers. Our group very strongly believes in cooperative participation from the private with Federal leadership, and we have been delighted to see the program developed in most areas in that respect.

In looking over the 1965 budget, we were very delighted to notice the increase nationwide for forest research and also the laboratory at Madison, Wis. We would like to speak, also, for a silviculture laboratory at Sewanee, Tenn., which is not currently in the budget, but funds have previously been authorized for architectural plans.

Activity in the South

Those plans have been now completed, and Mr. Baggenstoss had a few details he would like to give in that regard following my remarks. But, basically, the Forest Farmers Association feels that the forest research activity in the South to keep pace with the growing needs will require an increase of $1 million spread over nine Southern States.

This, we feel, is clearly indicated. A small amount of this money is in the budget and there are certain items I am not familiar with.

Senator BYRD. Mr. Myers, will you kindly desist just for a little while. The subcommittee will recess, and as soon as I answer my name on the rollcall I will return.

(Whereupon a short recess was taken.)

Senator BYRD. All right, Mr. Myers. I believe you were in the middle of your testimony.

SUPPORT FOR BUDGET INCREASES

Mr. MYERS. Yes, I was just mentioning that in reviewing the budget for 1965 we would have to notice certain increases in the budget. It is a little difficult to figure how much would be included for various activities, and we feel that to keep up with current needs approximately $1 million is needed, spread over nine States.

ITEMS WARRANTING INCREASES

Actually the biggest item that we feel needs strengthening is the forest survey which is a very valuable inventory of forest resources which, I am sure, the Chairman is familiar with. There is $150,000 in the budget nationwide, but actually it would be very desirable if a level of $200,000 could be provided for the South alone.

I realize these things are not always possible in 1 year, but they could be used very efficiently. The insect and disease investigation control research could use a minimum of $160,000, and forest fire research could use $150,000 very effectively.

The silvicultural studies could use $100,000 and the utilization and engineering could use $200,000. Soil and water management could use $50,000 increase, naval stores $170,000, which would be to more fully activate the work in a new laboratory that is built and partially operational, and wildlife and range activities could very efficiently use an additional $100,000.

These items are all detailed in my testimony, and I do not want to take your time to read them in detail. They are in here, sir, and I would like to have them in the record. I appreciate your consideration.

Mr. Baggenstoss has a short statement in specific support of the Sewanee Laboratory.

Senator BYRD. All right.

FOREST FARMERS ASSOCIATION

STATEMENT OF HERMAN E. BAGGENSTOSS, REGIONAL VICE PRESIDENT

SILVICULTURE RESEARCH LABORATORY, SEWANEE, TENN.

Mr. BAGGENSTOSS. I appreciate the opportunity of coming before you again. I am Herman E. Baggenstoss. I live in Tracy City, Tenn., which is in lower Appalachia. I am a weekly newspaper editor and a tree farmer.

I wish to thank this committee and Congress for providing $18,500 in the 1963 fiscal year budget for advance planning of the Silviculture

Research Laboratory facilities at Sewanee, Tenn. Our late Senator Estes Kefauver was vitally interested in this project and strongly supported it.

The Laboratory plans have been perfected, drawings and specifications completed, and a site has been selected. The actual building can begin as soon as funds are provided.

President's Message Relating to Forest Land Resources

President Lyndon B. Johnson in his message on agriculture, presented to Congress on January 31, 1964, stated:

> Better use of our timber, wildlife, scenic, and other renewable resources of forest land presents a related and major challenge. Economically distressed areas often exist where there are heavy concentrations of forest lands.
>
> Yet, there is a great backlog of work to be done in these forests that can provide employment and strengthen our economy. I am directing the Department of Agriculture to speed completion of a comprehensive review and appraisal of our timber resources, and to accelerate forest research to find new methods of wood utilization, better timber management techniques, improved fire protection, and more effective use of forest ranges.

I think the President's message summarizes the case for the Sewanee Research Center. The conditions he describes could not have been better said of the area had it been specifically prepared for the Cumberland Plateau.

Sewanee Project Endorsement

This project has the endorsement of the Keep Tennessee Green Association, the Elk River Development Association, the Grundy County Agriculture and Industrial Commission, the Tracy City Commercial Club, the Forest Farmers Association, and the Tennessee State Department of Conservation.

It is part of the long-range research program of the U.S. Forest Service. The research programs conducted at Sewanee will enhance the possibility of success for any fight on poverty which may be initiated for the Appalachia area.

Need for Facilities

I feel that there is an urgent need to provide these facilities now. I am hopeful that the committee will give careful consideration to providing $200,000 this year for the Sewanee Silvicultural Research Laboratory.

Senator Byrd. Thank you, Mr. Baggenstoss, and thank you, Mr. Myers, for your good statements.

Mr. H. E. Ruark and Mr. C. A. Roberts.

Georgia Forest Research Council, Macon, Ga.

STATEMENT OF H. E. RUARK, DIRECTOR

Southern Forest Fire Laboratory

Senator Byrd. Mr. Ruark, you are director of the Georgia Forest Research Council, I believe.

Mr. Ruark. Yes, sir. Thank you sir.

Senator Byrd. You have a prepared statement. Would you like to include it in the record?

Mr. RUARK. I would, sir, and I would like to make a few comments.
Senator BYRD. All right. You may proceed.
(The statement referred to follows:)

FOREST RESEARCH IN GEORGIA

Mr. Chairman and members of the committee, my name is H. E. Ruark, I am director of the Georgia Forest Research Council with headquarters at Macon, Ga. The council is an agency of the State of Georgia. We are responsible for coordinating, developing, implementing, and encouraging forest research in the State. It is a pleasure to appear before your committee and discuss forest research needs.

I am appearing before you to ask you to strengthen forest fire research at the Southern Forest Fire Laboratory at Macon, Ga., by adding $150,000 to the U.S. Forest Service's budget. Present funds are limited and provide for approximately one-half of the number of scientists needed at the laboratory. The additional funds will make it possible to undertake 75 percent of the programs planned for this facility.

To every forest landowner, wildfire is still the primary concern. A vice president of one of the South's largest forest industries wrote in a regional magazine in October 1963 that wildfire continues to pose the greatest threat to timberland management in the South. His statement could have applied to practically every one of 33 States lying east of a line from Minnesota to Texas. In 1963 many of these States experienced the worse fire season in a decade or more. North Carolina reported 185,000 acres burned in 1 day. Georgia's records show that three persons lost their lives fighting forest fires. In October, newspapers, national television, and radio programs reported raging forest fires in practically every State in the eastern half of the country.

We are particularly concerned with the large blowup fire which causes the greatest damage and is the most difficult to control. If we are to cope with the large blowup fire new knowledge is needed. For this reason I am asking that $150,000 be added to the U.S. Forest Service's budget for fire research at the Southern Forest Fire Laboratory, Macon, Ga.

So little is known about free-burning fires. There is a real and urgent need to determine the physical processes which govern the rate of energy output of free-burning fires. A greater understanding of the mechanisms of fire propagation and fire behavior is needed. When this basic knowledge is gained and placed into use the forest fire boss will be able to better predict fire spread and behavior. Of course, the information will add to better methods of fire control and fire safety.

Every forest landowner and firefighter is aware that weather plays a major role in fire behavior. Weather research is seldom approached from its cause and effect relationship with the ignition, behavior, and control of forest wildfires. Few attempts have been made to forecast directly fire behavior phenomena, yet this is a necessary natural extension of fire-weather forecasting for fire control planning. The warning of the pyramiding of fire conducive weather factors, such as high winds, high temperatures, low humidities and drought, leading to extreme fire danger and possible catastrophic wildfires, is of tremendous nationwide importance because a small percentage of fires and fire days account for most of the forest acres burned. Research in this field is extremely complex, calling for cross-discipline approaches in basic and applied physics, meteorology, chemistry, and forestry. The need for immediate application of findings lends urgency to research in fire danger rating systems and the prediction of both fire and weather behavior.

Prescription fires are becoming an integral part of the management scheme of many of our southern forests. Yet the lack of technical guides concerning fire use prevent achieving the full potential of this tool. To reach this greater potential within reasonable time, additional scientists are needed now.

These necessary research personnel can attack the critical problem of fuel rating. Forest fuels need to be classified according to ingition, rate of growth, and energy release for different weather conditions. Both laboratory and field evaluations will be required. With this type of classification, foresters can predict the behavior of a prescribed fire in a particular fuel type and measure the effect on components of a forest stand.

A fuel classification system will also benefit our fire control efforts. Our major concern here is with the prevention of blowups or conflagrations. Presuppression planning will be improved when dangerous fuel situations and conditions are

identified. When a wildfire's rate of growth and energy potential can be accurately and promptly classified following detection, control forces will be in a position to make a more effective initial attack and keep the fire small. Stepped-up research in attack strategy, logistics, and techniques will be necessary.

I ask you to increase the Forest Service's budget to provide $150,000 for the Southern Forest Fire Laboratory. New knowledge about fire behavior is urgently needed to help reduce heavy fire loss.

Mr. RUARK. I am appearing before the committee on behalf of the Southern Forest Fire Laboratory at Macon, Ga. This is a new laboratory. It is, in fact, the first one in the world and has been in operation for about 5 years. At the laboratory there are several projects underway—weather, measurement of fire danger, the prescribed use of chemical retardants, and also some basic studies dealing with basic information.

THREAT OF AND LOSSES TO FOREST FIRES

Forest fires in the South, and other sections of the country, hold a great threat to our timberlands. In 1963, we had one of the worst fire situations in the eastern section of the country, the worst we have had in the last decade or so.

North Carolina lost 185,000 acres in 1 day. In Georgia, three persons died fighting forest fires some time during the day. I am not asking you or this committee to appropriate money for ordinary, everyday, small-size fires. It is the large blowup fire, or the conflagration-type fires, that bother us, and they are the fires where we suffered the greatest loss. They are the hardest fires to control.

New information is needed if we are to cope with this type of forest fire. And that is the reason I am here today. There is very little known about the free-burning fire. Very little or no research has been done, until the laboratory opened at Macon in 1959.

EXPANDING FOREST FIRE RESEARCH

We feel there is a greater need for the understanding of fire propagation and fire behavior so that the fire bosses will know more how to cope with fires and plan their activities. In the weather end of the research there at the laboratory we have a weather forecaster and a weather section, but we would like to enlarge this section to extend weather information so that we will be able to forecast fire behavior.

FORECASTING CONFLAGRATIONS

Today our weather forecasters can normally forecast tonadoes, hurricanes, and snowstorms, and so forth, but we have no information to help the forest firefighter that will forecast for him certain conditions that he might expect conflagrations to rise up overnight and to lose thousands of acres.

So we need to approach this from a keen standpoint with physicists, meteorologists, and chemists working together at the laboratory.

A second area within the prescribed burning field where fire is used as a management tool under control for many purposes under forest management.

CLASSIFYING FUEL TO ASSIST FIREFIGHTERS

A third area is to classify fuel so that the firefighter may better know what he is up against so he can make his plans ahead of time.

City fire departments, for example, moving into a downtown area have already ahead of time classified certain buildings and upon call the alarm is a three-alarm, or a five-alarm fire, meaning they need more equipment.

This is what is needed in forest firefighters, and the laboratory is striving to give them this information. So what we need to know is more about wild fires, the rate of growth, the energy potential, so that it can be accurately and promptly specified in the forest fire so that the fighter came in with his needed forces to make the attack.

New knowledge is needed by the laboratory to help and benefit the forest firefighter in the South, and in other sections of the country.

Mr. Roberts is with me and would like to make a statement regarding naval stores research.

Senator BYRD. All right, Mr. Roberts.

AMERICAN TURPENTINE FARMERS ASSOCIATION

STATEMENT OF C. A. ROBERTS, LAKE BUTLER, FLA.

NAVAL STORES RESEARCH

Mr. ROBERTS. Thank you, Mr. Chairman. I appreciate the opportunity of coming before you today. My name is C. A. Roberts. I am a forest landowner and a producer of gum for naval stores, and live at Lake Butler, Fla.

It is a pleasure to appear before this committee to represent the needs of the gum naval stores producers in the South. I am on the board of directors of the American Turpentine Farmers Association and have been an active member of the association for 25 years. That includes all the States.

Mr. Chairman, I would like, if it is permissible, to read a short statement.

Senator BYRD. All right.

Mr. ROBERTS. I am also proud to be a member of the Florida House of Representatives for the past 12 years. I am on the forestry committee and the appropriations committee.

STRENGTHENING GUM RESEARCH

The purpose of my appearing before your committee is to request that $70,000 be added to the U.S. Forest Service's budget to strengthen gum naval stores research at the Naval Stores and Timber Production Laboratory at Olustee, Fla.

This is something that will cut production, Senator, or cost rather, because we naturally use darkies altogether and we have had a bad time getting labor, or securing labor, and keeping it.

I would not think of trying to mislead you. It applies to 20,000 or 25,000 people. This appropriation would help that many people. I do not mean it would discontinue if we did not get it, but it would help.

I believe I filed with your secretary several copies of this so I will skip.

Reducing Cost of Gum Production

The research program at the U.S. Forest Service's Naval Stores and Timber Production Laboratory at Olustee, Fla., must be strengthened if we are to reduce the high cost of producing gum. Already competitive synthetics have entered the market.

Unless the cost of producing gum can be reduced, unemployment in our rural areas will continue to rise. It is through research that we must turn to keep this important segment of our southern economy on a paying basis. I do not have to tell you that where there is unemployment, welfare increases as does unemployment insurance payments.

I believe I will also leave that out because this is also in the statement.

Increasing Research Budget at Olustee, Fla.

I ask you to increase the research budget at Olustee, Fla., by $70,000 so that this small but important industry in gum naval stores, which gives employment to a large number of people from South Carolina to Texas, might continue to survive.

Research designed to reduce production cost must be intensified. There are many facts which indicate increased demand for gum naval stores products—only, however, if they can be produced at less cost than competitive products.

Approval by you of $70,000 for naval stores research will contribute tremendously to the efforts of the South in sharing in the Nation's growth and well-being.

Mr. Chairman, I have one of my largest producers from Florida and he is with me, and I would appreciate the privilege of introducing him. He is Mr. Pritchett, it is Marvin H. Pritchett. I guess I should add that he happens to be my son-in-law, so I was proud for him to come along with me.

Senator Byrd. That makes it more enjoyable.

Mr. Roberts. Thank you, Senator.

Member of Florida House of Representatives

Senator Byrd. I notice you are a member of the Florida House of Representatives. How long have you been a member of the house?

Mr. Roberts. I have been a member for 12 years and this will be 14 years since I was sent up without opposition last Tuesday.

Senator Byrd. How many days a year does your lower house meet?

Mr. Roberts. Sixty to ninety.

Senator Byrd. Do you meet every year?

Mr. Roberts. Every other year. We are thinking about meeting every year.

Senator Byrd. On how many committees do you serve?

Mr. Roberts. I am on eight.

Senator Byrd. I was a member of our house of delegates.

Mr. Roberts. I always thought you were a man about 60 or 70 years old, and now I find it different.

Senator Byrd. I started out in the house of delegates in 1947. I enjoyed my service there.

Mr. Roberts. I went to the house with a boy and he was just 21, so you just became 21 when you got over there, too.

Senator BYRD. I was a little older than that.
Mr. ROBERTS. Thank you very much.
Senator BYRD. Thank you, Mr. Roberts.
We will now hear from Mr. Robert F. Lederer.

AMERICAN ASSOCIATION OF NURSERYMEN

STATEMENT OF ROBERT F. LEDERER, EXECUTIVE ASSOCIATE

DEPARTMENT OF THE INTERIOR APPROPRIATION REQUESTS

Mr. LEDERER. I would like to file two statements today.
Senator BYRD. All right. I have both statements in my hand and they will both be included in the record.
(The statements referred to follow:)

My name is Robert F. Lederer and I am executive associate of the American Association of Nurserymen with offices at 835 Southern Building, Washington, D.C. The American Association of Nurserymen is a trade association composed of about 1,400 member firms engaged in or serving the nursery industry located in 48 States.

We have a very definite interest in two areas of the Interior Department appropriation bill, Mr. Chairman. With your permission I would like to speak briefly in favor of an increase in the appropriation for the North-Central Forest Biology Laboratories of the U.S. Forest Service located in Delaware, Ohio. Additionally I would like to file testimony in opposition to items in the appropriation bill which appear under "Title II—Related Agencies, Department of Agriculture, Forest Service." The American Association of Nurserymen continues to strongly oppose any appropriation which will make it possible for the Federal Government to produce tree seedlings. Our testimony on this subject will, in our opinion, prove our case.

Mr. Chairman, we would like to go on record in support of an additional sum of $150,000 for the Central States Forest Experiment Station in Delaware, Ohio. To my knowledge, this is the first time that a representative of the nursery industry has appeared before your committee to request an appropriation for a Forest Service activity. We feel, Mr. Chairman, that a research opportunity has come into being which, if successful, could lead to a savings to National, State, and local governments alone of many millions of dollars each year without even considering private property owners.

There have now been developed by the chemical industry a number of materials known as "systemics." These are chemicals which, it is my understanding, can enter the tree either by actual injection, through the roots, or through the leaves. However they enter, they become a part of the system of the tree in a manner somewhat similar to injection of vaccine into a human being. An example of what a systemic could accomplish can be taken from your own garden where you see a Japanese beetle, for instance, devour a rosebush while he does not touch the leaves on a dogwood tree because he finds them unpalatable.

Economically the most serious tree disease which shows every possibility of being cured by the use of systemics is the well-known Dutch Elm disease. Just by coincidence last Monday's Evening Star carried a long article concerning tree problems of the city of Washington. May I quote one paragraph:

"Dutch Elm disease is one of the few diseases which has been controlled here. Since 1947, when it was discovered, it has taken 10.9 percent of the city's American elms, which arch over streets the way no other tree does. The tree is so valued that records are kept of every one that dies. Last year the death toll was 439, about 1 percent of the 40,000 still alive."

Nearly 11 percent of the elm trees of this city dead—a city in which elm disease is considered to be "controlled." It is estimated that each one of these trees costs $250 for removal alone, without considering the value lost. In this city to remove just those trees killed by Dutch Elm disease in one year the cost was nearly $110,000. Dutch Elm disease is only one of the economically important pest problems that show great promise of being controlled or even eradicated by the use of systemics. Others would be oak wilt, gypsy moth, European pine shoot moth, plant viruses, and even the Japanese beetle.

We strongly urge, Mr. Chairman, the addition of $150,000 to the $25,000 proposed in the budget for the purpose of setting up a full-scale program at the North-Central Forest Biology Laboratories in Delaware, Ohio, to evaluate the many systemics which have been developed by industry.

I this program is successful in finding materials to control only Dutch Elm disease, it is easy to see that the city of Washington alone, in one year, will save more than the operating cost of the project.

Thank you for the opportunity of appearing before you today.

Members of the American Association of Nurserymen respectfully urge the subcommittee to take particular note of an item of approximately $300,000 for forest tree planting under State and private forestry cooperation (Clarke-McNary, sec. 4 funds) and an item of $1 million for "assistance to States for tree planting" (title IV of the Agricultural Act of 1956) in the Forest Service budget. This association has testified in opposition to both of these unnecessary Federal appropriations for a number of years. The Chamber of Commerce of the United States lists them in its publication, "Recommended Reductions or Savings for the 1965 Federal Budget."

The appropriation for Clarke-McNary section 4 funds in 1962 was $296,000. It was the same last year. We are informed by the Department of Agriculture that in 1962 these funds were distributed to 46 States, each State receiving approximately $4,200 which had to be matched. This would indicate that the total funds distributed were about $100,000 less than the total amount appropriated; the $100,000 was withheld for "administrative purposes." This statement may be substantiated by referring to page 1225, table B of the hearings before the Interior Appropriations Committee of the Senate which cover "Interior and Related Agencies Appropriations for 1963."

The first Clarke-McNary section 4 funds were appropriated in 1924 "to stimulate tree planting in the various States." In that year, $226,722 of State and private funds were expended for the same purpose, or four times the $50,000 Federal appropriation. In 1962, State and private expenditures (according to the Forest Service's own figures) amounted to $6,710,000, or 33 times the Federal Clarke-McNary funds. This is a Federal appropriation which is no longer needed.

The $1 million appropriated for assistance to States for tree planting is designed to be matched by the States and is for "planting, seeding, or site preparation and natural seeding." States taking advantage of these funds are required to submit a plan for use of this money which then must be approved by the Federal Government before an appropriation is made. According to the Forest Service, during fiscal 1962, 25 States submitted plans that were approved (p. 1120). These plans, we are informed, are not available except in the States concerned, so it is not possible to know if the $1 million was used for the purchase of seedlings or for other uses. Mr. Swingler of the Forest Service stated during these hearings, "We cooperate with the State foresters in producing and planting trees on State and privately owned land" (p. 1121).

Chairman Hayden stated (p. 1056), "Part of the funds asked for reforestation and stand improvement will be used to produce trees to meet the demands of a larger tree-planting program." And then requested the Forest Service to place in the record a list of existing as well as planned nurseries. The resulting statement on forest tree nurseries (p. 1057) reveals the fact that there are already existing 13 nurseries in 11 States with 4 more under construction in 3 States. The Forest Service estimated that $1,205,000 had been expended on these new nurseries in 1962 and that the proposed construction cost for fiscal year 1963 would be $680,000. It seems perfectly obvious that substantial sums of Federal money are being expended to create competition for commercial nurseries.

The type and amounts of seedlings which are destroyed each year by nurserymen is information which is not systematically recorded. However, there are enough recorded samples to point up the fact that this is a serious problem for seedling-producing nurserymen. In the State of Michigan, 10 million 3-year-old Austrian pine seedlings were offered to the State conservation department for planting on State-owned land and for reforestation and conservation purposes. Subsequently, 10 million Scotch pine seedlings were offered. When the offers were made the State was informed that if the seedlings were not accepted they would have to be destroyed because "they were planted 3 years ago when the seedling growers were assured that planting stock for the conservation reserve section of the soil bank would be purchased from private growers." Michigan nurserymen explained to the State that, "Competition from State and Federal tax-tree and tax-supported nurseries led to reduced sales and resultant over-

production by the private nurseries. As a result private growers plowed under several million seedlings last year (1960) that had been planted 4 years ago, because they had grown beyond planting age and size." The offer of Michigan nurserymen was turned down and Federal-State grown nursery stock used.

We have just recently been advised of a seedling grower in the Middle West who destroyed 300,000 seedlings of deciduous trees in 1962 as well as 50,000 red cedar seedlings. The latter production was based on estimated requirements furnished by the State forester of Kansas but the seedlings, instead of being purchased from private nurseries, were secured from the Federal nursery at Halsey, Nebr. As a result of this type of unfair competition, commercial nurserymen have drastically curtailed their production of seedlings. Their market has been taken away from them by their own tax dollars.

We respectfully submit that the commercial nursery industry is well able to produce all of the seedlings that are needed for reforestation and conservation planting and produce them more economically than Government-operated nurseries, and incidentally they will pay taxes to the Federal Government on business done. We hear a great deal these days of reducing taxes and increasing job opportunities. The nursery industry asks only for the right to sell its products in the marketplace without unfair, unrealistic competition from the Federal Government. We welcome the opportunity to pay taxes on the business done (something Government does not do). Give us back this portion of our rightful market and we will create jobs.

We respectfully urge that the $300,000 appropriation for State and private forestry cooperation and the $1 million appropriation under assistance to States for tree planting be removed from the Forest Service budget.

North-Central Forest Biology Laboratory, Delaware, Ohio

Mr. Lederer. The first covers what we consider to be one of the most important research opportunities to present itself to the horticultural field in many years. Our request is that $150,000 be added to the $25,000 proposed in the budget for the purpose of setting up a full-scale program at the North-Central Forest Biology Laboratory in Delaware, Ohio, to evaluate the many systemics which have been developed by the industry.

Dutch Elm Disease and Other Tree Enemies

Systemics are chemical materials which show great promise of saving literally millions of dollars of National, State, and local government funds alone without even taking into consideration savings to private property owners by controlling or even possibly eradicating Dutch elm disease and other serious street and forest tree enemies.

It is my understanding that systemics work in a tree or shrub in a manner somewhat similar to injection of vaccine into a human being—giving resistance to certain diseases.

Cost To Remove Diseased Trees

Here in Washington alone last year—just to remove trees killed by Dutch elm disease it cost nearly $110,000. I understand that in Washington they consider this disease to be "in control." They lose only 1 percent a year.

That figure, of course, does not include the cost to replace trees, or the cost of present control methods, or the esthetic value lost with these big elms that we have always loved here in town.

Our association has never before asked for money for any part of the Forest Service, Mr. Chairman, but we feel very strongly that the expenditure of a very small sum now will save many times its amount in just this city alone each year.

Opposition to Tree Planting Appropriations

The other statement I would like to file is in opposition to $1 million for tree planting under title IV of the Agriculture Act of 1956 and $300,000 for the same purpose under Clarke-McNary section 4 funds.

It occurs to me, if the Congress adopts both of these suggestions, the Treasury will end up $1,150,000 ahead, it would not otherwise have.

Senator Byrd. Thank you, Mr. Lederer.

We will now hear from Mrs. David Wallace, director, Oyster Institute of North America.

Oyster Institute of North America

STATEMENT OF MRS. DAVID WALLACE, DIRECTOR

Bureau of Fisheries

Senator Byrd. Mrs. Wallace, I am sorry you have been kept waiting. We are glad to have you here and look forward to your statement.

Mrs. Wallace. It is a pleasure to appear before you, Mr. Chairman, on a shell fishery matter. I am here with Mr. Kleb of New York to support the budget of the Bureau of Fisheries, and most important that portion which deals with the shell fisheries, the industry we represent.

We deeply appreciate our Government's aid to our industry which we consider essential, and we hope to increase the production of nutritious food. There are two amendments that have been added to the appropriation which we hope will get your approval.

MSX Brood Resistance Disease Research

One is extending the MSX brood resistance disease research program which is organized and is doing very well and we are very hopeful.

We may not need the money. I hope this does not hurt our cause, but if we should need it, we hope we do not disperse the team working on it and lose some very valuable information.

Sea Clam Industry Research

We also ask for money to set up a research program on the sea clam industry. Mr. Kleb came with me to answer any questions on that industry. He is most knowledgeable on any aspect of the sea clam industry.

Senator Byrd. You have been an excellent witness. My clerk, Mr. Eaton, tells me that the two New Jersey Senators have proposed the surf clam survey.

Mrs. Wallace. Yes, they have, and Congressman Glenn in the House has put it into the House bill.

Senator Byrd. With advocates like these distinguished Senators, it certainly seems to have persuasive sponsorship. I would say with an excellent witness like you it is doubly persuasive.

Mr. Kleb, would you like to add to what Mrs. Wallace has said?

EASTERN SEA CLAM PACKERS COMMITTEE OF OYSTER INSTITUTE

STATEMENT OF WILLIAM KLEB, CHAIRMAN

MSX AND SEA CLAM RESEARCH

Mr. KLEB. I would just like to say the same things she said in regard to our industry's plight. I would say that we are in dire need of this research and exploration which is on the agenda.

Mrs. WALLACE. You have it well documented, the need and for what specific purposes the money would be used if appropriated. It has been well documented both in the House and the Senate, and we hope to spare you that. I think you have a brief statement right over there about the sea clam industry. There is one on the MSX and one on the sea clam.

Senator BYRD. Would you like these to be inserted in the record?

PRIVATE RESEARCH PROGRAMS

Mrs. WALLACE. Yes. Now the sea clam industry, itself, has appropriated and raised by voluntary cooperative efforts $27,000. We have research programs on our own and with that have captured the imagination and support of the Bureau of Commercial Fisheries, and they are supporting us the whole way.

(The statements referred to follow:)

PROPAGATION OF DISEASE-RESISTANT OYSTERS

One important reason for the steady decline in oyster production in the United States has been the serious losses by epidemic disease in the most productive areas of the Atlantic coast. Recurrence of such catastrophes can be averted by developing disease-resistant strains. The techniques for such developments are well understood for domestic animals, and the same principles can be applied to shellfish.

Public Law 87–580 authorized $100,000 for such purposes, and funds were made available in the fiscal year 1964 budget of the Bureau of Commercial Fisheries. The States of New Jersey, Delaware, Maryland, and Virginia are contributing $50,000 in matching funds, and contracts with the States, who will do the research, will be signed soon. Unfortunately, Public Law 87–580 specifically limits the study to 1 year. The complicated and painstaking studies necessary to achieve the objectives of this work cannot be completed in such a short time, and much of this effort will be wasted unless funds can be provided for a longer period.

It is necessary to carry the progeny of the selected stock through at least one generation in order to test the effectiveness of the experiment. This will require a minimum period of 3 years before preliminary results, indicating the possibility of success can be achieved.

ATLANTIC COAST SURF-CLAM FISHERY

The molluscan shellfish industry of the United States has suffered a steady decline in production in almost all coastal areas of the country. Total U.S. oyster production is less than one-third of the level in 1900. Total clam production, exclusive of surf clams, has dropped almost 50 percent since the end of World War II.

The relatively new surf-clam fishery, on the contrary, has shown a strong and steady rise in production since the end of World War II. Before 1945 this was an insignificant fishery. Today, it produces well over 30 million pounds of meats annually, and accounts for about 60 percent of total U.S. clam production.

The present fishery covers only a very small area of the total range of this valuable clam. Abundance of clams on grounds now being fished is rapidly dropping to unprofitable levels. Two avenues of approach are needed urgently: (1) develop more efficient gear to harvest surf clams economically on grounds less

accessible or less densely populated, and (2) increase our knowledge of the biology of the resource to provide a scientific background for rational utilization of the resource.

OYSTER PRODUCTION DECLINE

Senator BYRD. Tell me something about the decline in oyster production.

Mrs. WALLACE. I say the "P's" have us, pollution you know. Pollution hits us from so many different directions. If it does not hurt the species itself, it will eliminate it in its larval form. Of course, there are so many different kinds of pollution.

It often will eliminate one of the links in a food chain and the oysters grow up to a certain point, stop and die, because that next bit of plankton, or whatever it might be is missing. We have been working very, very hard on pollution legislation.

Then, we have in our States some laws that absolutely would work against the industry. Believe it or not, they were made in good faith, but tradition plays a big part here. We have predators. Everyone likes the oyster, including man.

MSX RESEARCH

You might include him as a predator. Then, in about 1957 we had MSX which is a multinucleid protazorn, the type of which they cannot even decide. They call it haplosporidiun, but they do not know what it is.

This research provides for additional investigations on that. We feel in our bones we are near a real breakthrough on this, when we will be able to transmit this disease and once we do, we will be able to break that link, you know, find out what it cannot stand, apply that pressure, and thereby bring back the oyster in New York, the Delaware Bay, and Chesapeake Bay, which have been the locations of that.

Last year the decline was 7 million pounds, chiefly because of this disease. We do not like to say "disease." We say ailment or scourge.

AILMENTS OR SCOURGES

Senator BYRD. What are some of these ailments or scourges?

Mrs. WALLACE. Dermosistidium is a fungus which operates in the summertime. They are hit in the summertime. You think you have a nice set of oysters in the spring and in the fall you do not. High salinity, crowded conditions, all make for epidemic proportions of dermosistidium.

Now there are many other diseases, parasites or coinhabitants which may or may not harm the oyster to the point of being useful. Would you like some other names?

Senator BYRD. I do not recognize any of them. I was interested in your statement.

Mrs. WALLACE. There is a group of fungi that attacks and then there is a group of protazoan. One is called the SSO organism. It is found only on the Virginia and Maryland seashore, you know, the oceanside. That is the only place it will grow.

But, then, we have a large decimation with accidents, accidents which wipe out a big area. It does not take much.

Senator BYRD. Your approach, therefore, is to develop disease-resistant strains?

Mrs. WALLACE. Yes, sir; on this particular one.
Senator BYRD. On this most serious one, I suppose.
Mrs. WALLACE. That is by far the most serious.

STATES SHARING RESEARCH COSTS

Senator BYRD. Do some of the States share in the cost of this?
Mrs. WALLACE. Four of them; Delaware, Maryland, Virginia, New Jersey. All of their facilities, you know the State facilities, private organizations, Rutgers University is one of our leaders, and then the Federal laboratories are all in a common effort trying to break this.
Senator BYRD. Are these the most productive areas in the country?

CHESAPEAKE BAY

Mrs. WALLACE. Absolutely. Japan has said that Chesapeake Bay could feed our entire nation.
Senator BYRD. Our Nation?
Mrs. WALLACE. Their nation. Their inland sea is nothing comparable with Cheaspeake Bay and its nutrients that are available for seafood, it has the right temperature, the right interchange of waters, everything works together in the Chesapeake Bay.

DELAWARE BAY

The second most valuable bay is the Delaware Bay, but unfortunately it is far more polluted so that they have not been able to realize their resources.
Senator BYRD. What other areas are oyster-producing areas?

OYSTER PRODUCING

Mrs. WALLACE. We have a big operation on the west coast. Are you familiar with that?
Senator BYRD. No.
Mrs. WALLACE. You will be, because the seed from that is brought over by freighter taking a journey of 3 weeks to this country and planted. Our waters in the Northwest are too cold for the reproduction of the big oyster.
It gets this big. This is a canned oyster product. But with the scarcity here, of course, they are beginning to develop a raw bar stock oyster, too.
Senator BYRD. How does this big oyster compare with the oysters in the Chesapeake Bay?
Mrs. WALLACE. It is a different species. If prepared as directed, it is superb. But if you treat it as an eastern oyster, you will have a disappointment on your hands. We so-called wine broiled them for a party we had here, and nobody ever got around to the beef and chicken. They are superb.

GULF OF MEXICO

Then, there is the gulf, of course. The gulf at this moment is the healthiest segment of our oyster industry, the southern oyster.

Senator BYRD. This disease, as you did not want to term it, has not spread to the gulf, has it?

Mrs. WALLACE. No, it does not have that. It has proportionately more dermosistidium. It occurs in the third year, so we harvest them in the second year and take care of that.

You can tell ahead of time and in that case we spread them out. Mr. Kleb harvests his products in the sea.

Senator BYRD. Do you have anything further, Mr. Kleb?

CLAM RESEARCH

Mr. KLEB. I would like to say that our situation takes us out in the ocean from 12 to 20 miles offshore, and our product is one of the clams you never hear anything about anything happening to, because every one of our clams is cleaned. There is so much that we have to know about this clam.

Our beds are being depleted. This is the last area that we know of where we are working. We know that these clams spawn every year. We do not know where the spawn goes. We have searched hither and yonder, and we do not know too much about this clam, although we have been in the business for 25 years.

DEVELOPMENT OF BEDS

As I said, we are about at the end of our rope in regard to further beds.

Mrs. WALLACE. You know of this clam. It is the one that comes in a can, and you mix it up with cream cheese, and it makes a marvelous bit. That is the industry we are talking about here.

Senator BYRD. Fine. Your statements have been included in the record; and you made a fine statement extemporaneously. You have made a very good presentation. Thank you.

Dr. Jackson M. Anderson, assistant executive secretary of the American Association for Health, Physical Education, and Recreation, will be our final witness, I believe, here today.

AMERICAN ASSOCIATION FOR HEALTH, PHYSICAL EDUCATION, AND RECREATION

STATEMENT OF DR. JACKSON M. ANDERSON, ASSISTANT EXECUTIVE SECRETARY

BUREAU OF OUTDOOR RECREATION BUDGET REQUEST

Dr. ANDERSON. Thank you, Mr. Chairman. I am, for the record, Jackson M. Anderson, and I want to express the appreciation of our association for the opportunity of appearing before this committee.

I am asking your permission, Mr. Chairman, since this is so brief, to make the points I have made in my letter.

Senator BYRD. Yes.

Dr. ANDERSON. The American Association for Health, Physical Education, and Recreation, which is a department of the National Education Association, strongly supports the Bureau of Outdoor Recreation's budget request of $2,700,000 for the fiscal year 1965, which is now being considered by your committee.

The officers and members of our association have been quite impressed with the splendid work which has been accomplished by the

Bureau of Outdoor Recreation during the short time it has been in existence. In spite of its limited resources, the Bureau has given aggressive leadership to an area of concern which we feel is vital to the welfare of our Nation. However, the Bureau cannot continue its fine work without the funds requested.

Federal, State, and Local Coordination

The preparation of a nationwide plan is of vital importance to assure coordinated action at Federal, State, and local levels. The 35,000 members of our association are organized into 50 State associations.

They are particularly concerned about the important impact the Bureau's program will have at the State and local levels. They are looking to the Bureau for assistance in developing statewide recreation plans which will reach down into their local communities and will also be an important part of the overall nationwide plan.

The requested funds will also make possible the coordination of important recreation studies. Another aspect of the Bureau's program in which we have a keen interest is the help which will be given to the preparation of the necessary leadership for outdoor recreation programs.

Demand for Outdoor Recreation Exceeding Supply

With an exploding population, higher incomes, shorter working hours, and longer vacations, increasing millions of people will be seeking outdoor recreation each year. The demand for outdoor recreation is already far exceeding the supply. If the Bureau of Outdoor Recreation is to give the needed leadership in helping to solve this important problem, the requested appropriation must be forthcoming.

We urge your support and that of your committee in approving this budget request which we feel is vital to make possible adequate outdoor recreation opportunities for the citizens of our country.

This completes our thinking on this, Mr. Chairman, and if you have any questions, I would be happy to try to answer them.

Senator Byrd. I have no questions, Dr. Anderson. I again express appreciation for your appearance before the subcommittee today.

Conclusion of Hearings

This concludes the hearing of this subcommittee for the fiscal year 1965 budget for the Department of Interior and related agencies. The committee will stand adjourned.

(Whereupon, at 12:50 p.m., Friday, March 6, 1964, the hearings were concluded.)

Additional Material for the Record

(Clerk's Note.—At the direction of the Chairman, the following material will be included in the record.)

(The material referred to follows:)

Letter From Charles H. Stoddard, Director, Bureau of Land Management, Clarifying Testimony Regarding Fees Charged for Use of Facilities Provided in Campgrounds on Public Lands

U.S. Department of the Interior,
Bureau of Land Management,
Washington, D.C., March 5, 1964.

Hon. Carl Hayden,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.

Dear Mr. Chairman: I would like to clarify one point in my testimony before the committee on the Bureau of Land Management's appropriation. The question was asked by Senators Bible and McGee whether fees would be charged for the use of facilities provided in campgrounds on public lands and possible relationship to the land and water conservation fund bill.

That bill, as reported to the House, provides that no entrance or admission charge for recreation use of the public domain per se could be made. The language of the bill is clear on this point: "Entrance and admission fees may be charged at land or water areas administered primarily for scenic, scientific, historical, cultural, recreational, or wilderness purposes." This means that no recreation entrance or admission fee could be charged to an entire grazing district, for example, because such an area, even though it might be used for simple recreation purposes, is not administered primarily for any one of the specified purposes. With respect to entrance and admission fees, the House Interior Committee report on the fund bill (H. Rept. 900) emphasizes that "the bill will not be applicable to areas where recreation is purely incidental to another major purpose of the area, to areas where neither Federal personnel nor Federal facilities are provided for the recreationist, * * *"

I hope this will clarify any confusion that may have been left as a result of my statement, and I will appreciate your incorporating it into the record.

Sincerely yours,

Charles H. Stoddard, *Director.*

Letter From Senator George McGovern Urging Additional Funds for Law Enforcement

U.S. Senate,
Committee on Agriculture and Forestry,
March 12, 1964.

Hon. Carl Hayden,
U.S. Senate,
Washington, D.C.

Dear Carl: I have been contacted by William Whirlwind Horse, president of the Oglala Sioux Tribal Council at Pine Ridge, S. Dak. Mr. Whirlwind Horse is an old and respected friend of mine and I value his judgments.

He indicates a great need for an additional $100,000 in Bureau of Indian Affairs appropriations for fiscal 1965 on the Pine Ridge Indian Reservation, to be used for law enforcement. He has supported this request with documentation and certification regarding this need.

Permit me to say that I would personally appreciate any consideration you can give to this request at the markup session. It appears that the request is modest and I can certainly subscribe to its need.

With warm personal regards, I am,

Sincerely,

George McGovern.

STATEMENT BY SENATOR GALE W. McGEE CONCERNING MANAGEMENT OF THE WYOMING ELK RANGE

I have been greatly concerned about the worsening condition of much of our rangeland that is of vital importance to our herds of big game. In my State wildlife constitutes an important resource and hunting of big game, such as elk, is an important recreational pursuit as well as being an income-producing activity. In many places big game is in direct competition with domestic livestock for the scanty herbage, and in other places overpopulation of elk has severely damaged the vegetative cover, disturbed the soil, and caused excessive erosion. I believe a sound program of research should be undertaken by the Forest Service at Laramie to determine how best to manage these big-game ranges so as to maintain a good level of population in harmony with other uses.

I have asked the Forest Service to supply me with information as to the problem, research needed, and what the estimated cost would be. I ask that the material they supplied at my request be placed in the record.

(Statement from Forest Service referred to by Senator McGee follows:)

IMPROVEMENT AND MANAGEMENT OF ELK RANGE IN WYOMING

The elk herds of Wyoming are nationally known, both for their esthetic qualities and for their association with sports hunting. Countless numbers of tourists visiting such places as the Grand Teton and Yellowstone National Parks and adjacent national forests enjoy seeing the animals. Hunters harvested approximately 7,000 elk in 1962 while enjoying nearly 30,000 man-days of recreation.

Management of these elk herds is complicated. Critical ranges have been overused, not only by the elk but also by livestock using them either simultaneously or at different seasons. This range abuse has serious impacts on both watershed values and fish habitat. There are also very direct relationships between elk habitat management and timber management. For example, clear cutting lodgepole pine or logging other forest areas is often followed by increased forage production and a concentration of elk in localized areas. This kind of elk range is transitory and serious conflicts frequently develop in the supply and demand for forage and the regeneration of the forest.

Research is needed to determine the interrelations between elk and livestock which will permit restoration of abused ranges. The program of work would be designed to develop and evaluate management systems to allow efficient and harmonious use of forage resources while stabilizing soils in critical watersheds. Where ranges are so deteriorated that primary native forage plants have been destroyed, additional research is needed to find ways of improving these areas artificially. Management methods must also be developed to allow maximum use of transitory ranges created by cutting timber while at the same time permitting new stands of timber to develop.

The Forest Service short-range plans call for at least $90,000 to implement the research when the financial situation makes such a program feasible. No funds are available in the fiscal year 1965 budget for this research. The recently completed Forest Range and Watershed Laboratory at Laramie is equipped to facilitate basic ecological and physiological research to support work done in field locations. Results obtained through this project would be generally applicable to elk habitat throughout the Rocky Mountains.

LETTER FROM CHARLES F. SCHWAN, JR., DIRECTOR, WASHINGTON OFFICE, THE COUNCIL OF STATE GOVERNMENTS, CONCERNING ADDITIONAL FUNDS FOR U.S. GEOLOGICAL SURVEY

Hon. CARL HAYDEN,
Chairman, Subcommittee on the Department of the Interior and Related Agencies, Senate Committee on Appropriations, the Capitol, Washington, D.C.

DEAR SENATOR HAYDEN: It is my understanding that increased appropriations for the water quality program of the U.S. Geological Survey were deleted by the Bureau of the Budget because of a possible duplication of effort by the Survey and the U.S. Public Health Service. Later, in testimony before your Appropriations Subcommittee, it was stated that the Survey had sufficient funds to carry out its program with respect to surface and ground water aspects, but that it lacked $200,000 to match State offerings with respect to the Federal-State water quality program.

Obviously there would ordinarily be no involvement by the Council of State Governments in a matter of this nature but, in this instance, we are concerned because a portion of the Geological Survey appropriation is used to match on a 50–50 basis State-contributed funds in order to accomplish a predetermined water program of a State as well as the Federal agency. An insufficiency of funds made available to the Survey seriously impedes the work of the State involved. Secondarily, the work of the Geological Survey with its own funds additionally supplies a great deal of information that is essential to the States for planning and carrying out water development and conservation programs.

As we understant it, the denial of additional funds to the Geological Survey was based on an internal matter within the executive branch, toward the resolution of which significant progress has been made. While we understand and sympathize with the aim of avoiding possible duplication of work, we are concerned that paying exclusive attention to the accomplishment of this aim may jeopardize a longstanding Federal-State program.

It occurs to us that a possible course of action might be to reprogram the Survey's 1965 appropriation so as to enable the Survey to proceed on schedule to match State-contributed funds with some kind of "gentlemen's agreement" that the Bureau of the Budget would transmit as soon as practicable a supplemental 1965 appropriation to restore the reprogramed funds to those items of the Survey's program from which they would be taken.

Thank you for your consideration of this important matter.

Yours very truly,

CHARLES F. SCHWAN, Jr.,
Director, Washington Office.

LETTER FROM SENATOR HARRISON A. WILLIAMS, JR., URGING ADDITIONAL APPROPRIATIONS FOR THE ATLANTIC MARINE GAME FISH RESEARCH CENTER AT SANDY HOOK, N.J.

MARCH 12, 1964.

Hon. CARL HAYDEN,
Chairman, Interior Appropriations Subcommittee,
U.S. Senate,
Washington, D.C.

DEAR MR. CHAIRMAN: I appreciate very much this opportunity to submit a statement concerning the need for additional appropriations for the Atlantic Marine Game Fish Research Center at Sandy Hook, N.J. As you know, I have been vitally interested in the Sandy Hook Laboratory since it was first established in 1960.

The work carried on at Sandy Hook is not of concern only to the economy of New Jersey and the other Atlantic Coast States or to the fishermen of the area. Its program is crucial to an increasingly important segment of our entire economy. Today there are more than 7 million salt water fishermen who spend $700 million a year for bait, equipment, accommodations, charter boats and other needs. I understand that in Florida alone, salt water fishing has an economic value equal to that of the citrus and cattle industries combined. And Dr. Lionel A. Walford, the distinguished scientist who directs the Sandy Hook Laboratory, estimates that there will be 15 million anglers by 1980.

Yet our knowledge of our game fish, the one resource upon which this economic and recreational asset is based, is pitifully small. We do not know, for example, the complete life history of a single marine game fish. We know all too well the results of such ignorance or lack of proper conservation measures on and over our land. The passenger pigeon is extinct and we are waging a last-ditch battle to preserve the whooping crane. Unfortunately, this same conservation crisis is developing for the game fish resources of the ocean. On the Atlantic coast the yellowtail flounder, which used to abound off southern New England, is almost gone from the area.

The work at Sandy Hook and its subsidiary facility at Tiburon, Calif., is our sole research effort to probe the vast chasm that is our ignorance of everything about marine game fish.

This fledgling program has been stunted from the start by the lack of adequate funds. Yet despite having to do without, devise makeshift equipment, borrow the use of a vessel and the assistance of volunteers, the dedication, economies and ingenuity of Dr. Walford and his outstanding staff have already accomplished valuable work. A study of sharks along the Jersey coast was of immediate practical value to the commercial menhaden fishing industry. Now underway at

Sandy Hook is the most fundamental of all research in this area—a study of phytoplankton, the food of the sea upon which all marine life ultimately depends for existence—yet much more needs to be done.

Mr. Chairman, the budget request for the Sandy Hook Laboratory in fiscal year 1965 includes only $168,000; just enough to continue operating at last year's level. Additional funds are urgently needed: $300,000 for operation of Sandy Hook's new vessel; $50,000 for operation of a new sea-water tank; and $30,000 to plan a census of the game fish catch and marine anglers. I will comment only briefly on these items since I know the statement by Mr. Richard C. Wolff which I am privileged to submit to you will present detailed and expert information on them.

Last year, your committee approved an additional $80,000 for Sandy Hook which made possible the acquisition of a Government surplus vessel that is now equipped and ready for use. Unless an additional $300,000 is provided, however, our $80,000 investment will remain tied at its wharf. With that amount, this new floating laboratory could operate year round—the most economical and effective way to study the 5,000 miles of our coastline.

With your committee's approval of $52,000 last year, a unique sea-water tank was constructed for the closeup study of game fish. This, too, will be a lost investment if $50,000 is not provided for it to function.

The proposed feasibility study and field test for a census of game fishermen and their catch is basic for all Sandy Hook's research, but it cannot be undertaken unless $30,000 is made available.

In my judgment, approval of these additional sums is essential not only to permit proper conduct of this important research but also to justify our past investment in it. I would like to emphasize that we certainly get our money's worth. As one anglers' club stated, in urging approval of these funds, "They do not look at a dollar twice before they spend it—they look at it three times. The dollars they see are hard to come by." And in this program our investment is multiplied because of the assistance rendered by the remarkable group of volunteer skindivers from the American Littoral Society who freely give their time and effort to help in much of Sandy Hook's research. In addition, fishing clubs and industry have already indicated great interest and willingness to help in any way possible in the proposed census.

Mr. Chairman, I strongly urge the committee's approval of these additional funds. It would be a profitable and prudent investment; to deny these essential appropriations would be false economy.

I would appreciate greatly if the attached statement by Mr. Richard C. Wolff could be included in the hearing record. In addition, I am enclosing an excellent article on Sandy Hook from the March 9, 1964, issue of Sports Illustrated for inclusion in the record if you deem it appropriate.

With best personal regards.

Sincerely,

HARRISON A. WILLIAMS, Jr.

(Statement by Richard C. Wolff referred to in Senator Williams' letter follows:)

STATEMENT OF RICHARD C. WOLFF ON FEDERAL MARINE RESEARCH APPROPRIATIONS, U.S. BUREAU OF SPORTS FISHERIES AND WILDLIFE, SUBMITTED MARCH 10, 1964, TO SENATE APPROPRIATIONS COMMITTEE, ROOM 1235, NEW SENATE OFFICE BUILDING, WASHINGTON, D.C.

Mr. Chairman, this statement is directed at the totally inadequate budget request for $262,000 in fiscal year 1965 to operate the entire Federal marine research program which is headquartered at Sandy Hook, N.J., on the Atlantic coast, with a second laboratory at Tiburon, Calif.

It is offered on behalf of the National Association of Marine Anglers, which I head, and reflects the concern of many of my colleagues in the 1,200-member Outdoor Writers Association of America and of several companies in the sports fishing field including the Garcia Corp., a leading tackle manufacturer, of which I am vice president.

The administration's request, less than 10 percent of the amount Congress provided might be appropriated annually for this vital program, is inadequate, unrealistic, and verges on the irrational.

Last year, many Members of Congress were properly alarmed by reports from many coastal communities of the unexplained disappearance of important species of gamefish, highly prized by the more than 7 million salt water anglers in the United States who invest an average of $100 each year in pursuit of this sport.

As a result, this committee recommended some $80,000 in additional funds so that a surplus vessel could be redesigned and outfitted for a 5,000-mile coastline survey of salt water gamefish extending out as far as the Continental Shelf.

Under the direction of Dr. Lionel Walford, head of the Federal Marine Lab, at Sandy Hook, such a vessel has been acquired and is now being outfitted. However, not a cent for the operation of this unique project is provided in the budget request before you now. Unless Congress acts, on July 1, 1964, the start of the next fiscal year, this vessel will be securely anchored inshore—deserted as a ghost ship.

Marine authorities advise us that for the most efficient and economical operation, it should be run year round at a minimum cost of $300,000 for fiscal year 1965. That amount would launch the ship at the first national study of game fish abundance, breeding, and migration habits, on a county-by-county basis with special attention to fish depletion problems already threatening local econo-, mies in 21 coastal States. These states are: Alabama, California, Connecticut, Delaware, Florida, Georgia, Louisiana, Maine, Maryland, Massachusetts, Mississippi, New Hampshire, New Jersey, New York, North Carolina, Oregon Rhode Island, South Carolina, Texas, Virginia, and Washington.

The second glaring budgetary omission concerns the world's first salt water undersea laboratory constructed at Sandy Hook, N.J. Here, in a specially equipped tank, important gamefish species may be studied close up through glass walls to determine the kind of marine environment resulting in abundant sports fishing. Even though Congress appropriated $52,000 in construction funds last year to build this unique facility, there is not one penny included in the budget before the committee to run it. An additional $50,000 is needed for this operation in the new fiscal year. Otherwise, Sandy Hook will wind up with the largest, emptiest indoor salt water pool in the world.

The third appropriations need of vital importance now is for $30,000 to conduct a feasibility study and field test preparatory to the first national census of the number of salt water game fish caught by recreational anglers every year. Marine researchers believe salt water fishermen are increasing at the rate of 400,000 a year. Already, their total catch of fin food fish exceeds the harvest taken by the entire U.S. commercial fishing industry. But an increasing number are fishing in troubled waters. Ed Buckow, outdoor editor of the Palm Beach Post Times, reports a 5-year downward trend in the business done in boat and tackle shops, harming the economy of the entire Palm Beach area. It is traced directly to the depletion of major game fish species in local waters. Higher up on the Atlantic coast, the fluke is vanishing and John Suydam, head of the National Party Boat Owners Association reports business has nosedived by 50 percent, endangering many jobs unless other game fish can be found to replace it.

To improve and expand our salt water sport fishing facilities and to formulate effective programs for marine game fish conservation—the key objectives of this Federal program—a national census of game fish and marine anglers is indispensable. Once a feasible plan is prepared, I will do everything in my power to enlist the wholehearted cooperation of the fishing clubs and private companies active in this field.

For a detailed report of the major miracles of marine research already performed by dedicated professionals and their volunteers, I respectfully call the committee's attention to a feature article titled, "A New Look Into the Sea," by Robert H. Boyle in the national magazine, Sports Illustrated, March 9, 1964. It describes the amazing work underway at Sandy Hook despite the meager budget.

Many Americans concerned with the future of salt water angling believe the opportunity it affords millions for healthful, outdoor recreation may well be its major contribution to the Nation's welfare. But how does one measure accurately such all-important yet intangible benefits? Fortunately, recreational fishing does have an enormous impact on our economy and the yardstick most commonly used involves a comparison between sport and commercial fishing.

Official Government figures show that the total value of the commercial salt water catch in the United States is in the neighborhood of $350 million annually. In sharp contrast, salt water fishing for sport involves an annual expenditure of more than $700 million annually, and it is increasing at the rate of $40 million a year. This sum covers the cost of transportation to coastal areas, food and lodging while there, plus motors, fishing equipment, boats and other chartering facilities. In dollars and cents, sports fishing has double the economic impact of commercial angling in salt water alone. Federal support for these groups does not, unfortunately, reflect that fact. Just the opposite is true.

By July of this year, Federal expenditures for research and development benefiting the Nation's 129,000 commercial fishermen are expected to average

$240 per fisherman. But, add up the budget request already proposed for the entire Federal marine research program plus the additional funds I have suggested on the basis of urgent need, and the overall expenditure averages out to less than 9 cents for every recreational salt water angler in the Nation. It is an investment we will never regret.

LETTER FROM STEERING COMMITTEE OF NEW YORK CONGRESSIONAL DELEGATION REGARDING AN ADDITIONAL APPROPRIATION TO CONSTRUCTION BUDGET OF BUREAU OF SPORT FISHERIES AND WILDLIFE FOR RENOVATING FEDERAL FISH HATCHERY AT CORTLAND, N.Y.

MARCH 3, 1964.

Hon. CARL HAYDEN,
Chairman, Subcommittee on Department of Interior and Related Agencies, Senate Appropriations Committee, Old Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: It has been brought to this committee's attention that the Federal Fish Hatchery at Cortland, N.Y., conducting outstanding research on nutrition requirements of fish in this country and serving as a training station for Federal and State fish hatchery personnel coming from all parts of the Nation, is housed in antiquated frame buildings. Other supporting facilities at the station are, according to information submitted to us, completely inadequate and obsolete for the important job being done there. Engineering planning for new and enlarged buildings has been undertaken with cost estimates totaling $975,000.

It is understood the Director of the Bureau of Sport Fisheries and Wildlife, U.S. Fish and Wildlife Service, several years ago requested this fund. Because of the seemingly important nature of this research, with its resultant finding to the benefit of the country as a whole, it is urged that your committee now consider inclusion of this item in the fiscal year 1965 appropriation measure.

Your every consideration to this request will be greatly appreciated.

Yours very truly,

Representative EMANUEL CELLER, *Chairman.*
Senator JACOB K. JAVITS.
Representative JAMES J. DELANEY.
Representative WILLIAM E. MILLER.
Representative LEO W. O'BRIEN.
Representative STEVEN B. DEROUNIAN.

STATEMENT BY PHILIP A. DOUGLAS, EXECUTIVE SECRETARY, SPORT FISHING INSTITUTE, CONCERNING APPROPRIATIONS FOR BUREAU OF SPORT FISHERIES AND WILDLIFE AND BUREAU OF OUTDOOR RECREATION

Mr. Chairman and members of the committee, my name is Philip A. Douglas. I am executive secretary of the Sport Fishing Institute, located in Washington, D.C. The objective of the Sport Fishing Institute is a simple one. It is to improve sport fishing to the fullest extent possible through encouraging the rapid development and application of sound fish conservation practices; in short, "to help shorten the time between bites." We are a nonprofit organization, deriving our operating funds from a wide representation of sport fishing equipment manufacturers, related industries, and concerned individuals.

The Sport Fishing Institute appreciates the opportunity to appear before your committee. At the outset, I should like to associate myself and Sport Fishing Institute with the testimony of my colleagues in conservation representing their various national organizations here today. We support their recommendations for additional funds to strengthen the several aspects of the Federal programs to which they have addressed themselves.

In the interest of time, I will confine my specific comment to the proposed budget items representing the fishery programs which are the responsibility of the Bureau of Sport Fisheries and Wildlife and to the operating budget of the Bureau of Outdoor Recreation. Too, these are the areas of special concern and professional competence that Sport Fishing Institute represents in conservation matters.

RESERVOIR AND SALTWATER SPORT FISHERIES

Sport fishing in lakes, reservoirs, streams, along the coasts and in the oceans is recognized today as one of the leading participant forms of outdoor recreation.

It's been proven to be a highly healthful sport, both for mind and body. The hypertensions of today's existence require that we pursue occasionally "a dignified way of doing nothing." Fifty-seven million people fished for sport at least once this past year, with some 32,600,000 habitual anglers accounted for among them.

Where all the people fished is detailed in ORRRC's Study Report No. 7 entitled "Sport Fishing—Today and Tomorrow." Estimates indicated that 31 percent went to manmade lakes and 17 percent to the oceans' shores, bays, and open waters. Within about a dozen years, not very far off, numbers of anglers are expected to double. Trends show that by 1976, reservoir fishing will encompass 44 percent of the fishing and marine waters, 22 percent of the total of such activity. Two-thirds of all angling, therefore, will be done in reservoirs or marine waters by 1976. This pretty well points up the needed priority in programing to further the fresh and salt water sport fisheries of this Nation.

A huge national problem confronts us when we attempt to figure out where and how we'll be able to support this tremendous pressure. The devastation by pollution of many of our estuarine "nursery grounds" for saltwater forage and game fish, the decline of sport fishing in many (not all) older reservoirs—is it because of the poor quality of inflowing waters, the depletion or unavailability of nutrients, intraspecific and interspecific competition, water level fluctuations, turbidity, temperature regimen, or oxygen levels, etc., etc.? Look at how ignorant we really are.

We estimate that Americans invested about $3 billion in goods and services required for recreational fishing purposes in 1963; this is a considerable factor in the Nation's economy. Even more important, fishing probably provided some 575 million man-days of outdoor recreation—vitally needed therapy in today's nerve-jangling world. The Izaak Walton League of America discovered that pollution of angling waters probably prevented an estimated 325 million daily fishing trips in 1960, a loss of about $682 million to the sport fishing industry and the Nation's economy that year. We're dealing in significant terms and our planning programs should reflect this fact. They don't.

Our basic knowledge of how best and most efficiently to manage one of our most important renewable natural resources is extremely limited. We just don't know answers to many of the very basic questions confronting us daily. Basic, as distinct from applied, research is the only way we'll ever be able to gain such knowledge. Yet, to look at some of the budgets established to find solutions to many of these perplexing problems is one of the most discouraging facts we must face today.

The Federal Government, acting through the Bureau of Sport Fisheries and Wildlife, should undertake the necessarily long-term basic research that must precede and provide the missing base for the applied fishery research programs which the States can and do handle. Many of the principal multiple-use impoundments in the United States today, and most certainly our coastal waters, are interstate to one degree or another, and are therefore a Federal responsibility. Many of our inland reservoirs are generally financed and built by the U.S. Army Corps of Engineers or the Bureau of Reclamation. Our estuaries, bays, and coasts, also under Federal cognizance, are being polluted and otherwise greatly damaged largely because of antiquated and inadequate practices. I submit that long-term basic research on the natural resources in these waters is a primary responsibility of the Federal department or departments involved.

The Federal program for reservoir and marine game fish research falls far short of the minimal needs. Current budgetary allocations are a mere $330,000 and $262,000, respectively. In fiscal year 1963–64, these figures were $326,000 and $257,000, but the apparent slight increases for the actual programs constitute practical decreases due to anticipated salary increases in 1965. Sport Fishing Institute has persistently requested the Congress to augment these paltry figures to bring the annual allocations to at least a minimum working figure of $600,000 for reservoir research and $850,000 for marine game fish research. There is no question of authority to be active in this work because the Department of the Interior has such authority under the Fish and Wildlife Act of 1956, as amended (16 U.S.C., 742a et seq.), to conduct a fishery research program on reservoirs and in marine waters. The latter authority specifically emphasized, further, in the Marine Game Fish Research Act of 1959 (Public Law 86–359).

Now, a bare beginning has been made through establishment of two small reservoir research units: one to study productivity and fish populations in the mainstem upper Missouri River reservoirs of North and South Dakota, and one in the White River Reservoir complex of Arkansas and Missouri. The personnel, though limited in number, are competent and enjoy the most able direction.

For marine fish biology, too, a very meager start is evidenced through establishment of two coastal marine laboratories at Sandy Hook, N.J., and Tiburon, Calif. A third laboratory is needed on the Gulf of Mexico, and we urge that such a laboratory be authorized on the superbly strategic Dauphin Island, Ala., with an appropriation for purposes of immediate planning in the sum of $50,000. This research program should eventually be raised to a level consistent with the stature and posture, it must assume as a leader, and these collective facilities would provide the needed skeleton. The modest increases Sport Fishing Institute is recommending would constitute a significant step and would yield enormous public benefits.

There are 12 cooperative fishery research units now established at major State universities throughout the United States. The $30,000 operating budgets for each of these is woefully inadequate; $40,000 is a more realistic figure. Too, there is merit in expanding this research effort. SFI urges the $10,000 operating fund increase to each of the established units to a $40,000 figure and a study of the training facilities and field study needs at additional feasible locations. It is recognized by many of you, I am sure, that this is a bare outline of a most vital and substantial subject that must be pursued with increased vigor to obtain the end results—more and better sport fishing for some 100 million anglers by 1976.

NATIONAL FISHERIES CENTER AND AQUARIUM

The recently authorized National Fisheries Center and Aquarium requires funds for completion of planning in fiscal year 1965. The sum of $500,000 has been requested by the Department in the budget—enough to complete all plans and specifications. We heartily concur in this request in the normal sequence of events leading to the logical implementation of Public Law 87–758. We especially applaud the self-liquidating feature of this excellent addition to the Nation's Capital and culture.

BUREAU OF OUTDOOR RECREATION

Among other things, the Outdoor Recreation Resources Review Commission recommended to the President that a Bureau of Outdoor Recreation be created, charged with the "overall responsibility for leadership of a nationwide effort by coordinating the various Federal programs and assisting other levels of government to meet the demands for outdoor recreation." Sport Fishing Institute applauded Interior Secretary Udall's implementing executive action creating such a Bureau on April 2, 1962. The institute strongly concurs in the proposed 1965 operating budget of $2,700,000 being requested for this agency by the Department of the Interior for purposes of its important assignments. A breakdown of this budget estimate shows that $1,600,000 is for planning and cooperative services which will be used in (1) the preparation of nationwide outdoor recreation plans including activities of the Federal, State and local governments as well as private interests, (2) assistance to the States in development of statewide plans, and (3) studies of significantly potential recreation areas; $1,100,000 is for coordination, education, and research to be used in (1) budgetary, legislative, and program review of over 20 Federal agencies as they relate to outdoor recreation, (2) for coordination of recreation aspects of major river basin studies, (3) for education and interpretation to encourage outdoor recreation careers in colleges and universities and to clear technical literature, and (4) research in support of the nationwide planning effort and the comprehensive Federal coordination program.

Contract studies are also being planned to measure demand for outdoor recreation. A sophisticated approach to this important research work is urgently needed.

We find that BOR in its first year of operation under Public Law 88–29 has proven itself through initiation of limited operations of six regional offices, cooperation with Federal, State and local outdoor recreation agencies, and staff service for the President's Recreation Advisory Council. BOR's annual report plots the course of future action in these words: "We must recognize and face the situation confronting us with the historical knowledge that unless prompt, courageous action is taken to assure adequate outdoor recreation resources, succeeding generations will suffer the loss of much of a priceless national heritage."

In conclusion, Sport Fishing Institute respectfully urges that you take action to increase the much needed money for both reservoir and salt water game fish research, approve the stipulated budget for planning funds for the National Fisheries Center and Aquarium, and provide adequate operating capital for the new Bureau of Outdoor Recreation as requested for this agency.

Mr. Chairman, we appreciate the opportunity to appear before your committee, and respectfully request that this testimony be included in the written record of these hearings. Thank you.

STATEMENT BY C. R. GUTERMUTH, VICE PRESIDENT, WILDLIFE MANAGEMENT INSTITUTE, REGARDING BUDGET ITEMS FOR BUREAU OF SPORT FISHERIES AND WILDLIFE, NATIONAL PARK SERVICE, AND BUREAU OF OUTDOOR RECREATION

Mr. Chairman, I am C. R. Gutermuth, vice president of the Wildlife Management Institute. The institute is one of the older national conservation organizations, and its program has been dedicated to the restoration and improved management of natural resources in the public interest for more than 50 years.

In order to conserve the committee's time, Mr. Chairman, I will comment on a limited number of budget items for the Bureau of Sport Fisheries and Wildlife, the Bureau of Outdoor Recreation, and the National Park Service.

BUREAU OF SPORT FISHERIES AND WILDLIFE

Conservationists are disappointed that only $8 million is being requested in the migratory bird conservation account for the purchase of wet lands and other habitat essential to waterfowl under the authorization of Public Law 87–383. This is a decrease of $2 million from the current fiscal year.

These funds are needed to implement the emergency program of wetlands preservation authorized by Public Law 87–383. That act authorizes the appropriation of $105 million over a 7-year period, with the appropriations repaid at the rate of 75 percent of the annual revenues from the sale of duck stamps commencing with fiscal year 1969. The program also is augmented by approximately $4 million received annually from sportsmen who purchase duck stamps.

Wet lands cannot be purchased and preserved with inadequate funds. The appropriations granted thus far to implement Public Law 87–383 have fallen below program expectations. Conservationists urge the Congress to provide at least $10 million for this vital program in the next fiscal year.

The wildlife research item under "Management and investigations of resources" falls far short of the amount actually needed to support the dove research and management program that was developed cooperatively by the Bureau, the individual State fish and game departments, and the International Association of Game, Fish, & Conservation Commissioners. The cooperative aspects of that widely supported program would be undertaken by both the State and Federal wildlife agencies.

It is believed that an enlarged mourning dove research and management program is necessary. More doves are taken by shooters than any other game bird, but little is known about their basic biology, habits, and requirements. Doves have a tremendous reproductive potential, and they appear to suffer less as a result of expanded urbanization than other species of wildlife. They are immensely popular with hunters, and they are sure to be an even more important migratory game bird in the future. State and Federal wildlife experts agree that the required information about doves can be obtained most efficiently through the cooperative program they have developed. It is hoped that the committee can increase the wildlife research item up to the $256,000 that the State and Federal agencies believe is necessary for this essential work.

During the past few weeks the institute has received a number of queries from Members of Congress regarding the southeastern cooperative disease studies currently being financed by 13 States through the University of Georgia. This subject may already have been discussed by the committee. The fish and game departments of the 13 Southeastern States are investing about $50,000 annually in the program in order to retain the competent diagnostic and field services of the School of Veterinary Medicine, University of Georgia, on a standby basis. The program already has produced some beneficial results, particularly in isolating and identifying a white-tailed deer disease organism.

The institute supports the view that the Federal Government could continue to benefit by investing at least $200,000 in this program annually. The money is included in the "Wildlife research" item for the Bureau of Sport Fisheries and Wildlife. That agency has a contract agreement with the University of Georgia for the actual research work.

Several problems now emerging in the Southeast warrant preventive diseas research such as that counducted by the southeastern cooperative disease studies.

Some of these involve such things as cattle tick fever, a blood disease in livestock, and other mammal and bird diseases for which domestic livestock and wildlife may be reservoirs of infection. Preliminary research now could prevent abrupt and emergency programs later, and the knowledge that is developed will provide continuing benefit to both the livestock industry and sportsmen.

We were unable to find a specific item in the budget for the new National Fisheries Center and Aquarium, but it is understood that $500,000 is being asked for the preparation of plans and specifications. It is hoped that much needed appropriation will be allowed. The Fisheries Center and Aquarium will contribute much to the advancement of fisheries science and to the understanding of the requirements of our valuable aquatic resources.

It also is hoped that the committee will approve the additional funds that are being requested for research into the effects of pesticides and other of the economic poisons on fish and wildlife resources. There is much to learn about the impact of the increasing use of such toxic materials.

NATIONAL PARK SERVICE

Conservationists urge the committee to allow the $150,000 increase that is requested in order to conduct the study that was recommended in the Leopold report. It is time that some management and use goals are established for our national parks and monuments.

BUREAU OF OUTDOOR RECREATION

It is hoped that the committee will grant the $800,000 increase that has been requested for the Bureau of Outdoor Recreation. This modest increase is essential to the orderly expansion of that new agency's program.

The additional funds will enable the Bureau ot proceed with the preparation of a nationwide outdoor recreation plan and to assist the States in developing similar plans as a part of that undertaking. Some of the requested increase will be used by the Bureau in seeking to coordinate outdoor recreation activities of various Federal agencies and in conducting research and study programs that will provide information necessary to the successful completion of the nationwide plan for outdoor recreation.

All of these activities are pointed toward the fulfillment of the charge laid down to the Bureau when it was created in 1962. They will better prepare that agency to handle the additional duties that apparently will be vested in it under the terms of the land and water conservation fund proposal currently before the Congress.

STATEMENT BY LOUIS S. CLAPPER, NATIONAL WILDLIFE FEDERATION, REGARDING BUDGET ITEMS FOR DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES

I am Louis S. Clapper, chief of the Division of Conservation Education, National Wildlife Federation, which has its headquarters here in Washington, D.C.

The National Wildlife Federation is a private organization which utilizes educational means to further conservation objectives in the public interest. Independent affiliates of the National Wildlife Federation are located in all States. These affiliates, in turn, are composed of individuals who, when combined with associate members and other supporters of the National Wildlife Federation, number an estimated 2 million persons.

We appreciate the invitation and opportunity to make these recommendations relative to appropriations proposed for the Department of the Interior and related agencies. We shall touch only upon the more important aspects, as we view them, in the budget.

We are hopeful that the committee can allow the full $8 million requested in advance funds for the emergency waterfowl wetlands acquisition program. Even though the acquisition program is being held up in the production areas of North Dakota and South Dakota, we believe that $8 million can be used wisely. As members of the committee know, the Senate Committee on Commerce has been conducting hearings on revenue-sharing bills which, if enacted, probably will result in the removal of objections to Federal acquisition in the Dakotas. If the Congress approves of this program, we would be hopeful that supplemental funds might be advanced. Even with $8 million allowed for fiscal 1965, this would mean that only $25 million of the $105 million authorized in 1961 would have been used through 4 years of the 7-year program.

The waterfowl wetlands acquisition program is self-liquidating. This same fact is true for the National Fisheries Center and Aquarium. As indicated in previous testimony, we believe this project should go ahead and that the committee should allow $500,000 for plans and specifications.

Conservationists long have been concerned about the effects of pesticide chemicals on fish and wildlife, as has been pointed out by the President's Science Advisory Committee. We recommend that the full authorization for pesticide research be granted and that the amounts requested for pesticide laboratories at Columbia, Mo., and Denver, Colo., will be allowed.

Other areas of research are important. We are particularly hopeful that as much as $165,000 in additional funds can be allocated for research on the mourning dove. This bird is of significant importance as a game species and is highly regarded by many other bird lovers. Much more needs to be known about it. Because of the bird's migratory nature, it is a true responsibility of the Federal Government and we are hopeful that more funds can be allowed for research. We are told that $165,000 would permit the employment of five field biolgoists and allow contracts to be signed with universities for suitable research.

Fishing continues to grow in importance as a public recreation. Large reservoirs being constructed in all parts of the country and offshore marine areas offer tremendous recreational potentials. Much more needs to be learned, however, about the management of these resources. We would hope that the reservoir fisheries research program can be raised to a total of $600,000 and the marine fisheries research program can be allocated as much as $800,000. The operating funds proposed for 1965—$330,000 for reservoir research and $260,000 for marine research—are about the same as allowed in the 2 previous years.

The Bureau of Sport Fisheries and Wildlife has an unusually good opportunity to secure a marine game fish research center location at a modest cost. According to our information, authorities in Mobile, Ala., have agreed to give an appropriate site on Dauphin Island in Mobile Bay to the Bureau for this laboratory. This site, probably valued at $200,000, has facilities such as water and sewage lines and is cited as the finest for the purpose on the eastern gulf coast. Nearby are Federal and State shellfisheries laboratories. As members of the subcommittee know, marine game fisheries laboratories at Sandy Hook, N.J., and Tiburon, Calif., are in operation and detailed planning is underway for the Narragansett installation in Rhode Island. However, no stations have been provided for along the gulf. An allocation of $50,000 is needed for development of the site. Planning and designing requires another $100,000.

We believe that the increase proposed for "Administration of wildlife refuges" is justified in view of the need to manage new areas and to handle new public recreational responsibilities approved by the Congress.

Mr. Chairman, our organization long has supported the concept of providing outdoor recreational facilities for the public. We believe the new Bureau of Outdoor Recreation is proving its full value. The proposed appropriation of $2.7 million in developing a nationwide plan for outdoor recreation appears reasonable. In coordinating Federal programs, and in assisting the States, this agency probably can save in avoiding duplication more than its cost. We are hopeful that the land and water conservation fund soon will be approved by the Congress. Allocations of money from this source for important acquisitions then should proceed with a minimum of delay.

The National Wildlife Federation is encouraged that a modest increase is proposed in operating expenditures for the Bureau of Land Management. We are particularly hopeful that the committee can allow $1 million for the construction of sanitation and protection facilities where public recreational use is heavy.

We believe the National Park Service should be granted $150,000 for natural science and wildlife management studies as part of a modest increase in the item for "Management and protection."

In conclusion, Mr. Chairman, we must express disappointment that the development program for the national forests is lagging in funds for several functions. The proposed increase for recreation-public use still leaves this phase behind the planned program. The only increases for wildlife habitat management and forest fire protection are for pay increases even though these projects also are behind the planned program. Wildlife habitat research should be accelerated beyond the present level.

Thank you for the opportunity of making these remarks.

LETTER FROM ALEX RADIN, AMERICAN PUBLIC POWER ASSOCIATION, CONCERNING FUNDS FOR BUREAU OF COMMERCIAL FISHERIES AND OFFICE OF SALINE WATER

MARCH 9, 1964.

Senator CARL HAYDEN,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.

DEAR SENATOR HAYDEN: In connection with the hearings which the Subcommittee on Department of the Interior and Related Agencies currently is holding on fiscal 1965 appropriations, our association would like to go on record in support of two budget items which affect electric power development.

We urge approval of the full $1,407,000 appropriation asked by the Bureau of Commercial Fisheries for continued research on fish migration over dams pointing out that this is below the 1964 estimate of $1,497,000 and substantially less than the $1,667,000 appropriated for this research in fiscal 1963.

Members of APPA feel that this program is of critical importance to future full development of our hydroelectric resources and regret that it appears to be diminishing rather than expanding. In absence of a large budget request, however, we would support the appropriation asked by the President.

With respect to the Office of Saline Water, APPA respectfully urges approval of the full $10,650,000 asked in the President's budget. Recent studies indicate that combination power and saline water plants may be economically feasible in certain areas of the country, and we would hope that research and development efforts along this line will be stepped up. The $9,650,000 asked for research and development activities in fiscal 1965 represents a modest increase over the $8,865,000 estimated in 1964 and we fully support this increase.

It would be appreciated if you could make this letter part of the printed hearing record.

Sincerely,

ALEX RADIN, *General Manager.*

LETTER FROM SENATORS WARREN G. MAGNUSON AND HENRY M. JACKSON URGING ADDITIONAL FUNDS FOR FOREST HYDROLOGY LABORATORY AT WENATCHEE, WASH.

MARCH 10, 1964.

Hon. CARL HAYDEN,
Chairman, Subcommittee on Department of the Interior and Related Agencies,
Senate Committee on Appropriations, Washington, D.C.

MY DEAR MR. CHAIRMAN: We are writing to commend to your attention and that of your subcommittee the need for strengthening research at the new Forest Hydrology Laboratory in Wenatchee, Wash.

We understand that the Forest Service fiscal year 1965 budget includes $90,000 for operations at this Laboratory. Full utilization of these new facilities would require an additional appropriation of $130,000 during fiscal year 1965.

Such an increase would result in the yield of much useful information concerning the mountain watersheds of the east side of the Cascade Mountains. This information is immediately pertinent to such land-use matters as timber harvesting, grazing, and recreational development. Material from the U.S. Forest Service to this effect is attached.

We should like to point out that this Laboratory is located in a labor surplus area contiguous to other distressed areas. The generation of such land-use information would have a very significant bearing on the employment problem of these areas.

We earnestly solicit your subcommittee's careful and sympathetic consideration of our request.

Yours faithfully,

WARREN G. MAGNUSON,
HENRY M. JACKSON,
U.S. Senators.

(Material from the U.S. Forest Service referred to by Senators Magnuson and Jackson follows:)

MOUNTAIN WATERSHEDS EAST OF THE CASCADES

FEBRUARY 28, 1964.

Hon. HENRY M. JACKSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR JACKSON: We appreciate your bringing Mr Kirby's letter of February 13 to our attention wi h your letter of February 20.

Strengthening the research at the new Forest Hydrology Laboratory at Wenatchee would result in much usable information becoming available concerning the mountain watersheds of the east side of the Cascades. This information would have an important bearing upon timber harvesting, grazing and other uses of the land, including the ski resort development mentioned by Mr. Kirby. For example, studies of mountain soils will determine what characteristics control the relative stability of the various soils and how these soils are affected by different types and degrees of disturbance. The ski resort development will entail soil disturbance through clearing of vegetation for ski runs, and construction of trails and roads. Some soils can withstand considerable disturbance without a great increase in storm runoff and erosion resulting, while others are quite sensitive to disturbance. The research will develop guides for recognizing problem soils and what special measures are needed to protect them.

The research will also develop information about snow accumulation and melt, how these are affected by different patterns of timber harvesting. The geometry of land surface configuration and timber distribution can have a considerable effect upon the snow blanket. This knowledge is basic to management of snow cover, whether for winter sports or for water yield purposes.

The new Laboratory will provide the necessary facilities to support an in-
research creased program of approximately $130,000 above the present level. The Forest Service plans to strengthen the research program at Wenatchee to this extent as soon as the budget situation will permit.

We hope this information supplies your need. If we can be of further assistance please call upon us. We appreciate your continuing interest in our research program. Mr. Kirby's letter is returned herewith.

Sincerely yours,

EDWARD P. CLIFF, *Chief.*
By CLARE HENDEE.

WATERSHED MANAGEMENT RESEARCH, WENATCHEE, WASH.

In the relatively dry mid-Columbia River system, water coming from the high-elevation alpine areas, the upper slope forests and the ponderosa pine grasslands is very important. This river system provides water for irrigation and hydroelectric power, for industrial and domestic use, and for a rapidly growing demand for recreation. Along the top of the Cascade Mountains in the State of Washington there is as much as 100 inches of rain and snow, but this decreases very fast as we come down the eastern slope, to less than 6 inches in some places. Precipitation occurs mainly in winter and early spring but heavy summer thunderstorms sometimes cause local flooding and erosion. The soils in eastern Washington and Oregon are highly erosible so that water quality is constantly endangered. Summer streamflow is generally very low and water is often in short supply.

In this area east of the crest of the Cascade Mountains, more than three-fourths of the usable water comes from about 30 percent of the land, the alpine and high-elevation forests and grasslands. Approximately 2.5 billion board feet of timber are harvested annually from this water-producing area, and these lands are also used for grazing and recreation. This use of these mountain lands for several purposes presents some problems of soil stability and water quality but they also present considerable opportunity for increasing the yield of water for downstream use, if the right management practices can be developed. This is the job to be done by the watershed management research people in the Forest Service.

The first phase of a modern forest soil and watershed research laboratory has recently been completed at Wenatchee, Wash., the headquarters for Forest Service research east of the Cascades. The present staff of scientists are high-

caliber men, but there just are not enough of them to do the job needing to be done and to fully utilize the laboratory facilities now available to them. They are currently studying the physical and chemical properties of soils derived from different geologic materials to determine their erodibility and to develop guides to better management. Radioisotopes are being used to study soil erosion on steep mountain slopes. The use of water by different trees and plants is being studied along with a whole complex of soil-plant-water relations that bear on water available for streamflow and ground water. This is a basic type of research which can be applied to management problems throughout the Northwest, or even further. In these days of impending local water shortages, this research is important. An increase of $130,000 is needed for strengthening the watershed management research at Wenatchee, Wash., and to bring staffing of the new laboratory up to the planned level.

LETTER FROM SENATOR FRANK CHURCH URGING ACQUISITION OF FOREST LANDS IN IDAHO

MARCH 13, 1964.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
U.S. Senate,
Washington, D.C.

DEAR CARL: I have been asked to help preserve from commercial development one of the most beautiful places in the State of Idaho. A small lake, the Upper Priest Lake, is connected by a narrow body of water to Priest Lake. It is surrounded by federally or State-owned land with one exception; 3 miles of shoreline is privately owned. The owners have announced that their land will be sold for private development on May 15 unless they can have reasonable assurance by that date that it will be purchased for public ownership.

The Area Redevelopment Administration, the U.S. Forest Service, and various interested Idaho agencies have recommended that this lake be preserved in its natural state. The Forest Service advises that the land can be purchased under the Weeks law of March 1, 1911, and added to the Kaniksu National Forest without the necessity of special legislation. An appropriation is, however, required in the amount of $400,000, and there has not been time for the Forest Service to initiate and properly clear a request that this item be added to the President's budget for fiscal year 1965.

I am writing to request that your committee's hearing record include a letter from the Forest Service on this subject, dated March 10, and this letter. If it is possible for the committee to consider insertion of the $400,000 required for purchase of the land at its markup session, I will be most grateful. If this cannot be done, I will want to discuss with you further the possibility of amending the appropriations bill on the Senate floor to accomplish the needed land acquisition.

Sincerely,

FRANK CHURCH.

(Letter from Forest Service referred to in Senator Church's letter follows:)

REPORT OF REGIONAL FORESTER

MARCH 10, 1964.

Hon. FRANK CHURCH,
U.S. Senate.

DEAR SENATOR CHURCH: On December 24, 1963, we promised to write you further in reply to your letter of December 10, 1963, concerning Upper Priest Lake. Mr. Art Manley, vice president of the Idaho Wildlife Federation, urges that this lake be preserved in its present primitive condition and suggests special legislation to authorize Forest Service acquisition and administration of certain privately owned lands adjoining the lake. You requested draft legislation, if necessary, to accomplish this purpose and you asked for our comments on such legislation and general landownership problem in the area.

We now have a report from our Regional Forester on this matter. Following are our suggestions.

We concur that it would be desirable to consolidate into public ownership (national forest and Idaho State forest) the land surrounding Upper Priest Lake for the purpose of maintaining the near-natural condition of the lakeshore and adjacent lands. Four privately owned tracts should be acquired to accomplish this purpose.

Purchase of these private lands is considered preferable to exchange. Our field people advise that Bonner County and State officials support Federal acquisition of these properties by purchase.

If the Congress appropriated the necessary funds it would be possible to acquire these lands under existing authority of the Weeks law of March 1, 1911, and to add them to the Kaniksu National Forest for administration without the necessity of special legislation. This presumes that the National Forest Reservation Commission would approve the individual purchase transactions that would be involved and we are confident that such approval would be forthcoming.

Such purchase action is only one step in assuring the continuance of a near-natural area around Upper Priest Lake. To accomplish this the State of Idaho must take special legislative action to classify, dedicate, and restrict its lands adjacent to the lake for near-natural use. As it now stands their lands are in the Priest Lake State Forest, and by law (or perhaps constitutional provision) are managed for the production of revenue for schools. There is no assurance that the State, without such action, will be able to prevent timber cutting or sale of recreation residence sites should pressures for such action build up. Such pressure is now occurring on State lands on the east shore of the main Priest Lake.

It would also be desirable at some future time that the State obtain exchange authority through appropriate State legislation to permit exchanges of lands between the State and the Forest Service around Upper Priest Lake. Such exchanges by consolidating ownership would contribute to greater economy and efficiency in administering both State and Federal lands in the area.

Our field people advise that the owners of the four private tracts have stated that they will sell their properties for $400,000. It is the judgment of our people that this value can be supported by an appraisal of the fair market value of the properties.

If we can be of further service in this matter please advise.

Sincerely yours,

HAMILTON PYLES.
By EDWARD P. CLIFF, *Chief*.

JOINT STATEMENT BY SENATORS HUBERT H. HUMPHREY AND EUGENE J. MCCARTHY URGING FUNDS FOR FOREST RESEARCH IN THE NORTHERN GREAT LAKES REGION

EXPANDING WOOD PRODUCTS MARKETS

Establishing expanded markets for wood products from the northern forests is a leading economic problem in the northern Lake States. More timber is growing annually than is being cut. This trend will increase unless there is expansion of timber used by existing companies and the establishment of a new wood-based industry. The need for new uses of wood and for new products is obvious if the timber resource is to provide employment.

Throughout the area, the present harvest of timber could be expanded. This is a problem for public and private forest owners alike. For example, statistics for the eight national forests in Lakes States show that in 1961 the total cut could have been almost double that which was harvested—1,284,000 cords versus 679,380 cords.

This lack of markets, which also applies to the products of private owners' lands, prevents the use of a resource which could help to bolster economic opportunities. In addition to the current situation, the lack of markets now will affect the future productivity of many timber stands. Necessary thinnings and stand improvement cuts can be made only when there is a market for sale of the products cut.

The northern Lakes States can ill afford the luxury of underused timber resource. Unemployment averaging 10 percent or more of the labor force is common throughout the area. Currently, 45 of the some 80 northern Lake States counties are listed as depressed labor areas. The need to provide new employment is obvious. Whether or not these areas can gain a larger share of the national prosperity will depend, to a considerable extent, on the more complete utilization of the available timber resource.

Accordingly, to meet this objective, we propose the establishment of a Federal Wood-Products Marketing and Applied Utilization Laboratory in northeastern Minnesota. Such a laboratory would serve not only northern Minnesota, but the entire northern Lakes States area—northern Wisconsin and northern Michigan as well.

Last fall, a similar type laboratory was officially dedicated at Princeton, W. Va. This laboratory, the research facility of the Northeastern Forest Experiment Station, was established by the U.S. Forest Service for the purpose of conducting research to find ways in which local forest resources and forest industries could make a greater contribution to the social and economic welfare of the people of the Appalachian region.

We need a similar-type project and facility in the northern Lake States. Northeastern Minnesota would make an excellent location. The laboratory could serve as a necessary link in the wood products research and developmental chain. Fundamental and basic research in wood products has been carried out for more than 50 years at the U.S. Forest Products Laboratory at Madison, Wis. This laboratory is a national institution for wood utilization research. Here basic research is done in wood products, and the results are of national and international importance.

The proposed Wood-Products Marketing and Applied Utilization Laboratory in northeastern Minnesota would not duplicate any other functions of either the Forest Products Laboratory at Madison or forestry schools in Minnesota, Wisconsin, or Michigan. Rather, it would serve as an operational or developmental research unit—working with the wood processors themselves, helping to isolate specific marketing and utilization problems, bringing new techniques and new processes to the small wood products, and analyzing economic and marketing factors so as to suggest ways to expand the processing of wood products for the entire northern Lake States region.

The need for such assistance is critical to thousands of small wood producers and processors who otherwise would be at a loss for technical assistance and help.

The project envisioned would call for the establishment of a major regional project in northeastern Minnesota, where a staff of wood marketing and utilization technicians would specialize in finding new data on the timber resource, study properties and performances in use of wood products made from northern Lake States tree species, and develop and test new wood products.

Their work would provide up-to-date and current information on timber resources, and their availability by specific location on the location and potential of markets for various forest products, on transportation facilities and ways to transport forest products more economically. The laboratory would also provide information on new processes and new wood products which offer potential for production in northern Minnesota and in the northern Lake States. All of this work would be done in close cooperation with the local wood users, the community officials, State conservation, and business development agencies, Area Redevelopment officials, and others interested in expanding economic opportunities in the northern Lake States area.

If the problem of marketing more timber from the Lake States' forests could be generalized in one sentence, it would be that, "consumers (manufacturers or other users) are reluctant to use northern Lake States timber products because they are uncertain or uninformed of its supply, and product suitability, and that in turn the majority of suppliers are unorganized and inefficient because the sluggish demand has not created economic opportunities that attract well-financed and capable individuals to be manufacturers." There are exceptions, but this situation cited is common throughout the area.

Some of the types of work that should be done are:

(1) Timber resource analysis—more detailed data as to specific location, available size classes, species, and qualities that can be made in the usual forest survey reports.

(2) Analysis of other economic factors influencing production costs—transportation, labor, water availability, credit sources, etc.

(3) Investigation of markets for specific products, i.e., the acceptance of balsam fir starts by manufacturers and contractors in northeastern Minnesota and the Twin Cities. For example, a project could look into the potential use of balsam fir dimension stock in northern Minnesota. At the present time, northern Minnesota has over a million and a quarter acres of spruce balsam fir forest. Balsam fir, one of its main components, is a problem specie. A complete examination of this problem could suggest ways to expand the use of balsam fir stock.

Northern white cedar stands occupy almost one-quarter of a million acres in northern Minnesota. The present market is limited to fenceposts. Much more could be harvested if expanded markets were available. This material makes a very decorative wall paneling. A study in this area would also enhance the possibility of expanded markets for this product. Aspen, the more abundant tree specie in northern Minnesota, is vastly underused. Required testing and performance evaluation could lead to a much larger acceptance of aspen lumber

in a large-growing pallet market in the Midwest. Other areas which could prove to be very profitable in terms of utilization of forest products in the northern Lake States region are in the manufacturing of particle board. The use of particle board (panel made from dry wood particles which have been coated with a binder) by American industry is growing at a phenomenal rate. Particle board is used by various manufacturers of furniture parts, house-trailer parts, sporting goods, games, table tops, etc., has grown tremendously. An analysis of this market could prove to be very useful in the expansion of this fast-growing industry.

Such a laboratory could also look into new opportunities in marketing manufactured summer homes and cottages. The port of Duluth Superior now supplies northern Minnesota and northern Wisconsin with an avenue to world markets. With rising standards of living in many previously underdeveloped parts of the world, new consumer markets are waiting to be satisfied.

One such market area lies in prebuilt, manufactured houses. One of the country's largest such manufacturers, already has designed a prototype small dwelling which they plan to sell in various South American countries.

Research studies from the proposed laboratory would provide information which could be used to expand the use of forest products in the northern Lake States region.

These are but a few of the potential opportunities which could be realized if more effort were applied to researching new markets and new products for the timber resources of the northern Lake States forests. Others could be listed. The extent to which these products could be pursued will depend upon the technical staff and facilities available. An expanded forest service marketing applied utilization project in northeastern Minnesota could help solve the problem of increasing the productive use and economic contribution of northern Lake States forests.

In summary, we feel that the establishment and staffing of a Forest Service Wood Products Marketing and Applied Utilization Laboratory in northeastern Minnesota would be a significant move toward reducing the regional problem of insufficient economic opportunity and chronic underemployment. Similar to the West Virginia laboratory's role in the Appalachian area, the proposed laboratory would provide a key which would unlock the underutilized forest resources of the northern Lake States. We have more than 50 million acres of forested land in the Lake States. We have the wood, we have the labor, and we have the interest in expanding the use of this valuable resource.

The minimum estimates for the construction of a suitable laboratory would be $300,000. It would house study rooms, conference rooms, library, test and evaluation laboratory room, and necessary storage rooms. The staff would consist of approximately 13 professional technicians and scientists, together with an equal number of nonprofessional employees. The yearly minimal operational cost for salaries and other expenses is estimated to be $250,000. This is a small investment in the economic future of the forested regions of northern Minnesota and the northern Lake States. It should pay large dividends. Among the requisites for the project headquarters are: (1) a reasonably central location in a northern Lake States region; (2) an environment in terms of living conditions that would permit recruiting the scientists required for the staff; and (3) access to scientists and supporting facilities in related fields such as are provided by a university campus. We feel that a site in northeastern Minnesota would fit the outlined requirements. The University of Minnesota at Duluth can provide the support necessary for the success of a ongoing project as proposed in this statement. UMD is a growing institution of 3,000 students and 340 faculty and staff. Its departments of business, economics, geography, industrial education, engineering, and mathematics provide skills and facilities that can be drawn upon to aid the wood products program at the station. The administration and the faculty have been most helpful and interested in the marketing research that has been done to date.

We ask that the Interior Subcommittee on Appropriations add to the appropriations bill $300,000 construction costs and $250,000 staff salaries and maintenance costs.

LETTER FROM EARL HARTLEY, EXECUTIVE SECRETARY, WESTERN COUNCIL OF LUMBER AND SAWMILL WORKERS, IN SUPPORT OF APPROPRIATIONS FOR THE FOREST SERVICE

PORTLAND, OREG., *March 2, 1964.*

Hon. CARL HAYDEN,
Chairman, Senate Subcommittee on Appropriations for Interior and Related Agencies, Senate Office Building, Washington, D.C.

DEAR MR. HAYDEN: I want to express the appreciation of the Western Council of Lumber and Sawmill Workers for your support of the forestry and conservation programs that are so vital to the national and regional economy. We are keenly aware that the forests of the Pacific Northwest provide jobs for over 134,000 persons in the wood-using industries. This is more than one-third of all of our manufacturing employment. In addition, a large portion of the service and other manufacturing industries depends upon forest industries, for example, the chain-saw logging equipment manufacturers.

The western council has long recognized that research provides the basic information that is essential for maintaining and strengthening the forest economy, upon which so many of our Nation's working people depend for their livelihood. This year, with the emphasis on increasing the Nation's output of goods and services, we are pleased that the new Federal budget provides for strengthening research in forestry throughout the Nation. This increase, though modest, is highly important.

Information is constantly needed on the condition of the timber resource. Detailed up-to-date statistics on the acreage, volume, growth, use and losses of the timber resource are needed almost every day as a basis for solving the problems that face the people of the entire country as well as here in the Pacific Northwest. This year's budget provides for a $150,000 increase in this work, nationwide. We strongly support this proposal. It is particularly important to the Northwest.

The new Forest Service program of forest engineering research is intended to strengthen the forest economy by helping to relieve the cost-price squeeze through development of improved timber harvesting and transportation methods. Here in the West a large part of the much needed timber grows on steep, difficult topography where logging costs and employee safety are prime considerations. The forest engineering research now just well started shows great promise for reducing the costs and hazards of these operations. We in the western council urge Congress to approve the additional $75,000 for this important project provided in the President's budget for fiscal year 1965.

We are also aware of the need for basic wood products research to help assure the continuation of wood's competitive position as an economical, useful, and renewable raw material. We believe that the U.S. Forest Products Laboratory at Madison, Wis., should be modernized and expanded to thereby strengthen this search for new hasic information needed to stimulate development of new and improved wood products. The $3,800,000 included in the President's budget to provide for this is urgently needed so that our timber industry technology can provide increasing valuable products for our economy and rewarding employment for our people.

The health of the forest resource can be measured by the losses due to disease, insects, and animal damage. Forest diseases quietly kill trees, reduce growth, and cause volume losses in living trees. In 1952 disease was ranked as a principal destructive agent with a total growth impact of about 1.4 billion board feet per year for the Pacific Northwest In terms of employment this volume would provide work for 15,000 to 20,000 people in logging and processing into wood products. Forest disease problems have been given only enough attention to develop control measures for a few of the most destructive diseases. Much greater research attention is needed to bring this work up to a level proportionate to its importance in good forest management

Pest insects similarly affect the health of the forest resource and the strength of the forest economy. In the past two decades some of the most damaging insects have been controlled by the use of synthetic organic insecticides.

These chemicals pose certain hazards and must be carefully tested before use. It is imperative that research be stepped up to assure the safe and effective use of chemicals and to develop alternative insect control methods that do not require chemicals. Nationwide, insects cause losses totaling many billions of board feet annually, thus causing the loss of employment as well as weed output. The western council is also greatly concerned with the insect threat to the general health of the forest which provides recreation as well as jobs for our people. We are particularly pleased wtih the work being done at the Forestry Sciences Labora-

tory located on the campus of Oregon State University at Corvallis and urge that this and similar research work be strengthened.

Another problem in the health of our forests is the increasing damage to the forest caused by animals. It was recently estimated that animals cause damage totaling $15 million yearly in Oregon and Washington.

The proposed U S. Forest Service research budget provides for an increase in animal damage research at Olympia, Wash. We are in favor of this definite though small effort to reduce the losses due to these animals.

This animal damage control project is still seriously handicapped by lack of an adequate research laboratory. The State of Washington has provided an excellent 5-acre site for the needed facility by long-term lease to the Forest Service. Need for a research construction appropriation of $300,000 for a Silviculture and Animal Problems Laboratory on this site was emphasized during Senate hearings on appropriations for the Forest Service in 1962 and during both House and Senate hearings in 1963. No funds have been made available for this construction, however, and we are disappointed that this item is not included in the budget for fiscal year 1965. I believe it merits your careful consideration.

We in the western council strongly support each of these much needed increases for research in forestry. Your careful consideration and continued support for this work will be much appreciated.

Cordially yours,

WESTERN COUNCIL, LUMBER AND SAWMILL WORKERS,
EARL HARTLEY, *Executive Secretary.*

STATEMENT BY W. A. WILLIAMS, JR., ON BEHALF OF NATIONAL ASSOCIATION OF SOIL & WATER CONSERVATION DISTRICTS, CONCERNING BUDGET ITEMS FOR DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES

SOIL AND WATER CONSERVATION DISTRICTS

The 2,940 soil and water conservation districts in the Nation are increasingly concerned about the protection and development of public lands being managed by the Federal Government. This concern is especially evident among the districts of the West because it is in the West that the programs of districts and those of the public land agencies are most frequently and directly related.

The National Association of Soil & Water Conservation Districts (NACD) wishes to make known its strong support for the soil and moisture conservation, range management, watershed, and related programs of several agencies of the Department of the Interior—and also the national forest program of the Forest Service in the Department of Agriculture.

As you know, soil and water conservation districts are local units of government organized under State laws. Across the country, approximately 1,890,000 farmers, ranchers, and other landowners are cooperating with their districts in soil, water, forest, and other programs of resource protection and development.

The program of each district is tailormade to the needs of the district. It is developed by local people, with the assistance of scientists and technicians from appropriate Federal and State agencies—and also private organizations. The program is managed by a governing body of local people, elected by the landowners and operators within the district. These district supervisors serve without pay. They are charged not only with the responsibility of developing long-range programs of resource conservation and development, but also annual plans of work which lead to accomplishment of the long-range programs.

It is still a fact, regardless of how stereotyped it may seem, that erosion and many other forms of resource damage take place without regard to either political, administrative, or ownership boundary lines. The work to protect resources and to develop them for greater usefulness must also proceed across these manmade boundary lines. This is a fact based on nature, and we are well-advised to recognize it.

We recognize it in districts as we move forward with work in cooperation with individual landowners and operators on their privately owned lands. There is need for greater recognition of the fact in connection with conservation and development work on public lands intermingled with, or adjacent to, privately owned lands.

To put the problem another way, there is an urgent need for much closer collaboration in actual conservation work, on the ground, between public land administering agencies and private landowners in districts. The work of each,

when it is carried forward on the basis of natural units such as watersheds and as part of a comprehensive program for an entire unit, will then supplement and support the work of the other for the mutual benefit of all parties concerned and the resources themselves.

The public lands comprise very large areas, particularly in parts of the West. We are mindful, too, that extensive areas of public lands in the West are handicapped by very sparse vegetation and highly erodible soils. Long periods of drought are interspersed by rainstorms of high intensity, in short, the task of conservation is not only formidable from the standpoint of sheer size; it is also made exceedingly difficult by climatic and other conditions.

If it is true that the Nation cannot proceed energetically and deliberately to tackle the whole job of conservation and development of public land resources at one time, then we recommend as a matter of public policy that efforts be directed first to those areas where there are the greatest concentrations of intermingled public and private land ownerships. These are the areas, in our judgment, where joint efforts toward mutually determined goals can achieve the most conservation, in the shortest time, for the benefit of the greatest number of people. These are the areas and circumstances, too, where the greatest returns can usually be expected from each dollar expended.

WISE FISCAL MANAGEMENT

The pressures continue to mount on our land and water—and on our forests, wildlife, grass, and recreational areas. Accordingly, we believe it is a basic responsibility of leadership in the Congress, and in the executive branch of Government, to anticipate the oncoming requirements of the Nation for these resources and prepare to meet them in an orderly, effective way. It is only rarely that sound development and conservation of resources can be accomplished swiftly. This is work that requires time.

It is a fact, and one that all of us should recognize, that the longer this work is postponed, the costlier it becomes. In terms of Federal dollars and the public interest, it is less expensive to conserve than to repair and rebuild. It costs less to plant and maintain grass than to pay flood damages. The price of upland erosion control is less than the cost of downstream reservoir silting and reduced water storage capacity.

Accordingly, we in the NACD believe it is wise fiscal management as well as wise resource management to provide more adequately for the conservation and resource development operations of the land administering agencies of the Interior Department, and also the Forest Service.

This committee is well versed in the extent of land and vegetative damage on the public lands. You are well aware of the increasing yield of silt, the increasing rate of erosion, and the unnecessary waste of water. All these underscore the very serious lag in conservation and resource development operations on the public lands.

Moreover, we who also have a responsibility for conservation on the adjacent and intermingled private lands become increasingly conserved by the fact that existing limitations on public land operations serve to slow down and restrict what we can accomplish on private lands.

On the other hand, we believe that an administrative and fiscal policy designed to accelerate conservation work on intermingled public-private lands would lead, in a very short time, to a companion acceleration of work on the intermingled private lands.

THE BUDGET ESTIMATES

We are pleased to see that the budget estimates submitted by the administration for fiscal year 1965 recognize, at least moderately, the pressing needs facing us now and in the years directly ahead.

We support the budget request of $150,419,000 for forest land management by the Forest Service. Included in this figure is a sorely needed increase for construction and maintenance of forest roads and trails. Too large a share of the national forest land is still "locked up" because of inadequate roads and trails. The progress that can be made with the funds recommended in the budget will open up, beneficially, new and larger areas. Our national forest lands will become more widely accessible to traveling and vacationing Americans, and also more readily subject to the kind of management and development which is needed in the decades ahead.

As soon as possible, as a followup to this roadbuilding advance, there should be a step-up in appropriations for construction and maintenance of public facilities

in the national forests; and also for water management and watershed land treatment operations affecting intermingled private lands and downstream values. The soil and water management and range resource management items in the Forest Service budget for fiscal 1965 show no increase over the 1964 level. Expansion of this work, either in conjunction with accelerated public works projects, a Youth Conservation Corps, or the establishment of joint Forest Service-conservation district resource improvement projects, is a vital need ahead.

The increase of approximately $4 million in the budget estimates for forest research is a recognition of growing needs in this field, not only for wood utilization research, but also the critically important studies necessary to cope with the mounting damages caused by forest insects and disease. We support the forest research increase included in the budget for fiscal 1965.

BLM LANDS

In our judgment, the major shortcoming in the budget estimates for soil and water conservation work by Department of the Interior agencies occurs in the recommendation for the Bureau of Land Management.

As we have tried to emphasize before, conservation work on the BLM lands has fallen so far behind, and the needs are now so urgent, that a major breakthrough should be undertaken in the wholly inadequate level of progress which has marked this work in recent decades. What is needed is a major recovery effort geared carefully and deliberately over a period of years. We urge that this effort be inaugurated during the 1965–75 decade.

The increase of nearly $700,000 in the 1965 budget estimate for soil and moisture conservation work by BLM is earmarked primarily for rehabilitation of burned-over areas. This is certainly work of high-priority importance, and we favor it, but it represents no more than a fraction of the total job yet to be tackled.

We urgently recommend that the soil-and-moisture conservation work of the Bureau of Land Management in fiscal year 1965 be expanded by raising the appropriation for this work to $15 million.

We believe the additional funds are needed and should be used by BLM for conservation operations on lands under its management which are located in watersheds containing adjacent or intermingled acreages of privately owned lands. In these locations, we believe BLM and the local conservation district (or districts) should develop comprehensive conservation programs, covering both public and private lands. The programs should provide for a coordinated attack on the resource problems in the designated watershed areas.

Past experience has demonstrated that this type of approach will yield maximum results. In "pilot" project areas sponsored by districts, and in other demonstration areas, the coordination of public and private effort over project or watershed areas has proven its effectiveness. We are now past the demonstration stage and ready to move into a more mature and deliberate attack, designed to catch up with the enormous conservation job on BLM-administered lands during the remainder of this century.

We advocate the establishment, during 1965, of two or more resource improvement projects by BLM in each State having any substantial acreage of land under BLM administration. We believe these resource improvement projects should be established in locations where the work of the BLM on public lands can be coordinated effectively with the work of conservation districts and cooperating private landowners—all within natural watershed areas. We believe a comprehensive program should be developed covering all types of ownership and all types of renewable resources within the resource improvement project areas.

It would be entirely practical to develop advance project proposals, with cost-benefit estimates, before the actual establishment of such resource improvement projects. Although the BLM probably has adequate authorization now to proceed with such projects, it might be desirable to submit project proposals to appropriate subcommittees of the Congress, for advance approval, prior to their establishment—as in the case of flood control and watershed projects.

Our primary concern, however, is to move ahead with the establishment—and the resource accomplishments—of such projects by whatever route is deemed most practical and necessary.

An increase in the BLM appropriation to $15 million for soil and water conservation work in fiscal year 1965 would permit the Bureau to proceed with essential preliminary work toward the establishment of projects—or to the submission of project proposals to the Congress.

There are other Bureau of Land Management appropriations items which are important to districts. The forestry and grazing land management items are,

in our judgment, less than the needs require. The budget proposal of $8,685,000 for forestry and the proposal of $6,172,000 for grazing land management are essentially stabilized estimates—recommending the same level of effort in 1965 as in recent years. Yet the lag of improvement work on BLM forest and range land is of such proportions that past levels of accomplishment cannot hope to encompass the full dimensions of the job.

We believe BLM's appropriation for forestry should be increased to $12 million, and for grazing land management to $7,500,000.

We recommend that soil and moisture conservation funds for the Bureau of Indian Affairs be increased for fiscal year 1965 to $7,500,000—a rise of approximately $1,500,000 over 1964—rather than cut back to $5,408,000 as the budget proposes. The additional funds should be applied to the application of conservation measures in districts on reservation lands. The work is programed; the need is more than evident; but funds are lacking for the kind of progress required.

The NACD supports the budget items for soil and moisture conservation operations by the Bureau of Sport Fisheries and Wildlife, and by the National Park Service. These items would continue work in 1965 at approximately the same levels as this fiscal year.

CRITICAL REGION

The economic advancement of the United States is linked, inevitably, with the protection, wise use, and orderly development of its natural resources. While this work may be limited or postponed across a span of years, it cannot be limited or postponed indefinitely without incurring penalties on national growth and national well-being. The decisions on the rate of resource work on the publicly owned lands of the Nation are centered uniquely on the Congress. It is our view and we believe it must be yours, that the work on public lands should not be carried on at a slower rate, or with less quality, than the resource work on private lands.

Some of the Nation's most difficult conservation and resource development problems are concentrated on the public lands and intermingled private lands of the West. This is clearly the most hazardous erosion area of the country. The values at stake are enormous, because so much depends on the vital irrigation, water storage, power, and recreation reservoirs already in existence—or considered for construction in the years directly ahead. Yet our western reservoirs are being filled with silt faster than anywhere else in the Nation.

The techniques of soil erosion and silt control are known. We are not faced with the problem of learning how to cope, from a technical or scientific standpoint, with the erosion and vegetative problems. We are faced with the problem of financing the work that needs to be done.

Soil and water conservation districts—and the thousands of western landowners and operators cooperating with these districts—stand ready to share their know-how and efforts with the Federal Government in a joint enterprise. We are not only ready; we are eager. The work which is vital to the welfare of the public lands is vital, also, to those who live and work near the public lands, depend on them for water, and often use them under permit for grazing.

The resources need greater attention; we want to help.

LETTER FROM MRS. JAMES H. ROWE, JR., CHAIRMAN, NATIONAL CAPITAL PLANNING COMMISSION, REGARDING LOCATION OF THE JOHN F. KENNEDY CENTER FOR THE PERFORMING ARTS

MARCH 10, 1964.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
U.S. Senate,
Washington, D.C.

DEAR MR. CHAIRMAN: Notwithstanding press reports over the weekend which may have given the erroneous impression that there had been a change in its position, the National Capital Planning Commission continues to support the Potomac River site for the John F. Kennedy Center for the Performing Arts.

At the Commission's regular monthly meeting on Thursday, March 5, the Center was discussed in executive session. In a formal action the Commission requested the Center's trustees to prepare a model which would show the proposed building in relation to the inner loop freeway and the Theodore Roosevelt bridge ramps and interchange. At the same time the Commission requested the District of Columbia Highway Department to report as soon as possible on

the feasibility of reducing the proposed interchange from three to two levels. Both of these actions were taken for the purpose of improving the presently designated site—not for the purpose of abandoning it.

This letter is sent to you now so that your committee may be fully informed of the National Capital Planning Commission's position.

Sincerely yours,

Mrs. JAMES H. ROWE, Jr., *Chairman.*

LETTER FROM LEE P. CLAGETT, ARLINGTON MEMORIAL CO., CONCERNING COMPENSATION TO BUSINESSMEN FOR MOVING COSTS INCURRED IN CONNECTION WITH LOCATION OF JOHN F. KENNEDY CENTER FOR THE PERFORMING ARTS

MARCH 12, 1964.

Hon. CARL HAYDEN,
Chairman, Senate Committee on Appropriations,
New Senate Office Building, Washington, D.C.

DEAR SENATOR HAYDEN: On Friday, March 6, at 10 a.m. I attended the subcommittee hearing on the proposed John F. Kennedy Center for the Performing Arts.

While the hearing covered several facets of the proposed Center, my particular interest was in the statements of the several business people who lease property on the proposed site, and will be forced to move when the Center is built. My business in the 500 block of 26th Street is one of these, and it is my belief, also that of the others in the area, that we should be compensated for our moving costs.

I have conducted my business at this location since 1945, and since a great part of my activity is placing monuments in Arlington National Cemetery, I initially selected this area for its proximity to the cemetery. There is, of course, no other available similar site either in this area or near the cemetery on the Virginia side, so that in addition to the moving costs, a relocation cannot help but affect my business adversely.

If there were any possibility of my particular business surviving financially such a move and relocation, I would be inclined to simply make the best of it as one must from time to time in operating a small business with limited resources. However, this will undoubtedly not be possible, and it is disheartening to realize that my years of work to build my business since I started it in 1938 will result in failure—brought about by no fault of my own.

I am now almost 50 years old and since I have spent most of my life in this particular field, I have no training for any other work. While I do not have a large number of employees, three of them have been with me from periods of a minimum of 8 years to a maximum of 22 years. They support themselves and their families, and would be as handicapped as I in finding other employment.

I maintain a shop with a good deal of heavy and special equipment used in my monument business, also in another building an office and display of sample monuments, so that moving costs will be neither simple nor inexpensive.

At the hearing, I noted that the other business people to be affected filed with the committee a written statement on the above subject and in several instances were called upon for their views.

My purpose in writing is to ask that this letter be made a part of the record of the hearing, so that it may be included in any consideration given the matter.

Sincerely yours,

LEE P. CLAGETT.

STATEMENT BY WASHINGTON BUILDING CONGRESS, INC., REGARDING NATIONAL CULTURAL CENTER

RECONSIDERING PROPOSED NATIONAL CULTURAL CENTER

The Washington Building Congress is pleased to note the renewed effort to secure funds for the proposed National Cultural Center. The decision to reduce the ambitious scope of the proposal to more manageable proportions was wise—provided it is recognized that this should entail a complete restudy of the project and not merely a partial completion of the project as originally proposed.

Before the Cultural Center reaches the stage of bricks and mortar, however, it should be reconsidered not only from the point of view of its size but from the point of view of its location. We are firmly convinced that, before the project is actually built, there will be almost unanimous opinion that it should not be built

in the location which is presently proposed. It would be most unfortunate, therefore, if funds are solicited on the basis that the presently proposed location cannot be changed. This statement by the Washington Building Congress is presented for the purpose of suggesting a different location before it is too late to do so.

It is natural that the sponsors of the Cultural Center were attracted to the riverside location because of the spectacular setting which it would provide. In making this choice, however, we believe that they actually underestimated the importance of the Cultural Center. A magnificent setting and background for the buildings of the Cultural Center are desirable if they are conceived as architectural monuments. The true function and enormously important purpose of the Cultural Center, however, should be that of playing its proper role in the life of the Nation's Capital.

The city of Washington, like most other large American cities, is going through a process of blight which affects both its residential areas and its downtown shopping areas. We are groping for a response to this disease through the process of urban renewal and the work of "Downtown Progress." In the process of seeking to recreate the central city we are becoming aware of the fact that we must seek a close relationship between the spaces in which to live, work, shop, play, and learn. These should not be areas that are carefully segregated by zoning but, on the contrary, cleverly combined by judicious planning and the free play of natural forces so that each phase of activity helps rather than injures the others.

We may be able to stimulate renewed interest in the commercial possibilities of the downtown shopping area but we shall certainly not be able to do so if all the middle income and upper income families flee to the suburbs.

We may be able to stimulate a return to the city of the families in the middle and upper income groups but we shall probably fail if the center of the city ceases to be an attraction and becomes, instead, a deserted area at night.

The center of the city should remain its center of attraction, at night as well as during the day, and every effort should be made to locate centers of interest close to and within walking distance of the hotels and the downtown shopping district.

In this fashion the parking facilities that are needed in the center of the city can be used at night as well as during the day; subway stations can serve a double purpose; pedestrian traffic can be at a maximum, adding to the liveliness of the sidewalks at night at the same time that it reduces congestion in the streets.

The Washington Building Congress endorses urban renewal, "Downtown Progress," and the Cultural Center but it recognizes that, important as these are, they are only elements in city development and that good city planning requires that they work with rather than against each other.

The Cultural Center, in its present location, tends to decentralize the night life of the city; this is not good planning either for the city or for the successful use of the Cultural Center itself, viewed as an independent and separate project.

A location in or near Franklin Square, for instance, would be within walking distance of the downtown shopping area and close to hotels and close to large concentrations of urban population; a cultural center in this location would benefit downtown as well as the new residential area to be rebuilt to the north of it. There may very well be better locations but this is at least one location that would seem to meet most of the requirements suggested in this statement. We believe it is better to build an effective, useful, and usable center of culture, fully integrated with the city's night life, than to build a beautiful monument in splendid isolation between the river and the freeway.

LETTER FROM DR. I. LAWRENCE KERR, AMERICAN DENTAL ASSOCIATION, URGING INCREASED FUNDS FOR THE DENTAL PROGRAM, INDIAN HEALTH SERVICE

MARCH 5, 1964.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations, Subcommittee on Department of Interior and Related Agencies, Senate Office Building, Washington, D.C.

DEAR SENATOR HAYDEN: I am writing you in regard to fiscal 1965 appropriations for the Division of Indian Health of the U.S. Public Health Service.

The American Dental Association has been long concerned with the health of the American Indian and his ethnic relations in Alaska: the Eskimo, the Alaskan Indian, and the Alaskan native. The health needs of this segment of our popula-

tion are significantly greater than other groups because of unusual physical, social, and related ecological factors and because of this group's distinct attitude toward health services. The conditions which have rendered the Indian population immobile, in tightly confined and often remote areas, further intensify the need for a lasting solution.

The association knows that Congress has been becoming more and more aware of the health needs of the Indian. The notable increase in effective performance by the U.S. Public Health Service, since it received this responsibility in 1955, would not have been possible without substantial congressional appropriations. Related to the size of the problem, however, such success serves merely to underscore the need for constant and increasing support of the well-constructed and well-administered programs of the Division of Indian Health.

Dental health is essential to total health. The laws of the land are replete with evidence that Congress has accepted this maxim as unqualifiedly as have all health professions. The program established within the Division of Indian Health to meet the dental needs of program recipients deserves, therefore, careful and sympathetic consideration.

The U.S. Public Health Service inherited a massive backlog of accumulated dental neglect when it assumed full responsibility for the health of the Indian people. Since the resources needed to reduce this were lacking and since most forms of dental disease are progressive, the decision was reluctantly reached that care of the adult population would be restricted almost entirely to emergency treatment so that most of the limited resources available—in terms of professional and subprofessional personnel, equipment, and supplies—could be applied on an incremental basis to children. This approach has characterized the program of the Dental Services Branch of the Division for several years. Professional services are extended to children through the efforts both of commissioned corps personnel and of civilian dentists under contract. The program is sound in design but, in operation, it is far too limited because of restrictions on personnel and equipment imposed by the inadequate budget.

Statistics for fiscal 1963 indicate that slightly more than 300,000 of the 380,000 persons in the Indian beneficiary population were under age 18 and that of this number, approximately 220,000 were between ages 6 and 18, the critical years for the control of dental disease and the teaching of sound oral health habits. Only 87 dental officers and 96 clinical auxiliaries were available to serve and educate this group during fiscal 1963. The dentist-to-patient ratio, with respect to the 6–18 year age group was 1:2,500, as contrasted with about 1:1,900 in the general population. The dental officers and civilian dentists were able to treat only 88,000 patients in the reporting year. These patients received a total of 384,610 services, an impressive figure until it is realized that these same patients needed but could not be provided an additional 187,000 services. Further, since the number of patients treated represented less than 25 percent of the total beneficiary population, virtually all of whom need dental care, it is obvious that the dental program needs to be broadened considerably in scope.

The professional and subprofessional dental personnel serving with the Division of Indian Health are a dedicated and competent group. They deserve encouragement and support. More important, their patients deserve the opportunity to receive necessary health care.

The American Dental Association respectfully submits that Congress should provide that level of assistance necessary for an effective dental service for all beneficiaries of the Division of Indian Health. The association, therefore, urges your committee to increase substantially that segment of the Division's fiscal year 1965 appropriation that pertains to the activities of the Dental Services Branch.

On behalf of the association, let me thank you for this opportunity of communicating to you and your colleagues the viewpoint of the dental profession. It is my hope that this letter may be made part of the hearing record.

Sincerely,

I. LAWRENCE KERR, D.D.S.,
Council on Legislation, American Denatal Association.

STATEMENT SHOWING EFFECT ON DEPARTMENT OF THE INTERIOR AGENCIES OF BUDGET REDUCTIONS SET FORTH IN HOUSE DOCUMENT NO. 240, MARCH 9, 1964

BUREAU OF LAND MANAGEMENT

Management of lands and resources

Soil and moisture conservation: Reduction of $75,000 in the request of $11,076,000 for soil and moisture activities exclusive of $850,000 for rehabilitation programs for burned-over areas. Reduction of 40 temporary positions.

BUREAU OF INDIAN AFFAIRS

Education and welfare services

Educational assistance, facilities, and services: Operation of additional Federal school facilities, reduction of $60,000 in the increase of $2,944,590 and 60 temporary positions.

GEOLOGICAL SURVEY

Surveys, investigations, and research

Topographic surveys and mapping: Resumption of work on the National Atlas, reduction of $72,000 in the increase of $346,000, and 24 permanent positions.

Geologic and mineral resource surveys and mapping: Reduction of $27,000, and nine permanent positions in the increase of $985,000 for accelerated studies of the earth's crust and upper mantle.

Marine geology and hydrology: Reduction of $45,000 and 15 permanent positions in the increase of $500,000 for extension of studies in this activity.

Water resources investigations: Reduction of $420,000, and 140 permanent positions in the requested increase of $1,265,036 for expanding primary networks for studies of surface and ground water resources.

Conservation of lands and minerals: Reduction of $36,000, and 12 permanent positions in the increase of $100,000 to provide for increased workload in lease supervision and land classification.

BUREAU OF MINES

Conservation and development of mineral resources

Bituminous coal: Reduction of $9,000 in request of $8,119,000 for this activity, exclusive of $217,000 increase for research in methane mining. Reduction involves one permanent and two temporary positions.

Petroleum, natural gas, and oil shale: Reduction of $5,000, and two temporary positions in request of $3,982,000 for this activity, exclusive of $200,000 increase for in situ retorting of oil shale.

Minerals and metals: Reduction of $17,000, and one permanent and five temporary positions in request of $16,298,000 for this activity.

Health and safety

Inspections, investigations, and rescue work: Reduction of $10,000, and one permanent and one temporary position in the request of $6,747,000 for this activity, exclusive of $140,000 increase for expansion of safety educational program.

Health and safety research: Reduction of $9,000, and one permanent and one temporary position, in the request of $1,620,000 for this activity, exclusive of increases totaling $620,000 for research in fine-coal float dust explosion, mine ventilation, and expansion of methane detection.

General administrative expenses

Reduction of $15,000, and two permanent and three temporary positions in the request of $1,425,000 for this appropriation.

BUREAU OF COMMERCIAL FISHERIES

Management and investigations of resources

Research: Reduction of $50,000, and 20 temporary positions in the increase of $495,000 for biological research on pesticides.

BUREAU OF SPORT FISHERIES AND WILDLIFE

Management and investigations of resources

Management of fishery resources: Reduction of $25,000 and eight temporary positions in the request of $6,882,000 for this activity, exclusive of increases of $325,000 for new hatchery operation and $101,000 for wage board costs.

Administration of wildlife resources: Reduction of $35,000 and 12 temporary positions in the request of $12,444,627 for this activity, exclusive of increases totaling $934,373 for management of new refuges, more adequate management of existing refuges, employees' compensation payments, replacement and overhaul of aircraft, and wage board costs.

AGENCY REQUESTS FOR AMENDMENTS TO HOUSE BILL

DEPARTMENT OF THE INTERIOR

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., March 20, 1964.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Referring to your letter of March 18, 1964, there are submitted proposed adjustments in the Department of the Interior and related agencies appropriation bill for fiscal year 1965, presented in the form of amendments, with an explanatory statement covering each change recommended. The amendments refer to page and line numbers of the bill as reported by the House Committee on Appropriations.

We appreciate this opportunity to present recommendations for changes in the bill, which we consider essential to our operations. It is our desire to cooperate in every way in the consideration of these amendments.

Sincerely yours,

STEWART L. UDALL,
Secretary of the Interior.

Enclosure.

BUREAU OF INDIAN AFFAIRS

EDUCATION AND WELFARE SERVICES

(House hearings, pp. 763–780)

(Senate hearings, p. 141)

Appropriation, 1964	$89,235,250
Estimate	96,910,000
House allowance	95,200,000
Restoration requested	1,710,000

(P. 5, line 18)

Amendment requested:

Page 5, line 18 strike out "$95,200,000" and insert in lieu thereof "$96,910,000",—the estimate, or an increase of $1,710,000 in the appropriation.

HOUSE REPORT

"The committee recommends $95,200.000, an increase of $5,964,750 in the 1964 appropriation and a decrease of $1,710,000 in the budget request.

"The amount allowed by the committee by activity compared with the 1964 appropriation and the estimate for 1965 is as follows:

"The amount allowed includes the full budget request, an increase of $500,000, for assistance to pupils in non-Federal schools, and an increase of $1,675,000, a reduction of $1,676,200 in the request, for the operation of additional Federal school facilities and for improvement of operations at existing facilities in fiscal year 1965. The additional 200 positions provided, together with the filling of existing vacancies, should make adequate provision for the estimated 2,253 additional students in boarding and day schools during the next fiscal year."

JUSTIFICATION

This amendment restores the reduction of $1,710,000 made by the House in the budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1964	Budget estimate, 1965	House allowance, 1965	Restoration requested
1. Educational assistance, facilities, and services	$66,118,250	$69,960,250	$68,284,050	+$1,676,200
2. Welfare and guidance services	11,264,000	11,594,000	11,594,000	----------
3. Relocation and adult vocational training	9,420,000	12,023,000	12,023,000	----------
4. Maintaining law and order	2,433,000	2,553,000	2,553,000	----------
1964 Pay Act costs	----------	779,750	779,750	----------
Transfers in the estimate and rounding	----------	----------	−33,800	+33,800
Total	89,235,250	96,910,000	95,200,000	+1,710,000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$1,045,625
12	Personnel benefits	84,695
21	Travel and transportation of persons	100,000
22	Transportation of things	50,000
23	Rent, communications, and utilities	25,000
25	Other services	154,680
26	Supplies and materials	100,000
31	Equipment	150,000
	Total	1,710,000

The increase in funds of $2,175,000 provided in the bill will allow $500,000 for assistance to public school districts educating Indian children and a limited increase in new Federal school enrollment. For this purpose the House committee has allowed 200 additional permanent positions.

Restoration of $1,710,000 and 200 positions is required to accomplish the work proposed by this amendment. The Bureau's estimates were based on enrollment of an additional 2,253 pupils in boarding schools, approximately 240 additional pupils in 8 new day school units and $466,610 for increased plant operations. If the reduction made by the House is allowed to stand it will be necessary to absorb the reduction by reducing standards in all Bureau schools in order to provide for the additional pupils. This would mean lower instructional standards and lower feeding standards for all students in Bureau schools and would result in fewer guidance services to boarding school children during their out-of-school hours. These standards of operation would be further reduced to meet the increased costs of power, heat, and light and other operating costs required in the operation of schools.

BUREAU OF INDIAN AFFAIRS

RESOURCES MANAGEMENT

(House hearings, pp. 781–812) (Senate hearings, p. 158)

Appropriation 1964	$37,691,300
Estimate	40,728,000
House allowance	40,178,000
Restoration requested	550,000

(P. 6, line 2)

Amendment requested:

Page 6, line 2, strike out "$40,178,000" and insert in lieu thereof "$40,728,000", the estimate an increase of $550,000 in the appropriation.

HOUSE REPORT

The House report made no statement, except a tabular breakdown by activities.

JUSTIFICATION

This amendment restores the reduction of $550,000 made by the House in the budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1964	Budget estimate, 1965	House allowance, 1965	Restoration requested
1. Forest and range lands	$4,804,100	$4,854,100	$4,854,100	
2. Fire suppression	140,000	140,000	140,000	
3. Agricultural and industrial assistance	5,499,400	6,229,400	6,229,400	
4. Soil and moisture conservation	5,917,600	5,317,600	5,317,600	
5. Maintenance of roads	3,134,800	3,584,800	3,584,800	
6. Development of Indian arts and crafts	312,700	312,700	312,700	
7. Management of Indian trust property	5,921,600	6,368,600	6,368,600	
8. Repair and maintenance of buildings and utilities	10,642,700	12,192,700	11,642,700	$550,000
9. Operation, repair, and maintenance of Indian irrigation systems	1,318,400	1,309,400	1,309,400	
1964 pay act costs		418,700	418,700	
Total	37,691,300	40,728,000	40,178,000	550,000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$112,000
12	Personnel benefits	9,000
25	Other services	429,000
	Total	550,000

8. Repair and maintenance of buildings and utilities

Restoration of the $550,000 is required for repair and maintenance of buildings constructed in fiscal year 1964 for which funds have not previously been appropriated. In order to protect the large capital investment the Government is making in new facilities, a minimum standard of repair and maintenance should be maintained.

The request for this activity included 60 new positions. The committee allowed 40 new positions or a reduction of 20 new positions. Restoration of these 20 new positions is requested so that the Bureau will be able to provide the necessary repair and maintenance personnel to staff the new educational facilities that will be operating for the first time in fiscal year 1965. These positions are needed not only to protect the Government's investment in these new facilities, but also to keep these plants in a safe and efficient operating condition for the children and educational staff that will be using them.

BUREAU OF INDIAN AFFAIRS

CONSTRUCTION

(House hearings, pp. 827–860)

(Senate hearings, p. 179)

Appropriation, 1964	$58,300,000
Estimate	51,176,000
House allowance	46,700,000
Restoration requested	4,476,000

(P. 6, line 12)

Amendment requested:

Page 6, line 12, strike out "$46,700,000" and insert in lieu thereof "$51,176,000", the estimate, or an increase of $4,476,000 in the appropriation.

HOUSE REPORT

"The amount allowed provides for the following construction program during fiscal year 1965:

1. New Indian day and boarding schools, dormitories, and related facilities	$33,534,000
2. Major alterations and improvements	5,000,000
3. Employee housing	700,000
4. Water exploration and development	390,000
5. Water and sanitary sewer and jail facilities	710,000
6. Advance planning	400,000
7. Navajo Indian irrigation project	4,700,000
8. Other irrigation systems	3,700,000
Subtotal	49,134,000
Reduction due to anticipated slippage in construction program	−2,434,000
Total	46,700,000

"The committee has approved the budgeted construction program except for the proposed conversion of the Tongue Point naval installation at Astoria, Oreg., to provide a high school at an estimated cost of $4,963,000, to be financed with a reprograming of $2,921,000 of fiscal year 1964 funds and an additional appropriation of $2,042,000 for fiscal year 1965. Based on detailed review, the committee is convinced that the extensive conversion of the old facilities of this abandoned naval base and the additional new construction required to provide a suitable school are not warranted, as the initial savings expected compared with all new construction would soon be offset by excessive annual operation and maintenance costs. The committee also questions the advisability of relocating the Indian students to this location, far removed from their homes.

"The funds provided for new day and boarding schools will provide for 2,400 additional seats and replacement of 1,380 existing seats in substandard buildings in the existing Bureau school plants.

"Considering the unobligated balance of $37.9 million available as of January 31, 1964, it is believed that the reduction recommended can be readily absorbed through anticipated slippage in the 1965 construction program. The committee expects that the Bureau will continue to use standard plans and specifications and will continue its efforts to achieve greater economies in planning and construction costs."

JUSTIFICATION

This amendment restores the reduction of $4,476,000 made by the House in the budget estimate for the appropriation. This amount was cut from the 1965 construction program as shown in the following table.

Activity	Appropriation, 1964	Budget estimate, 1965	House allowance, 1965	Restoration requested
1. Buildings and utilities	$52,800,000	$42,776,000	$38,300,000	+$4,476,000
2. Irrigation systems	5,500,000	8,400,000	8,400,000	
Total	58,300,000	51,176,000	46,700,000	+4,476,000

A breakdown of the restoration requested by object of expenditure follows:

11	Personnel compensation	$243,000
12	Personnel benefits	20,000
21	Travel and transportation of persons	10,000
32	Lands and structures	4,203,000
	Total	4,476,000

BUILDINGS AND UTILITIES

Restoration of the $4,476,000 reduction is required to accomplish the work proposed by this amendment.

The House committee disapproved the proposed conversion of the Tongue Point naval installation to provide high school facilities for Indian children ac-

counting for a reduction of $2,042,000 in the construction program. This conversion work will result in a substantial savings in the initial cost of construction, and restoration of this amount is requested in order to provide this needed high school facility. The House committee recommended that $2,434,000 of the total reduction could be absorbed through anticipated slippage in the 1965 program. The preparation of drawings and specifications is proceeding on a schedule which will result in the total obligation of all available construction funds by the end of the 1965 fiscal year. The estimated cost of each construction project included in the Bureau's construction program is based upon the particular need of the individual projects and it is necessary to have funds available in order to award construction contracts. If the $38,300,000 allowed by the House committee is not increased to restore the $2,434,000 reduction, planned projects totaling that amount will have to be delayed until after fiscal year 1965.

This amendment restores the reduction of 40 permanent positions below the fiscal year 1964 level made by the House in the buildings and utilities program.

Restoration of the 40 permanent positions is required to accomplish the construction program approved by the House committee. The projects now under construction and scheduled for construction from the fiscal year 1964 appropriation will carry forward through 1965 and some projects from that year will carry through 1966. Each project requires supervision and inspection in the field as well as management control for approval of material and scheduling. Each new project in the 1965 construction program must have drawings and specifications prepared prior to actual construction. While the budget request is less in 1965 there are approximately the same number of projects to be designed and constructed in the Bureau's fiscal year 1965 program as in the 1964 program. Restoration of the 40 positions is necessary in order to enable the Bureau to carry out the most efficient and economical construction program possible.

BUREAU OF INDIAN AFFAIRS

General Administrative Expenses

(House hearings, pp. 912–915)

(Senate hearings, p. 219)

Appropriation 1964	$4,265,000
Estimate	4,331,000
House allowance	4,331,000
Restoration requested	

HOUSE REPORT

"The increase provided is for pay increase annualization. In addition to this direct appropriation, the budget estimate proposed the use of $1,510,000 of program funds, an increase of $135,000. The committee has allowed an increase of $42,000 for pay increases, but has disallowed the program increase of $93,000, including provision for 11 new employees. Effective use of existing manpower in the Washington and area offices should provide adequately for the Bureau's overhead requirements in fiscal year 1965."

JUSTIFICATION

Facilitating administrative services

Approval is requested to apply $1,510,000 of program funds which involves an increase over 1964 or $135,000 and 11 positions. Of this increase, $42,000 is for increased pay costs and $93,000 is for increased programs. The proposed 11 positions, to be financed from program funds, will assist the administrative offices in keeping pace with the increasing workload caused by expanding program activities. This housekeeping workload must be accomplished if substantive programs are to be efficiently executed.

The committee has allowed $42,000 for pay increases. Restoration of the requested authorization to use $93,000 of program funds will provide the minimum expansion needed to service Bureau operating programs.

The total amount requested for the administration program in 1965 is only 2.8 percent of the total funds requested for the entire Bureau.

NATIONAL PARK SERVICE

MANAGEMENT AND PROTECTION

(House hearings, pp. 985–1030 and 1115–1118)

(Senate hearings, p 291)

Appropriation, 1964	$27,124,000
Estimate	29,712,000
House allowance	29,000,000
Restoration requested	712,000

(P. 10, line 10)

Amendment requested:

Page 10, line 10, strike out "$29,000,000" and insert in lieu thereof "$29,712,000", the estimate, or an increase of $712,000 in the appropriation.

HOUSE REPORT

"Increases allowed consist of:

New park areas for which funds are not provided	$46,000
New park areas activated since beginning of Mission 66 now partially financed	300,000
Operation of newly constructed facilities in pre-Mission 66 areas	554,817
Conversion of park radio systems to narrow band frequencies	68,000
Commercial power and telephone service connection charges	100,000
Natural science and wildlife management studies	100,000
Additional U.S. Park Police	97,000
Production of additional park informational publications	75,000
For more adequate fire protection service	82,000
Employees' compensation fund payments	52,000
Pay increase annualization	448,600
Transfers in the estimates	−47,417
Total, net increase	+1,876,000

"The amount provided includes $25,000, to be matched by private funds, for the high school student park conservation program."

JUSTIFICATION

The amendment restores the reduction of $712,000 made by the House in the budget estimate for this appropriation. This amount is distributed to activities as follows:

Activity	Appropriation, 1964	Budget estimate, 1965	House allowance, 1965	Restoration requested
1. Management of park and other areas	$22,165,200	$24,598,300	$23,886,300	$712,000
2. Forestry and fire control	1,423,000	1,514,700	1,514,700	----------
3. Soil and moisture conservation	203,900	205,000	205,000	----------
4. Park and recreation programs	2,826,300	2,877,000	2,877,000	----------
5. Concessions management	505,600	517,000	517,000	----------
Total	27,124,000	29,712,000	29,000,000	712,000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$184,000
12	Personnel benefits	13,000
23	Rent, communications, and utilities	135,000
24	Printing and reproduction	10,000
25	Other services	300,000
26	Supplies and materials	30,000
31	Equipment	40,000
	Total	712,000

1. *Management of park and other areas.*—The net increase in funds of $1,768,517 and 19 positions provided in the bill will allow for:

Increased pay costs for fiscal year 1964 positions	$375,700
2 new park areas for which funds are not now provided	46,000
A portion of the amount requested for new park areas activated since the beginning of Mission 66 now partially financed	300,000
A portion of the amount requested for meeting increased visitor use and general park program expansion in pre-Mission 66 areas	554,817
Conversion of park radio systems to narrow-band frequencies	68,000
A portion of the amount requested for commercial power and telephone service connection charges	100,000
A portion of the amount requested for natural science and wildlife management studies	100,000
10 additional U.S. Park Police, salaries and expenses	97,000
Production of additional park informational publications	75,000
Employees' compensation fund payments	52,000
Total	1,768,517

Restoration of the $712,000 and 2 positions is requested for the following purposes:

Remainder of the amount requested for new park areas activated since beginning of Mission 66 now partially financed	$101,000
Remainder of the amount requested to operate newly constructed facilities and to meet requirements generated by increased visitor use and general park program expansion in pre-Mission 66 areas	461,000
Remainder of the amount requested for commercial power and telephone service connection charges	100,000
Remainder of the amount requested for natural science and wildlife management studies	50,000
Total	712,000

NEW PARK AREAS ACTIVATED SINCE BEGINNING OF MISSION 66 NOW PARTIALLY FINANCED

There are 23 new park areas that have been activated since the beginning of Mission 66 in 1957 for which the budget requested an increase of $401,000 and for which the House allowed $300,000. These areas are currently provided with funds to meet minimum needs only. Requirements for new areas increase from year to year as progress is made in getting operations underway and in providing services and facilities to meet visitor needs. The full amounts requested in the estimate are needed to bring management, protection, and interpretive program levels of the areas involved more nearly in line with those of comparable areas and to meet the workload anticipated to obtain in the 1965 fiscal year. Five of the areas included in this item—Padre Island and Point Reyes National Seashores, Sagamore Hill and Theodore Roosevelt Birthplace National Historic Sites and Whiskeytown Reservoir Area—were included in our request for funds for the first time (new park areas) in the 1964 budget. The 1964 budget request of $288,400 for these five new areas was reduced by congressional action to $150,000, leaving a deficit in the amounts requested for these areas alone of $138,400. It is urged that the full amount of the budget estimate, $401,000, be allowed.

TO OPERATE NEWLY CONSTRUCTED FACILITIES AND TO MEET REQUIREMENTS GENERATED BY INCREASED VISITOR USE AND GENERAL PARK PROGRAM EXPANSION IN PRE-MISSION 66 AREAS

The full amounts requested in the estimate for operating newly constructed Mission 66 facilities and for requirements generated by increased visitor use and general park program expansion in pre-Mission 66 areas totaling $1,015,817 are essential to meet visitor needs and to meet minimum requirements for management, protection, and interpretation of the park areas. The portion of the total request allowed by the House ($554,817) will not permit the operation of new visitor centers, campgrounds, entrance stations, campfire circles, etc., at adequate levels and it will not provide fully for meeting the increase in visitor use workload. These are requirements that must be met if the Service is to fulfill its responsibility for providing visitor services and for protecting park features and facilities. The amount of $461,000 disallowed by the House should be restored in order that the present standard of operation can be maintained.

COMMERCIAL POWER AND TELEPHONE SERVICE CONNECTION CHARGES

In order to obtain commercial electric power and telephone service in some of the isolated park areas, payments must be made to the utility companies to cover all or portions of the cost of extending company lines and making the necessary connections. These payments are usually made in lump sums when the services are commenced. A small increase of $50,000 was provided for the purpose in 1964. An additional $200,000 is needed in 1965. The $100,000 reduction in this item and the $50,000 reduction in the companion item included in the "Maintenance and rehabilitation of physical facilities" appropriation would seriously curtail the programs scheduled for some of the park areas. Electric power and telephone services are necessary for Service and concessioner operations and it is essential that sufficient funds be made available to facilitate initiation and completion of necessary negotiations, some of which are currently underway. It is recommended that the $100,000 be restored for this item. A similar recommendation is made for the companion item under the "Maintenance and rehabilitation" appropriation.

NATURAL SCIENCE AND WILDLIFE MANAGEMENT STUDIES

A planned and coordinated program of natural science and wildlife management studies is urgently needed to provide data essential to the formulation of sound and timely management, policy, planning, and programing decisions required to protect and maintain the integrity of the parks for present and future generations. The budget estimate of $150,000 is considered the very minimum requirement for commencement of the program. The reduction of $50,000 made by the House will make necessary a reduction (1) in the number of cooperative arrangements that can be entered into with other agencies, (2) in the extent and scope of significant study contracts with cooperating colleges and universities, and (3) in the field investigations, analysis and program recommendations to be accomplished with the proposed small permanent staff which is needed for immediate attack on existing situations where there is severe environmental deterioration. The reduction will also eliminate two of the five proposed positions. If the amount is not restored, there will be a substantial and serious reduction in the effectiveness of the program, and incomplete and partial coverage of the environmental situations that are now deteriorating in the park areas.

The budget program is in line with various other efforts that are being made to assure full utilization of manpower and fund resources, particularly from a long-range standpoint. It is urged that the amount of $50,000 which was disallowed by the House be restored to the bill and that the budget request for a small nucleus of five positions be allowed in order that this effective and coordinated study program which is so urgently needed, may be commenced in 1965.

NATIONAL PARK SERVICE

MAINTENANCE AND REHABILITATION OF PHYSICAL FACILITIES

(House hearings, pp. 1030–1041)

(Senate hearings, p. 325)

Appropriation, 1964	$21, 566, 750
Estimate	23, 500, 000
House allowance	23, 100, 000
Restoration requested	400, 000

(P. 10, line 19)

Amendment requested:

Page 10, line 19, strike out "$23,100,000" and insert in lieu thereof "$23,-500,000", the estimate, or an increase of $400,000 in the appropriation.

HOUSE REPORT

"The net increase allowed includes $487,000 for pay increase annualization and wage rate increases; $38,000 for new park areas; $210,000 for park areas activated under Mission 66 and now partially financed; $673,504 for more adequate maintenance and operation of facilities in pre-Mission 66 areas; $150,000 for com-

mercial power and telephone service connection charges; and a decrease of $25,254 due to transfers in the estimates."

JUSTIFICATION

The amendment restores the reduction of $400,000 made by the House in the budget estimate for this appropriation. This amount is distributed to activities as follows:

Activity	Appropriation, 1964	Budget estimate, 1965	House allowance, 1965	Restoration requested
1. Roads and trails	$8,784,000	$9,500,000	$9,311,000	$189,000
2. Buildings, utilities, and other facilities	12,782,750	14,000,000	13,789,000	211,000
Total	21,566,750	23,500,000	23,100,000	403,000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$95,000
12	Personnel benefits	5,000
23	Rent, communciations, and utilities	54,000
25	Other services	206,000
26	Supplies and materials	30,000
31	Equipment	10,000
	Total	400,000

(1) Roads and trails, and (2) buildings, utilities, and other facilities: The increase in funds of $527,000 for roads and trails and $1,031,504 and five new positions for buildings, utilities, and other facilities provided in the bill will allow for:

	Roads and trails	Buildings, utilities, etc.	Total
Increased pay costs	$24,000	$33,000	$57,000
Wage rate increases	164,000	266,000	430,000
New park areas for which funds are not now provided	3,000	35,000	38,000
A portion of the amount requested for 24 new park areas activated since commencement of Mission 66 now partially financed	107,000	103,000	210,000
A portion of the amount requested for more adequate maintenance and operation of facilities existing at commencement of Mission 66	229,000	444,504	673,504
A portion of the amount requested for commercial power and telephone service connection charges		150,000	150,000
Total	527,000	1,031,504	1,558,504

Restoration of $189,000 for roads and trails, and $211,000 for buildings, utilities, and other facilities is requested for the following purposes:

	Roads and trials	Buildings, utilities, etc.	Total
Remainder of the amount requested for 24 new park areas activated since commencement of Mission 66 now partially financed	$68,000	$20,000	$88,000
Remainder of the amount requested for maintenance and operation of new and reconstructed facilities in pre-Mission 66 areas and more adequate maintenance and operation of facilities existing at commencement of Mission 66	121,000	141,000	262,000
Remainder of the amount requested for commercial power and telephone service connection charges		50,000	50,000
Total	189,000	211,000	400,000

The House reduction of $350,000 in the first two items listed above will, if sustained, make necessary deferring or lowering the standard of maintenance and operating functions in the various park areas.

The 24 new areas authorized since the commencement of Mission 66, for which restoration of $88,000 is requested, are currently provided with amounts to meet minimum needs only. Requirements for new areas increase from year to year as progress is made in getting operations underway and as facilities and services to meet visitor needs are provided. The full amounts requested in the estimate are needed to bring maintenance and operating program requirements of the areas involved more nearly in line with those of comparable areas and to meet the workload anticipated to obtain in the 1965 fiscal year. House action will preclude meeting this need.

The House bill makes inadequate provision for operating and maintaining new and reconstructed facilities which will be completed and placed into operation by or during the 1965 fiscal year in pre-Mission 66 areas. As most of the new or reconstructed facilities will have to be placed into operation and maintained to protect the Government investment the standard of maintenance of other facilities would have to be lowered to provide minimum funds required for the purpose. We urge that the $262,000 disallowed by the House be restored.

In order to obtain commercial electric power and telephone service in some of the isolated park areas, payments must be made to the utility companies to cover all or portions of the cost of extending company lines and making the necessary connections. These payments are made in lump sums when the services are commenced. The $50, 000 reduction in this item (the third item listed in the foregoing) and the $100,000 reduction in the companion item included in the "Management and protection" appropriation request would seriously curtail the programs scheduled for some of the park areas. Electric power and telephone services are necessary for service and concessioner operations and it is essential that sufficient funds be made available to facilitate initiation and completion of necessary negotiations, some of which are currently underway. It is recommended that the $50,000 be restored in the allowance for this item. A similar recommendation is made for the companion item under the "Management and protection" appropriation.

NATIONAL PARK SERVICE

CONSTRUCTION

(House hearings, pp. 1041–1073, 1107, 1109–1115, and 1117) (Senate hearings, p. 333)

Appropriation 1964	$32, 697, 000
Estimate	25, 406, 000
House allowance	23, 800, 000
Restoration requested	1, 250, 000

(P. 11, lines 5, 7, 8, and 9)

Amendments requested:

(1) Page 11, line 5, strike out "$23,800,000" and insert in lieu thereof "$25,050,000", an increase of $1,250,000 in the appropriation.

(2) Page 11, lines 7, 8, and 9, strike out the following: *Provided*, That no part of this appropriation shall be used for condemnation of any land for Grand Teton National Park in the State of Wyoming

HOUSE REPORT

"The amount provided by activity consists of the following:

Camping and picnicking facilities	$2, 202, 500
Public service and administrative units	8, 782, 500
Utilities	8, 859, 100
Employee housing	2, 172, 300
Miscellaneous	2, 587, 800
Acquisition of water rights	480, 000
Reduction due to anticipated slippage in construction program	−1, 250, 000
Deletion of fallout shelter at Rocky Mountain National Park and rounding	−34, 200
Total	23, 800, 000

"The amount allowed includes $845,000 to initiate the construction of visitor and related facilities at Glacier Bay National Monument, Alaska, representing the first phase of the budgeted plan. The committee has deferred the balance of the request, $321,800, representing the construction items that will not be required until fiscal year 1966.

"As there was an unobligated balance of $33.5 million under this appropriation as of January 31, 1964, it is believed that the reduction of $1,250,000 will be absorbed readily through anticipated slippage in the construction program.

"It should be noted that funds heretofore appropriated under this item for acquisition of national park lands have been deleted from the 1965 budget which proposes that such requirements hereafter be financed from the land and water conservation fund assuming favorable action by Congress on H.R. 3846. The committee has approved, within available funds, the retention of existing land acquisition personnel under this appropriation item pending congressional action on the bill."

JUSTIFICATION

Explanation of amendment (1).—The amendment restores the reduction of $1,250,000 made by the House in the budget estimate to cover anticipated slippage in the construction program. This amount is distributed to activities as follows:

Activity	Appropriation, 1964	Budget estimate, 1965	House allowance, 1965	Restoration requested
(a) Buildings, utilities, and other facilities	$26,532,000	$24,926,000	$23,320,000	$1,250,000
(b) Acquisition of—				
(1) Lands	5,300,000			
(2) Water rights	365,000	480,000	480,000	
(c) Roads and trails	500,000			
Total	32,697,000	25,406,000	23,800,000	1,250,000

A breakdown of the restoration request by objects of expenditure follows:

32 Lands and structures $1,250,000

Slippage, $1,250,000

It is conceded that a program involving more than 400 projects will experience yearend slippage for various reasons, among them being rejection of excessive bids, or unanticipated activities of other agencies, such as State road construction, which necessitates revision of park plans. To obtain maximum value it is frequently necessary to reject contract bids for projects and readvertise in hopes of more favorable bids. The deferred projects are seldom dropped from the construction programs as their need continues to exist. Congressional action on the 1964 appropriation contemplated slippage in projects having a value of $1,400,000. Specific projects were not identified. These projects must be carried forward to be accomplished during the 1965 or future fiscal years. A reduction of $1,250,000 under the 1965 budget estimate for additional project slippage would result in a cumulative total of $2,650,000 involving an estimated 40 to 50 unfinanced projects. This significant amount would make the program difficult of administration, and lead to misunderstanding or confusion of those interested in the projects, because of rescheduling of prior year projects in some future year programs.

During the past 8 years, a net of 27 additional park areas have been authorized or established, presenting an additional imposing construction workload. The amount of $23,800,000 proposed by the House bill represents a reduction of more than 20 percent under the amounts appropriated for this construction activity during the 1962 and 1963 fiscal years. It is respectfully recommended that $1,250,000 be restored to the bill to assist in meeting development needs in the newer units of an expanding park system, and to provide in part for needs of more visitors, the numbers of which have exceeded all expectations.

Explanation of amendment (2).—The amendment deletes the restriction on condemnation of any land for Grand Teton National Park in the State of Wyoming.

The language of the proviso is at variance with the basic purpose for which national parks are established.

The Grand Teton National Park was established under the act of September 14, 1950 (64 Stat. 849), to "be administered in accordance with the general statutes governing national parks." The park purpose is defined in the act of August

25, 1916 (39 Stat. 535), as being "to conserve the scenery and the natural and historic objects and the wildlife therein and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations."

This conservation objective is very difficult to attain while land within the park is held in private ownership because management as a unit is impracticable under the circumstances. There are no means at the disposal of the United States to prevent irreparable damage to park values from such activities as mining, the cutting of timber, or the construction of unsightly developments on private lands. Charged with the responsibility of administering national parks in accordance with the basic purpose of the act, the Department of the Interior pursues a policy under which all lands within national parks may eventually be brought into Federal ownership.

In furtherance of this policy with respect to national parks, the Department proposes to acquire private land in Grand Teton National Park as it becomes available. The Grand Teton National Park, established in accordnace with the act of September 14, 1950, contains a gross acreage of 310,350 acres. All but 7,896 acres are now owned by the United States.

The continuation of the prohibition against condemnation may operate to preclude the undertaking of development of construction in any area where private land must be acquired to permit a proposed installation to be undertaken or completed. If the prohibitory language is continued, the Service may be faced with paying an exorbitant amount for land if an uncooperative owere is encountered, and the Service will be without the further benefit of condemnation to acquire title immediately if title infirmities are present.

For the foregoing reasons, it is strongly recommended that the restriction be removed from the 1965 appropriation bill.

NATIONAL PARK SERVICE

General Administrative Expenses

(House hearings, pp. 1096–1105)

(Senate hearings, p. 374)

Appropriation, 1964	$2,136,750
Estimate	2,412,000
House allowance	2,325,000
Restoration requested	87,000

(P. 12, lines 7 and 8)

Amendments requested:

(1) Page 12, line 7, strike out "$2,325,000" and insert in lieu thereof "$2,412,000", the estimate, or an increase of $87,000 in the appropriation.

(2) Page 12, line 8, strike out "$115,000" and insert in lieu thereof "$125,000", an increase of $10,000 in the limitation of the amount for travel and transportation of persons.

HOUSE REPORT

"The increase allowed includes: $17,000 to strengthen financial management functions in the Washington office; $42,650 to intensify management analysis and statistical functions in the Washington office; $60,000 to provide management analysis staffs in the regional offices; and $68,600 for pay increase annualization."

JUSTIFICATION

Explanation of amendment (1).—The amendment restores the reduction of $87,000 made by the House in the budget estimate for this appropriation. This amount is distributed to activities as follows:

Activity	Appropriation, 1964	Budget estimate, 1965	House allowance, 1965	Restoration requested
(a) Departmental expenses	$1,304,350	$1,457,000	$1,410,000	$47,000
(b) Regional office expenses	832,400	955,000	915,000	40,000
Total	2,136,750	2,412,000	2,325,000	87,000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$67,000
12	Personnel benefits	4,000
21	Travel and transportation of persons	10,000
23	Rent, communications, and utilities	1,000
25	Other services	1,000
26	Supplies and materials	1,000
31	Equipment	3,000
	Total	87,000

(*a*) Departmental expenses and (*b*) regional office expenses. The increase in funds of $188,250 and 10 positions provided in the bill will allow for:

Increased pay costs for fiscal year 1964 positions	$68,600
Strengthening the financial management functions in the Washington office	17,000
A portion of the increase requested to intensify management analysis and statistical functions in the Washington office	42,650
A portion of the increase requested to provide management analysis staffs in the regional offices	60,000
Total	188,250

Restoration of the $87,000 and 10 positions is required to accomplish the work proposed by this amendment, for the following:

Remainder of the amount requested to intensify management analysis and statistical functions in the Washington office	$12,000
Remainder of the amount requested to provide management analysis staffs in the regional offices	40,000
To strengthen training functions in the Washington office	15,000
To increase the effectiveness of the Service's trust fund program	20,000
Total	87,000

MANAGEMENT ANALYSIS AND STATISTICAL FUNCTIONS IN THE WASHINGTON OFFICE

House action in reducing the request for additional management analysis personnel in the Washington office will make necessary the elimination of one professional position and a secretarial position from the proposed staff. The professional position is needed to help develop and provide statistical data upon which to base planning, programing, budgeting, and management decisions. The provision of adequate statistical data for planning, programing, budgeting, and day-to-day management purposes is an essential requirement for full manpower and fund utilization, particularly from a long-range viewpoint. The secretarial position is needed to serve the above position and to relieve the existing staff of the more routine duties. The entire request for this item, as well as the companion one for the regional offices, is in line with both administration and congressional directives dealing with manpower and fund utilization. It is respectfully requested that the reduction made by the House be restored.

MANAGEMENT ANALYSIS STAFFS IN THE REGIONAL OFFICES

The House allowance will provide for five professional positions, without secretarial help, for management analysis work in five of the regional offices. Management analysis is an extremely important function and one which must receive increased emphasis in the interest of efficiency and economy and good manpower utilization. Provision for a management analysis officer and a secretary in each of the regional offices is considered a minimal requirement to meet management needs. Restoration of funds to provide or the secretarial positions is urgently requested.

TRAINING FUNCTIONS

The full amount of this request was disallowed by the House. An additional training position is vitally needed to assist the training officer. The passage of the Government Employees Training Act of 1958 has generated considerable additional workload for the training officer. He has not been able to set up guidelines for a formal program or to do other things which would make use of the provisions of the Training Act more effective and productive. These things

include an intensive and continuing study of training needs which could be met through use of outside facilities, reports on these needs, and establishing criteria for the selection of employees to receive the benefits of training in outside facilities. The additional position is essential to provide more adequate leadership and assistance in supervisory training, instructor training, orientation, safety training, etc., which are vital for the improvement of the career service and for more effective use and development of manpower. It is presently impossible for the training officer to plan and execute an adequate training program for a bureau of the size and complexity of the National Park Service. The pressures on the training officer are mounting steadily, and there are many demands on his time which simply cannot be met without the addition of an assistant training officer position, funds for which were deleted by the House. It is requested that the amount in question be restored to meet this need.

TRUST FUND PROGRAM

The House allowance makes no provision for the requested staff of two positions needed to implement and carry forward a more effective and active trust fund program. Two primary trust funds have been authorized by the Congress for the benefit of the national parks. The first grants broad authority to the National Park Service to accept donations including land, property, and money for national park purposes. The second created the National Park Trust Fund Board and authorizes the acceptance of gifts to be invested as in a foundation or endowment fund. Substantial donations have been received to date in both funds; however, there is ample opportunity to enlarge the scope and effectiveness of the trust fund program if full-time attention can be devoted to it. Heretofore, no individual has had this function as a primary responsibility with the result that the program has lacked continuity and has succeeded only to the extent that the Director and others have taken time from their other responsibilities to devote to it.

Substantial financial benefits will accrue to the Service by establishing the positions of trust fund officer and a clerk-stenographer. The Service would then be in a position to develop and program a comprehensive portfolio of necessary and suitable projects having appeal to potentially large and small donors. The trust fund officer would follow through and give leadership, continuity, and full-time thought and energy to the routine aspects of such an enterprise. He would also work closely with the Director and the Secretary of the Interior in enlarging the scope of the trust fund programs and activities for national park purposes. Restoration of funds for this purpose is urgently requested.

Explanation of amendment (2).—If the funds and positions herein recommended for restoration are allowed, it is urged that the amount of the travel limitation be increased from $115,000 to $125,000 to permit required field work of the positions included in the estimate.

NATIONAL PARK SERVICE

Administrative Provisions

(House hearings, pp. 1105–1106)

(Senate hearings, p. 380)

(P. 12, lines 11 and 12)

Amendment requested:

Page 12, lines 11 and 12, strike out: "ninety-four passenger motor vehicles" and insert in lieu thereof "one hundred and eighteen passenger motor vehicles of which ninety-four shall be".

HOUSE REPORT

The House report made no statement concerning this item.

JUSTIFICATION

House action on the bill eliminated the 24 additional vehicles proposed in the budget.

The increases proposed in the budget are for the following purposes:

U.S. Park Police	1
Areas activated since the beginning of Mission 66	8
Pre-Mission 66 areas	15
Total	24

Lack of authorization for acquisition of additional passenger motor vehicles will preclude the provision of (1) an additional police patrol vehicle for the new U.S. Park Police positions included in the estimate; (2) adequate vehicles for 5 of the areas activated since the beginning of Mission 66 for which 8 additional vehicles are requested primarily for the additional permanent positions which will be provided with the increases requested in the estimates; and (3) adequate patrol and general transportation in 8 of the pre-Mission 66 areas for which 15 additional vehicles are requested to more nearly meet the needs of existing ranger, naturalist, historian, and administrative personnel. The additional vehicles will make possible better utilization of manpower. The positions for which the 24 additional vehicles are requested are provided for in the House allowance, and fulfillment of the Service's responsibilities for managing, operating, protecting, interpreting, and maintaining these parks will be impeded if the additional passenger motor vehicles are not provided.

OFFICE OF TERRITORIES

Administration of Territories

(House hearings, pp. 1306–1347, 1396–1435)

(Senate hearings, p. 540)

Appropriation, 1964	$13,000,000
Estimate, 1965	18,814,000
Estimate (supplemental), 1964	11,464,000
House allowance, 1965	15,300,000
House allowance supplemental, 1964	10,000,000
Restoration requested, 1965	1,000,000
Restoration requested (supplemental), 1964	1,464,000

(P. 13, line 17 and p. 14, line 4)

Amendments requested:

(1) Page 13, line 17 strike out "$15,300,000" and insert in lieu thereof *"$16,300,000"*—an increase of $1 million in the appropriation.

(2) Page 14, line 4 strike out "$10,000,000" and insert in lieu thereof *"$11,464,000"*—the estimate or an increase of $1,464,000 in the appropriation.

HOUSE REPORT

"This item makes provision for the expenses of the Office of Territories and for support of the governments of the Virgin Islands, Guam, American Samoa, and Administration of Canton Island.

"Of the amount allowed, $5,537,000 is for support of American Samoa, a decrease of $2,500,000 in the budget estimate. The committee has approved the budgeted construction program as submitted but believes that the amount allowed will be sufficient to meet obligations in fiscal year 1965 as there is at present an unobligated balance of $12.1 million, and further slippage in the program is anticipated.

"The amount allowed also includes $9 million of the $10 million requested for fiscal year 1965 to carry out the provisions of the Guam Rehabilitation Act, approved November 4, 1963, which authorized loans and grants up to $45 million for the rehabilitation of the territory of Guam. The loans and grants will be used to replace public facilities destroyed by the severe typhoon in 1962 and also to replace other obsolete temporary facilities constructed in World War II. Water power and telephone projects will be financed from loans repayable in full with interest. All other projects are to be financed 50 percent from loans and 50 percent from grants. The committee has also approved $10 million of the 1964 supplemental request of $11,464,000 to initiate the rehabilitation program. The total provided, $19 million, is believed all that can be efficiently and effectively obligated by June 30, 1965, and, therefore, the committee has imposed the total reduction of $2,464,000 in the estimates based on anticipated slippage in the construction estimate."

JUSTIFICATION

Explanation of amendments.—Amendment (1) restores $1 million of the total reduction of $3,514,000 made by the House in the 1965 budget estimate for this appropriation; amendment (2) restores the entire reduction of $1,464,000 made by the House against the budget estimate for 1964 (supplemental). These amounts are distributed to activities as follows:

Estimate, 1965

Activity	Appropriation, 1964	Budget estimate, 1965	House allowance, 1965	Restoration requested
1. Virgin Islands:				
(a) Governor's office	$90,000	$92,000	$88,000	
(b) Legislative expense	13,000	13,000	13,000	
(c) Comptroller's office	179,000	185,000	185,000	
2. Guam:				
(a) Governor's office	83,000	84,000	81,000	
(b) Legislative expense	24,000	24,000	24,000	
(c) Loans		6,539,000	6,039,000	$500,000
(d) Grants		3,461,000	2,961,000	500,000
3. American Samoa:				
(a) Governor's office	161,000	168,489	168,489	
(b) Legislative expense	35,000	30,600	30,600	
(c) Chief justice and high court	78,000	89,100	89,100	
(d) Grants	12,002,000	7,748,811	5,248,811	
4. Canton Island administration	21,000	22,000	17,000	
5. General administration	314,000	357,000	355,000	
Total	13,000,000	18,814,000	15,300,000	1,000,000

A breakdown of the restoration request by objects of expenditure follows:

33	Investments and loans	$500,000
41	Grants, subsidies, and contributions	500,000
	Total	1,000,000

Estimate, 1964 (supplemental)

Activity	Appropriation, 1964	Supplemental estimate, 1964	House allowance, 1964	Restoration requested
Guam:				
(a) Loans		$5,877,100	$5,145,100	$732,000
(b) Grants		5,586,900	4,854,900	732,000
Total		11,464,000	10,000,000	1,464,000

A breakdown of the restoration request by objects of expenditure follows:

33	Investments and loans	$732,000
41	Grants, subsidies, and contributions	732,000
	Total	1,464,000

We request restoration of the $1 million deleted from the $10 million estimated for fiscal year 1965; and, in addition, the $1,464,000 deleted from the $11,464,000 supplemental estimate for fiscal year 1964. The committee's reason for deleting these sums from the requests were apparently not based on disapproval of any of the projects listed in the budget request but were based on the committee's belief that of the total $21,464,000 requested in the 2 fiscal years under review, only $19 million could be efficiently and effectivley obligated by June 30, 1965. The Governor assures us that all funds can be effectively and efficiently obligated by the end of fiscal year 1965, very likely by January 1965. The Government of Guam has entered into an agreement with the Navy in Guam for the contract administration of nearly all the projects included in the estimates. A strict time schedule developed by the Navy for such contract administration has been agreed upon. We concur with the government of Guam that the funds requested can be obligated within the time frame under consideration.

GEOLOGICAL SURVEY

SURVEYS, INVESTIGATIONS, AND RESEARCH

(House hearings, pp. 681–758)

(Senate hearings, p. 423)

Appropriation, 1964	$63,700,000
Estimate	68,623,000
House allowance	65,930,000
Restoration requested	2,693,000

(P. 18, line 1)

Amendment requested:

Page 18, line 1, strike out "$65,930,000" and insert in lieu thereof "$68,623,000", an increase of $2,693,000 in the appropriation.

HOUSE REPORT

"The amount allowed by activities as compared with the 1964 appropriation and the estimate for 1965 is as follows:

Activity	Committee bill, 1965	Bill compared with—	
		1964 appropriation	Estimate, 1965
Topographic surveys and mapping	$21,480,000	−$160,000	−$434,000
Geologic and mineral resource surveys and mapping	16,510,000	+250,000	−708,000
Marine geology and hydrology	748,000	+250,000	−205,000
Water resources investigations	19,743,000	+1,036,000	−346,000
Soil and moisture conservation	193,000		
Conservation of lands and minerals	4,465,000	+64,000	
General administration	1,801,000		
Special-purpose buildings		−200,000	−1,000,000
Increased Pay Act costs	990,000	+990,000	
Total, Geological Survey	65,930,000	+2,230,000	−2,693,000

"The net increase allowed includes $140,000 to resume work on the National Atlas; $500,000 for accelerated studies of the earth's crust and upper mantle; $500,000 for expansion of primary networks for studies of the surface and groundwater resources of the Nation; and $502,000, the full budget request, to match anticipated increase in State offerings for cooperative investigations of surface and ground waters.

"The committee has disallowed the proposed appropriation of $1 million for construction of a nuclear research laboratory at Denver, Colo. As facilities are available for the conduct under contract of essential research of this nature at the present time, the committee believes, in the interest of economy, that this large capital expenditure should not be undertaken in the coming fiscal year. The committee also reiterates its request of last year that the laboratory expansion program of the agency be referred to the legislative committee for appropriate review and approval."

JUSTIFICATION

The amendment restores the reduction of $2,693,000 made by the House in the budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1964	Budget estimate, 1965	House allowance, 1965	Restoration requested
(1) Topographic surveys and mapping	$21,640,000	$21,914,000	$21,480,000	$434,000
(2) Geologic and mineral resource surveys and mapping	16,260,000	17,218,000	16,510,000	708,000
(3) Marine geology and hydrology	498,000	953,000	748,000	205,000
(4) Water resources investigations	18,707,000	20,089,000	19,743,000	346,000
(5) Soil and moisture conservation	193,000	193,000	193,000	
(6) Conservation of lands and minerals	4,401,000	4,465,000	4,465,000	
(7) General administration	1,801,000	1,801,000	1,801,000	
(8) Special-purpose buildings	200,000	1,000,000		1,000,000
Increased pay act costs		990,000	990,000	
Total	63,700,000	68,623,000	65,930,000	2,693,000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$520,000
12	Personnel benefits	35,000
21	Travel and transportation of persons	127,000
22	Transportation of things	45,000
23	Rent, communications, and utilities	70,000
24	Printing and reproduction	53,000
25	Other services	345,000
	Services of other agencies	30,000
26	Supplies and materials	115,000
31	Equipment	353,000
	Total Geological Survey	1,693,000
Allocation account:		
21	Travel and transportation of persons	1,000
24	Printing and reproduction	12,000
25	Other services	32,000
32	Lands and structures	955,000
	Total allocation to General Services Administration	1,000,000
	Grand total	2,693,000

TOPOGRAPHIC SURVEYS AND MAPPING

The overall decrease of $434,000 in the requested amount of funds for topographic surveys and mapping for fiscal year 1965 will result in a decrease in standard quadrangle mapping, map printing services, and in the planned rate of progress on the National Atlas.

The program of the Geological Survey in topographic surveys and mapping results from carefully made plans based on high-priority requests from map users on a nationwide basis. In keeping with the economy program of the President the amount requested for 1965 would satisfy only a small fraction of the national needs. It was considered a minimum amount. Any reduction would deny the country a basic service needed for the development of the Nation's natural resources and economy.

Topographic quadrangle maps are not only needed by many Government agencies and the general public but the Department of Defense now more fully relies on the Geological Survey for such maps of domestic areas in accord with a recent agreement. This agreement saves the Department of Defense an estimated $1 million a year. If the Geological Survey cannot furnish the printed maps as needed, the Army Map Service would have to resume the preparation of some military editions of domestic maps, and some of the effected savings would be lost.

A delay of the National Atlas, for which only $140,000 of the requested $346,000 was allowed by the House, would deny the country a document whose immediate need was confirmed through a recent market survey of potential government educational, and commercial users, and reaffirmed many times.

GEOLOGIC AND MINERAL RESOURCE SURVEYS AND MAPPING

The increase of $250,000, together with another $250,000 reassigned from other projects—as provided in the bill approved by the House—will permit about half of the expansion planned to meet the needs of the upper mantle project. The amount cut ($708,000) from the funds requested for geologic and mineral resource surveys and mapping should be restored not only to meet the minimum requirements for the Geological Survey to fulfill its appropriate and recommended initial part of the upper mantle project, but also to enable the Survey to (1) accelerate critical appraisals of the mineral and fuel resources of the United States, and (2) expand much needed engineering geologic studies in fast-growing urban and industrial areas as well as work on the application of geophysical methods to engineering construction and related land-use problems.

The funds disallowed for the upper mantle project ($458,000) must be restored if the Survey is to make the contribution recommended by the Geophysics Research Board of the National Academy of Sciences. Specifically the decrease excludes the possibility of any participation in some critical parts of this program, such as phase equilibria and geothermal measurements that depend upon the

drilling of holes in new and critical areas, and it cuts essentially in half the number of geophysical observations that the Geological Survey can make in support of the upper mantle project.

In addition, in regional geology the reduction will result in our being unable to begin the program of 1:250,000-scale mapping in the Southeastern United States, a fundamental section of the transcontinental strip—a narrow strip that is the principal target for geophysical investigations related to the upper mantle program.

With no increase in funds allowed for appraisal of mineral and fuel resources ($125,000 requested), research planned to improve methods of reserve appraisal must be sharply curtailed, and essential State and regional resource compilations and energy reports that have been requested by Members of Congress and various investigating groups will be possible only by recessing or discontinuing other important resource studies.

The funds disallowed for engineering geology ($125,000) would have permitted (1) undertaking important new engineering geologic studies in rapidly growing urban areas, such as in Charleston, S.C., and Phoenix, Ariz., where work was originally planned to be started early in fiscal year 1965, and (2) continuation and expansion of a program aimed at applying geophysical methods to measuring the bulk engineering properties of rocks that are important in major urban construction programs.

MARINE GEOLOGY AND HYDROLOGY

The $250,000 increase provided for marine geology and hydrology in the bill approved by the House Appropriations Subcommittee will permit modest expansion of the Survey's cooperative program on the Atlantic continental slope and shelf with the Woods Hole Oceanographic Institution, and support for the planned Willapa Bay, Wash., project.

The decrease of $205,000 in the requested increase for marine geology and hydrology will require (1) postponement of the proposed studies of San Francisco Bay, (2) an appreciable decrease in the effort which can be made in the initial operations of the joint Geological Survey-Coast and Geodetic Survey program to study conditions and resources of the Pacific continental shelf and slope, (3) a reduction in the scale of work at Willapa Bay, Wash., and (4) reduced support of interagency activities, including a one-half reduction in the amount planned for support of the National Oceanographic Data Center.

WATER RESOURCES INVESTIGATIONS

The increase of $1,036,000 provided in the bill for water resources investigations will allow a minimal strengthening of the primary network of streamflow stations and the nationwide network of ground water observation wells and will provide funds to match the anticipated increases in State offerings for the surface water and ground water subactivities of the cooperative program.

Restoration of $346,000 is required to accomplish the work proposed by this amendment.

As a result of huge increases in the demand for water a multitude of water problems urgently requiring solution will continue to arise. It is clear that we must continue to find out more and more about the water resources of our Nation and at a rate far exceeding that of any past year. Current plans to carry out comprehensive river basin planning and to accelerate water development call for accelerating our efforts to obtain adequate basic information about water as a resource. Water facts are basic and indispensible to efficient water development. How much water is available? How is it distributed? How does it vary with time? What is its quality? How do man's activities affect the water supply? These fundamental questions call for the collection and analysis of enormous quantities of water data and the preparation of basic description of this vital resource.

The Geological Survey's long-range plan calls for obtaining basic facts about water resources and monitoring these resources to provide a continuing appraisal of them as extensively and intensively as the need for information requires. The rate of accumulation of water facts has lagged with respect to the need for them. Work for which restoration of funds is requested will help to alleviate a few of the major deficiencies. This work is briefly described in the following paragraphs:

(1) *Collection and compilation of streamflow data.*—The Geological Survey recently conducted a 2-day conference with representatives of more than 20 Federal agencies that depend largely on the Survey for basic data on water. There was near-unanimous agreement on the need for expansion of data coverage. Streamflow information is especially needed for small watersheds or basins. It is estimated that 3,400 stations should be added to the present network. Addi-

tionally, many stations now in operation are critically in need of rehabilitation and upgrading, for example, the Grand Canyon and Lees Ferry stations on the Colorado River.

(2) *Description of ground-water systems.*—To date, only about 1 million square miles, or a little more than 30 percent of the United States, has been covered by ground-water studies. Descriptions that show the areal extent and thickness of water-bearing aquifers, the physical characteristics that control the rate, direction, and quantity of water movement, and changes that take place are urgently needed in many areas of the country. At the present rate of ground water development, the need for ground water information far exceeds the rate of acquiring this information. Essential to this task is expansion of the nationwide network of observation wells to continuously assess the impact of burgeoning ground water development.

(3) *Bench mark network.*—Only about 15 percent of this network needed to distinguish natural variations in water supply from those caused by man will be in operation by the end of fiscal year 1964.

(4) *Basinwide water resources studies.*—National needs in comprehensive river basin planning efforts, as evidenced in pending legislation, require that the Survey expand its efforts on studies which will provide an appraisal of the hydrologic systems and that provide information to enable an evaluation of the effect of proposed water developments on the resource and on the environment. It is this knowledge of the hydrologic systems that is the Geological Survey's most significant contribution to river basin planning.

SPECIAL PURPOSE BUILDINGS

Restoration of $1 million for construction of the special purpose Nuclear Research Laboratory in Denver is requested.

Following the request last year by the House Committee on Appropriations that the proposal for construction of a nuclear building be first reviewed and approved by the legislative committee, a letter was sent to Chairman Aspinall of the House Interior Committee, by the Director of the Geological Survey, briefly describing the Survey's programs and the need for additional facilities, and offering any additional information that might assist in answering any question the committee had on laboratory needs. In addition, the problem was taken up with the committee staff. The Survey proposes to again review the proposal with the chairman of the House Interior Committee.

Problems in geology and hydrology that are both unique to the work of the Geological Survey and are an integral part of its operations, require a wide variety of geophysical and geochemical tools for effective solution. The nuclear techniques proposed for use in a new facility at Denver do not duplicate the work of other national laboratories and reactors or at universities. None of these laboratories in the United States is interested in or equipped to cope with the problems of handling the Geological Survey's enormous load of upward of 40,000 chemical analyses of earth materials and water coming from field and laboratory studies, or to develop and apply new tools to explore for additional supplies of water and minerals to meet our future needs. The analytical load especially is expected to increase as problems develop in the national resources field.

The Geological Survey has and will continue to take advantage of the advances made in the larger national laboratories and reactors. We have found that some of the nuclear tools and techniques that they have developed, such as activation analysis methods for the identification of substances, can be modified and applied to the solution of our water and mineral problems.

Tracers are coming into use as a tool to follow the course and behavior of chemicals which enter in increasing quantities into hydrologic systems, and to facilitate determination of dilution and rate of travel in water of materials that could have serious impact on municipal supplies. The use of activatable tracers in field studies not only will not cause public objections such as are stimulated by the use of radioactive isotopes, but will allow the study of long-term processes.

Similarly, such new tools as the beryllometer, which utilizes a radioactive source to selectively activate beryllium bearing minerals, and thus permit not only recognition of potential ore minerals of this element in the field, but also quantitative appraisal of their abundance, may be expected to significantly improve exploration techniques.

The Nuclear Research Laboratory will provide the necessary specialized facilities for work in hydrology and geology. In addition, it will provide critically needed safer working conditions for the men and women who are currently engaged in intensive studies with radioactive materials at the Denver field center; this work is rapidly approaching the safety limits of the existing facilities.

BUREAU OF MINES

CONSERVATION AND DEVELOPMENT OF MINERAL RESOURCES

(House hearings, pp. 571–631, 673–680)

(Senate hearings, p. 482)

Appropriation, 1964	$29,404,000
Estimate	30,346,000
House allowance	30,100,000
Restoration requested	246,000

(P. 19, lines 8 and 9)

Amendment requested:

(1) Page 19, line 8, strike out "$30,100,000," and insert in lieu thereof "$30,346,000," an increase of $246,000 in the appropriation.

(2) Page 19, lines 8 and 9, strike out "including not to exceed $700,000 for travel and transportation of persons."

HOUSE REPORT

"The increases allowed include $208,000 to provide for research on drainage of methane during mining and $75,000 for increased marine minerals research. The latter amount, together with the $53,000 currently available, will provide a total of $128,000 which the committee expects will be utilized only for the development of technology for mining minerals from the ocean floor. In approving this increase the committee wishes to make it abundantly clear that it does not approve the planned program of the Bureau with a possible duration of 10 years at a cost of $7,500,000. The committee sees no need for the Bureau to engage in ocean surveys, resource evaluations, identification of sea-floor deposits or other oceanographic functions now being performed by the many other Federal and private agencies engaged in oceanographic research. Instead the committee will expect the Bureau's program to be held in the future to the modest level approved for the next fiscal year and that the work will be strictly confined to the development of the technology for mining marine minerals."

JUSTIFICATION

Explanation of amendment (1).—The amendment restores the reduction of $246,000 made by the House in the budget estimate. This amount is distributed by activities as follows:

Activity	Appropriation, 1964	Budget estimate, 1965	House allowance, 1965	Restoration requested
1. Bituminous coal	$7,957,000	$8,165,000	$8,165,000	
2. Anthracite coal	1,059,000	824,000	824,000	
3. Petroleum, natural gas and oil shale	3,862,000	4,057,000	3,862,000	$195,000
4. Minerals and metals	15,952,000	15,917,000	15,917,000	
5. Oceanographic research	53,000	179,000	128,000	51,000
6. Foreign mineral activities	521,000	521,000	521,000	
Increased Pay Act cost		683,000	683,000	
Total	29,404,000	30,346,000	30,100,000	246,000

A breakdown of the restoration by objects of expenditure follows:

11	Personnel compensation	$89,000
12	Personnel benefits	7,000
21	Travel and transportation of persons	10,000
22	Transportation of things	4,000
13	Rent, communications, and utilities	2,000
24	Printing and reproduction	1,000
25	Other services	87,000
26	Supplies and materials	14,000
31	Equipment	22,000
32	Lands and structures	10,000
	Total	246,000

Petroleum, natural gas and oil shale.—Restoration of the House reduction of $195,000 is requested to enable the Bureau to develop effective means of oil shale retorting technology.

The economic production of large volumes of shale oil from oil shale in future years as a supplement to domestic crude oil supplies will be dependent on the ability to produce shale oil by in situ methods, since much of this vast, undeveloped resource is covered by 1,000 feet and more of useless overburden. To mine this oil shale at such depths would be expensive by ordinary mining methods. Costs would be lower if shale oil could be produced by retorting the oil shale in place.

The Bureau of Mines needs to explore the possibilities of in situ production on a modest scale in order to be able to advise Congress and the rest of the Federal Government as to the feasibilities of the proposal, and to determine the possible recoveries of oil from the shale reserves. Such information would be of direct benefit, too, to smaller companies interested in competing in the future shale oil industry. The proposed studies also would delineate more clearly the recoverable oil reserves in oil shales.

Oceanographic research.—The house reduction of $51,000 in the marine minerals minerals research program for fiscal year 1965 from the requested $179,000 to $128,000 will seriously hamper the Bureau from its long-range goal of adding minerals from the seas to supplement diminishing dryland sources. Achievement of this goal will require not only a careful study of the practicability of adapting current mining and processing methods for marine mineral extraction, but the formulation and possible demonstration of entirely new concepts for recovery of minerals from the seas. The proposed budget reduction will severely restrict these areas of research.

The requirement that research be limited "only for the development of technology for minimg minerals from the ocean floor," is technically overrestrictive, since the problem of marine mineral recovery will vary greatly with the type of mineral to be mined, the extent and grade of the deposit, whether it is composed of unconsolidated sediments or hard rock, the distance from the underwater occurrence to land, the depth of water in which it lies, and other factors. The technology for mining can be developed only after identification of the above items.

Explanation of amendment (2).—The amendment deletes the restrictive limitation placed by the House on funds to be used for travel and transportation of persons. The increase indicated in the estimate for 1965 is due to the methane drainage research program, research on in situ retorting of oil shale and expansion of the marine minerals program. These programs would be basically accomplished by fieldwork parties detached from various field headquarters.

Personal communication, visual inspection, and the exchange of scientific techniques are the primary bases for travel of research personnel and are foremost factors in determing the success of scientific research and forestalling duplication of effort. The limitation on travel is disruptive to the performance of the research functions coming within the assigned responsibilities since no allowance is made for the sometimes necessary unplanned travel required to carry out the Bureau's functions.

Further, when specific object class limitations are placed on the use of funds, it is necessary to establish special controls which are both cumbersome and costly.

Inasmuch as the Bureau has placed increased emphasis on efficient and effective use of funds for travel and transportation of persons, it is felt that the limitation is undully restrictive, unnecessary, and should be eliminated.

The Bureau hopes that the restrictive language will be removed. In case that it is not, then it is requested that the limitation be increased from $700,000 to $725,000 to permit the Bureau to carry out its programs in the most feasible and efficient manner.

BUREAU OF MINES

HEALTH AND SAFETY

(House hearings, pp. 631–651, 675–676)

(Senate hearings, p. 518)

Appropriation, 1964	$8,664,000
Estimate	9,511,000
House allowance	9,300,000
Restoration requested	185,000

(P. 19, line 13)

Amendment requested:

Page 19, line 13, strike out "$9,300,000" and insert in lieu thereof "$9,485,000", an increase of $185,000 in the appropriation.

HOUSE REPORT

"The net increase allowed includes: $102,000 for expansion of the safety educational program; $185,000 for expansion of fine-coal float-dust explosion research; $150,000 for expansion of mine ventilation research and investigations; $91,000 for expansion of methane detection and monitoring research; and $208,000 for pay increase annualization. The committee has disallowed the proposed increase of $185,000 to rehabilitate and modernize the second experimental mine at Bruceton, Pa.

JUSTIFICATION

The amendment restores $185,000 of the $211,000 reduction made by the House in the budget estimate. This amount is distributed by activities as follows:

Activity	Appropriation, 1964	Budget estimate, 1965	House allowance, 1965	Restoration requested
1. Inspections, investigations, and rescue work	$6,672,000	$6,700,000	$6,674,000	----------
2. Control of fires in coal deposits	396,000	396,000	396,000	----------
3. Health and safety research	1,596,000	2,207,000	2,022,000	$185,000
Increased Pay Act cost	----------	208,000	208,000	----------
Total	8,664,000	9,511,000	9,300,000	185,000

A breakdown of the restoration request by objects of expenditures follows:

25	Other services	$86,000
26	Supplies and materials	54,000
31	Equipment	45,000
	Total	$185,000

The committee disallowed $185,000 of a requested increase of $370,000 for fine-coal float-dust explosion research. In commenting on the reduction, the committee stated that it "disallowed the proposed increase of $185,000 to rehabilitate and modernize the second experimental mine at Bruceton, Pa."

We would like to explain that these funds are intended solely to provide the experimental mine with modern scientific and engineering equipment necessary to carry out the programs specifically authorized. The experimental mine is in reality a laboratory and, like all scientific and engineering laboratories in which experiments are performed and measurements made, the usability of the results obtained and return on the investment made in the research work, is dependent to a large extent on the reliability of the laboratory measuring or testing devices. This is especially true in fire and explosion and other hazardous research because the experiments are performed by remote control and human observation cannot be employed safely to verify instrument readings and equipment results. A portion of the funds would be used to provide grinding and crushing equipment to prepare pulverized coal samples of appropriate fineness and quality to simulate the significantly different coal dusts being produced by the newer, more rapid, mining methods.

The equipment and instrumentation desired would be chosen for immediate use in connection with the research programs authorized for 1965, but would be equally valuable for future programs involving safety in coal mining. The equipment and instrumentation will be an integral part of the float-coal-dust study. If restoration of the $185,000 is not allowed, much of the funds already allowed will have to be consumed in providing and installing the necessary equipment. This would result in a corresponding delay in completing the work, and it would mean the very significant hazard we are trying to eliminate will continue to plague us that much longer.

BUREAU OF MINES

General Administrative Expenses

(House hearings, pp. 656–659)

(Senate hearings, p. 530)

(P. 19, lines 17 and 18)

Amendment requested:
Page 19, lines 17 and 18, strike out the following: ", including not to exceed $54,000 for travel and transportation of persons".

HOUSE REPORT

The House report made no statement concerning this item.

JUSTIFICATION

The amendment removes the language which limits the amount that may be expended for travel and transportation of persons.
Since the Bureau of Mines has already and is continuing to emphasize the effective use and control of travel funds, it is felt that this restriction is unnecessary and will be expensive to administer.

OFFICE OF COAL RESEARCH

Salaries and Expenses

(House hearings, p. 549–567)

(Senate hearings, p. 647)

Appropriations 1964	$5,075,000
Estimate	6,836,000
House allowance	6,336,000
Restoration requested	500,000

(P. 21, line 6)

Amendment requested:
Page 21, line 6, strike out "$6,336,000" and insert in lieu thereof "$6,836,000", the estimate, or an increase of $500,000 in the appropriation.

HOUSE REPORT

"This appropriation provides for contract research to develop new methods of mining, preparing, and utilizing coal. The amount allowed includes $6 million for new contract research and $336,000 for administration and contract supervision. As the Office had an unobligated balance of over $2 million as of February 28, 1964, and many of the project obligations scheduled for 1965 are dependent upon successful test results during the current year and 1965, it is believed that the recommended reduction of $500,000 will be readily experienced through slippage in the program."

JUSTIFICATION

The amendment restores the reduction of $500,000 made by the House in the budget estimate. This amount is distributed in the following activities:

Activity	Appropriations, 1964	Budget estimate, 1965	House allowance, 1965	Restoration requested
1. Administration and contract supervision	$325,000	$336,000	$336,000	
2. Contract research	4,750,000	6,500,000	6,000,000	$500,000
Total	5,075,000	6,836,000	6,336,000	500,000

A breakdown of the restoration by objects of expenditures follows:

25	Other services	$500,000

CONTRACT RESEARCH

Restoration of $500,000 is vital to the accomplishments of the contract research work proposed by this amendment. It involves all of the new research effort which the Office of Coal Research proposes to undertake on new contracts in fiscal year 1965. The statement which appears in the House report indicates that the House allowance "includes $6 million for new contract research." This is a misconception. The $500,000 which the House has eliminated is proposed for new contract research. The $6 million will be used for continued funding in the next fiscal year on projects already in existence, or which will be signed by the end of fiscal year 1964.

OCR at the present time is estimating to undertake only five new contract research projects in fiscal year 1965 with the $500,000. In the event we fail to receive this money, we shall be unable to undertake any new research.

It is OCR's present estimate that all of the funds which are being requested, will be necessary for the continuation of the program at the level, and at the pace, at which technical progress indicates it should proceed in the next fiscal year.

OCR believes that a corollary effect from failure to appropriate the additional $500,000, will be to cause the interest of outstanding research organizations to wane, and almost certainly to dry up the sources of continuing good proposals for research which should be undertaken.

FISH AND WILDLIFE SERVICE

Bureau of Commercial Fisheries

MANAGEMENT AND INVESTIGATIONS OF RESOURCES

(House hearings, pp. 379–429)

(Senate hearings, p. 707)

Appropriation, 1964	$17,832,900
Supplemental estimate, 1964	100,000
Estimate, 1965	20,631,000
House allowance:	
Supplemental estimate, 1964	----------
Direct appropriation	17,832,900
Transfer from receipts	2,125,000
Total	19,957,900
Restoration requested	503,100

(P. 22, line 22)

Amendment requested:

Page 22, line 22, strike out "$17,832,900" and insert in lieu thereof "$18,336,000" or an increase of $503,100 in the appropriation.

HOUSE REPORT

"The increases allowed under marketing and technology include: $71,500 for increased operating costs; $65,000 for exploratory fishing and gear research projects; $35,000 for technological research on pesticides; and $190,000 to provide for the botulism research program. In addition, the committee has approved, within available funds, an additional amount of $50,000 for consumer education in connection with this latter program.

"The net increase recommended under research includes $704,800 for operation and maintenance of new facilities; $244,000 for North and Central Pacific oceanography; $156,000 for North Atlantic and Gulf of Mexico oceanography; $66,500 for the cooperative oceanographic programs; $275,000 to provide for biological research on pesticides; and $100,000 for radiobiological and shellfish studies. The committee has also approved within available funds $15,000 for exploratory commercial fisheries studies off the coast of North Carolina. The reduction of $270,000 imposed in the budget estimate for biological research on pesticides, including the 1964 supplemental estimate of $100,000, is necessary to limit the program to the annual monetary authorization.

"In lieu of financing the 1965 increase of $2,125,000 by the appropriation of general funds from the Treasury, the committee has provided the increase by

transfer from the Pribilof Islands fund which has an unappropriated balance of $6,278,000. This fund is derived from receipts of sales of fur seal skins and other wildlife products of the Pribilof Islands."

JUSTIFICATION

The amendment restores the reduction of $503,100 made by the House in the budget estimate for the appropriation. This amount is distributed as follows:

Activity	Appropriation, 1964	Budget estimate, 1965	House allowance, 1965	Restoration requested
1. Management	$393,600	$390,734	$390,734	
2. Marketing and technology	4,099,000	4,532,500	4,457,500	$75,000
3. Research	9,711,900	11,769,300	11,171,200	428,100
4. Research on fish migration over dams	1,496,700	1,396,700	1,396,700	
5. Fishing vessel mortgage insurance	41,800	41,800	41,800	
6. Columbia River fishery facilities	2,089,900	2,249,900	2,249,900	
1965 Pay Act costs		250,066	250,066	
Total	17,832,900	20,631,000	19,957,900	503,100

A breakdown of the restoration request by objects of expenditure follows:

25	Other services	$503,100
	Total	503,100

2. *Marketing and technology.*—The increase in funds of $361,500 provided in the bill will allow $41,500 for operation and maintenance of new facilities; $30,000 for increased costs for postage, communication services, mimeograph paper, and other supplies, and replacement of old processing equipment associated with the fishery market news service; $65,000 for exploratory fishing and gear research programs; $35,000 for technological research on pesticides; and $190,000 for research on clostridium botulinum type E. In addition, the committee has approved, within available funds, an additional amount of $50,000 for consumer education in connection with the last program.

Restoration of $75,000 is requested for this activity. No increase in the number of positions over that authorized for fiscal year 1964 will be required.

The sum of $75,000 is needed to undertake exploratory fishing investigations off the Pacific coast of the State of Alaska and for gear development for locating pelagic species of fish. The very important shrimp and king crab fisheries of Alaska cannot be expanded because there are now no known new fishing grounds available to the industry. The tremendous increase in shrimp and king crab production during the last few years has resulted in maximum utilization of previously discovered grounds much sooner than anticipated. The limited amount of exploratory work which has been carried out, in addition to locating many of the presently utilized king crab and shrimp grounds, has indicated there are additional grounds which could support a much larger industry than now exists. Initial explorations off Alaska would be concentrated in the offshore waters between Price William Sound and Kodiak Island where it is believed that considerable unutilized quantities of these shellfish exist.

3. *Research.*—The increase in funds of $1,462,100 over the 1964 appropriation, or $1,562,100 considering a nonrecurring item for oyster brood stock research in 1964, provided in the bill will allow $704,800 for operation and maintenance of new facilities; $251,900 for North and Central Pacific oceanography; $156,000 for North Atlantic and Gulf of Mexico oceanography; $66,500 for cooperative oceanographic programs; $275,000 for biological research on pesticides; $100,000 for radiobiological and shellfish studies; and $7,900 for payment to employees compensaation fund. In addition, the committee has approved, within available funds, an amount of $15,000 for exploratory commercial fisheries studies off the coast of North Carolina.

Restoration of $428,100 is requested for this activity. No increase in the number of positions over that authorized for fiscal year 1964 will be required.

The sum of $298,100 is needed for oceanographic research programs in the North and Central Pacific. The requested increase will provide for Bureau participation in a new cooperative oceanographic investigation of the eastern tropical Pacific that has been recommended by the Eastern Pacific Oceanic Council (EPOC), for a joint study with the State of California on the bluefin

tuna resources of the eastern Pacific, and for expanded studies of tuna behavior which are designed to increase the efficiency of the American fisherman. Additional funding is required for research on the basic physiology of fishes and for investigations of sardine spawning and the survival of larval sardines in relation to oceanographic factors.

In the Central Pacific, funds are required for planning, preliminary testing and calibration of instruments, and for initial cruises of a cooperative study of the Pacific trade wind zone. Data will be collected that will be of great interest to both meteorologists and oceanographers and will enable the fishery scientists to better understand the interrelations of fish and the environment and to improve their predictions of fish abundance.

Protection of the salmon runs of the North Pacific Ocean continues to be one of our more critical fishery problems. We must improve our ability to predict the size of the runs and determine the numbers of North American salmon taken annually by the intensive Japanese high seas fishery. Our interests in the valuable halibut, king crab, and shrimp stocks of the eastern Bering Sea and Gulf of Alaska require a substantial increase in our research efforts to define the size and distribution of these stocks and to appraise the effects of the growing foreign fisheries.

Increases in funds are needed to extend our knowledge of the growth and survival of salmon to the critical estuarine period of their life history in Bristol Bay, Prince William Sound, and southeastern Alaska both to identify the causes of annual fluctuations in the survival of young salmon and to improve the accuracy of the predictions of adult returns to the fisheries.

King crab tagging programs must be stepped up in the Kodiak and Shumagin Island areas where stocks are under greatest pressure from increasing exploitation by foreign fisheries in competition with the rapid expansion of our domestic fishery.

The United States has an international obligation as a signator of the International Convention for the Regulation of Whaling and as a member of the International Whaling Commission, to "encourage, recommend, and if necessary organize studies and investigations relating to whales and whaling." This international obligation cannot be met without increasing our research effort. A study of the seasonal occurrence and relative abundance of whales within reach of U.S. whaling stations on the Pacific coast is required by those engaged in planning commercial whaling. The world catch of whales is about 65,000 a year valued at $140 million. Over 60 percent are caught in Antarctic waters. The Antarctic stocks have been dangerously depleted through overkilling and if Northern Hemisphere stocks are to be saved new regulations based on new scientific studies must be drafted. A comprehensive whale-marking program is scheduled to begin in 1965 to determine the size, distribution, and biological facts of North Pacific whale stocks; this is essential data for establishing conservation regulations.

The erratic fluctuations of the salmon fisheries—the unpredicted overabundance or the disastrous failures of salmon runs have plagued fishermen, industry, and management agencies along the Pacific coast. An understanding of ocean mortality becomes of utmost importance in the prediction of the size of the returning salmon runs. This understanding will be further developed by additional studies in 1965 which will evaluate a new tagging technique using a coded wire tag, and apparatus and specialized physiological assistance to study causes and extent of salmon death from conventional tagging.

The sum of $130,000 is needed for North Atlantic and Gulf of Mexico oceanographic research programs. It is necessary that studies be intensified to determine the effects of increased foreign fishing on the New England fish stocks. Additional funding requested will permit the Bureau, utilizing the new research vessel *Albatross IV*, to expand to a more productive level programs such as physical oceanography and plankton studies. Such programs are now being financed at a minimal level.

Increased funding is required for programs at the Ichthyological Laboratory, Washington, D.C., and at the Biological Laboratory, Brunswick, Ga., on taxonomy and life history studies of fishes and invertebrates. The National Academy of Sciences Committee on Oceanography has singled out taxonomy as one of the fields of oceanography in urgent need of additional support.

BUREAU OF COMMERCIAL FISHERIES

General Administrative Expenses

(House hearings, pp. 453–457)

(Senate hearings, p. 777)

Appropriation, 1964	$653,000
Estimate	676,000
House allowance	667,000
Restoration requested	9,000

(P. 23, line 20)

Amendment requested:

Page 23, line 20, strike out "$667,000" and insert in lieu thereof "$676,000", the estimate, or an increase of $9,000 in the appropriation.

HOUSE REPORT

"The net increase allowed includes reduction of $39,000 due to nonrecurring costs, an increase of $23,000 for pay increase annualization, and $30,000 for purchase of additional accounting equipment."

JUSTIFICATION

The amendment restores the reduction of $9,000 made by the House in the budget estimate for the appropriation. This amount is distributed as follows:

Activity	Appropriation, 1964	Budget estimate, 1965	House allowance, 1965	Restoration requested
1. Departmental expenses	$291,900	$298,000	$289,000	$9,000
2. Regional office expenses	361,100	378,000	378,000	
Total	653,000	676,000	667,000	9,000

A breakdown of the restoration request by objects of expenditure follows:

21	Travel and transportation of persons	$5,000
23	Rents, communications, and utilities	2,000
25	Other services	1,000
26	Supplies and materials	1,000
	Total	9,000

1. *Departmental expenses.*—The $289,000 provided in the bill represents an increase of $10,100, considering a nonrecurring item of $13,000, or an appropriation decrease of $2,900. The $10,100 is for increased pay costs for positions approved for 1964 which are to be continued in 1965. Restoration of $9,000 is required for this activity.

The $9,000 is needed to cover the additional cost of providing essential executive direction and administrative services required for the most effective conduct of the expanded Bureau program planned for fiscal year 1965. The expanded program will require additional travel by the Bureau directorate and key administrative personnel, and will involve additional costs for communication expenses, supplies and materials, and other services.

FISH AND WILDLIFE SERVICE

Administrative Provisions

(House hearings, pp. 366–367)

(Senate hearings, p. 906)

(P. 25, lines 13 and 14)

Amendment requested:

Page 25, lines 13 and 14, strike out "one hundred and twenty-four passenger motor vehicles" and insert in lieu thereof "one hundred and twenty-nine passenger motor vehicles, of which one hundred and twenty-four shall be".

HOUSE REPORT

The House report made no statement concerning this item.

JUSTIFICATION

Authority for the Fish and Wildlife Service to purchase 129 passenger motor vehicles, of which 124 would be for replacement only, would permit the Bureau of Commercial Fisheries to purchase the 5 additional vehicles needed. The additional vehicles are required for use by field personnel engaged in the expanded pesticides research programs to be conducted by the Bureau of Commercial Fisheries in the fiscal year 1965.

OFFICE OF SALINE WATER

SALARIES AND EXPENSES

(House hearings, pp. 482–519)

(Senate hearings, p. 1125)

Appropriation, 1964	$10,000,000
Estimate	10,650,000
House allowance	10,000,000
Restoration requested	650,000

(P. 26, line 18)

Amendments requested:

(1) Page 26, line 18, strike out "$10,000,000" and insert in lieu thereof "$10,650,000", the estimate or an increase of $650,000 in the appropriation.

(2) Page 26, line 18, strike out "$703,000" and insert in lieu thereof "$820,000".

HOUSE REPORT

"The amount allowed includes $9,297,000 for continuation of basic and applied research to develop low-cost processes for converting saline water to fresh water and $703,000 for administration and coordination, the same as 1964 except for pay increase annualization. Considering that the Office had an unobligated balance of $6.6 million as of December 31, 1963, and has research contracts in effect or in process with a total value of $16.5 million, the committee believes the allowance of $10 million should provide adequate additional research funds for fiscal year 1965."

JUSTIFICATION

Explanation of amendment (1)

The amendment restores the reduction of $650,000 made by the House in the budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1964	Budget estimate, 1965	House allowance, 1965	Restoration requested
1. Administration and coordination	$690,000	$820,000	$703,000	$117,000
2. (a) Contracts and grants (non-Federal)	9,010,000	9,630,000	9,097,000	533,000
(b) Federal laboratories	300,000	200,000	200,000	
Total	10,000,000	10,650,000	10,000,000	650,000

The restoration is distributed by objects of expenditures as follows:

11	Personnel compensation	$100,000
12	Personnel benefits	7,500
21	Travel and transportation of persons	10,000
23	Rent, communications, and utilities	2,000
24	Printing and reproduction	2,000
25	Other services	450,000
26	Supplies and materials	1,800
31	Equipment	1,700
41	Grants, subsidies, and contributions	75,000
	Total	650,000

Activity 1.—Administration and coordination of contracted research and development

Increase in program.—The increase in funds of $13,000 provided in the bill will allow only for pay increase annualization.

Program appeal.—Restoration of $117,000 and 10 man-years are required to effectively accomplish the work proposed by this amendment taking into consideration the fact that the research and development contracts in effect increased by $4 million in the calendar year 1963 and is expected to increase further as new basic concepts and processes are studied and contracts or grants executed.

The coordination of this contracted research and development program requires that each individual scientist and engineer responsible for research contracts must have the professional capability to analyze and evaluate research and development proposals, must participate in the planning and direction of any proposed research and development project, must negotiate the technical portions of the contract, and administer and evaluate the technical work performed to insure worthwhile results, and finally, he must plan future work under succeeding contracts that will best achieve the long- and short-range goals.

Experience of other contract programs has demonstrated that an average number of five contracts per project leader is the maximum if the fullest benefit is to be achieved. Under the restricted personnel ceiling limitation, the current assignment per project leader ranges from 8 to 11 contracts and will gradually increase under the accelerated program. This will reduce the amount of technical supervision given each contract, handicap the fulfillment of the role of the Office of Saline Water as the recognized world center for saline water conversion and possibly reduce the fullest realization of direct results and benefits. The final technical evaluation and publication of the results obtained from each contract will also be affected by the same conditions.

Activity 2—Contracts and grants

Decrease in program.—The amount provided in the bill decreases by $13,000 the 1965 funds for research and development contracts. The total value of research and development contracts being administered at December 31, 1962, was $8,676,000 and at January 31, 1964, was $12,676,300, an increase of over 50 percent. During this 13-month period the total number of contracts in effect has increased from 86 to 91 and it is estimated that the average number of contracts in effect in 1965 will again increase by approximately 2 percent.

Program appeal.—Restoration of the $533,000 is requested to accomplish the work proposed by this amendment. The results of work already undertaken and the advances made in the technology have illustrated the value of an accelerated rate of research contracting to insure early development of more effective and economical methods of water conversion. The estimate of $10,650,000 represents the amount which can effectively and economically carry out the directive of the Congress.

The current budget estimate is predicated on a continuation of a schedule for contracting water conversion research. Based on this program schedule the full amount of the estimate, $9,830,000, will finance an effective and efficient program of research and development contracts and grants.

Explanation of amendment (2)

The amendment increases the limitation on the amount available for administration and coordination from $703,000 to $820,000. The request for restoration of $117,000 will make possible much needed staff additions as follows:

Scientific and technical engineering staff	3
Contract and general administrative staff	3
Stenographic and clerical assistance	4
Total	10

The need for additional technical personnel has been pointed out in the foregoing statements, but this personnel must be supported by an adequate administrative, stenographic, and clerical staff. Without the requested increases the current rate of work productivity cannot be indefinitely sustained.

The workload growth has created a specific need for support personnel to improve accounting controls, perform property management functions, and to supply administrative and clerical assistance to the scientists and engineers so that they are relieved of day-to-day housekeeping chores and can more effectively devote their time to program accomplishment.

OFFICE OF SALINE WATER

CONSTRUCTION, OPERATION, AND MAINTENANCE

(House hearings, pp. 482–519)

(Senate hearings, p. 1153)

Appropriation, 1964	$1,850,000
Estimate	2,300,000
House allowance	2,250,000
Restoration requested	50,000

(P. 27, lines 1 and 2)

Amendments requested:

(1) Page 27, line 1, strike out "$2,250,000" and insert in lieu thereof "$2,300,000", the estimate or an increase of $50,000 in the appropriation.

(2) Page 27, line 2, strike out "$230,000" and insert lieu thereof "$250,000".

HOUSE REPORT

The amount allowed includes $910,000 for operation and maintenance of the saline water demonstration plants at Freeport, Tex., Webster, S. Dak., and Roswell, N. Mex.; $360,000 for process changes and improvements; $230,000 for administration; and $750,000 for replacement of the demonstration plant at San Diego, Calif., which is being transferred to the naval base at Guantanamo, Cuba. This latter amount, together with available unobligated balances and a reimbursement from the Department of Defense, will provide a total of $2,500,000, the estimated cost of the replacement facility.

JUSTIFICATION

Explanation of amendment (1)

The amendment restores the reduction of $50,000 made by the House in the budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1964	Budget estimate, 1965	House allowance, 1965	Restoration requested
Demonstration plants	$1,850,000	$2,300,000	$2,250,000	$50,000

The restoration is distributed by object of expenditures as follows:

11	Personnel compensation	$19,000
12	Personnel benefits	1,000
22	Transportation of things	1,000
23	Rent, communications, and utilities	4,000
25	Other services	23,000
26	Supplies and materials	2,000
	Total	50,000

Increase in program.—The increase in funds of $400,000 recognizes the changing requirements of the program but does not adequately provide for the interim custodial operating costs of the San Diego plant or the necessary need for personnel to plan, engineer, and supervise the replacement.

Program appeal.—The transfer of the San Diego plant to the Department of the Navy and the approval for the replacement have occurred since the presentation of the budget estimate to the Appropriation Committee. The transfer of this plant does not relieve the Office of Saline Water of its housekeeping, maintenance, and custodial responsibilities for the remaining facilities which are not being transferred. Located immediately adjacent to the ocean, the equipment requires special maintenance to protect if from salt spray. In addition to this function there will be engineering work required to accomplish the replacement.

The construction of the new plant will require the preparation and design of plans and specifications, and the reviewing and evaluation of bids for architect and engineering services and construction. On-site supervision of the construction will be required during the year to build and activate the new facility.

The present staff of the Demonstration Plants Division is not adequate to carry out its assigned responsibilities which include: supervising the operation and maintenance of existing plants; the development of design changes, improvements, and alterations; performing engineering feasibility studies on new plants; and to adequately carry out the necessary duties required in the replacement of the San Diego plant.

Explanation of amendment (2)

The amendment increases the limitation on the amount available for administration from $230,000 to $250,000. The request for restoration of $20,000 is justified under amendment No. 1.

OFFICE OF THE SECRETARY

SALARIES AND EXPENSES

(House hearings, pp. 1272–1290)

(Senate hearings, p. 1070)

Appropriation, 1964	$3,858,400
Estimate	4,125,000
House allowance	4,065,000
Restoration requested	60,000

(P. 27, line 18)

Amendment requested:

Page 27, line 18, strike out "$4,065,000" and insert in lieu thereof "$4,125,000", the estimate or an increase of $60,000.

HOUSE REPORT

"The increase allowed includes $82,000 for pay increase annualization; $16,000 for the Undersecretary; $12,475 for the Assistant Secretary for Mineral Resources; $42,500 for the Office of Survey and Review; $28,000 for the Office of Management Operations; $14,000 for the Division of Management Research; and $15,000 for equipment replacement."

JUSTIFICATION

The amendment restores the reduction of $60,000 made by the House in the budget estimate. This amount is distributed to the following activities:

Activity	Appropriation, 1964	Budget estimate, 1965	House allowance, 1965	Restoration requested
1. Departmental direction	$590,400	$616,300	$616,300	
2. Program direction and coordination	1,357,900	1,407,600	1,393,100	$14,500
3. Administrative management services	1,780,400	1,954,000	1,908,500	45,500
4. General services	129,700	147,100	147,100	
Total	3,858,400	4,125,000	4,065,000	60,000

A breakdown of the restoration by objects of expenditures follows:

11	Personnel compensation	$56,000
12	Personnel benefits	3,400
21	Travel and transportation of persons	600
	Total	60,000

Program direction and coordination, $14,500

Restoration of $14,500 is requested for the Office of the Assistant Secretary for Water and Power for an engineering position which is particularly needed for conducting engineering and economic studies to demonstrate that the power generated by the project can be sold at rates which will insure repayment, within 50 years, with interest, of all costs allocated to power. Public Law 88–253, 88th Congress, H.R. 8667, December 30, 1963, specifically added this proviso for the Ohio River Basin studies in authorizing additional appropriations for the prosecu-

tion of comprehensive plans for certain river basins. These studies are directly related to marketing activities which the Department may have in the development of water and power resources in areas, primarily outside the areas presently served by the four power marketing agencies. No increase in total positions is necessary for this, but because of within-grade promotions and some changes in organization in this area funds are insufficient to fill all positions authorized.

Administrative management services, $45,500

Restoration of $36,500 is requested for the Office of Survey and Review. Exclusive of Pay Reform Act costs, the Office of Survey and Review sought an increase of $79,000 of which the House committee allowed $42,500. It is emphasized that this increase does not represent a growth trend in this part of the Department's organization. On the contrary, it represents merely the amount needed to finance the original plan for the Office which was established near the end of fiscal year 1963 after congressional action on the 1964 appropriation request. While it was possible to get the important functions of this Office underway with funds made available through other economies in fiscal year 1964, funds essential to provide even minimal staff for all the initial responsibilities of the Office were not available. Approval of the full amount of the increase requested, $79,000, or an increase of $36,500 above the House allowance is urgently needed to permit completion of staffing in audit and analysis and methods (including ADP) and to provide adequate clerical complement. In connection with audit and analysis work, the Department is undertaking to develop Department-wide audit management at the secretariat level responsive as far as practicable with those fundamentals of internal audit operation enunciated by the Committee on Government Operations. Such action is novel in the Department and requires skilled employees to coordinate and direct the efforts of Bureau audit staffs and to perform special inquiries where justified. In the methods area the Department is exercising more positive leadership in sensible computer adoption with emphasis upon multibureau use of costly equipment investment. The Office of Survey and Review is the key element in the Department's revised approach to audit and methods. As such, it is also the key to manpower and fund savings consistent with current trends toward economy and efficiency.

Restoration of $9,000 is requested for the Division of Management Research.

The increases requested for the Division of Management Research were to strengthen its programs in productivity measurement relating manpower requirements to workload, and in work improvement and work simplification.

With the administration's and Department's increasing emphasis on economy and efficiency through improving productivity and manpower utilization, restoration of the $9,000 cut in personal services designed to strengthen these programs would be an investment that should provide both immediate and long-range returns throughout the Department.

Department of Agriculture

FOREST SERVICE

March 18, 1964.

Hon. Carl Hayden,
Chairman, Committee on Appropriations,
U.S. Senate.

Dear Senator Hayden: Enclosed are statements in support of the amendments which we request be made in the Forest Service portion of the Department of the Interior and related agencies appropriation bill as reported by the House committee March 13, 1964.

We urge the following House committee reductions be restored:

Forest protection and utilization	$1,383,000
Forest land management:	
(*a*) Reforestation and stand improvement	100,000
(*b*) Recreation, public use	700,000
(*c*) Structural improvements for fire and general purposes	23,000
(*d*) Insect and disease control (other pest control)	500,000
Forest research: (*a*) Planning funds for research station	60,000

The 1965 budget request for the Forest Service was considerably below the financing needed to fully implement the development program for the national forests. The House reductions are particularly serious since our revised estimates were already reduced to the bare minimum needed to do an effective job of protecting and managing the national forest resources.

The Forest Service put to effective use the accelerated public works funds made available in distressed areas to alleviate unemployment. To use this program as a basis for the curtailment of regular programs would defeat the purpose for which the APW legislation was enacted. The "offset" principle applied by the House committee not only defeats the purpose of the accelerated public works program, but the reduction in the regular Forest Service appropriations below normal program levels tends to create even more adverse economic conditions in the distressed areas—the areas where the problems of unemployment still remain to be solved.

This action is not considered compatible with the President's poverty program, which recognizes a continuing need for these very programs which funds are now being denied. We strongly urge restoration of the cuts made by the House on the APW "offset" basis.

The House reduction of the insect detection and evaluation project is particularly serious. Improvement in survey coverage is essential to proper control and resultant cost reductions. Restoration of this item and related permanent positions is urgently requested.

Representatives of the Department will be glad to furnish any additional information you may need or to appear before your committee as necessary to further discuss the 1965 budget estimates of the Forest Service.

Sincerely yours,

JOSEPH M. ROBERTSON,
Administrative Assistant Secretary.

FOREST SERVICE

FOREST PROTECTION AND UTILIZATION

FOREST LAND MANAGEMENT

(House hearings, pp. 1121–1167)

(Senate hearings, pp. 916–975)

1964 appropriation	$147,312,000
1965 budget estimate	149,919,000
House bill	148,596,000
Restoration requested	1,323,000

AMENDMENT REQUESTED

Page 30, line 15, strike out "$148,596,000" and insert "$149,919,000" to restore the budget estimate.

HOUSE REPORT NO. 1237 (P. 21)

"The committee believes that the reductions recommended in the requests for reforestation and stand improvement and for recreation-public use can be readily absorbed as $7 million and $10,500,000, respectively, have been available for these activities from accelerated public works funds. The reduction made in 'recreation-public use' has been made in construction funds.

"The committee has disallowed the request under structural improvements to plan and design a combined regional office and research station headquarters in Pennsylvania. Considering the high proposed construction cost of this facility, the committee believes that there should be more opportunity to study the need for the project before planning is initiated.

"The reduction of $500,000 in the request for the insect and disease control program has been made in the proposed allocation for the detection and evaluation activity. The $1,195,000 allowed for this purpose, an increase of $171,000 over the current year, should be adequate for fiscal year 1965."

JUSTIFICATION OF THE AMENDMENT BY THE DEPARTMENT

The amendment proposed by the Department would restore the following reductions made in the House bill: (*a*) $100,000 for reforestation and timber

stand improvement; (*b*) $700,000 for recreation-public use; (*c*) $23,000 for structural improvements for fire and general purposes; and (*d*) $500,000 for insect and disease control.

(*a*) The Department recommends that the reduction of $100,000 for reforestation and timber stand improvement made by the House be restored. A reduction of $100,000 would necessitate a cutback of 1,500 acres in the reforestation program. This activity uses large amounts of unskilled labor and is concentrated largely in depressed areas where the unemployment problem already is critical. Deceleration of the planting program will further delay restoration of timber productivity.

In order to keep pace with the reforestation needs as expressed in the development program for the national forests it would be necessary for the Forest Service to plant 380,000 acres each year during the 10-year period (1963–72). The current rate of progress will fall way short of this goal because of the limited funds made available for this purpose. If this trend continues, our planned objective will not be reached until the year 1991.

(*b*) The Department recommends that the reduction of $700,000 for recreation-public use made by the House be restored. The House action will result in a setback in the gradual progress being made in alleviating the overcrowded conditions of developed camp and picnic sites. Unless this item is restored, there will be no improvement in the overuse of campground and picnic facilities. Recreation use of the national forests reached an alltime high of 122.6 million visits and 126.5 million visitor-days' use in 1963. Increased use means higher costs for cleanup and care of campgrounds and for policing all areas to maintain desired sanitation and safety conditions. Any reductions in the budget can only be taken by reducing the construction of seriously needed new facilities and this will result in greater use of already overtaxed recreation facilities, as indicated in the following table:

CAMPGROUNDS AND PICNIC SITES

Fiscal year	Family units		Visitor-day capacity (millions)	Visitor-day use (millions)	Percent overload
	Installed at end of fiscal year	Programed to build during fiscal year			
1963	67,739	[1] 8,736	28.8	[1] 43.2	50
1964:					
Regular		4,671			
APW		2,843			
Total	75,253	7,514	32.0	[2] 45.0	40
1965:					
Regular budget	80,703	5,450	34.3	[2] 47.5	38
Reduced budget	80,103	4,850	34.0	[2] 47.5	40

[1] Actual.
[2] Revised estimate.

At the end of Operation Outdoors (June 30, 1962) there was a 70-percent overuse of national forest campgrounds and picnic sites. Through augmenting regular recreation funds with accelerated public works funds in fiscal years 1963 and 1964, this overuse has been reduced successively to 50 and 40 percent. The regular fiscal year 1965 budget was expected to further reduce the overuse slightly to 38 percent, but if the proposed $700,000 reduction is made, the expected overuse will be the same as in fiscal year 1964.

Overloading recreation areas presents sanitation problems, damages ground cover, causes traffic congestion, and forces countless numbers of visitors to use undeveloped areas which creates additional fire risk and further unsanitary conditions. Any curtailment to campground and picnic area development will be felt in each of the national forest regions.

(*c*) The Department recommends that the reduction of $23,000 for structural improvements for fire and general purposes made by the House be restored. It is important that planning and design start in fiscal year 1965 for a combined regional office and experiment station headquarters building in Radnor, Pa. The cost of this structure will be approximately $2,800,000, and will be reflected

in the budget estimate as soon as the overall budgetary situation will permit. The site for this building was acquired in fiscal year 1963 at a cost of $192,500.

On January 30, 1962, the Forest Service presented to the Appropriation Committees detail about the fiscal year 1963 proposed program for structural improvements for fire and general purposes. Under "Site acquisition" the acquisition near Upper Darby was shown much as it was in the House committee hearings hereinafter described. In the House hearings for that year, the Forest Service provided the committee with a summary of planned structural improvements for fire and general purposes. This statement said, "Negotiations are being conducted for purchase of a site near Upper Darby, Pa., for future construction of a combined research laboratory-regional headquarters installation. It is estimated the cost may be between $125,000 and $175,000. The purchase would be financed jointly from 'Forest land management' and 'Forest research' subappropriations of the 'Forest protection and utilization' appropriation. If site purchase negotiations can be completed during fiscal year 1963, program adjustments will be made within each subappropriation to accommodate this purchase as timely acquisition will result in material savings to the Government."

The site acquisition was not disallowed by either of the Appropriation Committees. In view of this, the Forest Service considered the acquisition met the approval of the committees.

Space occupied by the regional office and the experiment station is inadequate. The headquarters for the experiment station includes laboratories and greenhouses which are not compatible with a location in downtown Philadelphia. The experiment station and regional office should be quartered in the same building. This would provide for economical and more efficient administration because of combining services and facilities.

The planning and design for the building should be done in fiscal year 1965 so that construction can proceed without delay.

(*d*) The Department strongly recommends that the reduction of $500,000 for insect and disease control made by the House be restored. No increase for insect and disease control was requested in the 1965 budget. In fact, since about $1,700,000 funds appropriated in the 1963 supplemental appropriation (Public Law 88–25, approved May 17, 1963) will be obligated in 1964, the 1965 budget estimate actually reflects a program reduction. The House reduced the detection and evaluation project. This project was adjusted within the insect and disease control activity from $1,024,000 to $1,695,000 in the budget estimate because of the importance of these key functions in deciding proper control action. The estimated cost of control work was correspondingly reduced in the budget estimated since exact dimension of suppression needs are difficult to forecast in advance.

We are striving for fast and thorough detection coverage and better diagnosis of pest outbreaks on all forest lands before control action is taken.

Early discovery of pest trouble makes it possible to attack the problem while outbreaks are still small. Better evaluation of outbreaks means more timely and efficient control programs. It assures thorough and complete assessment of all values in the forest stand under pest attack; that cost-benefit returns are sound; that use of pesticides where called for is absolutely necessary for the job at hand; and that the selected chemicals can be safely used.

Detection and evaluation surveys are in particular need of strengthening on non-Federal lands and much of the proposed increase for this item was to provide Federal assistance to States where such work has been lagging. Responsibility for this work is recognized as a Federal responsibility. The work has been severely handicapped in the past by the pressing control problems on national forest land and lack of State interest and facilities. The Forest Service is stimulating this part of the program by negotiating with the States on a State-Federal cost-sharing basis. Some States are preparing to employ needed technical people and to provide their share of these costs. A reduction in funds for detection and evaluation would make it impossible for the Forest Service to provide the Federal financing and consequently reduce the State participation.

Complete and thorough detection and evaluation surveys will:

1. Make possible quick control action while outbreaks are small.
2. Avoid unnecessary control through inadequate diagnosis.

Unless this reduction is restored it will be impossible for the Forest Service to accomplish this highly technical and essential program.

The restoration of the related permanent positions is needed to properly implement the program.

FOREST SERVICE

Forest Protection and Utilization

FOREST RESEARCH

(House hearings, pp. 1169–1243)

(Senate hearings, pp. 944–1000)

1964 appropriation	$25, 893, 000
1965 budget estimate	29, 944, 000
House bill, increases	135, 000
House bill, decrease	60, 000
Net House bill increase	75, 000
House bill	30, 019, 000

AMENDMENT REQUESTED

Page 31, line 3, strike out "$30,019,000" and insert "$30,079,000" to restore the House bill decrease.

HOUSE REPORT NO. 1237 (P. 22)

"Deletion of planning funds for regional office and research station, Pennsylvania, $60,000"

JUSTIFICATION OF THE AMENDMENT BY THE DEPARTMENT

(a) The Department recommends that the reduction of $60,000 for forest research made by the House be restored. See supporting statement comments under item "c" above.

FOREST SERVICE

Forest Roads and Trails (Liquidation of Contract Authorization)

(House hearings, pp. 1210–1218)

(Senate hearings, pp. 1001–1006)

1964 appropriation	$63, 200, 000
1965 budget estimate	72, 000, 000
House bill	70, 300, 000
House reduction	1, 700, 000

HOUSE REPORT NO. 1237 (P. 23)

"These funds are required to liquidate the obligations incurred under the contract authorization contained in the Federal-Aid Highway Act. It is estimated that this amount, together with the permanent appropriation of 10 percent of the national forestry receipts and the planned road construction by timber purchasers under timber sales contracts, will provide a total road program in 1965 of about $147.8 million. It should also be noted that the Forest Service has had available $18.8 million from public works acceleration funds for the road program.

"The recommended reduction of $1,700,000 is based on the estimate that about 72 percent of the $72,500,000 planned for obligation in 1965 will require cash expenditures in lieu of the 75 percent factor reflected in the budget estimate. The committee sees no basis for increasing the experience rate of 72 percent reflected in the budget estimates for the current year and believes that with efficient use of the funds that the 1965 budget program for construction of timber access roads can be accomplished."

We have carefully reevaluated the program for 1964 and 1965 and on the basis of present cash projections we believe we can operate within the allowance of $70,300,000 for 1965.

FOREST SERVICE

ADMINISTRATIVE PROVISIONS, FOREST SERVICE

(House hearings, pp. 1223–1225)

(Senate hearings, pp. 1010–1012)

AMENDMENT REQUESTED

Page 33, line 22, strike out "one hundred and fourteen" and insert "one hundred and fifty-five"; line 23, delete "for replacement only" and insert "of which one hundred and fourteen shall be for replacement only", to restore the budget estimate.

JUSTIFICATION OF THE AMENDMENT BY THE DEPARTMENT

The Department recommends that the House reduction of 41 passenger motor vehicles be restored. The purchase of 155 such vehicles, of which 114 are for replacement, is needed to provide transportation essential for the efficient administration of the various Forest Service programs. As of fiscal year 1964, the Forest Service will have 650 such vehicles. The budget proposal would increase this to 691. These vehicles would be used in areas where General Services Administration and common carrier facilities cannot adequately meet program needs. Full use is made of such facilities where they are available. As a result, the total number of passenger vehicles proposed under this budget is 10 less than the total of 701 the Forest Service had in fiscal year 1958, notwithstanding very substantial increases made by the Congress in Forest Service programs since that date. The proposed fleet addition of 41 units is therefore fully justified.

FOREST SERVICE

NUMBER OF EMPLOYEES

(House Report No. 1237, p. 3)

"The committee, which has stressed for years the need for more effective manpower utilization, highly endorses the current efforts of the Agencies, as reflected in the estimates, to limit the number of additional personnel requests. On a total available funds basis, the 1965 budget estimates provide for a net increase of 855 permanent positions over the 1964 authorization of 73,318 employees. The committee allowances provide for a net increase of 354, a reduction of 501 positions. The additional positions approved are primarily for Indian education, welfare, and resources management, and for construction of forest access roads."

This Department is maintaining close surveillance over manpower increases and effective manpower utilization. Forest Service manpower increases for 1965 were held to a minimum consistent with improved management practices, better manpower utilization, and economy of operations.

Following is a tabulation showing the permanent position increase included (1) in the 1965 budget estimate and (2) the House action:

	Budget estimate	House action	House change from budget estimate
Forest land management	+58	−33	[1] −91
Forest research	+12	+22	+10
State and private forestry cooperation	+30	+30	
Forest roads and trails	+276	+226	−50
Acquisition, special acts	−4	−4	
Total	+372	+241	−131

[1] Includes 40 permanent positions related to $500,000 insect and disease control reduction made by the House.

The Department fully recognizes the need to hold employment to a minimum consistent with achieving program objectives. However, the House reduction in permanent positions for forest roads and trails will have impacts that are particularly serious. The reduction of 50 permanent employees would make it almost impossible to complete the necessary road survey, design, and construction programed for timber access and other purposes in 1965. The program was developed with maximum emphasis on contracting. The employment of competent professioanl engineers to handle road construction, design, contract administration and supervision, and other specialized related work cannot be further reduced without serious implications. This program has increased from a $50 million authorization in 1963 to $72.5 million in 1965, a program increase of almost 50 percent. Permanent positions have increased from 3,252 in 1963 to 3,696 proposed in the 1965 budget estimate, an increase of less than 15 percent. The Department strongly recommends reduction of the 50 permanent positions for forest roads and trails made by the House be restored.

As discussed in connection with the restoration of insect and disease program funds, the Department recommends the restoration of the 40 related permanent positions reduced by the House.

FEDERAL COAL MINE SAFETY BOARD OF REVIEW

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HAYDEN: In reply to your letter of the instant date, reference is made to page 35, line 6, of the Department of the Interior and Related Agencies appropriation bill for the fiscal year ending June 30, 1965, as reported by the House Committee on Appropriations (H.R. 10433). The Board strongly urges, for the reasons adverted to below, that the amount of $65,000 appropriated for this agency in the House bill be amended to read $70,000, as requested in the budget estimate of the Board submitted to the Congress.

The amount of $65,000 provided in the House bill for fiscal year 1965 would limit the Board to the same amount as that appropriated for the current fiscal year.

The compelling needs for a $5,000 increase in the appropriation for fiscal year 1965, over the current year's appropriation, were fully detailed in the justification of the 1965 budget estimate, and in the Board's supplemental statements at the hearings conducted by your committee. It is sufficient to add, here, that even the appropriation for the current fiscal year may prove inadequate, and request for a supplemental appropriation may be necessary, because of an increase in agency activities, including a number of formal appeals recently filed with the Board by coal mine operators. One of these appeals is scheduled for hearing on its merits, during the next month, in southwestern Virginia, as required by the Federal Coal Mine Safety Act and will necessitate extensive consideration to resolve the issues involved. Moreover, even assuming this agency can fulfill its statutory responsibilities for the current fiscal year under the present appropriation, which is now questionable, the Board will need an increase of $2,500 for fiscal year 1965 just to maintain the present reduced staff of only four full-time employees. This added payment is mandatory, as you know, under the Classification Act amendments of 1962 and the automatic schedule step increases, over which the Board has no control. The balance of the requested addition for fiscal year 1965 would provide only the minimum amounts needed to cover increases in the Board's other administrative and adjudicative expenses, based on the past and current fiscal year experience of this agency.

Accordingly, in order for the Board to fulfill its statutory duties and to accomplish its mission of preserving human lives and property under title II of the Federal Coal Mine Safety Act, it is imperative, and the Board strongly urges, that page 35, line 6, of H.R. 10433 be amended to read $70,000, instead of $65,000 as appears in the House bill.

For the Board:
Sincerely yours,

CHARLES R. FERGUSON,
Member of the Board.

HEALTH, EDUCATION, AND WELFARE

PUBLIC HEALTH SERVICE

MARCH 18, 1864.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
U.S. Senate,
Washington, D.C.

DEAR MR. CHAIRMAN: The House of Representatives has now acted on H.R. 10433, making appropriations for fiscal year 1965 for the Department of Interior and related agencies. Included in the bill as passed by the House are the amounts of $61,500,000 for "Indian Health Activities," and $8 million for "Construction of Indian Health Facilities," which are programs administered in the Department of Health, Education, and Welfare.

The House action on the estimate for "Indian Health Activities" is a reduction of $76,000 from the amount contained in the President's budget. Although I believe that our original estimate was a firm one, I am not requesting restoration of the reduction.

The House has reduced the 1965 estimate for "Construction of Indian Health Facilities" by $643,000. In its report, the Committee on Appropriations explains that this reduction is due to anticipated slippage based on an unobligated balance of over $11 million in this appropriation as of January, 1964, and the provision in the estimate for a carryover unobligated balance of $650,000 at the end of fiscal year 1965. The House report also directs us to proceed with the planning and construction of alterations to the hospital at Wagner, S. Dak., a project which was not included in our estimate for 1965.

I do not recommend that the Senate restore the reduction of $643,000. However, I believe that it is appropriate to inform you of the interpretation which we place on the House action with respect to this item.

We have generally followed the policy in our budget estimates for construction of requesting appropriations at two stages. The first stage represents the full amount necessary for planning and site acquisition, and the second stage represents the full amount necessary for completion of construction and fixed equipment, including technical services, supervision, and contingencies. Because of the time element involved in construction projects, some of these funds are normally not obligated until after the end of the budget year. The House committee's action, both this year and last year, makes it apparent that they prefer to appropriate only those amounts which will actually be obligated during the budget year. If the Senate sustains the House action, we are therefore planning to proceed with the projects which were included in the budget plan to the extent approved by Congress as evidenced in the committee reports, and to request such additional funds as are required for completion of those projects in the estimates for 1966.

Sincerely,

ANTHONY J. CELEBREZZE, *Secretary.*

SMITHSONIAN INSTITUTION

NATIONAL ZOOLOGICAL PARK

MARCH 18, 1964.

Hon. CARL HAYDEN,
Chairman, Department of the Interior and Related Agencies Subcommittee of the Committee on Appropriations, U.S. Senate, Washington, D.C.

DEAR SENATOR HAYDEN: Thank you for your letter of March 18, 1964, requesting amendments considered to be justifiable for the Smithsonian Institution in the Department of the Interior and related agencies appropriation bill for the fiscal year ending June 30, 1965 (H.R. 10433), as passed by the House of Representatives on March 17, 1964.

The Smithsonian Institution requests amendments to restore $94,000 for the oceanography program in the "Salaries and expenses" appropriation and $501,000 for "Construction and Improvements, National Zoological Park."

SALARIES AND EXPENSES

On page 39, line 16, change $15 million to $15,094,000.

The Smithsonian Institution requests restoration of $94,000 cut by the House of Representatives from its request for the "Salaries and expenses" appropriation. The restoration funds are needed for the oceanography program to employ a limited additional staff to sort and to study organisms received from federally financed marine expeditions. These services are required by scientists and scientific organizations both within and without the Federal Government. No other agency is performing the essential function of sorting marine specimens.

The total amount requested by the Smithsonian Institution for fiscal year 1965 for the oceanography program represents less than 1 percent of the amount for the entire oceanographic effort in the Government. Yet, the Smithsonian's role is vital. At the request of the other agencies concerned, the Smithsonian is serving as the primary Federal repository for marine specimens being collected by oceanic cruises and as the center for sorting such specimens. The Smithsonian was urged to expand its work in marine systematic biology because it has exceptional scientific capabilities in this area, including outstanding marine collections. Unless the full amount requested for fiscal year 1965 is granted, the Smithsonian will not be able to meet its assigned share of the Federal oceanography program to supply information on the nature and identity of the increasingly large numbers of specimens being received from marine expeditions.

It is urged, therefore, that this request for restoration of $94,000 for the oceanography program be favorably considered.

CONSTRUCTION AND IMPROVEMENTS, NATIONAL ZOOLOGICAL PARK

On page 40, line 10, change "$1,275,000" to "$1,776,000".

Restoration of the amount of $501,000 which was reduced by action of the House is urgently requested in order to provide the total amount of $1,776,000 for capital improvements at the National Zoological Park, as carried in the budget for fiscal year 1965.

The principal features to be constructed in 1965 comprise a winter house complex of three buildings for delicate hoofed stock, the main sewerage system for the park for both storm water and sanitary flow, an automobile parking lot for visitors, and associated utility lines. Restoration of the cut is necessary to avoid deferring construction of two of the three winter houses or, alternatively, deferring installation of the sewerage system.

Deferment of a part of the winter house complex will effectively deny to the public the benefits of constructing the delicate hoofed stock exhibit until the following year, when the remaining two houses can be funded and constructed. Restoration of the $501,000 is essential, therefore, in order that this area may be developed as an integral exhibition unit.

Deferment of the new sewerage system would result in the continuation of pollution of Rock Creek by the National Zoological Park. Elimination of this pollution from a governmental source such as the Zoo has been strongly urged by health authorities and by the House Committee on Public Works.

Restoration of the amount of $501,000 is necessary also to avoid stretchout over an unreasonable period of years the scheduled 10-year program of needed improvements at the National Zoological Park.

Sincerely yours,

S. DILLON RIPLEY, *Secretary.*

NATIONAL CAPITAL PLANNING COMMISSION

MARCH 18, 1964.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.

DEAR SENATOR HAYDEN: The National Capital Planning Commission respectfully requests the restoration of its full budget request of $774,000 for salaries and expenses and $3 million for land acquisition in the Department of the Interior and related agencies appropriation bill, 1965 (H.R. 10433). Amendatory language to accomplish this restoration is attached.

SALARIES AND EXPENSES

The Commission feels justified in asking for restoration of the entire amount of $124,000 for salaries and expenses deleted by the House of Representatives.

As we pointed out in our testimony to the Senate Appropriations Subcommittee, the construction cranes and demolition equipment on the Washington skyline provide visible and dramatic evidence of the tremendous physical changes taking place in the Nation's Capital. Whether such development activity is governmental or private, the National Capital Planning Commission, as the central physical planning agency for the Federal and District of Columbia governments in the National Capital region, must provide the planning framework within which such activity occurs. With adequate staff and budget the Commission can furnish to the community and to the Federal and District of Columbia governments comprehensive and project planning and related advice and assistance that will enable the National Capital and its environs to develop and redevelop in a more economic, efficient, and attractive manner.

Of major concern to the Commission, therefore, is the deletion by the House of Representatives of $76,720 for eight new professional, technical, and administrative positions needed to fill certain gaps in the personnel resources of the Commission and the Regional Planning Council and to provide a staff with a variety of skills and technical knowledge. These positions are editorial and technical writing aid, GS–12; personnel management assistant, GS–7; assistant highway planning engineer, GS–12; statistician, GS–9; 2 urban planners, GS–12; urban planner, GS–11; and stenographer, GS–6. Several of the positions are needed to help meet congressional policy or to facilitate planning for the Federal Establishment in the National Capital region. For example, the assistant highway planning engineer is essential to Commission and Council participation in the continuous comprehensive transportation planning process for the metropolitan area required under the Highway Act of 1962; one urban planner would be added to the Commission's Federal Planning Division staff to assist in the review of existing Federal landholdings in the region and the development of a program for their optimum utilization and in the preparation of portions of the 1985 comprehensive plan for the District of Columbia relating to the location of Federal employment centers.

In addition to the staff needs discussed above, the Commission has continuing need for consulting services for specific projects and activities for which it is neither feasible nor economic to hire additional personnel. It is respectfully requested that the Senate restore the $28,000 for experts and consultants, as well as the $3,000 for seasonal positions and the $16,280 for increased travel costs, increased telephone system costs, supplies and materials, and statistics and data processing. The amounts requested by the Commission and Council for such personnel, services, and materials represent minimums essential to carrying out the responsibilities of the Commission and Council in an efficient and economic manner.

LAND ACQUISITION, NATIONAL CAPITAL PARK, PARKWAY, AND PLAYGROUND SYSTEM

The House of Representatives deleted $800,000 requested by the Commission to replace an equal amount appropriated to the Commission under section 4 of the Capper-Cramton Act for land acquisition for parks, parkways, and playgrounds in the District of Columbia. This amount, which is repayable to the Treasury by the District of Columbia, was used for land acquisition for the John F. Kennedy Center for the Performing Arts in partial fulfillment of the congressional policy that the site be provided by the Federal Government. In view of the continuing needs of the community for neighborhood parks and playground facilities and the fact that all of the funds authorized to be appropriated under the Capper-Cramton Act have been appropriated and committed, the Commission strongly requests the restoration of this amount.

Sincerely yours,

Mrs. JAMES H. ROWE, Jr., *Chairman.*

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATION BILL, 1965

(H.R. 10433)

MARCH 18, 1964.

PROPOSED AMENDMENTS RELATING TO THE NATIONAL CAPITAL PLANNING COMMISSION

SALARIES AND EXPENSES

On page 37, line 17, strike out "$650,000" and insert in lieu thereof "$774,000".

LAND ACQUISITION, NATIONAL CAPITAL PARK, PARKWAY, AND PLAYGROUND SYSTEM

On page 37, line 24, strike out "$500,000" and insert in lieu thereof "$1,300,000."

Summary of increases and decreases, 1965 647
Statement of Dr. George L. Haller, vice president of the General Electric Co., reporting on progress of work on Project Bootstrap, and the potentials of electrical processing through corona chemistry and its application for their work for the Office of Coal Research 1457
Corregidor-Bataan Memorial Commission and Veterans' Administration (beginning of hearings) 1164
The Corregidor-Bataan Memorial Commission was created by an act of the Congress in 1953 (Public Law 193, 83d Cong., approved Aug. 5, 1953). Its mission is to plan a memorial to be erected on Corregidor Island to commemorate veterans who fought under the American flag in the Pacific area during World War II 1165
Administrative expenses 1165
Developing the memorial study, in cooperation with the Philippines National Shrine Commission, for the location and erection of the memorial 1165
Preparing policy directives to guide the Veterans' Administration in carrying out all phases of the authorized construction 1165
Carrying out necessary liaison with the Veterans' Administration during the contractual and construction phases 1165
Developing plans for raising additional funds by public subscription 1165
Budget request 1164
Justification statement for 1964 supplemental estimate 1166
Justification statement for 1965 budget estimate 1165
Justification statement for Veterans' Administration construction 1167
Statement of prior appropriations and expenditures 1173
Cost of the memorial project 1174
Combined cost of memorial project 1175
Philippine Government contribution 1176
Coordination between Philippines and United States Government 1176
Planning and technical services 1170, 1173
Program and financing 1165, 1168
Planning the memorial (costs, obligations) 1165
Planning, design, and supervision 1168
Construction 1168
Statement by Director 1169
Tasks and responsibilities under Public Law 88-240 1170, 1171, 1172
Federal Coal Mine Safety Board of Review (beginning of hearings) 1157

Highlight statement 903
Itemization of estimate 905
Summary of increases and decreases, 1965 903
Statement showing effect of budget reductions set forth in House Document 240, March 9, 1964 1567
Statements of congressional witnesses:
Letter of February 25, 1964, written on behalf of the Oklahoma Department of Wildlife Conservation, enclosing proposal for a commercial fisheries research project. Letter signed by the Honorables Mike Monroney, J. Howard Edmondson, Page Belcher, Ed. Edmondson, Carl Albert, Tom Steed, John Jarman, and Victor Wickersham 738
Letter of February 26, 1964, and enclosures, from Hon. Clifford P. Case, concerning surf clam research proposal 752
Letter of February 24, 1964, from Hon. Harrison A. Williams, Jr., enclosing letter of February 12, 1964, from William J. Kleb, general manager of the F. H. Snow Canning Co., Wildwood, N.J., concerning survey and research for the surf clam industry 757
Proposal for lobster research was submitted by Hon. Margaret Chase Smith, Hon. Leverett Saltonstall, and Hon. Norris Cotton, on behalf of the Atlantic States Marine Fisheries Commission 787
Letter of February 24, 1964, to Hon. Norris Cotton from Associate Professor Philip J. Sawyer of the University of New Hampshire, Durham, asking support of an amendment to the budget concerning lobster research 792
Letter of February 17, 1964, from Hon. Mike Mansfield, advocating the improvement and development of the Bozeman, Mont., Federal Fish Hatchery 882
Letter of February 21, 1964, from Hon. J. W. Fulbright, requesting funds for the general renovation and modernization of the physical plant of the Corning, Ark., National Fish Hatchery 884
Statement from Hon. John L. McClellan, concerning construction of national fish hatcheries at Greers Ferry, Corning, and Mammoth Spring National Fish Hatcheries, Ark 885
Letter of February 19, 1964, from Hon. John Sparkman, and letter of February 26, 1964, from Hon. Lister Hill, requesting funds for construction work at Marion National Fish Hatchery, Ala 887
Request from Hon. Frank E. Moss for information concerning needs at Springfield National Fish Hatchery, Utah 889
Letter of February 18, 1964, from Hon. A. Willis Robertson, urging continued improvement at the Wytheville and Harrison Lake National Fish Hatcheries in Virginia 890
Letter of February 25, 1964, from Hon. Olin D. Johnson, concerning redevelopment program at the Cheraw National Fish Hatchery, S.C 892
Letter of February 19, 1964, from H. G. Wilm, commissioner, State of New York Conservation Department, concerning construction of new and enlarged buildings at the Federal fish hatchery at Cortland, N.Y 893
Statement from Hon. Wallace F. Bennett concerning development of the Ouray National Wildlife Refuge in Utah; also requesting funds to rebuild the road from Brigham City, Utah, to the Bear River Migratory Bird Refuge 895

Sport Fisheries and Wildlife, Bureau of—Continued
Statements of congressional witnesses—Continued Page
Hon. J. Caleb Boggs stated his support of the proposal to undertake surf clam research and urged appropriation of money to undertake this vitally needed research as there is a definite threat of depletion of the clambeds 1391
Hon. Ernest Gruening urged the committee to provide the Bureau of Commercial Fisheries with funds to initiate large-scale feasibility studies to strengthen the research program and to establish markets for specialized fish protein concentrate products 1408
Hon. Frank E. Moss stated that additional funds could be used to good advantage at the Ouray National Wildlife Refuge in the Uintah Basin of eastern Utah 1413
Hon. Laurence J. Burton stated his support for additional funds for the Bear River Migratory Bird Refuge road and the Ouray National Wildlife Refuge 1434
Hon. Lee Metcalf suggested the committee get the Department's views about the disparity in the funding of two similar programs in wildlife research by the Bureau of Sport Fisheries and Wildlife 1442
Hon. Thomas J. McIntyre expressed his support to amend Interior's appropriation bill to include funds for research by the Bureau of Commercial Fisheries on lobsters 1449
The following statements were filed with the committee for inclusion in the record:
Mrs. David Wallace, director, Oyster Institute of North America, in support of the budget dealing with shell fisheries research and the MSX brood resistance disease research 1534
William Kleb, chairman, Eastern Sea Clam Packers Committee of Oyster Institute, setting forth the dire need of research and exploration of the MSX and sea clam research 1535
Hon. Harrison A. Williams, Jr., urging additional appropriations for the Atlantic Marine Game Fish Research Center at Sandy Hook, N.J 1543
Richard C. Wolff, concerning Federal marine research appropriations 1544
Joint letter from the steering committee of New York congressional delegation regarding an additional appropriation to the construction budget; also for renovating the Federal fish hatchery at Cortland, N.Y 1546
Letter signed by the following:
Hon. Emanuel Celler, chairman.
Hon. Jacob K. Javits.
Hon. James J. Delaney.
Hon. William E. Miller.
Hon. Leo W. O'Brien.
Hon. Steven B. Derounian.
Philip A. Douglas, executive secretary, Sport Fishing Institute, concerning sound fish conservation practices in sport fishing 1547
C. R. Gutermuth, vice president, Wildlife Management Institute, re migratory bird conservation account for the purchase of wet lands and other habitat 1549
Louis S. Clapper, National Wildlife Federation, in support of the emergency waterfowl wetlands acquisition program 1550
Alex Radin, American Public Power Association, concerning fish migration over dams 1552
Forest Service (beginning of hearings) 916
Purpose statement 916
Accelerated public works program 923, 959, 960
Summary of major accomplishments, Federal projects, by regions, fiscal years 1963 and 1964 960
Financing by regions, fiscal years 1963–64 960, 961
Summary of major accomplishments, State cooperative projects, by regions, fiscal years 1963 and 1964 962
State matching funds, accelerated public works grant-in-aid projects 962

Statements of congressional witnesses:
Statement of Hon. John Stennis, in support of the Forest Soil and Hydrology Laboratory, Oxford, Miss 912
Letter of February 21, 1964, to Hon. John C. Stennis, from Tom DeWeese, chairman for Mississippi of the Southern Pine Industry Committee, Philadelphia, Miss., concerning research projects in connection with the biology and control of insects attacking wood, and the protection of wood from decay 913
Letter of February 20, 1964, from Hon. Stuart Symington, and Hon. Edward V. Long, requesting that an area known as the Markham Springs tract, which lies within the Clark National Forest in southeast Missouri, be purchased by the Forest Service 974
Letter of February 26, 1964, signed by Hon. Stuart Symington and Hon. Edward V. Long, requesting funds to undertake cooperative wildlife habitat research in Missouri and other Midwestern States 985
Statement from William E. Towell, director of the Missouri Conservation Commission, recommending that funds be appropriated for the Forest Service research programs 986
Letter of February 20, 1964, to Hon. E. L. Bartlett from Hon. B. Frank Heintzleman, urging that strong support be given to increased funds for forest research 988
Letter of February 21, 1964, from Hon. Mike Mansfield, enclosing letter of February 17, 1964, from Dean Arnold W. Bolle, School of Forestry at Montana State University, Missoula, Mont., discussing the proposed forestry research laboratory on the Montana State University campus, and the appropriation for forestry research in Montana 992
Letter of February 27, 1964, from Hon. Al Ullman concerning the plans for the research program at La Grande, Oreg 996
Letter of February 18, 1964, from Hon. Albert Gore, requesting the subcommittee to provide funds to construct a silviculture laboratory at the University of the South at Sewanee, Tenn 996
Statement of Hon. Clinton P. Anderson requesting construction funds for a forest science laboratory at Albuquerque, N. Mex 1053
Statement of Hon. Gaylord Nelson urging approval of funds for expansion of the Forest Products Laboratory at Madison, Wis 1054

General forestry assistance—Continued
Statements of congressional witnesses—Continued
Page
Letter of February 20, 1964, from Hon. Franklin D. Roosevelt, Jr., Under Secretary of Commerce, regarding importance of Forest Products Laboratory at Madison, Wis 1056
Statement of Hon. Wallace F. Bennett urging increased appropriations for the Forest Service, particularly for watershed management research and land acquisitions for watershed protection 1057
Letter of February 24, 1964, from Hardy Glascock, Jr., forest counsel of the Western Forestry & Conservation Association urging approval of the Forest Service budget 1061
Statement by assistant commissioner, Kentucky Department of Conservation, urging increased appropriations for timber management research 1061
Letter of February 18, 1964, from Paul E. Tilford, executive secretary of the National Arborist Association, urging that adequate provision in the Forest Service budget be made for research on Dutch elm disease 1063
Letter of February 19, 1964 from Oliver D. Diller, chairman, Wooster, Ohio, Citizens Dutch Elm Disease Control Committee, urging approval of funds for research on Dutch elm disease 1063
Statement of Charles H. Lewis, Jr., Louisiana Forestry Association, regarding funds to adequately staff the Alexandria, La., Forest Products Research Laboratory 1064
Statement of Warren E. Dietrich, Louisiana Forestry Association, urging staffing of Alexandria, La., Forest Products Research Laboratory at Alexandria, La 1065
Letter of February 24, 1964, from Lynn Sandberg, chairman, Upper Peninsula Committee on Area Problems, Michigan, supporting the budget estimate for Forest survey 1066
Letter of February 3, 1964, from Donald Linville, executive secretary, American Hardboard Association, supporting the budget estimate for expansion of the Forest Products Laboratory at Madison, Wis 1067
Hon. Wayne Morse submitted a statement concerning the program for the national forests and requested an effort be made to provide necessary increases for all the various proposals in order to more nearly approximate the schedules that were indicated in the program. He stated the proposed increases in forest research are not substantial, and enclosed letters from various soil conservation districts dealing with the need for additional forest research funds; he stated the need for construction of a Forest Service laboratory at La Grande, Oreg., is most urgent; urged the committee to give careful consideration to the need for forest management and watershed research 1366
Hon. Ernest Gruening submitted a statement concerning the Forest Service budget for the State of Alaska 1394
Hon. Frank E. Moss expressed his satisfaction concerning the resource development item in the budget request for the Forest Service and emphasized strongly that the watershed and range management research projects should be strengthened 1413
Hon. Philip A. Hart requested funds be appropriated for the construction of the Forest Engineering Laboratory at Houghton, Mich., to improve the timber industry and relieve the unemployment in the area 1420b
Hon. George D. Aiken urged the committee to appropriate funds for the establishment of a National Maple Production Research Center in Burlington, Vt., and attached correspondence evaluating the proposal 1428
Hon. Gordon Allott stated his support of funds for the construction of a headquarters office-laboratory for the Rocky Mountain Forest and Range Experiment Station to be built on the campus of Colorado State University at Fort Collins, Colo 1437

General forestry assistance—Continued
Statements of congressional witnesses—Continued Page
Hon. Lee Metcalf stated the budget fails to provide the sustained buildup needed in the development of the national forests and that timber resource activities are lagging and that additional funds would be a prudent investment; stated the budget for cooperative forest fire control, forest management and processing and for general forestry assistance are very modest and that larger amounts can be justified; the Forestry Sciences Laboratory at Missoula, Mont., would speed the research necessary to accomplish improvements in management 1439
Hon. John B. Bennett urged that funds be made available for the construction of the Forest Engineering Laboratory, Houghton, Mich., so that the productive program in forest engineering research can be advanced 1455
The following statements were filed with the committee for inclusion in the record:
William T. Jobe, Jr., general counsel, National Lumber Manufacturers Association, re forest products and forest pests control research 1467
Arthur F. Muschler, technical director, Edward Hines Lumber Co., concerned with forest products research, Forest Products Laboratory in Madison, Wis 1471
Hon. Everett R. Dirksen regarding need for research program at Southern Illinois University 1472
Dr. William J. Tudor, Southern Illinois University, regarding increased research program 1475
Hon. John Stennis regarding a laboratory at Oxford, Miss 1479
Hon. Charles M. Teague concerning the national forests, fire problems and flood control 1479
Robert T. Radford, president, Watershed Fire Council of Southern California, concerning a fire laboratory at Riverside, Calif., and the fire protection needs of southern California 1480
Austin H. Wilkins, forest commissioner of the State of Maine concerning State and Federal cooperative programs, particularly forest fire control, seedling production, cooperative forest management and forest tree planting 1502
Donald H. Gott, executive director, American Walnut Manufacturers' Association, concerning construction of wood utilization, timber management, and marketing research laboratories at Carbondale, Ill., and expansion of the Laboratory at Madison, Wis 1506
Richard D. Behm, marketing specialist, regarding walnut timber production, and additional research 1508
Ralph C. Wible, State forester, Department of Forests and Waters, Commonwealth of Pennsylvania, concerning Federal-State forestry cooperative programs 1509
William E. Welsh, executive director, National Reclamation Association, concerning improvement of recreational areas on national forest lands; strengthening of the program in watershed management research 1511
Theodore B. Pomeroy of the American Forestry Association, regarding forest insect and disease research, forest products utilization, strengthen fire protection facilities in Alaska 1514
Hon. William Proxmire concerning research benefits of the Forest Products Laboratory, Madison, Wis 1521
William Ross Brown, Jr., Forest Farmers Association, concerned with water and hydrology laboratories and forest watershed management research 1523
Herman E. Baggenstoss, regional vice president, Forest Farmers Association, concerning silviculture research laboratory, Sewanee, Tenn 1525
H. E. Ruark, director, Georgia Forest Research Council, Macon, Ga., regarding Southern Forest Fire Laboratory 1526
C. A. Roberts, American Turpentine Farmers Association, Lake Butler, Fla., concerning strengthening gum naval stores research at the naval stores and Timber Production Laboratory at Olustee, Fla 1529

General forestry assistance—Continued

Justification 176
Summary of sources and application of funds 177
Statement showing effect of budget reductions set forth in House Document 240, March 9, 1964 1566
Statements of congressional witnesses:
Hon. Wayne Morse submitted a comprehensive statement, with supporting data, urging funds be appropriated for the Tongue Point Indian School at Tongue Point, Oreg 1364
Hon. Ernest Gruening urged the committee to appropriate the necessary funds for new construction of facilities for schools; supported the need for funds to develop Indian arts and crafts and vocational education training, which will pay dividends to Alaska 1406
The following statements were filed with the committee for inclusion in the record:
Theodore B. Hetzel, Friends Committee on National Legislation, concerning Alaskan Indian community social and economic affairs, their education, housing, and sanitation 1516
Hon. George McGovern, concerning appropriation for the Pine Ridge Reservation to be used for law enforcement 1541
Dr. I. Lawrence Kerr, American Dental Association, urging increased funds for the dental program, Indian Health Service 1564
Indian Claims Commission (beginning of hearings) 1104
Analysis by activities 1105
Hearing and adjudication of Indian claims 1105
Budget justification 1104
Purpose statement 1104
Detailed statement 1105
Public Law 88-168, effective November 4, 1963, to remedy the situation of impecunious Indian claimants to present their cases 1106, 1107
Supplement request for an appropriation to activate this act 1107
Object classification 1106
Salaries and expenses 1105
Status of Indian claims 1109
Claims pending, dismissed, and awarded 1110
Summary of increases and decreases, 1965 1105

Statement showing effect of budget reductions set forth in House Document No. 240, March 9, 1964 1566
Statements of congressional witnesses:
Hon. Wayne Morse urged the committee to give consideration to a further acceleration of the soil and moisture conservation work of the Bureau of Land Management; also requested the committee to instruct the Bureau to make a comprehensive analysis of the weed control situation in Oregon 1367
Hon. Ernest Gruening stated his concern about the cadastral surveys in Alaska by the Bureau and urged the committee to request the Bureau to submit specific progress reports from time to time; urged that funds be provided the Bureau to initiate construction of fire control facilities 1394
Hon. Lee Metcalf spoke of budget items in Montana, especially the sanitation facilities in recreation areas and the soil and moisture work 1444
Hon. Clinton P. Anderson requested that funds be provided for soil and moisture conservation as the present funds are not sufficient to permit the Bureau to participate in the pilot conservation projects being planned 1452
The following statements were filed with the committee for inclusion in the record:
William E. Welsh, executive director, National Reclamation Association, urging that sufficient funds be granted for a satisfactory program of watershed management and control 1512
Kenneth Pomeroy, American Forestry Association, urging the rehabilitation of rundown ranges 1516
W. A. Williams, Jr., National Association of Soil and Water Conservation Districts, regarding insufficient funds for soil and moisture conservation work 1561
