A major function of the operation will be the development and use of programmed learning materials. These can be either self sufficient or used in conjunction with workshops, conferences, seminars or formalized classroom follow-up training. It would appear, until research develops better methods, that the programmed learning technique is the most feasible method which DIH can use to reach the numbers needing training with a variety of subjects. With proper motivation of the learners almost any subject can be learned through programmed instruction. Some subjects, of course, lend themselves much more successfully to this method than do others.

Converted first floor space at the partially vacated former tuberculosis sanitarium at Tuscon will accommodate six training officers, six secretaries and provide two classrooms. Potentially available space will permit expansion as required.

Five positions and $100,000 are requested in Fiscal Year 1968 for initial staffiing and equipping of the Division of Indian Health Training Center at Tucson, Arizona.

Mental health (increase of $150,000)

The pressures of modern day living have precipitated in the Indian people a diversity of social and personality conflicts and mental illnesses that are resulting in high rates of suicides and accidents, excessive use of alcohol, family disorganization, child neglect, school dropouts and unemployment. The Division intends to combat these manifestations of maladjustment through a planned comprehensive mental health program designed to implement and to integrate community mental health services into the ongoing Indian health program with major emphasis upon the prevention of mental illness and the reduction of mental health complications that accentuate other medical conditions. Distribution of the $150,000 requested follows:

Pine Ridge, 5 positions $50,000.

In the 1966 appropriation, Congress provided $100,000 for the development of a pilot mental health study oriented to the needs of a community mental health program at the Pine Ridge Service Unit. Provision was made for five full-time staff members, four part-time consultants, and other necessary costs. Despite the fact that the program has been in operation less than 10 months, plans are well under way to obtain baseline data on the extent of the problem. Benefits are already accruing from the initial efforts to sensitize Area and field staff to recognize early manifestations of deviations from normal behavior and emotional patterns, and to involve tribal and community groups in the planning of mental health programs. Five workshops have been held for medical and related agency personnel and a planned system of supportive consultations has been set up to advise teachers, welfare workers and clergy who have daily contacts with Indians in trouble.

Activities will be accelerated toward compiling and analyzing the study data and providing the services and the training necessary for the implementation of positive mental health concepts. In Fiscal Year 1968, $50,000 and five additional staff members consisting of a clinical psychologist, a biostatistician, a psychiatric social worker and two clerks are requested for this purpose.

The project implements activities of the Economic Development Program and is expected to make a significant impact on such indices of maladjustment as incarcerations for drunkenness, alcohol-related neglect of children and repeated hospitalizations.

Albuquerque, 5 positions $100,000.

It is proposed to initiate in fiscal year 1968 a mental health program in the Albuquerque Area which serves more than a quarter of all reservation Indians in the United States. There is a critical need for such a program in this Area. On the basis of national statistics there are here 13,000 Pueblo, Navajo and Apache Indians with treatable mental and emotional disorders. Yet last year only 760, or less than 6% received treatment. Studies conducted in an Area boarding school showed that 16% of the students needed psychiatric care in 1965, yet less than 2% received psychiatric services. There are 462 mentally retarded children among the Pueblos and Apaches and at least 2,000 among the Navajos who need psychiatric and psychological evaluations. A study recently completed on one Indian reservation in this Area showed that one-third of all adult Indians have an alcohol problem which adversely affects their ability to care for their children and to keep a steady job. This group had twice as many hospital admissions as the rest of the reservation population, and 70% of their hospital episodes were alcohol-related. The Tribal judge reported that over 80% of tribal arrests and court activities were alcohol-related.

Suicide rates among Indians are 14% greater than among non-Indians, and homicides occur three times as often.

Counseling and other services which might help an Indian approach his problems with a healthy attitude are rarely available. Despite efforts of the State mental health authorities to provide psychiatric treatment to all citizens who need it, the majority of Indians are dependent for early evaluative diagnoses and outpatient psychiatric services on the general physicians and allied staff of the Division of Indian Health. It is anticipated that over 100 mental health centers will be built in the United States in the next few years, yet very few are being planned for the States with the highest concentrations of Indian population, and the few that will be developed will be inaccessible to the isolated, sparsely settled areas where reservation Indians reside.

A program is being proposed with a mental health team stationed in Albuquerque to collect data from scattered studies, to analyze the extent and prevalence of the most severe problems and to develop a course of action to suit the problems. Concurrently with the study the mental health team will travel to the small satellite hospitals to provide professional education for the young general practitioners and related staff to assist them in the early detection of mental disorders, in the evaluation of the emotional component in physical ailments, and in the handling of groups of Indians who need to learn how to manage periods of crisis in their lives with a minimum of stress to avoid mental breakdowns that require long periods of hospitalization. Consultative services, geared to Indian cultural values, will be extended to educational, welfare, police and other related agencies whose work may involve counseling of emotionally maladjusted Indian people. The mental health team will be responsible also for maintaining strong liaison with State mental health agencies to coordinate the preventive aspects of the Indian mental health program with the over-all State mental health plans.

$100,000 and 5 positions consisting of a community psychiatrist, a psychologist, a mental health social worker and two clerks are requested to initiate the program in the Albuquerque Area in 1968.

Plan of work

The request of $9,459,000 for Field Medical Services encompass ambulatory medical care and preventive health services provided at fixed facilities, outside of hospitals, and at numerous field locations as close as practicable to the widely scattered and isolated groups of Indian and Alaska Native beneficiaries.

The therapeutic services include diagnosis and treatment, referral of persons needing hospital care and follow-up of patients after hospitalization. The preventive health services include a vast range of activities such as prenatal and postnatal care, well child clinics, school health, control of communicable diseases including immunization and screening and follow-up of cases and contacts, e.g., tuberculosis, venereal diseases and trachoma, early detection of chronic diseases such as diabetes, prevention of deficiency diseases and mental health. Associated with this activity are medical social services and epidemiology training.

The prevention and early identification of diseases will be accomplished by an increase in the number of scheduled general and specialty clinics that will be held in the present clinics and new clinics to be constructed. The new clinics will be make the services more easily available to the Indians by being closer to where they live.

The percentage of children under five years old immunized against diphtheria tetanus, pertussis, polio, measles and influenza will be increased from 50 percent to 55 percent.

The number of pre-school children who have had complete physical examinations previous to entering school will be increased from 50 percent to 60 percent. Seventy percent of the children under one year of age will be brought under medical supervision. Expectant mothers will be seen in the prenatal clinics in the first trimester. Premature babies will be seen by the public health nurses within 1 month after birth. Nutrition services will be increased to reduce the number of cases of malnutrition, particularly in children, as malnutrition contributes to the high incidence of infective and respiratory diseases.

The increased services will also assist in identification and coordination of all community resources toward the prevention of accidents, and the prevention and treatment of mental disorders, crippling conditions in children, tuberculosis and venereal diseases.

The facilities in which these services are provided include 46 Health Centers (which include centers at the large BIA Boarding Schools) and about three hundred other locations which include health stations and satellite field clinics.

There follows a distribution by major fixed facilities of the outpatient visits for 1965, 1966 and 1967:

	1966 actual	1967 estimate	1968 estimate
Health centers	253, 600	275, 000	300, 000
School health centers and larger day schools and dormitories	85, 300	70, 000	80, 000
Other clinics	241, 650	285, 000	300, 000
Total	580, 550	630, 000	680, 000

Itemization of estimate—Field health services

Obligations by objects	Actual, 1966	Amount available, 1967	Estimate, 1968	Increase (+) or decrease (−)
11 Personnel compensation	$8, 388, 797	$10, 481, 000	$12, 669, 000	+$2, 188, 000
12 Personnel benefits	937, 103	1, 206, 000	1, 495, 000	+289, 000

Total obligations	13, 033, 051	[1] 15, 631, 000	[1] 18, 951, 000	+3, 320, 000

[1] Excludes reimbursements as follows: 1967, $94,000; 1968, $94,000.

4. Special assistance to the Menominee Indian people

Special assisance to the Menominee Indian people:

Amount available, 1967	$800, 000
Estimate, 1968	350, 000
Decrease	450, 000

A four year program to assist the Menominee Indian people of Menominee County, Wisconsin was authorized by Public Law 89-653 dated October 14, 1966, commencing with 1967. The assistance for 1968 covers joint school district costs of $150,000 per annum, public welfare benefits costs of $100,000 per annum (including administrative costs, public assistance, indigent medical care services, child welfare, veterans services, surplus commodities, general relief, and the services of State hospitals, mental institutions, and industrial schools), and health and sanitation services costs of $100,000 per annum (including hospitalization of the tubercular, employment of a public health nurse and a sanitary aide, immunization against communicable diseases, collection and disposal of garbage and refuse, and collecting and recording of vital statistics).

The estimate of $350,000 provides a net decrease of $450,000 resulting from the anticipated completion of the construction of sanitation facilities in Menominee County, Wisconsin, commenced by the Secretary of Health, Education, and Welfare pursuant to the authority contained in the Act of April 4, 1962 (76 Stat. 53) and authorized for completion in 1967 pursuant to Public Law 89–653.

5. *Administration*

Administration:	
Amount available, 1966	$1,880,879
Amount available, 1967	1,887,000
Estimate, 1968	2,156,000
Increase	269,000

The estimate of $2,156,000 provides an increase of $269,000 and 9 positions consisting of:

Statutory promotions	$39,000
Program increase:	
Division of Indian Health (9 positions)	107,000
Public Health Service management fund	123,000
Net Increase	269,000

Division of Indian Health, 9 positions and $107,000

Planning-Programming-Budgeting, 8 positions and $100,000.

The Division of Indian Health is committed to the administration of its programs in the most prudent and judicious manner possible. The Division's innovating program packaging concept with its techniques of performance budgeting developed and implemented in 1963 without a request for additional staff or resources is an example of the Division's exercise of administrative responsibility and control. This system is currently being integrated into the President's planning-programming-budgeting system.

However, the proper and effective implementation of the President's planning-programming-budgeting system with its workload ramifications requires a minimum of eight additional staff at the headquarters level in order to provide higher level management echelons with the information they will require under this system to fulfill their decision making responsibilities.

Eight additional positions are requested in 1968 to provide for:

1. The workload requirements of translating the costs of program plans and objectives into a sound and effective budget and appropriation request:
2. A centralized report and retrieval control responsibility;
3. The quantitative analytical evaluations and computations necessary for conducting in depth cost effectiveness and other special studies; and,
4. The application of computer oriented systems analysis which will give the Division greater precision in specifying the variables of its health problems and the further development and design of information systems to facilitate the planning-programming-budgeting system.

The positions requested are two programming budget analysts, one program reports officer, one program evaluation officer, one public health programming analyst, two systems analysts, and one secretary.

Training, 1 position and $7,000

The position of an audio-visual assistant is vitally needed to perform audiovisual services including graphic art development—production of aids and materials, maintenance of equipment, audiovisual files and training materials stocks now performed by the Assistant Branch Chief with the assistance of extensive overtime help, thus releasing him to devote needed time to the newly instituted DIH career development program. The career development program and expanding training activities including additional inhouse residencies and programs instituted by the new DIH Training Center increase the workload upon the already overburdened headquarters Training Branch staff.

Office of the Bureau Director, Public Health Service management fund, $123,000

The Office of the Bureau Director provides program direction, program services and handles business management functions for Bureau activities. It is financed by payments from the component Divisions to the Public Health Service Management Fund on a pro rata basis.

Itemiaztion of estimate—Administration

PREPARED STATEMENT

Chairman HAYDEN. Dr. Rabeau, will you please submit your written statement for printing in the record, and then highlight it for the committee.

Dr. RABEAU. Yes, sir. Thank you, Mr. Chairman.

(The statement follows:)

The U.S. Public Health Service assumed responsibility for the health care of American Indians and Alaska Natives on July 1, 1955 as a result of legislation transferring the responsibility from the Department of the Interior. The Division of Indian Health was established to administer the program.

The Indian health program is unique among Federal programs. It serves a group of American citizens whose relationship to the Federal Government differs from any other and whose situation requires the utilization of the most comprehensive planning and services posssible.

The Division of Indian Health serves nearly 400,000 beneficiaries. About 340,000 are members of some 250 Indian tribes living on Federal reservations or in communities or rancherias in 23 States, mostly west of the Mississippi. The remainder are Eskimo, Indians and Aleuts scattered throughout the State of Alaska.

No other populations occupy a similar position in the cultural, sociological and economic structure of the United States. Indians and Alaska Natives are set apart from the rest of the Nation by a combination of many factors. In the majority, they are geographically isolated in remote areas, with accessibility further complicated by poor or nonexistent roads, mountainous terrain or severe weather conditions. They have their own languages peculiar to the respective tribes and maintain their own cultures which have been preserved throughout past centuries. They do not have recourse to the organized community affiliations of other Americans to meet their physical, social and economic needs and are unfamiliar with the pattern and working of non-Indian society, either industrial or social.

Indians and Alaska Natives also live in circumstances which differ from any other population group. In general their contact with non-Indian society is extremely limited and they do not belong to any community other than their own. Family income falls far below the $3,000 floor which the Office of Economic Opportunity calls the "poverty line"—it averages less than $1,500 a year, and is under $1,000 in many instances.

The majority of the housing is worse than sub-standard, with roughly 90 percent below that which is considered acceptable. The average family of 5.5 lives in a one or two-room dwelling poorly constructed of wood, clay, or a combination of materials indigenous to the particular area. They do not have sanitation facilities and more than 40 percent obtain domestic water from potentially contaminated sources and approximately 50 percent must haul or carry their drinking water. Only about 25 percent of the houses have satisfactory waste disposal facilities.

The average education level of the adults of middle age is fifth grade and many are virtually illiterate in English. Among children who go to Reservation Indian schools, about eight out of ten enter with limited or no ability to speak English. The number who complete even elementary level education is the lowest of any ethnic group and each year only a few hundred Indian high school graduates go on to college.

The lack of education and correspondingly vocational training, inhibits economic advancement of tribal groups. They cannot favorably compete in the regular labor market and employment opportunities on reservations are extremely limited.

The low economic level coupled with the deplorable living conditions are reflected in serious health problems affecting Indians and Alaska Natives. The problems are further aggravated by malnutrition, isolation from health facilities or medical practitioners and lack of knowledge of good health principles and the need to obtain treatment for health conditions.

The health status of these populations is about that of the general population 25 years ago. Most of the illnesses and about 13 percent of the deaths among Indians and Alaska Natives are due to infectious diseases and their complications. Included are gastroenteritis, dysentery, influenza, pneumonia and other respiratory diseases, tuberculosis, measles, otitis media and trachoma, all of which can be considered preventable. These, combined with accidents account for almost 50 percent of the hospital admissions.

The Indian infant death rate is almost one and one-half times that of the general population and the average age at death is 44 in contrast to 63 in the general population.

GOAL AND OBJECTIVES OF THE INDIAN HEALTH PROGRAM

The magnitude of the health needs of these populations and their social and economic situations necessitate the provision of a totally comprehensive health program which will integrate and coordinate curative medical treatment, rehabilitative care, and most important, preventive services, including the whole gamut of environmental health activities.

The goal of the Indian health program is to raise the health status of American Indians and Alaska Natives to the highest possible level.

To achieve this goal the Public Health Service has set the following objectives:

1. Institution of self-help health programs conducted by and with the Indians and Alaska Natives. The aim of these programs would be the assumption by the beneficiaries of fuller responsibilities in meeting their health needs.
2. Management of Division resources (manpower, money, and materials) in a manner that provides a coordinated and balanced preventive, curative and rehabilitative health program through a constantly updated Area-wide operations plan, initiated at the service unit level and consolidated in a comprehensive Division plan with Indian cooperation and consultation.
3. Institution of continuing appraisal of health status to insure efficient application of effort in those areas that will have the greatest impact on achieving the Division's goal, coupled with continued development of additional tools for measurement, evaluation, and application.
4. Management of manpower resources not only to provide for the most efficient utilization of these resources, but also to provide opportunity for total growth and development of individual staff.
5. Fostering and promotion of all extra Divisional resources, public and private, with particular reference to State and local government responsibilities for their Indian citizens.

The new procedures developed by the Division in providing comprehensive health services can be utilized to great benefit in non-Indian communities in the United States and in underdeveloped nations throughout the world.

ACCOMPLISHMENTS

The Public Health Service will begin its 13th year of responsibility for the health care of American Indians and Alaska Natives on July 1, 1967. The progress of the past 12 years is measurable and significant, due mainly to the understanding of the Congress and its committees which reviewed and advised or acted upon the Indian Health program by passage of supportive legislation and appropriation of requested funds. We also gratefully acknowledge the assistance of Indian interest groups, especially, Association of American Indian Affairs, Inc., National Congress of America Indians, Indian Rights Association and American Friends Service Committee, Inc.; other organizations, the States and communities where Indians live, and most importantly, the Indians themselves. Valuable help has been received on all aspects of program improvement from the American Medical Association, the American Dental Association, the American Academy of General Practice, the American Academy of Pediatrics, the American Hospital Association, the American Public Health Association and the Association of State and Territorial Health Officers.

Combatting the high morbidity and mortality rates among Indian and Alaska Native populations has been the primary effort of the Division of Indian Health. Dramatic reductions have been made since 1955. Among Indians, infant death rates have declined 41 percent; death rates from tuberculosis are down 57 percent; and death rates from gastroenteric diseases are down 49 percent. Among Alaska Natives, infant death rates are down 31 percent and tuberculosis death rates are down 86 percent. During the same period, new case rates for tuberculosis declined 60 percent among Indians and 70 percent among Alaska Natives.

Despite such major inroads, comparisons with the general population still are highly unfavorable. Ratios of Indian rates to U.S. All Races rates are: infant deaths, 1.4 times higher; deaths from tuberculosis and gastroenteritis, 5 times higher; and incidence of tuberculosis, 7 times higher. Ratios of Alaska Native rates to U.S. All Races rates are: infant deaths, 2.2 higher; deaths from tuberculosis, 4.2 higher; and incidence of tuberculosis 21 times higher.

Encouraging Indians to utilize services available to them is an essential key to successful achievement of the Division goal. The Indian has a meager understanding of the scientific basis for good health and physical well-being. His culture relates physical well-being to harmony with both the natural and supernatural forces surrounding him; while illness is associated with a lack of attunement with these forces rather than with some condition within himself. His language contains no terms to describe the disease theory and he is still often accustomed to relying on religious rituals, rather than on modern medical practices to cure his ailments.

Staff serving these populations must be familiar with their conceptual differences and be prepared to take infinite time, frequently through interpreters, to make a person understand what is wrong with him and what procedures must be performed to make him well. Explaining preventive health measures and why they are necessary, is a particularly difficult endeavor and one in which the entire health team collaborates continuously.

A measure of the Indian's growing understanding and appreciation of the importance of health care is shown by his increased utilization of the health facilities. Admissions of Indians and Alaska Natives to hospitals now number some 92,000 a year in contrast to 50,000 in 1955. Similarly since then out-patient visits have more than doubled, from 550,000 to 1,300,000 and the number of dental services provided has almost tripled from 220,000 to 571,000 a year.

Part of the growth is attributable to the Division's capability of providing better services through additions of staff and improved facilities. Since 1955, the numbers of physicians assigned to the program has increased from 125 to 335; dentists from 40 to 105 and professional nurses from 782 to 908.

Nine hospitals, nine health centers and 34 health stations have been built either to replace antiquated facilities or to provide care where none was formerly available. Construction of two additional hospitals and two health centers is underway.

With expanded staff and better facilities, the Division has been concentrating on improving the competency of employees so that they can better perform their individual duties and also assume a more substantial role as a member of the health team. Successful functioning of a total health program depends on the ability of professional workers to plan, budget, conduct and continuously evaluate a coordinated effort of curative, preventive and rehabilitative medical services and environmental health activities to meet the Indians' needs. The most prudent use of resources must be made and a constant vigilance maintained to improve the amount and quality of services provided.

With the groundwork laid several years ago in training Division staff in management practices, including the relating of program planning to specific health objectives, it was an easy transition to enter the new Federal system of Planning-Programing-Budgeting (PPB) in order to assure that each dollar will be spent where it will show greatest gain or "profit" in terms of achieving a defined goal. In addition to improving health services, practices can be applied to other community health programs throughout the world.

Other professional staff training efforts instituted include three physician residency programs in pediatrics, general practice and preventive medicine in which 17 physicians have been enrolled, and a dental internship program with 6 dentists in training.

More than 200 professional employees of the Division have received training in epidemiology combined with program planning and managerial principles The Division training center where the course is given has recently been moved from Phoenx, Arizona, to the PHS Indian Health Center near Tucson.

Prototype studies were conducted at three locations wherein hospital administrators were utilized as hospital managers, thus relieving physicians from certain administrative duties. Results indicated the soundness of the concept and non-medical administrators are now being appointed to Indian hopsitals.

Two pilot efforts have been instigated to attack mental health problems which are increasing among Indian and Alaska Native people. One is a prototype study being conducted on the Sioux Reservation at Pine Ridge, South Dakota, where a mental health staff is measuring the magnitude of the situation and developing a program which will be applicable Division-wide; the other is a preliminary investigation and consultative project carried out by a psychiatrist and mental health team workng out of the Anchorage, Alaska, Public Health Service Hospital.

The training and employment of Indians continues to carry sustained emphasis within the Division of Indian Health. Consistently, more than 50 percent of employees are of Indian descent and more than 1,000 have been trained for health auxiliary positions in the program.

The largest single category of formal training for Indian people is practical nursing, which encompasses a year's basic training leading to licensure, plus advanced training in either clinical or public health nursing duty. Opportunities are offered to graduates who wish to continue studies to become registered nurses.

Formal training also is provided for dental assistants and sanitarian aides who perform essential services for the professional in each field. In addition to their regular assignments, these employees provide a link with their fellow Indians to encourage understanding and acceptance of the health services available.

Increasing the participation of Indians and Alaska Natives in activities directed toward bettering their health is another of the Division's major efforts. Their cooperation in the area of sanitation facilities construction exemplifies a significant trend in this direction. Under the authority of the Indian Sanitaton Facilities Act, passed in 1959, safe water and waste disposal facilities are constructed by the Division on Indian reservations and in Alaskan villages. About 37,000 families have benefited by this Act through projects authorized to date. More than one-third of the value of the projects has been contributed by Indians and Alaska Natives through donated labor, materials, and funds.

We anticipate that continued improvements in program development, staff training and facilities, governmental and private cooperation, and involvement of Indian and Alaska Native people will be reflected in health statistics that will be more compatible with those of the general population.

INDIAN HEALTH ACTIVITIES

Direct medical care is currently provided to Indian and Alaska Native people by the Public Health Service through a system of 51 hospitals (including St. George and St. Paul Islands in the Pribilofs transferred to the Public Health Service pursuant to Section 205 of Public Law 89-702), each with inpatient and outpatient services, 46 health centers, 30 in various field locations and 16 at Bureau of Indian Affairs boarding schools; and more than 300 field health stations and special school clinics. In addition, where there are no Public Health Service facilities or personnel is limited, contractual arrangements are held with 300 community hospitals, 18 State and local health departments and more than 400 private physicians, dentists and other specialists, to provide whatever health services are needed.

Hospital admissions and outpatient visits have shown steady increases, with pediatric patients comprising more than one-third of admissions to Indian hospitals and more than one-half of the workload in outpatient departments and clinics. Other significant portions or medical services are expended on various aspects of maternity care, on patients with infectious diseases and on victims of accidents.

Hospital Health Services

The 1968 request for hospital health services will provide for (1) the operation of 51 Public Health Service Indian hospitals and attached outpatient clinics with an employee/patient ratio slightly higher than 1967; (2) a nurse training program associated with Public Health Service Indian hospitals; (3) maintenance of all Public Health Service Indian Health facilities consisting of hospitals, health centers, stations, school clinics and staff quarters; (4) increased training of professional and sub-professional personnel; and (5) consultant services.

Three practical nurse training programs for young Indian women are conducted by the Public Health Service. The largest is the School of Practical Nursing in Albuquerque where some 60 girls are trained and graduated each year. After graduation, they take State board examinations and following qualifications as licensed practical nurses, are assigned to hospital or field positions within the Division of Indian Health, or to some other Public Health Service facility.

The second oldest practical nurse training program was established at Shiprock, New Mexico, to teach Indian graduates to assist public health nurses who work in Indian homes, schools and field clinics. Twelve young women receive this training each year.

New funds made available in 1964 permitted the introduction of the third type of practical nurse training which includes advanced clinical experience to enable the licensed practical nurses to assume additional nursing responsibility and to perform more complex nursing procedures. Eighty-five Indian women have now been graduated from the course.

The Division of Indian Health is also financing the enrollment of three Indian licensed practical nurses in schools of professional nursing and graduate study for two registered nurses.

Seventeen physicians are now in residency training in programs being conducted at the Phoenix Indian Medical Center, the Gallup, New Mexico, Indian Hospital and the University of Oklahoma, Oklahoma State Health Department. Each of the programs in pediatrics, general practice and preventive medicine has been approved by the American Medical Association.

Six dentists are in training in dental internship courses at the PHS Indian Hospitals at Gallup, New Mexico, Fort Defiance, Arizona, and Anchorage, Alaska.

All residencies and internships include instructions in the culture and beliefs of the Indians and in techniques for meeting their special health needs.

The $46,770,000 requested in 1968 will permit the hiring of 182 additional personnel to enable the Division to provide better quality care in hospitals and their outpatient clinics and to slightly increase the employee/patient ratio.

Contract Medical Care

It has been the practice of the Division of Indian Health that where the Public Health Service does not have facilities or sufficient personnel, medical and dental services are provided through contractual arrangements with community hospitals, clinics, laboratories, pharmacies, and private physicians and dentists. In addition, special diagnostic and therapeutic services which are used only occasionally, are purchased through contracts, avoiding the necessity for the Division to support these activities on a full-time basis.

Emergency hospitalization and medical care in locations where an Indian facility is not readily available are also provided under this program.

The request for 1968 of $13,906,000 reflects a moderate decrease expected in average daily contract patient loads and in contract physician services. This represents the anticipated effect of Titles XVIII and XIX, Public Law 89–97 on the Indian health program. Title XVII provides hospital insurance and supplementary medical benefits for people 65 years of age and over. The responsibility for administrating this program rests with the Social Security Administration. Title XIX provides federal grants to states which meet the requirements for federal participation in an expanded and improved medical care program for recipients of public assistance and for the medically needy. These programs are administered by State agencies.

Field Health Services

All programs of preventive health services and medical care provided outside hospitals are identified as field health services. The field health program is designed to bring health services to the tens of thousands of Indians and Alaska Natives who live considerable distances from Indian hospitals or community health resources. Involved are all health activities conducted in homes, communities, villages, at field health stations and at schools and health centers.

It is during the home visits and community activities that field health personnel provide therapeutic medical services and preventive health programs so necessary to reduce illness and premature death among Indians and Alaska Natives.

Services include medical and dental diagnosis and treatment; clinical and public health nursing; immunizations; referral of people needing hospitalization or specialized service; communicable disease surveillance and control. Other services include specialized clinics for screening and treatment of diabetes, tuberculosis, heart disease, cancer, ear and eye diseases; follow-up home visits; well baby care; prenatal and postnatal care; health education; medical social services; guidance in nutrition problems; accident prevention; environmental health services, and conduct of a cooperative Federal-Tribal program to construct water supply and other sanitation facilities.

The extent of services ranges from the continually operated fully staffed health center to the smaller, more remote health station which may be open one, two or more days a week. In Alaska, these stations permit service to hundreds of villages which are accessible only by bush plane and dog sled, and where Indian health physicians hold daily radio medical clinics with villages to provide advice and instructions on care of the sick or injured. Medical and nursing staff fly into the villages at least once a year to hold general medical clinics and make home visits.

The 1968 request of $18,951,000 provides for 273 new field health positions needed to accommodate an additional workload and to increase the attack on health problems through the preventive medical care program. It will also permit expansion of the preventive medicine physician residency training program; provision of long and short-term professional training and further development of community health aide training.

Community health aides, also known as village health aides have been utilized in Alaska since 1947, serving as the link between the professional medical staff at PHS Alaska Native Hospitals and the village residents needing health services. Their training was conducted on an informal basis until 1964 when four 1-2 week courses were given at Kotzebue, Bethel and Mount Edgecumbe. In 1965 and 1966 community action programs to train Indians as community health aides were initiated on several reservations under Title II of the Economic Opportunity Act. The Division of Indian Health participated in the program by developing a prototype course of instruction and providing instructors, field supervisors and facilities for field practice for the Aides. The Division plans to extend the program to as many reservations as possible.

Summary

The 1968 appropriation request for $82,133,000 for Indian health activities represents an increase of $5,809,000 and a net increase of 464 positions: 182 in Hospital Health; 273 in Field Health; and 9 in Administration. In addition to mandatory items such as statutory increases and cost increases under the Contract Medical Care program in the amount of $1,754,000, funds requested will provide for: (1) a small increase in the hospital employee/patient ratio which includes the full operation of two hospitals replacing inadequate ones, (2) direct services to beneficiaries on the Pribilof Islands, Alaska, (3) the establishment of an operations research program directed toward the design and preliminary implementation of an integrated and comprehensive management information system based on Service Unit planning and evaluation needs, (4) a decrease in the workload of the Contract Medical Care program due to the anticipated effect of Medicare legislation, (5) an increase in the preventive health activities consisting of Sanitation, Dental, Public Health Nursing, Health Education and Field Medical Services including the administration of an increased sanitation facilities construction program and the establishment of a community health aide training program, (6) special assistance to the Menominee Indian people, and (7) a slight increase to effectively implement the President's planning-programming-budgeting system.

CONSTRUCTION OF INDIAN HEALTH FACILITIES

Hospitals, Field Health Centers, and Field Health Stations

To successfully conduct the Indian Health program following modern medical practices and utilizing specialty skills to the utmost, it is essential that health facilities be fully operative and functionally arranged. Considerable progress has been made in correcting deficiencies which existed at the time of transfer of the program to the Public Health Service, through alterations, additions and new construction. But many still exist due to age, obsolescence, deferred maintenance and unsafe conditions. In addition, population shifts and changing health problems create needs for increased capacities of facilities or for construction of facilities where none exist.

During 1967 construction on new facilities was started or completed on replacement hospitals at Lawton, Oklahoma, and Belcourt, North Dakota, and clinics at Cherry Creek, South Dakota, Kaibeto, Arizona, Lower Greasewood, Arizona, and Whitehorse, South Dakota.

In addition, construction was started or completed on alteration projects at Gallup, N. Mex., Sells, Ariz., Wagner, S. Dak., Rapid City, S. Dak., and Anchorage, Alaska.

The 1968 appropriation request provides $5,478,000 for (1) construction of a 125-bed hospital to replace the present 75-bed facility at Tuba City, Ariz.; (2) completion of a 15-bed hospital in Mescalero, N. Mex.; (3) planning for the construction of a new 100-bed hospital in Chinle, Ariz.; and (4) alterations of health facilities at 13 locations.

The request also includes $2,285,000 for construction or for planning of health centers and health stations at Chilocco, Okla.; Riverside, Calif.; White Shield and New Town, N. Dak.; Tec Nos Pos, Albuquerque, Sanostee and San Felipe, N. Mex.; Beshbitoh, Many Farms, Dilkon, Nazlini, Oraibi, and Rock Point, Ariz.; Red Water, Miss.; and Stewart, Nevada.

Staff Quarters

The isolation of Indian health facilities and their remoteness from established communities where housing is available make it necessary for the Public Health Service to provide quarters for Indian health staff. Unless adequate housing is provided, it is virtually impossible to recruit and retain the professional and technical personnel needed in the program.

Since the time of the transfer of the program to the Division of Indian Health many of the gross deficiencies in staff housing have been corrected, but there still remain many units that are substandard and there is an insufficient number to accommodate personnel.

This year 207 units were authorized for construction at Kaibeto, Lower Greasewood, Shonto, Whiteriver, Parker, Sells, San Carlos, and Peach Springs, Arizona; Ft. Yates and Belcourt, North Dakota; Winnebago, Nebraska; Wanblee and Pine Ridge, South Dakota; Mescalero and Crownpoint, New Mexico; Browning, Crow, Poplar, Lame Deer and Rocky Boy, Montana; Ft. Washakie, Wyoming; and Schurz, Nevada.

The 1968 request of $3,734,000 will permit the construction of 195 units at Taholah, Washington; Warm Springs, Oregon; Fort Hall, Idaho; Beshbitoh, Teec Nos Pos, Nazlini, Dilkon, Tuba City and Many Farms, Arizona; Sanostee, New Mexico; Wagner, South Dakota; White Shield, North Dakota; and Owyhee, Nevada.

Sanitation Facilities Construction

One of the most glaring deficiencies of the Indian and Alaska Native physical environment is the lack of safe water supplies. Currently more than 40 percent obtain their domestic water from potentially contaminated sources and approximately 50 percent haul or carry all water for household use. Another is the inadequacy or complete absence of facilities for the disposal of human and other household wastes.

These conditions are responsible for much of the spread of organisms causing diarrheas and dysenteries which plague these populations, and contribute in a large extent to the spread of communicable diseases throughout Indian reservations and communities, and Alaska Native villages.

These physical inadequacies are further compounded by the lack of understanding of modern health and sanitation principles on the part of the people.

Environmental health activities of the Division include motivating and educating Indians to desire a better environment, construction of needed sanitary facilities, and training of Indians in use and maintenance of these facilities. Preparatory activities at the local reservation level prior to construction are essential to development of full Indian understanding of the relationship between environment and health. Further, these activities are prerequisites to the conversion of Indian requests into workable sanitation facility projects.

The construction of sanitation facilities is accomplished under the authority of Public Law 86–121. Appropriations authorized under Public Law 87–658, the accelerated public works programs, has augmented this construction activity. In all instances, planning and implementation of construction activities are done by the Public Health Service cooperatively with the respective Indian tribes or Alaska Native groups. The tribes themselves contributed about one-third of the value of the projects in labor, money or materials.

With the completion of all projects and assistance to housing authorized through fiscal year 1967, improved sanitation facilities will have been made available to nearly 37,000 Indian and Alaska Native families. This level of accomplishment represents 38% of the required effort to provide all families with both running water in the home and adequate waste disposal facilities.

The request of $10,464,000 for sanitation projects in 1968 will permit construction of 65 projects to correct existing sanitary deficiencies and for construction of sanitation facilities for Federal and Tribal housing programs conducted by the Housing Assistance Administration, the Bureau of Indian Affairs and other Federal Agencies, as well as Tribal groups.

In addition, continued emphasis will be placed on educating the Indians and Alaska Natives in good environmental health practices and in proper care and maintenance of facilities constructed for them.

Summary

In summary, the construction appropriation request in the amount of $22,211,000 will provide for (1) construction of a 125 bed General Medical and Surgical hospital at Tuba City, Arizona ($4,230,000), completion of a 15-bed hospital at Mescalero, New Mexico ($50,000) and planning funds for a new 100-bed hospital at Chinle, Arizona ($288,000); (2) construction of eleven and planning of two health centers or school health centers ($2,120,000); (3) construction of three health stations ($165,000); (4) funds for 195 units of personnel quarters ($3,734,000); (5) alteration projects at thirteen locations, including planning of improvements at Shiprock and Crownpoint, New Mexico ($910,000); (6) participation in a community hospital construction ($250,000); and (7) 65 sanitation projects plus provision of sanitation facilities to serve Federal and Tribal Housing programs for Indians ($10,464,000).

INDIAN DEATH RATE DECREASE

Dr. RABEAU. I would like to highlight what has occurred in the past 11 years since the Public Health Service has taken over the Indian health program. The progress has been both measurable and significant. For example, among Indians infant death rates have declined 41 percent. Deaths from tuberculosis are down 57 percent and deaths from gastroenteric diseases are down 49 percent.

USE OF HEALTH FACILITIES

The growing appreciation by the Indian of health care is shown by this continued use of the health facilities.

Our admissions now number some 92,000 a year in contrast to about 50,000 in 1955. In this same period the outpatient visits have more than doubled. The number of dental services have almost tripled. Part of the growth is due to the Division's capability of providing better services through increased staff and better facilities. This came about through the understanding and support of this committee.

PROGRAM PHYSICIAN AND NURSE INCREASES

During this period, the number of physicians assigned to the program has increased from 125 to 335; the dentists from 40 to 105; professional nurses, from 782 to 908.

CONSTRUCTION

During the same period, nine hospitals, nine health centers, and 34 health stations have been built either to replace antiquated facilities or to provide care where none was fomerly available. Construction of two additional hospitals is underway at the present time.

With this expanded staff and better facilities the Division has, in recent years, been able to undertake efforts to improve the competency of all employees so that they can better perform their individual duties and also assume a more substantial role as a member of the health team. We place a great deal of credence on functioning as a team.

PROFESSIONAL TRAINING

Professional staff training has been instituted in epidemiology and management practices. We have instituted several physician residency programs and a dental internship program. Subprofessional training activities are intensive and varied and include basic and advanced practical nurses, courses for dental assistants, health record technicians, and sanitarian aids and community health aids.

Much of the training has been devoted toward the expanded function of the health auxiliary.

WATER SUPPLY AND SANITATION

Another area of improvement is in water supplies and sanitary facilities on Indian reservations and Alaskan villages. The majority of Indians and Alaskans do not have sanitation facilities and more than 50 percent still must haul or carry their drinking water. Under the authority of the Indian Sanitation Facilities Act, safe water and waste disposal facilities have been authorized for over 37,000 families since the passage of legislation in 1959.

CONTRIBUTIONS BY INDIANS AND ALASKAN NATIVES

I think the best example of the involment of the Indian in the program is manifested by the fact that for every dollar—every Federal dollar expended on these projects, approximately 40 cents has been contributed by Indians and Alaskan natives through donated labor, materials, and funds.

NEW PROGRAMS FUNDED IN 1967

New programs that have been initiated through the 1967 appropriations are having considerable impact on specific health problems within the populations we serve.

Indian Trachoma Control Program

To prevent further spread of trachoma in the Indian population, a 5-year Division-wide control program has been initiated with major program emphasis in the Southwest—the Phoenix and Albuquerque-Window Rock areas.

Alaskan Mental Health Program

A mental health program in Alaska has been instituted. We have a mental health team that orients medical and nonmedical personnel to enable them to recognize and treat early symptoms and manage the recuperating patients when they return to the home community.

In the first 7 months of this program, over 300 patients have been treated by this method and it is estimated that 150 of these would have had to return or be committed to the psychiatric hospital if this program had not been instituted.

INDIAN HEALTH CARE, RAPID CITY, S. DAK.

Another new program is provision of health care for Indians in Rapid City, S. Dak. Since our health center there is one of the few we operate in an urban area, we have developed a unique, comprehensive, family-centered program plan which identifies the need of the people and provides special care for the high-risk families living in an urban center.

1968 PROGRAM

The provisions of our appropriation request for 1968 represent an increase of $5,809,000 or a net increase of 464 positions: 182 in hospital health, 273 in field health, and nine in administration.

In addition to mandatory items, such as statutory increases and cost increases under the contract medical care program, these funds requested will provide for a small increase to the hospital employee/patient ratio which includes full operation of two replacement hospital facilities; provide direct services to the beneficiaries on the Pribilof Islands in Alaska; allow the Division to establish an operations research program, which is directed toward the design and preliminary implementation of an integrated and comprehensive planning management information system based on our unique service unit planning and evaluation techniques; a decrease in the workload of the contract medical care program due to the anticipated effect of medicare legislation; an increase in preventive health activities consisting of sanitation, dental, public health nursing, health education, and field medical services, which includes the administration of an increased sanitation facilities construction program and the establishment of a community health aide training program.

This appropriation also provides for special assistance to the Menominee Indian people and allows for an increase to develop an improved planning-programing-budgeting system.

CONSTRUCTION

The construction appropriation request in the amount of $22,211,000 will provide for the construction of one new hospital, complete construction of a second new hospital and allow planning for a third. It will also allow construction of 11 health centers or school health centers, and the planning of two more. It will allow for the construction of three health stations, 195 units of personnel quarters, alteration projects at 13 locations, including planning for two hospitals; participation in a community hospital construction program, and last but not least, 65 sanitation facilities projects plus provision of sanitation facilities to serve Federal and tribal housing programs for the Indians.

Mr. Chairman, I would be happy to answer any questions.

Senator BARTLETT. Mr. Chairman, I wonder if I might ask Dr. Rabeau, before you start, where are those new hospitals to be located?

Dr. RABEAU. The new hospitals? Tuba City, Ariz.; and planning for one at Chinle, Ariz.

Senator BARTLETT. Thank you.

HOSPITAL ADMISSIONS

Chairman Hayden. In the highlight statement which you submitted with this estimate, you indicate that hospital admissions are continuing at a high rate through fiscal year 1966. Is the number of admissions still increasing?

Dr. Rabeau. It is starting to plateau now, Mr. Chairman. Our admission rate is starting to level off now.

Chairman Hayden. Is the increase because of additional available facilities or because of increasing difficulties?

Dr. Rabeau. The increase in hospital admissions has been, we feel, twofold. One, there are now additional and better facilities, and second—and I think this is the major point—acceptance of the program by the American Indian. The ever-increasing recognition by the Indian and Alaskan native of the importance and value of health care, particularly early health care, and preventive activities.

BUDGET REQUEST INCREASES

Chairman Hayden. Your proposed increase for Indian health activities over the amount appropriated in fiscal year 1967 is $8,462,000. How much of this results from increases resulting from Federal Pay Act legislation and from wage board increases, and how much of it is due to program increases?

Dr. Rabeau. Of the $8,462,000, $1,865,000 is due to Pay Act increases. $800,000 is a special appropriation for the Menominee Indians, and the balance are program increases.

Personnel Increase

Chairman Hayden. What is the total number of additional permanent employees which you plan to add during the coming fiscal year?

Dr. Rabeau. 464.

Hospital Health Services Increase

Chairman Hayden. For hospital health services, you are proposing a program increase of $2,157,000 to require 182 new employees. Would you please discuss this program?

Dr. Rabeau. The increase in hospital health activities will allow us to accomplish a number of things. First, funds are requested which will allow us to increase the hospital employee-patient ratio from 156 employees per hundred patients to 161 employees per hundred patients. The increase will also allow us to increase our hospital outpatient employee-patient ratio. It will increase it from 0.642 man-years per thousand outpatient visits to 0.698. There are 19 positions requested for an operations research program. Eight positions are requested for the direct operation of medical facilities on the Pribilof Islands. Public Law 89–720, which was passed by the last Congress, directed the Secretary of HEW to provide health services to the natives and other personnel of the Pribilof Islands. Heretofore, we had been providing the health service through a reimbursable agreement with the Fish and Wildlife Service.

SYSTEMS ANALYSIS MODULE

Chairman HAYDEN. Please explain the systems analysis module?

Dr. RABEAU. Operation SAM is the acronym that we use for the systems analysis module. Basically this is a program of applied research on health services. It is an area where very litttle has been done throughout the country. Most of the advances that have come about in the improvement of health of the American people have been in the nature of clinical and basic medical research. There have been very few advances in the public health field in the delivery of health services. What we propose is to do applied research on what is the proper mixture of personnel, for example, to work on a particular health problem. How much of a public health nurse's time, how much of a physician's, how much of a health educator's, should be devoted to this health problem? These facts are not known at the present time.

Traditionally, in the provision of health services, planning has been done and directed toward effort, and not toward a measurement of what the effort has produced. We hope through this research program to be able to come up with new ways that will more efficiently and effectively, and much more quickly, produce the solutions to the health problems of the American Indian.

HEALTH SERVICES FOR THE PRIBILOF ISLANDS

Chairman HAYDEN. I note that effective last November, your department became responsible for providing medical and dental care to the Pribilof Islands natives; and on a reimbursable basis to Federal employees and their dependents, and tourists and other persons in the Pribilof Islands. In order to accomplish this you are proposing an additional 8 positions and an increase of $117,000. Is this expense reimbursable from the Pribilof Islands fund?

Dr. RABEAU. No, sir. In the past it has been done on reimbursable basis. It is now necessary under Public Law 89–702 that we fund these services from our direct operations.

PEDIATRIC RESIDENCIES

Chairman HAYDEN. You ask for pediatric residency training programs in Phoenix and in Alaska. Which of these, if either, is a new program?

Dr. RABEAU. Neither of them, Mr. Chairman. For the Alaska program we received two positions in the 1967 budget. We were unable to institute this program because of delays in affiliating with a university medical school. The two positions were put in our Phoenix pediatric residency program. We anticipate that the requested increase will allow us to have two residents in our Anchorage pediatric residency program, which will be affiliated with one of the medical schools of the Pacific Northwest. Under our Phoenix pediatric residency program, we have four residents at the present time, our program is an affiliated community residency with community hospitals in Phoenix.

FOOD SERVICE TRAINING

Chairman HAYDEN. I assume that you have a supervisory food service training program in existence now. Where is it located, and how much is the total requested for this activity?

Dr. RABEAU. We do not have a formal training program at the present time for supervisory food service workers. In our hospital chain of 51 hospitals, many of them are too small to have a dietician; that is, a professional dietician to head the food service department. Nor are they of the size that would be feasible, if you could get dieticians in such isolated locations, to utilize them there; however, we do need somebody that is knowledgeable not only in the preparation of food and the various nutritional and caloric values, but is also knowledgeable about the managing of the food service department.

The great percentage of our food service staff are American Indians and Alaska natives. Many of them are excellent cooks, but they have never had any formal training. In the past, we have been able to send an occassional food service worker to a course that is offered by Michigan State University for food service supervisors. We can't enroll adequate numbers in that course at any one time because it is designed for people of Michigan and the surrounding area. Furthermore, it is not appropriate for our needs. We therefore propose to introduce our own training program.

PHARMACY RESIDENCY PROGRAM

Chairman HAYDEN. Is the Gallup pharmacy residency program a continuing one or a new one?

Dr. RABEAU. It is a new one, sir.

COMMISSIONED OFFICER EXTERN PROGRAM

Chairman HAYDEN. How many students are now enrolled in the commissioned officer student training extern program, and what is its present level of funding?

Dr. RABEAU. The commissioned officer students training extern program, or COSTEP, is a program where we recruit medical, dental, nursing students and other health professionals somewhere in their graduate training, for active duty with the Public Health Service for a period of time up to 3 months. I might add, this program serves as one of best sources of recruiting professionals into the Public Health Service. Recent figures that the Office of Personnel provided me show that about 47 percent of our COSTEPs join the Public Health Service.

At the present time, we are budgeted for 48 positions. The additions requested in 1968 will allow us a total of 75.

LOCATION OF OPERATIONS RESEARCH PROGRAM

Chairman HAYDEN. I note on page 33 of your justification statement that an operations research program to be located at Tucson, Ariz., will utilize the Papago Indian Reservation as the operational community. Would you please describe this program?

Dr. **Rabeau.** Yes, sir. The operations research program will be headquartered at the old San Xavier TB sanitarium. We are not using this facility except for a small portion as a health center at the present time. There are several reasons why we have selected this particular area for this operation research program.

One is that the Papago Reservation provides us a typical service unit insofar as we have two health centers, health stations and a hospital in this reservation. San Xavier, being 12 miles from Tucson, is in close proximity to the University of Arizona. This allows us to have frequent and intimate access to consultants.

The other major advantage of this is that the Bureau of Ethnic Research of the University of Arizona has compiled a rather unique population register, which supplies complete demographic information about all Papago Indians, on or off of the reservation. This affords us a complete universe of the Papago people.

Now, to do studies, it is necessary that when you take a sampling it be a representative sampling. By having a complete universe, and when you are dealing with small numbers of only around 10,000 people, it is imperative that your sample be statistically significant. Having an excellent known universe, as we would have on the Papago, allows us to take small samplings, stratified or otherwise, that will be accurate and statistically significant. This would permit us to perform our research with considerable ease, and yet at the same time with a great deal of accuracy.

CONTRACT MEDICAL CARE

Chairman **Hayden.** You indicate that there will be a decrease of $980,000 in your contract medical care program because of the effect of the medicare legislation. How is this program applicable to the Indian Health Service?

Dr. **Rabeau.** Titles XVIII and XIX of the medicare legislation, of course, are applicable to all Americans. We have estimated that of the beneficiary population we serve, approximately 18,000 of the Indians are 65 or over, and would be eligible for services under title XVIII. However, only about 11 percent of this population reside in areas where community facilities and private practitioners are the most available and accessible ones to them. The balance of the Indians live in areas where they would have to go by one of our own health facilities to reach a community facility, and therefore, would not utilize community facilities. Title XIX, or medicaid, as it is popularly known, takes in other categorical groups not over 65. It provides basically for the medically indigent. Now, our figure here is only an estimate. This is predicated on the basis that all States that have Indian populations will have enacted title XIX legislation by the beginning of fiscal year 1968.

At the present time, there are 10 States that need legislative authority before they can enact a title XIX program. There is an 11th State, but at the present time we are unable to predict when it will enact basic legislation. This is an estimate, and we are somewhat uncertain about it.

FIELD HEALTH PROGRAM

Chairman **Hayden.** Please comment on your proposed program increase of $3,098,000 and 273 positions for field health services.

Dr. RABEAU. Mr. Chairman, our field health services are where the primary thrust, the direction of our program, is aimed. It is basically the part of the program that reaches the Indian in his home. It is directed toward preventive health activities. If we are ever to achieve our goal of elevating the health status of this population segment to that of the general population of the United States, it will be through these preventive health activities.

Under field health services, sanitation, dental, public health nursing, and health education are significant aspects of the program. The balance, field medical services, is the portion of the field health services activity wherein field locations, field health stations and field health centers are located. It includes clinics that are held on an intermittent but regularly scheduled bases as well as clinics that are held on a daily basis that are not located within a hospital.

SANITATION FACILITIES CONSTRUCTION

Chairman HAYDEN. I note that 38 additional staff positions are requested in connection with the sanitation facilities construction program. In this connection, how many sanitation facilities projects were constructed in fiscal years 1965, 1966, and are proposed for 1967?

Dr. RABEAU. Mr. Johnson, do you have the figures on the projects for the last 3 years? We will submit it for the record, otherwise.

Mr. JOHNSON. I will submit it for the record.

Chairman HAYDEN. Place it in the record.

Dr. RABEAU. For 1968, we anticipate that the 65 projects, plus the housing projects, will reach 8,000 additional families.

(The information follows:)

Indian sanitation facilities construction authorized under Public Law 86-121, fiscal years 1965-67 and fiscal year 1968 request

Fiscal year	Type of project		
	Major construction	Assistance to Federal housing	Emergency, study, and other special projects
1965	48	28	13
1966	36	31	13
1967	39	*27	*12
1968	65	**50	------

*Through Mar. 15, 1967.
**Estimated.

SANITATION FACILITIES CONSTRUCTION PROGRAM PERSONNEL

Chairman HAYDEN. For each of these 3 fiscal years, how many staff positions were added because of the sanitation facilities construction program?

Dr. RABEAU. The staff in the construction program are mainly engineers. Prior to fiscal year 1965 we had 46, we added none in 1965. In 1966, we added 22. This year we added none, and 38 are requested in fiscal year 1968. This will give us a total of 106 personnel in the sanitation facilities construction program.

Chairman HAYDEN. As construction of these facilities is completed, do not the staff positions which were provided in connection with them become available for use with a new sanitation facilities construction program?

Dr. RABEAU. When our permanent staff on sanitation facilities construction complete a project, they move to another project. The other personnel are part-time employees, that is wage board employees. They are laid off at completed locations. New ones are hired wherever the next project is initiated.

Chairman HAYDEN. If the 38 additional staff positions are approved, what will be the total number of positions then available to you for implementation of the sanitation facilities construction program?

Dr. RABEAU. If these 38 are added, this would give us a total of 106.

STATE PUBLIC HEALTH CONTRACTS

Chairman HAYDEN. What is the total amount requested to cover contract services with the States?

Dr. RABEAU. Our contract services with States are of several types. The major contracts that we have with States are with health departments; the largest element is for public health nursing. We had $539,000 in 1966. This year we have $563,000 and in 1968 we are requesting a total of $592,000. Our contracts are with many of the States. The largest single contract is with Alaska.

FIELD MEDICAL SERVICES

Chairman HAYDEN. You are requesting an increase of $1,615,000 for "Field medical services." Indicate to the committee what program you propose in fiscal year 1968 under this subactivity.

Dr. RABEAU. There are three segments to this. The largest segment of personnel (98) under the field medical services program will be to increase field medical services; i.e., the services provided at field clinics. We are asking for an increase of 10 personnel in the field of mental health. Five of these will be to allow us to go into phase 2 of the Pine Ridge mental health prototype program that is in its second year at the present time. The other five positions in mental health are to institute a prototype mental health program in Albuquerque, N. Mex. These 98 additional positions in field medical services will allow us to provide an estimated additional 50,000 outpatient visits. The balance of the positions, 23, are for training programs, and they are several in number. We propose to institute a community health aid training program in Alaska, where we have some rather unique problems in that it is necessary to have an individual in each village in Alaska, knowledgeable about medical practices, able to communicate via radio with our medical personnel and provide a description of the symptoms, and then carry out necessary treatment as ordered over the radio by the physician.

The preventive medicine residency program, for which three additional positions are requested will allow us to reach our maximum number that was originally projected in our physician preventive medicine program, which is affiliated with the University of Oklahoma.

SOCIAL WORK ASSOCIATES TRAINING PROGRAM

Another program that we are requesting is a social work associates training program. We wish to train Indians and Alaska natives to be social work associates, to help social workers in casework. The use of indigenous people in any health program is of paramount importance. It is important because these people serve as a bridge between the professional and their own people. With the large cultural gaps that exist between our two cultures, it is necessary to have somebody that can bridge the gap. This accomplishes several things: it expedites the work of the professional, it allows the professional to act as a manager of services, rather than as a purveyor. In other words, it increases the scope of professional services that can be provided to the Indian.

LOCATION OF TRAINING CENTER

Chairman HAYDEN. You indicate that the Division of Indian Health Training Center now located at Phoenix is to be transferred to Tucson. Is there a Government-owned facility available?

Dr. RABEAU. Yes, sir, Mr. Chairman, we propose to put it in the same facility as Operation SAM which is the Old San Xavier Hospital.

Chairman HAYDEN. Is all of the Indian health training to be done at Tucson?

Dr. RABEAU. Much of our training activites will be carried on out of Tucson. Basically, we envision that at Tucson we would do several things in the way of training. One I regard as training, although it is health education. This is training of the individual beneficiary. For example, we have developed and are developing audiovisual aids that consist of a box that holds a slide projector and a tape mechanism that plays automatically. It will hold up to 80 slides. This mechanism we are placing in all the waiting rooms of our hospitals and clinics. They are automatic; when they finish one round, it will start repeating again. These programs are of about 30 minutes in duration, and one of the subjects that we have already developed, for example, is on safety in the home—an educational series of pictures and talk that tells the mother how she should protect her children from hazards in the home, how medication should be safely put away; how, for example, boiling water should be kept on the back of the stove.

TRAINING OF PERSONNEL

In training personnel, the major emphasis will be in the development of programed—instruction for personnel, that will allow them to take a training course right back in the particular service unit where they are located, at the hospital, the health center, wherever it may be.

We are developing material to cover the entire gamut of our health team. As you will recall, over 50 percent of our employees are American Indians and Alaska natives. It is necessary to continually seek educational opportunities and to continually provide inservice training for not only the Indian staff but the balance of the health team as well.

We also propose to have our epidemiology training center located at Tucson. This is the course that we have now run for several years, in which we teach a cross section of the health team, not only the health professionals and the subprofessionals, but also administrative personnel, for example, personnel officers, finance officers. They are taught the principles of epidemiology, not in the traditional sense, but rather the use of epidemiology, as a scientific method in decisionmaking and program planning. This has been a tremendously successful program. I might add this was started under Dr. Wagner's tenure as chief of the division. A new program that we anticipate will be training of our people in program planning by the use of simulation models. Our operations research group will be able to develop in concert with our training people, hypothetical communities, which will give health problems, and complete demographic characteristics of the community.

In other words, we will describe a typical Indian community with its health problems. The personnel to be trained will be brought into Tucson. They will attempt to lay out a program plan of how you would solve the health problems of a hypothetical community. They will feed their data into the computer. The computer will then give them more information if they request it, or it will tell them that this is what would have occurred if they had taken this action. This is an extremely valuable training mechanism.

Another function of this training center is that much of the material will be developed for training programs that will be conducted elsewhere.

Under our social work associates, for example, we anticipate that in the first year of the program all the training will be done at Gallup. Training will be provided particularly to Navajo aids. In a few years, we expect to extend this to Alaska, and set it up at Anchorage, where we will train Eskimo and Alaskan Indian social work associates.

Chairman HAYDEN. What will be the effects of our Tucson operation on your activities at Phoenix?

Dr. RABEAU. None whatsoever, sir. At the present time, in addition to these others, our health record technician training is conducted at Phoenix. With the construction of the new Phoenix medical center, we anticipate initiating a great number of other clinical and professional residency training programs. At the present time, our people are working with community hospitals in Phoenix on community residency programs in surgery and internal medicine. We do not have the space at Phoenix for this training center.

MENTAL HEALTH PROGRAMS FOR PINE RIDGE

Chairman HAYDEN. Last year, Congress provided funds to initiate a mental health program at Pine Ridge. I note that this year you propose to increase the scope of this program by five positions and $50,000. Would you please explain your activities under this program?

Dr. RABEAU. Mr. Chairman, last year Congress provided a hundred thousand dollars for the development of this program. It was a prototype study done at the service unit level. This particular study for the Oglala Sioux is located in the Pine Ridge service unit. What we have attempted to do is to determine what are the mental health needs, what are the mental health problems on a reservation and what is the best method of attacking these problems. We have found that it has been tremendously successful. Our mental health team is headed by a psychiatrist. They work with all personnel who work with the Indians, not just the health people, but the schoolteachers, the clergy, and other community workers. The team increases the expertise of these people, not only in recognizing abnormal reactions to stress, but also how to assist and treat abnormal mental behavior.

One of the steps that is necessary to achieve a completely well-rounded program is to perform a very intensive study to derive background data. This study is underway at the present time.

In 1968 we propose to add a psychologist, and a psychiatric social worker to our team. We also need to add a biostatistician, who will take the results of this survey and present the data in usable form for the mental health team itself. Personnel of this project have been working very closely with community action projects under OEO that are extant on the Pine Ridge Reservation.

I might add that we have community health aids on Pine Ridge. Our mental health team is extending the expertise of these aids, who are all Sioux Indians working on their home reservation.

MENTAL HEALTH PROGRAMS FOR ALBUQUERQUE

Chairman HAYDEN. You also indicate that you intend to initiate such a program at Albuquerque. What comments do you have on this?

Dr. RABEAU. Yes, sir. Mr. Chairman, we hope to institute a mental health program in the Albuquerque area. It would be somewhat similar to the one at Pine Ridge; and also the one that is in Alaska, insofar as it would encompass more than a service unit. This program will work on the predominant mental health problems that present themselves, ranging from the overt psychoses to merely stress reactions; also alcoholism, which is another very prominent manifestation of abnormal mental health.

In addition, the program at Albuquerque will become deeply involved in the mental health of the Indian boarding school student. There has been a great need over the years for more emphasis to be placed on the study and treatment of the student in the boarding school. These boys and girls leave a reservation home for a boarding school. They are met not only with the challenge of being away from their family and being in school, but also the challenge and the problems that arise in a different society. They are now living in a Caucasian society as contrasted to the Indian one. This often produces marked stresses. These stresses, in turn, produce some significant behavior problems.

The thrust of our Albuquerque program will be more on the school health program, whereas the one on Pine Ridge and the one in Alaska, are a general overview of the mental health of the specific population group.

MENTAL HEALTH PROGRAM FOR ALASKA

Chairman HAYDEN. Also last year $100,000 was made available for an areawide preventive mental health program in Alaska. What has been accomplished with this appropriation?

Dr. RABEAU. A great deal, Mr. Chairman. Our people in Alaska are working very closely with the Alaska Psychiatric Institute, where hospitalization for mental patients is provided. In the first 7 months of this program, our mental health team, by themselves, or in the teaching and training they have provided our health staffs in our various field locations, have been able to treat over 300 patients, many of these are patients who have been in the psychiatric hospital and have been discharged. They have been able to provide followup service to them.

In addition, they have prevented a great number from needing psychiatric hospitalization. There is a basic tenet in the field of mental health that the closer to home the treatment of the mentally ill patient can be accomplished, the more successful and the shorter the treatment time will be.

Our people estimate that there would have been about 150 more hospitalizations at the psychiatric institute, if it had not been for the efforts of this team.

MENOMINEE HEALTH PROGRAM

Chairman HAYDEN. Late last fall legislation was enacted to provide special assistance to the Menominee Indian people and $800,000 was subsequently appropriated for this purpose. Would you please discuss this program briefly?

Dr. RABEAU. The Menominee Indians are a group of Indians in Wisconsin that were terminated several years ago. However, they have continued to have significant problems in functioning as a county, and they became, I believe it was, the 73d county in the State of Wisconsin. Public Law 89–653, which was passed this past October, authorized a 4-year program to assist these people. In 1967 there is a $450,000 appropriation to complete the sanitation facilities construction for the Menominee Indians. This is a nonrecurring item. The balance of the $350,000 which is again asked for in 1968, is to give grants to Wisconsin, $150,000 for education, $100,000 for health, and $100,000 for welfare. This will allow this county of Menominee Indians to better meet their needs in the future.

PLANNING, PROGRAMING, AND BUDGETING

Chairman HAYDEN. How many persons do you have now for planning, programing, and budgeting? You are requesting eight additional ones in fiscal year 1968.

Dr. RABEAU. We have—I may answer this rather paradoxically. We have none, and yet we have very many. I might say that the numbers are in the thousands, because our planning and programing is done by almost the entire Division of Indian Health staff. It is done at the service unit level where the plans and programs for that individual service unit are developed. They are reviewed and collated at the area and incorporated into an area plan, and then headquarters makes a divisonwide plan based on the area plans that were originally developed at the service unit level.

The necessity for new activities in budgeting that this requires, because this does require a different system, has placed a great deal of stress and impact upon our financial management staff. They have absorbed this. I really don't know how, for it has placed a tremendous overload upon them. It is anticipated that in the future there will be more of the new type of PPB system, implemented throughout the Department of Health, Education, and Welfare. It is necessary that we have additional staff to implement this system.

ADMINISTRATION

Chairman HAYDEN. Would you please provide for the record a breakdown of the total amount assessed against each of your programs to be used for administrative purposes?

Dr. RABEAU. I would be happy to, sir.

(The information follows:)

All administration activities of the program are financed from the Administration Activity of the Indian Health Activities appropriation.

INDIAN HEALTH ACTIVITIES IN SOUTH DAKOTA

Chairman HAYDEN. Senator Mundt desires that you answer for the record his questions regarding Indian health activities in South Dakota. Would you please do that?

(The questions and answers follow:)

Question. Will the $50,000 requested on page 58 of the justification adequately fund the Pine Ridge pilot health study?

Answer. Yes, sir, for fiscal year 1968. However, as the program develops additional resources may be required.

Question. A few years ago we appropriated money for the practical nurses training course at the Sioux Sanitorium at Rapid City. Would you please give the committee a rundown on how that program has been working out? It seems to me that we may be at the point where we should expand that program a bit. Will you give us your thoughts and indicate how much the program might be expanded if the committee provided the funds?

Answer. The advanced practical nurse training program at the Sioux Sanatorium at Rapid City has been working out very well and has benefitted greatly both the Indian girls and the Division's Nursing Program. To date, 85 students have graduated from the course. Many of these have now been promoted to a higher grade because they are able to function at a somewhat higher level. In addition, we have found several who appear to have potential for going on into professional nursing.

This year in January, because of the Division's felt need for upgrading of another category of personnel, the GS-2 Nursing Assistant, we decided to use one of the Sioux San courses on an experimental basis to provide training to a group of Indian girls at that level. Although, this course will not be completed until April, we have already found it highly successful. The first surprise was the calibre of individual we found in this group. One had had one year of college and has now become interested in going into professional nursing. Several others have indicated their desire to enroll in the basic Practical Nurse Course at Albuquerque.

On the basis of our experience with this class, we would like in the future to be able to conduct the two courses simultaneously, one for practical nurses, and one for GS-2 nursing assistants, having 5 in each class. The faculty of the school feels this can be worked out very well and that there would be advantages in having the two groups simultaneously.

We do not feel that the program should be expanded at this time since a group of ten seems to be about the maximum that can be handled optimally with our present patient case load material, facilities, and student housing. However, the current program could be improved by providing a student counselor for the students when they are assigned to Pine Ridge for the portion of their clinical experience which they receive there. The lack of such a position at present seems to be th current chief difficulty of the program. An addition to the budget of $5,000 would adequately provide for this.

We also feel that an increase in the appropriation for sending Indian employees into Schools of Professional Nursing would be highly desirable.

We have at the present time three young ladies enrolled in schools of professional nursing in South Dakota under the appropriation received for this purpose. Two of them are in their Sophomore year and one in her Junior year. The average cost per year for each of these (including salary) is $6,200.

We have encountered one major difficulty in this program with our first three trainees. It was necessary for them to be enrolled for four years in a three year program, the first year being used for making up deficiencies and for special tutoring to bring them up to the level scholastically of the other beginning students. The Bureau of Indian Affairs has, however, agreed to provide assistance to us with this in the future.

For these reasons the most appropriate area for expansion of the nurse training program would be to increase the professional nurse training to a magnitude of two to three times its current level.

Construction of Indian Health Facilities

Chairman Hayden. I will place in the record the statements in justification of a budget estimate of $22,211,000 for construction of Indian health facilities. This is $7,722,000 more than was appropriated last year.

(The justification follows:)

Appropriation, 1967	$14, 489, 000
Unobligated balance from prior years	9, 212, 522
Total available for obligations	23, 701, 522
Decreases:	
Hospitals and clinics	9, 334, 377
Personnel quarters	4, 208, 666
Alterations	2, 763, 520
Construction of Indian sanitation facilities	6, 091, 859
Total	22, 398,422
Carried into 1968	1, 303, 100
Increases (1968 appropriation request):	
Hospitals and clinics	6, 853, 000
Personnel quarters	3, 734, 000
Alterations	910, 000
Community facilities (Public Law 85–151)	250, 000
Construction of Indian sanitation facilities	10, 464, 000
Total	22, 211, 000
Total available for obligations	23, 514, 100

ANALYSIS BY ACTIVITIES

Amounts available for obligation

	Amount available 1967	Fiscal year 1968			Total available 1968 compared to total available 1967
		Unobligated balance from prior years	1968 budget requests	Estimated total available	
1. Hospitals and clinics	$9,651,777	$317,400	$6,853,000	$7,170,400	−$2,481,377
2. Personnel quarters	4,361,366	152,700	3,734,000	3,886,700	−474,666

HIGHLIGHT STATEMENT

Adequate, up-to-date health facilities of all types are prerequisite to providing proper medical care and public health services. Despite continuous improvement in this direction, many of the present Public Health Service Indian Health facilities—hospitals, health centers and stations are inadequate, are not functionally arranged and properly equipped, involve hazardous conditions, require major repair and thereby represent a major deterrent to efficient use of personnel and the practice of modern medicine. This inadequacy of physical plant results from several factors: (1) age; (2) obsolescence resulting from major changes in hospital practice; (3) lack of facilities, and (4) deferred maintenance. The projects requested herein involving major modification, changes in bed capacity, new hospitals and those providing additional bedspace have been evaluated using the PHS-BIA construction criteria (Nash-Wagner) and have been found to meet the required criteria set forth in this document.

The need for additional staff housing is critical. The Indian tribes who are the beneficiaries of Federal health services are generally located in isolated and sparsely populated areas where trained personnel needed to carry on a health program can not be locally recruited and where the local economy and practices are such that essential personnel recruited elsewhere find that surplus housing for rental simply is not available. At the time when Public Health Service assumed responsibility for the Indian health program, government owned housing at these locations was inadequate in numbers to permit full staffing needed for required health services and to a major degree grossly below normal standards of acceptability. Completed construction since that time has somewhat mitigated the situation but has by no means fully alleviated it. Rental quarters are not available. Recruitment and retention of professionally and technically trained personnel at the isolation and hardship posts to which the majority of Indian health employees are assigned depends on the availability of acceptable governmental quarters.

Public Law 86–121 authorizes the Public Health Service, in cooperation with the Indians, to construct, improve, extend or otherwise provide water supply facilities, drainage facilities, sewage-and-waste-disposal facilities, and other essential sanitation facilities for Indian homes, communities and lands. Public Law 85–151 authorizes the Public Health Service to participate in the construction of hospital facilities in a community hospital for joint use by Indians and non-Indians.

In 1967, with the concurrence of the Appropriations Committees, funds appropriated for projects at Chinle, Arizona (planning a new hospital), White Shield, North Dakota (construct a new health center), and Rock Point, Arizona (construct a new health station), together with $167,000 of funds appropriated for a sewage treatment plant at Kotzebue, Alaska, were reprogrammed and the projects deferred in order to construct projects of a more urgent nature at Belcourt, North Dakota, Kaibeto and Lower Greasewood, Arizona (bids on construction contracts exceeded available funds); Keams Canyon, Arizona (trailers to implement Trachoma Program); Winnebago, Nebraska (obstetrics and nursing areas); and Anchorage, Alaska (expansion of laboratory).

The 1968 estimate contains a request for restoration of these funds so that the deferred projects may be accomplished and needed services provided.

The rebudgeted projects are included at a slightly higher cost, essentially as a result of recent increases in the construction cost index.

To assist in conquering the controllable health conditions afflicting the Public Health Service Indian beneficiaries and to achieve and maintain an improved health status as described under the Indian Health Activities Budget estimate for 1968, it is requested that the projects and programs contained in this estimate be approved.

Funds requested in 1968

	To complete 1967 program	1968 new program	Total 1968 request
Hospitals and clinics:			
Hospitals	$50,000	$4,518,000	$4,568,000

Equipment funds to be requested under Indian health activities, fiscal year 1969	225,000
Total estimated project cost	4,690,000

PROPOSED PROJECT

The proposed project involves replacement of the existing 75-bed GM&S hospital with a 125-bed GM&S hospital, its outpatient clinics, adjunct services and supportive elements in order to provide a comprehensive coordinated health program for about 17,500 Navajo Indian beneficiaries in the Tuba City, Arizona Service Unit.

EXISTING FACILITY

The existing hospital was opened in 1954 as a 75-bed general medical and surgical facility. This facility was not designed to meet the tremendous growth in population which has occurred in the last ten years, or the expanded need for and demands an outpatient medical, dental and related preventive health services. It was originally designed to serve an estimated 11,000 Navajo Indians, including the Kayenta sub-agency. The services and activities have increased two-fold in the last ten years causing an extreme shortage of space and crowding in practically all functional areas—outpatient clinics, field health staff offices and adjunct space, administrative and professional offices, pharmacy, laboratory, X-ray, dining room, storage and supply areas.

For the past five years the hospital has been operating at 88 to 96 percent capacity. There is no flexibility in bed space arrangement to assure safe and adequate organization of the medical, surgical and obstetrical services to meet the diversified character of the inpatient load (infants, young children and male and female adults). With the limited space, it has not been possible to meet the steadily increasing need for specialty services, nor the overwhelming need for more preventive health services. Lack of space and poor functional arrangement have prevented a coordinated health program which would integrate the hospital services with the multiplicity of public health activities and services provided in the hospital and the field, at numerous schools and satellite locations.

POPULATION SERVED

The 1960 census enumerated approximately 11,700 Navajos residing in the Tuba City land management (BIA) districts; but also within the hospital service area are the Navajos around Kayenta and adjacent areas to the north and east. About 5,500 in these areas would bring the total of beneficiaries served to over 17,000. It is anticipated that the hospital service population will exceed 18,000 within a few years. This projection is based upon the accelerated school construction program and expanded BIA school enrollment, as well as on the continuing high birth rate. The Navajo population is estimated to be increasing at an average rate of 2.5% a year.

GEOGRAPHIC BACKGROUND

The Tuba City Service Unit covers about 4,400 square miles of the west central segment of the Navajo Reservation in Arizona, almost entirely in Coconino County, and also has for its hospital drawing area the Navajos who live in the Kayenta segment, (an area of 4,015 square miles) to the north and east in portions of Apache and Navajo counties, and in San Juan County, Utah. Kayenta is administratively part of the BIA Tuba City sub-agency.

The region is arid, eroded and vast areas are inaccessible to modern transportation. Tuba City is the principal trading, governmental, health, and tribal center of the service unit. Page, Williams, and Flagstaff are the principal border settlements within three hours travel time of Tuba City by car over paved road. The nearest rail center in Flagstaff, 75 miles south of Tuba City, and 152 miles from Kayenta.

The western Navajo is almost completely isolated from commercial transportation. There is no rail transportation within the area. The isolation of the population presents problems of communication. Many of the people do not speak or read English.

Economically, a majority of the population live a marginal existence. A sampling of 1960 census data indicated a median family income of $1,400 (for the Navajo).

BIRTHS AND INFANT DEATHS

The Navajo birth rate based on registered births has increased steadily in the last decade. Registered births in 1964 indicate a rate of nearly 50 per 1,000 population (twice that in the general population).

Infant deaths although reduced in the past five years, are still high. The average rate for the Navajo (1962–1964) in Arizona was about 48 infant deaths per 1,000 live births, a rate nearly twice that for all races, in 1963. Leading causes of infant deaths are influenza, gastroenteric diseases, prematurity, congentital malformations, and other diseases of early infancy (malnutrition among them). The Tuba City infant death rate of 53 is even higher than the rate for all of the Navajo.

MORTALITY—ALL CAUSES

In 1964 accidents were the leading cause of death among the Navajo; influenza and pneumonia ranked second, diseases of early infancy third and congenital malformations fourth. Deaths from tuberculosis have declined markedly among the Navajo, and ranked seventh as a cause of death.

For the Tuba City Service Unit during the period 1962–64 influenza and pneumonia were reported as the leading cause of death; deaths from accidents were second, and diseases of early infancy third. Deaths from malignant neoplasms, gastroenteritis, diseases of heart and tuberculosis follow among the ten leading causes.

MORBIDITY

Infectious diseases are reported in large numbers. Leading are gastroenteritis, pneumonia and other respiratory infections, otitis media, trachoma, and strep sore throat. Measles has been high in incidence but it appears to have fallen as a result of the immunization program. The Navajo tuberculosis incidence rate of over 200 per 100,000 population in 1965 has dropped by 60 percent compared with ten years ago, but is still almost nine times the incidence rate for all races in the United States. The Tuba City service unit reported an average of nearly 40 newly discovered cases annually over the past three years.

HOSPITALIZED PATIENTS

An unusually high percentage of patients hospitalized in the Tuba City hospital are in the younger age groups. In 1966, 45 percent of the discharges were in the pediatric age group including infants who accounted for 17 percent of all the hospital discharges. In 1966, hospital days for the pediatric age group accounted for 56 percent of the total. Infants and pre-school children suffer from the infective diseases of childhood, influenza and pneumonia and other respiratory conditions, otitis media, gastroenteric illnesses and accidental injuries and the complicating residuals of these conditions.

Influenza, pneumonia, and other respiratory infections accounted for 22 percent of the discharges in 1966. Next leading were deliveries and complications of pregnancy, gastroenteric and other digestive system illnesses, accidental injuries; genito-urinary system diseases.

Discharges, fiscal year 1966, by age group

	Discharges	Percent of total	Hospital days	Percent of total
Total	2,784	100.0	23,248	100.0
Total, pediatric	1,255	(45.1)	13,071	(56.2)
Under 1 year	472	17.0	6,863	29.5
1 to 4 years	464	16.7	4,105	17.7
5 to 14 years	319	11.4	2,103	9.0
Total, 15 years and over	1,529	(54.9)	10,177	(43.8)
15 to 44 years	1,116	40.0	5,920	25.5
45 to 64 years	252	9.1	2,059	8.9
65 and over	161	5.8	2,198	9.4

The average length of stay for these hospitalized patients ranged from a low of 3.9 days on the average for obstetrical patients, to a high of 22 days for patients with vascular lesions affecting the central nervous system and patients requiring longer hospitalization (cancer, diabetes, heart).

Fiscal year 1966—Discharges

Leading diagnostic categories	Discharges	Percent
Total excluding newborn	2,784	100.0
Respiratory system	611	21.9
Deliveries and complications of pregnancy	524	18.8
Digestive system including gastroenteritis, colitis, dysentery	332	11.9
Accidents, etc.	331	11.9
Genitourinary disease	150	5.4
Other diagnoses	836	30.1

Tuba City has an active surgical service, both in and outpatient, but there is a large backlog of elective surgery not provided due to the shortage of beds.

MAJOR WORKLOAD STATISTICS

FISCAL YEARS 1964–1966 AND PROJECTED

The following table includes basic information on the utilization of the hospital during the period indicated:

	1964	1965	1966	Projected after construction completed
Admissions	2,580	2,971	2,928	3,825
ADPL	66	68	70	105
Births	563	550	451	680
Average length of stay ... days	9.1	8.3	8.4	10.0
Outpatient medical visits to facility	41,186	38,172	37,168	42,000
Dental:				
Patients examined	3,833	3,357	3,373	4,000
Services provided	13,594	12,282	14,956	16,000

Satellite field clinic locations are Howell Mesa, Kaibeto, Dennebito Dam, Red Lake and Gray Mountain. Field clinic visits to physicians totalled more than 4,000 in 1966 (reflecting extension of clinic services to the schools and especially immunization activity).

PROPOSED PLAN

Under the proposed plan, primary emphasis will be given to the facilities and staff required for the necessary extension of health protection services, outside of the hospital facility to the Navajo of this area. The services in the outlying locations will be integrated with the hospital inpatient and outpatient program and particular emphasis will be given to maternal and child health clinics and school health.

The plan involves a replacement of the existing facility and increasing the beds to a total of 125 with provision of sufficient isolation beds for care of infectious cases (tuberculosis and other conditions requiring isolation) and beds for patients with handicapping and crippling conditions. BIA has expresed interest in the old Hospital building for use as a sub-agency administration facility upon construction of the new hospital.

ANTICIPATED BED DISTRIBUTION

The following shows the bed distribution and estimated average daily census, by major clinical service, after construction:

	Beds	ADPL
Total, excluding newborn bassinets	125	105
Medical	27	22
Surgical	20	17
Pediatric	60	51
Obstetrics	18	15
Bassinets	24	

The unusual peak loads during epidemic periods have often resulted in over 100 percent occupancy of pediatric and medical beds The projected number of admissions and the ADPL reflect an expected hospital admission rate of 225 per 1,000 population, with an average stay of ten days. The proportion of pediatric patients represents about half of the total load. Surgical services will increase as will the average length of stay for complicated cases. An increased field health program (case finding, home visiting, expansion of school clinics with increased school enrollment), will result in an increase in outpatient visits and also more referrals for hospitalization.

COMMUNITY FACILITIES AND REFERRAL FACILITIES

The Arizona State Hospital Plan, 1963 lists only two non-PHS Indian hospitals in the area. These are at Page, Arizona (25 acceptable beds), 79 miles north of Tuba City on the Utah border and Sage Memorial Hospital, Ganado Mission (47 acceptable beds recently constructed), 110 miles east of Tuba City and outside of the drawing area of the Tuba City Service Unit (serves the Chinle population).

Referral of cases requiring specialized care are to the Indian hospital in Gallup, New Mexico about two hundred miles away. Specialized laboratory services and consultant services are limited and must be obtained under contract from points over two hundred miles away.

The distinct health needs of the Navajo, the isolation of the Tuba City Service Unit, the level of acculturation, cultural pattern and degree of understanding of modern medicine require the operation of direct Federal services through a coordinated comprehensive preventive, curative and restorative health program.

Communication through interpreters is necessary, since 40% do not read or speak English. The emphasis for each of the health program activities is continuing assistance to the Navajo in order to increase their understanding of both health problems and the means made available to them of protecting themselves and their communities against controllable diseases.

The unique health needs of these people are best met by the PHS Indian Hospital and satellite field programs, with active Tribal participation.

1968 REQUEST

Although original plans were to modernize and expand the present facility, the feasibility study indicated that a completely new facility could be provided for little more than the cost of the intended alteration project. The funds requested herein are to construct a new (replacement) facility.

Additional staff is required to execute an expanded comprehensive program. Under the Personnel Quarters Activity of this estimate, there is a request for 121 units of housing to permit successful recruitment of personnel required to operate the hospital.

Chinle Hospital, Chinle Ariz	$288,000

In 1967, Congress appropriated funds to initiate planning for the construction of this facility. In order to satisfy requirements of a more urgent nature, the funds were reprogrammed with the approval of the Congressional Committee and the project deferred. It is requested that the funds be restored so that the Public Health Service may provide health services to this group of beneficiaries.

Project cost estimate

Planning funds requested in 1968	$288,000
Construction funds to be requested in 1969	3,484,000
Subtotal	3,772,000
Equipment funds to be requested under Indian health activities in fiscal year 1969	300,000
Total estimated project cost	4,072,000

PROPOSED PROJECT

The proposed project involves the construction of a new 100-bed general medical and surgical hospital and its associated clinics and ancillary services to provide major diagnostic and treatment services for the rapidly growing Navajo beneficiary population in the Chinle (Arizona) Service Unit. The 16,000 Navajos estimated to be residing in and around Chinle within the next few years would be provided with comprehensive inpatient and outpatient services through this new facility and its field health program. A comprehensive preventive health program will be extended from the hospital to the surrounding areas, through an active outpatient department and through a number of field health stations and school health units.

PRESENT SERVICES

There is no hospital in the Chinle Service Unit at the present time. Health services are provided primarily by the Chinle Health Center and field health stations which are satellites of the health center. Hospital care is provided by three different hospitals: Keams Canyon, a PHS facility about 85 miles to the west; Sage Memorial Hospital, a mission hospital at Ganado about 33 miles to the south; and the Ft. Defiance PHS Hospital 65 miles to the southeast. Many babies are born in hogans and illnesses go untreated because of the distances to available hospital facilities.

As a result of rapid population growth in these communities in recent years, few general hospital beds are available to meet the needs of Chinle beneficiaries.

POPULATION SERVED

About 12,000 people are recorded as living in the service unit by the 1960 census. The population is growing rapidly and is expected to reach approximately 16,000 within the next five years. It is a young population, with a median age of 15 years. About 20% of the population is under five years of age. The population is relatively more diverse than that of the Tuba City service unit (Western Navajo). This results in a variety of demands made upon the health services. Traditional healing practices are still adhered to.

It is estimated that not more than one-third of the Navajos seen in the Chinle clinics are able to give medical history information in English. Families are large compared to non-Indian population groups, with an average number of more than six persons per family. For the vast majority, housing is the traditional log and mud hogan, a single room, with a dirt floor. Income is derived chiefly from raising sheep, or seasonal agricultural work during the spring and summer months. Full-time wage earners are few. The average family income is about $1,700 per annum (1960 census data.)

GEOGRAPHIC BACKGROUND

The Chinle Service Unit is located in the center of the Navajo Reservation in northeastern Arizona, a roughly triangular area stretching about 100 miles east-west from the New Mexico border, and about 70 miles north-south with the northern most point about 15 miles from the Utah border. It covers an area of 3,400 square miles. The land is generally semi-arid and capable only of supporting small herds of sheep.

The Chinle community is the trading center of the central part of the reservation. Roads radiate out from it to various other reservation communities. The paved major highway in the area runs north and south through Chinle to the Utah border. Most of the roads in the service unit are gravel, dirt or primitive trails which are virtually impassable to motor vehicles during the winter and spring months.

TRIBAL AND BIA ECONOMIC DEVELOPMENT PLANS

The major community change in this Service Unit visualized at this time is limited to Chinle and Many Farms. A 400 pupil day school, and a 1,000 pupil elementary boarding school are already established and the BIA long-range plans will include a boarding high school in this area, (1,000 pupils) to be located at Many Farms. A community plan has been drawn for Chinle, designating shopping, recreational and residential areas. The residential area will be zoned for three classes of homes: (1) FHA type or quality; (2) low cost public housing; (3) "do-it-yourself" small houses. Supporting water and sewer systems will be completed prior to the start of the proposed hospital.

Several business proposals for a shopping complex and/or tourist facilities are being considered for Chinle. The Navajo Tribe visualizes Chinle becoming the first independent town on the Reservation. Recently several Navajo-owned and operated filling stations, stores and one cafe have opened in Chinle. A new jail and court house (with a few modern quarters) and a Chapter House have been built. Each year there is an increasing number of tourists visiting Canyon de Chelly National Monument. Chinle is the entrance to the Canyon. The overall Economic Development Program Planning subcommittee is working with regional Park Service personnel to fully inform Park Rangers in all nearby National Parks and Monuments about roads, etc., in order that accurate information may be provided tourists interested in visiting the Reservation. The Navajo Park Commission has built several nice picnic sites in and around Canyon de Chelly.

The tribe has indicated an interest in investing in a private proposal for a large slaughter and packing house, USDA approved and inspected, at Many Farms. BIA and Tribal irrigation programs have activated irrigation projects in Many Farms, providing a source of income for many families. There is a sizeable increase in home building in the Chinle Valley from Chinle to several miles north of Many Farms.

There is a noticeable trend among the Navajos to begin moving into communities where there is: (1) a large school; (2) a paved road, and (3) a modern water system.

BIRTHS AND DEATHS

The birth rate in the Chinle Service Unit is about 45 per 1,000 population, twice that of the U.S. population as a whole. According to available information (1962) 18% of the births for the service unit as a whole occurred of the hospital, with this proportion running much higher in some of the more isolated communities. Infant mortality is high, about 45 infant deaths per 1,000 registered live births. For those births which are not registered, it is observed that infant deaths are even higher.

The leading causes of death in this service unit in 1964 were accidents, gastroenteritis, influenza and pneumonia, diseases of early infancy, diseases of the heart and tuberculosis.

MORBIDITY

Infectious diseases are reported in large numbers. In 1965 the leading diseases were otitis media (1,598 reported cases) and gastroenteritis (1,408 cases), followed by pneumonia and streptococcal sore throat. Tuberculosis is still a serious problem, although the rate has declined in recent years. In 1965 the Navajo rate for new active cases was 217 per 100,000 population, about eight times the rate for the general population of the United States.

Overall disease patterns in the Chinle Service Unit are those relating to the youthfulness of the population, its low economic status and unfavorable environmental conditions. The most frequent causes of illness are the acute respiratory infections, the diarrheal diseases, and the common communicable diseases of childhood. In the four years (1962–1965) the most frequently reported notifiable diseases were as follows:

	1962	1963	1964	1965
Otitis media	672	1,105	1,475	1,598
Diarrheal diseases	1,091	2,503	1,771	1,409
Influenza and pneumonia	1,238	1,236	486	736
Streptococcic sore throat and scarlet fever	616	1,428	578	343
Trachoma	241	231	408	322
Measles	171	497	3	290

Because of the insanitary conditions of the home environment in which most of the beneficiaries live, the gastroenteric conditions are a year-round problem. The complications of gastroenteritis such as dehydration, acidosis, weight loss (especially in infants) are the cause of many referrals to the hospitals.

Otitis meda, a leading reportable disease, is a serious problem, particularly among the young children. In spite of continuing follow-up examinations and treatment, many children have persistent drainage from the ears. Varying degrees of permanent hearing loss are a resultant complication of these ear infections.

Other disease problems are impetigo, particulary in young children. Important factors relating to the solution of the problem includes health education regarding personal hygiene and adequate water supplies in the home. Trachoma and conjunctivitis are serious eye infections that continue as problems.

A characteristic of the disease patterns in this service unit is the explosive epidemic, a constant threat which must be guarded against continually. An example of this is the hepatitis outbreak of 1957–1958. In one month, December 1957, the Chinle Health Center reported 153 cases. Although the epidemic subsided in the Chinle area the following month, there was a marked increase in reported cases of hepatitis from adjacent service units throughout the rest of the year. No large-scale outbreaks have occurred since that time, but sporadic cases occur (28 in 1963, 19 in 1964 and 43 in 1965) and the threat of an outbreak remains.

HOSPITALIZED ILLNESSES

Since there is no hospital in the Chinle Service Unit at present, data specifically for this population group cannot be given. The experience for the smaller Navajo hospitals (excluding Gallup) are assumed to be representative of the Chinle Service Unit.

Pediatric patients (under 15 years of age) constituted 38 percent of the patients discharged in 1965. About 70% of these were hospital episodes among children under five years of age.

Leading causes of hospitalization for the peripheral hospitals on the Navajo Reservation (excluding Gallup) in 1965 were deliveries and complications of pregnancy, diseases of the respiratory system, gastroenteric conditions (including gastroenteritis and dysentery), accidents, eye and ear diseases (especially trachoma and otitis media) and skin diseases.

Of the 11,362 discharges from the five general hospitals (excluding Gallup) the distribution of discharges in 1965 by leading diagnostic group was as follows:

Diagnostic category	*Percent*
Deliveries and complication of pregnancy	24
Respiratory (including influenza and pneumonia)	15
Accidents	12
Digestive system diseases (including dysentery)	10
Diseases of eye and ear	4
Skin	3
All Other	32
Total	100

Similar to the experience for other Navajo hospitals, pediatric patients also experience the highest average length of stay. This is a reflection of various factors including poor general health level and nutritional deficiency on admission, and the crowded, poor home conditions where these young children are exposed to reinfection and where only limited means are available for adequate health measures to protect them from disease and illness. Longer hospitalization is necessary to establish an adequate health level, since home care for a convalescent is almost totally lacking. As the complications of pregnancy and immaturity among newborn lessens, the average stay of obstetrical cases will lessen, but this is not expected until prenatal care is extended and better understood.

Complicated medical, surgical and obstetrical problems will be referred to the DIH hospital at Gallup or contract facilities in Albuquerque for care. State and other resources will be utilized for mental patients. DIH hospitals and contract facilities will be utilized for tuberculosis patients.

There is only one non-Federal hospital in the area, the 47-bed Sage Memorial Mission Hospital at Ganado. This facility, already fully utilized by those living close by, is expected to be used less and less by the Chinle population. As the only facility available to non-Indians in the area, this hospital must be expected to serve the increasing non-beneficiary population.

In addition to the need for general hospital beds in this culturally isolated and rapidly growing area where the population is exploding, an expansion of outpatient services (preventive and curative) is anticipated.

The Chinle health center was designed to handle a population of about 4,000. Besides the overall increase in population, the BIA school construction program has caused a rapid expansion in school enrollees, for whom health facilities must be provided.

The outpatient services at the health center and its satellite clinic have increased as follows in the last six years:

Fiscal year	Outpatient visits (medical)		
	Total	Facility	Field or home
1961	25,334	20,049	5,285
1962	28,564	23,777	4,787
1963	38,867	24,783	14,084
1964	41,345	26,301	15,044
1965	44,800	29,035	15,765
1966	45,848	30,684	15,164

A large proportion of the health center services are provided to the school age population.

A 1,000 Student BIA Boarding School is close by the health center and a 1,000 pupil public school is located there. Another 300 pupil public school was also reported to have been planned. This school expansion explains in part the very heavy demands placed on the health center which is even now too small to meet the local needs of the Chinle community.

Over the past few years field health services have been extended at satellite field clinic locations. The larger health stations and clinic locations are at Lukachukai, Pinon, Rock Point and Round Rock. Services are also provided on an itinerant basis by the Chinle Health Center staff at the following places where there are schools and family groups: Cottonwood, Low Mt., Nazlini and Rough Rock, as well as at other isolated locations.

PROPOSED PLAN

The proposed plan is to develop a comprehensive health program providing for all aspects of community health services. Preventive services with emphasis on immunizations, case-finding and screening programs will encompass a comprehensive program of child care, prenatal and postnatal care, school health, adult outpatient and diagnostic services, tuberculosis clinics, EENT clinics and dental care; also nutrition consultation and environmental health services. With increased emphasis on health education, a significant, progressive increase in the use of outpatient services is expected. A system of referral for hospital and post-hospital follow-up, specialty care and rehabilitation services is planned.

Such a program is influenced in large measure by the vastness of the geographic area involved, the isolation of the centers of population, the lack of community resources, and difficulties of communication. In this setting, programming includes providing for a network of clinics through which services, both therapeutic and preventive, are provided close to population settlements and schools.

In addition to providing clinical services on an inpatient and outpatient basis, the hospital will serve as a base for a complete and comprehensive field health and preventive program. The five-year Many Farms Field Health Project (1957–1962) encompassing a portion of the Chinle Service Unit revealed a backlog of illness and high proportion of preventable disease. It was one of the conclusions of this study that an adequate and integrated field health and hospital program with accessible facilities was essential if inroads were to be made on the backlog of illnes found.

The proposed 100-bed hospital is to provide general medical, surgical, obstetrical and pediatric care for inpatients, and comprehensive outpatient medical, preventive health and dental services. Radiological and pathological services will be available on a full-time basis as well as complete supportive services.

The hospital will serve as the focal point for a complete and comprehensive field health and preventive health program for a service population of about 16,000.

For hospitalization the admission rates and patterns follow closely those of the Navajo at other hospitals on the reservation. Admissions usually approximate 200 per 1,000 population. Patient stay averages nine days with pediatric cases requiring an average stay up to 15 days. This is a reflection of various factors including the poor general conditions of cases on admission which necessitates longer hospitalization to establish an adequate health level.

Thirty-eight percent of admissions are pediatric cases (which account for 47 percent of the hosiptal days). Of the adult cases surgical conditions account for 26 percent of admissions, medical conditions 20 percent and obstetrics 16 percent.

Based upon the resident population of 16,000 in the Chinle Service Unit, the admission rate of the Navajo population and experiences at the Chinle Health Center in treating medical and dental conditions on an outpatient basis, the expected inpatient and outpatient workloads are indicated as follows:

Admissions	3,200
Births	700
Average length of stay	9
ADPL	80
Outpatient medical visits	40,000
Dental patients examined	2,500
Dental services provided	10,000

By projecting an average of 80 percent occupancy of available beds the ADPL will require a minimum of 100 beds. The projected bed distribution and utilization is as follows:

	Beds	ADPL
Total (excluding newborn)	100	80
Medical	25	18
Surgical	15	12
Pediatrics	45	38
Obstetrics	15	12
Newborn bassinets	(20)	----------

The distinct health needs of these beneficiaries, their level of acculturation, the geographic isolation of their communities and the present lack of available hospital beds require the operation of direct Federal services, through a coordinated comprehensive preventive, curative, and restorative health program.

REFERRAL FACILITIES

Extremely complicated medical or surgical problems will be referred to the Public Health Service hospital at Gallup or contract facilities in Albuquerque for care. State and other resources will be utilized to care for mental patients. Other Public Health Service facilities or contract hospitals will be utilized for tuberculosis.

Mescalero Hospital, Mescalero, New Mexico $50,000

Project cost estimate

Planning (savings from other projects)	$45,000
Construction funds appropriated in 1967	627,800
Balance of construction funds requested in 1968	50,000
Subtotal	722,800
Equipment funds to be requested under Indian health activities in fiscal year 1968	45,000
Total estimated project cost	767,800

In 1967 Congress appropriated funds to proceed with all budgeted projects. The amount requested here for the Mescalero Hospital project is that portion required to complete the project in 1968.

Clinics (Health centers, school health centers and stations) $4,568,000

A comprehensive preventive health program offers the most promising opportunity for eventually reducing the more costly medical and hospital services. Failure to continue to expand Field Health activities would unnecessarily delay the achievement of a level of health for Indian beneficiaries comparable to that of the general population.

The definition of Health Centers and Health Stations for which funds are requested follows:

(1) Health Center: A facility where health services are available at least 40 hours a week and where physicians' services are available either full time or on a regularly scheduled basis (at least weekly) and where other health staff is stationed such as dental, clinical and/or public health nursing, sanitation, health education and medical social services.

(2) Health Station: A facility where, although physicians' services may be regularly scheduled, physicians are not available full time, but one or more other health services are available full time or on a regularly scheduled basis, such as dental, public health nursing, sanitation, health education and medical social services. Such services are available from itinerant personnel headquartered in Public Health Service Indian Hospitals and Health Centers or on a contractual basis.

The location, need and estimated cost for each of the proposed facilities follows:

Health Centers and School Health Centers	$2,120,000
White Shield, North Dakota	263,000

In 1967, Congress appropriated funds for the construction of this facility. In order to satisfy requirements of a more urgent nature, the funds were reprogrammed with the approval of the Congressional Committees and the project deferred. It is requested that the funds be restored so that the Public Health Service may provide health services to this group of beneficiaries.

Project cost estimate

Construction funds requested in 1968	$263,000
Equipment funds to be requested under Indian health activities in fiscal year 1969	40,000
Total estimated project cost	303,000

It is proposed to construct a health center complex at White Shield, North Dakota, on tribal land to serve as the center of operation for the health program for the estimated 2,500 beneficiaries of the Fort Berthold Reservation. This reservation of 430,000 acres is in the northwest portion of North Dakota above Garrison Dam on the Missouri River. The Garrison Reservoir divides it into five segments. All Fort Berthold health operations will be directed from this location including activities in proposed health stations at Mandaree (94 miles), Twin Buttes (127 miles), and New Town (54 miles).

CURRENT PROGRAM AND EXISTING FACILITY

Space is currently rented at New Town for the administrative direction of what is basically a program of contract health services. Field clinics are held twice monthly at White Shield, Mandaree, and Twin Buttes. Outpatient care on other than clinic days is provided beneficiaries in private physician's offices in New Town, Garrison, Parshall, Hazen, Beaulah, Stanley, and Watford City. Hospitalization and inpatient care services are provided in Garrison, Hazen, Stanley and Watford City. Contract dental services are provided in Hazen, Stanley, Garrison, Dickinson, Watford City, Beaulah, and Parshall.

There is currently one Social Worker and one clerk handling matters involving eligibility and administrative duties of the service unit. The public health nursing service is under contract with the North Dakota State Health Department with three nurses giving part-time service to this reservation. One reservation sanitarian is currently on the staff and is responsible for checking wells and implementing P.L. 86–121 sanitation construction projects.

TYPE AND EXTENT OF CARE NEEDED

Health conditions on the reservation indicate a need for a comprehensive health program (with special emphasis on preventive services and rehabilitation) to adequately meet the health needs of this population group. Examples of health problems which exist are illustrated by the following indices:

1. *Respiratory diseases*—accounts for 30% of total hospital admissions—56% of these cases being in the 0–4 age group.
2. *Digestive tract disease*—second highest cause of hospitalization.
3. *Otitis media*—220 cases reported in 1965.
4. *Infant death rate* (1962–1964)—39.2 per 1,000 live births.

Infant mortality rates in this service unit are high. The average 1962–1964 rate of 39.2 is 60% higher than the infant mortality rate for all races. In 1964 the all races rate was 24.8; the rate for all Indians (excluding Alaska Natives) was 35.9 in that year.

The leading notifiable diseases in 1965 were gastroenteritis, otitis media, pneumonia, streptococcal sore throat. The following table compares reported cases of these and other leading diseases for the years 1963–1965.

Reported cases, leading notifiable diseases

	Fiscal year 1963	Fiscal year 1964	Fiscal year 1965
Gastroenteritis	238	138	309
Otitis media	(1)	245	220
Pneumonia	239	168	157
Streptococcal sore throat	131	114	136
Chickenpox	40	62	33
Measles	72	33	18
Mumps	9	20	18
Hepatitis	41	25	2

[1] Not available.

Reservation workloads	Fiscal year 1964	Fiscal year 1965	Estimated,[1] fiscal year 1966	Projected
Total outpatient visits	12,738	12,476	12,900	13,000
Total dental services provided	2,205	2,673	2,880	4,000
Total cases hospitalized	1,162	1,141	1,250	1,300
Total hospital-days	8,788	9,944	10,000	10,000

[1] Fiscal year 1966 data pending compilation of tab runs.

Inpatient care by diagnostic category, 1965 contract hospital discharges

Leading causes	Discharges		Hospital-days	
	Number	Percent	Number	Percent
Total discharges, excluding newborn	1,141	100.0	9,944	100.0
Respiratory system diseases	342	30.0	2,948	29.6
Digestive system diseases	162	14.2	1,342	13.5
Accidents	127	11.1	1,062	10.7
Deliveries and complications of pregnancy	90	7.9	460	4.6
Genitourinary system diseases	74	6.5	775	7.8
Nervous system and sense organ diseases	54	4.7	402	4.0
Infective and parasitic diseases	48	4.2	257	2.6
Skin and cellular tissue diseases	47	4.1	450	4.5
Allergic, endocrine, metabolic, and nutrition diseases	45	3.9	387	3.9
Circulatory system diseases	42	3.7	424	4.3
All other conditions	110	9.7	1,437	14.5

Continued hospital care and treatment of diseases can be adequately handled by utilization of community medical and hospital resources. The problem, however, is compounded by several factors unique to an economically deprived group who are not acculturated and who have special needs. Efforts to reduce the excessive disease and mortality require concentration in areas of public health service and practice. A full range of preventive health activities which concentrates on patient education in matters related to health and health practices is necessary in order to insure the acceptance of and utilization of techniques and practices which can and will prevent diseases which are now common and uncontrolled.

DEFICIENCIES OF CURRENT FACILITIES

The current facilities consisting of rented space in New Town, a room in the BIA school at White Shield, a small space in the tribal building at Twin Buttes, and space in the BIA building at Mandaree are completely inadequate for carrying on the current local ongoing programs and would be far less effective in meeting the more comprehensive program required to satisfy the health needs of this reservation.

PROPOSED FACILITIES

It is proposed that a health center be constructed and staffed at White Shield. This location which is on the eastern segment of the reservation, is a population center for approximately 400 beneficiaries and accessible to another 340. It would be the focal point for all of the Ft. Berthold comprehensive health services. White Shield is closer to Minot and Bismarck, both of which have a population of over 30,000 making them more attractive, medically speaking, because of the specialty services available to the beneficiary. These relationships are extremely important to the conduct of a comprehensive health program.

A health center with space to provide headquarters and services for a comprehensive medical care and health program to the Fort Berthold population will be complemented by satellite health stations at Mandaree, New Town and Twin Buttes. To conduct this program the following staff will be required: 1 health educator, 2 medical officers, 1 dental officer, 1 dental assistant, 1 pharmacist-administrative officer, 2 public health nurses, 1 clinic nurse, 2 practical nurses, 1 medical social worker, 1 technician, 2 clerks, 1 maintenance worker, 1 janitor chauffeur and 2 sanitarian aides. Three of these positions are currently on duty at New Town. Fourteen new positions will be requested in 1968 and one in 1969 making a total of 17 and 18 positions respectively.

Workload for the reservation upon completion of this health center and the satellite health stations will approximate annually:

Outpatient visits	13,400
Dental services provided	4,000
Hospital admissions	1,400
Hospital days	11,000

Fifteen units of housing will be required at this location for personnel and are included under the Personnel Quarters Activity.

Many Farms, Arizona	$372,000

Project cost estimate

Planning funds in 1967	$41,000
Construction funds requested in 1968	372,000
Subtotal	413,000
Equipment funds to be requested under "Indian health activities in fiscal year 1969"	41,000
Total estimated project cost	454,000

It is proposed to construct a new school health and community health center at Many Farms, Arizona, which is an Indian Trading Center on the Navajo Reservation, 15 miles from Chinle. It will serve a rural population of approximately 2,500 and a large school population. A 400 pupil public school is now in operation, a 1,000 pupil BIA elementary school is now nearing completion. In addition a 1,000 pupil BIA boarding high school is to be constructed and ready for occupancy by September 1968. Since no other health facilities are available at the location, construction of a new facility is necessary to serve the 2,500 resident population and 2,400 school children. The only health service presently available consists of screening by an itinerant school health nurse who commutes from Chinle, and refers students requiring physicians' services to the Chinle Health Center. The local population must travel 14 miles to Chinle for health services.

PROPOSED FACILITY

It is proposed to build a facility to serve as a school health, and community health center that will adequately meet the needs of the program. The facility will include space for administration; for medical, public health activities and dental clinics. It will also include space for examining and treatment rooms to properly examine, diagnose and treat minor illnesses and injuries. The proposed facility will also provide space for routine dental care and complete physical examinations and for screening patients for more serious conditions who would be referred to DIH hospitals. The new facility will also contain ancillary space to provide routine laboratory services, health counseling to all students and in-service training to school and dormitory personnel. Emergency day bed care for students requiring observation to determine if hospitalization is necessary will also be provided.

PROPOSED PROGRAM

A comprehensive school health program of curative and preventive activities will include outpatient medical, public health nursing, and dental services and screening for referral of patients requiring hospitalization in PHS facilities at Ft. Defiance and Gallup. Eventually, after the new 100-bed hospital planned at Chinle is completed, patients from Many Farms will be referred to the Chinle Hospital for hospitalization. The beneficiary population residing in this area will be provided comprehensive services through this center and a proposed satellite health station at Rough Rock, 22 miles west. Maternal and child health services will be emphasized.

Upon completion of this facility anticipated workloads will be as follows:

Medical outpatient visits	9,000
Immunizations	5,000
Nurse visits	25,000
Dental services:	
Individuals examined	2,200
Services provided	9,000

Staffing will consist of: 1 medical officer; 2 dental officers; 4 dental assistants; 1 public health nurse; 2 clinic nurses; 2 practical nurses; 1 pharmacist; 1 medical record clerk; 1 laboratory technician; 1 community worker; 1 administration clerk; 1 maintenanceman; and 1 chauffeur-interpreter. It is anticipated this staff will be required in F.Y. 1969.

Chilocco, Okla ---------- $270,000

Project cost estimate

Planning funds appropriated in 1967	$22,000
Construction funds requested in 1968	270,000
Subtotal	292,000
Equipment funds to be requested under Indian health activities in fiscal year 1969	23,000
Total estimated project cost	315,000

It is proposed to replace the existing unsafe and functionally inadequate school health center facility located on the campus of the BIA Indian School at Chilocco, Oklahoma. Student enrollment, which reached nearly 1,000 in 1966, is projected at about the same level. The school community is an entity with no near neighbors, seven miles from Arkansas City, Kansas and 60 miles from the nearest PHS Indian Hospital at Pawnee, Oklahoma.

EXISTING FACILITY

The existing facility is a frame, stucco structure, constructed with student labor in 1926. Each part of the structure was hand crafted with little regard to dimensions or standard construction practices and even simple repairs are difficult and expensive to accomplish. There is a two story center section providing office space. Medical and dental clinics and kitchen space are provided for on the first floor (second floor not used) and there are single floor wings on either side of the structure which have open wards and bath rooms. The building continues to settle and cracks in plaster recur. Overnight care of patients has been discontinued and only day bed care is provided. Cases needing 24 hour care are referred out to local hospitals in Arkansas City, or PHS Indian Hospitals at Claremore, Pawnee or Talihina, Oklahoma. Physical arrangement of this building is very poor and does not adapt to efficient arrangement of equipment and prohibits the performing of necessary service functions. The Bureau of Indian Affairs is proceeding with long range plans for remodeling or replacing obsolete buildings on this campus.

Current workload and projections

	1963	1964	1965	1966	Workload projections
School enrollment	1,069	1,172	1,082	996	1,000
Outpatient visits:					
Physicians	1,942	692	852	755	1,000
Nurse	11,160	5,582	8,032	[1] 4,228	5,000
Dentist	1,866	1,887	1,025	932	1,200
Immunizations (completed and boosters)	2,869	4,498	3,707	NA	4,000

[1] Number of visits indicated in fiscal year 1966 reflect revised system of reporting in that multiple daily visits by an individual are tabulated as single visits.

PROPOSED FACILITY

It is planned to construct a new school health center facility at this location that will provide the environment for conducting an adequate school health program. The new facility will include space for: administration, medical, public health activities and dental clinics. It will also include space for examining and treatment rooms to properly examine, diagnose and treat minor illnesses and injuries. The proposed facility will provide space for dental care. It will enable screening patients for more serious conditions for referral to hospitals or specialized clinics. It will contain ancillary space to provide routine laboratory services, health counseling to students and in-service training to school and dormitory personnel. Also to be provided is emergency day bed care to students requiring observation to determine if hospitalization is necessary. All illnesses requiring overnight hospital care will be referred to PHS Indian or contract hospitals.

The proposed staff of the Chilocco, Oklahoma School Health Center is as follows: 1 medical officer; 1 dental officer; 1 dental assistant; 1 public health nurse; 2 nursing assistants; 2 clinic nurses; 1 medical record clerk; 1 clerk administration and 1 maintenanceman (handy man). It is anticipated that this staff will be required in F.Y. 1969.

Riverside, Calif. $434,000

Project cost estimate

Planning funds appropriated in 1967	$30,000
Construction funds requested in 1968	434,000
Subtotal	464,000
Equipment funds to be requested under Indian health activities in Fiscal Year 1969	41,000
Total estimated project cost	505,000

Plans are to replace the existing unsafe and functionally inadequate School Health Center located on the Campus of the Indian School on the outskirts of Riverside, California with a new 16 bed infirmary type School Health Facility. This facility will provide for the operation of a coordinated comprehensive health program for over 1,000 boarding students enrolled in the Bureau of Indian Affairs Boarding School at this location.

EXISTING FACILITY

The existing building constructed in 1904, is a two story wood-frame structure of approximately 11,760 square feet providing 35 infirmary beds for minor illness care. The structure does not lend itself to modernization, is obsolete, unsafe and in a deteriorated condition. The Bureau of Indian Affairs, proceeding with long range plans for remodeling the school campus is completing a dormitory which is within three feet of the present infirmary structure. This structure will be razed sometime in 1969.

The proposed replacement structure for this Health Center is a modern infirmary building with capacity to meet the basic health needs of some 1,000 students residing on this campus.

Current and projected workloads

	1963	1964	1965	1966	Workload projection upon completion
School enrollment (peak)	989	1,061	1,081	985	1,000
Outpatient visits:					
Physician	7,049	8,060	6,247	3,000	7,000
Nurse	20,465	23,499	39,395	37,894	*20,000
Dental:					
Patients examined	1,024	1,097	1,024	658	900
Treatments provided	4,224	3,088	4,234	4,146	5,300
Inpatient:					
Admissions	502	470	473	494	500
Peak census	26	15	19	31	16
Average daily infirmary inpatient	9.3	5.0	6.0	7.0	9

*Nurse visits will decline through availability of full-time physician services.

PROPOSED FACILITY

The new school health center and infirmary will provide space to meet the basic requirements for providing the services indicated in the above projected workload estimate. This will include space for administration; medical, public health and dental clinics with offices; examining and treatment rooms sufficient to properly examine, diagnose and treat minor illnesses and injuries, and give routine and specialized dental care. It will enable screening for referral of serious conditions or specialized clinics; providing immunizations, physical examinations, health counseling and tests on all students; and giving in-service training to school and dormitory personnel. Space for a minimum of 16 beds will provide for the peak load of minor illnesses (including communicable diseases not usually accepted in community hospitals). Serious illnesses and complicated cases will be hospitalized in community hospitals in Riverside.

The proposed staff for the Riverside School Health Center is as follows: 1 medical officer; 2 dental officers; 4 dental assistants; 1 public health nurse; 6 clinical nurses; 5 nursing assistants; 1 pharmacist; 1 lab technician; 2 medical records personnel; 1 administrative clerk; 2 food service workers; and 1 maintenance man. It is anticipated this staff will be required in F.Y. 1969.

Teec Nos Pos, Arizona	$105,000

Project cost estimate

Construction funds requested in 1968	$105,000
Equipment funds to be requested under "Indian health activities in fiscal year 1969"	8,000
Total estimated project cost	113,000

Teec Nos Pos is located 28 miles west of Shiprock on Arizona State Highway 64 and the Junction of Four Corners Highway, Arizona Route 364. A gravel road runs south off of Arizona Route 64 to Sweetwater and Immanuel Mission. No health facilities exist at present in this community.

It is proposed to provide a new school health center facility at this location that will be adequate for conducting a school health program. The new facility will include space for: administration, medical public health activities, and dental clinics. It will also include space for examining and treatment rooms to properly examine, diagnose and treat minor illnesses and injuries. The proposed facility will provide space for dental care. Patients will be screened for more serious conditions for referral to hospitals or specialized clinics. Emergency day bed care will be provided for students requiring observation to determine if hospitalization is necessary. All illnesses requiring overnight hospital care will be referred to the PHS Indian Hospital at Shiprock or contract hospitals. It will contain ancillary space to provide routine laboratory services, health counseling to students and in-service training to school and dormitory personnel.

Upon completion, this facility will serve pupils attending the following BIA schools:

	Pupils
Teec Nos Pos Boarding School	840
Aneth Boarding School	420
Baclabita Day School	60
Mission Indian School	35

This health center will serve an additional 1,400 beneficiaries residing in and around the community.

Major workload (projected)

Outpatient visits:	*Annual*
Medical	900
Nursing	2,600
Clinic (General)	3,100
Dental	3,800

Proposed staff for the Teec Nos Pos School Health Center is as follows: one school nurse; one licensed practical nurse; one janitor-driver; one clerk; one dental officer; two dental assistants. It is anticipated this staff will be required in F.Y. 1969.

Five units of housing will be required at this location for personnel and are included under the Personnel Quarters Activity.

Beshbitoh, Ariz.	$104,500

Project cost estimate

Construction funds requested in 1968	$104,500
Equipment funds to be requested under "Indian health activities in fiscal year 1969"	8,000
Total estimated project cost	112,500

Beshbitoh, Arizona, on the Navajo Reservation, is the site of a new 1,000 pupil boarding school in the Steamboat Chapter where no health facilities exist at present. The school, in an area remote from any existing facilities, is located approximately 9 miles southwest of Steamboat, 12 miles east of Jeddito, and 21 miles west of Ganado. The new school health center facility will provide space for administration, medical, public health activities and dental care and necessary offices; sufficient examining and treatment rooms to properly examine, diagnose and treat minor illnesses and injuries and give routine and specialized dental care. It would provide adequate space for the screening of serious conditions or those needing hospital care, immunization programs, physical examinations, and health counseling. Those students requiring hospitalization will be referred to the hospital at Fort Defiance.

The new facility will serve the Steamboat Chapter, a small eastern portion of the Jeddito and White Cone Chapters, and the local population. The primary population to be served by this facility consists of 1,128 pupils to be enrolled in the Bureau of Indian Affairs school and the approximately 1,490 adult and pre-schoolers living in Beshbitoh. The secondary service population would be those students enrolled at the Bureau of Indian Affairs schools at Steamboat and White Cone.

Major workload (projected)

Outpatient:	
Medical	1,200
Nursing	3,300
Clinic, general	3,600
Dental	3,300

The staff will consist of: 1 school nurse, 1 licensed practical nurse, 1 clerk, 1 maintenance man, 1 janitor-driver, 1 dental officer and 2 dental assistants. It is anticipated this staff will be required in F.Y. 1969.

Five units of housing will be required at this location for personnel and are included under the Personnel Quarters Activity.

Dilkon, Ariz	$104,500

Project cost estimate

Construction funds requested in 1968	$104,500
Equipment funds to be requested under "Indian health activities in fiscal year 1969"	8,000
Total estimated project cost	112,500

It is proposed to construct a school health center at Dilkon, Arizona. Dilkon is located approximately 39 miles north of Winslow, 26 miles of this distance being unimproved roads. It is in the south central portion of the Reservation and remote from any population center. It is about 13 miles west of Arizona Route 77 over marginal roads.

This facility will provide for the operation of a comprehensive health program for the Boarding School pupils and the local beneficiary population in Dilkon. The enrollment of the school is anticipated to be about 800. At present there are three trailer schools which will be replaced by a new facility. There have been no adequate health services for this group in the past. The facility should be adequate for provision of medical, public health and dental activities. It will also provide space for examining and treatment rooms to properly examine and treat minor illnesses and injuries. The proposed facility will provide space for dental care and for routine laboratory services, health counselling and in-service training to school and dormitory personnel. It will also provide for screening patients for more serious illnesses. Patients requiring more specialized care and inpatient services will be referred to Winslow.

The population served will include 800 students at the BIA school, plus some 200 preschoolers and other beneficiaries residing in Dilkon. The projected workload is:

Nurse visits	3, 200
Dental visits	4, 000

The anticipated staffing will be one dental officer, two dental assistants, one school nurse and one practical nurse. It is anticipated this staff will be required in F.Y. 1969.

To provide housing for personnel, 5 units of quarters are requested under the Personnel Quarters Activity.

Nazlini, Ariz	$104, 500

Project cost estimate

Construction funds requested in 1968	$104, 500
Equipment funds to be requested under "Indian health activities in fiscal year 1969"	8, 000
Total estimated project cost	112, 500

It is proposed to construct a new school health center at Nazlini to serve the new BIA Boarding School to be constructed at this location in 1968. Nazlini is located approximately 13 miles north of Ganado and 28 miles from Ft. Defiance. The roads in and around Nazlini are unpaved, but some are graded and gravelled.

This facility will provide for the operation of a comprehensive health program for the 1,000 pupils to be enrolled in the BIA Boarding School. The facility will provide space to meet the basic requirements for providing medical, public health and dental clinics with offices, examining and treatment rooms sufficient to properly examine, diagnose and treat minor illnesses and injuries and give routine and specialized dental care. It will enable screening for referral to the proposed hospital at Chinle or Sage Memorial Hospital in Ganado for serious conditions or specialized need. The school health center will provide immunization, physical examinations, health counselling and tests for all students. There are no overnight beds planned. The proposed health center would also provide services to the local Indian beneficiary population numbering about 600.

The projected workload is:

Nurse visits	3, 300
Dental visits	4, 000

Proposed staffing would include one dental officer, 2 dental assistants, 1 school nurse and 1 licensed practical nurse. It is anticipated this staff will be required in F.Y. 1969.

To provide housing for personnel, 5 units of quarters are requested under the Personnel Quarters Activity.

Sanostee, N. Mex	$105, 000

Project cost estimate

Construction funds requested in 1968	$105,000
Equipment funds to be requested under "Indian health activities in fiscal year 1969"	8,000
Total estimated project cost	113,000

Sanostee is located 10 miles west of U. S. 666 and 40 miles south and west of Shiprock in the Shiprock Service Unit. It is proposed to build a school health center to serve the BIA school having a population of 700 elementary students with the possibility of expansion to 1,008. The secondary population to be served would be 800 adults and pre-school children. No health facilities exist at present in this community.

Major workloads (projected)

Outpatient:	
Medical visits	700
Nurse visits	2,100
Clinic, general	1,080

It is anticipated that the general medical and preventive clinic will be operated at least twice each week. There are no overnight beds proposed for this facility.

The Dental staff will provide routine dental care to the students at Sanostee and also to the Toadlena dental facility (800 students) twice per week. Emergency dental service will be provided to the total adult population plus routine dental care to the younger age groups, relocatees and medico-dental patients:

Dental services workload (projected)

Dental visits—Sanostee and Toadlena	3,400

The proposed staffing would be: one school nurse, one licensed practical nurse, one dental officer and two dental assistants. It is anticipated this staff will be required in F.Y. 1969.

Provision for 5 units of quarters to house the staff are requested under the Personnel Quarters Activity.

Oraibi, Ariz	$105,000

Project cost estimate

Construction funds requested in 1968	$105,000
Equipment funds to be requested under "Indian health activities in fiscal year 1969"	8,000
Total estimated project cost	113,000

It is planned to build a new school health center at Oraibi Village on the Hopi Indian Reservation which is 35 miles due west of Keams Canyon. The present clinic used at Oraibi is located in one small room of the BIA school building which is completely inadequate. There is no space for examination, treatment, waiting room or storage of drugs and equipment. The room has only approximately 220 square feet total space.

The new school health center to be constructed would contain space for a physicians office, examination room or rooms, dental suite, x-ray-PHN office, sanitarians office, community health worker's office, waiting room, general storage and adequate toilet facilities.

The BIA school has an enrollment of 246 children and the village has a population of 400. Presently the clinic is held one day a week with as many as 90 attending and averaging about 40. The most common diseases treated are acute infections and communicable diseases. Prenatal obstetrical services are provided. Immunization is given to all babies and school children and all adults who attend the clinic. It is anticipated that the work load would increase to 4,333 visits annually averaging 1½ clinics per week if an adequate facility were made available.

Staff will be supplied by the Service Unit hospital at Keams Canyon.

San Felipe, N. Mex $104,500

Project cost estimate

Construction funds requested in 1968	$104,500
Equipment funds to be requested under "Indian health activities in fiscal year 1969"	8,000
Total estimated project cost	112,500

It is proposed to construct a new health facility in the San Felipe Pueblo on the San Felipe Indian Reservation. This reservation comprises 49,000 acres located in Sandoval County, New Mexico. The Pueblo is mid-way between Albuquerque and Santa Fe (35 miles from each). Both Albuquerque and Santa Fe have community hospitals and DIH hospital facilities.

The total estimated on-reservation population of the San Felipe Reservation is 1,350 and increasing at the rate of about 1.7 annually. Of this number, the total of pre-school and school age children is estimated to be 550.

The present clinic facility is located in one room of a BIA building. There is no space to conduct examinations or treatment and there is a complete lack of waiting space.

A therapeutic and prevention clinic is held one day a week with an average attendance of 30. In F.Y. 1965, 46 pre-school exams were provided in special clinics. Special clinics were also held for immunizations and firefighters' physical examinations. Complete medical care and physical examinations were given to pre- and post-natals. The estimated number of visits projected after completion of the new facility is 1,600. Personnel from the Santa Fe Hospital will provide the health services.

The projected number of student beneficiaries to be seen annually in the new facility is 450. Emergency dental services will be rendered to the adult population. Selected age groups of the younger adult population plus medical-dental patients will receive routine dental services on a time-available and appointment basis. The dental clinic will be operated twice a week.

Albuquerque, N. Mex $22,000

Project cost estimate

Planning funds requested in 1968	$22,000
Construction funds to be requested in 1969	239,000
Subtotal	261,000
Equipment funds to be requested under "Indian health activities in fiscal year 1969"	40,000
Total estimated project cost	301,000

It is proposed to construct a new school health center in Albuquerque, New Mexico, to complement a BIA boarding school proposed for construction in 1968.

The new boarding school will serve 2,000 new students plus the 350 students who reside in the present school. This school is to be built on the west side of the Rio Grande River, approximately 10 miles from any Public Health Service facility.

The existing health center is located in a converted residence at the old Albuquerque Indian School. This is totally unsatisfactory because of the functional inadequacies inherent in the building, which cannot be eliminated by remodeling. The new facility would be located at the new school site.

The function of the new facility will provide space to meet the requirements of providing for administration; medical, public health and dental clinics with offices; examining and treatment rooms sufficient to properly examine, diagnose and treat minor illnesses and injuries and give routine and specialized dental care. It will enable screening for referral of serious conditions or specialized need; provide space for immunization programs; physical examinations, health counseling and tests for all students; and give in-service training to school and dormitory personnel. All students requiring hospitalization will be referred to the Bernalillo County Hospital in Albuquerque. No overnight beds will be provided at the health center.

It is anticipated that upon completion of all construction there will be 8,000 medical visits a year. A comprehensive dental program will examine 2,400 patients and provide 10,000 services.

Full time staff at the facility will consist of 2 medical officers, 3 nurses, 2 dental officers, 4 dental assistants, 1 sanitarian, 2 health educators and 8 supporting personnel (clerks, maintenance, etc.). These employees will also provide health services and conduct clinics away from the center. It is anticipated this staff will be required in F.Y. 1969.

Stewart, Nev	$26,000

Project cost estimate

Planning funds requested in 1968	$26,000
Construction funds to be requested in 1969	364,000
Subtotal	390,000
Equipment funds to be requested under "Indian health activities in fiscal year 1969"	22,000
Total estimated project cost	412,000

This BIA off-reservation boarding school is located at Stewart, Nevada, three miles south of Carson City in Ormsley County near the California State line. It has an enrollment of about 600 students from various reservations in the Southwest.

It is proposed to replace the present obsolete and unsafe health center with a modern, efficient and fire-resistant facility. The BIA presently is in the process of rebuilding the school campus and it would be more expedient and economical if replacement of the facility could be coordinated with their project.

The present structure, completed in 1904, is a one-story frame building with an exterior of stone veneer and drop siding. The building is not suitable for renovation because of basic functional inadequacies such as a 30-inch wide hallway which is too narrow for beds to pass through. The wooden framework prohibits achieving a fire-safe facility. Aging utilities are a constant and expensive maintenance problem.

The new health center would be an infirmary with a capacity to meet the basic health needs of 700 students with adequate space for a complete outpatient clinic and 16 infirmary beds. Space would be provided for a doctor's office, two examining rooms, nursing office, dental suite, and ancillary services. Patients requiring hospitalization will be cared for under contract services or at the PHS hospital at Schurz, Nevada.

School year 1966 workload data

	1964	1965	1966	Projected
Pupil enrollment	635	637	577	700
Visits to physician	2,053	2,251	3,148	3,200
Visits to nurse	21,815	38,030	34,731	35,000
Dental:				
Patients examined	1,013	1,121	1,100	1,200
Services provided	6,597	5,187	6,304	6,600
	Infirmary (school year 1966)			
Inpatients:				
Admissions	469	395	451	500
ADPL	7.3	7.4	6.7	7.5
Peak census	17	16	28	28

NOTE.—Staff currently (fiscal year 1967) on duty consists of 1 dental officer, 1 dental assistant, 4 nurses, 2 nurse assistants, and 1 clerk-steno. It is anticipated that an additional nurse assistant will be required in fiscal year 1969.

Health stations	$165,000
New Town, N. Dak	53,000

Project cost estimate

Amount appropriated in 1967	$3,000
Construction funds requested in 1968	53,000
Equipment funds to be requested under "Indian health activities in fiscal year 1969"	3,000
Total estimated project cost	59,000

New Town, North Dakota, which is the BIA Agency headquarters is located in the northern fringe of the Fort Berthold Indian Reservation and has a population of about 2,500.

Administrative headquarters for the reservation health program are maintained at this location in rented space. Medical outpatient services have been provided by contract in private physician's offices.

With the construction and staffing of a health center at White Shield, the administrative offices in New Town will no longer be necessary. However, it is planned to provide more comprehensive services at New Town with staff from the White Shield health center.

It is proposed to situate a health station in New Town to serve those Indian residents of the Northern segment of the reservation and those beneficiaries coming into the BIA headquarters from other portions of the reservation. New Town is about 54 miles from White Shield. In 1965 approximately 11,000 visits were referred to private physicians located in New Town, Watford City, Parshall, and Stanley. Many of these referrals come from other segments of the reservation. With the establishment of the health center at White Shield and health station at Mandaree, Twin Buttes, and New Town, this load will be absorbed by these various locations and will minimize distances beneficiaries must travel.

It is proposed to hold clinics at this location two or three times per week. Both therapeutic and preventive medical and dental services will be given. In addition, well baby, prenatal, pre-school, and postpartum conferences will be conducted by a Public Health physician and/or Public Health Nurse.

Demonstrations and group instructions will also be scheduled and conducted. Staff from the proposed White Shield health center will serve this station.

A health station building providing waiting, examining, treatment, demonstration, conference and storage rooms for the various activities will be required. Space for the parking of a dental mobile unit and connections for same would be provided.

Rock Point, Ariz	$56,000

In 1967, Congress appropriated funds for the construction of this facility. In order to satisfy requirements of a more urgent nature, the funds were reprogrammed with the approval of the Congressional Committees and the project deferred. It is requested that the funds be restored so that the Public Health Service may provide health services to this group of beneficiaries.

Project cost estimate

Construction funds requested in 1968	$56,000
Equipment funds to be requested under "Indian health activities in fiscal year 1969"	3,000
Total estimated project cost	59,000

Rock Point is a community on the Navajo Reservation in Arizona, located about 50 miles north of Chinle. A paved road connects Rock Point and Chinle. It is the site of a Bureau of Indian Affairs boarding school and trading post. There is an estimated population of 1,200 Navajos in the area.

At present, clinics are held on a weekly basis in an old frame building that was once a mission clinic but is totally inadequate. Services are provided by staff from the Chinle Health Center. A total of about 4,000 visits were reported in F. Y. 1966.

A permanent standard-design health station is proposed to serve the 1,200 resident population and a proposed new 400-pupil boarding school. Twice weekly general clinics and preventive health clinics, public health nursing conferences and immunization clinics will be held. An average attendance of 50–60 persons is expected.

Red Water, Miss	$56,000

Project cost estimate

Construction funds requested in 1968	$56,000
Equipment funds to be requested under "Indian health activities in fiscal year 1969"	3,000
Total estimated project cost	59,000

It is proposed to construct a new health station at Red Water Community, the site of a BIA Day School. The area to be served is in Leake County, Mississippi which has a 50 bed community hospital. The PHS Indian Hospital is in Philadelphia, Mississippi, about 30 miles south and will supply the staff for the station. State highway 35 to the hospital is paved; however, most beneficiaries live on unimproved roads with only approximately one-third having their own transportation.

The 1960 census enumerated approximately 3,200 Indians in the entire state of Mississippi. Of these, 2,750 were residing in the 10 counties comprising the Philadelphia Service Unit boundaries and are considered eligible as beneficiaries of the Publc Health Service. The Red Water population estimate in F.Y. 1965 was 385. The present enrollment of the BIA Day School is between 80–85 students in grades 1–7. Most of the children who attend high school enroll in Oklahoma BIA schools.

The present clinic is being conducted in an old unused woodframe classroom which belongs to the BIA school. There is no running water or toilet facilities in the clinic, and the examining and waiting room are in the same room. When a patient is examined, a screen is used, which does not provide adequate privacy. There are no offices for ancillary health personnel.

General medical and surgical clinics are held the first and third Monday of each month. Pediatrics, prenatals and adult patients are seen at these clinics as well as school children who require medical services. Twenty-four clinics are held each year, with an annual number of visits of between 600–630. Average attendance at each clinic has approximated 24. The total number of dental patients seen annually at Red Water is approximately 78.

Space for the PHN, clinic nurse and field medical officer would be included in the new building.

PERSONNEL QUARTERS

1968 request $3,734,000

The unique characteristics of the Indian Health program and the geographical location of the beneficiary population requires location of Indian Health facilities for the most part in isolated, desolate sparsely populated areas. In most of these areas housing for sale or rental is non-existent. Unfortunately, availability of housing constitutes a major factor in the ability to recruit or retain professional employees essential to the conduct of the program and the provision of basic health services.

It is quite evident that to provide the quality and quantity of health services required to elevate the health status of the Indian, Government housing must be made available. The Surgeon General's Advisory Committee on Indian Health, the American Hospital Association, the Association of State and Territorial Health Officers and the American Academy of General Practice have noted the deficiency and have strongly recommended the provision of an adequate number of suitable staff quarters.

To implement an accelerated hospital and field health program in 1956, 326 surplus prefabricated housing units and trailers were acquired. These units provided a partial solution to emergency housing problems and helped sustain the crash health program. However, they were never intended, nor are they adequate, for long-term use. Many of these and other substandard units are still in use, but not by choice. The urgency for providing for current deficiencies, or for new and expanded programs and facilities by necessity takes precedence over the desire to replace all of the substandard units.

In 1968 the request for 195 units will permit the satisfying of both replacement and additional needs at thirteen locations. Included in the request are 174 units in association with various construction projects contained in other activities in this request: a new (replacement) hospital at Tuba City, Arizona (121 units), and clinics at White Shield, North Dakota (15 units), Many Farms, New Mexico (13 units), Beshbitoh, Arizona (5 units), Sanostee, New Mexico (5 units), Teec Nos Pos (5 units), Nazlini, Arizona (5 units), and Dilkon, Arizona (5 units). The remaining 21 units are desperately required to overcome existing deficiencies through provision of additional units or replacement of substandard units at 5 other locations.

A distribution, by location, of the 195 units of quarters for which $3,734,000 is requested in 1968 follows:

Distribution of quarters by location, fiscal year 1968

Facility	Location	Number of 1-BR units	Number of 3-BR units	Total number of units	Estimated cost[1]
School health center	Beshbitoh, Ariz	2	3	5	$94,000
School health center	Dilkon, Ariz	2	3	5	94,000
Center	Fort Hall, Idaho		4	4	80,000
Do	Many Farms, Ariz	6	7	13	244,000
School health center	Nazlini, Ariz	2	3	5	94,000
Hospital	Owyhee, Nev		6	6	120,000
School health center	Sanostee, N. Mex	2	3	5	94,000
Station	Taholah, Wash		3	3	60,000
School health center	Teec Nos Pos, Ariz	2	3	5	94,000
Hospital	Tuba City, Ariz	36	85	121	2,312,000
Do	Wagner, S. Dak		3	3	60,000
Center	Warm Springs, Oreg		5	5	100,000
Do	White Shield, N. Dak	4	11	15	288,000
Total 1968 program		56	139	195	3,734,000

[1] Costs indicated reflect prefabricated type units.

Equipment requirements for ranges, refrigerators, washer-dryers in the amount of $130,700 will be requested under Indian Health Activities estimate in 1969.

ALTERATIONS

1968	$910, 000

The following projects represent needed alterations to existing Indian Health facilities to meet current program needs and/or provide for safe patient care.

Aberdeen area

Pine Ridge Hospital, Pine Ridge, S. Dak	$10, 000

It is proposed to extend water mains for a fire hydrant line loop as recommended by the National Fire Protection Association.

The project will eliminate dead-ends of fire lines which extend into areas of newly constructed personnel quarters.

The present domestic water supply system provides fire protection to the hospital and personnel quarters through a 6-inch main. There exists a 1,400 foot-long dead-end run of 4-inch main that serves a part of the quarters areas. New quarters authorized in 1967 make is essential to provide a 6-inch main which will complete a loop in compliance with fire code requirements. To complete the project will require the relocation of 500 feet of sewer line and construction of a new manhole.

Cass Lake Hospital: Cass Lake, Minn	$54, 500

Cass Lake Hospital is located in the northwestern part of Minnesota near the North Dakota State line, where U.S. Highways 2 and 371 intersect. There is excellent public transportation to the hospital. Three busses arrive daily and are accessible to the Indians living in the surrounding communities. About 50% of these Indians own automobiles.

This 22 bed facility serves a beneficiary population of over 2,500 of which approximately 1,400 are 18 years or younger.

Major workloads for the past three years follow:

	Fiscal year 1964	Fiscal year 1965	Fiscal year 1966
Inpatient admissions	705	691	629
Inpatient hospital days	3, 987	3, 775	3, 588
Average daily census	10. 9	10. 3	9. 8
Average length of stay	5. 7	5. 5	5. 7
Newborn births	101	94	81
Newborn hospital days	423	314	262
Newborn average daily census	1. 2	. 9	. 7
Newborn average length of stay (days)	4. 3	3. 2	3. 2
Outpatient visits to facility	11, 958	12, 026	12, 312

RELOCATE OBSTETRICAL SUITE

The existing delivery room with adjacent facilities and the O.B. beds are located on opposite sides of a main public corridor. The nursery is located at the far end of this corridor. The O.B. facilities, due to their location, are subjected to possible contamination because of unavoidable public and personnel traffic. The recent Environmental Health Survey conducted in May 1965, included a recommendation that the O.B. facilities be relocated to a remote portion of the hospital to minimize general traffic and possible contamination hazard.

Remodeling will be done to provide an obstetrical unit consisting of a delivery room, labor room and patient beds, and will be separated from the mainstream of the hospital. The O.B. suite will be located adjacent to the existing nursery. Installation of smoke and fire doors in the corridors of the hospital will be provided for patient's safety.

IMPROVEMENTS TO DIETARY AREA

The existing facility was constructed during the 1930's. No major improvements have been made to the dietary area of the hospital. The existing kitchen and dishwashing facilities are antiquated in respect to layout, equipment, and minimum standards of the Environmental Health Survey conducted in July 1965.

It is proposed to accomplish alterations in the kitchen and supporting facilities to provide better facilities and equipment which will result in a more efficient operation.

The project would replace the dishwashing machine (a surplus machine installed nine years ago); removal of the existing walk-in refrigeration unit with a modern unit; provide hoods for the range and dishwasher; replace the original two-compartment sink; and replace antiquated equipment. The project would improve the lighting, provide ventilation for the dishwashing and storage areas and rearrangement of the layout which will result in a dietary area that will: (1) be acceptable to Environmental Health Standards and (2) improve the work flow.

Total, Aberdeen area	$64,500

Albuquerque area

Shiprock Hospital, Shiprock, N. Mex	$102,600

Project cost estimate

Feasibility study funds appropriated in 1967	$42,000
Planning funds requested in 1968	102,600
Construction funds to be requested in 1969	1,832,500
Subtotal	1,977,100
Equipment funds to be requested under "Indian health activities in fiscal year 1970"	105,000
Total estimated project cost	2,082,100

In 1967 Congress appropriated $42,000 to plan expansion of the outpatient department and field health area. These funds will be used to conduct a feasibility study to determine the course of action best suited to provide health services to this group of beneficiaries.

EXISTING FACILITY

The existing 75-bed hospital was authorized in 1953 to replace an old and very poor 43-bed hospital. Estimates then of the population to be served ranged between 12,500 and 13,600. However, by 1957, due to the accelerated industrial activity and additional employment on the irrigation projects, the population reached an estimated 14,000. When the hospital was completed in 1960, it was already too small to meet the growing population needs and the new demands on health facilities generated by the expanded preventive health and field health services. At the present time it serves an estimated population in excess of 18,000 and it is expected that by F. Y. 1972 it will be serving a population of 22,000.

The present outpatient facility, which also serves the adjacent 1,000 student boarding school, requires expansion of space and supporting facilities in order to provide a more adequate and comprehensive base for health services, integrated with the field health activities. The present ancillary, field health and outpatient areas are too small to meet the needs of the present program effectively, and will be completely inadequate to meet the needs of the expected population. The present overcrowding in service areas poses a potentially hazardous situation which will get more critical as the demands increase. An additional 25 beds will permit an average occupancy rate of 80%.

POPULATION SERVED

The 1960 U.S. Census enumerated approximately 16,000 Indians residing in the Shiprock Service Unit. It has grown since that time at a rate conservatively estimated at 2.5% per annum. It is anticipated that the hospital service population will reach approximately 22,000 by F.Y. 1972.

By contrast with other Navajo service units, this area of reservation is distinguished by industrial activity and serves as the center of the irrigation farming complex. In more recent years the Tribal public works program has further accelerated activity.

Expansion of schools and the mobility of the population within the area have placed greater demands on the services and program conducted through the hospital which is the base for a complete and comprehensive field health program.

The age distribution of the Navajo beneficiaries in the service unit resembles the pattern of the Navajo generally. Nearly 50 percent of the population is under 15 years of age and almost 60 percent is under 20 years old.

The socio-economic circumstances, educational level and the accessibility of health facilities, especially hospital beds, to a large segment of the population (Shiprock community itself has more than 4,000 Navajo) affect the degree of utilization and influence the demand for services.

Although their socio-economic level is more favorable than the western Navajo, the median family income (about $1,500) is well below the $3,000 considered the national "poverty threshold."

A sampling of 1960 census data for Indians of San Juan County, New Mexico (Shiprock Service Unit) revealed that about 45 percent of the persons 25 years and over had not attended school; the median years of school completed was about two years.

This service unit has a large proportion of young people attending school. There are twelve day and boarding schools in the area with a total enrollment of over 3,100 and the Bureau of Indian Affairs plans the expansion of several. In addition, at six locations about 1,400 students are attending public schools.

GEOGRAPHY AND ROADS

The Shiprock service unit in the northeastern portion of the Navajo reservation is the only Navajo service unit which involves parts of three states—New Mexico, Arizona and Utah. The area encompasses about 2.8 million acres—4,400 square miles in what is commonly referred to as the Four-Corners area of the reservation. Three classes of roads traverse the area: surfaced U.S. Highways 666 and 550, graded semi-graveled roads which go to the main community areas and trails which lead to the homes of the beneficiaries. Bus service is limited to points between Shiprock and Gallup, Farmington and Cortez.

Industrial development has contributed to road construction and transportation improvement. This in turn has resulted in greater accessibility of the hospital and its clinics to many more communities in the service area; and consequently unusual demands are made on the facilities and services, which were not originally contemplated. This results in need for more referral and follow-up services.

The distances to Shiprock from some of the larger communities are: Aneth, Utah, (population 1,500) 55 miles; Fruitland, New Mexico, (population 2,600) 15 miles; Red Rock, Arizona, (population 700) 46 miles; Sweetwater, Arizona, (population 1,000) 58 miles; and Sanostee, New Mexico, (population 2,125) 32 miles.

MORBIDITY AND MORTALITY

The demographic pattern, especially the high birth rate (between 45 and 50 per 1,000 Navajo population), the growing population and the high percentage of young people (59 percent under 20 years of age and 28 percent between the ages of 20 and 45) influence the morbidity and mortality patterns and the utilization of the facilities—outpatient as well as inpatient and the field health activities.

Leading notifiable diseases reported in 1965 were otitis media, pneumonia, gastroenteric illnesses, trachoma, and measles. These are shown below and compared with leading diseases reported in 1963 and 1964 (calendar year).

Notifiable diseases

	Total cases reported		
	1963	1964	1965
Gastroenteritis	1,323	247	347
Dysentery	79	23	32
Influenza	141	10	29
Pneumonia	471	473	599
Otitis media	591	577	720
Measles	260	1	264
Hepatitis	22	5	35
Trachoma	73	106	169
Strep sore throat	68	65	119
Tuberculosis	52	66	55

MORTALITY—LEADING CAUSES OF DEATH

Infant deaths represent between 25 and 30 percent of the total deaths reported by the service unit. Leading causes are diseases of early infancy (prematurity, birth injuries, etc.), influenza and pneumonia, and gastroenteritis.

Leading causes for all ages are accidents, gastroenteritis, malignant neoplasms and influenza and pneumonia.

This pattern suggests that causes are associated with deficiencies in the environment and lack of sanitation facilities, as well as limited service for mothers and infants.

HOSPITALIZATION

Deliveries and complications related to pregnancy were the leading reasons for hospitalization in 1965, and constituted 32 percent of the discharges. Accidents were second leading (about 12%), influenza and pneumonia third (8.1%) and gastroenteritis fourth (1.6%).

A third of the discharges in 1965 were pediatric patients.

Discharges, fiscal year 1965—Age distribution of discharges and hospital days

	Number of discharges	Hospital days	Percent of total	
			Discharges	Days
Total, excluding newborn	2,857	21,190	100.0	100.0
Total pediatric	964	9,001	33.7	42.5
Under 1 year	377	4,411	13.2	20.9
1 to 4 years	320	2,656	11.2	12.5
5 to 14 years	267	1,934	9.3	9.1
Total adults	1,893	12,189	66.3	57.5
15 to 44 years	1,493	8,080	52.3	38.1
45 to 64 years	240	2,388	8.4	11.3
65 and over	160	1,721	5.6	8.1

NOTE.—Thirty percent of the pediatric patients were hospitalized for treatment of influenza and pneumonia, gastroenteritis and dysentery. Other common reasons for hospitalization were about 20 percent for accidents and diseases of eye and ear and skin.

Hospital discharges, fiscal year 1965

Leading causes	Discharges	Percent
Total discharges, excluding newborn	2,857	100.0
Deliveries and complications of pregnancy	926	32.4
Accidents	339	11.9
Digestive system diseases, including dysentery	334	11.7
Gastroenteritis and colitis	(189)	(6.6)
Respiratory system diseases	333	11.7
Influenza and pneumonia	(232)	(8.1)
Genitourinary system diseases	116	4.1
All other causes	809	28.2

UTILIZATION OF OUTPATIENT SERVICES

Definitive outpatient morbidity data reported for the communicable and notifiable diseases and the inpatient discharges by diagnosis reflect the morbidity seen in outpatients. The high maternity workload results in demands for prenatal and postnatal services. The facilities are inadequate to meet these needs as well as the need for well child services, immunization clinics, nutritional services and public health nursing.

Similarly, the existence of the large BIA boarding school and the public schools and dormitories for Indian students in Shiprock and Farmington, with a total combined enrollment of nearly 2,000, (further expansion contemplated) places extremely heavy demands on the hospital outpatient services and supporting activities, which the present facility cannot accommodate.

A comprehensive school health program involves physicals prior to entering school, and periodic examinations including eye and hearing tests, tuberculin testing, consultation services for students with emotional problems and referral services for correction of defects found upon examination. Dental needs are great and the dental workload is steadily increasing. The Division plans to establish a dental internship program at Shiprock, as well as an expanded service to meet far more effectively and completely the needs of the young adult population.

Shiprock is the location of the BIA agency and center of industrial activity in the Four-Corners area. Beneficiaries of the service unit depend upon Shiprock for non-health services. Although there is a community hospital in Farmington (106 beds) which is used to a limited extent for inpatient hospitalization under contract, its facilities are not organized to provide the comprehensive outpatient and preventive services which are most needed by Indian beneficiaries.

The San Juan County Health Department staff provides selected services to a limited number of off-reservation Navajos. Off-reservation Indian students, however, are referred to Indian health facilities for immunizations.

The preventive health program is broad in terms of its components—maternal and child health, public health nursing, dental, nutrition, health education, social service and environmental health—but the Shiprock facilities are overcrowded and so inadequate, that the management of a comprehensive and complete field health service and a comprehensive preventive health program for the population in and adjacent to Shiprock is ineffective.

Waiting space, radiology, laboratory and related auxiliary services are not even sufficient to support the present outpatient workloads and patients must be moved through quickly, or not seen at all, to the detriment of their health. Field medical services organized out of the hospital are extended regularly to the field locations, and especially the BIA day and boarding schools. Examinations are conducted at the schools and individuals requiring follow-up are referred to the hospital for consultation. This workload is increasing and cannot be adequately met with the present facilities.

Summary of major workloads

	1963	1964	1965	1966	Projected
Beds available	75	75	75	75	100
ADPL	64	60	62	59	80
Admisions	3,032	2,473	2,956	2,767	3,500
Births	692	691	759	673	750
Average length of stay per discharge, excluding newborn	7.6	8.8	7.7	7.8	8
Outpatient visits	53,616	52,067	57,829	59,202	76,000
Shiprock Boarding School	4,715	2,833	3,236	1,970	2,000
Dental workload:					
Dental services provided	13,139	14,123	11,275	12,764	19,000
Patients examined	5,742	6,123	4,410	3,903	6,000
Shiprock Boarding School	973	978	972	648	1,000

Nearly 8,000 visits were recorded at satellite field clinics in the Shiprock Area in fiscal year 1966. Scheduled clinics were held at least once a month at the locations listed:

Cove, Arizona
Newcomb, New Mexico
Aneth, Utah
Sanostee, New Mexico
Bisti, New Mexico
Immanuel Mission, Arizona
Oak Springs, Arizona
Toadlena, New Mexico

The reduction in admissions in 1966 was due to a combination of several factors: a limited and overworked nursing service; treating as outpatients some cases because of the closeness of their residence to the hospital; and to some extent a lack of appreciation on the physician's part concerning the unsatisfactory home environment of the patients.

Besides the referral of patients to general community hospitals under contract, (Farmington, New Mexico, Southwest Memorial Hospital, Colorado) patients with complicated medical and surgical conditions are referred to Gallup and general hospitals in Albuquerque for specialty care. Tuberculosis and mental patients are also referred to other appropriate facilities. To achieve continuity and effective medical management, facilities must be available at the base hospital for complete diagnostic workup and post-hospital follow-up and treatment.

PROPOSED PLAN

The projected plan is to construct a 25-bed addition to the existing 75 bed GM&S hospital, expand existing outpatient and field health facilities, and expand the ancillary facilities to handle the increasing demands being placed on this facility.

The expanded hospital will provide general medical, surgical, obstetrical, pediatric and dental care on an inpatient and outpatient basis. Limited ophthalmological, otolaryngological and orthopedic services will also be provided. Complete radiological and pathological services will be available to the staff on a full-time basis to assist in diagnosis. All ancillary services needed for a well developed clinical program will be provided.

In addition to provision of the above clinical services on an inpatient and outpatient basis, the hospital will also serve as a base for a complete and comprehensive field health and preventive program.

Extremely complicated medical or surgical problems will be referred to the DIH hospital at Gallup for care. State and other resources will be utilized for mental and allied services. Other DIH facilities and contract hospitals will be utilized for tuberculosis care.

ANTICIPATED BED DISTRIBUTION

The following shows the bed distribution and estimated average daily census, by major clinical service, after construction:

	Beds	ADPL
Total, excluding newborn bassinets	100	80
Medical	15	13
Surgical	24	20
Pediatric	45	37
Obstetrics	16	10
Bassinets	(18)	

The projected number of admissions and the ADPL reflect a hospital admission rate of 160 per 1,000 population, with an average stay of 8 days. The proportion of pediatric patients represents about 43% of the total load. An increased field health program (case finding, home visit, expansion of school clinics with increased school enrollment), will result in an increase in outpatient visits and also more referrals for hospitalization.

With special emphasis on earlier prenatal care, postnatal services and well-child care, the high obstetrical workload and outpatient clinical workload is expected to increase.

Expectant mothers will be referred from field clinics to hospital clinics for more comprehensive prenatal examinations and services earlier in pregnancy, in order to reduce the complications of pregnancy and delivery. Improved prenatal service is expected to influence the infant mortality rates over a period of time.

More complete diagnostic services (laboratory, pathology, specialty consultation services) are needed as is also screening of the older population to uncover existing conditions requiring medical attention. Since many patients are referred to other facilities for inpatient hospitalization, a comprehensive follow-up service must be organized and a system established for examining patients after discharge from the hospital, and before they return to their homes in order to provide continuity in medical management. Consequently, plans for expansion of the Shiprock outpatient clinic services and hospital supporting facilities, as a base for coordinating expanded services at satellite field locations, is the priority proposal.

Additional services are required for infants, pre-school and school children (examinations and immunizations), as well as increased prenatal services for expectant mothers. Intensification of these services is expected to result in more referrals to the hospitals where comprehensive diagnostic and treatment services are available.

Crownpoint Hospital, Crownpoint, N. Mex	$29,000

Project cost estimate[1]

Feasibility study funds requested in 1968	29,000
Planing funds to be requested in 1969	120,000
Construction funds to be requested in 1970	1,736,000
Subtotal	1,885,000
Equipment funds to be requested under "Indian health activities in fiscal year 1971"	193,000
Total estimated project cost	2,078,000

[1] Estimate based on modernization.

PROPOSED PROJECT

It is proposed that a feasibility study be conducted to determine the most economical method of modernizing the 56-bed physical plant used to provide health services to the beneficiary population of the Crownpoint Service Unit. If the feasibility study indicates that a new facility is required, the proposal would be to construct a replacement GM&S hospital with a chassis capable of supporting future expansions.

EXISTING FACILITY

The present hospital is a frame construction with sandstone veneer. Recent fire and safety inspection by a consulting firm proves that the building in its present condition is unsafe for inpatient services. The hospital was constructed in 1939.

In the outpatient area overcrowding is critical. Examining rooms are curtained cubicles in what was a patient ward; there is no privacy. There is only a makeshift emergency room. The outpatient waiting area is in the corridor. The pharmacy is located in what was originally two small baths and a private bedroom, greatly limiting storage and compounding space. The record room has exceeded storage space for currently active records; it is far removed from the outpatient examining area. The laboratory is far removed from both outpatient and inpatient areas and is located in a small storeroom and the old obstetric scrub room. The dental clinic and X-ray are cramped for space; X-ray films are stored in the dental clinic.

The administrative area is located in the most congested part of the building, being sandwiched between outpatient service areas. There is no library or conference room.

Community Health Service staff are located in a temporary Camp Pickett house in the quarters compound.

There is no operating room; the former operating room has been converted into a delivery room and labor room. Only minimal private, semi-private rooms for isolation, intensive or terminal care are available.

The kitchen and the staff dining room are in the basement—as are the storerooms, morgue, and maintenance shop. This area is serviced by an ancient, malfunctioning elevator.

Steam heat for the hospital is from a central plant operated by BIA. Because of relocation of the boarding school and subagency office, the BIA plans early abandonment of this plant.

POPULATION TO BE SERVED

Based on 1960 census data, the current population approximates 8,000. However, other sources indicate a population considerably higher. For this project, the 1960 census data are used and can be considered conservative. Projections, of these data indicate a population of 9,000 upon completion of project.

GEOGRAPHICAL BACKGROUND

The Crownpoint Service Unit exists for the most part off the Navajo Reservation's southeast corner, in what is known as the checkerboard area. This is an area of mixed ownership—private, tribal, state and Federal. The area within the official boundaries of the Service Unit amounts to about 2,600 square miles, while the area actually served by the hospital is approximately 3,500 square miles and extends roughly 25 miles south and west from Crownpoint, 50 miles north and 75 miles east. It is located primarily in the eastern portion of McKinley and San Juan Counties and extend slightly into Sandoval County, New Mexico.

Until recently nearly all roads crossing the area were unpaved, poorly maintained, and exceedingly rough. At present, the only paved roads are U.S. 66 bordering on the south, a recently paved road, New Mexico 56 from U.S. 66 north to Crownpoint, and the incompletely paved road from U.S. 66 east to Crownpoint. Eventually, New Mexico 56 will be paved north to Farmington and the western road extended to Cuba, New Mexico and New Mexico Route 44.

The nearest other hospital facilities are Gallup, 57 miles, and Grants, 54 miles, and a 17-bed mission hospital at Otis, 80 miles.

NATALITY AND MORTALITY

The birth rate in the Crownpoint Service Unit is high, between 45 and 50 per 1,000 population, over twice the rate for the U.S. population (21.0 in 1964). Similarly, the infant death rate is high, approximately 40 per 1,000 live births, nearly twice the rate for the U.S. (24.8 in 1964). Leading causes of infant deaths are immaturity and other diseases of early infancy, influenza and pneumonia and gastroenteric conditions.

MORBIDITY—NOTIFIABLE DISEASES

Among the notifiable diseases, the principal causes of illness reported in 1965 were: otitis media (693 cases), gastroenteritis and dysentery (654 cases), streptococcal sore throat (643 cases), and gonorrhea (115 cases). Other diseases of importance were the communicable diseases of childhood, trachoma, and hepatitis. Tuberculosis, although it has declined in incidence in recent years, is still a major health problem.

HOSPITALIZED PATIENTS

Deliveries and complications of pregnancy accounted for 20.2% of the discharges from Crownpoint Indian Hospital in fiscal year 1965. The respiratory system diseases (15.4%), ranked second, accidents (12.1%), ranked third, and diseases of the nervous system and sense organs (8.3%), ranked fourth. A relatively large younger population was served by the hospital. The pediatric patients accounted for 43.9% of the discharges compared with 56.1% for adults. Of the total hospital days, 59.5% were utilized by pediatric patients. Among the under age 5 pediatric patients, 65% were hospitalized because of respiratory system diseases, 20% because of gastroenteritis, including dysentery, and 10% because of accidents.

Crownpoint Hospital discharges, fiscal year 1965

Leading causes	Discharges	Percent
Total discharges, excluding newborn	1,630	100.0
Deliveries and complications of pregnancy	329	20.2
Respiratory system diseases including influenza and pneumonia	251	15.4
	(175)	(10.7)
Accidents	197	12.1
Diseases of nervous system and sense organs	135	8.3
Digestive system diseases including gastroenteritis including dysentery	127	7.8
	(96)	(5.9)
Infective and parasitic diseases	120	7.4
All other causes	471	28.8

Discharges by age group, fiscal year 1965

Age group	Discharges	Percent
Total, excluding newborn	1,630	100.0
Total, pediatric	716	43.9
Under 1 year	245	15.0
1 to 4 years	234	14.4
5 to 14 years	237	14.5
Total, adults	914	56.1

Hospital workload

	Fiscal year 1964	Fiscal year 1965	Fiscal year 1966	Projected
Admissions	1,605	1,662	1,716	1,930
Births	232	258	273	275
ADPL	38	44	44	49
Average length of stay	9.3	9.0	9.3	9.3
Outpatient visits:				
Hospital	15,487	19,176	20,963	22,700
Field	4,517	4,655	4,569	5,000
Dental:				
Patients examined	2,323	2,495	1,870	4,500
Services provided	4,739	6,957	7,030	7,500

COMMUNITY FACILITIES

Community resources are almost non-existent. There is a 17-bed mission hospital at Otis, staffed by one physician which is the only other inpatient resource in the checkerboard area. The Navajo are well-known for their caution in dealing with strangers. From the standpoint of inaccessibility, unwillingness to deal with the "white man" and the special relationship between the Navajo and "his" Federal hospital, the Navajo is almost totally dependent on the PHS Indian Hospital for the provision of health services.

Gallup Hospital, Gallup, New Mex	$226,000

Project cost estimate

Construction funds requested in 1968	$226,000
Equipment funds to be requested under "Indian health activities in fiscal year 1969"	17,000
Total estimated project cost	243,000

Since the construction of the PHS Indian Hospital in Gallup, New Mexico, the dental clinic has been operating in space that is inadequate for efficient and effective work flow. In Fiscal Year 1966 a dental intern training program was initiated in this already inadequate space. Two dental interns were trained during the first year of this minimal program. There were two other dentists on the staff of the hospital.

This renovation is proposed because:

(1) Increase of staff and expansion of the intern training program is not possible in the current facility.

(2) The efficiency in the utilization of the available manpower is greatly hampered by the cramped conditions.

(3) Modern dental equipment, which improves the efficiency in the provision of dental services, cannot be utilized in the present facility because of inadequate space.

The expansion of the present four-operatory clinic to an eight-operatory clinic is necessary to house a more effective dental care program and intern training activity in this hospital. The staffing plans include three staff dentists, four interns and nine dental assistants. The comparative anticipated workload is as follows:

	Fiscal year 1966	Estimated, fiscal year 1967	Estimated after renovation
Patients examined	3, 587	3, 600	5, 100
Services provided	13, 422	13, 500	19, 000
Total, Albuquerque area, $357,600.			

Billings area

Crow Hospital, Crow, Mont $27, 000

REPLACE SEWAGE LIFT SYSTEM, $7,000

It is proposed to replace the 50-gpm (gallons per minute) sewage lift station with a 150-gpm unit. The existing pumps are inadequate, causing sewage to back up into the basement drains in periods of high discharge loads. New personnel quarters authorized in 1967 for construction will add to the load. It is imperative that the pumping capacity be increased to 150 gpm to handle this load.

FIRE SPRINKLER SYSTEM, $20,000

The project would provide an automatic fire sprinkler system and alarms in the hospital for the safety of patients and employees.

The hospital presently has no sprinkler system. To comply with the requirements of the American Hospital Association accreditation references, a sprinkler system must be provided in many areas of the building. A recent addition to the hospital has an adequate alarm system but the original portion of the building has none.

It is proposed to install a wet line sprinkler system in the basement and a dry line system in the attic with complete automatic alarm system throughout the hospital.

Total, Billings area $27, 000

Phoenix area

Sells Hosiptal, Sells, Ariz $8, 000

CORRECT FIRE AND SAFETY DEFICIENCIES

To correct fire deficiencies and provide safety to patients and employees it is proposed to replace plain glass with safety glass in the hospital interior, enclose areas over the smoke barrier doors, and replace non-fire resistant ceiling in the mechanical room with fire retardant materials. These deficiencies were identified by a Plant Evaluation Survey and correction is essential to comply with existing fire prevention practices.

Keams Canyon Hospital, Keams Canyon, Ariz $73, 600

INSTALL BOILER ROOM AND BOILERS, $66,600

The hospital currently receives high pressure steam from a plant operated by Bureau of Indian Affairs. Since Bureau of Indian Affairs now obtains electric energy from the Arizona Public Service, only a low pressure system is required for their purposes. However, it is necessary to maintain the plant at full capacity to service the Public Health Service Indian Hospital. It is proposed to construct an area (and steam lines and tunnels) to house two high-pressure boilers of sufficient size to heat and operate the hospital. The steam required for operation of the hospital could be generated at approximately one-fourth the present cost. To provide this project, funds in the amount of $66,600 are requested in 1968.

CORRECT FIRE AND SAFETY DEFICIENCIES, $7,000

Certain deficiencies were identified by a Plant Evaluation Survey and their correction is essential to provide safety to patients and employees.

To alleviate these deficiencies it is proposed to provide fire exits at dead-end corridors; replace plate glass with wire glass in interior windows and doors; install fire doors in the stairwells; construct smoke barriers in the hospital attic; and install an air horn alarm system from the hospital to quarters which are several miles away.

Sacaton Hospital, Sacaton, Ariz	$7,000

CORRECT FIRE AND SAFETY DEFICIENCIES

To correct fire deficiencies and provide safety to patients and employees, it is proposed to replace selected panel and hollow core doors with proper fire rated doors and to install smoke barriers. These deficiencies were identified by a Plant Evaluation Survey and correction is essential to comply with existing fire prevention practices.

Yuma Hospital, Winterhaven, Calif	$18,000

CORRECT FIRE AND SAFETY DEFICIENCIES

To provide safety to patients and employees, certain deficiencies which were identified by a Plant Evaluation Survey are to be corrected.

The project would provide a sprinkler system, fire alarms, attic fire barriers, correct inadequate ventilation of janitor closets and provide filters in the kitchen range hood.

Total, Phoenix area	$106,600

Anchorage area

Bethel Hospital, Bethel, Alaska	$27,000

INVESTIGATE FOUNDATION PROBLEMS

This project would provide for engineering studies of receding perma-frost and the effect it has on the piling systems. The buildings are erected on systems of piling driven into the permanently frozen earth. Apparently some thermic source is causing the upper level of the perma-frost to recede, allowing settling of the piling.

An engineering study is required to determine (1) the present perma-frost level, (2) the probable continuation of this recession, (3) the thermic source which effects this change and (4) recommendations to reclaim the perma-frost or otherwise protect the hospital from damage by continual settlement.

Kotzebue Hospital, Kotzebue, Alaska	$247,300

FOUNDATION REPAIR PROJECT, $80,300

Project cost estimate

Planning and Construction funds in 1968	$80,300
Construction funds for phase II in 1969	92,400
Construction funds for phase III in 1970	80,800
Total estimated project cost	253,500

Uneven consolidation of the fill under the slabs on grade of the hospital and service buildings has caused differential settlement of the floors of the hospital buildings. The Cold Region Research and Engineering Laboratory was engaged to make a study of the causes of the problem and to recommend the remedial action to repair the damage and prevent recurrence.

The first phase will provide funds for the project design and the repair and stabilization of the most critical areas.

Pending the receipt of the study findings, temporary measures have been taken to shore up the structure at critical points and to repair underslab waste lines. This project will utilize the results of the study to design the proper corrective measures and to complete the repair and stabilization work. The repair and stabilization work is phased in three years to enable the actual construction to be limited to portions of the structures which will enable the hospital to operate continuously throughout the repair and stabilization work.

SEWAGE TREATMENT PLANT, $167,000

In 1967, Congress appropriated $500,000 for the construction of a sewage treatment plant. In order to satisfy requirements of a more urgent nature, funds in the amount of $167,000 were reprogrammed with the approval of the Congressional Committees and the project deferred. It is requested that the reprogrammed funds be restored to enable the Public Health Service to complete the project.

All wastes from the Alaska Native Hospital and Bureau of Indian Affairs School in Kotzebue are discharged into Kotzebue Sound at a point 550 feet from the beach and at a depth of 80 feet below the water surface. The report of the Natural Resources and Power Sub-Committee of the Committee on Government Operations directed attention to the lack of primary treatment of waste material being discharged. It is proposed to construct a primary treatment plant for the sewage load of the Division of Indian Health Hospital, the Bureau of Indian Affairs day school and the supportive facilities such as staff quarters, which are operated as a portion of the hospital and school complexes. The plant will provide the minimum treatment required by the State of Alaska Administrative Code.

Mount Edgecumbe Hospital, Mount Edgecumbe, Alaska	$80, 000

INCINERATOR, $80,000

In 1967 Congress allowed partial funds to implement site preparation for an incinerator at Mt. Edgecumbe. The balance of project funds is requested to complete the project in 1968.

At present all dry garbage and burnable waste is burned by open fire on the beach on Mt. Edgecumbe Island. No fill material is available for constructing a sanitary fill type area for waste disposal. The present method of open burning is unsightly and insanitary. Gulls and vermin infest this disposal area and frequent the residential, school and hospital sites. It is proposed to clear the site and install an incinerator plant for burnable wastes which will provide a modern sanitary method of waste disposal in accordance with approved practices.

Ten thousand dollars was appropriated in 1967. The amount requested here is to complete the project in 1968.

Total, Anchorage area	$354, 300

COMMUNITY HOSPITALS SERVING INDIANS AND NON-INDIANS

1968 request	$250, 000

Under Public Law 85–151 the Surgeon General, where such an alternative appears more desirable and effective, is authorized to financially participate in the construction of needed hospital facilities in a community for joint use by Indians and non-Indians rather than to construct a separate Federal facility. To date, the Public Health Service has participated in 15 projects providing 327 beds of which 110 have been funded from this appropriation for the use of Indian beneficiaries. Under this authority, an amount of $250,000 is requested in 1968 to participate in a community project.

CONSTRUCTION OF INDIAN SANITATION FACILITIES

1968 request	$10,464,000

The request for 1968 includes:

(1) $8,000,000 for construction of 65 projects to correct existing gross sanitation deficiencies and for investigations, emergency works, supplies and equipment, and

(2) $2,464,000 for construction of sanitation facilities in Indian communities where they are needed to complement Federal and Tribal housing programs conducted by the Public Housing Administration, Bureau of Indian Affairs, Office of Economic Opportunity, or Tribal groups in accordance with mutual understandings.

With the completion of all projects and assistance to housing authorized through Fiscal Year 1967, improved sanitation facilities will have been made available to more than 37,000 Indian and Alaska Native families. This level of accomplishment represents 38 percent of the required effort to provide all existing families with both running water in the home and adequate waste disposal facilities. The request for 1968 will enable facilities to be made available to another 9 percent of the families.

Sanitation Facilities Construction Projects ($8,000,000)

Provision of basic sanitation facilities for Indian communities and homes is essential in the prevention of diseases and is basic to the improvement of health services and the fight against poverty. During the past seven years the Public Health Service has worked with Indians and Alaska Natives in a cooperative effort to correct the gross insanitary conditions existing in their communities and homes. While progress has been made, the lack of safe available water supplies and waste disposal facilities continues to be a major deficiency in the Indian environment. This condition is in large measure responsible for the high incidence of preventable disease that still prevails among Indians and Alaska Natives.

Health Problems

1. Gastroenteritis ranks second among the leading reportable diseases for Indians; incidence rates for amebic and bacillary dysentery is more than 50 times higher than the rate in the general population.

2. The Indian infant death rate is 1½ times (2 times in Alaska) that of the general population, and for infants who have returned to their home environment after hospital births and particularly for infants one month through eleven months of age, the death rate is about three times (for Alaska Natives, about five times) that of comparable age groups in the general population, a condition in large part associated with the lack of sanitation facilities in the Indian home and extremely crowded living conditions.

3. Approximately twenty percent of all reported Indian deaths in a year are infant deaths (under 1 year of age) compared with 5.4 percent for this age groups in the general population.

4. More than 35 percent of the Indian patients discharged from hospitals were treated for infectious diseases (respiratory, other infective and parasitic, and skin diseases) and their residuals most of which are associated with lack of running water, insanitary conditions and the overcrowded home environment.

Environmental Conditions

Contributing to these health problems is the widespread scarcity of water among Indians and Alaska Natives for even elemental household purposes. Thousands of Indians on many reservations haul water in a primitive manner for distances of a mile or more. In such instances, use of water for domestic purposes is as low as one to three gallons per capita per day as compared to five times this amount for the poorest rural families in the non-Indian population. A delivery charge is made of $1 to $3 per barrel for unsafe water. Contaminated streams, irrigation ditches, stock ponds and unprotected wells and springs are often the only available supply. The excessive amount of time which Indians and Alaska Natives must thus expend combating the rigors of their environment is another major contributing factor to the continuing impoverished conditions under which they live.

The lack of adequate facilities for the disposal of human and other household wastes (both liquid and solid) also contributes to the health problem of the Indians and Alaska Natives. The absence of these facilities result in (1) spread of micro-organisms responsible for diarrheas, and dysenteries, (2) insect and rodent infestations both in Indian homes and communities, (3) contamination of foods and domestic water supplies, and (4) general nuisance conditions.

Indian Participation and Training

Public Law 86–121 enables the Public Health Service to help alleviate the substandard environmental conditions that have been described. This law authorized construction of domestic water supplies, waste disposal facilities, and other sanitation facilities for Indian homes, communities, and lands. The Public Health Service administers the program in consultation with Indian Tribes, Alaska Native groups, and State and local health agencies. Participation by the Indians in project execution is stressed and tribes are assisted in assuming responsibility for continued operation and maintenance of completed community sanitation facilities. Education and training activities are conducted to assure utilization, protection and maintenance of household sanitation facilities.

Projects for Indian beneficiaries include one or more of the following features: *water*—source development, treatment, storage facility, distribution systems; *waste (liquid and solid)*—collection system, sewage treatment, disposal facility; *household appurtenances*—sanitary pit privy or flush toilet, kitchen sink, connecting plumbing; *drainage*—facilities for control of insects, systems to permit subsurface waste disposal.

It should be noted that the results of these efforts have produced an increasing awareness by the Indian people of the advantages of adequate sanitation facilities. This has been demonstrated by the many requests from the Indians for assistance under this program and by the substantial contributions of labor, money, and materials made by the Indians which total about one-third of the overall construction effort. Indian governing bodies have shown a willingness to adopt the necessary measures which are required for continued operation and maintenance of completed facilities. These measures include appointment of responsible maintenance personnel, establishment of water and sewer charges, and adoption of sanitary regulations. Each of these actions embraces a new concept in the Indian methods of government.

Construction progress

Since the beginning of this activity seven years ago, through Fiscal Year 1966, a total of 511 sanitation projects have been undertaken. These include: 393 construction projects (61 of which serve Federal housing projects) and 118 engineering investigations, emergency works and other special projects. Of these, 367 are completed or in operation, and 127 are underway as of June 30, 1966. The remainder are projects to complement new Federal Housing construction and are in the final stages of planning and negotiation with the Indian tribes.

The F.Y. 1967 appropriation included $3,859,000 for 39 sanitation facilities construction projects. This will enable improved sanitation facilities to be made available to more than 5,000 Indian and Alaska Native families in more than 50 different geographic locations. It also included $1,736,000 for the construction of facilities to serve approximately 1,600 new housing units being constructed under Federal and Tribal Housing Programs.

Work Planned for Fiscal Year 1968

The 65 projects planned for 1968 are urgently needed on 37 Indian reservations throughout the country and in 21 communities in Kansas, Oklahoma, South Dakota, and Alaska. They will meet needs in areas where (1) essential sanitation facilities are lacking or in need of major rehabilitation, (2) rates of preventive diseases attributable to gross environmental sanitation deficiencies are high, (3) work is feasible and most nearly ready to be undertaken from an engineering and economic standpoint, (4) ability and willingness of Indians to assume responsibility for maintenance and operation have been indicated, and (5) willingness of Indians to contribute to and participate in the work has been shown.

Included in the 65 projects is a special project planned to provide water and waste disposal facilities for approximately 100 Indian families residing in the vicinity of Rapid City, South Dakota. This work will be part of a Demonstration Community Health Project planned by the Division of Indian Health to establish a model Community Health Program to serve indigent people.

The request also provides: for investigation and planning funds for urgently needed construction projects for which additional technical information is necessary before a solution can be recommended; for correction of emergency problems related to Indian sanitation facilities such as occur from severe drought conditions, floods, failure of well casings and pumping equipment; and for other unforeseen conditions which may require provision of materials, supplies, and equipment for completing the construction or repair of sanitation facilities. The following table summarizes the history of this program:

Summary of construction of Indian sanitation facilities, Public Law 86–121

Fiscal year	Federal funds	Number of construction projects	Families benefitted [1]	Cumulative percent of known facilities needs programed [2]
1961–66	[3] $30, 469, 000	393	30, 000	34
1967	5, 736, 000	[4] 37	6, 600	38
1968 request	10, 464, 000	[4] 65	8, 000	47

[1] Some families included are not provided all basic sanitation facilities at this time.

[2] Based on a formula designed to compute relative percentage of families that will have all basic sanitation facilities. (Number of beneficiary families is currently estimated to total 69,000).

[3] Includes $5,170,000 made available for 42 projects authorized in fiscal year 1963 and 1964 under the Public Works Acceleration Act. (Public Law 87–658).

[4] Does not include undetermined number of projects to assist Federal and tribal housing program for Indians.

Assistance to Federal Housing Program ($2,464,000)

Since 1965 the Public Health Service by mutual agreement has been coordinating its sanitation facilities construction efforts with the Public Housing Administration, the Bureau of Indian Affairs, the Office of Economic Opportunity, and Tribal groups to complement new Indian housing construction. During this period the Service has participated in housing projects which will provide 1,700 units of new housing and accommodate approximately 10,500 Indians. Additional projects to provide sanitation facilities for approximately 2,400 units of new housing are currently in the planning stages.

The request for funds to assist Federal and Tribal housing projects during Fiscal Year 1968 will permit the construction of sanitation facilities for an estimated 2,000 new homes. The majority of these homes will be built under programs of the Public Housing Administration. The request includes funds required to complete the 1967 program.

Sanitation facilities projects, fiscal year 1968

Reservation	Community	State	Project description	Estimated Federal cost
Aberdeen area:				
Cheyenne River	Cherry Creek, Ziebach County	South Dakota	Sewer collection and water treatment	$90,000
Lac Courte Oreilles	New Post and rural Sawyer County	Wisconsin	Community water and individual waste	70,000
Rosebud	Soldier Creek, Mellette County	South Dakota	Individual water and waste disposal	92,000
Red Lake	Redby, Beltrami County	Minnesota	Community water and sewerage	144,000
Standing Rock	Wakpala, Corson County	South Dakota	do	171,000
Turtle Mountain	South Belcourt, Rolette County	North Dakota	Water and sewer extensions	125,000
White Earth	White Earth, Becker County	Minnesota	Community water and sewer	226,000
Albuquerque area:				
Santa Anna	Santa Anna, Sandoval County	New Mexico	do	250,000
San Juan	Rural area, Rio Arriba County	do	Community water and individual waste disposal	100,000
San Felipe	San Felipe, Sandoval County	do	Community water and sewerage	269,000
Acoma	Acomita, rural Valencia County	do	Community water and individual waste disposal	74,000
Ute Mountain	Towaoc, Montezuma County	Colorado	Community water and sewerage	165,000
Laguna	Old Laguna, Valencia County	New Mexico	Community sewerage	50,000
Window Rock:				
Navajo	Scattered locations	Arizona, New Mexico, and Utah.	Construct and develop shallow wells and springs	100,000
Do	do	do	Community water and sewerage and individual waste disposal.	200,000
Do	Fruitland-Kirtland rural Navajo Area, phase I, San Juan County.	New Mexico	Community water and individual waste disposal	551,000
Do	Iyanbito, McKinley County	do	do	90,000
Do	Salt Springs Wash, San Juan County	do	do	90,000
Do	Saw Mill area, Apache County	Arizona	do	75,000
Do	Sheep Springs, San Juan County	New Mexico	do	45,000
Do	Chinle Valley, phase I, Apache County	Arizona	do	75,000
Do	Lupton, Apache County	do	do	45,000
Do	Cove, Apache County	do	do	40,000
Anchorage area:				
Kotzebue	Election District 22	Alaska	Construct water transmission line	400,000
Good News Bay	Election District 16	do	Community water	90,000
New Kolignek	Election District 15	do	Communal water and individual waste disposal	25,000
Middle Yukon Group (3 villagets)	Election Districts 17 and 24	do	do	130,000
Saxman	Election District 2	do	Community water and sewerage	100,000
King Cove	Election District 14	do	do	170,000
Barrow	Election District 21	do	Waste collection system	60,000
Billings area:				
Flathead	Camas-Hot Springs, Sanders County	Montana	Individual water and waste disposal	150,000
Fort Peck	Brockton-Riverside, Rosevelt County	do	Individual and community water and waste disposal	92,000
Do	Frazier-Wiota, Valley County	do	do	125,000
Crow	Crow Agency, phase II, Big Horn County	do	Community sewerage	220,000
Wind River	Mill Creek-Boulder Flat, Fremont County	Wyoming	Individual water and waste disposal	53,000
Do	Dry Creek Ranch, Fremont and Hot Springs Counties.	do	do	68,000
Blackfeet	Seville-Badger-Fisher, Pondera and Glacier Counties.	Montana	do	188,000

Oklahoma City area:				
Jackson and Brown Counties	Horton district	Kansas	do	90,000
Seminole County	Seminole district	Oklahoma	do	75,000
Pontotoc County	Pontotoc district	do	do	75,000
Cherokee and Mays Counties	Spring Creek district	do	do	90,000
Cherokee Reservation	Tomtla district Cherokee County	North Carolina	do	60,000
Latimer and Le Flore Counties	Talihina district	Oklahoma	do	75,000
McIntosh County	Pierce district	do	do	50,000
Adair County	Greasy district	do	do	102,000
Delaware County	East Kansas district	do	do	75,000
Custer and Washita Counties	Clinton district	do	do	60,000
Kay County	Marland district	do	do	60,000
Comanche County	Cache district	do	do	60,000
Phoenix area:				
Duck Valley	Northern section Elko County	Nevada	do	152,000
Gila River	Maricopa, Pinal County	Arizona	Community water and individual waste disposal	140,000
California Rancherias	Scattered locations	California	do	48,000
Round Valley	Entire reservation, Mendocino County	do	Individual water and waste disposal	120,000
Gila River	West Casa Blanca, Pinal County	Arizona	Community water and individual waste disposal	50,000
Papago	3 villages, Pima County	do	do	122,000
Fallon Colony	Fallon, Churchill County	Nevada	do	30,000
Hopi	Second Mesa, phase I, Navajo County	Arizona	Community water	95,000
Gila River	Stotonic San Tan, phase II, Pinal County	do	Community water and individual waste disposal	155,000
San Carlos	Gilsen Wash, Graham County	do	do	135,000
Portland area:				
Western Washington	Five scattered locations	Washington	Individual and community water and individual waste disposal.	207,000
Colville	Nespelem community, Douglas County	do	Community water and sewerage	139,000
Do	Nespelem-Coulee Dam, phase II, Okanogan County.	do	Individual water and individual waste disposal	37,000
Yakima	White Swan community, Yakima County	do	Community water and sewerage	199,000
Fort Hall	Fort Hall, Bingham County	Idaho	do	91,000
Special project	Demonstration community health project, Rapid City.	South Dakota	do	200,000
All areas			Investigations, emergency works, supplies, and equipment.	200,000
Subtotal—Sanitation facilities construction projects.				8,000,000
All areas			Assistance to Federal and tribal housing program for Indians. For the construction of sanitation facilities in Indian communities where they are needed to complement Federal and tribal housing programs conducted by the Public Housing Administration, Bureau of Indian Affairs, Office of Economic Opportunity, or tribal groups. (Approximately 2,000 units of housing.) This request includes funds to complete the 1967 program.	2,464,000
Total, 1968 request for sanitation facilities.				10,464,000

BIA–PHS CRITERIA

Chairman HAYDEN. In the highlight statement supplied with your justifications you indicate that the projects requested have been evaluated under the Public Health Service-Bureau of Indian Affairs criteria. What are these criteria?

Dr. RABEAU. This document, Mr. Chairman, was done originally at the request of the Deputy Director of the Bureau of the Budget early in 1963. He requested that the Chief of the Division of Indian Health and Commissioner of the Bureau of Indian Affairs come up with a joint document that would define—would set up criteria and guidelines that could be used to decide whether or not a health facility, a hospital, is needed, and if one is needed, how could the need best be met—for example, through a construction of a Division of Indian Health facility, or the use of a community facility. Some of the criteria that this document covers are official tribal desire, geography, the behavioral dynamics, the particular problems of the difference in culture between the Indian and what he encounters in a community hospital, such things as diseases and related patterns, and the factors of comprehensive health programing.

These are the major criteria that were developed in this document.

INCREASED COSTS OF PROJECTS

Chairman HAYDEN. Also, I note with regard to projects which were deleted from the fiscal year 1967 program, and funds for which are again asked in this budget, are expected to cost more because of increases in the construction cost index since estimates were first formulated. What is this increase?

Dr. RABEAU. $211,000.

STEWART BOARDING SCHOOL

Chairman HAYDEN. You are asking for $26,000 to plan a replacement of the school health center at Stewart, Nev. Is this center to be located on the same site as the one to be replaced?

Dr. RABEAU. Yes, sir. The Bureau of Indian Affairs is modernizing and expanding the boarding school at Stewart, which is just outside of Carson City, Nev. We have a very antiquated and dangerous, from a safety viewpoint, structure there at the present time. It will be on the same grounds.

PERSONNEL QUARTERS

Chairman HAYDEN. Your justification statement indicates that the estimated cost of the 195 units of personnel quarters reflect prefabricated type units. Are all of these units to be prefabricated?

Dr. RABEAU. This year, all of the three-bedroom units are prefabricated, and with this coming year, all the one-bedroom units, in addition, will be prefabricated.

SHIPROCK HOSPITAL

Chairman HAYDEN. With respect to your statement concerning the Shiprock Hospital, last year's appropriation was based on your request for planning funds for expansion of the outpatient department and field health facilities at the 75-bed hospital at Shiprock, which you estimated would cost $585,500. This year you are asking $102,000 for planning funds, indicating that $1,832,500 will be proposed in the fiscal year 1969 budget. I note also that it is planned to construct a 25-bed addition to the present hospital. Is this a change in your planning from last year, and, if so, what is the reason?

Dr. RABEAU. Yes, sir, Mr. Chairman. This does represent a change in our planning. Two things have come about. The Shiprock area is the most rapidly growing of the entire Navajo country. Industry has moved into Shiprock. This was not anticipated, at least, not to the degree that it has occurred. For example, in this past year, there is an electronics plant there that has doubled the number of Navajos that it employed. It has gone from 300 to 600 employees.

In addition, construction of a dam is going to provide, I think, 110,000 acres of irrigated land, and my people tell me that they anticipate there are going to be canning plants, frozen food plants at this location, and that there is going to be a great demand for not only employees for these, but also for working on the farms.

In view of this we felt that it would be necessary, because of the influx of population, to increase the number of beds that we have at Shiprock. It was felt that it would be better to do the entire alteration at one time rather than just the outpatient wing. Incidentally this hospital has the largest volume of outpatient visits of any of our hospitals on the Navajo.

One of the favorable arguments is, if we put the addition on at the same time, this will allow us the least amount of disruption of the hospital. In other words, you could build the addition, the patient-care beds first, and this would allow you then to move into the modernization of the out-patient wing.

One other factor, and I very ruefully say this, we have had a great deal of difficulty in the past in our cost estimates. I am also happy to say that with the transfer of our construction branch into the new Division of Buildings and Facilities, in the Office of the Surgeon General, this deficit will be corrected as they have a professional cost estimator. I would like to assure the committee that we can now present cost estimates that we can live with.

TUBA CITY HOSPITAL

Chairman HAYDEN. In fiscal year 1967 when planning funds were provided for the Tuba City hospital, it was indicated that the construction cost would be $3,112,000. However, the budget for fiscal year 1968 indicates that construction funds are needed in the amount of $4,230,000, an increase of $1,118,000. Is this all due to increased construction costs, or have the plans been expanded? So far as I can determine, the hospital description is almost the same in both budget justifications.

Dr. RABEAU. Mr. Chairman, it is partially due to a faulty cost estimate. It is also partially due to escalation in building costs. Mr. Chadwick, do you want to add something to that?

Mr. CHADWICK. Mr. Chairman, this project has been somewhat involved, because we now have a 75-bed hospital that is not too old, and we found that we had to do much more modernization than we had thought we would to start with. And the modernization and addition of those beds were of such magnitude, after we did our feasibility study, that we found that there was very little difference between this and a new hospital. So this is what we now have, but the difference in cost relates directly to that magnitude we first thought, versus what we finally ended up with, after the feasibility study.

CHINLE HOSPITAL

Chairman HAYDEN. With respect to the planning funds asked for the coming fiscal year for the Chinle Hospital in the amount of $288,000, I recall that last year for planning funds $132,000 was provided. This is an increase of more than two times. What is the cause of this?

Dr. RABEAU. Mr. Chairman, it was necessary to reprogram the planning funds that we were appropriated last year. The increase from $132,000 to $288,000 is based on our experience plus a much more accurate cost estimate.

COMMUNITY HOSPITALS

Chairman HAYDEN. In order to finance community hospitals serving Indians and non-Indians under Public Law 85-151, there is a request for a $250,000 appropriation. How much was provided for this purpose in fiscal year 1967?

Dr. RABEAU. None, sir.

Chairman HAYDEN. None?

Would you please place in the record an indication of where this money will be used, and how much will be provided for each recipient?

Dr. RABEAU. We would be happy to.

(The information follows:)

The amount of $250,000 was included in the budget for a Public Law 151 project at Juneau, Alaska. However, since the preparation of the 1968 budget, this project has not progressed as expected. A project for a Community Hospital at Roosevelt, Utah, has progressed faster than expected, and is currently the most appropriate project for consideration. In the event that the Division of Indian Health finalizes its plans to assist in this construction project we will seek necessary approval to reprogram these funds for this project.

WATER AND WASTE DISPOSAL FOR RAPID CITY

Chairman HAYDEN. I note that within the work planned for fiscal year 1968, there is a special project to provide water and waste disposal in Rapid City, S. Dak. Would you please describe just what is planned?

Dr. RABEAU. Yes, sir. In the Rapid City area we have put in a demonstration family health center. The sanitation facilities project is part of the program. This will supply running water and waste disposal facilities to approximately 100 Indian families who are living in the Sioux addition. It is outside the city limits of Rapid City, but will be connected with the city water and sewerlines. The division is working very closely with both the county health department and the city on this project.

OTHER REPROGRAMING

Chairman HAYDEN. Aside from the four construction projects to which you refer in your justification statement, has it been necessary to reprogram any other construction projects? If so, which are they?

Mr. CHADWICK. We haven't had to reprogram any further at this time, Mr. Chairman.

PROJECTS NOT UNDERWAY

Chairman HAYDEN. Will you please place in the record a table of the authorized construction projects which are not yet underway, and indicate the reason why construction activity has not begun?

Dr. RABEAU. Yes, sir.

(The information follows:)

Status of projects not under construction, construction of Indian health facilities, Public Health Service

Activity-project-description	Percentage of completion of program of requirements and/or working drawings	Remarks
HOSPITALS AND CLINICS		
Hospitals:		
Phoenix Medical Center, Arizona, 200-bed hospital replacement.	20	Working drawings under development; estimated completion of working drawings September 1967; estimated bid opening November 1967.
Mescalero Hospital, New Mexico, 15-bed hospital replacement.	95	Estimated bid opening April 1967.
Philadelphia Hospital, Mississippi, 30-bed hospital replacement.	2	Program of requirements under development; appropriated for planning only.
Harlem Hospital, Montana, 33-bed hospital replacement.	2	Do.
Claremore Hospital, Oklahoma, 60-bed hospital replacement.	2	Do.
Clinics, health stations (HS) or health centers (HC):		
Fort Wingate HC, New Mexico, construction.	95	Working drawings completed; estimated bid openings April 1967.
Wanblee HC, South Dakota, construction.	2	Program of requirements under development; estimated bid opening August 1967.
Riverside HC, California	10	Program of requirements completed; appropriated for planning only.[1]
Many Farms HC, Arizona	2	Program of requirements under development; appropriated for planning only.[1]
Chilocco HC, Oklahoma	2	Do.
Mandaree HS, North Dakota	75	Working drawings under development; estimated bid opening May 1967.
Twin Buttes HS, North Dakota	75	Working drawings under development; estimated award of contract May 1967.
New Town HS, North Dakota	75	Working drawings under development.[1]
Lower Brule HS, South Dakota	75	Working drawings under development; estimated bid opening May, 1967.
Cannonball HS, North Dakota	75	Do.
Red Lake HS, Arizona	75	Do.
Rough Rock HS, Arizona	75	Do.
Wellpinit HS, Washington	75	Do.
Queets HS, Washington	75	Do.
Taholah HS, Washington	75	Do.
Lapwai HS, Idaho	75	Do.
Big Cypress HS, Florida	95	Working drawings under development; estimated bid opening March 1967.
PERSONNEL QUARTERS (NUMBER)		
Belcourt, N. Dak. (construction) (17)	100	Estimate of award of contract March 1967.
Wanblee, S. Dak. (construction) (5)	100	Do.
Winnebago, Nebr. (construction) (7)	100	Do.
Fort Yates, N. Dak. (construction) (14)	100	Do.

[2] Balance of planning funds in 1968.

PHOENIX MEDICAL CENTER

Chairman **HAYDEN**. Some 6 years ago a medical center was authorized at Phoenix. Each year you come before this committee and report little if any progress for this project over the previous year. How long has it been since you developed the requirement for this hospital?

Dr. **RABEAU**. The original program requirements were developed in 1959, sir.

Chairman **HAYDEN**. Planning funds were appropriated in fiscal year 1962. What specific actions have been taken since that time? Summarize them briefly and then place a full statement in the record to include the officer or agency making each review of this project, and the time required for each review.

Dr. Rabeau. We would be happy to submit the more detailed one for the record.

Mr. Chairman, Congress appropriated the planning money in fiscal year 1962. Alternate programs were then studied at that time, including whether we should use the VA hospitals or go into community hospitals. In 1963, $60,000 was apportioned for the feasibility study to determine whether we should modernize the existing structure, or whether a new one was preferable.

In early 1964 the A. & E. contract was awarded for the feasibility study, and at the same time, the study was conducted as to whether or not a wing added onto the VA hospital would be feasible. By early 1965, the feasibility study showed that a new facility was needed. Congress then in fiscal year 1966 appropriated the construction money for a new hospital. In the fall of 1966, the balance of the planning money was apportioned, and from this point we have made great strides. In early 1966, the architect-engineering planning contract was awarded, and we have progressed rapidly. There has been a long delay in this project. Part of this is that assurance was needed that this was the best type of facility for the Indian; that this would be the most suitable. The second factor is this is not only a medical center, but it is also having a research unit in it. This has been done in consort with the National Institute of Arthritis and Metabolic Diseases. At the present time, I am happy to report that the working drawings are, as of this date, 20 percent completed, we anticipate the invitation to bid to be October of this year, the contract to be awarded in November of 1967, and the hospital to be completed within 18 months or by March of 1969.

(The statement follows:)

Chronology of the PHS Indian Medical Center, Phoenix, Ariz.

1. Program of requirements summary was developed in 1959. The committee was advised in May of 1961 by Secretary Ribicoff that planning funds would be requested in the 1963 budget.

2. Congress authorized $350,000 in the 1962 appropriation to plan a new replacement facility.

3. Subsequent to the appropriation of planning funds in 1962, a new program was developed in conjunction with Public Health Service, Department of Health, Education and Welfare and the Bureau of the Budget which considered (1) the use of the Veteran's Administration Hospital in Phoenix, (2) the use of community facilities including the possibilities of supplementary P.L. 85-151 funds. Conclusion of study was that a separate Public Health Service Indian Medical Center would best meet the health needs of the beneficiaries.

4. Feasibility funds of $60,000 against the authorized planning funds of $350,000 were apportioned by the Bureau of the Budget in the fall of 1963 for a feasibility planning study by a private Architect/Engineer to determine whether modernization or a complete new facility was the most economic method of meeting the health needs of the Indian beneficiaries. On the basis of this feasibility study, it was determined to construct a completely new facility. The study was completed February 1965.

5. Planning funds of $290,000 were apportioned by the Bureau of the Budget in October 1965.

6. Congress authorized $4,950,000 for the construction of the facility (1966 appropriation).

7. The architect-engineering contract to prepare the working drawings was awarded in February 1966.
8. The working drawings are currently 20% complete.
9. Invitation for bids for the construction contract will be requested in October 1967.
10. The hospital will be completed March 1969.

ADDITIONAL FUNDS REQUIRED

Chairman HAYDEN. In fiscal year 1966 $4,950,000 was appropriated for construction. Will this be sufficient? If not, how much do you now estimate is required, and what is the reason for the additional costs?

Dr. RABEAU. Mr. Chairman, this amount will not be sufficient. We need approximately $1,425,000 in additional funds. There are about three segments of requirements. You will recall that the 1966 Senate-House conferees agreed that if we needed $500,000 more than the original construction funds authorized at that time, to request it.

Another segment of almost equal size is needed for the 25-bed research wing that we are going to incorporate in this hospital. The balance, a little over $400,000, is due to cost escalation since the original appropriation.

Chairman HAYDEN. You indicate that a portion of the approximately $1,500,000 additional required at this date is related to the inclusion of research beds under the auspices of NIH. If this be true, why isn't this portion of the funds provided by NIH rather than the Division of Indian Health?

Dr. RABEAU. Mr. Chairman, the research will be for Division of Indian Health beneficiaries and therefore part of our program. The National Institutes of Health is providing us with the research expertise and consultation necessary to put in this department.

REASONS FOR DELAY IN CONSTRUCTION OF PHOENIX MEDICAL CENTER

Chairman HAYDEN. What is the reason for delaying on this hospital construction when other hospitals to be built and operated by the Public Health Service for Indians are planned within a year or so and constructed promptly after funds are available? There must be a reason.

Dr. RABEAU. There are several. It does take longer to plan a medical center of this magnitude. The last one that we constructed at Gallup also required a number of years to design and construct.

Secondly, we are particularly desirous that it will be an outstanding example of the latest in hospital design and in research competency.

Senator BARTLETT. Well, did the Budget Bureau throw any roadblocks in your way at all?

Dr. RABEAU. No, sir.

Senator BARTLETT. They have gone along fully?

Dr. RABEAU. Yes, sir, we are very pleased with the assistance that we have had, during my experience in the program, with the Bureau of the Budget.

Chairman HAYDEN. Well, may I have your personal assurance that the contracts on this hospital construction will be let during the first half of fiscal year 1968 at the latest?

Dr. RABEAU. Yes, sir.

Mr. NEIL. Mr. Chairman, could I just add to that, speaking for the Department, that we are discussing with the Budget Bureau the problem of this cost overrun and trying to determine what steps we should take to deal with it.

CONSTRUCTION OF FACILITIES IN NORTH AND SOUTH DAKOTA

Chairman HAYDEN. Will you please prepare for the record responses to these questions posed by Senators Mundt and Young.

(The questions and answers follow:)

RESPONSES TO QUESTIONS BY SENATOR MUNDT

Question. Can you tell us just what is involved in the $97,000 for alterations at Pine Ridge outlined on page 77 of the justifications?

Answer. The $97,000 for alteration projects as outlined on page 77 of the justification provides funds for six alteration projects which include projects for Pine Ridge, South Dakota—$10,000; Sells, Arizona—$8,000; Sacaton, Arizona—$7,000; Crow, Montana—$27,000; Winterhaven (Yuma) California—$18,000; and, Bethel, Alaska—$27,000.

The estimate of $97,000 includes $10,000 for an alteration project at Pine Ridge, South Dakota. The project as proposed will extend water mains for fire protection to the new personnel quarters constructed in 1967.

The existing domestic water supply system provides fire protection only to the presently available personnel quarters and the Pine Ridge hospital. The new personnel quarters authorized in 1967 make it essential to provide a 6-inch water main extension loop including necessary fire hydrants and manholes. To provide this system it will be required to relocate 500 feet of sewer line.

Question. Your estimate on page 148 of the justifications includes $60,000 for three units of quarters at Wagner. Will this complete the quarters program at Wagner? If not, how many more units will be needed? What about your other locations in South Dakota? Do you have adequate quarters?

Answer. The three quarters requested for Wagner will complete the quarters program at Wagner. In the State of South Dakota only one additional quarter is required at Sisseton to replace a sub-standard unit.

Question. I note on page 164 of the justifications your discussion of the extension of the water main at Pine Ridge to serve quarters authorized in 1967. How are you coming on those quarters? Will the $10,000 requested give you a completely adequate line?

Answer. The construction for fourteen units of quarters for Pine Ridge will be awarded March 27, 1967. It is anticipated that construction of these quarters will be completed by December 16, 1967.

The $10,000 requested for the extension of the water main at Pine Ridge to serve the personnel quarters authorized in 1967 will provide a 6-inch extension of the existing 4-inch water main. The work proposed will provide fire protection for the personnel quarters authorized for construction during 1967.

In order for the total water supply system to meet the fire code requirements of the National Fire Protection Association, the existing 4-inch water main line will have to be replaced sometime in the future.

Question. I note on page 211 of the justifications your discussion of Sanitation facilities requested for Cheyenne River, Rosebud and Standing Rock in fiscal 1968. Would you provide for the record and a copy to my office a breakdown of other sanitation facilities needed at various locations in South Dakota?

Answer. The following table provides this information.

Known Indian sanitation facilities needs for South Dakota locations (over and above fiscal year 1968 request)

Reservation	Community or district	County	Project description	Order of magnitude cost
Yankton	Phase I	Charles Mix	Individual water and waste	$130,000
Sisseton	Lake districts	Roberts	do	168,000
Cheyenne River	Promise	Ziebach	do	66,000
Standing Rock	Bullhead	Corson	Community water and waste	384,000
Rosebud	Parmalee district	Mellette	Individual water and waste	80,000
Do	Ring Thunder	Todd	do	60,000
Standing Rock	Little Eagle	Corson	Community water and waste	50,000
Cheyenne River	Moreau River	Dewey	Individual water and waste	90,000
Do	Red Scaffold	Ziebach	Combination water and individual sewer.	200,000
Crow Creek	Rural	Buffalo	Individual water and waste	130,000
Yankton	Phase II	Charles Mix	do	130,000
Pine Ridge	American Horse Creek.	Shannon	do	112,000
Standing Rock	Kenel district, phase I.	Corson	do	120,000
Pine Ridge	Lakeside and Grass Creek.	Bennett	do	57,000
Lower Brule	Rural	Lyman	do	40,000
Pine Ridge	Rockyford	Shannon	do	66,000
Cheyenne River	La Plant district No. 9.	Dewey	Combination water and individual sewer.	200,000
Yankton	Phase III	Charles Mix	Individual water and waste	120,000
Standing Rock	Wakpala district	Corson	do	366,000
Do	Bullhead district	do	do	360,000
Do	Little Eagle	do	do	272,500
	Little Eagle district, phase I.			
Do	Kenel district, phase II.	do	do	90,000
Do	Little Eagle district, phase II.	do	do	272,500
Cheyenne River	Four Bear	Dewey	do	51,000
Rosebud	Grass Mountain	Todd	do	40,000

NOTE.—Above list based upon requests for assistance received from Indian tribes. Additional project requests may be received.

RESPONSE TO QUESTIONS BY SENATOR YOUNG (N. DAK.)

Question. Doctor, we have had a problem in getting funds for Health Stations and Health Centers on the Fort Berthold Reservation. As you know, funds have been appropriated and re-programmed in the past. These facilities are badly needed. Are there funds in this year's Budget?

Answer. Funds are included in the 1968 request.

Question. If funds are appropriated, is there a possibility that they will be diverted again for some other use?

Answer. Funds will not be diverted.

Chairman HAYDEN. Do you have any questions, Senator?

Senator BARTLETT. Oh, lots. Thank you.

Off the record.

(Discussion off the record.)

MENTAL HEALTH

Senator BARTLETT (presiding). Perhaps, Dr. Rabeau, I ask you this question every year, and then forget your answer, and so I apologize. What is the incidence of mental health among the Indian people as compared with the white population?

Dr. RABEAU. Our best records show that it is about the same; however, there are some significant indexes that show that mental health is a problem among the Indians. For example, the suicide rate is about three times that of the non-Indian population. The violent death rate—this includes not only accidents but homicides as well—is also more than double that of the general population. Part of the latter is attributable to the conditions of living.

Senator BARTLETT. Not necessarily associated with mental illness.

Dr. RABEAU. Yes, sir.

Senator BARTLETT. Senator Hayden asked you a question about the Alaska community health aid training program for which you have a budgetary request of $95,000. My recollection is that you told him that this was a new program?

Dr. RABEAU. It is new insofar as that what we have done heretofore has been done entirely by the staff, and has been done on a very limited extent, at some of our facilities. We have been unable to pay the people that are undergoing this training. This will be a much longer and much more intensified course. We have developed materials. We have a manual that we developed for community health training that is being used all over the country. This will be a much longer course. Our courses in the past have only been, at the best, a week or two. This will be at least a 4-month didactic course. This will be a formal one. In the past, we have had a small one on an informal scale.

Senator BARTLETT. A rather hit-or-miss program before.

Dr. RABEAU. Yes, sir.

FUNDS BUDGETED FOR ALASKA

Senator BARTLETT. Now what is your budgetary request this year—$82 million?

Dr. RABEAU. Yes, sir.

Senator BARTLETT. How much of that is for Alaska?

Do you know?

Dr. RABEAU. I would be happy to supply it for the record. Offhand, Senator, roughly one-fifth of our appropriation has gone to Alaska.

Funds budgeted for Alaska from the Indian Health Activities Appropriation follow:

Fiscal year	*Amount*
1966 actual	$14, 264, 000
1967 estimate	15, 554, 000
1968 request	16, 485, 000

CONTRACT MEDICAL CARE

Senator BARTLETT. Well, how much of this budgetary request is intended to be used for contract medical care?

Dr. RABEAU. Our contract medical care figures this year are just under $14 million—$13,960,000. This is a net decrease of $200,000 over fiscal 1967.

Senator BARTLETT. Just how does this contract program work?

BASIS FOR CONTRACT PROGRAM

Dr. RABEAU. The basis for our contract program is to utilize community facilities and community health resources, private health practitioners, dentists, other members, in locations where they are the most available and accessible health resources to the Indian and Alaskan native. We also utilize contracts to provide specialized services that would not be feasible or economical in our own facilities.

Much of this provides physician, dental and hospital services to Indians and Alaska natives that are not close to our facilities.

In Alaska, for example, a great amount of our funds is spent in Fairbanks, Juneau, Sitka, and Nome.

Senator BARTLETT. The philosophy here being that it would be more expensive to transport them than to treat them locally. Is that right?

Dr. RABEAU. Yes. Not only more expensive, but that it is in the best interest of the patient that they be treated as close to home as possible.

Senator BARTLETT. Now, you said that there was a reduction of $200,000 for fiscal year 1968 as compared with the current fiscal year?

Dr. RABEAU. Yes, sir. This is a net decrease.

Senator BARTLETT. How does this come about?

Dr. RABEAU. Well, we have an increase of $775,000 for rising costs of our program operation. This is predicated on a 5-percent increase in hospital costs.

We also have $5,000 for statutory pay increase for the personnel involved in contract medical care supervision. The $980,000 decrease, representing a decrease of 54 patients a day, that we alluded to in our budget is the anticipated effect of the medicare legislation on our program. These add up to a net decrease over fiscal 1967 of $200,000.

Senator BARTLETT. Now, you projected a 5-percent boost in hospitalization rates for fiscal 1968, over fiscal 1967. Now was that projection made before or after you had had experience with the Medicare Act?

Dr. RABEAU. It was made before, Senator.

Senator BARTLETT. Well, is it accurate?

Dr. RABEAU. Well, figures that were just released in departmental studies show that hospital charges have gone up an average of 16.5 percent in 1966, and that physicans' fees went up an average of 7.8 percent.

I might add, I just saw in the newspaper earlier this week that the Bureau of Labor Statistics showed that in the January Price Index, that just for the month of January 1967, hospital rates went up 2.8 percent, and that physican and dental fees rose one-half of 1 percent.

Senator BARTLETT. So your 5-percent projection as of now has no relation to the realities of the situation which could not have been foreseen at that time. Am I right in making that statement?

Dr. RABEAU. Yes, sir. We made, I think, basically a premature estimate. The second thing is, there was considerable doubt as to whether there would be a significant increase in hospital costs. There was quite a bit of discussion, pro and con, on this matter throughout the country.

SPECIFIC EXAMPLE OF CONTRACT COST INCREASES

SENATOR BARTLETT. Can you give us anything specific resulting from these increased rates? An example?

Dr. RABEAU. Well, our own experience is now showing us that we may run into even larger increases. Part of it is due to the fact that in some areas we had been receiving rates equivalent to the welfare departments—for example, physicians' fees. In several States the medical societies have now abolished this, which, of course, in turn, then means that we are going to pay not only the increase in fees that have gone up, but also this differential that we had received heretofore.

As to hospitals, our experience with negotiation of contracts has been that the rates are going up significantly.

Senator BARTLETT. All right, then. In view of that, in view of the fact that you earlier stated that there is no way to foretell how many additional States will implement title 19, what would your estimate be now as to the additional amount of money needed to serve those you are privileged to care for medically?

Dr. RABEAU. Well, anything that I say on this, Senator, would only be a pure estimate based on the 5-percent increase for which we received $775,000, and not knowing what will be the impact of medicaid, for it is not only a problem of the enactment of title 19, but it is also a problem of how liberal, how restrictive the legislation will be. My estimate, and this would be a very crude estimate, would be roughly—and this is arithmetic done in my head—I would say about one and a quarter million.

Senator BARTLETT. If you are going to do the kind of job that you are supposed to do.

Dr. RABEAU. Yes, sir. I must add that we really don't know, we really won't know until we get into 1968 what our experience will be as far as the impact of medicare goes.

All we can say is that we will attempt to carry out the program to the best of our ability. If it proves to be inadequate with these amounts, it will, of course, be necessary to decrease the scope of the services we provide under this.

ALASKA CONSTRUCTION

Senator BARTLETT. Are there any funds in your budget for construction in Alaska?

Dr. RABEAU. In 1968?

Senator BARTLETT. Yes.

Dr. RABEAU. No, sir.

Senator BARTLETT. Well, I have had continuing association with this health problem in Alaska for a good many years, and it was my understanding that the Division intended to launch out upon a program of constructing health stations.

Have those plans been dropped?

Dr. RABEAU. Senator, Mr. Chadwick just reminded me that we have requested sanitation facilities construction funds in 1968. Mr. Johnson, do you have an estimate for 1968?

Mr. JOHNSON. Yes, we will expend, if the funds are appropriated for fiscal year 1968, approximately $1 million in Alaska.

Senator BARTLETT. For what purposes?

Mr. JOHNSON. For purposes of constructing sanitation facilities to serve the villages and communities, that is, native villages and communities, in Alaska.

Senator BARTLETT. What types of sanitation facilities?

Mr. JOHNSON. A situation which will give you one specific example that I am sure you are aware of, is the project for Kotzebue.

Senator BARTLETT. Unfortunately, yes.

Mr. JOHNSON. That project has been started. We did start some preliminary work in Kotzebue during fiscal year 1967, at which time we will develop a water supply source using a couple of tundra lakes and small dams, and a pipeline to bring the water down to the community of Kotzebue.

This will be the first time that they will have, if we are successful in this venture, an all-year round supply of water to serve the community.

We would like to supplement this in fiscal year 1968 with the construction of a large storage reservoir in the community, that will give further insurance to a full year supply of water.

Under our long-term plans in the future we would anticipate some type of community distribution system.

Senator BARTLETT. And you have—when I said, "unfortunately, yes," I was referring to the wrong town. I was thinking of Unalakleet. You had a little disaster there, didn't you?

UNALAKLEET WATER SYSTEM

Mr. JOHNSON. Yes, sir. Unalakleet was the first recirculating type water system in a native village in Alaska. We are very proud of our construction at this location. Unfortunately, very recently, we had a fire that caused some $60,000 worth of damage. We are in the process of developing the plans to replace the pumphouse that was burned out. This construction will be done some time this summer.

We will take steps to prevent this kind of happening occurring in the future. We hope that perhaps we can negotiate with the electric utilities in that community to perhaps preclude the need to use oil or other kinds of heat, supposedly the kind of problem that causes this type of disaster.

Senator BARTLETT. Do you have the money available?

Mr. JOHNSON. Yes. Through the very kind offices of Congress, who authorized some funds to take care of emergencies of this type. From these emergency funds, we will be in a position to put the system at Unalakleet back into operation.

Senator BARTLETT. That is well.

COST OF HEALTH STATIONS AND QUARTERS IN ALASKA

Now, Dr. Rabeau, returning to these health stations, have you dropped those plans for construction of health stations?

Dr. RABEAU. No, sir, we have deferred them, while we look into cheaper methods of construction.

Senator BARTLETT. What do you mean?

Dr. RABEAU. Our construction costs in Alaska are running much higher than that in the continental United States, both quarters and health stations. We have always built, in Alaska, conventional construction quarters, which was also the case in the continental United States until recently. We are now constructing prefabricated housing, which reduced our cost about 35 percent. Thus, our plans have been deferred this year on construction of any Alaskan health stations and quarters while we investigate other possible means of construction or the use of different materials.

FUNDS FOR THREE HEALTH STATIONS DISALLOWED BY BUDGET BUREAU

Senator BARTLETT. Well, did the budget of the U.S. Public Health Service contain any money for any of these stations or for any quarters to be with them?

Dr. RABEAU. In the President's budget for 1968?

Senator BARTLETT. No.

Dr. RABEAU. In our budget?

Senator BARTLETT. In your budget as it left the U.S. Public Health Service.

Mr. CHADWICK. Yes, sir, the budget as we submitted it had funds for three health stations.

Senator BARTLETT. Three. Where were they to be located?

Dr. RABEAU. Minto, Unalakleet, and Alakanuk.

Senator BARTLETT. Now, how much would that have cost?

Dr. RABEAU. Our original budget proposal was $95,000.

Senator BARTLETT. $95,000 each?

Dr. RABEAU. Yes, sir.

Senator BARTLETT. And how much for the quarters that would be required?

Mr. CHADWICK. We had 18 units of quarters requested, sir, at a total of $1,523,000. They would cost almost $90,000 each, $80,000 to $90,000.

Senator BARTLETT. And was this budgetary request chopped off in the HEW, or at a later date?

Mr. CHADWICK. At a later date, sir.

CONSTRUCTION COSTS IN ALASKA

Senator BARTLETT. And my understanding is, Dr. Rabeau, that construction costs in Alaska had some bearing upon this.

Dr. RABEAU. Senator, a typical health station in the continental United States costs about $56,000, so you can see that it is almost double in Alaska.

Our prefabricated quarters are now running us around $20,000, while our quarters in Alaska will cost us about four times as much. Yes, we were requested to determine if there wasn't some way that this could be done at less cost. These are, as you are personally well aware, extremely high.

We were requested not only to look into new methods of construction or the use of new materials, but also the possibility of the utilization of community buildings. This is what we are doing, or will do.

Senator BARTLETT. Well, those in charge of money management in Washington ought not to have been surprised, in my judgment, to discover that building costs in Alaska are higher than they are in States to the south, and that notwithstanding this, Government agencies and private business continue to build there.

What are you supposed to do at this late date to find a new form of construction adapted to Alaska that will match in cost like buildings in Arizona, for example?

INVESTIGATION OF OTHER METHODS OF CONSTRUCTION

Dr. **Rabeau.** Well, it is hoped that we ought to look beyond conventional methods of construction. We historically had this same problem with our quarters that we were building in the continental United States.

Our cost kept going up. The executive branch directed us to investigate other methods, specifically, the use of prefabricated buildings. This has reduced our costs.

It is hoped, possibly by looking into what is available, that we may be able to find some way. I really don't know whether this will materialize or not.

Possibly precut buildings may be the solution, because the problem with prefabrication, as you well know, is that it costs you a great deal to ship them to Alaska, because with water shipment, volume is the measurement of cost. Also, in most of the villages there is no method of taking such a large object off of a ship or putting it up on location. Machinery is not available.

Senator **Bartlett.** Well, without asking for any comment from you, I should say that this burden ought not to be imposed upon the Division of Indian Health, whose building program in Alaska is peanuts compared to that of some other Government agencies.

For example, right now, money has been released heretofore appropriated and held up for a while for the construction of quarters on military bases in Alaska, and they are not going to be prefabs; they are going to be conventional, and they are going to cost a lot more money than a similar home would cost in Louisiana, and I fail to discover the logic requiring you to find out if there isn't someway to reduce construction costs in Alaska.

This is scarely in your field, I should think.

PLANNING FUNDS FOR ALTERNATE CONSTRUCTION METHODS

Now, you have, notwithstanding, been directed to do this. Do you have any planning money in the budget, or available to you now, that would permit you to embark upon this search immediately?

I suggest it will be a rather expensive undertaking, and will constitute a failure when it is completed, but what I want to know is can you proceed on this search right now?

Mr. **Chadwick.** We would do this, Senator, in the same means we did with the prefabrication of quarters in the continental United States; namely, we would seek ways and means to do this with our ongoing staff. We would not need additional funds for the purpose of trying to find more economical ways of construction.

Senator **Bartlett.** Well, bless you.

You have enough money now to do this.

Dr. **Rabeau.** We have no additional funds for planning or study of such projects. We would do whatever our staffs could accomplish. We would ask our people at our Anchorage area office, for example, to investigate the possibilities of using any precut or prefabricated dwellings that are available in Alaska.

Senator **Bartlett.** Well, this is a major undertaking, and I suspect that it is one that you won't direct your attention to as a matter of first priority on account of the enormity of he task, which has been approached by many other agencies, which are more completely in the field of construction than you are.

So it seems to me that at a very minimum, we are going to have a 2-year delay in the construction of the first health station, maybe more.

Would you agree with that estimate?

Dr. RABEAU. Yes, sir.

Senator BARTLETT. What if day after tomorrow your construction people said,

> Eureka! We have found it! We have found a system whereby we can construct these health facilities at costs comparable to that in the lower States.

So could you move then, or would you have to come back at a later date for money for purchase and installation and construction?

Dr. RABEAU. I am not sure that I have ever had the experience of moving that fast on construction. I don't think our history is very demonstrative of it. No, we would not be able to; we would immediately seek to put it in our 1969 budget.

Senator BARTLETT. I am almost through, Doctor.

COORDINATION WITH THE ARCTIC HEALTH RESEARCH CENTER

Do you work—does your division work in Alaska in cooperation or coordination with the arctic health program?

Dr. RABEAU. Yes, sir.

Senator BARTLETT. Arctic Health Research Center?

Dr. RABEAU. Yes, sir.

Senator BARTLETT. I was talking with Dr. Scott earlier this year, who is Chief of the arctic health program, and he related two very interesting accounts to me, about which I should like to ask you.

Off the record.

(Discussion off the record.)

INCIDENCE OF SUCCINYLCHOLINE IN ALASKA

Senator BARTLETT. I have a memorandum from Dr. Scott—a rare medical event which involved Alaska native patients and succinylcholine, commonly used during surgical procedure as a muscle relaxant. If there is no objection, I am going to insert this memorandum in the record in full, because I think it is intensely interesting.

(The memo follows:)

PSEUDOCHOLINESTERASE DEFICIENCY IN ESKIMOS

Succinylcholine is commonly used during surgical procedures as a muscle relaxant. Its effect is of short duration, because an enzyma in normal blood, called pseudocholinesterase, rapidly destroys the drug. In 1962, a patient was found in England who lacked this enzyme. Giving this patient succinylcholine caused a cessation of breathing for about 3 hours requiring use of a respirator. No other effects of the enzyme deficiency have been observed. This condition is inherited, but is exceedingly rare in most populations, and up to the present only 7 cases in 6 families have been described throughout the world.

In early 1966, Dr. Brett Gutsche, anesthesiologist at the Alaska Native Medical Center, Anchorage, had two patients who stopped breathing for 3 to 4 hours after surgery, and suspected that pseudochlinesterase deficiency might be the cause. Investigations at the Arctic Health Research Center confirmed the deficiency of the enzyme. Since the families of both patients had their origin in the Mountain Village-Pilot Station area, a field investigation was begun.

The results have been that 19 persons in 11 families who lack pseudocholinsterase have been identified. All 19 individuals live in the area between Unalakleet and Hooper Bay and between Pilot Station and the mouth of the Yukon River. The investigation is still incomplete and it is anticipated that other enzyme deficient persons will be found.

The investigation is being actively pursued so that as many as possible of these people may be identified. The hospital records of these persons will be marked so that should an operation be indicated the use of succinylcholine will be avoided and other drugs be substituted. In addition, the remarkably high prevalence of the condition within this limited area offers a unique opportunity for scientific study of the enzyme deficiency.

ARTHROGRYPOSIS

Senator BARTLETT. Dr. Scott also reported a form of congenital—and I am going to spell this next one out, too—arthrogryposis has been found in 17 Eskimos in southwest Alaska.

This disease is familial, and is evident as an inability to move the joints freely. People with this condition usually are not able to walk. Researchers at Arctic Health Research Laboratory have discovered that this condition can be corrected by surgery. I was wondering, Doctor, if—I am sure you are fully aware of all this—if you have anything to add?

Dr. RABEAU. Well, sir, since the advent of the Arctic Health Research Center, we have worked closely with them, and have supplied material particularly on clinical research. They in addition, of course, do a great amount of basic research.

We are planning in the modernization of our Anchorage Medical Center to request a research unit similar to the one that will go in the new Phoenix Medical Center, and will be working very closely, not only with the National Institutes, but also with the AHRC in the utilization of this research unit.

Senator BARTLETT. Thank you.

Without objection, I am going to place the memorandum on arthrogryposis in the record.

(The memorandum follows:)

CONGENITAL ARTHROGRYPOSIS IN ESKIMOS

A form of congenital arthrogryposis has been found in 17 Eskimos in southwest Alaska. This disease is familial and is evident as an inability to move the joints freely. The patients are usually incapable of walking; two middle-aged brothers in Tanunak have walked on their knees all their lives.

Arthrogryposis can result from any of several causes; muscle disease, poor transmission in nerves, bone disease or involvement of tendons. The cases in Alaska are unusual in that they are accompanied by a peculiar abnormality of bone development.

Studies by the Arctic Health Research Laboratory have shown that in Alaskans with arthrogryposis the muscles are normal but weakened from disease, and that nerve conductance is normal. Accordingly, surgical treatment was begun at the Alaska Native Medical Center. The results have been encouraging; one fourteen-year-old boy is now walking for the first time in his life.

The cause of the disease is still unknown. Further research is needed to determine this, in the expectation of preventing the immobilization and thus avoiding surgery. Because of the considerable number of cases in a small population group, the opportunity for this research in Alaska is especially promising.

Senator BARTLETT. Dr. Rabeau, I want to thank you and your associates for your helpful testimony.

SUBCOMMITTEE RECESS

The committee will adjourn until 10 a.m., Thursday, March 16, when witnesses representing the National Gallery of Art and the Smithsonian Institution will be heard.

(Whereupon, at 12:20 p.m., Wednesday, March 15, 1967, the subcommittee was recessed, to reconvene at 10 a.m., Thursday, March 16, 1967.)

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS FOR FISCAL YEAR 1968

THURSDAY, MARCH 16, 1967

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, D.C.

The subcommittee met at 10 a.m., in room 1223, New Senate Office Building, Hon. Carl Hayden (chairman) presiding.

Present: Chairman Hayden and Senators Bartlett and Young.

NATIONAL GALLERY OF ART

SALARIES AND EXPENSES

STATEMENT OF JOHN WALKER, DIRECTOR; ACCOMPANIED BY E. JAMES ADAMS, ADMINISTRATOR; ERNEST R. FEIDLER, SECRETARY-TREASURER; LLOYD D. HAYES, DEPUTY ADMINISTRATOR

BUDGET REQUEST

Chairman HAYDEN. The subcommittee will be in order. There will be placed in the record the justification statement submitted by the National Gallery of Art in support of its budget estimate for fiscal year 1968 in the amount of $3,085,000. This is an increase of $263,000 over the amount appropriated for the past fiscal year.

(The justification follows:)

The 1968 appropriation proposed for "Salaries and Expenses, National Gallery of Art," is $3,085,000. This amount exceeds the current year's requirement of $2,822,000 by $263,000.

PROGRAM

Of the $263,000 increase, $240,000 is to provide additional space, personnel, and equipment for long-established activities where the workload is determined by the interest and participation of the general public in the Gallery's program, rather than by management decisions. The remaining $21,000 is for preliminary work in the acquisition and preparation of sculpture for a National Sculpture Garden.

NATIONAL SCULPTURE GARDEN

On May 21, 1966, the White House announced the agreement between the National Gallery of Art and the Department of the Interior for the establishment of a National Sculpture Garden. The Garden will be located just west of the Gallery on the four-acre area known as L'Enfant Square which is under the jurisdiction of the Department of Interior. Under the establishing agreement the National Gallery of Art is obligated to acquire the sculpture, prepare it for exhibition, supervise its installation, and maintain its condition. The Gallery is also responsible for conducting an educational program for the benefit of visitors to the Garden. All the sculpture pieces will be acquired by gifts or purchases from nonappropriated funds. In this request for 1968, $21,000 is included for the employment of a Curator of Sculpture and a Museum Technician to assist in the preparatory work for which the Gallery is responsible. One or two additional employees for the Sculpture Garden's education program may be required after the Garden is completed.

NEW POSITIONS FOR ESTABLISHED FUNCTIONS

In addition to the two positions for the new National Sculpture Garden, five new positions are requested to sustain the continuous growth of existing activities—three in the educational and curatorial activities, and two in administrative functions. The brief tabulation below provides some measure of the increased public interest in the National Gallery over the past ten years in comparison with the increase in staff during the same period.

	1957	1966	Percent increase
Visitors	942, 146	1, 577, 108	67
Participants in education activities (excludes extension service program)	85, 643	156, 609	83
Requests for expert opinions by private owners of art objects	346	1, 669	382
Average number of all employees	316	333	5

ALTERATIONS AND IMPROVEMENTS IN BUILDINGS

The largest and most urgent item of increase in 1968 is for alterations and improvements in the Gallery building to provide additional storage, library, office, and other work space. This project is planned for completion over a five-year period at an estimated cost of $200,000 per year. The 1968 request for this item is $193,000. An early start of the project is basic to the growth of public service and supporting functions which must be expanded if the Gallery is to meet its ever-growing nation-wide obligations.

AUTHORIZING LEGISLATION

This request for an appropriation is based on the premises contained in section 4(a) of the Joint Resolution of Congress, March 24, 1937 (20 U.S.C. 71–75) in which:

"The faith of the United States is pledged that * * * the United States will provide such funds as may be necessary for the upkeep of the National Gallery of Art and the administrative expenses and costs of operation thereof, including the protection and care of works of art acquired by the Board, so that the National Gallery of Art shall be at all times properly maintained and the works of art contained therein shall be exhibited regularly to the general public free of charge."

Salaries and expenses

Appropriation, 1966, including supplemental of $66,000	$2, 531, 000
Appropriation, 1967, including anticipated supplemental of $104,000	2, 822, 000

SUMMARY OF INCREASES AND DECREASES

1. To pay, on a full-year basis, wage-board pay increases effective Dec. 4, 1966	+7, 687
2. To pay within-grade promotions and wage-board step increases	+15, 570
3. To pay salaries and benefits for 2 new positions due to the establishment of the National Sculpture Garden	+20, 875
4. To pay salaries and benefits for 2 new administrative positions due to increased workload	+15, 752

Salaries and expenses—Continued

5. To pay salaries and benefits for 3 new positions due to increased workload in educational services	+$26, 816
6. To pay for alterations and improvements in the Gallery building to permit better utilization of space	+193, 000
7. To pay for new equipment to increase efficiency in accounting and duplicating activities	+18, 000
8. To pay for other increases	+9, 500
9. Reduction due to lower accident compensation payments and 1 less compensatable day	−9, 300
10. Reduction due to completion of building repairs and equipment purchases	−34, 900
Net change, 1968	+263, 000
Budget estimate, 1968	3, 085, 000

EXPLANATION OF INCREASES AND DECREASES

1. Extra cost in 1968 to pay wage-board increases granted December 4, 1966, $7,687

On December 4, 1966, pay increases, as authorized by law (5 U.S.C. 1082(7)), were granted to 80 employees in trades, crafts, and manual labor positions. Thus, for the current year the increases will be paid for only 15 bi-weekly pay periods. In 1968 the increases will be paid for the full year of 26 bi-weekly pay periods. The cost of the increases for the additional 11 pay periods is $7,687.

2. Within-grade promotions and wage-board step increases, $15,570

The estimated net cost of within-grade promotions and wage-board step increases was derived from an analysis of each position and present incumbent. This analysis gave consideration to: the incumbent's past service at the Gallery, his age, general health, step in grade, and prospects for promotion.

3. Participation in establishment of National Sculpture Garden, $20,875

The White House announced, May 21, 1966, the agreement between the National Gallery of Art and the Department of the Interior covering the establishment of the National Sculpture Garden. The Garden will be located on the four-acre area just west of the Gallery, known as L'Enfant Square. Under the establishing agreement, the Interior Department, which has jurisdiction of the land, undertakes the suitable development of the area for the agreed purpose. The National Gallery of Art is obligated to acquire the sculpture, prepare it for exhibition, supervise its installation, and maintain its condition. Also, the Gallery is responsible for conducting an educational program benefiting visitors to the Garden. All the sculpture pieces will be acquired by gifts or purchases from non-appropriated funds.

Although the Gallery has in its collections over 1700 works of art classed as sculpture, we have not employed an expert in this field of art for over 20 years. The responsibilities of the National Sculpture Garden greatly intensify our need for such an expert. The funds requested are for the employment of a curator, grade GS–13, and a museum technician, grade GS–7. The curator will participate in the appraisal, attribution, and selection of sculpture for the Garden, and the museum technician will assist the curator in the installation, care, preservation, and renovation of all sculpture in the custody of the Gallery.

4. Two new administrative positions due to growth in staff for substantive functions, $15,752

In the past 20 years only 1 new position has been requested for the offices providing administrative services for the Gallery's program—a GS–5 accounting clerk in the 1959 budget. Actually in 1948 there were 28 man-years employed in the administrative function compared to 25 man-years available in the current year. The tabulation below indicates the administrative overhead ratio for the years 1957, 1966, 1967 and 1968:

	Average number of all employees			
	Actual, 1957	Actual, 1966	Estimate, 1967	Proposed, 1968
(*a*) Administrative services personnel	29.8	25.0	25.0	27.0
(*b*) Program personnel	286.2	307.7	329.8	334.8
(*c*) Total all employees	316.0	332.7	354.8	361.8
Overhead ratio (percent) (a÷c)	9.4	7.5	7.0	7.5

The administrative problems and routine workload generated by the additional hours the Gallery is open to the public, from April 1 through Labor Day, are far greater than expected. As an example, during the past spring and summer we made 96 appointments of part-time guards to realize an average of 44 on duty—our plan called for an average of 52 on duty. Payroll work during the period, due to the heavy turnover, leave without pay, and overtime work was more than double that anticipated. Processing of personnel records for these and other part-time summer employees ran far beyond normal completion periods.

One payroll and leave clerk, GS–5, is proposed for 1968. This will provide 2 employees to devote full-time to that activity. The total time given to the function will be about 2.5 man-years compared with the 1.5 now available.

The second new employee requested for administrative services in a GS–11 administrative officer. For the past 10 years the Administrator has had no staff personnel to assign to management improvement projects, to assist in budget preparation and execution, or to prepare the increasing number of administrative reports to other agencies. Many internal directives and regulations have become obsolete during that period; others urgently needed to promote efficient operations have not been written. A revived records management program would relieve space and equipment pressures. In addition to the general administrative functions, building maintenance, space planning, protection, and public service activities for which the Administrator is responsble are requiring more executive direction with the growth in basic functions.

In our judgment, there is no need more critical in the interest of effective management than the two positions justified above.

5. Three new positions for educational programs, $26,816

Three new positions are requested for Gallery educational programs serving the public. Two positions, a GS–7 and GS–5, are for the Education Office. The third position, a GS–13 curator is for the Index of American Design.

The Education Office program for the benefit of Gallery visitors is presented in the following forms:

a. Information services available at both public entrances,
b. Regularly scheduled tours,
c. Scheduled tours by appointment.
d. Leaflets, in exhibition rooms, relating to the works of art,
e. Taper talks on works of art for LecTour reception in exhibition rooms,
f. Taped talks on special exhibitions for Acoustiguide users,
g. Printed texts on a different work of art each week,
h. Weekly Sunday program in auditorium on some aspect of art, and
i. Preparation of printed material and training of volunteers who conduct tours for area school children.

In addition, except for the summer, weekly radio talks are presented at the intermission of Sunday concerts.

The professional staff presently authorized for the Education Office consists of these positions:

1 curator, GS–13.
1 docent, GS–9.
3 docents, GS–7.
4 junior docents, GS–5.

Two additional professional positions are proposed for 1968—1 docent, GS–7, and 1 junior docent, GS–5.

Educational program workload (actual 1964–66, estimated 1967–68)

	1964	1965	1966	1967	1968	1968 over 1966 (percent)
Number of visitors served by tours and lectures	140, 458	141, 656	156, 600	164, 000	174, 000	11
Number of tours by appointment	460	467	610	700	800	31
Number of volunteer docents trained	130	126	159	166	176	11

In addition to better service to visitors through an increased number of tours, the additional 2 employees for this office will permit an increase in the number of galleries in which leaflets are available to visitors without charge.

The GS–13 curator requested for the Index of American Design will permit the continuation of the Index function at a relatively low level of activity in 1968 compared with years prior to 1960. In July of 1960 the staff of the Index was assigned the added responsibility of establishing and operating an extension service. At that time the staff consisted of the curator, a museum aid, and a secretary. Due to the phenomenal growth of the extension service, the effort now being devoted to the Index of American Design is that of one museum aid.

The Index collection consists of some 17,500 water color renderings of the crafts and folk arts of his country from before 1700 to about 1900. It was produced during the depression of the 1930's by the Works Progress Administration's Federal Art Project as a part of its program for providing work for artists. The Index was placed in the permanent custody of the National Gallery of Art in 1944. Renderings and records of the Index of American Design give students and the general public an opportunity to become familiar with the designs and craftsmanship of the early American cultural pattern. It provides artists, designers, and craftsmen with a source for an organic development of indigenous American design.

From 1945 to 1959 the Curator, Index of American Design wrote six books and twenty articles about the Index. Since 1959, the Index staff has lacked time to produce any written material on the Index for publication. Also, the number of people seeking material from the collection, which the staff has been able to assist, has decreased from 406 in 1959 to 304 in the past year. The new position will permit better service to the public seeking information from the collection, and provide the professional knowledge needed for better utilization of the collection for educational purposes.

6. *Alterations and improvements in Gallery building, $193,000*

Additional storage, library, office, and other work space is urgently needed for the supporting activities of the Gallery's program. Space occupied for these purposes has not been significantly increased since the opening of the Gallery in 1941. Growth in these activities over the past quarter-century and prudent planning for the future make it imperative to seek better utilization of present space. Also, certain alterations in the approach to the 7th Street Entrance are needed to make it suitable as a public entrance when the National Sculpture Garden is completed. To meet these present and future needs certain alterations and improvements are proposed for completion over the five-year period, 1968–1972. A brief outline of this plane, in the general order of precedence, follows.

Building Alteration and Improvement Projects for Fiscal Years 1968–1972

(1) Entrances to building from 7th Street:

(a) Widen 7th Street Drive to public entrance to provide two traffic lanes. (Present single lane was constructed for use as sidewalk.)

(b) Construct branches from 7th Street Drive to provide vehicular access to both northwest and southwest moats. (This is necessary to provide full utilization of areas hidden by moat walls.)

(c) Construct walk from 7th Street to entrance—to provide ready accessibility between Gallery and National Sculpture Garden.

(d) Relocate northwest moat wall to conform more closely to design of northeast moat wall in order to provide adequate service area for delivery of materials to the basement.

(e) Install elevator adjacent to west building wall in northwest moat to provide suitable means of moving materials in and out of basement.

(2) Construct building, with basement, in northwest moat for housing Extension Service activity.

(3) Install metal decking in general storeroom (G-137) east of north-south ceiling beam to provide storage on deck for the equipment parts, plumbing supplies, etc. now in bin storage at ground-floor level. The ground-floor level vacated to be used to meet need for additional storage space for Publications Fund sales merchandise.

(4) Rearrange or relocate in basement the present basement shops and move carpenter and paint shops (now on ground floor) to basement.

(5) Make necessary alterations in vacated carpenter and paint shops for occupancy of these spaces by the Supply Office and Duplicating Unit.

(6) After minor alterations in present area occupied by Supply Office and Duplicating Unit, move Publications Office to that space with needed expansion of the facilities for the mail-order activity.

(7) Remodel present Main Floor Publications and Check Room to be largely vacated by consolidating all sales facilities on Ground Foor. This room and the long area to the west which has never been fully utilized should provide facilities for Information, checking, LecTour and guard activities.

(8) Construct laborers locker rooms in upper area of east end of Fan Room 164 and Cleaning Equipment Room 163 and vacate present rooms 144 through 149 used for that purpose.

(9) Remodel Photographic Laboratory and extend it into spaces vacated in (8) above as necessary—installing new automatic processing equipment.

(10) Construct two or more partitions in Office 101-C to provide two additional offices for general administrative functions.

(11) Vacate Office 131-A to provide additional facilities for Registrar and Expert Opinion activities.

(12) Erect wall running north and south across open area adjacent to Registrar's storeroom, office, and vault to provide additional secure space for works of art received or awaiting shipment.

(13) Construct gardening shop and storage facility in southwest moat and extend greenhouse, thereby vacating space 73-75 which will be needed for exhibition rooms. (All space requirements for the complete gardening function to be provided in this new facility.)

(14) Construct new Restoration Studio over unfinished area 73-75 on Main Floor.

The $193,000 request for building alterations and improvements to be undertaken in 1968 is the estimate made by the General Services Administration, at the request of the Gallery, for the following work: Widen 7th Street Drive to public entrance to permit two-way traffic. Relocate granite curb; install bronze gates at moat walls at two locations. Relocate northwest and southwest moat walls.

7. *Equipment to increase efficiency of duplicating and accounting activities, $18,000*

Duplicating services for the Gallery are provided by 1 employee who operates an offset duplicator, an embossing machine for making addressing machine plates, and an addressing machine. With the present machines the operator is unable to carry the duplicating workload. Of the some 1¼ million pages duplicated in the past year more than half were printed on both sides of the paper sheets. A machine with two duplicating heads would have saved an estimated 400 hours of the operator's time. While such a machine costs $7,500, we believe its use will solve the duplicating workload problem without the assignment of additional personnel to the function.

The accounting and posting machine used in the recording of payrolls and other fiscal operations was purchased in 1959. The capacity of this machine is not sufficient to accumulate totals on all payroll items which must be recorded and reported. To that extent the efficiency to be gained from machine posting is largely lost. A modern machine with adequate capacity for all fiscal operations will cost an estimated $10,500.

8. Other increases, $9,5000

(1) *Payment to the Civil Service Commission for recruiting services.*—By letter of September 19, 1966, from the Chairman of the Civil Service Commission, we were given an estimate of $7,300 as the Gallery's share of the costs for operation of the interagency recruiting program. The letter states that the amount was computed under a formula approved by the Bureau of the Budget. This estimate exceeds by $3,900 the charge for the service in the current year.

(2) *Frames for George Catlin paintings.*—In the past year 351 paintings by George Catlin were received as a gift from Paul Mellon. The paintings are to be loaned for exhibition by smaller museums throughout the country. Most of these paintings must be framed before they can be exhibited. The $5,600 requested will provide frames for about one-third of the paintings. Additional funds for this purpose will be requested in subsequent years.

9. Decrease in accident compensation payments and one less compensable day, —$9,300

Accident compensation costs for fiscal year 1966 were $600—$1,600 less than for 1965. Reimbursement to the Department of Labor for 1965 costs of $2,200 is from the current year's appropriation. The reimbursement in 1968 will be for the $600 covering 1966 costs.

In the current year there are 261 compensable days. Only 260 compensable days occur in fiscal year 1968. For this reason, total personnel compensation payments in 1968 will be $7,700 less than in 1967.

10. Completion of building repairs and equipment purchases, —$34,900

The non-recurring items in the current-year budget are:

Repair of granite platform	$25,000
Repair of ventilating fans	6,500
Film inspecting machine	3,400

EXPLANATION OF PROPOSED CHANGES IN APPROPRIATION LANGUAGE

1. The addition of the words, "alteration, improvement," provides the authority required to use the appropriation for the construction work proposed for 1968.

2. Change of the $15,000 limitation for restoration and repair of works of art provides a reasonable allowance over the $13,000 annual contract for restoration of paintings should work beyond the scope of the contract be necessary. No additional amount over that available for the current year is requested for 1968.

STATUS OF PROGRAM

CHANGES IN MANAGEMENT REQUIREMENT

The average employment in 1966 (including the full-time equivalent of part-time and intermittent employment) was 333—11 man-years under the approved figure of 344. Our inability to achieve the planned level of employment was due primarily (as in other recent years) to the shortage of suitable applicants for laborer and guard positions. Employee turnover was unusually heavy, especially in the part-time positions related to the extended hours the gallery was open during the summer and spring. Overtime work due to periodic guard shortages and the lack of dependable part-time help cost about $24,000 more than planned.

Estimated average employment for the current year is 354—about 6 under the number planned prior to pay increases. The cost of pay increases in the present year totals over $123,000. A supplemental appropriation of $104,000 is being requested to help pay this additional expense. Based on operating costs of the past year, supplies, utilities, etc. required in the operation of the gallery are expected to run some $20,000 higher than estimated in the 1967 budget.

Funds are requested for fiscal year 1968 to support an average employment of 361. This increase of 7 over the current year includes: (*a*) 2 new employees due to the establishment of the National Sculpture Garden; (*b*) 2 additional employees in administrative services; and (*c*) 3 new employees for educational services provided the general public. The major item of increase over the current year covers certain alterations and improvements of the Gallery building to permit better utilization of space and provide suitable public access to the building from Seventh Street and the new National Sculpture Garden. The work planned for 1968 is estimated to cost $193,000.

ACCESSIONS

During the 1966 fiscal year 380 works of art were acquired, including the Paul Mellon collection of paintings by George Catlin.

SPECIAL EXHIBITIONS

The following exhibitions were held at the National Gallery of Art during the fiscal year 1966:

The Chester Dale Bequest—continued from the preceding fiscal year.

Graphic Arts from the Chester Dale Collection—continued from the preceding fiscal year through August 18, 1965.

Exhibition Illustrating Richard Bales' Index of American Design Suite No. 4—continued from the preceding fiscal year through August 6, 1965.

Exhibition of Rembrandt's Portrait of the Artist's Son Titus—on loan from the Norton Simon Foundation—continued from the preceding fiscal year through December 5, 1965.

Sketches by Constable from the Victoria and Albert Museum—continued from the preceding fiscal year through July 5, 1965.

White House Festival of the Arts Exhibition—continued from the preceding fiscal year through July 11, 1965.

19th and 20 Century European Drawings—July 11 through August 29, 1965.

19th and 20th Century Prints—August 6 through November 4, 1965.

British Mezzotints from the 18th and Early 19th Centuries—September 18 through October 31, 1965.

John Singleton Copley: A Retrospective Exhibition—September 19 through October 31, 1965.

Treasures of Peruvian Gold—October 14 through November 28, 1965.

Christmas Prints—November 5, 1965 through January 12, 1966.

Dürer and His Time—November 14 through December 12, 1965.

Modern French Prints from the Rosenwald Collection—December 11, 1965 through March 9, 1966.

Fifteenth-Century Woodcuts and Metalcuts from the Collection of the National Gallery of Art—December 19, 1965 through January 30, 1966.

Bruegel Prints from the Rosenwald Collection—January 13 through March 8, 1966.

French 18th Century Prints from the Widener Collection—March 9, 1966, to continue into the next fiscal year.

Etchings by Rembrandt in the Collection of the National Gallery of Art—March 11, 1966, to continue into the next fiscal year.

Drawings from the Collection of the National Gallery of Art—February 5 through April 17, 1966.

French Paintings from the Collections of Mr. and Mrs. Paul Mellon and Mrs. Mellon Bruce—March 17 through May 1, 1966.

Twenty-Five Years of National Gallery Publications—March 17 through May 1, 1966.

Art Treasures of Turkey—June 5, 1966, to continue into the next fiscal year.

Exhibitions of recent accessions: The Wife of Hasdrubal and Her Children by Ercole Roberti, *Elizabeth Throckmorton* by Largilliere, and *Portrait of a Man* by Corneille de Lyon—August 10 through October 25, 1965; *The Marquise de Pezé and the Marquise de Rouget with Her Two Children* by Vigée-Lebrun—November 9, 1965 through January 12, 1966; *Daniel in the Lions' Den* by Rubens—January 12, 1966, to continue into the next fiscal year; *Saint George and the Dragon* by Rogier van der Weyden—May 6, 1966, to continue into the next fiscal year; and *A Lady in Writing* by Vermeer—May 20, 1966, to continue into the next fiscal year.

CURATORIAL SERVICES

Advice was given regarding 1,669 works of art brought to the Gallery for expert opinion, and 36 visits to collections were made by members of the staff in connection with offers of gifts. About 6,771 inquiries, many of them requiring research, were answered verbally and by letter. The material in the Index of American Design was studied during the year by 304 persons doing special research or seeking material for publication and design.

EXTENSION SERVICE

This service circulates to the public traveling exhibitions, Gallery films, slide lecture sets, and film strips. There are 149 exhibits in circulation, lent free of charge except for transportation costs. These were circulated in 1,122 bookings and were seen by an estimated 561,000 viewers. Eleven special exhibits, lent to a church organization for circulation in 190 bookings, were seen by 66,414 viewers. One copy of a large panel exhibition *Physics and Painting* circulated by the Traveling Exhibition, Smithsonian Institution in 8 bookings, was seen by an estimated 5,600 viewers. Fifty copies of three films on paintings in the National Gallery of Art were circulated in 417 bookings and were seen by an estimated 125,100 viewers. A total of 2,160 sets of slide lectures on 14 subjects were circulated in 6,872 bookings and seen by approximately 412,320 viewers. In the past year the Extension Service reached approximately 1,170,434 people, an increase over last year of 199,371. In addition, the Index of American Design had 31 traveling exhibits (booked 65 times), and there were 135 bookings of Index slide sets.

EDUCATION OFFICE

The staff of the Education Office continued to give daily tours and talks in the galleries, morning and afternoon, throughout the year. The attendance for the scheduled tours was 40,123. Lectures, conferences and tours given by special appointment served 20,888 visitors. There were 50 Sunday auditorium lectures illustrated with art films or slides, attended by 14,975 persons. Members of the Education Office prepared and recorded 30 radio broadcasts during the year.

LIBRARY ACQUISITIONS

During the year the Gallery Library acquired 724 books, 2,575 pamphlets, and 3,136 periodicals. The Library now has 23,613 books, 20,494 pamphlets, and 1,944 bound volumes of periodicals.

PHOTOGRAPHIC LABORATORY

The Photographic Laboratory of the Gallery made 31,188 color slides, 83 black and white slides, 2,443 negatives, 784 color transparencies, and 115 infrared and ultraviolet photographs, in addition to the prints required for study work and sale to the public.

CONCERTS

The Sunday evening concerts in the East Garden Court, which are provided from private funds, were continued throughout the year. These concerts are free to the public.

ATTENDANCE AND MAINTENANCE

There were 1,577,108 visitors to the Gallery during fiscal year 1966. This represents an increase of 324,006 over the 1965 attendance. From July 1 through Labor Day, 1965, and April 1 through June 30, 1966, the Gallery was open to the public from 10 A.M. to 10 P.M. on weekdays and from noon to 10 P.M. on Sundays. For the remainder of the year the Gallery was open to the public every day save Christmas and New Year's Day on a schedule of 10 A.M. to 5 P.M. on weekdays and 2 P.M. to 10 P.M. on Sundays. Visitors during the additional hours in the summer of 1965 and the spring of 1966 numbered 154,911. The average daily attendance for the year was 4,345. The Gallery as a whole was maintained at a standard in keeping with the conditions of the gift of the building and the initial collection of works of art.

Obligations by object classification

		1966 actual	1967 estimate	1968 estimate
11	Personnel compensation	$2,071,942	$2,294,900	$2,368,700
12	Personnel benefits	142,458	162,300	165,900
21	Travel and transportation of persons	8,436	8,000	8,000
22	Transportation of things	331	400	400
23	Rent, communications, and utilities	150,537	154,300	154,300
24	Printing and reproductions	10,554	27,000	27,000
25	Other services	44,433	69,500	44,500
	Services of other agencies	1,375	4,800	8,700
26	Supplies and materials	81,233	89,400	88,500
31	Equipment	18,770	11,400	26,000
32	Lands and structures			193,000
	Total obligations	2,530,069	[1] 2,822,000	3,085,000

[1] 1967 column includes anticipated supplemental of $104,000 for pay act and wage board increases.

PREPARED STATEMENT

Chairman HAYDEN. Mr. Walker, would you please submit your prepared statement for the record, and highlight it for the committee?

Mr. WALKER. Yes, sir; I would be delighted to.

We have submitted our statement.

(The statement follows:)

The 1968 appropriation proposed for "Salaries and Expenses, National Gallery of Art," is $3,085,000. Authorization for the appropriation is based on the Joint Resolution of Congress, approved March 24, 1937, in which the faith of the United States is pledged to provide the funds necessary for the upkeep, administrative costs, and operating expenses of the Gallery. Appropriated funds are not used to purchase works of art. All works of art in the Gallery's collections have been acquired solely by gifts from private collectors, and purchases from funds donated for that purpose.

The net increase of $263,000 over the requirement for the current year is due primarily to the phenomenal growth of the collections over the past quarter century, the ever-increasing interest of the general public in the arts, and the need for building improvements and alterations to provide the physical facilities to support that growth.

Specifically, the items of increase are:

(1) $20,900 for two new positions to assist in the acquisition and preparation of sculpture for the National Sculpture Garden;

(2) $193,000 for alterations and improvements required to provide suitable access to the Gallery building from Seventh Street;

(3) $42,600 for five new positions to meet workload increases in educational and administrative functions;

(4) $23,200 for within-grade promotions, wage-board step increases, and the full-year cost of a wage-board rate increase granted last December;

(5) $18,000 for the purchase of new equipment to improve the efficiency of duplicating and accounting activities;

(6) $5,600 for the purchase of 100 picture frames; and

(7) $3,900 for an increase in the payment made to the Civil Service Commission for the interagency recruiting program.

The first increase mentioned relates to the establishment of the new National Sculpture Garden which was announced by the White House on May 21st of last year. In this undertaking the National Gallery of Art is joining with the Department of the Interior to create and maintain an outdoor garden of sculpture on the plot just west of the Gallery. This four-acre area, known as L'Enfant Square, is under the jurisdiction of the Interior Department. Our obligation consists of: acquiring the sculpture, preparing it for exhibition, supervising its installation, maintaining its condition, and conducting an educational program benefiting visitors to the Garden.

The location of the National Sculpture Garden across the street from the west entrance to the Gallery creates a need to open that entrance for public use. Moreover, the entrance must be opened when work specified in the Mall and Pennsylvania Avenue plans cuts off vehicular traffic to the Sixth Street entrance on Constitution Avenue. The $193,000 requested for alterations and improvements covers the construction of appropriate drive and walkways from Seventh Street to the west entrance, as well as other building modifications adjoining that work which are necessary to gain suitable access to space in the basement. Without that access the basement area can never be fully utilized.

Full utilization of the basement area and other non-exhibition space allotted to supporting activities has become imperative for two reasons:

(1) storage, office, and other work areas are now inadequate, and

(2) unfinished areas planned, and now needed, for exhibition rooms are presently being used for supporting purposes.

Our total plan for improved utilization of non-exhibition space extends over a five-year period at an estimated annual cost of $200,000. During the same period additional exhibition rooms will be constructed as needed within unfinished areas allotted for that purpose. That construction of new exhibition rooms will be financed, as in the past, from private funds.

This private-fund program for the completion of unfinished exhibition space, as required due to the growth of the collections, is in accord with the intent of the donor of the building. Over the past twenty years, twenty-seven new exhibition rooms have been constructed from private funds at a cost of some two and one-half million dollars. At the present time, we have 112 completed rooms and reserved space for the construction of about 20 more. There are private funds for the completion of these rooms. There are no private funds for the alterations and improvements I have described. The growth of the Gallery's program makes such alterations necessary at this time.

That growth is the result of the ever-increasing public interest in the National Gallery, and is the prime reason for the increases in staff which we are requesting. Some measure of the increased public interest is: the 700 percent increase over the past five years in the persons benefiting from our extension program; the 83 percent increase over the past ten years in the visitors participating in Gallery education activities; and the 67 percent increase in attendance over the past ten years. The increase in employment over the same period has been only five percent.

Last year 1,577,108 persons visited the National Gallery of Art for an increase of 26 percent over the preceding year.

NATIONAL SCULPTURE GARDEN

Mr. WALKER. I will summarize the increases for you, sir, if I may. There is an increase of $20,900 for two new positions to assist in the acquisition and preparation of sculpture for our National Sculpture Garden. You may remember that the White House announced that just west of the National Gallery of Art, opposite the Archives, the Interior Department and the National Gallery are to collaborate to have a sculpture garden there. We need a curator to help us collect the sculpture, but we also need a curator for the gallery itself, because we started out with 23 pieces of sculpture in 1958 and today we have 1,700 pieces of sculpture, including probably the greatest collection of medals, plaquettes, and small bronzes there is anywhere in the world. In Renaissance sculpture, neither of Louvre nor the Victoria and Albert Museums nor the German Museums can surpass what we have here in Washington.

BUILDING ALTERATIONS AND IMPROVEMENTS

The largest item in the increases is the sum of $193,000 for alterations and improvements required to provide a suitable access to the gallery building from Seventh Street. I think we need this money for several reasons I consider vital, but if I may, sir, I would like to ask the Administrator, Mr. Adams, to tell you about that item.

Chairman HAYDEN. Well, you can finish your statement, and we will hear from him later.

Mr. WALKER. All right, fine.

NEW POSITIONS

Then there is another item for $42,600 for five new positions to meet workload increases in educational and administrative functions. I will speak about the educational requirements; Mr. Adams will speak later about the administrative ones.

EDUCATIONAL SERVICES

I am sure you will be pleased to know, sir, that we now reach, through our extension services, a million four hundred thousand people around the country. That is almost as many people as come to the gallery itself. We send them movies and slide lectures, and material of this kind, so that when they do come to Washington—and most of them do, eventually—the gallery is more meaningful.

This extension service has increased 700 percent in the last 5 years. Within the gallery itself there has been an 83-percent increase in the number of visitors who use our educational services, and we simply need more help to give our lectures, our tours, our radio broadcasts.

Though we have gone up 700 percent in extension services and 83 percent in educational activities, and 67 percent in the people who visit the gallery, I am very proud to say that we have gone up in employees only 5 percent in the past 10 years; so I think we really do need these people very badly. Of course, when we have more visitors, then there is more work in the administrative section. Mr. Adams will speak about that later. And also we need about $18,000 for new equipment. We are asking a small amount, $3,600 for the purchase of a hundred picture frames. Paul Mellon gave us 351 paintings by Catlin, the famous painter of Indians. This is one of the two important collections of Catlin's work. The other is at the Smithsonian Institution.

CATLIN PAINTINGS

In the case of the Catlin paintings in the National Gallery, it is Mr. Mellon's wish and our intention that these be placed on long-term loans in smaller museums, especially in the West. We have lent to the Buffalo Bill Museum in Cody, Wyo., 72 paintings; to the Jefferson National Expansion Memorial in the old courthouse in St. Louis 26 paintings; to the Joslyn Art Museum, Omaha, Nebr., 35 paintings; and to an artmobile in Arkansas, 18 paintings. We want to frame a hundred more pictures and send them out in the same way.

VISITOR ATTENDANCE

I am sure, sir, that you will be pleased to know that last year 1,577,000 people visited the National Gallery of Art, which represents an increase of 26 percent over the preceding year.

That concludes my part of the statement, sir. I know Mr. Adams will be glad to fill you in on the other part.

NATIONAL SCULPTURE GARDEN

Chairman HAYDEN. A portion of the increase is for personnel necessary to establish the National Sculpture Garden. Would you please describe what is proposed for the garden, and indicate, if you can, when it is to become operative?

Mr. WALKER. George Hartzog of the Park Service, Department of the Interior, tells me that he hopes to begin actually constructing the sculpture garden shortly after the first of July. I think it will take about a year to complete, but while it is being completed, we ought to begin ordering, out of private funds—because we have raised private money for this—the sculpture to adorn it.

Chairman HAYDEN. Have any pieces of sculpture yet been acquired for it?

Mr. WALKER. No, sir; not as yet. We are waiting to get the design for the garden, and we hope to begin commissioning them after July.

Chairman HAYDEN. Of the 1,700 pieces of sculpture which you indicate are now in the gallery, are any of these to be placed in the garden?

Mr. WALKER. No, sir; they are too fragile, and too precious to be shown out of doors. Only certain kinds of sculpture can be shown in the park in all weather.

NEW POSITIONS

Chairman HAYDEN. I see. Aside from the two positions sought for the National Sculpture Garden, five employees are being sought. Would you please explain the need for these employees, and their proposed duties?

Mr. WALKER. In 1961 we started our extension service, which I spoke about. This service has been immensely successful. It sends moving pictures, slide lectures, and exhibitions around the country. In 1961, I took the curator of the Index of American Design and put him in charge of this. Due to the extraordinary expansion of our extension services, he has not been able to fulfill his duties in both jobs. We need a second man to take care of the Index of American Design which is a very important part of our collection. Two of the other jobs are for docents to take care of the increased number of visitors coming to the gallery. There are some increases of personnel for administration. Jim, would you talk about those?

ADMINISTRATIVE POSITIONS

Mr. ADAMS. Mr. Chairman, in the past 20 years, we have had only one new position for administrative services for the gallery's program. That was a GS-5 accounting clerk, which was included in our 1959 budget. Actually, we now have three fewer employees in the administrative function than we had in 1948. Our administrative overhead ratio, that is, the number of employees performing administrative services divided by the total number of employees, in 1957 was 9.4 percent; in 1966, it was down to 7.5 percent. In 1967, the current year, it is down to 7 percent. If you allow us the two administrative positions we are asking for, the ratio would come back up to 7.5 percent, where we were last year.

PAYROLL CLERK

One of the positions we are asking for is a helper for our payroll clerk. We have only one man who is responsible for the preparation of our payroll. We have a very complicated payroll, because we have a 24-hour operation, 7 days a week, which involves numerous differentials and premiums. Furthermore, as you know, deductions such as for health insurance, life insurance, United Giver's Fund, and State taxes, have increased the complexity of the payroll operation.

Our summer evening hours have added to the complexity. Last summer, it was necessary for us to hire 96 temporary guards to produce an actual average of 44 on the payroll. These comings and goings slowed down the payroll work during the period, and the processing of our personnel records ran far behind. We were criticized on several occasions in the press for being slow pay. In fact, on one occasion, when the papers were criticizing an entirely different agency, for emphasis they said, "Why, those people are even worse than the National Gallery of Art."

Finally, the man who is our payroll clerk is now crowding the mandatory retirement age, and we think it would be wise to be bringing somebody up behind him.

ADMINISTRATIVE OFFICER

The second new employee we are requesting for administrative services is a GS–11 administrative officer. For the past 10 years, we have had no staff personnel to assign to management improvement projects, to assist in the preparation of this budget now before you, to aid in execution of the budget, and to prepare the increasing number of reports required by other agencies. Many of our own internal directives and regulations have become obsolete during this period; others urgently needed to promote efficient operations have not been written. A revived records management program would relieve space and equipment pressures.

In addition to the general administrative functions, building maintenance, space planning, protection, and public services activities are requiring more executive direction, with our growth in basic functions. We believe this is a real and critical need and that these additional positions will pay for themselves in increased efficiency.

BUILDING ALTERATIONS AND IMPROVEMENTS

Chairman HAYDEN. Also, I believe you should explain briefly what you propose by way of alterations and improvements in the National Art Gallery building.

Mr. WALKER. Would you speak about that?

Mr. ADAMS. Mr. Chairman, when our building was constructed, it was designed to allow for the expansion of exhibition space over the years. When the building was opened, we had 85 exhibition galleries finished. In the past 25 years, we have completed 27 additional exhibition galleries, and we have space available for about 20 more exhibition galleries to be finished in the future; but there is no room available for the expansion of offices, shops, and other work areas required for the services which support the activities of the gallery. The only course available is to modernize our existing facilities so as to provide for the most efficient use possible of the finite space we have available for that purpose. I am speaking now of such mundane but necessary matters as supply storage, art storage, our carpenter shop, our machine shop, our paint shop, our electrical shop, our duplicating unit, locker rooms, checking facilities, photo lab, cleaning equipment rooms, gardeners' shops, and the like.

We are proposing to you a long-range plan for this purpose. The first step in the plan is to move toward gaining more effective access to our basement, in order to better utilize the space available there, by moving shops from the ground floor space, and thus freeing ground floor space for more appropriate use. Other steps would follow in succeeding years as outlined on pages 13 to 16 of our submission, which you have.

Now it happens that our basement exists only at the west end of our building, so that the first step we are proposing will serve the additional purpose of improving that entrance to the building, which is now closed, for use in connection with the sculpture garden to which Mr. Walker referred. The sculpture garden will be right across Seventh Street from that entrance. Also, that entrance will have to be used as the main ground grade entrance to the building during the period of construction when Constitution Avenue is being lowered to pass under Pennsylvania Avenue as proposed by the Pennsylvania Avenue Commission. Specifically, our request is for $193,000 for this work. We would widen the Seventh Street drive to the public entrance to permit two-way traffic. We would relocate the granite curb. We would install bronze gates in our moat walls in two places, and we would relocate the northwest and southwest moat walls.

In short, we are bursting at the seams, and we need your help to rearrange ourselves to take better advantage of the limited space available to us. We need to start at the earliest possible time, because at best it will be 2 or 3 years before we gain any actual usable space, from our own program.

SALES FACILITIES

Chairman Hayden. With respect to your sales facilities, how large a sales staff do you now have?

Mr. Hayes. We would have about 18 all together. Part of those are paid from the income from the fund. As a matter of fact, a majority of them are, at this time.

Chairman Hayden. What is the cost of your sales operations?

Mr. Adams. The cost to the Government? About $80,000 in payroll costs.

Chairman Hayden. What gross income do you have from the sales operation?

Mr. Adams. Gross income, Mr. Chairman, is right around a half million dollars. This sales operation is a very interesting and fascinating system, which has grown up from practically nothing, over the years until it is now, as the sales indicate, a very large operation. It is very complicated. We would be more than delighted if you or any member of the committee or Mr. Eaton could come down some day and go through the entire operation with us, to see how we decide what we are going to sell, how we order it, how we produce it, how we stock it, how we sell it, and how we account for the proceeds.

GINEVRA DE'BENCI BROCHURE

Now let me give you an example, if I may, if you are interested, Mr. Chairman, in how it works. This, of course, is our new picture, which we just acquired, to which we have invited Members of Congress to a preview tonight, and which will go on exhibition to the public tomorrow. We felt that we had a duty to provide information about this picture to the public, so we have prepared quite hastily but, we think, very well, a small booklet about our new acquisition, which we will sell through this program. It costs us 7.6 cents to produce this booklet, to get if off the press. Our expenses run about one-third, so we are selling this for a dime to the public, as a service, to the citizens of this country and the visitors to the gallery. I believe we could probably get 50 cents easily for this, or possibly even a dollar; but it is not our purpose, with this operation, to make money. It is our purpose with this operation to provide information and educational services to the public.

Senator YOUNG. May I ask a question? How much does it cost you?

Mr. ADAMS. 7.6 cents, and we are selling it for a dime, up a third.

Senator YOUNG. Off the record.

(Discussion off the record)

Mr. ADAMS. I believe this would sell at a dollar or more, but we are trying to make it available to as many people as we possibly can. Therefore, we are trying to keep the prices in this operation at a level which makes possible a wide distribution for educational purposes.

We had to buy, I may say, 125,000 of these, in order to get the price down to 7.6 cents, so we have a lot of selling to do.

Senator YOUNG. Where did you get that printing done?

Mr. ADAMS. This printing was done by the H. K. Press here in Washington.

Senator YOUNG. You must have done some shopping around. That is a real cheap price for that kind of publication.

Mr. ADAMS. We believe we have a bargain here, and we are passing the bargain on to the visitors to the gallery, and, I may say, many people who order by mail. This is a catalog of all the material that we have in this sales operation for the public. There is a provision by which you can order through the mail, and we would expect to sell a great number of these through the mail.

SALES RECEIPTS

Chairman HAYDEN. Now are these receipts paid into the general fund of the Treasury, or what do you do with them?

Mr. ADAMS. The receipts revolve, Mr. Chairman. We take the receipts and use them to buy more merchandise, including buying more merchandise than we had before, so that our inventory is constantly expanding to support larger sales. Our aim is to have represented here for sale a reproduction of every work of art that is on exhibition at the gallery.

Chairman HAYDEN. We thank you for your appearance.

Mr. WALKER. Thank you, sir.

THURSDAY, MARCH 16, 1967.

SMITHSONIAN INSTITUTION

STATEMENT OF S. DILLON RIPLEY, SECRETARY; ACCOMPANIED BY JAMES BRADLEY, ASSISTANT SECRETARY; SIDNEY R. GALLER, ASSISTANT SECRETARY (SCIENCE); WILLIAM W. WARNER, DIRECTOR, OFFICE OF INTERNATIONAL ACTIVITIES; AND EDWARD H. KOHN, DIRECTOR, OFFICE OF PROGRAMING AND BUDGET

BUDGET REQUEST

Chairman HAYDEN. The Smithsonian Institution.

Mr. RIPLEY. Mr. Chairman, good morning.

Chairman HAYDEN. Good morning, sir. There will be placed in the record the general statement submitted with the budget justification of the Smithsonian Institution, together with a number of other statements containing information about the Institution.

(The statements follow:)

GENERAL STATEMENT

The Smithsonian Institution, established by the Act of August 10, 1846, is devoted to public education, basic research, and national service in science, learning, and the arts. The Institution, with its wide array of research and education facilities for both the scholar and the general public, is richly endowed with many of the resources that can create a fuller and more meaningful life for the American people.

In dedication to the high purposes of its founder, "the increase and diffusion of knowledge among men," the Smithsonian for well over a century has been concerned with the nature of man, the organization of life, and the nature of the physical universe.

The Institution performs fundamental research and publishes the results of studies, explorations, and investigations. In the National Collections it holds for study over 60 million valuable items of scientific, cultural, and historical interest. It presents public exhibitions in the arts, history, and science.

The museums and art galleries are a powerful but still little understood force for the free education of approximately thirteen million of our fellow citizens who visit these exhibitions every year. The rewarding experience of these visits is made possible only because, in our conception, this Institution constitutes a company of scholars, brought together to use and to interpret the National Collections and to pursue original investigations and research. One of our concerns is the study of what constitutes the creation of awareness and interest in people as a result of viewing exhibits. We believe the solution of this problem can represent a significant contribution to the educational process.

The "Salaries and Expenses" appropriation finances the continuing operations of the Smithsonian Institution. The Institution maintains public exhibits representative of the arts, American history, aeronautics, space, technology, anthropology, geology, and biology; preserves for reference and study purposes millions of valuable objects of scientific, cultural, and historic interest; conducts research in the natural and physical sciences and in the history of cultures, technology, and the arts in the United States and in many foreign countries; and participates in the international exchange of scientific literature and art. The areas of research in the sciences include anthropology, biology, earth sciences, solar radiations, and astrophysics. The Smithsonian is also undertaking an extensive program of classification and study of marine organisms collected in connection with the Government's expanded oceanographic program.

The Institution administers 3 museums, 5 scientific programs, 4 art galleries, the Armed Forces Museum Advisory Board, and associated international programs. It is responsible for the operation and maintenance of 7 main exhibition buildings; the Astrophysical Observatory in Cambridge, Massachusetts; the Tropical Research Institute in the Canal Zone; the River Basin Surveys in Lincoln, Nebraska; and seven other research, storage and service facilities.

Under the "Salaries and Expenses" appropriation, funds in the amount of $25,100,000, an increase of $2,577,000, are requested in order to fulfill more adequately our two primary objectives—

The education and inspiration of the Public through museum and art gallery presentations and services; and

The advancement of knowledge through original research and scholarship in history, art and science.

The United States National Museum requires an increase to serve the accelerating national interest in the preservation and study of natural and manmade objects as a basis of understanding our history, our civilization, and man's environment. An expanded program of museum training, publication and consultation will be supported. The care of permanent exhibits and preservation of valuable objects will be made more adequate, and the effectiveness of museum presentations will be studied.

The Museum of History and Technology, with its emphasis on the development of the United States, requires an increase to stepup its preparation for the commemoration of the Bicentennial of the American Revolution. Additional specialists and technicians are required in order that this museum may utilize its collections as a living center for exhibition and research on American cultural growth.

The Museum of Natural History, an international center for the natural sciences with the Nation's largest collections of scientific material and specimens, requires an increase to alleviate substandard levels of technical staffing support. Access to its great stores of data must be modernized to meet a growing demand for cooperative research and education with national and international agencies and universities.

The National Air and Space Museum, in carrying out its responsibilities under the Act of July 19, 1966, requires an increase to develop exhibits to reflect space flight accomplishment, update present exhibits and acquire notable representations for its planned new building.

The National Collection of Fine Arts and the National Portrait Gallery respectively charged with the missions of establishing in the Nation's Capital a permanent survey and presentation of American art and of portraiture and statuary of the contributors to the Nation's history and development, require increases to prepare notable openings of their great new galleries to the American Public in 1968.

The Joseph H. Hirshhorn Museum and Sculpture Garden requires a small initial staff to commence planning for the newly authorized Museum to house the gift to the American people of the Hirshhorn collection of paintings and sculpture.

The Astrophysical Observatory, in continuing its basic research program on the origin and the matter of the solar system and the universe, needs additional funds for planned stages of growth in the fields of radio and gamma-ray astronomy, meteorites, meteors and comets, theoretical astrophysics, optical observations, and planetary and lunar studies.

At the Tropical Research Institute in the Canal Zone small increases in staff and technical support are needed to continue its program of research and inter-American cooperation for tropical research in environmental biology and other natural sciences.

The Radiation Biology Laboratory requires funds to alleviate marked deficiencies in supporting staff and equipment while carrying on its pioneering research on the effects and controls of radiation on the functions of living organisms.

In order to engage more efficiently the many resources of the Smithsonian in the national and world effort to study man and his environment, a small increase is sought for the coordinating efforts of our Office of Ecology.

The Smithsonian's program in marine science serves growing national and international requirements for research on the future harvest of the food and mineral resources of the seas. Efforts to determine what the crops are and where they will grow require faster identification of specimens from ocean surveys and expeditions. Increased funds are sought so that the Smithsonian Oceanographic Sorting Center can meet this growing demand.

The Buildings Management Department, with forty percent of the Smithsonian's employees, requires added funds to perform its operation, maintenance and protection of more than 3,000,000 square feet of laboratory, service and exhibition areas, with their priceless collections, in 15 different sites.

The Office of Education and Training's increase would allow measured growth in the use of the Smithsonian's extensive collections and laboratories by visiting scholars, students and for school programs.

In International Activities an increase is sought to administer an accelerated Excess Foreign Currency Program and to meet increased costs and volume for international exchange of publications.

The Administrative and Technical Support divisions require increases to overcome deficiencies to meet existing demands, particularly in the library, press and automatic data processing areas, and to keep pace with the substantive programs of the Institution.

Provision has also been made in the 1968 estimates of appropriations for an expanded Special Foreign Currency Program to accommodate the strong interests of American universities and museums to finance research overseas though the advantageous use of foreign currencies excess to the needs of the United States.

In the construction program for 1968, emphasis has been placed on planning; construction proposals have been held to a minimum in accord with present austerity and the need for economies.

Funds are requested for the planning of the Joseph H. Hirshhorn Museum and Sculpture Garden, and for planning of the continuation of a twelve-year capital improvement program at the National Zoological Park and for rectifying a water pollution problem in one of its areas.

The Restoration and Renovation of Buildings appropriation includes necessary modifications to existing buildings and sites at a level of 40% under 1967.

SALARIES AND EXPENSES

Report of the number of permanent positions by organization unit

	1966 actual	1967 estimate	1968 estimate	Increase, 1968 over 1967

EXHIBITS PROGRAM, MUSEUM OF HISTORY AND TECHNOLOGY, FISCAL YEARS THROUGH 1966 AND 1968

A. Halls installed and opened to the public as of June 30, 1966:

1. Flag Hall
2. First Ladies Hall
Everyday Life in the American Past:
3. 17th Century Furnishings
4. 18th and 19th Century Furnishings.
5. Historic Americans
6. American Costume
7. Light Machinery (Timekeeping, Typewriters, Phonographs, and Locks)
8. Tools
9. Farm Machinery
10. Autos and Coaches (partial)
11. Railroads
12. Temporary Exhibits Gallery (first floor)
13. Civil Engineering (Bridges and Tunnels)
14. Watercraft
15. Philately and Postal History
16. Glass
17. Graphic Arts: Hand Processes
18. Graphic Arts: Photomechanical Processes
19. Graphic Arts Salon
20 & 21. History of the Armed Forces I (through Civil War)
22. Ordnance, and the gunboat *Philadelphia*
23. Special Exhibits (third floor)
24. Medicine, Dentistry and Pharmacy (Medical Sciences)
25. Physics
26. Ceramics
27. Electricity I

B. Additional Halls to be installed and opened to the public by June 30, 1967:

1. Heavy Machinery
2. Growth of the United States II and III
3. Petroleum
4. Underwater History
5. Automobiles and Coaches (completion)

C. Additional Halls to be installed and opened to the public by June 30, 1968:

1. Photography
2. Armed Forces II
3. Textiles
4. Electricity II

RENOVATION OF EXHIBITS

In 1968 the Smithsonian will continue its program of revitalizing the exhibits in the United States National Museum.

A. Completed and opened to the public in 1966:

1. Gem and Jade Sections of Gems and Minerals Hall.
2. Reptile Section of Cold-blooded Vertebrates Hall.

B. Halls to be completed and opened to the public by the end of 1967:
  1. Osteology Hall (Completion).
  2. Meteroite Section of Physical Geology Hall.
  3. Peoples of Asia and Africa Hall (Completion).
  4. Fish Section of Cold-blooded Vertebrates Hall.

C. Construction partially completed by the end of 1967:
  1. Physical Geology Hall (6 units).
  2. Classical Archeology.
  3. Life in the Sea.

D. During 1967, drawings for the Hall of Insects will be partially completed and contracts will be awarded for certain individual cases and units for this hall.

E. During 1968, contract will be awarded for the Hall of Insects, and the Botany Hall will be architecturally designed.

TEMPORARY AND SPECIAL EXHIBITS

Fiscal year 1967	*Fiscal year 1968*
Australian Prints	Early Chicago Architecture
World Exposition of Photography	Copp Textiles
Victorian Needlework	Urban Planning
Rembrandt Landscape Prints	Presidents' Pastimes
Vinland Map	Genteel Female
Six Danish Graphic Artists	Alexander Graham Bell
Irish Architecture	Revolutionary Bicentennial
World War Posters and Art	Slavery exhibit Part 1
Wedgwood Exhibit	Slavery exhibit Part 2
The Face of Chile	A Panorama on the Arts and Crafts
Washington Beautification	Tunisian Mosaics

Grants to the Smithsonian Institution, fiscal year 1966

Granting agency and title of grant	*Actual amount*
Department of Defense: Potential vectors and reservoirs of disease in Africa	$21,000
National Aeronautics and Space Administration:	
Study of meteorites	100,000
Satellite tracking program	5,300,000
Prairie network	230,000
Environmental	135,000
Miscellaneous small grants	70,000
Total, National Aeronautics and Space Administration	5,835,000
National Science Foundation:	
Undergraduate research program	20,000
Studies of Antarctic biology	50,000
Recording of data for specimens collected during the U.S. Antarctic program	43,000
Sorting of U.S. Antarctic research program biological collections	67,000
Mineral collection	43,000
Miscellaneous small grants	27,000
Total, National Science Foundation	250,000
Total grants, fiscal year 1966	6,106,000

Research by the Smithsonian Institution on contracts, fiscal year 1966

Contracting agency and research field	*Actual amount*
Atomic Energy Commission: Plant physiology	$83,000
Department of Defense:	
Astrophysics	185,000
Oceanography	50,000
Zoology	250,000
Miscellaneous	90,000
Total, Department of Defense	575,000
National Science Foundation: Science information exchange	1,900,000
National Aeronautics and Space Administration:	
Celescope	3,174,000
Astrophysics	797,000
Total, National Aeronautics and Space Administration	3,971,000
Total, research contracts, fiscal year 1966	6,529,000

Grants to the Smithsonian Institution, fiscal year 1967

Granting agency and title of grant	*Estimated amount*
National Aeronautics and Space Administration:	
Study of meteorites	$175,000
Prairie network	150,000
Satellite tracking program	5,500,000
Miscellaneous small grants	100,000
Total, National Aeronautics and Space Administration	5,925,000
National Science Foundation: Estimated miscellaneous grants	50,000
Total grants, fiscal year 1967	5,975,000

Research by the Smithsonian Institution on contracts, fiscal year 1967

Contracting agency and research field	*Estimated*
Health, Education, and Welfare: Various research projects	$200,000
Atomic Energy Commission: Plant physiology	90,000
Department of Defense: Various research projects	1,000,000
National Science Foundation: Science information exchange	2,000,000
National Aeronautics and Space Administration: Astrophysics	4,000,000
Total research contracts, fiscal year 1967	7,290,000

SMITHSONIAN INSTITUTION

SCHEDULE OF BUILDING PROJECTS

Fiscal Years	1961 and prior years	1962	1963	1964	1965	1966	1967	1968	1969	1970
Remodeling of Civil Service Commission Bldg. (for Art Galleries)	Pre-planning studies	Planning apprn. received, $400,000		Under Construction Apprn. received, $5,465,000	Apprn. received, $1,000,000		April 1967 completion	April 1968 opening		
National Air and Space Museum Building	Pre-planning studies			Planning apprn. received, $511,000	Remainder of planning apprn. received, $1,364,000				Scheduled to be under construction Request apprn., $44,300,000	
Construction and Improvements, National Zoological Park		Planning apprn. rec'd. (DC) $85,000	Construction and Improvements in Progress Apprn. received, $1,275,000	Apprn. received, $1,275,000	Apprn. received, $1,525,000	Apprn. received, $1,539,000	Apprn. received, $1,589,000	Apprn. requested, $485,000	Request apprns. of various amounts for twelve-year program	
Restoration and Renovation of Buildings						Apprn. received, $2,248,000	Apprn. received, $2,300,000	Apprn. requested, $1,353,000	Request appropriations of various amounts	
Joseph H. Hirshhorn Museum and Sculpture Garden								Planning apprn. requested, $803,000	Scheduled to be under construction Request construction apprn., $13,200,000	

PREPARED STATEMENT

Chairman HAYDEN. Dr. Ripley, would you please file your written statement for the record, and then summarize it for the committee?

Dr. RIPLEY. Thank you, sir; I would be very happy to.

(The statement follows:)

HIGHLIGHTS OF 1968 APPROPRIATION REQUEST

The Smithsonian's total request of $33,841,000 for the fiscal year 1968 is an increase of $5,113,000 over the current level of $28,728,000.

SALARIES AND EXPENSES

For Salaries and Expenses, the increase is $2,577,000 over the present level of $22,523,000.

The increase will permit a start on the training and consultation program authorized by the National Museum Act of 1966.

In the Museum of Natural History we will be able to add supporting staff for better utilization of our research scientists.

For the National Collection of Fine Arts and the National Portrait Gallery, $398,000 are required to prepare these two major galleries for the public opening of the Fine Arts and Portrait Galleries next year.

For research in astrophysics, in tropical biology, radiation biology, ecology, and oceanography, an increase of $421,000 will provide additional instrumentation and additional research workers in these important fields of Smithsonian scientific interest, now at the level of $2,703,000.

The Smithsonian operates and maintains its own buildings. The Buildings Management Department requires an increase of $530,000 over the current allotment of $6,740,000 to provide for the operation of additional building space. The Fine Arts and Portrait Galleries is scheduled for public opening in April of 1968. In addition to the cost of operating this building, four new exhibition halls will be opened in the Museum of History and Technology. Service in all buildings was curtailed by the need to offset the pay raise cost in 1967. It is now planned to bring the buildings up to normal levels of cleaning and maintenance.

The administrative and technical services which are necessary to support the substantive programs require an increase of $467,000.

The Smithsonian would like to persuade this Committee that it needs automatic data processing, as other Governmental agencies and industrial concerns use the process. We have the same administrative operations, such as payroll, fund accounting, and property inventory, as does any other organization. But we have never had the opportunity to employ an appropriate, small-scale, automatic data processing system to our needs. (We have now three positions and $55,000. We need as a minimum an increase of five positions and $80,000.)

In addition to our administrative load, we have a truly massive collection of scientific specimens which can only be utilized to their full value by being known to the scientific community. In lieu of the employment of a great body of cataloguers, subprofessionals and professional employees, automatic data processing provides an effective and economical means for the storage and retrieval of information that today is locked into these scientific and historical collections. I trust that the Committee will allow us this increase for automatic data processing, on a small scale.

FOREIGN CURRENCY PROGRAM

In our foreign currency program, the strong interests of American universities and museums for archeological research, systematic and environmental biology, and related museum programs, is reflected in an increase from the 1967 level of $2,316,000 to the 1968 request of $6,100,000.

Initiated in 1966, this program of grants to American universities and other institutions of learning utilizes foreign currencies in countries where the supply will be greater than the normal requirements of this country, namely, Burma, Ceylon, Guinea, India, Israel, Pakistan, Poland, Tunisia, United Arab Republic, and Yugoslavia. The use of these currencies for these purposes is of benefit to the United States as well as to the countries concerned. We are advised by the Budget Director that these currencies would not otherwise be used and their use in these proposed programs will provide benefits to the United States at no increased cost to the American taxpayer. The benefit to this country results from increased exploration concessions and research opportunities for American institutions in the host countries. This results also in the increased sharing of knowledge of archeological treasures and in the enrichment of collections. Secondly, the preservation and restoration of ancient monuments makes a positive contribution to United States relations with the host countries and directly supports foreign aid objectives, since properly restored monuments are a stimulus to tourist industries and also represents aid which goes to all sectors of society, from the considerable number of laborers employed in the larger projects, to the foreign scholars and scientists working side by side with Americans.

The requested increase from $2,316,000 to $6,100,000 will be used as follows:

Increased archeological research	$468, 000
Systematic and Environmental biology	2, 537, 000
Museum programs	500, 000
Astrophysics	130, 000
Scientific publications	17, 000
Program administration	132, 000
Total	3, 784, 000

Among the archeological projects are the Lawrence Radiation Laboratory of the University of California which is undertaking to X-ray Egyptian pyramids to discover unknown interior chambers. The University of Missouri, working with the Corning Museum of Glass, is excavating Phoenician glass factories along the Israeli coast. The American Academy of Benares is conducting long-range studies to document and photograph archeological sites throughout India.

Included in the request is $3,553,000 for systematic and environmental biology projects. This will contribute to the objectives of the international biological programs. Included will be such projects as the establishment of an oceanographic sorting facility in India and additions to the national collects in entomology, botany, and zoology.

CONSTRUCTION

The construction program has been reduced below this year's level of $3,889,000. $2,641,000 is requested. Of this amount $485,000 will continue the program of improvements at the National Zoological Park, providing principally for the construction of the waterfowl area and the elimination of a source of pollution of Rock Creek.

For the renovation of building $1,353,000 is requested, principally to complete the renovation of the Smithsonian Institution Building, for additional improvements to the Fine Arts and Portrait Galleries, and to relocate the Radiation Biology Laboratory at the old Bureau of Standards site.

$803,000 is requested for the preparation of plans and specifications for the Hirshhorn Museum and Sculpture Garden. The authorization of this new gallery was enacted into law on November 7, 1966. It is planned during the fiscal year to prepare drawings and specifications for this gallery to be located on the Mall between 7th and 9th Streets. The Gallery and Sculpture Garden will house more than 1500 pieces of sculpture and 4,000 paintings and drawings, which have been given by Mr. Hirshhorn to the American people through the Smithsonian.

SALARIES AND EXPENSES

Dr. RIPLEY. The Institution is requesting, this year, a total request of $33,841,000, which represents an increase of $5,113,000 over the current level of $28,728,000.

This increase represents about $2½ million in "Salaries and expenses" over our present level. One of the purposes of this increase, sir, is to give us a start on a new program which was authorized by the Congress last year, known as the National Museum Act of 1966. We will have a chance to start on training and consultation under this program.

TECHNICAL SUPPORT FOR SCIENTISTS

In the Museum of Natural History, sir, we would be able to add what I have been particularly keen to develop during my brief tenure here of 3 years, and that is the appropriate support for our scientists. It is quite difficult to employ high-grade scientists in an institution like the Smithsonian, unless we can give them the research assistance and the laboratory backup support which are equivalent, at least, or partially equivalent, to what goes on in present-day laboratories and universities, not only in the private universities around the country, but in the Federal Government laboratories.

Now the Smithsonian, because of lack of this support, has difficulty, often, in recruiting high-level people to work for us, and I have been anxious each year to try and make up, as it were, for this shortage which I consider to be an area of hardship and neglect in the Institution's payroll situation.

We are at about one-third of what is considered to be the optimal position for support for senior scientists in the Institution, compared to universities and Federal laboratories on an ideal scale. The Federal laboratories are now close to two-thirds of what they should be in the way of the ideal support, and universities are around 80 percent of what they should be.

FINE ARTS AND PORTRAIT GALLERIES OPENING

We are going to have one principal cultural event in the year 1968, which will be the major one, I believe, in Washington, D.C., during that entire year, the year of the next election. This will be the opening of that magnificent building on F and Eighth Streets, the old Patent Office Building, where the first patent office models were displayed in the basement, in the 1840's, and which by the kindness of the Congress was authorized in 1958 to be transferred to the Smithsonian.

As you know, sir, we have been scheduling, every year, a gradual increase in the attempt to renovate and restore this building for two purposes: One is the National Portrait Gallery, and the other is the National Collection of Fine Arts. These two museums, we hope, can open in 1968, in April. It should be a very distinguished event. It should be, in fact, a revelation to the cultural world of the resources and the facilities of the Capital, and will represent the other great major art resource that the Federal Government is responsible for, in addition to the National Gallery.

We are particularly keen that these galleries should be opened, and for them, the absolute minimal support that we need is just under $400,000. I know that this is a year of tremendous austerity, and that the problems of the war and the difficulties with getting new programs underway have placed a tremendous strain on our national resources; but I make a special plea for the opening of these two new galleries in the F Street building, because I feel that this is part of a cumulative plan which has been developing over 6 years, and has been faced each year in stages. If we cannot do this, we will be letting down our side.

SCIENTIFIC RESEARCH RESPONSIBILITIES

For research in various types of science which the Smithsonian pursues: astrophysics, biology in the tropics, radiation biology, ecology, and oceanography, we request an increase of $421,000, to add instrumentation and additional research workers in these fields. In a number of these fields we are specifically charged with and perform unique responsibilities of particular value to related Government agencies which are concerned that we maintain appropriate capability to provide information and data from our collections and research. Such service is often essential to their purposes.

BUILDINGS OPERATION AND MAINTENANCE

We operate and maintain our own buildings, sir, as you know, and we request an increase of half a million dollars for the maintenance and operation of the existing buildings, and particularly for the opening of these two new galleries, the Fine Arts Collection and the Portrait Gallery, in April 1968.

We are also gradually phasing the opening of new halls in the wonderful new Museum of History and Technology, which continues to be, next to the Capitol of the United States, the largest single tourist attraction in Washington. Last year, it is estimated that about 7 million people visited the Capitol, and about 5 million people visited the new Museum of History and Technology. This building has been a winner, and has, I think, made a tremendous impact on the American people; and we are gradually, each year, opening just a little bit more in the way of new halls.

We have had to curtail maintenance services in that building because of the freeze in employment in 1967 to offset the pay raises. But we would like to continue gradually this phased opening of the building's halls.

AUTOMATIC DATA PROCESS FOR COLLECTIONS

We are keen to get into the important area of automatic data processing for our millions of specimens. Last year, the Senate supported us in our request for these funds. This year again I have made a very strong plea, as strong as I could, to the House that we make a start. The kinds of specific and utilitarian services which we can perform for other agencies of the Government can be greatly speeded up in terms of information retrieval by the use of some of these systems. There is absolutely no comparison to the degree of service which we could perform if we make a good start in automatic data processing. We feel this is quite proved and demonstrated now, and we therefore request a small increase in this area.

USE OF EXCESS FOREIGN CURRENCIES

The main part of our budget, in a sense, reflects the very strong interest that has developed in the 3 years since we have been administering a segment of the foreign currency appropriation, and we request a major increase of over $3 million above the fiscal year 1967 level for these purposes. The success of this program has been great. We are the sole, concerned agency in the Government which has been stimulating archeology abroad, and allowing American institutions to participate in major programs, particularly in the Middle East and the Mediterranean Basin. As I often note, the young citizens of the countries where we work under this foreign currency appropriation tend to be greatly interested in their own history, their own national history, and in archeology. The foreign ministers and the prime ministers of tomorrow, in many of these cases, are people who are graduate students in universities in these areas, working with American scientists under American institutions in the field on historical archeology. This is a fascinating area, one in which there is no stress from adverse American publicity, or anything of this sort. It is purely a people-to-people program, which I think has enormous potential effect—a scholar-to-scholar program. The dominant political figures, so often, in countries like, let us say, Tunisia, are people who participated as students in strong cultural programs in their own national history.

Senator YOUNG. They have a lot of history, there, too.

Dr. RIPLEY. Yes, sir.

Senator YOUNG. I think it is fascinating. Would you hire me sometime?

Dr. RIPLEY. Some of the work is perfectly fascinating. At the moment, the Lawrence Radiation Laboratory in California has received a grant, through this program, to X-ray by special techniques the interior of the Great Pyramid in Egypt, to find out if there are those hidden chambers which people have always assumed there were and which have never been discovered. By new techniques, with radiation X-ray, they are hoping to penetrate through the stones and be able to get soundings on whether the chambers are there.

In another case, the University of Missouri is working with the Corning Museum of Glass in New York on Phoenician glass factories, along the Israeli coast, a subject which is very little understood, the whole evolution of the making of glass in the Eastern Mediterranean. And in India, we have been helping the American Academy in Benares to study, document, and conserve sculpture and very fragile, early cultural and historical objects.

LIMITED BUILDINGS RESTORATION AND FUTURE PLANNING

We have a rather small and modest construction program this year, sir. We request $2,641,000. This is 32 percent below the level of 1967. About one-half a million dollars of this would permit construction to protect against the zoo's contributing to water pollution, and planning to continue in future years, the approved reconstruction program for the national zoo. We have had to cut down this materially. Normally, this has been funded at a rate of about $1.5 million a year. Now we are asking for half a million, which will keep the program going along, despite the cutback in construction. We request a renovation sum of about $1.3 million, principally to complete the restoration of our wonderful old red stone castle on the Mall, and for undertaking improvements for the Radiation Biology Laboratory's new site in a building released to us at the National Bureau of Standards previous site on Connecticut Avenue. And we request $803,000, sir, for the preparation of plans and specifications for the Hirshhorn Museum. The legislative authorization of this gallery was approved on November 7, 1966. We hope during the fiscal year 1968 to prepare drawings and specifications for the new building and sculpture garden. As you know, sir, this has to be done within a stated period of time, under the agreement with the donor.

Thank you, sir.

Chairman HAYDEN. There will be printed in the record the justification submitted in support of the 1968 budget estimate of $25,100,000 for "Salaries and Expenses" of the Smithsonian Institution. This is an increase of $2,577,000 over the amount of the appropriation for fiscal year 1967.

(The justification follows:)

SMITHSONIAN INSTITUTION

SALARIES AND EXPENSES, SUMMARY STATEMENT

Appropriation Act, 1967	[1] $22,523,000
Budget estimate, 1968	25,100,000
Increase, 1968	$2,577,000

[1] Excluding $176,000 anticipated supplemental.

SALARIES AND EXPENSES, SUMMARY OF INCREASES, 1968

	Amount
1. U.S. National Museum—to support a program of training, publication, consultation, and study; to meet increasing demands on its exhibits, conservation, and registrar activities	$175,000
2. Museum of History and Technology—to plan and develop permanent and special exhibitions and educational activities based on the National Collections; and to step up planning for the commemoration of the Bicentennial of American Revolution	58,000
3. Museum of Natural History—to alleviate shortages in technical staffing support; to strengthen research programs in scientific areas of National importance; to improve access to research and collection data; to obtain adequate scientific equipment; and to increase support for short-term research opportunities	285,000
4. National Air and Space Museum—for undertaking responsibilities of the Act of July 19, 1966 (P.L. 89-509), updating exhibits to reflect space flight accomplishments, cataloging of collections, and acquiring significant objects for the planned museum building	70,000
5. National Armed Forces Museum Advisory Board—for research in the contributions of the Armed Forces in peace and war	10,000
6. Freer Gallery of Art—for increased support of its administration and maintenance of exhibits	11,000
7. National Collection of Fine Arts—for preparing its exhibition and other spaces in the Fine Arts and Portrait Galleries for public opening; and strengthening the International Art Program	218,000
8. National Portrait Gallery—for build-up of professional staff, acquisition of portraiture, and other minimal preparations prior to the opening of the Fine Arts and Portrait Galleries	180,000
9. Joseph H. Hirshhorn Museum and Sculpture Garden—to begin work of planning for the new Museum authorized by Public Law 89-788 approved November 7, 1966	57,000

SALARIES AND EXPENSES, SUMMARY OF INCREASES, 1968—continued

	Amount
10. Astrophysical Observatory—for additional instrumentation and computer time in furthering its 10-year budgetary plan, embracing the fields of radio and gamma-ray astronomy, meteorites, meteors and comets, theoretical astrophysics, optical observations, and planetary and lunar studies	$100,000
11. Smithsonian Tropical Research Institute—to alleviate shortages in technical and support staff in continuing its program of research and inter-American cooperation in environmental biology and other natural sciences	78,000
12. Radiation Biology Laboratory—to alleviate shortages in technical support in order to strengthen its pioneering research on the effects and controls of radiation on living organisms	80,000
13. Office of Ecology—for planning and developing programs of fundamental research on the interrelationships of living organisms, including man, with their total environment	42,000
14. Office of Oceanography and Limnology—to allow the Oceanographic Sorting Center to meet growing national and international requirements for biological and geological specimen identification services in support of research on the food and mineral resources of the sea	121,000
15. Buildings Management—for providing minimum acceptable levels of maintenance, operation and protection, including services for additional building space in the museums, galleries, and laboratories	530,000
16. Office of Education and Training—to extend programs of cooperative research and education through the use of the national collections and laboratories by scientists, students, and school groups	50,000
17. International Activities—to administer an accelerated special foreign currency program and increased cooperation with international efforts of other Government agencies; and to meet increased costs and volume for international exchange of publications	45,000
18. Administrative and Technical Support—for additional administrative assistance and specialized services to enable the program activities of the Smithsonian to perform productively and efficiently	467,000
Total increase, 1968	2,577,000

Absorption of Increased Pay Costs in 1967

In order to reduce inflationary pressures, Government-wide restrictions were placed on employment in the summer of 1966. The impact of the employment ceiling was to curtail the authorized strength of a number of units. In particular, the Buildings Management Department was reduced an authorized strength by 147 positions. As a result of these reductions, no supplemental appropriation is being sought in 1967 for the cost of salary increases granted the General Schedule employees under the "Federal Employees Salary and Fringe Benefits Act of 1966."

Supplemental appropriation of $176,000 is being sought for the cost in 1967 of authorized increased wages to wage board employees which were made effective on December 5, 1965 and on December 4, 1966. (Salaries and Expenses increases for 1968 are described in relation to the 1967 base amounts for each activity, not including the requested wage board supplemental.)

Since the 1967 base amounts for 1968 include absorption of increased pay costs for General Schedule employees, no portion of the increases are described as related to the effects in 1968 of wage and salary increases effected prior to that year.

Salaries and expenses, summary of the 1966 and 1967 appropriations and 1968 estimates

	1966 appropriation		1967 appropriation		1968 estimate		Analysis of increase

1. UNITED STATES NATIONAL MUSEUM

1966 appropriation	$2,243,000
1967 appropriation	2,569,000
1968 estimate	2,744,000

The U.S. National Museum has the fundamental responsibility to advance knowledge in science and history, and to convey to the Nation and the world knowledge about the growth of science and the history and development of our civilization. It is comprised of the Museum of History and Technology and the Museum of Natural History, which are presented in separate justifications; and the centralized services which are presented under this heading, namely, the Office of the Director, the Office of Exhibits, the Conservation Analytical Laboratory, and the Office of the Registrar. These centralized services need an increase of $175,000, as follows:

(a) $80,000 for the Office of the Director,
(b) $60,000 for the Office of Exhibits,
(c) $25,000 for the Conservation Analytical Laboratory, and
(d) $10,000 for the Office of the Registrar.

Office of the Director

The Office of the Director provides guidance, direction, program planning and review of the U.S. National Museum's programs of exhibition, education and public information, education and training in museum techniques, advice and assistance to museums and community institutions, and museum research and scholarship.

An increase of $80,000 is needed to support an expanded program of training, publication, consultation, and study.

Need for increase

On an increasing scale national interest is growing in the preservation and study of natural and manmade objects as a basis of understanding our history, our civilization, and man's environment. The Congress in the National Museum Act of 1966 recognized museums as important educational and cultural assets of their communities. The testimony at hearings on this Act pointed up the need for more professional and technical personnel in museums in the United States and for up-to-date, authoritative manuals on museum practices, including exhibition, conservation, registration, administration, and safeguarding. The Act directs the Smithsonian Institution to engage its experience, laboratories, and collections in programs to benefit all museums.

Education and training of museum personnel.—The National Museum Act recognized the need for the Smithsonian to provide training for career museum personnel. Since the passage of the Act, scores of requests have been received from museums in all parts of the country for training of technicians and curators. Funds are needed to establish a program of grants so that the training of museum staff members will no longer be limited to the facilities of the Smithsonian but may be extended to other museums where specialized opportunities exist. The increase would allow for six trainee grants and associated expenses.

Cooperative publication of museum manuals.—The National Museum Act reaffirmed the Smithsonian's program of publications conducted in cooperation with other museums and their associations. Funds are requested to extend this program through matching grants to such museums or their associations to engage specialists to write manuals and to publish them. Shared publication of two manuals will be accomplished with the increase.

Support of regional museum advisory panels.—The Smithsonian Institution receives several hundred requests a year for administrative and technical advice on plans for museum buildings and programs designed to meet community, education, and cultural requirements. A direct and economical method to provide this needed service is to obtain the cooperation of museum professionals throughout the country, establish regional rosters of available and capable advisers, and support museums in engaging their services. Travel and contractual funds are requested for the Institution to advance this program, providing for 200 man-days of consultation on a matching fund basis.

Study of museum visitors' response to exhibits.—Millions of dollars are spent nationally on the preparation of museum exhibits. Very little is spent in understanding how the museum visitor responds. An exhibits research specialist will be added to the Office of the Director to further the study of how exhibits are actually experienced by the viewer so that design and communication guidelines can be developed to increase the value to the public of future investments in exhibits.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	9	$67,000	$5,000	$3,000			0	$95,000	$2,000	$23,000		$195,000
Increase requested	1	9,000	1,000	10,000			$10,000	50,000	0	0		80,000
1968 estimate	10	76,000	6,000	13,000			10,000	145,000	2,000	23,000		275,000

NOTES

Personnel compensation and benefits (1 position, $10,000).—1 exhibits research specialist (GS-11) to further study of how exhibits are actually experienced by the visitor.

Travel ($10,000).—For museum specialists throughout the United States to travel to regional panel meetings to discuss plans for museum buildings and programs.

Printing and reproduction ($10,000).—Smithsonian's share of publishing two manuals on museum practices.

Other services ($50,000).—6 grants at an average of $7,500 for education and training of personnel ($45,000); support of regional advisory panels-consultant services ($5,000).

Office of Exhibits

The Office of Exhibits designs, produces, installs, and modernizes permanent exhibits in the United States National Museum; prepares special temporary exhibits on important and timely subjects in art, history, and science; maintains exhibits in sound and attractive appearance; and assists and advises in exhibits work throughout the Smithsonian Institution.

An increase of $60,000 is required to employ seven exhibits workers for the preparation and maintenance of permanent exhibits; for production of special exhibits; and for continued requirements for explanatory labels for all exhibits.

Need for increase

The permanent exhibits of the Museum of History and Technology and of the Museum of Natural History suffer wear and abrasion caused by the close attention of millions of visitors each year. Visitor participation devices, projectors, and audio systems receive constant use. The Office of Exhibits must make continuous inspections, adjustments, revisions in the security of exhibits, repairs, painting, and other forms of preventive maintenance to forestall breakdowns and progressive deterioration; to avoid costly overhauls and rebuilding of exhibits; and to keep the exhibitions in a condition to provide each visitor with maximum pleasure and education.

In addition to maintaining its schedule of producing permanent exhibits, the Office of Exhibits prepares frequently changing educational, and informative special exhibits. Many of these possess a timely and important national interest such as the "Profile of Poverty," the "Alaska Centennial," and the "Bill of Rights Commemorative Exhibit." Through special exhibits, it is possible also to show significant objects from the Smithsonian's reserve collections and from the collections of other museums in the United States and other countries.

There are increasing demands for traveling exhibits on history, science, and art requested by schools, colleges, libraries, historical societies, museums, and community centers. Increased funding is requested to meet this need.

To meet the requirement that all explanatory labels reflect the most current available information and are maintained in good condition, additional funds are needed for printing and other reproduction.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	166	$1,264,000	$94,000	$7,000			$30,000	$146,000	$127,000	$366,000		$2,034,000
Increase requested	7	36,000	2,000	0			22,000	0	0	0		60,000
1968 estimate	173	1,300,000	96,000	7,000			52,000	146,000	127,000	366,000		2,094,000

NOTES

Personnel compensation and benefits (7 positions, ($38,000).—7 exhibits workers (GS-5 and GS-7) to maintain exhibits and prepare special exhibits.

Printing and reproduction ($22,000).—For explanatory labels for new and varied exhibits, both permanent and temporary.

Conservation Analytical Laboratory

The Conservation Analytical Laboratory performs research in the science and techniques of the conservation of museum and art gallery objects and conducts analysis, examination, treatment, restoration and preservation of the National Collections.

Analytical service is rendered by the laboratory to all Smithsonian bureaus in the specific areas in which it has the equipment and professional capability as well as in other areas in which analytical techniques might be beneficial. The Laboratory collects and disseminates information on conservation techniques and materials for use throughout the Smithsonian and in other museums.

An increase of $25,000 is needed to employ additional personnel to train members of the museum staff in the best methods of conservation treatment; to analyze and resolve problems of damage from lighting, heat, humidity and temperature fluctuation; and to control damaging organisms by fumigation and other methods.

Need for increase

Hundreds of significant and valuable objects in the large collection of the Smithsonian are in poor condition. Many of the new accessions each year also require repair, cleaning, conservation, and preservation treatment. Additional conservators are needed to prevent the progressive deterioration of the collections.

Techniques such as neutron activation analysis, metallographic examination, and X-ray fluorescence analysis will be used to identify the source of materials recovered from archeological excavations, to study metallurgical problems, and perform other studies in support of the curatorial staff. The Laboratory will develop plans for an information retrieval system which will centralize data on work performed in other laboratories. This system will assist the Laboratory's work and constitute a valuable National reference.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	9	$65,000	$5,000	$2,000	----------	----------	----------	$3,000	$6,000	$26,000	----------	$107,000
Increase requested	3	16,000	1,000	1,000	----------	----------	----------	7,000	0	0	----------	25,000
1968 estimate	12	81,000	6,000	3,000	----------	----------	----------	10,000	6,000	26,000	----------	132,000

NOTES

Personnel compensation and benefits (3 positions, $17,000).—2 conservators (GS-9) and 1 technician (GS-7) to train museum staff in methods of conservation; to analyze and resolve problems of damage from lighting, heat, etc.; and to develop fumigation control of damaging organisms.

Travel ($1,000).—Visits by staff of other laboratories to observe experimental procedures and techniques for application in Smithsonian's laboratory.

Other services ($7,000).—Contracts for special analyses which cannot be performed at Smithsonian.

Office of the Registrar

The Office of the Registrar records all accessions to the U.S. National Museum and provides mail, transportation, and other services which are essential to the productive operation of all bureaus of the Smithsonian.

An increase of $10,000 is required for adequate control of the expanding mail activities and for insurance requirements in connection with privately owned objects.

Need for increase

The volume of official mail has more than doubled during the past three years as a result of increased awareness of Smithsonian activities throughout the world. The two new positions requested would absorb the impact of the increased mail volume and would service the National Collection of Fine Arts and the National Portrait Gallery in their new quarters in the Fine Arts and Portrait Galleries.

The increasing demand of other museums, art galleries, and individuals for insurance coverage on items lent by private citizens and institutions for temporary exhibit, emphasizes the need for a central operating fund for payment of premiums.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	24	$135,000	$10,000	----------	$85,000	----------	----------	0	$1,000	$2,000	----------	$233,000
Increase requested	2	8,000	1,000	----------	0	----------	----------	$1,000	0	0	----------	10,000
1968 estimate	26	143,000	11,000	----------	85,000	----------	----------	1,000	1,000	2,000	----------	243,000

NOTES

Personnel compensation and benefits (2 positions, $9,000).—2 mail clerks (GS-2 and GS-4) to service the National Collection of Fine Arts and the National Portrait Gallery in their new quarters and assist with the increased volume of mail throughout the Institution.

Other services ($1,000).—Insurance coverage on items loaned to the Smithsonian for temporary exhibit.

Summary

	1966		1967		1968	
	Positions	Amount	Positions	Amount	Positions	Amount
Office of Director	5	$46,000	9	$195,000	10	$275,000
Office of Exhibits	168	1,947,000	166	2,034,000	173	2,094,000
Conservation Analytical Laboratory	8	76,000	9	107,000	12	132,000
Office of the Registrar	21	174,000	24	233,000	26	243,000
Total, U.S. National Museum	202	2,243,000	208	2,569,000	221	2,744,000

2. MUSEUM OF HISTORY AND TECHNOLOGY

1966 appropriation	$1,793,000
1967 appropriation	1,732,000
1968 estimate	1,790,000

The Museum of History and Technology, which is visited by more than five million persons each year, presents permanent and special exhibitions of the National Collections depicting our national heritage and culture. These collections cover such diverse fields as the physical sciences; mechanical and civil engineering; transportation; medical sciences; music; political, cultural, and armed forces history; underwater archeology; philately; and numismatics. Emphasis is placed upon the development of the United States. Thirty-two major exhibition halls will be opened to the public by fiscal year 1968. Eighteen additional halls remain to be planned and developed by research scholars who are experts in United States history. The balance of the collections are cataloged and stored as a priceless source of authentic reference materials for national and international use. Of increasing significance are special educational and cultural activities based on these collections.

An increase of $58,000 is requested, including $27,000 for additional research and supportive personnel and benefits; $6,000 for public events, including performances of music; and $25,000 for planning the Bicentennial of the American Revolution exhibitions.

Need for increase

Five additional positions are required to search out and acquire items of historical and technological significance; to document and publish information on the collections for scholarly and public education and interest; to plan and develop permanent and special exhibitions in subject areas for which we now have no professional staff; and to add new dimensions to the collections through their use in special public events. For instance, the Museum of History and Technology has pioneered in interpreting the history and techniques of music through performances on rare and valuable instruments in its collections. This music program has entertained and inspired many thousands of visitors and has been enthusiastically received by the general public. The attendant research accomplished for exhibits and publications has received encouraging recognition from scholars.

Activity must be stepped up in planning for the commemoration of the Bicentennial of the American Revolution in 1976, an event of major national and international importance. The museum is developing preliminary long-range plans for important exhibitions and other events celebrating this historic period in the Nation's history. During 1968, substantial research on this project must be accomplished in consultation and cooperation with those historians and other persons in museums, galleries, historical societies, and the National Park Service and other Government agencies involved in achieving a fully representative exhibit. The curatorial staff has already opened two exhibits, one on the Stamp Act and the other on the Bill of Rights, to pilot this long-range program. A third exhibition on the Townshend Act will be opened in the summer of 1967. To create the large-scale exhibits befitting the observance of the 200th anniversary of the American Revolution, much significant material must be acquired either as permanent accessions or as long-term loans. Additional travel is needed so that the curators may examine and acquire objects and collections in various parts of the United States, study sites and documents associated with the period, and develop effective cooperation with other organizations and collectors in order to realize an educational and inspirational series of exhibits, publications, and other speical activities.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	150	$1,244,000	$91,000	$36,000	----------	$7,000	----------	$140,000	$40,000	$174,000	----------	$1,732,000
Increase requested	5	25,000	2,000	2,000	----------	0	----------	14,000	0	15,000	----------	58,000
1968 estimate	155	1,269,000	93,000	38,000	----------	7,000	----------	154,000	40,000	189,000	----------	1,790,000

NOTES

Personnel compensation and benefits (5 positions, $27,000).—1 curator of medicine (GS-13), 1 curator of chemistry (GS-12), 1 curator of music (GS-11), 2 technicians (GS-7) for continuation of several programs, including music performances, and plans for the commemoration of the Bicentennial of the American Revolution.

Travel ($2,000).—For curators to travel to various parts of the United States to examine and acquire collections for exhibition in connection with the observance of the Bicentennial of the American Revolution.

Other services ($14,000).—To contract with musicians ($6,000) and for special studies related to the Bicentennial of the American Revolution ($8.000).

Equipment ($15,000).—Purchase of significant collections for exhibitions in connection with Bicentennial of American Revolution.

3. MUSEUM OF NATURAL HISTORY

1966 appropriation	$3,002,000
1967 appropriation	3,476,000
1968 estimate	3,761,000

The Museum of Natural History is an international center for the natural sciences, maintaining the largest reference collections of scientific material and specimens in the Nation, as well as a comprehensive scientific program of original research on man, plants, animals, rocks and minerals, and fossil organisms—their classification, distribution, and relationship to the environment. The reference collections and the resident scientists provide an important focal point for cooperative research and educational activities among Federal agencies, universities, and other scientific institutions. Its studies of living and fossil plants and animals provide critical data for problems of pollution, medicine, development of food sources, and earth sciences pursued by Federal agencies.

An increase of $285,000 is needed for the following purposes:

(*a*) $89,000 to provide adequate supportive assistance (research assistants, clerical personnel, and museum aids) to the scientific staff in order that these scarce professional resources may be effectively used in productive work and to assure better care for the National Collections;

(*b*) $41,000 to develop further high priority research programs in the study of fossil plants, to increase capability for cooperative study of the first lunar samples and other nonterrestrial bodies (with the National Aeronautics and Space Administration), and to encourage studies in the histology of sea animals;

(*c*) $35,000 to provide specialists in data processing to continue development and application of techniques for the more efficient handling of the growing masses of data accruing from biological studies in the United States, data for which the Museum of Natural History, as the National natural history repository, has an important responsibility;

(*d*) $10,000 to improve our program in education through increased training of students at all levels, especially in critical scientific areas in which an adequate number of professionals are not being trained otherwise;

(*e*) $35,000 to obtain adequate equipment and to replace obsolete scientific tools being employed in current research programs;

(*f*) $75,000 to increase a program of competitive research awards to Smithsonian scientists for short-term field research.

Need for increase

The professional research staff now expends large amounts of time on nonscientific tasks such as handling collections and specimen preparation. The addition of supportive personnel will enable researchers to be more scientifically productive and thereby increase the effectiveness of the scientific staff now employed. The increase requested will also provide for replacement of obsolete or worn equipment and, in selected research areas, for modernization of tools required for priority programs.

Two hundred sixty research publications were issued in fiscal year 1966 alone. Many of these have direct bearing on applied problems of rational utilization of our natural resources in the sea and on the land, as well as those concerned with biomedicine, pollution, and space exploration.

Great progress has been made in obtaining and recording scientific information about the collections, which increase at the rate of about one million specimens annually, through an active program of field study in many parts of the world and through exchange relationships with other scientific research institutions and with universities.

The programs of the Museum of Natural History are closely related to those of several of the mission-oriented Federal agencies, notably National Aeronautics and Space Administration, National Institutes of Health, and the Departments of Agriculture, Interior, and Defense. Scientists in the Museum's Entomology and Paleobiology departments work side by side in a complementary fashion with their counterparts in the Department of Agriculture and in the Geological Survey, each providing specialists in a closely coordinated program of cooperative research based on the National Collections. In Mineral Sciences the research of meteorite specialists on extraterrestrial materials is carried on cooperatively with NASA. In Vertebrate Zoology the research undertakings of mammalogists and icthyologists provide basic information useful to applied science projects in the Department of Defense and the Bureau of Commercial Fisheries, as well as contributing to the National Oceanographic Program. Agreements have been reached also with the National Institutes of Health for cooperative studies of biomedically important rodents and primates.

A major portion of the scientific effort of the specialists in Invertebrate Zoology, especially concerning marine forms, adds significantly to the National program to understand and utilize the resources of the seas around us. A cooperative program with NIH is underway on the occurrence of abnormal tissues among invertebrates. Identifications by the specialists in the Museum are often of critical importance to Federal plant and animal quarantine inspectors, and pest and disease control programs in the Department of Agriculture. The efforts of the Department of Interior and other Federal agencies concerned with pollution of the environment are also materially aided by the basic data presented in the research products of many of the scientific staff.

Through cooperative educational programs, the Museum is becoming increasingly interrelated with universities all over the country. The Museum of Natural History engages in basic support of research by scientists all over the world, based to a significant extent on specimens loaned for study from the National Collections. Duplicate specimens are exchanged with scientific institutions wherever they are located, especially in North America and Europe.

The increase for the Research Awards Program, together with the base amount of $400,000 appropriated for 1967, copes with the serious problem of taking advantage of unexpected opportunities to investigate short-lived biological and natural events occurring in the field. The Program employs review panels and the same standard of excellence used by the National Science Foundation in its consideration and previous support of such efforts. The Program also serves as a means whereby scientists of the Smithsonian may engage in collaborative field research projects in timely fashion with colleagues located in other institutions.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	252	$2,366,000	$173,000	$61,000	0	$10,000	----------	$594,000	$132,000	$140,000	----------	$3,476,000
Increase requested	20	134,000	8,000	11,000	$10,000	0	----------	94,000	13,000	15,000	----------	285,000
1968 estimate	272	2,500,000	181,000	72,000	10,000	10,000	----------	688,000	145,000	155,000	----------	3,761,000

NOTES

Personnel compensation and benefits (20 positions, $142,000).—1 chemist (GS-12), 1 paleobotanist (GS-12), 1 histologist (GS-11), 2 programer-analysts (GS-12), 4 clerk-typists (GS-5), 6 museum aids (GS-5), 4 museum technicians (GS-7), and 1 education assistant (GS-9), to develop research programs in the study of fossil plants, lunar samples, and histology of sea animals; provide scientists with supportive staff; continue development and application of techniques for more efficient handling of biological data; and improve the Museum of Natural History's program in education.

Travel ($11,000).—For scientists to conduct more field research, participate in significant national and international meetings, and strengthen professional ties with their colleagues throughout the world.

Transportation of things ($10,000).—Shipment of natural history specimens to be added to the national collections.

Other services ($94,000).—For the program of competitive research awards to Smithsonian scientists for short-term research and for special studies related to overall natural history programs.

Supplies and materials ($13,000).—Scientific supplies for stepped-up programs.

Equipment ($15,000).—Replacement of obsolete and worn equipment and provide necessary equipment for new staff.

4. NATIONAL AIR AND SPACE MUSEUM

1966 appropriation	$385,000
1967 appropriation	438,000
1968 estimate	508,000

The National Air and Space Museum is the Nation's exhibition and educational center for air and space flight, science, and history. The Museum collects, restores, and preserves the world's greatest collection of air and space craft, engines, rockets, instruments, personal memorabilia, and other historical objects. Scholars, writers, historians, engineers, and other interested persons work with the Museum's collections and extensive reference library. Within the limited existing exhibition facilities, selected air and space objects are meaningfully displayed for the education of millions of visitors each year.

An increase of $70,000 is required for the following purposes:

(*a*) $37,000 for exhibits specialists to renovate and update air and space exhibits;

(*b*) $9,000 for a technician to continue cataloging and reorganization of the air and space collections; and

(*c*) $24,000 for a curator and for travel and transportation costs to acquire historically and technically significant objects while available.

Need for increase

The Act of July 19, 1966, authorizes the construction of the National Air and Space Museum and directs the Smithsonian to record and exhibit the history of air and space flight and to provide educational facilities and programs for the public and the scholar in the underlying science and technology of aeronautics and astronautics. The legislation broadens the stated purpose of the Museum to include the history and science of *space flights*. Although no request for construction funds is made at this time, minimum increases are necessary in order to undertake the responsibilities contained in the recent authorizing Act.

The existing facilities of the National Air and Space Museum must continue to serve the public for at least five years until a new building can be provided. The current popular attraction of air and space exploration generates a lively personal interest on the part of the visitor in seeing objects associated with it. Existing exhibits must be redesigned and continuously updated, employing the latest exhibition and educational techniques of the Smithsonian, to satisfy this interest.

The Museum has many priceless aviation and space objects and memorabilia. As an indispensable resource for the new Museum, work must be advanced on the proper restoration, preservation, indexing, and storage, in exhibitable condition, of the present collection of models and memorabilia and those acquired by the Museum during the year. An additional technician is needed for this work.

In this rapidly developing field, the Museum must acquire material that is now available and will be invaluable to the public. To delay would result in deterioration and disappearance of historically and technologically important objects which are the central responsibility and reason for being of this Museum. Field research is essential to locate objects and to guarantee their quality. In addition, continual liaison with industrial firms and Government agencies is necessary. Increased curatorial staff and travel and transportation funds are required to accomplish the necessary acquisitions in 1968.

The National Air and Space Museum collaborates and cooperates with other museums. Close relationships are maintained with the Air Force Museum at Wright-Patterson Air Force Base, in Dayton, Ohio, and the Naval Aviation Museum, Pensacola, Florida. Within the past year the Museum has lent one of its Mercury capsules to the Science Museum in London and the Royal Scottish Museum in Edinburgh. Arrangements are being made also to lend a capsule to the U.S. Information Agency for the United States display in the Canadian Exposition of 1967.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	37	$340,000	$25,000	$4,000	0			$37,000	$14,000	$18,000		$438,000
Increase requested	8	55,000	4,000	10,000	$1,000			0	0	0		70,000
1968 estimate	45	395,000	29,000	14,000	1,000			37,000	14,000	18,000		508,000

NOTES

Personnel compensation and benefits (8 positions $59,000).—1 curator (GS-14), 6 exhibits specialists (GS-9 and GS-7), and 1 technician (GS-7) to search out significant collections; to renovate and update air and space collections; and to restore, preserve, index, and store aviation and space models and memorabilia.

Travel ($10,000).—For curatorial staff to accomplish necessary acquisitions.

Transportation of things ($1,000).—For shipment to the Smithsonian Institution of collections acquired by the Museum.

5. NATIONAL ARMED FORCES MUSEUM ADVISORY BOARD

1966 appropriation	$91,000
1967 appropriation	127,000
1968 estimate	137,000

The National Armed Forces Museum Advisory Board, as specified in Public Law 89–186, provides advice and assistance to the Board of Regents of the Smithsonian Institution on matters concerned with the establishment of a National Armed Forces Museum. The objective of the Advisory Board is to portray the valor and personal sacrifice of the men and women of the Armed Forces and their extensive peacetime contributions; to provide a study center for scholarly research into the meaning of war and the role of the Armed Forces in maintaining a just and lasting peace; and to collect and exhibit military objects of historical interest.

An increase of $10,000 is needed to employ a historian to conduct research into the contribution of the Armed Forces in war and peace.

Need for increase

The Board of Regents has approved recommendations of the Advisory Board that the Fort Foote-Smoot Bay Area of Prince Georges County, Maryland, be selected as the location of a National Armed Forces Museum Park. Development of plans to implement these recommendations is being coordinated with the National Capital Planning Commission, the Maryland National Capital Park and Planning Commission, the General Services Administration, the Department of the Interior, the Commission of Fine Arts, and interested private institutions.

Plans call for the acquisition and development, subject to future authorization and appropriations by the Congress, of suitable lands and buildings for the outdoor display of military and naval facilities characteristic of historic American military and naval operations, together with a study center and other enclosures necessary to carry out the objectives of the Act of August 30, 1961.

The proposed acquisition of land for a National Armed Forces Museum Park demands an acceleration in the research work required in planning such a Museum.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	7	$64,000	$5,000	$10,000				$35,000	$1,000	$12,000		$127,000
Increase requested	1	9,000	1,000	0				0	0	0		10,000
1968 estimate	8	73,000	6,000	10,000				35,000	1,000	12,000		137,000

NOTE.—*Personnel compensation and benefits (1 position, $10,000).*—1 historian (GS-11) to conduct research into the contribution of the Armed Forces in war and peace.

6. FREER GALLERY OF ART

1966 appropriation	$32,000
1967 appropriation	32,000
1968 estimate	43,000

The Freer Gallery of Art exhibits one of the most outstanding collections of Oriental art in the world. It furthers scholarship in the areas of Oriental Art history and promotes studies relative to the collections, thus contributing to a better understanding of the artistic achievements of Near and Far Eastern civilizations. The Gallery includes a library, photographic laboratory, conservation laboratory, and supporting shops.

An increase of $11,000 is requested for staff requirements in the conservation laboratory and the cabinet shop.

Need for increase

Research at the Freer has set international standards for studies in Oriental Art history. This reputation combined with a greatly increased interest in Oriental culture has imposed a greater program workload. The most critical needs are a secretary for the conservation laboratory, which is responsible for the technical analysis and preservation of objects; and a cabinetmaker, to make and repair exhibit furnishings and installations for the Gallery.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	5	$30,000	$2,000									$32,000
Increase requested	2	10,000	1,000									11,000
1968 estimate	7	40,000	3,000									43,000

NOTE.—*Personnel compensation and benefits (2 positions, $11,000).*—1 secretary for the conservation laboratory (GS-5), and 1 cabinetmaker for the cabinet shop (W-10).

7. NATIONAL COLLECTION OF FINE ARTS

1966 appropriation	$398,000
1967 appropriation	739,000
1968 estimate	957,000

The National Collection of Fine Arts, the oldest gallery of art directly related to the United States Government, exhibits American art in the Nation's Capital and other parts of the United States and abroad. The Gallery is directed by its founding Act to develop the appreciation of art, both past and present, to encourage contemporary creative effort, and to provide a safe repository for art belonging to the Government.

An increase of $218,000 is needed for the following purposes:

(*a*) $176,000 for necessary preparations to open to the public the National Collection of Fine Arts' major national art museum in the remodeled Old Patent Office building.

(*b*) $40,000 for increased support of the International Art Program which has been transferred to the Smithsonian from the United States Information Agency, and

(*c*) $2,000 to augment the present level of support for art lending activities and cooperation with other institutions.

Need for increase

The opening of the new Fine Arts and Portrait Galleries building to the public in April, 1968, requires additional funds at this time to prepare the galleries and collections for this significant event. Expanded exhibition areas will require furnishings and necessary settings for the public viewing of art objects. Storage areas must be provided with racks, screens, and bins to safeguard adequately public art treasures; work areas must be properly equipped for the photographing, conservation, and renovation of paintings and will require appropriate supplies and materials for the restoration of objects; and a minimal increase in staff will be needed to develop and perform the National Collection of Fine Arts' program of public service.

Prior to the move into the new Gallery and continuing after it, increased travel is required of the curatorial personnel to establish and strengthen professional ties with other museums, to pursue significant acquisitions, and to arrange for the loans of exhibit materials.

Included in the responsibilities of the National Collection of Fine Arts is the International Art Program which circulates 20–30 traveling exhibitions of work by United States' artists annually through diplomatic posts and galleries in all parts of the world. The Smithsonian assumed responsibility for this Program from the United States Information Agency in 1966 and professional staff and supporting services are required to achieve the build-up needed to continue this successful program beyond the planned expiration of USIA funding of the activity.

A minimal addition of funds will permit increased lending activity, such as loans of art to the White House and other Government departments, and assist in halting the potential dispersal of the most comprehensive research collection of art and design material in America currently held by the Cooper Union Museum.

The National Collection of Fine Arts differs from other Federal art museums in that it is primarily concerned with American art with an emphasis on living artists. Related art of the past in its collections provide a basis for understanding and appreciating the relation of the present to that past. Professional assistance is also provided other Government and nongovernment agencies as requested. utilizing, too, their facilities when possible.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	45	$355,000	$26,000	$13,000	----------	----------	----------	$152,000	$24,000	$169,000	----------	$739,000
Increase requested	12	93,000	5,000	4,000	----------	----------	----------	60,000	1,000	55,000	----------	218,000
1968 estimate	57	448,000	31,000	17,000	----------	----------	----------	212,000	25,000	224,000	----------	957,000

NOTES

Personnel compensation and benefits (12 pos. $98,000).—1 assistant director (GS-15), 2 curators (GS-13 and GS-11), 1 archivist (GS-12), 1 conservator (GS-11), 1 research assistant (GS-9), 1 library assistant (GS-5), 1 clerk-typist (GS-5), and 4 museum aids (GS-7 and GS-3), for preparation for opening to the public of the National Collection of Fine Arts Galleries in the remodeled Old Patent Office building; and for continuation of the USIA art program.

Travel ($4,000).—For curatorial staff to establish and strengthen professional ties with other galleries, to meet and encourage potential donors, and to arrange for the loans of exhibit material to the Gallery and to the International Art Program.

Other services ($60,000).—For collecting and preparing exhibits materials and planning and design of exhibits; conservation and renovation of paintings.

Supplies and materials ($1,000).—For restoration of objects.

Equipment ($55,000).—Racks, screens, and bins for storage areas; equipment for photographing, conservation, and renovation of paintings; furnishings for exhibition areas; and works of art.

8. NATIONAL PORTRAIT GALLERY

1966 appropriation	$258,000
1967 appropriation	610,000
1968 estimate	790,000

The National Portrait Gallery is charged with the unique mission of educating and inspiring the public through the exhibition of portraiture and statuary depicting men and women who have made significant contributions to the history, development, and culture of the United States. This program will be presented to the public with the opening in September 1968 of the Gallery in the remodeled Fine Arts and Portrait Galleries.

The primary objective of the Gallery in fiscal 1968 is to prepare for the opening of one of the world's major galleries of portraiture.

An increase of $180,000 is needed for build-up of professional staff, acquisition of portraiture, and other minimal preparations.

Need for increase

Professional staff increases are essential to carry out the complex program of acquisition, accessioning, documentation, exhibition design, and assembly of portraits and statuary. Furnishing and equipping of the public spaces and galleries, offices, laboratories, library, and storage facilities of the new quarters must be completed.

During the next several years the permanent collection, now numbering only some 300 likenesses, must be greatly expanded and temporary exhibitions relating to the American scene organized and put on display. The Gallery operates against the considerable hardship of building a great collection belatedly in a steadily rising market. Notable progress has been made but a growing acquisition effort is required. Significant increases in gifts may not be anticipated until the Gallery is open and established and has become favorably known for the distinction of its holdings and the manner in which they are exhibited. Therefore, the Gallery is in need of funds for purchase when desirable portraits are available for acquisition.

The renovation, conservation, and photographing of portraits and statuary must be accelerated so that adequate numbers of objects will be available for exhibition and study. Contracts with experts will be necessary for framing, exhibit panels, dioramas, pedestals, and cases for all exhibitions.

Professionals are needed to assemble historical data on the works of art, the historical figure, and the artist for informing the public and for use by scholars.

Funds are also requested to begin the collection of fine color photographs of distinguished personages such as the President, the Cabinet, Members of the Supreme Court, and all Members of both Houses of Congress.

The exhibition areas will require additional furnishings and specialized treatment to enhance the portraiture displayed. Offices and public lounges will require adequate furnishings. Storage areas must be provided with racks and bins. Specialized laboratory and study areas must be minimally equipped. The additional staff will require adequate supplies, materials, and equipment.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	19	$202,000	$14,000	$8,000	----------	----------	----------	$200,000	$14,000	$172,000	----------	$610,000
Increase requested	8	50,000	3,000	4,000	----------	----------	----------	28,000	20,000	75,000	----------	180,000
1968 estimate	27	252,000	17,000	12,000	----------	----------	----------	228,000	34,000	247,000	----------	790,000

NOTES

Personnel compensation and benefits (8 positions, $53,000).—2 historians (GS-11 and GS-13), 2 museum technicians (GS-7), 1 secretary (GS-7), 2 museum aids (GS-5), and 1 clerk-typist (GS-4) for the complex program of acquiring, accessioning, documenting, designing, and assembling portraits and statuary in preparation for the move to the Fine Arts and Portrait Galleries building.

Travel ($4,000).—For curatorial staff to establish and strengthen professional ties with other galleries, to meet and encourage donors, and to arrange for loans of exhibit material to the gallery.

Other services ($28,000).—Acceleration of renovation, conservation, and photographing of portraits and statuary; contracts with experts for framing, exhibit panels, dioramas, pedestals, and cases.

Supplies and materials ($20,000).—For conservation and restoration supplies.

Equipment ($75,000).—Furnishings for exhibition areas, offices, public lounges; storage areas; specialized laboratories, and study areas.

9. JOSEPH H. HIRSHHORN MUSEUM AND SCULPTURE GARDEN

1968 estimate	$57,000

The Joseph H. Hirshhorn Museum and Sculpture Garden will be the permanent home of the collection of art of Joseph H. Hirshhorn and the Joseph H. Hirshhorn Foundation, donated to the Smithsonian Institution for the benefit of the people of the United States. This Museum will be used for the exhibition, study, and storage of this unique collection of art.

An initial request of $57,000 is being sought to recruit a small staff to begin the work of planning this Museum.

Need for increase

Public Law 89-788, approved by the President on November 7, 1966, provides for the establishment of the Joseph H. Hirshhorn Museum and Sculpture Garden. Preliminary architectural planning will be initiated early in 1967 for a new museum building and scultpure garden to be located on the approved Mall site between Seventh and Ninth Streets, Independence Avenue and Madison Drive.

It is necessary now to employ a curator, technician, and a secretary to inventory and catalog the collection, now located in New York; plan for its shipment; establish criteria for arrangement and operation of the Museum and Garden; and to consult with and advise the architects and engineers throughout the planning stage.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	0	0	0	0		0		0	0	0		0
Increase requested	3	$30,000	$2,000	$7,000		$1,000		$5,00	$2,000	$10,000		$57,000
1968 estimate	3	30,000	2,000	7,000		1,000		5,000	2,000	10,000		57,000

NOTES

Personnel compensation and benefits (3 pos.—$32,000).—1 curator (GS-14), 1 museum technician (GS-11), and 1 secretary (GS-7), to inventory the collection of art being donated by Joseph H. Hirshhorn and the Joseph H. Hirshhorn Foundation.

Travel ($7,000).—To undertake studies and surveys related to the planning of the museum and sculpture garden.

Rent, communications, and utilities ($1,000).—To rent office copy equipment needed to inventory and catalog this collection.

Other services ($5,000).—For special studies in connection with the arrangement and operation of the museum and sculpture garden and for documentation of the collection.

Supplies and materials ($2,000).—Purchase of reference books and materials and office supplies for staff.

Equipment ($10,000).—Furniture and office equipment for new staff and for racks and shelving for storage of the collections.

10. SMITHSONIAN ASTROPHYSICAL OBSERVATORY

1966 appropriation	$1, 169, 000
1967 appropriation	1, 686, 000
1968 estimate	1, 786, 000

The Smithsonian Astrophysical Observatory carries out basic research in astrophysics, the science concerned with the origin and matter of the solar system and the universe. An increase of $100,000 is requested to continue its 10-year budgetary plan embracing the fields of radio and gamma-ray astronomy, meteorites, meteors and comets, theoretical astrophysics, optical observations, and planetary and lunar studies. These funds are required for the purchase of an electron probe microanalyzer, for additional computer time to permit studies in theoretical astrophysics, and for equipment to be used at the Arizona observational station.

Need for increase

To promote collaboration and mutual support, the Observatory maintains a constant exchange of information and people with other Government organizations, especially with the National Aeronautics and Space Administration (NASA), the Department of Defense (DOD), and the National Science Foundation (NSF). The Observatory participates actively with these groups in the planning and execution of national scientific programs, such as the United States participation in the International Quiet Sun Year and the 1966 solar eclipse expeditions to South America, both coordinated by NSF; and the United States geodetic satellite program, under NASA.

As a by-product of its primary effort in pure research, the Observatroy provides many services to other organizations. Its round-the-world network of astrophysical observing stations continually responds to special requests from NASA and DOD, providing information for which there is usually no other source. The U.S. Coast and Geodetic Survey, and American and foreign universities and observatories, also use the facilities of the stations and of the headquarters in Cambridge. A post-doctoral fellowship program administered by the National Academy of Sciences brings outside scholars to the Observatory, and each year a number of graduate and undergraduate students are awarded assistantships related to their studies. As a service to the International Association of Geodesy and to the International Astronomical Union, respectively, the Observatory operates the Central Bureau for Satellite Geodesy and the Bureau of Astronomical Telegrams. Both are international clearing-houses for scientific information.

The request for fiscal year 1968 is lower than the estimate in the 10-year plan because of budgetary limitations. It is designed to provide continuity to the basic research programs carried on during 1966 and 1967. The 10-year scientific program remains a valid guide for the future of the Observatory. It is comparable to the Observatory's record of achievements over the past 10-year period.

Radio astronomy has produced some of the most exciting results in modern science, including the recent discovery of the extremely strong radio sources called quasars, which indicate an unknown source of energy. The radio astronomy allotment will be reduced $50,000 in equipment, the major equipment having now been acquired. An additional radio astronomer will be employed, at $17,000 including benefits. Increased travel for observing and attendance of professional meetings will require $3,000. Other contractual services will require $3,000. Total net decrease: —$27,000.

Gamma-ray astronomy utilizes that part of the spectrum which includes light, X-rays, and radio waves, and may therefore permit observation of objects or effects heretofore invisible. The allotment will be reduced $20,000 for other contractual services and reduced $40,000 for equipment. An additional astronomer will be employed at $12,000. Additional travel to Arizona for installation and use of the large reflector acquired in 1967 will require an increase of $5,000. Total net decrease: —$43,000.

Meteorites and cosmic dust are analyzed to reveal the history and evolution of the solar system. Also, they vitally affect spaceflight. Lunar samples will provide a new challenge in this research. An electron probe microanalyzer, which is similar to an electron microscope, will be purchased at $70,000 for analysis of samples. Total increase: $70,000.

The Observatory is widely recognized in *theoretical astrophysics*, particularly where modern electronic computing has led to new techniques for studying stellar atmospheres and interiors. The computing allotment will be increased $30,000 to permit additional machine time for computations of extreme complexity.

Optical observing remains a bulwark of astronomy. In addition to its satellite tracking stations (which are supported by NASA grants), Smithsonian has a major astronomical observing site at Mt. Hopkins, Arizona, with excellent seeing conditions. Contractual services for limited site development will require an increase of $20,000. Technical accessories and equipment for the Arizona field observatory will require $40,000. Total increase: $60,000.

Flight experiments, both balloon and satellite borne, supplement ground-based observing when the shielding effect on the atmosphere must be avoided. No major changes in funding are contemplated in 1968.

Planetary and lunar studies are an inseparable part of space science. Smithsonian's worldwide data-gathering network, which is probably unique among basic research institutions, supports research in geophysics, lunar research, and exobiology. No major changes in funding are contemplated.

Meteors and comets are also important to an understanding of the solar system, and to the national space program as well. Additional transportation funds will be required to cover shipment of optical equipment to observing sites. Total increase: $10,000.

	Personnel compensation											
	Number of positions (permanent)	Amount	Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
1967 base	51	$700,000	$52,000	$29,000	$5,000	$82,000	$4,000	$264,000	$50,000	$500,000	------------	$1,686,000
Increase requested	2	27,000	2,000	8,000	10,000	0	0	33,000	0	20,000	------------	100,000
1968 estimate	53	727,000	54,000	37,000	15,000	82,000	4,000	297,000	50,000	520,000	------------	1,786,000

NOTES

Personnel compensation and benefits (2 positions, $29,000).—To employ 1 radio astronomer (GS-15) for radio astronomy and 1 astronomer (GS-13) for gamma-ray astronomy.

Travel ($8,000).—Increased travel for observing and attending professional meetings in connection with radio astronomy program ($3,000) and for travel to Arizona for installation and use of large reflector for gamma-ray astronomy ($5,000).

Transportation of things ($10,000).—For shipment of optical equipment to observing sites under the meteors and comets program.

Other services ($33,000).—Special studies for radio astronomy ($3,000); additional machine computations for Theoretical Astrophysics ($30,000); limited site development at Mt. Hopkins, Ariz. for optical observing ($20,000); for a total increase of $53,000; offset by decrease in gamma-ray program, —$20,000; net increase, $33,000.

Equipment ($20,000).—Electron probe microanalyzer for meteorites and cosmic dust ($70,000); technical accessories and equipment for Arizona field observatory ($40,000); for a total increase of $110,000; offset by decreases in programs of gamma-ray and cosmic dust, $90,000; net increase, $20,000.

11. SMITHSONIAN TROPICAL RESEARCH INSTITUTE

1966 appropriation	$213,000
1967 appropriation	307,000
1968 estimate	385,000

The Smithsonian Tropical Research Institute (STRI), incorporating the Canal Zone Biological Area, represents the principal springboard for inter-American cooperation in environmental biology, oceanography, and the biological and natural sciences relating to the tropical Western Hemisphere. It provides scientists from the Smithsonian, universities, and other institutions in the United States with both the opportunity and the physical facilities and environmental resources necessary for their tropical research projects.

An increase of $78,000 is needed to add scientific and supporting staff in order to continue the STRI's on-going program in Tropical Biology at a critical juncture in the evolutiton of the program.

Need for increase

The proximity of the Atlantic and Pacific oceans and the enormously rich Central and South American plant and animal life make the STRI uniquely located for biological research and training. The STRI serves as an international center for tropical research and is receiving a rapidly increasing number of demands for service and research. If the STRI is to fulfill its role in tropical research, it must analyze as many aspects of the tropics as possible. Thus far its research program has been oriented toward vertebrates and certain problems of evolution and behavior. It is vitally important that this program be expanded to include other groups of organisms and other approaches to the life sciences (for example, quantitative ecology and biological climatology). A small increase in scientists and supporting staff will enable the STRI to undertake this important work and increase the efficiency and raise the productivity of the existing staff. This increase will also permit strengthening contacts and cooperative efforts with other Federal agencies.

The most important product of the STRI's research programs is basic knowledge about tropical environment. These research programs are providing fundamental information of direct application in health-oriented research programs, including those being conducted by the National Institutes of Health through the Gorgas Memorial Laboratory. The Navy's Bureau of Yards and Docks is utilizing basic information provided by the STRI about the resistance of tropical wood to marine boring and fouling organisms. A further example of the importance of the STRI's research activities is the reliance placed by the U.S. Army Tropical Test Center on basic information pertaining to identification and description of vegetational succession, which is critical to the Test Center's investigations.

Through a fellowship program with the Organization of American States, the STRI is providing training in tropical field biology to graduate students and teachers from Latin America. Also, members of the STRI marine biology staff are acting as consultants to the Central American Marine Training Program which is under the sponsorship of UNESCO.

Most recently the prime contractor for the Atlantic-Pacific Inter Oceanic Sea Level Canal Commission and the U.S. Army Corps of Engineers have called upon the STRI for fundamental data to assist in the feasibility study for the planned canal.

1968 estimate	28	271,000	17,000	16,000	5,000	10,000		21,000	14,000	31,000		385,000

NOTES

Personnel compensation and benefits (7 positions, $66,000).—3 biologists (NM-12), 1 administrative officer (GS-14), 1 technician (NM-4), 1 secretary (GS-4), and 1 laborer (M5) to expand the program to include research in marine and terrestial invertebrates, quantitative ecology, and biological climatology.

Travel ($8,000).—For transportation of new scientists and their families to the Canal Zone; official travel of new staff; more trips by present staff because of stepped-up research; and for administrative travel between Canal Zone and Washington headquarters.

Transportation of things ($3,000).—For shipment of household goods of new scientists.

Supplies and materials ($1,000).—Scientific supplies for new scientists.

12. RADIATION BIOLOGY LABORATORY

1966 appropriation	$336,000
1967 appropriation	338,000
1968 estimate	418,000

The Radiation Biology Laboratory conducts pioneering research on the effects and controls of radiation on the functions of living organisms. This broad spectrum of investigation includes studies on the transmittal of solar energy into metabolic response of living organisms; biophysics and physiology of regulatory photo-responses; relationships of energy cycling in natural biological systems to human populations; measurement of solar radiation; calibration of primary solar radiation standards; and carbon dating.

An increase of $80,000 is needed to alleviate deficiencies in professional, technical, and subprofessional support and to ease the shortage of critical equipment and supplies. The increase will serve the following purposes:

(*a*) $44,000 for necessary scientific and technical support (physicist, biologist, and technicians to continue to provide leadership in measuring the spectral quality of sunlight and its influence on organisms, to strengthen environmental biology studies on the effects of variations in light quality, quantity, and duration on plant growth; and for the maintenance of solar radiation instrumentation calibration standards for worldwide use.

(*b*) $24,000 to provide subprofessional assistance and computer services for extracting, recording, and computing scientific data resulting from research projects, thereby releasing the scientific staff for more productive work; and

(*c*) $12,000 to obtain necessary supplies and to replace inadequate or obsolete scientific equipment.

Need for increase

Demands for solar radiation information by biologists, ecologists, plant physiologists, and other specialists in the United States and from around the world are increasing at an enormous rate. Many significant problems in biology cannot be solved until such data have been acquired. For example: Can the production of food in the ocean and on land be altered by controlling solar radiation? Is there a correlation between solar radiation and patterns of animal behavior? Similarly, the correlations between these solar radiation data and laboratory-controlled experiments to verify the significance of spectral changes on plant growth under natural field conditions are urgently needed. Several new responses have been observed during the preliminary development of the Laboratory's present facilities and greatly improved and modified solar radiation measuring instruments have been designed and constructed for these programs. Due to the inherent difficulties and long-term nature of these programs, no other known laboratory in the world is presently attempting to make a combined attack upon these problems.

At present, computation of scientific data, drafting, editing, bibliographic searches, and typing of manuscripts are handled largely by the scientists. Research productivity of the scientific staff can be increased significantly by employing available computer techniques and by the addition of editorial and clerical staff to perform these routine tasks.

Much of the instrumentation used by the Laboratory represents the product and effort of the scientific staff during the early experimentation stage of a research project. Many of these pieces of equipment are outmoded. Replacement and upgrading of these essential tools are required.

The Laboratory's research and calibration activities are of underlying importance in insuring the success of environmental and ecological research studies sponsored by many agencies, universities, and other laboratories throughout the United States and abroad. As the responsible center for solar radiation calibration standards, the Laboratory must be able to maintain, improve, and adjust those instruments it receives from throughout the country and world.

Carbon dating techniques have been extended recently to activities such as dating of soils and water table recharging, and requests for service from other agencies and universities are outstripping the present capabilities of the Laboratory.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	25	$237,000	$18,000	$4,000				$13,000	$24,000	$42,000		$338,000
Increase requested	8	53,000	4,000	1,000				10,000	6,000	6,000		80,000
1968 estimate	33	290,000	22,000	5,000				23,000	30,000	48,000		418,000

NOTES

Personnel compensation and benefits (8 positions, $57,000).—1 biologist (GS-12), 1 physicist (GS-11), 1 editorial assistant (GS-9), 4 laboratory technicians (GS-4, 2 GS-7, and GS-9), and 1 clerk-stenographer (GS-5) to alleviate deficiencies in professional, technical, and subprofessional support.

Travel ($1,000)—To permit each senior staff scientist to attend 1 major scientific meeting in the United States annually.

Other services ($10,000).—To provide computer services in handling rapidly and accurately huge volumes of data from environmental control and solar radiation experiments.

Supplies ($6,000).—To offset rapid rise in costs of isotopes and other supplies for experiments.

Equipment ($6,000).—To meet rising costs of scientific equipment and to replace inadequate or obsolete equipment.

13. OFFICE OF ECOLOGY

1966 appropriation	$97,000
1967 appropriation	118,000
1968 estimate	160,000

The Smithsonian Office of Ecology plans and oversees a program of fundamental research on the interrelationships of living organisms, including man, with their total environment. This program emphasizes the effects of rapidly changing environments on natural resources and on human societies. Its work brings into concerted action efforts under way in the Smithsonian's research bureaus with those of other public and private agencies, and with activities such as the International Biological Program.

An increase of $42,000 is needed for additional staff to meet minimal needs for the development of national and international projects.

Need for increase

The improvement of man's environment depends largely on the manner and level at which human societies can harmonize with their environment. Success in adjusting human populations to the resources that support them rests primarily on developing new tools of understanding. The momentum of population increase and the side effects of modern technology present mankind with ever-increasing problems of pollution of air, water, and soil. The need is critical to seek a deeper understanding of man's total impact on his environment including the consequences to future generations; to establish baselines for measuring further impacts; and to provide the foundations for a program of research and education to help assure the continued existence of favorable environmental balances for civilization. For these goals the Smithsonian Program in Ecology helps to integrate action between the physical and life sciences on one hand, and the behavioral sciences (economics, psychology, ethology, and anthropology) and humanities on the other.

The Smithsonian Office of Ecology operates the Chesapeake Bay Center for Field Biology, a 700-acre preserve owned by the Smithsonian and, in cooperation with the University of Maryland and Johns Hopkins University, devoted to ecological research and conservation education. A survey of the flora is nearly completed, providing the groundwork for a study of principles of vegetation change, the basis for the management of vegetation for forestry, wildlife production, beautification of highways and open spaces, and right-of-way maintenance. Research on the social behavior and dynamics of bird and mammal populations have been initiated at the Bay Center. Planning is under way for studies of estuarian pollution. The increase will allow immediate progress in using present natural conditions for developing principles of long-range vegetation change—a requirement for sound conservation practices as well as for fundamental understanding of environmental modification.

The Smithsonian is a participant on the United States National Committee of the International Biological Program (IBP) and is assisting in the development of a world network of nature reserves and a program of world conservation of natural resources. A professional ecologist with broad education in general ecology and human environmental relationships will be added, along with minimal administrative support for the Office, to further Smithsonian contributions to the IBP and the management of Smithsonian ecology programs in Latin America, Ceylon and Korea.

Additional accomplishments of the Smithsonian Program in Ecology, since its inception in July 1965, include:

Aiding development of plans for a conference on "Rational Use of the World's Biosphere" for which the Smithsonian is to be host in 1968;

A long-range program of university education and research in the biological sciences is being developed in Korea, using the study area immediately south of the demilitarized zone, where vegetation and animal life have been rigidly protected for 14 years, as a base line for understanding the impact of man on his natural resources;

Excess foreign currencies are used in Ceylon for combined studies of wildlife and vegetation to provide a foundation for natural resources management. Four scientists will be assisted by Ceylonese students;

Plans for a world program in tropical biology with a network of selected sites for comparative studies, and for the development of a network of research areas within the United States to establish long-term research programs;

Plans for summer institutes for university teachers to upgrade university education in ecology;

The conducting of conferences on "The Avifauna of Northern Latin America" and "Panama Conference on Tropical Biology"; and

Establishment of a consortium between the Johns Hopkins University, the University of Maryland, and Smithsonian Institution for research and education in ecology.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	5	$63,000	$5,000	$5,000				$35,000	$5,000	$5,000		$118,000
Increase requested	4	37,000	3,000	0				0	1,000	1,000		42,000
1968 estimate	9	100,000	8,000	5,000				35,000	6,000	6,000		160,000

NOTES

Personnel compensation and benefits (4 positions, $40,000).—1 biologist (GS-14), 1 administrative assistant (GS-11), 1 assistant curator (GS-9), and 1 secretary (GS-5) to meet present obligations for developing national and international projects of ecological research.

Supplies and materials ($1,000).—To purchase supplies and materials for research.

Equipment ($1,000).—Equipment for new staff.

14. OFFICE OF OCEANOGRAPHY AND LIMNOLOGY

1966 appropriation	$218,000
1967 appropriation	254,000
1968 estimate	375,000

The Office of Oceanography and Limnology operates the Smithsonian Oceanographic Sorting Center which provides essential identification services for the biological and geological specimens collected by oceanographic expeditions and surveys of Federal agencies and private institutions. It directs the contributions of the Smithsonian's marine sciences toward the accomplishing of national goals in oceanography and is a focal point for the development of biological oceanography. The Office furthers limnological studies on prediction and assessment of biological changes, especially in the major U.S. inland bodies of water.

An increase of $121,000 is required in order that the Sorting Center may develop a staff adequate to meet the greatly increasing demands for service necessitated by the growing national programs for understanding and utilizing the food and mineral resources of the seas.

Need for increase

Demands for service are increasing and volumes of specimens are being amassed that require sorting and identification so that planned surveys and expeditions can avoid duplication and concentrate on filling critical gaps. An increased technical staff is necessary to cope with these increasing volumes. Additional student technicians will be trained at the Sorting Center to supplement scarce professional personnel in the Smithsonian and other marine facilities. A plankton specialist and supporting technicians will be added to assist in the high priority need of understanding the distribution of fish larvae as they contribute to food production in the sea. An increase in the requests for assisting in national and international efforts in biological oceanography requires the addition of a biological oceanographer as Deputy Head of the Office, with appropriate administrative assistance.

The Sorting Center services the National Science Foundation, the Bureau of Commercial Fisheries, the National Oceanographic Office, Intergovernmental Oceanographic Commission, the scientists of the Smithsonian, and many private institutions and universities in the processing of marine collections. As an operating agent of the U.S. Government, the Sorting Center provides essential services to the processing of international collections of the Intergovernmental Oceanographic Commission. Collections of the International Indian Ocean Expedition, the International Cooperative Investigations of the Tropical Atlantic, the Guinean Trawling Survey, the Cooperative Studies of the KUROSHIO, and the proposed Cooperative Studies in the Mediterranean require identification work by the Sorting Center to achieve their purposes. The Sorting Center's information is sought for its contributions to the obtaining of food and mineral resources from the sea; national defense interest in shark occurrences, biological fouling, bioluminescent organisms, and in sound attenuating organisms; biomedical research on occurrences of cancerous organisms, utilization of unique experimental animal and plant life, and determining antibiotic properties; water quality studies on the elimination of species from polluted areas; and for similar contributions to basic research on the organisms of the marine environment.

Recently the results of the Sorting Center's efforts caused a major rescheduling of research vessels of the Bureau of Commercial Fisheries into areas proven to have larvae of commercial species of fishes. The cataloging of numbers of marine specimens will make continued contributions to future research planning.

Processing of the collections by this central laboratory represents a service to more than 250 scientists throughout the United States. Before the Sorting Center was established four years ago, each of the scientists had to establish his own sorting capability. Thus the Smithsonian Sorting Center represents a net saving in operating costs within a planned oceanography program. Nearly 100 technicians have participated in the training program at the Sorting Center and many have carried their taxonomic skills into other Government and private laboratories.

The Smithsonian further contributes to national oceanographic planning by participation in review and coordinating groups, by offering information on national oceanic research programs through the services of the Science Information Exchange, and by providing information and assistance on collection efforts and commitments of marine biology specialists worldwide.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	18	$159,000	$11,000	$4,000		$3,000		$25,000	$29,000	$23,000		$254,000
Increase requested	17	110,000	7,000	4,000		0		0	0	0		121,000
1968 estimate	35	269,000	18,000	8,000		3,000		25,000	29,000	23,000		375,000

NOTES

Personnel compensation and benefits (18 positions, $117,000).—1 oceanographer (GS-14), 1 training supervisor (GS-13), 1 biologist (GS-12), 1 administrative assistant (GS-11), 1 secretary (GS-7), and 12 technicians (GS-4 to GS-7) to meet increasing demands for service necessitated by growing national programs for understanding and utilizing the food and mineral resources of the seas.

Travel ($4,000).—To transport people and pay per diem costs to make or supervise collections, to provide field support services to other collectors, to cordinate the identifications and descriptions of species, to arrange for the use of local resources where the collecting will occur, and to transport individuals to save needed collections not otherwise preserved by those on the spot because of their special interests.

15. BUILDINGS MANAGEMENT DEPARTMENT

1966 appropriation	$6,089,000
1967 appropriation	6,740,000
1968 estimate	7,270,000

The Buildings Management Department protects, maintains, and operates eight major Smithsonian buildings, including the original Smithsonian building, the Museum of Natural History, the Museum of History and Technology, the Arts and Industries building, the Freer Gallery of Art, the National Air and Space building, the Fine Arts and Portrait Galleries, and the Gallery of American Arts, Crafts, and Design. It performs all or a combination of these functions for some seven other research, collection and service facilities, for example, the Chesapeake Bay Center for Field Biology, the Belmont Conference Center, the Oceanographic Sorting Center, and the Silver Hill facility for restoration and storage of air and space craft.

The Department provides utilities, transportation, and communications services; plans and supervises construction projects; performs alterations, repairs, and improvements; furnishes guard, custodial, fire protection, safety, and security services; participates in the installation of new or renovated exhibition halls; repairs and refinishes museum objects and furnishings; and provides supporting services for the research, scientific, cultural, and public education programs.

An increase of 86 positions and $530,000 is required to approach acceptable levels of performance in the maintenance, operation, and protection of the existing facilities of the Smithsonian Institution, and to provide minimum protection, security, safety, and maintenance services for new building spaces, exhibition halls, laboratories, and public-use areas.

Need for increase

In order to reduce inflationary pressures, Government-wide restrictions were placed on employment in the summer of 1966. The impact of the employment ceiling was to curtail the authorized strength of the Buildings Management Department by 147 positions. These positions were equivalent to partial year's cost of $400,000. Our capability for service has been reduced below acceptable limits in light of the specialized use of our museum, gallery, and laboratory resources. These facilities are unique in respect to receiving over 13 million visitors, researchers, and students annually and being the repository of extremely valuable National Collections in art, history and science. As a result of this curtailment in employment, no supplemental appropriation is being sought in 1967 for the cost of salary increases granted the general schedule employees under the "Federal Employees Salary and Fringe Benefits Act of 1966." The cost of this raise is estimated at $462,000.

This Department must increase its basic capabilities in direct proportion to the acquisition by the Smithsonian of authorized new or renovated building spaces and exhibition halls; new approved educational, research, and cultural programs; and increased, continuing use of all buildings, grounds, and facilities by the visiting public, students, and scholars. Services must be provided not only during the regular hours when the buildings are open but also for special activities in the evenings and on weekends and holidays as well as during the spring and summer when the museum and gallery exhibitions are open until 10:00 p.m.

The Fine Arts and Portrait Galleries building is scheduled for public opening in April 1968. To meet this commitment, the Department must operate, maintain, and protect the building during fiscal year 1968, while final renovation work is being completed and exhibition halls, research laboratories and equipment, library facilities, offices, and heating, air conditioning, and humidity control systems are being installed and activated.

The opening of four new major exhibition halls in the Museum of History and Technology and the plan for an experimental "Store Front Museum" in one of the culturally-deprived neighborhoods in Washington require additional funds and personnel to service these new activities.

Additional guards are needed to man new posts or patrol new areas as they are open to the public. The irreplaceable National Collections must be given added protection to prevent loss or damage through theft or vandalism. The incidence of such acts in other museums and galleries has been publicized throughout the world. There have been several recent incidents in Washington museums and galleries. Every effort must now be expended to protect the specimens and objects which constitute the material evidence of America's history and accomplishments in the arts, history, and science.

Funds are needed to furnish required utilities and to procure commensurately larger quantities of maintenance, operation, and cleaning materials, supplies, and equipment replacements for the additional space being operated.

Periodic review of our buildings management operations assures that work methods are effective and training is fully utilized to improve the effectiveness of internal and public services at a minimum cost.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	723	$4,289,000	$313,000	$4,000		$995,000		$771,000	$268,000	$100,000		$6,740,000
Increase requested	86	229,000	14,000	0		77,000		73,000	72,000	65,000		530,000
1968 estimate	809	4,518,000	327,000	4,000		1,072,000		844,000	340,000	165,000		7,270,000

NOTES

Personnel compensation and benefits (86 positions, $243,000).—33 guards (GS-3 to GS-9), 9 operating engineers (W-7 and W-10), 5 electricians (W-5 and W-10), 2 instrument makers (GS-11), 1 communications' specialist (GS-11), 1 buildings manager (GS-11), 2 foremen (W-8), 5 elevator operators (W-1), 28 laborers (W-1 to W-3) to provide maximum acceptable levels of maintenance, operation, and protection.

Rent, communication, and utilities ($77,000).—For Fine Arts and Portrait Galleries Building ($60,000) and for increased usage in other Smithsonian Institution buildings ($17,000).

Other services ($73,000).—Installation of security, fire, and smoke detection systems; additional cost of security and protective services for additional areas; inspection and maintenance of additional elevators; and repairs to heavy equipment, machinery, and motor vehicles.

Supplies and materials ($72,000).—Supplies for cleaning additional restrooms and work shops; uniforms for new staff, and supplies for care and upkeep of areas surrounding the buildings.

Equipment ($65,000).—Cleaning, safety, mechanical, and gardening equipment for additional public exhibition areas, offices, laboratories, and shops; and 1 additional "carry-all" truck and replacement of 3 trucks.

16. OFFICE OF EDUCATION AND TRAINING

1966 appropriation	0
1967 appropriation	$200,000
1968 estimate	250,000

The programs of the Office of Education and Training fall into two broad categories reflecting the major activities of the Institution. The first category includes those programs directly related to Smithsonian research in science, history, and the arts. The research-related programs consist primarily of visiting research appointments for post-doctoral scholars and scientists, graduate students, and short-term consultants. The second category includes those programs directly related to the exhibit and public education functions of our museums. Particular attention will be given to programs designed for the educationally and culturally deprived. An example of these is the experimental "Store Front Museum" proposed for opening in the Spring of 1968 in a poor neighborhood in Washington, D.C. In all cases, the programs of the Office are designed to support and strengthen continuing and fundamental Smithsonian activities and, at the same time, to make the results of these activities more widely available to the appropriate groups.

While maintaining research-related activities at the present level, an increase of $50,000 is needed to fulfill more adequately the Institution's obligations in education for the general public, and so that schools and children can make maximum use of the museum's educational potential.

Need for increase

By employing a small staff of individuals who are experts in the museums' subject fields and are trained in the techniques of teaching, we can ensure more effective educational use of the exhibits. Programs under the direction of the museums' instructional staff will include—

Workshops and seminars for classroom teachers in the use of the museums;

Preparation of educational materials based on the museums' collections for use in the schools;

Preparation of bibliographies and information leaflets to provide replies to the thousands of inquiries received annually about the museum exhibits;

Research on the educational effectiveness of museum exhibits and formulation of special exhibit programs;

Development of tour programs and special informational programs to aid the millions of persons who visit the museums.

The general Smithsonian charter for "the increase and diffusion of knowledge among men" applies fully to the work of the Office of Education and Training. In its research-related activities, the Office makes visiting research appointments at the post-doctoral, pre-doctoral, and consultant level to support original research based on the unique resources of the Institution. Evidence of the need met by these programs is to be found in numbers of applications already received for the current fiscal year—150 applications after preliminary screening. It is in the diffusion of knowledge through programs of education for the general public, however, that the need for an increasing program effort seems greatest. Both for the Washington, D.C. area and for the Nation as a whole, the Institution's collections can serve as invaluable supplements for the educational curriculum. The expanded programs proposed by this Office will explore means of making optimum use of the Institution's potential for education.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	10	$93,000	$7,000	$2,000			$2,000	$94,000	$1,000	$1,000		$200,000
Increase requested	5	25,000	2,000	2,000			0	21,000	0	0		50,000
1968 estimate	15	118,000	9,000	4,000			2,000	115,000	1,000	1,000		250,000

NOTES

Personnel compensation and benefits (*5 positions, $27,000.*—1 education specialist (GS-9), 2 education technicians (GS-7) and 2 secretaries (GS-7 and GS-4), to fulfill the Institution's obligations in education of the general public and to enable schools, teachers and children to make maximum use of the museums' educational potential.

Travel (*$2,000*).—To arrange for educational programs with schools, universities, and other institutions.

Other services (*$21,000*).—Special studies and workshops to insure that museum resources are used in the most effective manner for educational programs.

17. INTERNATIONAL ACTIVITIES

1966 appropriation	$152,000
1967 appropriation	206,000
1968 estimate	251,000

The International Activities program focuses on the Smithsonian's traditional commitments to basic research and international exchange of information in the sciences and the humanities. The Office of International Activities serves as a catalyst for international research and developmental efforts by American institutions in archeology, systematic and environmental biology, and museum sciences through the Special Foreign Curreny Program which the Office administers. In addition, the Office determines the international projects which will best advance the Smithsonian's and thus the Government's interests; advises the State Department and private organizations and individuals on international exchange of persons in fields of Smithsonian concern; and assists the Institution's scientific and curatorial staff in establishing research projects and exhibits programs which require substantial international cooperation.

The International Exchange Service is the official instrument for exchange of Government documents and private institutions' scientific and literary publications with foreign governments and institutions. Today the Service forwards over one million pounds of publications annually to governmental and private organizations overseas and, in turn, receives publications from foreign countries for distribution to scientific and educational organizations in the United States. The Service is receiving numerous worthwhile additional requests for assistance in transmitting publications abroad. Examples include: reading materials for the Peace Corps Volunteers and textbooks for use in their school programs; law, medical, and dental journals are also being sought by ministers of justice and by universities in the developing countries.

An increase of $45,000 is needed for additional staff and related expenses of these programs.

Need for increase

The Office of Director, International Activities, requires funds for additional staff and related expenses to administer the accelerated Special Foreign Currency Program, requiring considerable Smithsonian staff assistance to both American and foreign institutions; and to conduct cooperative programs with the State Department, the Department of the Interior, the Pan American Union, and the Peace Corps. Also the International Exchange Service needs an additional freight clerk to handle an increased volume of shipping, more funds to meet rising transportation costs, and a small increase for packing and shipping supplies.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total *
	Number of positions (permanent)	Amount										
1967 base	6	$64,000	$5,000	$6,000				$15,000		$1,000		$91,000
Increase requested	5	25,000	2,000	2,000				0		1,000		30,000
1968 estimate	11	89,000	7,000	8,000				15,000		2,000		121,000

NOTES

*Excludes International Exchange Service.

Personnel compensation and benefits (5 positions $27,000).—2 administrative assistants (GS-9), 1 secretary (GS-7), and 2 typists (GS-4) for administration of accelerated Special Foreign Currency Program and to conduct cooperative programs with the State Department, the Department of the Interior, the Pan-American Union, and the Peace Corps.

Travel ($2,000).—For internationally renowned scientists who are members of the advisory council to review research proposals in the natural sciences.

Equipment ($1,000).—Office equipment of new staff.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total[1]
	Number of positions (permanent)	Amount										
1967 base	12	$63,000	$4,000	0	$43,000				$4,000	$1,000		$115,000
Increase requested	1	4,000			10,000				1,000	0		15,000
1968 estimate	13	67,000	4,000		53,000				5,000	1,000		130,000

NOTES

[1] International Exchange Service.

Personnel compensation and benefits (1 position, $4,000).—1 freight clerk (GS-3) to handle increased volume of shipping.

Transportation of things ($10,000).—To cover rising transportation costs.

Supplies and materials ($1,000).—For packing and shipping supplies.

18. ADMINISTRATIVE AND TECHNICAL SUPPORT

1966 appropriation	$2, 445, 000
1967 appropriation	2, 951, 000
1968 estimate	3, 418, 000

The administrative and technical offices and units of the Smithsonian provide the executive direction, administrative assistance, and specialized services that enable the program activities of the Smithsonian to work productively and efficiently toward identified objectives. Administrative services are provided by: the Office of the Secretary and the Divisions of Management Support, Fiscal, Museum Service, Personnel, Public Information, and Supply. Technical services are provided by Information Systems, the Library, Photographic Services, and the Press.

The increase is requested in order to meet the minimal requirements of the Institution's present "Salaries and Expenses" programs.

The increase is required in order to overcome deficiencies in the administrative service units which have been evidenced by increasing need for overtime, protracted procurement time, and backlogs in service areas despite continuing efforts to obtain efficiencies in operations. The increase is also required to provide administrative and technical support commensurate with the increased activity of the Institution.

The administrative and technical service units are requesting a total increase of 46 positions and $467,000 for 1968, as summarized below and justified on the following pages:

Summary of increases requested for 1968

	1967 appropriation		Administrative		Technical		1968 estimate	
	Positions	Amount	Positions	Amount	Positions	Amount	Positions	Amount
Office of the Secretary	23	$332, 000	8	$50, 000			31	$382, 000
Management support	26	303, 000	8	52, 000			34	355, 000
Fiscal	21	320, 000	5	40, 000			26	360, 000

Office of the Secretary

1966 appropriation	$324, 000
1967 appropriation	332, 000
1968 estimate	382, 000

The Office of the Secretary provides executive direction, program planning, and review of all activities of the Smithsonian Institution. This Office includes the Secretary, three Assistant Secretaries, and their respective staffs of assistants.

The increase requested, $50,000, is required for technical and administrative services to assist the Secretary in the executive direction of the expanded programs of the Institution, to strengthen the Smithsonian's Equal Employment Opportunity Program, and to assist the Secretary in his duties as a member ex officio of the American Revolution Bicentennial Commission.

Need for increase

The Equal Employment Opportunity Program, established by Executive Order 11246, requires the Smithsonian to conduct a positive action program which will continue to provide true equality in all Smithsonian employment practices. The program includes regular evaluations of the effectiveness of the total effort throughout the Institution, implementation of changes designed to eliminate any discriminatory practices, investigation of complaints of alleged discrimination, coordination of agency efforts to assure adequate housing for employees who are members of minority groups, and maintenance of a system to provide confidential, current, and continuing statistical employment information by race and national origin which will help to assure that the objectives of Executive Order 11246 are met. The services of a responsible administrator to carry out this program for the Secretary are required.

The Act of July 4, 1966 established the American Revolution Bicentennial Commission to coordinate nation-wide activities in commemoration of this historic event. The Secretary of the Smithsonian Institution is a member ex officio. Plans are under way by interested organizations to develop appropriate programs of celebration. The Smithsonian administers the leading United States museum and gallery complex and is the repository of many fine examples of memorabilia of this important era. In recognition of this, the Smithsonian has been called upon to advise and cooperate with this Commission. Studies must now be made of the resources and opportunities of the National Museum and other museums and galleries to assist the Commission in achieving a coordinated program involving museums, galleries, national institutions, and community organizations. One planning and coordinating assistant is now required to provide continuing study and coordinated action on this program.

The Institution has been a leader in the advancement of basic science for the last 120 years. In order to continue this leadership, new trends in science must be investigated and the development of appropriate new programs explored. The long-range objectives of the Institution need to be thoroughly explored and selective programs drafted to reach approved goals.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	23	$267,000	$20,000	$12,000				$13,000	$6,000	$14,000		$332,000
Increase requested	8	46,000	3,000	1,000				0	0	0		50,000
1968 estimate	31	313,000	23,000	13,000				13,000	6,000	14,000		382,000

NOTES

Personnel compensation and benefits (8 positions, $49,000).—1 Equal Employment Opportunity Officer (GS-15), 1 planning and coordinating assistant, American Revolution Bicentennial Commission (GS-15), 2 special assistants (GS-15), 1 secretary (GS-8), and 3 secretaries (GS-5) for increased workload related to providing executive direction, policy guidance, program planning, review and evaluation of the various bureaus and programs.

Travel ($1,000).—To enable the staff to travel to various Smithsonian installations and to attend executive seminars.

MANAGEMENT SUPPORT

1966 appropriation	$237, 000
1967 appropriation	303, 000
1968 estimate	355, 000

Management Support provides specialized advice and assistance in support of the Secretary and Assistant Secretaries in the administrative requirements of the Smithsonian's programs. Included are Archives, Internal Audit, General Counsel, Organization and Methods, Programming and Budget, Secretary's Files, Travel Office, and Duplicating Services. (These functions previously were budgeted under the Office of the Secretary.)

An increase amounting to $52,000 is requested for management support.

Need for increase

Additional funds are required to augment the staffs of certain of these units to meet the increased workload resulting from expansion of the programs of the Institution.

An increase in travel funds would make possible essential trips related to the administration of the Institution's varied activities. Certain travel for other administrative units (e.g., Fiscal, Personnel) also is financed by Management Support funds.

The Archives requires funds to rent a microfilm machine and employ an operator. It is essential that a program be initiated for microfilming the Institution's large collection of historically and scientifically valuable and irreplaceable records Many of these papers dating from the early 19th Century are deteriorating.

An additional program analyst is needed for the Office of Programming and Budget which is responsible for the development and application of planning, programming, and budget principles and techniques to the needs of the Institution. This additional employee will strengthen this Office's capability to perform systematic and thorough analyses of program requirements.

The Organization and Methods Division, which is responsible for developing, coordinating, and maintaining programs for the continuing application of sound business administration and management improvement techniques, requires a clerk-typist.

The General Counsel's office requires an additional attorney to handle an increased volume of complex legal matters.

The Travel Office, established to expedite and provide specialized services to travelers in the several bureaus and to eliminate duplication of effort in making arrangements, requires a travel clerk and funds to rent a teletype ticketing machine.

The Duplicating Unit requires a multilith operator to perform duplicating, collating, and addressograph services; and also funds for repair of machines.

It is necessary to employ 2 typists as part of a pool from which the various units may obtain emergency typing assistance.

	Personnel compensation		Personnel benefits	Trave	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	26	$243,000	$19,000	$3,000		$2,000	$19,000	$7,000	$4,000	$6,000		$303,000
Increase requested	8	39,000	3,000	6,000		2,000	0	1,000	1,000	0		52,000
1968 estimate	34	282,000	22,000	9,000		4,000	19,000	8,000	5,000	6,000		355,000

NOTES

Personnel compensation and benefits (8 positions, $42,000).—1 attorney (GS-14), 1 program analyst (GS-9), 1 travel clerk (GS-7), 3 typists (GS-4), 1 microfilm operator (GS-4) and 1 multilith operator (GS-3) to meet increased workload.

Travel ($6,000).—For essential trips related to administration of Institution's varied activities.

Rent, communications, and utilities ($2,000).—Rental of a machine to microfilm historically and scientifically valuable and irreplaceable records and a teletype ticketing machine for the travel office.

Other services ($1,000).—To pay for services related to upkeep of duplicating machines.

Supplies and materials ($1,000).—For the duplicating functions.

Fiscal Division

1966 appropriation	$253, 000
1967 appropriation	320, 000
1968 estimate	360, 000

The Fiscal Division is responsible for the administration and accounting of funds of the Smithsonian Institution. This includes payroll, accounting, auditing, reporting, and financial counseling.

An increase of $40,000 is requested for 5 new clerical positions, to reimburse the Employees' Compensation Funds, and to finance the additional cost of postage indicia mail.

Need for increase

Acceleration of the various activities of the Smithsonian and initiation of new activities, resulting in higher levels of appropriations, have a direct bearing on the workload of the Fiscal Division. To cope with the extended volume of payroll, accounting, auditing, reporting, and counseling work, additional fiscal clerks are needed.

An additional $10,000 is needed to reimburse the Employees' Compensation Fund as invoiced by the Department of Labor for payments made by the Fund to employees for job-related injuries in fiscal year 1966.

Costs of postage indicia mail are constantly rising as a result of the increased activities of the Smithsonian Institution and the greater influx of letters from the general public, students, scholars, and educators; and from research, museum, cultural, historical, educational, community, and similar organizations seeking information, advice, and assistance. An increase of $10,000 to cover these costs is requested.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	21	$177,000	$13,000	----------	----------	$120,000	$3,000	----------	$2,000	$4,000	$1,000	$320,000
Increase requested	5	18,000	12,000	----------	----------	10,000	0	----------	0	0	0	40,000
1968 estimated	26	195,000	25,000	----------	----------	130,000	3,000	----------	2,000	4,000	1,000	360,000

NOTES

Personnel compensation and benefits (5 positions, $30,000).—1 ledger clerk (GS-7), 1 travel clerk (GS-6), 1 time, leave and payroll clerk (GS-5), and 2 voucher clerks (GS-5), to cope with the increased volume of payroll, accounting and auditing; and to reimburse the Department of Labor for payments made to Smithsonian employees through the Employees' Compensation Fund.

Rent, communications, and utilities ($10,000).—Postage indicia for the growing programs.

Museum Service

1966 appropriation	$49, 000
1967 appropriation	95, 000
1968 estimate	105, 000

The Museum Service is responsible for planning and developing special activities and events for the education and entertainment of the visiting public and others. These events are designed to enrich museum and gallery visits, to supplement traditional exhibitions, to enliven the Mall with colorful and dramatic performances, and to stimulate the public's cultural interests.

An increase of $10,000 is requested to enable the Museum Service to expand its activities.

Need for increase

The Museum Service is originating new and coordinating existing performing arts programs such as Sound and Light Production, "Music Making—American Style" (a folk music program), a puppet theater, expanded concert programs, and a Youth Orchestra Festival.

An assistant is needed to help the Director of the Museum Service plan and produce these and other programs which will give added interest to museum visiting for the public.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	9	$69,000	$5,000					$8,000	$7,000	$6,000		$95,000
Increase requested	1	9,000	1,000					0	0	0		10,000
1968 estimate	10	78,000	6,000					8,000	7,000	6,000		105,000

NOTE.—*Personnel compensation and benefits (1 position, $10,000).*—Museum specialist (GS-11) to assist in the planning and production of special activities and events.

Personnel Division

1966 appropriation	$217,000
1967 appropriation	227,000
1968 estimate	257,000

The Personnel Division supports the Smithsonian scientific, educational, exhibition, and management programs by providing specialized services in employment including position classification, employee relations, employee training, and salary and wage administration. The Division also administers the Health Services Unit.

An increase of $30,000 is requested for fiscal year 1968.

Need for increase

Two technicians are needed to assist with the extra workload resulting from expanded Smithsonian programs. Additional travel funds are needed in connection with the employee training and development programs. Funds are requested for the Smithsonian Institution's share of the operation of Interagency Boards of Expert Examiners under the Civil Service Commission.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	16	$180,000	$13,000	$8,000				$23,000	$2,000	$1,000		$227,000
Increase requested	2	12,000	1,000	1,000				16,000	0	0		30,000
1968 estimate	18	192,000	14,000	9,000				39,000	2,000	1,000		257,000

NOTES

Personnel compensation and benefits (2 positions, $13,000).—2 personnel clerks (GS-7) to provide personnel technicians to assist with the extra workload resulting from expanded Smithsonian programs.

Travel ($1,000).—For employee training and development.

Other services ($16,000).—To finance the Smithsonian's share of the operation of Interagency Board of Expert Examiners under the Civil Service Commission.

Office of Public Information

1966 appropriation	$47,000
1967 appropriation	85,000
1968 estimate	110,000

The Office of Public Information promotes public understanding of the Smithsonian's science, history, and art programs; responds to public inquiries concerning the work of the Institution; assists representatives of the mass communications media in their work with the scholars, scientists, and administrators of the Institution; broadens the impact of the Institution's educational resources through radio and TV programs; and improves communications within and without the Institution.

An increase of $25,000 is required to employ a Director for the Office of Public Information and a Chief of Film and Broadcasting.

Need for increase

The Smithsonian continues to make significant contributions to the National effort to improve the educational and cultural aspects of American life. Our accomplishments to date have been received with marked success by the public. Among projects undertaken is *The Free Film Theatre*, whose diversity of topics included patriotism, meteorites, underwater exploring, history of civil rights, and psychology. This theatre program has proved to be very popular with our museum visitors. During 1966, the *Dial-A-Satellite* service provided 90,000 callers with the precise time and exact location of satellite passages visible to the naked eye. Since the *Dial-A-Museum* service was initiated on November 1, 1966, over 5,200 callers have been informed of the subject and times of new showings or special demonstrations in our buildings. Through our public information program, the National Broadcasting Company became interested in the real potential of our scientific, cultural, and historical resources for the education and pleasure of its audience. As a result, a number of half-hour shows were developed and the first was televised on October 10, 1966. This nation wide program, being viewed by an estimated 4 million people, is continuing.

To assure that the great resources of the Smithsonian are used to maximum effectiveness by American citizens and organizations throughout the country, the Smithsonian has a responsibility to continue projects such as described above and to evolve new programs responsive to the cultural, educational, and scientific needs and desires of all levels of our society. A small but talented staff of experts is necessary to develop and carry out programs to meet these objectives.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	7	$62,000	$4,000	$1,000		$1,000	$4,000	$4,000	$3,000	$6,000		$85,000
Increase requested	2	23,000	2,000	0		0	0	0	0	(		25,000
1968 estimate	9	85,000	6,000	1,000		1,000	4,000	4,000	3,000	6,000		110,000

NOTE.—*Personnel compensation and benefits (2 positions, $25,000).*—Director (GS-15) and Chief of Film and Broadcasting (GS-14) to strengthen the Smithsonian's capabilities in keeping the public informed about the programs and activities of the Institution.

Supply Division

1966 appropriation	$249,000
1967 appropriation	257,000
1968 estimate	275,000

The Supply Division is responsible for the procurement and utilization of supplies, materials, contractual services, and equipment. The Division stocks common supply items for the program and administrative offices and maintains an inventory of equipment for the entire Institution.

An increase of $18,000 is needed for additional procurement specialists and for supplies to meet the requirements of approved new or expanded programs.

Need for increase

The research, exhibit, and educational programs of the Smithsonian have steadily increased in scope and complexity. The Supply Division requires a commensurate increase in order to keep abreast of the demands placed on it for procuring specialized technical equipment and materials. The Supply Division is currently studying the application of semi-automated processing techniques to the preparation of purchase orders, the recording of goods received, and concurrent establishment of property control. Successful application of these techniques will enable the purchasing agents to spend more time on the important aspects of procurement, developing procurement specifications, and obtaining the most advantageous prices.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	17	$133,000	$9,000			$13,000		$13,000	$76,000	$13,000		$257,000
Increase requested	3	14,000	1,000			0		0	3,000	0		18,000
1968 estimate	20	147,000	10,000			13,000		13,000	79,000	13,000		275,000

NOTES

Personnel compensation and benefits (3 positions, $15,000).—3 procurement specialists (GS-4 and GS-5) to meet the requirements of new or expanded programs.

Supplies and materials ($3,000).—For additional stock items for new programs.

Information Systems Division

1966 appropriation	$29, 000
1967 appropritaion	55, 000
1968 estimate	135, 000

The Information Systems Division provides systems for utilizing automatic data processing equipment in the storage, computation, and retrieval of information essential to the successful accomplishment of the scientific and educational programs and the management activities of the Smithsonian.

An increase of $80,000 is necessary to strengthen our capability of applying the processing speed, capacity, and versatility of computers to the work of the Institution.

Need for increase

As the national repository for specimens of natural history, the Smithsonian is faced with increased demands for information to meet research, educational, and applied science requirements across the country and around the world. Manual methods for searching through identification and environmental data relating to over 60,000,000 plant and animal specimens have become inadequate because of the great volume of specimens and because questions cut across subject matter, time periods, and geographic areas. The development of imaginative, computer-supported information storage and retrieval systems will enable the Smithsonian to respond with the speed, accuracy, and completeness that the public needs from the National Museum.

Urbanization, air, and water pollution are dramatically changing the composition and relationships of plant and animal life. Many species are now endangered. New sources of food supplies must be found to meet exploding world populations. The simulation of ecological conditions and the study of terrestrial and ocean life are greatly enhanced by the application of computer science.

Sound administrative and financial management requires that the Smithsonian continue to explore and apply computer techniques to its fiscal, supply, library, and other activities where studies indicate that such applications improve performance and lower unit costs of work.

To provide computer services in the Smithsonian, a program director and technical specialists must be added to the nucleus of systems designers and programmers established in the Information Systems Division.

To minimize computer processing costs, the Smithsonian is exploring every possible source of cost reduction. For example, less expensive second and third shift computer time is being used and will be used whenever available at Government and private installations.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	3	$31,000	$2,000	$3,000		$12,000		0	$5,000	$2,000		$55,000
Increase requested	5	59,000	4,000	0		0		$17,000	0	0		80,000
1968 estimate	8	90,000	6,000	3,000		12,000		17,000	5,000	2,000		135,000

NOTES

Personnel compensation and benefits (5 positions, $63,000).—1 director (GS-15), 2 systems analysts (GS-13 and GS-14), and 2 programers (GS-7 and GS-13) to provide computer services for the scientific, educational, and management activities of the Smithsonian Institution.

Other services ($17,000).—Additional computer time to provide on a more timely basis information demanded by research, educational, and applied science requirements across the country and the world.

Library

1966 appropriation	$363,000
1967 appropriation	510,000
1968 estimate	585,000

The Smithsonian Library performs an indispensable role in providing library and related informational services to the research, exhibit, and educational programs of the Smithsonian. Through its collection—one of the oldest and most carefully selected natural science and historical library collections in existence—its acquisition program, and reference services, the Library contributes to the quality of research, conserves research staff time by expediting acquisitions and reference services, and measurably heightens the creativity and productivity of the scientists and the scholars at the Smithsonian.

An increase of $75,000 is needed for the following purposes:

(*a*) $42,000 for 7 positions and photocopying services to meet an increasing reference services workload; and

(*b*) $33,000 for the purchase of publications for new and expanding programs of the Smithsonian.

Need for increase

The number of reference and information queries showed an increase of over 60 percent in the last two years. Significant increases occurred also in the number of patrons coming personally to the Library for assistance, in interlibrary borrowings, and in clerical support required for the reference and circulation functions. Previous studies by Library staff, special committees, and outside consultants support the conclusion that the Library still is unable to keep pace with cataloging, reference, circulation, and translating requirements. No new projects, such as recataloging, can be undertaken in 1968; but with the increases in workload, additional staff will be required to maintain an acceptable level of services to the Smithsonian's bureaus and offices.

Journal literature and technical volumes are of prime importance to the curatorial and research staff of the Smithsonian. Strengthening of existing programs, such as those in oceanography, radiation biology, and art, and the development of new programs in ecology, tropical biology, and American studies makes it necessary to add to the collections of the Library. The requested increase in funds will meet the costs of acquiring back issues of journals not previously included in subscriptions, as well as providing new publications.

Maintaining the Library's collection leadership in certain areas of history and science benefits more than the Smithsonian. Because of the uniqueness of the collection, the Library is called upon to serve the Library of Congress, other national libraries, educational institutions, the scholarly community at large, and the general public. In addition, daily requests are received and processed from scientists of other Federal agencies, such as the Department of Agriculture, the National Institutes of Health, Geological Survey, and the Fish and Wildlife Service.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	40	$320,000	$23,000	$4,000		$15,000	$25,000	$2,000	$33,000	$88,000		$510,000
Increase requested	7	38,000	3,000	0		0	0	1,000	13,000	20,000		75,000
1968 estimate	47	358,000	26,000	4,000		15,000	25,000	3,000	46,000	108,000		585,000

NOTES

Personnel compensation and benefits (7 positions, $41,000).—2 librarians (GS-7), 4 library assistants (GS-4 and GS-5), and 1 clerk-typist (GS-5) to meet an increasing reference services workload.

Other services ($1,000).—Photocopying services for reference activities.

Supplies and materials ($13,000).—For back issues of journals for the curatorial and research staff.

Equipment ($20,000).—For purchase of books for new and expanding programs.

Photographic Services Division

1966 appropriation	$159,000
1967 appropriation	198,000
1968 estimate	215,000

This Division provides professional photography to aid the fields of exhibition, documentation, research, publication, conservation, restoration, preservation, and training; and the public service and educational programs of the Smithsonian Institution.

An increase of $17,000 is requested to permit this Division to fill requests on a more timely basis; to reduce current backlogs of copying and printing historically important prints and negatives which should be processed on a current and scheduled basis to forestall their loss through deterioration; and to obtain contractual commercial services for photographic work which it is not economical to perform in house.

Need for increase

The diversity of objects photographed, the varied applications of these visual materials, and the high standards of quality demanded by the users of these services make the photographic responsibilities of this Division unparalleled. Subjects range from minute natural history specimens to huge space missiles; from delicate fabrics to live animals; from priceless gems to rock cores; and from copies of rare prints to contemporary photographs of national and international personages. These uses cover fields which demand scientifically and technically accurate reproductions in scale, density, color, shadings, highlights, and backgrounds. Timely, pleasing, and appropriate pictures of special events and programs are needed as they occur.

The photographers work directly with scientists in all disciplines; historians; technologists; exhibits specialists; conservators; and museum, gallery, and laboratory administrators to achieve desired results and to assure that services are promptly and fully responsive to professional requirements.

The demands for photography are scrutinized to reduce both volume and cost. Backlogs of requests have developed, however, and this increase will make it possible to provide an essential service with less delay.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	18	$135,000	$10,000					$20,000	$25,000	$8,000		$198,000
Increase requested	2	11,000	1,000					5,000	0	0		17,000
1968 estimate	20	146,000	11,000					25,000	25,000	8,000		215,000

NOTES

Personnel compensation and benefits (2 positions, $12,000).—1 photographer (GS-7) and 1 clerk-typist (GS-4) to reduce backlogs, to fill requests on a more timely basis, and to forestall loss of historically important prints and negatives through deterioration.

Other services ($5,000).—Commerical services for photographic work which is not economical to perform in house.

Smithsonian Press

1966 appropriation	$518, 000
1967 appropriation	569, 000
1968 estimate	639, 000

The Smithsonian Press (formerly the Editorial and Publications Division) is an integral part of the Smithsonian Institution's efforts to extend the limits of man's knowledge. The Press, in direct support of the Smithsonian's research, exhibit, and educational programs and of special benefit to scholars and the public, is responsible for approving, editing, designing, arranging the printing, and distributing the research and popular publications of the Smithsonian.

An increase of $70,000 is needed for the following purposes:

(*a*) $25,000 for two editors and a production assistant to eliminate a backlog and to remain abreast of the increasing number of scholarly manuscripts; and

(*b*) $45,000 for increases in printing costs.

Need for increase

In the past, reports of scientific research have lain dormant for periods up to a year owing to insufficient editorial staff and printing funds. Research is futile if not reported for the benefit of others. This intolerable situation has arisen, despite increases in Federal allotments, because of several factors which have combined to negate those increases. The number of scholars and scientists on the Smithsonian staff has increased in the past five years. Additional research programs and projects have been initiated. The per capita production of manuscripts from this staff has gone up markedly. The expansion of exhibit halls and addition or expansion of public service, cultural, and educational programs and activities have encouraged the demand for printed guides, information leaflets, catalogs, and popular publications for the visiting public. The additional output, combined with an increase in the cost of Government Printing Office services, has made this increase necessary.

Recognizing the problems of increasing workload and printing costs, the Smithsonian Press is taking steps to economize and improve efficiency wherever possible. Editorial, production, purchasing, and distributing practices are being critically examined. Such economies as setting straight copy in linotype instead of monotype and using typewriter composition for offset reproduction of tabular and mathematical material are being considered. Such techniques will help to hold down costs and speed up publication schedules.

	Personnel compensation		Personnel benefits	Travel	Transportation of things	Rent, communications, and utilities	Printing	Other services	Supplies	Equipment	Insurance claims and indemnities	Total
	Number of positions (permanent)	Amount										
1967 base	18	$164,000	$11,000	$3,000		$3,000	$383,000	$1,000	$2,000	$2,000		$569,000
Increase requested	3	23,000	2,000	0		0	44,000	1,000	0	0		70,000
1968 estimate	21	187,000	13,000	3,000		3,000	427,000	2,000	2,000	2,000		639,000

NOTES

Personnel compensation and benefits (3 positions, $25,000).—2 editors (GS-9 and GS-11) and 1 production assistant (GS-7) to eliminate a backlog and to remain abreast of the increasing number of scholarly manuscripts.

Printing and reproduction ($44,000).—Increased printing costs.

Other services ($1,000).—For indexing services.

GRANTS FOR MUSEUM TRAINING ACROSS THE COUNTRY

Chairman **Hayden**. I note on page B–9 of your justification that you are asking funds to establish a program of grants at locations other than the Smithsonian Institution for training museum staff members. Where will such training be carried on and how much are you asking?

Dr. **Ripley**. We are asking at the present time, sir, $45,000, for six interns in this program. This is under the National Museum Act, which was passed last year. A number of museums would be selected as training sites. Our present thought is that we might be able to afford three science programs; that is, intern traineeships at three prominent science museums across the country: one on the east coast, probably; one in the Middle West; and one somewhere in the West. We are initiating conversations with the directors of some of the outstanding museums to give young people an opportunity to work as an intern in a museum, and learn the museum techniques. At the same time, they may be required to attend some local university and take a strong science course program, so that they will be able to prepare themselves for work in science museums.

We feel that it is a vital part of our mission to allow the Smithsonian to cooperate with science museums in training and to assist in replicating scientists who are willing to work in museum careers. The universities tend not to stimulate work in museums, and as a result we have been pinched for available manpower.

Chairman **Hayden**. Also, you are asking funds for matching grants to museums to employ specialists to write manuals and publish them. Do the matching funds have to equal the granted funds?

Dr. **Ripley**. The contributions from other museums will equally match these; yes, sir.

Chairman **Hayden**. Did you have such a program as this in fiscal year 1967 and, if so, how much was devoted to it?

Dr. **Ripley**. This is a new program, sir, under the National Museum Act.

NEW EXHIBITS

Chairman **Hayden**. For the Office of Exhibits, you are requesting an additional $60,000 over the $2,034,000 provided for you last year. This increase will be used to employ seven exhibit workers. How many exhibits workers do you have on your roll now?

Dr. **Ripley**. I would like to ask Mr. Bradley, Assistant Secretary, to answer the exhibits question.

Mr. **Bradley**. Mr. Chairman, we have 149 exhibits technicians on the roll today, out of a total of 166 positions in this unit.

Chairman **Hayden**. What permanent exhibits, if any, do you plan to prepare in fiscal year 1968?

Dr. **Ripley**. We plan to prepare four halls, sir, in the Museum of History and Technology, which as I mentioned earlier has been so successful. One we are working on now, I think will be quite exciting. I know that Mr. Humphrey, the Vice President, is very much interested in it, and that is the Photography Hall. The Vice President feels that in the area of photography, the Smithsonian can perform a signal service in attempting to develop a series of exhibits and some delineation of the history and evolution of photography into the art form that it is now.

Another hall will have to do with Textiles. The third hall will be an Electricity Hall, and the history of science in electricity; and the fourth will strengthen our halls showing the history of the Armed Forces.

ALASKAN CENTENNIAL EXHIBIT

Chairman HAYDEN. Last year the conferees directed that you utilize $50,000 of funds to prepare an Alaskan centenary exhibit. Has this been done?

Dr. RIPLEY. Yes, sir. We prepared an exhibit on the Alaskan centennial. I am happy to say that Senator Bartlett has seen it. It was shown down in our Museum of Natural History. It is a very handsome exhibit and is now being circulated in Alaska, prior to moving to Fairbanks for the centennial celebrations this year.

OFFICE OF REGISTRAR PERSONNEL

Chairman HAYDEN. You indicate a need for an additional two positions at a cost of $9,000 in the coming fiscal year in the Office of Registrar. Would you please explain your need for this personnel?

Dr. RIPLEY. Would you answer that, please?

Mr. BRADLEY. Mr. Chairman, this arises from the need for a mail clerk, who will be a messenger in connection with the new Fine Arts and Portrait Galleries at Eighth and F Streets, which is removed from the Mall; and also the need for a mail clerk on the Mall in order to handle the steadily increasing volume of mail in our five buildings there.

MUSEUM OF HISTORY AND TECHNOLOGY

CURATORS OF CHEMISTRY, MEDICINE, AND MUSIC

Chairman HAYDEN. For the Museum of History and Technology you ask five new positions. Why will the 150 positions now available to you not be sufficient?

Dr. RIPLEY. Sir, this is part of our development program in the new museum. Three of these curators would be in areas of our collections where we do not now possess expertise. One would be in chemistry, one in medicine, and one in music.

The history of medicine is an extraordinarily interesting area, in which we have been unable, so far, to find a suitable candidate for, in three years of searching. I think, now, we may have one; and we would like very much to have this authorization for a new position in this area. Two technicians are needed in addition.

MUSEUM OF NATURAL HISTORY

EXPANDING EDUCATIONAL SERVICES

Chairman HAYDEN. With respect to the Museum of Natural History, I note your request for $10,000 to improve your educational program through increased training of students. What are you doing in this field now and what additional do you propose?

Dr. RIPLEY. This is an increase which is new, sir. We have no earmarked funds for this in fiscal year 1967. It is due to the need to meet the expanding educational activities in the museum. The most widely used educational service in the museum is the continuing function of consultant at large, in which we provide assistance to academic research programs at various levels, from students right up to postdoctorals, both in the United States and abroad. This is an activity which is becoming greatly increased, every year. We finally reached the breaking point, as far as we are concerned. We simply need help to be able to meet this demand.

Literally thousands of requests come each year on very specific topics, and we lack the staff capability at present to be able to answer many of them in time. We need to provide students and scholars with the various tools, such as access to particular collections, to plan their programs or conduct research, often on the premises. We fill thousands of requests each year, and we have finally gotten to the point where something has just got to give.

GRANTS FOR INDIVIDUAL RESEARCH PROJECTS

Chairman HAYDEN. Tell the committee about your competitive research awards to Smithsonian scientists. You are asking an additional $75,000 for fiscal year 1968. Just what is this program?

Dr. RIPLEY. Each year, sir, we fund worthy, short-term research projects. It is a serious problem in the Smithsonian that our own scientists, who are organized to engage in field-oriented fundamental research, often lack the opportunity to take advantage of various unexpected possibilities to go out in the field or on short-lived biological trips. The support of field research projects often can't be anticipated in the normal course of science budget planning. As a result, we set up a research awards program with the approval of the Congress 2 years ago, to give us expeditious exploitation of these unanticipated research opportunities while continuing to maintain the long-term, basic long-term research projects. Through this central, essentially supplementary support, we can assist research and various kinds of science.

It is an important means for us, too, whereby scientists in the Smithsonian can engage in collaborative field projects in a timely way with colleagues in other institutions and universities. We employ a review panel of eminent scientists and the same standard of excellence, we believe, as used by the National Science Foundation in awarding these grants. The grants are mostly quite small. In the last year we had 66 of these small grants.

Chairman HAYDEN. Well, what is the size of the individual award made?

Dr. RIPLEY. Generally in the area of less than $15,000.

NATIONAL AIR AND SPACE MUSEUM

PERSONNEL REQUEST

Chairman **Hayden**. For the National Air and Space Museum you propose an additional eight positions and an increase of $70,000. Does this request have any direct relationship to the construction of the new National Air and Space Museum which was authorized last year, but for which you are not yet requesting construction funds?

Dr. **Ripley**. May I ask Mr. Bradley to answer this one, please?

Mr. **Bradley**. Not directly, Mr. Chairman, although the request is related to the very same act. The act authorizing the construction of the Air Museum also directed the Smithsonian to record the history of air and space flight and, more importantly, to provide educational facilities and programs for the public and for students in the underlying science and technology. The positions that we are requesting relate to the necessary preparation of catalogs, organizing air and space collections and materials, preparing exhibits, and to update the existing exhibits that we have, where we entertained 1½ million visitors last year. We need funds also for other necessary expenses, particularly to acquire historically and technologically important aircraft and spacecraft while they are still available around the country.

PERSONNEL FOR ARMED FORCES MUSEUM ADVISORY BOARD

Chairman **Hayden**. How many historians are now employed for the National Armed Forces Museum Advisory Board? I note that you are requesting one additional historian for the coming fiscal year.

Dr. **Ripley**. We have three, sir, who are presently employed as professionals in this activity. But we actually need, I would say, a strong caliber military historian in order to work with us in making studies and reports on the characteristics of the Armed Forces in war and peace. The present three professionals have been concerned with the planning of the Armed Forces Museum, negotiations with National and State of Maryland Planning Commissions, acquisition of military objects for ultimate display, and studies of the characteristics of the Armed Forces in war and peace as directed by the act. But we feel that this is a good moment to pause, when there is relatively little prospect at the moment of developing physical facilities, to have an ad hoc review, a symposium perhaps, on the purposes of such a museum; to have a chance to get together with historians around the country, and we would like to have this organized by our distinguished military historian.

MILITARY PARK NEAR FORT FOOTE, MD.

Chairman **Hayden**. Last fall the newspapers carried an item with respect to a military park planned on the Maryland shore of the Potomac River, apparently to be located between the Woodrow Wilson Bridge and Fort Foote. Would you please comment on this news item, indicating the status of such a proposal, the estimated cost of it, and whether or not specific substantive legislation is required?

Dr. **Ripley**. Sir, we believe that legislation is needed to authorize the Smithsonian to acquire a suitable tract of land in the vicinity of

Fort Foote, which is just south of the Woodrow Wilson Bridge. We selected this location because of the suitability of the terrain, the fact that it is near the District of Columbia as specified under the act in fiscal year 1961, and because it is adjacent to navigable waters where, in fact, historical ships can be displayed. We feel that the National Park Service has a very good point in recommending that we collaborate with them. They have some 85 acres which they would like to give us for these purposes.

FREER GALLERY OF ART

Personnel Request

Chairman Hayden. You are again asking for a secretary for the conservation laboratory in the Freer Gallery of Art, as well as a cabinetmaker for that activity. Would you please explain the need for these two positions?

Dr. Ripley. Sir, we need a secretary for the conservation laboratory, which is responsible for the technical analysis and preservation of objects, and the cabinetmaker to repair and maintain exhibit furnishings and installations for the gallery, many of which are particularly precious and delicate, and which need a very skilled workman, indeed. We have at the present time a tremendous backlog of work which is being deferred because we don't have these people. Insufficient funds were appropriated in 1967 to allow their hire.

INTERNATIONAL ART PROGRAM

Chairman Hayden. How much are you now provided for the international art program which you have taken over from the U.S. Information Agency; and why do you believe that $40,000 more is necessary for this program in the coming fiscal year?

Dr. Ripley. The international art program was given to us at their request by the U.S. Information Agency, with a small budget. Last year, during fiscal year 1967, there was about $130,000 available. We feel that $40,000 more is needed to allow us to prepare and tour through Europe a major exhibition, which would have great strength and which would reflect the vitality of American art today. This tour has been strongly recommended by the Department of State, the U.S. Information Agency and, through their cultural attachés, six European countries.

This is the second step in what we feel is an appropriate and necessary gradual buildup to provide the basis for services comparable to those of the fine arts program formerly conducted by the U.S. Information Agency. The present funding allows us approximately 12 small shows each year, related to the U.S. missions abroad, in USIA libraries and townhalls of communities in Asia, Africa, and South America.

NATIONAL COLLECTION OF FINE ARTS AND NATIONAL PORTRAIT GALLERY

Chairman HAYDEN. Please explain the approximately 30 percent increase in funds for the National Collection of Fine Arts which you are asking.

Dr. RIPLEY. This request relates to the fact that in April 1968, we hope to open the two new galleries in the old Patent Office Building. We have spent about $7 million over a period of 5 or 6 years in order to make this building appropriate and suitable for these two great galleries. We feel that we can't open them properly without this increase in staff and personnel.

Chairman HAYDEN. I assume that the similar increase requested for the National Portrait Gallery is caused by the same set of circumstances. Do you have any further comment?

Dr. RIPLEY. That is true, sir.

JOSEPH H. HIRSHHORN MUSEUM AND SCULPTURE GARDEN

Chairman HAYDEN. With respect to the new item entitled Joseph H. Hirshhorn Museum and Sculpture Garden, for which at a later place in your budget request you are asking planning funds for the construction of the museum, why is it necessary now to employ curators, technicians, and secretaries?

Dr. RIPLEY. Sir, we believe that we are justified in asking for this, because the Hirshhorn Museum is now officially a bureau of the Smithsonian. It therefore seems appropriate that in fiscal year 1968 we start with a nucleus staff of three people in order to prepare for assuming the responsibility for the collection and its display and protection.

Preliminary architectural studies are already underway, and the contract drawings and specifications, we hope, will proceed throughout the year 1968. In fact, I am hoping that if the architect, Mr. Bunshaft, has an appropriate design, we can actually submit a preliminary design to the Fine Arts Commission in May of this year. This is contingent on whether the design is appropriate, and is approved within our own thinking. But we are trying to make as rapid a start on this as possible, in order to meet the commitments of the agreement with the donor.

Chairman HAYDEN. Was not the art collection inventoried prior to your appearance before legislative committees in connection with legislation authorizing the construction of the museum?

Dr. RIPLEY. Yes, the collection was inventoried, and a copy of the inventory accompanied the legislation. But continually, now, Mr. Hirshhorn is adding and buying new objects of art. Yesterday, an extraordinarily interesting sculpture arrived from the west coast and is now being uncrated for placing on one of our terraces as a kind of earnest of things to come. This is a sculpture by Stern, which Mr. Hirshhorn has just bought on the west coast, which will be able to be shown out of doors. He has also just given us a Rickey, which we are going to place on the steps of the National History Building. Gradually, we will be placing outdoor sculpture around, as an advance indication of the Hirshhorn building's arrival—advance notice—like circus posters scattered around the town.

Senator BARTLETT. May I ask a question right there?

Dr. RIPLEY. Yes, sir.

OUTDOOR SCULPTURE PROTECTION

Senator BARTLETT. Are you concerned about possible defacement?

Dr. RIPLEY. Not particularly, at this point. I can say that I am not particularly concerned, because of the success, for example, that the city of Philadelphia has had with its outdoor contemporary art show, which has been going now for several months. No traces of vandalism have occurred. One steel cable snapped on one end of a suspended sculpture in one of the public areas in Philadelphia, and for all I know, this is only because a bolt broke. The statuary and other sculpture which is out on the grass, easily accessible, within reach of people's hands, isn't being scribbled on or being defaced at all. I toured the city of Philadelphia with the city planning group, 2 weeks ago, and was much impressed. In the same way, in Paris, in the Louvre Garden, there are no cases of vandalism that I have heard of. So I am fairly optimistic, Senator. Of course many of these will be on plinths or bases which will be relatively high, so it would be a little bit hard to reach them. We hope they will be in areas in general near the buildings, where people circulate.

Chairman HAYDEN. I note that part of your request is for racks and shelving for storage of the collections. Do I assume that the collections will actually be brought in to this area prior to construction of the building?

Dr. RIPLEY. Yes, sir. These will gradually be coming in. As I mentioned, a large sculpture arrived yesterday and was being uncrated yesterday. Small pieces are following, from a particular purchase in California. In the past year, I might say, Mr. Hirshhorn has purchased over $900,000 of additional objects, not in the inventory. He hasn't stopped collecting.

ASTROPHYSICAL OBSERVATORY STATION IN ARIZONA

Chairman HAYDEN. What is the status of the Observational Station planned for Mount Hopkins by the Smithsonian Astrophysical Observatory?

Dr. RIPLEY. Mr. Bradley, would you answer that?

Mr. BRADLEY. Mr. Chairman, we are getting underway. We have a permit for the occupation of the mountaintop in the Coronado National Forest near Tucson, Ariz. We would like to emphasize that this would be a sort of small, "workingman's" type of optical observatory. It will not be a large mountaintop astronomical observatory in the classic sense. We will run this one with the same economy as the 12 optical satellite tracking stations that we operate around the world. Minimal overnight quarters will have to be installed, because we are out of town about 40 miles, and we plan with money that you have furnished us this year, to acquire a gamma ray mirror for the interception of gamma ray impulses. We are undertaking to improve the site with an access road and we hope to get into operation next year.

Chairman HAYDEN. Well, what is the total estimated cost of this installation?

Mr. BRADLEY. The total estimated cost for site preparation is $220,000.

SMITHSONIAN TROPICAL RESEARCH INSTITUTE

Chairman HAYDEN. With regard to the Smithsonian Tropical Research Institute, I note that you show your 1967 appropriation base as $307,000. However, last year's budget estimate was $277,000 for fiscal year 1967. How do you account for the additional $30,000?

Dr. RIPLEY. I would like to ask Assistant Secretary Galler to speak to this, if I may, Mr. Chairman.

Dr. GALLER. Mr. Chairman, the need to direct the additional $30,000 for 1967 to the Tropical Research Institute (STRI) is actually due to several conditions which were not originally anticipated, but which were of sufficient critical importance to require immediate attention. The lapse rate for the STRI had originally been estimated to be at a higher rate than was considered practicable when the estimates were reconsidered as the basis for the fiscal year 1967. To correct this situation, and to fund the increased pay for this bureau, $5,000 was reallocated during fiscal year 1967.

PERSONNEL REQUEST

In addition to that, the Smithsonian Tropical Research Institute staff has been receiving a marked increase in requests for advice, research services, and support from both public and private organizations and agencies, scientists and visitors from a number of places, both in the Canal Zone and in the Republic of Panama. For example, scientific investigators and student visitors for the fiscal year 1966 increased over a hundred percent over the prior year. The unprecedented increase in requests for scientific information and assistance had exhausted the ability of the STRI to respond in a rapid, timely fashion. Therefore, to maintain its vital services to the users of STRI's resources in the tropics, funds had to be reallocated for the employment of part-time technicians, and support staff for the STRI professional staff.

Also, authorization for part-time employment and the necessary funds were granted during fiscal year 1967 to meet the critical needs resulting from the unanticipated success that was experienced in activating two new, very small, marine biological laboratories associated with the Smithsonian Tropical Research Institute. One of these laboratories is located at Fort Amador, on the Pacific coast, and the other on Galeta Island on the Atlantic coast, using land and buildings that had been formerly owned by the U.S. Navy. Outside grants provided the principal sources of funding in setting up these laboratories. By 1967, considerable progress had been made at the Pacific installation, so that it was considered fully operational considerably in advance of the time schedule that we had anticipated. This laboratory was immediately put to use, and the type of research conducted necessitates a 24-hour attendance to insure that nothing goes wrong with the aquarium equipment or the other facilities that we need to keep study animals alive. The interruption of this equipment for a very short period of time might actually destroy months of scientific research.

Funds were diverted, therefore, to permit the employment of part-time staff, and to meet the necessary utility, communications, and related expenses essential to continued operation of the laboratory.

RESEARCH AND SERVICES

Chairman HAYDEN. For the fiscal year 1968 you are requesting an additional $78,000, most of which is for employment of seven additional personnel. Would you indicate to the committee specifically what you plan to do in addition to the work which you now carry on?

Dr. RIPLEY. Yes, sir, Mr. Chairman. The Smithsonian Tropical Research Institute needs an increase of $78,000 to meet the rapidly increasing number of demands for research and services, and to expand its research to cover important aspects of the tropics that are now not under study. Beginning in November 1966, the Interoceanic Canal Commission and its principal contractors, Atomic Energy Commission and the Battelle Memorial Institute, have been requiring increased assistance and expanded scientific support services from the Smithsonian Tropical Research Institute to implement the feasibility study for the proposed sea level canal, as ordered by the President of the United States.

MARINE PLANTS AND ANIMAL SURVEY

The addition of a biologist, who will be a specialist in the marine sciences, will enable the Smithsonian Tropical Research Institute to initiate a survey of both the distribution and the kinds of marine plants and animals that are presently at both sides of the Isthmus of Panama, and within a wide radius of the present site of the Panama Canal. This survey will provide fundamental base line information to assess any changes that may occur in both the commercially important or sports-fishery-important organisms that might be attributable either to nuclear explosions that are being considered as a basis for excavating the new canal, or resulting from a free exchange of waters that would occur if and when the new sea level canal comes into existence.

BIOLOGISTS EDUCATION AND TRAINING

In addition, the Smithsonian Tropical Research Institute has received a substantial increase in requests from such organizations as the Organization of Tropical Studies, as well as from universities in the United States and elsewhere in the Americas, to aid in the education and training of undergraduate biologists from the United States and throughout the Americas.

PLANT AND ANIMAL BEHAVIORAL STUDY

For example, as we have noted, scientific investigators and student visitors in the fiscal year 1966 increased more than a hundred percent over fiscal year 1965. At the same time, the resident staff of the Smithsonian Tropical Research Institute is being requested to provide additional advice and research services to a number of public and private agencies located both in the Canal Zone and in the Republic of Panama. These increases will necessitate the employment of a botanist, who will aid in carrying out surveys of the plants in the area, and an animal behaviorist to fill the basic gaps in our knowledge of the tropical environment, and to provide the scientific information and assistance that are being required by the other agencies.

ADMINISTRATION

A direct consequence of the rapidly increasing need for advice and scientific information as well as specimens from the Smithsonian Tropical Research Institute has been a consequent increase in administrative responsibilities. This has resulted in a disproportionate increase in the amount of time that the few resident scientists at the Smithsonian Tropical Research Institute must devote to administration and a consequent decrease in the amount of time available for fundamental research.

The addition of an administrative officer and a technician and a secretary will help alleviate this increasingly serious situation.

FIELD AND LABORATORY RESEARCH

And finally, one laborer is required to assist in the conduct of the field and laboratory research.

RADIATION BIOLOGY LABORATORY

COMPUTER SERVICES

Chairman HAYDEN. A part of the increase asked for the Radiation Biology Laboratory is $10,000 to provide computer services. How much did you expend for this purpose for the Radiation Biology Laboratory in fiscal year 1967?

Dr. RIPLEY. Sir, we expect to spend $6,000 this year. We rent a small computer at the moment, which is largely for administrative data processing, and as time is available, the Radiation Biology Laboratory has been using time on the machine. But a growing segment of the Laboratory's research requires a larger capacity machine, and for this we will have to obtain the computer services under contract.

Chairman HAYDEN. Does any other Federal agency provide solar radiation information as does the Radiation Biology Laboratory?

Dr. RIPLEY. No, sir; this Laboratory's research—measurement of spectral quality of solar radiation every day of the year, and its maintenance of calibration standards for worldwide use—is unique.

OFFICE OF ECOLOGY

Chairman HAYDEN. How long has the Office of Ecology been established in the Smithsonian Institution?

Dr. RIPLEY. The science of ecology goes back to the beginnings of the Smithsonian. It is only that we have recently formulated the Office of Ecology as an evocation of what we have been doing since our earlier times.

Chairman HAYDEN. Would you please explain why an increase in the personnel and activities of this Office is desirable in fiscal year 1968?

Dr. RIPLEY. We request an increase in the area of ecology of five positions, and $42,000. We now have five positions and $118,000, which has been previously budgeted under the Museum of Natural History.

I believe that we have a pressing need for continuing to develop the interrelationships between the people who are working in this office and the rest of the museum, and our laboratories. We operate, as you know, the Chesapeake Bay Center for Field Biology, at which studies are to be undertaken jointly with Johns Hopkins University and the University of Maryland. We are planning to make the fullest possible use of the Center. This is the finest natural laboratory available for any agency or university near Washington. We hope that the National Institutes of Health and other agencies will gradually develop an interest in this area. In order to prosecute the work and the running of this Center, for the benefit of our own scientists and outside scientists, we feel we need this small addition.

ECOLOGY STUDIES IN CEYLON USING EXCESS FOREIGN CURRENCY

Chairman HAYDEN. On page B–55 of your justifications you indicate that excess foreign currencies are to be used in Ceylon. I assume that this foreign currency is provided with the funds appropriated under the "Museum programs and related research activity."

Dr. RIPLEY. Yes, sir; all four of them will be salaried from the Smithsonian Institution, using a combination of private grant funds we anticipate from the World Wildlife Fund and excess foreign currencies.

This project is on-going now. Two of the scientists are in the field in Ceylon. We have had word from the Ambassador in Ceylon that he is very pleased that the project is finally off the ground, and I think it is going to be quite a distinguished project by the time it is finished.

Chairman HAYDEN. Off the record.

(Discussion off the record.)

OFFICE OF OCEANOGRAPHY AND LIMNOLOGY

PERSONNEL REQUEST

Senator BARTLETT (presiding). For the Office of Oceanography and Limnology you are asking an increase of $121,000 for the sorting center. How many sorters do you employ now and how many more will be provided if the full amount of your budget estimate is allowed?

Dr. RIPLEY. Senator, we have 10 sorters on the staff now. The total staff of the sorting center is 18, and we hope that if the 1968 request is approved, we will undertake a training program in order to build the staff to 35, including 21 sorters. I may say that staff increase is directly in response to the tremendous volume of work which we receive from all over the world and from Government supported oceanographic expeditions. The request has been scaled down in response to budgetary stringency, while attempting to service the President's Commission on Marine Sciences' request.

Senator BARTLETT. Off the record.

(Discussion off the record.)

COORDINATION WITH GOVERNMENT PROGRAMS

Senator BARTLETT. Mr. Ripley, in regard to the Institution's work on oceanography, how closely is it coordinated with the many similar activities being taken by many departments of Government?

Dr. Ripley. Sir, I sit as an observer on the President's Council on Marine Sciences. Dr. Galler and Dr. Wallen, who is the head of our oceanographic program, are closely associated with me, and I believe that we are very closely coordinated with other programs. In fact, the Smithsonian is one of the benchmarks of this entire business. Small as we are, and relatively small as our budget is for these marine sciences, it is absolutely basic to the success of the entire program.

Senator Bartlett. Have you discovered any duplication of effort on the part of the Federal Government in this activity?

Duplication of Efforts

Dr. Ripley. I have not discovered any duplication of efforts in the areas in which I am concerned, because, in fact, we are the only ones that are doing it. It is as simple as that.

OCEANOGRAPHY STUDY EXPANSION

Senator Bartlett. All of us who are interested in this subject, and I have a very deep interest, were pleased to note that the President in a special message to Congress just a few days ago called for a greater national effort in this entire field of oceanography. I heartily applauded that, because I think that we need to do more, and need to do it soon, and need to do it in a more massive way than we have embarked upon as yet.

Dr. Ripley. You will note that in the President's message and in the reports providing the fundamental basic material that went into the President's message, as well as in the reports of the President's Science Advisory Committee and others, the Smithsonian has been urged to expand its efforts in this area, in a way which we cannot afford to do. Our total budget is so relatively small that we could not make these great leaps forward which other groups would like us to make.

Senator Bartlett. Well, if this great leap forward were to be attempted, if you had sufficient money to seek to do this, are there enough competent people available?

Dr. Ripley. Part of the increase that we would have to get would be for a training program to make these people available. And I do believe, sir, that this would greatly speed up the process of getting such people.

Senator Bartlett. There just are not enough now?

Dr. Ripley. There are not enough now. We have had to establish our own professional resources from all over the world, from 28 countries, of some approximately 200 specialists, to help us identify the organisms in the sea.

BUILDINGS, OPERATION AND MAINTENANCE

Senator Bartlett. For your buildings management department, you are proposing an increase of $530,000 over the $6,740,000 available to you this year. Would you please discuss in detail the need for this increase?

Dr. Ripley. Mr. Bradley?

Mr. BRADLEY. Mr. Chairman, the need is directly related to the operation, protection, and maintenance of additional building floor area. The Smithsonian is somewhat unique from the rest of the Government in that we operate our own buildings. Such services normally are provided by the General Services Administration to other organizations. However, in our budget now before you about 30 percent of the total request is for the operation of buildings.

The Smithsonian now has in operation something over 3 million square feet—it is 3,185,000 square feet of floor area, in 11 separate buildings. We have to offer for the record, tabulations showing the floor area by building, the part devoted to exhibition for public use, the part for scientific laboratories, and so forth. We also have here, if you are interested Mr. Chairman, an historical record of the addition of the various areas in buildings of the Smithsonian, running to the total of over 3 million square feet.

We also have an evaluation that we asked to be made of our budget for one of the largest buildings, the Museum of History and Technology. In some detail, we went over that budget with the Public Buildings Service in order to appraise the adequacy and the reasonableness of this request.

I am glad to report to you that we found agreement with these people who do operate buildings, although they were not familiar with museum buildings and the special problem of 5 million people coming in and out. The appraisers were highly knowledgeable on building operations and represented the nearest thing we could get, we felt, to a reasonably knowledgeable appraisal of what we were proposing to submit to you. I can report that it worked out very well, and we are in reasonable agreement.

Senator BARTLETT. Those tables will be accepted, by the way. Thank you sir.

(The tables follow:)

SMITHSONIAN INSTITUTION BUILDINGS[1]

Buildings Management Department

Name of building	Gross square feet	Net square feet	Exhibit area	Science or laboratory area	Storage area
1. Museum of History and Technology	753,667	518,818	301,405	10,000	70,000
2. Museum of Natural History	1,220,581	896,034	220,027	[2] 150,000	[2] 300,000
3. Smithsonian Institution Building	150,388	87,273	11,000	20,000	....
4. Arts and Industries Building	162,897	143,488	103,195	....	....
5. Fine Arts and Portrait Galleries	374,125	225,530	[4] 48,202 [5] 49,960	....	12,000
6. Smithsonian Gallery of American Arts, Crafts, and Design	38,000	(3)	(3)	....	3,000
7. All other (Air and Space, Freer, 24th St., Oceanographic Sorting Center, Silver Hill, Lamont St., and 2 temporary sheds)	485,210	472,398	46,146	42,000	255,000
Total	3,184,868	2,343,541	779,935	222,000	640,000

[1] Excludes National Gallery of Art.
[2] Approximate.
[3] Not available.
[4] National Portrait Gallery.
[5] National Collection of Fine Arts.

Buildings Management Department, fiscal year 1968

	Positions	Man-years

Summary of construction appropriations and increases in gross floor areas

Fiscal year	Construction appropriation	Gross floor area added (square feet)	Total floor area (square feet)
1956	$2, 288, 000	----------	1, 425, 665
1957	33, 712, 000	----------	1, 425, 665
1958	800, 000	----------	1, 425, 665
1959	----------	----------	1, 425, 665
1960	----------	----------	1, 425, 665
1961	13, 500, 000	43, 705	1, 469, 370
1962	4, 836, 000	753, 667	2, 223, 037
1963	1, 275, 000	----------	2, 223, 037
1964	7, 251, 000	259, 903	2, 482, 940
1965	3, 889, 000	259, 903	2, 742, 843
1966	3, 787, 000	29, 900	2, 772, 743
1967	3, 889, 000	374, 125	3, 146, 868
Subtotal	75, 227, 000	1, 721, 203	3, 146, 868
1968	2, 641, 000	38, 000	3, 184, 868
1969	33, 171, 000	30, 000	3, 214, 868
1970	49, 315, 000	365, 000	3, 579, 868
1971	18, 060, 000	----------	3, 579, 868
1972	7, 100, 000	1, 231, 833	4, 811, 701
Subtotal	110, 287, 000	1, 664, 833	----------
Total	185, 514, 000	3, 386, 036	4, 811, 701

NOTE.—1968 thru 1972 are estimates. 1,721,203 square feet or 55 percent of all Smithsonian building space was opened from 1961 to 1967.

LEVELS OF MAINTENANCE, OPERATION, AND PROTECTION

Senator BARTLETT. In the table preceding page B–61 of your justifications, it is stated that the additional personnel are needed "to provide maximum acceptable levels of maintenance, operation, and protection," and on page B–62, in discussing the 86 additional positions asked for, the statement is made that they are "required to approach acceptable levels of performance in the maintenance, operation, and protection * * *"

What level will be achieved if the full amount of this increase is allowed?

Mr. BRADLEY. Mr. Chairman, the level of acceptability is our objective. This simply means that the buildings will be well maintained structurally, will be clean, well guarded, that the collections will be under surveillance, and that the large crowds will be kept orderly.

BUILDINGS OPENINGS

The net result of this budget is that the total amount of money that we will spend per square foot is $2.27 square foot. I submit that the level of maintenance is directly related to the requirements that we have. We are open 364 days a year, every day but Christmas, and many of our buildings are open at night during the five warm months of the year. We have a guarding requirement which requires almost five men, technically 4.85 men, in order to put a guard on a single post for around-the-clock guarding for the whole year. This is because these people work five shifts per week with time-off for vacation and sick leave. We have to be open 21 shifts in the course of a week. This, of course, runs up the cost of operating these buildings. What we are trying to do here is to present clean, welcome, fresh buildings with good exhibits to the millions of visitors that we have each year.

GUARD SALARY AND RECRUITMENT

Senator Bartlett. What is the starting salary for a guard?

Mr. Bradley. A guard comes in, Mr. Chairman, at just over $4,000 a year—GS-3, $4,269 a year.

Senator Bartlett. Do you have trouble recruiting?

Mr. Bradley. We surely do, sir.

Senator Bartlett. I should think so, at that figure.

OFFICE OF EDUCATION AND TRAINING

1967 Appropriation and 1968 Budget Request

Your justifications indicate that the programs of the Office of Education and Training fall into two broad categories. Would you indicate the nature of these categories and provide information as to the funding in fiscal year 1967, and the increase requested in fiscal year 1968 for each of these programs?

Dr. Ripley. Thank you, Mr. Chairman.

The first category includes graduate level, postdoctoral, and short-term consultants in research. We are requesting no increase in 1968 for this category. This stands at $168,000 in 1967, and we intend to continue it at this level in 1968. The second category, museum services for public education, is of great concern to us. This effort stood at $32,000 in 1967, but we must increase this in a major way if we are to accommodate the greatly increasing volume and demand of requests from the public and from the schools.

Increased Visitations to Museums

Under the Education Act, use of museums is being increased all over the country by schools and school classes. We have no comparable way of meeting this increased use, because we cannot go to the Office of Education and ask for equivalent funds. We have to come directly to the Congress, and ask for some service funds which will allow us to meet the needs of the schools who are now asking for the first time for these services. This is essentially the reason for our request.

EXPERIMENTAL MUSEUM

Senator BARTLETT. Apparently one of the activities planned for next year is an experimental Store Front Museum. Would you please tell the committee just what this will be, and indicate when it is to be established and how much you expect it to cost?

Dr. RIPLEY. We expect to finance this essentially through private funds. We have received a grant of $25,000 from the Carnegie Corp. toward this activity. This is an experimental concept which I feel we have the local conditions, and the local know-how to attempt to undertake.

The purpose of this would be to rent a space, perhaps a store, in some rather run-down neighborhood in part of Washington, where the people have little likelihood of ever coming to our museums, and to attempt to develop in this sample museum a combination of exhibits which would excite and interest their curiosity, and which would allow them to have some personal involvement.

One of my great interests in being associated with museums is the problem of the arousal of interest in people in anything at all. Few of us understand, perhaps, how it was that we did begin as individuals to be interested in things, or concerned with them, and I feel that we should do more experimenting with understanding in museums. They have rather open, nondidactic methods of displaying interesting objects and talking about them. They are not imposing their will on the potential pupil the way a teacher is. There are no tests, no weekly quizzes, no comeback. It is just a thing that is there, and if the person is interested, he becomes interested of his own volition.

This is to me the most secure method of becoming interested in anything at all, by your own volition. I feel that the fact that museums exist, and the fact that we are working in them, gives us an unparalleled opportunity to test some of these suppositions and attempt to find out why people are interested.

I would like to work in an area where there are people who are deprived of coming to museums for a variety of reasons. One reason is that many of these people don't move out of their particular neighborhoods for long periods of their life. We should bring the museum to them, in the same way that a bookmobile, for example, brings books to a neighborhood.

Senator BARTLETT. How much do you think this will cost?

Dr. RIPLEY. As I say, we expect that it won't cost more than about $30,000, and we have already received a grant of $25,000.

Senator BARTLETT. You have received the $25,000?

Dr. RIPLEY. Yes.

INTERNATIONAL ACTIVITIES

1967 APPROPRIATION AND 1968 BUDGET REQUEST

Senator BARTLETT. For international activities, you propose an appropriation in fiscal year 1968 of $251,000, $45,000 more than the amount available to you during the current fiscal year. Of this increase, $15,000 is for the International Exchange Service. Would you explain what this is and furnish some examples of your activities?

PERSONNEL REQUEST

Dr. RIPLEY. Sir, this is for an additional freight clerk to handle the increased volume of shipping; $10,000 additionally to cover rising transportation costs; and $1,000 for packing and shipping supplies.

The Smithsonian traditionally, since the early years of its history, has been responsible for forwarding publications to governmental and private organizations overseas, including reading materials now for the Peace Corps volunteers, textbooks for use in their school programs, law, medical, and dental journals requested by Ministers of Justice and universities in the developing countries.

In return, we receive publications from foreign countries for distribution to scientific and educational organizations in the United States.

Many universities as well as Government agencies use these services, and it is one of our fundamental responsibilities and has been so for over a hundred years.

ACCELERATED SPECIAL FOREIGN CURRENCY PROGRAM

Senator BARTLETT. The remaining $30,000 of your proposed increase is for an accelerated special foreign currency program and for conduct of cooperative programs with other Federal agencies. Would you please explain the requirement for such an increase?

Dr. RIPLEY. May I introduce the Director of our Office of International Activities, Mr. Chairman? Perhaps you would like to answer that, Mr. Warner.

Mr. WARNER. Mr. Senator, we have requested an increase of two administrative assistants, one secretary, and one clerk-typist, mainly to manage successfully the foreign currency program at the scope that we requested for fiscal year 1968. We ourselves, within the Office of International Activities, do all the front running, as it were, for the universities and museums receiving grants under the program. We tell them what kind of expenses are allowable under the program and we frequently help them in finding appropriate host country institutions with whom they will work overseas. In some of these excess currency countries, the host governments demand a full exchange of diplomatic notes and a program agreement before any Smithsonian-supported project can get into the field.

It is a complex administrative responsibility, and we feel that we would need the increased positions in order to successfully manage a foreign currency program of the level we have requested.

Senator BARTLETT. Thank you.

EQUAL EMPLOYMENT OPPORTUNITY PROGRAM STAFF

How many personnel are there on your staff, Mr. Ripley, now dealing with the equal employment opportunity program; and what is the need for another equal employment opportunity officer?

Dr. RIPLEY. Mr. Bradley, would you care to answer that?

Mr. BRADLEY. Mr. Chairman, at present the Assistant General Counsel serves as our equal employment officer in his spare time, of which he has practically none, and we back him up with the man who is in charge of the International Exchange Service, who happens to have had experience in this field also. Because of the evident interest in the equal employment opportunity program, and because the two gentlemen who are serving are being increasingly diverted from their principal responsibilities, we would like very much, if we could, to put on a man and have him in charge of an affirmative equal opportunity program.

Senator BARTLETT. He would be full time?

Mr. BRADLEY. Yes, sir.

Senator BARTLETT. And how many secretaries would he have?

Mr. BRADLEY. We haven't provided a secretary for him. We would have to double up for a while.

PLANNING FOR AMERICAN REVOLUTION BICENTENNIAL CELEBRATION

Senator BARTLETT. How many people do you now have working on the American Revolution Bicentennial celebration?

Dr. RIPLEY. Mr. Chairman, we have no full-time people working on the American Revolution Bicentennial, but it has become quite obvious in the past year that the Smithsonian will be heavily involved in this celebration.

Not only does the Federal Council on the Arts and Humanities, on which I sit, call for preparing plans for the observance of the bicentennial or similar great national holidays, which are observances which I assume are equivalent to this, but also there is a special American Revolution Bicentennial Commission.

I sometimes think that, to paraphrase the National Park Service, the Smithsonian is going to have to embark on a "Mission 76." We have at the present time a number of curators, six of them, and a number of exhibits people, four of them, who have been putting in time, during the past year, on the exhibition in connection with the Stamp Act, and on the Bill of Rights. A third exhibition is opening in the summer of 1967 on the Townsend Act.

We are requesting $25,000 under the Museum of History and Technology to develop plans to commemorate this period. We hope that our curators will be able to study particular locations in which to survey historic collections, and to arrange for loans, and to evaluate collections.

Also, we hope to take on various historians, some of them perhaps members now, in various capacities, of the Bicentennial Commission, to assist us in research effort which will culminate in publications and plans for exhibits.

I feel it is not too early, at this time, to begin preparing for what is obviously going to be a major effort for the Smithsonian, a few years hence, and we are continually being requested already by letters from Members of Congress for information on plans that we are making and laying for these observances.

Senator BARTLETT. If you do eventually feel the necessity to follow the lead of the National Park Service, I am sure the Smithsonian will emerge with words that are more imaginative, descriptive, and glorious than the National Park Service adopted.

MANAGEMENT SUPPORT

In connection with your management support budget, what particular activities make additional travel essential?

Mr. Ripley. We request additional travel funds, sir, to make official trips to permit us to maintain close review and management of our installations outside the District. These are principally Cambridge, Mass., where the Astrophysical Observatory is located; its station, in Arizona; the River Basin Survey, Lincoln, Nebr.; and Barro Colorado Island in the Canal Zone. Some travel will increase in regard to New York City and Connecticut, where the Hirshhorn collection is presently located. This will gradually have to be moved down in segments. We are in touch, under our Collection of Fine Arts, with the Cooper Union Museum and numerous other museums throughout the country.

Our satellite tracking locations are located in eight foreign countries, and our foreign currency programs are also presently worldwide.

We have to have appropriate travel, where directed by me, and which is essential for these administrative functions.

We have requested in 1968 a total of 29 administrative employees, and for the increased management support staff that provides services throughout the Institution we have asked for an increase of $6,000 for travel funds.

Also, certain service activities have travel budgeted under this central source, including our Fiscal Division, Supply Division, Photographic Services, and the Museum Services. We are asking that the "no-increase" policy on 1967 be removed in 1968, and that we have an increase commensurate with the increase in the number of employees who are required to travel. It is actually up now 30 percent compared to before.

Senator Bartlett. If this——

Dr. Ripley. Compared to fiscal year 1966.

Senator Bartlett. Yes. If this additional money you have requested is allowed, what will be the total travel budget for the next fiscal year?

Dr. Ripley. Sir, I know that the average cost of travel per employee at Smithsonian is below the costs of similar agencies of the Government.

Mr. Bradley, perhaps, can give me the total figure.

Mr. Bradley. Mr. Chairman, the total for the Institution will be $322,000, if this increase is granted.

Senator Bartlett. Off the record.

(Discussion off the record.)

OFFICE OF THE GENERAL COUNSEL

Personnel Request

Senator Bartlett. What has increased the complexity, or the volume of legal matters which makes an additional attorney necessary?

Dr. Ripley. Perhaps Mr. Bradley would like to speak to that.

Mr. Bradley. Mr. Chairman, I think that the best answer, the quickest answer is indicated on a chart here where it shows that the Smithsonian Institution through the generosity of this committee and the Congress has had a steady increase. These dollars, of course, are converted into programs, and those in turn get us into legal situations. We have had——

Senator Bartlett. I thought you were going to say "difficulty."

Mr. Bradley. Difficulty. Then, too, our present complement of two attorneys, really, is not a large staff. The two attorneys that we have are concerned not only with matters of governmental function, but also with the gifts and bequests, wills, property acquisitions, and disposals, grants, and our foreign activities. In respect to foreign activities, the proper procedures to place out this $2 million that we have this year, and possibly $6 million that we may have next year, require legal activity. This requested position is related to the known workload in this office, and I can confidently say to you, sir, that they are somewhat overworked.

Senator Bartlett. How many do you seek to add?

Mr. Bradley. One, sir.

Senator Bartlett. At what salary?

Mr. Bradley. He should be about a grade 14, that is about at a salary of the same number of dollars, about $15,000.

INTERAGENCY BOARD OF EXPERT EXAMINERS

Senator Bartlett. How much did the Smithsonian Institution contribute for operation of the Interagency Board of Expert Examiners under the Civil Service Commission in 1967?

Dr. Ripley. Mr. Bradley, would you have the detailed answer to that?

Mr. Bradley. We are contributing $16,800 as our share of operating this program in fiscal year 1967, and the same amount is planned in 1968.

Senator Bartlett. You are not asking for $16,000 boost in fiscal year 1968, then?

Mr. Bradley. We are asking for the increase in fiscal year 1968. We are doing what is called "absorbing" in 1967.

Senator Bartlett. And you want to end that practice?

Mr. Bradley. We would like to, sir.

OFFICE OF PUBLIC INFORMATION

Personnel Requests

Senator Bartlett. Are the Director for the office of Public Information and a Chief of Film and Broadcasting new positions?

Dr. Ripley. Yes, sir.

Senator BARTLETT. I note that you are requesting $25,000 to meet the costs of these positions and the personnel benefits attached to them.

Dr. RIPLEY. Yes, sir; these are the only positions in this area that we are requesting this year. We feel that the Office of Public Information is far more than perhaps what it might appear to be, or is in some Government agencies, on the surface. This is related to the problem that I mentioned earlier—the question of understanding interests. We want the Office of Public Information head to be someone who will survey our total problem of relating and communicating our programs to people, to the public.

As you know, we have many millions of visitors every year, Senator, and I am concerned that we are not testing and sampling and working with these people adequately to attempt to find out what brings them to the Smithsonian, and what kind of concerns they particularly have and answers that they are receiving.

Senator BARTLETT. You now have an Office of Public Information?

Dr. RIPLEY. Yes, we have a small office which essentially consists of an outgrowth of our past Editorial and Publications Division.

Senator BARTLETT. But no one heads it up, with the title?

Dr. RIPLEY. Mr. Berg, title?

Mr. BRADLEY. Sir, we have had a director. He just left, the first of the month, but we now have an acting director, of course.

Dr. RIPLEY. For public information.

Mr. BRADLEY. Yes, Director of Public Information.

DIAL-A-MUSEUM SERVICE

Senator BARTLETT. What is the Dial-A-Museum service, and what is its expected annual cost?

Dr. RIPLEY. The average cost of the Dial-A-Museum service is estimated to be $300 a year. By dialing this particular number, 737-8811, it is possible to get the latest information, revised daily, on what is being shown in the museums, where it is being shown, and how long it will be on display. This recorded report is prepared each day. It has been working since November 1966, and it averages about a hundred calls daily.

DIAL-A-SATELLITE PROGRAM

We also have a Dial-A-Satellite program, which costs us $672 a year, and by dialing 737-8855 you can get the precise time and the exact locations of satellite passages which are visible to the naked eye, and other astronomical data.

This averages about 500 calls a day. It is an up-to-date report, which is prepared daily by the Astrophysical Observatory. It has been amazingly popular.

Senator BARTLETT. Today, there will be 101 calls on the first, and 501 on the second.

Dr. RIPLEY. Thank you, Senator.

PHOTOGRAPHIC SERVICES DIVISION

Senator BARTLETT. Does your Photographic Services Division provide photographic services for any but the Smithsonian Institution? If so, are the outside agencies charged for this work?

Dr. Ripley. Sir, essentially our work is internal, and concerned with activities of the Smithsonian. However, services are occasionally rendered to other activities, and to persons and agencies outside the Smithsonian.

This is primarily for work undertaken through grants and contracts from other Federal agencies, so in that sense, it is Smithsonian-oriented and Smithsonian-directed. In these instances, the costs of the supplies, materials, labor, and outside photographic work are borne under the grants and the research contracts.

Very rarely, because of the uniqueness of some item found in the Smithsonian, we get requests for a photograph from an organization outside the Institution. As a regular policy of our agency, some photographs are provided free of charge to such agencies or persons in return for specimens, rare articles, or other materials given to the Institution. In some cases, a photograph of an item donated or transferred may be the sole request of the donor. If they give us a rare object, they may say they would like a photograph of it, and we will perform this free for them.

Where any such costs are significant, and are incurred in connection with furnishing photographic services and materials to an outside agency, and we have little obligation, we will make a charge for such services rendered.

In general, we do get requests from the public and these are subject to a modest charge which we put on a cost recovery basis.

MUSEUM PROGRAMS AND RELATED RESEARCH

Senator Bartlett. For fiscal year 1968, there is a request for an appropriation of $6,100,000 for museum programs and related research to be met through the special foreign currency program. This is an increase of $3,784,000 over the amount appropriated last year.

The justification for this estimate will be placed in the record.

(The justification follows:)

Museum Programs and Related Research (Special Foreign Currency Program)

1966 appropriation	$1,300,000
1967 appropriation	2,316,000
1968 estimate	6,100,000

An appropriation of $6,100,000 in foreign currencies, as determined by the Treasury Department to be excess to the needs of the United States, is requested for a grant program for 1968.

There follows an analysis of 1966, 1967 and 1968 programs.

	1966 actual	1967 actual	1968 estimate
Archeological excavation and research	$1,300,000	$1,300,000	$1,768,000
Systematic and environmental biology		1,016,000	3,553,000
Museum programs			500,000
Astrophysics			130,000
International exchange of scientific publications			17,000
Program development and administration			132,000
Total	1,300,000	2,316,000	6,100,000

ARCHEOLOGICAL EXCAVATION AND RESEARCH

$1,768,000 is requested for the third year of the Smithsonian's program of grants to American universities, museums or other institutions of higher learning interested in conducting archeological excavation or research in the excess foreign currency countries.

Within this amount, approximately $939,000 will be required for on-going research or expeditions which in the Institution's view fully merit continuing support. Among some of these projects are:

> The Lawrence Radiation Laboratory of the University of California project for X-raying Egyptian pyramids to discover unknown interior chambers. This project, which is jointly funded by the Smithsonian and the Atomic Energy Commission, is not only of great archeological interest in itself, but has also developed new technologies for archeological exploration everywhere.
>
> The University of Missouri-Corning Museum of Glass excavations of ancient Phoenician glass factories along the Israeli coast. Some of the sites have been of such interest that the Government of Israel has converted them into small on-the-spot museums.
>
> The American Academy of Benares, a research center administered by the University of Pennsylvania, which began operations in September of 1965 in a historic palace generously provided by the Hindu University of Benares. The guiding purpose of this new institution is quite clear. The archeology and art history of India are so rich that often the most difficult question is where to begin. The Academy seeks to answer this question by conducting long-range surveys which will document, record and photograph ancient temples and archeological sites throughout India, as a prerequisite to the determination of intelligent research priorities.

Within the total of $1,768,000 for archeological excavation or research, $504,390 is requested for the accommodation of new archeological project proposals and $324,456 for projects in other of the anthropological sciences, especially for ethnographic studies of contemporary peoples which can contribute to our knowledge of man's past. In many cases, these studies must be made on an urgent basis, because there are now many tribes or groups of people around the world whose identity is fast disappearing through acculturation. The Smithsonian considers this last to be one of the Institution's most important responsibilities. In the nineteenth century the Institution early gained a strong reputation for its timely surveys of American Indian tribes in our expanding West; the Smithsonian was then and is still today the prime source of knowledge concerning our Amerindian communities. But now this anthropological "frontier" has moved beyond our West to the developing continents of Africa, Latin America, and Asia, where there are many tribes whose history and culture must be known now, before the opportunity is irretrievably lost.

A listing of on-going projects and new or sample project proposals is found below.

SYSTEMATIC AND ENVIRONMENTAL BIOLOGY

$3,553,000 is requested for support of systematic or environmental biology projects, nearly all of which will contribute to the objectives of the International Biological Program. This amount, which forms the largest part of the Institution's foreign currency request, may be subdivided as follows:

(*1*) *Direct Support of the International Biological Program, $60,000*

During the past year, the Smithsonian has emerged as a prime contributor to the United States' plans for the International Biological Program (IBP), which is a massive international scientific effort aimed at taking a biological inventory of the earth's natural environments, both marine and terrestrial, in order to determine their productivity for the human populations that must someday inhabit or sensibly exploit them.

Responding to requests of the National Science Foundation, the National Academy of Sciences and the United States National Committee for the IBP, on which the Institution is prominently represented, the Smithsonian employed a small but significant portion of its fiscal year 1967 special foreign currency appropriation to support IBP conferences and preliminary surveys in various of the excess currency countries. Since the plans of the U.S. National Committee and of the International Secretariat for the IBP are now much more advanced, the Institution would like to continue to make a direct contribution to the IBP through the advantageous medium of excess currencies.

Since much of the research in systematic or environmental biology which the Smithsonian itself and other American institutions wish to conduct in the excess countries will contribute to the goals of the IBP or bear specific IBP endorsement, the sum of $60,000 is requested for symposia or planning conferences which the United States National Committee for the IBP wishes to hold in the excess countries.

(2) *IBP-Related Research in Systematic and Environmental Biology, $2,992,100*

The sum of $2,992,100 would be used for research projects in systematic and environmental biology contributing to the program objectives of the IBP, approximately two-thirds of which will be carried out by the Institution's own scientific staff, with the remainder reserved for grants to other American institutions.

Approximately 23 percent of this amount is needed to continue multi-year projects initiated in Fiscal Year 1967. Some noteworthy examples include:

> An oceanographic sorting facility established with the cooperation of the Tunisian Institute of Oceanography and Fisheries at Salambo, Tunisia, which the American Embassy in Tunis characterized as one of the most worthwhile new uses of Tunisian currencies proposed during Fiscal Year 1967. This sorting facility has advanced the Smithsonian Oceanographic Sorting Center's general task of identification of marine organisms and serves also as the collection and identification center for special projects in the marine biology of the Mediterranean.
>
> A multi-national research project concerning biological interchange of marine organisms between the Mediterranean and Red Seas, Smithsonian-administered, utilizes the above facility and involves collaborating institutions in Israel, Egypt and Yugoslavia. This project is of inherent basic scientific interest because of the problems caused by migration of species between the two seas, which are as yet imperfectly understood; it also has applied significance in explaining changes in commercially valuable species in the Eastern Mediterranean and as a model or prototype investigation for the biological interchange that will occur with the construction of a sea-level canal across the Isthmus of Central America.
>
> A Johns Hopkins University study of the small mammals of Bengal, India, an investigation that combines basic and applied research through the identification of rodents, as well as their ecto- and endo-parasites, which can seriously affect public health in India.

The increase in this part of the program will be required for such new projects as the establishment of another oceanographic sorting facility in India or Ceylon, coral reef research in India, and a stepped-up program of individual grants to Smithsonian scientists for enlarging the National Collections in entomology, botany and zoology, which will assist the biological inventories planned by the IBP.

(3) *Smithsonian Contribution to the National Science Foundation's Translation Program, $500,900*

In addition, part of the requested increase would be used to accelerate the translation of vital foreign reference works in systematic biology, through the National Science Foundation's (NSF) translation program. Under the existing system, the Smithsonian annually receives an average of 3,000 pages of translation of foreign scientific works without charge, as its quota in NSF's interagency service program. However, at this rate of support, the Institution simply cannot receive in time the necessary foreign monographs which will permit it to make much needed comparative studies of materials in its own growing collections. For example, the Museum of Natural History's Department of Botany and the American botanical community in general urgently need a translated edition of the recently completed 30 volume *Flora of the USSR*, but will not receive it under the present allocation rate until sometime after 1990. This one reference set is indispensable to the plans now under way to write a long overdue revised *Flora of North America*. There are many other similarly urgent needs for translation of foreign taxonomic literature; all of them must be met at a faster pace because the IBP's "global biological inventory" cannot be completed without such basic reference works.

It is therefore proposed that the Smithsonian transfer $500,900 of its foreign currency appropriation to the National Science Foundation, to permit the Foundation to respond more adequately to the Institution's translation needs. Similar foreign currency transfers for accelerated translation have already been made by the Departments of Commerce; Interior; Labor; and Health, Education and Welfare.

MUSEUM PROGRAMS

$500,000 is requested to support and expand cooperative programs of the United States National Museum with other museums and their professional organizations in the United States and abroad. The Institution seeks to carry out a major part of its international museum programs with excess foreign currencies, rather than dollars. The funds requested would be used to provide training courses and conferences for museum professionals in five of the excess currency countries, for advisory services of American museum professionals as requested by foreign museums, and for the production of model science-teaching exhibits in India, Egypt, and Israel under a plan submitted by the UNESCO-affiliated International Council of Museums (ICOM).

ASTROPHYSICS

$130,000 is requested to permit the Smithsonian Astrophysical Observatory (SAO) to establish a satellite geodesy observing station in Poland; to provide for international travel of staff members of the SAO's existing tracking station in Naini Tal, India, to conduct gamma-ray balloon experiments in India; and for theoretical studies in celestial mechanics in Egypt.

Preliminary negotiations with appropriate institutions in Poland have already indicated a high degree of host country receptivity and cooperation for the establishment of geodetic stations. The station would employ local crews, with perhaps one resident Smithsonian scientist or periodic visits by a supervising Smithsonian scientist. They would be under the administration and scientific supervision of the SAO's Central Bureau for Geodesy, a responsibility recently given the Astrophysical Observatory by the International Association of Geodesy in recognition of the SAO's clearing-house function in the assemblage of international geodetic data. Such supervision would automatically connect the stations to an international network, for the benefit of the host countries, the SAO's own research programs and the international scientific community.

A relatively small part of the amount requested, not in excess of $10,000, would be required to meet the international travel of permanently assigned Indian personnel of the SAO's existing tracking station in India. For some years the cooperating agency in India, which is the Uttar Pradesh State Observatory, has requested more advanced training in observational astronomy for the Indian technicians it has assigned to the station through visits to SAO facilities in this country. It will be very much to the future benefit of the Naini Tal station to meet this modest request.

The Smithsonian has pioneered the study of gamma-rays with spark chambers flown from high altitude balloons. Such studies are among the first ever made of this neglected portion of the electro-magnetic spectrum. They reveal phenomena, in effect, of a new color and at distances never before visible. Initial studies which have been gratifyingly successful, should contribute to our understanding of the origin of the universe through detection of anti-matter, the origin of cosmic rays and the density of cosmic radiation. Initiation of collaboration with the Tata Institute of Fundamental Research in Bombay, India, advantageously funded with excess foreign currencies, would combine the talents of two of the principal contributors to this field of study. The Tata Institute is pre-eminent among Asian research institutions and is located close to the magnetic equator where high altitude balloon studies are assured the best results.

With a contribution of about $20,000 it is proposed to support studies in Egypt in celestial mechanics and artificial satellite theory employing computer techniques. The Smithsonian has made basic contributions to the theory of artificial satellites around the earth. These studies would extend collaboration with Egyptian scientists already begun at the Astrophysical Observatory in Cambridge.

INTERNATIONAL EXCHANGE OF SCIENTIFIC PUBLICATIONS

$17,000 is requested to permit the International Exchange Service (IES) to effect economies in its dollar expenditures for the shipment of publications to various of the excess currency countries and to assist the India Exchange Bureau in achieving more rapid and efficient distribution of IES publications throughout India.

Investigations have revealed that in many cases the American or other flag lines which IES employs for shipment of publications will accept payment in foreign currencies. In the Smithsonian's view, therefore, the President's memorandum of May 21, 1966, to heads of executive departments and agencies urging maximum possible use of excess currencies for transportation, may logically be extended to freight costs. Although the sum requested is small, it will allow the IES to make significant dollar savings.

APPORTIONMENT OF FOREIGN CURRENCIES

Outlined below are the various projects and project proposals which make up the total $6,100,000 excess foreign currency Fiscal Year 1968 request, divided according to the different program areas described in the narrative justification immediately preceding. Continuing or on-going projects are so identified. New projects are in effect sample or illustrative projects based on firm indications of interest both within and without the Smithsonian. They represent the Institution's selection of possible projects which appear most promising for successful development and implementation during Fiscal Year 1968. It should be noted, however, that actual implementation of these projects will be contingent upon three factors: review by the Smithsonian's outside advisory councils, review by the Department of State for foreign policy implications, and appropriate cooperative arrangements with host country institutions or governmental authorities.

Museum programs and related research (special foreign currency program)

I. ARCHEOLOGICAL EXCAVATION AND RESEARCH

Recipient	Project	Fiscal year	Grant expressed in U.S. dollars
A. Ongoing projects:			
1. American Institute of Indian Studies (a nonprofit organization of 24 American colleges and universities).	For continued support of the American Academy of Benares, a research center for South Asian archeology and art history.	1968 [1] 1967 1966	141,645 130,778 76,850
2. American Research Center in Egypt (a nonprofit study center supported by 10 American universities).	To continue support of the center's research and excavation program in the archeology of Egypt, which includes Pharaonic, Hellenistic, Roman, and early Christian sites.	1968 [1] 1967 1966	170,000 177,137 259,200
3. Jerusalem School of Archeology of the Hebrew Union College.	To continue the survey and exploration of some 400 archeological sites in the Negev and to conduct seminars in biblical archeology for American graduate students in archeology.	1968 [1] 1967 1966	200,000 165,750 150,000
4. Peabody Museum of Yale University.	To continue the paleontology and stratigraphy studies of the Paleocene, Eocene, and Obligocene deposits of Egypt, which have resulted in important discoveries relating to human evolution.	1968 [1] 1967 1966	16,362 31,396 19,310
5. University of Missouri, Corning Museum of Glass.	To continue excavations of Phoenician glass factories in Israel.	1968 [1] 1967 1966	30,000 ------------ 30,200
6. University of Colorado	To study prehistoric archeological and paleontologic remains in Tunisia.	1968 [1] 1967 1966	50,000 62,000 ------------
7. Southern Methodist University	To study prehistory of the area around Sibaiya, Egypt.	1968 [1] 1967 1966	30,000 39,800 5,205
8. University Museum, University of Pennsylvania.	To study remaining stones of the Temple of Akhnaten at Luxor, Egypt.	1968 [1] 1967 1966	78,300 65,070 ------------
9. Museum of Anthropology, University of Michigan.	To develop a program for research and training in prehistoric archeology through field excavations on Mount Carmel in Israel.	1968 [1] 1967 1966	58,091 50,000 ------------

See footnote at end of table.

Museum programs and related research (special foreign currency program)—Con.

I. ARCHEOLOGICAL EXCAVATION AND RESEARCH—Continued

Recipient	Project	Fiscal year	Grant expressed in U.S. dollars
A. Ongoing projects—Continued			
10. American Museum of Natural History, University of Washington, Seattle.	To study and excavate prehistoric and early historic sites in East and West Pakistan.	1968 [1] 1967 1966	66,717 52,367 ----------
11. Carnegie Museum	To continue the excavation of a Philistine city at Ashdod, Israel.	1968 [1] 1967 1966	52,105 47,180 50,000
12. Lawrence Radiation Laboratory, University of California, Berkeley.	To continue testing the utilization of cosmic rays to "X-ray" the Egyptian pyramids in search of presently unknown chambers.	1968 [1] 1967 1966	25,000 21,680 23,320
13. Museum of Anthropology, University of Michigan.	To continue excavations of early Neolithic sites near Cracow, Poland, with the goal of providing the 1st detailed description of early Neolithic cultures in Poland.	1968 [1] 1967 1966	20,934 20,934 ----------
Subtotal, fiscal year 1968, estimate.			939,154
B. New project proposals:			
1. University Museum, University of Pennsylvania.	To survey pre-Buddhist archeological sites in Ceylon for future excavations and comparative studies with prehistoric burial complexes in southern India.		4,390
2. University of Chicago	Anthropological investigations of the Vaisnava tradition in India.		64,456
3. University of California, Los Angeles.	To continue radiocarbon dating of archeological samples in India.		25,000
4. Smithsonian Office of Anthropology.	To study rapidly disappearing crafts at the village level in India, Pakistan, Burma, and Ceylon.		100,000
5. University of Michigan	To conduct research in ancient numismatics in the eastern Mediterranean (Israel).		20,000
6. American Institute of Indian Studies, American Academy of Benares.	To survey and excavate monuments and remains of the Pratihara period, especially at Bhinmal in Rajasthan.		150,000
	To survey and document bronze sculpture of northern India.		30,000
7. Museum of Natural History, Smithsonian Institution.	To survey and document the art history of Tibet on the basis of objects currently being brought to India and Nepal by Tibetan refugees.		50,000
8. Boston University	To survey, identify and test archeological sites in the northern Savannah region of Guinea.		20,000
9. Drew University and McCormick Theological Seminary.	To complete research in Israel on late Hellenistic and early Roman pottery.		40,000
10. Smithsonian Office of Anthropology.	To extend a project, begun in Iran, which will survey and document ancient urban technologies in India, Pakistan, and Ceylon.		160,000
11. Peabody Museum of Yale University.	To excavate the Oligocene and Miocene deposits of the Siwalik Hills of northern India to enlarge knowledge of man's primate ancestry.		50,000
12. Peabody Museum of Yale University.	To conduct excavations related to item above in the Oligocene-Miocene deposits of the Pondaung region of Burma.		50,000
13. University Museum, University of Pennsylvania.	To survey and excavate early neolithic sites in Yugoslavia, believed to contain important evidence on the origin and early production of food crops.		65,000
Subtotal			828,846
Total, archeological excavation and research.			1,768,000

See footnote at end of table.

Museum programs and related research (special foreign currency program)—Con.

II. SYSTEMATIC AND ENVIRONMENTAL BIOLOGY

Recipient	Project	Fiscal year	Grant expressed in U.S. dollars
(1) DIRECT SUPPORT TO THE INTERNATIONAL BIOLOGICAL PROGRAM			
1. National Academy of Sciences-U.S. National Committee for the IBP.	A conference in Israel sponsored by the Human Adaptability and Environmental Physiology Sections of the U.S. National Committee for the IBP, to discuss the adaptability of man, plants, and animals to the changing environment, especially as regards the effects of pollutants and temperature pressures.	--------	35,000
2. National Academy of Sciences-National Research Council.	A conference in Tunisia to develop the 1st regional conservation program of the Terrestrial Conservation Section of the IBP utilizing the Mediterranean area as a prototype for future conservation programs.	--------	25,000
Subtotal		--------	60,000
(2) IBP-RELATED RESEARCH IN SYSTEMATIC AND ENVIRONMENTAL BIOLOGY			
A. Ongoing projects:			
1. Smithsonian Institution, Museum of Natural History, Department of Vertebrate Zoology.	To complete research and partially support publication of a handbook of Indian birds.	1968[1] 1967 1966	5,000 3,334 ------------
2. Smithsonian Institution, Radiation Biology Laboratory.	To continue support of a radiation biology laboratory in Israel, especially for the development of additional recording systems for transfer to other latitudes for comparative solar radiation analyses.	1968[1] 1967 1966	218,900 109,462 ------------
3. Smithsonian Institution, Museum of Natural History, Department of Entomology.	To support behavioral investigations of insects in Egypt, particularly wasps, and to obtain examples of insects and plants of Egypt for the botanical and entomological exhibits in the Museum of Natural History.	1968[1] 1967 1966	5,100 5,100 ------------
4. Smithsonian Institution, Museum of Natural History, Department of Invertebrate Zoology.	To study the ecology and physiology of benthic marine organisms in the Adriatic Sea, utilizing newly developed equipment to measure and permanently record physical factors in the marine littoral zone, in collaboration with marine biological research institutions in Rovinj, Split, and Dubrovnik, Yugoslavia.	1968[1] 1967 1966	18,200 24,858 ------------
5. Smithsonian Institution, Office of Ecology.	To study the Ceylonese elephant through an analysis of seasonal and daily movements and the behavioral patterns-ecological requirements for maintaining breeding populations in preserved areas.	1968[1] 1967 1966	25,800 24,000 ------------
6. Smithsonian Institution, Museum of Natural History, Department of Vertebrate Zoology.	To continue and enlarge investigations in Egypt concerning the ecology of Palearctic birds migrating through northeastern Africa, including cooperative research on serology with the Rockefeller Virus Laboratory and ectoparasites with Naval Medical Research Unit III in Egypt.	1968[1] 1967 1966	50,000 40,235 ------------
7. Smithsonian Institution, Office of Oceanography.	To accelerate the processing of marine organisms from the Mediterranean through a recently established sorting facility in Tunis, in cooperation with the Tunisian Institute of Oceanography.	1968[1] 1967	135,000 150,000
8. Do.	To study marine organisms of the Red Sea and eastern Mediterranean in order to determine what biological interchange of species has occurred through the Suez Canal.	1968[1] 1967 1966	127,600 127,000 ------------

See footnote at end of table.

Museum programs and related research (special foreign currency program)—Con.

II. SYSTEMATIC AND ENVIRONMENTAL BIOLOGY—Continued

Recipient	Project	Fiscal year	Grant expressed in U.S. dollars
A. Ongoing projects—Continued			
9. Smithsonian Institution, Office of Ecology.	To study the flora of Ceylon, with emphasis on the vegetation of elephant habitats.	1968 [1] 1967 1966	59,400 36,500 ----------
10. University of Michigan	To support taxonomic studies of Indian mollusks, through caryotype analysis and the cytogenetics of closely related species, which will contribute to medical, public health, and veterinary programs in India.	1968 [1] 1967 1966	16,300 16,307 ----------
11. Johns Hopkins University	To study the ecology and behavior of small mammals of Bengal, India.	1968 [1] 1967 1966	41,000 41,000 ----------
Subtotal, fiscal year 1968 estimate.			702,300
B. New project proposals:			
1. Johns Hopkins University	To study the population ecology of rhesus monkeys in northern India.		9,200
2. University of Georgia	To study the interaction of human and small rodent populations in a variety of temperate zone environments, in conjunction with the Ecological Institute of Poland.		128,400
3. University of Georgia	To study the flow of energy through small rodent populations in different habitats, in conjunction with the Ecological Institute of Poland.		187,900
4. University of Michigan	To study the importance of bilharzlasis snail hosts in new environments created by the Aswan High Dam in Egypt.		75,000
5. University of Michigan	To make before and after studies of the plankton communities of the Nile River delta area of the Mediterranean, which may be radically altered through changes in salinity and circulation caused by the construction of the Aswan Dam.		482,100
6. Smithsonian Institution, Museum of Natural History, Department of Paleobiology.	To make preliminary explorations of underwater formations containing fossil echinoids off the Tunisian coast.		3,500
7. Smithsonian Institution, Department of Botany.	To study the flora of Hassan district, Mysore, India.		53,700
8. Smithsonian Institution, Office of Ecology, Office of Oceanography.	To help establish a natural reserve on one of the Laccadive Islands of India, for continuous biological studies of coral reef environments of the Indian Ocean.		500,000
9. Smithsonian Institution, Office of Oceanography.	To develop oceanographic sorting facilities in India or Ceylon.		250,000
10. Smithsonian Institution, Museum of Natural History, National Zoological Park.	To provide grants to Smithsonian scientists for increasing the national entomological, botanical, and zoological collections, by expeditions to India, Ceylon, Egypt, Pakistan, the Congo, Burma, Tunisia, and Guinea.		600,000
Subtotal			2,289,800

See footnote at end of table.

Museum programs and related research (special foreign currency program)—Con.

II. SYSTEMATIC AND ENVIRONMENTAL BIOLOGY—Continued

Recipient	Project	Fiscal year	Grant expressed in U.S. dollars
(3) SMITHSONIAN CONTRIBUTION TO THE NATIONAL SCIENCE FOUNDATION'S TRANSLATION PROGRAM			
Library, Smithsonian Institution, Museum of Natural History.	To accelerate the translation and publication of reference works and monographs in Russian, which represent outstanding requests made by the Smithsonian staff since 1960, 20,000 pages, at $23.50 per page (cost includes both translation and publication).		470, 400
Do	For the translation and publication of selected Western European and Oriental language scientific journals or other serial publications, 1,300 pages, at $23.50 each.		30, 500
Subtotal			500, 900
Total, systematic and environmental biology.			3, 553, 000

III. MUSEUM PROGRAMS

Recipient	Project	Fiscal year	Grant expressed in U.S. dollars
1. Smithsonian Institution, U.S. National Museum.	To carry out the International Council of Museums' recommendation to establish exhibit laboratories, initially in Israel, India, and Egypt for the construction of scientific and other educational exhibits for circulation among the developing nations, as examples of the potential of museum education.		110, 000
2. Smithsonian Institution, U.S. National Museum.	To hold international and national seminars or planning conferences in Israel, India, Egypt, and Tunisia, for the purposes of developing national programs in museum education (4 conferences with from 15-20 museum specialists; average cost of each conference $22,500).		90, 000
3. Smithsonian Institution, U.S. National Museum.	To provide advisory or consultant services by American museum specialists, requested by Israel, Pakistan, Egypt, and Tunisia, for the planning of specific science or youth museums and for feasibility studies prior to the construction of these museums.		125, 000
4. Smithsonian Institution, U.S. National Museum-American Association of Museums (AAM).	To provide grants to establish training courses for curators and museum professionals in 10 selected museums in 5 of the excess currency countries. The grants will be administered by the AAM; they will support the travel and per diem of Americans and travel country instructors.		155, 000
5. Smithsonian Institution, U.S. National Museum-American Association of Museums.	To provide for international travel of foreign museum specialists who will receive on-the-job training in American museums.		20, 000
Total, museum programs			500, 000

Museum programs and related research (special foreign currency program)—Con.

IV. ASTROPHYSICS

Recipient	Project	Fiscal year	Grant expressed in U.S. dollars
1. Smithsonian Astrophysical Observatory	To establish in Poland an astrophysical observing station to carry out projects in satellite geodesy, orbit determination and the publication of articles on artifical satellites.	--------	50,000
2. Smithsonian Astrophysical Observatory	To defray costs of advanced training in observational astronomy at Smithsonian Astrophysical Observatory facilities in this country for permanently assigned Indian personnel at the Uttar Pradesh State Observatory, Naini Tal, India.	--------	10,000
3. Smithsonian Astrophysical Observatory	To conduct gamma ray balloon experiments on the magnetic equator in cooperation with the Tata Institute of Fundamental Research at Colaba, Bombay, India.	--------	50,000
4. Smithsonian Astrophysical Observatory	To conduct theoretical studies in celestial mechanics in Egypt.	--------	20,000
Total, astrophysics		--------	130,000

V. INTERNATIONAL EXCHANGE OF SCIENTIFIC PUBLICATIONS

Recipient	Project	Fiscal year	Grant expressed in U.S. dollars
Smithsonian Institution, International Exchange Service (IES).	To support costs of ocean freight of IES publications to Burma, Congo (Kinshasa), India, Israel, Pakistan, Poland, Egypt, and Yugoslavia.	--------	5,000
Do	To expedite the transmittal of IES publications throughout India by providing clerical services to the India Exchange Bureau.	--------	12,000
Total, international exchange of scientific publications.		--------	17,000

VI. PROGRAM DEVELOPMENT AND ADMINISTRATION

Recipient	Project	Fiscal year	Grant expressed in U.S. dollars
1. Smithsonian Institution, Office of International Activities.	To defray costs of program development primarily travel and per diem for program staff, its scientific advisors or outside experts, to negotiate cooperative research agreements, introduce the program in new countries, and inspect on-going projects.	--------	122,000
2. Smithsonian Institution, Office of International Activities.	To defray costs of audit of multiyear projects on-site in the excess currency countries.	--------	10,000
Total, program administration		--------	132,000
Grand total		--------	6,100,000

---

[1] Estimate.

ESTIMATED DISTRIBUTION OF EXCESS FOREIGN CURRENCY FUND BY COUNTRY

Senator BARTLETT. Would you please place, in the record, information to indicate the American dollar equivalent to be spent in various countries under the provisions of this program?

Mr. RIPLEY. Yes, sir.

(The table follows:)

Fiscal year	Total	Country										
		India	Egypt	Israel	Pakistan	Tunisia	Poland	Guinea	Burma	Yugoslavia	Ceylon	Congo
1968	$6,100,000	$1,714,200	$1,221,800	$1,091,900	$302,900	$376,600	$633,100	$95,000	$130,600	$83,800	$374,500	$75,600
1967	2,316,000	554,850	303,700	497,350	30,100	375,000	150,000	70,000	50,000	100,000	165,000	20,000
1966	1,300,000	93,900	704,100	446,500	17,000	----------	----------	----------	----------	2,000	36,500	----------

UNEXPENDED APPROPRIATION BALANCES

Senator Bartlett. This appropriation is available until expended. How much money is now available, including all unexpended balances of any prior year appropriations?

Mr. Ripley. Mr. Warner, would you like to speak to that, please?

Mr. Warner. Of the combined fiscal years 1966 and 1967 appropriations, there is at the moment remaining the dollar equivalent of $1,293,000. All the rest has been awarded in grants, Mr. Senator, and I might explain that of this balance, we now have at hand proposals in various states of readiness that will be considered this May by the advisory councils which we use before awarding these grants. These total over a million dollars. Consequently, we believe we have every prospect of granting the balance for good projects before the end of fiscal year 1967.

Senator Bartlett. Thank you.

SPECIAL FOREIGN CURRENCY PROGRAM FUNDS

Are any other funds, American dollars or foreign currencies, available to the Smithsonian Institution for work similar to that which will be accomplished under the special foreign currency program? If so, will you please indicate in the record the amounts, the purposes for which it will be used and the source of the funds?

Dr. Ripley. Yes, sir. The "Salaries and Expenses" appropriation is technically available for this work but is not planned to be used for this purpose; $11,000 is expected to be granted for the study of wildlife and vegetation in Ceylon by the World Wildlife Fund in the fiscal year 1967.

INTERNATIONAL BIOLOGICAL PROGRAM

Senator Bartlett. How much have you spent or will you expend during the current fiscal year in direct support of the international biological program?

Dr. Ripley. Well, during the fiscal year 1967, we have obligated a total of $713,847. Of this, $688,077 are for international biological program research projects. The expenses in connection with these of an administrative nature and for conferences, in the form of grants to the U.S. National Committee for the International Biological Program, were $25,770.

In fiscal year 1968, we estimate that the IBP, as we call it, program projects, should amount to $2,992,100, and the administrative expenses attendant on those would be in the neighborhood of $60,000.

"FLORA OF THE U.S.S.R."—TRANSLATION AND PUBLICATION

Senator Bartlett. How much do you estimate it will cost to acquire a translated edition of the complete 30-volume "Flora of the U.S.S.R."?

Dr. Ripley. Only a small part of the "Flora of the U.S.S.R." has been translated. The total cost is estimated at $528,000, and to complete what has not yet been translated will cost about $430,000. It comes out at a unit cost per page of $24, which includes the translation and the publication. At this price, we would receive a thousand copies.

Senator Bartlett. Have the Russians done a good job on this?

Dr. Ripley. Yes, the flora and fauna volumes of the Russian academies are first rate. They are very good. We have no comparable publications in this country.

Senator Bartlett. We do not?

Dr. Ripley. No, Senator.

Senator Bartlett. They are ahead of us in fishing, they are catching up with us on merchant marine, and now they have surpassed us in this.

"FLORA OF THE UNITED STATES"—PUBLICATION

Dr. Ripley. I may say that one of the projects which the Smithsonian would like to do very much is an up-to-date "Flora of the United States," which would, I am sure, if it were done, be superior to the one that is available in Russia. It would not be equivalent, because the flora is rather different, but it would be a very good job.

Senator Bartlett. At a wild, speculative estimate, how much would such an undertaking cost?

Dr. Ripley. I should think it would cost us in the neighborhood of a million dollars.

Senator Bartlett. Oh, is that all?

Dr. Galler. If I may say so, it has been estimated between a million dollars and a million and a half dollars.

Senator Bartlett. I had though it would be much more.

INTERNATIONAL EXCHANGE OF SCIENTIFIC PUBLICATIONS

Is the item which you entitled "International exchange of scientific publications," and for which you ask $17,000 this year, a new one?

Dr. Ripley. No, sir, this is not a new item. It is the first time we have asked for help through the excess foreign currencies to assist our International Exchange Service in the tasks of exchange of publications. We have discovered that American and other flag vessels will in some cases accept payment in foreign currencies for such shipments. This makes for dollar savings, and, of course, is in harmony with the Executive instructions to utilize foreign currencies where available to the maximum extent.

ARCHEOLOGY

Senator Bartlett. Are those projects listed beginning at page C–12 under the heading "Ongoing projects" all of those on which you plan to expend funds in fiscal year 1968 and which were being carried on in fiscal year 1967?

Mr. Ripley. Mr. Warner, would you care to speak to that?

Mr. Warner. Mr. Senator, that is correct for archeology, with one exception. On page C–13, there is a grant which we listed last year in our fiscal year 1967 justification, which will not be implemented during this current fiscal year. That is a grant to the University of Washington in Seattle for an excavation in Pakistan. We were not able to implement that, mainly because all kinds of projects like this for research in the field were delayed during the Indian-Pakistan war.

However, the principal investigator, Prof. Walter Fairservice, is in Pakistan now, seeking the necessary archeological excavation permits, and we think it might get off in fiscal year 1968, although it did not in fiscal year 1967, as we had hoped it would.

BIOLOGICAL RESEARCH

For biological research, the projects underway or planned for 1967 and to be continued in 1968 are set-forth on pages C–16 to C–18 in the justifications.

Senator BARTLETT. I see.

DENDUR TEMPLE

The committee has not yet acted on your request to reprogram foreign currency funds to bring the Dendur Temple to the United States. Should this occur, what will be done with the temple after it arrives?

Dr. RIPLEY. Mr. Chairman, aside from myself, I think that Mr. Warner now really is far more the expert on this matter, and I would like him to speak to it.

Mr. WARNER. Mr. Senator, it is our understanding that if—and I should place a capital "I" on the "if"—if Washington is favored with the temple, and there is a Presidential committee of five experts which is reviewing all known applications from the many municipalities or museums across the Nation interested in the temple—if Washington is favored, it is my understanding that the Department of the Interior would seek in the next fiscal year to fund the costs of reconstruction and the annual maintenance of the temple. This financing would be in part from Federal appropriations and in part from private funds, since considerable interest has already been expressed in the Washington community by individuals and by institutions in helping with the costs of reconstruction.

Senator BARTLETT. Off the record.

(Off the record.)

NATIONAL ZOOLOGICAL PARK

Senator BARTLET. I will place in the record the estimate which you make of a need of $485,000 for the capital improvement program at the National Zoological Park in fiscal year 1968.

(The justification follows:)

CONSTRUCTION AND IMPROVEMENTS

1966 appropriation	$1,539,000
1967 appropriation	1,589,000
1968 estimate	485,000

An appropriation of $485,000 is requested to continue the program of capital improvement at the National Zoological Park.

In 1968 these funds will provide for:

Site planning in the center area of the Zoo; detailed plans for bears, aquatic mammals, goats and sheep; plans for one additional hard-surface parking area and landscaping; and the construction of a waterfowl area.

The 12-year program is designed to improve the Zoological Park for its millions of visitors by modernizing exhibits; improving visitor conveniences; eliminating automobile traffic through the Park; enhancing educational and recreational values of exhibits and the natural park; subordinating buildings and other structures and increasing planting and landscaping; advancing science through the study of the animals, their health, nutrition, pathology, and behavior; and providing maintenance facilities for economy and efficiency of operation.

Funds totaling $1,275,000 in fiscal year 1963; $1,275,000 in 1964; $1,525,000 in 1965; $1,539,000 in 1966; and $1,589,000 in 1967 have been appropriated for the first five years of a continuing program of capital improvements at the National Zoological Park.

These appropriations have provided for construction of:

the bird flight cage and remodeling of the bird house;

the hardy hoofed-stock exhibit and habitat consisting of 7 large pens and shelters for animals that can be exhibited outdoors all year (heavy antelope, oxen, zebra, buffalo, Cape buffalo, and ostriches);

the deer exhibit and delicate hoofed-stock area, consisting of 2 houses with 6 large exhibit pens plus 2 large "summer" paddocks (for such animals as okapis, klipspringer, gerenuk, sable antelope, dik-dik, waterbuck and bongo);

the multiclimate house to exhibit animals so closely associated with their environments that they cannot be successfully exhibited or maintained without simulating their natural habitat by means of controlled heat, light, air and water temperature, and humidity (platypus, tuatara, lizard, kiwi, hoatzin, and penguins);

two paved parking areas for 526 visitors' automobiles and 24 buses;

a property yard, warehouse, mechanical shop, garage, and incinerator; new sewerage system and utilities; and

an animal hospital, laboratory, and holding area.

When the modernization and improvement of the Zoo have been completed, the collection of animals will amount to over 1,000 species (currently, approximately 900) and over 4,000 animals (currently, about 3,000). The National Zoological Park will then contain one of the major zoological collections in the world with the capability of exhibiting the collection in full accord with its statutory purpose: "The advancement of science and the instruction and recreation of the people."

The remodeled Zoo will have adequate parking facilities. A trackless train will provide internal transportation and an interesting view of many of the animals while traveling to and from parking areas and other points. This train will be operated on a concession basis and should make a substantial return to the Government.

Visual barriers between visitors and animals will be largely eliminated by the use of both wet and dry moats, structural glass, and fine stainless-steel tension wires.

The viewing eye-level will begin at approximately 28 inches from the ground for the benefit of children. Stairs will be eliminated wherever possible, and sidewalks will be kept to a maximum slope of 10 percent.

When the 12-year plan has been completed, the animal exhibit area will have increased from 17 acres to 50 acres. Twenty-three acres will be natural parkland; 18 acres will be used for needed primary circulation (automobile parking, roadways, and sidewalks). Service and administrative facilities (educational unit, restaurant, public restrooms, maintenance shops, hospital, and research area) will cover 13 acres. The total developed area of the Zoo will increase from 64 to 104 acres.

There follows a summary of the projects to be undertaken with 1968 funds.

Summary

Planning

Detailed plans and designs for bears, aquatic mammals, goats and sheep exhibits; parking areas; and landscaping	$165,000
Advance planning and consultation for 1970 projects	20,000
Total planning	185,000

Summary—Continued

Construction

Construction of waterfowl area	$300,000
Total	485,000

PLANNING ($185,000)

Detailed plans and designs for 1969 projects, $145,000

Detailed plans will be made for five projects. The animal-exhibit project will be located in the valley west of the small mammal house and present bear dens in and around the existing present sea lion and wild dog exhibits.

(1) *Bears* (Planning): Bear dens will be designed to accommodate 12 species (an increase of one species over our present collection). The new bear exhibit, a dry-moat type, will permit unobstructed viewing of the animals by the visitors. The judicious use of bear-resistant glass will give visitors a close inspection of several species of bears. These pens are designed for maximum flexibility, ease of maintenance and care, and also include hibernation and maternity dens. The polar bear exhibit will be especially attractive and will have a central location for maximum display. Artificial and natural rock work will simulate the animals' natural environment. Water refrigeration is not necessary to exhibit these bears successfully in the Washington climate.

(2) *Aquatic Mammals* (Planning): This exhibit will consist of sea lions, elephant seals and smaller mammals such as seals, copyus, tapirs, otters, and muskrats. The exhibit will consist of four all-year, all-weather outdoor pools. Six minor exhibits will be closely associated with the major ones. These animals lend themselves well to the barless type of exhibit. Filtration and recirculation will prevent unnecessary water wastage. Several of the exhibits will have underwater viewing so that subsurface activities of these animals can be seen by visitors.

(3) *Goats and Sheep* (Planning): Goats and sheep will be exhibited on the steep, precipitous west bank of Rock Creek, an area which duplicates their natural environment. The animals will be viewed from a path along the Creek and may be seen bouncing from crag to crag exhibiting their unique agility and adaptability to rugged conditions.

(4) *Parking Areas* (Planning): An additional hard-surfaced parking area will be planned for visitors. This lot will accommodate 216 automobiles.

(5) *Landscaping* (Planning): A detailed landscaping plan will be developed to provide an orderly method of tree, shrubbery, and flower planting to enhance the natural beauty of the Zoo park.

Smithsonian Institution expenses, $20,000

The Smithsonian Institution will require $20,000 in fiscal year 1968 for the improvement program, including consultants' fees, travel for inspection of good design practices in other zoos, purchase of equipment, and similar expenses directly related to the program of improvements.

Advanced planning and consultation for fiscal year 1970, $20,000

Advance plans will be made for remodeling the small mammal house and for the construction of a new lion exhibit.

CONSTRUCTION ($300,000)

(1) Construction of Waterfowl Area, $300,000

A new waterfowl area is to be constructed at the south end of the National Zoological Park near the Harvard Street entrance to aid in eliminating pollution to Rock Creek. The present pond drains directly into Rock Creek and is the last remaining source of pollution to Rock Creek from the Zoological Park. Construction is presently under way for new sewerage facilities which will eliminate all other sources of Zoo-contributed pollution. Complete reconstruction of the pond will be accomplished by regrading and reshaping. A system will be installed to recirculate water and to drain the pond into the sewerage system. A small structure will be provided to house pumping and chlorination equipment.

CONSTRUCTION AND IMPROVEMENT

Senator BARTLETT. Would you indicate the status of the work which has been going on at the zoo for the past several years, and advise the committee of the work planned for the coming year?

Dr. RIPLEY. Mr. Bradley.

Mr. BRADLEY. Mr. Chairman, funds appropriated during the past 5 years have been used to accomplish a good portion of a 12-year program of improvements at the zoo. We have been able, so far, to recondition and completely rebuild the birdhouse and the great flight cage. We have a new deer area and delicate hoofed stock shelters and paddocks. We have an area for hardy hoofed stock with shelter buildings and paddocks. There is a fine storage building and a new sewerage system. During the present year we have been after approvals which we have sought, and I am glad to say have now been given by the National Capital Planning Commission and the Fine Arts Commission on the particular part of the zoo, 165 acres in size, that includes the site for the animal hospital, the research area, and also the multiclimate house. So we plan, during this year, to get on with the construction of both.

Senator BARTLETT. Have you estimated how long it will take to complete the improvements program at the zoo?

Mr. BRADLEY. Mr. Chairman, if we can continue appropriations at the rate that we have been successful in obtaining during the last 5 years, it would take another 6 or 7 years to complete the total planned improvement.

Senator BARTLETT. Thank you.

RESTORATION AND RENOVATION OF BUILDINGS

Senator BARTLETT. For restoration and renovation of buildings you are proposing an appropriation of $1,353,000, $947,000 less than was appropriated last year. The justification for this request will be printed in the record.

(The justification follows:)

1966 appropriation	$2,248,000
1967 appropriation	2,300,000
1968 estimate	1,353,000

An appropriation of $1,353,000 is requested for fiscal year 1968 for the following projects:

Completing renovation of Smithsonian Institution building	$690,000
Additional improvements to Fine Arts and Portrait Galleries	125,000
Mechanical improvements and minor renovation to:	
Chesapeake Bay Center for Field Biology	75,000
Barney Studio House	35,000
Freer Gallery of Art	98,000
Smithsonian Oceanographic Sorting Center	148,000
Radiation Biology Laboratory	182,000
Total	538,000
Total estimate for 1968	1,353,000
Less amount appropriated in fiscal year 1967	—2,300,000
Decrease in fiscal year 1968	—947,000

SMITHSONIAN INSTITUTION BUILDING

Funds in the amount of $690,000 are requested to complete the renovation of the Smithsonian Institution building. This increase, in addition to the $2,054,000 appropriated in fiscal year 1966, is made necessary by several unanticipated costs: the unexpected extent of deterioration of water, sewer, and electrical lines revealed by complete examination; the difficulty of performing renovation work in this 19th Century building; the modification of additional areas of the building not included in the original project; and substantial increases in construction prices.

This building, designed by architect James Renwick and constructed in 1855, is the original Smithsonian Institution building. It is most conveniently located on the Mall and in the center of the complex of Smithsonian museums and art galleries. In November 1964, it was designated by the Joint Committee on Landmarks, appointed by the National Capital Planning Commission and the Commission of Fine Arts, as a landmark of great importance, having both historic and aesthetic value. It provides a focal point on the Mall for the millions of persons each year who visit the Nation's Capital to gain knowledge and inspiration from the exhibits and collections of the Institution. In 1966, over one million persons visited this building to view the Great Hall which has been restored to mid-19th Century appearance and to study carefully selected and exhibited objects representative of the collections and research work of the Smithsonian.

Many persons enjoyed concerts from the Smithsonian tower during the summer months. In addition to these public service and education functions, the building also houses the archives of the Institution as well as administrative offices. With these requested additional funds, the opportunity will be realized to make this valuable building responsive to functional requirements while retaining and enhancing its historic and architectural significance.

The 1966 appropriation was based on a cost estimate provided by the General Services Administration (Public Buildings Service) for general renovation of a typical building containing 150,000 square feet. Subsequent to the preparation of the initial cost estimates, it was found to be necessary to conduct complete surveys and investigations of the building in order to develop a detailed set of "as built" drawings. These investigations disclosed latent conditions which should be corrected.

The building was constructed with solid masonry walls characteristic of mid-19th Century construction. Since there are no spaces within walls or floors to place utility lines, it will be necessary to cut chases in the masonry, place the utilities and conceal them with plaster. Careful workmanship will be required to protect the architectural features of the building. This method of construction and the extent of work required to replace deteriorated water, sewer, and electrical lines revealed by the building inspection require an additional $190,000.

Although the primary purpose of this project is renovation and restoration of this valuable building, additional floor space also will be provided on the third and fourth floors, to accommodate scholarly activities related to advanced studies. The Smithsonian Institution, founded as a learning center, is cooperating with universities, learned societies, foundations, and others, both in and out of Government, in furtherance of its central purpose, the "increase and diffusion of knowledge."

It is now proposed that improvements be made at the western end of the first floor, comprising the old chapel, west range, and the library. Improved lighting, flooring, partitioning, book stacks, display cases, and appropriate furnishings can convert this area into a study and discussion hall and library. This portion of the project is estimated to cost $200,000.

The intensified use of the building, combined with the inadequacy of restaurants in the area, emphasizes the need for a small staff dining room in this building. A small kitchen and dining room can be installed most economically during the general building renovation and installation of new utilities. This facility is estimated to cost $100,000, including all kitchen equipment, service entrance in the basement, and a dumb-waiter from the basement to a dining room on the first floor.

When the original budget estimate for this project was prepared in 1964, the construction cost index for Washington, D.C., as reported by the E. H. Boechk Construction Cost Index Service, was at a level of 337.

In October 1966 the index had increased to a level of 360 or an increase of 7%. The "National average" construction cost increase was reported by Engineering-News Record (a McGraw-Hill publication) to be 8% for the same period. It is expected that an additional increase of 3% will occur from November 1966 to the expected construction starting date in July 1967. An amount of $200,000 is included in this request to offset this 10% total cost increase.

FINE ARTS AND PORTRAITS GALLERIES BUILDING

Funds in the amount of $125,000 are requested to accomplish additional renovation work in the Fine Arts and Portrait Galleries building in order to protect and enhance the work that has been completed. Some of this additional work had to be excluded from the original contract to make funds available to meet critical construction problems. The need for other modifications did not become apparent until renovation was at an advanced stage. The items include repointing, resetting, and cleaning exterior stonework; birdproofing; yard improvements; exposing hidden marblework; and correcting ceiling heights.

Renovation and modifications to the old Civil Service building at 7th and F Streets, N.W. to accommodate the National Collection of Fine Arts and the National Portrait Gallery are substantially complete. The building is being fitted with shelves, display cases, equipment and other items necessary to receive the collections. This work is being expedited so that the building may be opened to the public at the earliest possible time.

Renovation of this 100-year-old building has been difficult and delayed by latent conditions resulting from the various types of construction encountered and the deteriorated state of obsolete building materials. Exceptionally complex methods are required to thread modern utility lines through this structure. In order to finance necessary and mandatory changes to the contract, a constant management evaluation of the work was maintained to study the effect of the changes and to reduce the work effort in other, less critical areas. Consequently, some features which are necessary for efficient and proper functioning of the building which were previously deleted are now requested. These include:

1. Repointing, resetting, and cleaning exterior stonework, $50,000: A detailed examination of the building exterior has revealed that pointing has washed out of upper portions of the walls. Water entering the walls, and subjected to freeze-thaw cycles, has caused some large stones to move out of place.
2. Birdproofing, $20,000: The building is now a popular bird roosting place for this part of town. The continued installation of electrical impulse birdproofing systems on other nearby buildings will increase the problem at the Fine Arts and Portrait Galleries building. Installation of a birdproofing system will help protect the appearance and reduce the frequency of future cleaning.
3. Improvements to exterior yard, $15,000: The small yard around the building will require repairing of damaged curbs, fencing, and sidewalks. New sod and a very minimum amount of landscaping will be provided to maintain the appearance of the building.

There are also other modifications which should be made to the interior of the building to provide the most appropriate setting for public exhibitions. These items were not fully apparent until the renovation work was at an advanced stage and operational planning was initiated by the staff. Items in this category are:

1. Remove paint from stonework, $25,000: One of the largest galleries in the building to be used for exhibition of fine arts has columns and wall surfaces which have been painted for many years. During the renovation work it was discovered that the columns are marble and the walls are paneled with marble. We now propose to remove all paint from these surfaces and expose this very attractive stonework.
2. Drop ceilings, $15,000: Existing ceilings in four areas are much too high for the intended use of the rooms, the exhibiting of smaller objects of fine arts in display cases and tables. To correct the scale of the space, suspended ceilings and improved lighting are required.

The conversion of this old office building for the National Collection of Fine Arts and the National Portrait Gallery has been very successful and is a compliment to those who endorsed and supported this idea. The interior of the building reflects a dignified and inspiring setting for this purpose and implies a degree of magnificence far beyond the cost of the renovation. With the amount requested here, these essential additional improvements can be accomplished.

CHESAPEAKE BAY CENTER FOR FIELD BIOLOGY

An appropriation of $75,000 is requested for renovation to the Institution's Chesapeake Bay Center for Field Biology, located on the western shore of Chesapeake Bay. These funds will restore existing structures for Center use and provide necessary utilities and roadways.

Approximately 700 acres of land located seven miles south of Annapolis were acquired by the Smithsonian Institution through a bequest and purchases made with generous foundation grants. This land is the only natural preserve on the western shore of the Chesapeake Bay and will become increasingly valuable as an ecological baseline.

To develop a program of research and education in field biology, a consortium was formed between the Smithsonian Institution, the Johns Hopkins University, and Maryland University. Scientific programs planned for this area include the identification and study of the natural populations of plants and animals that make up the ecological system of this marine estuarine area. Physical and chemical factors affecting the populations will be analyzed.

A number of structures on the site (barn, stalls, garage, equipment building, and creamery building) can be restored for use in serving the initial program needs of the Center. By accomplishing minimum repairs, the Smithsonian will be able to initiate a modest scale of operations at this Center at limited cost.

Minimum repairs to roofing and flooring, and interior repairs to structures are estimated to cost $54,000. Utilities, consisting of a new well, pump, service piping, new sewerage system and septic tank, and electrical service, will cost $7,000. An all-weather road surface will be provided between the buildings at a cost of $14,000. Total estimated cost: $75,000.

BARNEY STUDIO HOUSE

An appropriation of $35,000 is requested for the Barney Studio House, located at 2306 Massachusetts Avenue, N.W., Washington, D.C. to correct serious safety hazards and to provide adequate and efficient utilities service.

This house, constructed in 1904, was acquired by the Smithsonian Institution in 1960 for use as a museum headquarters and for meetings of groups concerned with the Smithsonian Institution.

This house has required only minimum maintenance but the effects of time and general deterioration now require that all loose and worn plaster be removed and replaced to insure safety of the occupants and that the interior be painted. This work is estimated to cost $10,000.

The electrical service and electrical wiring are now obsolete and should be replaced to conform to current standards of safety and to provide adequate capacity for modern usage. Replacement of the electrical service and rewiring all lighting and receptacle circuits will cost $5,000.

The existing antiquated and inefficient heating plant needs to be replaced with a modern combination heating, ventilating, and air conditioning system at a cost of $20,000.

This minimum renovation effort is necessary for comfort and safety as well as to assure years of continued satisfactory service from this valuable structure.

FREER GALLERY OF ART

An appropriation of $98,000 is requested for the Freer Gallery of Art to provide fire detection and security systems, to maintain the exterior and interior of the building, and to increase storage capability by the addition of an elevator.

The Freer Gallery is a monumental building located on the Mall at the corner of Independence Avenue and 12th Street. It was constructed in 1923 to house the outstanding collection of Oriental art given to the people of the United States by the late Charles L. Freer.

The Freer Gallery was designed and constructed in accordance with the best standards of its day. It has been well maintained. In the intervening years, however, there have been many technological improvements and new systems developed for fire detection and security which were not available when the building was designed. Our increasing concern for security of valuable art collections and the availability of economically installed fire protection and security systems are the basis of this request for funds for security improvement.

To install a modern fire detection system, watch-tour system, and automatic shutdown of fans and electric motors in case of emergency, funds in the amount of $10,000 are requested.

Funds amounting to $13,000 are requested to accomplish one-time general improvements to the building, including replacement of roofing material, floor tile, and plaster; and painting.

Funds in the amount of $75,000 are requested to extend an existing elevator shaft and install a new cab, new controls and equipment to serve both the attic and the basement which are used for storage purposes. Access to these spaces is available at present only by a stairway. Movement of heavy or bulky objects, which must be stored in the building, through the stairwell is difficult and dangerous. In addition to eliminating an unsafe condition, the storage capability of the building will be increased by this ready access.

SMITHSONIAN OCEANOGRAPHIC SORTING CENTER

Funds in the amount of $148,000 are requested for air conditioning the Oceanographic Sorting Center in order to increase employee productivity and to protect their health.

The Center occupies 30,000 square feet of space in a remodeled building at the Washington Navy Yard Annex. Skilled personnel are employed to sort, preserve, label, identify, package and distribute for scientific study marine organisms collected on oceanic expeditions. The large volume of items handled daily and the fumes from preservatives create nearly unbearable working conditions during the hot and humid summer months.

Funds are requested to provide approximately 100 tons of air conditioning for a portion of the Center. Wall-type fan coil units will be installed around the exposed wall area; chilled water supply and return mains will be provided from the existing chiller plant to the new air handling units; and necessary ductwork, piping, and automatic temperature controls will be provided.

The estimate for this project was prepared by the General Services Administration. Design and installation will be supervised by that agency.

RADIATION BIOLOGY LABORATORY

Funds amounting to $182,000 are requested to relocate and install a major portion of the laboratory equipment and facilities of the Radiation Biology Laboratory at a new location This relocation will provide more suitable and additional space and proper facilities for this scientific activity.

The Smithsonian Institution Radiation Biology Laboratory now occupies approximately 40,000 square feet of floor space in the basement of the Smithsonian Institution building, and several shed-type buildings located in the yard between the Smithsonian Institution building and Independence Avenue. All space now used by this laboratory was originally designed for storage and utility usage and consists of small basement rooms with low ceilings and several wood frame sheds.

Laboratory experiments were initiated in this substandard space only as an expediency. Due to uncertain future requirements for this type of investigation and to the limitation of funds, it was not possible to identify long-range physical requirements and to plan or construct a proper facility. Now the laboratory has developed into an outstanding and widely-recognized activity, specializing in vital research programs in the biological reaction to light. This research activity now completely utilizes all available space and needs additional space to relieve over-crowding and to gain potential benefits from expansion of experimental activities. In addition to the lack of floor space, research experiments are limited by the amount of electrical energy which can be delivered to this location without the construction of a new transformer substation. It is not efficient or economical to continue this operation in the Smithsonian Institution building or on the Mall.

Plans authorized by the Congress, for renovation and restoration of the historic Smithsonian Institution building, do not contemplate the use of the building for laboratories. These plans are based on restoring the building to public exhibition and educational and administrative activities. The design has now progressed to the point where the substantial areas in the basement required for new electrical switch gear and air conditioning mechanical equipment can be identified. It is now apparent that the rooms occupied by the Radiation Biology Laboratory must be used for these and other utilitarian services. It will not be possible to proceed with work related to the building's restoration until the laboratory is relocated.

Alternate site locations are being investigated to find a suitable place for the laboratory away from the Mall areas. The General Services Administration is assisting with this investigation. It is estimated that $182,000 will be required to relocate and install a major portion of the laboratory equipment and facilities at a new location during fiscal year 1968. In view of the need to start relocating this activity concurrent with restoration of the Smithsonian Institution building, which is scheduled to start in July 1967, funds are urgently requested at this time.

1967 Building Renovations

Senator Bartlett. Will you please advise the committee of your plans for building renovations during fiscal year 1967?

Dr. Ripley. Mr. Bradley, would you answer that?

Mr. Bradley. During 1967, Mr. Chairman, there is available to us a little over $2 million, $2,129,000, from 1966 which is primarily available for restoration of the original old Smithsonian Institution Building. In addition, an appropriation of $2.3 million is available for restoration and renovation of the old Court of Claims Building, for use as an art gallery, and for planning future improvements.

OLD COURT OF CLAIMS

The work on the old Court of Claims Building is expected to go under contract by the General Services Administration sometime this spring, and the planning of future improvements is progressing.

SMITHSONIAN BUILDING

The work on the restoration of the Smithsonian Institution Building has been delayed because, frankly, it was an old building and we had to stop and prepare "as built" drawings, in order to know what we had there to improve. However, this work has now been done. We have also accurately located all sewer, water, and other utility lines. We have determined the structural condition of the foundations. This has been accomplished and now the contract drawings for restoration of the building should be completed in several months, and construction work should start this summer.

FINE ARTS AND PORTRAIT GALLERIES

Senator Bartlett. $125,000 of your construction estimate is for additional renovation work in the Fine Arts and Portrait Galleries building. As I understand, this is the old Patent Office or Civil Service Commission building, which has been completely remodeled for gallery use by the Smithsonian Institution. Is the building in use now?

Dr. Ripley. Yes, sir; it is. We have been moving in since February. Both galleries, the National Collection of Fine Arts and the National Portrait Gallery, now have offices and exhibition space there, although they are not completely moved in yet. A great deal of this additional request is due to the fact that this is a 100-year-old building, more than a hundred years old actually, and it has been very difficult to get the work completed because of latent conditions in the building. Types of construction had to be modified in some cases, and a good deal of the interior in certain places had deteriorated badly, more so than first surveys showed. To fund these mandatory contract changes, we had to delete some features of the work. So this is a minimal request for additional funds to complete the work which had to be deleted from the original contract: repointing exterior stone work; bird proofing; landscaping the interior court yard; cleaning interior marble; and adding suspended ceilings in four exhibition areas.

RADIATION BIOLOGY LABORATORY

Senator BARTLETT. Do you have any idea where you will relocate the Radiation Biology Laboratory?

Dr. RIPLEY. Yes, sir, we have been given Building 7, or part of it, at the old Bureau of Standards, and this will be available for us in July 1967. This is a very adequate space for us. We are delighted to get our radiation biologists out of the incredibly cramped quarters where they have been living in the basement of the old Smithsonian castle.

We had an ad hoc survey by biologists familiar with this work during the past summer, who gave the laboratory the very highest recommendations for the efficiency of its work, but were startled, amazed, and horrified by the conditions under which they did this work. Therefore, we are delighted to have a chance to move them out.

Senator BARTLETT. You believe $182,000 will suffice to do this job?

Dr. RIPLEY. Compared to where they are now, they are going to be in a bed of roses. The request for $182,000 will finance the first year's improvements and permit us to move in. It is estimated that $328,000 will be required in future years for further improvements.

Senator BARTLETT. Are they subjected—well, I am going to put it another way. They must be subjected to unusual health hazards, in this activity. Are they tested frequently to determine whether they have overexposure?

Dr. RIPLEY. I assume so. Dr. Galler, do you know about that?

Dr. GALLER. Mr. Chairman, they do wear dosimeters whenever they come in contact with radioisotopes in the course of their laboratory work and the dosimeters are checked regularly, and they do, under AEC regulations, require regular physical checkups.

Senator BARTLETT. Sometimes I wonder, this is somewhat aside from the proposition before us, whether the AEC standards are high enough. I was just reading not long ago a declaration by Dr. Teller, who certainly is no alarmist, who recommended very strongly that all nuclear plants constructed to produce electricity ought to be placed underground, and we are placing them above ground.

JOSEPH H. HIRSHHORN MUSEUM AND SCULPTURE GARDEN

For planning the Joseph H. Hirshhorn Museum and Sculpture Garden, you are requesting $803,000.

The statement in support of this request will be printed at this point in the record.

(The justification follows:)

1968 estimate	$803,000

An appropriation of $803,000 is requested for the preparation of plans and specifications for the Joseph H. Hirshhorn Museum and Sculpture Garden. Public Law 89–788, authorizing establishment of this museum and sculpture garden under the Smithsonian, was approved on November 7, 1966.

The authorization of planning and construction of this museum was in response to an offer from Joseph H. Hirshhorn to give to the people of the United States more than 1,500 pieces of sculpture and 4,000 paintings and drawings valued at over $25,000,000 together with $1,000,000 for the purchase of additional works of art.

During Fiscal Year 1968 plans and specifications will be prepared for the construction of an art museum building and sculpture garden in the Mall area between Seventh Street, Ninth Street, Independence Avenue and Madison Drive, S.W., as specified in the public law.

Concurrently, the Department of Defense proposes to prepare plans and specifications for a new facility to house the Armed Forces Institute of Pathology at Walter Reed Army Medical Center, as authorized by Public Law 89–746. Relocation of the Armed Forces Institute of Pathology from their present building now occupying the Mall site of the Hirshhorn Museum must be accomplished prior to construction of the Joseph H. Hirshhorn Museum.

In consideration of budgetary limitations and to provide time for careful design, construction funds are not requested at this time. In recognition of the magnitude of the gift and its importance to the cultural enrichment of the Nation, the timely initiation of design and planning for a suitable building and sculpture garden is warranted. In order that this collection may begin to play its full role in the inspiration and education of the American public, an uninterrupted development program is also warranted.

The total cost for the Joseph H. Hirshhorn Museum and Sculpture Garden will not exceed $15,000,000. The museum building will contain approximately 250,000 square feet of floor space and will be constructed on the Independence Avenue side of the Mall.

The outstanding collection of modern American paintings to be exhibited in this building assures that the museum will compare favorably with the leading contemporary art museums of the world. The sculpture garden will extend from the museum building across the Mall to Madison Drive. It will provide an appropriately designed setting to display the works of Rodin, Henry Moore, Degas, Matisse, Renoir, Picasso, Giacometti, Brancusi, Lipchitz, and many others. Most careful consideration will be given to this design to assure that the development of the Garden is consistent with the open-space concept of the Mall.

PLANNING AND CONSTRUCTION

Senator BARTLETT. I know that legislation authorizing this construction was approved during the last session of Congress. Is there any requirement as to the time during which the building must be constructed and ready for use?

Dr. RIPLEY. It is a condition of Mr. Hirshhorn's gift, and our subsequent agreement with Mr. Hirshhorn and the Hirshhorn Foundation, that the Congress shall have authorized the construction of the museum and sculpture garden—as in fact the Congress has already done—and also shall have appropriated funds for planning and for construction by the close of the 90th Congress.

Construction is to be completed within 5 years after the appropriation is made available by the Congress.

SMITHSONIAN TROPICAL RESEARCH INSTITUTE

Senator BARTLETT. Let's go back, if you will, to the Smithsonian Tropical Research Institute.

Now, speaking of another program, Mr. Ripley, you said that costs were assessed for photographs, and so forth, except in exceptional cases, to those who desired to have them. And, Doctor, do I understand you to say that in respect to the Tropical Institute, an organization such as Battelle Memorial, came to you for special service?

SPECIAL SERVICES

Dr. GALLER. Mr. Chairman, the special services that I spoke of are in fact needs for fundamental data that have in part already been acquired at the Smithsonian Tropical Research Institute; data that need to be brought together and consolidated to respond to the kinds of questions that a feasibility study would raise.

If the request refers to large increments of work related to a given agency, either public or private, usually this requires a grant or a contract from such an agency.

Dr. RIPLEY. We would become, in this case, a subcontractor.

Senator BARTLETT. Would Battelle pay you?

Dr. RIPLEY. They would give us a grant.

Senator BARTLETT. They would give you a grant, because they are under contract, and otherwise, this would just be in addition to the sum which they were originally allowed.

Dr. RIPLEY. Yes, it would be unavailable unless they did come to us with a grant.

REPROGRAMING REQUESTS

Senator BARTLETT. Now, you used $30,000, was it, out of the current appropriation for these additional needs of the Institute?

Dr. GALLER. Yes, sir.

Senator BARTLETT. Now, my understanding was that before any reprograming of that character were to take place, the consent of the Appropriations Committees first must be had. Is that your understanding?

Mr. BRADLEY. May I speak to that, Mr. Chairman?

Senator BARTLETT. Yes.

Mr. BRADLEY. Certainly that has been our general understanding. This committee has been most reasonable in our requests for reprograming. In this particular case, it was a matter of judgment, and from the way you put the question I suspect it was a matter of an error of judgment, in not submitting a reprograming request for an amount of $30,000. This is an increase on a base of about $300,000. It was about a 10-percent overrun on the program for the current year.

Normally, your understanding is entirely correct. We do approach this committee, and, of course, the committee in the House, in connection with the reprograming of funds during the year.

Senator BARTLETT. I would suggest that approach is highly desirable. I can't anticipate that any difficulties would arise, but the sitution would be easier for you if any great objection were made.

Mr. BRADLEY. Yes, sir.

ALASKA CENTENNIAL YEAR

Senator BARTLETT. Now, Mr. Ripley, you spoke modestly, understandably, about the special exhibit prepared for the Alaska Centennial Year. Indeed, you were far too modest. I was thrilled and excited and pleased by what I saw before the exhibit was packed and started for Alaska.

My recollection is this committee allowed and the Senate appropriated $100,000, specifically, to you to make this contribution to this celebration of the 100th anniversary of the purchase of Alaska by the United States from Russia, and my further understanding or knowledge is that when the conference committee had completed its work, you were allowed $50,000 to be taken from funds otherwise appropriated, and not a penny was allowed for his special activity. Am I correct?

Dr. RIPLEY. That is correct, sir. I would say——

Senator BARTLETT. Let us change that to not a hundred but to $50,000. We gave 50. I guess that was it.

Dr. RIPLEY. I would say that, as I recall, we requested approximately $100,000 for the purpose of these sorts of special exhibits, and the Senate committee recommended that $50,000 be allocated for these sorts of special exhibits which necessitate special overruns in time, labor, materials, efforts, and so on, on our staff.

Senator BARTLETT. Now, I want to go into that a bit more, and I won't do it in the parochial sense. I would like to develop here a little bit of information about the number of requests that come to you for special exhibits, and what difficulties arise, if any, when the Smithsonian has to fund those special exhibits, if you are able to produce them at all, from funds appropriated for other purposes.

Dr. RIPLEY. Thank you very much, Senator. I would like to speak to this, because it is a continual drain on our very slim resources in manpower, time, and money, and I foresee that in connection with 1976 and the buildup toward that commemorative year, the continual pressure is going to mount, every year.

EXPO 67 EXHIBIT

Let me cite to you an example, if I may, of what has just come up. As you know, the international fair in Montreal, Expo '67, is opening on the 28 of April, I believe, in Montreal. We were asked last month by the U.S. Ambassador to that fair to prepare an exhibit. Last month isn't very long ago, and April 28th is very soon, and the idea of attempting to rub Aladdin's lamp—and the Smithsonian, I am sorry to say, bears no relationship to Aladdin's lamp—and produce instantly a set of genii who would produce an exhibit for us was, of course, a shocker for us. But this is very much the way these sorts of requests tend to come. They tend to be last minute, hurry-hurry-hurry, great pressure instantly put on, and "a dramatic and stylish and tasteful show," of course, to be produced.

We were able to suggest that we could put on an exhibit on oceanography, and on the kinds of things which we are working on which are particularly curious and interesting. The Ambassador's response was very warm and friendly. We have discovered that this exhibit will cost something in the neighborhood of $30,000 to construct and put on, working at top speed, with overtime and so on, and we at the present time have the possibility of getting a grant from the National Science Foundation of only as much as $5,000.

FUNDS AND SKILLED LABOR SHORTAGE

As a result, I have had to make a decision that we must turn them down, because we don't have the money.

Senator BARTLETT. You can't do it.

Dr. RIPLEY. We don't have the approximately $25,000. We don't have the ability——

Senator BARTLETT. You don't have the time, either, do you?

Dr. RIPLEY. No, it would have to be overtime, and we would have to subcontract for parts of the work. But we don't have this flexibility. We are continually starved for special people to do exhibit work, and it is all we can do to meet our own schedules, which are then, of course, instantly broken into and hampered by special requests.

Senator BARTLETT. Well, in this instance, of course, the request came to you belatedly.

Dr. RIPLEY. Yes.

Senator BARTLETT. Far too belatedly, and yet I think it is too bad that the Smithsonian can't have something there.

Dr. RIPLEY. Yes, sir.

SPECIAL EXHIBITS UNIT

Senator BARTLETT. Well, there are celebrations and there are anniversaries of all kinds, and as you say, they come with increasing frequency, and demands upon you come with increasing frequency. What if you were to have a special small staff for these special exhibits, have you ever considered how large a staff you might start out with, and what it would cost?

Dr. RIPLEY. My own hope, Senator, would be that we could relate this sort of work to our efforts under the National Museum Act. Under the terms of the act, we are supposed to render help, aid, and comfort to other parts of the country for museumlike activities. We would need to have a small, flexible unit or staff of exhibit people. We could, with this kind of a staff, work on exhibits which are going out to other museums. We could call them sort of a unit for special exhibits. This would be an economic and sensible way of not interfering with the time of the regular people who are concerned with refurbishing and developing exhibits in the existing museums.

PERSONNEL

I would think that something in the neighborhood of $100,000 a year would give us the potential for building up a solid group of really expert technicians who could not only perform themselves, but could train others, which is what I am so keen always to do. We could make this a continuing involvement with the whole exhibits and museum field throughout the country.

Senator BARTLETT. I think there would be an added virtue and value there. Let's assume that Vermont, for example, was going to have some kind of a celebration 3 years from now, and officials representing Vermont inquired of you as to the possibility of doing something of this kind. That would give the Institution, especially the people who were assigned to this activity, if there be such, time to dream and dwell upon what kind of an exhibition would be best to represent the Institution, and perform the service for which the exhibit was desired.

ASSISTANCE TO OTHER MUSEUMS

Dr. RIPLEY. I may point out, Senator, with such potential, we could also send people out in the field to work with the local people. For example, in the past year, we have had to lend, very pleasantly and happily—we have been willing to do this, but at cost to ourselves—two people to go and help develop the museum in Oakland, Calif. This was largely a sort of hands-across-the-continent scheme, because we felt that our people who happened to be specialists in western historical areas would be significantly helpful there, in a way that no other particular specialist would be. They would make a unique contribution, and in order to make a better museum in Oakland, these people were really necessary. But there we would also have been able, if we had had a craftsman or two, to go out and actually help with our own expertise to design and contribute toward the building of some of the exhibits.

This would be wonderful for establishing and maintaining what you might call rapport between the Smithsonian, which, because it is Washington based, tends to sound just a little bit too much like a large bureaucratic arm of the Government, and the great museums of distinguished character around the country. Very often, because of our lack of funds for support, they tend to think of us as monolithic and octopuslike.

We could cooperate wonderfully with them if we had just this kind of support. That is why we think this National Museum Act is a real breakthrough, because it will give us this service and interrelationship aspect in our dealings and relations with other museums.

LOOKING AHEAD

Senator BARTLETT. Today the Smithsonian is an institution of which all Americans are very proud. Have you cast a visionary eye upon the future, say, within the next 5 years, and evolved a program for such a period of time?

Dr. RIPLEY. Mr. Chairman, we have speculated on this, and we have speculated in a variety of ways. One is what we can see coming over the horizon in the way of obligations, like 1976, for example. Another is in the development and utilization of existing buildings such as the Renwick Fine Arts and Decorative Arts Gallery on the corner of 17th and Pennsylvania Avenue, the old Court of Claims building, which the President has allocated to the Smithsonian, and which should be a great decorative arts center in this country. Still another is in the increasing use of the Smithsonian's facilities by universities and higher education institutions.

I hesitate to hazard a guess about the budget increase. I can only point out that, on the basis of wage and salary increases, what we buy now at $1.44, 10 years ago cost us only $1. And so some of this, I am afraid, will inevitably be reflected in obvious cost-of-living increases. But whatever we have done, and whatever we intend to do, should be commensurate with the fundamental principle of the Smithsonian, which, as I see it, is that we do only what no one else can really do well. We are, as I have sometimes called us, "the unconventional in pursuit of the unfashionable." When something that we are doing turns out to be enormously effective, and useful in an applied sense, we then traditionally spin it off into some applied activity.

SPIN OFF ACTIVITIES

That is why, for example, the Smithsonian invented weather forecasting, and discovered that it was possible to assess weather. This is why eventually the Weather Bureau was created, a totally independent agency.

We are happy to spin off activities, we are happy to nurture tender flowers, when at a certain moment they do not have large understanding or acceptance by our people. That is why, for many, many years, we indulged in such unfashionable activities as astrophysics, which was virtually unknown in the rest of the country, and eventually, when combined with our concern in aeronautics, spun off into something now known as NASA.

These sorts of things are the kinds of contributions, I think, which the Smithsonian can make in a very significant way, indulging and carrying on activities which the Nation must afford, but which few other people are courageous enough, shall we say, or persistent or dogged enough to undertake.

Senator BARTLETT. And from the standpoint of your representation, I think it is well that there are spin offs.

Dr. RIPLEY. Yes.

Senator BARTLETT. Such as weather. I am reminded of the letter to the editor, a man in the Midwest wrote just a little while ago, saying, "I have just completed shoveling a foot of partly cloudy off my sidewalk."

SUBCOMMITTEE RECESS

Well, it has been a very interesting morning for me, and I want to thank all of you, and each of you, for your testimony. The committee now will adjourn until 10:30 a.m., Friday, March 17, when the National Capital Planning Commission, and the National Council on Marine Resources, and Commission on Marine Science will testify.

(Whereupon, at 12:30 p.m., Thursday, March 16, 1967, the subcommittee was recessed, to reconvene at 10:30 a.m., Friday, March 17, 1967.)

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS FOR FISCAL YEAR 1968

FRIDAY, MARCH 17, 1967

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, D.C.

The subcommittee met at 10:30 a.m., in room 1223, New Senate Office Building, Senator E. L. Bartlett presiding.

Present: Senator Bartlett.

NATIONAL CAPITAL PLANNING COMMISSION

STATEMENT OF MRS. JAMES H. ROWE, JR., CHAIRMAN; ACCOMPANIED BY CHARLES H. CONRAD, EXECUTIVE DIRECTOR; DONALD F. BOZARTH, DIRECTOR, CURRENT PLANNING AND PROGRAMING; GEORGE H. F. OBERLANDER, DIRECTOR, LONG-RANGE PLANNING AND REGIONAL AFFAIRS; DANIEL H. SHEAR, GENERAL COUNSEL AND SECRETARY; JOHN R. PRITCHARD, ASSISTANT EXECUTIVE DIRECTOR (ADMINISTRATION); AND EDWARD L. GOLDMAN, ADMINISTRATIVE OFFICER, TEMPORARY COMMISSION ON PENNSYLVANIA AVENUE

ST. PATRICK'S DAY AND GENEROSITY

Senator BARTLETT. The subcommittee will be in order.

The National Capital Planning Commission will be the first to be heard.

Mrs. Rowe.

Mrs. ROWE. Thank you, sir.

It is very good to see you, and we hope it is an auspicious day, being St. Patrick's Day.

Senator BARTLETT. In what respect?

Mrs. ROWE. That you will be feeling generous.

Senator BARTLETT. On a day like this, one is bound to feel generous.

Mrs. ROWE. Yes.

INTRODUCTION OF STAFF MEMBERS

Mr. Chairman and members of the committee, it is a pleasure to appear before your committee again this year. Before starting my testimony, I would like to introduce the members of the Planning Commission staff who are here with me:

Mr. Charles Conrad, who is the Executive Director;

Mr. Donald F. Bozarth, next to the end, who is Director of Current Planning;

Mr. George H. F. Oberlander, the Director of Long-Range Planning and Regional Affairs;

Mr. Daniel H. Shear, General Counsel and Secretary;

Mr. John R. Pritchard, Assistant Executive Director for Administration; and

Mr. Edward L. Goldman, the Administrative Officer of the Temporary Commission on Pennsylvania Avenue.

Senator BARTLETT. You come notably well flagged.

Mrs. ROWE. Yes, I do. I have got an expert on every subject for you, on every question.

1968 BUDGET REQUEST

Senator BARTLETT. The budget estimate for the National Capital Planning Commission, all salaries and expenses, for fiscal year 1968 is $1,100,000, $95,000 more than was appropriated in fiscal year 1967. Of this amount, $76,000 is for the Temporary Commission on Pennsylvania. The justification and statement will be printed in the record.

(The justification follows:)

NATIONAL CAPITAL PLANNING COMMISSION

Analysis of increases, fiscal year 1968

	Commission	Council	Pennsylvania Ave.	Total
"Salaries and expenses" appropriation, fiscal year 1967	$815,500	$113,500	$76,000	$1,005,000
Deduct nonexpenditure transfer of funds to GSA for office rent provided initially in fiscal year 1966 budget	−10,463			−10,463
Deduct savings resulting from Reorganization Plan No. 5 of 1966, June 29, 1966		−25,000		−25,000
Transfer of funds from NCRPC to NCPC as result of Reorganization Plan No. 5	88,500	−88,500		
Add portion of savings resulting from Reorganization Plan No. 5 required to offset pay costs, Federal Salary and Fringe Benefits Act of 1966	20,000			20,000
Deduct nonrecurring increase in fiscal year 1967 for Capitol Hill study	−40,000			−40,000
Adjusted base, fiscal year 1967	873,537		76,000	949,537
Increases proposed for fiscal year 1968:				
Permanent positions (10)	89,610			89,610
Personnel benefits for above	5,000			5,000
Rental, additional office space for above personnel 1,000 square feet times $5.15	5,150			5,150
Related expenses for above consisting of supplies, materials, equipment, telephone, travel, and transportation	1,837			1,837
Funds to offset reallocation of 5 positions already effected	8,866			8,866
Special consultant studies and services:				
Zoning study, 1st year of 2 years	25,000			25,000
Planning history, 1st year of 2 years	10,000			10,000
Research computer programs	5,000			5,000
Total increases	150,463			150,463
Total budget estimate, "Salaries and expenses," fiscal year 1968	1,024,000		76,000	1,100,000

LAND ACQUISITION, NATIONAL CAPITAL PARK, PARKWAY AND PLAYGROUND SYSTEM

The House Committee on Appropriations in its report dated March 31, 1966 indicated that new authorizing legislation should be submitted before it would give favorable consideration to further funding. Such legislation is being drafted and funding will be requested at a later date.

Increases by priority

A. Funds to offset reallocation of the following 5 positions, already effected:	
Assistant director (administrative), GS-14 to GS-15	$2,444
Architect, GS-12 to GS-13	1,946
Architect, GS-12 to GS-13	1,946
Urban planner, GS-12 to GS-13	1,946
Secretary, GS-6 to GS-7	584
Subtotal	8,866
B. 10 new positions:	
District of Columbia project review planner, GS-13	12,873
Federal planning division planner, GS-12	10,927
Social science analyst, GS-12	10,927
Transportation planner, GS-12	10,927
Comprehensive planning, division planner, GS-12	10,927
Project designer, GS-11	9,221
Urban renewal planner, GS-11	9,221
Messenger, GS-2	3,925
Secretary, GS-5, office of director, current planning and programing	5,331
Secretary, GS-5, office of director, long-range planning and regional affairs	5,331
Subtotal	89,610
Related costs to above personnel	6,837
Rental additional office space 10 persons, 1,000 sq. ft. x $5.15	5,150
Research computer programs (continuing)	5,000
C. Two special projects:	
Joint zoning study (with District of Columbia Zoning Commission) 1st year of 2 years	25,000
History of planning and development of Washington, D.C. (1791-1967), 1st year of 2 years	10,000
Total increases	150,463

	Permanent positions			
	Fiscal year 1966	Fiscal year 1967	Increase	Fiscal year 1968
National Capital Planning Commission	47	61	10	71
National Capital Regional Planning Council	9			
Temporary Commission on Pennsylvania Avenue	2	3		3
Total	58	64	10	74

NATIONAL CAPITAL PLANNING COMMISSION FISCAL YEAR 1968 BUDGET

Analysis by object classification, salaries and expenses appropriation (obligational basis)

	Actual, fiscal year 1966	Estimate, fiscal year 1967	Net fiscal year 1968 increases	Estimate, fiscal year 1968
ACTIVITY 1—NATIONAL CAPITAL PLANNING COMMISSION				
Permanent positions (net of lapses)	$432,075	$619,700	$93,476	$713,176

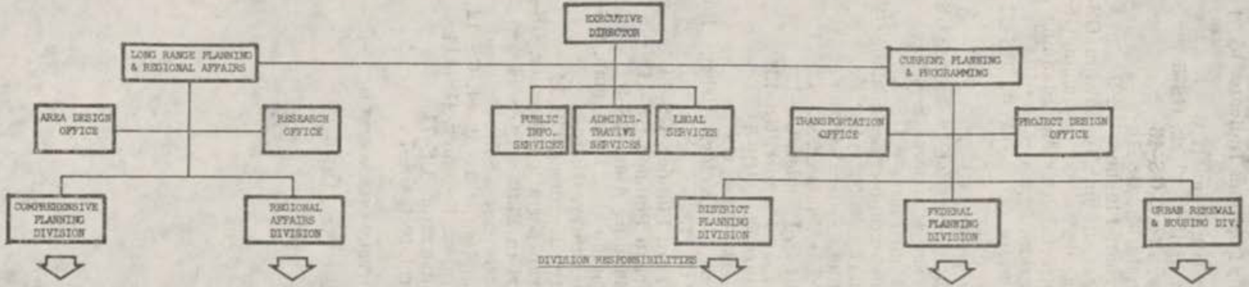
TEMPORARY COMMISSION ON PENNYSLVANIA AVENUE

72. Administrative Officer, GS–12
73. Architect, GS–13
74. Secretary, GS–6

Proposed new positions total 10.

NATIONAL CAPITAL PLANNING COMMISSION

STAFF ORGANIZATION



EXECUTIVE DIRECTOR
LONG RANGE PLANNING & REGIONAL AFFAIRS
CURRENT PLANNING & PROGRAMMING
AREA DESIGN OFFICE
RESEARCH OFFICE
PUBLIC INFO. SERVICES
ADMINIS-TRATIVE SERVICES
LEGAL SERVICES
TRANSPORTATION OFFICE
PROJECT DESIGN OFFICE
COMPREHENSIVE PLANNING DIVISION
REGIONAL AFFAIRS DIVISION
DISTRICT PLANNING DIVISION
FEDERAL PLANNING DIVISION
URBAN RENEWAL & HOUSING DIV.

DIVISION RESPONSIBILITIES

1. Preparation of modifications to the Comprehensive Plan and Development Program for the District of Columbia.
2. Preparation of modifications to the Year 2000 Policies Plan for NCR.
3. Review and evaluation of District and Federal projects and programs to determine their conformance to the Comprehensive Plan for the District of Columbia.
4. Staff services and studies aimed at the timely implementation of the Comprehensive Plan and the Year 2000 Plan.
5. Special planning and design studies related to the preparation of planning district and subdistrict plans within the District of Columbia.

---

1. Regional review and coordination of Federal and District projects located outside of the District of Columbia.
2. Liaison and coordination of the Federal interest in the planning of the National Capital Region with the M. W. Council of Governments, local and subregional governing bodies and planning agencies.
3. Preparation of a long-range Federal public improvements program for the National Capital Region in coordination with State and local programs of land acquisition and construction in the region.
4. Review of local, regional, and subregional plans and programs in order to evaluate their impact on Federal establishments in the National Capital Region.
5. Assist the Comprehensive Planning and Federal Planning Divisions in preparing long range Federal employment plans and programs.

---

1. Review of the Annual Capital Budget of the District of Columbia, and assistance in the preparation and the review of the District's Five-Year Public Improvements Program.
2. Review of District Site and Building Plans for Individual Construction projects.
3. Preparation of and/or the review of proposed zoning changes, membership on the Zoning Advisory Council and the Board of Zoning Adjustment, review of large scale planned developments under Article 75 of the District zoning regulations and propose or review amendments or changes to the District subdivision regulations.
4. Review of proposed street and alley closings and proposed transfers of jurisdictions between Federal and/or District agencies within the District of Columbia.
5. Assist the Comprehensive Planning Division in the review of the long range development program for the District of Columbia as part of the Comprehensive Plan.

---

1. Review of Fiscal Year and Five-Year programs prepared by Federal agencies and departments responsible for land acquisition and construction -- including the review of the General Services Administration's Ten-Year Federal Building Program.
2. Review of Site and Building Plans for individual Federal Projects and Master Plans for Federal installations within the National Capital Region.
3. Preparation of, and updating of, the Federal Inventory Studies.
4. Review of plans for the park, parkway, and playground system for the National Capital, including the George Washington Memorial Parkway and stream valley park programs in Maryland and Virginia under the Capper-Cramton Act.
5. With the assistance of the Regional Affairs Division, responsible for the preparation of long-range Federal employment plans and programs.
6. Assist the Comprehensive Planning Diyision in the Federal employment portions of the Comprehensive Plan for the District of Columbia.

---

1. Preparation and/or review of Urban Renewal Plans and modifications thereto, including the review of proposed boundaries and plans for Title I-- assist code enforcement projects in the District of Columbia.
2. Site selection studies and the review of the general location and site development plans for low-rent public housing.
3. Annual review and revisions to the District's Community Renewal Program.
4. Responsible for preparing the planning portion of the annual Program for Community Improvement (Workable Program) in conjunction with the District Government.
5. Responsible for preparing a housing program for the District of Columbia in cooperation with the Research Office and the Comprehensive Planning Division.

December 1966

NATIONAL CAPITAL PLANNING COMMISSION FISCAL YEAR 1968
APPROPRIATION ESTIMATES

PROGRAM AND PERFORMANCE

The Congress established the National Capital Planning Commission in 1952 to succeed the National Capital Park and Planning Commission.[1] The purpose of the Act establishing the Commission is "to secure comprehensive planning for the physical development of the National Capital and its environs—and to establish the agency and procedures requisite to the administration of the functions of the Federal and District of Columbia Governments related to such planning."

The general objective of the Act is "to enable appropriate agencies to plan for the development of the Federal Establishment at the seat of Government in a manner consistent with the nature and function of the National Capital." To this end the Commission is directed "to plan the appropriate and orderly development and redevelopment of the National Capital and conservation of the important natural and historic features thereof."

Provisions of other laws—especially the zoning enabling act for the District of Columbia and the District of Columbia Redevelopment Act of 1945, as amended—place significant additional responsibilities upon the Commission.

In accordance with the National Capital Planning Act of 1952, the District of Columbia Redevelopment Act of 1945, as amended, and various other acts of Congress,[2] the Planning Commission serves two basic responsibilities. It is "created and designated as the central planning agency for the Federal and District Governments." Thus, it is both a municipal planning agency and the responsible agency for representing the Federal interest in the growth and development of the National Capital Region.

The National Capital Region as defined in the National Capital Planning Act of 1952 consists of the District of Columbia, Montgomery and Prince Georges Counties in Maryland; Arlington, Fairfax, Loudoun, and Prince William Counties in Virginia; and all cities existing in Maryland and Virginia within the National Capital Region.

ORGANIZATION AND ROLE OF COMMISSION

The Commission is composed of five eminent citizens appointed by the President (serving without pay); six ex-officio members from executive agencies (the Chief of Engineers of the Army, the Engineer Commissioner of the District of Columbia, the Director of the National Park Service, the Commissioner of Public Buildings, the Federal Highway Administrator, and the Administrator of the National Capital Transportation Agency), and the Chairman of the Committees on the District of Columbia of the Senate and the House of Representatives.

The Commission meets in monthly formal sessions throughout the year and provides policy guidance for, and basic coordination between, the development programs in the District and the Region of District and Federal agencies. This coordination is enhanced by having members from the six Federal and District agencies on the Commission.

There are six standing committees which meet regularly prior to Commission meetings. In addition an Executive Committee meets when necessary. These meetings average more than 20 hours during the first week of each month. The Committees review technical studies, receive recommendations of the staff, and prepare committee recommendations to the Commission.

---

[1] The National Capital Park and Planning Commission was established initially in 1924 as the National Capital Park Commission.

[2] Other legislation containing significant Commission functions:
Act of June 12, 1934 (48 Stat. 931) (Public housing plans).
Act of March 2, 1893 (27 Stat. 532), as amended, (Permanent System of Highways Plan).
Act of December 15, 1932 (47 Stat. 747) (street and alley closings).
District of Columbia Motor Vehicle Parking Facility Act of 1942 (56 Stat. 90), as amended, (public off-street parking facilities).
Act of June 20, 1938 (52 Stat. 802) (zoning regulations).
Act of May 20, 1932 (47 Stat. 161) (transfers of jurisdiction).
Act of August 5, 1939 (53 Stat. 1211) (surplus public property in the District of Columbia).
Act of May 29, 1930 (46 Stat. 482), as amended, (National Capital park, parkway and playground system).

Professional Staff

The Commission employs a highly-trained professional staff to perform technical studies and prepare recommendations for and maintain records of its meetings, to carry out general and special urban planning studies, to prepare background information on matters which are to come before the Commission, and to carry out policies, instructions and programs of the Commission.

The staff participates actively in many coordinating groups, maintains liaison with numerous official agencies and conducts an active community relations program in order to effectuate the Commission's program.

Special experts are retained on occasion to use their competence on particularly important problems.

Studies in urban renewal are carried out in part with funds received from District agencies.

An official NCPC Coordinating Committee meets twice monthly to bring together representatives of many District, Federal, and neighboring jurisdiction agencies to coordinate the review, study, and comment on major building and development projects within the District of Columbia, as well as routine review actions required by legal statutes. It also is used to test new projects in relation to the Comprehensive Plan and desirable planning practices.

The Coordinating Committee is composed of representatives from various departments of the District of Columbia Government, National Park Service, Corps of Engineers, Public Buildings Service, National Capital Planning Commission Staff, National Capital Transportation Agency and optional members when necessary from Redevelopment Land Agency, Architect of the Capitol, National Housing Authority, Commission of Fine Arts, Maryland-National Capital Park and Planning Commission and Arlington County Office of Planning.

PROGRAM AND ORGANIZATION OF THE NATIONAL CAPITAL PLANNING COMMISSION

I. OFFICE OF THE EXECUTIVE DIRECTOR

The staff activities of the Commission are directed by professional urban planners. An Executive Director and two Directors constitute the supervisory personnel of the Executive Director's office. The Executive Director is responsible for all administrative functions, not specifically reserved for the Chairman as head of the agency, and for all professional work of the staff.

This office formulates policy proposals on technical matters to present to the Commission; represents the Commission in carrying out its policies and programs; and supervisors, coordinates, and reviews the work of the staff. The office provides staff leadership and direction to ensure that the professional program offers appropriate guidance to the community in urban planning and urban design.

The Administrative, Legal and Public Information Services are also a part of the Office of the Executive Director.

A. Administrative Services

Since the Commission exists as an independent agency, all duties and functions required of a Federal agency are carried out by its own staff. Staff is required to administer financial management, budget preparation and control, personnel, payroll, records and space management, property records and accountability, and general administrative routines.

The need has been apparent for several years for a position of messenger, GS-2, to provide service within the office, between various offices with which we deal, and as an alternate driver to the chauffeur when he is absent on leave. The need for this position became acute when the Commission's offices were relocated August 1, 1966, because the office space is divided into three separate units on two floors, requiring frequent distributiton of material.

B. Legal Services, Commission Secretariat

The Office of the General Counsel and Secretary performs the following activities for the Commission:

1. Serves as official secretariat for the Commission and its several committees at their monthly meetings.
2. Provides legal services on matters of agency administration.
3. Serves as Legislative Counsel in review of proposed and pending legislation coming under the Commission's purview, in the preparation of Congressional testimony, and in statutory drafting.

C. Public Information Services

The public information services perform the following activities for the Commission:

1. Editing and writing publications and reports of the Commission.
2. Providing information on Commission's policies and activities to the press, community and foreign visitors.
3. Arranging meetings and presentations in conjunction with Commission programs with other agencies and the public.

II. PLANNING DIVISIONS

The overall objective of the planning divisions is to assist the Commission in directing the growth and development of the District of Columbia and to represent the federal interest in the planning and development of the metropolitan area.

The major program objectives for Fiscal Year 1968 will consist of methods to carry out the newly adopted Comprehensive Plan for the National Capital. Such standard administrative devices as zoning, subdivision control and capital improvement programming will be evaluated in light of the adopted comprehensive plan recommendations. New methods for plan execution within current or new legislation will be explored in order to establish a more effective planned growth and development within the Nation's Capital.

In order to fulfill the purpose and functions of the Commission, the professional staff is assigned into two basic groupings:

Long-range Planning and Regional Affairs, and
Current Planning and Programming.

A. Long-range Planning and Regional Affairs

The function of this portion of the staff is to determine what kind of city the District of Columbia should be in the future and how the suburban and regional planning efforts affect the federal interest in the metropolitan area. The responsibilities of these functions are divided between the Comprehensive Planning Division and the Regional Affairs Division, supported by the Offices of Research and Area Design.

1. Comprehensive Planning Division

The duties and responsibilities of this divison are indicated on the table of organization, supra.

The workload for this division is diveded between two main elements: the Commission's responsibility for developing and maintaining the Comprehensive Plan for the National Capital, and the application of general plan concepts to current projects through the continuing referral process.

The process of comprehensive planning will not cease with the publication of the plan. One of the key purposes of the Comprehensive Plan for the National Capital is (its development program) to serve as the basis for the orderly coordination of public works scheduled for the District of Columbia during the next two decades. As such, this initiates a process of long-range programming which will be continually subject to review and up-dating. Formulation of the initial 20-year development program objectives as they have been incorporated in the plan is scheduled for up-dating and continuous review in FY 1968.

a. *Program for FY 68–72.*—Following the Commission's adoption of its new 20-year plan for Washington, now scheduled for the latter part of 1967, the five-year period beginning with FY 68 should be one of plan refinement accompanied by a continuing dialogue with the community which itself may be expected to contribute concepts and specific projects.

i. It is the Commission's intent to up-date its 20-year plan for Washington every five years. Accordingly, a major assignment of the Comprehensive Planning Division during the five-year period beginning with Fiscal Year 1968 will be that of contributing to the preparation of a plan for Washington looking toward the 1990 decade.

ii. During this same period, the Division will have the assignment of translating the 20-year plan objectives into more immediate guides in the development of the city, as sets of objectives for the next five years, and as specific programs to be achieved year-by-year.

b. *Direct Application of the Comprehensive Plan FY 1968.*—i. Within the context established by the Comprehensive Plan, as adopted, this Division's work-program will call for initiating a series of area studies detailing the adopted plan. Comprehensive plan concepts will be extended to a more refined level including the detailing of neighborhood plans and working with citizen groups in translating plan objectives into specific private investment opportunities. This will include work on the following areas of the city.

(1) City-area sections: Central employment area near North Capitol East Anacostia.

(2) City-plan elements: housing, transportation, commercial.

(3) Design concepts: Capital Hill, Buzzards Point, Anacostia Park, New York Avenue corridor/bluff, uptown center series, special street series, school campus series.

(4) Publications: plan report supplements.

ii. The series of 40-year (long range) outlook studies (population, economics) to initiate the process of the Year 2010 Plan preparation should be up-dated within FY 1968.

iii. A comprehensive plan is effective only to the degree to which it is used as a guide to public and private development action. In addition to the above mentioned area studies and special-purpose reports detailing the plan, the following steps must be initiated during Fiscal Year 1968 to implement the adopted general plan:

(1) Participating in a joint study of the revision of the District zoning ordinance as a result of the adopted plan.

(2) Strengthening the six-year capital improvements program review process to include all District and Federal capital projects within the District.

(3) Exploring and developing new methods and techniques for carrying out the intent and purposes of the adopted plan.

(4) Reviewing the legislative and other regulatory machinery required to implement the adopted plan and, if necessary, prepare recommendations to improve regulatory methods.

iv. Among supporting systems and component studies and actions, the highest priority will be given to housing and basic transportation systems. Close liaison with other public agencies and community organizations to further the understanding of plan objectives and to identify circumstances requiring reconsideration of plan objectives.

c. *FY 1698 Staff Increase—Comprehensive Planning Division.*—In order to carry out the responsibilities of this Division and undertake the special studies necessary during Fiscal Year 1968, one additional Urban Planner (GS–12) is requested.

2. *Regional Affairs Division*

The Regional Affairs Division was established during Fiscal Year 1967 as a result of the Presidential Reorganization Plan No. 5 of 1966, which stated:

"The reorganization plan will not alter the basic responsibilities of the National Capital Planning Commission. That Commission will continue to represent the Federal interest in the planning and development of the Region. Indeed, its work should increase as comprehensive regional planning by the Council of Governments is accelerated. In accord with the reorganization plan, the Commission will work closely with the Council of Governments in regional planning. The Commission will also deal directly with the suburban jurisdictions and assume the liaison functions now exercised by the National Capital Regional Planning Council."

The responsibilities and functions of this division are derived from the Planning Act of 1952 and include the following:

a. Regional review and coordination of Federal and District projects located outside of the District of Columbia.

b. Liaison and coordination of the Federal interest in the planning of the National Capital Region with the Metropolitan Washington Council of Governments, local and sub-regional governing bodies, and planning agencies.

c. Preparation of a long-range Federal public improvements program for the National Capital Region in coordination with the Federal Planning Division.

d. Review of local, regional, and sub-regional plans and programs in order to evaluate their impact on Federal establishments in the National Capital Region.

e. Assistance to the Comprehensive Planning and Federal Planning Division in preparing long-range Federal employment plans and programs.

f. The work of this division for Fiscal Year 1967 will consist of the following:

i. Federal Interests in the Region: The interest of the Federal Government in the development of the National Capital Region is apparent. It was stated by the 86th Congress in the Washington Metropolitan Region Development Act (74 Stat. 224). It was also the subject of a memorandum by President John F. Kennedy on November 27, 1962 to the Executive Agencies setting forth a number of development policies as a guide for those agencies.

There is a need to identify further and define more precisely the nature of this interest. While it pertains to the basic character of the District and Region which is the seat of the National Government, it also must be spelled out in terms of efficiency and conduct of each of the units of the Government and their requirements for physical facilities and an appropriate environment.

(1) This division will continually review all published local, sub-regional and regional plans to identify the Federal interest in the National Capital Region and to assure its achievement.

(2) The National Capital Region is divided into 93 major planning districts. To date 41 current plans have been published, 20 adopted. During Fiscal Year 1968 it is estimated that 28 more plans will be proposed requiring review.

ii. Regional review and coordination: To accomplish the regional review of Federal master development plans and projects, as required by the Planning Act of 1952, this division works directly with each of the suburban jurisdictions. As the new regional comprehensive planning organization, the Metropolitan Washington Council of Governments, proceeds on its planning efforts, this division will need to coordinate the regional Federal planning interests and programs with COG's program, as well as to coordinate COG's regional program with the central city's planning work. Continuous close liaison with MWCOG will be essential.

It is suggested that this division, in conjunction with the Federal Projects Division, is in a most favorable position to provide an effective exchange of planning and development information between the Federal Government and the local planning jurisdictions. This type of area-wide development coordination, geared with MWCOG's comprehensive planning program, will be a continuing responsibility of this division.

iii. Regional Open Space Program: (1) Work will continue (with MWCOG) on an action program for the selection and acquisition of open space within the National Capital Region. Following the adoption by the National Capital Planning Commission of a "General Procedure for the Selection of Sites for New Federal Facilities in the National Capital Region," the staff established a current inventory of available sites. The Division will maintain sufficient information on the planned highway and transit routes and construction programs, the growth of other Federal facilities planned in the area, and the pattern of growth of residential areas within the region to allow the intelligent comparison and selection of sites.

(2) The Division also will promote adidtional open space research and education. Working with such groups as MWCOG, the Washington Center for Metropolitan Studies and the Conservation Foundation, research projects on the benefit per cost problem of obtaining and maintaining the large low-density wedges and knowledge of the future recreation needs and demands should be initiated.

(3) The Division will continue the educational program on the advantages and possibilities of open space preservation by the use of easements and demonstrate this in selected geographic areas. This educational program logically precedes an easement acquisition or donation program. The Commission would promote through MWCOG and the subregional agencies efforts to locate and purchase critical areas where development pressures may threaten needed open spaces deemed important to local, sub-regional, and regional program. Such a program would utilize the inventory of available sites and the priority designation information already completed.

iv. Federal Capital Improvements Program for the National Capital Region: As the strongest method for effective coordination and plan implementation, a framework for Federal Capital Improvements Programming (on a six-year continuing basis) should be worked out to include capital expenditures of all Federal departments and agencies.

In this framework, a total regional capital improvements program should be developed by MWCOG which would be revised and updated each year for the projected next six years effective coordination can be established in relation to:

(1) Local capital requirements.
(2) Impact on region and local areas.
(3) Federal sites and needs in the region.
(4) Advanced land acquisition or reservation of needed sites.
(5) Reduction of duplication of regional facilities.
(6) Employment growth and distribution.
(7) Timing of Federal development in keeping with local needs and ability to support developments.

Such a Federal capital improvements program would provide the best single programming device for coordinated growth and development in the Region.

g. *Fiscal Year 1968 Request—Regional Affairs Division.*—Due to the Reorganization Plan and the reassignment of staff, no increase is requested for this division for FY 1968. Existing staff of this division can perform the proposed work.

3. Office of Area Design

The major functions and responsibilities of this office are as follows:

a. Advice and technical urban design assistance to the Comprehensive Planning and Regional Affairs Division in the design review of area-wide programs submitted to the Commission and/or long-range studies by these divisions.

b. Preparation of special area-wide design studies and/or area-wide plans, as requested by the Commission.

c. Participate in the review and evaluation of special area-wide studies undertaken by third-party consultants to the Commission, and supervise or direct such studies where required.

The Area Design Office is primarily concerned with area site design studies in connection with general plans and with prototype feasibility studies for the Landmark presentation program.

d. Typical Area Design Office Performance FY 1966-1967.
  i. All area design studies of 1985 Plan.
  ii. South Capitol Street area.
  iii. National Training School for Boys area.
  iv. Union Station Transportation Terminal and Visitors Center.
  v. Judiciary Square and vicinity.
  vi. Mt. Vernon Square and vicinity.

e. Proposed FY 1968 typical area design studies.
  i. Development plan for Capitol Hill area.
  ii. Phase II of *Comprehensive Landscape Plan* for city.
  iii. Identification and descriptions of *The District Communities of Washington* from an urban design point of view.
  iv. Brookland-Eckington uptown center design.
  v. Neighborhood design plan for Columbia Heights and adjacent areas.

f. *Fiscal Year 1968 request—Office of Area Design.*—Existing staff of this office can perform the proposed work.

4. Office of Research

The major functions and responsibilities of this office are as follows:

a. To provide the necessary planning research data and information to assist all divisions in their assigned duties.

b. To initiate special research studies as requested or programmed by the Commission.

c. To participate in the review and evaluation of special studies undertaken by third-party consultants with respect to the population, economic, social, and community facilities aspects of the Commission's work.

The Office of Research is substantially but not entirely a support operation to the other divisions. As the work of the agency expands, the assignment requests made of this office can be expected to increase.

d. *Typical work performance during Fiscal Year 1967.*—During Fiscal Year 1967 this office published "Problems of Housing People in Washington, D.C." a special report to the community. Among other assignments are included the following:

Cardozo Ecology Study
Housing Proposals Survey
Housing Programs Study
Population and Education Studies

In addition, this office continually provides public information services to citizen groups and public or private agencies and organizations in the city.

e. *Fiscal Year 1968 staff increase requested.*—In response to the increasing emphasis and need of research from all divisions and the commission itself, one Social Science Analyst position (GS–12) is needed and requested for the Office of Research.

B. Current Planning and Programming

The current planning and programming activities of the Commission include the District, Federal and Urban Renewal Planning Divisions and the Offices of Project Design and Transportation Planning.

The duties and responsibilities of these divisions are summarized on the table of organization chart, supra.

1. District Planning Division

This Division carries out a major part of the Planning Commission's role as the planning agency for the District Government, as set forth in the National Capital Planning Act of 1952. The District Division's major responsibilities and workloads are as follows:

a. *One and Six-Year Public Works Programs.*—Section 7 of the Planning Act states that "the Commission shall recommend a six-year program of public works projects which it shall review annually with the agencies concerned. To this end each Federal agency and the Board of Commissioners of the District of Columbia shall submit to the Commission in the first quarter of each fiscal year a copy of its advance program of capital improvements within the National Capital and its environs."

During the past several years, the amount of time that has been required for an adequate review of this program has consistently increased. With the completion of the 1985 Comprehensive Plan during Fiscal Year 1967, the Commission will be better able to review and evaluate the proposed projects and their recommended priority and scheduling within the framework of a long-range plan and program for the physical development and redevelopment of the Cty of Washington. More emphasis will, therefore, be given to this function of the Commission than in the past.

b. *Current District Land Acquisition and development plans.*—In accord with Section 5 of the National Capital Planning Commission Act of 1952, as amended, the Commission reviews the general location of proposed District buildings and facilities, and the preliminary and final site and building plans for the District projects within the National Capital Planning Commission.

The Commission's activities under this Section of the Act are to be consistently extended in Fiscal Year 1967 and 1968 as a result of a recent agreement with the District of Columbia Government that all such projects would be submitted for Commission review in the future. As indicated below, an additional staff person will be needed, and is requested, to assist in the review of such project submissions in Fiscal Year 1968.

c. *Zoning Referrals and Recommendations.*—Section 8 of the Planning Act sets forth the functions of the Commission with respect to zoning and subdivision regulations in the District. Section 8(a) provides: "The Commission may make a report and recommendation to the Zoning Commission of the District of Columbia on proposed amendments of the zoning regulations and maps as to the relation or conformity of such amendments with the comprehensive plan of the District of Columbia. The Commission may also submit to the said Zoning Commission proposed amendments or general revisions to the zoning regulations or the zoning map for said District."

There are a number of provisions of the Zoning Regulations which require referral to and a report from the Planning Commission, either to the Zoning Commission or the Board of Zoning Adjustment, prior to action being taken. Among the more significant of these are proposed Group Development Plans for sites 1½ acres or more in size. Each case requires meetings with those interested in the matter including archtiects, university representatives, builders, attorneys, citizens' organizations, and representatives of the District Government. It requires writing or aiding in the writing of new regulations, reporting to the Planning Commission, and presenting the Commission's recommendations at public hearings.

With the completion of the 1985 Comprehensive Plan it is anticipated that many additional recommendations will be made since zoning is the principal control available in realizing the land use proposals of the plan.

In addition, the Division will participate actively in the special zoning study to be undertaken jointly by the Commission and the Zoning Commission as previously mentioned.

d. *Zoning Advisory Council.*—Section 5 of this Act creates a Zoning Advisory Council, one member of which shall be a representative of the Planning Commission. The Act states that "no amendment of any zoning regulation or map shall be adopted by the Zoning Commission unless and until such amendment be first submitted to said Zoning Advisory Council and the opinion or report of such Council thereon shall have been received by the Commission".

As a member of this Council representing the Commission, the Chief of the District Division in Fiscal Year 1966 participated in the review of 173 proposed amendments to the zoning maps and regulations. Each case requires an inspection visit to the site, writing, with other Council members, a report to the Zoning Commission, and attendance at the public hearing and at the executive meeting of the Zoning Commission, this year 16 executive sessions and 13 public hearings were held.

e. *Board of Zoning Adjustment.*—Section 8 of the Act creates a Board of Zoning Adjustment, one member of which shall be a member of the Planning Commission or its staff, designated by the Commission and appointed by the Commissioners of the District of Columbia. The Chief of this Division represents the Commission on the Board. The Board holds hearings once a month on exceptions and variances to the Zoning Regulations. The Board over the past several years has heard the average 45–50 appeals a month. During the past year the Board heard 556 appeals, at thirteen public hearings. This number was an increase of 80 appeals over the previous year. Appeals often require an inspection visit to the site. Every appeal involves a check against other programs of the Commission, attendance at public hearing, review of briefs submitted by applicants, and aiding in the writing of orders granting or denying each case.

f. *Subdivision regulations.*—The District of Columbia is currently reviewing the existing subdivision regulations with the object of revising them. The Chief of this Division is a member of the Committee established by the District Commissioners to undertake this review.

g. *Additional functions of the Division are.*—

i. Street and Alley Closings: The Commission makes recommendations to the District Commissioners on proposed street and alley closings. There were 49 such closing actions investigated and acted upon in FY 1965.

ii. Changes in the D.C. Highway Plan: Planning Commission approval is required for all changes in the "Permanent System of Highways Plan." Two such changes were processed in FY 1965.

iii. Transfers of Jurisdiction: The Planning Commission approves all transfers of jurisdiction over properties within the District of Columbia owned by the United States among and between Federal and District authorities. There were 23 such transfers investigated and acted upon in FY 1965.

iv. Sale of surplus land: Commission approval is required for all sales of District owned land which the District Commissioners and the National Capital Planning Commission find to be no longer required for public purposes.

h. *Fiscal Year 1968 Request.*—In order to properly review and evaluate the proposed general location of, and the preliminary and final site and building plans for District building projects, an additional staff person is required, therefore, a position as Architect-Planner (GS-13) is requested in Fiscal Year 1968.

2. *Federal Planning Division*

This division carries out a major portion of the Commission's responsibilities in regard to projects and developments of the various executive departments and independent agencies of the Federal Government in the National Capital Region under the National Capital Planning Act of 1952. The activities of this division include the following:

a. *Current Federal Land Acquisition Development Plans and Programs.*—The Commission reviews budget proposals, general location proposals for Federal buildings and facilities, preliminary and final site and building plans, monuments and memorials, National Capital Park, Parkway and Playground Plans, and Stream Valley Park Plans and Programs.

i. Fiscal Year and 5-Year Programs: In Fiscal Year 1965, the Commission reviewed and took action on 16 budget proposals. No five-year public works programs were submitted for Commission activity that year. In Fiscal Year 1966, the Commission reviewed and made recommendations on 28 budget proposals and two five-year public improvement programs submitted by Federal agencies. It is anticipated that this activity of the Division will continue to increase.

ii. General Location, Site and Building Plans: In Fiscal Year 1965 the Commission reviewed and approved 31 such submissions. In Fiscal Year 1966, 63 project submissions were reviewed and approved, representing an increased work load of more than 100% in this activity of the Division.

iii. Park, Parkway and Playground System: In Fiscal Year 1965, the Commission reviewed and took action on seven park projects relating to these programs. In Fiscal Year 1966, six projects were acted upon by the Commission.

b. *Long-Range Federal Land Acquisition and Development Plans and Programs.*—The Commission reviews five-year construction programs and master plans for the various Federal facilities and installations in the National Capital Region. In Fiscal Year 1965 the Commission reviewed and approved four master plans for Federal installations. In Fiscal Year 1966, eight master plans were reviewed and approved, representing an increased work load of 100% in this activity of the Commission. It is anticipated that the work load related to the review of Master Plans and proposed modifications to approved plans will continue to increase rapidly.

c. *Site Utilization Studies of Federal Installations and Facilities.*—In response to a request from the Bureau of the Budget and, as a part of the Commission's continuing master planning studies, the division is reviewing existing Federal land holdings in the District of Columbia and in Virginia and Maryland within the National Capital Region, as a basis for recommendations on the future use of these sites.

d. *Participation in the Preparation of the 1985 Comprehensive Plan.*—The division, in conjunction with the Comprehensive Planning Division, is in the process of developing a long-range plan and program for Federal employment in the National Capital Region. The policy and program recommendations resulting from this study are to be a part of the Commission's 1985 Comprehensive Plan for the National Capital.

A technical report incorporating the detailed proposals and recommendations of the Federal Employment Plan and Program is to be completed early in Fiscal Year 1967. This will mark the first time the Commission has had such a detailed program, and it is important that it be kept up-to-date and made a useful, effective guide to evolving Federal land acquisition and development programs.

e. Preparation of a long-range Federal public improvements program for the National Capital Region in coordination with the Regional Affairs Division.

f. *Fiscal Year 1968 Request.*—With Commission approval of a Federal Employment Plan and Program for the National Capital Region expected in Fiscal Year 1967 it is important that it be kept current, updated and extended on a systematic basis in keeping with day-to-day decisions and developments in the National Capital Region. A full-time permanent staff person is required to do this and to aid in the preparation of a Federal public improvements program for the National Capital Region. Therefore, a new program-planner position (GS-12) is requested as a part of the Fiscal Year 1968 budget.

3. Urban Renewal and Housing Division

The principal activities and responsibilities of this Division are the preparation of urban renewal plans or modifications thereto, the review of proposed low-income housing sites and development plans, participation in the continuing review and revisions to the District's Community Renewal Program and special renewal related studies.

a. *Preparation of Urban Renewal Plans.*—The Commission, in cooperation with the District of Columbia Redevelopment Land Agency, prepares urban renewal plans for the adoption of the Commission and for the approval of the Board of Commissioners of the District of Columbia. The execution of these plans is the responsibility of the Redevelopment Land Agency. The preparation of these plans is usually done by special staff personnel recruited by the Commission for this purpose with funds provided by RLA under the provisions of the District of Columbia Redevolpment Act of 1945, as amended, and Title I of the Housing Act of 1949, as amended. This work is carried out under the direction and supervision of the Urban Renewal Planning Division with general supervision and technical and administrative services furnished by the permanent staff of the Commission from appropriated funds.

i. *Anacostia-Bolling:* The Commission, assisted by consultants on major technical problems, began detailed planning studies for this project under contract with the Redevelopment Land Agency during Fiscal Year 1965. The planning budget calls for an estimated $120,000 to be spent during Fiscal Year 1966, Fiscal Year 1967, and Fiscal Year 1968.

It is expected that an Urban Renewal Plan for the development of those portions of the area which are excess to the needs for the Department of Defense will be completed during Fiscal Year 1967. During Fiscal Year 1966, General Planning and Design Objectives, including the allocation of land to various uses and the relationship of the Project Area to adjoining uses and areas, were formulated as a guide to the preparation of the urban renewal plan. During project planning, the staff of the Division is required to work closely with the staff of the Federal Planning Division, the Comprehensive Planning Division, and planners for the Department of Defense who are responsible for the preparation of the Master Plan for the Bolling-Anacostia Cantonment Area, approved by the Planning Commission during Fiscal Year 1966, and for the development of a Defense Office Building.

ii. *Shaw School:* During Fiscal Year 1966, the Planning Commission adopted urban renewal boundaries for planning purposes for the Shaw School Urban Renewal Area. The Redevelopment Land Agency has prepared and submitted an application to the Department of Housing and Urban Development for a planning advance which is expected to be approved in early Fiscal Year 1967.

It is expected that the Commission will begin detailed planning studies for this project under contract with the Redevelopment Land Agency during the early part of Fiscal Year 1967. The planning budget calls for about $160,000 to be expended during Fiscal Year 1967 and Fiscal Year 1968.

It is expected that the Urban Renewal Plan and supporting documentation prepared by the Commission staff will be completed during Fiscal Year 1968 with the major portion of the work being accomplished during Fiscal Year 1967.

iii. Downtown: The preparation of a Feasibility Study of the Downtown Area, as a result of the passage of enabling legislation in Fiscal Year 1966, is the start of the renewal process there. The Commission anticipates starting detailed planning studies for the Feasibility Study under a contract with the Redevelopment Land Agency early in Fiscal Year 1967. The work is being undertaken with an estimated budget of $50,000 to be expended during Fiscal Year 1967 and Fiscal Year 1968.

During Fiscal Year 1967, the Commission will report on environmental conditions and public facilities, conduct surveys to identify buildings of significant historic or aesthetic value and classify them as to importance. The Commission is to participate with the Agency and its consultants in the evaluation of the consultants work, preparation of an Illustrative Development Concept and proposals for public action to eliminate and prevent recurrence of blight and determination of the extent to which urban renewal action would be feasible.

b. *Proposed Urban Renewal Activities.*—The regular staff of the Division is also responsible for reviewing proposals for possible future urban renewal projects, for undertaking and/or assisting in urban renewal feasibility studies and, within the framework of the *Comprehensive Plan for the National Capital* and Community Renewal Program studies, initiating and recommending specific urban renewal proposals for consideration by the Commission and the District Commissioners. Studies of this nature in the past have been initiated by the Commission or have been undertaken in response to requests by the District of Columbia, the Redevelopment Land Agency, or other groups or institutions.

i. Community Renewal Program: During Fiscal Year 1966, the Commission staff that is preparing portions of the Community Renewal Program with funds supplied under an agreement with the District of Columbia Government completed a staff report, *The Physical Development Proposals for the Community Renewal Program, Washington, D.C.* This constitutes a major technical contribution to the final recommendations to the District of Columbia Government on a Community Renewal Program for the Nation's Capital.

During the early part of Fiscal Year 1967, the Commission staff will assist in revisions and modifications of the CRP as a result of review by the Department of Housing and Urban Development and the District of Columbia Government. After approval of the Community Renewal Program, the permanent staff of the Urban Renewal and Housing Division will participate with other agencies and the District of Columbia Government in the annual review and revision of the CRP as new data become available and implementation of its proposals proceeds, so that a long-range Community Renewal Program can be maintained in the future. The staff will also be involved in the preparation of a 6-year housing program in conjunction with the District of Columbia Government. This will constitute an addition to the workload of the Division in Fiscal Year 1968.

ii. Special Area Studies: The Division staff has continuing responsibility for preliminary planning or eligibility studes n potential urban renewal areas in various parts of the Districts. The number and kinds of areas currently under consideration indicates an expansion of the Division's workload in Fiscal Year 1967 and Fiscal Year 1968.

(1) National Training School for Boys Site: The use of the urban renewal process as the most appropriate and effective means of replanning and disposing of all or major portions of this site is now under study by the District of Columbia Government, the Redevelopment Land Agency and the Commission.

In the event that this approach is adopted by the District and Federal Governments, the Commission—with funds supplied by the Redevelopment Land Agency—could begin preparation of the urban renewal plan in Fiscal Year 1967 and complete it during FY 1968.

(2) Coordinating Renewal and Rapid Transit Programs: Limited studies of the potential development impact of subway station locations on surrounding areas have been initiated by the National Capital Transportation Agency. These stations will exert a significant development potential on surrounding areas and more extensive planning and design studies should be initiated by the Commission in FY 1967 and FY 1968.

In areas of the transit system that are in or near areas that are apparently eligible for urban renewal assistance, the Urban Renewal and Housing Division will investigate the potentials for urban renewal activities as a means of coordinative public and private investment within the framework of an over-all development plan.

These studies will be coordinated with the Transit Development Program and are intended to support that system as well as coordinate its impact. It is anticipated that priority study will be given to the Fourteenth Street and Park Road station and its immediate vicinity.

(3) Howard University Area: The Community Renewal Program and studies leading to the delineation of the Shaw School Urban Renewal Area have also identified the Howard University area and the surrounding Cardozo area as needing attention and having a high priority for future renewal action. In addition, Howard University is contemplating a major expansion and a future development plan and program that will have considerable impact on the surrounding areas. An opportunity exists in the Howard University area, where land has already been acquired or where it is proposed to be acquired for University use for noncash grants-in-aid credits under Section 112 of the Housing Act of 1949, as amended. (It may be desirable to combine these studies with that proposed in the Fourteenth and Park Road area.)

(4) South Capitol Street Area: In order to further the Commission's interest and the Comprehensive Plan recommendations in the South Capitol Street area between the Southwest Expressway and the Anacostia River, an urban renewal feasibility study should be undertaken to determine the feasibility of the general proposals in regard to cost, relocation and the proper methods and techniques for phasing or staging the private and public uses proposed in this strategically located area.

(5) Neighborhood Conservation: In conjunction with recent Community Renewal Program and Comprehensive Plan proposals, the first step to initiate Title I—assisted Concentrated Code Enforcement—one of the major tools to conserve neighborhoods—was taken in Fiscal Year 1967 by the District. This step consisted of preparing an application for a Federal grant to carry out Section 117 (dealing with code enforcement) along with other programs permitted under the Housing Act of 1949, as amended.

The Commission anticipates starting detailed planning studies for the Trinidad area and other areas designated for conservation by the Community Renewal Program. This work will be undertaken with an estimated budget of

$50,000 to be expended during Fiscal Year 1967 and Fiscal Year 1968. These expenditures will be a part of the local one-third share of the total project costs. It is anticipated that the District of Columbia Government will transfer the funds necessary for the Commission to assist in these studies.

During Fiscal Year 1967, the Commission staff will prepare detailed studies on land use, zoning, building, conditions, circulation and potential public housing sites and urban renewal area. Surveys that will be made by the District's Housing Inspection Division, National Capital Housing Authority, Redevelopment Land Agency, etc., will be utilized in formulating specific recommendations to conserve the Trinidad area and other comparable residential neighborhoods. These efforts will be designed to halt the spread of blight in sound neighborhoods, to remove deteriorated and unsafe structures and incompatible land uses and to reduce unnecessary through-traffic.

(6) Demonstration Cities Program: During Fiscal Year 1967, the Commission staff will continue to coordinate with the District of Columbia Government in the preparation of an application for a Demonstration Cities Grant for the District. The scope of this work will be aimed towards describing and defining the priority areas for selected human and physical renewal. These efforts will serve to expedite already defined urban renewal areas and initiate others.

It is anticipated that the Shaw School Urban Renewal Area may become a part of this new program at an early date.

c. *Low-Rent Public Housing Site Development.*—In Fiscal Year 1966, the division staff continued to work with the staff of the National Capital Housing Authority in the review of potential sites for low-rent public housing projects and in the review of development plans for approved sites. Readily available undeveloped sites for public housing in the District of Columbia have now been virtually exhausted. Program authorization exists for approximately 500 units of housing for which appropriate sites have yet to be selected, and further increments will be required to accommodate anticipated displacement from public works and urban renewal. The difficulty of site selection, the probability of an increase in the number of projects, the expected expansion of the scattered site acquisition and rehabilitation program, and the care required to assure the successful physical integration of projects into the existing structure of the city indicate an expansion of the division's workload in Fiscal Year 1968 and beyond.

d. *Activities in Connection with Current Urban Renewal Projects.*—The division staff has a continuing responsibility and workload resulting from the consideration, review and study (and/or the development) of proposed modifications in previously adopted and approved urban renewal plans.

Frequent proposals for plan modifications originate from the Redevelopment Land Agency, property owners in the area involved, potential redevelopers, the District of Columbia Government, or the Commission staff. Staff studies are involved in each case prior to presentation for the Commission's consideration.

Adopted and approved urban renewal plans exist for each of the following areas of the District of Columbia:

i. Southwest B, C, and C–1: During Fiscal Year 1966, the staff of the division reviewed with the Redevelopment Land Agency the Waterfront Plan, particularly traffic circulation through the area. In addition, the staff has continued an intensive review of the remaining undeveloped and uncommitted sites in Southwest to determine the feasibility of constructing additional Federal office buildings there.

ii. Northwest No. 1: Continuing staff study of the Urban Renewal Plan for Northwest Project No. 1, in cooperation with the Redevelopment Land Agency and the District of Columbia Government, has identified a need for minor modifications relating to the development of specific parcels. An amended Plan will be submitted to the Commission in Fiscal Year 1967.

In addition, the need for a new building for the Government Printing Office, will necessitate a reexamination of the area around the present Government Printing Office to determine what, if any, modifications in the Plan may be desirable or necessary. As land disposition proceeds, and proposals from redevelopers are received, additional modifications of the Plan will be needed during Fiscal Year 1967 and Fiscal Year 1968.

iii. Northeast No 1: Continuing staff study, in conjunction with the RLA, will be required as land disposition proceeds in order to evaluate whether the existing Plan is workable in the present market for commercial and industrial land.

iv. Columbia Plaza: Development is underway on the 8.4-acre residential portion of the project, and highway construction on the remaining 5.6 acres is well advanced.

Fiscal Year 1968 Request

In order to strengthen the division's resources to undertake special urban renewal and housing studies of potential future project areas and in order for the Commission to participate effectively in the annual review, and revision of the District's Community Renewal Program, an additional Project Planner (GS-11) is needed and is requested in the Fiscal Year 1968 Project.

4. Office of Project Design

a. The major functions and responsibilities of this office are as follows:

i. Advice and technical assistance to the District, Federal and Urban Renewal Planning Divisions in the design review of projects submitted to the Commission and/or current studies by these divisions.

ii. Initiation and preparation of special design studies and/or plans, as requested or programmed by the Commission.

iii. Participation in the review and evaluation of special studies undertaken by third-party consultants to the Commission. In some cases, supervision and direction of such studies is required.

The Project Design Office is primarily concerned with detailed project and site plans for small areas within the National Capital Region.

Fiscal Year 1968 Request

In response to the increasing needs for special design services in the Urban Renewal and Housing Division and in the Federal Planning Division, an architect-planner (GS-11) position is needed and is requested in Fiscal Year 1968 in the Project Design Office.

5. Office of Transportation Planning

a. The major functions and responsibilities of this office are as follows:

i. Preparation of, and modifications to, the transportation elements of the Comprehensive Plan for Washington, D.C. in conjunction with the Comprehensive Planning Division.

ii. Advice and technical assistance to the District, Federal and Urban Renewal Planning Divisions on the transportation elements of proposed projects, master plans, low-income public housing and urban renewal plans.

iii. Continued liaison with the District of Columbia Department of Highways, the National Capital Transportation Agency, the Washington Metropolitan Area Transportation Commission, the Transportation Planning Board of the Metropolitan Washington Council of Governments and other organizations within the National Capital Region.

iv. Close coordination with the Washington Council of Governments and the Regional Transportation Board in the development of coordinated transportation plans for the District of Columbia and for the National Capital Region, as a whole.

Fiscal Year 1968 Request

In FY 1968, the construction programs of both the District of Columbia Highway and the National Capital Transportation Agency will be at their highest level of activity requiring continual review and Commission approval of detailed design of projects.

Two large urban renewal projects: Downtown and Shaw, will be in the planning stage and will require a considerable amount of participation by the Commission's transportation planner in coordinating the transportation elements of those plans.

Due to the increased need for: (1) an adequate technical review of the transportation element of proposed District and Federal projects in the National Capital Region, and (2) close cooperation by the Commission's technical staff with the Regional Transportation Board and its staff, an assistant transportation planner (GS-12) is required on the staff and is requested in Fiscal Year 1968.

III. SERVICES OF EXPERTS AND CONSULTANTS

The nature of urban growth and change, the rapidity with which it is occurring in Washington and, indeed, the whole National Capital Region, and the necessity to cope with special problems by special efforts lead to the need for selected special programs from time to time and the utilization of specialized insights and experiences. The Commission employs the services of experts on a daily basis or through contract studies when this is to the economy and convenience of the Government.

A. *Major projects performed by experts during Fiscal Year 1966 for the Commission were as follows:*

Robert Gladstone & Associates, population matrices	$2,500
Robert Gladstone & Associates, Eastern Market Study	2,500
Robert Gladstone & Associates, Georgetown Market Study	5,000
Henry M. Bain, Jr., consultation and final drafting of the 1985 comprehensive plan	9,100
Alan M. Voorhees & Associates, District of Columbia residential parking study	4,000
Total	23,100

B. *Projects contemplated for Fiscal Year 1967 are as follows:* D. C. Landscape Plan (part of the Beautification Program), $25,000.

C. *Projects contemplated in Fiscal Year 1968 are as follows:* The projects listed under Fiscal Years 1966 and 1967 could not be anticipated in advance. Those projects that can be anticipated for Fiscal Year 1968 are listed in Section V, *Special Projects.* For use of experts on special programs which are directed by the Commission from time to time and which we cannot anticipate, we are requesting the same amount as allotted in Fiscal Years 1966 and 1967, $25,000.

IV. PUBLICATIONS PROGRAM

A. *Printing requirements for Fiscal Year 1967 include the following major documents:*

Title:

1. Comprehensive Plan for Washington, D.C.

2. Publication of Consultants' Reports.

a. Towards a Comprehensive Landscape Plan for Washington, D.C.

The final report of consultants Wallace & McHarg Associates describing a method for a Comprehensive Landscape Plan for the District of Columbia.

b. Skyline Report

Recommendations of Chloethiel W. Smith for large scale concepts of over-all city design.

c. Prototype for Uptown Center Study

Final report of consultant Victor Gruen's recommendations of Uptown Centers.

3. Federal Site Utilization (Inventory).

4. Informational Booklet (Personnel and Purpose).

A brief outline of the functions of the National Capital Planning Commission and short biographies of Commission members and top level staff.

5. Monthly Informational Bulletin.

Summary of activities and projects of the National Capital Planning Commission.

6. Special Projects.

a. Pennsylvania Avenue, S.E.

Plan for development of a special street from Capitol to Barney Circle.

b. Shaw Area and Its Problems

A review of the problems of the Shaw neighborhood and what urban renewal could accomplish for its residents.

c. National Training School

Proposed design scheme for development of National Training School site as residential community of 15,000 people.

d. Anacostia Park

Staff recommendations for development and extension of Anacostia Park.

e. Problems of Housing People in Washington, D.C.

Commission's findings on the Condition of Housing and Social Problems of the People in Washington, D.C.

7. Regional Reports

a. Summary of Regional Growth 1950–2000

b. Appendices—General Development Guide 1966-2000

It is estimated that the cost for the above documents will be within the amount appropriated for publications in Fiscal Year 1967. Total $57,500.

B. *Printing requirements for Fiscal Year 1968 will follow the same pattern as set forth above for Fiscal Year 1967 and include the following categories:*

1. Further reports on the Federal Government Site Utilization (Inventory).
2. Further delineation of Comprehensive Plan Proposals, particularly those dealing with community and neighborhood developments.
3. Special reports among which would be:
    a. Research documents on housing and population
    b. Transit stop design studies
    c. Special street designs
    d. South Capitol Street development designs
    e. Buzzards Point development concepts.
4. Usual miscellaneous printing costs.

It is estimated that costs for publications during Fiscal Year 1968 will be the same as for Fiscal Year 1967. Total $57,500.

V. SPECIAL PROJECTS

A. Zoning Regulation Revisions

"Section 8(a) The Commission may make a report and recommendation to the Zoning Commission of the District of Columbia on proposed amendments of the Zoning Regulations and maps . . ."

One major means of carrying out the newly adopted Comprehensive Plan policies is through modification of the Zoning Regulations. Such a review and revision is also needed since the last major modification was in 1958.

This would be a joint project with the District of Columbia over a two-year period.

Commission's share for Fiscal Year 1968, $25,000.

B. The History of Planning and Development of Washington, D.C. 1791–1967

This history project would bring together in one document the planning, developments and changing organization in the evolution of the Nation's Capital. Many of the early participants in the contemporary planning process for Washington, D.C., are still living and it would be desirable to take advantage of their knowledge. This is the first year request for a 2-year program estimated at $25,000 in total.

Cost (exclusive of publishing), $10,000.

C. Research Computer Program (Continuing)

During Fiscal Year 1968 it will be necessary to develop computer programs for the mathematical housing model funded previously.

The model requires as an input a set of District-wide forecasts of population and households by income, race, and household size. The Research Office developed a matrix technique that takes a metropolitan area forecast and steps it down to a District forecast. It is desirable to use more than one District forecast in the model for any given time period. Use of the model for short-range planning also will require short-range District-wide forecasts as inputs to the model. The computer can work much more economically because of the time required to run the Step-Down Matrix manually to obtain these forecasts.

A Sub-Model would predict age profiles of the population associated with housing that would be applicable and important for planning for schools and recreation, special facilities for the aged, and other age-associated facilities and programs.

Cost for the above computer program (FY 1968), $5,000.

TEMPORARY COMMISSION ON PENNSYLVANIA AVENUE

I. Background

President Kennedy appointed a Council on Pennsylvania Avenue in June of 1962 to prepare a plan for the revitalization of the Avenue. The plan was prepared and submitted to the President in April 1964. That concept has been endorsed and approved by all interested agencies.

The report of the Council on Pennsylvania Avenue, recommending a plan for development of the area of Pennsylvania Avenue between the Capitol and the White House, has received a great deal of enthusiastic support from many sources.

On October 23, 1964, President Lyndon B. Johnson stated that the details may require modification and that the plan must remain flexible but that "I believe that it should be accepted as a worthy and challenging goal for our Nation's most important street, our Nation's ceremonial drive." He said further, "I was particularly impressed by the approval of the National Capital Planning Commission, which really has the major responsibility for the development of the city; by the Commission of Fine Arts; and by the District of Columbia Board of Commissioners. I have likewise been heartened by the enthusiastic response to the plan from so many national and local organizations concerned with the development of our Nation's Capital."

President Johnson established the Temporary Commission on Pennsylvania Avenue by Executive Order No. 11210 of March 25, 1965. The President appointed a thirteen member Commission including Cabinet Officers and the heads of agencies with specific interests in the Avenue. Congress appropriated a small amount of money to the National Capital Planning Commission to carry out the work of this Temporary Commission during FY 1966 and 1967.

At the recommendation of the Temporary Commission, the Avenue between the Capitol and the White House and certain areas adjacent to it have been declared a historic site under the Historic Sites Act of August 21, 1935. Furthere, upon recommendation of the Commission the President has recommended legislation to establish a Pennsylvania Avenue Commission. Joint Resolutions have been introduced in both Houses of Congress for this purpose.

Early acceptance of the concepts of the plan has caused the redesign of two major buildings to fit into the plan, the FBI building and the building on the site of the old Raleigh Hotel. Other private and public decisions and actions about projects in the area await guidance from detailed plans and engineering controls which must be formulated.

II. Current Status

As mentioned above, Joint Resolutions were introduced in both Houses of Congress in the recently concluded session. The Senate passed the Resolution and it was reported favorably out of the House Interior Committee, but it did not reach the House floor. New legislation is expected to be introduced in the first session of the 90th Congress.

III. Program Objectives

The immediate objective of the Commission is to continue to develop reliable information upon which decisions can be based. Technical data must be available for those agencies, both public and private, which must now make decisions relating to development on the Avenue.

The Commission must retain an adequate staff with broad experience to assure accomplishment of the tasks encountered in a complex program of this nature.

Consultation with and coordination of the activities of all interests in the Avenue improvements are constantly necessary. This is required to assure integration of all plans and activities with the Pennsylvania Avenue plan and with the comprehensive plans for the National Capital developed by the National Capital Planning Commission.

IV. Work Program

The work program of the Commission will include such activities as the following:

Economic and Engineering Feasibility Studies
Cost Studies
Program Studies
Impact Considerations
Development of Legislative Proposals
Coordination Activities
Public Relations

With the limited staff and funds available to date, beginnings have been made in a number of the above mentioned areas.

Land acquisition, National Capital park, parkway, and playground system

No appropriations for land acquisition are requested pending review of the authorizing legislation for the George Washington Memorial Parkway by the appropriate legislative committees of the Congress in accordance with the directive of the Committee on Appropriations of the House of Representatives in its report on H.R. 14215, the Department of the Interior and Related Agencies Appropriation Bill, 1967 (H. Rept. 1405, 89th Congress, Second Session, pp. 34–35).

Unobligated balances

The December 31, 1966 unobligated balances of appropriations under the Capper-Cramton Act (Act of May 29, 1930, 46 Stat. 482, as amended) are follows:

George Washington Memorial Parkway:	
Arlington County, Va.	$844
Fairfax County, Va	500
Montgomery County, Md	100,700
Total	102,044
Maryland stream valley parks	12,345
Park, parkway, and playground system in the District of Columbia	656,297
Total unobligated balance	770,686

EXPLANATION OF BALANCES

George Washington Memorial Parkway

Arlington County, Virginia.—This $844 represents the balance of funds appropriated for the Parkway and allotted to Arlington County but unmatched by the local jurisdiction. Unless required to meet deficiency awards in pending condemnation cases and matched by the local jurisdiction or reallotted, these funds will be returned to the Treasury.

Fairfax County, Virginia.—This $500 represents the balance of funds appropriated for the Parkway and allotted to Fairfax County but unmatched by the local jurisdiction. Unless required to meet deficiency awards in pending condemnation cases and matched by the local jurisdiction or reallotted, these funds will be returned to the Treasury.

Montgomery County, Maryland.—$100,000 of this amount was appropriated in the Department of the Interior and Related Agencies Appropriation Act, 1963, for the acquisition of portions of the D.C. Transit Co. Cabin John right-of-way and several other properties necessary for the connection of the GWMP with the Little Falls Branch Parkway. It is anticipated that an agreement with the Maryland-National Capital Park and Planning Commission, providing for the matching of this amount, will be executed, and the amount obligated, during Fiscal Year 1967.

Maryland stream valley parks

This $12,345 represents the balance of funds appropriated under Section 1(b) of the Capper-Cramton Act and not covered by agreements with the Maryland-National Capital Park and Planning Commission.

Park, parkway and playground system in the District of Columbia

The $16 million authorized to be appropriated under Section 4 of the Capper-Cramton Act has heretofore been appropriated and the unobligated balance has been programmed for expenditure by the Commission. The projects for which substantial amounts are unobligated are as follows:

1. *Palisades Park.*—$135,000 is available for obligation for acquisition of the remaining properties comprising this project. It is anticipated that a substantial portion of this amount will be obligated in Fiscal Year 1967.

2. *Addition to Morgan-Happy Hollow Playground.*—$375,000 has been allotted for the acquisition with the District of Columbia Government of additional land for the Morgan-Happy Hollow Playground at 18th and California Streets, N.W. It is anticipated that the $375,000 or a portion thereof will be obligated during Fiscal Year 1967 or obligated and transferred to the District of Columbia Government in Fiscal Year 1968 for the joint acquisition of land for addition to the Playground.

COMMISSION RESPONSIBILITY

Mrs. Rowe. The summary of the Commission's statutory responsibility can be found in the budget recommendations. Briefly, the

Commission is the municipal planning body as well as the agency which plans the Federal establishment in the city and the region.

As the city's planners we are concerned with schools, parks and playgrounds, public housing, urban renewal projects, highways, and mass transit. In all of these areas we work with the operating agencies to see that new projects and facilities meet the needs of the people and fit into the fabric of the city. In its municipal work, the Commission also advises the city's zoning authorities.

LONG-RANGE PLAN

Since my appearance before you last year, the Commission and staff have been hard at work on a long-range plan for the District. The plan was published last week. And it is the green document, Senator, you have before you, and I do recommend it for reading and for browsing through. It is a fascinating document, and if you would like additional copies, or members of the committee would, we would be glad to supply them. It might be useful to planning agencies in your State, or in the States of other members of this committee.

Senator BARTLETT. I would like a few, very much.

Mrs. ROWE. We will be glad to send you some.

Senator BARTLETT. Thank you. I could use about half a dozen.

Mrs. ROWE. All right.

Senator BARTLETT. You have done me in. I was going to read my first James Bond story, over the week end.

Mrs. ROWE. Well, this is rather different reading, but almost as fascinating.

Operating as the physical planning agency of the Federal Government in the city and the region, the Commission and its staff spend a great deal of time reviewing Federal projects in the city and the region—including the military installations.

A glance at the agenda for the last Commission meeting will, I believe, give the committee some indication of the variety of the problems and projects considered by the Commission. I thought it would be good to introduce the agenda into the committee records, because following the Commission's activities in the newspapers gives you a very unbalanced view of the variety of projects which are reviewed. The only ones that meet the public eye are the ones on which there are disagreements, and this will show you that we accomplish a great deal with minimum disagreements on many projects.

SPECIAL PROJECTS

In addition to its regular program, the Commission has undertaken or expects to undertake a number of special projects including: a transportation center study for Union Station, special street studies, a South Capitol Street/Buzzard Point development study, and a joint study with the District government of the existing zoning regulations. Then, too, the Commission expects to continue its work with Mrs. Johnson's beautification committee and its landmarks preservation work.

ADDITIONAL FUNDS REQUISITE

I am aware of the need for economy in Government, particularly at this time, but I would be less than honest if I did not present what the Commission considers to be its minimum budget needs. We are seeking additional funds for the National Capital Planning Commission, but no additional funds for the Temporary Commission on Pennsylvania Avenue.

No appropriations for land acquisition are requested pending review of the authorizing legislation for the George Washington Memorial Parkway by the appropriate legislative committees of the Congress, in accordance with the directive last year of the Committee on Appropriations of the House of Representatives.

BEAUTY AND BRIGHT FUTURE FOR CITY OF WASHINGTON

I know the members of the committee agree that Washington is a great and beautiful city. Like all cities, it has its problems. But in finding solutions to these pressing present problems as well as in planning the future physical growth of the Nation's Capital, we must be sure the city's beauty is enhanced and not diminished; we must also be sure that the Washington of the future will be a good place to work and to live. We ask you to give us the tools to help insure a bright future for this great city.

Thank you.

Senator BARTLETT. Thank you.

Mrs. ROWE. That concludes my prepared testimony, and we would be glad to answer any questions you might have.

DISTRICT OF COLUMBIA SIZE, POPULATION AND VISITORS

Senator BARTLETT. I have some.

Before coming to them, do you happen to know offhand how large the District of Columbia is?

Mrs. ROWE. By acreage?

Senator BARTLETT. By square miles.

Mrs. ROWE. By square miles?

Mr. CONRAD. It is about 69 square miles. It used to be a hundred square miles, until the portion on the other side of the Potomac River was ceded back to the State of Virginia. Taking out some 30 square miles on that side, it is about 69 square miles.

Senator BARTLETT. And how many people within that area?

Mr. CONRAD. Approximately 820,000 people. Of course, these are the people who live in the District. This doesn't go into the employment, and people who come into the District to make a living.

Senator BARTLETT. Hundreds of thousands more.

Mr. CONRAD. That's right. Plus the many tourists who come into the District during the summertime, over 9 million.

Senator BARTLETT. We were told yesterday by Mr. Ripley of the Smithsonian Institution that 7 million people visit there every year.

Mr. CONRAD. That is right.

Senator BARTLETT. You need more land. We will give you a little bit from Alaska. We have 586,000 square miles and 272,000 people.

Mrs. ROWE. We could use some.

REORGANIZATION PLAN

Senator BARTLETT. One of the first things I noticed in reading your budget justification was a reference to Reorganization Plan No. 5 of 1966, dated June 29, 1966. Would you please explain what this reorganization plan accomplished?

Mrs. ROWE. I think Mr. Conrad would be glad to answer that question.

REGIONAL AFFAIRS DIVISION ESTABLISHMENT

Mr. CONRAD. I will be glad to, Mr. Chairman.

The Regional Affairs Division was established during fiscal year 1967 as a result of the Presidential Reorganization Plan No. 5 of 1966, and I would like to state it, Mr. Chairman, for the record.

The reorganization plan will not alter the basic responsibilities of the National Capital Planning Commission. That Commission will continue to represent the Federal interest in the planning and development of the region. Indeed, its work should increase as comprehensive regional planning by the Council of Governments is accelerated.

In accordance with the Reorganization Plan, the Commission will work closely with the Council of Governments in regional planning. The Commission will also deal directly with the suburban jurisdictions and assume the liaison functions now exercised by the National Capital Regional Planning Council.

PROTECTION OF FEDERAL INTEREST

Since this reorganization plan was approved, Mr. Chairman, we have established a Regional Affairs Division within the Commission to carry out the Federal interest in the regions, which we are still required to do under Public Law 592. This involves review of all Federal installations that will go into the region, and coordinating directly with the jurisdictions involved. It also involves the review of their land use master plans, which the jurisdictions send to the Planning Commission for review and comment as to how they relate to the Federal interest in the area. The Regional Affairs Division will also be working with the Council of Governments in carrying out their regional planning prerogatives.

FORMER WORK OF NATIONAL CAPITAL REGIONAL PLANNING COUNCIL

Senator BARTLETT. Thank you. Who now does the work formerly performed by the National Capital Regional Planning Commission.

Mrs. ROWE. Well, I think Mr. Conrad's explanation in part answers that. The Council in the past was a separate body. It was made up of representatives from the surrounding jurisdictions. The Council itself was an unpaid body, the —members were—, and they listened to the jurisdictions, for instance, when the problem arose, and then reported to us. For example, just last week, during our Commission meeting, we had two items on the agenda. We had representatives from Arlington County speaking directly to the Planning Commission. In the past, they would have spoken to the Regional Planning Council, which in turn would have made a report to the Commission.

I don't know whether Mr. Conrad wants to comment.

Mr. CONRAD. That is fine, Madam Chairman.

SAVINGS RESULTING FROM REORGANIZATION

Senator BARTLETT. It is indicated that $25,000 were saved through the implementation of this reorganization plan. What became of that money?

Mrs. ROWE. Well, we will give you a report.—Mr. Pritchard.

Mr. PRITCHARD. Mr. Chairman, it is explained on page 1 of our justification, $20,000 of that amount was required to offset pay costs under the Federal Salaries and Fringe Benefits Act of 1966. In other words, we are not coming before the Congress for supplemental money to offset the pay increase. The other $5,000 is a saving and was deducted before arriving at the 1968 base as indicated on page 1 of our justification.

FUNDING OF 1967 POSITIONS

Senator BARTLETT. I see.

In fiscal year 1967, you proposed an increase of approximately $104,000 in order to pay for 11 new positions and the related costs. However, Congress approved only $82,500 for these expenses, a difference of some $22,000. The material submitted with your fiscal year 1967 budget indicated that allowance of 11 new positions would provide a total of 59 positions. It appears, however, from your 1968 submission in which you ask for 10 new positions that you had 64 in fiscal year 1967. Where did you get the funds to employ the additional 16?

Mr. CONRAD. I can't give a direct answer to that question, Mr. Chairman. It is a rather detailed one. We would like to supply the information for the record.

Senator BARTLETT. All right.

(The information follows:)

The confusion results from using figures only for the National Capital Planning Commission for Fiscal Year 1967 and comparing them with total figures for Fiscal Year 1968 which include the former Council and the Pennsylvania Avenue Commission. In addition, the Fiscal Year 1967 budget submission included a line entry for personnel of the National Capital Regional Planning Council. Those positions were taken over by the Commission as part of the $88,500 transferred from the Council to the Commission, as indicated on pages 1 and 2 of our justifications.

The increases are summarized as follows:

	Fiscal year 1966	Increases	Fiscal year 1967	Proposed increases	Estimate, fiscal year 1968
Commission and Council combined	[1] 56	5	[2] 61	10	71
Pennsylvania Ave	2	1	3		3
Total	58	6	64	10	74

[1] 47 Commission; 9 Council.

[2] Includes 9 positions formerly assigned to Council.

1967 NEW POSITIONS

Senator BARTLETT. What positions by grade and title did you add in fiscal 1967?

Mr. CONRAD. We would have to supply that for the record, too, Mr. Chairman.

Senator BARTLETT. All right.

Mrs. ROWE. But I do want to reassure you, Mr. Chairman, that we have not gone beyond what has been allowed us. We will be glad to supply the figures.

(The information follows:)

The new positions provided in Fiscal Year 1967 were as follows:

Commission:
1. Assistant Administartive Officer, GS-12
2. Urban Planner, GS-9, Comprehensive Planning
3. Social Science Analyst, GS-7, Research
4. Urban Planner, GS-12, District Planning
5. Urban Planner, GS-12, Federal Planning

Pennsylvania Avenue:
1. Architect, GS-13

Total, 6.

1968 NEW POSITIONS

Senator BARTLETT. With respect to the 10 additional personnel requested for next year, would you please describe briefly the duties of these, indicating the grades at which you propose to appoint them?

Mrs. ROWE. Mr. Conrad.

Mr. CONRAD. We are proposing 10 additional positions which primarily range between grades GS-2 to GS-13. They are not the higher grades. We are trying to supplement the working force of the Commission, plus the secretarial staff, in order to catch up with the workload which the Commission now has, and which we can foresee in the coming year.

PROJECT REVIEW PLANNER

The first request is for a District of Columbia project review planner at a grade 13. The purpose of this position is to review and evaluate the proposed general locations and the preliminary and final site and building plans for District building projects. This division now has two professionals in it, and it is the only division which deals with District affairs. The Chief of the District division is on the Board of Zoning Adjustments and also advises the Zoning Commission on zoning amendments. This division is responsible for the review of District of Columbia public works programs, both annual and 5-year programs.

I would like to present a pamphlet that was put out by this division on the review of the Capital improvement program of the District of Columbia for this year and their 5-year program. This is a function of the District division.

But this is just at the public works level, or the review for budgetary purposes. The Commission is also delegated the responsibility for review of the subsequent location of these various public works, and also the site planning for these facilities. We have not been able to carry out this function, because of the workload and the lack of an adequate staff in the District division. We are asking for the project planner, in this division, to carry out this function.

FEDERAL PLANNING DIVISION PLANNER

The Federal Planning Division is requesting one additional planner at GS-12 grade. It has now three professionals. With Commission approval of a Federal employment plan and a program for the National Capital region expected in fiscal year 1967, it will be important that this program be kept current, updated, and extended on a systematic basis, in keeping with the day-to-day decisions and developments in the National Capital region.

SOCIAL SCIENCE ANALYST

We are requesting a social science analyst position, GS–12. This division has three professionals on its staff. There has to be a tie between the social problems in the District of Columbia and the physical plans and programs. The physical plan is for people, and to provide for the needs of the people of the District.

For instance, the questions that you asked, Mr. Chairman, at the beginning of the hearing as to how many people live in the District, what is the function of the District, and how many tourists come to visit us each year is a part of the research function of this Division. It deals with population statistics, social implications of the plans, and provides information upon which physical planning is based. We are asking for one additional position in this Division.

Mrs. ROWE. We might at this moment show you this report produced by the Research Division. It is the report on housing. It is the fundamental document on the Washington housing situation, which is largely the work of one man, working day and night.

Senator BARTLETT. I can tell that he would be busy on that.

Mrs. ROWE. He needs some help.

TRANSPORTATION PLANNER

Mr. CONRAD. The next position request is for a transportation planner at a GS–12 grade. We have one transportation planner on the Commission staff at the present time. He functions as a consultant to all the divisions. On overall projects, for instance, the Anacostia-Bolling urban renewal project, he will prepare the traffic analysis as to what highways are needed, and what is the possibility of getting rapid rail into this area. He is also the major individual in the office who works on the rapid rail system with the National Capital Transportation Agency, and reviews the various transit stops and access to these points, and environmental impacts around these stops. He is also the staff member who works with the Council of Governments and the Transportation Planning Board, on regional transportation. The District is the center or the hub of the whole region, and therefore, must coordinate transportation plans and studies of the region. He is the individual staff member who is responsible for these functions. It is too much for one individual to do. We are requesting one additional staff to help out the transportation planner.

COMPREHENSIVE PLANNING DIVISION PLANNER

The Comprehensive Planning Division is requesting one additional planner at grade GS–12.

The Comprehensive Planning Division has produced the comprehensive plan which you now have before you. The next step in the planning process is to present it to the citizens of the District, as well as District and Federal agencies for comment. The latter part of the year we hope to have an adopted comprehensive plan. At that point, the work just starts. We then work with the people in the community to improve their neighborhoods and to carry out the basic concepts as contained within this report.

The District is contemplating establishing what it calls multipurpose centers throughout the District, so that many of the social and welfare functions of the District can be in actual contact with the people. We would hope that our planning process could also work through these various centers in the District. In order to do this, we will need one additional planner in the initial phases of getting this program set up and in carrying out the objectives of the comprehensive plan.

PROJECT DESIGNER

An additional project designer is requested in the Current Planning Branch as a grade GS-11. This position is in response to the increased needs for special design services in the Urban Renewal and Housing Division in the Federal Planning Division, and in the District Division.

Do we have the chart on the Buzzard Point area?

I can show you an illustration of what the project designer does. National Training will be all right, if you have that.

Excuse me, Mr. Chairman. We can give you two examples of the work of the project designing staff. We not only propose locations and objectives for an area, but we also show how they can be accomplished. This is the National Training School for Boys site. Bladensburg Road is here and the Baltimore-Washington Parkway comes in at this angle. New York Avenue goes here, and this is South Dakota Avenue.

This shows how the site can be laid out for residential purposes, for commercial and all the community facilities that are needed to supply the needs of a balanced community. It also indicates the possibility of a special employment center here, or even a center of learning, where one of the educational facilities that are now being proposed for the District of Columbia might be located.

So the purpose of the urban designer is to design these installations, and to show how they can actually be site planned in order to carry out the land-use objectives.

Here is another example, where we were proposing an international center, just north of Washington Circle. The urban designer will take over from the land planner, who lays out the basic objectives in the program. He will then show how the program might be carried out, through urban design.

We are getting more and more into the design process. At the present time, we have four urban designers. We are asking for one more in the project design staff.

Senator BARTLETT. Does that complete the list?

Mr. CONRAD. No, I am half way through, sir.

Senator BARTLETT. You go ahead.

Mr. CONRAD. I will be brief.

Senator BARTLETT. No, no; this is fine.

URBAN RENEWAL PLANNER

Mr. CONRAD. Next division is the Urban Renewal Division, which is requesting an urban renewal planner, GS–11. This is to strengthen this division's staff resources to undertake special urban renewal and housing studies for potential future project areas, and in order for the Commission to participate effectively in the annual review and revision of the District's community renewal program, and the model cities program, when it once gets underway.

This division has two professional planners. It is the permanent staff of the Commission, which deals with urban renewal, as contrasted with the urban renewal staff based on specific projects funds under title I, which is earmarked just for that specific project and can't be spent for anything else. This division provides the studies for the creation of new urban renewal areas and works with the District on the community renewal program and in the future on the model city program. This division also reviews all public housing projects that come before the Commission.

The Urban Renewal Division is greatly understaffed, and we are asking for one additional urban planner.

MESSENGER AND SECRETARIES

The other three positions, one is the messenger, GS–2. We have one messenger now, who is primarily chauffeur for the chairman and the director. We have moved our quarters recently. Where we used to be on one floor, now we are on three different locations, and we find it necessary to have another messenger, or else we rely on secretaries or other type of personnel to carry out this function.

The other two are for secretaries, which would support the staff that is being asked for.

Senator BARTLETT. You say that messenger is a GS–2?

Mr. CONRAD. Yes, sir.

Senator BARTLETT. What does that mean in terms of an annual salary?

Mr. PRITCHARD. The starting salary is $3,925 per year.

Senator BARTLETT. And how about the secretaries?

Mr. CONRAD. The secretaries are GS–5, and that would be $5,331.

Senator BARTLETT. Do you have trouble getting secretaries at that figure?

Mr. CONRAD. We have trouble getting secretaries at any figure, Mr. Chairman. They are just like the urban planners. They are quite difficult to obtain, but through persistence we succeed.

At the present time, I believe, Ralph, that we have all of the secretarial positions occupied.

Mr. PRITCHARD. There is one vacancy.

Mr. CONRAD. One vacancy?

Senator BARTLETT. And they can go up to what grade?

Mr. CONRAD. We are a rather small agency, and the highest secretarial grade that we have is a grade 8. We have two at grade 7, and two at grade 6, the others are grade 5's and 4's.

Senator BARTLETT. What does a grade 8 pay?

Mr. PRITCHARD. The starting salary is $7,068 per year.

CONSULTANTS' COSTS

Senator BARTLETT. Thank you. How much work do you have done by outside consultants?

Mrs. ROWE. Mr. Conrad.

Mr. CONRAD. Yes. Last year, we spent $23,000 for outside consultants, including Gladstone Associates, Henry Bain, Jr., and Alan Voorhees. Most of our consultant service is to supplement staff work. The comprehensive plan is a staff product; but in order to get nationwide review of it, and analyses of certain specialized sections like the industrial implications on the District of Columbia outside consultants were utilized.

For insance, last year, Robert Gladstone was retained to prepare a population matrix upon which many of the population forecasts in the comprehensive plan are based. Special projects which are unforeseen also require consultants' services. The Eastern Market disposition, which the District Commissioners wanted the Planning Commission to study, required a market analysis consultant. This was also true of the Georgetown market disposition study. Another special study was made by Alan M. Voorhees & Associates which dealt with curb parking in residential areas of the District. The Commission was interested in finding out what was the nature of the car parking on residential streets of the District and why, particularly adjacent to the District line.

And what kind of traffic was this, what was the origin and destination, and what could be done about clearing some of the District residential streets for residential purposes.

Senator BARTLETT. Did you find any answers to either of those questions?

Mr. CONRAD. Yes, sir. We are going to have a second part of the study with Alan Voorhees & Associates to study specific areas of the city, such as Sixteenth Street and District line, and also in the vicinity of Georgetown, where quite a bit of out-of-town parking occurs. It was found out that many of the people who park within the District were Maryland drivers. The zone change for bus fares is just across the District line, as a result they parked on residential streets just over the District line to take advantage of the reduced bus fare downtown. So the residential areas adjacent to the District line were becoming parking lots for the Maryland people working downtown. We don't think this is right. The second part of this study will be to explore what can be done about this situation, and also how it can be correlated with the transit stops of the National Capital Transportation Agency in this vicinity.

Senator BARTLETT. And maybe conversations with Mr. Chalk or his successor?

Mr. CONRAD. Or his successor; yes, sir.

FLAT FEE AND PER DIEM PAYMENTS

Senator BARTLETT. Well, when you employ consultants, is there a flat fee for a specified job? Or do you pay each consultant so much a day or both?

Mr. CONRAD. Ralph, I believe it would be both.

Mr. PRITCHARD. The type that you are speaking about, Mr. Conrad, is always a flat fee. A specified job for a specified sum of money.

Senator BARTLETT. How much did you pay for this study to which you referred, for example?

Mr. CONRAD. $4,000.

Senator BARTLETT. How much?

Mr. CONRAD. $4,000, sir.

Senator BARTLETT. And when you hire a consultant by the day, what do you pay him?

Mr. PRITCHARD. The maximum amount in the fiscal year 1967 appropriation bill is $83, sir, and we pay far less than that, in most cases.

Mrs. ROWE. We haven't paid over $50, have we?

Mr. PRITCHARD. In most recent years, we have gone mostly to the contract basis. The only expert at the present time is Mr. Grotecloss, who is paid from the land acquisition appropriation. He is paid $80 per day less retirement annuity. There are two experts on the Pennsylvania Avenue Commission, one at $36 and one at $56 per day.

URBAN RENEWAL FUNDS

Senator BARTLETT. On page 8 of your justification statement you say that studies in urban renewal are carried out in part with funds received from District agencies. Do these funds pay only expenses of the Commission, or do they provide additional personnel?

Mr. CONRAD. These are the urban renewal title I funds to carry out urban renewal projects in the District of Columbia.

Mrs. ROWE. They pay for staff which is not a part of the permanent staff. It is a project staff, working on the particular project.

Mr. CONRAD. These funds, sir, are based on personnel which are required to carry out the projects. And not only personnel, but the publications which may be necessary, plus the supplies that would be necessary to carry out the projects. But this is as far as that goes.

20-YEAR DEVELOPMENT PROGRAM

Senator BARTLETT. You say that during fiscal year 1968 you will update and review the initial 20-year development program objectives as they have been incorporated in the comprehensive plan for the National Capital. Just what is entailed in this activity?

Mr. CONRAD. The comprehensive plan as it is now constituted represents a plan for 20 years, also a plan for 40 years. As the Commission reviews the various projects which come before it, it is necessary to keep the plan up-to-date on a yearly basis. Every 5 years, we are planning to come out with a document as you see before you now. This is to avoid the time lapse as was experienced between the 1950 comprehensive plan and the 1985 comprehensive plan, which we now have.

In this way, the Commission will be able to keep abreast of all the developments, and the operating agencies will have a better document upon which to base their operating functions. Planning is a continuous process, and just the publication of a report like this does not mean that the work is completed. It is a continuous process of updating the plan as developments occur.

REGIONAL AFFAIRS DIVISION

Senator **Bartlett**. There was established, during the past year, the Regional Affairs Division. Will you please tell us what this Division is for, and how it it working out?

Mrs. **Rowe**. This, Mr. Chairman, was reviewed to some extent in one of your earlier questions that was concerned with the Regional Planning Council.

Senator **Bartlett**. I would like a little bit more detail.

Mrs. **Rowe**. A little bit more.

Mr. **Conrad**. The Regional Affairs Division has created with the Council of Governments a means of coordinating so that the region knows what the Federal projects are in the region, and has a means of commenting upon them. For instance, we have a joint committee set up, which consists of all of the regional planning directors of the metropolitan area. This committee serves the Planning Commission and the Federal interests, and is also jointly used by the Council of Governments. As the schedule for our last Commission meeting will show, we had at least a half dozen Federal projects before the Planning Commission. These are referred to this committee of the planning directors, and if they want it referred to their jurisdictions, it is referred to their jurisdictions. We then work with them and report back to the Planning Commission. We have already set up the process of coordination between the region directly and also the Council of Governments, which is the body carrying out the regional planning process.

I would like to point out that the Regional Council, in its existence, came out with some very good reports. For instance, the Mass Transportation Survey, which brought out the first balanced transportation system. There is some disagreement as to what "balance" meant, but at least here was the first system which coordinated the highways along with the rapid rail. One of the recent documents put out by the Council before it went out of existence is this Regional Development Guide in 1960–2000, which we hope will be a basis for the Council of Governments to prepare its own regional planning.

The Regional Council, never did get into regional planning as such. The region was just not ready, and about all that the Council could do was to pull together their plans, so we could relate one to another. It was understood in 1952, when the Regional Council was established, that one basic purpose was to have the region accept the responsibility of regional planning, rather than the Federal Government. They have done this. This is why the Planning Commission did not object to the Regional Council being taken over by the Council of Governments. We felt there had to be strong regional planning in this area, since by the year 2000 it is forecasted there will be 5 million people in the metropolitan area, and about a million of them in the District. You can see the need for strong regional planning.

The Regional Council's function was not so much regional planning as it was concern for the Federal interest which the Regional Affairs Division is now taking over. The regional planning which heretofore had not been done is the function which the Council of Governments is now taking over, and in which we are delighted.

PROTECTION OF FEDERAL INTEREST

Mrs. **Rowe**. If I might just emphasize what Mr. Conrad said, the real job of this section of the staff is to represent at the staff level the Federal interest in the region, and to report back to the Commission which does have a statutory responsibility to plan the Federal facilities.

Mr. **Conrad**. A minor example of the Regional Affairs Division in carrying out the Federal interest is the recent Marriott sign proposed in Rosslyn. The sign is to be placed on the Marriott future motel in Rosslyn, which is to be 12 stories high. It can be seen by every person who visits our Nation's Capital—from the Mall. This is an item on which the Federal interest is going to have to be heard. It is the duty of the Regional Affairs Division to keep abreast of such projects as to how they relate to the Federal interest.

Senator **Bartlett**. What is the status of that now? Do you know?

Mrs. **Rowe**. I believe that Mr. Marriott is thinking it over.

TECHNICAL URBAN DESIGN

Senator **Bartlett**. I am going to drop that subject.

What is technical urban design?

Mr. **Conrad**. Technical urban design is illustrated by the National Training School site plan which I went through to show you the relationship of program and planning policies and putting them into a two- and three-dimensional site plan. Another example is the Bolling Cantonment area, which was worked out by the Department of Defense. Our technical urban designers in cooperation with the DOD reviewed this particular site plan to come up with the best possible site plan obtainable. One of the major issues in this design was the large parking areas which take up so much room, and so much land which could otherwise be utilized for office buildings and actually productive space, rather than that of parking an automobile. We have been asking the Department of Defense to study the possibilities of putting this parking into structures, so that the land can be better utilized.

This is an outgrowth of analyses by our technical urban design staff. The planning process started with the urban planner, who studied this area for use of the military and what part of the area should be for an urban renewal project, and what part for a balanced residential community. The urban planner also recommends the number of employees to be housed, and what land use functions should be located here. From that point the urban designer shows how these land-use functions would be related to the ground, in a site plan, and how one building would be related to another. This is the technical urban design phase.

Senator **Bartlett**. What has been the reaction of Defense to this suggestion?

Mr. CONRAD. They concur with this. Currently, the Department of Defense is planning for a 10,000 employee office building adjacent to the Bolling cantonment area. It is providing for parking underneath, and not on the surface, as a part of the building complex. This is to some extent a result of our previous review of the Bolling cantonment area plan.

DOD is still studying these areas. It accepts the idea of putting the parking into structures, but the problem is in getting Congress to see the need for parking structures for the Department of Defense, so we can better utilize the land. Parking structures cost money, and when added to the cost of the office building, it comes up to something like $4,000 or $5,000 per space.

Our position is that this land can be better utilized, and is worth more that what the parking would cost as a part of the building. The Department of Defense is pursuing this.

Mrs. ROWE. I think that the Senator might be interested in a letter that we had about a year ago from the officer who was in charge of the planning in this area, and who was leaving for another assignment. He wrote and said that he was very grateful to the Planning Commission and to its staff for its great help in planning; that he felt the planning had been tremendously improved through the work with the Planning Commission staff. And I would be glad to send you a copy of it, if you would be interested to see it.

Senator BARTLETT. I would be.

Mrs. ROWE. It has been a very good relationship, and the difference in the quality of planning in the years that I have been in the Planning Commission has been really quite spectacular. The new military planning in particular has been very heartening. It is done with much more thought and care than it had been in previous years.

Senator BARTLETT. Off the record.

(Discussion off the record.)

CAPITOL HILL STUDY

Senator BARTLETT. One of these designs, according to your justifications, is a development plan for the Capitol Hill area. Would you please tell the committee what would be sought through such a plan?

STUDY ABANDONMENT AND ANTICIPATED REPROGRAMING OF FUNDS

Mrs. ROWE. Yes, I might just review the past history of that, and then ask Mr. Conrad to speak.

We have in this present year's budget the money set aside for the Capitol Hill plan. We did talk to Mr. Stewart, because we had anticipated having a joint study with the Architect of the Capitol's office. He felt he could not; that he had no mandate from the Congress to make the kind of study that we were looking forward to making with him. So we have abandoned for this year the Capitol Hill study.

Senator BARTLETT. What happened to the $40,000 that was appropriated for that purpose?

Mr. CONRAD. We still have the $40,000, Mr. Chairman. In 2 or 3 days, there will be a letter to you requesting that this $40,000 be used on other major projects.

Senator BARTLETT. Did you spend any money at all?

Mr. CONRAD. No.

MASTER PLAN WORKLOAD INCREASE

Senator BARTLETT. I note that you anticipate a rapid increase in the workload related to review of master plans and proposed modifications of approved plans. Why do you anticipate such an increase?

Mrs. ROWE. Maybe Mr. Conrad would like to speak to this, but I would like to say in introduction that when, for instance, in Anacostia-Bolling, the plan started coming in piece by piece, we asked for a master plan of the total area, of the total cantonment area, and we have been asking the different agencies that come before us if they could present a master plan, rather that just a project plan. If we get more master plans coming, it is going to take more time to look at them, but this is the way to do good planning. Once you have a master plan approved and then a project comes in, it fits into the master plan, and then it makes the agency's life easier, and the Planning Commission's life easier.

Mr. CONRAD. This is a result of two forces in action. One, the Planning Commission requiring a better quality of master plan upon which projects can be based; and, two, the complete acceptance of this by many of the Federal and military agencies, who have seen that through master planning and project planning, that there are savings to be made, and at the same time coming up with a better plan.

For instance, the Department of Defense has issued regulations requiring that within a year or two, all military installations shall have master plans. As a result, all Department of Defense activities within the region are coming before the Planning Commission for review. There are 50 different Federal and military sites in the National Capital region which have master plans or will have master plans, which are going to be up for review. As the present time we have somewhere between six or eight approved master plans from the Federal Establishment.

The District Building is also coming in, and we are working with District officials now on procedures for review of master plans for the various District facilities. I might show the master plan procedures that the Planning Commission goes through. These charts are ideally set up just for this purpose.

Here is the overall land distribution master plan for Anacostia-Bolling site of approximately 900 acres. It indicates that portion which would be retained by the Department of Defense, and that portion proposed as a balanced residential community. This map is the master plan which DOD developed for its section. Now when the Department of Defense comes in with a specific project, such as the bachelor officers' quarters in this position, it will be in conformance to the master plan, which shows its relationship to all of the other buildings, the circulation pattern and the other community facilities.

Here is an example of the bachelor officers' quarters preliminary site plan. This shows an individual building and its immediate environment at a large scale and its relationship to the adjacent facilities, the pedestrian circulation and the landscaping for the project.

This is the Commissions review procedure from the master plan to the specific project.

The Commission has a procedure set up with the various operating agencies which sets forth the major steps of approval which includes master plan, approval of location, approval of the preliminary site plan and approval of final site plan. It is working very well.

FEDERAL EMPLOYMENT PLAN AND PROGRAM

Senator BARTLETT. Please describe briefly the Federal employment plan and program?

Mr. CONRAD. Could I ask Mr. Bozarth to?

Senator BARTLETT. Certainly.

Mr. BOZARTH. Mr. Chairman, the comprehensive plan report which was mentioned earlier contains the essential elements of the Federal employment plan and program proposals by the Commission. The technical report is still in the process of preparation. We have here this morning a chart which shows some of the maps prepared as a part of this study the maps on this side of the panel, on your left, show the results of an inventory of Federal employment in the National Capital region, both in owned space and in leased space, as of the end of 1964.

The panels on the right show the Commission's proposals for the distribution of the Federal employment increases that are forecasted to take place in the National Capital region between now and 1985. The Commission's studies indicated that Federal employment increases in the National Capital region will be on the order of a net increase of 6,000 paid civilian employees per year.

And so the plan and program propose how and where these 6,000 increased employees would be located, whether along the Mall, in the District of Columbia or outside the District. And it also proposes that Federal employees and activities now housed in temporary buildings and spaces, be rehoused in new space by 1985. In effect, the Federal Employment program is an inventory of Federal employment in the National Capital region in 1964, and a plan and a program for how to accommodate this increase, while at the same time eliminating the temporaries. It goes into considerable detail.

If you have some questions, Mr. Chairman, I would be glad to try and answer them.

Senator BARTLETT. No, no specific ones. I just wanted to know in a general way.

But referring to this program, which you expect to complete during this fiscal year, as I understand it, you now say that in connection with it a program planner position is needed in fiscal year 1968. It seems to me that having completed the program, the personnel who worked on it would be available to keep it current. Why is that not so?

Mr. BOZARTH. I think, Mr. Chairman, if I may, Mr. Conrad and Madam Chairman, previous mention has been made of the fact that the staff of the Federal Planning Division has been faced with a sharply increased workload of: (1) Master plan proposals for the 50 different Federal sites that were previously mentioned; (2) preliminary sites and building plans for individual Federal construction projects in the region. The workload has actually doubled in the last fiscal year. The small staff in the Federal Planning Division has been literally swamped with the increase in the workload of these projects.

We would like to extend the work of the Federal employment plan program and, specifically as indicated in the budget justification statement, to work with the Regional Affairs Division and with the Council of Governments to prepare a 5-year Federal development program for the National Capital Region. Such a program, in conjunction with the District's capital budget and 5-year public improvements program would, in toto, provide a composite 5-year program for the Federal and District Governments for the National Capital region and provide a key tool for implementing the comprehensive plan for both Federal and District facilities in the National Capital region.

The preparation of the Federal employment plan and program was given special priority in order to complete the comprehensive plan. The Commission has never had a full-time person in this area, and the request is to provide one such full-time person.

SPECIAL AREA STUDIES

Senator BARTLETT. With respect to special area studies, you say that the number and kinds of areas currently under consideration indicate an expansion of workload in this fiscal year and the next. Would you please explain this statement?

INTERNATIONAL CENTER

Mr. CONRAD. Some of these charts will explain the special area studies. One of the special area studies that has already been mentioned, Mr. Chairman, is the International Center. Should the legislation be passed which is now before the Congress—there will be a special plan developed for the International Center. The Planning Commission will be involved in its development.

This International Center site plan is an illustration of how it could be accomplished. This would be one of these special areas studies.

BUZZARD POINT AND OTHER AREAS

Other special area studies would be the Buzzard Point area and the 4-year community college which is proposed in the vicinity of South Capitol Street and the 11th Street Bridge, on the Anacostia side. The community college would be correlated with the future transit stop there and the possibility of an uptown center.

BUREAU OF STANDARDS SITE

Another special area study is the Bureau of Standards site, where the initial rapid rail system will terminate. Here is the opportunity to develop Federal facilities as well as private and commercial facilities in conjunction with a transportation stop where various modes of transportation come together.

The comprehensive plan outlines many of these areas, where further planning is essential to provide for orderly development.

Mrs. ROWE. I think the Senator might be particularly interested in the South Capitol Street development, since it is such a close neighbor of yours, and I am sure, looking at it, you realize that something could be done there. It is just waiting for development, and we have been giving a lot of thought to its possible future use for Federal buildings, and making it a great entrance to the city and a great view back from Capitol Hill to the river, rather than the rather dilapidated and shabby hodgepodge that is there now.

This offers a great opportunity, because the displacement here, human displacement, would be very small, as compared to that amount of acreage almost anywhere else in the city.

ANACOSTIA RIVER VALLEY

Mr. CONRAD. Mr. Chairman, this map shows the Anacostia River Valley. What I might do is go from the district line to Buzzard Point, and indicate the special studies that are now being carried on in conjunction with this valley. I have already mentioned the National Training School for Boys, which borders on the valley.

ARBORETUM

The second major area is the Arboretum, which is under the jurisdiction of the Department of Agriculture. And they are now in the process of modifying their master plan, and tying it in to the east leg of the Inner Loop, between Barney Circle and Maryland Avenue.

The entrance to the Arboretum is being designed in conjunction with the east leg of the Inner Loop, which we are coordinating with the District Highway Department in an effort to obtain the best urban design we can. Here is another special area that is being coordinated by the Commission with the Highway Department, the Department of Agriculture, and the Park Service, in coming up with an acceptable plan for this whole area of the Anacostia valley.

WASHINGTON NAVY YARD

Another specific project in the valley is the Washington Navy Yard. Three or four years ago, the Planning Commission prepared a complete redesign and new master plan for this area. The old facilities of the Navy Weapons Plant were phased out. It has a wonderful place in our history. There are many landmarks on its site and the Commission felt an overall study should be made to assure retention of these landmarks and to provide for employment and recreation along the waterfront. Following through on this overall study, the Department of Defense hired consultants, who prepared this master plan, which has been approved by the Planning Commission as being in agreement with the initial study.

This retains the historic quadrangle of the Washington Navy Yard, it enhances the waterfront, and it provides for the possibility of walking all the way from Buzzard Point up to the National Training School for Boys site at the northern terminus of the Anacostia valley.

The waterfront is open to the public. The pedestrian way ties together all of the facilities along the waterfront.

The other portion of the Washington Navy Yard has been transferred to GSA and it is now in the process, as an operating agency, of detailing that section of the master plan. It will probably have that completed within a month or two, and then the whole Navy Yard will be tied together.

SOUTH CAPITOL STREET

Another special area in the valley is the South Capitol Street as shown on this plan, which focuses on the dome of the Capitol. This is one of the best views of our Nation's Capitol. We are proposing that this approach from the South Capitol Street Bridge to our Nation's Capitol be a Government complex of approximately 25,000 Government employees, to take care of the need for new housing in the District of Columbia for the Federal Government.

As you know, at the present time the frontages along South Capitol Street are dilapidated. They are eyesores. It is a disgrace as an approach to the Nation's Capitol. We are proposing that this be a Federal complex, and that the area between South Capitol and Washington Navy Yard be predominantly residential. Buzzard Point is west of South Capitol Street and if you are familiar with this section of the city you will know that it is an obsolete industrial area. There are coalyards, junkyards, and undeveloped land. It is underused. It never will be a first-rate industrial area. We are proposing a complete revision of this area of the city for residential purposes. This will provide residential living adjacent to the South Capitol Street Federal building complex. As a result a 24-hour type of population will be in this area, rather than like the Federal Triangle, where people are there during the day, but then during the night it is no-man's land. The Anacostia-Bolling project, which I previously showed you on this chart, continues to the south. At this location is the proposed 4-year college, located on the Anacostia River. And here is one of the uptown centers that we are proposing, which is based on the transit stop proposed in this area.

As soon as a transit stop is located here, we are sure that the values are going to increase in this section of the city and that development opportunities are going to occur. The Commission is endeavoring to give logical direction to this development. So, just by taking one section of the city, you can see all of the special areas and the special problems that we deal with.

The planning goes across the whole fabric of our city and includes coordination with all the District, Federal, and military agencies. The Park Service is involved. The GSA is involved. The Department of Agriculture is involved. The Department of Defense is involved. And the function of the Commission is to give direction to these projects and to tie them all together. I think you can see the type of planning that we do.

TRANSPORTATION PLANNING

Senator BARTLETT. Concerning your transportation planning functions, do you now have in your employ a transportation-planner, a position which I do not find listed as current on page 5 of your justification statement?

Mr. CONRAD. The position is listed as Civil Engineer, GS-14 on line 64 of page 5.

RESEARCH COMPUTER PROGRAM

Senator BARTLETT. Is the research computer program, for which you request $5,000 in the coming year, a new one and would you please describe its operation and advantages?

Mr. CONRAD. The research computer program, for which we requested $5,000 in the next fiscal year, is a new program, as such, although it is a continuation of work already being done by this agency, in the past through consultants.

The work intended with this funding consists of further developmental work and operations of a mathematical population-housing impact model for the District of Columbia. We have already completed basic developmental work on a mathematical model which has capabilities to make current estimates and forecast future characteristics of populations and housing for 96 census tracts in the District of Columbia. The characteristics include: (1) average household sizes and numbers of households by size and income, (2) numbers of households by size in seven household income-housing program groups, (3) numbers of housing units by bedroom size, and (4) numbers of overcrowded housing units. The funds requested for the next fiscal year would enable: (*a*) operations of the model, (*b*) important refinements to be made in the model already developed, and (*c*) development of an age distribution submodel that would make current estimates and future forecasts of age groups in the District's population, including school-age categories.

Population and housing estimates and forecasts continue to be an important input for planning by this agency. Up to now, it has been necessary to make these estimates and forecasts manually.

The population-housing impact model is able to do this work and make updated revisions more systematically, at more frequent intervals, and at lower costs to the Federal Government than is possible now. At comparative small costs the population-housing impact model also is able to estimate different prospective impacts on population and housing comparing alternative project and other types of plans proposed. In this way, the model also is able to provide a new input for planning decisionmaking by answering questions about impacts which have not been practicable or economical to answer before.

PRESIDENT'S TEMPORARY COMMISSION ON PENNSYLVANIA AVENUE

Senator BARTLETT. For the Temporary Commission on Pennsylvania Avenue, you are requesting $76,000, the same amount as was appropriated in fiscal year 1967. A statement by Chairman Owings will be printed in the record.

(The statement follows:)

Mr. Chairman, the Temporary Commission on Pennsylvania Avenue is currently in its second year. During this last year, the Congress saw fit to give us the added responsibility of working with the American Battle Monuments Commission in reviewing the design for a memorial to General John J. Pershing to be built on the site of National Square. Further, the Woodrow Wilson Memorial Commission in its final report to the Congress recommended that our Commission prepare a detailed study to implement the plans for a living memorial Center for Scholars as a tribute to President Wilson. On February 27, the President in his message to the Congress on the District of Columbia endorsed the recommendations of the Woodrow Wilson Memorial Commission and asked our Commission to commence work on the study.

This last year also saw work progress on the first two buildings to be built on the Avenue in complete consonance with our plans. Land clearance for the FBI Building on the Avenue between 9th and 10th is well along and the Congress appropriated money for beginning the substructure. Another building, being built with private capital, is well along and will be completed by the end of this year.

The staff of the Temporary Commission currently consists of Mr. Goldman, two architects and a secretary. Although it is small, it is adequate for our current needs.

There is also pending before the Congress a bill to establish a Permanent Commission on Pennsylvania Avenue. This bill provides for a statutory Commission with a five-year life to carry on the work of the Temporary Commission. Last year this bill was passed by the Senate, reported favorably out of the House Interior Committee, but did not reach the House floor. The bill was passed by the Senate on Monday. We are hopeful that this bill will receive favorable consideration in the House very soon.

1967 ACCOMPLISHMENTS

Senator BARTLETT. What physically was accomplished by the Commission during fiscal year 1967 to this time?

Mr. GOLDMAN. The question is framed in terms of "physical" accomplishments during the fiscal year to date. Such accomplishments are always the result of many months of serious and detailed planning and negotiations with the various governmental and private interests involved. Thus, it is difficult to talk in terms of "physical" accomplishments while pegging them to a specific fiscal year. However, we can point to the very recent beginnings made on the construction of the Capitol Reflecting Pool which is being built in conjunction with the center leg freeway in front of the Capitol Building. We can point to the land clearance which is proceeding in preparation for the excavation for the new FBI Building and to the recent completion of the second floor of the John Hancock Building. These, of course, were started at least in terms of negotiation and planning, prior to the beginning of the fiscal year.

There have been other less tangible accomplishments which will yield the "physical" within a relatively short period of time. The inclusion of the Constitution Avenue underpass, where it crosses Pennsylvania Avenue, and the tunneled E Street in the master plan for roads in the District; the enactment by the last Congress of legislation authorizing the construction of a monument to Gen. John J. Pershing in the southern half of our National Square; the recommendation by the Woodrow Wilson Commission that the monument to our 28th President be built on Pennsylvania Avenue at the site of Market Square; and the opening of serious negotiations with private developers for certainties along the avenue. All of these things, taking time and effort on the part of the Commission, will yield the "physical" accomplishments about which the committee asks.

PROGRAM FOR FISCAL YEAR 1968

Senator BARTLETT. Specifically, what does the Commission plan to accomplish in the coming year?

Mr. GOLDMAN. During the coming year, the Commission expects to complete sectional development plans, as called for by the zoning regulations for the entire length of the avenue. It is anticipated that within 6 months we will be able to announce the commencement of major private construction along the avenue. We will start and finish a complete study of the nature, design, and source of nongovernmental funds for the proposed Woodrow Wilson Center for Scholars on Pennsylvania Avenue. Many of the details of the Pennsylvania Avenue plan will be further refined and submitted for approval to the National Capital Planning Commission and the Fine Arts Commission. We plan to accomplish all this, and more.

Senator BARTLETT. Can you give an example of the "reliable information upon which decisions can be based," which is stated to be the immediate objective of this Commission?

Mr. GOLDMAN. Perhaps the best example of this information is the soon to be commenced feasibility study of the E Street tunnel. Before we can make firm decisions on certain land use problems, details of building design and layout, and pin down many structural details, we must have accurate grade and route information on the E Street tunnel. This entails an engineering study to determine subsoil conditions, traffic handling capabilities, linkage with feeder streets, study of traffic plans for as far away as the North Central Freeway, and many other details. At the present time, we do not have this information and it must be developed so that we may be able to advise the many private persons interested in developing their land along the avenue as to exactly what route and depth the tunnel will take.

LAND ACQUISITION

Senator BARTLETT. No additional funds for land acquisition are requested during the coming year. However, I want to place in the record a table provided by the National Capital Planning Commission indicating that as of December 31, 1966, there were available unexpended funds in the amount of $1,435,603. These include both the Federal appropriations and funds contributed by the governmental jurisdictions in the Washington area.

(The table follows:)

NATIONAL CAPITAL PLANNING COMMISSION

Unexpended land acquisition funds, Dec. 31, 1966

Project	Amount	Fiscal year for which appropriated	Additional funds necessary to complete acquisition
GEORGE WASHINGTON MEMORIAL PARKWAY			
A. Montgomery County, Md.:			
1. Little Falls Branch parkway connection	[1] $100,000	1963	0
2. Residual funds:			
(*a*) Matched by Maryland-National Capital Park and Planning Commission.	49,716	1956, 1958	------------
(*b*) Unmatched	3,185	1940, 1958	------------
B. Prince Georges County, Md.:			
1. Unit No. 1—vicinity of approaches to Woodrow Wilson Memorial Bridge.	136,885	1961	(2)
2. Unit No. 2 (Fort Foote extension in the Smoot Bay area), No. 3 (Harmony Hall historic area between Indian Queen Estates and Broadwater Estates subdivisions), and No. 4 (extension of Fort Washington to Broad Creek).	384,521	1962	$2,200,000
3. Remainder of parkway, District of Columbia line to Fort Washington.	------------	------------	5,800,000
C. Arlington County, Va.:			
1. Residual funds:			
(*a*) Matched by Arlington County and Commonwealth of Virginia.	20,582	1954, 1955, 1956, 1957.	------------
(*b*) Unmatched	844	1957	------------
D. Fairfax County, Va.:			
1. Capital Beltway to Great Falls	------------	------------	6,400,000
2. Residual funds:			
(*a*) Matched by Fairfax County and Commonwealth of Virginia.	5,102	1954, 1955, 1956, 1957.	------------
(*b*) Unmatched	1,447	1955, 1957	------------
STREAM VALLEY PARKS			
A. Maryland	[3] 12,345	1960	(4)
B Virginia	------------	------------	(4)
PARK, PARKWAY, AND PLAYGROUND SYSTEM IN THE DISTRICT OF COLUMBIA			
1. Palisades Park	138,000	1958, 1960	0
2. Morgan-Happy Hollow Playground	381,000	1960	[5] 1,419,000
3. Watts Branch Park	10,590	1958	1,550,000
4. Klingle Valley rights-in-land	48,000	1958	0
5. Land acquisition expenses	3,090	1960	------------
6. Reserve	[6] 140,296	1958, 1959, 1960.	------------

---

[1] Not available for expenditure until matched by the Maryland-National Capital Park and Planning Commission in accordance with sec. 1(a) of the Capper-Cramton Act.

[2] All parcels in this unit have been acquired except the Potomac Sand & Gravel tract, containing 80.759 acres, and the residue of the Sellner tract, containing 73.057 acres. On Sept. 6, 1961, Potomac Sand & Gravel Co. offered to convey its 80.759 acres in fee simple for a consideration of $75,000 reserving the right to remove sand and gravel therefrom for a period of 12 years and to refill the area for a period of 14 years from the date of deed. The present authority of the National Capital Planning Commission to acquire fee title to land subject to limited rights reserved to the grantor does not extend to limited rights for business purposes. The fee simple appraisal of this property prepared on behalf of the Commission is in the amount of $452,500. On Dec. 11, 1963, Potomac withdrew its offer, indicating its willingness to consider the same or a similar sale at favorable terms to the United States when and if legislation authorizing acquisition by the Commission subject to limited rights for business purposes is enacted. A condemnation complaint, without declaration of taking, covering the residue of the Sellner tract, was filed Nov. 4, 1964. This condemnation has been consolidated with the condemnation of portions of the Sellner property on behalf of the Bureau of Public Roads filed May 5, 1958, and a stipulation in the amount of $450,000, covering all of the Sellner property, has been entered into with the defendants in the consolidated proceedings. Final award will be entered after adjudication of certain questions relating to title. The amounts to be paid by the Commission and the Bureau of Public Roads have not yet been determined.

[3] This amount represents the balance of funds appropriated under sec. 1(b) of the Capper-Cramton Act and not covered by agreements with the Maryland-National Capital Park and Planning Commission.

[4] Secs. 1(b) and 1(c) of the Capper-Cramton Act authorize the appropriation of funds to the National Capital Planning Commission for the purpose of making grants to local park authorities in Maryland and Virginia, respectively, covering ⅓ of the cost of acquiring lands for stream valley parks. No estimates are available from the local park authorities in Maryland and Virginia as to the cost of acquiring all of the lands determined to be necessary for all stream valley parks for which grants are authorized under the act.

[5] $723,000 for this project is included in the fiscal year 1967 District of Columbia public improvements program.

[6] This amount represents the balance of appropriations under sec. 4 of the Capper-Cramton Act which have not been obligated nor allotted by the Commission to specific projects within the District of Columbia. It is anticipated that all or a substantial part of this amount will be reallotted by the Commission to 1 or more uncompleted projects and/or expended for land acquisition expenses.

GEORGE WASHINGTON MEMORIAL PARKWAY, MARYLAND

Senator BARTLETT. All of this money has been available at least since fiscal year 1963. One hundred thousand dollars were appropriated in that fiscal year for the Little Falls Branch Parkway connection and is still unused because the matching grant has not been provided by Maryland. What is the reason for this delay?

Mr. SHEAR. The delay results for the most part from difficulties in establishing the precise alinement of the connection between the George Washington Memorial Parkway and the Little Falls Branch Parkway in order that an agreement with the Maryland National Capital Park and Planning Commission, providing for the matching of the appropriation, can be executed.

Senator BARTLETT. How long should the fund remain available?

Mr. SHEAR. It is anticipated that the alinement will be established, an agreement with the Maryland commission executed, and the appropriation obligated during this fiscal year or early next fiscal year. Since the fund is essential to completion of the George Washington Memorial Parkway, it should continue to remain available until matched and obligated.

SELLNER PROPERTY, GEORGE WASHINGTON MEMORIAL PARKWAY

Senator BARTLETT. The information which you have provided indicates that a stipulation was entered into in the amount of $450,000 for the Sellner property near the Woodrow Wilson Bridge. Do you estimate that the approximately $130,000 remaining available for purchase of this land will be sufficient?

Mr. SHEAR. The commission and the Bureau of Public Roads have agreed that the commission would pay $100,000 and the Bureau would pay $350,000 of the $450,000 award for the Sellner property and these amounts have been paid over to the Department of Justice for deposit into the registry of the court in satisfaction of the award.

POTOMAC SAND AND GRAVEL TRACT

Senator BARTLETT. Has any step been taken to seek legislation to acquire title to this land subject to limited rights for business purposes which would permit you to consider the Potomac sand and gravel tract at the Woodrow Wilson Bridge?

Mr. SHEAR. It is anticipated that the Congress will be asked to amend the statute permitting the commission to acquire fee title to land subject to limited rights reserved to the grantor, to permit such acquisition subject to limited rights for business purposes, in connection with the pending review of the authorizing legislation for the George Washington Memorial Parkway in accordance with the directive of the House Committee on Appropriations last year.

UNUSED FUNDS

Senator BARTLETT. I observe that with respect to the minor amounts remaining of appropriations for the George Washington Memorial Parkway relating to lands both in Arlington County and Fairfax

County that the funds will be returned to the Treasury unless they are required to meet deficiency awards in pending condemnation cases. What are these cases?

Mr. SHEAR. I believe that awards have been entered and paid for all parcels in the several condemnation cases filed in connection with the parkway in Arlington and Fairfax Counties.

Senator BARTLETT. Have the condemnations which have been filed included declarations of taking?

Mr. SHEAR. In most instances condemnations filed for parkway land acquisition have included declarations of taking.

Senator BARTLETT. If so, what is your situation should the awards be greater than the amounts of your appropriations?

Mr. SHEAR. All of the condemnation cases filed to date, including those involving declarations of taking, have been completed and all awards have been paid.

MORGAN-HAPPY HOLLOW PLAYGROUND DISTRICT OF COLUMBIA

Senator BARTLETT. Would you bring the committee up to date with regard to the addition to the Morgan-Happy Hollow Playground for which $375,000 is available?

Mr. SHEAR. It is contemplated that acquisition of the addition to the Morgan-Happy Hollow Playground will be carried out jointly by the commission and the District of Columbia government in connection with the replacement of the Morgan Elementary School. The District Commissioners have included in the District's fiscal year 1968 appropriation estimates $723,000 for site acquisition for the playground and $1,187,000 for site acquisition for the school, including the school playground.

Senator BARTLETT. Thank you.

FRIDAY, MARCH 17, 1967.

NATIONAL COUNCIL ON MARINE RESOURCES AND ENGINEERING DEVELOPMENT AND COMMISSION ON MARINE SCIENCE, ENGINEERING, AND RESOURCES

STATEMENT OF EDWARD WENK, JR., EXECUTIVE SECRETARY, ACCOMPANIED BY ENOCH L. DILLON, PROGRAM PLANNING OFFICER; AND CHARLES S. BARDEN, JR., EXECUTIVE OFFICER, NATIONAL COUNCIL ON MARINE RESOURCES AND ENGINEERING DEVELOPMENT; AND STATEMENT OF JULIUS A. STRATTON, CHAIRMAN, COMMISSION ON MARINE SCIENCE, ENGINEERING, AND RESOURCES

Senator BARTLETT. The committee will now hear testimony from the National Council on Marine Resources and Engineering Development, and the Commission on Marine Science, Engineering, and Resources.

SALARIES AND EXPENSES

For the fiscal year 1968, a budget of $1,330,000 is proposed for salaries and expenses of the National Council on Marine Resources and Engineering Development, and the Commission on Marine Science, Engineering, and Resources. This is $230,000 more than was appropriated in fiscal year 1967. The justification statement will be entered into the record.

(The justification follows:)

NATIONAL COUNCIL ON MARINE RESOURCES AND ENGINEERING DEVELOPMENT—COMMISSION ON MARINE SCIENCE, ENGINEERING, AND RESOURCES

Justification of estimates for fiscal year 1968

	Millions
1967 appropriation	$1.10
1968 estimate	1.33

THE NATIONAL POLICY AND PROGRAM

Public Law 89–454 the "Marine Resources and Engineering Development Act of 1966" established the national policy of the United States to develop, encourage and maintain a coordinated and comprehensive, long-range program in marine science for the benefit of mankind. This policy looks forward to the accelerated development of marine resources, the expansion of our knowledge of the sea, and the improvement of our capabilities to operate in and exploit the marine evironment. The Law established the National Council on Marine Resources and Engineering Development and directs the President to establish the Commission on Marine Sciences, Engineering, and Resources.

Public Law 89–688, amended PL 89–454 to authorize the establishment and operation of sea grant colleges and programs by initiating and supporting programs of education and research in the various fields relating to the development of marine resources, and assigned certain advisory functions to the National Council on Marine Resources and Engineering Development.

The Council and the Commission form the basis for the Budget Activities described below:

1. *Planning, policy development and program coordination (Council).*—This activity will finance the work and studies of the National Conucil on Marine Resources and Engineering Development. These relate to exploration, description and prediction of the marine environment to enable exploitation of the ocean's resources and potentials. The Council advises and assists the President by:

(a) surveying all significant marine science activities, including Federal policies, plans, programs and accomplishments,

(b) developing a comprehensive program to be conducted by the Federal government, independently or in cooperation with non-Federal organizations,

(c) coordinating a program of international cooperation in work done pursuant to Public Law 89–454, as amended,

(d) undertaking a comprehensive study of legal problems arising out of management, use, development, recovery, and control of marine resources,

(e) designating and fixing Federal agency responsibilities for conducting marine science activities,

(f) insuring cooperation between, and resolving differences among, Federal agencies,

(g) reviewing annually all Federal marine science activities, and

(h) preparing the annual report required by PL 89–454 for the President's transmittal to Congress.

Also, as provided for by PL 89–688 (Title II) the Council shall, as the President may request,

(a) advise the National Science Foundation with respect to policies, procedures, and operation of the Foundation in carrying out its function under Title II,

(b) provide policy guidance to the Foundation with respect to contracts and grants in support of Sea Grant Programs, and

(c) submit an annual report on its activities and its recommendations under Title II.

Finally, the Council will undertake technical, economic, and other studies related to national security, resource development, enhancement of commerce transportation, protection of life and property and other benefits resulting from programs in marine resources, engineering, and science.

2. *Reviews of marine science, engineering and resources programs. (Commission).*—This activity will provide for the public advisory Commission on Marine Science, Engineering, and Resources. Representing industry, universities, state and federal government, the Commission with four advisors from the Congress will:

(a) Review existing national research programs to insure realistic and adequate support for basic oceanographic research,

(b) review existing oceanographic and ocean engineering programs, including education and technical training in relation to advancing oceanographic competence,

(c) review known and contemplated needs for natural resources from the marine environment,

(d) conduct a comprehensive investigation and study of, and make recommendations with regard to, the adequacy of existing and planned marine science activities to meet the national objectives set out in PL 89–454, and

(e) recommend to the President, via the Council, and to the Congress, such organizational and other measures as they deem necessary.

THE COUNCIL

Public Law 89–454, the "Marine Resources and Engineering Development Act of 1966," designates the Vice President as Chairman of the Council. It also designates as members the Secretaries of State, Navy, Interior, Commerce, Health, Education and Welfare, and Transportation,* and the Chairman of the

---

*With the transfer of the Coast Guard to the Department of Transportation, the Secretary of Transportation replaces the Secretary of the Treasury.

Atomic Energy Commission and the Director of the National Science Foundation. In addition, heads of the National Aeronautics and Space Administration, the Smithsonian Institution, the Office of Science and Technology, the Bureau of the Budget, the Agency for International Development, and the Council of Economic Advisers have been invited as Observers to the Council.

The budget estimate for the Council provides for a small professional staff of senior specialists representing the fields of science, engineering, economics, foreign affairs, public administration, and law to prepare Federal policies and to review and coordinate the programs of each of the eleven agencies and their twenty-four subdivisions presently engaged in marine science and technology.

The Executive Secretary of the Council, appointed by the President, is responsible for administering this appropriation, supervising the staff of the Council, and providing liaison with the Commission. Expertise of the Council staff is supplemented by consultants and contract studies.

In carrying out its responsibilities, the staff works closely with the President's Office of Science and Technology, the Federal Council for Science and Technology, the President's Science Advisory Committee, and other offices, commissions and councils located in the Executive Office of the President. This staff does not exercise operational or management responsibilities in connection with the agencies' programs, but supports the policy and program planning of the National Council on Marine Resources and Engineering Development. The Council itself, composed of the Vice President and the responsible cabinet officers and agency heads, in turn recommends necessary policies and programs to the President.

At the July 13, 1966, commissioning of the ESSA ship *Oceanographer*, the President requested the Council to review the report, *Effective Use of the Sea*, prepared by his Science Advisory Committee, and to develop initial recommendations by the following January. In addition to analyzing the more than 100 recommendations included in this report, the Council staff also considered suggestions from the Interagency Committee on Oceanography and the National Academy of Sciences Committee on Oceanography as well as recommendations submitted by individual Federal agencies relating to new possibilities in marine sciences. The Council then selected nine programs for priority attention and made recommendations to the President accordingly. A report embodying these recommendations has been prepared by the Council as part of the President's report required by Section 7 of PL 89–454.

THE COMMISSION

In addition to the Council, PL 89–454 provides for an independent Commission on Marine Science, Engineering and Resources. The Commission was established by the President on January 9, 1967. The Commission's report is due no later than 18 months after its establishment.

These estimates provide for the Commissioners and for a small staff. This staff will be supplemented by assistance from the Council staff and from appropriate government agencies, in order that the Commission may have ready and adequate access to all information necessary to carry on its functions. It is anticipated that specialized panels of additional consultants will be used.

ESTIMATE FOR FISCAL YEAR 1968

The budget activities in the attached appropriation request are designed to provide financial support for the Council and the Commission. The budget estimate for FY 1968 is for $1.33 million of the $1.5 million authorized, and represents an increase of $230,000 over the FY 1967 appropriation of $1.1 million. This increase reflects the Council and Commission operating at full strength through the entire fiscal year. This estimate will provide for the Commissioners, Council and Commission staffs, and operating expenses required to carry out the provisions of Public Law 89–454 and Public Law 89–688, and those scientific, economic and legal studies which will be conducted to determine the potential benefits to the United States economy, security, health and welfare to be gained from marine resources, engineering and science. These studies will be aimed at establishing goals, cost/benefit relationships and feasibility of various programs concerned with such areas as fisheries, minerals, environmental prediction, prevention of beach and coastal erosion, pollution of estuaries, and the oceanographic data system. The Council and Commission will also use such contracting and consulting services as are necessary for these purposes.

Personnel summary

	1966 actual	1967 estimate	1968 estimate

PREPARED STATEMENT

Senator BARTLETT. Dr. Wenk is here as chairman of the National Council on Marine Resources and Engineering Development; Dr. Julius A. Stratton, chairman of the Commission on Marine Science, Engineering, and Resources, was supposed to be here, but is not. Where is he?

Dr. WENK. Sir, he is delayed by a blizzard in New York City.

Senator BARTLETT. On March 17th?

Dr. WENK. On March 17th, a St. Patrick's Day Blizzard.

Senator Bartlett, whereas we looked forward to the benefits of science, here is one case where it hasn't helped us a great deal.

Senator BARTLETT. That is what I thought when I looked out the window this morning. It is snowing even in the Nation's Capital.

Dr. WENK. He has asked me to extend his regrets, and asks also if he might have permission to have his prepared statement inserted in the record at an appropriate time.

Senator BARTLETT. It will be placed in the record.

(Dr. Stratton's prepared statement follows:)

INTRODUCTION

The Marine Resources and Engineering Development Act of 1966, Public Law 89-454, constitutes an historic step on the part of the Congress in recognition of the growing importance of these resources to the security and economic progress of our country, as well as for the general benefit of mankind.

OBJECTIVES OF ACT

Specifically, the Act was designed to contribute to the following objectives:

1. The accelerated development of the resources of the marine environment.
2. The expansion of human knowledge of the marine environment.
3. The encourage of private investment enterprise in exploration, technological development, marine commerce, and economic utilization of the resources of the marine environment.
4. The preservation of the role of the United States as a leader in marine science and resource development.
5. The advancement of education and training in marine science.
6. The development and improvement of the capabilities, performance, use, and efficiency of vehicles, equipment, and instruments for use in exploration, research, surveys, the recovery of resources, and the transmission of energy in the marine environment.
7. The effective utilization of the scientific and engineering resources of the nation, with close cooperation among all interested agencies, public and private, in order to avoid unnecessary duplication of effort, facilities, and equipment, or waste.
8. The cooperation by the United States with other nations and groups of nations and international organizations in marine science activities when such cooperation is in the national interest.

ESTABLISHMENT OF INDEPENDENT COMMISSION

To fulfill these objectives, Public Law 89-454 establishes in the Executive Office of the President a National Council on Marine Resources and Engineering Development under the chairmanship of the Vice President of the United States, and an independent Commission on Marine Science, Engineering and Resources. Provision is made for appointment by the President of fifteen members to the Commission to be drawn from Federal and State governments, industry, universities, or research institutions. In addition, four advisory members are to be appointed from among the Members of the Senate and House of Representatives.

On January 9, 1967, President Johnson announced the appointment of the new Commission. The attached copy of the official press release provides a brief account of the membership.

FIRST COMMISSION MEETING

The Commission met for the first time on February 24 and 25, with Senators Magnuson and Cotton and Representatives Lennon and Mosher present through much of the discussion. We were addressed by Vice President Humphrey on the nature of our mandate and on the relation of the Commission to the Council. We initiated a series of background briefings which will be continued through future meetings. But the primary purpose of this first session was to arrive at a clear understanding of our task and to organize our efforts to insure the effective fulfillment of that task within the prescribed eighteen months.

In a number of areas the responsibilities of the Commission and the Council appear from the wording of the legislation to overlap, and, where appropriate, the two bodies propose to work closely in concert. Nonetheless, it was clearly the intent of Congress to establish the Commission as an independent entity, charged with specific duties.

MAJOR OBJECTIVES OF COMMISSION

Out of our initial discussions the Commission has arrived at the following formulation of major objectives:

1. To become familiar with the whole range of projects and programs relating to marine affairs; including the state of relevant science, technology, and education; the abundance and distribution of mineral and food resources; the interaction of sea and air as it affects climate; the conservation of shore lines and estuaries. In the course of this examination the Commission will draw freely upon available material, including studies carried out under the Council, and the numerous reports prepared by other groups, such as the National

Academy of Sciences, the National Academy of Engineering, the President's Science Advisory Committee, and others. Further studies will be initiated only when it appears to the Commission that there are serious gaps in our information.

2. The Commission, as an independent body free of operational responsibilities, will plan and take at least the first steps within the brief time available a thorough evaluation of current activities in the broad field of marine affairs.

3. We shall attempt to identify major trends and opportunities, and to project these into the future; thus endeavoring to determine the needs as well as the problems of the future. In the course of this effort we shall pay particular attention to:

a. the needs and interests of the private sector;

b. the international implications of an expanded program;

c. international, federal, state, and private inter-relationships and responsibilities;

d. the development and maintenance of a balanced program.

4. Finally, on the grounds of these investigations, the Commission proposes to recommend:

1. a plan for the organization of the national effort; and
2. an administrative structure for governmental activities.

We take this to be our primary and overriding responsibility.

COMMENTS OF VICE PRESIDENT CONCERNING COUNCIL/COMMISSION FUNCTIONS

In his very lucid and constructive comments on the occasion of our first meeting, the Vice President noted that the Council and the Commission serve distinct functions. They are not competing but complementary. The Council, he pointed out, is a coordinating body of existing machinery. The Commission is directed to pioneer, to experiment, to look to the future, to have a free hand —so to speak—working more closely with the private sector as to how we can upgrade, improve, expand, enhance the whole field of marine sciences.

STAFF SUPPORT

The Commission proposes to carry on its work with the aid of special consultants and a small staff. Thus far we have drawn on Dr. Wenk, the Executive Secretary of the Council, for support. The Commission will need to appoint a Staff Director and Assistant Director with appropriate secretarial help if it is to carry out its mission effectively. To this end a budget plan will be worked out jointly with the Council.

PREPARED STATEMENT

Senator BARTLETT. And your prepared statement, Dr. Wenk, will be placed in the record, the complete text, and perhaps you care to highlight it.

(Dr. Wenk's prepared statement follows:)

INTRODUCTION

I very much appreciate the privilege of appearing as a witness today to provide background justification in support of the FY 1968 appropriations requested for the National Council on Marine Resources and Engineering Development and for the Commission on Marine Science, Engineering, and Resources.

I am pleased that the Chairman of the Commission, Dr. Julius Stratton, is present to testify with me. Dr. Stratton, I am sure you know, is a former President of MIT and presently Chairman of the Board of the Ford Foundation. President Johnson appointed him as Chairman of the Commission on January 9 of this year.

I will comment briefly on the responsibilities and progress of the Council, and Dr. Stratton has a statement regarding the work of the Commission.

Last October I appeared before you to present President Johnson's FY 1967 supplemental budget request for both the Council and the Commission. I reviewed the general provisions of the Marine Resources and Engineering Development Act of 1966, discussed the role of the Council, what we proposed to do, and how we planned to go about doing it. Now, five months later, we can add to those remarks in terms of some operating experience, to explain what we have done, and more explicitly what we hope to achieve with the funds now requested.

MARINE SCIENCE AFFAIRS—NEW RELATIONSHIPS

By way of perspective—marine science affairs is a term intended to portray the body of oceanic activities that link science and society. Many of these relationships are old, dating to man's earliest efforts to extract fish and salt from the sea, and to exploration of our planet. But many of the relationships are new. While extending knowledge of the marine environment, a significant transition in marine science activities is underway toward focusing ocean engineering and technologies on explicit purposes:

to contribute to national security;

to rehabilitate domestic fisheries and harvest fish protein for the undernourished;

to develop seashore resources and reduce pollution of the Great Lakes, bays, estuaries and near-shore waters;

to improve forecasting of weather, climate, and ocean conditions;

to supplement continental sources of oil, gas, and minerals; and

to promote international understanding and cooperation through the use of the oceans.

This list illustrates that marine science affairs cannot be considered in isolation. Just as research and development activities in the oceans must be related to similar activities on land, so, too, must man's exploration and exploitation of the oceans' resources. Marine science goals, policies, programs, and activities must therefore be examined in two ways: as they relate to the unity they derive from the marine environment, and as they contribute to major goals of society and the nation. It is in this second context—the relatively unfulfilled promise of the sea to contribute to human needs—that recent efforts became increasingly related to major issues of world peace and national security; nutrition and welfare; the requirements and problems of a growing and increasingly urbanized population; and the protection of our environment and seashore resources from the unnecessary degradation.

1966—TURNING POINT IN MARINE SCIENCES

For marine sciences, the year 1966 was a significant turning point. Through the Marine Resources and Engineering Development Act, the 89th Congress developed and the President approved a new national policy to intensify the study of the sea, and to convert its promise to practical reality.

The principal responsibilty of the National Council on Marine Resources and Engineering Development is to assist the President in planning and coordinating the many Federal marine science activities. Since its creation last summer, the Council has met five times. The Vice President presided at all meetings and attendance by Council members has been excellent. At the President's request, the Council started to carry out the provisions of Section 4(a) of the Act by:

surveying public and private marine science activities;

developing a program of marine science activities—in cooperation with the departments and agencies, especially in terms of filling gaps and establishing areas of special emphasis;

designating and fixing responsibilities for the conduct of certain marine science activities;

insuring cooperation and resolving differences arising among departments and agencies . . .; and

planning studies . . . of the legal problems arising out of the management, use, development, recovery, and control of the resources of the marine environment.

The Council is also taking steps to

establish long-range studies of the potential benefits to the United States economy, security, health, and welfare to be gained from marine resources, engineering, and science, and the cost involved in obtaining such benefits; and

review the marine science activities conducted by departments and agencies . . .

PRESIDENT'S REQUEST FOR COUNCIL RECOMMENDATIONS—COUNCIL REPORT

The President is required by law to submit to the Congress annually a report that describes and evaluates Federal activities and accomplishments in marine science and contains an estimate of funding requirements of each Federal agency for marine science activities during the succeeding year. The Council was assigned this responsibility. In addition, the President requested the Council to develop initial recommendations within the FY 1968 time frame that required a fast start last fall. Most of the Council's early efforts were devoted to familiarization with the issues involved and then with selection of areas deserving priority attention.

After screening well over 100 proposals from numerous public and private sources, and the many continuing efforts that could be effectively mobilized around a smaller number of explicit goals, the Council identified priorities, recommended steps to strengthen management, clarified agency responsibilities, and provided additional methods for coordinating multi-agency support of programs.

The areas of special emphasis are set forth in the President's report now being transmitted to the Congress.

PROPOSED TOTAL FEDERAL EXPENDITURES—FY 68

As the new scope of marine science affairs was studied and defined, categories were established to reflect more clearly the end purposes of Federal expenditures in marine science and technology such as national security, seafood technology and pollution abatment. The total amounts to some $462 million proposed for FY 1968.

LEAD AGENCY CONCEPT

Many of the goals and programs, incidentally, were found by the Council to cut across agency lines. Wherever possible, the Council recommended a lead agency to take responsibility in developing specific areas and to provide Government-wide leadership.

In discussing the role of the Marine Sciences Council, I should like to emphasize that it is not an operating agency. Its purpose is to assist the President in identifying Government-wide goals, in developing alternative strategies for their achievement, in identifying issues, and in helping the President reach an informed decision. But we also try to assist the operating agencies in doing their job.

COUNCIL PLANS

During the coming months, the Marine Sciences Council will give special attention to a selected number of policy areas:

to understand the goals of the nation and of society and the capacity of marine sciences to accelerate progress toward these goals;

to examine the potential contribution of marine science and technology to national security and peace;

to define the role of the Federal Government along the shoreline and in the oceans, and methods of cooperation between the Federal Government and States, regions, universities, and private industry;

to clarify the administrative, legal, and technological framework for encouraging the rational exploitation of the resources of the sea; and

to identify steps needed to strengthen the base of scientific research which underlies our marine technology.

This year, Congress has not been asked to enact new marine science legislation. The many instruments already provided allow us to move forward in meeting many of the urgent problems of our times.

STAFF SUPPORT—BUDGET REQUEST

In order to effectively support the policy and program planning of the Council, we are striving to develop and maintain a small but highly qualified staff. Our own capabilities are being extended through the use of consultants and policy studies that combine considerations of marine science with engineering, law, public administration, economics, and foreign affairs.

This FY 1968 budget request before you today for $1.33 million will provide for the Commission Members, Commission and Council staffs operating in

FY 1968 at full strength for a full year, and consultants to both the Commission and the Council. Operating expenses, and studies that are required by law or are necessary to evaluate marine science and technology programs in terms of benefits to the United States economy, security, health and welfare, are also provided for. Justification background material for this FY 1968 estimate has already been provided to the Committee.

MAXIMUM USE OF EXISTING KNOWLEDGE AND CAPABILITIES

As required by the Act, we will continue to solicit the views of departments and agencies concerned with marine sciences and the views of non-Federal organizations and individuals with capabilities in the marine sciences. We intend to make maximum use of the studies and surveys that are already completed or underway by Federal agencies and others.

This completes my statement. Dr. Stratton's statement regarding the nature and work of the Commission on Marine Science, Engineering, and Resources has been placed in the record.

MARINE RESOURCES AND ENGINEERING DEVELOPMENT ACT OF 1966

Dr. Wenk. Senator Bartlett, it is quite a privilege to appear here before your committee. This is my first appearance before this group. It is all the more a privilege, because the legislation that established our Council was cosponsored by Senator Bartlett, and many of the provisions of that legislation, S. 944, were derived from separate legislation that you had introduced in the last session of the Congress.

By way of background, the Congress had taken initiative to advance our activities in the sea for many years. The legislation under which we operate that was enacted last June is considered by everyone, both in and outside of Government, as a landmark.

It did three things. It established a mandate for the Nation to develop a long-range set of policies and programs in marine sciences. It established a policy planning and coordinating council. And it established an advisory commission. The Council, as you know, is chaired by the Vice President, includes five Cabinet officers, and three department heads; that is, the most senior representatives of those agencies of Government that have major statutory responsibilities for operating programs related to marine sciences.

COUNCIL MEETINGS

I am pleased to report to you that since the enactment of that bill, the President activated the Council. It met first August 17 of last year, and has met a total of five times since. Excuse me, a total of four times since—a total of five meetings since August 17. The Vice President has presided at all, and we have had excellent attendance from these Cabinet officers and senior representatives from these agencies.

PRESIDENT'S FIRST REPORT

The first assignment that we received was to develop for the President his first report provided by the legislation to be submitted to the Congress. This report was transmitted by the President to the Congress last week, on March 9. The report describes for the first time what we believed to be the scope of activities of marine science defined by the legislation; sets forth some nine new initiatives which the executive branch has included within the budgets now before the Congress for fiscal year 1968. It summarizes the activities of the Council as they reflect a review and evaluation of the $462 million of on-going activities in these 11 agencies that are involved, some new steps toward coordination, some initiatives in international cooperation, and finally, the designation of agencies responsible for each of these nine initiatives.

EXPLANATION OF 1968 BUDGET

The budget that the President has submitted this year for this activity is for $1.33 million. It would provide for continuation of policy planning and coordinating activities of the Council, and for initiating the activities of the Commission. That is to say, the $1.33 million is for both. It is $230,000 more than last year, because for fiscal year 1968, both the Council and the Commission will be operating at full strength for a full 12 months. For fiscal year 1967, the Council was operating only 10 months, and the Commission that was appointed by the President January 9 of this year, would have been operating only 6 months. The main difference therefore between the two budgets represents the full operation of both activities for a full 12 months.

We would be pleased to answer any questions that you may have, Senator Bartlett.

Senator BARTLETT. Thank you very much, Dr. Wenk.

You were organized in August?

Dr. WENK. Yes, sir; the first meeting of the Council occurred August 17. The executive secretary was sworn in August 17.

JUSTIFICATION FOR BUDGET INCREASE

Senator BARTLETT. Your first appropriation came in the second supplemental appropriation bill which became law last October. Prior to that time you were funded through money borrowed from other agencies. I assume that the increase in your budget this year is to carry you for a full fiscal year.

Dr. WENK. That is correct.

Senator BARTLETT. When you testified last fall, you told the committee that there were five full-time employees. How many employees are there now?

Dr. WENK. We now have 13 on board, four commitments and three vacancies, totaling 20 for the Council. There are five staff vacancies for the Commission, and many candidates who are being interviewed. No commitments made, but commitments should be made within the next few days.

Senator BARTLETT. How large do you expect this group to become?

USE OF CONSULTANTS

Dr. WENK. With regard to full-time staffing, the personnel allowance by the Bureau of the Budget is 25, and we do not expect to go above that, or to request an increase. We do have the opportunity, however, of employing part-time consultants, and we are making extensive use of these individuals. By this means, we can tap expertise in a wide variety of fields, in science, engineering, in law, in economics, and public affairs, outside of Government. Considering the arduous assignment given us by the Congress and the short period of time in which we are to come in with some recommendations, we feel that we want to pick the best brains the country has to offer.

1968 PROGRAM PLANS

Senator BARTLETT. What program do you have in mind for the fiscal year starting July 1?

Dr. WENK. The activities of the Council comprise a day-to-day assistance and advice to the President. And this concerns a review of all of the on-going programs of the 11 operating agencies, which, incidentally, total for this year some $462 million. Secondly, we will be endeavoring to identify more clearly the goals for these activities, in terms of well-defined public purposes. By that, I mean we interpret the legislation as an important step to translate scientific discoveries about the sea, to some practical application. And these public purposes include defense, but they also include energy and minerals exploration; they include a new program mentioned by the President on extracting food from the sea, steps to improve weather forcasting, steps to control pollution of bays and estuaries, and to make better use, multiple use, of our shoreline.

Finally, we will be, during this fiscal year, doing a good deal of thinking about the organization of government. One of the provisions of this law requires the commission to examine whether the present assignment of responsibilities and, to some extent, fragmentation of responsibilities might be altered by some new organization arrangements in government. A number of proposals have been made that stretch all the way from consolidating all of these activities into one superagency to their being assigned to one or another of our departments, or at least consolidated in a smaller number of agency units. This, in other words, is a step to evolve better management of a multiagency program. One of our main responsibilities would be in this direction.

Senator BARTLETT. Did you say, Dr. Wenk, that $462 million was appropriated for this fiscal year, or it has been requested for the next?

Dr. WENK. Requested for the next, Senator Bartlett. For the current fiscal year, it is $409 million.

Senator BARTLETT. For marine sciences in general?

Dr. WENK. Yes, sir.

Senator BARTLETT. And this is distributed among 11 agencies?

Dr. WENK. Yes, it is. There is a table in our report on page 25, if that would be of any assistance in elaborating on the details between the different departments, and also the budget for 3 successive years.

Senator BARTLETT. Thank you. That table will be included in the record.

(The table follows:)

Program plan of Federal agencies for marine sciences and technology

[In millions of dollars]

Agency	1966 actual	1967 estimate	1968 estimate
Department of Defense	174.9	235.8	258.7
Department of the Interior	56.5	71.2	72.3
National Science Foundation	[1] 47.7	29.0	40.1
Department of Commerce	25.0	32.5	36.0
Department of Transportation	8.1	10.8	24.6
Atomic Energy Commission	8.3	13.7	15.8
Department of State	5.0	5.1	5.4
Department of Health, Education, and Welfare	5.4	7.0	4.8
Agency for International Development	.1	2.0	2.0
Smithsonian Institution	1.5	1.6	1.8
National Aeronautics and Space Administration	.9	.4	.8
Total	333.4	409.1	462.3

[1] Includes Project Mohole which was discontinued in fiscal year 1967.

SEA GRANT PROGRAM

Senator BARTLETT. What is the sea grant program?

Dr. WENK. The sea grant program is a new law, Public Law 89-688, established by the Congress last year, with three objectives. The first is for training and education, particularly of engineers oriented toward marine activities. The second concerns the stimulation of applied research as it relates to the sea, and the third concerns improvement in information transfer, particularly to take academic research, and put it in the hands of people in industry. Some people have compared that third stage, incidentally, to the agricultural extension service.

The law provides that our Council establish policy guidance in implementing the legislation, but the funding for the sea grants themselves, and the administration of the program, comes through the National Science Foundation.

EFFECT OF SEA GRANT LEGISLATION

Senator BARTLETT. The National Science Foundation. Now, in my opinion, this is a statement, not a question, and to coin a phrase, generations yet unborn will bless the memory of Senator Pell, the author of this bill, because it sets up a situation comparable to that of the land-grant colleges. And my own conclusion is that it is going to have enormously beneficial effects upon this entire program.

Will you agree with that?

Dr. WENK. Senator, I would wholeheartedly. The Council includes that sea grant legislation as one of the nine specific recommendations to the President, to implement immediately. In fact, the National Science Foundation is being encouraged to ask approval from the Congress to reprogram some fiscal 1967 money, so that it can get that program started even before the Congress has acted on the fiscal 1968 budget. So you have now very enthusiastic support from the President and Vice President for this legislation.

SEA GRANT BUDGET

Senator BARTLETT. Can you tell us how much money is going to be asked for this sea grant program in the next fiscal year?

Dr. WENK. For the request to the Congress for reprograming, $1 million. That is, in fiscal 1967.

Senator BARTLETT. Yes.

Dr. WENK. Of new money, $4 million.

Senator BARTLETT. Four million dollars?

Dr. WENK. Yes, sir.

Senator BARTLETT. In your opinion, is that a sufficient amount for launching the program? Because that, in effect, is what would occur, the reprograming wouldn't give very much of a start.

Dr. WENK. This is such a new program that the universities themselves are going to have to think through how to implement it.

Senator BARTLETT. You want to feel your way carefully?

Dr. WENK. Yes; feel our way carefully. There are two reasons for this. One is that the program is multidisciplinary, and the universities have not had extensive experience in bringing together people from different departments of science and engineering, economics and law, and this will be an encouragement in this direction.

Secondly, it provides for matching funds, and we feel that it is going to take a while before the States will have developed their own funds to match Federal grants.

COOPERATION WITH AGENCIES

Senator BARTLETT. Now I would like to ask you this, Dr. Wenk. So far, have you found a willingness on the part of each of these agencies to cooperate, or do some of them which have been in this business for long on their own have a standoffish attitude?

Dr. WENK. First, Senator, the attendance and participation by the members of the Council or their immediate subordinates who have been attending these meetings, had been accompanied only by enthusiasm and a willingness to consider issues, to express their opinions candidly, to debate differences of view, and finally, to try to reach a consensus to advance the program.

I think it is fair to say that any new institution of government has an effect of rocking the boat. This new Council is a new institution of government. But we are trying to make our way not in any sense of competition with the operating agencies, but rather, as an extra element of government that will help even plead their cause. In other words, one of our objectives is to help these individual agencies to do their job better, by clarifying goals, even coming to their assistance in defending the budget of Council endorsed elements before the Bureau of the Budget. And from this point of view, I think each of these agencies has the opportunity, as it were, of one more friend in court. At the same time, we feel we must assume an independent and objective point of view in serving the President, and not support any single agency, or special interest.

VICE PRESIDENT'S PARTICIPATION

Senator BARTLETT. I have been informed—and I would like to check this with you, Dr. Wenk—that the Vice President, either acquired or already had developed a tremendous interest in this subject, and has been most actively engaged in helping the Council and the Commission. Is that right?

Dr. WENK. It is absolutely correct. He has personally presided at all Council meetings; he has had extensive briefings prior to them, and this, in terms of keeping up with issues, means a personal involvement—and I believe he has said this publicly—of at least 2 to 3 hours every week. He has a strong interest in visiting all of the major oceanographic research laboratories throughout the country, and especially to see ways of translating the untapped potential of the sea to serve our public interest. You have a most enthusiastic supporter for this program in the Vice President.

Senator BARTLETT. This is good.

I suspect you have already noted that you are presenting your testimony to one Senator who is somewhat prejudiced in favor of this activity.

TECHNOLOGY INTERCHANGE BETWEEN DOD AND CIVILIAN AGENCIES

I note, referring to the table you said was on page 25 of your report, that the bulk of the requested funds for the next fiscal year will go to the Department of Defense, and that if the full budget amount is allowed, it will amount to $258,750,000. Now is the work that the Department does in this field exclusively related to defense, or are there spinoffs, to use the term that was employed here frequently, that will be of great benefit to oceanography in general?

Dr. WENK. Senator Bartlett, there is an advantage both to the civilian agencies of work being done by the Navy, but an advantage to the Navy of work being done in the civilian agencies. By that, I mean the measurements of ocean temperatures, and currents, and salinity, is important to the Navy with regard to antisubmarine warfare, but also important to the Bureau of Commercial Fisheries in terms of understanding the migratory habits of fish. These same data are important to the Department of Commerce's Environmental Sciences Services Administration, with regard to oceanic effects on weather and climate. One of the things we are trying to do through this Council is to make sure that all of the agencies know what the other agencies are doing, and each make best possible use of the other's data.

So in answer to your question—and this is one of the most important jobs we have to do—there is great benefit in the civilian sector of work being done by the Navy; and in turn, though as the funds indicate at a somewhat smaller scale, a benefit to the Navy of work being done in the civilian agencies.

DEPARTMENT OF TRANSPORTATION

Senator BARTLETT. Now what will the Department of Transportation, a new agency, do with almost $25 million for this work?

Dr. WENK. Virtually all of these funds reflect the transfer of the Coast Guard from the Department of Treasury to the Department of Transportation and the bulk of the increase is for the construction of a previously planned Coast Guard ship as an oceanographic ship.

BENEFITS OF MARINE SCIENCE AND ENGINEERING PROGRAM

Senator BARTLETT. Dr. Wenk, we are doing lots of things in space. We are spending a very considerable amount of money in space. Whether or not there will be any material gains from that, we don't know. We aren't actually looking for any, insofar as I am aware. But if we explore the oceans more intensively, more scientifically, more dramatically, is there a possibility that within a very short space of time, as time runs, that tremendous benefits might come to the United States in terms of recovered minerals, better fishing methods, and a host of other things?

Dr. WENK. There is very great promise of these benefits. People have estimated these for many years, but it has taken this action by the Congress and the response by the administration, to translate this possibility into reality. This is reflected in the report the President transmitted to the Congress, so this is just a beginning. But it shows something about what the potential is of the sea.

For example, there is a world problem of hunger. All of the normal sources of food, agricultural products, and so on, can't meet the worldwide shortage today. And that disparity between demand and supply continues to increase. We have recognized for a long time that the food from the sea is still an untapped potential. People have estimated the productivity of the sea at anywhere from five to 50 times the amount of the worldwide catch, and one of our first projects that the President is proposing is to develop some specific action now that would help our domestic fisheries, but also, make available the technology for fish protein concentrate to help some of the less-developed nations of the world that suffer from protein deficiency make use of the fish that are in their own backyard.

Senator BARTLETT. I am glad you mentioned that.

Dr. WENK. So this is an example of just the opportunity you mentioned of now not just talking about the sea, but really doing something about it.

PRESIDENT'S SPECIAL MESSAGE, MARCH 9, 1967

Senator BARTLETT. I think it might be well to put in the record at this point, if there is no objection, the special message which the President sent to the Congress on March 9, 1967, in connection with transmitting the report of marine sciences which we have been discussing, and since there is no objection, that message will be included.

(The President's report follows:)

REPORT ON MARINE SCIENCE ACTIVITIES OF THE FEDERAL GOVERNMENT—MESSAGE FROM THE PRESIDENT (H. DOC. NO. 79)

The ACTING PRESIDENT pro tempore. The Chair lays before the Senate a message from the President of the United States, transmitting a report on marine science activities of the Federal Government. Without objection, the message will be printed in the RECORD, without being read, and appropriately referred.

The message was referred to the Committee on Commerce, as follows:

To the Congress of the United States:

I am pleased to report on the marine science activities of the Federal Government.

The resources of the oceans can help us meet many of the challenges that face our Nation and the world today.

The vast food reserves of the sea must be developed to help end the tragic cycle of famine and despair.

The continuing pollution and erosion of our seashores, bays, estuaries, and Great Lakes must be arrested and reversed to safeguard the health of our people and to protect the resources of the sea.

The influence of oceans on the environment must be understood so that we may improve the long-term forecasting of storms, weather and sea conditions; protect life and property in coastal areas; and improve the prediction of rainfall in the interior.

The wealth of the ocean floor must be freed for the benefit of all people.

Finally, the seas must be used as pathways to improved international understanding and cooperation.

The great potential of the seas has not gone unnoticed. During the past 6 years, we have invested increasingly in the development of marine scientific and technical manpower, ships, and facilities. The quality of our research fleet, deep sea vessels, and laboratories is unsurpassed. The small but growing corps of highly trained specialists provides a strong creative base for our marine science and technology.

The 89th Congress also responded to the challenge of the oceans by enacting:

The Marine Resources and Engineering Development Act which provides a stronger policy and organization framework and gives new momentum to our marine science activities.

The Sea Grant College and Program Act, which will improve our capabilities for training and research in marine sciences and engineering.

The act authorizing pilot plants for the production of fish protein as a usable source of food.

The new National Council on Marine Resources and Engineering Development, chaired by the Vice President, has made significant progress in carrying out its responsibilities for planning and coordinating the Nation's marine science activities. In consultation with the President's Science Advisory Committee, the National Academy of Sciences, and other agencies of the Federal Government, the Council has reviewed our current work and has identified the areas in which action should be taken.

We must:

Launch a pilot program to assist the protein-deficient countries of the world in increasing their capacity for using the fish resources of the seas;

Implement the Sea Grant College and Program Act to strengthen oceanographic engineering, expand applied research and improve technical information activities;

Accelerate studies to improve the collection, storage, retrieval, and dissemination of oceanographic data;

Expand ocean observation systems to improve near-shore weather prediction services, and study ways to make more accurate long-range predictions of precipitation levels and drought conditions;

Study the Chesapeake Bay to determine the effects of estuarine pollution on shellfish, health, recreation, and beauty, and to provide a basis for remedial measures;

Explore off-shore solid mineral deposits;

Improve technology and engineering for work at great ocean depths;

Equip a new Coast Guard ship to conduct oceanographic research in sub-Arctic waters.

Details of these programs are set forth in the accompanying report of the National Council on Marine Resources and Engineering Development.

I have this year recommended to the Congress a 13-percent increase—from $409 million to $462 million—in appropriations to support marine science activities. These funds will permit us to expand our efforts to understand the seal and develop its vast resources. They will enhance the capabilities of local government, universities, and private industry to join in this vital enterprise. They will enable us to support the important new efforts recommended by the National Council on Marine Resources and Engineering Development.

I urge the Congress to provide the necessary funds to support these important efforts.

In January I appointed 19 distinguished Americans, including four Members of Congress, to serve as members and advisers of the Commission on Marine Science, Engineering, and Resources. This Commission will complement the activities of the National Council on Marine Resources and Engineering Development, by providing impartial insights into the strengths and weaknesses of our marine science programs.

The Commission will be called upon to identify still more opportunities for a concerted public and private effort—to develop the resources of the sea through a creative and cooperative partnership of Government, industry, and the academic community.

The depth of the sea is a new environment for man's exploration and development, just as crossing the West was a challenge in centuries past.

We shall encounter that environment with the same conviction and pioneering spirit that propelled ships from the Old to the New World.

We shall bring to the challenge of the ocean depths—as we have brought to the challenge of outer space—a determination to work with all nations to develop the seas for the benefit of mankind.

LYNDON B. JOHNSON.

THE WHITE HOUSE, *March 9, 1967.*

Senator BARTLETT. Thank you, gentlemen, very much.

Dr. WENK. Thank you, Senator Bartlett.

SUBCOMMITTEE RECESS

Senator BARTLETT. The committee will adjourn until 10 o'clock, Monday morning, March 20, 1967, when outside witnesses will be heard.

(Whereupon, at 12:10 p.m., Friday, March 17, 1967, the subcommittee was recessed, to reconvene at 10 a.m., Monday, March 20, 1967.)

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS FOR FISCAL YEAR 1968

MONDAY, MARCH 20, 1967

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, D.C.

The subcommittee met at 10 a.m., in room 1223, New Senate Office Building, Hon. Carl Hayden (chairman) presiding.

Present: Chairman Hayden and Senators Russell, Bible, McGee, and Bartlett.

DEPARTMENT OF THE INTERIOR

NONDEPARTMENTAL WITNESSES

STATEMENT OF A. R. SHIRLEY, PRESIDENT OF THE NATIONAL ASSOCIATION OF STATE FORESTERS

FOREST FIRE PREVENTION

INTRODUCTION OF WITNESS

Chairman HAYDEN. The subcomittee will come to order.

Senator Stennis.

Senator STENNIS. I would rather yield and hear what the Senator from Georgia has.

Senator RUSSELL. I wish to present Hon. Ray Shirley, State of Georgia. He is a career employee and president of the State Foresters Association of the United States.

Mr. Shirley is outstanding in all phases of conservation and has done a wonderful job in my State, which I am proud to say has the largest commercial forest plantings of all States of the Union.

Chairman HAYDEN. We will be glad to hear from you.

Mr. SHIRLEY. Thank you, sir.

My name is Ray Shirley, I am director of the Georgia Forestry Commission and president of the National Association of State Foresters. My statement is on behalf of all 50 States, since all are members of the National Association of State Foresters.

I would like at this time to introduce five State foresters who will not make a statement and are here and interested in this program, and will substantiate the statement I will make and I would like to introduce first Mr. Lester D. McClung, State forester, Division of Forestry, Department of Natural Resources, Charleston, W. Va.

Mr. John A. Beale, chief State forester, Wisconsin Conservation Department, Madison, Wis.

Mr. Samuel S. Cobb, director, Bureau of Forestry, Department of Forests and Water, Harrisburg, Pa.

Mr. Osal B. Capps, State forester, Missouri Conservation Commission, Jefferson City, Mo.

And Mr. George W. Dean, State forester, Division of Forestry, Charlottesville, Va.

COOPERATIVE FIRE PREVENTION

We request the 1968 Federal appropriation for cooperative State and private forestry include an increase of $3 million for cooperative forest fire prevention.

The 1967 appropriation for this item is $12,811,000. We are requesting an increase in Federal funds for forest fire prevention from $12,811,000 to $15,811,000.

This requested increase in Federal funds is based upon the following factors.

Federal funds budgeted to this program in 1950, 1956, 1962, and 1967 are as follows:

Year	Amount of Federal appropriation	Amount allotted to States
1950	$9,000,000	$8,550,000
1956	10,000,000	9,485,000
1962	12,465,500	11,654,000
1967	12,811,000	11,826,500

1967 APPROPRIATION AND AUTHORIZATION

Of the Federal appropriation in 1967 of $12,811,000, the States received in direct allotment $11,826,500; $810,370 was spent for Federal administration; $160,000 was spent for the nationwide forest fire prevention campaign; and the remaining $14,130 was for various miscellaneous items.

Federal funds received by the States in 1967 amounted to $11,826,500—or an increase of only $172,500 more than 1962.

According to Public Law 392, which was approved by the 81st Congress, October 26, 1949, Federal authorization for cooperative forest fire prevention with States was increased to a total of $20 million.

1966 EXPENDITURES

The combined expenditures by the 50 States for forest fire prevention in 1966 totaled $72,966,345, an increase of $9,187,395 over 1965. Of the total funds for the fiscal year 1966, 14.93 percent were Federal funds.

The above facts reveal the tremendous acceptance and support given to this program by State and local governments.

STATE PARTICIPATION

The amount of lands being protected under the cooperative program have greatly increased since 1960. Four States: Wyoming, Alaska, Kansas, and Arizona have come under the program since 1960.

ADDED LAND COVERAGE

Since 1962, 41,951,000 acres of commercial and noncommercial forested area have been brought under the program as of December 31, 1966. Reports for the calendar year 1966 show there still remain 32,057,000 acres of forest land without the cooperative forest fire prevention program. This area lies within 15 States.

SALARIES AND EXPENSES

The various State forestry agencies consider the need of forest protection as the present greatest problem. This need has come about by the increase in the cost of salaries, equipment, and operation and maintenance for forest protection. Data from the States reveals that between the fiscal year 1962 through the fiscal year 1966, salaries increased by 22.80 percent; expenditures for equipment and materials used in forest fire prevention and suppression activities increased 18.45 percent; and maintenance and repair costs increased 31.71 percent.

These increases only apply to State costs. The problem has been compounded by virtue of these increased costs, and during the same period having four States and 41,951,000 acres of forest land added without obtaining the Federal funds to meet this added demand. This condition has resulted in 18 of the participating States receiving less Federal funds in fiscal year 1967 than in fiscal year 1962.

There are also other facts affecting increased costs. The Fair Labor Standards Act of 1966 will increase the wage rate paid in many States and will also result in increased costs for some equipment and supplies.

FOREST MATERIAL DEMAND INCREASE

The most recent U.S. Department of Agriculture "Timber Trends in the United States," Forest Resource Report No. 17, dated February 1965, predicts an 80 percent increased demand for forest material by the year 2000.

The trees planted in 1967 will require from 10 to 25 years to grow into pulpwood size for the first thinning, and sawtimber will require 35 to 100 years to reach harvest size. Growth will vary this much, depending upon the section of the United States. Forest fire prevention is basic to timber protection and the long-term investment values represented by trees.

COMMERICAL FOREST LANDS OWNERSHIP

It is well to consider who owns the commercial forest lands that must produce the forest products needed by the Government, the general public, and forest industry now and in future years. The Federal and State Governments own 28 percent of the Nation's commercial forest land, with the Federal Government owning most of it.

Private forest lands comprise 72 percent of the total and account for 75 percent of the annual timber cut. Miscellaneous private owners, other than forest industry, own 59 percent of the private commercial forest area of the United States. Most of this is in the category of small ownerships.

RELATED FOREST FIRE PREVENTION PROGRAMS

In addition to our timber needs, we have many related programs depending upon a sound forest fire prevention program, such as soil and water conservation, game and fish, recreation, tourism, and others.

SUPPORT OF FOREST SERVICE BUDGET REQUEST

We earnestly solicit your favorable consideration by increasing the Federal funds for cooperative forest fire prevention in the amount of $3 million to strengthen and make possible a more realistic and effective program.

We wholeheartedly support the U.S. Department of Agruiculture, Forest Service budget items for State and private cooperative forestry programs. These include:

Cooperation in forest tree planting (unchanged from 1967)	$300,000
Cooperation in forest management and processing (contains $8,000 increase for Federal pay adjustments)	3,546,000
General forestry assistance	1,571,000

(Increase of $123,000—$23,000 for pay adjustments and $100,000 for hardwood improvement program.)

EXPRESSION OF APPRECIATION FOR NATURAL RESOURCES CONSERVATION SUPPORT

We deeply appreciate the opportunity to make known on behalf of all the States our request for the additional funds. We believe that a realistic and adequate forest fire prevention program is vital to the public and national interest.

It is a program too vast and far reaching for any single landowner or State to cope with, regardless of size. The support being given by State and local governments attests to their acceptance of this conservation program and need of assistance to achieve it.

On behalf of the State foresters of the 50 States, we thank you for the excellent support we have received from the Congress for the conservation of our natural resources.

Senator RUSSELL. I want to thank you, Senator Stennis, for giving us this opportunity to go first.

DECLINE OF FEDERAL PARTICIPATION IN COOPERATIVE FIRE PREVENTION PROGRAM

Mr. Chairman, you recall back in 1933, I believe, the first agricultural appropriation bill I handled, forestry being in the agricultural bill, I think this cooperative program, Clarke-McNary appropriation, I have forgotten the exact amount, but I think $1 million and a quarter or million and a half and the State was putting up about $8 million to $10 million.

Now, the States have gotten up to $90 million and the Federal Government has only reached $11 million or $12 million.

Chairman HAYDEN. Personally, I consider this one of the most important programs we have.

Senator RUSSELL. I recall that and I appreciate your statement.

Mr. SHIRLEY. Thank you so much.

I deeply appreciate the opportunity to appear before you.

Chairman HAYDEN. Senator Stennis.

Senator STENNIS. I defer to Senator Russell.

STATEMENT OF H. E. RUARK, DIRECTOR OF THE GEORGIA FOREST COUNCIL, MACON, GA.

FOREST RESEARCH NEEDS IN THE SOUTH

Senator RUSSELL. Mr. Ruark.

Chairman HAYDEN. The next witness will be Mr. H. E. Ruark, whose complete statement will be included in the record.

(The statement follows:)

Mr. Chairman, and members of the Committee, my name is H. E. Ruark. I am Director of the Georgia Forest Research Council with headquarters at Macon, Georgia. The Council is an agency of the State of Georgia. We are responsible for coordinating, developing, implementing, and encouraging forest research in the state. It is a pleasure to appear before your Committee to discuss forest research needs.

By the year 2000, economists assert, America's demand for wood will increase by eighty percent. The South will become the Nation's wood pile, since it must produce one-half of the country's requirements. As a matter of fact, by the end of this century, as much timber as is now cut each year in the entire United States must be harvested from the woodlands of the South. Obviously, her forests must be made more productive.

With the advance of civilization, land is being stripped of its forest cover to make room for the highways, power lines, airports, reservoirs, factories, homes, and shopping centers of a suburbanizing America. Such progress will necessarily bring about a shrinking forest land area from which the increasing needs for woodland raw materials must be met.

Accelerated forestry research is a must if maximum benefits and production from American forests are to be obtained. It is imperative, therefore, that we take the necessary steps now to increase the productivity of the remaining forest land. It is for this reason that I am appearing before you today. I request that the United States Forest Service's budget for Fiscal Year 1968 be increased as follows:

1. Forest tree improvement, Macon Research Center, Macon, Ga	$100,000
2. Forest survey:	
Southeastern Forest Experiment Station, Asheville, N.C	250,000
Southern Forest Experiment Station, New Orleans, La	250,000
Total	600,000

TREE IMPROVEMENT RESEARCH

Since the allocation of more land to forest production is not possible, it stands to reason that increased outputs of raw materials must come from the existing, or even a diminishing forest land inventory. To meet increasing wood requirements, forest lands must be made more productive. The availability of improved growing stock would boost timber production significantly. Tree improvement research is the best weapon in the arsenal of modern science and technology to attain this objective.

Since 1954 tree improvement research has been carried out at Macon, Georgia, by the U.S. Forest Service with the objectives of producing improved strains of southern pines and guiding reforestation efforts in the management of forest tree seed orchards.

During its twelve-year existence the project has established extensive outplantings of plant material resources. In all, 149,306 seedlings have been outplanted at eighteen locations. These plants contain combinations of traits that reflect the quality of their parent trees and the volume yield of wood which they will produce.

The seedlings represent not only a monumental task of experimental design for their outplanting but also offers a tremendous wealth of potential information upon which to evaluate trees with specific traits that are needed for tree breeding.

Major studies included in this project are:

(1) Progeny Testing Seed Orchard Clones.
(2) Racial Variation.
(3) Shortleaf-Slash Pine Hybrids.
(4) Breeding Southern Pines for Desirable Traits.

From these studies researchers have produced the first generation of improved southern pines, and the first improved seed is being produced in state and industrial seed orchards. An expanded research program is needed *NOW* to capitalize on the tremendous backlog of plant material available for breeding the second and third generations of improved trees.

There is a technological lag in tree improvement research—that lag must not be allowed to widen. Instead, it must be overcome with dispatch. Presently understaffed, the Macon Tree Improvement Research Project must have additional support, or an ever-widening gap will erase the opportunities which exist and the means to exploit those opportunities. Now is the opportune time for a bold step forward in tree improvement research at Macon.

Early outplantings which form the foundation for further work are reaching the point now that measurements can yield significant, meaningful data. The potential of this project is tremendous. Small pilot studies are revealing that volume yields of southern pine can be increased by 50%, and in some cases doubled by one generation of breeding.

To the best of its capabilities, a small staff of scientists and technicians carries out the studies listed previously. Much needed work goes undone, as each of the well-trained tree improvement workers does what time, weather, and budget limitations permit.

Needed immediately is $100,000. This increase will provide for the addition of vitally needed scientists and technicians as well as labor and administrative support.

From 1955 until now research scientists were heavily involved in selecting, breeding, progeny testing and in developing the new techniques needed for the breeding program. A larger staff and increased funds are needed now to further refine the breeding program with slash and loblolly pine, to begin new work with longleaf and shortleaf pine, and to begin new work with hybrids of the southern pines. Another vital need of the tree improvement research program is to combine desirable traits of growth, quality, disease and insect resistance into one strain suitable for mass production and outplanting. Competent professional guidance should be available to seed orchard managers to insure maximum cone production, proper handling of high quality seed and cones, suitable storage of improved seed, and appropriate fertilization and irrigation recommendations.

The addition of the professional and technical workers will enable much better utilization of skills. Scientists will be able to spend more time in the analysis, interpretation, and publication of data which have to a great extent been allowed to stagnate—simply because undermanning has not permitted the most effective allocation of time and talents to the tasks at hand.

$100,000 is needed now for tree improvement research.

FOREST SURVEY IN THE SOUTH

The information obtained from the Forest Surveys is in greater demand today than ever before by National, State and local governments, by Area Development Commissions, by forest industries and by private landowners. Up-to-date statistical forest survey data is required for purposes of planning forestry programs, for locating new forest-based industries, for guiding wood procurement and planning programs of existing wood-based industries, for planning major watershed programs, for planning and conducting wildlife and recreation programs, and for many other uses. The results of Forest Survey information are put to a more varied and wider use today than any other published results of Forest Service research.

The dynamic changes which are taking place in the South's timber resource picture reflect the aggregate expansion and growth of the wood-based industries. For example, in 1960 there were no pine veneer and plywood mills operating in the South. By 1965 there were 13 mills producing 821 million square feet annually, which represents an annual drain of 46 million cubic feet. Seven new mills are now under construction and eight additional mills are proposed. This is one of the most dynamic industry expansions in history.

While the plywood industry was experiencing this industrial boom, the pulp and paper industry expansion was just as vigorous. In 1960 there were 76 primary pulp and paper mills in the South that consumed 23 million cords of pulpwood. By 1966 the total number of mills had increased to 85 with an annual consumption of 31 million cords of pulpwood. Presently, nine new mills are under construction or have been announced. In addition to the new mills, practically every mill in the South that was in operation in 1960 has expanded its operations.

Key officials of the pulp and paper industry forecast that this industry in the South will require 75,000,000 cords of pulpwood annually by 1990. Total consumption in 1990 will be almost 2½ times greater than in 1966.

New technology and demand has also caused the lumber industry to expand. Many mills are automated and consequently fewer mills produce larger amounts of lumber. Slabs and edgings that were once burned are converted to marketable chips. Large diesel-powered truck-trailers transport several thousand board feet of lumber hundreds of miles overnight. Fork lift trucks enable the lumberman to move or load large packages of lumber onto trucks or railcars with ease. Quality southern pine lumber is reentering the mid-western and northern markets.

The United States Forest Service Forest Resource Report No. 17, "Timber Trends in the United States," indicates that there will be a sharp increase in sawtimber cut in the South between 1962 to 2000. Unfortunately, the net growth of sawtimber will continue to increase until about 1975 when it will peak and will begin to decline by 1982. Current forest surveys of course will keep forest planners abreast of such situations and measures can be taken to overcome any serious threat to our forest balance.

Current resource information is essential to guide this expansion, encourage systematic development, and prevent serious depletion of timber supplies in localized areas. Generalized, statewide trends indicate just how fast a particular inventory situation can be reversed, how quickly a favorable growth-to-cut balance can be upset, and how inventory depletion can occur. In localized areas of county size these dangers multiply and develop in shorter periods of time.

The present level of appropriations for the Forest Survey in the Southeast with the rising cost of operations has increased the intervals between remeasurements. Unless additional funds are provided, the intervals between surveys for each state will continue to increase. For example, the third forest survey for Georgia was completed in 1961 and the fourth is scheduled to be conducted from 1973 to 1976 . . . an interval of fifteen years.

Remeasurement periods of over eight years are likely to indicate resource trends which are completely erroneous and projections of future timber supplies which are unreliable. Short remeasurement periods of from 4 to 8 years will better identify cycles, reversals, and trends which are essential to the formulation of sound management decisions, and provide the statistical assumptions necessary in the preparation of reliable and realistic projections of the future timber supply.

Needed is $500,000 for the forest survey in the South:

$250,000 for the Southeastern Forest Experiment Station, Asheville, N.C.

$250,000 for the Southern Forest Experiment Station, New Orleans, Louisiana.

Mr. RUARK. Yes, sir.

Mr. Chairman and members of the committee, my name is H. E. Ruark. I am director of the Georgia Forest Research Council with headquarters at Macon, Ga.

The council is an agency of the State of Georgia. We are responsible for coordinating, developing, implementing, and encouraging forest research in the State. It is a pleasure to appear before your committee to discuss forest research needs in the South.

Economists claim there will be a tremendous upsurge in the demand for wood and wood derived products by the year 2000. These same economists also tell us that because of the expanse of forest land and the ideal growing conditions in the South the region must produce one-half of the Nation's wood requirements by the turn of the century.

The South must meet this demand despite the fact that millions of acres of forest land will be stripped of its forest cover to make room for highways, right-of-ways add many other requirements of a rapidly urbanizing nation.

It stands to reason then that the leaders of our Nation must take steps today to assure that America's demand for wood will be met from this diminishing forest surveys so that forestry planners and policymakers will have available current forest facts on which to make decisions of major consequence at the National, State and local levels.

TREE IMPROVEMENT RESEARCH

Accelerating tree improvement research is one means of being sure that the South will fulfill its role of furnishing one-half of the Nation's wood supply. The U.S. Forest Service's tree improvement research project at Macon, Ga. is in its 13th year. During this time an enormous storehouse of tree breeding material has been accrued.

In fact, during these 12-plus years of research a total of 149,006 seedlings are growing in test plantations established by tree improvement researchers.

Nowhere in America is there more advanced material and data for southern pine breeding than at Macon now. Nor does any other place have the quantity of breeding material. If these resources are to be fully exploited, $100,000 must be added to the Forest Service's budget at the Macon location.

The $100,000 requested at this time will provide only for essential scientists, technicians, labor and administrative support that are needed to initiate free breeding programs for producing the second generation of improved southern pines.

The tree improvement research project at Macon is in dire need of being strengthened if forestry is to move forward in the South.

FOREST SURVEY

With the occurrence of rapid changes in technology affecting the growing, harvesting, processing, and manufacturing of forest products it is essential that forest planners and users be aware of the most current changes that are taking place in the forests of the South.

Only through up-to-date information provided by forest surveys can planners effectively develop essential programs. Insufficient or inaccurate information is costly at all levels. Consequently, Congress is asked to appropriate a total of $500,000 additional funds to conduct the forest surveys for the southeastern and southern station areas of the U.S. Forest Service. The cost of current survey data is small compared to the values at stake.

Thank you for allowing me this opportunity to appear.

SUBCOMMITTEE PROCEDURE

Chairman HAYDEN. Any more witness?

Senator RUSSELL. The other statements will be more lengthy and I think Senator Stennis ought to proceed.

STATEMENT OF HON. JOHN STENNIS, A U.S. SENATOR FROM MISSISSIPPI

FOREST TREE SEED RESEARCH, STATE COLLEGE, MISS.

Chairman HAYDEN. Senator Stennis.

Senator STENNIS. If you insist, Mr. Chairman.

Mr. Chairman, I have a very brief statement here myself. I also have a brief statement by two other supporting witnesses. My personal knowledge on this matter is limited but nevertheless I do have some—I have planted some pine seedlings for more than 20 consecutive years.

I discovered it is a practical thing, the need for better planning in planting of these seedlings.

I have found out there are a whole lot of things we didn't know and other things have been given priority. So I have been plugging now for several years for a Tree Research Laboratory that can really carry on comprehensive research in this field.

It is strongly endorsed by Dr. Jemison, who has already been supplied some questions that I couldn't be here to ask at the actual hearing. There is a very modest amount of money involved for the lab, only $290,000.

Frankly, I don't think it is enough but it is being asked for now because that is the way the plans came out.

We already have, down at Mississippi, some of your best scientists working on this very problem, but in a very modest way.

SEED TECHNOLOGY LABORATORY AT MISSISSIPPI STATE UNIVERSITY

We have there, if I may say with modesty, insofar as field plants are concerned, a seed laboratory that has an international reputation. I was surprised to learn myself how high it does rate. I was surprised because I had not otherwise been apprised and I made a special trip up there and went through it.

The Forestry people here found out that was true. In other words, there is an all-around environment there of high-type scientists in this seed improvement field generally, but not yet enough for the forestry research which is required.

Now, we want to get this laboratory. We had this one last fall and the budget was fixed up, cutting back on highway funds and everything else. If they would just stop all of these other things and finish this war and put their concentrated effort on that; I would say let the laboratory wait, but if all of these things are going to ride along, I feel certain this then is of major importance and has been long delayed.

May I take just a very few minutes now for these gentlemen to come up here that are versed in this and say what they think about it?

PREPARED STATEMENT

Chairman HAYDEN. Certainly. We will insert your statement in the hearing record.

(The statement follows:)

As you know, I have for some time had a strong interest in the Forest Service research program in the South. I was pleased when Congress appropriated $20,000 in fiscal year 1966 for planning the Forest Tree Seed Research Laboratory at State College, Mississippi. It is my understanding that the architectural and engineering planning of that Laboratory has now been completed, and construction could be started as soon as funds are appropriated. It will cost $290,000 to build the Laboratory.

An excellent site for that Laboratory has been made available to the Forest Service by Mississippi State University. The site is on the campus of the University close to both a fine forestry school and the University's internationally famous Seed Technology Laboratory. The Seed Technology Laboratory has been in operation since 1950 and has gained recognition as the center of agricultural seed technology research in the United States and in the World. The close association of scientists with common interests will provide an excellent climate for the tree seed research program of the Forest Service and will be conducive to a most productive research program. The establishment of the Forest Service Laboratory at that location has the enthusiastic endorsement and support of Mississippi State University, its College of Forestry, and the Southern Seedmen's Association.

The Forest Service tree seed research program is aimed at developing comprehensive knowledge of most effective methods of collecting, processing, storing, treating, and sowing tree seed to maintain or enhance its capacity to germinate successfully. It will include study of the physiology of seed ripening, durability, dormancy, and germination. It will include study of effective ways to treat seeds to stimulate germination and to repel birds, rodents, and insects. An early step in this research will be the up-dating of the *Woody Plant Seed Manual*, a definitive manual first published by the Forest Service in 1948. I am told demands for an up-to-date version of that manual are increasing steadily.

By making some program adjustments, the Forest Service has made available the services of an excellent scientist to lead its program at State College. This has made possible a good start in the very significant program of research planned. An appropriation increase of $75,000 will be needed to strengthen the work to the point where its objectives can be realized in a reasonable length of time.

I am convinced that the contemplated Forest Service program will be an excellent investment that will yield valuable benefits in improving our forest resources. It is well justified and deserving of our strong support. I urge you to join me in supporting this essential program and the modern facility needed to provide for its most effective accomplishment.

STATEMENT OF JOHN W. SQUIRES, REPRESENTATIVE, SOUTHERN HARDWOOD FOREST RESEARCH GROUP, JACKSON, MISS.

HARDWOOD RESEARCH

Senator STENNIS. If that is in order, I have Mr. Squires here, who, I believe has a very brief statement.

Mr. SQUIRES. That is right.

Chairman HAYDEN. Senator Stennis.

Senator STENNIS. Whom do you speak for?

Mr. SQUIRES. I speak for the Southern Hardwood Forest Research Group, and my name is John W. Squires, from Jackson, Miss.

This group found that hardwood research was not keeping up with the research in pine.

Senator STENNIS. You are talking about another matter different from what I was talking about. You better give background.

Mr. SQUIRES. I want to mention yours when I get through with this group, Senator.

LABORATORY AT STONEVILLE, MISS.

To begin with, the hardwood research was lagging and thanks to the Congress we got enough money to build a fine laboratory at Stoneville, Miss.

Senator Stennis came down and dedicated that building and it is going along fine.

FORESTRY IN THE SOUTH

Forestry contributes a great deal to our Southern States along the Mississippi River. In our State of Mississippi it amounts to $700 million a year income.

In Louisiana it is already up $1 billion. In Tennessee and Arkansas, it is $500 million. A good many industries are involved in the manufacture of wood products.

In the last 3 years in our State we have had 67 new plants built to manufacture wood products with a total investment of over $300 million.

Now, the payoff, though, is the jobs. Those industries have created 10,000 new jobs in our State.

FOREST TREE SEED RESEARCH, STATE COLLEGE, MISS.

So you can see it is very important to us. Now, to get to the Senator's statement about the need for a seed laboratory at State College, that subject is particularly of interest to we in the hardwood end of it. We have found we could get the right seed to germinate properly and planting has been a problem with hardwood.

We think that seed laboratory is certainly needed, as the Senator has said—$290,000—but we think we need $100,000 to operate it once we get it built so it is very important, Senator.

LABORATORY AT STONEVILLE, MISS.

Now, the one subject, getting back to the hardwood, last year the Senator talked to us and we asked for $250,000 at Stoneville Laboratory and we missed it, we got $125,000 and, of course, that helped but we feel we desperately need the other $125,000 to step up and do the research on hardwood that is lagging so badly and is so badly needed particularly in disease and insects and that sort of thing.

FOREST SURVEY

Now, I am a member of the Department of Agriculture Forestry Research Advisory Committee. We met in Madison last year. I want to endorse this item on the need for a forest survey.

That is lagging, particularly at a time when there is more industries going in and on this item the Forest Service needs $500,000, I think that is in order.

Now, Senator, I am finished.

Senator STENNIS. Excuse me, that is the item Mr. Shirley testified about.

Mr. SQUIRES. That is right.

PREPARED STATEMENT

Senator STENNIS. Do you have a prepared statement?

Mr. SQUIRES. I have filed that statement, Senator.

(The statement follows:)

Mr. Chairman and Members of the Subcommittee: Forestry contributes nearly 700 million dollars annually to the economy of Mississippi. It adds almost a billion dollars to Louisiana's income. Arkansas profits to the tune of over half a billion as does Tennessee. Similar returns are being experienced by other states. And this income is increasing. My home state of Mississippi is an example; in the last 3 years, 67 new wood-using industries have been announced along with many expansions of established plants. This represents new capital investment of over 300 million dollars and provides 10 thousand new jobs.

Over the years, the native broad-leaved trees, or hardwoods as they are called, have been the essential raw material for about half this industry. Pine, too, is a vital part of the industry. Research in the southern coastal plain in the '30s and '40s concentrated on improving knowledge about growing and using the southern pines. This work, of course, should be continued. A beginning was made on hardwood research in the late '40s, and in the early '50s, the Southern Hardwood Forest Research Group joined with the U.S. Forest Service to help finance a doubling of the effort at what is now the Southern Hardwoods Laboratory at Stoneville, Mississippi.

Congress has seen fit to gradually increase the financing of the research program in the late '50s and in more recent years. Gentlemen, let me report that your recognition of the need for more knowledge about managing the Nation's vital resources has provided a soundly based research program contributing annually and directly to the improvement of forest management. One of the finest examples of the meaning of this research was observed at a recent south-wide meeting of the Southern Forest Soils Council.

Over a hundred forest managers, primarily from industry, attended a short course led by scientists at the Southern Hardwoods Laboratory where research in the relationships of hardwoods to the many sites on which they occur was translated into readily understood recommendations. Both auditorium and field discussions showed these managers of millions of acres of forest land the immediate applicability of soil-site research. And this example is only one of many.

There are other needs that must be filled if we are to continue our progress in the field of forest research, but today I want to direct your attention to two items for which additional funds are immediately needed. The first is to continue the gradual build-up of the research effort at the Southern Hardwoods Laboratory where $125,000 is needed to accelerate planting, harvesting and insect control research. Already planting and forest management recommendations have been developed that have us well on the way, but knotty problems are demanding a sophistication of research to find more fundamental truths as we intensify forestry practices. This takes much time of talented scientists. For example, development of elementary planting methods for some hardwoods has allowed this intensive forestry measure to come out of its infancy for hardwoods. Now there is demand for knowledge of how to further accelerate growth through fertilization, cultivation, improved planting stock, insect and disease control, even irrigation of tree crops. Each area requires "in-depth" research.

Another of the areas requiring basic reseach is in the physiology of tree seed. We need to more precisely control the germination of acorns, for example, as techniques are developed to reseed rundown forested areas. This research, along with other fundamental seed research, needs to be concentrated in a seed research laboratory now being planned by the Forest Service at State College, Mississippi. We in the hardwood industry, support the construction of this laboratory for which preliminary plans are already prepared by an architect. It is my understanding that at least $290,000 is needed for this construction.

In summary, gentlemen, I strongly recommend, as chairman of the Southern Hardwood Forest Research Group, that you approve increases of $125,000 for research in Southern Hardwoods at the Southern Hardwoods Laboratory and a minimum of $290,000 for construction of a seed research laboratory at State College, Mississippi.

STATEMENT OF CHARLES F. CARLTON, REPRESENTATIVE, SOUTHERN HARDWOOD FORESTRY RESEARCH GROUP, DELTA COUNCIL, AND LOUISIANA FORESTRY ASSOCIATION

FOREST TREE SEED RESEARCH, STATE COLLEGE, MISS.

Senator STENNIS. Mr. Chairman, Mr. Carlton has a statement that he can put in the record if you gentlemen would give him a couple of minutes to mention the high point of it, that would finish the tree seed laboratory group.

Chairman HAYDEN. That may be done.

(The statement follows:)

STATEMENT OF SOUTHERN HARDWOOD FOREST RESEARCH GROUP AND DELTA COUNCIL

RESEARCH ACTIVITIES AND NEEDS FOR SOUTHERN HARDWOODS AT THE SOUTHERN HARDWOODS LABORATORY

Mr. Chairman and Members of the Subcommittee: The goal of the research at the Southern Hardwoods Laboratory, maintained by the U.S. Forest Service at Stoneville, Mississippi, is the development of knowhow to triple the production per acre of the hardwood forest. Seventy million acres of this basic resource furnishes 40 percent of the raw material needed by southern wood-using industries today. The land area base is shrinking with the conversion of some of the best hardwood lands to farming, water impoundments, and other uses. Over a million acres of the lower Mississippi Valley have been cleared in the last four years. Eventually maximum hardwood forest production through improved management will be essential to meet the expanding demands for hardwood.

Active financial support of over 50 industrial and private landowners from throughout the South and from Mississippi State University has greatly aided this work for the past 15 years. Laboratory, greenhouse, nursery and field studies are underway to develop insect and disease controls, improved planting stock, better regeneration techniques, ways to manage developing stands, and harvesting procedures for appropriately inventorying and processing timber. Three experimental forests and experimental areas furnished by cooperators are available to supplement excellent laboratory facilities.

The Forest Service has been able to meet the steadily increasing demands for research as Congress has seen fit to provide funds. Fifteen professionals are now active on approved research projects requiring scientists in soils, pathology, entomology, genetics, physiology, mensuration, wood technology, and silvics. During the last six years, buildings and greenhouses have been erected to allow fundamental studies aimed at solving some of the tougher problems.

This scientific community has the background and supporting facilities and cooperators to move ahead at a better pace. Seventy-seven publications report results of research in the last six years. Some of these papers are aimed at the forest manager who puts their recommendations into immediate use; others provide progress reports along the way to the solution of problems.

Following methods developed by the Laboratory at Stoneville, major landowners have established hardwood plantations of commercial size. A manual written by scientists at the Lab is the only complete treatise available to guide the forest manager as he begins management to improve the production of native southern hardwood forests. These and other contributions already at hand from the research can double the present production of the hardwood forests as the principles they define are put into practice.

Needs for research in silviculture and insects: Significant progress is being made at Stoneville, but there is demand for acceleration of research as markets for quality logs and pulpwood continue upward. To continue development of the research program to an adequate level, an increase of $125,000 is needed for Fiscal Year 1968.

Additional money provided in FY-1967 by Congress allowed research to begin in the swamps of southern Alabama, Mississippi, and Louisiana where the cypress-tupelo forests prevail. Also, improved financing has allowed the employment of a scientist to study nutrient requirements of sweetgum, cottonwood and the oaks to improve planting recommendations.

The strengthening of tree improvement research in southern hardwoods is now necessary. Extensive test plantings of progeny from apparently superior trees of cottonwood and sweetgum must be continued and maintained. New research to improve valuable southern oak species needs to be expanded. An able, experienced scientist has now advanced the work at the Stoneville Laboratory to the point where he must have an associate to move ahead on the scale demanded by the quantity of work. An idea of the meaningfulness of improved strains can be found in cottonwood where it is felt sure the research will soon produce a tree that will uniformly yield a 15 percent greater return than average trees. Plantations of this species are now being established at the rate of about 4,000 acres per year and the rate is expected to increase.

The hardwood forest is pre-eminent as a game habitat. However, herds of deer now threaten regenerating hardwoods. Research has been started in an attempt to provide repellents or alternate food supplies, but it is apparent that a concentrated research effort must be undertaken to solve this and related problems. A scientist with background in animal and plant biology is needed now to work closely with researchers in forest management to determine ways to alleviate or prevent this damage to assure good timber crops while the forest continues to satisfy the ever-increasing demand for game hunting.

A multiple product inventory system coupled with a harvesting procedure which will utilize the quality of round product for its most valuable end use must be developed. Additional assistance is necessary to get at this problem.

Although space will not allow recounting all of the insect research underway at the Laboratory, one of the important areas of research is concerned with the carpenterworm, which bores in living trees without killing them. These tunnels create degrade that amounts to millions of dollars annually. Mill-scale studies have shown that an annual loss of 41 million dollars is sustained in oaks degraded by the boring carpenterworm. Current research is pointing the way toward the solution of this problem. However, additional research is needed to hasten the solution. As the demand for more knowledge about planting and seeding of southern hardwoods builds up, it becomes necessary to accelerate insect protection research for seed and for planting stock. This cannot be done without greater assistance in the scientific staff of the Forest Insect Project at Stoneville.

Tent caterpillars keep tupelo and sweetgum forests defoliated the majority of the growing season. In addition, these insects strip the trees of seed-producing flowers. Growth rates have declined markedly and much mortality is noticed in over three million acres of forest. The majority of this forest is located in southwest Alabama and southern Louisiana. A reduction in growth by 50 percent amounts to a loss of 25 million dollars annually. Early research has tested chemical controls, but damage to fish causes wildlife scientists to oppose chlorinated hydrocarbons. Work toward discovering virus controls should be started, but additional scientific assistance will be required.

An increase in support of the research program at the Southern Hardwoods Laboratory in the amount of $125,000 is essential if the program is to move forward at a rate to yield results in time to balance growth with demands of the growing population and a reduced area suitable for supplying hardwoods. Actually, we are already late in adequately financing the research for this valuable and renewable nature resource and raw material for industry. Benefits will far exceed costs and the Subcommittee's approval is strongly urged.

Needs for research at the Seed Research Project: The Subcommittee's attention is invited to the needs of research at the Seed Research Project at State College, Mississippi. In 1966, the Forest Service established this project for work on the technology and physiology of seeds of eastern tree species. This project is located on the Mississippi State University campus and is under the administration o fthe Southern Forest Experiment Station at New Orleans, Louisiana. The principal objectives of the project are to (1) develop and prove methods of collecting, processing, storing, and testing seeds of important species, and (2) determine means for speeding the germination of these seed. The immediate research will be concentrated on the valuable southern hardwoods because of our great lack of knowledge of these species. Research findings will have nationwide application in forestry and will be especially valuable to the rapidly expanding tree improvement programs. Genetically superior seed is now being produced and its high production costs make improvement in our technology for tree seed imperative. The Seed Technology Laboratory at Mississippi State University is internationally recognized as one of the world's finest agronomic seed research groups. The Forest Service project was located at State College to work cooperatively with the Mississippi State University scientists. The meeting of the project's objectives will require adequate laboratory and supporting facilities. Work is currently conducted in borrowed and rented facilities from various departments of Mississippi State University, but the research effort is greatly limited by this arrangement. Preliminary plans for laboratory construction are completed, and $290,000 is needed for construction in FY 1968.

General: The Southern Hardwood Forest Research Group, representing over 50 industries, is very grateful to the Subcommittee and to the Congress for implementing this important hardwood research program in a manner that has permitted the full and effective utilization of appropriated funds. At the same time, the Group has tried to exercise sound judgment in its requests. The $125,000 is the amount that is urgently needed and that can be efficiently and effectively used in FY–1968 to advance the over-all program of research that is underway in southern hardwoods. In addition, the $290,000 to build a tree seed research laboratory for fundamental studies of both hardwood and softwood seed is recognized as being of great importance and has the strong support of the Group.

Your Subcommittee is urged to recognize that the research program for southern hardwoods must look a long way into the future if progress is to keep up with demands being made on forest crops. The Group would like to point out, also, that there are other important problems in southern hardwoods on which no studies have yet even been started because of insufficient scientists and funds. It is the sincere hope of the members of this Group that the Subcommittee and the Congress will give attention to these problems in future years and that funds will be made available for this work. It is only through the solution of these problems by research and the application of research results on forested acres that this great natural resource can be effectively utilized.

Senator STENNIS. Who do you represent?

Mr. CARLTON. Charles F. Carlton, from Mississippi, forester for a small hardwood timber growing company down there.

I represent the Southern Hardwood Forestry Research Group, Delta Council, and the Louisiana Forestry Association.

If you will permit, I want to first lend the support of these groups to Senator Stennis' much-needed and well-planned laboratory at Mississippi State. The subcommittee's attention is invited to the need of research at the seed research project, State College, Miss.

In 1966, the Forest Service established this project for work on the technology and physiology of seeds of Eastern tree species. This project is located on the Mississippi State University campus and is under the administration of the Southern Forest Experiment Station at New Orleans, La. The principal objectives of the project are (1) to develop and prove methods of collecting, processing, storing, and testing seeds of important species, and (2) determine means of speeding the germination of these seed.

HARDWOOD RESEARCH

As you know, some of our hardwood seeds have such thick hulls on them that the seeds sometimes laid for more than a year before germination and we feel we need to improve this.

The immediate research will be concentrated on the valuable southern hardwoods because of our great lack of knowledge of these species. Research findings will have nationwide application in forestry and will be especially valuable to the rapidly expanding tree improvement programs.

Genetically superior seed is now being produced and its high production costs make improvement in our technology for tree seed imperative.

SEED TECHNOLOGY LABORATORY AT MISSISSIPPI STATE UNIVERSITY

The Seed Technology Laboratory at Mississippi State University is internationally recognized as one of the world's finest agronomic seed research groups. The Forest Service project was located at State College to work cooperatively with the Mississippi State University scientists.

The meeting of the project's objectives will require adequate laboratory and supporting facilities. Work is currently conducted in borrowed and rented facilities from various departments of Mississippi State University, but the research effort is greatly limited by this arrangement. Preliminary plans for laboratory construction are completed, and $290,000 is needed for construction in fiscal year 1968.

BUDGET REQUEST SUPPORT

The Southern Hardwood Research Group, representing over 50 industries, is very grateful to the subcommittee and to the Congress for implementing this important hardwood research program in a manner that has permitted the full and effective utilization of appropriated funds.

At the same time, the group has tried to exercise sound judgment in its requests. The $125,000 is the amount that is urgently needed and that can be efficiently and effectively used in fiscal year 1968 to advance the overall program of research that is underway in southern hardwoods.

In addition, the $290,000 to build a tree seed research laboratory for fundamental studies of both hardwood and softwood seed is recognized as being of great importance and has the strong support of the group.

Your subcommittee is urged to recognize that the research program for southern hardwoods must look a long way into the future if progress is to keep up with demands being made on forest crops.

The group would like to point out, also, that there are other important problems in southern hardwoods on which no studies have yet even been started because of insufficient scientists and funds.

Thank you very much.

VALUABLE HARDWOOD TYPES

Senator **Stennis**. You put all of your statement in the record.

Mr. **Carlton**. The entire statement is in the record.

Senator **Russell**. As I look through your statement I didn't find you mentioned any particular type. You referred to the more valuable types of hardwood. What do you catalog as the most valuable types of hardwood?

Mr. **Carlton**. Senator, some of the concentrated effort is being put in yellow poplar, old type hardwood which dominates the southern scene very common to Georgia.

Cherrybark oak, sweet gum, and genetic studies are being made to find ways and means of reproducing these species more easily and economically and also in this superiority program, in other words, seeds are being gathered from superior trees and being geminated and outplanted.

Senator **Russell**. Do you include walnut oak, any of the old hardwood in use?

Fundamental Studies on Four Types

Mr. **Carlton**. I am sorry to say, Senator, we are so far behind in our hardwood research we are in a position of having to pro rate. While there are 15 or 20 very important species, cherry bark oak, yellow poplar, cottonwood, and sweet gum, four are all we can afford at this time to even begin fundamental studies on.

HARDWOOD USAGE IN PLYWOOD

Senator **Russell**. You are already using a good many of those types in plywood and things of that kind?

Mr. **Carlton**. Yes, sir. As a matter of fact, we are losing ground.

Senator **Russell**. Well, you should know something about them.

Mr. **Carlton**. We do know something, but not enough. I am a field forester and I am sorry to tell you we are flying blind in this field compared to the amount of research that has been done in pine in the area that this Stoneville station will serve where there are at least five research centers doing research on pine, this center at Mississippi is serving a seven-State area.

Senator **Stennis**. For hardwood?

Mr. **Carlton**. Yes.

Senator **Russell**. I am in favor of the work being done. I was interested in what you really thought were the valuable types.

Frankly, I am not in forestry. I am surprised about the poplar hardwood.

Mr. **Carlton**. Hardwood forestry is complex. Some of our hardwoods are softer than some of the soft woods. The soft woods are needlebark or evergreen.

Senator **Russell**. I can see where you need research all right.

Hardwood Importation

Mr. Carlton. I would like to add that this plywood business has boomed to the point that our imported hardwoods are making up the deficit. Our native hardwoods are losing ground.

Senator Russell. They import at a great rate

GEORGIA PACIFIC RAILROAD LAND PURCHASES

Senator Stennis. We know we are on a trail down there because the Georgia Pacific is coming in and buying land right and left. They are wise people.

Senator Russell. They started in Georgia but have spread all the way to the west coast.

Senator Stennis. They are people of vision. Thank you very much, Mr. Chairman.

STATEMENT OF HON. CHARLES H. PERCY, U.S. SENATOR FROM ILLINOIS

Southern Illinois

INTRODUCTION OF WITNESSES

Chairman Hayden. Senator Percy.

Senator Percy. Mr. Chairman, I very much appreciate the opportunity to speak on behalf of an area of our State that I know rather well.

I think I have traveled more miles in this area than any other politician in the last 3 years.

Senator Paul Douglas before me was very deeply interested in southern Illinois. Senator Dirksen feels so strongly about it that he wanted very much to be here this morning, but, as you know, he is in the hospital. He asked me to come and present Dr. William J. Tudor, assistant to the vice president of Southern Illinois University, and Mr. Don Gott, executive director of the American Walnut Manufacturers Association, and Mr. Howard Gatewood, executive vice president of the Fine Hardwoods Association.

AREA POVERTY AND DECLINING POPULATION

Our concern for the welfare of southern Illinois is great; for, even though Illinois is a wealthy State, a vast area of the State is in need of assistance.

In some counties we have as many as a quarter of the population on public welfare. We have had, over a period of many years, a declining population, and many factors have caused people to leave southern Illinois.

They have left mainly because they cannot find employment. We have worked very hard indeed, along with Southern Illinois University, to find out what we can do ourselves to help develop the area.

GEORGE ROGERS CLARK RECREATION WAY

The Shawnee National Forest is one of the Nation's great scenic areas, but unfortunately it is still largely underdeveloped. We feel that the highest priority in southern Illinois is to open up the area to its full tourist potential and the highest priority project is the George Rogers Clark recreation way.

PROJECT BENEFITS

Studies have shown that initially this scenic road would produce direct annual expenditures in a single year of about $8.5 million and that by 1976, the 29 counties of southern Illinois could expand their tourist and recreation business by an annual expenditure by tourists of $123 million.

This would create in southern Illinois 6,000 new jobs, 70 percent of which could be filled with people living in the area. People can stay in their own land rather than crowding up into the major cities.

This is a way to take people off of public aid rolls and put them on private payrolls. The Government expenditure would be very small and modest indeed compared to the money that would be put in by private industry.

DEFICIT FINANCING AND BALANCING OF PRIORITIES

Mr. Chairman, I know that now is not a good time to overly burden an already overburdened budget. Our problems in Vietnam are very great, we face a deficit, and I have not operated in any organization in my life, in business or in education, with a deficit budget. This is my first experience at it, being now in public service.

I don't want to unnecessarily add to that debt. On the other hand, I think it is more than ever important that we establish priorities. Projects that can be begun with a modest amount of Federal funds used as seed money to attract a greater expenditure of private funds should, I believe, receive priority.

I think I can say in all honesty that the projects which Dr. Selyte W. Morris, president of Southern Illinois University, discusses in his prepared statement—and I will put it into the record this morning with your permission—fall into the high-priority category.

PROJECT ECONOMIC POTENTIAL

The private sector of the economy can provide a sound basis for prosperity in southern Illinois if only the Government will lay the foundation with good roadways and recreational potential.

Having traveled almost every road in southern Illinois and then all over the country as well, I think these are some of the worst roads that exist any place in the United States. I don't see how this area, without good roads, can begin to attract the recreational and tourist trade that would otherwise be brought in by the natural beauty of southern Illinois:

Mr. Chairman, in southern Illinois, the establishment of these recreation areas is of paramount importance. I know that Paul

Douglas before me has spoken deeply and strongly about this particular area. He devoted a great many of his years to finding ways to improve the quality of life in the area.

ENGINEERING AND RECREATION SURVEYS

Dr. Morris is requesting $260,000 for an engineering and recreation survey. This figure comes from an intensive private survey that was prepared on behalf of the Shawnee National Forest.

It suggests that $220,000 is needed for engineering surveys and $40,000 for recreation surveys. The estimated total cost of the recreation corridor is $42.5 million, but we need to get started now. I think even in times of budget stress an item of $260,000 for this seed money can be found.

AREA UNIVERSITY AND YOUTH

Before introducing the fine gentlemen that are here from Illinois with me, I should first like to mention that southern Illinois contributes a great deal to the Nation. Last Saturday, at Madison Square Garden, we contributed the National Invitational Champions—Southern Illinois University.

It is a university that has risen by its own bootstraps and has done a magnificent job in many areas. But, we do not want the fine young men and women in the area to grow up and be forced to move to the cities because there is no opportunity for them in southern Illinois. We want to make it a fine place in which to work as well as live.

RECOGNITION OF MR. HUGH O'BRIEN

In closing, I would like to introduce a distinguished guest who was here this weekend because he brought the group of "Guys and Dolls" to the White House Saturday night to entertain the 50 Democratic and Republican Governors. I would like to introduce Mr. Hugh O'Brien, who has been depicting for years on television the famous sheriff, Wyatt Earp, one of our famous characters from the West. Mr. O'Brien is a native of Illinois and was a schoolmate of mine at high school. Before going back to New York he is observing how the Congress of the United States operates. I welcome you, sir, and appreciate your attending this meeting.

STATEMENTS OF E. HOWARD GATEWOOD, EXECUTIVE VICE PRESIDENT, FINE HARDWOODS ASSOCIATION, AND DON GOTT, EXECUTIVE DIRECTOR, AMERICAN WALNUT MANUFACTURERS ASSOCIATION, CHICAGO, ILL.

INTRODUCTION OF WITNESSES

Senator PERCY. May I present now, Mr. Chairman, Dr. Tudor, vice president of Southern Illinois University.

Chairman HAYDEN. Glad to have you, sir.

Mr. TUDOR. It is good to be with you again, Mr. Chairman, and I would like to introduce, first, Mr. Howard Gatewood, who is the executive vice president of the Fine Hardwoods Association, from Chicago, and Mr. Don Gott, who is executive director of the American Walnut Manufacturers Association, also from Chicago.

I will let them speak first and would like to summarize my statement briefly in closing.

HARDWOOD FORESTRY RESEARCH IN EASTERN UNITED STATES

Mr. GATEWOOD. Thank you very much. Good morning, Chairman Hayden and Senator Russell.

I have a statement here which I would like to submit for the record, but, if I may be permitted, I would like to highlight it for a few minutes.

FUNDING INCREASE

My primary purpose in being here is to recommend that you increase Forest Service appropriations for next year and in the years immediately ahead to strengthen the hardwood research work they have underway in Eastern United States.

I must admit that I cannot give you precise long-term cost estimates for this program but am confident that the Forest Service could provide firm estimates. Quite probably the annual long-term costs would fall between $3 and $4 million.

So that the most urgently needed hardwood research can be started immediately, I recommend that $2.3 million be added to the Forest Service budget for next year. This increase should be distributed among existing Forest Service research offices in Eastern United States where work in growing and protecting hardwoods is already in progress.

DEPLETION OF HARDWOOD TREES

When our Nation was first settled we had an abundance of magnificent hardwood trees. Over the ensuing years they were cut for many purposes. Products from some of the hardwoods with attractive grain, beautiful color, excellent machining qualities, and other desirable characteristics have become traditional features of our homes and offices.

MANUFACTURE OF HARDWOOD AND INCOME FROM PRODUCTS

Furniture made of walnut, cherry, maple, pecan, and birch; flooring of oak and maple; and rich paneling of these and other fine hardwoods are examples. We live, work, sleep, and play in environments graced by the warmth and beauty of hardwoods. And many of our necessities are provided by hardwood products, such as news and magazine printing papers, milk cartons, and cardboards used to ship the vast quantities of goods we consume each year.

Thus, timber products made from eastern hardwoods add to the enjoyment and amenities of our everyday life as well as supply the necessities. In doing so, they contribute strongly to our economic well-being.

To illustrate, about $7.5 billion is added annually to our national economy by the manufacture of hardwood forest products, and approximately 5 percent of all payroll employees in manufacturing industries in the United States work in hardwood products industries.

HARDWOOD DEPLETION AND IMPORTATION INCREASE

Because of heavy demands for timber products, as well as losses from wildlife, insects, diseases, and wild animals, our eastern hardwood forests are producing well below their full potential. This is especially true for the grades and species of timber that have been, now are, and will continue to be in heavy demand for high-value uses, such as veneer trees of walnut, cherry, birch, maple, oak, poplar, gum, and pecan.

Less than one-third of our total hardwood sawtimber reserve in the Eastern United States is in the best two grades of logs that meet the requirements of many dependent industries.

In the face of existing and impending shortages, demand for high-grade hardwood timber products has been increasing and is expected to continue this upward trend.

Hardwood lumber production increased slightly in 1966 over 1965. Hardwood plywood consumption was about 13 percent greater in 1966 than in 1965 and more than double the level of a decade ago. Because of shortages in domestic supplies of hardwoods and other factors, hardwood veneer imports in 1965 were 2.6 times greater than in 1955.

INCREASING USE OF HARDWOOD FOR PULP AND PAPER PRODUCTS

Concurrent with the supply-demand situation for high-value hardwoods I have just outlined, there is a strong uptrend in the use of hardwoods for pulp and paper products. This is occurring throughout the East but is especially apparent in the South, the Appalachian region, and the Midwest.

To illustrate, hardwood pulpwood production in 1966 was about 14 percent greater than in 1965. The use of hardwoods for pulp products is expected to quadruple by the year 2000.

Although the demand-supply situation I just described appears quite dark, there are some breaks in the clouds.

HARDWOOD FOREST ACREAGE

To start with, we have 260 million acres of hardwood forests in Eastern United States. This gives us a good basic resource that can be improved. We also have some knowledge from Forest Service research that is guiding improvements now in progress.

RESEARCH REQUISITE

And we are confident that the situation can be greatly improved by strengthening hardwood forestry research program now and in the next few years. My association is not alone in believing that a stronger research program is the most direct route to a permanent improvement in the situation I have described.

For example, at their recent national meetings both the National Forest Products Association and the Hardwood Action Council adopted resolutions urging research aimed at improving hardwood timber growing techniques.

If we are to rebuild our eastern hardwoods quickly and efficiently, while at the same time meeting current demands for timber products, a much greater research program should be started immediately. It should, I feel, serve the needs of all hardwood forest landowners and industries and be concentrated upon:

1. Improving young natural hardwood stands through such techniques as thinning, weeding, pruning, and fertilizing, with special attention to select trees of the prime species.
2. Controlling hardwood growth, especially to improve timber grades.
3. Using agronomic methods to plant select species such as walnut, cherry, birch, pecan, gum, and maple for rapid growth of top-quality trees.
4. Improving genetically, through selection, breeding and propagation, all the prime species.
5. Controlling lethal and degrading insects and diseases.
6. Controlling wildlife and animal damage.
7. Developing economic systems for profitable management of hardwood forests and plantations under intensive culture.

RESEARCH PROGRAM RECOMMENDATION

I recommend that the Forest Service be encouraged to plan and promptly undertake a stronger research program in hardwoods that has the objectives I have just listed. This work should, I feel, be done at locations in Eastern United States selected by the Forest Service.

For example: (1) on walnut at Carbondale, Ill.; (2) cherry at Warren, Pa.; (3) insect and disease control at Hamden, Conn. and Delaware, Ohio; (4) genetics at Rhinelander, Wis.; (5) bottomland and delta hardwoods at Stoneville and Starkville, Miss.; New Orleans, La., Charleston, S.C., Athens, Ga., and other appropriate locations in the South.

PROGRAM FUNDING

I further recommend for your consideration that $2.3 million be added to the Forest Service appropriation bill you are preparing so that they may start immediately the expanded hardwood research program I have outlined.

Our association would like to express our appreciation to you for giving me this opportunity to discuss with you the need for a sharply strengthened hardwood research effort in Eastern United States.

We hope that we may count on your assistance in getting the work underway immediately.

HARDWOOD UTILIZATION LABORATORY, CARBONDALE, ILL.

Senator RUSSELL. I seem to recall 12 or 15 years ago, at the request of Senator Dirksen, we requested some hardwood utilization laboratory activity out in Illinois. Is that still in existence?

Mr. GATEWOOD. It is in Carbondale. I will report on it.

Senator RUSSELL. I remember we had difficulty with it in Congress. At that time I was handling the forestry item in the appropriation bill. That is still functioning.

Mr. GATEWOOD. Very much so.

STATEMENT OF MR. GOTT

Mr. GOTT. Mr. Chairman, may I express my appreciation to appear before you and Senator Russell as I have done the last several years.

With your permission, I have a full statement to file plus figures from the Department of Census.

Chairman HAYDEN. That will be included in the record.

Mr. GOTT. Thank you, Mr. Chairman.

(The statement and statistics follow:)

My name is Donald H. Gott. I am Executive Director and Secretary for the American Walnut Manufacturers' Association with headquarters in Chicago, Illinois.

Over the past few years I have had the privilege and pleasure of appearing before this Subcommittee to seek your help in getting a stronger Forest Service research program in growing walnut and other native hardwood timber. I deeply appreciate these opoprtunities and want to thank you for your generous assistance.

My reason for appearing before you today is to ask for your continuing support of hardwood forestry research programs of the Forest Service, especially with the high-valued grades and species that are either now or are likely to be in short supply. These include such trees as walnut, cherry, birch, gum, ash, maple, pecan, and poplar.

Specifically, I recommend that you add $725,000 to the Forest Service budget you are preparing for immediate strengthening of the research they are doing in growing, protecting and improving prime hardwoods. These funds should be used to accelerate the work already under way at their laboratories in the North Central part of our nation, for example, at Rhinelander, Wisconsin; Carbondale, Illinois and Ames, Iowa.

My colleague, Mr. Gatewood, of the Fine Hardwoods Association, has just given you a statement about the need for a much greater research program in protecting and growing hardwoods. I fully support his statement and recommendation that $2.3 million be added to Forest Service appropriations for next year to strengthen substantially on-going hardwood research. But, rather than repeat this information I will illustrate the over-all situation by reviewing with you our problems in obtaining an adequate supply of walnut timber.

My Association is composed of 24 companies which are engaged in processing black walnut veneer and lumber into a variety of products—paneling, furniture, gunstocks, novelties, and musical instruments. Our members produce more than two-thirds of all walnut veneer made in the United States. The domestic walnut industry, in itself, furnishes employment for many people in Central and Eastern United States as well as providing a lucrative market for walnut tree growers throughout this area. Furthermore, a major segment of our furniture industry depends upon walnut veneer and lumber for its products. These American industries operate over 6,000 plants and employ 200,000 people with an annual payroll of $850 million. They manufacture and ship annually consumer products valued in excess of $2 2/3 billion. It is highly significant that of all our domestic hardwood veneers, walnut makes up 52 per cent of that consumed in the United States.

Since the United States was first settled, walnut has been one of our most treasured and valuable woods. It is held in high esteem by designers and architects for many high-valued uses because of its uniquely beautiful grain, hardness, strength, and durability combined with excellent machining and finishing properties. I am sure you are familiar with these fine characteristics because I have seen walnut desks, chairs, and paneling in congressional offices and buildings here in Washington.

The walnut producing and furniture industries and the people of the United States now are threatened with the loss of this fine wood. Increasing export, in particular, and domestic demands over the past decade have reduced severely our supply of walnut trees. Numerous surveys made by the U.S. Forest Service in the walnut growing states show clearly that the volume, tree size, and grade of walnut timber is declining sharply. Strong, but unsuccessful efforts have been made to curtail exports. You are, I am sure, familiar with this situation. Our domestic industry has instituted sound conservation measures to stretch the walnut supply by reducing the thickness of veneer. In spite of these efforts heavy cutting continues, especially for export. For example, approximately 12.8 million board feet of walnut veneer logs were exported during 1966. This is again another record year—only second to 1965.

So, the outlook is dark for our having a reasonable supply of walnut timber in the years immediately ahead.

The Forest Service research program, undertaken with your good help, offers the first ray of hope we have for improving this situation. I am very enthusiastic about the program and have followed closely its development. Your Committee is to be commended for its understanding of the need for a "crash" research program in growing walnut and can take great pride in providing the funds to start it. The Forest Service, through its office at Carbondale, Illinois has moved aggressively and has underway an excellent research program. With their leadership, Southern Illinois University, several State agricultural experiment stations, State Forestry organizations, industrial interests, and others have joined forces to mount a major walnut research program. My industry is cooperating and participating fully in this work. To illustrate, we have increased our contribution of funds to the program and are participating cooperatively in several specific studies.

The Forest Service research program has both short-term and long-term objectives. These are—

1. To improve the quality and growth rate of natural occurring walnut trees. They have already found that the grade of individual trees can be improved by pruning and that the growth rate can be accelerated sharply by removing competing trees and vegetation plus proper fertilization. Application of these research results will help us grow better walnut trees faster and extend the present supply of timber.

2. To increase the total supply of walnut timber by planting. Research in progress has already given us some good guides for establishing successful walnut *plantations*. For example, clean cultivation or elimination of weeds and grasses with chemicals is necessary to obtain good survival and fast growth of the planted trees. Forest Service research now underway in soils, planting methods, fertilization, irrigation, and genetics will, I am convinced, help us build up a supply of walnut timber for the use and enjoyment of our future generations.

To summarize quickly, the outlook for a continuing supply of walnut timber in the immediate future is dark. The same dismal outlook is beginning to appear for top-grades of many other prime hardwood species such as cherry, birch, maple, ash, gum, pecan, and poplar. But research in progress now and that which Mr. Gatewood and I recommend will help us overcome these problems. The appropriations you have made in the past years for research in walnut and other hardwoods have given us the springboard for excellent and promising programs. I am confident that the Forest Service can, with your assistance, administer and execute an even larger and more effective hardwood research program throughout eastern United States.

Thus, I strongly recommend that you increase the Forest Service budget for the hardwood research program Mr. Gatewood outlined. The specific increase of $725,000 for work in North Central United States which I have discussed would not be an addition to the program he recommended. Rather it would be a very important and vital part of this total eastern hardwood research program.

I want to thank you again for this opportunity to appear before you and for your very excellent assistance over the past years.

U.S. export of walnut logs

[Quantity in thousand board feet; value in dollars]

	MBF	Value
January 1967:		
Austria	5	10,650
Canada	112	125,224
France	44	81,587
Germany, West	446	806,554
Israel	4	5,000
Italy	450	564,647
Japan	277	343,099
Switzerland	91	138,366
United Kingdom	6	3,327
Total	1,435	2,078,454
Average price		1,448
January 1966:		
Total	1,437	2,012,915
Average price		1,401
January to December 1966:		
Total	12,743	17,044,156
Average price		1,338

WALNUT RESEARCH CENTERS, CARBONDALE, ILL.; RHINELANDER, WIS.; AND AMES, IOWA

Mr. Gott. Through your generosity I think perhaps I may answer Senator Russell's query that the funds which you have so generously given in the past were to establish a going Walnut Research Center at Carbondale, Ill., for which we are most grateful and the reason that I am here this morning is, if Mr. Gatewood's request is honored, to latch on to approximately $725,000 of his requested appropriations simply to accelerate the vital programs that are underway on walnut; namely, the Rhinelander, Wis., Ames, Iowa, as well as Carbondale, Ill.

EXPORTATION OF WALNUT EXCESSIVE TO ANNUAL GROWTH

We have rather a dark future ahead of us in walnut which is rather paradoxical that we work like brothers with the U.S. Forest Service development improvement programs which will speed the growth, which will permit planting black walnut in plantations, which will produce a better wood perhaps 40 to 50 years instead of 60 to 80 to 90 years, but when exports of our raw material in the form of logs go out of this country at the rate of 1 million board feet a month with an annual growth rate of approximately 20 million board feet per year, we need this extra remuneration to accelerate the programs that we believe are successful and are underway.

INDUSTRY CONSERVATION EFFORTS

We have tried as an industry to do our part in conserving black walnut by reducing our standard veneer thickness from one twenty-eighth of an inch nominal to one thirty-sixth of an inch dry thickness.

We have been offered 40 councils of the National Boy Scouts of America to encourage and plant hardwoods with emphasis on walnut in the walnut growing States as part of their conservation programs.

RESEARCH FUNDING REQUISITE

So, to sum it up, I just wish to express my appreciation, past and present, and if Mr. Gatewood does receive some, I would like a part of it.

Thank you.

STATEMENT OF WILLIAM J. TUDOR, ASSISTANT TO THE VICE PRESIDENT, SOUTHERN ILLINOIS UNIVERSITY, EDWARDSVILLE AND CARBONDALE, ILL.

Chairman HAYDEN. All right, Mr. Tudor. Your statement will be included in full in the record.

Chairman Hayden, members of the Senate Subcommittee on Appropriations for the Department of Interior and Related Agencies: I am William J. Tudor, Assistant to the Vice President at Southern Illinois University, Edwardsville and Carbondale, Illinois.

It is a privilege and a pleasure to appear before this Subcommittee again. I have presented testimony to you several times in recent years supporting a stronger Forest Service research program. The many courtesies you have shown me on these occasions are greatly appreciated.

My purpose in appearing before you today is to express my sincere thanks for the increased appropriations you have made available to the Forest Service in past years so that forestry research of vital important to Illinois and elsewhere in the Nation could be strengthened. We at Southern Illinois University have an especially keen interest in forestry research conducted by the Forest Service unit of the North Central Forest Experiment Station located on our campus. My main purpose, however, is to give you a brief report on the excellent progress being made by this Carbondale research unit of the Forest Service with funds that you appropriated the past two years. These increases included $150,000 in Fiscal Year 1966 to strengthen research to improve the quality and supply of valuable black walnut timber throughout the East, and $690,000 in Fiscal Year 1967 for construction of a Forestry Sciences Laboratory on the Southern Illinois University campus, needed to effectively conduct the aggressive research program underway. I hasten to point out that I am not here to ask for more funds this year. As you will see from my statement we are making excellent progress with the current funds.

Research at Carbondale is being continued to find out how to better manage hardwood stands, improve the processing of hardwood lumber, and find new markets for the hardwood resource. The results of the timber growing research to date have been published as a Timber Management Guide for hardwood forest managers and is in wide use. This guide will be revised as new information becomes available. Results of studies to find new uses for hardwoods have been published. The emphasis in utilization research has now been placed on finding out how to improve efficiency in hardwood processing, such as in drying, cut up, machining and fastening. Special attention is being given to finding out how to make the best possible use of the low-grade trees which should be cut to improve the quality of the hardwood stands. As a corollary to the timber management and utilization research, marketing studies are being made to find new outlets for hardwoods so that this resource can make increasingly greater contributions to the economies of the areas where they are produced.

Substantial progress is being made on the Forest Service's walnut research program with wholehearted cooperation and support in the form of research fund, facilities, and services from Southern Illinois University, the American Walnut Manufacturers Association, many industrial companies, and other interested groups. Studies and research investigations are being conducted following various lines of attack involving forest genetics, soil-moisture-growth relationships, nursery and planting techniques including fertilization and weed control, and cultural practices for improving quality and growth of natural-occurring walnut trees now in our forests.

During the past two years, for example, walnut seedlings have been produced from 75 different selected groups of black walnut located throughout the range of the species. This spring the seedlings in this "provenance study" will be outplanted in several states. Results will indicate the best sources of walnut seed for planting in areas with widely varying soil and climatic conditions.

Genetics studies have been initiated to determine relationships in stem straightness and form between parent trees and their offspring, which may lead to improved planting stock. Several species of walnut including Carpathian and Californian walnut, butternut, and various strains of American black walnut are being collected for our breeding program in search for hybrids with outstanding growth, quality, and form characteristics.

The effects of specific quantities of water on growth of young walnut trees are being studied. For this, elaborate installations have been installed with special trenching systems, water meters, plastic rain shields, and highly sensitive equipment that emits neutrons into the soil to measure moisture content. When the basic water-growth relationships have been determined, irrigation procedures will be developed on a practical basis to increase early growth and production of this valuable timber species.

Several nursery studies have been installed to develop optimum methods and seasonal schedules for planting walnut, and to determine soil factors that influence development of desirable fibrous roots on walnut seedlings. Results will soon provide prescriptions for producing the best seedlings possible, and for planting walnut to obtain the best survival and fastest early growth. Many more examples of progress could be told.

Major effort also was spent in putting research results to work An outstanding example of this was the successful Black Walnut Workshop cooperatively conducted in August, 1966, by the Forest Service, the American Walnut Manufacturers Association, and Southern Illinois University. Some 225 forestry and extension specialists attended the Workshop from 26 states and Canada. They spent three days listening to papers by researchers and industrialists, and discussing and examining the most effective and up-to-date methods and techniques available for growing and harvesting black walnut timber. The proceedings of the Workshop were published in a research bulletin entitled "Black Walnut Culture." This Workshop greatly stimulated interest in improved culture and production of black walnut timber throughout the East. The publication has been very widely distributed, and additional requests for copies are still received daily. Thus the latest results from this important walnut research program that you financed are being put to prompt use in all walnut-growing areas of the country.

Laboratory facilities of the Forest Service at Carbondale are being improved, and this will contribute to more effective future research. A very desirable campus site has been provided by Southern Illinois University, at no cost to the Government, for the Forest Service's new Forestry Sciences Laboratory. Plans for this modern Laboratory are completed, and construction will be started this spring. The irrigation system on the nearby Walnut Research Farm has been installed, and the new headhouse-greenhouse facility is under roof and will soon be activated. These new modern research facilities will accelerate progress on this important cooperative walnut research program and will make possible additional vitally needed investigations that previously could not be undertaken. The funds which you have appropriated for Forest Service walnut research work and required facilities at Carbondale, Illinois, have made possible this excellent and most productive program. I sincerely thank you for your interest and assistance.

I also want to briefly testify in support of the very important Hardwood Forestry Research Program described by Mr. Donald Gott of the American Walnut Manufacturers Association and Mr. Howard Gatewood of the Fine Hardwoods Association. We at Southern Illinois University fully recognize the importance of the hardwood forest products industry in the economy of Illinois and the Midwest. If these industries are to continue making their substantial contributions to employment, the economy, and the well-being of our people, we must promptly develop and undertake an adequate research program aimed at increasing future supplies and improving the quality of our high-grade hardwood timber resources of other species as well as walnut.

Our supply of high-grade hardwood timber has been declining, and our forests are producing much less than their full capacity, especially of the quality species and grades in great demand such as veneer trees of walnut, cherry, birch, gum, and white oak. Furthermore, demands for hardwood timber are expected to increase 250 per cent by the end of the century.

The research program of the Forest Service conducted at Carbondale with the help of Southern Illinois University and other cooperators is now contributing to these research needs. This work should be intensified and expanded as a part of a coordinated, balanced Hardwood Forestry Research Program for improving quality hardwood resources throughout the Eastern states. Studies at Carbondale on soil-moisture-growth relationships, nursery and planting practices, tree improvement through genetics, and intensive cultural practices for increased production of prime walnut timber should be speeded up and expanded to include additional high-valued midwestern hardwood species. Important additional research also should be initiated on control of insects and diseases that hamper establishment, growth, and use of walnut and other prime quality timber.

Based on past experience, I am certain that the Forest Service would vigorously move ahead on this vitally needed research program whenever funds can be made available. I can assure you that Southern Illinois University will assist the Forest Service in every way we can on such an important assignment.

I sincerely appreciate your granting me this opportunity to appear before you again, and the recognition you have given our needs in the past. I know you will give full consideration to the needs for additional hardwood forestry research, and I hope this important program can be developed and activated soon.

Thank you.

CARBONDALE RESEARCH PROGRAM

Mr. TUDOR. Senator Hayden, you may remember a few years ago I appeared before your committee and indicated I was not there to ask for more money. I am doing the same thing this year, I want to report on funds allocated to the Carbondale research program and will answer, I think, with my statement, some of the questions I think Senator Russell has raised.

We have been fortunately very successful, I think, with your program at Carbondale. It is moving along fine, and you will find in my statement some details of what is going on here and I hope you find it interesting because I know of your long interest in what we are trying to accomplish.

SEMINAR WORKSHOP

We feel we had one of the finest seminars held in the old wood industry last August and the U.S. Forest Service, American Walnut Manufacturers Association, and Southern Illinois University combined to put on a woodshop of 3 days.

We had 25 forestry and extension specialists from 26 States and Canada attending this workshop. The results of the early activities of the Walnut research were presented there. These are moving along well.

LABORATORY BUILDING CONSTRUCTION

The building that you allocated funds for last year is moving along. We hope to break ground. The university has given the site to the Forest Service through a lease arrangement and this is at no cost to the Government. We will hopefully have the laboratory in operation in about a year's time. So we are moving along very well.

Southern Illinois

I wish to support Mr. Gott and Mr. Gatewood in their interests and concerns. I also want to support my own president, Dr. Morris, in his statement.

I have spent many hours working on the project that he discusses in his statement and I feel they are very necessary and very important. We certainly appreciate Senator Percy being with us this morning and his fine contributions to helping build this part of the State of Illinois.

Thank you very much.

ABSENCE OF AREA INDUSTRY TO UTILIZE RESEARCH FINDINGS

Senator Russell. Dr. Tudor, has there been any development of any industry in that area to utilize the findings of this research?

Mr. Tudor. Yes, we have developed some. This has not come out as well as we would hope. We one time hoped we would get some pulp plants in that area using the hardwoods. These have not come into southern Illinois because the program at that point was at such a stage they were not developing new sources of paper, and so we have had to wait until we got caught up, so to speak.

Small Wood Using Industry and Employment

We do have a number of small wood using industries making a variety of products and this I think is helping considerable with the problems of unemployment in that area. As you know, we have made considerable progress in southern Illinois in a number of the counties that were listed as high unemployment counties.

Senator Russell. That is what I was really getting at because I recall the testimony was to the effect you had these vast resources of hardwood and a very high incidence of unemployment and you wanted to do research to match the two together and eliminate the unemployment.

Mr. Tudor. Yes; and it has worked and we are very proud of what has been accomplished.

Senator Russell. I would like to congratulate you.

Mr. Tudor. It is through the help of people like you it has been done.

Thank you, Senator.

Mr. Percy. Thank you, Mr. Chairman and Senator Russell.

STATEMENT OF DR. DELYTE W. MORRIS, PRESIDENT, SOUTHERN ILLINOIS UNIVERSITY, EDWARDSVILLE AND CARBONDALE, ILL.

Senator Hayden. The statement of Dr. Delyte W. Morris, president of Southern Illinois University, will be included in the record.

(The statement follows:)

Chairman Hayden, members of the Senate Subcommittee on Appropriations for the Department of Interior and Related Agencies, I am Delyte W. Morris, President of Southern Illinois University, Edwardsville and Carbondale, Illinois.

It is my purpose in this statement to support the continued development of a series of key projects of the U.S. Forest Service in the Shawnee National Forest. It is important that funds be appropriated for fiscal year 1966 to insure the continued progressive development of this area in southern Illinois. Southern Illinois University and I, personally, have had great interest in the recent activities and purposeful developments in the Shawnee National Forest. We have devoted considerable of our limited resources, mostly in terms of manpower, using the skills of our highly trained technicians to assist the Forest Service in planning and carrying forward these important projects.

Many reasons can be set forth as justification for the development of Forest Services facilities in southern Illinois. Please let me summarize what to me are some of the more important ones. First, this area is located near the center of population of the United States. Approximately forty million (40,000,000) people live within one day's drive of this area, now that we are developing our system of interstate highways. With adequate facilities for tourist and recreation use, large numbers of people, especially in the middle and lower income groups, will be able to have available to them excellent outdoor recreational opportunities. As evidence of this, we have the fact that the existing facilities are being used extensively.

Second, southern Illinois has made great strides in the past twenty years in improving its social-economic level. While much still remains to be done, one of the important potential factors is the improvement of the economy through the expansion of the outdoor recreation and tourist industries. We are convinced that the investment in these projects will pay real dividends in the form of reduced public aid expenditures and increased income from taxes.

Third, the State of Illinois as well as the U.S. Forest Service has recognized the importance of the developments in the Shawnee National Forest. In a study released in February, 1966, jointly by the Department of Business and Economic Development and Southern Illinois University entitled "The Future of Tourism and Recreation in Southern Illinois" high priority is given to the U.S. Forest Service developments in southern Illinois. This study was made by Checchi and Company under contract with the Department of Business and Economic Development of the State of Illinois and the Economic Development Administration of the U.S. Department of Commerce. The report indicated that the Shawnee National Forest in 1964 had an estimated attendance of 789,200, and an estimated total man days of recreation of 394,600 with only 110 acres of water surface.

In the State plan for "Outdoor Recreation in Illinois" prepared jointly by the Illinois Departments of Conservation and Business and Economic Development, the following statement is prepared:

"United States Forest Service holdings total 211,554 acres in the Shawnee National Forest, which occupies portions of the most rugged and scenic portions of Illinois. A combination of rock outcroppings, steep hillsides and extensive woodlands make this one of the state's outstanding recreational resources, both in terms of existing and potential use. Existing facilities include 225 camping units and 281 picnic sites. Swimming, boating, hiking, hunting, and fishing facilities are also provided.

"Although the Shawnee National Forest adds a large measure to the total supply of recreation land and features some of the best scenery, its recreation potential is not adequately realized in current use. Access for potential users from the East St. Louis metropolitan area and for other users is relatively difficult and distances to other urban areas of the state are great. Recreational development is expected to continue since the Forest Service estimates that by 1970 it will increase its land holdings by 50,000 acres, and additional facilities including 163 camping and 228 picnic spaces will be provided.

"As a federal project, the Shawnee National Forest preserves for public use some of the most scenic lands in Illinois. Its significance to the statewide supply will remain limited to its facilities for serving vacationers and nearby weekend visitors, and for the benefit of its large area for hunting."

From this we can see that general recognition is given to the importance of the development of this area. Now, let me turn to some of the specific projects:

1. *Lake of Egypt Recreation Area, $250,000.*—A start has been made on the development of this important recreation area. In fiscal year 1966 1700 acres of land were purchased with Land and Water Conservation funds. During fiscal year 1967 (the current year), 4.2 miles of entrance roads, 42 camping units, 31 picnic sites, and associated facilities have been established. It is now im-

portant to move ahead with this project and the $250,000 is needed to cover construction of a beach, bathhouse, water and sewage system, and additional camp sites.

2. *George Rogers Clark Recreation Way, $260,000.*—This important, high-priority project has reached a stage where engineering and recreation surveys prior to the final design and construction are now needed. Many professional people are of the opinion that the development of this project, along with the activities to be associated with it, holds the key to making southern Illinois a major tourist and outdoor recreation area.

3. *Week's Law Funds for Land Purchase, $500,000.*—Certain lands vital to several projects lie outside proclaimed national forest boundaries, and are therefore not eligible for purchase from Land and Water Conservation Funds.

Established costs are as follows:

a. Kinkaid Lake	$100,000
b. Little Cache Lake	50,000
c. George Rogers Clark Recreation Way	100,000
d. Tower Rock Recreation Way	50,000

In addition, land not eligible for Land and Water Conservation Funds but with a high priority to the several projects in the Shawnee National Forest are estimated to need $200,000. These lands are associated with recreation projects, providing public access to present national forest lands, for our key tracts needed to fill in gaps, and present ownership by the U.S. Forest Service.

Thank you for granting me this opportunity to present a statement on behalf of the U.S. Forest Service. I can assure you that Southern Illinois University plans to continue its close cooperation with the Forest Service in the development of these projects vital to Mid-America.

STATEMENT OF J. WALTER MYERS, JR., EXECUTIVE DIRECTOR, FOREST FARMERS ASSOCIATION

INTRODUCTION OF WITNESS

Senator RUSSELL. Mr. Chairman, we have here this morning the Honorable Walter Myers. He has appeared before the committee, and is one of the best men on forestry problems in the country. He has done a great deal to get the forest farmers in increasing number in recent years in organizations where they can advise their needs and wishes.

Mr. Myers, we will be glad to hear you.

Is Mr. Walker going to make a statement?

Mr. MYERS. He has a brief statement.

Senator RUSSELL. It may not be possible for me to remain throughout your statements because of other important and pressing demands.

Mr. MYERS. I certainly understand.

Senator RUSSELL. I have read your statement.

Mr. MYERS. Thank you, Mr. Chairman and members of the committee, my name is J. Walter Myers, Jr., and I am executive director of the Forest Farmers Association.

ORGANIZATION OF SOUTHERN TIMBERLAND OWNERS

It is a pleasure to appear before this committee again as a representative of our association. The Forest Farmers Association, as you may know, is an organization of timberland owners—primarily small owners—in 15 Southern States. Headquarters for our association is Atlanta, Ga.

FOREST RESEARCH PROGRAM

This committee has, over the years, continued to demonstrate its support and interest for maintaining a strong program of Federal research in forestry, and this has been most gratifying.

The committee can take great pride in the Federal Government's outstanding forest research program, and the important role which it has played in developing and maintaining that program. Meanwhile, the committee is, I am sure, aware of the outstanding support which private timberland owners, wood-using industries, and the States have extended the Federal Government in promoting forest research activities, particularly at the local level. Such cooperative participation is both logical and desirable.

SOUTHERN FOREST RESEARCH AND FOREST SERVICE BUDGET REQUEST

In recent months, representatives of the Forest Farmers Association have carefully reviewed the status of forest research activities in the South with a number of key individuals and groups, representing both public and private interests. We have also reviewed the 1968 fiscal year budget estimate, and we have been pleased to note certain increases for research, both for program activities and construction.

It is our understanding that this increase totals $2,580,000 nationwide. The Forest Farmers Association concurs in the desirability of this increase and is very hopeful that this committee will recommend that it be retained.

RESEARCH FACILITY CONSTRUCTION

Our group particularly wishes to endorse funds in the budget for planning construction of research facilities at Franklin, N.C. ($57-000); the Raleigh-Durham, N.C., Research Triangle complex ($95,000); and the Institute of Forest Genetics at Gulfport, Miss. ($50,000).

In addition, our group strongly endorses the $1.3 million in the budget for construction of a second wing at the U.S. Forest Products Laboratory at Madison, Wis., to house wood chemistry research activities.

ADDITIONAL FUNDING RECOMMENDATION

Our association is also hopeful that the committee will recommend additional funds for fiscal year 1968 to further strengthen forest research programs and for construction of other much-needed research facilities.

Research activities must be maintained at a high level if we are to meet the sharply rising demands for timber and other forest-related resources. The Forest Farmers Association feels such increases can be justified on the basis of investments which will pay rich dividends in the future.

CONSTRUCTION REQUISITE

The committee's consideration to providing construction funds for the following much-needed research facilities, not included in the budget, is invited: a forest range management laboratory at Fort

Myers, Fla. ($220,000); a forest tree seed laboratory at Starkville, Miss. ($290,000); and a wildlife and silviculture laboratory at Nacogdoches, Tex. ($335,000).

Planning funds for the Fort Myers, Fla., laboratory were provided in the 1965 fiscal year budget, and funds for planning the Starkville, Miss., and Nacogdoches, Tex., laboratories were included in the 1966 and 1967 fiscal year budgets, respectively.

These facilities are all urgently needed and the work must be done at the local level to provide truly significant data. No construction funds for these facilities were included in the original 1968 fiscal year budget.

Drafting of Architectural Plans

The committee's consideration is also invited to providing funds for drafting architectural plans for a much-needed engineering laboratory at Auburn, Ala., on the Auburn University campus ($35,000) and a forest science laboratory on the Virginia Polytechnic Institute campus, Blacksburg, Va. ($52,000).

FUNDS REQUISITE

Our association's review of research program activities, meanwhile, indicates that an increase of $1,625,000, spread over six Southern States and including $5,000 for South-wide strengthening of the forest survey, is clearly indicated if minimum forest research needs are to be met in fiscal year 1968.

Association Recommendation

Certain of these funds are included in the present budget estimate; however, it is not possible at this time to determine what funds might be available for the South. Therefore, the following breakdown shows nearly the total need estimated by our group:

THE FOREST SURVEY

The forest survey is a top-priority item. The survey provides invaluable State-by-State forest research inventories on a current basis. The survey provides the basis for all forest planning, public and private, nationally and locally. A great need exists to strengthen this program, and especially in the South with its fast-growing timber and the increasing demands on its forest resources.

A minimum annual increase of $500,000 is needed in the South, alone, beginning in fiscal year 1968, to achieve the objective of State resurveys on an 8-year cycle, which the Forest Service recommends.

The 1968 fiscal year budget estimate provides an increase for the forest survey, nationwide, and the South would likely receive a portion of these funds but not in the order of the $500,000 needed. A more detailed statement on the forest survey will be submitted for inclusion in the record.

(The statement follows:)

NEED FOR ADDITIONAL FOREST SURVEY FUNDS

No other information derived from U.S. Forest Service research is in greater demand than the findings of the Forest Survey. Both, private forest interests—landowners and industry, and public agencies wholeheartedly concur in the strong need for accurate and up-to-date Survey information. It provides the basis for all forest policy and program planning. The reason is simple: the Forest Survey provides the only complete forest resource statistics available, locally and nationwide.

In order that timber yield and consumption rates can be related to future requirements, trends must be determined periodically. The Survey does this. Moreover, the Survey provides the only basis on which the required planning for forest resource protection, management and utilization can be developed with any degree of accuracy. It also provides detailed information for other important uses such as: determining timber-growing and timber supply potential of various areas; developing feasibility studies for the location of new forest-based industries; planning for major watershed programs; surveys of wildlife and recreation potentials; and numerous other uses.

The Forest Farmers Association feels that Forest Survey data is so valuable that complete state resurveys should be accomplished on an eight-year cycle in the South. A satisfactory alternative might be complete resurveys every ten years with partial resurveys every five years, using recently developed U.S. Forest Service techniques. The cost would be comparable. Such frequencies are felt necessary in view of the rapidly expanding economy and the greatly stepped up demands on the South's forest resources. The South, today, is producing almost two-thirds of the Nation's pulpwood (63% in 1965), and a very substantial volume of sawtimber and other forest products. Current pulpwood production is up from approximately 50% in the late 1940's and the early 1950's. Resurveys in other sections of the country may not be necessary on this same frequency due to less intensive demand and slower growth rates.

The eight-year resurvey goal for Southern states is based on recommendations by the U.S. Forest Service. Present funding for the Southeastern Forest Experiment Station and the Southern Forest Experiment Station is wholly insufficient, however, to meet this objective. Sharply rising costs will require lengthening the resurvey frequency significantly, if present accuracy standards are to be maintained. The alternative would be a sharp reduction in the number of sampling plots, which would increase the possible error beyond an acceptable level. Neither of these alternatives is satisfactory in the view of the Forest Farmers Association.

The answer seems clear. Additional funds should be provided in the budget for the Forest Survey so the necessary job can be done. A more intensive and up-to-date state resurvey program is indicated, if Southern forests are to keep pace with expanding demands. The approximately 26,000,000 acres of fast-growing Pacific Northwest forests are going to do well to supply the timber needs of California and the western states in the years ahead. The rest of the Nation's timber requirement are to come increasingly from the South.

An eight-year resurvey program with an acceptable sampling error and the availability of primary county data should be the minimum acceptable standards for the southern states. To accomplish this goal an additional annual appropriation of $500,000 would be required beginning in fiscal year 1968.

This amount would be split equally between the Southern and Southeastern Forest Experiment Stations, with each receiving an additional $250,000. The Forest Survey is fundamental to the continued wise use of America's renewable natural resources. It should be supported at a level in keeping with its importance.

FOREST ENGINEERING RESEARCH

Mr. MYERS. The changing economic picture has added great impetus to mechanization in harvesting and marketing of forest products. Mechanization on large acreages can normally be accomplished without unusual difficulty due to the size of the tracts and volume of the timber involved.

A great need exists, however, to develop efficient and economical systems for havesting and transporting timber crops from small acreages. A minimum of $100,000 is urgently needed to strengthen and expand this work, centered at Auburn, Ala., on the Auburn University campus.

INSECT INVESTIGATION AND CONTROL RESEARCH

A minimum of $200,000 is urgently needed to keep pace with insect research and control, centered primarily in the States of Florida and Louisiana.

A substantial portion of these funds would be used to strengthen research on control of insects attacking pine cones and seed, with project headquarters at Olustee, Fla. The remainder would be used for strengthening and expanding bark beetle research activities at Alexandria, La.

TREE IMPROVEMENT RESEARCH

To meet increasing demands for wood, our forest lands must be made more productive. The availability of improved growing stock would boost timber production significantly.

$175,000 is needed to finance and expand more fully the research program now underway at Macon, Ga. A portion of this money would also go to strengthen and expand research activities aimed at developing improved strains of pines for the naval stores industry, which work is centered at Olustee, Fla.

FOREST MANAGEMENT AND SILVICULTURE STUDIES

Increasing demand for wood means that southern timberland owners must learn more about managing crops of timber for bigger and better yields. A minimum of $375,000 is needed for strengthening this work in Florida, Mississippi, and Virginia.

The program in Mississippi involves research activities in insect and disease investigation and control, as well as bottomland hardwood silviculture, and is centered at Starkville, Miss.

FOREST TREE SEED RESEARCH

A minimum of $100,000 is needed for program strengthening and additional staffing of the new forest seed research project at Starkville, Miss., with initial attention to hardwood seed research.

PRODUCTION ECONOMICS RESEARCH

A minimum of $100,000 is needed to strengthen research in economic evaluations, particularly in alternative land uses involving forestry. This work is centered at New Orleans, La.

WILDLIFE HABITAT MANAGEMENT STUDIES

One hundred thousand dollars is needed to strengthen the existing program in the Appalachian area on the ecology and economics of managing Appalachian forests for increased game production. This work is centered at Blacksburg, Va.

NAVAL STORES PRODUCTION

Seventy-five thousand dollars is needed to expand the existing program of naval stores production research, with particular emphasis on cutting production costs. Production costs have become a major problem for the naval stores industry. This work is centered at Olustee, Fla.

The committee's consideration to recommending additional funds to meet these minimum needs will be appreciated. I thank you for your consideration in hearing me.

Chairman HAYDEN. Thank you for your appearance.

Mr. MYERS. Thank you.

STATEMENT OF DR. LAURENCE C. WALKER, DEAN, SCHOOL OF FORESTRY, STEPHEN F. AUSTIN STATE COLLEGE, NACOGDOCHES, TEX.

CAMPUS HABITAT AND SILVICULTURE LABORATORY FOR U.S. FOREST SERVICE

Chairman HAYDEN. The next witness is Dr. Laurence C. Walker, dean, School of Forestry, Stephen F. Austin State College, Nacogdoches, Tex.

Dr. WALKER. Mr. Chairman, I am dean of Forestry, Austin State College, Nacogdoches, Tex.

I am sorry Senator Russell left because I learned how a forestry school should be operated from engineers at the University of Georgia and then returned to Texas as dean of the school there which is the State's forestry school.

My interest this morning is in support of a U.S. Forest Service Wildlife Habitat and Silviculture Laboratory on the campus. The cost is $335,000. The plans have been drawn with funds provided for the current fiscal year, so we feel we are ready to go.

COLLEGE PRESENT FACILITY INADEQUATE

The Forest Service there is now housed in a World War II Army barracks just as our school of forestry is, with both of these structures scheduled to be torn down in 1968 to make room for a new forestry school building.

Since 1945, when the U.S. Forest Service established its program at Nacogdoches, the Federal Government has received free utilities, janitorial services, and space.

STATE LEASE ON LAND FOR CONSTRUCTION SITE

Last year our State leased to the Federal Government for 99 years 1½ acres of land in the SFA Forestry Center, so that their new laboratory building for which the plans have been drawn would be adjacent to our facilities.

COLLEGE GROWTH AND FOREST SERVICE FOR MIDSOUTH AREA

Our college is one of the fastest growing in the Nation. It had less than 2,000 students in 1959 and has 7,000 now and we expect 8,000 in the fall. As a result we are tremendously short on space.

The work of the U.S. Forest Service at Nacogdoches involves the Midsouth. It is the live habitat and silviculture program for the States involved in that area.

INTEGRATED MANAGEMENT OF TIMBER AND GAME

The program deals with the integrated management of timber and game and with all of the emphasis on outdoor recreation today we would like to think this East Texas outdoor recreation is essentially game and game management. The Forest Service program at Nacogdoches happily is cooperative with the school of forestry, with the Texas Forest Service, the U.S. Bureau of Sport Fisheries and Wildlife, and they, too, would be housed in the new laboratory building, the Texas Parks and Wildlife Research program, and with similar organizations in Arkansas, Louisiana, and private industry.

UTILIZATION OF RESEARCH FINDINGS

I might add that the work of this group is used, the results are used in the management of four national forests in our State and many others in the Midsouth.

Members of the Forest Service there, on a leased-time arrangement with the Federal Government, supply teaching and research for our own faculty.

I appreciate the opportunity to speak in support of this program for the U.S. Forest Service at Nacogdoches, Tex.

Thank you, sir.

PREPARED STATEMENT

Chairman HAYDEN. Thank you. Your prepared statement will be included in the record.

(The statement follows:)

I would like to recommend the Committee's consideration of additional appropriations for construction of the U.S. Forest Service's Wildlife Habitat and Silviculture Laboratory on the Stephen F. Austin State College campus at Nacogdoches, Texas.

The laboratory is the regional headquarters for all wildlife habitat research at the U.S. Forest Service's Southern Forest Experiment Station, an area that includes 108 million acres of commercial forests in the midsouth. Whether deer, squirrel, turkey, quail, and other game will be scarce or abundant depends on how these forests are managed. Research at Nacogdoches is designed to furnish sound scientific knowledge of ecological relations between game, habitat, and timber, and to develop guidelines for practical management that is consistent with other uses.

Urgently needed at Nacogdoches—for Fiscal Year 1968—is a new federal laboratory building. Architectural and planning funds amounting to $25,000 were appropriated by the last Congress. These plans are in the final stages of preparation and will be completed before June 1, 1967—in ample time to award a construction contract at the beginning of Fiscal Year 1968.

The College has, for over 20 years, provided *gratis* to the federal government all facilities, utilities, and custodial services—a considerable obligation upon funds also needed for instruction. The state-owned World War II barracks now occupied by the researchers is scheduled to be torn down in 1968 to make room for construction of additional and much needed forestry laboratories and classrooms for graduate and undergraduate instruction at the State's most rapidly expanding college.

The cost of the proposed laboratory is approximately $335,000. The State of Texas has leased 1½ acres for 99 years in the FSA Forestry Center to the U.S. Forest Service on which to locate the building.

The commercial forests of the mid-South yield raw materials for a multimillion dollar timber industry. Whether game can likewise be included in the "millionaire" class depends, essentially, on ascertaining facts and then informing timberland owners of scientifically tested techniques for managing the natural resources of the Nation's woodlands. Both timber and game can be grown on the same acreage, but one may thrive at the expense of the other unless sound conservation practices are understood and applied. At present, broad generalizations may be made of the interrelations of timber and game, but they are inadequate for these dynamic times of strong competition for forest land use.

Forage quality and wildlife nutrition is a phase of research that has long been neglected throughout the South. Information about energy and digestibility values of wildlife foods is basic for understanding why wildlife thrive or do poorly in various habitats. Research would tell which plants, or combinations of plants, are inherently capable of furnishing essential nutrient constituents for animal diets. Techniques for diagnosing deficiency conditions of wildlife and its environment, and how to improve animal vigor and productiveness, would be sought.

I would like to mention, too, that U.S. Forest Service research at Nacogdoches is cooperative with Stephen F. Austin State College; Texas Parks and Wildlife Department; Texas A & M University; Arkansas Game and Fish Commission; Louisiana Wildlife and Fisheries Commission; Louisiana State University; the U.S. Fish and Wildlife Service; and private industry. Thus, the new laboratory building not only will expedite U.S. Forest Service research, but will also strengthen a team of scientists and organizations vitally interested in the economic and recreation potential of the South's wildlife and forests.

The work is also important locally; federal scientists regularly teach courses in the State's School of Forestry and direct graduate and undergraduate student research projects. Thus, the U.S. Forest Service is an integral part of the college program.

The productivity of this group over the years, attested to by industry and other government agencies, commends the use of federal funds for this cause.

I appreciate the opportunity to appear before this committee and ask that this statement be included in the records of your hearings.

STATEMENT OF MRS. ALBERT D. LASKER

Senator BIBLE. Chairman Hayden, Mrs. Albert D. Lasker had planned to be present this morning. However, when she learned that she could not remain this weekend, she asked me to present her statement for the record. I am glad to ask that it be included.

Chairman HAYDEN. It will be printed at this point.

(The statement follows:)

TESTIMONY OF MRS. ALBERT D. LASKER BEFORE U.S. SENATE SUBCOMMITTEE ON APPROPRIATIONS FOR THE DEPARTMENT OF THE INTERIOR

Chairman Hayden and members of the Subcommittee on Appropriations, thank you for granting me this opportunity to discuss with you a matter of concern to us all—a *more* beautiful national capital. Of course, it is already beautiful, but our aim should be to make it a *model* not only for this country but for the world!

You will recall that Pericles and the Athenians are remembered, not for their great wars, but for the Parthenon and for their beautiful city with its architecture, and the greatest sculpture ever known. Now, *we* have an unusual opportunity here in the United States. Never has any head of state—*except* President Johnson—ever called for the enhancement of the natural beauty of a *whole* *country.* Napoleon III of France got Hausman to redesign and rebuild the boulevards of Paris. Louis XIV built Versailles. However, never have we heard that they, or anyone else in history, urged more beauty for *all* their cities and highways throughout a *whole* nation, until President and Mrs. Johnson took up the enhancement of our environment, in *this* country.

Mrs. Johnson felt that one of the ways in which she could make a contribution to this was by forming the First Lady's Committee for a More Beautiful National Capital, as every great effort needs a model which will inspire others.

I am the President of the Society for a More Beautiful National Capital, a nonprofit corporation formed in 1965, to complement and supplement the work of the First Lady's Committee. The Society was formed to receive "seed" money from citizens and organizations, and to give encouragement to help make Washington the most beautiful city in the world! However, today I appear before you as an individual citizen. I have been interested in more beautiful cities for a long time, since I was a small child in the middle West. I have contributed toward more trees and flowers for New York City's gray midtown streets, and I have made some contributions to Washington's plantings. However, what any one citizen or group can do is infinitesimally *small* compared with *this* city's needs, and the *national* needs, and we can only hope to spark this effort.

I am here to ask your careful consideration of the budget for the National Park Service for fiscal 1968, particularly in relation to the Washington metropolitan area. I do this out of the knowledge that the Park Service needs more funds to meet its obligations properly in the *maintenance* of the public parks and lands that it is responsible for in the District of Columbia.

There is no organization anywhere—government or private—whose mission and performance I admire more than the Park Service's. I know of no organization of government that brings more joy or pleasure to our people. Nothing serves more to lift one's spirit than driving or walking in one of its great parks, or the *joy* of seeing the cherry blossoms in full bloom at the Tidal Basin here.

The National Park Service, as you well know, is responsible for innumerable small triangles and small parks, as well as larger parks and highway segments in the Washington Area. Park Service officials are demonstrating, through planning and development, what can be done to inspire the 16 millions of people who come to Washington from all over the world, every year, to visit the center of our Government. Most of these people come from all parts of the United States, but *many thousands* come from all parts of the earth. What we do well here gives pleasure and inspiration to them.

The Society for a More Beautiful National Capital is interested in the development of large concepts that will assure improvement in the public parks and lands of the city, as well as the improvement in plantings of highways, school playgrounds and housing developments. Projects, such as the development of the Mall west of the Capitol with more plantings, fountains and lighting, are examples of what we are advocating. Others are the lighting of our public buildings and monuments; the increase in landscaping of parks and triangles with flowering trees, flowering shrubs and bulbs to give recreation and pleasure to our people; for instance the planting of flowering trees on Columbia Island in the area of the George Washington Memorial Parkway, a vast grove of dogwoods which later in spring would *rival* the beauty of the cherry blossoms at the Tidal Basin.

We also advocate the planting and the provision of playground equipment for the District schools and for the public housing projects in the area. More fountains, and swimming pools, which, in winter, could be converted into skating rinks, should be provided for recreation, and to give children activity during the hot mid-summer. We have a convertible swimming pool skating rink in Central Park in New York.

The 27 major entrances to Washington should all be beautifully landscaped and planted so that people will know when they are entering the Nation's Capital by the beauty of its entrances.

Another major need which should be met is the provision of trained horticulturalists and gardeners. The Park Service should have a National School of Horticulture and a National Garden on 600 acres of its land near Washington. This could be a major tourist attraction and a center for gardeners and scholars in the field of horticulture. Throughout the nation, gardening is one of the professions in the most short supply. Nowhere are adequate numbers being trained with high standards of excellence. Without this, the quality of our

City parks and gardens will never be maintained with highest standards, and in the future, our efforts will gradually die out. The school for gardeners at Kew Garden is one reason England's cities and parks and gardens are outstanding in the world.

Such a great school, park and garden, once developed, could probably pay for its upkeep by the number of visitors it would attract. It should include flowers, plants and trees of every variety, resulting in a garden and a park of great beauty in design and top maintenance. The development of a National School and Garden of Horticulture will serve to inspire, teach and enlighten many millions of people each year. The scarcity of skilled gardeners is working against our ability to supply outstanding park supervisors and gardeners for this city, and for the major cities across the U.S.

I feel that every American and the citizens of other nations of the world should be able to regard our Capital as a living expression of the highest ideal of beauty in a city. It should be a great setting for our democratic way of life and our government.

The city's parks serve to provide an opportunity for spiritual and physical enjoyment to all who live and visit here. They provide places where children and grown-ups can exercise and play.

The First Lady's Committee, composed of many inspired, dedicated and hard-working people, has been a catalytic agent in many efforts to beautify Washington. Many of the efforts here are being copied throughout the country. It is important that what we do here set an example—one in which all Americans can take deep pride. Among the things which have been done by the Park Service, some by other agencies, some with private help are:

The landscaping of 80 small parks or triangles by the Park Service;

The planting of East Pennsylvania Avenue with magnolias and the planting of Pennsylvania Avenue between Pershing Square and the Capitol with azaleas and some cherries;

Landscaping and planting of dogwoods at the Post Office Building;

Cherry tree planting on Ohio Drive, Hains Point, with 1800 cherries, weeping cherries and pines;

Re-landscaping of Lafayette Park, for which a private individual has given funds;

Cherry tree plantings on Rhode Island Avenue;

Planting of crepe myrtle trees for over one mile on Dalecarlia Drive;

Start of planting work on MacArthur Boulevard;

Planting of 210,000 daffodils in Rock Creek Parkway;

Plantings on M Street;

Re-landscaping and developing of Watts Branch Park;

The construction of Buchanan School Playground and Community Center. Tree and shrub planting at other schools, as well as 16 school playgrounds supplied with new, gay equipment from the Mexican Government;

Plans for landscaping and plantings at Capper Housing Project;

Streets and highways planted include New York Avenue, the Southwest Freeway; plantings of about 15 miles on the Beltway done by the State of Maryland;

Plantings at the plaza of the Pennsylvania Railroad Station, and others.

However, there are many difficulties about the preservation and protection of the efforts so far achieved—again the lack of skilled gardeners, the need for production of plants and equipment, and the *lack of sufficient maintenance money*. We need to *correct* these deficits so that the beautification program *will not slow down*. Remember that cities throughout the country are patterning their efforts after Washington's example, and many states and cities are *slow starters*.

The providing of proper maintenance funds for the Park Service is vital. The Park Service simply cannot stretch its budget to do the kind of job needed to be done. As more parks are improved, more plantings are completed and the beauty of the city is further increased, the problem will become more compounded. There is danger of losing the gains made over the past two years. The Park Service itself, seeing the need to achieve excellence in standards of park maintenance, has established three levels—Class A, Class B and Class C. Last year funds available permitted the achievement of the Class A standard in only *six* parks. This spring, the Park Service has the capability of extending

Class A maintenance to 33 parks. Ultimately, it is planned that a Class A level of maintenance will be achieved in approximately 299 parks—this out of a total of over 750. Included are the 80 parks landscaped since the beginning of the beautification program and other scheduled for improvement between now and the coming fiscal year.

As a practical matter, the Park Service recognizes that it cannot achieve a Class A maintenance level in all parks for some time to come. It does believe that it must achieve this goal in the parks which have been improved under the beautification program. About 400 acres are involved. About $5,300 per acre per year is available now for park maintenance. Based on experience to date, it will cost about $11,500 per acre annually to maintain this acreage at a Class A level. This has generated the need for an additional $2.5 million in the Park Service's maintenance appropriation.

I urge that you consider the appropriation of this additional amount for this and the Park Service's succeeding budgets. This is a relatively small sum when one considers the joy flowers, flowering trees and shrubs, lighting and other improvements will give the 2 million men, women and children who *live* in Washington and the 16 million who come here every year.

A clean, colorful environment—with ample playgrounds and parks for recreation and rest—places to occupy young and old in healthy, outdoor activity—can do much to avoid many of the social problems, miseries and disturbances which threaten us in big cities every summer. The young and old need places to go for exercise, play, and refreshment—and to leave crowded home environments.

I also urge that you consider a fund of $360,000 to make a superb detailed plan for a National Horticulture School and Garden so that later this project may go forward to provide the teaching and instruction necessary for the enhancement of the environment of our country.

Thank you for the sympathy and great aid in understanding human needs, which this Committee has given to the National Park Service, and for hearing me. Thank you.

STATEMENT OF GORDON GRAY, CHAIRMAN, THE NATIONAL TRUST FOR HISTORIC PRESERVATION

Program for Preservation of Additional Historic Sites and Properties

Chairman Hayden. The next witness will be Mr. Gordon Gray.

Mr. Gray. Mr. Chairman, my name is Gordon Gray. I appear in my capacity as chairman of the National Trust for Historic Preservation and speak on behalf of our trustees and 11,600 members.

The 89th Congress by the passage of Public Law 89-665 established a program for the preservation of additional historic sites and properties throughout the Nation, and authorize new programs and the enlargement of existing programs on behalf of the Federal Government.

FEDERAL, PRIVATE AGENCY, AND INDIVIDUAL PROGRAM PARTICIPATION

In its preamble, this legislation provides that the Federal Government, private agencies, and individuals should play a vital role and that the Federal Government should give maximum encouragement to agencies and individuals undertaking preservation by private means.

NATIONAL TRUST FOR HISTORIC PRESERVATION PROGRAM EXPANSION

It further recognizes the necessity for the National Trust for Historic Preservation in the United States to expand and accelerate its historic preservation programs and activities.

Representation of Nongovernmental Participants

Throughout the process of enactment, it was frequently evident that the National Trust was felt to be the organization best prepared to represent the nongovernmental participants in a national program for historic preservation.

TRUST CHARTER

This leadership position was initially established in the congressional charter of the National Trust, Public Law 408, 81st Congress, "An Act * * * to facilitate public participation in the preservation of sites, buildings, and objects of national significance or interest * * *."

TRUST ACTIVITIES

This responsibility for public participation was further strengthened when in 1953 the Trust's charter was amended by Congress permitting it to assume activities previously conducted by the National Council for Historic Sites and Buildings. These were:

1. mobilizing sentiment and opinion;
2. diffusing knowledge concerning the need for such preservation and the appropriate methods and techniques;
3. examination, appraisal, and support of specific projects; and
4. conducting research and surveys on matters relating to the preservation and use of historic sites.

Presidential Expressions of Interest in Trust

In more recent years the growing concern for our tangible heritage and the environment, both natural and manmade, led President Johnson to express his interest and take note of the National Trust on two occasions.

In his message on "Natural Beauty of Our Country," presented to the Congress February 8, 1965, he said:

> In almost every part of the country citizens are rallying to save landmarks of beauty and history. The Government must also do its share to assist these local efforts which have an important national purpose. We will encourage and support the National Trust for Historic Preservation in the United States, chartered by Congress in 1949. I shall propose legislation to authorize supplementary grants to help local authorities acquire, develop, and manage private properties for such purposes.

Later, in the President's message on "Preserving Our Natural Heritage," presented to Congress February 23, 1966, he suggested methods:

> Historic Preservation is the goal of citizens groups in every part of the country. To help preserve buildings and sites of historic significance, I will recommend a program of matching grants to States and to the National Trust for Historic Preservation.

Congressional Enactments

In late 1965, techniques to meet the growing needs were recommended by the Special Committee on Historic Preservation, and the legislative base for a more effective national program was laid with the enactment of several laws by the 89th Congress, especially Public

Law 89–665, the Historic Preservation Act with which we are concerned here.

Title I of this act authorizes the Secretary of the Interior to establish a program of matching grants to the National Trust for Historic Preservation in the United States for the purpose of carrying out its responsibilities. Of the $2,323,000 requested by the National Park Service in the 1968 fiscal year budget for "preservation of historic properties," $1,750,000 is for grant-in-aid to the National Trust on a matching basis.

TRUST ADOPTION OF PLANS FOR ACTIVITY ENLARGEMENT

In recognition of the leadership obligation and trust responsibility, the trustees of the National Trust have adopted plans for enlarged activities in three areas of activity, proven by experience to be of the greatest value in assisting private individuals and organizations. These are: (*a*) service programs; (*b*) National Trust properties; and (*c*) a preservation emergency fund. These will supplement the ongoing programs of the Trust.

SERVICE PROGRAMS

A national program of preservation will involve citizens and organizations in every State. These persons and organizations must inform themselves on the many technical aspects of restoration and preservation projects. There must be a source to which participating citizens and organizations can turn to go in from the experience of others as well as to learn the newest techniques in the field generally.

Accordingly, the Trust will conduct an expanded service program furnishing experts and consultants qualified to recommend solutions to involved and difficult questions related to architecture, history, construction, or local organization. To the largest possible audience, the Trust will make available a wide variety of publications pertinent to restoration and preservation activities. Educational films, slides, and other audiovisual materials will also be available.

The additional service programs planned to meet the accelerated need in the coming year will cost approximately $430,000 and will include such new activities as a Government liaison office at an approximate cost of $50,000. The primary objective of this office will be establishment of direct and clear communication between governmental agencies at all levels and private agencies and organizations conducting preservation programs effected by programs of these related governmental agencies.

NATIONAL TRUST PROPERTIES

To insure permanent preservation, the Trust has accepted certain outstanding properties. While the Trust often receives some accompanying financial assistance for the long-range care and operation of property it accepts, the level of this assistance is generally inadequate.

In fulfilling its leadership obligation, the Trust must conduct its stewardship of properties with exemplary effectiveness. The Trust must set standards for preservationists across the Nation. It must perfect existing techniques, and develop new, in research, restoration and rehabilitation, interpretation, and contemporary use in community life. It is necessary that the Trust act to upgrade properties presently held and to respond affirmatively to the opportunities for further property acceptance in circumstances where Trust ownership is indicated.

The rehabilitation and total restoration of all National Trust properties (Belle Grove, Middletown, Va.; Casa Amesti, Monterey, Calif.; Decatur House, Washington, D.C.; Lyndhurst, Tarrytown, N.Y.; Oatlands, Leesburg, Va.; Pope-Leighey House, Mount Vernon, Va.; Shadows-on-the-Teche, New Iberia, La.; Wilson House, Washington, D.C.; and Woodlawn Plantation, Mount Vernon, Va.) to include significant furnishing has been estimated to cost approximately $687,000. Operating and maintenance funds necessary for exemplary ownership will cost an additional $150,000 in the coming year. The owners of 59 properties have expressed interest in conveying to the National Trust by gift, bequest, or sale of their properties. Many of these are notable, and included in the list are several national registered historic landmarks. If ownership by the Trust of any of these properties becomes necessary to insure preservation, the funds required for this portion of the National Trust program would grow in proportion to the financial requirements of the properties concerned.

PRESERVATION EMERGENCY FUND

Frequently, change in urban areas necessitates quick action on the part of community leaders if the preservation of a significant property is to be accomplished. To forestall irrevocable loss, the Trust proposes to create a fund to help provide responsible civic leaders with the necessary moneys for options or other expedients to make possible appropriate preservation efforts.

The emergency aspects of this type of need are difficult to meet through the normal process of philanthropy. Time gained by such immediate assistance would in most circumstances give the community leadership an opportunity to seek and secure permanent funding.

PRIVATE AGENCY REQUESTS FOR PROGRAM ASSISTANCE

Since the enactment of Public Law 89–665 the National Trust has received innumerable inquiries from agencies or organizations seeking assistance under the new program. To name only a few, they are such private organizations as Historic Alexandria Foundation; Historic Annapolis, Inc.; Girl Scout Council of Savannah, Ga., Inc.; Friends of Clara Barton, Inc.; as well as from the County of Los Angeles Department of Arboreta and Botanic Gardens.

FUNDS DISTRIBUTION CAPABILITY

It is impossible to estimate the exact need or to predict recipients because of the emergency nature of this program. However, it is estimated that in fiscal year 1968 the Trust could distribute a large portion of the grant-in-aid funds made available to it to organizations and agencies qualified under the terms of the Historic Preservation Act on a matching basis.

TRUST FINANCIAL STATEMENT

Recent history indicates that the National Trust will be able to meet the financial obligation of matching its grant-in-aid funds. While the Historic Preservation Act was under consideration by the Interior and Insular Affairs Committee, we provided Chairman Aspinall with financial information as follows:

During the 5-year period ending June 30, 1966, the National Trust received from all sources $5,222,160. Donations made up the major part of this sum with only a small portion attributable to admissions or other types of miscellaneous income. This total has been disbursed or assigned in the following manner: endowments, $2,452,966; capital needs, $634,524; and operational purposes, $2,134,670. During this same period the assets of the Trust, excluding the value of historic properties, grew from $3,690,340 to $5,751,550.

It is noteworthy that the assets figure does not include the value of nine properties owned by the National Trust. These properties which in total are significant have been acquired by the Trust with restrictions that they be maintained and operated for specific preservation purposes and cannot be sold. Hence, there are no determinable market values and a determination of intrinsic historical or cultural values is not believed feasible.

Recently we provided the Secretary of the Interior through the Director of the National Park Service similar information based on the audited financial reports of the fiscal period ending June 30, 1966. He was further advised that the National Trust is presently engaged in a fundraising effort. In the past 20 months payments of $427,258 and pledges or statements of intent of $945,983 have been received. This effort has been intensified with preliminary presentations to major foundations, two of which have made beginning gifts. An immediate next step will be a campaign to reach major private donors.

Current experience enables us to forecast that in fiscal 1968 the growing membership which now totals 11,600 will contribute more than $200,000; than income from endowments will exceed $240,000; and that special gifts will be sufficient for the remainder of our financial obligation under the matching requirements.

SECRETARY OF INTERIOR APPROVAL OF PROGRAMS

The Secretary of the Interior before making matching grants-in-aid to the National Trust will approve the programs to be undertaken and require compliance with such regulations and procedures as may be established by him. By this means, the Federal Government will be assured of satisfactory performance by the National Trust in the use of Federal moneys.

REPORTING OF TRUST ACTIVITIES

I should also like to point out the obligation of the Trust to keep the Committees on Interior and Insular Affairs informed of National Trust activities; participation by the Secretary of the Interior, the Attorney General, and the Director of the National Gallery as ex-officio trustees of the National Trust; and, finally, the provision in the congressional charter for the United States of America to be the recipient of all National Trust assets in the event of its dissolution.

Mr. Chairman, this completes my prepared statement. I appreciate very much the opportunity to appear before the committee in support of the appropriation request for "preservation of historic properties." I shall be pleased to try to answer any questions the committee might have with respect to the National Trust for Historic Preservation and the program it proposes to carry out with the grant-in-aid funds.

TRUST FINANCING SOURCE

Chairman HAYDEN. What is the source of the financing for National Trust?

Mr. GRAY. Up until this time it has been entirely private. We have certain headquarters endowment and membership contributions and then we are raising funds, we are just heading into a fundraising campaign, Mr. Chairman, to foundations, from foundations, individuals and others, and you will find in the prepared statement the sources of the funds and their increases over the last few years.

FUNDS AVAILABILITY

Chairman HAYDEN. What are the amount of funds now available to your Trust?

Mr. GRAY. Well, our Trust has, during the period ending last June received from all sources $5,222,000. These have been incomes from endowments, and grants, and as I say, membership income from our more than 11,600 members.

1968 TRUST FINANCING

Chairman HAYDEN. How much other than the $1,750,000 appropriated is expected to be accumulated in the year 1968?

Mr. GRAY. Well, we will expect in fiscal year 1968 from our membership, membership contributions, more than $200,000, income from endowments will exceed $240,000, and we will raise the remainder of the matching funds required from foundations and other major gifts.

We are embarked on that program now.

Of course, sirs, to the extent that we are not able to match this figure, then the Secretary of the Interior would not release it.

That is one of his requirements.

MATCHING OF APPROPRIATED FUNDS AND GRANT PURPOSES

Chairman HAYDEN. Can you match the $1,750,000?

Mr. GRAY. I am reasonably confident we will.

Chairman HAYDEN. For what purposes is it proposed that the $1,750,000 will be used?

Mr. GRAY. That amount will be used in making grants on a matching basis to local groups who are trying to save historic sites and structures in their own communities.

Some of this money would be used for other National Trust purposes and services and education, but the primary amount of it would go back to local communities and States.

Chairman HAYDEN. Could you indicate the amount to be expended for each of these, or do you have the figure here?

Mr. GRAY. I would say the larger portion of the $1,750,000 will go for those purposes.

PROPERTIES ON WHICH FUNDS WILL BE EXPENDED

Chairman HAYDEN. Please list the properties on which the funds will be expended.

Mr. GRAY. I do not have them in this statement but I would be pleased to furnish a list. The point is, Mr. Chairman, that aside from our own National Trust properties, of which there are nine, and we will furnish the committee information about this, this is a new program and we wish to make sure that these various applications, which we receive for matching grants from local groups, represent worthy causes.

Chairman HAYDEN. I guess under the circumstances you can't quite answer the question.

Mr. GRAY. It would be very difficult to do it. We have had, already, before the money has been appropriated, innumerable inquiries, and from all over the country, but we simply could not give you an accurate list. I will say that the request will far exceed the amount of money available.

Now, some of the requests are not going to be worthy requests. We would not honor them.

Chairman HAYDEN. Will these properties be owned by the National Trust?

Mr. GRAY. No, sir; most of these will be owned by local groups like the Historic Alexander Foundation, Historic Annapolis, Friends of Clara Barton. We have a request, for example, from the County of Los Angeles Department of Arboretum and Botanic Gardens. Whether its a worthy request, I don't know.

Chairman HAYDEN. Thank you for your statement.

Mr. GRAY. Thank you.

STATEMENT OF JOSEPH M. POLLARD, LOS ANGELES COUNTY WATERSHED COMMISSION

PURPOSE OF COMMISSION

Chairman HAYDEN. The next witness will be Mr. Joseph M. Pollard.

Mr. POLLARD. The Los Angeles County Watershed Commission is a citizens' advisory group created by the County Board of Supervisors to study, advise and recommend methods and means for the prevention and suppression of forest fires, the preservation of watersheds, and the control and conservation of floodwaters within the mountainous watersheds of Los Angeles County.

FOREST FIRE MENACE

Repeated forest fires in the Los Angeles County watershed and the territory within the boundaries of the Angeles National Forest constitute a constant menace to the citizens of this county. Because of the peculiar characteristics of the climate and the topography of this region, the forest fires are extmerely devastating. Long periods of drought, hot dessert winds and low humidity characterize the climate of the mountainous areas of Los Angeles County, and the rugged terrain makes accessibility for firefighting units extremely difficult.

Adding to the problem is the fact that Los Angeles County's population continues to rise sharply each year, resulting in increased demands for recreational use of the forest areas. As a consequence, this accelerated usage of forest areas has been a prime factor in heightening the hazard of forest fires.

During the calendar year of 1966, there was a total of 38 forest fires in the Angeles National Forest, 37 of which were man caused. A total of 3,032 acres of valuable watershed was destroyed by these fires in spite of the heroic efforts of firefighting units of various levels of government, namely, the Los Angeles County Department of Forester and Fire Warden and various city fire departments.

COMPREHENSIVE WATERSHED FIRE PROTECTION PLAN

Because of the growing concern of county government in this area of responsibility, the board of supervisors, in cooperation with the Federal Government, has developed a comprehensive watershed fire protection plan for the front country of the watersheds of Los Angeles County. This is a 10-year plan which commenced in 1962 at a total cost of $5,238,950.

Accordingly, Congress acted in 1962 to adopt a base plan for the U.S. Forest Service for the purpose of protecting and managing National forests, and it was the intent that this plan was to be fully implemented within a 10-year period. The total annual need during this 10-year period for the protection and management of the Angeles National Forest amounts to $2,045,707.

LAG IN FEDERAL APPROPRIATIONS

Officials of local government in Los Angeles County are showing growing concern over the fact that there is a frightening lag in Federal appropriations to meet the needs of this base plan. In the previous 2 years, there remained a deficiency of appropriations totaling $2,328,592, and during fiscal year 1967 there was an added deficiency of $1,157,360. This brings the total deficiency of Federal funds available to implement the 1962 base plan approved by Congress to $3,485,952 for the past 3 fiscal years.

By comparison, the property taxpayers of Los Angeles County have contributed a total of $19,643,839 as the county government's share of the cost of protecting and managing forest areas. A survey of comparable expenditures by the U.S. Forest Service for the same period indicates a total of $24,145,410. This represents expenditures for an 11-year period ending June 30, 1966.

In addition to the appropriations for personnel, preattack planning, fuel treatment, equipment and supplies covered in the base plan, there is a critical need for added appropriations for structural needs and fire roads to provide better fire control.

RECOMMENDATIONS TO COMMITTEE AND CONGRESS

In order to provide more effective means of prevention and suppression of fires in the Angeles National Forest, the Los Angeles County Watershed Commission, therefore, urgently petitions your committee and the Congress to—

1. Increase the appropriation of funds in the 1967–68 fiscal year budget for fire protection and maintenance in the Angeles National Forest by a minimum of $3,485,952 in order to bring the 10-year plan up to date according to the needs established under the U.S. Forest Service.
2. Appropriate the necessary funds to continue the program for national forests.
3. Appropriate the necessary funds to provide for structural improvements within all of the national forests of the United States, including fire protection facilities and fire personnel quarters.

Chairman HAYDEN. There will be printed in the record your second statement as a representative of the Watershed Fire Council of Southern California in which are outlined fire protection need for the national forests of southern California.

(The statement follows:)

FIRE PROTECTION NEEDS OF THE FOUR SOUTHERN CALIFORNIA NATIONAL FORESTS FOR THE FISCAL YEAR OF 1967–68

The Watershed Fire Council of Southern California is a citizens' advisory group composed of appointed and elected citizens who represent twelve million people residing in eight counties of this region. The Council was organized in 1954 for the purpose of planning a concerted program in cooperation with Federal, State, County and City agencies for the preservation of the watersheds of this region and for the prevention of forest fires therein.

Four national forests—the Angeles, Cleveland, Los Padres, and San Bernardino National Forest—are situated in this region where forest fires are most prevalent. Weather and atmospheric conditions, which characterize Southern California, are the major contributing factors to the high rate of fire incidence in forest areas, resulting in the loss of valuable watershed year after year. The combination of long periods of drought, hot desert winds, and low humidity pose a year-round threat to the health, safety and welfare of the citizens residing within these areas as well as the tremendous property destruction resulting therefrom.

Each year since 1954, the Watershed Fire Council has presented to Congress a program explaining the need for increased funds for fire protection in these four national forests as set forth in a Ten-Year Comprehensive Fire Protection Plan.

Since 1956, there have been increases in appropriations for fire control; however, these have not been adequate to keep up with the expanding nature of the fire problem and the increased cost to the Fire Agencies to do business. This condition is reflected by the intolerable rate of loss to life and property during this ten-year period. Loss of life to wildfire in the four Southern California National Forests exceeded all the rest of the National Forests in the United States combined.

The following items show where the Southern California deficiencies are most critical:

1. Maintenance, operating and equipping the fire control organization requires an additional $4,173,308 annually.
2. Fuel treatment portion of above program needs to be increased by about $664,000 annually.
3. Building programs for adequate housing and equipment storage need an additional annual average of $820,145 over the next five years.
4. Road and trail construction will require an additional annual average of $4,948,167 to meet the fire control needs.

During the calendar year of 1966, there have been a total of 278 fires within the borders of the four national forests, 217 of which were man-caused. The total acreage burned of these forest fires amounted to 104,849 acres.

Congress has allowed certain additional funds for improving fire protection in Southern California, but our carefully developed program to provide adequate protection has fallen far behind the stated minimum need of $2,375,000 annually as designated in the fire protection plan. The fire control appropriations for the four Southern California national forests indicate that a total of $3,191,143 for manpower and equipment was available for the fiscal year of 1967. Computed on the formula of the 1960 Base Fire Plan, the total needs for manpower and equipment, less the contributions of State cooperative funds, amounted to $7,364,451.

Thus, there exists the $4,173,308 deficiency in appropriations for manpower and equipment in the fire control appropriations available for these four Southern California national forests as of January 1, 1967.

The ever-expanding population rise, residential developments into forest and wildland areas, and continually increasing recreational use of the national forests of Southern California have further complicated the fire problems. The possibility of great loss of life and enormous destruction of property has increased to such a point that major corrective steps must be taken immediately if a holocaust is to be prevented in Southern California.

Accordingly, we urgently petition this Committee and the Congress to—

1. Increase the appropriation of funds in the 1967–68 fiscal year budget for fire protection and maintenance of the four Southern California national forests by a minimum of $12,630,554 in order to bring the ten-year plan up to date according to the needs established under the United States Forest Service.
2. Appropriate the necessary funds to continue the program for national forests.
3. Appropriate the necessary funds to provide for structural improvements within all of the national forests of the United States, including fire protection facilities and fire personnel quarters.

STATEMENT OF LOUIS S. CLAPPER, CHIEF OF CONSERVATION EDUCATION, THE NATIONAL WILDLIFE FEDERATION

Purpose of the Federation

Chairman Hayden. The next witness will be Mr. Louis S. Clapper of the National Wildlife Federation.

Mr. Clapper. Mr. Chairman, I am Louis S. Clapper, chief of conservation education for the National Wildlife Federation which has its headquarters here in Washington, D.C. Ours is a nonprofit organization which seeks to attain conservation goals through educational means. The federation has affiliates in 49 States. These affiliates, in turn, are made up of local groups and individuals who, when combined with associated members and other supporters of the National Wildlife Federation, number an estimated 2 million persons.

I appreciate and welcome the invitation to appear here today. I shall touch on only a few items proposed for the Department of the Interior and related agencies.

Department of the Interior

BUREAU OF OUTDOOR RECREATION

We hope the subcommittee will see fit to allow the full $142 million requested to be allocated from the land and water conservation fund, split $74,225,000 for the Federal agencies and $65 million for the States, with the balance for administration. We particularly are encouraged that the request includes $3 million in acquisition funds for the new endangered species program administered by the Bureau of Sport Fisheries and Wildlife. This program was delayed until authorization could be approved by the Congress, as it was last year, and it badly needs to get underway. In passing, I should say that we are hopeful that the Congress allows the $300,000 increase proposed for operating this new endangered species program.

Conservationists have been interested in the plan for the Federal agencies to be advanced $32 million from the fund. As we understand it, this money would be used to tie up lands at new units of the National Park System before prices escalate any higher and we certainly agree that some approach of this sort must be made. For example, we are told that it is urgent that acquisition be expedited on the new Indiana Dunes National Lakeshore to prevent damage or loss of some of the finest resources. I might add that we are hopeful that the Congress also soon will further alleviate this problem by supplementing the fund with receipts from natural resource sources.

BUREAU OF SPORT FISHERIES AND WILDLIFE

The national Wildlife Federation is grateful that $7.5 million is being recommended for the underfinanced waterfowl wetlands acquisition program. We are confident that these funds, together with the duck stamp receipts, will be put to good and effective use. I might add in passing that we hope this accelerated wetlands acquisition program can be extended for another 8 years before repayment begins, as proposed in separate legislation.

There are several other comments we should like to make:

We hope the level of the individual cooperative wildlife research units can be increased to that of the cooperative fisheries units. In fact, we believe that all of these units should be at the same financial level of about $40,000. Attaining this uniformity would cost about $450,000 extra for 23 units. In this connection, we reiterate our appeal of last year—that a new wildlife unit at Washington State University be funded. According to all information we can develop, a unit at this fine institution is fully justified.

We join others who are asking that a minimum of $450,000 be set aside for the Bureau to increase its research effort on the so-called lesser migratory birds such as doves, rails, woodcock, snipes, and so forth. These species are a Federal responsibility, just as waterfowl are, and the effort thus far has been almost nonexistent. If funded, this work will be coordinated with the States.

We are dismayed that the anadromous and Great Lakes fisheries program, only newly begun, is being cut by $1 million. According to our advice, the Bureau of Sport Fisheries and Wildlife and the Bureau of Commercial Fisheries each can spend $2.5 million wisely, or $5 million in all for the program.

OTHER INTERIOR AGENCIES

Without going into detail, we feel that the budget proposals for the National Park Service, Bureau of Land Management, and Bureau of Commercial Fisheries are modest enough in view of their great responsibilities for public resources. We particularly are pleased at the progress BLM is achieving in the classification of land for retention and multiple-use management. We believe that recreation should be a full partner with other uses and must be adequately funded.

DEPARTMENT OF AGRICULTURE

FOREST SERVICE

We are pleased at the emphasis placed on recreation and public use in the Forest Service budget. We hope the $3,389,000 increase—to a total of $34,528,000—will be granted along with the $1,480,000 additional proposed—of $6 million—for water resources recreation. The continually increasing public demands for recreational facilities must be met by the Forest Service, along with other resource agencies. Many new opportunities are becoming available, especially with relation to Corps of Engineers and Bureau of Reclamation reservoirs.

It also is important that a new wilderness recreation research effort be initiated at the Intermountain Forest and Range Experiment Station at Missoula, Mont. We are pleased that $75,000 is proposed for this activity even though $300,000 per year is needed.

We hope that ample funds can be provided for the uniquely valuable wildlife wetlands management plan for the Chippewa National Forest in Minnesota. Our people there advise that $300,000 can be utilized effectively for this project. This is a wonderful program, one fully meriting all of the support the committee may see fit to give.

We especially are intrigued by a new device the Forest Service is using, a "riffle-sifter," to clean fish spawning beds. This promises to boost the production of fish and we hope the program can be encouraged.

And, we hope that $57,000 can be allowed for construction planning at the Cowetta hydrologic station in Georgia, a fine facility suitable for expanded forest watershed research work.

Finally, we support requests by wildlife and conservation groups for increases of funds for the Forest Service wildlife habitat research program. Mr. C. R. Gutermuth, vice president of the Wildlife Management Institute, who could not appear here today, has authorized me to speak jointly on this for his organization.

Nationwide there are everincreasing demands from hunters, fisherman, and nature enthusiasts for increased wildlife. The Forest Service is the Federal agency responsible for research on the management and improvement of wildlife habitat on forests, grasslands, and other wild land areas. Such research is conducted cooperatively with the various State wildlife agencies, the Fish and Wildlife Service, universities, and private groups. This team approach has stretched the research dollar, resulting in the development of procedures for improvement and management of habitat which point the way to great advances that can be made in the field.

NEED FOR RESEARCH

There is an especial need to start research on the breeding and selection of shrubs and other food and cover plants of value for game. This would be westernwide in scope and findings would also be of value for livestock range improvement, erosion control, plantings for recreation areas and roadside beautification. Additional knowledge is urgently needed by public land managers and private holders to carry out the most effective management and manipulation of wildlife habitat in harmony with other uses.

The present research effort of 27 full-time scientists in the Forest Service is totally inadequate to meet the habitat problems on our wild lands that comprise over half the total area of our country. In our past annual conventions, the delegates have adopted resolutions urging full funding for a continued and expanded research effort. In fiscal 1967, Congress appropriated $912,000 for wildlife habitat research and no increase is proposed for fiscal 1968. We recommend as a bare minimum an increase of $700,000 to strengthen or start needed research by the Forest Service at their project locations in the Pacific Coast States, the Intermountain and Rocky Mountain regions, the Ozarks, and the Southeastern States.

Thank you for the opportunity of making these remarks.

STATEMENT OF RICHARD C. WOLFF, VICE PRESIDENT OF THE GARCIA CORP., TEANECK, N.J.

INADEQUACY OF REQUEST FOR FEDERAL MARINE GAME FISH RESEARCH

Chairman HAYDEN. The next witness will be Mr. Richard C. Wolff.

Mr. WOLFF. Mr. Chairman and members of the subcommittee: I am Richard C. Wolff, vice president of the Garcia Corp., the largest fishing tackle concern in the United States, with headquarters in Teaneck, N.J.

I am also a director of the Outdoor Writers Association of America, whose 1,400 members are located throughout the Nation's 50 States.

For the past 5 years I have directed your attention to the administration's inadequate budget request to conduct Federal marine game fish research projects on the broad and comprehensive scale presently needed.

Today, there are more than 8,300,000 salt water fishermen distributed along the Atlantic, gulf, and Pacific coasts, who spend approximately $800 million annually in pursuit of their favorite outdoor recreation. In 1966, salt water anglers are estimated to have landed 1.4 billion pounds of edible fishes, which is approximately 70 percent of the total edible catch of finned fishes by U.S. commercial fishing vessels.

Salt water fishermen of all ages and both sexes enjoyed 95,837,000 days of fishing in 1965. In traveling more than 4 billion miles in the same year, salt water fishermen spent more than $85 million for transportation, $136 million for boats, equipment, and licenses, and an additional $236 million for bait, guides, and other angling expenses.

Sportfishing, as evidenced in the 1965 National Survey of Hunting and Fishing, continues to be one of the Nation's fastest growing outdoor recreational activities. In terms of dollars spent, salt water fishing is more than twice as important as commercial fishing. While the Nation's population continues to be urbanized into little more than 1 percent of the total land mass, we are experiencing a "blacklash" in which growing numbers are turning to outdoor recreation such as fishing in order to rediscover our great natural resources.

The decline, disappearance, and immediate threat to many popular game fish species along our coasts not only will disrupt the growth of salt water angling, but also infer serious economic consequences in coastal communities of some 21 States.

The present requested budget of $895,000 is intended to accommodate the entire Federal program in research facilities at Sandy Hook, N.J., Narragansett, R.I., and Tiburon, Calif. This sum is approximately one-third the amount envisaged by Congress in 1959, when it established the annual requirements of the Federal research program. It is also $307,303 less than what is needed to conduct vital research in order to forestall threats to important game fishes on both coasts. Under the present budget request, expansion of the research program will not be permitted.

We are confronted with the fact that actually little is known of the fish and invertebrate life of the Continental Shelf. Intensive study of this area will help in correcting the present decline of such important game fish species as fluke, weakfish, drum, bluefish, spot, croaker, and others.

Marine biologists also are alarmed by the great pressures being placed on oceanic species like the tunas and billfishes by commercial longliners. It is reported that some 60 foreign commercial fishing vessels are operating in the coastal waters of southern California, extending miles of longlines that are responsible for taking thousands of large fish in this important fishery. Eastern Pacific longlining has been increasing in the past 10 years—the total number of hooks jumping from 164,000 in 1956 to 50 million in 1963, and the marlin catch from 600 in 1956 to over 200,000 in 1963.

URGENTLY NEEDED RESEARCH PROJECTS

In addition to the Department of Interior's reported budget of $895,000 for Federal marine research projects—which is little more than the amount allocated last year and which was increased only after Congress reexamined the Department's original small request—I direct your attention to three urgently needed projects.

These are:

1. $100,000 for a pilot study of the Atlantic coastal estuarine zone, which provides the largest portion of yield of the sea resources. This estuarine zone is the key to fish and wildlife productivity along the Atlantic coast and also is the source of nutrients for the Continental Shelf. Some 65 percent of fish inhabit estuarine areas for all or part of their lives.
2. $100,000 to conduct study programs of big game fishes of the Continental Shelf, and to accelerate tagging programs, life histories, analyses of catches, and systematic collection of data on the effects of longlining and purse seining on big game fish.
3. $107,303 for the first year of a 6-year study on marlin and sailfishes in Pacific coastal waters to determine trends in fish populations

and changes and effects of increased foreign fishing on Eastern Pacific billfishes.

IMPORTANCE OF KNOWLEDGE OF ATLANTIC ESTUARINE ENVIRONMENT

Referring back to the first of the three additional research projects I recommended, the importance of gaining additional knowledge of the Atlantic estuarine environment is based on the fact that these areas where salt and fresh water meet serve as spawning grounds and as nurseries for migratory fish. Generally speaking, man's activities along the seacoast are harmful to fish and wildlife resources.

Damage is greatest where the population is heaviest, and here the estuarine zone is subjected to industrial and domestic pollution, garbage dumping, filling, and cutting up for residential lots and industrial sites. Much of the damage has resulted from poor plannng; from the present lack of understanding; and absence of priciples that, it is expected, will be derived from the proposed concentrated study of estuarine areas.

PROPOSED RESEARCH PROGRAM

The proposed research program also will develop additional basic information on fish and wildlife needs required for orderly planning of land use; a methodology for restoring badly damaged areas; and a system for increasing the productivity of remaining estuarine land.

The research plan suggested by the Sandy Hook Marine Laboratory includes the establishment of three experimental stations and a demonstration estuarine area of approximately 100 acres. These study centers will, if possible, be situated in existing Federal wildlife refuges along the Atlantic coast. At these centers, the effects of disruptive activity such as dredging, filling, channeling, and pollution, will be measured precisely.

Before a full-scale program can be undertaken, a 1-year feasibility study should be conducted to determine the kinds and extent of estuarine damage and to locate the three experimental stations. The pilot investigation will include a study of present water quality, hydrographic characteristics, and fauna and flora at proposed sites. It also will include a review of existing data on survival requirements of estuarine fish species and an assessment of costs and benefits for estuarine conservation activities.

This planning and feasibility pilot project can be accomplished in 1 year with the following budget:

Scientific personnel	$ 43,000
Supporting personnel	30,000
Engineering services	5,000
Equipment	8,000
Operating expenses	14,000
Total	100,000

OFFSHORE LONGLINING BY FOREIGN AND DOMESTIC COMMERCIAL FISHERMEN

The second recommended research project deals with a problem of great concern to sport fishermen in the waters of the Continental Shelf. Offshore longlining by foreign and domestic commercial fishermen after big oceanic fishes has increased dramatically in recent years. Because little is known about the effects of this accelerated fishing activity, steps should be taken to measure present tuna and billfish populations to determine what conservation problems exist and what steps must be taken to conserve this angling resource.

To date inadequate funding has held this area of marine research to an almost token level. To offset this, I recommend that tagging programs be expanded and accelerated as a step to defining stocks, determining migrations, and assessing any exploitation. In addition, life history studies of these great sea fishes must be made, as well as systemized data collection involving commercial and sportfishing catches.

A 1-year study to accomplish the above objectives can be completed using three biologists and the help of supporting personnel. The actual costs involved include:

Scientific personnel	$ 30,000
Supporting personnel	25,000
Operating expenses	45,000
Total	100,000

STRIPED MARLIN AND SAILFISH

The third project involves the striped marlin and sailfish located off the coast of southern California and Mexico. Both are areas widely regarded for these important game fishes whose presence contributes substantially to the local economy.

In recent years, heavy fishing for the striped marlin by foreign commercial vessels has been carried on in locations believed to be important spawning centers. Since little is known about Eastern Pacific billfishes, research data must be accumulated in order to undertake sound conservation practices.

Under supervision of the Tiburon Marine Laboratory, oceanic researchers will seek to detetrmine distribution, abundance, and general life history of the Pacific striped marlin and sailfish, as well as to evaluate the effects of commercial and sportfishing on these species over a 6-year period.

The studies, to be conducted in the laboratory and on the high seas, will record and plot catches of billfishes, establish migratory patterns through tagging, conduct life history studies to locate spawning areas, establish spawning seasons, and finally examine the sport and commercial billfish catches for seasonal and annual variations in size, age, and sex.

The studies, aiming at developing specific recommendations for conserving these valuable fish, require an allocation for the fiscal year 1968 of $107,303 to be divided as follows:

Personnel	$32,703
Equipment, including plankton samplers, nets, longlining gear, laboratory, field biological equipment, and vehicles	12,600
Travel	5,000
Boat charters and tagging	47,000
Total	$107,303

Cost of Additional Research Projects

In requesting Congress to include these three additional and vital research projects at a cost of $307,303, the total budget for marine sportfishing research will total $1,202,303 and still be less than half that contemplated when the authorizing legislation was passed in 1959. I hope Congress also takes into consideration that in the fiscal year 1965 Federal excise taxes amounted to nearly $28 million on the sale of fishing tackle.

Finally, the expenditures of nearly $800 million by salt water sports fishermen in 1965 seem to justify a research expenditure of $1,202,303 in order to help insure that this great sport enjoyed by young and old will continue to grow in the years ahead.

Gradual Reduction of Fish

Senator McGee. What is the greatest pressure, commercial fishing or pollution?

Mr. Wolff. Well, since pollution has existed since almost—well, it is hard to say what the effect would be, however, the commercial industry has gradually declined in the past years because of the gradual reduction of these fish.

It is questionable whether it is economically feasible to catch fish commercially at least on the scale they were catching them. The commercial industry right now is catching a harvest of edible fish about equal to that of the sport fishing.

Now commercial, they get menhaden, which are reduced to oil and so forth, things other than sport fish, but there is a definite shortage of fish, both commercially and sport fishing, so we need help in both directions.

Senator McGee. Thank you.

Chairman Hayden. Thank you.

Mr. Wolff. Thank you.

STATEMENT OF ROBERT P. BLEDSOE, EXECUTIVE SECRETARY, WYOMING WOOL GROWERS ASSOCIATION, CASPER, WYO.

INTRODUCTION OF WITNESS

Chairman Hayden. Mr. Bledsoe, Wyoming Wool Growers Association.

Senator McGee. Let me suggest, Mr Chairman, that Bob Bledsoe is first of all a citizen of the State of Wyoming and executive secretary of the Wyoming Wool Growers Association, and he is speaking here for the national group, since their interests are identical.

I just want to point out that this committee each year devotes some of its concern to the problems we have out there; namely, predatory animals that affect our sheep industry and that a year ago we cut some of this back rather sharply.

As a consequence, in the past year, the activities of the predators have shot upward, and the losses are very measurable both in the State itself as well as nationally. We are very hopeful that because of the concern of this group, the woolgrowers, that we may be able to help them a little more this year.

SHEEP DESTROYED BY PREDATORY ANIMALS

Mr. Bledsoe. Thank you, Senator Hayden and Senator McGee.

My name is Robert Bledsoe, and I am speaking on behalf of the National Wool Growers Association and the Wyoming Wool Growers Association. The National Wool Growers Association membership consists of 20 affiliated State and area producer organizations where approximately 75 percent of the Nation's sheep, lambs, and wool are produced.

Wyoming is an affiliate of the National Wool Growers Association, and ranks second among our States as a producer of wool and lamb.

Representing the Natinal Wool Growers Association and the Wyoming Wool Growers Association, I want to thank you for this opportunity to discuss with you one of the domestic sheep industry's major problems—the increasing number of sheep destroyed by predatory animals.

Sheep and lamb losses from predators have increased substantially during the past year.

For example, in my State, the Wyoming and U.S. Departments of Agriculture have reported losses of sheep and lambs in Wyoming from predators for the years 1965 and 1966. The following table indicating the number of sheep and lambs killed by the various kinds of predators, should prove most interesting to members of this committee.

(The table follows:)

Sheep losses in Wyoming by predators

	1965 head	Value of sheep	1966 head	Value of sheep
Coyotes	66,900	$944,100	82,200	$1,156,200
Bobcats	11,900	192,700	9,100	144,900
Dogs	5,500	66,000	9,200	113,200
Bear	4,800	60,800	6,800	83,500
Eagles	7,200	121,200	8,800	144,600
Others	3,000	42,600	2,300	39,800
Total	99,300	$1,427,400	118,400	$1,682,300

INCREASE IN DEPREDATION CAUSED BY COYOTES

Mr. Bledsoe. In computing the value of the sheep and lambs killed, the Department used the annual average prices—1965, lambs $17.10 per head; sheep, $7.40 per head; 1966, lambs $17.32 per head; sheep $7.52 per head.

In reviewing the above table we find an increase in the number of sheep killed by each class of predators, from 1965 to 1966, except by bobcats. The most alarming increase in depredation was caused by coyotes. A total of 15,300 more head of sheep were killed by coyotes in 1966 as compared to 1965. The monetary loss increased by $212,100. The total loss of sheep and lambs to predators increased from 1965 to 1966 by $254,900, and 83 percent of this was caused by coyotes.

I am sure it is rather obvious to the members of the committee why sheepmen are requesting more adequate control of this cunning and bloodthirsty predator.

I am sure the increased losses experienced in Wyoming are typical of the other Western range sheep-producing States. In fact, Floyd Myers Marsh, president, California Wool Growers Association, reports that depredation losses from predators have increased rapidly throughout California the past year and when the State department of agriculture was contacted, he was informed that complaint calls on predator depredations during 1966 were up between 5 and 10 percent over the previous year.

Texas, the Nation's largest sheep and wool producing State, reports increased sheep losses from predators during the past year.

BETTER CONTROL OF PREDATORY ANIMALS NEEDED

From the sheep loss figures, it is rather obvious that more and better control of predatory animals is needed if the sheep industry is to survive. The present level of control is now allowing sharp increases in predator numbers. Therefore, we strongly urge that the full $350,000 cut from the predatory control budget 2 years ago be restored, along with an additional $500,000; and furthermore, that these funds be directed toward the field or control level where they are urgently needed and can best be utilized.

RECOMMENDATIONS

We are fully cognizant and appreciative of the fact that the U.S. Congress last year restored $200,000 of the $350,000 cut of 2 years ago; however, it is rather apparent from the increased sheep losses just cited, that either it was not enough money or the money was spent at the least effective control level of the program. Therefore, we respectfully request the following:

1. That Congress appropriate adequate funds for the work of the predator control program for the Bureau of Sports Fisheries and Wildlife.
2. That the Bureau of Sports Fisheries and Wildlife initiate immediately a concentrated campaign and effort to control predators. The effort must be made at the trapper level, out in the field where the damage is being done. We feel that it is imperative that the increased appropriation be specifically earmarked by Congress to be used for predator control at the trapper level.
3. A dire effort must be put forth to control coyotes in their breeding areas, especially national forests and Indian lands. Actually, the effort to control coyotes is futile unless it is also done at their breeding areas or at the source of supply.

COOPERATIVE FUNDS

Sheepmen are not asking for the Federal Government to bear the full financial responsibility of an adequate predatory animal control program. They have heavily taxed themselves for control funds.

For example, in Wyoming, the Wyoming Wool Growers Association asked the State legislature to raise the maximum on the sheep mill levy from 20 mills to 35 mills to finance the predatory control program.

In Idaho, the 1967 legislature just enacted a law to raise the sheep mill levy to 50 mills for predator and disease control work.

The Federal Government contributes roughly around 30 percent of the total expenditure used in the cooperatively financed predator control program, yet the Federal Government owns 50 percent of the land in the 11 Western States.

PREDATORS AND WILDLIFE POPULATIONS

Many people, including stockmen, are interested in big game and concerned with such predators as coyotes, eagles, lions, and bobcats. They know these animals are killers of big game. Statistics show that where predatory animal populations are high, severe losses of wildlife occur.

For example, the Bureau of Land Management in Wyoming recently released the following statement in a report that was made in connection with the antelope population in Wyoming—"The wildlife population of Wyoming was considered to be increasing or static until 1962, with a decline noted in 1963 and 1964. It is interesting to note that these last years were periods of rapid decreases in effectiveness of predatory animal efforts * * *." In other words, when the confirmed coyote and bobcat kills declined, the antelope population likewise decreased.

A recent South Dakota publication points out that in that State, the hunter harvested only 2,000 antelope from 1911 to 1944—33 seasons. During this time, the seasons were repeatedly closed and the antelope population seemed doomed. A good hard look was then taken at the predator situation and efforts which followed resulted in sharp predator reductions. As a result, in the next 12 years, 46,000 pronghorns were legally harvested.

> What was happening to the hunter's share of antelope?

The same report goes on to say:

> The U.S. Department of Agriculture reported coyotes in one winter on Montana's National Bison Range destroyed all but 17 of a herd of 60 antelope, and also credited coyotes and bobcats on the Wind Cave National Park with killing over half the antelope.

That's the balance of nature you hear so much about.

Big game is not the only wildlife that falls victim to predators. Upland birds and waterfowl make choice morsels for coyotes and foxes.

In Utah, the Goshen Valley Wildlife Federal claims that predatory animals are eliminating the bird population. Their president, in a recent article said:

> We will spend thousands of dollars to equip our fieldman to catch the man who illegally steals one bird and then waste thousands of birds each year because we cannot worry ourselves with the predator "poacher" who is busy destroying our birds each day and night.

PREDATORS CAUSE SHEEP TO BE HERDED

Many sheepmen in Wyoming and other range States have found that in order to cut down on labor costs, manage their range for more production, to get a higher lambing percentage, heavier lamb weaving weights and more clean wool per ewe, it is necessary to run their sheep flock under fence.

It is virtually impossible to secure competent qualified herds. The older men are fast fading from the picture, and younger men are not interested in becoming sheepherders.

Cost of production in the sheep business has increased tremendously during recent years, and in order for the sheepman to survive he must attempt to cut costs of production and at the same time increase the production per unit.

Fencing of range has been one of the tools of management which has proven beneficial in cutting costs of production and at the same time increasing the production.

STUDY MADE BY UNIVERSITY OF WYOMING

A study made by the University of Wyoming reveals that when sheep are run under a fenced operation, the grazing capacity of the range is improved by at least 20 percent, as opposed to a herded operation.

To quote from the University of Wyoming publication, "Fencing Versus Herding of Range Sheep," by W. P. Roberts, Jr., June 1961:

> When sheep cease to be herded they are allowed to shift for themselves, finding their own bedgrounds and coming to water when they desire. They will spread out and cover a pasture thoroughly, getting into and grazing, spots that a herded sheep would never find.

This, and the reduction in grass breakage from not having a band of sheep travel over it, account for a considerable increase in available forage.

However, if the coyotes and other predators continue to increase and, consequently, the increased number of sheep lost, as has been the case in recent years, because of the lack of an adequate control program, then the fenced-sheep operation cannot survive.

RABIES CARRIED BY PREDATORS

Have you ever seen a person bitten by a rabid dog? If a person happens to have been bitten by a dog and is later discovered to be rabid, an all-points bulletin goes out over the country in a concentrated effort to find this person in the short time before this disease becomes fatal.

Rabies is transmitted from wild animals, such as foxes, bobcats, and coyotes, to domestic livestock and dogs by salvia deposited in bite wounds and is transmitted by dogs to humans in the same way.

An active predator control program is necessary not only to keep the disease in check but also to have a staff readily available to move in on an area should an epidemic or outbreak of rabies occur.

Rabies infection in certain wild animals appears to be increasing rapidly. The National Pest Control Association in their "Technical

Release," dated February 27, 1967, report the incidence of rabies in the United States for the period of 1953–65.

In 1965 the incidence in wild animals totaled 3,257 compared to 1,476 in 1953. The report indicates the incidences in wild animals in 1965 as follows: foxes, 1,038; skunks, 1,582; bats, 48.4; raccoons, 99; other animals, 54.

Many States report an increase in 1966 over 1965 of the number of animals tested for rabies. For example, the department of health in the State of Texas showed a 15-percent increase in 1966 over 1965.

Animals tested for rabies (other than dogs and cats) include the fox, skunk, and various small varmints. As a result of rabid animal bites, over 900 people were given serum shots by the State department of health in Texas.

This trend of increasing rabid animals is alarming and all necessary measures should be taken to curtail the increase and to control rabies. A number of instances have occurred where entire families have had the shots administered because of rabid animal bites.

CONCLUSIONS AND RECOMMENDATIONS

Present losses due to predators are now costing the sheep industry approximately $40 million annually. This is unnecessary waste. Furthermore, these losses are increasing, which indicates a sharp increase in predator numbers under the present program.

If this increase is allowed to continue due to an inadequately financed program, and the lack of the Department of Interior to accept its responsibility in adequately controlling predators, the very existence of the sheep industry of this country is in jeopardy.

We strongly recommend the following to this distinguished committee:

Increase the appropriation for predatory animal control $650,000 over last year's appropriation.

Specifically earmark the increased appropriation to be used only at the trapper or field level. Predators are not reduced from behind a desk at the administrative level.

Request that the research program for new methods of taking predators to be greatly accelerated.

Sheep numbers in the United States are at an alltime low. One of the major reasons is because predators have put a lot of sheepmen out of business.

We sincerely solicit your help in reviving the industry, by providing an adequate predator control program.

LOSSES IN WYOMING

I would like to submit for your consideration a picture that appeared in our monthly publication of the Wyoming Growers that individually points out the losses experienced in our State in 1965. You will notice that the title of the caption on these pictures is "Coyotes destroy over $1 million worth of sheep in Wyoming annually plus untold numbers of wildlife."

Chairman HAYDEN. Are coyotes the principal predator?

Mr. BLEDSOE. Yes, they are in our State. We are losing quite a few from eagles, but the primary predator is coyotes in the State of Wyoming.

STATEMENT OF VERNON J. SMITH, CALIFORNIA WILDLIFE FEDERATION

FOREST SERVICE WILDLIFE HABITAT RESEARCH PROGRAM IN CALIFORNIA

Chairman HAYDEN. The next witness is Mr. Vernon J. Smith, California Wildlife Federation, San Francisco, Calif.

Mr. SMITH. Thank you, Mr. Chairman.

I am Vernon J. Smith, representing the California Wildlife Federation, a sportsman-conservation organization of 100,000-plus members. We are also the State affiliate of the National Wildlife Federation and represent the broad spectrum of outdoor use from hunters, fishermen, boaters, skindivers, varmint callers, four-wheel drive enthusiasts, trailhound owners, and archers to those who just enjoy and appreciate esthetically the flora and fauna provided by our land.

I am most privileged to have the opportunity to appear before this committee and make a plea for strengthening the increasingly important Forest Service wildlife habitat research program in California. Our State rangs fourth in the Nation in hunting license sales of nearly 650,000, first in fishing license sales with over 1½ million, and esthetic values of our State's wildlife is appreciated by untold numbers of nature lovers. It is recognized the health and productivity of our wildlife depend upon good habitat. The strong competition and varying needs for the use of our wildlands dictate that we must manage these lands to their full potential. To achieve this will require new knowledge, knowledge which can be gained through research and will benefit all related outdoor interests. An effort must be made to keep pace with our complete society, the population increases and the rising demand for recreation space. The recognition that more people with the shorter workweek relates directly to increased pressure on our "out of doors," indicates we must avail ourselves of every opportunity to bring this lagging research area up to a par with other environmental requirements. This, it would seem, is the responsibility of the U.S. Forest Service, and it is the opinion of my organization the present research budget of only $50,000 is not adequate. It just cannot get the job done.

Besides the single major study, currently, of bitterbrush improvement in northeastern California, the people I represent would like to see additional studies of: 1. chaparral management for wildlife; 2. increased emphasis on quail and other small game habitat; 3. nongame habitat, song birds, etc.; 4. fish habitat research.

RECOMMENDATIONS

The California Wildlife Federation respectively requests this budget be increased to $175,000 annually. Funding at this level would, we understand, permit the start of much needed research on our most pressing problems. We believe, by all indications, the need for the increase is urgent. Time is not on our side in trying to adequately provide for the increasing demand for wildlife in California.

Our federation further supports the request by the Western Association of Game and Fish Commissioners that the research branch of the Forest Service assume responsibility for coordinating all available information on wildlife habitat in the western area. The advantages of having the data available, and in one place for its ultimate use, is essential in realizing the ultimate potential of the program. This would require establishing an office of wildlife habitat information coordinator.

Information available to our organization indicates this would require an additional $75,000. Such an office would assist directly to improve wildlife habitat management practices in California and throughout the West. The value received for the dollar invested in this program indicates the greatest possible dividends.

Again, for this opportunity to appear before your committee, thank you.

STATEMENT OF NORMAN F. SMITH, CHIEF OF THE RECREATION RESOURCE PLANNING DIVISION, MICHIGAN DEPARTMENT OF CONSERVATION

OPPOSITION TO BUDGET RECOMMENDATION RE ALLOCATION OF APPROPRIATION FOR LAND AND WATER CONSERVATION FLOOD

Chairman HAYDEN. Norman F. Smith, Michigan Department of Conservation.

Mr. SMITH. Thank you, Mr. Chairman.

I am Norman F. Smith, chief of the Recreation Resource Planning Division of the Michigan Department of Conservation. Among the responsibilities of this division are the preparation of the statewide plan for outdoor recreation and the administration of the land and water conservation fund. I am representing the director of the Michigan Department of Conservation, and wish to speak in opposition to the President's budget recommendation wherein the total advance appropriation of $32 million to the land and water conservation fund is to be allocated to Federal agencies to accelerate land acquisition.

REASONS FOR RECOMMENDATION

Reasons given for this recommended action apparently are:

1. The large unexpended balance presently in the State's allocations indicate a lack of need;
2. The States are spending too much on development and not enough on land acquisition; and
3. The price of land which the Federal agencies wish to buy is escalating rapidly, and therefore the Federal agencies need additional funds.

Our position is that these are not valid reasons for changing the basic allocation formula at this time.

BACKGROUND OF THE ACT

The land and water conservation fund was a direct outgrowth of recommendations made by the Outdoor Recreation Resources Review Commission. The Commission and the legislative history of the act pointed to the States and local units of government as playing a most vital role in meeting recreation needs of today's and tomorrow's urban populations. The ORRRC findings indicated that the greatest shortages in recreation areas and facilities and hence the greatest needs were in and near urban areas where the responsibility rested logically with State and local governments. This fact was recognized in the 40 percent Federal–60 percent State-local division of the fund as provided in section 4(a) of the act. This need has also been stressed by the Bureau of Outdoor Recreation; and by the President who has challenged us to meet the needs of urban populations.

Section 4(a) of the act also gives the President the authority, during the first 5 years, to vary this 40–60 ratio by 15 percent either way "to meet, as nearly as may be, the current relative needs of the States and the Federal Government." There is no basis at present to assume that these relative needs have changed. The apparent large balance in the fund allotment available to the States but unused is not a reflection of the need, but rather the result of a normal lag in gearing up to a new program. This lag has not been entirely at State and local levels.

PROGRAM STATUS IN MICHIGAN

The history of the program in Michigan is perhaps typical of this gearing up process. As in most States, it was necessary to obtain funds and personnel after the passage of the act in September 1964, in order to prepare a State outdoor recreation plan and to administer the land and water conservation fund program. In Michigan we held numerous meetings and conferences with local communities; we promoted and sold the program through news releases, radio, and television; we prepared and distributed detailed guidelines for local participation in the program, an developed forms and proceures. The preliminary State plan required 1 year to prepare and was approved by the Bureau in January 1966. Thus we have been operating under the program a little over 1 year.

Local communities, which share equally in the fund in Michigan, were likewise faced with delays in applying for funds. Just as the Federal Government required the States to have comprehensive plans, many States, including Michigan, required local governmental units to have, or be in the process of preparing, similar long-range community plans. This requirement for both State and local level planning is as it should be and the ultimate results will bear this out, but it has taken time and delayed applications.

While some communities had financial resources with which to match Federal funds, many were not ready to take advantage of the program. But the prospect of assistance which the fund offered spurred many to provide funding sources through special appropriations, bond issues, or tax millage. These have taken time, frequently requiring a vote of the people at a regular election. Our first local applications were accepted in June 1966, and submitted to BOR. The first local project was funded 5 months later.

As of February 1, 1967, Michigan had submitted a total of 55 State and local applications requesting $3,712,000 or 75 percent of our total allotment. Yet the Bureau has funded only 13 for $795,000, or 16 percent. This latter figure is the one which is being used as an indication of our progress and needs.

This is no criticism of the Bureau of Outdoor Recreation which has a tremendous job to do. But this low percentage of projects funded to date certainly in no way reflects the State's needs.

The program is new. Like Michigan, most States have been in it a little over 1 year, and it is just now beginning to accelerate. The slow start, and the gradual acceleration were obviously anticipated by the writers of the act for they wisely provided in section 4(b) for the advance appropriation to start with the third full fiscal year of the fund, about the time the program would really gain momentum. This is the point we have reached, and the full allotments to State and local governments is needed now and will be in the future.

Under the stimulus of the act and its requirements for long-range planning, the Michigan Department of Conservation has developed a program which projects expenditures of $377 million over the next 10 years. Of this, $44 million are foreseeable from various Federal sources and $54 million from State sources, leaving a deficiency of $278 million. We are now making strong efforts to develop State financing, and have proposed increases in certain fees and allocations which would raise $77 million. There should be no illusions about the size of the contribution of the Federal land and water conservation fund. We foresee, at present levels, only $32 million from this source in the next 10 years. But it is a crucial $32 million. It is seed money, and any reduction in the amount of seed, will reduce the outdoor recreation harvest far in excess of the amounts withdrawn.

ACQUISITION VERSUS DEVELOPMENT

We believe that the use of a high proportion of funds for development of land already in local public ownership is warranted at this time, particularly in or near urban centers, where the need for use and facilities is critical. In Michigan, 90 percent of the funds requested for State projects have been for land acquisition, mostly in the southern urban region. Conversely, 64 percent of our local projects have been for development.

However, we feel we have been justified in approving a higher proportion of local development projects for several reasons:

1. Many communities had the land, and before the local officials could convince the voters that they should acquire more they had to put this land to use first.
2. Local racial and teenage unrest is attributed in some degree to lack of "things to do." Ball diamonds, swimming pools, and skating rinks offer outlets for energy that weeds and bare ground do not. Buy now and play later won't keep today's kids out of trouble.
3. In response to the gentle prodding of the Bureau of Outdoor Recreation to submit applications as soon as possible to begin to use the fund, we accepted and submitted development projects which were qualified and in conformance with the State plan.
4. It can also be noted that the Secretary of the Interior requested expenditures from the land and water fund for development of several

bicycle trails near metropolitan centers. The city of Detroit already owned land suitable for this purpose and was able to qualify for one of these development projects.

We are making a gradual shift in the emphasis on development projects at local levels. Both the States and the Bureau of Outdoor Recreation have it within their authorities to bring about this change. However, it should be remembered that there is a backlog of critical development need just as there is a land need, and in many instances the development should receive higher priority at this time. Satisfying the immediate need for development and use will pave the way for further acquisition.

LAND COSTS

Cited specifically in the President's budget message was the matter of rapidly rising land prices in Federal acquisition areas. This situation is no less true in the State and local programs; and in fact, land prices in the metropolitan areas and urbanizing fringes, which are the normal province of State or local action rather than Federal, are perhaps the highest to be found. We can cite numerous cases in Michigan. For example:

The State has been involved in negotiations for Lake Michigan frontage for park purposes which have gone from $5 per foot in 1948, to $15 in 1951, to $70 in 1966.

In the short course of 2 years water frontage similar to some which the State purchased in 1964 at $20 to $35 a front foot today sells for $60 to $100 a foot.

In Oakland County, in the Detroit metropolitan fringe, with no sewers or water service, 97 acres of land sold in August 1966 for $2,750 per acre, and was resold in February 1967, 6 months later, for $3,750 per acre. Fifteen acres sold in May 1966 for $6,500 per acre and was resold in March 1967 for $11,000 per acre.

A parcel which was available to the State in our Van Buren State Park in 1960 for $60,000 was sold in December of 1966 to a corporate buyer for a figure in excess of $325,000.

In this same park, a piece of land priced at $19,000 and optioned for 1 year by the State in 1964 but not purchased for lack of funds rose in price and was sold to a private purchaser in 1966 for $35,000.

Even our northern Michigan "wild lands" which could be purchased for $10 an acre right after World War II, and $25 an acre in 1960 are now $75 to $100 per acre.

The list is long and serves only to bolster the point that we are all caught in the same land cost spiral which favors no area or segment of government.

Two other points. The dollar invested by the Federal Government in State and local programs under the land and water fund buys twice as much recreation value as the dollar invested in a Federal project, because each Federal dollar is matched by another when used at State or local levels. There is no matching at the Federal level.

The States and local governmental units are authorized under the act to develop recreation areas as well as to acquire land. Since the Federal agencies can only acquire land, it seems only reasonable that the State share be maintained at a higher level in order to accomplish this dual purpose. And, development costs, like land costs have also gone up.

SUMMARY

1. The land and water conservation fund program is in its infancy, and there is no basis to assume that the relative needs of the States and the Federal Government have changed in the short time of its operation. It is much too early to consider changes in the basic 40–60 formula.

2. The Land and Water Conservation Fund Act and its legislative history clearly give the States and local units of government the major role in meeting recreation needs. Loss of funds will remove part of the stimulus needed to back State and local programs, which received their initial momentum on the basis of fund participation.

3. The needs and interest of the States and local units should not be measured by the amount of money in funded projects but rather by the total amount represented by applications which have been submitted.

4. Spiraling land prices affect the State and local programs as well as the Federal programs.

We, therefore, strongly recommend that the 40 percent Federal, 60 percent State ratio be maintained and that the $32 million advance appropriation be allotted accordingly. The establishment of the formula for sharing of Federal funds with the States and their local units of government, and the assignment of State government of a pivotal role in the total program gave this law great vitality. The program is working. We are moving forward in good faith, and sincerely hope that the Congress will continue this cooperative Federal-State-local government program in the pattern which it so wisely established.

SUMMARY OF STATEMENT

My name is Norman F. Smith and I am chief of the Recreation Resource Planning Division of the Michigan Department of Conservation. Our functions are to prepare a plan for outdoor recreation and the administration of the land and water conservation fund.

I am here representing the director's department and I wish to speak in connection with the President's budget recommendation wherein the total advance appropriation of $32 million to the land and water conservation fund is to be allocated to Federal agencies to accelerate land acquisition. We do not favor this allocation. The reasons given for this recommendation are apparently there is a large unexpended balance in the State's allocation, that the States are spending too much on development projects as against land acquisition and that the price of land which the Federal agencies have to acquire has gone up greatly and, therefore, the Federal agencies need the additional funds.

REASONS FOR RECOMMENDATION NOT VALID

Our position is that these are not valid reasons at this time for changing the basic 40 percent Federal, 60 percent State and local allocation of the funds.

The Outdoor Recreation Resources Review Commission indicates the greatest shortages in land areas for outdoor recreation were in and near the urban area and responsibility was therefore given to the States and local units of government to work in and near those areas to meet this need. This fact was recognized in the 40 percent Federal, 60 percent State and local division of funds in section 6 of the act. The need has also been stressed by Bureau of Outdoor Recreation and the President himself has challenged us to meet the needs of urban population. The President does have the authority to vary this ratio in the first 5 years of the act to meet as nearly as may be the current relative needs of the States and the Federal Government. We do not believe there is a basis at the present time to assume these relative needs have changed.

The apparent large balance of the fund allotment available to the States but unused is not a reflection of the needs but rather the result of a normal lag in the setting up of a new program.

HISTORY OF MICHIGAN PROGRAM

The history of the Michigan program may be typical of what the other States are facing. It has taken us a year to get our plan completed, a preliminary plan, and submit it to the Bureau and therefore we have just been in the program along with other States for about a year now.

Local communities share equally in the fund in Michigan, were likewise faced with delays. Many of them had to set up new staffs, new offices, they had to go to the voters to get funds, they have been delayed in their planning and this has just taken time in getting the program going.

As of February 1, Michigan had submitted a total of 55 State and local projects which represented 75 percent of our total allotments. The Bureau of Outdoor Recreation, on the other hand, has been able to fund only 13 percent or 16 percent of these projects as of February 1. I am happy to say this is moving faster at the present time. The program is new. Like Michigan, most States have been in it a little over a year. It is just now beginning to accelerate. A slow start and gradual acceleration were obviously anticipated by the writers of the act where they wisely provided in section 4(b) that the advance appropriations should start with the third full fiscal year of the fund about the time the program would really gain momentum.

Chairman HAYDEN. When was the first fiscal year.

Mr. SMITH. 1965.

FULL ALLOTMENT TO STATE AND LOCAL GOVERNMENTS IS NEEDED

This is the point we have reached now. We are in the third fiscal year. The full allotment to State and local governments is needed and will be in the future. In regard to development versus acquisition we believe the use of a high proportion of the funds for development of land already in local public ownership is warranted at this time, particularly in the near urban centers where the need for use of facilities is critical.

Many communities already had the land and therefore the local officials could convince the voters they could acquire more land, they had to put what they already had to use.

Further than that, many local, racial, and teenage unrest problems have been attributed in some degree to lack of things to do. Ball diamonds, swimming pools, and skating rinks offer outlets for energy whereas weeds and bare grounds do not, therefore some development was needed.

RAPIDLY RISING LAND COSTS

The President specifically cited in his budget message the rapidly rising land costs in Federal areas required more Federal money to meet these costs to buy the necessary lands. Our position is that the situation is no less true in the State and local programs and in fact land prices in the metropolitan areas and urbanizing fringes which are the normal province of State and local action rather than Federal, are perhaps the highest to be found.

There are many examples which I could cite but I won't do this as far as land prices are concerned.

Chairman HAYDEN. I understand you recommend transfer of funds from Federal expenditures to the other programs?

RECOMMENDATION

Mr. SMITH. We recommend the balance of 40 percent Federal 60 percent local be maintained in the allocation of the $32 million advance appropriation.

Our program is working and we are moving forward in good faith and we hope Congress will continue the cooperative Federal-State-local program in the pattern which so wisely has been established.

Chairman HAYDEN. Let me ask you how much money would be transferred?

Mr. SMITH. We would take the $32 million allocation which is the advance appropriation which was to go entirely for Federal projects and would split this 40 percent Federal and 60 percent State on the original format.

Chairman HAYDEN. Thank you, sir.

Mr. SMITH. Thank you.

STATEMENT OF KENNETH J. SMITHEE, PUBLIC AFFAIRS OFFICER, NATIONAL RECREATION AND PARK ASSOCIATION

PREPARED STATEMENT

Chairman HAYDEN. The next witness will be Mr. Kenneth J. Smithee, public affairs officer of the National Recreation and Park Association.

Mr. SMITHEE. Thank you, Mr. Chairman. I have a prepared statement.

Chairman HAYDEN. It will be made a part of the record.

(The statement follows:)

Honorable Chairman and Members of the Subcommittee, my name is Kenneth Smithee and I am Public Affairs Officer of the National Recreation and Park Association. This organization came into being on January 1, 1966, after six national recreation and park organizations merged into a single organization to serve the people of the United States in their pursuit of better park and recreation lands and facilities, and to help provide more wholesome and meaningful leisure time activities for the American people. The six organizations that now comprise the National Recreation and Park Association formerly were the National Recreation Association, American Institute of Park Executives, American Recreation Society, National Conference on State Parks, National Association of State Park Directors, and the American Association for Zoological Parks and Aquariums.

Laurance S. Rockefeller is President of this organization and its Board of Trustees is made up of distinguished lay and professional leaders from all parts of the Nation. Over 600 outstanding parks and recreation leaders serve on its various national and district advisory committees. More than 2,000 national, state and local parks and recreation agencies, both public and private, are service affiliates of the Association and over 7,000 indiivduals, professional and lay, are members.

BUREAU OF OUTDOOR RECREATION

(Land and Water Conservation Fund)

The National Recreation and Park Association which strongly endorsed and has supported the Land and Water Conservation Fund since its inception, wishes to reemphasize its continuing support for this key assistance program.

However, if this program is to be effective for a prolonged period of time it must provide enough matching funds to acquire and develop critically needed park and recreation areas at the city, county and state levels, as well as at the federal level.

While escalation of land prices is a serious problem in acquiring national parks, recreation areas, forests and game refuges, it should be remembered that escalation is even more of a problem for state and local governments attempting to acquire critically needed sites in and near the metropolitan areas where land costs have been skyrocketing due to residential, commercial and industrial developments.

Many local governments throughout the country have indicated that receipt of Land and Water Conservation Funds would enable them to establish parks and recreation systems or to expand existing systems.

Reports from the Association's eight district offices continue to show that information about the Land and Water Conservation Fund and other federal assistance programs is one of the most prevalent requests. This is due in great part to the shortage of local funds. Thus, cities and counties seek other sources of financial assistance to stretch their local tax dollars.

While we understand the importance of meeting federal acquisition emergencies, we hope the Secretary of the Interior, in exercising the discretion authorized in the Land and Water Conservation Fund Act, will hastily act in increasing the amount of monies for local and state emergencies as he has done for the federal needs.

Overall, we believe that excellent progress has been made by this program since its initial appropriation a little more than two years ago. One of the most important projects authorized under this program is the cooperative arrangement entered into with the National Association of Counties that provides for the publication of 10 guide books on developing parks and recreation programs and for 30 workshops on this subject to be held throughout the country. We believe the positive effects of this grass roots program will last for many years.

We wish to strongly emphasize that other methods of funding the Land and Water Conservation Fund program must be found in order to provide the monies necessary to acquire and develop critically needed park and recreation areas before such sites are irrevocably lost to other uses. Thus, we are in complete sympathy with, and support the objectives of, S-531 (Kuchel), HR-5320 (Dingell), HR-4501 (Morton) and HR-3395 (Saylor).

We respectfully urge this honorable subcommittee to approve the administration's 1968 fiscal year budget request of $142,000,000.

NATIONAL FOUNDATION ON THE ARTS AND HUMANITIES

The National Recreation and Park Association strongly endorsed and supported the provisions of the Congressional Acts creating the Foundation on the

Arts and Humanities, and it has given full support to this program since it was started.

The Association has been kept informed of the excellent work being done by the Foundation, and has benefited directly from the services of the Foundation Staff on several occasions. For example, Mr. Charles C. Mark, Director, State and Community Operations, National Foundation on the Arts and Humanities, has given invaluable advice and guidance to the Association in its efforts to develop the cultural functions of park and recreation agencies throughout America.

It is deeply gratifying to the Association to have the Federal Government not only create an atmosphere conducive to the arts, but, to render tangible evidence of its support. The National Foundation on the Arts and Humanities is creating a favorable atmosphere for the Arts and Humanities, and is making it possible for the arts to move forward on a broad front in such a way that all Americans will find it possible to continue to make substantial progress in all the states and in thousands of communities.

In view of the major tangible accomplishments of the Foundation under the leadership of Roger L. Stevens, during the fiscal year 1967, the Association respectfully urges this honorable subcommittee to approve the administration's total budget request of $15,350,000 for the fiscal year 1968.

NATIONAL PARK SERVICE

The National Recreation and Park Association wishes to affirm its complete support for the administration's 1968 fiscal year budget request of $131,235,000 for the National Park Service.

While this figure represents an increase of $11,018,000 over last year's appropriation, $8,000,000 of this amount is to be used to liquidate obligations incurred under the previous program level. In addition, by deducting the $2.3 million requested to implement the Historic Preservation Act, the total amount sought is only one million dollars higher than last year's total budget. To keep the total budget request at this low figure, it has been necessary to reduce the construction budget by $3,879,000, compared to the 1967 level.

We believe the National Park Service Budget is a frugal budget representing an earnest and sincere attempt to hold the budget request to a minimal level.

The $2.3 million requested to implement the Historic Preservation Program is clearly a start—but only a start—toward preserving historic sites and structures which are of local, state and national significance. However, unless this start is made now, valuable historic properties, which can never be replaced once desecrated, will continue to be lost.

In summary we believe this budget request is inadequate but if approved in its entirety will permit the proven programs of the National Park Service to continue at an acceptable level.

BUREAU OF LAND MANAGEMENT

One of Americas greatest resources is the 465 million acres of public domain of which 178 million acres are located in the eleven western states.

The key hope of providing outdoor recreation opportunities for many of our nation's citizens is dependent upon the identification of public domain areas which have recreation potential and the programmed development of such areas.

To date B.L.M., in an aggressive program, has inventoried 4,300 local, state and national public domain areas with significant recreation potential. Five million acres serving urban centers have tentatively been selected as sites for intensified recreation developments.

However, in order to effectively and fully utilize the vast recreation potential of B.L.M. lands it is mandatory that a long range comprehensive planning program be undertaken which will: (1) determine existing and projected demands and (2) determine where capital improvements should be placed in order that maximum use of such facilities will be obtained. These two steps will insure that public monies budgeted for recreational projects will be wisely spent. B.L.M. simply does not presently have the capabilities to do these studies. The expertise required for the planning and development of specific areas can be obtained by contract with the National Park Service and other federal agencies.

One of the foremost problems in the implementing of a meaningful long range construction program on B.L.M. lands is that of providing adequate funds for this purpose. Last year only $800,000 was approved for construction purposes on B.L.M. lands. Compare this if you will to the recent park bond issue of $17 million approved by Fairfax County voters.

Our main purpose in testifying for the B.L.M. budget today is to re-emphasize to this honorable subcommittee the fact that we have a natural resource with unlimited recreation potential for both present and future citizens. We believe the time to develop this resource is now, but an effective planning and development program can only be started and continued if adequate funds are budgeted.

Now that the decision has been made for the Bureau not only to dispose of lands but also to administer lands with recreation potential, we respectfully urge this subcommittee to give the Bureau the tools to do the job and thus approve the administration's 1968 fiscal year budget request.

In summary, we wish to thank the Committee individually and collectively for permitting us to explain our views on these important and far-reaching national programs.

FRUGAL BUDGET REQUEST

Mr. Smithee. The National Park Service, we feel, has submitted a very frugal budget this year, only $1 million increase over last year and $2.3 million of the total increase is for implementing the Historic Preservation Act, which Mr. Gray talked about earlier; we are in complete sympathy with that.

STATEMENT OF STEWART M. BRANDBORG, EXECUTIVE DIRECTOR, THE WILDERNESS SOCIETY

SUPPORT OF DEPARTMENT OF INTERIOR AND FOREST SERVICE PROGRAMS

Chairman Hayden. Thank you. The next witness will be Mr. Stewart M. Brandborg, executive director, the Wilderness Society.

Mr. Brandborg. Thank you, Mr. Chairman. I have a prepared statement which I submit for the record. Then I would like to summarize it.

Chairman Hayden. Your statement will be made a part of the record.

(The statement follows:)

Mr. Chairman, I am Stewart M. Brandborg, Executive Director of The Wilderness Society, a national conservation organization with headquarters at 729 Fifteenth Street, N.W., in Washington, D.C. Supported by its 36,000 individual members, The Wilderness Society endeavors, through educational means, to perpetuate our nation's wilderness resource for the use and enjoyment of present and future generations. One of the Society's primary efforts now is directed toward encouraging the establishment of an adequate National Wilderness Preservation System under the provisions of the Wilderness Act of 1964.

I am here today to speak on behalf of those programs of the Department of the Interior and the Forest Service which we view as deserving of special attention and strong funding support. These include programs for the acquisition of key tracts of wild land including inholdings within Wilderness Areas, National Parks, habitat of endangered wildlife, and efforts to assure adequate protection and maintenance of Wilderness Areas. Also very important is the financing of trail construction work, and research to furnish the public land agencies with guidelines for providing for the best possible public recreational use of Wilderness Areas without damage to the fragile soil and unique plant and animal life of the areas themselves.

NATIONAL PARK SERVICE

The National Park Service, faced with the prospect of having to administer ten more Park System units—some 240 now—in fiscal 1968 than in fiscal 1967 with approximately the same amount of money as was provided for this purpose in the fiscal 1967 budget, wisely has chosen to devote more of its available funds to the management and protection of the parks with smaller allocations for construction. The Wilderness Society is pleased to see this awareness of the need to protect the natural values of the great National Parks and Monuments reflected in the Service's budget, and we hope that the decrease in the Service's construction funds request indicates a trend toward Park Service encouragement of private investment in tourist-accommodation facilities outside of the parks, where, in most instances, such facilities belong.

In this connection, we support the Park Service's joint planning efforts, now under way with the Forest Service and the Bureau of Outdoor Recreation in the regions surrounding Mount Rainier and Grand Teton National Parks. This essential regional planning program should be fully financed and expanded to enable the federal land management agencies to comply with a heavy schedule of wilderness reviews and to respond to the growing demand for a variety of outdoor recreation opportunities in a manner that will meet public needs without destroying the basic resources upon which this recreation is based. Such regional planning will be especially helpful in placing proposals for the establishment of new Wilderness Areas in proper perspective. When such proposals are considered by the agencies and the Congress, they should be viewed against a background of full information regarding opportunities for both facility-oriented mass recreation and the harvest of timber and other commodities from other lands in the same region.

The Wilderness Society recognizes the need for road construction within National Parks to bring visitors to important points of interest by private automobile, but suggests that a parkways, roads, and trails budget totaling $38 million which contains little more than one million dollars for trail repair and construction may be out of balance. Visitors to National Parks should be encouraged to leave their automobiles in parking lots outside of or immediately within the boundaries of National Parks, thus freeing themselves from the distractions of coping with auto traffic and allowing their attention to be given to the natural wonders around them. While the use of shuttle buses, "minitrains", and perhaps, in certain instances, monorail trains and aerial trams can offer this kind of "leave the driving to us" relaxation to park visitors, those truly interested in becoming acquainted with the parks will explore them on horseback or, better yet, on foot. For these people—a growing segment of the park visitor population—basic networks of sensitively located, well maintained trails within the parks are needed. The agency's fiscal 1968 budget request for only enough money to repair or construct a total of 100 miles of trail seems wholly inadequate in view of the need for such work. To place this figure in perspective, there are 653 miles of trail in Great Smoky Mountains National Park alone.

With respect to the Park Service's road and parkway construction fund requests, we support in particular the two million dollars requested for further work on the Foothills Parkway, which parallels the northwestern boundary of Great Smoky Mountains National Park in Tennessee. We see this scenic road as a safety valve for the motorists who otherwise would place excessive pressure on the necessarily-limited road system within the Great Smokies Park itself. We recognize the need for the request for $400,000 to resurface the existing road between the Smokies Park headquarters and Elkmont Junction within the Park. However, we respectfully request that this Subcommittee recommend against the Service's request for $1,200,000 to build another 2½ miles of new road within the Park along the north shore of Fontana Lake (identifiable in the budget as the "Bryson City road"). I submit herewith photographic evidence, in these articles reprinted from the Society's magazine, THE LIVING WILDERNESS, of the destruction of scenic values this so-called "Transmountain road" has already caused. Such degradation of the natural values of a National Park should not be allowed to continue when an alternative routing of this road could alleviate such damage—an alternative conservationists in North Carolina are encouraging the Park Service to consider.

Approval of this particular agency road construction funds request would allow the completion of this controversial road from Noland Creek to Forney Creek within the Park. It would devastate an area, now roadless, which is qualified under the Wilderness Act of 1964 for inclusion in the National Wilderness Preservation System. We believe the "Transmountain road" project should be held in abeyance until such time as the Congress decides which portions of the Great Smokies Park shall be designated as wilderness.

We are hopeful that the $2 million requested for road construction within Canyonlands National Park and the $630,000 requested for a "south rim road" in Canyon de Chelly National Monument will be expended in such a way as to avoid conflict with scenic and wild land resources and potential Wilderness Areas within these Park System units.

One other construction need deserves special attention: the necessity to install a salt water barrier in Canal 111 at Highway 1 northeast of Everglades National Park before the earth plug in this canal is removed by the Army Corps of Engineers. This barrier must be constructed to keep salt water from spilling out of the Park and into the unique and productive fresh water environment of the National Park.

Moving to the Park Service's land acquisition budget, we note that this agency's request from the Land and Water Conservation Fund for fiscal year 1968 is $48,225,000, and that much of this would be used to acquire land within newly authorized National Park System areas such as Delaware Water Gap National Recreation Area, Fire Island, National Seashore, Assateague Island National Seashore, and Indiana Dunes National Lakeshore. This emphasis on the prompt acquisition of lands in recently authorized areas is sound in view of rising land prices in these areas. Acquisition at Indiana Dunes should begin as soon as possible, at the full $6,500,000 level recommended by the Administration. It is The Wilderness Society's feeling, however, that the allocation of less than ten percent of the Park Service's land acquisition budget to the purchase of inholdings within existing Park System units is conservative. It is extremely important that private inholdings within National Park System areas be acquired without delay and that funds be scheduled for this purpose until the job is done. Private inholdings in Lassen Volcanic National Park, Sequoia and Kings Canyon National Parks, and Olympic National Park recently have been brought to our attention as priority acquisition needs.

In line with our support for National Park Service efforts directed toward the implementation of the Wilderness Act, we urge that the full amount requested by the Park Service for its master planning and natural history and natural science studies programs be granted by the Congress. The research done by the Service's natural history and natural science specialists will help its planners locate future park developments on the basis of ecological studies to show where they will do the least harm to the park's natural values. This work may further reinforce proposals to save major portions of the parks and monuments as undeveloped wilderness.

FOREST SERVICE

Passage of the Wilderness Act in 1964 placed important new responsibilities on the Forest Service. The nucleus of that system, composed of 9.1 million acres in 54 areas, was established within the National Forests. If the Forest Service is to redeem its responsibilities under the Act, it must mark the boundaries, provide the kind of management that will channel and disperse visitors use, clean up after thoughtless visitors, provide the public information that will enhance public appreciation of the wild land values, and prepare long-range management plans to insure that the wilderness resource will continue to be maintained for the use and enjoyment of future generations.

The Forest Service must also study and report as to the suitability or unsuitability of the 34 National Forest Primitive Areas for inclusion in the System. This is to be done no later than September 3, 1974; in the meantime, its Primitive Areas must be managed so as to maintain their primitive character.

Recreation use has been increasing rapidly during recent years on all public lands, but it has increased even more rapidly in Wildernesses. This is an indication of the growing public appreciation and need for Wilderness.

Meeting these important responsibilities will require funds and personnel. The F.Y. 1967 budget request for the Forest Service asked for a sum of $1,500,000 ". . . to pay for the initial work of planning, making studies, posting boundaries, and providing information as required by the new law." The Service stated that "This level of financing is less than 30 percent of what is estimated as needed to do the job to desirable standards, but is related to reaching that level in three steps rather than all in one year." This money was allotted, and the Forest Service is making excellent progress. It is, however, important that this work be accelerated to reach a satisfactory level by F.Y. 1969.

Wildernesses, as the Subcommittee knows, are more than recreation areas. They are important guideposts by which land managers can gauge the management activities on other lands. To biologists, botanists, ornithologists, ecologists, and other scientists, wilderness stands as a laboratory, a control plot, for measuring the behavior of plants and animals free of human intervention. From such observations will come advancement in medical science, sources of new foods to cultivate and commercial products useful to man.

While recreation is an important use of Wilderness, it must not be allowed to destroy the fragile wilderness resource. We must provide and maintain opportunities for dispersed types of recreation such as hiking, camping, hunting, fishing, and sightseeing outside these areas. While developed sites such as picnic areas, campgrounds, and winter sports sites will occupy only a tiny fraction of the area within our National Forests, they serve as a focal point from which the vast majority of Americans will enjoy these outdoor recreation pursuits.

The Forest Service now has, and maintains, over 7,500 camp and picnic grounds—an operating "plant" of tremendous size and value. A steadily mounting amount of use, over-use, and mis-use has caused them to devote a greater and greater percentage of their recreation appropriations to the maintenance, clean-up, and administration of these important facilities. The number of new sites they can construct is decreasing. This places an even greater visitation load on existing sites which accelerates their deterioration, requiring even more maintenance, clean-up and administration. A vicious cycle ensues.

The situation is made even more difficult by the need for modern sanitation systems to prevent pollution of our lakes and streams by the growing crowds of visitors. Quality installations are needed on new areas to meet public health requirements. Existing sanitation installations which are no longer adequate under today's heavy use must be modernized. In many areas where human use and occupancy has mushroomed, water purification systems are now mandatory where springs or wells were once considered safe.

The Wilderness Society urges that Congress recognize these important public needs and provide the Forest Service with the funds and manpower to meet them.

The Wilderness Society also urges that Forest Service programs of forest and wild-land recreation research—both biological and sociological—be strengthened and expanded. Specifically, we urge the estabishment of a strong research program in the ecology and use of western Wilderness Areas, and we request that the recreation research program in the Boundary Waters Canoe Area be strengthened to meet the Area's rapidly increasing use pressures and their consequences.

One of the most critical problems in the entire area of resource protection and use is the need for a sound understanding of wilderness ecology—not only the forces of nature and their phenomena, but also the impacts of man in and near the wilderness. Wilderness Areas are living, ever changing, plant and animal communities. Animals move about. Trees die. Seeds sprout. There is constant change, and man contributes to this change. With inadequate understanding, the very reason or purpose a Wilderness Area has been set aside can be destroyed. Because of improved forest fire protection, for the past several decades, large forest fires and their tremendous ecological force occur much less often today. What does this means in terms of the plant and animal community? White pine blister rust, an introduced disease from Europe, probably has entirely different impacts upon American ecosystems. What are they and what can be done about them? The wilderness visitor himself and his pack animals have changed the wilderness. Western Wilderness Areas are mountainous and geologically youthful. Soils and the plants upon them are usually thin and fragile. A basic question is, How can we best use and enjoy wilderness without destructive impact upon its natural character?

The Forest Service has an able and experienced research organization that can get to the heart of these and related problems effectively and efficiently. For western Wilderness, research is needed (1) on the basic ecology of the principal wilderness plant and animal species and associations, (2) to understand and develop methods to minimize the impacts of human use, (3) to find ways to maintain wilderness plant cover compatible with the wilderness concept, and (4) to develop techniques to maintain a proper balance of wildlife, particularly the elk and deer, with the environment. Ecological research also should be emphasized at the Boundary Waters Canoe Area, but under much different circumstances in this land of forests and lakes with a different climate, different soils, and different use.

A western wilderness research program should have a base of $300,000 and the Boundary Waters program should be strengthened at least $100,000 to field a team of ecological and social scientists to develop the knowledge which will guide the completion and maintenance of America's National Wilderness Preservation System.

Development and management of wildlife and its habitat on the National Forests has not kept pace with other resource developments. This, we are sure, is a result of inadequate funding. Some of the National Forests in the Lake States and in the Mississippi Valley, for example, can be economically developed for increased waterfowl production to offset the loss of aquatic types through private land drainage.

The wetland development survey recently completed on the Chippewa National Forest shows what results can be expected.

National Forest lands and waters, in a number of instances, support the remnant populations of rare and endangered species. With these lands already in public ownership, more attention needs to be given to protection of habitat to help safeguard these endangered species.

FOREST SERVICE LAND ACQUISITION

The Land and Water Conservation Fund Act budget, as presented to the Congress, includes proposed acquisitions by the Forest Service of about 120,000 acres at an estimated cost of about $18 million. This program includes a large variety of lands to serve the varied needs of the American public for general outdoor recreation use such as camping, hiking, fishing, skiing, swimming, horseback riding, and for the enjoyment and protection of wilderness environments. It provides for acquiring lands for addition to the scenic Eleven Point River to Missouri, the George Rogers Clark Recreation Way in Illinois, the Mount Rogers National Recreation Area in Virginia, the Spruce Knob-Seneca Rocks National Recreation Area in West Virginia, Whiskeytown-Shasta-Trinity National Recreation Area in California, Kinzua Reservoir in Pennsylvania, and the Big Sea Water Recreation Way in Michigan. These are but a few of the key project areas.

The Wilderness Society, of course, has a primary concern with the advancement of wilderness concepts and programs. It is vitally interested in seeing that the Wilderness System, as envisioned by the Wilderness Act, be established as rapidly as is practical. A major concern of conservationists is that there be acquisition as quickly as possible of inholdings within national forest Wilderness Areas and Primitive Areas. It is very important that whenever properties within these units become available the Forest Service be in a position to acquire them without delay. The alternative will be further increased prices, the threat of subdivision for summer homes, and other possible uses adverse to the wilderness environment and in conflict with the policy set by Congress in the Wilderness Act.

Notable progress has been made in several of the wilderness areas under the current year's budget. The largest resort in the Selway-Bitterroot Wilderness Area has been purchased by the Forest Service. Negotiations are substantially complete for other private ownerships within the Selway-Bitterroot Wilderness Area and other Wilderness and Primitive Areas. This progress needs to be continued. It can be continued through the 1967–68 appropriations requested for the Forest Service but at less than the desired rate.

The budget under consideration includes funds necessary to acquire only 2,285 acres within or immediately adjacent to National Forest Wilderness or Primitive Areas, in California, Idaho, Montana, Oregon and Washington. The Society recognizes the need for accelerating this effort through holding acquisitions in nearly 10 additional Wilderness Areas and Primitive Areas. These purchases would require an increase of $1 million in appropriations to permit the purchase of about 2,000 acres of National Forest wilderness lands. We would strongly support such increases.

As a companion to the needs for land purchases, there is an urgent need for an acceleration of the land exchange program of the Forest Service. Many of the larger industrial owners of lands within wilderness and primitive areas are not willing to sell but are willing to exchange. In the past, such exchanges have been delayed due to inadequate appropriations for land appraisal and negotiation work. The Wilderness Society supports the $416,000 increase in the budget request for land exchanges as a significant contribution to the acquisition of inholdings in both Primitive Areas and Wilderness Areas.

BUREAU OF SPORT FISHERIES AND WILDLIFE

In addition to voicing our support of the Fiscal Year 1968 budget for the Bureau of Sport Fisheries and Wildlife as proposed by the Administration, we would like to respectfully request that provision be made by the Congress to extend the Wetlands Loan Act for an additional eight years. Through June of 1966, the Bureau has been able to acquire only one third of the prairie wetlands it hoped to preserve under the accelerated program which began in 1961. The Society specifically urges approval of the proposed sixth annual appropriation under this program of $7,500,000, which is $1,500,000 over the 1967 program.

In order to permit the Bureau to conduct the necessary field studies and master planning required to meet the deadlines for wildlife refuge wilderness reviews specified in the 1964 Wilderness Act the Society urges that the full amount requested by the Bureau for its "Management and Investigations of Resources—Wildlife Refuges" and "Construction—Wildlife Facilities" line items be approved. Monies for Wilderness Act implementation studies, for natural area inventories, and for refuge recreational planning are included in these two budget items.

The Bureau's present endangered species program consists of the propagation installation of the Patuxent Wildlife Research Center and four field stations. The location of the field stations and species under study are as follows: Delray Beach, Florida—Everglade kite and other species in the southeast; Hilo, Hawaii—dark-rumped petrel, Laysan Hawaiian duck, and other species in this State; Ojai, California—California condor; and Rapid City, South Dakota—black-footed ferret.

The budget estimates for F.Y. 1968 include an increase of $195,000 for the purpose of initiating a comprehensive regional endangered wildlife preservation program to provide coordination of operational programs with Federal, State, and private agencies, and $105,000 to meet immediate needs of propagation studies underway at Patuxent. These increases are supported by The Wilderness Society, as would be the funding of additional endangered species—preservation activities including the following:

1. Construction of the endangered species laboratory at Patuxent to provide the facility required for conducting the fundamental studies of avian and mammalian biology, nutrition, physiology, pathology and behavior	$650,000
2. Construction of a visitor center to handle people attracted to the propagation center because of the increasing publicity and interest in the program	200,000
3. Erection of permanent type propagation exclosures	300,000
4. Expansion of field studies in the Southwest (Attwater's prairie chicken, red wolf, Mexican duck, etc.); Southwest (ivory-billed woodpecker, brown pelican, dusky seaside sparrow, etc.); and Hawaii (to cover endangered species on the island of Kauai and the Hawaiian island of the Leeward Island group)	100,000

The President's budget for fiscal year 1968 contains an item of $3 million for acquisition of land needed for conserving, protecting, restoring, and propagating selected species of wildlife threatened with extinction. This allocation from the Land Water Conservation Fund is strongly supported by The Wilderness Society. The areas involved are:

1. Lands in Monroe County, Florida, totaling 1,854 acres, for preservation of habitat for key deer. The existing refuge contains 834 acres of Federal land plus private lands controlled by leases subject to termination on 90-day notice. The additional area of 1,854 acres is estimated to be the least habitat that will assure survival of this species in the wild.
2. Lands in Prince Georges County, Maryland, comprising 253 acres to be added to the Patuxent Wildlife Research Center, where detailed research on all endangered species can be carried out.
3. Lands in Wahkiakum County, Washington, for preservation of habitat for the Columbia white-tailed deer. Intensive agricultural development is rapidly destroying the good habitat within the acceptable area range. An area of about 2,000 acres in the Columbia River Valley has been selected, with funds for 970 acres included in the F.Y. 1968 budget.

The Wilderness Society supports efforts to give new direction to the Bureau's wildlife services program—away from massive, unselective, predator and rodent control programs and toward limited, selective, animal control combined with sound training and educational efforts. The Bureau's control methods research program needs include: (1) continued search for selective, lethal agents to be used in the control of commensal and field rodents ($100,000) and (2) expansion of research on predator-prey relationships to gain information on the golden eagle and coyote and their prey species ($100,000).

We urge the provision of the funds required to permit the Bureau to proceed with these important projects.

BUREAU OF OUTDOOR RECREATION

The Wilderness Society has noted with interest and appreciation the fact that the Bureau of Outdoor Recreation is participating in a positive and constructive way in Interior Department decision-making relating to wilderness preservation. Its "special area studies" group has been especially helpful and effective in this regard, through its compilation of basic data on scenic river preservation opportunities and recreational trail needs nationwide. It is also in a position to assist the wilderness agencies and the Office of the Secretary of the Interior in their formulation of sound Wilderness Area proposals, especially for National Park System and National Wildlife Refuge System units.

The regional offices of this Bureau are making important contributions to the record at local, administrative public hearings on agency wilderness proposals through presentation of statements relating the wilderness proposals to the regional outdoor recreation picture. Such presentations often point up opportunities for the development of facility-oriented recreation elsewhere in the same region as the proposed wilderness units, thus making possible statutory protection of the Wilderness Areas.

The special area studies group has been assigned by the President the task of inventorying all islands in the United States over ten acres in size, to find unspoiled islands in time to provide public protection for them. In view of the imminent development of relatively inexpensive processes for the conversion of sea water to drinking water, which would bring about profitable commercial resort development of offshore islands, and in view of the increased availability of helicopter transportation to formerly inaccessible terrain, The Wilderness Society supports this farsighted program and urges its adequate funding.

We also are aware of the important contributions to conservation being made by the President's Council and the Citizens' Advisory Committee on Recreation and Natural Beauty and their staffs, and express the hope that these programs will receive the $100,000 requested for their operation.

With respect to the administration by BOR of the Land and Water Conservation Fund Act, we note that all of the States now have prepared statewide comprehensive outdoor recreation plans acceptable to the Secretary of the Interior and that all States are actively sharing in the matching grants program. We have some misgivings concerning the use of Land and Water Conservation Fund monies for the construction of facility-oriented recreation developments such as golf courses and swimming pools, when sponsors of the Fund Act had in mind the use of the Fund for more conservation-related projects such as the acquisition of key tracts of wild land and other open spaces easily accessible to urban dwellers and the use of such tracts for hiking, horseback riding, nature study and other resource-based activities. We are hopeful that the Bureau may be able to encourage State recreation planners to utilize their Land and Water Conservation Fund money to achieve long-range conservation goals.

We urge approval of the suggested allocation of $74,225,000 from the Fund for Federal land acquisition projects, which we have discussed in detail earlier in our statement in connection with the budgets of the National Park Service, the Forest Service, and the Bureau of Sport Fisheries and Wildlife.

We support the allocation of $5 million to the Bureau of Outdoor Recreation itself under this program. This money would be allocated to the three land management agencies just mentioned as new parks and other recreational areas are authorized by the Congress, to enable the agencies to proceed with the verification of property lines, mapping, development of ownership data, appraisals, and the purchase of key tracts of land, and would avoid the present complicated procedure of "reprogramming" funds within the agencies to begin work on newly authorized areas.

We understand that, should legislation to establish a Redwood National Park receive Congressional and Presidential approval during fiscal year 1968, a supplemental appropriation for this purpose will be sought using the authority contained in the Fund Act for an advance from the general fund of the Treasury.

BUREAU OF LAND MANAGEMENT

The Wilderness Society supports good land management on all units of the public lands. We urge that funds be provided for well-planned commodity and recreation development of the public lands administered by the Bureau of Land Management. These lands, representing the largest public ownerships in the nation with an undeveloped recreational potential, are located adjacent to or within 60 miles of every national park, national monument, national recreation area, and most national forest areas in the eleven western states and Alaska. They can and should be used to provide outdoor recreation for the American people to take development pressure off the national parks, national monuments, and national forest back country.

The Department of the Interior estimates that 44 million visitors will use these lands annually by 1972. These visitors will come whether provisions are made for them or not. If they come without provision, we can anticipate land abuse, stream pollution, unsightly trash, wildfires, and health hazards from the lack of sanitation facilities. The Administration's request for $1,100,000 is a very modest request, particularly so when it is known that on June 30, 1966, there was only one developed recreation site for every 4.5 million public land acres. At least another $1,000,000 put into recreation facilities on the public lands now would be that much added insurance that four years hence this veritable avalanche of visitors—and the land they use—will be adequately cared for.

We also are intensely interested in the administration of the Classification and Multiple Use Act. We think the Department of the Interior and the Bureau of Land Management have made excellent progress. We are pleased to learn that the Bureau's work plans for fiscal year 1968 will give special attention to the preservation of sites with values as wild land. We believe it is absolutely essential that the full request of $4,658,000 for land classification and mineral examination be retained.

The scars of erosion do not fit with our—or anyone's—ideal of the natural beauty of wild landscapes. Consequently, we are strong in our support for funds for soil and watershed conservation work on the public lands. We think it is particularly reprehensible that the United States, as a landowner, should have to admit that erosion is a chronic condition—and in many instances an outright desecration—of the natural landscape on over one-half of the 175 million acres of western public lands. We hope, therefore, that the Committee will recommend against the decrease of $835,000 from last year's appropriation for this most important work. An increase in the budget estimate of at least $2,500,000 in this item could be well used for this necessary work to avoid further erosion of the value of our public domain.

I very much appreciate the opportunity to present this testimony here today, and thank the Chairman and the Committee for this privilege.

SUMMARY OF STATEMENT

Mr. BRANDBORG. I am Stewart Brandborg, director of The Wilderness Society, a national conservation organization which has a broad concern for natural resources, wilderness management and use of resources and particular concern for preservation of the wilderness. Our headquarters are here in Washington, D.C., at 729 15th Street.

I am here to speak in behalf of those programs of the Department of Interior and Forest Service which we know are deserving of particular concern and worthy of strong funding support. These include the programs for acquisitions of key tracts of wild lands and recreational lands including holdings within wilderness areas, national parks, habitat of endangered wildlife, and efforts to assure adequate protection and maintenance of wilderness areas.

Very important also is the financing of trail construction work and research to furnish the public land agencies with guidelines for providing the best recreational use of wilderness areas without damage to the fragile soil and unique plant and animal communities in these areas.

The National Park Service wisely has chosen to devote more of its available funds to the management and protection of the parks with smaller allocations for construction.

PARK SERVICE REGIONAL PLANNING EFFORTS

We strongly support the Park Service regional planning efforts, recognizing that such planning will be especially helpful in placing proposals for the establishment of new wilderness areas in their proper perspective.

The agency's fiscal 1968 budget request for only enough money to repair and construct a total of 100 miles of trails seems wholly inadequate in view of the need for such work. We make comparison here to place this figure in perspective—there are 653 trails in the Great Smoky Mountains National Park alone. We see that provision for only 100 miles of new trail next year as inadequate. We respectfully request that this subcommittee recommend against the Service request for $1,200,000 to build another 2½ miles of new road within the park along the north shore of Fontana Lake identifiable in the budget as Bryson City Road within the Great Smoky Mountains National Park.

TRANSMOUNTAIN ROAD PROJECT

I submit with my statement photographic evidence of the destruction of scenic values of this so-called transmountain road where portions of it have already been built.

We believe the transmountain road project should be held in abeyance until such time as the Congress decides which portions of the Great Smoky Park shall be designated as wilderness.

One other construction item needs special attention. The necessity to install the salt water barrier in Canal 111 at Highway 1, northeast of Everglades National Park before the earth plug in the canal is removed by the Army Corps of Engineers.

LAND ACQUISITION BUDGET

Moving to the Park Service land acquisition budget, we urge that additional funds be provided for acquisition at the Indiana Dunes and that this acquisition begin as soon as possible, at the full $6½ million level recommended by the Administration.

The allocation of less than 10 percent of the Park Service land acquisition budget to the purchase of inholding within existing park system units is very conservative in our opinion. We urge that the full amount requested by the Park Service for its master planning, natural history and natural science studies program be granted by the Congress.

Budget Request for Forest Service

The fiscal year 1967 budget request for the Forest Service asks for a sum of $1½ million to pay for the initial work of planning, making studies, posting boundaries and providing information as required by the wilderness law. This money was allotted and the Forest Service is making excellent progress. It is, however, important that this work be accelerated to reach a satisfactory level by fiscal year 1969.

The Wilderness Society also urges that the Forest Service programs of forest, wild land recreation service, both biological and sociological, the handling of people in back country areas be strengthened and extended. The western wilderness research program should have a base of $300,000 and the boundary water canoe area program should be strengthened at least $100,000 to field a team of etiological social scientists to develop knowledge which will guide the completion and maintenance of America's National Wilderness Preservation System.

LAND ACQUISITION PROGRAM

Within the national forest land acquisition program we have a major concern that there be acquisition as quickly as possible of inholding within national forest wilderness areas and primitive areas. The budget under consideration includes funds necessary to acquire about 2,300 acres within or immediately adjacent to national forest wilderness or primitive areas in California, Idaho, Montana, Oregon, and Washington.

Bureau of Sport Fisheries and Wildlife

The society recognizes the need for accelerating this effort by inholding acquisitions in 10 additional wilderness and primitive areas. The purchases would require $1 million additional appropriations to permit purchase of about 2,000 acres of national forest wilderness lands. We would strongly support such increase. In references to the request of Bureau of Sport Fisheries and Wildlife, we would respectfully request that provision be made by Congress to extend the Wetlands Loan Act for an additional 8 years. The society urges that the full amount requested by the Bureau for management and investigation of resources, wildlife refuges, construction and wildlife facilities line items be approved.

Wilderness Act Implementation Studies

Moneys for Wilderness Act implementation studies for national inventories and recreational planning are included in these two budget items.

The Wilderness Society noted with interest and appreciation the fact that the Bureau of Outdoor Recreation is participating in the positive and constructive way in the Interior Department decision-making relating to wilderness preservation and comprehensive recreation planning.

The regional offers of the Bureau are making important contributions to the record at a local administrative public hearing on agency wilderness proposals to presentation of statements relating to wilderness proposals on regional outdoor recreation needs.

PRESIDENT'S COUNCIL AND CITIZENS ADVISORY COMMITTEE

We are also aware of the important contributions being made by the President's Council and Citizens Advisory Committee on Recreational and Natural Beauty and extend and express the hopes these programs will receive $100,000 requested for their operation.

We urge approval of the suggested allocation of $74 million from the land and water conservation fund for Federal land acquisition projects.

BUREAU OF LAND MANAGEMENT

The next item, Mr. Chairman, is the Bureau of Land Management. We feel that the administration request for $1,100,000 for recreational facilities within public ownerships administered by the BLM is a very modest request, particularly so when it is known that on June 30, 1966, there was only one developed recreational site for every 4½ million acres of Bureau of Land Management and other publicly administered lands.

At least $1 million should be put into recreation facilities on the public lands so that we would have additional assurance that at the end of a 4-year period we would be prepared for the avalanche of visitors to these public ownerships. We believe it is absolutely essential that the full request of $4,650,000 for land classification and mineral examination be retained. We hope that the committee will recommend against the decrease of $835,000 from last year's appropriation for soil and water conservation work on BLM jurisdiction. An increase in the budget estimate of at least $2½ million in this item could be used for this necessary work to avoid further erosion of the value of our public domain.

Chairman HAYDEN. Thank you, sir.

STATEMENT OF DR. SPENCER M. SMITH, JR., SECRETARY, CITIZENS COMMITTEE ON NATURAL RESOURCES

SUPPORT OF APPROPRIATIONS FOR DEPARTMENT OF INTERIOR

Chairman HAYDEN. Dr. Spencer M. Smith, Jr., secretary, Citizens Committee on Natural Resources.

Mr. SMITH. Thank you, Mr. Chairman.

(The statement follows:)

Mr. Chairman and members of the committee, I am Dr. Spencer M. Smith, Jr., Secretary of the Citizens Committee on Natural Resources, a national conservation organization with offices in Washington, D.C.

We wish to indicate to the Committee our support of the Interior appropriations for FY 1968. The very nature of details of this budget are beyond our resources to comment on in full, but we feel the need to communicate to the Committee some highly significant areas that in our judgment are worthy of special attention.

BUREAU OF SPORT FISHERIES AND WILDLIFE

We feel the appropriations requested by the Bureau are lacking in two important areas. One is the funds affecting the programs of 18 research stations in the approximate amount of $440,000 which is vitally needed if these programs are to continue uninterrupted. It has been the practice in too many instances by administration after administration to reduce their requests for research when faced with a tight budget situation. The demands of civilization have caused such sweeping changes in much of the habitat and environments of wildlife that a heavy burden has been placed upon the professionals in wildlife management. Necessary research activities and appropriate planning, which embody changes in past plans, are mandatory, if there is to continue to be a vigorous wildlife population. We would hope to have included in this next year's budget this amount, since the failure to do so will cause a number of programs to be interrupted seriously. It is beyond our knowledge to assess whether there is a hard and fast ceiling for the funds of the Bureau, as such, but even in the event that such a condition does exist, we would strongly urge the inclusion of these funds as one of the highest priorities.

In a genuine sense these funds represent an important investment in the future of our fish and wildlife populations. We have been forced to agonizing reappraisals in many instances of the past, which may not have been necessary had our research activities been kept intact.

Secondly, we would hope that funds for research for minor species, such as mourning doves, snipe, woodcock, etc., could be included. Reports continue to come to us in abundance as to the need for accelerating research in these minor species as to their present condition and possibilities for better management. Funds that could achieve this have not been requested on many occasions of the past due to budget restrictions in general and a strong pressure for other demands upon the Bureau. Time is running out, however, and the need for greater concern as to these minor species has become more manifest in the past few years.

It has been estimated that $1,300,000 is required to effect a necessary program involving these species. Whether the entire amount need be appropriated in this one instance is not known conclusively. It has been suggested, by some most knowledgeable in this field of interest, however, that $250,000 could be used productively in FY 1968. Because of the delay in such research, others have contended that the quarter of a million is simply a token amount in terms of the overall problem. As we are able to envisage the program, however, this amount appears to us to be an appropriate start and we would rather have the Bureau in a posture of using a relatively small amount efficiently than a significantly larger amount inefficiently.

BUREAU OF OUTDOOR RECREATION

We would like to pay special tribute to the Bureau of Outdoor Recreation which has had the most formidable of all tasks, that is, starting anew a program vitally needed and earnestly demanded by impatient Americans. The creation of the Bureau occurred in the 88th Congress (PL 88–29) and upon its creation was given the significant task of administering much of the Land and Water Conservation Fund Act passed three years later (PL 88–578). In addition to these responsibilities it coordinates a number of projects under the Federal Water Projects Recreation Act passed in the 89th Congress (PL 89–72). Also ,the Bureau cooperates with the Department of Housing and Urban Development regarding the Open Spaces Program for urban areas.

The Bureau's request for this year appears to us as modest relative to their functions. The Bureau's own operation requests only an increase of $250,000 over the appropriation for FY 1967. Of this increase $100,000 will enable the Bureau to serve in a staff function to the President's Council and Advisory Committee on Recreation and Natural Beauty. This organization, as we are sure the Committee understands, is performing a great service in the overall planning for recreation and natural beauty. At times the influence of this organization appears obscure but is brought to the fore quickly, when its outstanding work is indicated in measures introduced in the Congress. The remaining $150,000 is occasioned by the previously authorized study of the Connecticut River Valley, and $75,000 will be utilized by the Bureau in studying a nationwide inventory of coastal and inland islands. President Lyndon B. Johnson has tendered to the Bureau a rather special task in assessing these coastal and inland islands and waterways.

The Land and Water Conservation Fund which was established in 1965 while boasting of revenues over $200,000,000 continues to fall short of recreation needs. It is evident, especially in the Federal sector, that many projects, which have been authorized will not be able to be funded if the schedule of the last two years is continued. We support, therefore, the Administration's request of $75,225,000 for the National Park Service, Forest Service, Bureau of Sport Fisheries and Wildlife, and the Bureau of Outdoor Recreation. This would entail an advance of $32 million from the general fund of the Treasury with the balance drawn from the revenues of the Land and Water Conservation Fund.

The escalating cost of land values has made acquisition a difficult task. Thus, without the additional $32 million advance, a number of projects already authorized will in all probability be in serious jeopardy of final completion if such an advance was not forthcoming.

While this method is helpful in closing the gap for FY 1968, it is hoped that a more permanent means will be found to expand the revenues allocated to the Land and Water Conservation Fund and in so doing overcome our serious deficit in recreation areas, that still exists despite the excellent efforts of all concerned.

NATIONAL PARK SERVICE

New legislation in the 89th Congress (PL 89–665) authorized the National Park Service to expand their activities in preservation of historic properties. The request of $2,323,000 for the 1968 FY is inclusive of an increase of $2,000,000 over the last fiscal year and represents the expansion of activities envisaged in the new Act. It is our hope that this program can go forward with the new authorization. Previous acts of the past were somewhat fragmented and did not provide for the full implementation of the services that could be employed by the Service.

The Everglades National Park represents a serious and a major concern to every conservation group in the United States. The fresh water supply of the Park has been threatened on two counts. First, the failure to achieve some agreement with the Corps of Engineers and the Central and Southern Florida Flood Control projects to the north of the Park regarding the supply of fresh water and second, the proposal to remove the earth plug in Canal 111 at Highway No. 1, north and east of the Park. In the latter case, if no barrier is constructed, removing the plug will allow salt water to intrude into the fresh water environment of the Park. Despite a series of studies and proposals, the supply of fresh water is not now guaranteed and though temporary measures have been taken, primarily motivated by an excess of water and runoff in the flood control projects, no permanent solution has been found.

We are not aware of any particular jurisdiction that this Committee has relative to the plight of Everglades National Park, but we hope the Committee in being apprised of the situation may find solutions that have not been found by others.

The Piscataway Park has had a most confused history. Originally $937,000 was authorized in the 87th Congress (PL 87–362) of which approximately $300,000 was appropriated. Last year the total authorization was increased to $4,100,000 leaving $3,700,000 to be appropriated. In view of the long-term difficulty of implementing this Park and in view of the number of donations by individuals and philanthropic organizations, which have granted the Federal Government lands in fee and in less than fee, we hope this acquisition can be completed by August 7, 1967, at which time the donations revert back to the owners unless the Secretary of the Interior can certify that there is a de facto Park. If the full amount is appropriated we understand that the Federal Government, by moving with dispatch, will be able to meet the deadline.

We are hopeful also that the appropriations for National Park acquisitions can be accomplished in order to reduce the backlog of those projects that have been authorized but not yet funded. We would urge also that the Service continue their exploration of new land acquisition tools such as scenic easements, zoning, purchase and lease back, and other means that may serve the purposes of the Government without taking the land in fee title. With greater utilization and development of these tools, even though negotiation is often more extended, it would appear to represent a saving on the part of the Federal Government.

While our general attitude regarding the efforts of the National Park Service is one of commendation, we must say in all candor that we are deeply concerned about the location and utilization of some roadway plans. The National Park Act of 1916 is quite specific in terms of the purpose of National Parks. It is our judgment that the Bryson City Road of the Great Smokies National Park is not compatible with park values. This request of $1,298,500 could be reduced from the request of the Park Service to the greater good of the Great Smokies

National Park. There is always the problem, with which we are not unsympathetic, of trying to determine when capital improvements, especially in road building, in order to suit the convenience of the people destroys the very values for which people come to the Park in the first place. We feel that Bryson City Road is essentially in this category.

We thank the Committee for the opportunity of presenting our views on these particular portions of the budget of the Department of the Interior.

STATEMENT OF DR. CARL MUSCHENHEIM, CHAIRMAN, NATIONAL COMMITTEE ON INDIAN HEALTH OF THE ASSOCIATION ON AMERICAN INDIAN AFFAIRS, INC.

DIVISION OF INDIAN HEALTH

Chairman HAYDEN. Dr. Carl Muschenheim, chairman, National Committee on Indian Health of the Association on American Indian Affairs, Inc.

PURPOSE OF ASSOCIATION

Dr. MUSCHENHEIM. Mr. Chairman and members of the subcommittee, thank you for this opportunity to appear on behalf of the Association on American Indian Affairs.

The Association on American Indian Affairs is a national voluntary organization founded in 1922 to assist American Indian and Alaska native communities in their efforts to achieve economic and social equality with other American communities. Its National Committee on Indian Health is composed of doctors, anthropologists and tribal and public health workers who are experienced in the conduct of health programs on the reservations.

In recent years our association has appeared before committees of the Congress in support of such measures as the transfer of health services from the Bureau of Indian Affairs to the Public Health Service in 1955; Public Law 86-121, the Indian Sanitation Facilities Act; the establishment of a preventive mental health program beginning with a pilot activity at Pine Ridge, S. Dak., during the fiscal year 1966; the establishment of a pilot preventive mental health project in Alaska in fiscal year 1967; the initiation of a 5-year comprehensive trachoma control program, also in fiscal year 1967.

Our association wishes to compliment the subcommittee on its pioneer action in bringing into being these two preventive mental health programs as well as a third one in the Southwest. We are hopeful that the positive impact of these programs on the populations served will win early and general recognition, thereby demonstrating the value and economy of establishing additional community-oriented preventive mental health programs to serve other Indian communities. Our association applauds the subcommittee for having established the aforementioned trachoma control program in fiscal year 1967. The eradication of this major cause of blindness among the Indian people fully merits the high priority assigned to it by the Division of Indian Health and by this subcommittee.

RECOMMENDATION

My purpose in appearing here today is (1) to comment on the budget request of the Division of Indian Health for fiscal year 1968 in light of Indian health needs, and (2) to recommend for your consideration appropriations for the provision of water and sanitation facilities beyond the amounts appearing in the Division's 1968 budget request; namely:

> An annual appropriation of $18 million for the construction of sanitation facilities in order that the existing backlog of need for such facilities be eliminated within a period of five to six years.
>
> An annual appropriation of $5,925,000 for field health services in support of a sanitation construction program of the recommended magnitude.

IMPORTANCE OF SAFE WATER SUPPLY

The provision of a safe water supply and facilities for the sanitary disposal of human waste is the most crucial and far-reaching step which can be taken to eliminate a large residue of illness which continues to plague the Indian and Alaskan native populations but which has long since been reduced to manageable proportions among the great majority of the rest of the population of the United States. These environmentally conditioned diseases are a subject of intense concern to our association and its National Committee on Indian Health, and they formed the topic of our Fourth National Conference on Indian Health, which was held in New York City in the fall of 1966.

DISEASES INVOLVED

By and large, the diseases with which we are here concerned are commonplace, and exist to some extent among the population as a whole. We are referring to the common respiratory infections—upper respiratory infections and their dangerous sequel, otitis media or inflammation of the middle ear, an important cause of hearing loss and consequent learning impairment among Indian children (for example 25 percent of the Eskimos in the Bethel area have significant hearing loss from otitis media); the lower respiratory infections: bronchitis, influenza, and pneumonia. I also refer to tuberculosis, still an important environmentally related disease, although one for which considerable progress has been made toward curbing the devastation which it once wreaked on the American Indian and Alaskan native populations. The incidence of infectious respiratory disease among the American Indians, as reflected in hospital discharge rates, is five times that of the rest of the population of the United States. Among the Alaskan natives the incidence is seven times as great.

Streptococcal sore throat occurs eight to 10 times as frequently among this group as among other Americans. In 1964 deaths from influenza and pneumonia among the Indians occurred twice as frequently as among the general population. Among the Alaskan natives, death from these illnesses was three times as likely.

There are also the infectious gastroenteric diseases, the most important of which is infantile dysentery. Dysentery occurs 35 times more frequently among the native populations as among the population in general. The mortality due to dysentery among the Indians and Alaskan natives is 17 times that of the U.S. population as a whole.

Evidence is emerging that nonfatal dysentery among infants may leave significant disability in its wake—that the severe dehydration which may accompany this condition may lead to permanent brain damage and consequent falloff in educability of the stricken child.

There are infectious meningitis and encephalitis, which, when not fatal, are apt to leave severe brain damage in their wake. It is estimated that 50 percent of the mental retardation of Alaska natives is due to residual brain damage from acute infestious disease suffered in infancy.

Other conditions which prevail at peak incidence where housing, water, sanitation, and economy are poorest are trachoma, infestious skin disease and physical trauma.

In 1965 more than 70 percent of pediatric hospitalizations of children under 5 years of age among the American Indian and Alaskan native populations were for diseases associated with the environment in which they live.

PROGRESS MADE BY DIVISION OF INDIAN HEALTH

Considerable progress has already been made by the Division of Indian Health in curbing the onslaught of those diseases which lend themselves to programs of management and prevention by medical techniques. In Alaska, for example, the tuberculosis attack rate has been reduced from 80 percent by age 3 (meaning that 80 percent of the children were infected with tuberculosis by age 3) to 0.5 percent within a 5-year period. This is an outstanding achievement and a tribute to the energy and resourcefulness which the Division has brought to bear on the massive medical problems of the Alaskan natives. All the same, the incidence of tuberculosis among this group remains 21 times higher than that of the general population.

AREA REQUIRING ATTENTION

Attention needs not to be directed to a sizable core of diseases which cannot be efficiently brought under control by a program of active medical interventive and preventive techniques comparable to that which has been launched against tuberculosis in Alaska. These illnesses are even more intimately bound up with the physical environments in which people find themselves. Neither drugs nor vaccines are available or likely to become available which can effectively cure, prevent, or limit the constant cycle of reinfection which is the lot of the majority of the American Indian and Alaskan native children. It is only by an effective attack on the medically dangerous physical conditions in which so many Indian and Alaskan native families are virtually trapped that we can effectively reduce the attack rates of these illnesses, diminish the baleful toil of infant mortality and eliminate the frightful wastage of human and economic resources taken by the disabilities they produce.

For certain of these conditions, otitis media, for example, precise environmental linkages, that is, mechanisms of transmission and role of factors such as adequate living space, proper heating and ventilation, and the availability of a safe water supply and sanitary facilities are not clear, while in others, such as infantile diarrhea, the pertinent environmental factors can more readily be identified. Nevertheless, for this entire group of diseases, the relevance of the physical environment is most emphatically demonstrated by the positive statistical correlation between inadequate housing and lack of safe water supply and sanitary facilities on the one hand and high attack rates and increased severity of these illnesses on the other. For example, the dysentery attack rate is 413 cases annually per 1,000 population in Indian communities where there is no on-premises water supply. With an inside water supply, the rate falls to 139 cases per 1,000 population. A further example is trachoma, which is virtually nonexistent in areas where there is an indoor water supply.

Our association recognizes that the provision of a safe physical environment will not of itself constitute an adequate attack on the vast residue of illness to which we are here addressing ourselves. There must, of course, be concomitant progress in the areas of health education and economic development. We applaud the successes of the Division of Indian Health in attempting to provide, along with sanitary construction, and education in the principles and techniques of personal and domestic hygiene and an orientation toward community involvement in improving the level of health. In these areas the Indian people themselves are the most valuable resource, and their active leadership and participation in community health projects deserves wide recognition.

PRESENT INDIAN HEALTH STATUS

The goal of the Division of Indian Health is to elevate the health status of American Indians and Alaska natives to a level comparable with the general population.

Marked progress has been made toward that goal since the transfer of program responsibility to the Public Health Service from the Department of the Interior in 1955. Infant mortality is down 41 percent among Indians and 31 percent among Alaska natives. Tuberculosis deaths among Indians have declined 57 percent and among Alaska natives 86 percent. Deaths from influenza and pneumonia are approximately 30 percent lower. Deaths from gastroenteric diseases have declined 60 percent among Indians.

Despite these strides forward, the program remains far short of its goal. Present comparisons with the general population are highly unfavorable, as I have indicated in my testimony. Poor environmental health conditions and a low level of family and community knowledge in the application of modern health measures contribute heavily to these intolerably high rates. Today approximately two-thirds of American Indians and Alaska natives haul their drinking water, in some instances, a mile or more, from potentially contaminated sources, in unsanitized containers, and have grossly inadequate waste disposal facilities or no facilities at all.

Most Indian and Alaska natives live in poorly heated, overcrowded homes, many with more than five people to one room. The Bureau of Indian Affairs has identified a current need for 65,000 housing units. However, in the last 5 years only 1,107 units of public housing have been built and occupied.

It is the firm belief of our National Committee on Indian Health that increased preventive medical services, including an aggressive program of health education, and improved environmental conditions hold the key to further progress.

1968 Budget Request

With the understanding and support of the Congress, funds available to the Division of Indian Health have increased steadily since July 1, 1955. The funds have made it possible to accommodate a substantial increase in patient load in the hospitals, clinics, and other outpatient facilities of the Division as well as those facilities under contract in non-Indian communities.

Over the years our committee has been concerned with the slow growth in the field health activities of the Division's program. Preventive and field clinic services have failed to keep pace with curative services, and appropriations for environmental sanitation facilities have lagged far behind recognized need, resulting in an unbalanced general health program and inefficient utilization of existing resources.

In fiscal year 1966 the Congress took an important step toward improving environmental health conditions by appropriating $2.2 million for construction of sanitation facilities in connection with approved public housing projects which had been stalled for lack of sanitation funds.

Analysis of the President's budget for 1968 indicates a program activity budget for the Division of Indian Health in the amount of $82,133,000, representing a gross increase of $5,809,000 over 1967 for the same activities. Of this amount $1,754,000 of the increase must be utilized for mandatory pay increases and other statutorily required costs, which reduces the net increase to $4,055,000. This represents a net program increase which falls short of the annual increment of $5 million that the Association on American Indian Affairs has, for the past several years, recommended for use in program activities by the Division of Indian Health in order that the growth of the preventive health program might measure up to the curative phase of the Division's operation in a balanced total program.

Our analysis of the President's budget for 1968 also indicates an appropriation request of $10,464,000 to correct existing gross sanitation deficiencies in the beneficiary communities. This represents a net program increase of $4,728,000 over fiscal year 1967, a significant increase. However, the total backlog need for sanitation facilities is estimated to be at least $100 million. At the present rate of expenditure it will take approximately 10 years to catch up with this backlog.

Recommendations

The Association on American Indian Affairs respectfully submits the following recommendations to this subcommittee:

1. An annual appropriation of $18 million for the construction of sanitation facilities in order that the existing backlog of unmet need be eliminated within a period of 5 to 6 years.
2. An annual appropriation of $5,925,000 for field health services in support of the sanitation construction program.

3. We also recommend that the committee explore with the Division of Indian Health the current status of nurses' salaries in order to determine whether recent pay increases awarded to nurses in non-Federal institutions have caused the salaries of nurses within the Division to fall below a competitive level.

4. We further recommend that the subcommittee explore with appropriate Federal agencies the feasibility of establishing a community transportation system on the reservations in support of medical, educational, and other community needs. The delivery of medical services and participation in community programs on the reservations is frequently greatly restricted because of a lack of adequate transportation facilities.

Our association believes these recommendations are fully justified in view of the now prevailing health conditions among Indian and Alaska native citizens.

STATEMENT OF EDWARD O. PLUMMER, RESOURCES DIVISION, NAVAJO TRIBE OF INDIANS

PREPARED STATEMENT

Chairman HAYDEN. The next witness is Mr. Edward O. Plummer of the resources division, Navajo Indian Tribe, who will speak for the director of resources, Mr. Ned A. Hatatli.

Mr. PLUMMER. Thank you, Mr. Chairman. May I submit Mr. Hatatli's statement for the record?

Chairman HAYDEN. You may do that.

(The statement follows:)

STATEMENT OF MR. NED A. HATATLI, DIRECTOR OF THE RESOURCES DIVISION OF THE NAVAJO TRIBE OF INDIANS

Mr. Chairman and members of the committee, my name is Ned A. Hatatli. I am the Director, Resources Division, of the Navajo Tribe of Indians with Headquarters in Window Rock, Arizona.

In behalf of the Navajo tribe of Indians, I appreciate the opportunity to appear before your Committee to present the views of the Navajo tribe concerning the appropriations requested by the Department of the Interior, Bureau of Indian Affairs, for the Navajo irrigation project and to ask this Committee and Congress to appropriate the $15,000,000 originally planned for use during F.Y. 1968.

The primary objective of the Navajo Irrigation Project is to bring the highest economic returns to the Navajo Indians consistent with optimum and desired levels of living and community life. The estimated population of the Navajo exceeds 110,000 with an estimated work force of 30,000 people. This has always been an area of underemployment, and at no time in recorded history have the people on this reservation had sufficient income to approach the standard of living enjoyed by their non-Navajo neighbors. This is the most graphically illustrated by the fact that unearned cash income this last year (from welfare and surplus commodities) has nearly doubled the earned income from livestock and agriculture. Economically, the problem on the Navajo Reservation is one of combating the result of underdevelopment and underemployment to establish an economy capable of supporting the population at an acceptable level.

Each year in which the requested appropriation is cut, it means another year before water would be delivered, and in the meantime an additional 3,000 persons each year are added to the work force with perhaps two-thirds going unemployed. These appropriation cuts will continually delay the project and the overall objective to provide improved and additional means of livelihood for thousands of presently impoverished Navajos. Senator Anderson of New Mexico in a letter dated December 1, 1965 to the Secretary of Interior stated that it will be 35 years before the Navajo Project is completed at the rate we are going; and this project was to be completed in 12 years from the first contract.

The Navajo Tribe is demonstrating the need for filling the education and technical gaps involved in irrigated agriculture. The Tribe has made an agreement with the New Mexico University Agriculture Experiment Station and the University is now constructing an experimental farm on the project lands to provide information in irrigation practices for use by Navajo farmers.

The Navajo Tribe has employed an experienced farmer to operate a demonstration farm on the Hogback Project to train Navajos assigned to the tribal training program in vegetable farming. This has been very successful the last season and this year we have planned to expand this type of cropping. The greatest value of this demonstration of experimental farming will be the personnel teaching and relationship in working with Navajo trainees on the farm.

We are presently negotiating with a private firm for the possibility of developing a large commercial operation, wherein, by agreement with the private firm, it has consented to train additional Navajo farmers in a commercial type farming.

The Navajo tribe has deep concern and a feeling of frustration with regard to both the progress and physical capacities at which the Navajo irrigation project is being constructed. Although earlier studies and proposals were made, the congruous sequence of studies and plans which ultimately culminated in the enactment of the Navajo irrigation project on June 13, 1962, began with the directive of May 20, 1953 from the Secretary of the Interior to the Commissioners of Indian Affairs and Reclamation to report on the feasibility of what came to be known as the Navajo Project. This feasibility study was reported in January, 1955 and proposed that the Navajo project be constructed with sufficient capacity to divert 630,000 acre-feet per year and to irrigate 137,250 acres.

Next, by letter dated December 12, 1956 the governor of New Mexico proposed to the Secretary of Interior that the Navajo Project be reduced to a diversion capacity of 508,000 acre per year and to irrigate 115,000 acres. This proposal was accepted by the Navajo Tribe, as expressed in the resolution of the Advisory Committee of the Navajo Tribal Council dated January 9, 1957 (Exhibit 1), in accordance with an agreement between the Navajo Tribe and representatives of the state of New Mexico providing that in exchange for this reduced capacity and acreage, all irrigated land within the project would be developed solely for Indian use. The state of New Mexico confirmed this agreement and expressed its desire to proceed in accordance therewith by a letter from Governor John F. Simms to Fred E. Seaton, Secretary of the Interior, dated December 12, 1956. (Exhibit 2.)

Consistent with that agreement, the Bureau of Indian Affairs supplemented the January 1955 feasibility report with a report dated March, 1957 in which it stated that the proposal to reduce the acreage to 115,000 acres had merit and a possible reduction in cost could be effected.

During the discussions and negotiations between the Navajo tribe, the states involved and the Department of the Interior, the point arose that the Navajo tribe had a paramount right to the waters of the San Juan river, as decreed in the *Winters* doctrine (and confirmed by other Supreme Court decisions), which could be raised at a later date by the Navajo Tribe to claim priority to water of the San Juan River in years of shortage, in preference to the other users in New Mexico. To allay this concern, the Navajo Tribe agreed to waive its rights of priority under the *Winters* doctrine as consideration for receiving the assurance that the project would not be reduced below an area of 110,630 acres and that the diversion to the project would not be reduced below 508,000 acre feet per year. This agreement was expressed in the statement of John H. Bliss, Upper Colorado Commissioner for New Mexico, (Hearing before the House Subcommittee on Irrigation and Reclamation, 86th Congress, Second Session, May 20, 1960, page 89) and in Navajo Tribal Council resolution CD–86–57 (Exhibit 3).

Next in this series of events, the Act of June 13, 1962 (76 Stat. 96) was passed, authorizing the construction of the Navajo Irrigation and the San Juan Chama projects. This Act provided in part that the Secretary of the Interior is authorized to construct the Navajo Irrigation Project with sufficient capacity to irrigate 110,630 acres of land and to divert 508,000 acre feet of water per year. The Act also authorized the Secretary to construct the Navajo project with sufficient capacity to supply municipal and industrial water requirements and for other miscellaneous purposes over and above the diversion requirements for irrigation. The Act authorized $135,000,000 (based on June, 1961 prices) to be appropriated for the construction of these facilities.

Next, Senator Clinton P. Anderson proposed to the Secretary of the Interior that a complete reevaluation of the Navajo Irrigation Project be conducted, and the Secretary, in his letter dated February 16, 1966 to Senator Anderson, advised that he was asking the Bureau of Reclamation to conduct such a reevaluation. It thereafter became known to the Navajo Tribe that the construction of the main canal from the Navajo Dam, which had originally been planned to have a capacity of 2,100 cubic feet per second (required to transfer directly sufficient water to irrigate 110,630 acres), had already been commenced but with a capacity of only 1,800 cubic feet per second. The Navajo Tribal Council opposed the making of this reevaluation survey by resolution CAP–56–66 passed on April 28, 1966. (Exhibit 4).

The reevaluation of the Navajo Irrigation Project was made nevertheless, and a preliminary draft of a report was submitted to the Tribe in August, 1966, among the findings of which were the following:

(a) That the capacity of the main tunnel coming from the Navajo dam should be reduced from 2,100 cfs to 1,800 cfs;

(b) The tunnel capacity of 1,800 cfs would not be adequate to irrigate 110,630 acres unless another reservoir, called the Gallegos Reservoir, were constructed;

(c) That even if the Gallegos Reservoir were constructed, the capacity of the Navajo Project would not be sufficient to deliver water for municipal and industrial requirements during the irrigation season and the only way any municipal and industrial requirements could be satisfied would be for those cities and industries to build their own supplemental storage terminals limited in location to the Burnham area of New Mexico;

(d) The reevaluation report states on page IV–6 of its Appendix that: "Therefore, it is the recommendation of this committee that the size of the works be of such size as to permit the irrigation of *not less than 90,000 acres* with a *potential* expansion to 100,000 or 110,000 acres *dependent upon industrial development*." (Emphasis added) This means clearly that any water to be used for municipal or industrial requirements must be taken from the supplies otherwise available for irrigation, rather than being supplied through facilities capable of furnishing municipal and industrial quantities above those required to irrigate 110,000 acres as authorized in the Project Act.

In addition to this series of reductions in the capacity of the Navajo Irrigation Project, set forth above, the time at which the first water would be delivered to the irrigated lands has been delayed seriously.

The Bureau of Indian Affairs has presented to this Committee and to the Senate Interior Appropriations Subcommittee that $5,300,000 is required for continuing the construction of the Navajo Project during fiscal year 1968. This amount has been reduced from $24,700,000 originally planned for construction during F.Y. 1968 and from $15,000,000 planned last year for construction during F.Y. 1968.

Robert L. Bennett, Commissioner of the Bureau of Indian Affairs, stated to the Senate Interior Appropriations Subcommittee on March 2, 1967 that the slow down in providing funds for the Navajo Irrigation Project will cause a delay in the delivery of first water to the lands by 2 or 3 years. The project data sheet prepared by the Bureau of Indian Affairs and Bureau of Reclamation shows only that the completion data of the Navajo Project will be "after fiscal year 1973."

I wish to mention briefly the San Juan-Chama Project which is the companion to the Navajo Irrigation Project. Both projects were authorized by the Act of June 13, 1962 and both will be supplied with water from the Navajo Reservoir. The San Juan-Chama Project will divert water out of the San Juan River basin into New Mexico to be used for irrigation and municipal and industrial requirements en route to and in Albuquerque, New Mexico. Although we would expect these two projects to progress at approximately the same rate, I wish to call the Committee's attention to what seems to be striking differences in the manner in which each has been handled:

(a) The reports from the Bureau of Reclamation show that there has been no change in the originally planned capacity of the San Juan-Chama Project nor in the land area which it will be capable of irrigating. I have mentioned before, the reductions which have been made in the Navajo Irrigation Project.

(b) The estimated completion time of the San Juan-Chama Project has been delayed only one year from F.Y. 1970 to F.Y. 1971, in contrast with the minimum of a three year delay in the Navajo Project, from F.Y. 1971 to sometime after F.Y. 1973.

(c) The $12,862,000 requested for the San Juan-Chama for F.Y. 1968 is a decrease of only 25% from the $17,026,000 estimated a year ago to be required for F.Y. 1968.

(d) Finally, the total funds authorized for the San Juan-Chama Project ($85,828,000) is only two-thirds the amount authorized for the Navajo Project ($135,000,000), that $12,862,000 requested for the San Juan Project for F.Y. 1968 is more than double that requested for the Navajo Project.

Another feature present in the San Juan-Chama development, which causes my people concern, was expressed in the 87th Congress by the House of Representatives Report No. 685, page 9, as follows:

"The Committee understands that the capacity which is frequently referred to as 'excess' and which would be necessary if the project were later enlarged will also serve a useful purpose in connection with the initial stage in that it will permit more efficient operation of the initial stage. In adidtion, should *additional diversions be possible* sometime in the future because of favorable water conditions, shifts in water use, etc., the cost of adding the capacity at that time would be many times the cost of building this capacity into the presently proposed works.

The Committee took the position of not objecting to including the excess capacity since New Mexico feels that the *possibility of future diversions* warrants the relatively small expenditure at this time and the state is willing to repay the cost of providing the *excess capacity* as a part of the project cost from revenues in the basin fund assigned to New Mexico." (Emphasis added.)

The existensce of this excess capacity and the continuation of the construction of the San Juan-Chama project almost on schedule, considered in contrast with the reductions and delays in the Navajo Irrigation Project, give rise to the great concern that water which would have been used for the originally planned capacity of the Navajo Project will now be diverted to the State of New Mexico through this "excess" capacity.

I wish to make clear that the facts I have stated have not been presented to this committee for the purpose of showing bad faith on the part of the states involved, any of the Bureaus of the Department of the Interior or of Congress in causing the delay in completion or in reducing the capacity and the area to be irrigated by the Navajo Project. These facts have been brought to the attention of this committee to show that, if the appropriations are reduced again this year or in subsequent years, these reductions will form another link in this chain of events, reducing drastically the benefits of the Navajo Irrigation Project to the Navajo Tribe.

The situation faced by the Navajo Tribe is simply this: the total demand of the state of New Mexico and the Navajo Tribe is greater than the available supply of water from the Navajo reservoir. Any delay or reduction in the capacity and ability to use that water on the part of one of the projects will be to its detriment and to the benefit of the other project. The Navajo Tribe fears that this has occurred to the benefit of the San Juan-Chama Project and to the state of New Mexico (outside the Navajo Reservation) and that it will occur to a greater degree if the disproportionate appropriation of funds is authorized by Congress.

The Navajo Tribe respectfully asks this committee and Congress to recognize the inequity and anomaly in this situation. The United States by its Congress, in its position as guardian and protector of Indian tribes should not, consistent with this position, permit this disparity between the treatment of its ward and one of the States.

In conclusion, we ask that the total amount of $15,000,000 originally planned for construction of the Navajo Project during F.Y. 1968 be appropriated and that this committee take cognizance of the needs of the Navajo Tribe in considering and appropriating the funds for the Navajo Project in subsequent years to permit the Navajo Project to be completed as nearly as possible on schedule.

Thank you.

EXHIBIT 1

RESOLUTION OF THE ADVISORY COMMITTEE OF THE NAVAJO TRIBAL COUNCIL

Approval of Proposal of Governor of New Mexico in His Letter Dated December 12, 1956, to the Secretary of the Interior Concerning the Navajo Irrigation Project

Whereas:

1. The Navajo Irrigation Project as proposed in the Feasibility Report dated

January, 1955 was to include two divisions:

(1) The Shiprock Division of 109,000 acres, located entirely inside the Navajo Indian Reservation.

(2) The South San Juan Division of 28,250 acres, 26,620 acres of which are non-Indian owned and 1,630 acres by individual Indians.

2. Studies conducted by the Irrigation Engineer of the Navajo Agency since the submission of the Feasibility Report have revealed that a better cost-benefit ratio could be obtained by combining the two divisions of the Navajo Project and reducing the total project acreage to 115,000 acres. Such reduction would also save water for industrial use in connection with the proposed Utah Construction Company coal and power project.

3. In accordance with this study, in a letter dated December 12, 1956, the Governor of New Mexico proposed to the Secretary of the Interior that the two divisions of the Navajo Project is combined, and the total acreage limited to 115,000, and, in accordance with a previous understanding between the Chairman of the Navajo Tribal Council and the State Engineer of New Mexico and the New Mexico member of the Upper Colorado River Commission, that all the irrigated land within the project be developed solely for Indian use. This would be accomplished by making the irrigable Federal and State lands within the old South San Juan Division a part of the Navajo Indian Reservation, by the Navajo Tribe's relinquishing non-irrigable lands of the present reservation to the State and Federal governments in exchange for the new lands to be added to the reservation. The proposal of the Governor of New Mexico, therefore, is that although the total area of the Navajo Project should be reduced from the acreage contemplated by the Feasibility Report, the actual area for Indian use should be increased from 110,630 acres to 115,000 acres, and that the Navajo Tribe should trade non-irrigable land in New Mexico for an equal area of irrigable land.

4. Before the Secretary of the Interior can request the Congress to authorize and appropriate funds to start construction of the Navajo Project, he must submit the plan to the States of Utah, Colorado and Wyoming giving them 90 days in which to return their comments. The Secretary will not submit a plan based on the above-described proposal of the Governor of New Mexico without an expression of approval from the Navajo Tribe. It is essential that the plan be submitted to the States without delay, so that their comments can be received at an early date and the plan sent to Congress in time for authorization at its current session.

Now therefore be it resolved that:

1. The Advisory Committee of the Navajo Tribal Council hereby approves and urges the early authorization by Congress of the Navajo Irrigation Project, in accordance with the Feasibility Report dated January, 1955, with the changes recommended in the letter of the Governor of New Mexico to the Secretary of the Interior dated December 12, 1956, to wit:

"The lands developed should be solely for Indian use, should include the most suitable lands in the Shiprock and South San Juan Divisions and should not exceed 115,000 acres with a diversion requirement of not to exceed 508,000 acre feet per annum."

2. The Advisory Committee further recommends inclusion in the act of Congress which will authorize construction of the Navajo Irrigation Project a provision to permit the addition of irrigable State or Federally owned lands in the South San Juan Division to the Navajo Indian Reservation in exchange for equal areas of non-irrigable lands contiguous to the boundaries of the present Reservation in New Mexico to be conveyed, with the approval of the Navajo Tribal Council, to the State of New Mexico and the Federal Government respectively. In the alternative, the Advisory Committee recommends that such legislation authorize the Navajo Tribe to purchase such lands and that such lands after such purchase be held in trust by the Federal Government for the Navajo Tribe.

CERTIFICATION

I hereby certify that the foregoing resolution was duly considered by the Advisory Committee of the Navajo Tribal Council at a duly called meeting at Window Rock, Arizona, at which a quarum was present, and that same was approved by a vote of 9 in favor and 0 opposed, this 9th day of January, 1957.

SCOTT PRESTON,
Vice Chairman, Navajo Tribal Council.

EXHIBIT 2

STATE OF NEW MEXICO,
STATE ENGINEER OFFICE,
Santa Fe, December 12, 1956.

Hon. FRED E. SEATON,
Secretary of the Interior,
Washington, D.C.

MY DEAR MR. SECRETARY: Please refer to your letter of August 2, 1956 with which you submitted reports on the San Juan-Chama and Navajo Projects for consideration by the State of New Mexico. As you have recognized, coordination of these two projects and allocation of use of San Juan River water poses many very difficult problems for the State of New Mexico. The Interstate Stream Commission, with invaluable assistance from your offices, has carefully considered the problems and, at their meeting of November 26 approved the enclosed resolution. This resolution, in which I concur, expresses the position of the State of New Mexico in regard to use of water by both San Juan-Chama and Navajo Projects.

The essence of the Interstate Stream Commission resolution is a substantial reiteration of the State's position evidenced by the letter from the Governor to the Secretary of the Interior dated March 4, 1953, which established for study purposes a 630,000 acre foot diversion capacity for the Navajo Project and a 235,000 acre foot diversion capacity for the San Juan-Chama Project.

In view of the current water shortages in the Rio Grande Basin, and in view of potential large demands in that basin, it is essential that construction of the San Juan-Chama Project be initiated at the earliest possible date, and that provision be made in this construction for an ultimate diversion of 235,000 acre feet per annum. However, because of uncertainty about ultimate requirements in both the Rio Grande and San Juan Basins, and because it is anticipated that a number of years must pass before financing is available for the construction of a full 235,000 acre foot diversion project, it is not desirable at this time to make final decisions fully allocating the San Juan waters between the two basins. Accordingly, to initiate the development of the San Juan-Chama Project, New Mexico desires Congressional approval of the San Juan-Chama Project involving an average annual diversion of 235,000 acre feet on the basis of the Bureau of Reclamation report entitled, "San Juan-Chama Project, Colorado-New Mexico, November 1955" with authorization for immediate construction of an initial stage having an average annual diversion of not to exceed 110,000 acre feet. New Mexico intends that the water diverted in this initial stage will be used in conformity with the following priority of uses:

(a) Municipal and industrial supplies

(b) Development of water supplies for tributary irrigation units in depressed areas in northern New Mexico

(c) Supplemental irrigation

The municipal and industrial water is intended primarily to supply the City of Albuquerque; however, there is a possibility that the water requirements of other municipalities in the Rio Grande Basin may be met with water supplied by the San Juan-Chama Project. The tributary irrigation units include all those which are proposed in your November 1955 report. Water remaining after the satisfaction of priorities 1 and 2 is intended for supplemental irrigation on lands of the Middle Rio Grande Conservancy District.

The distressing poverty of the Navajo people in New Mexico is a matter well known to you. That the Congress and the President are aware of this problem is evidenced by the enactment of Public Law 485 which authorized the Navajo Storage Unit and provided that, in the event the Navajo Participating Project is authorized, the cost allocated to irrigation of Indian-owned tribal or restricted lands of the project and beyond the capability of such lands to repay, would be nonreimbursable. The State of New Mexico is also sharply aware of the plight of the Navajo people and anxious to cooperate in a solution of their problems. Conferences among Mr. Paul Jones, Chairman of the Navajo Tribal Council, and other members of the Council, engineering representatives of the Bureau of Indian Affairs and State officials have led to the decision, mutually agreed upon, that authorization of the Navajo Project should be sought on the basis of the Bureau of Indian Affairs report entitled, "Navajo Project, New Mexico, Feasibility Report, January 1955." However, the conferees have agreed and it is the desire of the State of New Mexico that the final planning of the Navajo Project effect the following changes in that report: *the lands developed should be solely for Indian use,*[1] should include the most suitable lands in the Shiprock and South San Juan Divisions and should not exceed 115,000 acres with a diversion requirement of not to exceed 508,000 acre feet per annum. It is believed that these criteria for the Navajo Project will substantially reduce construction costs and result in a better use of the water than would have occurred under the January 1955 plan.

The changes to be accomplished in final planning as set forth above will require the exchange of Federal and State lands in the South San Juan Division for lands on the Navajo Reservation. The State Engineer of New Mexico was advised by a letter from Mr. G. Warren Spaulding, General Superintendent of the Navajo Agency at Window Rock, Arizona, and concurred in by Mr. Paul Jones, that about 568.4 acres of State land would be involved in such an exchange. Exchange of these lands under conditions set forth in Mr. Spaulding's letter as satisfactory to the Tribal Council can be effected by relatively simple State administrative procedures. I presume that no difficulty would be encountered in similar exchanges of Federal land for lands on the Navajo Reservation.

Your letter also requests the views of the New Mexico Department of Game and Fish relative to the San Juan-Chama and Navajo Projects. The New Mexico Department of Game and Fish cooperated in the preparation of the Fish and Wildlife Service "Report on Fish and Wildlife Resources in Relation to the San Juan-Chama Project and Related Developments," dated September, 1955, and Mr. Homer Pickens, Director of the New Mexico Game and Fish Department has advised me that that report adequately represents the views of his department. The views of the department on the Navajo Project will be forwarded at a later date. The Governor's letter to the Secretary of the Interior dated March 4, 1953 sets forth State's policy that "transmountain water shall be used primarily for domestic, municipal and industrial supplies and for supplemental use on existing projects with deficient supplies." Consistent with that policy the State of New Mexico does not wish at this time to allocate any of the waters of the San Juan River for the betterment of fish and wildlife habitat. The State recognizes the possibilities for developing a number of desirable fish and wildlife benefits in connection with these two projects without materially increasing the cost or decreasing the amount of water available to water users under the projects. New Mexico desires to develop these benefits to the fullest extent possible consistent with the above conditions and will wholeheartedly cooperate with the Bureau of Reclamation and the Fish and Wildlife Service toward this end. With this in mind it should be pointed out that the statement that New Mexico does not wish to allocate water to fish and wildlife purposes at this time does not preclude the Fish and Wildlife Service or the New Mexico Department of Game and Fish from acquiring under New Mexico statutes, rights to the use of water.

The State of New Mexico desires that your department proceed with all practical speed toward completion of the San Juan-Chama and Navajo Projects in a form suitable for the authorizations requested above, and I trust that the advice given herein makes that possible. I wish to express the gratitude of the State of New Mexico for these excellent reports and for the cooperation and assistance that you and your Bureaus have afforded in the planning of these projects and in the resolution of our very difficult water allocation problems.

Sincerely yours,

JOHN F. SIMS, *Governor.*
By S. E. REYNOLDS, *State Engineer.*

EXHIBIT 3

RESOLUTION OF THE NAVAJO TRIBAL COUNCIL URGING AUTHORIZATION BY CONGRESS OF THE NAVAJO INDIAN IRRIGATION PROJECT AND THE SAN JUAN-CHAMA PROJECT IN NEW MEXICO AND APPROVING IN PRINCIPLE LEGISLATION PROPOSED FOR THIS PURPOSE

Whereas:

1. The Congress of the United States by Public Law 485, 84th Congress, 2d Session, 43 U.S.C. § 620, has authorized the Upper Colorado River Storage Project, which includes the Navajo Dam in New Mexico, and has appropriated funds

---

[1] Italic supplied.

for the actual construction of this dam; but has not yet authorized the proposed Navajo Indian Irrigation Project, which, however, is listed in Public Law 485 for priority of study by the Secretary of the Interior in order to determine its feasibility for later authorization as a participating project of the Upper Colorado River Storage Project, and

2. The principal justification for construction of the Navajo Dam is to provide a water supply for the proposed Navajo Indian Irrigation Project and for industrial and municipal uses in the San Juan River basin in New Mexico, and

3. In order for the members of the Navajo Tribe, now comprising 85,000 people, to attain a standard of living equal to that enjoyed by the majority of the other American citizens, not only prompt construction of the Navajo Indian Irrigation Project, but also the greatest possible industrial development in the San Juan River Basin on and adjacent to the Navajo Indian Reservation are essential, and

4. In return for the generous support of the State of New Mexico for the proposed Navajo Indian Irrigation Project, and in recognition of the fact that the maximum economic development of all parts of New Mexico is a benefit to all citizens of New Mexico, including Navajo citizens of New Mexico, the Navajo Tribal Administration has supported authorization of the proposed San Juan-Chama Transmountain Diversion at the same time the Navajo Indian Irrigation Project is authorized, and

5. While the original Feasibility Report on the proposed Navajo Indian Irrigation Project, dated January 1955, contemplated a 137,250-acre project, 26,620 acres of which were to be for non-Indian use, further study, embodied in a supplemental report dated March 1957, has shown that reducing the total acreage to a net area of 110,630 acres making use of the best lands available for irrigation purposes under Navajo Dam, both on and off the present Navajo Indian Reservation, and reserving the entire project for exclusive Navajo Indian use, would result in a much more feasible project with a greatly improved cost-benefit ratio, in increased availability of water for industrial use in the San Juan River Basin in New Mexico, and consequently in greater over-all benefit to the Navajo people. Such plan would involve transfer of approximately 14,360 acres of Federal public domain, 960 acres of New Mexico State land, and 4,320 acres of privately-owned land of non-Indians to Indian Reservation status, so that the Project could be exclusively for Navajo use, and the provisions of Public Law 485 and the Leavitt Act would be applicable thereto. Such plan has been approved by the Advisory Committee of the Navajo Tribal Council on January 9, 1957, by Resolution No. ACJ-1-57, which contemplated an exchange of non-irrigable lands of the present Navajo Indian Reservation for the irrigable off-reservation lands needed for the Project, or in the alternative, purchase of the off-reservation lands by the Navajo Tribe and their transfer into trust status by Federal legislation. Further study, however, has shown that the plan of exchange is impractical because of the population displacement it would create but that purchase is feasible; and accordingly, the Advisory Committee has authorized initiation of a Tribal land purchase program to acquire the off-reservation portions of the proposed Navajo Indian Irrigation Project, and has authorized the expenditure of Tribal funds for that purpose, and

6. It appears feasible at this time to proceed with construction of only the initial phase of the proposed San Juan-Chama Project, with an average annual diversion requirement of 110,000 acre feet, building the tunnel to sufficient size, however, to accommodate the originally proposed annual diversion of 235,000 acre feet so that further stages of the project may be authorized without excessive cost when and if they become feasible, and

7. The Interstate Stream Commission of New Mexico approved the plan for reducing and consolidating the area of the proposed Navajo Indian Irrigation Project, and of purchase and transfer to trust status of the off-reservation lands required therefor, and of simultaneous authorization of the initial stage of the San Juan-Chama Project, in a meeting in Farmington on October 17, 1957. At said meeting, the Interstate Stream Commission approved proposed legislation for Congress to accomplish this purpose and further to provide for equal priority of water rights for the revised Navajo Indian Irrigation Project and the initial stage of the San Juan-Chama Project, and appointed the State Engineer and the Commission's legal advisor to work with representatives of the Navajo Tribe and the Department of the Interior to make further refinements in the proposed legislation, and

8. The State Engineer of New Mexico and the legal advisor to the New Mexico Interstate Stream Commission met in Phoenix, Arizona, on November 5, 1957, with the Solicitor of the Department of the Interior, the Field Solicitor and the Irrigation Engineer from the Gallup Area Office of the Bureau of Indian Affairs, and the Assistant General Counsel of the Navajo Tribe, and agreed on a draft of legislation to authorize simultaneously the Navajo Indian Irrigation Project and the initial stage of the San Juan-Chama Project. Such draft, with revisions in sections 4 and 7 is attached to this resolution, and

9. Subsequent to this meeting, the State Engineer of New Mexico and his advisers have meet with the Chairman of the Navajo Tribal Council and his advisers and representatives of the Bureau of Indian Affairs to discuss revision of sections 4 and 7 of the proposed legislation so as to provide for the sharing of shortages by all users of water in New Mexico from the San Juan River whose uses are hereafter initiated, and the Engineer and the Chairman and representatives of the Bureau of Indian Affairs have agreed that all such uses should share proportionately in all water shortages on the bases of their respective authorized diversion requirements, rather than on the basis of priority of appropriation.

Now therefore be it resolved that:

1. The attached proposed bill entitled "To authorize the Secretary of the Interior to construct, operate, and maintain in the Navajo Indian Irrigation Project and the initial stage of the San Juan-Chama Project as participating projects of the Colorado River Storage Project, and for other purposes," consisting of the draft made in Phoenix on November 5, 1957, but containing revisions as proposed by the State Engineer of New Mexico in sections 4 and 7 thereof, is hereby approved in principle, and the Congress of the United States is respectfully urged to enact legislation substantially semilar thereto into law at the earliest practicable date, and to provide funds for early commencement of construction of the Navajo Indian Irrigation Project and initial state of the San Juan-Chama Project.

2. The Chairman of the Tribal Council is hereby authorized to consider, and if in his discretion advisable in the interest of the Navajo Tribe to approve, further changes and modifications in such proposed legislation, provided the following principles are always adhered to:

(1) The Navajo Indian Irrigation Project not be reduced below a net area of 110,630 acres.

(2) The authorized average annual diversion requirement of the Navajo Indian Irrigation Project not be reduced below 508,000 acre feet.

(3) The Project be exclusively for Indian use, and the legislation provide for acquisition and transfer into trust status of the presently off-reservation areas susceptible to irrigation as part of the Project.

(4) No use in New Mexico of water of the San Juan River not heretofore authorized be given priority ahead of the Navajo Indian Irrigation Project.

CERTIFICATION

I hereby certify that the foregoing resolution was duly considered by the Navajo Tribal Council at a duly called meeting at Window Rock, Arizona, at which a quorum was present, and that same was approved by a vote of 70 in favor and 0 opposed, this 12th day of December, 1957.

PAUL JONES,
Chairman, Navajo Tribal Council.

EXHIBIT 4

RESOLUTION OF THE NAVAJO TRIBAL COUNCIL OBJECTING TO PROPOSED RE-EVALUATION OF THE NAVAJO IRRIGATION PROJECT

Whereas: 1. Senator Clinton P. Anderson of New Mexico has proposed to Secretary of the Interior Udall, and the Secretary has agreed that the Navajo Irrigation Project totalling 110,630 acres of land, as authorized by the Act of June 13, 1962, (76 Stat. 96), shall be "re-evaluated" with the objective of reducing said irrigation project to approximately 77,000 acres, in order to make available more water for municipal and industrial purposes, allegedly on the grounds of increased costs of reducing the proposed acreage.

2. Factors now relied upon in proposing such changes were well known when the said Act of June 13, 1962, was passed, and the acreage deemed feasible for irrigation purposes was changed for various reasons from the original amount of 137,250 acres in the Feasilibity Report of January, 1955, to the amount of

110,630 acres for Navajos only in a Supplemental Feasibility Report of March, 1957. The project was accordingly designed, planned and authorized by Congress to provide for irrigating 110,630 acres with an average annual diversion of 508,000 acre-feet of water for this purpose—all represented to Congress as the principal reason for passage of said Act.

3. In addition to federal lands to be embraced in the Navajo Irrigation Project, the Navajo Tribe has proceeded in good faith in reliance upon said Act in purchasing privately owned land at a substantial cost to the Tribe for inclusion in said project, in order to assure and carry out the principal objective of relocating approximately 2,000 Navajo families and offering direct and indirect employment to approximately 17,000 Navajos through direct and collateral forms of employment, all as set forth in Senate Report 83 (87th Congress, 1st Sesion, pages 6–10), in a letter from the then-Secretary of the Interior to Senator Anderson and in said Act of June 13, 1962 (76 Stat. 96, Sec. 2).

4. The Navajo Tribal Council endorsed and supported the passage of the Act by Resolution CD–86–57, dated December 12, 1957, and again by Resolution CMA–14–64, dated March 2, 1964, authorizing substitution of other lands more practicably usable for the irrigation project pursuant to the Act of June 13, 1962 (requesting Congress to amend said Act to include lands in Township 26 North, Ranges 11, 12, and 13 West, and Township 27 North, Range 11 West, N.M.P.M.). The Navajo Tribal Council also authorized the signing of a contract between the Navajo Tribe and the United States for delivery of water to said project, which said form of contract was signed and sent to Secretary Udall in July, 1964, but has never been acted upon by Secretary Udall.

5. Throughout said Tribal Council resolutions and at all times in supporting the passage of the Navajo Irrigation San Juan-Chama Act of June 13, 1962, the Navajo Tribe has in good faith relied upon the commitments of all parties, including the Congress of the United States, to create said Navajo Irrigation Project of 110,630 acres and commit thereto an annual diversion of 508,000 acre-feet of water, and in addition the Tribe would be entitled to apply for and receive a reasonable portion of an additional 200,000 acre-feet which Secretary Udall has found to be available for municipal and industrial purposes. Said advantages and considerations moving to the Tribe would be greatly impaired, and the principal purpose of the Act defeated, if the irrigation project is now reduced in size and the water to which the Tribe is rightfully entitled is made available for municipal and industrial purposes to the great advantage of New Mexico and Albuquerque, and industries to be served.

6. The Navajo Tribe in good faith, and in deference to its neighbors in Albuquerque, New Mexico, compromised its legal rights under the Doctrine of *Winter's* vs. *U.S.* 207 U.S. 564 (see proposed contract between the Tribe and the United States, P. 10g) by agreeing to share shortages of water from the San Juan instead of insisting upon the Tribe's paramount rights, all in consideration of the foregoing and other advantages to the Tribe, such as benefits of the Levitt Act applicable to this irrigation project.

7. The Tribe now notes that the San Juan-Chama Diversion Tunnel originally planned for a capacity of 235,000 acre-feet was built to a far greater capacity, which said capacity could only be filled by diversion of water rightfully belonging to the Navajos pursuant to the arrangement sought by Senator Anderson and Secretary Udall in "re-evaluation" of the Navajo Irrigation Project about which the Navajos first learned by reading in the newspapers.

Now therefore be it resolved that:

1. The Navajo Tribal Council reaffirms and confirms the conditions established by the Council in its Resolution of December 12, 1957 (CD–86–57), namely, the following:

(a) The Navajo Irrigation Project not be reduced below a net area of 110,630 acres.

(b) The authorized annual diversion requirement of the Navajo Irrigation Project not be reduced below 508,000 acre-feet.

(c) The project be exclusively for Indian use and transfer into trust status of the presently off-Reservation areas susceptible to irrigation as part of the project.

(d) No use in New Mexico of water of the San Juan River not heretofore authorized be given priority ahead of the Navajo Irrigation Project.

2. The Navajo Tribal Council finds that the reasons assigned by Senator Anderson and Secretary Udall for "re-evaluation" of the Navajo Irrigation Project, namely, increased cost of construction and related factors, are insincere for the following principal reasons:

(a) The Tribe's proposed contract for receiving the water has been on the desk of Secretary Udall since July, 1964, at which time had Secretary Udall not improperly delayed his official action of approving the contract, the increased and inflated costs of today would not have been present;

(b) All other government projects are subject to the same increased inflationary costs but such other projects are not abandoned for this reason;

(c) Factors now relied upon in proposing this "re-evaluation" were well known when the Act was passed on June 13, 1962, and no new factors have arisen since the Act provides for covering additional costs due to changes in construction cost, based on June, 1961, construction costs (Section 615oo of the Act).

(d) The purpose of the Act, namely, the resettlement of 2,000 or more Navajos and employment of approximately 17,000 Navajos from a failing, grazing economy to a sustaining agricultural way of life on this irrigation project is even of greater force today than when the Act was proposed and approved by Congress.

(e) The tunnel called for in the original San Juan-Chama diversion plan was to have a capacity of 235,00 acre-feet, however, the tunnel as actually built has a capacity far in excess of 235,000 acre-feet. The excess amount to be carried by this tunnel could be obtained from only one source: water rightfully belonging to the Navajos.

3. Unless the Navajo Irrigation Project is carried out to completion as contemplated by the Act of June 13, 1962, the Navajo Tribal Council hereby finds a complete failure of consideration and therefore revokes any past actions of the Navajo Tribal Council in compromising or in any way waiving the Winters Doctrine.

The Council hereby gives notice that the Navajo Tribe will assert any and all rights thereunder against any person or governmental bodies whatsoever who might seek to divert water from the San Juan River or its tributaries in any manner or for any purpose inconsistent with the defined objectives and purposes of said Act of June 13, 1962. The General Counsel of the Navajo Tribe in Washington, D.C., and the Tribe's Legal Department are hereby authorized and directed to take any and all steps deemed necessary, advisable or incidental to carrying out the purposes of the resolution, including the full assertion of the Winters Doctrine, under any circumstances and by any means deemed by them appropriate in the event of any departure from the purposes of the Act of June 13, 1962, in diminution of the conditions heretofore and herein approved by the Navajo Tribal Council.

4. The Navajo Tribal Council, on behalf of the Navajo people, hereby memorializes Congress that the Navajo Tribe has complete faith that the Congress will keep faith with the commitment which it made in passing the Act of June 13, 1962, and will not allow any deviation therefrom.

CERTIFICATION

I hereby certify that the foregoing resolution was duly considered by the Navajo Tribal Council at a duly called meeting at Window Rock, Arizona, at which a quorum was present and that same was passed by a vote of 58 in favor and 0 opposed, this 28th day of April, 1966.

NELSON DAMOU,
Vice Chairman, Navajo Tribal Council.

STATEMENT OF JOHN BELINDO, NATIONAL CONGRESS OF AMERICAN INDIANS

DIVISION OF INDIAN HEALTH

Chairman HAYDEN. Mr. John Belindo of the National Congress of American Indians.

Mr. BELINDO. Thank you, Senator. In behalf of the National Congress of American Indians we would like to thank you for the opportunity to appear before the subcommittee. I enjoyed the testimony of the gentleman who preceded me citing the different causes of diseases of Indians which is of great concern to us. I will read the introduction and I would like to read the summation for you.

Chairman HAYDEN. All right. Your prepared statement will be printed in full.

(The statement follows:)

I. INTRODUCTION

I am John Belindo, Kiowa-Navajo, and Director of the Washington Office of the National Congress of American Indians. The National Congress of American Indians is the only private, national organization of the Indian people themselves, where the voting and programming is limited to legally recognized Indians and Indian Tribes. We are responsible for speaking up for the American Indian people on a national scale. Close to 68 Indian tribes including Alaska Native villages are represented in our organization. We are in close contact with these various tribes and Alaska Native groups which represent a major cross-section of the Native American population of our nation and we are in a position to be knowledgeable regarding conditions which exist on the reservations and other communities where our people live. Through this contact with the tribes and the Public Health Service we are able to maintain a current knowledge of health conditions among the Indian and Alaska Native people. It is hoped that this testimony may help achieve a better understanding of the problems of Indian medical care—and of those who must cope with them.

We have reviewed the requested Budget of the Division of Indian Health for Fiscal Year 1968 and, having recognized the conditions which give rise to this request, heartily give our support to the Division's wish for adequate funds to accomplish its aims of improving the health of Indian and Alaska Native people.

The major categories of the Division of Indian Health Budget request for Fiscal Year 1968 are as follows:

Hospital health	$46, 770, 000
Field health	18, 951, 000
Contract medical care	13, 906, 000
Special Menominee fund *	350, 000
Administration	2, 156, 000
Total health activities	82, 133, 000
Hospital and health: Facilities with related construction	11, 747, 000
Sanitation facilities	10, 464, 000
Total construction	22, 211, 000

*Special assistance to the Menominee Indian people.

President Johnson's pledge to wage unconditional war on Indian poverty cannot be fully effective unless the Indian people enjoy a level of health that will help them to break the vicious circle of economic indigence. Certainly, no single group in the nation suffers greater disadvantages than the American Indian. Family annual income is far below the $3,000 established by the Office of Economic Opportunity as the "poverty line." In many instances this figure is under $1,000. Roughly 90 per cent of Indian housing is below the level that is generally considered to be acceptable. The homes generally do not have sanitation facilities and almost 50 per cent of them obtain their domestic water from potentially contaminated sources. Satisfactory waste disposal facilities are in only 25 percent of the homes.

The health of Indian and Alaska Native people is approximately that of the general U.S. population 25 years ago. Infectious diseases that are known to be preventable and complications thereof cause most of the illnesses and 13 per cent of the deaths among Indians and Alaska Natives. Influenza and pneumonia are twice as high among Indians and three times as high among Alaska Natives. Gastroenteric death rates are five times the national rate. Tuberculosis death rates are five times higher among Indians and seven times higher among Alaska natives. Tuberculosis incidence is seven times as great. The infant death rate among Indians is nearly one and one-half times that of the general population and the average adult age at death is 44, in contrast to 63 years in the general population.

The harmony with the President's expressed desire to see the Indian's and Alaska Natives total life improved, the National Congress of American Indians respectively recommends that the Division of Indian Health budget request be approved by this committee. We wish to give emphasis to the following items as being of particular need at this time.

II. Hospital and Field Health Items

A. Hospital and clinic construction

The National Congress of American Indians recognizes that changing health problems, population shifts and other circumstances make it necessary to construct new facilities and expand already existing areas. In addition to those constructed in recent years, the 1968 budget request include (1) construction of a 125-bed hospital at Tuba City, Arizona, to replace the present 75-bed facility; (2) completion of a 15-bed hospital at Mescalero, New Mexico; (3) planning for construction of a new 100-bed hospital at Chinle, Arizona; and (4) alterations of health facilities at fourteen other locations.

Included in the 1968 request is $2,285,000 for construction or for planning of health centers and health stations at Chilocco, Oklahoma; Riverside, California; White Shield and New Town, North Dakota; Teec Nos Pos, Albuquerque, Sanostee and San Felipe, New Mexico; Beshbitoh, Many Farms, Dilkon, Nazlini, Oraibi, and Rock Point, Arizona; Red Water, Mississippi; and Stewart, Nevada.

Through a number of avenues of communication the National Congress of American Indians has become aware of the expressed needs of the Indian people for more adequate health facilities. For Example, the Choctaw Indians in Mississippi have a high rate of infectious diseases. Among Choctaw children these diseases were the leading cause of deaths in 1964.

The majority of Choctaw Indians live in a rural environment in substandard housing with its attendant accident and illness problems. The high death rate could be significantly lowered and a greater control held on disabling diseases if a new hospital facility could be made available to these people.

Variations of these same kinds of conditions prevail in many Indian communities throughout the Nation. The need for improved facilities for the care and treatment of the sick is imperative if the Public Health Service program is to be truly effective.

B. Staff quarters

With regard to staff quarters, we recognize the vital need to provide adequate housing for Indian health staff because of the remoteness and isolation in many locations from established communities. In many instances these locations are virtually in accessible in inclement weather; or so far removed from established population centers that recreational, shopping and educational facilities are reached only by traveling many miles over rugged terrain. It becomes important, therefore, that every effort, without extravagance, be made to provide a comfortable home for staff members. Otherwise, it is nearly impossible to attract, recruit and retain the type of professional and technical personnel who are needed to carry out the health program.

C. Environmental health

The Sanitation Facilities Construction Act, commonly called Public Law 86-121 has been a major source of health improvement for the Indian people since its enactment into law in 1959.

The National Congress of American Indians enthusiastically endorses the Public Health Service view that continued attention should be given to the remaining sanitation facility deficiencies which can be corrected through assistance provided under the authority of Public Law 86-121. The remaining total known need for this activity is estimated to be approximately $100 million for the Federal share. Some 30 per cent of the required needs have been met for Indian families through authorized projects to date. However, nearly 50 per cent of the water comes from potentially contaminated sources. Nearly 45 per cent have inadequate or no waste disposal facilities.

Expressions from various Indian groups indicate that they feel the Sanitation Facilities program is being implemented too slowly. At the current budget level of construction, it will take approximately 15 years to meet the presently estimated need for such facilities. During the 23rd Annual NCAI Convention held in Oklahoma City, Oklahoma, November 14-18, 1966, a resolution on Public Law 86-121 was adopted respectfully urging Congress to appropriate sufficient funds to the Division of Indian Health to permit acceleration of Indian sanitation and construction activities that would accomplish the needed environmental health improvements in Indian and Alaska Native communities within a five to seven year time period. An additional resolution with respect to incomplete sanitation projects was also adopted requesting: (1) the Public Health Service to follow-up on sanitation projects to insure that facilities are in working order before the projects are completed and approved; and to inspect all homes where hand pumps and outside privies were installed and request funds to replace needed to upgrade existing non-functional sanitation projects. Copies of these resolutions are attached. In view of the health needs and the Indian pressures to participate, the construction program for sanitation facilities should be accelerated so that major known needs may be met over a period of five to seven years.

D. Dental health

Dental disorders continue to present a major health problem to the Indians and Alaska Native people. The Indian and Alaska Native people have for some time expressed their desire for a more widely spread dental program. They would like to have additional contract dentists provided to help meet their dental needs. At the present time the Division of Indian Health contracts with approximately 200 dentists. In the general population the dentist ratio is about 1 to 2,000; however, in the Indian Health program there is one clinician to about every 4,100 people.

The National Congress of American Indians gives its support to the tribal members request for additional dental professional personnel, clinical facilities and further dental care for adults.

E. Mental health program

Mental health activity in the Division of Indian Health has increased in recent years. This effort has led to early identification and treatment of mental problems, however, on the basis of national estimates, there are still some 45,000 American Indians and Alaska Natives with treatable mental and emotional disorders. Suicide rates are 15 per cent higher and homicide rates three times the all races rate. Between 13 per cent and 30 per cent of the students treated at various boarding school infirmaries show signs of prolonged emotional stress. The rate of children placed in foster homes because of emotional instability and other weaknesses is three times the national rate. The abuse of alcohol is another problem on Indian reservations. Poor living conditions and lack of occupational status results in excessive drinking. More than half of the car accidents, involving Indians are alcohol related. There is here a clear need for action.

The National Congress of American Indians supports the Division of Indian Health view that continued attention should be given to special long-range mental health programs—programs which will systematically break the continuity of this stigmatized existence.

F. Community health aides

In an effort to provide the highest quality of services to the Indian people, an emphasis is maintained on Training Programs for Health aides in the communities. The program has two major objectives. (1) Providing optimum health services in beneficiary populations, (2) increase the participation of Indian and Alaska Natives in meeting their own health needs. In 1965 a program was initiated on three reservations under Title II of the Economic Opportunity Act to train Indian people as community health aides. Division of Indian Health participation in the program included development of a prototype course of instruction and providing instruction, field supervisors and facilities for field practice for the aides. The community health aides provide such services as giving individual and group instruction in simplified home nursing techniques, infant care, nutrition, home management and good health practices.

The National Congress of American Indians recommends that the health aide training program be continued with Office of Economic Opportunity support, and that the Division of Indian Health be funded in future years to provide employment of these aides following their training.

G. Other health-rated needs

Other health-related needs given specific emphasis by Indian Leaders in their meetings with Commissioner Robert L. Bennett of the Bureau of Indian Affairs are:

1. Transportation improvement, particularly for the aged and children to health facilities which, in many instances, are long distances from their homes.

2. Increased efforts expended by the Division of Indian Health to utilize all available resources for care for the aged.

The National Congress of American Indians by resolution at the 1966 Annual Convention, requested that Congress appropriate sufficient funds needed to encompass the health problems of Indians who live in locations adjacent to the reservation on non-federal lands and as a result are not thereby eligible for health benefits from the U.S. Public Health Service acting through its Division of Indian Health. A copy of the resolution is attached.

III. SUMMARY

The $82,133,000 appropriation request for 1968 Indian Health activities represents a $5,809,000 increase and a net increase of 474 positions; 182 in Hospital Health; 273 in Field Health; and 9 in Administration. In addition to mandatory items such as statutory increases and cost increases under the Contract Medical Care program in the amount of $1,754,000, the funds requested will provide for (1) a small increase in the hospital employee, patient ration: (2) direct services to beneficiaries on the Pribilof Islands, Alaska: (3) the establishment of an operations research program directed toward the design and preliminary implementation of an integrated and comprehensive management information system based on Service Unit planning and evaluation needs; (4) an increase in the preventive health activities consisting of Sanitation, Dental, Public Health Nursing, Health Education and Field Medical Services including the administration of an increased sanitarian facilities construction program and the establishment of a training program for aides on the health team in the communities, (5) special assistance to the Menominee Indian people, and (6) a slight increase to effectively implement the President's planning-programming-budgeting system.

The National Congress of American Indians firmly supports the Division of Indian Health Budget request for Fiscal Year 1968, and respectfully petitions this Committee to give full consideration to the items submitted therein in order to assure that the American Indian and Alaska Native people will be provided those services necessary to raise their health status to a level comparable with that of the general population. We hope that this statement resounds the tone of urgency which we believe is subject matter requires and which its recommendations reflect.

RESOLUTION ON "THE INDIAN SANITATION FACILITIES ACT," PUBLIC LAW 86-121

Whereas, the gross environmental deficiencies in Indian supplies and Alaska Native communities such as lack of safe available water supplies and waste disposal facilities continue to exist and are in large measure responsible for the high incidence of preventable diseases that prevail among Indians and Alaska Natives; and

Whereas, The Surgeon General of the Public Service is empowered by authority under Public Law 86-121 "The Indian Sanitation Facilities Act," to assist Indians and Alaska Natives in the Construction of sanitary facilities essential to the improvement of their physical environment,

Now therefore be it resolved, we respectfully urge the U.S. Congress to authorize sufficient appropriations to the Division of Indian Health to permit the Indian Sanitation Construction activities to be accelerated to accomplish needed environment health improvements in Indian and Alaska Native Communities within a five to seven-year period of time.

(23rd Annual Convention, 1966, National Congress of American Indians, Oklahoma City, Oklahoma)

RESOLUTION ON SANITATION

Whereas, sanitation projects are not always completed and are often inadequate, and

Whereas, repairs are needed to existing non-functional sanitation projects, and,

Whereas, there are still a multitude of homes where hand pumps and outdoor privies were installed.

Now therefore, be it resolved that the Public Health Service is hereby requested to follow-up on sanitation projects to insure that facilities are in working order before projects are completed and approved.

That the Congress is hereby requested to appropriate funds for emergency repairs to existing non-functional sanitation projects to bring them up to standard.

And that the Public Health Service inspect all homes with installed outside privies and hand pumps and request funds to replace these facilities.

(23rd Annual Convention, 1966 National Congress of American Indians assembled in Oklahoma City, Oklahoma.)

RESOLUTION ON OFF-RESERVATION HEALTH SERVICES

Whereas, The U.S. Public Health Service, acting through its Division of Indian Health, has the responsibility of meeting the health needs of the Indian people, and

Whereas, present Division of Indian Health Policy is directed at the health problems of Indians living on an Indian reservation or on lands under Federal jurisdiction, and

Whereas, large numbers of these people live in locations adjacent to the reservation on non-Federal lands and as a result are not thereby eligible for health benefits, and

Whereas, there presently exists a crying health need of these Indians that is not being met,

Now therefore, be it resolved, that the Congress is hereby requested to appropriate sufficent funds to meet these needs.

SUMMARY OF STATEMENT

Mr. BELINDO. I am John Belindo, Navajo director of the Washington office of National Congress of American Indians and we are the only private National organization of the Indian people themselves. The voting and programing is limited to legally recognized Indians and Indian tribes. We are responsible for speaking up for the American Indian people on a national scale. Close to 68 Indian tribes including Alaskan native villages are represented in our organization. We are in close contact with these various tribes and Alaskan native groups which represent a cross section of American native population of our Nation and we are in a position to be knowledgeable regarding conditions which exist on the reservations and other communities where our people live. Through this contact with the tribes and public health service we are able to maintain a current knowledge of health conditions among the Indians and Alaskan native people.

RECOMMENDATION

In harmony with the President's message expressing a desire to see the Indian's and Alaskan natives' total life improved, the national congress respectfully recommends that the Division of Indian Health request be approved by this committee and also by the full committee. We wish to give emphasis to the following items as being of particular need at this time. Hospital and field health items, which I will not enumerate, staff quarters for environmental health, general health.

MENTAL HEALTH PROGRAMS

I think this is one subject of great importance to all Indians, those who are confronted with the Indian health problems, the mental health programs where suicide rates are 15 percent higher and homicide rates are three times higher. Between 15 and 30 percent treated at boarding school infirmary show signs of emotional stress and I hope this is a program that can be amended, community health needs and related needs.

SUPPORT OF 1968 BUDGET REQUEST

In summary, the appropriation request for 1968 Indian health activity represents a $5,809,000 increase in addition to mandatory items such as statutory increase and cost increase under the contract medical care program in the amount of $1,754,000, the fund requested will provide for, one, a small increase in the hospital employee patient ratio; two, direct service to beneficiaries on the Pribilof Islands of Alaska; three, establishment of an operations research program directed toward the design and preliminary implementation of an integrated and comprehensive management information system based on service planning and evaluation needs.

The National Congress of American Indians firmly supports the Division of Indian Health budget request for fiscal 1968 and respectfully petitions the committee to give full consideration to items submitted therein. We hope this statement resounds the tone of urgency which we believe the subject matters require and which its recommendations reflect.

Thank you.

STATEMENT OF RICHARD C. LONGMIRE, CHAIRMAN, LEGISLATIVE COMMITTEE, NATIONAL ASSOCIATION OF SOIL AND WATER CONSERVATION DISTRICTS

VIEWS ON APPROPRIATION ITEMS FOR DEPARTMENT OF INTERIOR AND FOREST SERVICE

Chairman HAYDEN. The last witness is Mr. Richard Longmire, chairman, legislative committee, National Association of Soil and Water Conservation Districts.

Mr. LONGMIRE. Thank you, Mr. Chairman.

(The statement follows:)

INTRODUCTION

I am Richard C. Longmire of Pauls Valley, Oklahoma, chairman of the Legislative Committee for the National Association of Soil and Water Conservation Districts (NACD). The Association represents approximately 3,000 local Soil and Water Conservation Districts in all 50 states, Puerto Rico, and the Virgin Islands. Our purposes are the conservation, orderly development, and wise use of the Nation's land, water, timber, and related natural resources through the exercise of local initiative and the operation of local programs in cooperation with landowners as well as federal and state resource agencies.

Close to 18,000 men and women serve without pay as the governing officials of these local Districts. Approximately 2,000,000 landowners are cooperators in the Districts' programs.

Throughout the country, District officials and District cooperators have a continuing and active interest in the condition, the use, and the improvement of public lands managed by the federal government. In literally thousands of situations, the public lands are intermingled with—or are adjacent to—lands in private ownership. The condition and the management of the public lands have important effects on the adjoining private lands. As a general statement, they are physically inter-related. Very often, they are economically related.

We appreciate this opportunity to present our views on appropriation items for fiscal year 1968 for certain resource agencies of the Department of the Interior as well as the Forest Service of the Department of Agriculture.

The level of government investment in programs for the protection and development of natural resources is a matter of deep and continuing interest to the members of our Association. This is true with respect to programs affecting public lands, as it is for programs focused on privately-owned lands.

Both categories of ownership and the resources involved are experiencing steadily greater pressures, either to meet the rising demands for production of food, fiber, and forage; or the similarly increasing demands for various uses, such as recreation, water supply, and wildlife preservation.

In the face of these pressures, the resource management job is becoming more complex and more expensive. Since these resources are the raw materials of our economy and the very essence of our environment, we have no alternative to doing whatever is necessary to keep them in good supply and in good condition.

The NACD recognizes, however, that all the desirable work cannot be undertaken at once. We understand the need to be selective and to set some kind of priorities. At the same time we are aware that effective resource work can rarely be accomplished swiftly, and it is important to anticipate oncoming requirements that could become critical.

FOREST SERVICE

The oncoming requirements for wood products are a case in point. Projections by the Forest Service indicate the demand for forest products will double by the end of the century. Since the increased production cannot be obtained by substantial additions to the acreage of commercial forest lands, most of it will have to come from better protection, better management, and improved yield rates from existing forests.

An important share of this future wood supply will be harvested from relatively small timber tracts which are parts of farms, ranches, and similar properties.

For this reason, the state and private forestry cooperation items in the Forest Service budget are of particular interest to Soil and Water Conservation Districts. These items cover programs which directly assist District cooperators with fire protection, woodland insect and disease protection, reasonably-priced forest and shelterbelt planting stock, and technical forestry assistance in the management and marketing of timber.

Most of the 4,000,000 private woodland owners of the United States are in Conservation Districts. Most all of these owners need the fire protection, low-cost tree seedlings, and technical forestry services offered through these cooperative programs. They are essential to development of the multiple-use capabilities of the forests.

The cooperative-state-federal forestry programs are carried out largely through the State Foresters. The State Foresters and their men on the ground work closely with Conservation Districts and with District cooperators in most parts of the country.

More than a third of all the Conservation Districts of the nation have written cooperative agreements with state forestry agencies, and another third, at least, are cooperating regularly without written agreements.

We are pleased by this trend. It is evidence of the increasing attention to farm forestry by individual Districts and private woodland owners.

Districts value highly the assistance they are getting from state forestry agencies. Indeed, they have made known their need for more of it.

We want to emphasize our needs for forest fire control. The enlarged use of forests, especially by sportsmen and recreationists, has increased the need for this protective program. It is an essential program, but we have noted with genuine concern that the federal share of the financing has failed to keep pace with the growing program needs. As one result of this, the states have been forced to assume most of the added costs in recent years.

Although a federal fund in the amount of $20,000,000 annually is authorized for use in the Clark-McNary Section 2 program, actual federal participation in the effort dropped to an all-time low of 15 percent of the total expenditures in fiscal year 1966. Our information indicates a federal participation that year of $12,803,000, compared with nearly $72,250,000 of state and private funds.

The federal appropriation for the Cooperative Fire Control Program for the current fiscal year is essentially the same—$12,811,000.

Although the financial burdens being assumed by the federal government are enormous, there is clearly a feeling in some states that the federal government's participation in the Cooperative Fire Control Program should be strengthened. Many state fire control officials believe that further large increases in state and private funds are unlikely.

Prospects of a leveling off in program activities would not disturb us so much if it were not for the following facts—

At the beginning of this year, an estimated 526 million acres of state and private forest lands were in need of protection. Of this total, approximately 480 million acres had been placed under organized protection, leaving about 46 million acres unprotected. Moreover, the level of protection was classified as inadequate on approximately 200 million acres of the "protected" base.

The capabilities of forest lands for all their multiple uses—recreation, forage, wildlife, and special forest products, as well as timber—cannot be fully developed unless protection from fire is assured.

We urge, therefore, an intensification and expansion of the effective fire protection program. Specifically, we wish to associate ourselves with the National Association of State Foresters in requesting an increase of $3,000,000 for fiscal year 1968 in the Forest Service budget item for Cooperation in Forest Fire Control. This would represent an increase to $15,811,000 for this item, which is carried in the budget at $12,811,000.

Our special interest in the preceding item is not intended to reflect any lack of concern about other items in the Forest Service budget. Our Association is sincerely concerned with all aspects of the forestry program.

The National Forests coincide to a major degree with the rural areas having the greatest need for economic improvement and present one of the best opportunities for its accomplishment. In fact, most of the National Forests in the East were established in cutover areas which required substantial investments to restore productivity. The increases for more timber sales, for recreation, fire protection, land exchange work, and forest roads and trails are sorely needed. We support them.

The increases for research items for timber, management of forest watersheds, forest products utilization, resource economics, and recreation are needed to provide facts to the action programs of many public agencies and to private enterprise in the forestry and related resource fields. With the current expansion of forest-based recreation, the relatively new research program of Recreation Research is particularly in need of strengthening.

We hope your Committee will see fit to approve the proposed budget in full for the National Forests and Forest Research programs before you. We believe they could be well supported at a higher level.

BUREAU OF LAND MANAGEMENT

The condition of the public lands administered by the Bureau of Land Management is a matter of continuing concern to Conservation Districts. We are steadily aware that millions of acres of these lands are so directly associated with the management of privately-owned lands—either through lease or permit arrangements, or by the simple fact that they exist side by side—that the success of private operations depends on the quality of the public lands. This means good vegetative cover and the application of essential soil and water conservation measures where needed.

As we have tried to emphasize before, the best evidence is that better vegetative cover and much more intensive use of conservation measures are needed on most of the 177 million acres administered by BLM within the contiguous western states. The Bureau's inventory of conservation needs on the public lands indicates, for example, the need for revegetation on more than 11,700,000 acres, the control of undesirable plants on more than 14,000,000 acres, and the application of other conservation practices on nearly 16,000,000 acres. This is only a partial listing of needs.

It is altogether evident that millions of acres of the reserved lands are deteriorating at a very serious rate. Continuing soil losses on more than 100 million acres, largely the result of depleted plant cover, are inflicting double damage. They are not only reducing the usefulness of an extremely valuable upland resource, but pouring costly deposits of sediment into downstream valleys and reservoirs. The damage to downstream areas includes agriculture, recreation, and the structures built for flood control, water supply, and power.

In the face of this evident damage and very large need, we find it very hard to understand the proposed decrease of $835,000 in the soil and watershed conservation item for BLM in the 1968 budget.

When this figure is translated to the land, we find that it means a reduction in the application of conservation practices such as contour trenching, pitting, furrowing, and water spreading on 92,000 acres. It would mean 200 fewer miles of protective fences and 55,000 fewer acres receiving revegetation care than are currently scheduled in fiscal year 1967.

In our judgment, this kind of cut-back is insupportable. At a time when spokesmen for the federal government are emphasizing the importance of natural resources, the dangers of water pollution, and the need for attention to our environment and natural beauty—comes a proposal to reduce the very work on the government's own lands. Moreover, it comes at a time when receipts from the disposition of resources are climbing in virtually every category to an estimated total of nearly $626,000,000.

We believe it is not only good economic sense, but a responsibility of leadership in Congress and in the executive branch to set a good example of resource stewardship. One would be hard put to find a better place to demonstrate this leadership than on the public domain administered by the BLM.

We believe it is extremely important to maintain—and not cut back—the momentum for soil and moisture conservation on public lands.

We urge the committee to take a more constructive step than that proposed by the budget. Instead of a reduction of $835,000 for this important work, as the budget proposes, we believe the committee should recommend an increase to bring this item to $16,000,000. This would be a rise of $1,093,000 over the sum appropriated for soil and watershed conservation for the current fiscal year. The increase is amply justified, in our judgment, by the formidable backlog of work built up over decades of inattention and by the substantial benefits that follow the installation of essential conservation measures.

BUREAU OF SPORT FISHERIES AND WILDLIFE

The national wildlife refuge system, containing approximately 30 million acres, is dedicated primarily to the benefit of wildlife and its habitat. In addition, the refuge units are managed to allow use by the public, insofar as this is compatible with the basic purposes.

At the time these refuge lands are acquired, a considerable acreage is marked by conditions of deteriorated soil, water, and vegetation. The Bureau undertakes to correct these conditions in order to obtail efficient management and maximum production. The most severely eroding areas get first attention, along with those areas where delay in treatment would accelerate costs.

Less than half of the needed conservation work has been completed on Bureau lands and the annual rate of accomplishment is discouraging. The budget proposes an appropriation of $713,000 for the soil and moisture conservation item for the coming fiscal year—an amount essentially the same as for the current fiscal year.

For the benefit of the Bureau's primary mission, as well as for the benefit of the millions of Americans who visit these unique areas each year, we hope the committee will give serious consideration to an increase, however moderate, in this item.

OTHER USDI AGENCIES

Our association is well aware of the extraordinary costs the country is now carrying because of the military operations in Southeast Asia. We recognize that this places limitations on what can be done during the coming year in many important areas of resource management—and we have stressed in our statement only those items we consider to be of exceptional urgency.

In addition, however, we wish to record our support for the budget proposals pertaining to the soil and moisture conservation items of the Bureau of Indian Affairs and the Bureau of Reclamation, as well as the forestry and fire control items for the National Park Service and the Bureau of Indian Affairs.

SUBMISSION OF STATEMENTS AND LETTERS

Chairman HAYDEN. A number of statements and letters have been received by the committee which I have directed the clerk to have printed in the record.

(The statements and letters follow:)

FOREST SERVICE

SILVICULTURE LABORATORY, BEND, OREG., LETTER FROM SENATOR JACKSON

U.S. SENATE,
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,
March 20, 1967.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Although I imagine you have already received a copy of this resolution adopted by the Board of Directors of the Western Wood Products Association, I am sending it along to you with my endorsement for adequate staffing funds for the Bend, Oregon Silviculture Laboratory.

Sincerely yours,

HENRY M. JACKSON, *Chairman.*

LETTER TO SENATOR JACKSON

WESTERN WOOD PRODUCTS ASSOCIATION,
Portland, Oreg., March 8, 1967.

Hon. HENRY M. JACKSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR JACKSON: At our Annual Meeting in San Francisco, held February 28–March 3, 1967, our Board of Directors adopted the recommendation of the

Oregon and Washington Forest Practice Committees in regard to the adequate staffing of the Silviculture Laboratory at Bend, Oregon.

Below is the resolution as adopted:

"Whereas, the current budget expenditure for the Forest Service Silviculture Laboratory at Bend, Oregon is $90,000 per year, and

"Whereas, the current program of the Laboratory is inadequate to serve the needs of the public and private timberlands located in Eastern Oregon and Eastern Washington, and

"Whereas, an adequately financed timber management research program promises to evolve land and timber management practices that promise the doubling of the current rate of timber production on public and private timberlands, and

"Whereas, current timber production on public and private timberlands is inadequate to meet the economic needs of the forest products industry based in Eastern Oregon and Eastern Washington

"Now therefore, be it, *Resolved*, That the Oregon and Washington Forest Practice Committees in joint session recommend that the Western Wood Products Association urge the Congress that the annual budget for the Bend Forest Service Silviculture Laboratory be increased. This is necessary to adequately staff the Laboratory so it can function effectively."

Resolution adopted February 10, 1967.

This is needed so that research and increase in timber production in the Pacific Northwest can be matched to provide for the needs of the nation.

Respectfully submitted.

DAVID T. KAUFFMAN,
Acting Chairman, Washington Forest Practice Committee.

FEDERAL-STATE COOPERATIVE FIRE CONTROL PROGRAM

LETTER FROM SENATOR THURMOND

U.S. SENATE,
COMMITTEE ON THE JUDICIARY,
March 21, 1967.

Senator CARL HAYDEN,
Chairman, Senate Appropriations Committee,
1235 New Senate Office Building,
Washington, D.C.

DEAR MR. CHAIRMAN: I have received a letter from Mr. John R. Tiller, the State Forester of South Carolina.

Mr. Tiller is concerned over the level of appropriations requested in the budget under Section 2 of the Clarke-McNary law which, as you know, is the cooperative State-Federal Forest Fire Control Program. The budget contains a request for $12,811,000.00 for Fscal Year 1968. Those involved in the program feel that an additional $3,000,000.00 would be necessary to maintain adequate fire protection throughout the nation.

I am enclosing for your information a portion of the letter I have received from Mr. Tiller in which he discusses the need for these funds. I would appreciate you and the members of the Interior Appropriations Subcommittee giving this request your very careful consideration.

With kind regards,

Sincerely,

STROM THURMOND.

EXCERPT, LETTER TO SENATOR THURMOND

COLUMBIA, S.C., *February 27, 1967.*

HON. STROM THURMOND,
U.S. Senator, South Carolina,
Senate Office Building, Washington, D.C.

DEAR SENATOR THURMOND: I am addressing this urgent plea for assistance to you because I know you will recognize that it is both of importance to the protection of life and property in this State and the Nation, and of particular concern to forest owners, our forest industry and our vital forest economy.

This matter has primarily to do with the forest fire control program which is a most important part of our over-all forestry problem with which we are faced—in South Carolina, the South, and the Nation.

An apraisal of trends in the Nation's timber situation and for timber supplies and demands to the year 2000 has recently been made by the United States Forest Service, Department of Agriculture. Based on logical assumptions of continued major expansion in population and economic growth, demands for timber products are expected to increase about 80% by the year 2000 for the Nation as a whole.

In the South, however, where the bulk of the Nation's timber must be grown, demands for softwoods are expected to be nearly three times the 1962 cut, and 44% higher for hardwoods. (Increases in cut, particularly in pulpwood, are already being felt in South Carolina through large expansions of pulp mills drawing on South Carolina for wood.) Projected use of all products from forests in the United States rises from 11.8 billion cubic feet in 1962 to 21.3 billion cubic feet in the year 2000.

This is essentially the problem—a problem because, currently, South Carolina and the Nation as a whole are growing only half, or less, of the wood they are capable of growing, and without immediate and sustained intensification in *all phases* of forestry, including forest fire control, we cannot be reasonably expected to grow sufficient additional quantities of wood to meet these expected demands by the year 2000.

Adequate fire protection is the insurance we pay to protect the investment of money and time of our woodland owners in scientifically growing forest crops; the tremendous capital investment of our woodusing industries, their jobs and payrolls; and the forest economy of this State and Nation, which is considerable. Too, it is the insuracne we pay to protect vital water supplies for domestic and commercial use; an improved habitat for wildlife; and wholesome outdoor recreation for our citizens and visitors. It is also the insurance we pay to protect the homes and, in fact, the lives of all our rural folks.

South Carolina, and much of the Nation, *does not have adequate fire protection*. This is certainly borne out by the fact that here in South Carolina last year 5,467 wildfires occurred during the year July 1, 1965–June 30, 1966, which burned over 127,805 acres of woodland. During the week ending April 2, 1966 alone, 878 wildfires burned 78,867 acres of woodland and destroyed 41 dwellings and 93 barns and other service buildings in suburban and rural areas.

This has occurred because we are only financed and equipped to handle a very normal fire situation—and every abnormal situation inevitably results in abnormal losses which deal blow after blow to our woodland owners, the forest industry and our forest economy, not to mention our water, wildlife and recreation potential. Basically, we must be better financed, both by the State and by the Federal Government through the Clarke-McNary Law, Section 2, which is administered by the U.S. Forest Service and through which the Federal Government very properly cost-shares the expense of fire protection—in theory on a 50-50% basis and in practice on a 20% Federal-80% State basis. The Clarke-McNary Law, Section 2, program is authorized by Congress at $20,000,000; current appropriations are at $12,811,000; the Association of State Foresters urged $15,811,000 for Fiscal 1968; and the President has asked $12,811,00 for 1968. Not only are we under-financed to build an *adequate* level of protection, *but the cost to do the job continuously increases and we are unable to maintain the level of protection we have had.* The States, South Carolina included, are doing their part financially, but proper financing by the Federal Government has, for years, bogged down.

STATEMENT BY THE MERAMEC BASIN ASSOCIATION

The Meramec Basin Association is a not-for-profit Missouri corporation organized to represent the people of the Meramec Basin of Missouri and to work with them in securing sound use and preservation of the resources of the Basin and the closely adjacent localities having geographic, political, economic and social ties with the Basin area. The Association has 900 members and a board of 58 directors representing a cross section of interests and localities in the region.

In addition to the justification of the H–25 project provided by reports of both the U.S. Engineers and U.S. Dept. of Agriculture, and the social and economic changes which call for projects of this nature in the area, there is a strong, additional reason for moving H–25 reservoir to completion as part of this most unusual and wide scope of water resources development that is underway in our Basin.

The Basin development program embraces a 3,980 square miles drainage system of Ozark terrain. The combination of 5 U.S. Engineer mainstream reservoirs and 60 Department of Agriculture upland reservoirs called for in the planning will provide a water control and use system that has been much needed for flood control, recreation, water supply and related land treatment programs.

A very serious problem in connection with the H–25 project is the fact that the upland reservoir program of the U.S.D.A. is overshadowed in the minds of many people in the area by the large mainstream reservoir projects. Yet the upland program is designed to work with the mainstream program—both programs to operate as a system. And to achieve a great portion of the upland program—as well as some phases of the mainstream program, the participation of non-federal interests is required in financing, sponsorship, and operation.

Completion of H–25 (Council Bluff Lake is the name which has been selected for it) will not only meet pressing needs in its general locality but will give us the prime example needed in terms of encouragement and enlightenment, and a leadership project that will expedite the arrangements which are being shaped up at this time at state, regional and local levels for assuming responsibility for their share of financing and management.

The development called for in the entire cooperative effort based on the federal Basin plan will have—with no exaggeration—really gigantic economic, resource, and social values. The mainstream program is getting underway, thanks to the interest and financing provided by the Congress. There is an absolute minimum of opposition to any of the entire plan. Our people see the need for it. But seeing the need, and getting in gear for action, are two different matters.

Our Basin is largely Ozark hills and valleys—with, up to now, a rather static and lightly constituted population base. The development of new mines, the actualities of the water resource program—are all new to our people. With respect to the water program, construction of H–25 reservoir will aid us both materially and in building our peoples' confidence to move ahead.

Plans on paper are nice and create hope in many people. But—as we hope you will agree—we feel that incentive for action in such new programs comes strongest and most soundly from a good example of which can be done with a paper plan. Nothing could serve the cause more of advancing the needed program of the Department of Agriculture than completion of this Forest Service reservoir.

We respectfully request that the Appropriations Committee provide the necessary funds needed to bulid and develop H–25 reservoir by the U.S. Forest Service.

Respectfully submitted.

JAMES F. GAMBLE, *Executive Director.*

STATEMENT BY WESTERN FOREST INDUSTRIES ASSOCIATION

Mr. Chairman, Members of the Committee, I am Joseph S. Miller representing the Western Forest Industries Association, a trade association comprised of approximately 100 members. The membership is located in the States of California, Oregon, Washington, Idaho, Montana, and Colorado. Our members process, depending upon the year and level of national economic activity, from 4½ to 5½ billion feet of logs each year into lumber, plywood and allied forest products. They are primarily dependent upon timber sale offerings from the public lands for their logs.

Our industry is a cornerstone of our western economy. When it is sick, the economy is slow; when it is booming, the economy is healthy. This industry is divided between those few having adequate timber supplies in their own ownership or contracted from other private sources, to supply their predominant needs, and those dependent on the public timber supply. During the last few years this competitive industry has been beset by a number of additional problems. This is particularly true of that part of the industry dependent upon the public timber for its raw material supply. One of these problems has been the shortage of logs. Basically the installed capacity and the need for raw materials is greater than that available as annual allowable cut from the public lands and from private sources.

This record was established in 1962 when the Senate Commerce Committee conducted extensive hearings during which the Chief of the Forest Service reported that the 42 Western National Forests located in Montana, Idaho, Northwestern Utah, Washington, Oregon and most of California did not have annual timber offerings adequate to meet the installed capacity and industrial demand. Since then, additional demand was added with the Japanese purchasing ever-increasing volumes of softwood logs from Oregon and Washington. This additional log demand on our already short supply has increased from 311 million board feet in 1962 to 1.0 billion board feet in 1966.

Becoming fearful with the increased drain caused by log exports from the already short softwood log supply, a committee was formed in Oregon and Washington of persons whose processing plants were dependent upon National Forest timber. The purpose of this committee was to request a Pacific Northwest Federal Sustained Yield Unit. This unit, if formed was to encompass the National Forests of Oregon and Washington and was to provide for domestic manufacture of all National Forest logs originating from the National Forests of the two states.

On September 17, 1965, Secretary of Agriculture Freeman rejected the request for a Federal Sustained Yield Unit. In Secretary Freeman's letter rejecting the Committee's request, he stated, in part:

"I am directing the Forest Service to use every means available to it to maintain timber harvesting at allowable cut levels and to accelerate offerings of timber not normally included under allowable cut limitations such as material from prelogging salvage operations and thinning of young growth stands."

Similarly, in a letter of December 9, 1965, from then Secretary of Commerce Connor to Senator Warren G. Magnuson responding to a request by Senator Magnuson that a review of the log export situation affecting the Pacific Northwest be made, Secretary Connor said ". . . a positive program is indicated including increasing the log supply in the Pacific Northwest through intensified management . . . and further . . . it would appear that a positive approach should be taken leading toward an overall increase in timber supply."

With these two policy directives to the Forest Service, they have undertaken considerable analysis, searching for opportunities to increase the available supply of timber.

Two programs have been developed, one needing substantial developmental research and offering tremendous returns as this applied research bears results. The other program is one that can immediately be put into effect that would produce annual benefits, when implemented, far in excess of the minimal financing and additional manpower needed. In fact, some progress was made in this year as a result of an unexpected saving in another area of Forest Service activity.

Timber Volumes Available in Presently Inoperable Areas Require Development of an Aerial Logging System

The program requires developmental research in aerial logging systems. Forest engineering research, if implemented, should make aerial logging operational within two to four years. Aerial logging systems would add immediately, upon becoming operational, an additional annual harvest of 100 million board feet from National Forest lands and 150 million feet from other ownerships, public and private, from mature timber now considered inoperable because of difficult terrain, unstable soils, high road construction costs, etc., all from Western Oregon and Western Washington. In addition, an estimated 110 million board feet of logs from young growth thinnings not now available on the National Forest lands could be placed on the market. This is a 360 million board foot addition to our Douglas-fir timber supply. This total 360 million board feet available, upon the satisfactory completion of this operational research, is only a portion of the total 840 million board feet of current annual losses from all unloggable lands of the region. The following table illustrated the importance of this program to public timber receipts and the National Forest program.

National forest lands, western Washington-western Oregon

[In million board feet]

	Total potential annual yield	Possible increase with aerial logging systems
Presently unloggable public lands needing—		
Harvest of mature timber	186	110
Young growth thinning	148	100
Total	334	210

Annual Economic Returns When Operational (Includes Forest Service and Other Federal)

Total Federal timber stumpage return	$3,800,000
Receipts to U.S. Treasury	3,000,000
Receipts to Counties	800,000

Also, aerial logging systems make possible the addition of more than $1,000,000.00 per year to timber receipts from Alaska's National Forests and additional significant increases in National Forests in other parts of the West having millions of acres of timberland currently classified as mature, needing harvesting and inoperable, due to terrain, soil or other such obstacles.

For this research program an estimated $500,000 per year is needed for four years. We urge that, if granted, at the end of the first and second years this committee instruct the Forest Service to present a detailed progress report; if the aerial systems continue to be promising and if progress has been made, before receiving appropriations for continuing the program, the Forest Service at that time include all or most of this additional 210 million board feet of annual allowable cut to the already existing allowable cuts of the respective National Forests of Western Oregon and Washington.

Forest Service Salvage and Thinning Program in Addition to the Sale of the Full Allowable Cut

The Forest Service's report entitled "Timber Trends in the United States" referred to several technical forestry measures that could be strengthened to increase supplies of timber now and in the future. The same references occurred in both Secretary Freeman and then Secretary Connor's letters, previously mentioned. Among these techniques mentioned were thinning, prompt reforestation, increased protection, closer utilization, greater mortality salvage and accelerated road construction. This increased intensity of management offers a significant opportunity to increase the annual cut in the west by 423 million board feet merely by increasing thinning, salvage and small timber sales. This volume needs no additional road construction. The volumes are in addition to the allowable cut and are located as follows:

Region:	*Volume*[1]
1 (Northern Rocky Mountains)	60
3 Southwest	20
5 (California)	30
6 (Pacific Northwest)	313
Total	423

[1] Millions of board feet.

The Administration's proposed budget has an item providing for the preparation and sale of 280 million feet of the 423 million foot total. An additional $700,000 is needed to make the program totally operational.

It is estimated the sales preparation and administration cost will be about ⅓ the appraised selling value of the timber. Thus, the increase in this program can be expected to generate revenues well above the necessary $700,000 addition.

We hope you will provide the funds necessary to make this thinning and salvage program fully operational. Approval of the regular timber sales program should provide for the sale and harvesting of the full regulated allowable cut.

Intensive forest management is a goal our Association has long been anxious to achieve on national forest lands in the West. We are fully aware that there is more behind the allowable cut than just building roads and making timber sales. Also, we are well aware that the reforestation program of the Forest Service other than reforestation of current timber sales areas, as provided by returning a portion of timber sales receipts, needs substantial modernizing.

An example of these reforestation needs exists in Oregon and Washington. The National forests in the two states have about 180,000 acres of commercial forest land, unproductive due to past fires—needing reforestation. Yet, these lands, if reforested, are capable of adding some 90 million board feet to the National Forest's annual allowable cut. The present rate of achievement in reforesting these lands with appropriated funds will require in excess of twenty years. An accelerated program is needed.

The Forest Survey

Our association member mills are almost entirely dependent upon the free and open market for logs and timber. We are forced to buy what is offered when it is offered. Our best defense in this situation is to have as much knowledge as possible about the current and prospective timber supply in each area upon which we depend.

Forest Survey research projects in Portland, Juneau and Ogden make inventories and report on the forest resources of the western United States. At least ten years elapse between inventories, and some areas haven't been inventoried for much longer. The reports of results are often limited to the barest of statistics. Analysis and interpretation of the significance of the data have been limited to broad areas. Our association members need additional local information, and its meaning in terms of future jobs and products should be explained. Special studies are needed on amount of timber being cut, the volume of usable logging residues and the volume of mortality. Past studies of these subjects are out of date.

The basic information that Forest Survey gathers and reports also is used by public agencies and private associations for their studies of timber supply. For example, Forest Survey information is a principal basis for the timber supply study that the Forest Service is now making in the Douglas fir region, a study that should be extended to the Pine Region upon completion of the present area study in July 1968. Similar information and similar studies are needed in the rest of the West in order to examine the policies and programs for growing more timber for the future economic growth in the timbered western states.

Our association is in favor of increased financing for the western Forest Survey units so the inventory cycle can be shortened, more detailed reports can be published, and special studies of timber cutting, waste wood and mortality can be made. Nationwide, the Forest Survey costs less than one-half cent per acre of commercial forest land. The expenditure of an additional small amount per acre for this necessary information would pay off many fold in the future strength of the timber industry which has so far been the basis for much of the economic development and employment in the West. We support the budgeted increase of $103,000 and request early consideration of further increases. A ceiling of $2,500,000 limits this appropriation. We favor legislation that would raise that ceiling to $5,000,000.

Bureau of Land Management Timber Sales Program

Another important source of softwood logs in Western Oregon is the O. & C. and Public Domain lands. The Administration's 1968 budget includes funds to sell the full allowable cut, to sell much of the fire killed timber in the Oxbow area and to sell 140 million feet of salvage and thinnings. I hope you will approve this item in full.

STATEMENT BY COLLEGE OF FORESTRY, STATE UNIVERSITY OF NEW YORK

Nature of Existing Program

The above two agencies have a soundly structured cooperative program in this subject field aimed at

1. Getting more and better answers to major problems affecting both private and public interests through concentrated multidisciplinary research; and

2. Providing a Center of Excellence, at the graduate and postdoctoral level, for thorough preparation of greater numbers of effective resource leaders at a time when this need is a regional and national problem of mounting importance.

The U. S. Forest Service clearly has recognized the significance of these needs for society. In order to meet its responsibilities best for the populous Northeast region, it has found it most fruitful to consolidate its nominal forest recreation research funds and personnel at one University base where optimum complementary research and advanced instruction could be provided for mutual effectiveness. The entire program is housed in College facilities, on its Syracuse campus.

This cooperative program in basic research and encouragement of professional leadership in forest recreation is a dynamic and effective unified endeavor. It constructively couples the finances, specialized personnel, and physical resources of the federal Forest Service research unit with pertinent counterparts at the State College of Forestry. Experience to date confirms that this combined effort generates the outstanding quality and interdisciplinary capability so critical to real progress in this complex subject field. Also, it provides much greater efficiency and utility in the use of public funds.

Major additional indirect values accrue to the recreation program at Syracuse from close association with the other strong complementary resident programs in resources management and biology, including forestry economics, soils, tree improvements, tree diseases, insect pests, forest engineering, meteorology, water, landscape architecture and forest administration. The State University of New York has just recently established its Statewide Water Resources Center at the College of Forestry. This coordinative unit for all campuses and colleges of the State University will directly impinge upon many facets of recreation, such as pollution, water quality, aquatic plants, fish and recreational uses of our waters.

Presenting Funding Levels for the Program

This U. S. Forest Service regional recreation research unit at Syracuse serves primarily the deepening needs in society's use of outdoor resources for rerceational benefits throughout the 14 states east and north from Kentucky, Ohio, West Virginia, and Maryland. In this most populous region of our nation there are rapidly mounting urgencies for accommodating the dwindling open land base to the most appropriate present and future needs of people—needs both for supporting livelihoods and for providing amenity qualities sought to make our society livable.

Over one-third of all the people in the United States live and pay taxes and vote in the region served by this Forest Service research unit. About one-fourth of this regional population resides in New York State. Also, approximately one-sixth of the total revenues supporting federal government activities is derived from New York State alone.

Public funds (state and federal) provided in the current fiscal year for support of the major efforts of this cooperative program are approximately as follows:

A. State college of forestry (direct and indirect support):	
Direct funding of personnel and research projects in forest recreation	$92,000
Value of administrative services, space and facilities contributed to Federal program	60,000
Contributed values by associated faculty in other related disciplines on campus	65,000
Value of adjunct support from associated research in related programs at the college	55,000
Annual cost of formal instruction furnished graduate students in forest recreation programs	28,000
Support to forest recreation research (approximately)	300,000
Direct State costs of closely allied and complementing resident instructional program in landscape architecture at the college of forestry, other than above	240,000
Direct State costs of closely allied and complementing resident instructional program in resources management at the college of forestry, other than above	390,000
Total	930,000

B. U.S. Forest Service: Federal budget allocation for forest recreation research, Northeastern Forest Experiment Station	110,000

The Importance of Outdoor Recreation to Our People and Our Economy

Forest-oriented and related outdoor recreation has become a prominent characteristic of the contemporary American way of life. Recently this has become supplemented by a widening public attention to its esthetic consciousness. A trend toward the cities as a place to live and work has brought a counter need for frequent return to shaded forests, pastoral meadows, peaceful streams and lakes, and quiet wooded hills as places to rest from work and to re-create implicit but critically important human values essential to the lasting quality of our society. Increased crowding with its concomitants in our cities is further increasing the trend to seek out open spaces, fresh air, esthetic quietude, and other qualities of a wildland environment that are vital ingredients to the environmental health of a dynamic and prosperous nation. The continuance and furtherance of the opportunities for quality outdoor recreation in the future depends upon our being able to effectively meet the highly complex recreation-resource pressures and requirements of today. This objective can be most soundly assisted in the long run through a comprehensive and adequately financed program of research and education for leadership.

The services we seek from our natural resources through use for forest recreation cannot be treated in either a social or a resource vacuum. The great complexity and fluidity of our society accompanies a similarly great complexity of our resources. Use of large amounts of our land resource base and capital for recreation developments has been justified on two grounds—(A) social, and (B) economic benefits. The social and economic benefits of forest recreation are not merely the result of a few simple activities on a few static sites set aside for recreational purposes. Recreational benefits, instead, are the result of an immensely complicated societal-resource system. Both major elements of the system—society and the resource—are, themselves, dynamic systems with multitudes of interacting forces and values. Alternative combinations of inputs into the societal-resource system generate various interactional impacts which result in different mixtures of societal benefits and types of resource "wear and tear".

Throughout the northeastern United States, needs for outdoor recreation are constantly accelerating upward. The Empire State, along with her sister states throughout the Northeast, has recognized the tremendous importance of outdoor recreation both to residents and to those who visit their state. As a result, a $100-million bond issue approved by New York voters in 1961 and 1962 for land acquisition for outdoor recreation purposes included $50,000,000 solely for acquisition of nonurban wildland. This was a crucial step toward providing for immediate and future needs. In addition, it is estimated that over the next 13 years, an additional $12,700,000 will be needed each year to develop for use the land that has been acquired. In 1965, a $200-million bond issue was passed overwhelmingly by the people of New York State to develop the recreation lands previously acquired for outdoor recreation. These monies are a heavy investment in public outdoor recreation activities. Similar governmental activities are prevalent in New Jersey and Pennsylvania. Such investments can be expected to grow through coming decades.

A. *Social benefits.*—The need for publicly-supported outdoor recreation is often defended by public agencies and legislators in terms of the nonmaterial societal benefits that accrue to both individual participants and to society. These include such things as improved health, strengthened families, better attitudes toward contributing to community affairs, appreciation for our nation's natural beauty, and pride in our country's heritage. If, in fact, such social and individual benefits do result from outdoor recreation, society needs to encourage and support such use of our land and capital in order to strengthen these benefits.

There also should be abundant opportunity for provision of these social and individual benefits of outdoor recreation through greater use of our private enterprise mechanism, thereby relieving more of the extreme cost and pressure upon publicly-provided recreation resources than may be expected otherwise. The economic values and benefits are, themselves, sufficient to justify development of better ways and means for preserving our heritage of strength through individual entrepreneurship in this major area of service to social needs. Better knowledge of these amenity and economic values, and their derivation through participation in various recreation activities, would undoubtedly yield much improved efficiency in use of money and resources to create them.

B. *Economic Benefits.*—Of equal importance in justifying public support of outdoor recreation are the material, or economic, benefits that result to those who provide equipment, supplies, and services to the recreation publics. These benefits include the many private enterprises that sell opportunities for recreation, and which often operate in vital complementary and cooperative relationship with the public land management agencies near them. The local economies of certain areas, as in the Adirondacks, for example, are almost wholly dependent upon different kinds of outdoor recreation activities.

The importance of the economic benefits from outdoor recreation is reflected in the fact that $2.2 billion of the New York State Gross Product resulted from expenditures in recreation of all types in 1962. This compares with $2.3 billion spent in the same year in New York State for medical care and death expenses. At the national level, $31 billion was spent on all forms of leisure activities in 1953. That figure would be considerably larger today and illustrates the dollar involvment of recreation activities in our economic system. Incalculable social value accrual is even more important to the tone and character of our society.

The Need for a Center of Excellence

Highly competent leaders in far greater abundance than now available are needed if we are to make headway in overcoming the visible worsening of our environmental standard of living. The continuance and furtherance of the opportunities for quality recreational and esthetic uses of our natural environment in future depend upon our being capable of planning to meet these needs effectively in relation to other increasing land use pressures. Experienced land managers, such as in the Forest Service, are very well aware of the extreme dearth of qualified leadership personnel in the forest recreation field. Men with the requisite depth and quality of interdisciplinary preparation are in extremely short supply, due in part to the lack of suitable centers of education and research and in part to the high cost and length of time necessary for educational preparation to requisite levels in intercultural disciplines. The cooperative center herein described is already making its mark in a small but promising way in serving this need. Much more needs to be done than present funding can sustain.

The diversity of the natural resource base for recreational values has involved several scientific disciplines, each with its own interests and interpretations of research needs and priorities. Consequently, much research into recreational problems has been piecemeal and fragmented, rather superficial, and with little central concept or purpose to guide the total effort forward. Solid basic data are not generally available as yet for making decisions that should endure. Empirical studies of all sorts have strongly dominated research efforts in the field and they are quite necessary to meet numerous needs of resource managers. But the urgent need is for fundamental studies and more sophisticated methods that can find answers within the complexity which actually controls use of our natural resources. Determining priorities and relative values for the whole series of invaluable resources on a forest land unit simultaneously supporting numerous "vitally necessary" multiple use demands by society, calls for a broader and deeper knowledge base than normally provided. It is down this road toward better knowledge of fundamenals that our college believes the cooperative support of the Center of Excellence in recreation research must move to be worthy of its public trust. The Center provides the vehicle and the system for focusing unusual capabilities and talents, and for synthesizing the premises and concepts guiding those who must work together to attain significant progress through sound research in this field.

With so much public money being spent in support of state and federal programs in outdoor recreation, it is timely to evaluate the benefits that seem to accrue from such expenditures. Are we really getting our money's worth compared to other federal, state, and private programs where we could strengthen support? Are the social benefits from outdoor recreation real or imagined? Where are our present outdoor recreation policies leading us? The public vote strengthens our intuitions concerning the reality of recreation values but an intuitive awareness of these nonmaterial benefits is scarcely sufficient as a basis for prudent and judicious investment of the enormous sums being put into land, capital improvements, and management. The public vote is a mass response that expects action and assumes resource agencies know what to do. For a limited time, the agencies can ride on their experience, intuitions, common sense, and communicated expressions of demand from interested persons in order to progress in the general direction of public needs. But wisdom in reaching appropriate division of responsibility between business enterprise and public subsidy in this sector, prudent sensibility in working out optimum allocation of land, and best coordination of the competing commodity and recreation requirements for the land resources, all require concentrated, deliberate, and systematic accumulation of a fundamental knowledge base that we do not now have. As New York's former Conservation Commissioner Dr. Harold Wilm has stated:

> We (in New York State) would have been in better shape to undertake this (aforementioned) acquisition program, if we had already had the advantage of some well-conducted research to determine what types of lands are best adapted to the several phases of outdoor recreation.
>
> Will our choices prove right five, ten, or twenty-five years in the future when we make investment development to meet the recreational demands on these lands?

The public concern and trust in its agents needs to rest on a much greater fund of sound knowledge about the justifications for such decisions, the alternatives we might now employ, and about what the future will require in present outdoor recreational resource use and planning. The responsibility of the College of Forestry (State University of New York) and of the Northeastern Forest Experiment Station (Forest Service, U.S. Department of Agriculture) to carry forward serious research in this important societal-resource system has become apparent over the past decade. In the State of New York alone, with over 17 million people and land area 47 percent forested, with millions of dollars of public funds being invested annually in support of the millions of visits for outdoor recreation activities, the time is overdue for a much stronger research effort on the core issues of outdoor recreation.

The urgent need for such concentrated research in this area of concern has been recognized nationwide. The national Outdoor Recreation Resources Review Commission, headed by Laurance S. Rockefeller, strongly sounded the need for a systematic and continuing program of recreation research to provide the basis for wise decisions and sound management. The National Academy of Sciences and National Research Council in its report to the President of the United States emphasized that research in the human aspects of resource use is needed to clarify some of the complex resource-system relationships and help sharpen the tools for finding and weighing the alternatives open to us in shifting the equilibrium of the system to achieve desired goals. President Johnson, in his recent message on a Natural Beauty, has emphasized the need for research in wildland esthetics—a major recreation resource which is now emerging as an important domestic policy issue.

Past Research Effort

Most forest recreation research efforts to date have been limited to studying small phases of major problem areas. Much larger efforts are needed to provide information on the important core or basic issues. As Marion Clawson of Resources for the Future stated (Clawson, 1963):

> There has been almost no basic research applied to outdoor recreation. * * * The need is acute for basic research, to develop principles, understanding, and laws. . . . There is equally great need for research applied to specific areas and problems, *but the latter is likely to be relatively unproductive until a better theoretical framework has been developed.*
>
> The total values created by outdoor recreation are a *major* fraction of those created by agriculture, for instance, yet the amount of research in outdoor recreation is miniscule as compared with agriculture. There is every reason to believe that research applied to outdoor recreation can be as productive as has been research applied to agriculture.

It is apparent, then, that a strong need exists for a much more sophisticated and higher caliber effort in outdoor recreation research. Furthermore, the greatest need is for studies on fundamental social and economic aspects of forest recreation in both the public and private sectors. The most expeditious way of achieving the necessary quality of research effort is through strengthening the funding of the cooperatively supported Center of Excellence already structured toward these goals as herein described.

Present Research Effort

The cooperative agreement entered into in 1962 by the College of Forestry and the U.S. Forest Service to foster mutual pursuit of research needs in recreational use of forest land resources currently brings together four federally-financed scientists and four state-financed faculty scientists actively engaged in research dealing with recreational phenomena in both the public and the private sectors. In addition, there are approximately 18 other faculty scientists at Syracuse who devote varying portions of their attention to research related to or contributory to progress in forest recreation research, and at least an equal number of graduate students. This scope of effort provides sufficient base of interest and capability upon which a worthy Center of Excellence could properly and readily be structured with much less additional cost than would be incurred otherwise to attain similar results.

Recommended Research Support

Our State depends upon the recreation research results to provide basic data for program direction and to guide decisions regarding land use, recreational enterprise, and related needs of both the public and the landowner. However, because of insufficient funds, the scope of the present cooperative program cannot encompass many of the important problems that should be included in a Statewide, and regional, recreation research program. Further, during recent years, costs of significant research here as elsewhere have increased substantially, even without considering the greatly increased needs for research information of all sorts.

It is urged that immediate consideration be given by Congress to legislative action necessary to increase the authorization limit on U.S. Forest Service research funds to allow for the expanding demands throughout the Northeast region for current and comprehensive Forest Recreation Research. There is no increase in funding provided for this cooperative Center for the Northeast in the pending federal budget for fiscal year 1968. New York State, in proportion to land area and number of people served, is now contributing very substantially to support of this cooperative research need. It is recommended that, in recognition of the much wider scope of responsibility served by the U.S. Forest Service Northeast Region, its appropriation for forest recreation research be increased by at least $250,000 in the current budget hearings.

LETTER FROM WESTERN COUNCIL, LUMBER AND SAWMILL WORKERS

MARCH 2, 1967.

Hon. HENRY M. JACKSON,
Senate Office Building,
Washington, D.C.

Each year at this time, the Western Council of Lumber and Sawmill Workers takes the opportunity to express our continuing interest in the forestry and conservation programs of the Nation. We appreciate your support of these programs.

This year we are pleased to note that the proposed budget for the U.S. Forest Service for fiscal year 1968 provides for several increases in forestry research. We concur with the need for all of these increases and would like particularly to support several programs that will bring important benefits to the Northwest as well as to the Nation.

The Forest Survey is a first essential to forestry progress. The recent report on "Forest Industries of Eastern Washington" is an example of the worthwhile work being done. However, keeping this timber inventory up to date requires constant effort. The increasing importance of the forests for all uses and users makes it necessary not just to maintain but to intensify the Forest Survey. The proposed increase of $103,000 in the fiscal year 1968 budget is more than justified in view of the fact that an increase of $400,000 is authorized and much needed nationwide.

Too little has been done about the need for economical applications of forestry action programs. Economic studies are an important part of the whole forestry program. The economics research at the Pacific Northwest Forest and Range Experiment Station in Portland has been particularly productive. The recently published report entitled "Manpower Use in the Wood Products Industries of Oregon and Washington" is an example of the many analyses needed to help understand and, in time, to solve our resource-related employment problems. The current level of effort in this work is far below that which is needed and projected in the "National Forestry Research Program." The proposed budget provides for an increase of $297,000 for forest economics research nationwide. We are very much in favor of this increase.

The large gains that could come from the successful development of aerial logging systems through engineering research were explained to the Congress last year, and they are well documented in the record of the hearings. This work is headquartered in Seattle. The three research engineers assigned to this project work closely with forest industry, the logging equipment industry and the University of Washington.

Their preliminary tests of skyline and balloon logging indicate that exceptional efficiencies could be realized by improving these systems through research and then using them extensively in harvesting timber from the rugged terrain typical of so much of the West. In fact, more than 25 million acres of commercial timberland in the West cannot be logged by conventional methods. These lands can contribute importantly to our timber economy and employment if engineering research can develop the key to efficient timber harvest from them. The expected benefits exceed the costs of this program many fold, but the level of financing and the rate of progress need to be increased.

For these reasons our Western Council urges your support of the proposed nationwide increase of $215,000 in forest engineering research and the further strengthening of this work as rapidly as feasible.

I want to express again our commendation for your successful efforts a year ago in obtaining construction funds for the Silviculture and Animal Problems Laboratory at Olympia. Construction is now well underway, and the new laboratory is expected to be ready for use by early fall. This modern facility will greatly help to increase the effectiveness of research scientists who are working there on the related problems of reducing tree losses from animal damage and raising production rates in Douglas-fir forests through development and testing of more intensive cultural practices.

We do feel, however, that the research on Douglas-fir silviculture should now be strengthened rapidly to bring these studies in balance with the importance of Douglas-fir in our Northwest timber industry, and the dominant species on some 20 million acres in western Oregon and western Washington. Research on possible use of fertilizer treatments for Douglas-fir shows much promise, and should be pushed aggressively along with study of other kinds of cultural treatments. The estimated cost of bringing this essential effort up to the strength planned under the 10-year National Forestry Research Program is $160,000 annually—an investment we are confident is justified many times over by the benefits that will accrue.

Members of the Council are concerned with opportunities for constuctive forest recreation as well as with forests to supply timber for jobs and essential products. Clean lakes and streams—a nice spot for trailer or camper—a quiet place to get away from it all—good hunting and fishing—these things too are important, along with productive employment.

Thus, we are pleased to note that the President has proposed to strengthen forest recreation research in the Forest Service. This is much needed to keep pace with the rapid expansion of recreation and tourism which are becoming increasingly important in the economy of the West. Both private and public forest lands are under pressure to supply more recreation, water, fish and game as well as wood products.

For these reasons, the Council urges stronger Forest Service recreation research programs, including the establishment of a cooperative research unit with the University of Washington, and strengthening recreation research to meet the pressure of increased use. This program should be implemented as rapidly as possible.

We are pleased also to learn that next years' budget proposes at least modest strengthening for watershed research. We have been concerned during the past two years that the new Forest Hydrology Laboratory in Wenatchee has not been fully staffed. Strengthening here will yield essential information concerning timber harvesting, grazing and recreational development on mountain watersheds. We urgently need to know how to build roads and harvest timber without causing excessive soil loss, and how to increase the yield of high quality water. The economy of our east side country is geared to a dependable supply of usable water.

We in the Western Council strongly back these needed increases in forestry research, and ask that you give them your careful consideration and support. I shall appreciate having a copy of this letter included in the record of the hearings on the Forest Service appropriation bill.

Yours very truly,

WESTERN COUNCIL, LUMBER & SAWMILL WORKERS,
EARL HARTLEY, *Executive Secretary.*

BUREAU OF OUTDOOR RECREATION

LETTER FROM SENATOR ALLOTT

UNITED STATES SENATE,
COMMITTEE ON APPROPRIATIONS,
March 16, 1967.

Hon. CARL HAYDEN,
Chairman, Senate Appropriations Committee, New Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: It has come to my attention that the Department of Interior, and specifically the Bureau of Outdoor Recreation, has asked for an advance of $32 million from the general fund to the Land and Water Conservation Fund for FY 68. Coupled with projected receipts of $110,000,000, the Department is requesting a total appropriation to the Land and Water Conservation Fund of $142 million. Of that $142 million, only $65 million is proposed to be available to states on a matching basis for state and local outdoor recreation development. This amounts to only 46% of the total appropriation as the states' share, while 54% would be the Federal share. Section 4(a) of the authorizing legislation, Public Law 88–578, establishes the apportionment between the states and the Federal government as 60% for the states and 40% for the Federal program. While the Act does permit the President to vary the apportionment by fifteen percentage points either way, the States must match on a dollar-for-dollar basis the amount they are allocated under the states' share of the fund. Therefore, for every dollar allocated to the states it can be anticipated that $2.00 will be spent in the field of outdoor recreation, and the long-term interest of outdoor recreation is better served by increasing the apportionment to the states and reducing the apportionment to the Federal program. Furthermore, the states tend to concentrate their efforts in the areas of greatest need, namely, the acquisition and development of outdoor recreation facilities near to metropolitan areas.

With a projected deficit of $8.1 billion for FY 68 and with strong indications that this deficit will go considerably higher, and with the national debt standing at an all-time high of approximately $336 billion, this does not seem to be an appropriate time to further burden the Administrative budget with a $32 million advance to the Land and Water Conservation Fund. Deferral of such advances from the General Fund would seem most appropriate at this particular time. I respectfully urge you and the members of the Committee support the reduction of this item from $142 million to $110 million. Further, I respectfully urge that you consider increasing the state apportionment to 60% or above in light of the fact that anticipated benefits will be on a basis of two for one, $2.00 for every $1.00 of Federal money expended.

Sincerely yours,

GORDON ALLOTT, *U.S. Senator.*

LETTER FROM COLORADO DEPARTMENT OF GAME, FISH, AND PARKS

PAUL EATON,
Clerk, Senate Appropriations Subcommittee, Interior and Related Agencies, Senate Office Building, Washington, D.C.

DEAR MR. EATON: We are vitally concerned about the change that is taking place in the Federal budget for the Land and Water Conservation Fund Act and request that our statement be included in the hearings on this subject in the Senate Appropriations Subcommittee for Interior and Related Agencies.

As we understand it, the Federal budget for Land and Water monies totals $142,000,000, of which $77,000,000 is allocated for Federal agencies, and $65,000,000 for state agencies. This is approximately 54% for the Federal share and 45% for the state share. This proposed change in the ratio of the fund is not consistent with the states' and the political subdivisions' outdoor recreation needs, and is contrary to the pre-passage propaganda which advertised a 60% allocation for the states with 40% allocation to the Federal agencies.

The 1966 appropriation for Colorado was $1,160,000. Requests totalled over $3,000,000. The 1967 appropriation is currently estimated at $876,000. Requests amount to over $3,500,000. The Land and Water Conservation Fund, at the current rate of estimated funds, can match only about $1 in $4 that is available in Colorado.

Colorado has allocated 70% of available Land and Water Conservation Fund monies to the political subdivisions allocated along the Front Range from Fort Collins to Trinidad where approximately 80% of our population resides.

We feel there is an overwhelming need to develop outdoor recreation facilities by the state and the political subdivisions of government in areas that are reasonably close to metropolitan centers of population. Any reduction of Federal funds for this purpose would seriously curtail the outdoor recreation program of the states and the political subdivisions of the nation.

Federal agency policy makers will attempt to justify a proposed change in the allocation of Land and Water Conservation Funds on the contention that the states and political subdivisions have spent money for development of facilities rather than for land acquisition. Their proposal is to allocate a greater share of funds to Federal agencies for acquisition of land for federal recreation areas.

We hope that 60% state and 40% Federal ratio upon which the Land and Water Conservation Fund Act was sold to the people of the country will be maintained.

Sincerely,

HARRY R. WOODWARD,
Director.
GEORGE T. O'MALLEY, JR.,
Assistant Director, Parks and Recreation.

LETTER FROM WISCONSIN CONSERVATION DEPARTMENT

Hon. CARL C. HAYDEN,
Chairman, Senate Subcommitte of Interior Appropriations, Old Senate Office Building, Washington, D.C.

DEAR SENATOR HAYDEN: It has come to my attention that the Land and Water Conservation Fund under the proposed Department of the Interior fiscal year 1968 budget calls for a decrease to the states of $703,000.00. At the same time the funds available to the federal agencies under this program will be increased by $32,488,000.00. I do not oppose the increase to the federal agencies, but I believe the states' share should similarly be increased.

Public Law 88–578 places the pivotal role for outdoor recreation upon the states. Section 4(a) while calling for 60% of the funds to go to the states does authorize a 15-point change during the first five years. This change is to reflect the current relative needs of the states and the federal government. The proposed budget would make the percentage split 46.7 state and 53.3 federal.

Without a doubt the current relative needs still rest with the states and local units of government. This act is designed to create outdoor recreation areas where the people are. As worthy as the federal projects are, they are still resource oriented and not people oriented as are the projects of the cities and local governmental agencies.

It is also designed to accelerate outdoor recreation. By pumping additional funds into the federal share, it will reflect that amount as acceleration. At the same time, a $32,000,000.00 increase in the state apportionment would mean an acceleration of $64,000,000.00. It is at this level where true acceleration can take place.

Undoubtedly, part of the thinking behind this proposal is the amount of funds unencumbered in past years' state apportionments. I believe there are very good valid reasons for this as follows:

1. Prior to submitting projects, the states had to have an acceptable plan. In most cases, this took between 1 to 1½ years after passage of PL 88–578. This requirement was not imposed upon federal agencies and the national plan is still not complete.

2. Since the states' share had to be matched at all levels, budget problems often existed. Many local units of government had no advance warning of this program, and they had not budgeted for it. In some cases, biennium budgets were involved which compounded the problem. This was no problem to federal agencies since it was not 100% funds.

3. A delay existed after a state had received acceptance of their plan due to informing local governments of the requirements. Staffing at both the state and local level was a problem. I believe the local response has been real encouraging in light of both of these problems.

4. The money encumbered is low, but why? Sufficient local projects have been qualified for eventual Bureaus of Outdoor Recreation (BOR) approval to just about exhaust the available funds; however, when projects have been submitted for encumbrance, inadequate staffing at the BOR level has resulted in often a six-month delay before final approval and encumbrance of funds. In the early stages all projects no matter how small had to go to Washington for approval which resulted in a real bottleneck.

Since the BOR is charged with coordination of outdoor recreation, they review projects with numerous other federal agencies; e.g., Housing and Urban Development, Federal Aviation Bureau, Fish and Wildlife Service, Federal Power Commission, Corps of Engineers and the Water Pollution Commission. As desirable as this is, it takes time.

5. A certain reluctance existed with the lower government levels as to getting into recreation. Many of them had never before been involved and there was uncertainty as to what they were getting into. This I feel in Wisconsin has now been overcome and there now exists an eagerness to compete with their neighbors in this field.

I believe this to be one of the main contributions of the Land and Water Conservation Fund. It has provided the stimulus for state planning and for many groups to get into recreation that never before had a single acre devoted to it. We find park commissions being formed and professional people being hired by increasing numbers.

This stimulus cannot be promoted by pumping more funds into the federal share. Actually it might have the reverse effects by making people again sit back and let the federal government do it for them.

I don't believe the states should now be penalized in the light of the above requirements. These factors affecting participation by local governments were caused by requirements imposed upon the states and not upon the federal agencies. When all things are considered, I believe the states have done remarkably well. Projects are now being received and processed in sufficient quantities to show the slack has been overcome and the funds can and will be encumbered.

Section 4 (b) of PL 88–578 permits advance borrowing up to $60,000,000.00 annually. It is my understanding that this is the avenue being taken for the federal increase proposed for 1968. I would, therefore, propose that borrowing also be used for the states' share at some level up to the balance of $28,000,000.00. With the increase of projects and since this fund does not lapse for two fiscal years after the one in which it is appropriated, I would see no danger of losing this amount. Conceivably, since these borrowed funds must be repayed, the states could be faced with less funds now and still in the future find that the repayment is coming from the states' share thus imposing a double burden upon the states' share.

I am enclosing a progress report for the State of Wisconsin dated January 1, 1967 (withdrawn). You will note from the last page that ample projects are in various stages of processing to amply encumber all Wisconsin funds. Of the 186 projects received by that date, 120 had been submitted to the BOR, but signed contracts had been received for only 41. I believe other states can also demonstrate that the projects are there to sufficiently justify an increase in the states' share of the Land and Water Conservation Fund.

Your efforts to increase the Department of the Interior's budget to provide additional funds for the states under the Land and Water Conservation Fund Act will be appreciated.

Very truly yours,

L. P. VOIGT, *Conservation Director.*

LETTER FROM FLORIDA OUTDOOR RECREATIONAL PLANNING COMMITTEE

SUBCOMMITTEE ON INTERIOR AND RELATED AGENCIES,
COMMITTEE ON APPROPRIATIONS,
March 15, 1967.

U.S. SENATE,
Washington, D.C.

GENTLEMEN: The Florida Outdoor Recreational Planning Committee—an inter-agency coordinating committee of the Florida state government, chaired by Governor Claude R. Kirk, Jr.—urges that the ratio of 60% states—40% federal agencies be observed by the Congress in appropriating monies from the Land and Water Conservation Fund for Fiscal Year 1968. The Committee feels that this ratio, established as the normal division of funds by the 1964 Land and Water Conservation Fund Act, should be strictly adhered to in apportioning all funds, including any advance appropriations which might be made.

It has been suggested that the Congress might interpret the substantial unobligated amount remaining in the states' share of previous Land and Water Conservation Fund appropriations as an inability or lack of desire on the part of the states to take full advantage of this grants-in-aid program. This is not the case. It is true that some states have had difficulty during the first three years in getting geared up financially to meet their share of the responsibility. Others, however—and these include Florida—take the position that, since two additional full years are provided in which to obligate the funds for any single years, it was the original intent of the Congress that the most careful deliberation precede the selection of outdoor recreation projects on which available funds are to be used. Until the law is changed to require obligation of funds on a year to year basis, we will continue to take maximum advantage of the time limits provided.

We understand that the President has asked the Congress to advance $32,000,000 to the Land and Water Conservation Fund for Fiscal Year 1968, all to be utilized by federal agencies. If this is done, not only would it reduce the states' percentage of the total forthcoming appropriation, but it would also penalize the states further eight years from now when half of the proceeds of the Fund must be used to repay the advance appropriations.

We urgently request that the 60%–40% ratio be maintained, preferably by increasing the amount of the proposed advance appropriation so that maximum land acquisition programs can be carried out at both the federal and state levels during the coming year.

Consideration of these views in connection with your March 20 hearing and all further deliberations will be greatly appreciated.

Very truly yours,

NEY C. LANDRUM, *Director.*

STATEMENT BY THE AMERICAN FORESTRY ASSOCIATION

MR. CHAIRMAN: I am Kenneth B. Pomeroy, Chief Forester of The American Forestry Association.

The members of this citizens organization are deeply interested in outdoor recreation. Each year our people take about 20 two-week expeditions into remote sections of the national forests and national parks as a part of our Trail Riders of the Wilderness Program.

Our members are trying to help provide recreational opportunities desired by the general public. Many of them have purchased the $7.00 Land and Water Conservation Fund sticker during each of the years it has been offered for sale.

These conservationists are well aware of the unfunded authorizations for additions to the National Park System and of the increasing recreational needs of state and local governments.

Therefore, The American Forestry Association recommends that Congress appropriate the full amount of the $142 million item in the President's budget for this purpose.

Respectfully yours,

KENNETH B. POMEROY.

GEOLOGICAL SURVEY

LETTER FROM SENATORS ANDERSON AND MONTOYA

U.S. SENATE,
COMMITTEE ON GOVERNMENT OPERATIONS,
March 20, 1967.

Hon. CARL HAYDEN,
Chairman, Interior Affairs Subcommittee,
Senate Appropriations Committee,
Washington, D.C.

DEAR CARL: The U.S. Geological Survey's Program for the collection of water resources information is one which will greatly extend the knowledge of water resources data throughout the United States.

The present request for this program in the President's budget for FY 1968 is $13,960,000, which is approximately $1,300,000 under the estimate of matching funds to be appropriated by State and Municipal Governments.

Realizing the need for this program as we do in the Southwest, as well as the desire by local governments to provide matching funds in excess of the submitted President's budget request, we strongly urge that the appropriation for this program be increased to $15,260,000.

Sincerely,

CLINTON P. ANDERSON,
U.S. Senator.
JOSEPH M. MONTOYA,
U.S. Senator.

LETTER FROM SENATOR TYDINGS

U.S. SENATE,
COMMITTEE ON THE JUDICIARY,
March 9, 1967.

Hon. CARL HAYDEN,
Chairman, Senate Appropriations Committee, New Senate Office Building, Washington, D.C.

DEAR SENATOR HAYDEN: Mr. Kenneth N. Weaver, Director of the Maryland Geological Survey, has called to my attention the fact that the budget proposed for the Geological Survey, United States Department of the Interior, for fiscal 1968, provides $13,960,000 in federal money for Federal-State cooperative water resources investigation programs. Although this is an increase of $790,000 over the present fiscal year, it falls nearly $1,500,000 below the estimated amount necessary to meet State program proposals for 1968. Mr. Weaver advises me that such a shortfall in federal funding will "undoubtedly mean a rather serious curtailment in the water resources investigations program unless additional funds are made available to the Geological Survey."

I am sure you are aware, Mr. Chairman, of the value of this program to every state. It would certainly be unfortunate if Federal-State cooperation in water resources investigation is not pressed forward at the maximum rate possible.

I am confident the Appropriations Committee will provide as great a funding level for this worthwhile program as the budget will reasonably bear. Nonetheless, I will appreciate your making my views on this program known to the other members of the Subcommittee on Department of Interior and Related Agencies during your proceedings on the Geological Survey budget.

Sincerely,

JOSEPH D. TYDINGS.

LETTER TO SENATOR ELLENDER

STATE OF LOUISIANA DEPARTMENT OF CONSERVATION,
LOUISIANA GEOLOGICAL SURVEY,
Baton Rouge, La., February 27, 1967.

Hon. ALLEN J. ELLENDER,
Senate Office Building,
U.S. Senate,
Washington, D.C.

DEAR SENATOR ELLENDER: It has come to my attention that the budget now before Congress includes an increase of $790,000 Federal money for Federal-State water resources investigation programs. Inasmuch as the present estimates of the increased State offerings for th fiscal yar 1968 total $2,273,800, the U.S. Geological Survey faces the prospect that they will not be able to match all firm offerings for the cooperative programs in 1968.

In Louisiana the State Department of Public Works, State Department of Conservation—Louisiana Geological Survey, and Louisiana Department of Highways cooperate with the U.S. Geological Survey in this program and are offering $476,800 for 1968 which is an increase of $85,100 over 1967.

If the budget now before Congress is approved there will not be sufficient funds to match the State offering and our program will suffer. This program is vital to our State and additional funds are needed to carry on the projects now underway. One of the most important projects is to complete the study of groundwater resources under Lake Pontchartrain in order to find a new supply of fresh water for Jefferson Parish and the New Orleans area.

We will appreciate it if you will look into this situation and encourage the budget Committee to appropriate to the U.S. Geological Survey the funds as requested so that they can carry on this vital work in Louisiana.

Yours very truly,

LEO W. HOUGH, *State Geologist.*

LETTER TO SENATOR COOPER

UNIVERSITY OF KENTUCKY,
Lexington, Ky., February 21, 1967.

Hon. JOHN SHERMAN COOPER,
U.S. Senate, Senate Office Building,
Washington, D.C.

DEAR SENATOR COOPER: The States are offering to the cooperative water resources investigations programs with the Geological Survey, United States Department of The Interior, increases in matching funds in estimated amounts of $2,273,800 for FY 1968 to bring this total program to $15,223,800 of estimated offerings. These monies must be matched by the Federal government if they are to become available.

The Geological Survey budget request for FY 1968 up for consideration by Congress includes $13,960,000 Federal money for the Federal-State program, an increase of $790,000 over the present fiscal year.

The water resources investigations programs furnish the basic data on a nationwide basis in the areas of surface, ground, and quality of water, from which all studies in water are made. It is particularly imperative these programs continue and increase in view of our increased problems in water supply, management, and pollution.

I urge our Kentucky Senators and Representatives to request $15,223,800 for the FY 1968 cooperative water resources investigations programs of the Geological Survey to be used to match the estimated State offerings—see attached programs. This would include an amount of $282,200 for Kentucky, an increase approved by the Kentucky Water Resources Authority which has approved a new five-year plan.

With best personal regards,

Sincerely yours,

WALLACE W. HAGAN,
Director and State Geologist, Kentucky Geological Survey.

Water resources investigations—Estimates of State and municipal offerings for fiscal year 1968 (as of Feb. 1, 1967)

State	Matching Federal funds committed, 1967	Estimated offerings, 1968	Increase (+) or decrease (−)
Alabama	$247, 000	$307, 900	+$60, 900
Alaska	95, 000	144, 000	+49, 000

FISH AND WILDLIFE SERVICE

PAHRANAGAT WILDLIFE REFUGE LETTERS TO SENATOR BIBLE

STATE OF NEVADA,
FISH AND GAME DEPARTMENT,
Las Vegas, Nev., March 15, 1967.

Hon. ALAN BIBLE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR BIBLE: Monday and Tuesday of this week I attended the North American Wildlife Conference in San Francisco.

Monday afternoon I met with officials of the United States Fish and Wildlife Service, concerning Nevada programs. It was brought to my attention that funding to rehabilitate the Pahranagat Wildlife Refuge was not included in the Interior Budget. I do hope you can assist us here in Nevada to secure approval of these much needed funds. This refuge is the only Waterfowl Refuge in Southern Nevada and a most important link in the flyway chain through Central and Eastern Nevada, as well as all Southern Nevada. The waterfowl program of the Nevada Fish and Game Commission is closely integrated with this important area.

If you need additional information in this connection, please call Mr. Noble Buell at U.S. Fish and Wildlife in Washington, D.C. Mr. Buell and his staff are completely in accord with this request and a call from you would help this program.

I am enclosing copies of the Proposed Rehabilitation Plan.

Thanks for your continued support of our Wildlife Resources and Public Recreation.

Sincerely yours,

WAYNE E. KIRCH, *Chairman.*

Rehabilitate Pahranagat National Wildlife Refuge

Drill—2 Wells	$15,000
Construct & Repair Ditches—4 Miles	15,000
Water Conservation Dikes—2 Miles	10,000
Rebuild & Repair all Access Roads—6 Miles	3,000
Complete & Repair Fences—10 Miles	10,000
Total	53,000

U.S. DEPARTMENT OF THE INTERIOR,
FISH AND WILDLIFE SERVICE,
BUREAU OF SPORT FISHERIES AND WILDLIFE,
Washington, D.C., March 21, 1967.

Hon. ALAN BIBLE,
United States Senate,
Washington, D.C.

DEAR SENATOR BIBLE: We are providing the following information in response to your telephone request of March 20 regarding the Pahranagat National Wildlife Refuge in Lincoln County, Nevada.

The Pahranagat Refuge now consists of 5,203 acres of land located in a relatively well-watered valley in southeastern Nevada. The refuge was established in 1964 after approval by the Migratory Bird Conservation Commission. The area has a long history of waterfowl use mostly during migration, but also has heavy use by migratory birds during favorable winters. The refuge is on an important waterfowl flight lane between Great Salt Lake and the Imperial Valley in California.

Peak populations of waterfowl did not exceed 12,000 birds in 1966 but are expected to exceed 50,000 birds under full development of the refuge. Portions of the refuge were opened to waterfowl hunting for the first time in the fall of 1966 and provided sport for 150 hunters. In addition, a pheasant hunt was held in cooperation with the Nevada Fish and Game Department which provided sport for over 700 hunters.

The principal water areas on the Pahranagat Refuge are the upper and lower Pahranagat Lakes. Supplementing these are seasonal impoundments which hold water for a short time during the migration period. The number and size of these seasonal impoundments will be dependent on development of ground water. Waterfowl food crops are grown on about 400 acres of land. Grazing is used as a management practice to maintain range and pasture lands in optimum conditions for waterfowl use.

The developments proposed include a short dike to permit maintenance of higher water levels in upper Pahranagat Lake, concrete lining for irrigation ditches, and irrigation well to provide water for farm crop irrigation. The necessary roads, trails, and fences must be constructed or rehabilitated. In addition, a service building is required for the repair of the equipment used on the refuge. This development is proposed in three phases as listed below:

PHASE I

Irrigation well	$20,000
½ mile dike	20,000
Concrete lining 6 miles of ditches	30,000
Total, phase I	70,000

PHASE II

Concrete lining 9 miles of ditches	50,000
Cleaning existing drains and ditches	27,000
Rehabilitate roads and trails	21,000
Fencing and posting	17,000
Total, phase II	115,000

PHASE III

Rehabilitate irrigation drainage system	32,000
Fencing and posting	13,000
Biological improvements	5,000
Service building	20,000
Structures and utilities	5,000
Rehabilitate roads and trails	21,000
Recreation development	2,000
Total, phase III	98,000
Total for development	283,000

The developments proposed in Phase I are especially important in order to provide a manageable unit to attract waterfowl and to provide food and cover for migratory birds. These developments should be initiated as soon as possible in order to make this newly acquired refuge available to migratory waterfowl.

A copy of a proposed development plan for Pahranagat Refuge is enclosed for your information. We shall be happy to provide any additional information you may wish.

Sincerely yours,

A. V. TUNISON,
Deputy Director.

WILLOW BEACH FISH HATCHERY LETTERS TO SENATOR BIBLE

STATE OF NEVADA,
FISH AND GAME DEPARTMENT,
Las Vegas, Nev., March 15, 1967.

Hon. ALAN BIBLE,
Senate Office Building,
Washington, D.C.

DEAR SENATOR BIBLE: I wish to thank you for taking time of your very busy schedule, during your recent trip to Nevada, to make an examination of the Willow Beach Fish Hatchery.

You know of my interest, and the interest of hundreds of thousands of fishermen of the Southwest, in the great winter playground area of Lake Mohave. In 1960 and 1961 you were instrumental in securing Federal funds to construct the Willow Beach National Fish Hatchery on the shore of Lake Mohave just a few miles downstream from Hoover Dam.

The output of trout from this hatchery, stocked in the Lake and the Lower Colorado River, has created a sport fishery that draws fishermen and vacationers from the population centers of Southern California, Arizona, New Mexico and Utah. Each year the public use of this area multiplies. The pressure placed on the fishery is staggering. Between 1961 and 1965 visitor use to the area increased 62% while fishing increased 90%. The same pattern is forecast for the five year period ending in 1970.

The rainbow trout is the principal sport fish in Lake Mohave and it is the species produced and stocked by the Willow Beach National Fish Hatchery. It cannot spawn naturally in the lake and river so we must continue to plant it if we are to satisfy the needs and demands of the people who come here seeking fishing.

I know we are going to need more fish from this hatchery. It is clear to me that we already need more than we have been stocking over the last few years. This concern for the need for more fish prompted me to visit the Willow Beach hatchery recently and to inquire about the possibility of increasing production. This is what I learned.

Production can be increased by 25% to 30% but not until the facilities at the hatchery are rehabilitated to provide for better and more efficient use of water. Other changes are needed to their pumping system and in facilities for receiving the visiting public.

An extension on the east end of the hatchery building to house the incubators and a well to produce clean water for the aquarium and the incubators would increase production and provide something of interest to the visiting public.

At the present time the hatchery is completely dependent on electricity for operating its pumps. An electrical storm could damage pumping equipment to the extent that the auxiliary power plant will be of no value. An auxiliary pump powered by a diesel engine would correct this problem and perhaps at some future time save a hatchery full of fish. The raceway drain lines are so constructed that one series of raceways, 10% of the total production space, must be used for waste ways and, therefore, are lost for production use. New supply and drain lines are needed to free these raceways for production.

The hatchery is an integral part of the Willow Beach Recreation Area but completely unequipped to handle the thousands of people who visit this site every year. The ½ mile access road connecting it to the concession area is narrow and unpaved. There is parking area for only 20 cars where 200 are needed. These conditions need to be corrected.

The Bureau of Sport Fisheries and Wildlife is trying to do a good job of putting out as many good quality trout as possible but they are working with two strikes against them. The fish they are stocking are vital to the recreational satisfaction and economy of the area. Only money will solve their problem and ours. I ask your support in, once again, helping us to get more fish for the lower Colorado River area.

The estimated cost of the rehabilitation and improvement program is $295,000. This will be a small cost to pay for the many millions of hours of extra enjoyment afforded to our local and visiting fishermen.

Sincerely yours,

WAYNE E. KIRCH,
Chairman, Nevada Fish and Game Commission.

U.S. DEPARTMENT OF THE INTERIOR, FISH AND WILDLIFE SERVICE,
BUREAU OF SPORT FISHERIES AND WILDLIFE,
Washington, D.C., March 21, 1967.

Hon. ALAN BIBLE,
United States Senate,
Washington, D.C.

DEAR SENATOR BIBLE: This is in response to your telephone inqury of March 20 concerning the Willow Beach National Fish Hatchery, Arizona. As requested, we are furnishing a brief statement of the management objectives of this unit, and a breakdown of development requirements.

More than twelve million people live within a radius of 350 miles of the Willow Beach hatchery. The warm dry climate of the lower Colorado River area has served to create a major recreation area and winter playground. In 1965, some 3.6 million people visited the Lake Mead National Recreation Area. More than 600,000 of these visitors were fishermen. Between 1961 and 1965, visitor traffic in the Recreation Area increased by 62 percent; during the same period, fishing pressure increased by 90 percent. In 1965 alone, trout fishing pressure on Lake Mohave increased by 38 percent. By 1970, some 6.3 million persons will visit the Recreation Area, an increase of 75 percent in five years.

Trout production at the Willow Beach hatchery helps to support much of the trout fishing pressure on the Colorado River. More than 900,000 trout are stocked in the River in four major management areas: Needles to Davis Dam, Lower Lake Mohave, Eldorado Canyon to Hoover Dam, and Lake Powell. Existing production facilities are capable of producing about 250,000 pounds of trout annually. However, in order to reach this level, the raceway water supply and drain lines must be modified, and other improvements made to operational and support facilities.

The development program outlined below will streamline operations and increase the production potential by ten percent. A number of existing operational hazards will be eliminated. Recent surveys indicate that increasing trout fishing pressure will utilize the maximum station production capability within five years, without consideration of development of new trout fishing waters. Funds are required for the following:

PHASE I

Addition to hatchery building for incubator room & storage of hatchery & aquarium equipment	$30,000
Construct block building to replace metal shed over auxiliary generator	3,000
Refrigerated building air conditioning with ducts and outlets	11,000
Install new water supply line to raceways, 470′ pipeline complete with fittings in place	20,000
Correct and rebuild raceway drain lines, 450′ pipeline complete with fittings in place	20,000
Construct truck loading ramp and barge loading slip with fencing and docking facilities	22,000
Construct float with diesel engine and pump linked to pipeline for auxiliary water supply	35,000
Enlarge septic tank to handle estimated load and correct pipeline supply facilities	3,000
Fish cultural equipment	6,000
Subtotal	150,000

PHASE II

Residence	20,000
Blacktop road from Park Concession, station roads and parking areas, including subsurface preparation and road beautification	125,000
Subtotal	145,000
Total estimated cost of the program	295,000

We very much appreciate your continuing support of our programs to help enhance the Nation's fish and wildlife resources. As you are very keenly aware, these resources are providing valued recreational opportunities for an ever increasing number of our citizens.

Sincerely yours,

A. V. TUNISON,
Deputy Director.

ORANGEBURG FISH HATCHERY LETTER FROM SENATOR THURMOND

U.S. SENATE,
COMMITTEE ON THE JUDICIARY,
March 21, 1967.

Senator CARL HAYDEN,
Chairman, Senate Appropriations Committee,
Washington, D.C.

DEAR MR. CHAIRMAN: I am enclosing a copy of a letter I have received from Mr. W. C. Bethea of Orangeburg, South Carolina. Mr. Bethea has over the years been interested in the development of the Orangeburg fish hatchery, and in his letter he requests a sum of $185,000.00 to complete a reconstruction project in this hatchery.

I think you will find this letter self-explanatory on the details of the project. I would appreciate it if you and the members of the Subcommittee on Interior Department Appropriations would carefully consider the inclusion of this item in the appropriation bill.

With kind regards.

Sincerely,

STROM THURMOND.

LETTER TO SENATOR THURMOND

FIRST NATIONAL BANK IN ORANGEBURG,
Orangeburg, S.C., March 10, 1967.

Senator J. STROM THURMOND,
Senate Office Building,
Washington, D.C.

DEAR SENATOR: The Orangeburg Fish Hatchery is a great asset to South Carolina. For many years I have contacted our representatives in Congress in behalf of this excellent government agency.

This past year a sum of money was obtained through a special appropriation to begin a modernization program of the Orangeburg National Fish Hatchery's County Unit. The amount appropriated was sufficient to rebuild eight (8) of the nineteen (19) ponds in the system and to construct a modest home for one of the Hatchery personnel to live in. Heretofore, no one was present at night on these premises to prevent vandalism and poaching.

To reiterate the need for this program, the pond system was originally developed in the early 1930's by W.P.A. funds and no modernization has taken place since. Now, due to the increased demands for fish in this area through increased tourism, an accelerated recreational program on a national as well as statewide level, and the increase in the construction of farm ponds, which are also supplied by this hatchery, more production ponds are desperately needed.

It is conservatively estimated, by a very good authority, that a sum of $185,000.00 would fairly well complete the reconstruction of the earthen ponds, replace the water supply lines and drain lines to these ponds, and drill a much needed well for dependable uncontaminated water supply.

Any help you may be able to extend us in securing this appropriation will be gratefully appreciated by all of South Carolina and particularly by the citizens of Orangeburg County.

Thanking you for all considerations past and present and with kindest personal regards, I remain,

Sincerely yours,

W. C. BETHEA.

COOPERATIVE FISHERY UNITS—LETTER FROM SENATOR MUSKIE

UNITED STATES SENATE,
COMMITTEE ON PUBLIC WORKS,
March 13, 1967.

Hon. CARL HAYDEN,
Senate Office Building,
Washington, D.C.

DEAR CARL: My attention has been called to an apparent inequity in the Interior Department Appropriations for Cooperative Fisheries Units in five states including Maine.

As I understand the situation, eighteen out of the twenty-three Cooperative Fisheries Units receive a base appropriation from the Department of the Interior of $40,000 while the five earlier established units at Idaho, Louisiana, Maine, New York and Pennsylvania are supported only to the extent of $30,000. Rising costs of salaries and other operating expenses are placing an unfair burden on these five states.

In your consideration of the Fiscal Year 1968 Interior Department Appropriations, any assistance you could extend to correct this situation would be appreciated.

Sincerely,

EDMUND S. MUSKIE,
U.S. Senator.

COOPERATIVE WILDLIFE RESEARCH UNITS—LETTER TO SENATOR HAYDEN

MARCH 14, 1967.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
Senate Office Building,
Washington, D.C.

DEAR SENATOR HAYDEN: I am surprised and disappointed to learn that the Department of the Interior has not requested additional funds in its 1968 budget to bring the financing of the eighteen Cooperative Wildlife Research Units up to the level of the more recent Cooperative Fishery Units. I had thought that this inequity would have been taken care of by the directive of Congress last year that the Interior Department seek equal funding in the 1968 budget.

As you can see from the enclosed tabulation, federal financial support of the Fishery Units greatly exceeds that of the much older Wildlife Units, both here in Arizona and throughout the country. The federal financial contribution to the Wildlife Units scarcely has risen since the first Unit was established in 1935. Contributions of the cooperating universities and land grant colleges and the state wildlife departments have risen greatly, however. In fact, the financial contributions of those two cooperators completely overshadow the federal share.

The provision of funding to the Wildlife Units equal to that of the Fishery Units would strengthen this essential program. Large benefits would result by way of intensified student training at the graduate level and the conducting of necessary wildlife research. The enclosed brochure describes the accomplishments made under this program.

It is hoped that the federal funding of the Wildlife Units can be increased this year. It is unfortunate that it has not been done by now.

With cordial regards,

Sincerely yours,

RICHARD A. HARVILL.

Federal funding of cooperative wildlife research units and cooperative fishery units, fiscal years 1965, 1966, and 1967

State	Cooperative wildlife research units, fiscal year—			Cooperative fishery units, fiscal year—		
	1965	1966	1967	1965	1966	1967
Alabama	$13,900	$14,400	$14,500			$40,000
Alaska	22,400	23,000	23,400

LETTER TO SENATOR ELLENDER

BATON ROUGE, LA., *March 17, 1967.*

Senator ALLEN J. ELLENDER,
Senate Office Building,
Washington, D.C.

HON. SENATOR ELLENDER: On Tuesday, March 21, 1967, the Senate Appropriations Committee will discuss the budget of the Department of the Interior. It is sincerely requested that you support the portion of that budget which provides for elevation of the operating funds of the Louisiana Cooperative Fishery Unit and the Louisiana Cooperative Wildlife Research Unit each to a minimum of $40,000 annually.

It is pertinent that the Louisiana Cooperative Wildlife Research Unit, founded in 1962, and the Louisiana Cooperative Fishery Unit, established in 1963, are funded much below other Units in the United States. Of 25 fishery units, only 5 are funded as low as $30,000. The Unit at L.S.U. is one of the five.

If the records of the units are consulted, it is evident that the Louisiana Units are doing significant work in research, extension, and instruction, and must rate in the upper 10 per cent of the national aggregate. It is inconsistent that the funding is so low. At present, the State of Louisiana is contributing much more than the federal government to the cooperative effort.

Support of the increased funding, as a follow-up of your help in establishing the two units, will be much appreciated, and a real service to Louisiana.

Thank you very much.

Sincerely,

R. ONEAL SMITHERMAN.

RESOLUTION OF PACIFIC MARINE FISHERIES COMMISSION

COMMERCIAL FISHERIES RESEARCH AND DEVELOPMENT

Whereas, the Commercial Fisheries Research and Development Act was enacted in 1964, and

Whereas, the primary purpose of the act is to supplement and, to the extent practicable, increase the amounts of state funds available for commercial fisheries research and development, and

Whereas, Section 4(a) of the Act authorizes $5,000,000 to be appropriated for each of the five fiscal years following enactment, and

Whereas, Congress appropriated only $4,100,000 each year for fiscal 1966 and 1967 under Section 4(a), and

Whereas, the several states have submitted many needed research and development projects requiring funding in excess of these appropriations,

Be it therefore resolved, that the PMFC does hereby respectfully petition the Secretary of the Interior, the Director of the Bureau of Budget, and the Congress of the United States, and particularly the Appropriations Committees of the Senate and House of Representatives, to assure that the full allowable amount of $5,000,000 be appropriated for fiscal 1968 and subsequent years.

The Executive Director of the PMFC shall transmit copies of this resolution to the Secretary of the Interior, the Director of the Bureau of Budget, to the members of the Congressional Delegations of the States of California, Idaho, Oregon, Washington and Alaska, the Chairmen of the Appropriations Committees, the Commissioner of the Fish and Wildlife Service, the U.S. Department of the Interior and the Governors of the aforementioned states.

(Adopted at Annual Meeting, Seattle, Washington, November 18, 1966.)

ANADROMOUS AND GREAT LAKES FISHERY RESEARCH

RESOLUTION OF PACIFIC MARINE FISHERIES COMMISSION

Whereas, the Anadromous Fish Act was enacted in 1965, and

Whereas, the basic purpose of this Act is the conservation, development and enhancement of the nation's anadromous fish, and

Whereas, Section 4 (a) of the Act authorizes to be appropriated for the period ending June 30, 1970, not to exceed $25,000,000 to carry out the purposes of this Act, and

Whereas, $5,000,000 was appropriated for this section during fiscal 1967, and

Whereas, the U.S. Bureau of the Budget has made available to the Department of the Interior for allocation to the states only $2,000,000 of this sum,

Be it therefore resolved, that the remainder of the appropriation of $5,000,000 for fiscal 1967 be immediately released to the Secretary of the Interior for apportionment to the several states, and

Be it further resolved, that the PMFC hereby respectfully petition the Secretary of the Interior, the Director of the Bureau of Budget, and Congress of the United States, and particularly the Appropriations Committees of the Senate and House of Representatives to assure that a sum of $6,700,000 be appropriated for fiscal 1968 as authorized under Section 4 (a) of the Anadromous Fish Act of 1965.

The Executive Director of the PMFC shall transmit copies of this resolution to the Secretary of the Interior, the Director of the Bureau of Budget, to the members of the Congressional Delegation of the States of California, Idaho, Oregon, Washington and Alaska, the Chairmen of the Appropriations Committees, the Commissioner of the Fish and Wildlife Service of the U.S. Department of the Interior and the Governors of the aforementioned states.

(Adopted at Annual Meeting, Seattle, Washington, November 18, 1966.)

WILDLIFE SERVICES

STATEMENT OF DEFENDERS OF WILDLIFE, INC.

The Defenders of Wildlife is a national, nonprofit, conservation, education organization, founded over forty years ago, with headquarters in Washington, D.C.

Park Lands Natural Areas and Wilderness

Defenders of Wildlife wish to support all appropriations for the acquisition of additional park lands, estuaries, natural, and wilderness areas now while they are still available. These are all constructive aims for the benefit of present and future generations of Americans. Defenders of Wildlife urge their favorable consideration by the Congress.

Endangered Wildlife

Defenders of Wildlife strongly recommend that the maximum funds be allocated for survival and preservation programs for endangered species of wildlife.

Wolves

We urge a generous appropriation for saving the wolf, with particular attention to returning this most valuable mammal to the National Parks, from which "predator control" operations once eliminated it. In this endeavor, preference should be given to those National Parks where wolves are most needed for natural controls, and where appropriate habitat already exists, such as Yellowstone, Yosemite, and Grand Canyon National Parks. Available natural food could keep most of them within park areas.

Unless protection can be given the wolf on a national basis, return to the National Parks may now be the only means of saving this highly intelligent and interesting mammal. The outlook for its future is ominous.

In Minnesota, where the only sizeable number of wolves is said to exist in the U.S. outside of Alaska, they now face additional, perhaps unsurmountable hazards. With the official incentive of a bounty restored, the helicopter and the snowmobile added to make their killing cruel and easy "fun", wolves seem to be doomed, for such "hunting" gives no living target a chance for escape.

Red Wolf

We strongly urge funds be appropriated for research and some possible cooperative agreement with such as the Welder Wildlife Foundation in Texas, for protection and encouragement of the red wolf (*Canis rufus*), if as has been reported, a few still exist in that area.

Predator Control

While the taxpayers' money is pledged to saving endangered wildlife on one hand, the taxpayer should feel confident that his taxes are not causing additional species to become "endangered", by appropriations to animal control activities.

Many predators are reported scarce or completely missing from their natural habitat as a result of indiscriminate federal predator control operations.

The harmless and entirely beneficial kit fox and ringtail cat are reported as almost extirpated in their native habitat of the southwestern United States, from the 1080 poison on baits put out for coyotes. The California Fish and Game Department incorporated in their 1965 Code, a regulation, "Kit Fox may not be taken at any time". However, this in the face of the spreading of 1080 poison baits by federal animal control agents, can be of little help.

The call for rodent control frequently follows the usual excessive predator control. This also destroys indiscriminately, unlimited numbers of wildlife that consume 1080 poison killed rodents and other creatures.

A letter from a competent trapper in Grand Junction, Colorado, dated December 28, 1966, reads:

"You ask me about the coyotes, if there were any more around Grand Junction There are [almost] no more coyotes in Colorado. The F. and W. have caught on to the 1080 poison grain for rodent control and it is going to wipe out everything. Of course, they still put out 1080 in meat baits also, but it isn't as bad as the rodent control. It is taking its toll of Deer, Birds of Prey, as well as the Prediator Animals."

A note just received from Mrs. W. J. Galbraith in Utah is characteristic of many:

"We have seen the same scene, year after year, of the animals hanging from the fences here in Utah—out on the desert near Jerocho, Utah. It is heart breaking and revolting and so needless and pointless."

Therefore, Defenders of Wildlife recommend that appropriations for animal control not exceed $100,000.00, in 1968; that any additional costs be paid by the special interest groups themselves.

That the animal control activity of Wildlife Services is now too heavily funded is evidenced by such objections as the following recent letter to Secretary Udall. People are persistently propagandized that the killing of predators on a large scale is an economic necessity, in spite of scientific evidence to the contrary. This propaganda is being disseminated in areas where there are no legitimate reasons for destroying the peoples' wildlife.

A letter from Burdett Green follows:

JANUARY 5, 1967.

Hon. STEWART UDALL,
Secretary of the Interior,
Washington, D.C.

DEAR MR. SECRETARY: During the past two years a number of us in this area have been attempting to correct a very unsatisfactory situation as respects the native wildlife. The Fish and Wildlife Service of the United States, through its branch of predator control, has been requesting permission to come onto our lands to kill off such wildlife as foxes, coyotes, wildcats, 'coons, skunks, and even mountain lion—although on this last species they are apparenty weakening somewhat, since the bounty on mountain lion has been removed as a result of public protest.

Please understand that this is an area of very, very little population in the Santa Cruz Mountains, south of San Francisco. A considerable part of the area is used for watershed and, as you may know personally, large acreages are in tree farms and devoted to the production of timber and Christmas trees. Therefore, there is no excuse that some rancher might lose a chicken to a fox, and there is very little excuse that one of these animals might carry rabies. If the animals are to be killed at all, they should let hunters have the satisfaction, during the season, of hunting the 'coons, etc. However, the majority of the people simply want the wildlife left alone, for it is interesting to have them around our own places as well as to see them in the Big Basin State Park and Portola State Park, both of which are very near us.

Then, of course, there is still another reason for discontinuing this unwanted work, and that it's a waste of Federal tax money. It is possible most people never think of that any more, but some of us do and I hope you people in Washington share our attitude. In case a 'coon or 'possum or squirrel gets under somebody's porch in town, such as Los Gatos, it would be my recommendation that you let them take care of the situation themselves or possibly they could call the County Agent—but there is certainly no excuse for having several agencies render this service, and certainly no excuse for their destroying the wildlife where the broad consensus is that we would like the animals left alone.

The reason I am suggesting this work be discontinued, without asking the reasons for it, is that I have already written several groups representing largely conservationists and they tell me that their efforts to bring about changes in your predator control activities have had few favorable results up to date. I am writing you not just as a conservationist myself, but on behalf of myself and many others around me who own these lands and want your agents in the above department to stay off of them. And, of course, we want these activities generally curtailed or eliminated in this large area at least.

Sincerely,

BURDETT GREEN.

We urge that the appropriation for destructive control work be reduced to where it will not be inconsistent with the reported constructive *aims* of Wildlife Services.

It is known that Kansas and Missouri have successfully regulated the numbers of carnivorous mammals under the State Extension Specialist System for eighteen years and twenty-two years, respectively, at less than one-twentieth the cost of the Federal Predator Control Cooperative System in the adjoining State of Oklahoma.

Thank you for this opportunity to express our views.

MIGRATORY BIRD RESEARCH LETTER TO SENATOR RUSSELL

MARCH 7, 1967.

Hon. RICHARD B. RUSSELL,
Senate Office Building,
Washington, D.C.

MY DEAR SENATOR: The Fish and Game organizations in this section of the country are interested in getting a larger appropriation for the study of various migratory birds.

We have a bad situation in Georgia in that North Georgia is quite different from South Georgia. They claim that if they get any dove shoots they have to have them in September, whereas the doves in South Georgia at that time are immature—in fact, in September they are still hatching new birds.

We have been interested for years in getting the State zoned and this is one of the items they are studying. The various game and fish organizations in our section are very much interested in getting further research on this matter and at this time are all cooperating with the Government, working to this end.

Due to the fact that people have more time than they formerly did the pressure for hunting and fishing for various types of game and fish is greater than ever before.

It seems there is some difficulty in the Bureau in Washington, on account of Senate procedures, for them bringing up a matter of this kind without having previously submitted it, unless it is requested by one of the members of the Sub-Committee. I hope you will ask Director Gottschalk for the proposals, probably best referred to as the proposal of the International Association of Game and Fish Commissioners.

Anything you can do in this regard would be greatly appreciated and if there is any other information we could give you please do not hesitate to call on me.

With best regards, I am,

Sincerely yours,

H. LANGDALE.

LETTER FROM MISSOURI DEPARTMENT OF CONSERVATION

March 17, 1967.

Hon. CARL HAYDEN,
U.S. Senate, Washington, D.C.

DEAR SENATOR HAYDEN: For several years conservationists have been aware of gaps in the information necessary for proper management of certain migratory game birds, including the mourning dove, woodcock, snipe and rails. Many states, acting independently and through regional associations such as the Southeastern Association of Game and Fish Commissioners and the Association of Midwest Fish and Game Commissioners, have devoted substantial funds to research and management of these birds.

It is worthy of note that some thirty-six million mourning doves are taken annually in the thirty-one states which permit hunting. The dove provides more hunting recreation than any other game bird in the United States. In 1965, an estimated 46,745 Missouri sportsmen took 1,035,762 doves and spent 533,898 gun-hours in this pursuit. The other migratory game birds provide sport for fewer, but equally enthusiastic, hunters.

The Migratory Bird Treaty Act places migratory birds under the jurisdiction of the U.S. Department of Interior and its Bureau of Sport Fisheries and Wildlife. It follows that research and management are primarily federal responsibilities. Federal research to date has been concentrated on waterfowl, and rightly so in the light of critical needs and budget limitations. But research on other migratory game birds which offer important recreation to the sportsmen has been relatively neglected. A strong federal research program on these is certainly in order.

The Bureau of Sport Fisheries and Wildlife recognizes its responsibility and has included funds in its budget request for an expanded research program. We understand that hearings are scheduled in the Senate next week. We urge you to work for approval of the full amount requested for research on migratory game birds. A comprehensive effort on this important resource is long overdue.

Sincerely,

CARL R. NOREN, *Director.*

STATEMENT BY AMERICAN FORESTRY ASSOCIATION

Mr. Chairman, I am William E. Towell, Executive Vice President of The American Forestry Association. This Association is concerned not only with private and public forests of the nation but with resources derived therefrom, including water, recreation, and wildlife. We particularly support work of the Bureau of Sport Fisheries and Wildlife, Department of Interior, and respectfully ask favorable Committee consideration of the following appropriation items:

1. Long-overdue attention to research and management of mourning doves and other non-waterfowl migratory birds. We recommend a minimum of $500,000 to be appropriated for mourning dove research as the federal share of a cooperative program with the States.

2. Increased financing of the Cooperative Wildlife Research units at State Colleges and Universities. State contributions have been increased over the years but federal financing has remained static. We recommend a minimum of $40.000 federal funds for each unit to equal the federal share to Cooperative Fisheries units more recently established.

3. Appropriation of the full budgeted amount of $7,500,000 as an advance to the Migratory Bird Conservation Fund. We further recommend that this vital waterfowl wetlands acquisition program be extended through other legislation now before the Congress.

Respectfully submitted.

WILLIAM E. TOWELL.

NATIONAL PARK SERVICE

STATEMENT BY THE AMERICAN FORESTRY ASSOCIATION

Mr. Chairman, I am Kenneth B. Pomeroy, Chief Forester of The American Forestry Association.

Several decades ago our Association had the honor of participating in a survey to determine the boundaries of several well-known national parks. At that time the parks were relatively inaccessible. Comparatively few people had opportunities to enjoy their scenic beauties. Management consisted of leaving the parks in their primitive condition.

Roads and automobiles are changing this situation. These conveyances bring hordes of people into the parks. Last year there were more than 133 million visitations. The presence of people inside the parks and their activities outside park boundaries are having unfavorable impacts upon both flora and fauna. People trample the grass, compact the soil, and upset the balance of nature in countless other ways. The most serious threat involves supply of fresh water for the Everglades National Park.

It seems to us that much more attention should be given to the twin problems of (a) managing fauna and flora as nature meant them to be, and, (b) managing people so that they can enjoy the resource without impairing it.

If these steps are not taken, and taken soon, the increasing hordes of visitors eventually will destroy that which we now cherish.

Respectfully yours,

KENNETH B. POMEROY.

BUREAU OF LAND MANAGEMENT

STATEMENT BY THE AMERICAN FORESTRY ASSOCIATION

Mr. Chairman, I am Kenneth B. Pomeroy, Chief Forester of The American Forestry Association. The members of this citizen's organization advocate "Conservation Through Wise Use" as a basic guide for the administration of natural resource management agencies of the Federal government.

When the Bureau of Land Management came into being, it acquired jurisdiction over a vast acreage of range and forest land. Much of the range resource had been depleted severely during previous decades.

With the aid of interested ranchers, the Bureau began to apply scientific management to the range. But much of the land had eroded to a stage where such measures had little effect. For example, in 1951 the Secretary of Interior stated "50 percent of federal rangelands are in a state of severe to critical erosion, 32 percent are eroding moderately and only 18 percent are in a condition of slight to moderate erosion". He estimated that erosion could be stopped within twenty years, and the productive capacity of the land increased three-to-ten fold, at a cost of 400 to 500 million dollars.

Three-fourths of the Secretary's 20-year period has elapsed, but only a tiny fraction of the land has been rehabilitated. Over 30,000,000 acres still need to be reclaimed from invading species of brush; nearly 12,000,000 acres of range still need to be reseeded; erosion still needs to be controlled on thousands upon thousands of drainages.

Progress on this major task should be speeded up. Agricultural economists tell us that by 1980 the Nation will need 25 percent more beef to feed our growing population. How much of this increase can be produced on the Public Domain?

Perhaps the first step should be to make a thorough survey of range resources to determine their present condition, contribution to the economy, importance for other uses such as wildlife and recreation, treatments needed for restoration, probable cost and, most importantly, to schedule an orderly program of rehabilitation.

Respectfully yours,

KENNETH B. POMEROY.

SUBCOMMITTEE RECESS

Chairman HAYDEN. That will conclude the hearings for today. The subcommittee will adjourn until tomorrow, at 10 a.m.

(Whereupon, at 12:30 p.m., Monday, March 20, 1967, the subcommittee was recessed, to reconvene at 10 a.m., Tuesday, March 21, 1967.)

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATIONS FOR FISCAL YEAR 1968

TUESDAY, MARCH 21, 1967

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, D.C.

The subcommittee met at 10 a.m., in room 1223, New Senate Office Building, Hon. Carl Hayden (chairman) presiding.

Present: Chairman Hayden and Senators Bartlett and Young.

DEPARTMENT OF THE INTERIOR

NONDEPARTMENTAL WITNESSES

STATEMENT OF HON. WALLACE F. BENNETT, A U.S. SENATOR FROM UTAH

UTAH PROJECTS

Senator BENNETT. Mr. Chairman, I thank the committee for this chance to testify in support of funds for worthy Utah projects which appear in the Interior Department appropriations bill now before the committee.

I have a fuller statement which I would like to submit for the hearing record. Then, I have a short summary of my testimony which I would like to read this morning.

DUCHESNE COUNTY HOSPITAL

My first request is for an additional $158,000 to be added to the $250,000 available under the Indian Health Service Transfer Act for construction of the Duchesne County Hospital. This hospital will serve certain Indian reservation populations eligible for assistance under provisions of the Indian Health Service Transfer Act.

PUBLIC LAND LAW REVIEW COMMISSION

Mr. Chairman, I also wish to state my full support for adequate appropriations for the activities of the Public Land Law Review Commission. The President's budget for fiscal year 1968 totals $860,000 for the Commission but indicates that no funds are being requested to undertake the important study contracts that are necessary if the Commission is effectively to pursue its overall study.

I endorse the proposal for additional funds which may be considered appropriate by the committee.

DIAGNOSTIC SERVICE UNIT AT SPRINGVILLE FISH HATCHERY

I also would like to bring to the attention of the committee the need for an additional $56,000 for the establishment of a diagnostic service unit at the Springville Fish Hatchery in Utah.

The hatchery has recently undergone a rehabilitation program and the construction program is now completed with space available to house the proposed diagnostic service unit. Therefore, the unit can be activated with only a minimum of additional cost.

OURAY NATIONAL WILDLIFE REFUGE

In addition, Mr. Chairman, the fiscal year 1968 budget includes $70,000 for the Ouray National Wildlife Refuge in Utah. However, an additional $125,000 is needed for this vital refuge. The funds would be used to complete the many programs at the refuge which are giving us so many benefits in the wildlife field.

COOPERATIVE WILDLIFE RESEARCH UNIT

Another project which requires assistance is the cooperative wildlife research unit at Utah State University. Evidence of satisfactory progress in the program lies in the fact that both the University and the Utah Fish and Game Department have voluntarily increased their contributions over the years to where they now provide 65 or 80 percent of the basic annual budget.

I also think that the Federal contribution also should be increased from $15,000 to $40,000 per year so that an assistant leader can be added to utilize more efficiently this research unit.

WESTERN BROWSE IMPROVEMENT LABORATORY

Mr. Chairman, I also would like to bring to the committee's attention once again the requirement for funds for the planned Western Browse Improvement Laboratory at Provo, Utah. The BYU has given the Federal Government a 50-year lease for a building site and $37,000 was appropriated in fiscal year 1967 for the design and specifications.

Unfortunately, no funds are included in the 1968 budget for this worthy project. It is my feeling that an efficient start can be made on the research program while awaiting construction of the laboratory. An increase of $50,000 is needed in research funds for the Forest Service.

INTERMOUNTAIN FOREST AND RANGE EXPERIMENT STATION

Another worthy research program is the insect and disease program at the Intermountain Forest and Range Experiment Station of the U.S. Forest Service in cooperation with Utah State University.

To implement adequately this needed program an increase of $100,000 will be required.

Mr. Chairman, I am grateful for the opportunity to make this brief statement at the beginning of your hearings today and I will be happy to get out of the way for my colleagues are waiting for me.

Thank you very much.

Chairman HAYDEN. We are glad to have you come.

Senator BENNETT. Incidentally, now, I go up to another committee.

(The statement follows:)

INTERIOR DEPARTMENT APPROPRIATIONS

Mr. Chairman, it is a privilege to testify before this distinguished subcommittee in support of funds for worthy Utah projects; and I appreciate the opportunity afforded me. In general, I support the budget request; however, their are some items to which I would like to direct the subcommittee's attention.

Duchesne County Hospital

The Roosevelt Hospital in Duchesne County, Utah, has become obsolete and unsafe. Recently, the Church of Jesus Christ of Latter-day Saints gave this facility to the County along with certain accumulated assets. The County has voted a bond issue for a new hospital of thirty-two beds and can use Hill-Burton funds to support it. Approximately 40 percent of the patient load is made up of Indians from the Ute-Ouray Reservation. This proposed hospital is designed to serve, and will serve, certain Indian reservation populations eligible for assistance under provisions of Public Law 85–181, the Indian Health Service Transfer Act. An analysis of the bed use for Indians by the Division of Indian Health indicates that 40 percent of the cost of the in-patient facility could be justified as proper Indian Health participation. In addition, there is need for an outpatient department to serve the Indians instead of the present inadequate facility at Fort Duchesne. The Division of Indian Health's estimated participation for the out-patient facility would be 100 percent.

Dr. Charles S. McCammon, Indian Health Area Director, recently met with the Utah State Health Officer and leaders of the Roosevelt community and discussed plans for the hospital and the addition of a wing to house the health center now located at Fort Duchesne. Without this type of coordinated construction and financing, it would be necessary to build two separate small facilities to serve this population. This would result in increased construction and operational costs.

As you know, the Indian Health Service testified before this subcommittee that "$250,000 was included in the budget for a P.L. 85–151 project in Juneau, Alaska. However, since the time of the preparation of the 1968 budget the Alaskan project has not progressed as expected. However, a project for a community hospital in Roosevelt, Utah, has progressed faster than expected and is currently the most appropriate project for consideration. In the event that the Division of Indian Health finalizes its plans to assist in this construction project, we will seek the necessary approval to reprogram these funds for this project."

The $250,000 buget request was based on what was needed in Juneau 18 months ago. The Duchesne County Hospital is a larger project and would require additional funds. The 12 beds proposed to be included in the in-patient facility portion of the project have been estimated to cost $26,000 each for a total of $312,000. The portion of the project proposed to be used by the Division of Indian Health as a diagnosis and treatment facility for out-patient Indian beneficiaries is planned to be approximately 3,200 square feet in size. It is comparable in area to similar projects which have been built and operated successfully by the Division. The total cost of both portions of this project will be $408,000. If the funds for the clinic and the hospital are available, plans could be completed and construction started this summer.

The Fort Duchesne Uintah and Ouray Indian Council has enthusiastically approved the project. There is a very good relationship between the hospital and the Indian Health Service. The community has shown its support by the sale of bonds. All are agreed that the hospital is badly needed. May I respectively request, therefore, that in addition to the $250,000 available under the Indian Health Service Transfer Act, $158,000 be appropriated for construction of this worthy project for a total of $408,000.

Public Land Law Review Commission

I also wish to state my full support of adequate appropriations for the activities of the Public Land Law Review Commission. The study of our complex public land laws and their administration by the Commission will be a monumental work and will result in the development of policies which will enable more efficient handling of our public lands and their administration in the future. I have a high personal regard for the members of the Congress who are serving on this Commission and for the public members who are devoting so much of their time in an unselfish effort to bring about a comprehensive study that will be useful to all of us in future consideration of public land problems.

The President's budget for fiscal 1968 totals $860,000 for the Commission and indicates that no funds are being requested to undertake the important study contracts that are necessary if the Commission is effectively to pursue its overall study.

Officials of the Commission have indicated that additional funds would be helpful now in order to pursue the contract study program. I heartily endorse such a move and would support any amendment in this direction considered appropriate by this Committee. I believe it is essential that this study be adequately funded since the task that it is accomplishing and the recommendations that it may make will result in countless savings in the years ahead.

Springville National Fish Hatchery

I also would like to bring to the attention of the subcommittee the need for an additional $56,000 for the establishment of a Diagnostic Service Unit at the Springville National Fish Hatchery, Utah.

To produce the large numbers and pounds of fish required for resource management and recreational fishing, the numbers and poundages of fish held in hatchery rearing facilities far exceed the densities in any natural situation. The so-called normal host-pathogen relationship no longer exists. Thus, the hatchery environment is favorable for outbreaks of serious diseases. In addition, hatchery production is increasingly directed to production of fish for specific management needs. Eggs are entering the hatchery production cycle during several months of the year, rather than only during fall or early spring as was the common practice formerly.

These two factors—intensive fish cultural practices and large scale movement of fish and fish eggs throughout hatchery systems and across State and National boundaries—are operating together to produce the vehicle for rapid, widespread distribution of fish pathogens. The best way to prevent the spread of fish diseases is a program of monitoring and control at fish hatcheries across the country.

A unit staffed and equipped to provide on-site diagnostic services in this region of high fish hatchery production is needed in the Intermountain area.

The services would be available to Federal, State, and commercial fish hatcheries.

The Springville National Fish Hatchery has recently undergone a rehabilitation program and the construction program is now completed with space available to house the proposed diagnostic service unit. Therefore, the unit could be activated with only a minimum of additional cost. Annual operation and maintenance funding requirements would be $56,000, which would cover salary costs of the unit leader and a staff of three and provide necessary funds for travel and purchase of supplies and equipment.

Ouray National Wildlife Refuge

The fiscal year 1968 budget includes $70,000 for the Ouray National Wildlife Refuge in Utah; however, an additional $125,000 is needed for this vital refuge.

The Ouray Refuge was established in 1960 by former secretary of Interior Fred A. Seaton. However, the Bureau of Sports Fisheries and Wildlife was not ready to begin developing the refuge until fiscal year 1964 when the Committee at my request added funds to initiate construction. The refuge is located in Uintah County, Utah, and extends along either side of the Green River for seven and one-half miles. It will provide habitat conditions capable of producing at least 1,000 geese each year with sufficient food to maintain a peak population of 400,000. Moreover, it is expected the refuge will produce 13,000 ducks each year and provide food for peak populations of 75,000 ducks during fall migration with overall duck use-days totaling 4,245,000 The refuge will offset the loss of Canada Goose production areas as a result of Flaming Gorge Reservoir.

In addition to its importance as a prime waterfowl production area and a resting and feeding area for migratory birds, the refuge will protect and maintain the upland game birds, big game, and furbearer populations that now use the area. Ultimately it also will provide hunting as well as recreation facilities; thus, social and economic benefits will accrue to nearby communities.

We are already reaping benefits from the money we have put into the development of the refuge thus far. It is estimated that a remainder of $599,000 will be necessary to complete the program. The addition of $125,000 will help put this important project back on schedule.

Cooperative Wildlife Research Unit

The Department of Wildlife Resources at Utah State University has had a Cooperative Wildlife Research Unit since initiation of the program in 1935. The Unit is supported primarily by the Land-Grant University, the State Fish and Game Department, and the Bureau of Sport Fisheries and Wildlife. A fourth cooperator, the Wildlife Management Institute, annually contributes $1,000 or more.

Evidence of satisfactory progress in the program lies in the fact that both the University and the Fish and Game Department in each participating State have voluntarily increased their contributions over the years to where they now provide 65 to 80 percent of the basic annual Unit budget. The contributions of the Bureau, provided by the Congress, are limited essentially to the salary and minor expenses of the Unit leaders, now averaging annually about $15,000 per Unit. The Bureau is thus in the embarrassing position of falling behind in its support of the Cooperative Wildlife Research Unit program.

The demand for high quality wildlife professionals with graduate training is increasing. As the multiple use principle is extended and the demands of a burgeoning population intensify, added managerial talent will be even more necessary. By increasing the Federal contribution from $15,000 to $40,000 per year an assistant leader could be added to utilize more efficiently this research unit.

Browse Laboratory, Provo, Utah

I would like again to bring to the Committee's attention another planned research facility in Utah, the Western Browse Improvement Laboratory, to be located on the campus of Brigham Young University at Provo, Utah. The University has given the Federal Government a 50-year lease for a building site on the south side of the campus. A total $37,000 was appropriated in fiscal year 1967 for design and specifications. Unfortunately, no funds are included in the 1968 budget for this worthy project.

This would be the first major research effort in the West for developing superior wildland shrubs, and would be extremely beneficial to Utah and the entire West. It has exciting possibilities because it will be aimed at improving range and forest shrubs or browse through selection and breeding. It would provide superior strains of native shrubs for wildlife habitat improvement, renovating and screening forest campgrounds and picnic areas, and for stabilizing and beautifying roadsides and other landscape scars.

The browse on game ranges must be built up if hunting demands are to be met in Utah. A reduction of approximately one-third of the average number of out-of-state big game hunters and loss of license revenues during the past season has necessitated a severe curtailment of the Utah Fish and Game Department's activities. This, of course, is only one aspect of the loss to Utah's economy. The only way to provide more deer is to provide more forage.

Browse from shrubs is the main food for deer, but desirable shrubs have almost disappeared from any critical game ranges as a result of past abuse. Efforts have been made to rehabilitate the ranges by seeding shrubs and other plants under a small research program in which the Fish and Game Department has cooperated with the Intermountain Station of the U.S. Forest Service during the past ten years. Although some progress has been made, the need remains to develop superior strains of native browse species which are better adapted to the variable conditions of our forest and range lands. There are many opportunities to develop, through selection and breeding, shrubs with high palatability, nutritional value, resistance to disease and insects, or drought tolerance. Research is also needed to find satisfactory methods for producing and processing seed of selected shrubs, and for establishing them on the range.

An efficient start can be made on the research program while awaiting construction of the Laboratory. Key scientists can be recruited and initial steps taken in the development of an effective research program in cooperation with Brigham Young and Utah State Universities and the State Fish and Game Department. An increase of $150,000 is needed in research funds for the Forest Service.

The laboratory will provide modern offices, laboratories, greenhouses and other facilities needed for the browse improvement research and two other research projects located at Provo. Early construction of the first of two phases of the Laboratory, now being planned, is highly desirable and is estimated to cost $460,000.

Insect and Disease Research

I would also like to discuss a new project of the Intermountain Forest and Range Experiment Station of the U.S. Forest Service in cooperation with Utah State University.

Reports of insect or disease damage to outdoor recreation areas and game or livestock browse plants are being received with increasing frequency. Shrubs and trees are of major importance for browse on many big game and livestock ranges as well as for the shade, beauty, and screening they provide in outdoor recreation areas.

A new project is research on woody plant disease and insects of recreation areas and game ranges. We need to learn what these insects and diseases are, their impact, how recreational use encourages damage, and how to control this. This project will be the first such effort in the West.

Damage or loss through insect and disease attacks has serious impacts on recreational values of intensively developed outdoor recreation areas in National Forests, National Parks, and other areas. Here invesments may run as high as $15,000 per acre, and the annual investment by the Federal Government alone in high use recreation areas is estimated at between $5 and $10 million in the Intermountain West. Extensive damage on big game or livestock ranges is of serious consequence to the highly important animal populations dependent on them.

Many shrubs that produce nutritious food for big game and livestock have been virtually decimated by the aroga moth, tent caterpillars, and other insects and by diseases such as rusts. At present we know of no quick and easy way to combat these pests, but we believe that a joint research effort between the Forest Service's Intermountain Forest and Range Experiment Station and Utah State University would produce results of great benefit to all.

To implement adequately this needed disease and insect research program will require $100,000. I respectfully request that the Committee add the necessary funds to the Appropriations Bill.

Cooperation in Forest Fire Control

As we all know, fire protection starts with fire prevention. The goal of the Utah State Forester is to eliminate wildland fires caused by man through an effective fire prevention program. In Utah there are 9,006,000 acres of state and private lands that are classified as needing fire protection.

In fiscal year 1967 the Federal allotment for Utah was $74,730. Although fiscal year 1967 data on State expenditures are not available, the State spent $137,035 in fiscal year 1966. The budget for 1968 continues funding at the same level as fiscal year 1967. Obviously, with the rising cost of protection and the increased values of our forest and watersheds as the economy has expanded, this will fall far short of the funds necessary to assure adequate protection. I strongly support, therefore, an increase of $3 million in Federal Clarke-McNary funds for Cooperation in Forest Fire Control for fiscal year 1968.

Thank you, Mr. Chairman.

STATEMENT OF HON. J. CALEB BOGGS, A U.S. SENATOR FROM DELAWARE

HYDROLOGIC SURVEY OF DELMARVA PENINSULA

Chairman HAYDEN. Senator Boggs.

Senator BOGGS. Thank you, Mr. Chairman.

Mr. Chairman, I thank you very much for permitting me to appear this morning to request your assistance in getting a 5-year hydrologic survey of the Delmarva Peninsula underway.

You may remember, Mr. Chairman, on March 8, a year ago I appeared before you and requested $100,000 for the first year's appropriation of a 5-year hydrologic survey of the peninsula. At that time the committee graciously approved $50,000 under the cooperative matching program which exists in the U.S. Geological Survey section.

PUBLIC LAW 89-618

Before any action can be taken under that appropriation, the Congress enacted S. 2287, which become Public Law 89–618, dated October 4, 1966. This bill, which received the unanimous support of both the Senate and House Interior Committees authorized a 5-year hydrologic survey of the Delmarva Peninsula. It was the feeling of these committees that since three States were involved in the peninsula study, it would be most difficult to apply the Federal-State cooperative program to the survey and that because of the critical nature of the water problem in the peninsula and the need for the survey to begin as soon as funds can be appropriated the committees determined that the Federal Government should bear the cost of the survey.

LETTER OF ACTING DIRECTOR, GEOLOGICAL SURVEY BRANCH

On March 15 of this year, my colleague, Senator Williams, received a letter from Mr. Baker, the Acting Director of the Geological Survey Branch of the Department of the Interior. In that letter, Mr. Baker said and I quote:

> It is our considered opinion, however, after encountering the difficulties in implementing the study through the Federal-State program, that a project of regional significance of this kind should be financed entirely with Federal funds.

In addition, Mr. Chairman, the letter also indicates the intention of the Geological Survey to request funds in fiscal year 1969 to initiate the survey as a Federal project.

May I request, sir, that this letter be made a part of my testimony?

Chairman HAYDEN. It may be done.

Senator BOGGS. Thank you.

(The letter follows:)

U.S. DEPARTMENT OF THE INTERIOR,
GEOLOGICAL SURVEY,
Washington, D.C., March 15, 1967.

Hon. JOHN J. WILLIAMS,
United States Senate,
Washington, D.C.

DEAR SENATOR WILLIAMS: The Geological Survey is pelased to reply further to your letter of March 8, 1967, addressed to the Secretary of the Interior.

We appreciate the concern of the Delmarva Advisory Council about the funding for the hydrologic study of the Delmarva Peninsula that has been authorized by Congress. The Council's Executive Director, Mr. Worthington J. Thompson, in his letter of February 27 to you, has asked some specific questions about this project, and we are pleased to have the opportunity to comment on them.

The Geological Survey believes that the water-resources study of the Delmarva Peninsula, as authorized under Public Law 89–618, would provide much new and valuable information that is needed in the development and management of the water supply of the Peninsula. We feel that the study is both timely and critical.

Funding of $50,000 for the conduct of the Delmarva study was provided in the appropriation for 1967 for the support of water-resources investigations of the Geological Survey, but was identified as part of the appropriation that, under language of the Act, can be used only if matched by State or local agencies. None of the three States has responded favorably to inquiries regarding availability of matching funds for a cooperative study. Therefore, the work has not been undertaken. The Federal money for this program is still available for fiscal year 1967. Funds have not yet been appropriated for 1968, but no funds have been identified for this project in the budget currently before the Congress.

It is our considered opinion, however, after encountering the difficulties in implementing the study through the Federal-State program, that a project of regional significance of this kind should be financed entirely with Federal funds. It is our present plan to include in our fiscal year 1969 budget request funds sufficient to initiate the Delmarva study as a Federal project.

Sincerely yours,

ARTHUR A. BAKER,
Acting Director.

AMOUNT REQUESTED

Senator BOGGS. While this letter is good news, Mr. Chairman, it is my feeling and the feeling of my colleagues that we cannot and should not wait until 2 years to commence this important study.

With this in mind, Mr. Chairman and remembering the kindness with which you accepted my testimony last year we request that the committee appropriate $100,000 as authorized by Public Law 89–618 for the first year of operation of this 5-year Delmarva hydrologic study.

I shall not attempt to reiterate the support of various public and private bodies for this survey. These, Mr. Chairman, were included in the hearing record of a year ago when the authorization bill was approved.

I can only ask that you give careful consideration to our request for this appropriation in light of what we consider to be a critical water situation in part of our State of Delaware as well as parts of Maryland and Virginia, which compose the peninsula.

Mr. Chairman, I would like to advise the committee that I have the authority to present this testimony on behalf of my colleague from Delaware, Senator Williams, as well as the two distinguished Senators from Maryland, Mr. Brewster and Mr. Tydings, and Senator Spong of Virginia.

I do appreciate this opportunity to appear before the committee.

Chairman HAYDEN. We thank you and it will be given careful consideration.

PUBLIC LAW 86–686

Senator BOGGS. Mr. Chairman, I have one other brief, small matter, if I may, at this time.

Again, I appreciate the opportunity to make this presentation.

On September 2, 1960, Public Law 86–686 was signed into law. The purposes stated in the act were to—

> facilitate cooperation between the Federal Government, colleges and universities, the States, and private organizations for cooperative unit programs of research and education relating to Fish and Wildlife and for other purposes.

OBJECTIVES OF PROGRAM

Some of the program's objectives as outlined in the Department's brochure are as follows:

> Training fishery biologists is the most important function of the unit. Management of the Nation's waters in such a manner as to best meet increasing

demands for public fishing requires more and more trained personnel to carry out research and management responsibilities. The units, therefore, contribute to a ready pool of fully trained biologists to meet the Federal, State and private employment needs on a continuing basis.

Research by unit personnel and by graduate students is also a major objective of the program. This involves individual research projects chosen with respect to the interests and capabilities of the personnel, facilities available or other research programs of the Bureau and in response to State, regional and National needs.

Now, the first unit was activated in January 1962, under this law, at Utah State University, and to date some 23 universities have actively entered into the program.

REQUEST OF DELAWARE STATE COLLEGE FOR COOPERATIVE FISHERY UNIT

Delaware State College has requested that a cooperative fishery unit be established at that college and has received the support of the Governor of the State and of the State game and fish commission.

In a letter to President Mishoe of Delaware State College, Governor Terry said, and I quote:

> This letter is to inform you that I approve this program and you are now authorized to seek the support of Delaware's Congressional Delegation and necessary Federal funds to support this program.

LETTER OF ACTING DIRECTOR, BUREAU OF SPORT FISHERIES AND WILDLIFE

Also, Mr. Chairman, I would like to include in my testimony a letter received last week from the Acting Director of the Bureau of Sport Fisheries and Wildlife, Mr. Tunison.

Chairman HAYDEN. Very well.

(The letter follows:)

U.S. DEPARTMENT OF THE INTERIOR,
FISH AND WILDLIFE SERVICE,
BUREAU OF SPORT FISHERIES AND WILDLIFE,
Washington, D.C., March 14, 1967.

Hon. J. CALEB BOGGS,
U.S. Senate, Washington, D.C.

DEAR SENATOR BOGGS: A copy of the letter addressed to Dr. Luna I. Mishoe, President Delaware State College signed by you, Senator John J. Williams and Congressman William V. Roth in support of a cooperative fishery unit at Delaware State College has been provided us by Secretary Stewart L. Udall.

We in the Bureau of Sport Fisheries and Wildlife believe a cooperative fishery unit at Delaware State College would add very significantly to our capabilities of meeting the training and research objectives of the program. We will be pleased to work with representatives of the College and the Delaware Board of Game and Fish Commissioners in the establishment and operation of the unit as soon as funds can be provided.

Sincerely yours,

ABRAM V. TUNISON,
Acting Director.

Senator BOGGS. In his letter Mr. Tunison says, and I quote:

> We in the Bureau of Sport Fisheries and Wildlife believe a cooperative fishery unit at Delaware State College would add very significantly to our capabilities of meeting the training and research objectives of the program.

Delaware State College is ideally situated for a unit of this type as it is only a short distance away from the Delaware River estuary as well as the Atlantic Ocean. It is near fresh water ponds and less than an hour away from the Chesapeake Bay on the other side of the Delmarva Peninsula.

Added to the eagerness and interest of the college in this field, it is nearly ideally geographically located for field studies and experiments.

SUPPORT OF CONGRESSIONAL DELEGATION

Mr. Chairman, Dr. Mishoe, who is president of the State college, has met with the congressional delegation and has the wholehearted support of the delegation. It is for that reason that I appear this morning on behalf of my colleague and myself, the senior Senator from Delaware, Senator Williams, to make this request of the committee to appropriate the sum of $41,000, which is the Federal share for the establishment of a cooperative fishery unit at Delaware State College.

Incidentally, Mr. Chairman, the State of Delaware does not have such a unit at this time and it is my understanding that in the whole middle Atlantic area of the States there is not such a unit which would seem to me to make it even more urgent and desirable to have one in Delaware.

Again, I want to thank you for the time you have given me to make this presentation.

Chairman HAYDEN. I assure you your statement will be given very careful consideration.

Senator BOGGS. Thank you very much.

STATEMENT OF HON. CLIFFORD P. HANSEN, A U.S. SENATOR FROM WYOMING

PREDATOR CONTROL PROGRAM

Senator HANSEN. Mr. Chairman and members of the subcommittee, I appreciate the opportunity of presenting this statement to your subcommittee on a matter of extreme importance to the State of Wyoming—the need for adequate funds for a responsible predator control program under the U.S. Bureau of Sport Fisheries and Wildlife for fiscal year 1968.

INCREASED LOSSES CAUSED BY PREDATORY ANIMALS

As a former Governor of Wyoming, I am well aware of the contribution that the sheep and wool industry makes to the economy of my State. I am also very much alarmed and concerned about the future of this industry in Wyoming; more and more wool growers and other stockmen are going out of business annually because of the increased losses they are experiencing on account of predatory animals.

With annual production of approximately 22 million pounds of wool, and 1.5 million head of feeder lambs, Wyoming is the second largest wool- and lamb-producing State in the Nation. Its sheep industry contributes approximately 17 percent of Wyoming's total agricultural income.

The total gross income from the sheep and lamb industry is approximately $31 million, which consists of sales of sheep, lambs, income from wool and pelts. To earn this income of $31 million, it is necessary for sheepmen to expend a large amount of money for such items as feed, labor, taxes, transportation, utilities, building materials, farm implements, trucks, interest payments, and numerous kinds of household expenditures.

IMPORTANCE OF WOOL AND SHEEP INDUSTRY

When the $31 million income from this industry is spent in the purchase of goods and services, the total impact on the State's economy is $62 million. An additional $6 million annually comes from sheep revenues to support county, State, and Federal Governments.

Because of its significant economic contribution to the overall economy of Wyoming, the sheep industry must be maintained in a strong position. Such a position can only be attained if the products, wool and lamb, are produced and sold.

One of the major factors governing the quantity of wool and lamb products to be sold is the sufficient control of predators—specifically, coyotes.

CARBON COUNTY, WYO.

Carbon County, Wyo., was once considered the sheep center of Wyoming and was the second largest sheep-producing county in the United States. The large herds of sheep that once existed in the county have decreased from 186,000 head in 1960 to 136,000 head in 1966, a decrease of 50,000 head in a period of 6 years—26.7 percent since 1960. The reduction of the sheep population has definitely affected the economy of Carbon County. Cattle are replacing the sheep; however, there has not been a corresponding increase in the number of cattle.

Sheep and coyotes simply cannot run on the same range. One sheepman in Carbon County has conservatively reported an annual sheep loss to predators in the past 2 years of $25,000 annually. With the cost-price squeeze, the sheep industry is now undergoing, no sheep outfit can survice that large a loss. This is a needless waste.

DECREASE IN WILDLIFE POPULATION

The wildlife population in Wyoming is also decreasing because of increased depredation by predators. Many deer, antelope, and birds are killed each year by coyotes.

A recent report of the Wyoming office of the Bureau of Land Management states—

> the wildlife population of Wyoming was considered to be increasing or static until 1962, with a decline noted in 1963 and 1964. It is interesting to note that these last years were periods of rapid decrease in the effectiveness of predatory animal efforts.

In other words, when the confirmed coyote, and bobcat, kills increased, the antelope population diminished.

Appropriations for Predatory Animal Control

The Federal appropriations for predatory animal control were cut 2 years ago by $350,000. Last year, Congress restored $200,000 of this cut. However, when this amount is spread over 22 sheep-producing States, it does not amount to much for each State.

Last year in Wyoming, the sheep producers taxed themselves for a total of $167,000 for predatory animal control work, to protect their flocks from the menace of these animals. Yet, according to both the United States and Wyoming Departments of Agriculture, sheep losses to predators in 1966 amounted to 118,400 head of sheep, valued at $1.7 million. This represents an increase of 19,100 head, $254,900 over the previous year's losses.

Request for Adequate Funds

In order that the sheep industry may survive and wildlife abound, I respectfully urge that adequate funds be provided for use at the field level in an effective predator control program in Wyoming and other affected States.

Thank you.

Chairman Hayden. I am in entire accord with your view about regulating predators, particularly coyotes.

Senator Hansen. Thank you very much, Mr. Chairman. That is very good news.

STATEMENT OF HON. MARK O. HATFIELD, A U.S. SENATOR FROM OREGON

TIMBER AND FISHERY RESOURCES

Chairman Hayden. Senator Hatfield.

Senator Hatfield. Good morning.

Mr. Chairman and members of the committee, I appear here today in support of appropriations for the continued development of two important natural resources in my State recognizing this is a busy committee and in order to conserve your time I have two prepared statements I would like to submit for the record as if read.

Chairman Hayden. They will be included in the record.

(The statements follow:)

The Oregon timber based industry is caught in a serious log supply demand squeeze. For a number of years the demand for public timber has far exceeded total supply. It was because of this demand situation that I requested during 1966 a survey of the potential of additional unregulated (thinnings, salvage, alder, etc.) timber harvests from the federal timberlands in Oregon. I was advised the potential for these type of annual sales in the National Forests of Oregon was 251.3 million board feet. For the Bureau of Land Management administered lands, the additional annual volume of this type thinning and salvage material was 218.1 million board feet. I am pleased the present budget under consideration includes financing for 140 million feet of this additional BLM sale volume as well as financing to offer for sale the BLM's full allowable cut in Oregon and a major portion of the timber killed in the disastrous Ox-Bow fire. I hope you will consider favorably this budget request. I am concerned, however, as to why the balance, 78 million feet of the BLM total

218 million of annual potential additional harvest reported to me as available, was not included. The representatives of county government in the areas where these lands are located, as well as the timber industry so dependent upon public timber offerings of the BLM are being urged to unravel the reasons for this omission and to make available to me a detailed explanation of this missing 78 million feet. When clarified, I hope you will allow me to return and explain the findings for this omission and the appropriation needs.

In regard to the forest service program of timber harvest, I urge approval of the budget request to sell and administer the full regulated allowable cut during fiscal year 1968 and to increase the current budget proposal to sell only a portion of the total annual potential in unregulated salvage and thinning volume. The current budget includes funds to sell 280 million feet of thinning and salvage to cut 210 million feet of unregulated volume in the West. The total program in the West is 423 million (Region 1, Northern Rocky Mountains, 60 million feet; R-3, Southwest, 20 million feet; R-5 California, 30 million feet; and R-6 Pacific Northwest, 313 million feet). An additional $700,000 is needed to implement the full program. This cash investment in good forest management and timber utilization would be a good long range economic investment if present returns merely equalled costs. Such will not be the case. Sales receipts should exceed by several times the cost of sale preparation and administration.

Forests in Eastern Oregon are threatened with a major bark beetle infestation—accelerated harvesting of lodgepole pine is needed in the Deschutes, Winema and Fremont National Forests. This program should be at approximately the 100 million foot sale level. This need to harvest lodgepole pine and control a major insect infestation is only 62% financed in the present budget request. Certainly as this program is proven successful, the program should receive financing adequate to fully activate the program in fiscal year 1969.

REFORESTATION

Fundamental to offering a high volume level of annual allowable cut from the national forests is the reforestation of the non-forested commercial Forest Service lands in Oregon. These lands denuded by old burns, are high growth potential lands and total 138,500 acres according to a survey completed July 1, 1966. The present rate of reforestation accomplishment on these national forest lands is approximately 8,000 acres each year. The lands, if reforested, would permit an increase in the national forest annual harvest in Oregon by 65,000,000 board feet. I urge the present program of reforestation be tripled to assure elimination of this phase of forest land "non-management" prior to 1975 rather than the present trend date of about 1985.

FOREST RESEARCH

The keystone to higher levels of forest management and timber harvest is founded on sound forest research. A number of total omissions or token budget requests in this field of forest research need reconsideration.

FOREST SURVEY

The forest survey program conducted as a function of forest research, has performed a valuable, and frequently poorly recognized resource analysis function. Its work has been on an extensive basis with reinventories taken every ten years or more. The short supply of softwood logs in the Pacific Northwest necessary to meet the need of the installed manufacturing facilities demands more precise inventory information. More details and more frequent inventories are needed.

Current authority provides a ceiling of $2,500,000 for forest survey activities. The current 1967 budget is $2,100,000. The 1968 budget request provides an increase of $100,000 to a proposed $2,200,000. The Pacific Northwest needs an intensified forest survey with a reduced lapse time before resurvey. I recommend funds be provided for forest survey to the full amount of the authority, $2,500,000 and that the increased funds be assigned to intensifying forest survey activities in the areas of the West in which supply falls so short of equalling industrial demand.

FOREST ENGINEERING

An additional opportunity to increase the supply of softwood logs in the West is by developing a system of logging using balloon and other aerial systems. Currently such Engineering Research is underway. This research, with token financing, has demonstrated the principle. Strong financial support of approximately $600,000 is needed to speed this research.

In the States of Oregon and Washington alone, there are over 6,500,000 acres of commercial forest land that cannot be logged by current methods. (It has been estimated that there is over 29,000,000 acres in the entire West which cannot be logged by present means.) This non-loggable land represents a loss, in terms of allowable annual cut in Oregon and Washington of approximately 840 million board feet. Of this volume, the Forest Service estimates they could recover at least 500 million with a workable aerial system. Approximately 250 million would come from mature timber areas and the other 250 million from thinning of young growth stands.

The increase in allowable annual cut by 500 million board feet would mean a gain of approximately $5,000,000 annually to the owners of this land. About $3,000,000 of this would go to the Federal Treasury from public timber sales alone. Another $800,000 would go to the counties as their share of the stumpage receipts. This increase in cut would, in total, add $100,000,000 annually to the Gross National Product.

FOREST ECONOMICS

Due to the serious inbalance of short log supply and high demand in the Pacific Northwest, the Forest Service announced a "pioneering study" to meet an ever-increasing demand for timber from the National Forests of the Douglas Fir region.

The communities and industries of the Ponderosa Pine region, where log supply also fails to meet installed plant demand, have an equal interest in such a "pioneering study." In fact, almost their entire log supply originates from the national forests, thus this commendable research being conducted in the Douglas Fir region offers hope to communities and timber processors of the pine region. I have been informed the Forest Service believes ". . . that it would be possible to conduct an appropriate study for the pine region without additional appropriations, provided the amounts in the budget for fiscal year 1968 are approved . . ." thus permitting an extension in 1968 of this commendable study to the pine forests (part of the 42 national forests with these supply/demand problems). I urge the approval of the full amount of this item in the current budget consideration.

LA GRANDE FOREST RESEARCH FACILITY

New forest wildlife research facilities at La Grande were considered in fiscal year 1967 and appropriations for design and planning provided. The urgency of providing appropriations to start construction was emphasized with the recent announcement of the planned demolition of the presently occupied facilities under lease only until July 1. No other facilities are available in the La Grande area for this research team. I urge that $350,000 for construction be included in this appropriation to meet the emergency.

BEND SILVICULTURAL RESEARCH LABORATORY

This fine facility is in need of a $200,000 increase in the present budget request. The 1967 appropriation was for $90,000. A similar amount is in the current budget request. This is totally inadequate to meet the research need to combat the threatening insect epidemic in the Eastern Oregon/Eastern Washington areas. Some 400 to 500 million feet of ponderosa pine are threatened in the Blue Mountain area.

In addition, 767,000 acres of lodgepole pine with a volume of 2.5 billion board feet in the Klamath Basin is threatened with a similar bark beetle epidemic. The control devices for this insect control lie in developing silvicultural practices—a research function of the Bend facility.

CORVALLIS FOREST SCIENCES LABORATORY

I urge the appropriation of funds this year to expand this research facility. The productivity of the especially capable staff at this facility is restricted by crowded conditions and the lack of laboratory equipment. Last year funds were appropriated to provide for the necessary architectural and engineering plans for the necessary laboratory addition.

It is especially important that funds be approved this year to provide for the construction of this facility because of the State of Oregon's current budget recommendation of funds for the new State Forestry Education and Research Building, a facility which is planned in close cooperation with the Forest Service. The facilities which the State is constructing are strongly dependent upon the development of the Federal facilities and, of course, the Federal facility is planned with the University building in mind. $2,500,000 is required to construct this research facility. The work of the scientists at this outstanding facility has been and will be of tremendous importance to the forest industry and the economy of the Pacific Northwest.

STATEMENT OF SENATOR MARK O. HATFIELD

Construction has recently begun on a multimillion dollar fishway complex at Willamette Falls on the Willamette River near Oregon City, Oregon. For many years, the Falls has been a serious barrier to anadromous fish migration on the largest and most important salmon-producing stream in the State of Oregon. My purpose today is to request an additional appropriation of $750,000 to allow for economical continuation of the four-phase construction of this $3.6 million project.

In order to apprise you of the importance of this project and give a background to the needs of the resource, I will briefly discuss what has already been accomplished and what is still required. The Willamette River enters the Columbia River some 100 miles from the ocean. It lies wholly within the state of Oregon and is the largest stream in Oregon. Some 20 miles above its confluence with the Columbia, an ancient lava flow has created the Willamette Falls. The Falls has partially blocked the runs of anadromous fish since prehistoric times. Industrial development at the Falls, dating back to Oregon Territorial Days, seriously hinders fish passage. In 1904, the state constructed a fish ladder that proved to be grossly inadequate during low-water flows and is completely inoperable during high water. Because of the erosional configuration of the Falls and industrial usage of water, the present ladder, when operating, serves only a limited area of the total flow. Above the Falls lies about 165 miles of the main stem Willamette, plus approximately 5,000 miles of tributary streams, providing an excellent spawning potential for chinook and coho salmon and steelhead trout.

At present, an average of about 60,000 salmon and steelhead pass above the Falls. With the new ladders at Willamette Falls, we anticipate these runs can be expanded to 300,000 fish. The contribution to the sport and commercial fisheries along the Pacific coast from such runs would approach $4 million annually.

In order to utilize the potential created by this adequate passage at Willamette Falls, the state, in cooperation with federal agencies, has undertaken an extensive salmon liberation program in the waters of the Willamette Basin. Millions of juvenile salmon and steelhead have been liberated into the waters in the past four years. In 1967 alone, 12.5 million unfed fall chinook fingerlings, 7.5 million fed fall chinook fingerlings, 11 million unfed coho fingerlings, 6.5 million fed spring chinook fingerlings, 600,000 unfed spring chinook fingerlings, and 240,000 steelhead smolts have been liberated into the tributary and main stem streams of the Willamette system.

In addition to the liberation of juvenile fish, a total of 5,200 adult coho and 4,300 adult steelhead were liberated into the system for natural spawning. There is great effort and enthusiasm on the part of the fishery agencies as well as the sport and commercial fishery interest to develop and utilize more fully the potential of this river system.

The fish produced in the Willamette above the Falls are captured by commercial fishermen and sportsmen as far north as Alaska and as far south as California. Not only do these fish provide an intensive and extensive ocean fishery, but the commercial and sports fishermen have access to them for about 100 miles on the Columbia River itself, and are then heavily fished in many miles of the Willamette River. Thousands of fishermen concentrate below the Falls at Oregon City to take these magnificent chinook salmon. During the past twenty years, there has been an average of 92,000 man days annually devoted to sport fishing in the Willamette River below the Falls. In addition, fishing interest and angling pressure are increaing rapidly in the smaller tributaries and the upper reaches of the main stem itself. Undoubtedly this will accelerate with the much larger runs.

Although for many years the people of the Pacific Northwest realized the need for adequate fish passage at Willamette Falls, it was not until the start of construction in 1965 that fulfillment of this dream was in sight.

Because of funding problems, the construction was divided into sections or phases. These consist of Phase A, the cul-de-sac fishway; Phase B, the exit structure, counting facilities, and water regulatory structure; Phase C, the complete downstream or low flow ladder in the horseshoe complex; and Phase D, the uppermost ladder in the horseshoe area and filling the wet hole. The most recent cost estimates for the work by phase are shown below. They are the total costs including the private industry share.

	Appropriated	Needed
Plans	$200,000	
Phase A	835,000	
Phase B	759,000	
Phase C		$791,000
Phase D		1,059,000
Total	1,794,000	1,850,000
	$3,644,000	

Approximately half the needed funds have been made available and committed to the project. It is vital that the money for Phase C be appropriated for fiscal 1968 to keep this project on a reasonable construction schedule. A private utility with a plant located at Williamette Falls, Portland General Electric, is paying 16.3 percent of the total construction costs, which will amount to approximately $561,000 under present plans.

Phase A construction began April 4, 1966. It is essentially complete, with final inspection and finishing work presently under way. Work on Phase B will begin approximately April 1 as soon as the water recedes and danger of excessive river flows has passed. The contract allows for 325 calendar days, but the contractor feels the job can be completed in the fall of 1967. With the completion of these first two phases, efficient passage from the cul-de-sac area will be provided for the fall chinook and coho salmon migrating upstream in 1967. However, no assistance from this work will be given to the estimated 75 percent of the fish that will be attempting to utilize the main Falls ladders or the horseshoe fishways.

Included in the construction budget for the Bureau of Commercial Fisheries in fiscal 1968 is $100,000 for construction on the Willamette Falls fishway. This is not sufficient to make meaningful progress on this important project. To date half the money has been provided. Therefore, in order to continue construction of Williamette Falls fishway on a practical and prudent basis and to realize the best value for the dollars expended, I strongly urge the appropriation of $750,000 for fiscal 1968 for use in constructing Phase C. Continuation of a realistic work schedule is only good business. The appropriate amount of private capital is committee and construction costs are rising.

The sooner the project is completed the sooner will the people realize the benefits from the very favorable cost benefit ratio of 3.6 total construction cost to about 4.0 annual benefit.

IMPORTANCE OF TIMBER

Senator **HATFIELD**. One concerns our timber resource and the other our fishery resource. If I may, I shall touch upon the important parts of each.

As you know, Oregon's economy is to a large extent dependent upon an adequate supply of logs reaching our timber manufacturers. The source of much supply comes from publicly held land. As Governor, I urged that action be taken to reach a large amount of unregulated cuts in form of thinning and salvage in order to meet the current demands.

ADDITIONAL APPROPRIATION REQUESTED

I am pleased to note action has been taken and money has been budgeted to make a portion of this type of timber avaliable. In order to bring this program to its full potential, I urge an additional appropriation of $700,000.

Through the cooperation of the Federal Government, the State, and private owners, a program of good forest management has been undertaken in Oregon. Much more can and should be done. Additional timber can be harvested without impairing the recreational potential of our forests.

For example, we are reforesting at about one-third the rate we should. This converts burned over and cut-over land to a productive resource. This activity, if stepped up, can increase the annual forest harvest by 65 million board feet.

AMOUNT REQUESTED FOR RESEARCH

We should pursue our surveying techniques and research facilities and step up the building of access roads. I strongly urge an appropriation of $600,000 for research to improve our ability to log by balloon or other aerial systems.

You have not seen it. We have been doing pionering work along this line which takes a balloon about the size of this room and inflates it with helium and it can lift the logs out of the forest and reduce the necessity for road construction considerably.

FOREST RESEARCH FACILITIES

I urge the appropriation of additional sums to meet the requirements and capabilities of three forest research facilities, one at La-Grande, one at Bend and one at Corvallis. The details are in my prepared statement.

WILLAMETTE FALLS FISHWAYS PROJECT

The Willamette Falls fishways project has been undertaken as a major step in rehabilitation of your animus fish in the Willamette Basin.

The second phase of the project will be completed this fall. The budget before you includes $100,000 for evacuation work, however. if the project is to remain on a reasonable construction schedule, an additional appropriation of $750,000 is required for construction of fish entrances.

I urge that additional appropriation be made.

Thank you very much.

ANADROMOUS FISH PROGRAM

Senator BARTLETT. Senator, if I may, I would assume you are disturbed likewise with the cutback in the amount authorized to be appropriated for the anadromous fish program generally, and a relatively low budget request which was made.

Senator HATFIELD. Yes, I am.

Senator BARTLETT. Do you believe it is important to keep that program going full steam ahead?

IMPORTANCE OF RESEARCH ACTIVITY

Senator HATFIELD. Senator Bartlett, I would certainly agree with your statement. Coming from the State of Alaska, you are every bit aware, if not more so, than we in the State of Oregon, of the necessity of maintaining a real appropriate schedule of research activity to not only preserve this fishery resource, but to guarantee that we have this resource for the next generation and more importantly for the entire world's need of food.

I think sometimes people living in other parts of the country think of the fishery resource along the coast as benefiting only the coastal States. Actually, this great ocean on both sides of this United States represents, in my opinion, a great potential to solve some of the world tensions that result from shortage of food.

Anything we can do in the area of research to preserve a fishery resource has an impact far beyond the coastal States, the United States, and it has an impact, I believe, on the entire world.

Senator BARTLETT. I am in agreement with you.

Thank you.

STATEMENT OF HON. FRED R. HARRIS, A U.S. SENATOR FROM OKLAHOMA

WICHITA MOUNTAIN WILDLIFE REFUGE

Chairman HAYDEN. Senator Harris.

Senator HARRIS. Mr. Chairman, I have a prepared statement, which I will, with your permission, just file with the committee.

Chairman HAYDEN. That may be done.

(The statement follows:)

Mr. Chairman: Once again, I am pleased to call to your special attention a greatly needed appropriation that was not included in the Administration's 1968 budget request for the Bureau of Sports Fisheries and Wildlife in the Department of the Interior. It is an appropriation for the continuation of work begun in fiscal 1966 and 1967 on the Six Year Master Plan for improvement of the Wichita Mountains Wildlife Refuge located in Comanche County, Oklahoma, my home county.

I was happy to see that the President's proposed budget for fiscal 1968 does recommend funds in the amount of $80,000 to construct a new office facility for the refuge, a part of the Master Plan. The Bureau of the Budget recognized that with the completion of the new highway for the Refuge, the annual visitor load will increase appreciably. Although I am extremely happy to see that the

President's proposed budget for 1968 contains this $80,000 item for construction of the new office building, it falls short of adequately providing for the monetary needs to carry out the provisions of the Master Plan for improvements for the Refuge. It is for that reason that I am here today requesting additional funds in the Department of Interior Appropriations Bill.

The annual visitation to this Refuge now exceeds one million persons, and it is predicted that annual visitation will increase to two million persons by 1975. The United States Department of Interior, recognizing the need for improvements in public use facilities brought about by this vast increase in annual visitation, has devised the Wichita Mountains Master Plan for the rehabilitation of buildings, fences, camp grounds and roads, which are now more than thirty years old, and for the construction of new residences and public use and other facilities.

The total development and rehabilitation proposed for this Refuge, the oldest unit in the system of wildlife refuges, is estimated to cost a total of $3,113,900 and will provide much-needed facilities to enable the continued use and benefits available to the general public.

The 59,000-acre Wichita Mountains Wildlife Refuge is dedicated to the preservation and management of big game herds and of providing the opportunity for public enjoyment of this natural area. Visitors throng to the lakes and camp grounds and use the extensive road network to observe wildlife in a natural setting.

Also located within the Wichita Mountains Wildlife Refuge is the world reknowned Easter Sunrise Service facility. This pageant utilizes a permanent physical plant occupying a 151-acre site made available under a long-term permit to the sponsoring, non-profit organization. The annual Sunrise Service, a pageant sponsored by local civic and church groups, attracts a crowd of 35,000 to 50,000 visitors each year. Many people also visit the pageant site, which includes a very attractive chapel, at other times throughout the year. The pageant buildings and scenes harmonize well with their setting and constitute a further attraction for the tens of thousands of visitors to the wildlife refuge.

Recent establishment of a Youth Job Corps Training Camp within the Wildlife Refuge will help with the work outlined in the Master Plan for improvement. However, the youth stationed at the job corps facility will not be able to assist with the heavier construction work which is of priority at this time.

Due to its natural beauty and its close proximity to metropolitan areas in both Oklahoma and Texas, public use is an increasing aspect of the overall requirements of rehabilitation of old, and construction of new, facilities within the complex. The Refuge is located within easy access of Lawton, Oklahoma, Oklahoma City, Oklahoma, Wichita Falls, Texas, Altus, Oklahoma, Duncan, Oklahoma, Chickasha, Oklahoma, and Anadarko, Oklahoma. The combined populations of these cities is in the neighborhood of 510,000 people. The Wichita Mountains Wildlife Refuge is the primary recreational facility available to the growing populations of these cities.

To further illustrate the need for rehabilitation of facilities within the Refuge, I would like to point out the fact that the visitation sometimes reaches as many as 20,000 visitors per day and completely overruns the inadequate facilities which were constructed during the 1930 WPA and CCC days. The present permanent staff of approximately sixteen employees, although very dedicated, find it almost impossible to maintain the 59,000 acres both for wildlife and for increasing public use.

1. Heading the list of priorities for the continuation of construction under the Six Year Master Plan is the need for an appropriation of $500,000 which would enable the completion of work begun in the past two years on the Medicine Park to Cache Gate Roadway. The completion of construction on this highway will decrease serious traffic hazards that now exist and will also afford an opportunity for families to enjoy the beauty of nature by providing them easy access to and through the Refuge. I have personally traveled this highway when traffic was bumper to bumper and when camping, picnic, and observation facilities were filled to capacity. I, therefore, urge the committee to include in the budget the $500,000 needed to complete construction and correct this existing inadequacy in the Wichita Mountains Wildlife Refuge.

2. The second area of priority consists of lake rehabilitation. Many of the thirty-five fresh water lakes within the Refuge are now virtually beyond use

because of aquatic vegetation and siltation. Therefore, the Bureau of Sports Fisheries and Wildlife has proposed a plan to remove sand and siltation from the lakes, to control the growth of aquatic vegetation and to improve beach facilities in order to enhance the use of the lakes for fishing, boating, and swimming. Most of these thirty-five lakes have not received adequate care over the past thirty years due to lack of adequate funds, therefore, I would request that the committee appropriate this year the $125,000 which the Bureau of Sports Fisheries and Wildlife feels is needed to properly rehabilitate these lakes in order to realize their full public use benefits. This job will take about four years, and due to the magnitude of the undertaking, the minimum amount that could be effectively used in any one year is estimated at $20,000. The Bureau of Sports Fisheries and Wildlife also has a plan calling for rehabilitation of swimming beaches. This work is estimated to cost some $95,000 and the minimum that could be effectively utilized in one year is around $10,000.

3. The third priority calls for the construction and rehabilitation of public sanitary and recreational facilities within the refuge. I feel that much of the work to be done in this category could be handled adequately by the members of the Youth Job Corps Camp. Therefore, I would feel that the $75,000 requested for these projects could possibly be withheld at this time.

4. The fourth area of priority involves planning and design for a visitor center complex to serve the refuge. This is an important job. We need to carefully plan and design this facility before requesting funds for construction. With the ever increasing number of visitors coming to the Refuge, it is important that they be given information about the refuge and the many points of interest to be visited within it. This visitor center could, along with the Refuge, become one of the major tourist attractions in the Southwest. The funds required to begin plans for this facility is $75,000. I would urge the Committee to include this amount in the FY 1968 budget.

The total capability of construction is estimated by the Bureau of Sports Fisheries and Wildlife to be $870,000. Inasmuch as construction on this Six Year Master Plan of improvement was begun year before last, and continued last year through an appropriation provided by your Committee, I would like to see the entire amount, less $75,000 under three, to be appropriated this year. I feel it is imperative that we continue our efforts to modernize the facilities within the Wichita Mountains Wildlife Refuge in order that the thousands of people who visit it annually might realize its full public benefit. Therefore, Mr. Chairman, and members of the Committee, I ask that you make available in the fiscal year 1968 the sum of $795,000 in order to enable the Department of Interior to continue its program of rehabilitation and modernization of one of Oklahoma's and America's most outstanding wildlife preservation and public recreation facilities. Your consideration of this request is certainly appreciated. Thank you.

ATTACHMENT TO TESTIMONY OF SENATOR HARRIS

Priority	
1. Scenic highway—Maximum	$500,000
Scenic highway—Minimum	200,000
2. Lakeshore rehabilitation—Maximum	125,000
Lakeshore rehabilitation—Minimum	20,000
3. Swimming beaches—Maximum	95,000
Swimming beaches—Minimum	10,000
4. Sanitary facilities—Maximum	75,000
Sanitary facilities—Minimum	25,000
5. Visitor center design	75,000
Total	795,000

PURPOSE OF WILDLIFE REFUGE

Senator HARRIS. I will excerpt from it briefly. I am here in regard to the Witchita Mountain Wildlife Refuge, which is in Oklahoma and is adjacent to my hometown of Lawton, Okla.

A facility I am interested in, a 59,000 acre wildlfe refuge dedicated to the preservation and management of big game herds and providing the opportunity for public enjoyment of the natural area.

The refuge is about the only recreational facility for a good many rather large cities, Oklahoma City, my hometown of Lawton, and Witchita Falls, and Texas are included, and illustrated the need for the masterplan for the rehabilitation of these facilities primarily for public use.

VISITATION TO REFUGE

I could point out that the visitation to the refuge sometimes reaches as high as 20,000 visitors a day and completely overruns the inadequate facilities there which were largely constructed back during the 1930 WPA and CCC days.

So there is a 5-year master plan which the Department of Interior has put together and during the last 2 years this committee provided funds for that.

ADDITIONAL FUNDS REQUESTED

I am here to talk about the third year, and in this year's budget there was only $80,000 recommended by the administration for the third year of the plan, which will not do anything but provide a new office facility, which is needed.

The entire master plan for this year, if we kept it on schedule, would require an additional $795,000 in addition to the $80,000 item in the budget.

PRIORITIES

I know that the committee is concerned about holding down this budget as much as possible. So what I have done is on that $795,000, in the event the committee feels it could not approve the entire request that would keep the master plan on schedule, I have broken it down with the advice of the Department of Interior into five priorities, one through five, and the first being for the completion of a highway, funds for which this committee has provided during the last 2 years.

That amount is $500,000, and that is even broken down into another segment, a very basic segment of $200,000, which is a part which is needed most.

There are other priorities here, like shore rehabilitation, swimming beaches, sanitary facilities, and the No. 5 priority of visitor center design, a total of $795,000.

IMPORTANCE OF REFUGE

This is an area which is of great importance to the people around those cities there. As I said, it is the only place in that whole area where they can go and have some recreation and in the natural outdoors, and we think it is important we improve these antiquated facilities.

I am grateful for what the committee has done in the past and I hope you will be able to grant some increase over and above the $80,000 in the administration's budget.

Thank you very much.

STATEMENT OF HON. FRANK CHURCH, A U.S. SENATOR FROM IDAHO

SALMON AND STEELHEAD TROUT HATCHERY ON CLEAR CREEK

Chairman HAYDEN. Senator Church.

Senator CHURCH. Thank you, Senator.

Mr. Chairman and gentlemen of the committee, I also have come to talk about anadromous fish this morning and to thank the committee for the help we have received in the past on a very important fish hatchery which is now in the process of being constructed in my State.

I appear here today to respectfully urge that your committee continue to fund the construction of a salmon and steelhead trout hatchery on Clear Creek, a tributary of the Clearwater River in Idaho.

The Clearwater is an integral part of the great salmon spawning complex in the Pacific Northwest. These migratory fish provide a tremendous commercial and sports fishing resource, since they return from the Pacific Ocean to spawn in the cold, clear streams of the inland mountains.

With the construction of dams on the Columbia and lower Snake Rivers, Indian fishing and other factors, these runs have dwindled. Both the State of Idaho and the Federal Government are involved in major programs to restore and rehabilitate these runs. The action of your committee in approving $255,000 in fiscal 1966, and $244,000 in fiscal 1967 for the Clear Creek hatchery is of tremendous importance in the preservation of this resource.

I might say, gentlemen, because of the action of this committee, all of the groundwork and the preliminary reconstruction work of this hatchery has now been completed.

This year the budget does not contain any money for the continuation of the work, and it is in order that the work may continue in a regular way that I come here to plead the case before you this morning.

AMOUNT REQUESTED

An appropriation of $445,000 for the coming fiscal year of 1968 will provide for the major construction phase of the project, and keep it on schedule. This money will be used for buildings, water, sewage and power systems, and other basic construction. After this funding, only $326,000 will be needed to complete the hatchery so that it can begin partial operation in fiscal 1969.

That would be the last appropriation needed to finish the work and would not be needed until next year.

TOTAL COST OF HATCHERY

The total cost of the hatchery will then be $1.3 million, a small price to pay to help preserve a resource which returns an estimated $50 million annually to the three States of Washington, Oregon, and Idaho.

The urgency of keeping the Clear Creek hatchery on schedule may best be explained in an excellent letter which I have received from

Mr. Donald Thomas, chairman of the fish and game committee of the Lewiston, Idaho, Chamber of Commerce. I ask that it be made part of the record.

Mr. Chairman, I again respectfully urge the committee to add these funds to those budgeted for the Bureau of Sports Fisheries and Wildlife.

(The letter follows:)

LEWISTON, IDAHO, *February 25, 1967.*

Hon. FRANK CHURCH,
U.S. Senate Office Building,
Washington, D.C.

DEAR FRANK: As you know, money has been appropriated for the initial phase of construction of the Clear Creek Fish Hatchery at Kooskia, Idaho. If the contracts have not been let, they will be shortly. The first phase of construction will take care of the ponds, pipelines and some related facilities.

The second phase of construction was to have been the main hatchery buildings, domestic water and sewage systems, power plant and other facilities. This would call for an additional appropriation of $445,000 and was to follow the first phase so the building program could be carried on uninterrupted.

The Fish and Game Committee of the Lewiston Chamber of Commerce has been very much interested in this hatchery. While its primary purpose was to be the restoration of the chinook fish runs in the Clearwater watershed, there had also been plans to use it during the critical years of construction of Dworshak Dam to preserve the runs of these wonderful fish into this watershed.

Now, we find that no funds have been included in the Interior Department budget for the continued construction of the project.

The Dworshak Dam project is on schedule and will remain on schedule. Presently the Clearwater steelhead—90 percent of which go up the North Fork are being trapped and transported around the construction area. Their offspring and the offspring from next years trapping program will be able to escape back down the river to return to the ocean. But, the 1969 run will be trapped in the reservoir. Not only the 1969 fish—but our biologists now tell us that they have new evidence that the small fish, instead of remaining in the head water two years, remain three.

Now, it is true that there will be a steelhead hatchery at Dworshak. But the problem that develops here is that this hatchery cannot get into operation until the dam is virtually completed because of the water quality problem. They need the cooler water which they can only get at certain reservoir levels.

So, we have the fish runs from two years and possibly three years that we have no means of caring for unless Clear Creek is kept on schedule. According to the biologists the solution of rearing them in other Federal hatcheries in Montana or possibly Washington is out, in that these are long-run steelhead and if they are raised outside the Clearwater watershed they most likely would never return to the Clearwater River.

The way things stand now, we know that we have one and possibly two years when the steelhead runs will not be cared for. While the loss of a couple years fishing would not be catastrophic, it would continue to reoccur with each cycle of these fish for years and years. Also, we really don't have a surplus of brood stock from which to maintain and rebuild the run and we can ill afford to lose that high a percentage of our remaining brood fish.

We realize the problems involved in getting appropriations for such a project as Clear Creek and the wisdom of keeping down all expenditures that are not absolutely necessary.

At the same time, we also feel that we have a responsibility to preserve as many of the good things of this country as we can. We won't always be at war. And I think that our young men who are now in Asia would feel that we had failed them if we allowed this tremendous resource to be lost.

We respectfully request that you use every effort to get the necessary funds reinstated in the budget to keep the Clear Creek Fish Hatchery project on schedule.

Best personal regards.

DONALD THOMAS,
Chairman, Fish and Game Committee,
Lewiston Chamber of Commerce.

NONBUDGETED ITEM

Senator CHURCH. I want to express my appreciation for the help this committee has given in the past to get this hatchery underway and to keep it on schedule.

Chairman HAYDEN. We thank you for your statement.

Senator BARTLETT. May I ask a question or two there, Mr. Chairman?

Chairman HAYDEN. Yes.

Senator BARTLETT. Is this entirely a Federal undertaking?

Senator CHURCH. Yes, it is.

Senator BARTLETT. Do you know if the Bureau asked for any money for the coming year?

Senator CHURCH. There is no money in the budget this year for the Clear Creek hatchery.

This surprises us very much because of the fact that a half million dollars has already been spent and the initial works are complete, that is, the ground has been secured, the water source is secured, the initial tanks and canals and pipes, and so forth, have been installed.

URGENCY OF PROJECT

Now, we are just at the point of going ahead with the main construction work on the hatchery. The urgency is that we have the Dworshak Dam building which, when completed, will create a high barrier and the hatchery is meant to help alleviate the effects of the dam.

The dam is on schedule, construction continues, and we feel very strongly that if this hatchery does not remain on schedule, the adverse effect on the fish run will be very serious.

Senator BARTLETT. The dams have taken a heavy toll of the salmon runs already?

Senator CHURCH. Yes.

Senator BARTLETT. The feeling out there is everything ought to be done that can be done to counteract this?

Senator CHURCH. That is correct.

A hatchery of this kind will make a significant contribution to the preservation of the fish runs.

Senator YOUNG. Would this deal with salmon?

Senator CHURCH. Yes. The anadromous fish that must come up the rivers to spawn in order to keep this resource alive. The hatchery would raise salmon and steelhead trout and restore and rehabilitate the runs in the Clearwater watershed.

That is why it is so important. That is why, in the past, the committee has given its support to this very fine project.

COMPLETION OF DAM

Senator YOUNG. When will the dam be completed?

Senator CHURCH. The dam is scheduled to be completed in 1973. The major construction is now underway on the basis of a $145 million contract let last year.

Senator YOUNG. When will they start to impound water?

Senator CHURCH. Senator, I understand from Mr. Thomas' letter that the run will be trapped in the reservoir in 1969, although the actual full-scale filling of the reservoir may come later, and 2 or 3 years before the completion date of 1973.

Senator YOUNG. It actually should be completed about that time.

Senator CHURCH. By keeping it on schedule, it would be.

IMPORTANT SOURCE OF SALMON AND STEELHEAD

Senator BARTLETT. Is Clear Creek now an important source of salmon and steelhead?

Senator CHURCH. Clear Creek is a tributary of the Middle Fork of the Clearwater River. The output of the hatchery is designed to replenish the salmon and steelhead in the major streams, such as the Middle Fork, the Main and South Forks of the Clearwater, and the Lochsa and Selway Rivers, and to make up for some of the loss on the North Fork of the Clearwater due to the construction of Dworshak Dam. The entire Clearwater watershed is an important source for these fish.

Senator BARTLETT. As important as it was in earlier days?

Senator CHURCH. No. But this hatchery will help bring it back to its old importance, and the need is urgent.

Chairman HAYDEN. Thank you, sir.

Senator CHURCH. Thank you, Mr. Chairman.

STATEMENT OF HON. FRANK E. MOSS, A U.S. SENATOR FROM UTAH

APPROPRIATIONS FOR DEPARTMENT OF INTERIOR AND U.S. FOREST SERVICE

Senator MOSS. Chairman Hayden and members of the subcommittee, I appreciate this opportunity to testify on Utah's strong interest in adequate appropriations for the Department of the Interior and the U.S. Forest Service. These programs touch us directly and intimately, and are tied in with our future economic progress. We favor as high levels of funding as the overall fiscal picture permits.

I recognize that in recommending appropriations the subcommittee is working under special difficulties this year. The budget demands of the war in Vietnam have necessitated reductions in many domestic programs, and the deferral of special projects in others. We who are dedicated to natural resource development, to conservation, to good land management practices to the expansion of outdoor recreation facilities, to improvement of our national parks and monuments, to the best possible care for our Indian population, and to many other activities under consideration by this subcommittee, find it difficult to accept with equanimity any reduction at all in needed appropriations.

We fear that money cuts may jeopardize long-range objectives. A natural resource destroyed or used up cannot be replaced.

I wish to say, therefore, that the subcommittee has my sympathy and understanding in trying to shape a satisfactory bill for fiscal year 1968. I will try not to add too greatly to your problems. Because of the obvious difficulties which you are facing, I have held my requests for additional funds to a minimum. I am asking for only two increases to the appropriation requests and supporting one other.

BROWSE IMPROVEMENT STUDIES AT BRIGHAM YOUNG UNIVERSITY

First, I ask that $150,000 be written into appropriations for Forest Service research to begin browse improvement studies at Brigham Young University at Provo, Utah.

You will remember that I have come before this subcommittee in the past to ask for planning funds for a Western Browse Laboratory to be constructed at Brigham Young. The Appropriation Committees of the House and Senate agreed to the sum of $37,000 in planning funds in the fiscal year 1967 budget, and we hoped that this would assure an appropriation of construction funds this year.

Although architectural designs and specifications are now being developed for the laboratory, construction funds have not been requested because of the high cost of the war in Vietnam, and we do not know when it will be possible to build the laboratory.

Meanwhile, there is temporary space available at the university to start some of the most urgently needed research activities. The sum of $150,000 could be used efficiently in fiscal 1968 to begin browse improvement studies and provide the nucleus of a considerable expanded program in the area when the laboratory is constructed.

DEPLETION OF INTERMOUNTAIN RANGES

I am sure that the members of this subcommittee are thoroughly familiar with the widespread depletion of our intermountain ranges through heavy livestock grazing. The livestock industry is one of the oldest in the West, and it represents an important segment of our economy. But it has never had enough basic information on management systems to be able to maintain range productivity or to undertake extensive range rehabilitation.

We need to provide this information, and we can do it by establishing a sustained research program using modern facilities and equipment so we can determine more precisely the best grazing management systems and the basic requirements and characteristics of important forage species.

PROBLEMS RESULTING FROM RANGE DEPLETION

Range depletion presents a problem not only for livestock grazing, but in the management of our wildlife. Our wildlife has become one of the most important wildland resources in the Intermountain West, and its importance is rapidly increasing.

In 1960, one-half of the big game harvest of 11 Western States and about one-fourth of that of the contiguous 48 States was on public lands. Browse is a key source of big game food and it is the principal vegetative cover in much of the area. It is necessary that we artificially restore some of the critical areas if we are to maintain even the present game herds in severe winters. If we can replace worthless shrubs with desirable browse species, it would permit greatly increased production of game.

Certain shrubs can also be extremely important in stabilizing soils on eroding rangelands and on sites disturbed during road construction, as well as for screening and general beautification of the landscape.

I understand that there has already been enough observation of variations in growth habits, palatability, disease and insect resistance, and in weather and fire tolerance to indicate that a major research program could show us the way to develop superior planting stock.

SUPPORT FOR BROWSE STUDY

I hope, therefore, that we can make a modest beginning in research on shrubs in the fiscal year 1968 through the appropriation of $150,000 for browse study at Brigham Young University.

My request has the strong support of Director John E. Phelps of the Utah State Department of Fish and Game, of Dr. Vasco M. Tanner, commissioner of the Utah State Park and Recreation Commission, and chairman of the committee on forests and conservation of the Provo Chamber of Commerce, and of the Provo City Corporation, Verl G. Dixon, mayor, Luke Clegg, city commissioner, and Ray Murdock, city commissioner.

CLARKE-MCNARY FUNDS FOR COOPERATION IN FOREST FIRE CONTROL

My second request is that Federal Clarke-McNary funds for cooperation in forest fire control for the fiscal year 1968 be increased by $3 million.

As you know, section 3 of the Clarke-McNary Act authorizes an annual Federal appropriation of not more than $20 million for use in cooperative forest fire control. In fiscal 1967, only $12,834,000 was appropriated for this purpose. The budget request for fiscal 1968 is at the same level. I feel it should be increased to at least $15,811,000.

RISING COSTS OF FIRE PREVENTION

Costs to the State for forest fire prevention increase each year. Salaries are rising and will increase even more as the new wage-and-hour-law schedules go into effect. Equipment costs more, so does general operation and maintenance.

In addition to the rising cost of protection for our forests, the values protected in them and on our watersheds have increased tremendously as our economy has expanded. Water, soil, timber, wildlife, and recreation, plus the intrinsic value of scenery and other esthetics, must all be considered in light of rapidly increasing use of the outdoors by the public.

I am told that at the end of 1965, 519 million acres of State and private land in this country qualified for protection under the Clarke-McNary program. Approximately 472 million acres of this received organized protection, but about 200 million acres was inadequately covered. Some 47 million acres had no organized protection at all.

UTAH LAND NEEDING FIRE PROTECTION

In Utah, we have over 9 million acres of State and private lands which are classified as needing fire protection, and it is estimated that 2 million of these were inadequately covered.

Utah's Federal allotment for the fiscal year 1967 was $74,730. It will not be much more than this if the fiscal year 1968 appropriation for Clarke-McNary funds is held at the same level as 1967. This amount is obviously inadequate, and I am confident that the Federal allocations to the other States are similarly inadequate.

An increase of $3 million will by no means provide the protection our eligible State and private lands require, but it would be a step in the right direction. As soon as our fiscal situation permits, we should be appropriating the full $20 million authorized each year.

SUPPORT OF ADDITIONAL FUNDS FOR WATERSHED PROTECTION AND MANAGEMENT ON PUBLIC LANDS

In conclusion, I would like to support my colleague, Senator Metcalf, in his request for additional funds in fiscal 1968 for watershed protection and management on public lands in our Western States administered by the Bureau of Land Management.

I will not take the subcommittee's time to make a case on this because I know the problem will be effectively and fully discussed by the distinguished junior Senator from Montana. But there is no question in my mind that the level of 1968 request is completely unrealistic, even in the face of the tight budget circumstances we face today.

Not only should the $900,000 cut from last year's levels of appropriation be restored, but there should be an increase over last year's appropriation if we are to keep pace with the development we must have to meet our long-term objectives. I support the Metcalf request for an additional $1.9 million, which would increase this item to $16 million from the budget request of $14.1 million.

Thank you for giving me this time to be heard.

PURPOSE OF BROWSE LABORATORY

Chairman HAYDEN. As usual, you make a very persuasive argument.

Senator MOSS. Thank you, Mr. Chairman.

Senator YOUNG. What is this?

You call it "browse"?

Senator MOSS. A "browse" laboratory, Senator; we have been working on this for some time. As our ranges have been graded, many of them overgrazed, they deterioriate to the point where they can no longer support cattle or game adequately, and they are subject to erosion.

Now, this browse laboratory is to determine how we can maintain the good type of browse on which cattle and big game feed and how we can eradicate the weeds that encroach on the range and replace them with adequate browse.

Senator YOUNG. What is browse?

Senator Moss. Well, it is herbs and shrubs. It is growth that is not grass but it is a shrub, really.

Senator Young. It makes good cattle feed?

Senator Moss. Yes, it does; and big game feed.

Senator Young. Thank you.

STATEMENT OF HON. LEE METCALF, A U.S. SENATOR FROM MONTANA

SUPPORT OF BUDGET REQUESTS FOR INTERIOR DEPARTMENT AND RELATED AGENCIES

Chairman Hayden. Senator Metcalf.

Senator Metcalf. Mr. Chairman, this is Senator Mansfield's statement and mine in support of budget requests for the Interior Department and related agencies, including the Forest Service, for fiscal 1968.

We appreciate the opportunity to state Montana's case for appropriations vital to the West.

I have filed with the committee an extended summary of some of these areas that I would like to testify, but I would like to testify on some of them and have the material I filed included in the record.

Chairman Hayden. That will be done. They will appear on the conclusion of your statement this morning.

Bureau of Land Management

Senator Metcalf. Mr. Chairman, Senator Mansfield and I support the budget request for the Bureau of Land Management. We note that the need for additional investment resulting from the comparatively recent utilization of the vast area of public domain managed by the BLM has recreation and wildlife resources which may at least equal in value the traditional primary concerns of BLM management, livestock, and timber production.

This fiscal year we will spend about 29 cents per acre on the 175 million acres of public land administered by the BLM.

Senator Mansfield and I are joined this year by Senators Bennett, Moss, Burdick, Magnuson, Hatfield, Cannon, Church, Fannin, Montoya, Jackson, McGee, McGovern, Anderson, and Morse, in urging an increase in the budget for the BLM. We believe that the care of our public lands is worth more than the price of a package of cigarettes per acre.

INCREASES REQUESTED

We are concerned in particular with 50,000 acres of headwater land in need of immediate attention. We are, therefore, urging that the line item for "soil and watershed construction" be increased by $2,050,000 over the budget request of $14,072,000, to a total of $16,122,000. In addition, Senator Mansfield and I seek an increase of $230,000 for "Range management," and $510,000 for "Construction and recreation facilities."

Before I leave this item, I should like to point out that we realize some $600 million in annual receipts from a $50,300,000 investment in these 175 million acres of public land. We suggest we reinvest more of the public profits in the public land and get on with the job this next fiscal year.

COOPERATIVE FIRE CONTROL

Senator Mansfield and I are in agreement with the suggestion of the National Association of State Foresters for an increase of $3 million in the program of cooperative fire control.

Senator Moss, who immediately preceded me also supported this proposition. We suggest an increase of $225,000 for research and development after more sophisticated fire-detection system along the lines of "fire scan," but capable of detecting smaller fires.

Mr. Chairman, I was at Smoker Jefferson in Missoula, with Vice President Humphrey, and we had an exciting view of some of this new matter of techniques of fire-control with the infra-red rays. As they fly over the fires they can look down and spot a very small flame that even an observer never found out about.

With additional research and a little money for additional research we will save millions of dollars in fire control and timber that burns as a resullt of failure to observe fires early.

WILDERNESS RESEARCH

Knowledge requires research. Wilderness research is one of the newest and most exciting developments in forestry. We are requesting an increase of $225,000 to be added to the $75,000 in the budget for the development of the wilderness research center at the University of Montana at Missoula.

I have been through the Marshall Wilderness. The trails there in that, one of the oldest wilderness systems in America, are almost like superhighways. Then campsites are developed in very small areas and we have what I call a wilderness slum.

We have thousands of acres of wilderness and a handful of trails and horses and people just use those very small trails so we need an additional concept of how we are going to use this wilderness to preserve the concept of wilderness at the same time permit people to enjoy access to them.

NATIONAL PARK SERVICE

Senator Mansfield and I were pleased with the $10,982,900 budget request of the National Park Service for Yellowstone and Glacier National Parks. Of this amount, $2,150,400 is for Glacier Park and $8,832,500 is for Yellowstone.

It is good to note that in the budget requests for Yellowstone, $2,800,400 is for road and trail construction and improvement. In light of the fact that 1972 will mark the 100th anniversary of Yellowstone Park, we can surely expect a great influx of tourists and this planning for roads and trails now will surely avoid a crash—an unnecessarily costly—program later.

We do have one requested increase for the National Park Service budget. This is for $45,000 for land acquisition and planning for the airport facility at East Glacier, Mont.

That is a facility which has been authorized, and will be constructed at some future time.

ATMOSPHERIC WATER RESEARCH

The budget includes $75,000 for atmospheric water research at the Water Resource Research Center at Bozeman. We are requesting that this line item be increased by $25,000 in order that this research can go forward at the most effective level, $100,000.

GROUND WATER RESEARCH

We also suggest that the budget request for ground water research being conducted in Montana be increased to a total of $132,500. This will be some $5,500 over last fiscal year, but will allow the project at Montana College of Mineral Science and Technology an increase of $8,000, which is needed and justified.

BUREAU OF INDIAN AFFAIRS

Senator Mansfield and I are pleased with the BIA budget request $775,000, for Indian sanitation. However, we urge that an additional $1.2 million be appropriated for Indian health, bringing this line item to a total of $13,900,000. We also request an additional $697,000 be added to the BIA budget for Indian law and order.

This amount, $550,000 would be used for construction of needed jail facilities at Blackfeet and Crow Reservations; the remainder would go to replace the tribal contributions for law and order, release these tribal funds for needed and productive projects and putting the cost where it originally belongs—with the Federal Government.

I might say, Senator Young, in the Dakotas, they do have a jail in the law-and-order programs in the Indian reservations and are paid for by the Federal Government, and we feel that in the reservations of the Blackfeet and Crow we should have the same contribution that is made in some of the other Indian reservations.

MUSEUM OF THE PLAINS INDIAN

The Museum of the Plains Indian at Browning, Mont., has had no attention in its 26-year history. We need $86,000 for improvement, repair, and maintenance. This item is not included in the budget. Senator Mansfield and I are joined by Senator Muskie in suggesting we take some needed action here.

Parenthetically, I will say that Senator Muskie came out to Montana, visited Grace Year Park and visited the Museum of the Plains Indian, and immediately said that it needs some additional appropriations, that this is one of the fine Indian programs in America.

BLACKFEET BETTERMENT

One other Indian item, small though extremely important, is a rehabilitation and betterment project at Blackfeet Reservation. We seek $90,000 not in the budget for the continuation of this work.

BUREAU OF RECLAMATION

Senator Mansfield and I are in complete agreement with the Bureau of Reclamation budget request. We support the $5 million request for continued construction at Yellowtail Dam. At Tiber Dam, the $600,000 request will be used to improve the spillway and raise the dam and dike.

Exactly $340,000 is requested for drain construction at Clark Canyon Dam. The request for $126,000 for the Helena Valley Irrigation District will be used for canal and drain system construction and improvement. Four other units at various sites in Montana request a total of $191,349.

We also support the Bureau of Reclamation request for $1,466,000 for planning in Montana and nine other States.

FISH AND WILDFIRE SERVICE

Senator Mansfield and I are most concerned over the disparity in the budget requests that exist between the cooperative fishery units and the cooperative wildlife units. We urge that the wildlife units be funded at the same level, $40,000, as are the fishery units.

We suggest that four units in immediate need, in Arizona, Montana, Maine, and Missouri, be attended to this next fiscal year.

U.L. BEND

Senator Mansfield and I were extremely pleased when, in February, the Migratory Bird Conservation Commission, of which I am a member, approved a significant addition to the waterfowl refuge system. It is the U.L. Bird Refuge in northeastern Montana. We authorized purchase of some 12,000 acres of private land. This refuge was approved after the budget was prepared.

Senator Mansfield and I propose that we begin the development of this important area in fiscal 1968. We urge the investment of $255,000 in the initial phase of development.

We hope the committee will see fit to provide this initial investment in a development that will make a significant and historic contribution to the conservation of a great natural resource, migratory waterfowl.

Over in the Dakotas, Mr. Chairman, whenever this pothole area that is the breeding ground for ducks and waterfowl in America—we have pased legislation that has provided, in lieu of taxpayments, so that in North and South Dakota now we are able to take care of the necessary purchase of those areas.

CREATION OF NEW WATER BREEDING GROUND

But this "U. L. Bend" is the first example of a can where we have created a new water breeding ground. And we are going to pump water from the dam at Fort Peck up into these thousands of acres and create a new breeding ground such as they have in the pothole area in North Dakota.

This is exhibiting an important new area for breeding ground for ducks and we were fortunate in having these two big ranches offered for sale at this time shortly after the budget was approved.

This will make a historic contribution to the waterfowl propagation.

Senator YOUNG. Would this form a big swampy area or potholes?

Senator METCALF. This will form potholes. This is a grazing area at the present time. The proposal is that we build some dikes and pump water from Missouri River using Fort Peak power and the lowlands will be potholes for breeding grounds for ducks and the higher lands will grow grass and feed for the ducks and we will have the same condition which you have in the Dakotas in your pothole country.

COOPERATION OF FISH AND WILDLIFE SERVICE

Senator YOUNG. That is a good idea. Is the Fish and Wildlife Service working with you on the plans on this?

Senator METCALF. That is right. You see, the Migratory Bird Commission, Mr. Gotschalk, has suggested we purchase this and it has been approved. As I say we had approved the purchase after the budget came in.

Once in a lifetime you get a chance to buy a couple of these big ranches and these came on the market and we have approved the purchase, but we hope that we will have some money for the development of this area.

DEVELOPMENT MONEY NEEDED

Senator BARTLETT. Will the owners hold the property for you for awhile?

Senator METCALF. No. The duck stamp fund has purchased the property. But what we want is some money now for the development of it, the pumping and the Fish and Wildlife Service to install the necessary facilities.

This is the first time, since I have been on the Commission in 7 years that we have created new breeding grounds, new areas. As you know, we drained the potholes and drained the swamps and drained the breeding grounds, but this is the first time we have been able to create new breeding grounds for ducks, especially the redheads and mallards, which are so important in our area.

Senator YOUNG. I am all for you for two reasons, first, because you have two good Senators from Montana, and second because we want you to raise some more ducks out there and maybe not quite so many in North Dakota.

Senator METCALF. I think with our "in lieu of tax bill" we did help you in North Dakota.

Senator YOUNG. Yes, this was helpful. We have many problems yet.

Senator METCALF. Yes, we have real problems but this is the first time we have expanded our breeding grounds instead of draining them.

BOZEMAN NATIONAL FISH HATCHERY

Mr. Chairman, an orderly and planned expansion of our national fish hatcheries will avoid a crash program at some future date and will maintain one of the State's major sport and tourist attractions. Senator Mansfield and I ask that the budget request for the Fish and Wildlife Service be increased to include $230,000 to develop the Bozeman National Fish Hatchery.

GEOLOGICAL SURVEY

We support the budget request for the Geological Survey of $24.5 million to continue the topographical mapping program. Of this, $1,374,000 will be used in mapping Montana. To date only 35 percent of the State is covered by published topographical maps in the 1 to 24,000 and 1 to 62,500 scales. With the approval of this budget request for next fiscal year the Geological Survey estimates that an additional 6,000 square miles of mapping will be published in 1968.

Mr. Chairman, that concludes my summary statement. I ask unanimous consent to file a more detailed and expanded statement for the record.

Chairman HAYDEN. That may be done.

INFRARED SYSTEM OF DETECTING FOREST FIRES

Senator BARTLETT. Let me make a statement and then ask you a question.

You surprised me very much by informing me about these breeding grounds for ducks in North Dakota because I had thought from what the opponents of the proposed Rampart hydroelectric project had to say all of the ducks that breed in North America came from that particular area up in Alaska, but I understand now this is not so.

Can you tell us anything more about this infrared system of detecting forest fires?

Senator METCALF. This is a a very exciting system. They have these infrared heat systems in an airplane. They fly over smoke and fog and they pinpoint the area of th fire. They can detect a very small fire. They can detect a campfire.

Senator BARTLETT. Through fog?

Senate METCALF. Through fog and clouds.

Senator BARTLETT. There is something back at the plane that indicates this?

Senator METCALF. That is right. The difference is the heat comes up through and you can see this little tiny pinpoint of a campfire. The technicians come in, develop the photographs and they find first what ground observers have not located or can't locate because of fog or because or smoke or because of adverse weather conditions.

Then the smoke jumpers fly over to put that fire out, and they put it out long before it would have been detected by other means.

RESEARCH RETURNS

That is one example of the kind of research that we are developing to eliminate some of the costly effects of forest fires. That is why Senator Mansfield and I are urging more research money, because we get hundreds and hundreds of dollars back as a result of this forest research.

INDIAN SANITATION

Senator BARTLETT. Are you and Senator Mansfield recommending a boost in the appropriation for the Division of Indian Health of $1,200,000, or $1,300,000?

Senator METCALF. Indian sanitation, yes.

Senator BARTLETT. Sanitation, what, in Montana or generally speaking?

Senator METCALF. This was in the whole Bureau of Indian Affairs budget.

Senator BARTLETT. But this money, if allowed, would be dedicated to santitation?

Senator METCALF. That is right.

Senator BARTLETT. Thank you.

Chairman HAYDEN. Thank you for your appearance.

Senator METCALF. Thank you very much.

(The supplementary statements follow:)

BUREAU OF LAND MANAGEMENT

I have carefully gone over the Bureau of Land Management budget justification for fiscal 1968. I congratulate the Bureau on a splendid presentation.

The Bureau has stated: "We believe the proposed budget provides *acceptable* levels of management and conservation progress consistent with overall administration goals and requirements."

For the most part Senator Mansfield and I support the BLM budget requests. There are a few items, however, we would like to bring to the attention of this Committee.

On March 1, I asked the Bureau of Land Management to list the needed additional work it could accomplish if funds were available. The Agency has provided me with this information. As I reviewed the budget requests and the additional data from the BLM, it became obvious that the sheet erosion which occurred in this fiscal year threatened to assume gully erosion proportions next year.

The BLM supervises some 175 million acres exclusive of Alaska and the territories. This fiscal year the budget request is for $50,273,200 to administer this public trust. Looking at it another way, it costs us about the price of a package of cigarettes—.29¢ per acre.

SOIL & WATERSHED CONSERVATION

Dr. Milton Eisenhower has estimated that from colonial days until the end of the dust bowl the average depth of America's topsoil was reduced by one half as a result of erosion, mud and water pollution.

This lost soil not only grew no crops but clogged rivers, silted-in dams and harbors, choked aquatic plants, destroyed domestic water supplies and killed enormous quantities of fish. This concerns me. I am also concerned when I see the budget of the BLM being undercut by an erosion of funds. I referred earlier to a sheet erosion which occurred this year cutting $256,210 from the appropriation of 1966. Gully erosion will surely follow if we reduce the 1967 appropriation by $700,000 as this budget requests. We do not want the third wave of conservation to miss that critical and neglected stretch of the conservation beachhead—the public lands. Too long has its tide been at ebb low. Too long has its sea been still. We say the future is today. Yesterday is gone and tomorrow is too late. The budget for 1968 needs attention now unless tomorrow's public lands be like yesterdays and todays.

ADDITIONAL FUNDS REQUISITE

For range management we need an additional $230,000. For construction of recreational facilities an additional $510,000 is required and a minimum of $2,050,000 is essential for soil and watershed conservation. It is this latter item to which I now call your attention.

In 1965 Senator Mansfield and I were joined by 11 Western Senators in a successful effort to provide an additional $3 million to begin an extensive Soil and Water Conservation program on the 175 million acres of watershed lands administered by the BLM.

The 1968 budget estimate for this item is some $1,050,000 less than the 1966 appropriation. This concerns me and it concerns 15 other Western Senators. We must not only continue this conservation undertaking. We must accelerate it.

DEPARTMENT OF INTERIOR YEARBOOK

The Interior Department's new yearbook, "The Third Wave-America's New Conservation," emphasizes the need for man to restore the balance between himself and his institutions on the one hand and his natural environment. Now, at last, the right hand wants to know—and clasp the left."

This is what we propose here by stopping the erosion in watershed funds. With authority, the Interior yearbook states "Land and water resources are inseparable, and watershed improvement programs are basic to the Nation's overall water resource development." The publication further points out BLM's future watershed management involves:

> (1) . . . such as . . . grazing and timber cutting, will be locally adopted to insure that vegetation, soil and moisture requirements are not out of balance with the erosion hazard.
>
> (2) Treatments will be started to stabilize the soil and increase its water-holding capacity.
>
> (3) Water flow originating on and passing through lands administered by BLM will be subjected to controls. Such measures include dams, water spreading and similar steps where gullying and deterioration of the soil-moisture balance are critical.

The budget revisions we urge are entirely consistent with the public land goals outlined by the Department of the Interior for the third wave of conservation.

If we were to spend $2.00 per acre developing the 175 milion acres of public land the cost would be $350 million. This $2.00 represents the average cost per month for garbage disposal. In reality, we will spend about $50,300,000 in fiscal 1967 or about .29¢ per acre. This is appalling when we realize receipts on this $50,300,000 investment in fiscal 1967 are estimated at some $600,000,000. If we were to prorate this income against the acreage of land managed it would equal $2.30 per acre income. This is after we deduct the management cost of $50 million and the payment to states of $70 million.

I propose that we reinvest some of the public profit in the public business. The budget request is for $14,072,000 for Soil and Watershed Conservation. We Senators urge that this item be increased by $2,050,000 to a total of $16,122,000.

The scope of this program is vast. If we could restore 500,000 acres per year, and this we are not doing, it would take us 100 years to restore the 50 million acres in need of immediate attention. We propose that we get on with the job.

CORRESPONDENCE

I ask to have inserted in the record of the hearing at this point the letter which I have sent to various Senators soliciting their support for additional watershed funds. The attached list of Senators have associated themselves with my request. I also ask that the reply I received from the BLM on their budget request be inserted in the record.

We also urge this Committee to consider two additional projects which are planned for Montana and could be completed if funds were made available in fiscal 1968. They are:

Beaverhead Recreation Complex in Beaverhead County	$65,000
Judith Mountain Recreation Area in Fergus County	25,000

The total additional funds needed here would amount to $90,000 and is part of the $510,000 of additional requested funds mentioned earlier for construction of recreation facilities. We urge their inclusion in the appropriation for next year.

(The Letters and List Follow)

MARCH 7, 1967.

Senator CLINTON P. ANDERSON,
Suite 4215, Senate Office Building,
Washington, D.C.

DEAR CLINT: In 1965 you joined me in a request to the Committee on Appropriations for an additional investment of $6 million to accelerate watershed protection and management on the public lands in our Western States administered by the Bureau of Land Management.

Through the help of our colleagues on the Committee, $3 million was added in conference and a total of some $15 million was made available in this fight to save the soil.

As I look at the budget for 1968, I see erosion—of the funds sought for soil and watershed conservation. The request is for $14.1 million, a reduction of some $900,000 from this year.

In sharp contrast is the statement in the budget (p. 569) that "The work of the Bureau (of Land Management) produces revenues . . . deposited in the Treasury . . . for 1966: $366 million, for 1967: $523 million (est.), for 1968: $551 million (est.)."

I propose to submit a strong statement urging more adequate funds to conserve these acres which blanket the vital watersheds of the west. It seems to me that the first step in controlling erosion is to stop the erosion of investment in this vital work.

In fiscal 1968, when the income from BLM land is estimated at $551 million, we propose a total expenditure of $49.6 million.

I hope you will join again in seeking an additional investment in watershed protection and management. I propose to ask the Committee for an additional $1.9 million, which would increase this item to $16 million from the budget request of $14.1 million.

If you wish to associate yourself with my remarks to the Committee when I appear on 21 March, please call Bill Huber on Extension 2651 by 15 March.

Very truly yours,

Affirmative response from each of following Senators who received this letter:

Senator Wallace F. Bennett
Senator Frank E. Moss
Senator Quentin M. Burdick
Senator Howard Cannon
Senator Frank Church
Senator Henry M. Jackson
Senator Gale W. McGee
Senator George McGovern
Senator Mike Mansfield
Senator Clinton P. Anderson
Senator Wayne Morse

MARCH, 7, 1967.

Senator JOSEPH M. MONTOYA,
Suite 2203, Senate Office Building,
Washington, D.C.

DEAR JOE: In 1965, 13 Western Senators, including Senator Hayden, joined in a successful effort to provide an additional $3 million to conserve the soil and water resources on the 175 million acres of watershed lands administered by the Bureau of Land Management.

The budget request for 1968 proposes to reduce the investment in watershed protection to $14.1 million from $15 million. This is proposed despite an overall increase in revenues from these lands to an estimated $551 million in 1968 from $523 million in 1967 compared to a total management outlay of $49.5 million.

Again this year a number of us are concerned with erosion—erosion of the FLM lands which blanket the headwaters of the west and erosion of investment in protection and management of these lands. We will seek to increase the investment in watershed protection to $10 million from the budget request of $14.1 million. While the $16 million total is small, amounting to less than 10 cents an acre, it will show our interest in western watersheds.

I hope you will wish to associate yourself with my proposal, which will be submitted to the Appropriations Subcommittee on Interior and Related Agencies on 21 March. If you wish to do so, please call Bill Huber of my staff on Extension 2651 on or before 15 March.

Very truly yours,

Affirmative response received from each of following Senators to whom this letter also was directed:

Senator Warren G. Magnuson
Senator Mark O. Hatfield
Senator Paul J. Fannin
Senator Joseph M. Montoya

U.S. Department of the Interior,
Bureau of Land Management,
Washington, D.C., March 9, 1967.

Hon. Lee Metcalf,
U.S. Senate,
Washington, D.C.

Dear Senator Metcalf: We are pleased to respond to your inquiry of March 1, 1967, concerning BLM's proposed budget for 1968. We believe the proposed budget provides acceptable levels of management and conservation progress consistent with over-all administration goals and requirements. Enclosed is a copy of our Budget Justifications.

The planned recreation facility construction projects included with the present 1968 budget are:

Little Rockies, 25 family units, 10,000 visitors, $39,000

Two excellent undeveloped campgrounds are located in this outstanding recreation area lying in the Little Rockies north of Zortman off U.S. Highway 191 in Phillips County. The visitors need potable water, sanitary facilities, and family campsites.

Ruby River, Recreation Complex (Ruby Reservoir), 40 family units, 50,000 visitors, $74,000

Twenty campsites and 20 picnic sites are planned on the Ruby Reservoir Lake lying about 5 miles south of Alder in Madison County. The lake and surrounding area provides excellent fishing, boating, and big game hunting for local people and tourists driving through to visit near-by historic Virginia City and Yellowstone National Park. Many people presently camp on the lake shore, and a bad sanitation problem has developed because facilities are not available.

Three other small recreation sites are planned in cooperation with the Prairie County Sportsmen's Association: One is located on Clark Reservoir near Miles City; one is a scenic overlook near Terry; and another is on the South Fork Reservoir. The needed fences, signs and picnic units will cost about $4,000.

In addition, the following recreation projects are planned for construction in Montana and could be accomplished in fiscal year 1968 if funds and manpower were made available.

Project	County	Family units	Cost
Beaverhead recreation complex	Beaverhead	35	$65,000
Judith Mountain Recreation Area	Fergus	16	25,000
Total			90,000

The above funds would add the Deadwood Gulch and Indian Cave Campsites in the Sheep Creek Area of the Beaverhead Recreation Complex. Sheep Creek, near the Montana-Idaho State line, has long been a popular fishing stream to out-of-state visitors as well as the natives of southwest Montana. The stream and its beautiful mountainous surroundings have sanitation and safety problems because of a lack of facilities for visitors.

Two small campsites are planned as part of a recreation complex in the Judith Mountains which are rich in gold mining and military history. The facilities will provide safeguards for historical values as well as visitor necessities.

Examples of benefits of soil and watershed conservation practices are described beginning on Page 22 of our 1968 Budget Justifications. Additionally, Montana recently made a study of a small watershed in the Coal Creek Resource Conservation Area near Terry. Treatment of this 8,000 acre watershed consisted of building 3 water control structures and a 400 acre water spreading system, sloping raw channel banks and planting trees and shrubs, building protective fences and working out a good grazing management system. The benefits realized from this work are estimated to be a 60% reduction in silt discharge, 20% retention of water discharge, and livestock forage is expected to increase about 30%. Recreation use potential has about doubled with increased big game and waterfowl carrying capacity and use of the reservoir for boating and other water sports.

Not all areas respond to treatment in the same way, but conservation work is undertaken when reasonable benefits can be expected.

The chart on Page 24 of the Bureau's 1963 Budget Justifications shows the planned work for 1967 and 1968 and the remaining work to be done.

With regard to over-all conservation needs, this Bureau could also accelerate work in these programs during 1968:

	Tentative 1968 budget	Additional
Title, lease and records service	$5,273,200	$60,000
Land classification and mineral examination	4,658,000	1,040,000
Range management	5,495,000	230,000
Forest management	7,646,700	------
Soil and watershed conservation	14,072,000	2,050,000
Protection	3,598,400	100,000
Cadastral survey	5,100,700	50,000
Construction recreation facilities	1,100,000	510,000

Oil Shale Development Program, $760,000

To initiate work connected with points 1 and 5 of the Secretary of Interior's 5 Point Oil Shale Development Program involving Colorado, Wyoming and Utah. There are three activities involved in this program:

The Title, Lease and Records Service Activity will be involved in processing and adjudication of adverse proceedings against apparently invalid, unpatented mining claims, hearings and appeals.

The Land Classification and Mineral Examination Activity will gather and record data on thousands of oil shale claims, examine the claims and initiate action against those claims believed to be invalid. Multiple-resource planning will also be accomplished.

The Cadastral Survey Activity will provide positive location of mining claims.

A breakdown of funds for this program is noted below in the descriptions of the involved activities:

Title, Lease & Records Service, $60,000

This amount is a portion of the funds to initiate the Secretary of Interior's 5 Point Oil Shale Development Program. See project description above.

Land Classification and Mineral Examination, $1,040,000

Identification of land and development on needed preliminary plans for recreation sites and areas having historical or archaelogical value; prompt processing of state selections and agricultural land entries. A portion of the funds to initiate the Secretary of Interior's 5 Point Oil Shale Development Program—$650,000. See project description above.

Range Management, $230,000

To accelerate wildlife habitat management by increased studies, identification of public access needs and cooperation with state wildlife agencies. The remaining management effort would be directed toward mitigation of livestock adjustments and preventing resource deterioration.

Soil & Watershed Conservation, $2,050,000

The additional funds would provide needed investments to improve critical watershed lands; reduce erosion and silt discharge; raise water quality; and assist in mitigation of livestock adjustments affecting dependent livestock industry. One hundred thousand dollars would be used in Montana.

Fire Protection, $100,000

This amount would accelerate replacement of old and worn-out equipment and increase training of seasonal fire employees. Montana would receive $10,000 of this additional amount.

Construction of Recreation Facilities, $510,000

To provide needed expansion of facilities at heavily used campgrounds and provide needed facilities at undeveloped sites now receiving heavy use. One hundred thousand dollars of this amount to provide the facilities needed in Montana as described above.

Cadastral Survey, $50,000

This amount is a portion of the funds to initiate the Secretary of Interior's 5 Point Oil Shale Development Program. See project description above.

The above amounts include the costs of the necessary administrative support.

We appreciate your continuing interest in the Bureau's programs.

Sincerely yours,

EUGENE V. ZUMWALT,
Acting Director.

FOREST SERVICE

We were disappointed that the Administration did not give more consideration to the increasing demands on our forest and related resources. For example, less than two-thirds of the 10-year program for development of the National Forests, which was sent to Congress by President Kennedy in 1961, is being implemented. The development of these public resources is very important to the economy of Montana and the other Western Public Land States.

The economy of western Montana is particularly dependent on the full development of Federal land. The tendency of use is illustrated by the fact that the timber cut from the National Forests in my State in 1961 was about 480 million board feet, and in 1966 about 800 million board feet. This increase of about two-thirds in Montana in this brief 5-year period compares with about a 45 per cent increase in timber cut from the National Forests on a national basis.

The recreation visits in Montana during the last 5-year period increased from 4.1 million to 6.0 million visitor days. Wtihin this total the use of Wilderness Areas increased from 90,000 to 312,000 visitor days or 246%.

The foregoing statistics are cited to indicate the rapidly expanding demands on our forest resources and their reflection in the creation of new jobs in my State and the influx of tourist dollars in an expanding economy.

Senator Mansfield and I approve the decision of the Administration to give greater attention to the forest road needs in this budget and, in a minor way, to other items for recreation and to timber. We strongly support this budget and would hope that this committee might see fit to add additional funds which would bring the budget closer to the National Forest Development Program.

There is a growing awareness of the need to give more attention to combating poverty in our rural areas. In many cases this poverty coincides with National Forest and other forest areas. This is so because such areas have marginal agricultural lands and the National Forest areas selected were those cutover forests most in need of development. The full development and utilization of the forest resource represents a major attack on the rural poverty situation, which relatively, for the Nation as a whole, is twice as serious in rural America.

STATE AND PRIVATE COOPERATIVE PROGRAMS

The Cooperative Forestry Programs of the Forest Service are not only of importance in Montana but nationally. These support cooperation with the State Foresters in forest fire protection, forest management and processing, and tree planting activities. The appropriation requested for cooperative fire control is $12,834,000. The National Association of State Foresters has requested that this be increased by approximately $3 million to $15,811,000. In view of the high forest fire losses in my State and throughout the Nation, we urge that this item be increased. The States can effectively use this increase to help reduce serious forest fire losses if it is appropriated.

FOREST PRODUCTS UTILIZATION RESEARCH

A small forest products utilization research unit is working in Missoula in cooperation with the University of Montana. This project is responsible for research aimed at improving the efficiency of processes of converting Rocky Mountain softwood timber into lumber, plywood and other panel products, laminated products, and the like. It is the only Forest Service project having responsibility for wood processing research in the western part of the country.

Many important problems must be solved if the western forest industries are to assume their proper place in the economy of Montana and of the Rocky Mountain area generally. Current emphasis is on developing a system of automating and speeding up the complex, expensive, and time-consuming process of drying lumber. The success of such a program, and later the development of other similar efficient processing systems for timber, will be an important factor in the technical advance of the forest products industries in the area and in making them competitive in the national scene. The project needs to be greatly strengthened in the future.

FOREST ENGINEERING RESEARCH

The engineering research project at Bozeman, Montana, is conducting studies in cooperation with Montana State University to improve the efficiency and performance of forestry operations particularly in the harvesting and transportation of forest product raw materials. Pioneer work in development of wood chip transportation by water pipelines, already well advanced, is receiving international interest. This development is expected to lead to continuous flow, low cost delivery of wood in chip form to large industrial complexes and the utilization of large volumes of lower valued timber which cannot justify high exploitation costs. Other studies underway to reduce road construction costs and to improve the efficiency of logging in steep country are component parts of total systems needed to develop rural industries in the Rocky Mountain area. Excellent progress has been made at this new project and goals of savings through cost reductions of many millions of dollars per year are in sight.

FOREST FIRE AND RECREATION RESEARCH

One of the most important Forest Service research activities at Missoula is Project Fire Scan, an exciting application of modern science to better forest fire reconnaissance. This project has developed an airborne electronic system which uses heat-sensing infra-red scanners to map fire perimeters and to provide other essential fire information rapidly and accurately. This new system can "see" fire details at night and through dense smoke when visual methods fail. The mapping phase of this system is already operational and in 1966 a Forest Service aircraft equipped with an infra-red scanner was used with great effectiveness on more than 30 large fires.

However, a second and more difficult phase is to build a similar capability to detect and pinpoint forest fires while they are still very small. Research has already determined that this can be done. The system would consist of a very sensitive scanner, which would report the fire to a control point, where a readout unit would display the information for immediate use. Forest Service scientists are now ready to move into the big and complex job of developing and testing such a complete electronic system. They have told me that a single high-flying aircraft will be able to patrol more than 4,000 square miles in an hour.

We urge that this important and rewarding research be properly funded. An increase of $225,000 would permit the Forest Service to move ahead with fire detection system development.

Last fall I had the pleasure of accompanying the Vice President on a visit to the Northern Fire Laboratory and we were privileged to see its excellent program and competent staff. Just recently the Forest Service moved another group of scientists into a new companion laboratory on the University of Montana campus where fine cooperative relations prevail.

WILDERNESS RESEARCH

The 1964 Wilderness Act broadened the responsibilities of wild-land management. Today Man and his horses are visiting the wilderness areas in increasing numbers. Man's fire control and management measures on adjacent lands are having a pronounced impact on these wilderness lands.

Research in wilderness management includes the following:

1) Fire control
2) Insect and disease control
3) Plant and animal ecology studies
4) Depth studies on wilderness visitors and their use of the wilderness areas with attention to:
   (a) Wilderness maintenance
   (b) Trail sanitation facilities compatible with wilderness
   (c) Enhancing wilderness enjoyment by visitors

One of the most critical problems in the entire field of forest recreation is the need for a sound understanding of wilderness ecology to help guide wilderness management and use. A competent research program at the $300,000 level is needed.

The 7½ million acres of National Forest Wilderness and Primitive Areas and 3 million acres of National Parks in Montana and adjacent parts of Idaho and Wyoming pose a unique and difficult challenge to the task of managing these areas to retain or restore their primeval character.

Vast forest fires, a major force in influencing plant and animal environments, have been sharply reduced in the past 40 years. Elk, once an edge-of-the plains animal, is now a major denizen in several wilderness areas. Insect pests introduced by man, such as the larch casebearer are defoliating vast stands of western larch and white pine blister rust, an introduced disease, is wiping out large and small stands of white pine, limber pine and white bark pine. And, man himself, and his animals are often deteriorating forces. Furthermore, wilderness—its flora and fauna—is not static and unguided changes will in some instances impair the wilderness values.

Research workers from several scientific disciplines have a variety of tasks which call for coordinated effort. Wilderness plants and animals change constantly due to the natural and man-caused processes, the ecological reactions. What are these changes and how may they be influenced?

How has man changed plant and animal succession by his control of fires? We need to know, too, how to effectively influence people so they do not destroy the very thing they seek. How can managers obtain better dispersal of visitors? What are the maximum levels of use in which wilderness values can be maintained? Also, what are the effects of wildlife on wilderness plant communities? What techniques can be used to bring about a balance between wildlife and their habitat? In summary, research is needed on: (1) determination of the ways in which principal plant and animal types interact (ecology), (2) manipulation of plant cover compatible with the wilderness concept, (3) methods to minimize the impacts of human use, and (4) techniques for maintaining a proper balance of wildlife with the environment.

The results of this research will have application throughout all of the Western States and study areas would include several of the States. The scientists would be located in Montana—the heart of several wilderness areas—and in close association with other Federal and University scientists who are conducting research in related ecological and resource problems.

Very little research has been done in this field. Wilderness use is increasing at a rate twice as fast as all other National Forest uses, and many critical and growing problems must be answered in the next few years.

The propossed recreation research budget increase of $75,000 for wilderness research at the Missoula, Montana, laboratory is far short of the $300,000 needed to pursue essential research. I ask that the attached materials, which will elaborate in detail this program, be inserted at this point in my statement.

We urge the Committee to give every favorable consideration to this request and further ask that $300,000 be appropriated for this continuing research.

INFORMATION OBTAINED FROM FOREST SERVICE

The following information was requested and received from the office of Edward P. Cliff, Chief, Forest Service, Department of Agriculture.

U.S. DEPARTMENT OF AGRICULTURE,
FOREST SERVICE,
Washington, D.C., February 16, 1967.

Hon. LEE METCALF,
U.S. Senate.

DEAR SENATOR METCALF: Chief Cliff has asked me to reply to your questions concerning the proposed wilderness program at Missoula, Montana. We appreciate your expression of interest and will answer your questions in the order they are asked.

1. *Question:* How much of the proposed recreation research budget increase is for wilderness research at Missoula?

Answer: Approximately $75,000.

2. *Question:* How would you spend that amount, if appropriated?

Answer: We would start some studies of the impact of visitors on the wilderness environment. This would require us to determine where how many people go—where they concentrate. This would lead to an understanding of the numbers of visitors that might be accommodated without destroying the wilderness environment. We would also make a small start on ecology studies, that is, studies of plant community development, recreation, and change.

3. *Question:* How much is needed to conduct this program of research efficiently and in a reasonable length of time?

Answer: $300,000 would be the most effective level. Very little research has been done in this field. Wilderness use, though low in total amount, is increasing at a rate twice as fast as all other National Forest uses, and many critical and growing problems must be answered in the next few years.

4. *Please elaborate.*

First of all, the 1964 Wilderness Act broadened the responsibilities of the wild-land manager. It focused attention on wilderness so there has been a noticeable increase in use. The Act describes wilderness as "an area where the earth and its community of life are untrammeled by man." Man and his horses, however, are visiting the wilderness, and man's fire control and management measures on adjacent lands have pronounced impacts on wilderness lands. Wilderness management is confronted with several difficult problems which research must answer.

These problems deal with the following:

Fire control and the possible use of prescribed fire as a tool to create conditions favorable to maintaining a wilderness environment.

The place for insect and disease control.

Studies of plant and animal ecology to determine their requirements and interrelationships, and to determine how to achieve an acceptable balancé between wildlife numbers and the wilderness environment.

And studies in depth related to wilderness visitors and their use of the wilderness in order to: (1) maintain the wilderness, (2) develop trail, sanitary, and other needed facilities compatible with wilderness, and (3) enhance the visitor's enjoyment of wilderness.

Sincerely yours,

GEORGE M. JEMISON,
Deputy Chief.

COMMENT OF DR. ARNOLD W. BOLLE, DEAN, SCHOOL OF FORESTRY, UNIVERSITY OF MONTANA

Dr. Arnold W. Bolle, Dean, School of Forestry, University of Montana, Missoula, Montana, offered the following comments regarding the proposed Research Center:

"We in the University are very anxious to have this research program started and to have it located here. Management of wilderness areas has been a very haphazard thing up to this point and we find that we have no basis for the management of these areas, to provide the type of recreation and other use which was intended. We know nothing about the ecology of these areas or what can be expected from our present management methods. Game habitat is disappearing in many of the areas as fire protection prevents the normal succession of burned over shrubby areas. Fire and insect protection is not based on wilderness use but on the general protection afforded all types of forest lands. But, most importantly, there is no basic information on which to develop systems of use by the public. At the present, the trail systems follow old routes which were constructed primarily to get people in and out. They concentrate in certain areas and there are already indications of overuse in some of these areas. Meanwhile, other areas, extensive areas, are getting little or no use.

"We believe Missoula is a natural selection to center this research because of the fact that we are in the center of millions of acres of wilderness area on the national forests, in addition to areas in Yellowstone and Glacier National Parks which are scheduled for inclusion in the wilderness system. We have capable people here and centering the research in this area would help us build a top staff of scientists who would not only develop a sound basis for wilderness management but would give us the best possible staff for the training of students.

"I have some idea of the problems in connection with asking for an increase in the budget at this time, but this is not a major increase and we are certainly going to need this knowledge in the near future. By getting started with it at this time, we'll be better prepared when the great crowds start hitting us."

CORRESPONDENCE

The following communications from the Western Montana Fish and Game Association, Montana State Planning Board, Montana Wildlife Association, Doris Milner, J. Nevin Thompson, D.D.S., John M. Dietrich, will provide the Committee with a representative sample of our mail urging support for this research program.

WESTERN MONTANA FISH AND GAME ASSOCIATION,
Missoula, Mont., February 19, 1967.

SENATOR LEE METCALF,
U.S. Senate,
Washington, D.C.

DEAR SENATOR METCALF: The Western Montana Fish and Game Association wishes to recommend that the Wilderness Research Project of the Intermountain Forest and Range Experiment station of the United States Forest Service be located at the University of Montana, Missoula, and that annual funding of $300,000 be granted.

We will appreciate any assistance you may be able to give in the matter.

Sincerely,

J. GEORGE HUMMEL,
Acting President.

MONTANA STATE PLANNING BOARD,
Helena, Mont., January 18, 1967.

Senator MIKE MANSFIELD,
Senator LEE METCALF,
Representative JAMES BATTIN,
Representative ARNOLD OLSEN.

GENTLEMEN: In February 1966 several letters were exchanged between your offices and this office relative to creation of a Wilderness Research Center. We have just received word from the University of Montana that the U.S. Forest Service is requesting that its appropriation for research include $300,000 to establish a Wilderness Research Program at the University of Montana in Missoula. If this can be brought about, it will center wilderness research for the United States at Missoula.

Because of the importance to Montana to secure this, we would greatly appreciate your efforts and support to get this facility for Montana.

Best personal regards.

Sincerely,

SAMUEL J. CHAPMAN,
Director.

MONTANA WILDLIFE FEDERATION
Missoula, Mont., January 18, 1967.

Hon. LEE METCALF,
U.S. Senate,
Washington, D.C.

DEAR LEE: The Montana Wildlife Federation believes that the proposed research program by the Intermountain Forest and Range Experiment Station at Missoula is necessary to determine what management is possible and desirable to maintain ecological balance in a wilderness environment when subjected to extensive visitation by man.

Missoula is the ideal location for such a program because it is completely surrounded and within short driving distances of five designated wilderness areas, four primitive areas, two National Parks and thousands of acres of unclassified lands which still maintain their wilderness qualities.

The wildlife habitat is presently affected by fire control and grazing of pack animals. Erosion caused by trails and the impaction of areas used for camps are further evidence of man's invasion. We feel that we can best arrive at programs which will preserve wilderness qualities through research.

We hope you will support the Department of Agriculture's request for an additional $300,000 to finance this program.

Sincerely,

DONALD ALDRICH,
President, Montana Wildlife Federation.

HAMILTON, MONT., *January 25, 1967.*

Senator MIKE MANSFIELD,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MANSFIELD: At the annual meeting of the Montana Wilderness Association held in Great Falls this month Dr. Arnold Bolle from the University School of Forestry spoke of the possibility that a research center for Wilderness Management might be located in Missoula. This is an excellent idea and we hope that you will consider the proposal and give it your support so that it may soon become a reality.

We all recognize that the establishment of Wilderness areas carries with it inherent problems of management. A center to handle these special problems staffed with people knowledgeable of and sympathetic with wilderness concepts is much to be desired. The Selway controversy which has taken up the time and effort of many people might never have become a big issue at all had there been some body of informed persons to consider this at the beginning.

Missoula would seem to be a natural location for such a center of inquiry since an excellent School of Forestry and a Forest Service regional headquarters are here, and, in addition, two great Wilderness Areas are close by.

We will certainly appreciate your attentions and support in this matter.

Warm personal regards.

Sincerely,

DORIS MILNER.

WOLF POINT, MONT.,
January 23, 1967.

DEAR SIR: Recently I attended the annual Meeting of the Montana Wilderness Association, at which was discussed the possibility of establishing a Wilderness Research Center in Missoula.

I fully endorse such a proposal and recommend that it be looked on favorably by Congress. If we are to fully realize the vast potential of our Wilderness Areas, both recreational and scientific, proper studies must be conducted by qualified personnel.

I respectfully request your help in this matter.

Sincerely,

J. NEVIN THOMPSON, D.D.S.

CROWLEY, KILBOURNE, HAUGHEY, HANSON & GALLAGHER,
Billings, Mont., January 27, 1967.

Re: Wilderness Research Program.

Hon. LEE METCALF,
U.S. Senate, Senate Office Building,
Washington, D.C.

DEAR LEE: Thanks very much for your prompt reply to my letter of January 17 concerning the above matter.

This past Monday and Tuesday the Board of Trustees of the University of Montana Endowment Foundation met in Missoula, and this matter was discussed. No doubt you have been "memorialized" by each of the other trustees and officers.

In any event, it does appear as though this has some real possibilities, and I will be interested to hear of the outcome.

Again, thanks for your courteous reply.

Cordially yours,

JOHN M. DIETRICH, Jr.

NATIONAL PARK SERVICE

Senator Mansfield and I were very pleased with the budget request of the National Park Service. We note that $10,982,900 is included for Glacier and Yellowstone National Parks. Of this amount, $2,150,400 is for Glacier, an increase of $223,700 over fiscal 1967 and $8,832,500 is the requested appropriation for Yellowstone for fiscal 1968, an increase of $2,230,550.

I point out that $2,800,400 of the Yellowstone Park request is for Roads and Trail Construction and Improvement. This item is very necessary. As you know, in 1972 the National Park Service will observe its 100th anniversary. It will also mark the centennial of Yellowstone National Park, being the first acquisition of the National Park Service. During that year we can expect a heavier tourist influx. It is good planning on the part of the Park Service to look to the future and not be caught short with a crash program as we approach 1972.

AIRPORT FUNDS—EAST GLACIER

Nationwide we see a steady increase in air travel for business as well as recreation. The value of an airport to serve tourists and those with business at Glacier National Park is no longer debatable. The question now is when?

We all know there will be an airport at East Glacier. The Federal Aviation Agency has included the site in its National Airport Plan. The National Park Service has made preliminary studies of the needs and requirements. The Montana Aeronautics Commission in cooperation with Federal and local interests has studied the problem. In short, the time for study has passed. Action is now needed. The action needed is one that will benefit all parts of the nation and is in line with goals of maximum effort at minimum expenditure of dollars.

Senator Mansfield and I have submitted to you, Mr. Chairman, a letter dated 7 March 1967, asking that $45,000 be added to the Department of Interior budget in order to complete essential land acquisition and planning. With the addition of these funds to the construction budget of Glacier National Park, action can be taken that will not delay the final construction of this needed transportation facility.

We realize that the passage of Public Law 89–763 came so late in the last session that it was not possible for the Administration to include this item in the budget. Thus, we feel that all concerned want to take advantage of the savings that will result by initiating this action now while the land is available and before the passage of time results in the inevitable increase in costs.

With the site acquisition funds here requested, we can all be sure that citizens from throughout the land and from all parts of the world will be able to visit this great natural resource via air travel.

ATMOSPHERIC WATER RESEARCH

The Atmospheric Water Research Program of the Department of the Interior is one part of the field of weather modification that is receiving increased attention and expanding financial support by the Congress. The engineering and scientific research effort initiated in fiscal year 1962 with broad Congressional support seeks to determine if by weather modification we can increase the flow into reservoirs administered by the Bureau of Reclamation. The program began with an appropriation of $100,000 to the Bureau in 1962. Congress appropriated $3,750,000 for these research activities this year, when the Weather Research Center at Montana State University at Bozeman received $13,000.

President Johnson recently said of weather modification that "substantial progress has been made . . . but the pace has been slow. To advance the rate of progress, an effort of larger scope and direction is needed both in direct basic research and in developing means to put the knowledge to work." In this same regard, Secretary of the Interior Udall commented recently, "The strength of our Nation in a competitive world will in large part be determined by our ability to manage our water resources including precipitation. This step in water management is a large one . . . the Nation has shown through other scientific programs that it is willing to pay the price to cross new frontiers." Senator Mansfield and I agree that this scientific and engineering research program is indeed a pioneering effort to cross this frontier. When we cross it the material benefits can exceed the investment a thousand fold.

WATER RESOURCE RESEARCH CENTER, MONTANA STATE UNIVERSITY

Montana began moving into weather modification research in 1964 with the formation of the Water Resource Research Center at MSU. Dr. Arlin Super, a meteorologist was added to the faculty in July 1965. He was convinced that the Bozeman area was a fine natural laboratory for weather modification reresearch and he began the development of a research program. Dr. Vincent Schaeffer of the State University of New York, one of the pioneers in cloud seeding, was brought into the Center as a consultant. Dr. Schaeffer confirmed Super's view that the Bozeman area has outstanding characteristics for weather modification research.

In 1966 the Bureau of Reclamation awarded the Center a $24,000 contract to develop a full scale research program to begin in fiscal year 1967. During this initial year of the program, the appropriation was $13,000. Next year the need is for $100,000. The budget includes $75,000 for this item. We will ask that this part of the appropriation be increased by $25,000.

The major emphasis of the research at the Bozeman Center has to do with the downwind effects of cloud seeding. This effort will not duplicate weather modification research in other areas. Some of the instruments required to measure precipitation and establish the natural pattern before cloud seeding commences are already in place. The study will also include an investigation of the effects of weather modification on precipitation patterns and amounts with a study of the effects on the ecology of the research area. This is the only program concerned with the ecological questions which are increasing in the scientific community. Research on the downwind effects of weather modification should provide answers to questions asked when a cloud seeding program comes into an area.

ANTICIPATED PILOT PROJECTS

Montana is one of 17 research and experimental centers in 11 states. The Bureau of Reclamation plans to have 50 such programs operating in the near future at an annual cost averaging $350,000 per project. These 50 "Experimental Projects" cover areas of 100 to 1,000 square miles, last from 3 to 6 years and each cost $1,660,000 per year on the average. These pilot projects will consider the problems of scientific regions.

Montana is an excellent location for such a Pilot Project being in the middle of the largest mountain range area in the United States. By 1980 this area, the Upper Missouri watershed, is expected to have a water supply deficiency and will require a high annual development cost of $4.00 per acre foot or more. Cloud seeding may well be a partial answer to this problem. We are of the opinion that the research program envisioned at the Bozeman Center would be productive with an investment of $175,000 per year and most effective at some $325,000 per year.

Montana State University Weather Resource Research Center is providing concrete evidence of its commitment to research in the area of weather modification by an orderly buildup of staff. In addition to Dr. Super they have added three other scientists to the faculty and are contemplating the addition of another next year.

LETTER OF ROY E. HUFFMAN, VICE PRESIDENT FOR RESEARCH, MONTANA STATE UNIVERSITY

At this point I would like inserted in the record a letter from Roy E. Huffman, Vice President for Research at Montana State University, supporting this request.

MONTANA STATE UNIVERSITY,
Bozeman, Mont., March 3, 1967.

Hon. LEE METCALF,
Senate Office Building,
Washington, D.C.

DEAR SENATOR METCALF: This is to advise you that we have signed a contract with the Bureau of Reclamation for a program of weather modification research during the 1967, 1968 and 1969 fiscal years. Details of this research program were outlined for you in my letter of February 16, 1967.

The contract peovides for funding as follows:

Fiscal year 1967	$13,000
Fiscal year 1968	100,000
Fiscal year 1969	175,000

The contract contains a contingency clause which makes the funding for FY 1968 and FY 1969 dependent upon appropriations for those years.

We believe this research will produce information of great importance to Montana and to the Nation.

Sincerely yours,

ROY E. HUFFMAN,
Vice President for Research.

Senator Mansfield and I feel there is ample justification for the request for $100,000 for fiscal year 1968. We hope the Committee will agree.

GROUND WATER RESEARCH AT MONTANA TECH

The proposed budget increase of $790,000 for cooperative water programs in fiscal year 1968 are justified. Last fiscal year the appropriation for cooperative water research programs in Montana was $127,000. With approval of the budget request this amount will be increased by $5,500 for fiscal 1968.

The fiscal 1968 requests for the four cooperative programs in Montana include:

Montana College of Mineral Science and Technology, $49,000; $8,000 increase.

Montana Fish and Game Commission, 20,000; 2,500 decrease.

Montana State Water Conservation Commission, 42,000; same as fiscal year 1967.

Montana State University, Bozeman, Mont., 21,500; same as fiscal year 1967.

The cooperative program at Montana College of Mineral Science and Technology is requesting an increase of $8,000 while the water program of the Montana Fish and Game Commission would be cut $2,500 from the fiscal 1967 appropriation. This means that the total requested increase for Montana in fiscal 1968 is $5,500.

LETTER OF DR. EDWIN G. KOCH, PRESIDENT, MONTANA COLLEGE OF MINERAL SCIENCE AND TECHNOLOGY

A letter from Dr. Edwin G. Koch, President of Montana College of Mineral Science and Technology, which I ask to be inserted at this point in the record, will further clarify this request.

MONTANA COLLEGE OF MINERAL SCIENCE AND TECHNOLOGY,
Butte, Mont., February 21, 1967.

Mr. ARNOLD OLSEN,
House of Representatives,
Washington, D.C.

DEAR ARNOLD: Just today I have received a letter from Dr. Charles W. Lane, District Chief of the Geological Survey stationed at Helena, Montana, in which he relates that the estimation of state offerings for cooperative water programs for the fiscal year 1968 are considerably above the matching funds contemplated by the President's budget. Of course, these increased state offerings for fiscal 1968 contain a considerable amount of expansion over previous cooperative programs. My concern in this regard is that our rather limited state program in cooperation with the U.S.G.S. would be jeopardized.

For example, our Montana Bureau of Mines and Geology located here at Montana Tech has been involved with the U.S.G.S. in a 50–50 cooperative project on ground water research in Montana for the past several years. It involves very few people and very little money but is essential to our continued progress in the development of the ground water resources of Montana. We try to maintain about three ground water projects in the state each year. For the coming biennium we have budgeted $49,500 for the first year and $51,500 for the second year. The U.S.G.S. would contribute like amounts to maintain this program for the next two years. I should not like to see this minimum ground water research program in Montana curtailed in favor of expanded state programs in other states.

I understand that the subcommittee on the Department of Interior and related agencies of the House Committee on Appropriations is to begin its hearings on Interior agencies' budget requests on March 2. Anything which you or other members of the Montana Delegation may be able to do in our behalf will be greatly appreciated.

Sincerely,

EDWIN G. KOCH, *President.*

INDIAN SANITATION—P.L. 86–121

The responsibility for the health care of American Indians and Alaska Natives was transferred to the U.S. Public Health Service from the Bureau of Indian Affairs on July 1, 1955, by authority of Public Law 568, 83rd Congress. The Surgeon General established the Division of Indian Health within the Bureau of Medical Services to administer the program. Since enactment of the original transfer legislation, Congress amended the Act by Public Law 86–121. This law authorized the Surgeon General to provide environmental sanitation facilities for Indian homes, communities and lands.

The Public Health Service has endeavored to carry out its responsibilities in this program area in a way which includes maximum tribal participation. As with other activities of the Indian Health Program, the goal is to raise the health of the American Indian and Alaska Native to the highest possible level.

SANITATION FACILITIES CONSTRUCTION ACTIVITIES

The lack of safe water and the inadequacy or absence of human waste and refuse disposal facilities are responsible for the spread of microorganisms causing diarrheas and dysenteries which plague the Indian people and contribute to the rapid and widespread movement of communicable diseases. Real advancement in environmental health services began only in 1959 with the passage of Public Law 86–121, the Sanitation Facilities Construction Act. In addition to construction of needed sanitary facilities for Indians and the training of people to use and maintain them, the environmental health activities of the Division include motivating and educating Indians to desire a better environment. Each construction project is undertaken cooperatively between the Public Health Service and the respective tribe or group in all facets of planning and implementation. We believe many Indians have been motivated by sanitation facilities construction projects to make improvements to their homes at their own expense, particularly housing additions for bathrooms. In terms of labor, money or materials, the Indians themselves have contributed about 30 per cent of project costs.

Since 1961 the Federal government has expended a total of some $36 million in construction of Indian sanitation facilities. These facilities are now benefiting 36,600 Indian families. It is estimated that this represents a completion of about 38% of the needed facilities. We still need to improve sanitation facilities for an estimated 69,000 Indian families. Bear in mind this 69,000 figure represents only the number of identified needs. Undoubtedly, there are many needy families who have been overlooked in the surveys. We would mention, however, that in the near future this appropriation should be brought up to the $16,000,000 level in order that this project can be completed in the minimal time 5–7 years.

Since 1960 the Division of Indian Health has completed a total of 42 sanitation facility projects for Indians in Montana. A total of 3,371 homes have been thus served.

The appropriation for Sanitation facilities for Montana Indians under P.L. 86–121 for fiscal 1968 totals $775,000 to be used as follows:

Flathead Reservation, Camas-Hot Springs project in Sanders County	$150, 000
Fort Peck Reservation, Brockton-Riverside project in Roosevelt County	92, 000
Frazier Wyota project in Valley County	125, 000
Crow Reservation, Crow Agency phase No. 2 in Big Horn County	220, 000
Blackfeet Reservation, Seville-Badger-Fisher project Pondera-Glacier counties	188, 000

With the exception of the Crow Agency project, which is a sewer project, the others are all for individual water and waste facilities.

Public Health Service—Division of Indian Health

HOSPITAL HEALTH SERVICES

The Division of Indian Health will have in operation in Fiscal Year 1968, 51 hospitals and outpatient clinics with an employee/patient ratio slightly higher than in fiscal year 1967. A practical nurse training program associated with Public Health Service Indian hospitals; maintenance of all Indian health facilities consisting of hospitals, health centers, stations, school clinics and staff quarters; increased training of professional and subprofessional personnel and consultant services.

Admissions of Indians and Alaska Natives to hospitals are now 92,000 per year compared with 50,000 in 1955 when the health program was transferred to the Public Health Service. Outpatient visits have more than doubled from 550,000 to 1,300,000 and dental services provided have almost tripled from 220,000 to 571,000 per year.

There are at present 385,000 Indians and Alaska Natives served by the Division of Indian Health. The 1968 allowance by the Bureau of the Budget for this activity is $46,770,000.

INDIAN HEALTH SERVICE IN MONTANA

In Montana the Public Health Department, Division of Indian Health, is serving some 19,950 Indian people. The total number of Public Health Service hospitals and outpatient clinics in operation in the state is 32, and dental services provided during the last year were 26,689. Public Health Service hospital admissions for fiscal year 1966 in Montana were 3,332. Outpatient visits to Public Health Service hospital facilities totaled 46,904; Indian Health Centers had 41,416 visits and Public Health Service hospital satellite field clinics in Montana had a total of 16,652 outpatient visits.

Field Health Services

The fiscal year 1968 Bureau of the Budget allowance of $18,951,000 provides for 273 new field health positions which are critically needed in the program to permit an increased attack on health problems through a preventive medical care program.

The need for this increased request of $18,951,000 for field health activities is evidenced by the fact that infant deaths among Indians are 1.4 times higher than all races in the U.S. Deaths from tuberculosis and gastroenteritis are 5 times higher and incidents of tuberculosis are 7 times higher than for all races in the U.S.

CONTRACT MEDICAL SERVICES

The fiscal 1968 budget estimates an expenditure of $13,906,000 for contract medical services. This figure in our considered judgment is too low. It is some $200,000 short of the 1967 appropriation and realistically this service cost has not decreased but, in fact, increased 20% to 25% as a result of overall medical cost increases and Medicare.

I was informed by the Public Health Service, Division of Indian Affairs, that this decrease came about because it was felt by some that there would be a decrease in Indian Contract Service, since the implementation of Titles 18 and 19 of the Medicare Act, which provides medical services for those 65 and over and indigent peoples respectively. This expected decrease has to date not occurred and is not likely to. I must point out that to date 10 states have not implemented Title 19 and in addition 43% of the Indian population reside in these 10 states. Further, it must be remembered that the Indian is traditionally reluctant in accepting new programs. We know, too, that the great travel distances and or the lack of transportation and, in many cases, the immediacy of medical needs all contribute to the fact that the Indian has not taken full advantage of Titles 18 and 19 of the Medicare Act.

In Montana, contract medical services in fiscal year 1966 totaled $1,362,351. This amount was increased by $154,849 totaling $1,517,200 in 1967. Now we see that the budget estimates for 1968 for these services in Montana have been decreased by $1,200. As we have already noted this amount is far short of meeting our present requirements to say nothing of the consideration for normal growth and service cost increases.

In brief, as a result of the significant increase in medical service costs and the apparent fact that some ten states have not implemented Title 19 (medical aid for indigent families) it would be necessary to increase the budget estimates of $13.906.000 for 1968 by a minimum of $1.2 million in order to preclude a severe reduction in the provision for contract medical service for fiscal 1968.

Senator Mansfield and I vigorously support this requested increase.

INDIAN LAW AND ORDER

When I appeared before this Committee in 1966, I outlined Senator Mansfield's and my position that the Federal government has the responsibility and should pay for Law and Order on our Indian reservations. While this Committee agreed, the other body did not.

We are again this year requesting an increase in appropriation for the Bureau of Indian Affairs to take part in joint Federal-tribal payment for law and order on the reservations.

We are of the opinion that the provision of law and order on Indian reservations is historically the responsibility of the Federal government. Originally this was our policy. Then some 18 or 19 years ago, because of post-war appropriations cutbacks the tribes were asked to pick up part of the cost on a temporary basis. We feel that it is time to re-examine an 18-year-old temporary policy.

It is well known that on some reservations the entire cost of law and order is paid for by the Federal government. On many others the Federal government pays practically all of this cost. At others, a great portion of the cost comes from tribal funds.

For example, at Fort Berthold and Fort Totten in North Dakota and at Sisseton Reservation in South Dakota, the BIA bears the entire cost of maintaining law and order. At Pierre Agency in South Dakota, which administers Brule and Crow Creek Reservations, the Bureau provides $92,000 while the tribe contributes the court income of some $5,000. The Bureau pays $105,000 for law and order at Rosebud Reservation in South Dakota and the tribe contributes court income of $3,000. At Standing Rock Reservation, the Bureau spends $124,000 annually and the tribal court income amounts to $9,700. In Idaho the North Idaho Agency receives $625,000 in BIA funds for law and order and the tribe contributes some $5,500 of court income.

We do not wish to imply that the tribal councils who are willing and able to continue the joint Federal-tribal participation financing program should be discouraged from doing so. But we do point out that the Indian Tribal Councils of Montana could well use their limited funds for more productive and dynamic programs.

At present the only reservation in Montana receiving total support from BIA for law and order is at Rocky Boy, one of the most blighted pockets of poverty in the nation. The tribal contributions at the other Montana reservations total $207,000 a year as follows:

Blackfeet	$45, 000
Crow	62, 000
Flathead	30, 000
Fort Belknap	2, 000
Fort Peck	35, 000
Northern Cheyenne	33, 000

Another item of concern which has come to our attention and which has a place in the whole scheme of Indian law and order is the need of new incarceration facilities at two Montana reservations. The Blackfeet reservation needs a jail to accommodate 30 inmates and at Crow reservation the need is for a facility to handle 40. In addition, each of these facilities would need quarters for a jailer, a court room and a two-car garage.

The Bureau of Indian Affairs estimates that the total construction of these structures at $550,000 which is not included in the budget estimates.

Senator Mansfield and I ask that the BIA appropriation be increased by $697,000 to provide for the cost of Indian law and order at six Montana reservations and to provide funds for construction of badly needed jails at Blackfeet and Crow reservations.

TELEGRAM OF EDISON REAL BIRD, CHAIRMAN, CROW TRIBUNAL COUNCIL

I ask that the following telegram from Edison Real Bird, Chairman, Crow Tribal Council, in behalf of increased appropriations to support this joint Federal-tribal payment for law and order on our Indian reservations.

HARDIN, MONT., *March 13, 1967.*

Hon. LEE METCALF,
U.S. Senate,
Washington, D.C.

MY DEAR SENATOR METCALF: During our discussion wtih Messrs. Reinemer and Huber in your office Friday, March 10, we talked about the cost of law and order on the reservation, as we now pay at least $62,360 annual out of our budget for our law and order activities this we are unable to continue. We feel that if this money could be appropriated for law and order on the Crow Reservation, then this money could go for other much needed development projects that would be beneficial to the Crow people for their social and economic development. I would also like by this letter to request that you place a line item in the Bureau of Indian Affairs appropriation for a new jail and facilities at Crow agency. The Crow tribe set aside $100,000 under resolution No. 62–12 passed and adopted February 2, 1962. We would propose that $100,000 be used in the appropriaiton act as part of the tribes contribution to getting a full law and order facility here at Crow agency.

EDISON REAL BIRD,
Chairman, Crow Tribal Council.

BLACKFOOT INDIAN BETTERMENT PROJECT

This Committee is aware that the budget for fiscal year 1968 did not include an appropriation for the continuation of rehabilitation and betterment work on the Blackfeet Irrigation District. Mr. C. P. Corke, Assistant Commissioner, Division of Economic Development, Bureau of Indian Affairs, has appeared before this Committee and testified that if this project is to be continued, an increase appropriation of $90,000 is required. He also stated that if this project is not continued the 12 present employees could hope for, at the most, from 2 to 6 months of work during the next 12 months. Normally, they are employed for the entire year. Senator Mansfield and I feel there is ample justification for the continuation of this project and ask that an additional $90,000 be included in the Interior appropriation. Of this amount, $75,000 would be expended for rehabilitation and construction of structures and $15,000 for canal extension.

I ask that the letter of Senator Mansfield to the Chairman of the Committee be included at this point in the record. (See page 787.)

MUSEUM OF THE PLAINS INDIAN

Another item we wish to bring to the attention of the Committee concerns the plight of the Plains Indian Museum at Browning, Montana. Only recently this museum was placed under the jurisdiction of the Indian Arts and Crafts Board. For many years the Museum of the Plains Indian has operated on a small and limited budget of some $24,000 per year.

In our letter to the Chairman of this Committee, Senator Mansfield and I detail the history and needs of the Museum. Our concern is that the budget requests for fiscal 1968 do not include any additional funds for the Museum, despite the fact that there has been no conservation work on the exhibits in this Museum's 26-year history.

We think it imperative that at least an additional appropriation of $86,000 be approved in order that the Museum can be renovated and the exhibits improved and added to.

LETTER OF SENATOR MUSKIE

I ask that the letter of Senator Muskie, attesting to the status of the Museum, be inserted in the record at this point followed by the joint letter from Senator Mansfield and me to the Chairman.

U.S. SENATE,
COMMITTEE ON PUBLIC WORKS,
February 27, 1967.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Last year, during a visit to Montana, I had the opportunity to tour the Museum of the Plains Indians in Browning. I was quite impressed by the quality of the exhibits in the Museum, but was equally distressed by the apparent lack of funds for proper maintenance.

This Museum, it seems to me, is unique in that it is one of the few historical representations of an important part of American history. To allow the Museum and its excellent exhibits and artifacts to deteriorate would be a serious and irreparable mistake.

I have discussed this subject with Senators Mansfield and Metcalf and they have informed me that full use of facilities, maximum exposure of the collections and adequate maintenance could be achieved through minimal expenditure. Because they have detailed those sums to you in separate correspondence, I will not repeat the costs.

I would, however, like to be on record as in complete support of adequately maintaining and expanding this facility and its unique art works.

Thank you for your consideration.

Sincerely,

EDMUND S. MUSKIE,
U.S. Senator.

FISH & WILDLIFE SERVICE

When I testified in 1964 and in 1965, I called the Committee's attention to the need for a small addition to the funds for the 31 year-old cooperative wildlife research unit program. Again last year I appeared before this committee and explained in some detail the need for additional funds for Cooperative Wildlife Research and the disparity which exists between this program and Cooperative Fishery Research. The Senate Committee agreed with the position held then as now by Senator Mansfield and myself. The proposal was shelved in the conference committee with the directive that the Interior Department would be asked to report on the appropriation problem and to request equal funding for the Cooperative Wildlife and Fishery Research Units in fiscal 1968. This has not been done. I again appear before this Committee to ask that you will again respond favorably to our request and hoping that the persuasion of the Committee will be used in presenting this needed appropriation matter to the other body.

The Cooperative Wildlife Research program, which is administered through the Bureau of Sport Fisheries and Wildlife, Division of Wildlife Research is a widely respected program which was begun in 1935. There now are 18 units located at land grant universities and colleges. Each unit receives financial support from the state fish and wildlife agency, the land-grant university, the Bureau of Sport Fisheries and Wildlife, and the Wildlife Management Institute.

I will not attempt to detail the progress that has been made under the Unit program. Its history and its successes are well known. The problem that has developed, briefly stated is, that the state support has increased from the original minimum of $12,000 per unit to the present average of about $40,000 a year. This over-shadows the Federal Government's contribution, mainly the salary and travel expenses of the unit leader, a federal employee, which is about $15,000 per unit per year now.

In contrast, the parallel Cooperative Fishery Research Unit program, begun in 1961 and patterned after the highly successful wildlife units, is receiving $40,000 yearly in federal financial support for each of the 20 units.

Many of the fishery units are located at the same universities and colleges as the wildlife units, and this tremendous disparity in federal support is obvious. I might say parenthetically that the reason for this different level of support is lost upon the professional fish and wildlife community. This shortage of funds retards the graduate-level education and research mission of the unit program. Without assistance, the unit leader is forced to devote much of his time to routine administrative details.

Increased federal financial support for the wildlife units was recommended by the International Association of Game, Fish and Conservation Commissioners in annual meeting at Portland, Oregon, in 1965. Last year I asked that the resolution be included in the record of the hearings. The resolution concludes:

"Now, therefore, be it resolved that the International Association of Game, Fish, and Conservation Commissioners urges the U.S. Fish and Wildlife Service to include in its budget request adequate federal financing for the Wildlife Research Units, so as to provide staffing and operating funds equal to those of the Fishery Research Units."

Senator Mansfield and I are most desirous that positive action on this matter begin in fiscal 1968. We believe it is obvious that action here is long overdue. We suggest that the funding begin on a gradual basis.

The Department has cited four units where the workload is especially acute—in Arizona, Montana, Maine and Missouri. We propose that these four units be funded first raising the annual federal contribution for each to $40.000, the identical amount now being obtained by the Cooperative Fishery units.

U L Bend National Wildlife Refuge

Mr. Chairman, as you know, I am a member of the Migratory Bird Conservation Commission, which passes on proposals by the Chairman, the Secretary of the Interior, for additions to the waterfowl refuges within our system of national wildlife refuges. The other members of the Commission are the Secretaries of Agriculture and Commerce, Senator Hruska and Congressmen Karsten and Conte.

At our most recent meeting in February, we approved a significant addition to the waterfowl refuge system. It is the U L Bend Refuge in northeastern Montana. Using funds from the sale of duck stamps and the advance authorized by Congress under Public Law 87-383, we authorized purchase of some 12,000 acres of private land. Most of the rest of the 57,000-acre refuge was already in Federal ownership.

This area has a tremendous potential for development of high quality waterfowl production habitat. It is unique in that it is not an area which must be reclaimed or restored for waterfowl use. It can easily be converted from low quality range land to high quality waterfowl habitat which will make a significant addition to the Central Flyway.

The Bureau of Sport Fisheries and Wildlife plans to develop some 17,000 acres of marsh habitat. Another 11,000 acres will be improved and irrigated for production of supplementary food and cover. Water for the development will come from the Missouri River, Fort Peck Reservoir and by impoundment of natural runoff.

This refuge was authorized long after the budget was prepared.

Senator Mansfield and I propose that we begin the development of this important area in fiscal 1968. We propose the investment of $255,000 in the initial phase of development. Of this, $90,000 would be for topographic surveys, planning and design, $40,000 for an access road to the pumping station and $125,000 for patrol roads and trails, dikes and water controls for impoundments.

We hope the Committee will see fit to provide this initial investment in a development that will make a significant and historic contribution to the conservation of a great natural resource, migratory waterfowl.

NATIONAL FISH HATCHERY—BOZEMAN, MONT.

Mr. Chairman, I was pleased to receive your assurance that a letter jointly signed by Senator Mansfield and me, urging the increased appropriation of $230,000 to develop the National Fish Hatchery at Bozeman, will be included in the record of this hearing (see page 1324).

The specific objectives of this center will be to develop and demonstrate fish cultural methods, systems and facilities for producing quality fish. The facility will also function as an intermediary in applying research information to cold water fish husbandry methods and relating newly developed procedures to the fish culture industry. The fish culture development center is an interesting concept, one which has our wholehearted endorsement and we ask that this Committee endorse this program by providing the necessary money which will permit the application of this testing program.

TOPOGRAPHIC MAPPING FOR MONTANA

The Topographic Division of the U.S. Geological Survey is engaged in an extensive long-range program to provide general-purpose topographic maps of appropriate scale and accuracy for the entire country.

The program began in about 1882 when a general plan was adopted for the production of a standard series of topographic maps. A map series is a family of maps conforming generally to the same specifications or having some common characteristic such as scale. The plan of 1882 has been expanded to meet the needs of a growing nation, and today the National Topographic Program includes several series of topographic maps.

The majority of the mapping to be accomplished in Montana in fiscal year 1968 will be in areas that have never been mapped at either the 1:62,500 (1 inch= approximately 1 mile) or the more detailed 1:24,000 scale (1 inch=2,000 feet). About 34 per cent of Montana has mapping at these scales, 14 per cent at the 1:24,000 scale. Current programs include about 20 per cent of the State.

These maps are necessary for the effective knowledge and evaluation of the Nation's natural resources. Topographic maps are essential to many kinds of work, such as geologic and other mapping activities, development of major dams and reservoirs, communication and highway systems, and the study and application of flood control, soil conservation, and reforestation.

For the sportsman, the hunter or fisherman, topographic maps are a must. The topographic map tells him how many hills he has to climb and how high they are, what rivers he must cross, where there are fire clearings, or low wet marshes. Instead of walking "blind" into strange country, he can plan his hunting or fishing trips thoroughly beforehand.

For the period from July 1, 1967–July 1, 1968, the Geological Survey has proposed a budget of $24.5 million for topographic mapping programs. Approximately $1,374,000 of this amount will be used to advance topographic mapping in Montana.

Senator Mansfield and I are in complete agreement with the budget request of the Geological Survey. We hope the Committee will accept their request in order that we can continue this needed and useful project in Montana and elsewhere.

INCREASES REQUESTED BY SENATORS MANSFIELD AND METCALF

Mansfield-Metcalf requested increases for fiscal 1968

I. Bureau of Land Management:	
A. Soil and watershed conservation increase	$2,050,000
B. Range management increase	230,000
C. Construction and recreation increase	510,000
II. Forest Service:	
A. State and private cooperative programs increase	3,000,000
B. Forest fire and recreation research increase	225,000
C. Wilderness research increase	225,000
III. National Park Service:	
A. Construction and planning increase	45,000
IV. Water research:	
A. Atmospheric water research increase	25,000
B. Ground water research increase	5,500
V. Bureau of Indian Affairs:	
A. Indian health increase	1,200,000
B. Indian law-and-order increase	697,000
C. Museum of Plains Indian increase	86,000
D. Blackfeet betterment increase	90,000
VI. Bureau of Reclamation: Approve budget requests	----------
VII. Fish and Wildlife Service:	
A. Cooperative wildlife research units increase approximately $100,000 to fund 4 units at $40,000 level	----------
B. U L Bend increase	225,000
C. Bozeman National Fish Hatchery increase	230,000
VIII. Geological Survey: Approve budget requests	----------

SUBMISSION OF STATEMENTS AND LETTERS

Chairman HAYDEN. A number of Senators who are unable to be here, as they had planned, have statements which they asked to have printed. These statements as well as a number of letters sent to the committee, will be included at this point in the records.

(The statements and letters follow:)

STATEMENT OF SENATORS ANDERSON AND MONTOYA

NAVAJO IRRIGATION PROJECT

Mr. Chairman, we are pleased to have this opportunity to submit a statement to your Committee in support of funds for various activities under the Bureau of Indian Affairs.

We are concerned that work on the Navajo Irrigation Project continues to lag, and is nearly three years behind schedule, due to inadequate funds for construction purposes.

We support the request for $5.3 million new funds for the project for fiscal year 1968, as a minimum. However, we feel that this amount is entirely unrealistic and should be increased. At this rate of appropriation construction will lag even further and it will be many years more than was anticipated before the Indians will realize any benefit from the project.

This Committee needs no reminder of the necessity for improvement of the economic conditions on the Navajo Reservation. The Chairman and members of the Committee in years past have tried to be helpful in solving some of the Navajo problems, and for this help we are grateful.

Our investment is a substantial one—in time, in money and in resources. We hope these funds can be provided so this project can begin working for the economy of this area in a positive sense.

ALBUQUERQUE INDIAN SCHOOL

This Committee is well aware of the long, hard struggle that we have had in obtaining approval of the proposed new Indian School in Albuquerque. You will recall that a number of the buildings at the present site were condemned by engineers several years ago. It was recommended that some of these buildings be abandoned beginning last year. The situation there is critical and we have delayed far too long now in replacing this plant. Your Committee has been most helpful with this problem, and last year you provided $700,000 planning money. The planning work is done, drawings completed, and the BIA has requested $9,000,000 construction funds for fiscal year 1968. If these funds are approved, we are assured that work can get under way early in the next fiscal year.

Mr. Chairman we support this request for funds and hope that there will be no obstacle to their approval.

MIDDLE RIO GRANDE INDIAN PUEBLO REHABILITATION AND IRRIGATION FUNDS AND MISCELLANEOUS PUEBLOS FUNDS

In past years the Middle Rio Grande Indian Pueblos have been receiving approximately $200,000 annually for farm improvement and irrigation works rehabilitation. In the 1968 budget this money has been completely eliminated.

There was proposed for the budget and deleted, $134,000 for the Middle Rio Grande Pueblos Project. This project is for improvement of the land and irrigation systems of the Pueblos within the Middle Rio Grande Conservancy District. The Pueblo Indian lands are served through the canal system of the Conservancy District. Water comes from storage in El Vada Reservoir on the Rio Chama. There are about 20,698 acres of irrigable Indian land eligible for service by this project.

The money requested is to be used in rehabilitation work designed to consolidate scattered holdings, to provide economical farm units where possible, and improve the irrigation systems of Isleta, Cochiti, and San Felipe Pueblos.

This work is critically needed to improve the economy of the Pueblo Indians since farming is their principal source of income. Much has been said about the poverty problem on Indian Reservations and the Government is continually seeking ways to relieve this situation. It seems inconsistent with that philosophy to delete funds for this purpose from the budget.

Also requested but deleted from the budget as presented to Congress is $93,000 for what is termed "Miscellaneous Pueblos Project." These funds were requested for rehabilitation of irrigation facilities for five different pueblos which derive approximately 60 percent of their income from farming operations. This project has been divided into the following five distinct subproject proposals for Fiscal Year 1968:

Santa Clara Pueblo—Lining of 1.66 miles of main canal with concrete to serve approximately 900 acres of land. This would affect 115 farm families. Cost $20,000.

Taos Pueblo—Replace the concrete lining on 2.0 miles of irrigation ditch. This would benefit approximately 3,500 acres of land and be of assistance to about 100 farm families. The cost would be approximately $30,000.

Nambe Pueblo—Rehabilitation of 2 flumes on the upper Nambe Canal at a cost of $20,000. This would benefit 25 farm families using approximately 425 acres of land.

Jemez Pueblo—Install 2,000 linear feet of 36 inch concrete pipe in critical hillside areas to prevent interruption of water service and to curtail erosion. This would cost $15,000 and benefit 128 families using 1,800 acres of land.

Laguna Pueblo—Drill and equip an irrigation well near the Casa Blanca Canal system at a cost of $8,000. This would provide additional irrigation water to 480 acres of land and benefit 80 families.

We consider these projects costing $93,000 of extreme importance to the Pueblo Indians. The amount of money, comparatively speaking, is insignificant. However, it will go a long way toward improving the basic agricultural economy for over 400 Indian families in the five Pueblos. We urge your Committee to include this item in the appropriation.

Navajo Reservation Road—Crystal to Sheep Springs

The members of this Committee will recall appropriating money two years ago for construction of an all-weather road from the town of Navajo to Crystal on the Navajo Reservation. This was on condition that the State of New Mexico would take over and maintain the road. This was the first leg of a road to connect Navajo with US 666 which leads north from Gallup, New Mexico to Farmington, New Mexico into Colorado.

Last year the Senate approved $2,000,000 contract authority for the Bureau of Indian Affairs for construction of the road from Crystal to Sheep Springs on US 666. In conference between the House and the Senate this amount was cut to $1,000,000. Because of budget restrictions the BIA did not include a request to Congress for this item in the 1968 budget.

This road is vital to the economy of the Navajo Indians. As you know there is a large lumber and wood products plant at Navajo. The completion of this strip of road would provide access to additional timber and assist in opening up new public recreation areas for use of tourists and the general public. It would provide a direct route from Window Rock to Shiprock which would result in a considerable saving in travel time and costs and provide a more direct route to market for some of the Navajo lumber and wood products. It would make available better transportation routes for Navajos living in the country who travel to Navajo to work and to school, in addition to providing a vital link with the Navajo Irrigation Project.

There is no doubt that investment in the road will multiply many times in benefits to this area. The State of New Mexico has agreed to take over and maintain the road if constructed.

Therefore, we urge that your Committee include funds in the appropriation to start construction of this road during Fiscal Year 1968.

We thank the Chairman and members of the Committee for the opportunity of presenting this statement and request that it be made a part of the record of hearings.

Statement of Senator Hart

SYLVANIA TRACT DEVELOPMENT

Mr. Chairman, I appreciate the opportunity of appearing before you in support of funds for items of special concern to me as a representative of Michigan.

On July 28, 1966 Sylvania, an 18,000-acre tract of lakes and forest in Gogebic County of Michigan's Upper Peninsula came into Federal ownership. This acquisition, which I sponsored and your Committee approved, will permit development of Sylvania as a quality recreation area for the benefit of the people of the Midwest. It would not have been possible without the approval and support of officials of Gogebic County.

Gogebic County supported public acquistion of Syvania, despite the immediate impact it would have on the county tax base, because they believed that public owership of Sylvania is in the long term public interest, and because they were confident that development for public recreation which would minimize the tax loss, would proceed at a reasonably rapid rate. I shared this belief.

In my view, the Forest Service budget request does not provide for acceptable development progress in Fiscal Year 1968. I deeply appreciate the problems this Committee faces, but adequate funds to develop Sylvania must be provided to protect the area from uncontrolled use and to keep faith with the people of Gogebic County.

The development work that should be done in Fiscal Year 1968 includes studies, planning and construction of facilities in Sylvania. Funds to cover administration of recreation use in Sylvania will also be necessary. Cost estimates of this work provided me are:

Cost estimates

Studies and plans:	
Area planning alternatives including a resort feasiblity study	$40, 000
Surveys to identify recreation sites, trail and canoe routes, planning of development sites, sewer and water systems, and preparation of an overall management plan	50, 000

Cost estimates—Continued

Facility construction:	
Day use area to accommodate 500 people; boat landings, water and sanitary facilities at 2 lakes	$259, 000
Wilderness type facilities at 37 sites; 1½ miles of trails	94, 000
Administration of recreation use	30, 000
Equipment purchase	12, 000
Total	485, 000

This, it seems to me, is a reasonable program to get Sylvania development underway. Acquisition of this area for public recreation has attracted wide interest. Thousands of people are certain to visit Sylvania starting next summer. Fortunately, the Forest Service has been able to allocate forest road development funds to provide access. Badly needed now are funds to permit a reasonable rate of progress in constructing facilities to provide control and protection, and to administer the heavy recreation use expected.

Of equal importance are adequate funds for studies, surveys, and plans. It would be a mistake to undertake development of this unique property without thoroughly exploring design alternatives, including a resort feasibility study. The Forest Service has a pressing obligation here not merely to provide for protection and use, but to plan development that will take full advantage of the strong attraction of the area and provide an economic stimulus in this part of the Northern Great Lakes Region.

Along with this work in importance is construction of a Ranger Office and Visitor Information building in the nearby town of Watersmeet, Michigan to complement Sylvania. Watersmeet is at the junction of U.S. Highways 2 and 45, an ideal location for the public coming to Sylvania. I am advised that the cost estimate for this facility is $232,000.

Planning	$20, 000
Construction	212, 000
Total	232, 000

This is exclusive of funds for exhibits, furniture and landscaping. I do not believe it is vital that the facility be completely equipped in Fiscal Year 1968 but I believe the planning and construction, estimated to cost $232,000 should be taken care of in Fiscal Year 1968.

I have been advised that the Forest Service budget request for Fiscal Year 1968 includes $300,000 for Sylvania development and $192,000 toward planning and construction of the Office-Visitor Information facility at Watersmeet, a total of $492,000. I strongly urge that the Forest Service Fiscal Year 1968 appropriation be increased by $225,000 so that Sylvania development may proceed at a pace more in keeping with the expectations of the people of Gogebic County and of the citizens of the Midwest who are interested in the development of this new Federal property.

FOREST RECREATION RESEARCH FOR SYLVANIA

The Sylvania Tract is a unique area containing some 18,000 acres of near-virgin forests and waters. There is nothing like it East of the Mississippi. Through continuity of ownership and complete isolation from commercial uses it has been maintained as a vestige of the primitive northwoods environment. It contains species rare or non-existent elsewhere, such as otter, fisher, pileated woodpecker and bald eagle.

Starting this spring, very heavy visitor use is expected, which could easily change forever some of the unique attractions of the area. Research should begin immediately to measure the changes that take place in plant, animal and water resources, to measure visitor reaction to recreational opportunities, and to gauge the economic impact of Government ownership and development. Later, experimental work will be needed to establish management guides.

Because the area is remote and practically unaltered by man, the opportunities for research are impressive. Recreational design studies should be made to provide a wide range of alternative access and transportation systems. Complementary developments should be studied and compared, including facilities for day-use, overnight campgrounds and large resorts on and off the Tract.

Alternative plans should be made for areas of scenic beauty, nature study and other outdoor pursuits.

The heavy use expected will have some adverse effect on the environment. Research is vitally needed to guide management that will safeguard water quality, wildlife habitat, and populations of rare or endangered species of plants and animals. The old-growth forests in Sylvania will require special measures to protect them from insects and diseases when the environment is changed by heavy recreational use. Susceptibility to damage from soil compaction and campfires must be investigated and control measures developed. Safety standards must be studied. Ways must be found for prolonging the life and beauty of the mature trees. Results will be directly applicable to the 33-million-acre area of northern hardwoods, most of which will feel the coming pressure for commercial use.

$75,000 in this year's Forest Recreation Research budget would make possible a start on this important aspect of preserving the extraordinary resources of this area.

FOREST ENGINEERING RESEARCH PROGRAM AT HOUGHTON

As you will remember, Mr. Chairman, your Committee at my request also approved funds for construction of a Forest Engineering Laboratory at Houghton, Michigan. This laboratory will be completed in June of this year.

Since 1961, Michigan Tech has provided office space on campus for an initial forest engineering staff with two engineers.

The Forest Engineering Laboratory at Houghton is one of five such research installations located in areas of critical forestry problems and produces research results with national as well as regional applicability.

The purpose of this laboratory is to find ways to make forestry operations more efficient and economical in the typical northern hardwood stands growing on rolling terrain. Specific subject areas being investigated include methods of harvesting and transporting raw forest products, re-establishing forests, protecting and improving timber stands and watersheds, and providing access to forest land for multiple-use purposes.

For the present, due to staff size and funding, major emphasis has been placed on developing basic information necessary to develop and implement improved harvesting machinery and methods. Basic office and laboratory studies are now in progress. These studies are aimed at improving the efficiency and economics of producing and transporting logs, or where appropriate, processing these logs into chips. Results from these activities have already been presented to industry. Increased funding will allow an even more effective development of this badly needed basic information and a more direct pursuit in applied research. The results of forest engineering research will be of specific interest and use to forest managers and landowners, equipment managers, loggers and machinery manufacturers. Thus, the overall economy of the timber-based industries will be stimulated.

If a broadened program of research is to be undertaken, an additional $300,000 is needed. This increase would allow hiring five additional scientists—one industrial engineer, two civil engineers, one applied physicist, and one wood technologist; and four supporting personnel—one electrical technician, one draftsman, one machinist-welder and one clerk. The remainder of the new funds will be used to purchase and maintain urgently needed equipment and for the operation and maintenance of the laboratory. Studies to be undertaken with the new funds are: development of a process for bark chip separation-segregation that may contribute in lower cost harvesting and transportation of wood to pulpmills; processes for production of pulp chips in the woods; new concepts for improved, more efficient log-making and log-handling systems through time studies and cost analyses of present and innovated logging systems; and reduction of logging costs through off-road mobility studies of felling and skidding equipment. A solution of the bark chip separation-segregation problem alone, for example, could save the industry more than $10 million annually in the North Central States and an estimated $65 million nationally.

When fully staffed, the project will include ten scientists plus supporting personnel. This research team is supplemented as appropriate with graduate and undergraduate students from the University, and some studies are conducted cooperatively with various departments of the University.

LETTERS SUPPORTING REQUESTED APPROPRIATION

I urge your support for $300,000 for this program, and ask that the letters in support of this item from Mr. John R. Riippa, Mr. William S. Ryan, Mr. S. M. Cohodas and Mr. John J. Howard be inserted in the Record.

PORTAGE LAKE LUMBER CO.,
Houghton, Mich., February 6, 1967.

Hon. PHILIP RUPPE,
Longworth Building,
Washington, D.C.

DEAR CONGRESSMAN RUPPE: The U.S. Forest Service, U.S. Department of Agriculture, in June 1967 will complete construction of a Forest Engineering Laboratory in Houghton, Michigan. This will affect the economy of Upper Michigan. I know this is true, for I have been producing forest products for almost thirty years, both logging in the woods and operating sawmills. This is my daily life. I know that we must improve, modernize our operations in the woods and the method of harvesting our pulpwood and sawlogs if we are going to supply the expanding mills in the Upper Peninsula with the timber they need. Another thing, improving our method and rate of production in the woods will mean more cords and board feet produced per man. Therefore, this should mean a better average wage for our loggers.

Now, this spring we will have a new modern building for the development of a forest engineering research program, but research program funds are needed. It is for this reason that I write to you now.

When the forest engineering research program was started at Houghton, Michigan in 1961, program funds were provided for only two scientists. Because of limited quarters and equipment, there has been no increase in scientific personnel up to the present time. If we are to correct pressing regional problems and results brought sooner to the wood user, additional program funds are needed for more scientists and to start equipping the new building. An amount of $300.000 will strengthen forest engineering research to develop more efficient methods for harvesting and delivery of wood to processing plants to develop economical methods and equipment for preparing our sites for planting of better species; and to develop equipment for slash disposal, fire fighting, and applying disease and insect control measures.

We shall appreicate your work in securing $300,000 for forest engineering research program at Houghton, Michigan, so that the expanded program can be implemented without delay. Will you please try to have this information become part of the record of the hearings?

Yours very truly,

JOHN R. RIIPPA.

MICHIGAN BELL TELEPHONE CO.,
Houghton, Mich., February 8, 1967.

Hon. PHILIP RUPPE,
Congressman, 11th District,
Longworth Building, Washington, D.C.

DEAR PHIL: A Forest Engineering Laboratory will be completed at Michigan Technological University early in 1967. This fine new building, built by the U.S. Forest Service, will conduct research on the methods of improving the pulpwood and sawlog harvesting business, and, as a result, will help assure a timber supply for the modern sawmills, paper mills, dimension plants and wallboard plants in the Great Lakes area. This should make us more competitive with areas of wood production outside of the United States.

As I said, the building is nearly built, so now we need money to equip and staff this building, in fact, $300,000. Also, money will be needed each year so the building and staff can carry on research on a continuing basis to the benefit of our industrial climate and to benefit the man working in the woods.

Will you please have this letter read into and become part of the hearing to be held on appropriations of the type?

Sincerely yours,

WILLIAM S. RYAN.

COHODAS-PAOLI CO., INC.,
Houghton, Mich., February 7, 1967.

Hon. PHILIP RUPPE,
Longworth Building
Washington, D.C.

DEAR CONGRESSMAN RUPPE: I like to feel that in my business, the wholesaling of fruits, vegetables and groceries across the entire Upper Peninsula, that I am aware of the economy. An area is healthy if all aspects of business have a sound foundation and if all people receive a fair wage for work accomplished. It seems evident to me that the forest products business is healthy in two out of three areas; namely, the production of timber, (supervised by well trained foresters), and the manufacturing of the forest products at our paper mills and sawmills, (which have all modernized in the Upper Peninsula). However, we can assure ourselves of adequate quantities of the raw material and we can modernize our methods of manufacturing, but if we do not have a system of harvesting the material to assure a supply to the mill, we are in trouble. The Forest Engineering Laboratory that will be completed this spring at Michigan Tech will conduct research on and prove the methods of modernizing and expanding the timber harvesting business, and, as a result, will help establish a better wage for the workmen and assure a timber supply. We have reached the point where we need money to equip this building. Will you please use your good efforts to obtain these funds at the forthcoming session of the House? You may wish to have this letter become a part of the hearing.

Sincerely yours,

S. M. COHODAS, *President.*

HOUGHTON NATIONAL BANK,
Houghton, Mich., February 8, 1967.

Hon. PHILIP RUPPE,
Congressman, 11th District,
Longworth Building,
Washington, D.C.

DEAR PHIL: The U.S. Forest Service, U.S. Department of Agriculture, in June 1967 will complete construction of a Forest Engineering Laboratory in Houghton, Michigan. This will affect the economy of Upper Michigan. We must improve and modernize our logging operations in the woods in the Upper Peninsula and the Lake States if we are going to supply the expanding mills with the pulpwood and sawlogs they need. The new U.S. Forest Service Engineering Laboratory in Houghton will develop methods to modernize our woods operations, providing we give the laboratory the people and equipment they need. We now need research program funds for this purpose, in fact, $300,000.

Will you please tell the Appropriations Committee that it is very necessary that we obtain $300,000 for the forest engineering research program at Houghton, Michigan?

Sincerely yours,

JOHN J. HOWARD.

Pictured Rocks National Lakeshore.—It is my understanding that there is $800,000 in the budget to start land acquisition at this newly-authorized Lakeshore (P.L. 89–668, approved October 15, 1966) plus $144,000 for administration.

The total amount authorized for land acquisition is $6,873,000. I do not need to underline with this Committee that money will actually be saved by moving ahead to acquire the land as rapidly as possible. Rising costs have become a major problem with new parks and lakeshores, and I would urge that we increase this figure by $200,000 to $1 million so as to move vigorously with land acquisition in the coming year.

Anadromous Fish Program (P.L. 89–304).—For Fiscal Year 1968 only $3 million has been requested for this program ($1½ million each to the Bureau of Commercial Fisheries and to the Bureau of Sports Fisheries) although $5 million is authorized.

The Great Lakes states—and specifically Michigan—have been among the strongest supporters of this program. Under it the coho salmon has been introduced into the Lakes. There, this fish has responded magnificently and we have great hopes not only that it will re-invigorate commercial and sport fishing, but that it will help rid the Lakes of our newest fast-multiplying pest, the alewife.

Michigan is prepared to match the largest sum available to any single state under this program—$1 million. The funds are acutely needed to help bring balance to the fishery resources of the Great Lakes.

Mr. Chairman, I request appropriation of the full $5 million authorized under the Anadromous Fish Act.

STATEMENT OF SENATOR COOPER

TROUT HATCHERY, KENTUCKY

I appreciate this opportunity to appear before the Appropriations Subcommittee on the Department of Interior's Budget. I am here today to request funds for the commencement of construction of a trout hatchery on the Cumberland River at the Wolf Creek Dam site in south central Kentucky.

I think it would be helpful to the Committee's consideration of this request if I reviewed briefly the history of this project and its current status in light of the actions taken by this Committee and the recommendations made by the Interior Department's Bureau of Sport Fisheries and Wildlife.

Since 1948 Kentucky has been stocking trout in its streams from hatcheries in other States, primarily from a hatchery in Virginia and one in Tennessee. The first stockings were experimental in nature. But in 1952, a trout fishery was established below Wolf Creek Dam on the Cumberland River at a point near where it is proposed that a hatchery now be constructed. It has been very successful. For the past six or seven years the Governor of Kentucky, the Commissioner of the Department of Fish and Wildlife, the membership of the League of Kentucky Sportsmen and the Kentucky congressional delegation have requested the Department of the Interior to proceed with planning for this hatchery.

In later years I have requested funds from this Committee. In 1965, while the Committee did not provide funds for site planning at that time, the Chairman, Senator Hayden, in a colloquy on the floor, told me that he would give consideration to this request the following year and that he felt the Committee would do so.

BUREAU OF SPORT FISHERIES AND WILDLIFE INVESTIGATION AND REPORT

In March of last year I again appeared before this Committee and requested planning funds to determine the feasibility of establishing a trout hatchery at the Wolf Creek Dam site. Upon the recommendation of this Committee Congress added $20,000 to the Bureau of Sport Fisheries and Wildlife's appropriation for fiscal 1967 for the determination of a suitable site for a trout hatchery in Kentucky.

The Bureau completed its investigation and filed its completion report in December of last year. The Bureau's study, I might add, was aided by the data collected over the past two years by the Bureau in cooperation with the Kentucky Department of Fish and Wildlife Resources.

I am happy to note that in its report the Bureau made the following recommendation:

"Present facilities at the Dale Hollow National Fish Hatchery are not adequate for producing trout required for the Kentucky-Tennessee area. In order to permit production of the trout needed for the area, early action should be taken to construct the needed facilities at either the Wolf Creek Dam site or at the Dale Hollow Dam site."

The Bureau, in consultation with the Corps of Engineers, then reached a decision in January that the new hatchery should be constructed at the Wolf Creek Dam site.

CONSTRUCTION COST

On January 10, I wrote the Bureau's Director, Mr. John Gottschalk, and requested that he furnish me with the construction schedule and cost estimates for the hatchery as soon as these estimates were completed. In his reply Mr. Gottschalk places the total construction cost of the hatchery at $1,452,500. The amount required for Phase I of the construction is estimated to be $233,000 and it is this amount that I am requesting the Committee to add to the Interior Department's appropriation for fiscal 1968.

I would like to note at this point that the Report was not received until late in December and the cost estimates were not available until February of this year—too late for consideration in the Interior Department's Budget for fiscal 1968 as submitted to Congress by the President.

LOCAL INTEREST

In concluding I cannot emphasize too strongly the keen interest that is felt in Kentucky over the prospect of this trout hatchery. Yesterday I received a telegram from Mr. Minor Clark, Commissioner of Kentucky's Department of Fish and Wildlife Resources, which expresses the sentiment in my State for the commencement of this project. The telegram reads as follows:

Senator JOHN SHERMAN COOPER,
Senate Office Building,
Washington, D.C:

At least 360,000 Kentucky fishermen are still requesting funds for trout hatchery established to provide fishing in 628 miles of water. Besides creating such activities, great economic benefits result other than fishing, such as gains for many businesses, including motels, gas stations, etc. Kentucky has patiently waited such appropriations and all people here are looking forward for appropriations to start phase as outlined by Bureau of Sport Fisheries after July 1.

MINOR CLARK,
Commissioner, Department of Fish and Wildlife Resources.

ASSOCIATION OF SENATOR MORTON WITH REQUEST

Finally, I would like to say that Senator Morton, who has been an ardent proponent of the trout hatchery over the past years, is familiar with my statement and wishes to be associated with it. We both appreciate the help this Committee has given in the past and we respectfully urge that the Committee provide the sufficient funds for commencement of Phase I of the construction of the trout hatchery as outlined in the program of the Bureau of Sports Fisheries and Wildlife.

CORRESPONDENCE WITH BUREAU OF SPORT FISHERIES AND WILDLIFE

I would also appreciate it, Mr. Chairman, if the recent correspondence I have had on this subject with the Bureau of Sport Fisheries could be included in the Record at the conclusion of my remarks.

DEPARTMENT OF THE INTERIOR,
BUREAU OF SPORT FISHERIES AND WILDLIFE,
Washington, D.C.

Hon. JOHN SHERMAN COOPER,
U.S. Senate,
Washington, D.C.

DEAR SENATOR COOPER: This is in reply to your letter of January 10 regarding a hatchery below Wolf Creek Dam in south-central Kentucky. As requested, we have included a statement specifying the need for the hatchery, along with itemized development requirements and cost estimates.

For the past several years, fishery biologists from the State of Kentucky and our Bureau have been assembling data on the numbers and sizes of trout needed for stocking Kentucky waters. These investigations show that there are 515 miles of streams which need to be stocked with legal-sized trout. An additional 113 miles of tailwaters are also suitable as year-round trout habitat.

Most of the large reservoirs in Kentucky have excellent trout fishing potential, and should be stocked periodically with trout. The use of reservoirs and tailwaters below dams to provide trout fishing is gaining in importance each year, and contributes substantially to the national sport fishery.

Based on management precedures used throughout the Southeast, the current requirements for trout in Kentucky are estimated to be about 150,000 pounds annually. A site for construction of a trout hatchery of this capacity is located below Wolf Creek Dam. An adequate water supply is available from pipes already installed within the Dam.

Outlined below is a program for development of the hatchery, broken down into phases with the latest engineering cost estimates:

Phase I:	
Acquisition of water and land rights, engineering and development	$15,000
Site preparation and rough grading	83,250
Station roads, parking areas, curbing, and gutters	50,000
Storm sewers	19,750
Water supply lines to aerator	65,000
Subtotal	233,000
Phase II:	
Hatchery building	218,750
Equipment storage building	50,000
Aerator building	84,250
Domestic water supply system	37,500
Domestic sewage system	37,500
Underground telephone	4,750
Underground electric system	20,000
Subtotal	452,750
Phase III:	
3 residences	60,000
Oil, paint, and chemical storage building	7,875
Vehicle storage building	42,250
Gasoline and fuel oil storage	10,125
Raceways	153,000
Water supply lines	32,500
Underground electric system	25,000
Outfall drain lines	34,250
Fish cultural equipment	30,000
Subtotal	395,000
Phase IV:	
Raceways	153,000
Water supply lines	32,500
Underground electric system	30,000
Floodlights, aeration, and electrical systems	31,750
Landscaping	50,000
Paving station roads, parking, and service areas	32,125
Fencing	12,375
Fish cultural equipment	30,000
Subtotal	371,750
Total	1,452,500

We are pleased to supply the above information, and appreciate your interest in the Bureau's programs to help manage the sport fishery resources of the Nation.

Sincerely yours,

JOHN S. GOTTSCHALK,
Director.

JANUARY 10, 1967.

MR. JOHN S. GOTTSCHALK,
Director, Bureau of Sport Fisheries and Wildlife, Fish and Wildlife Service, Department of the Interior, Washington, D.C.

DEAR MR. GOTTSCHALKS: Thank you for your letter of December 23 enclosing the report of the Fish and Wildlife Service approving the Wolf Creek dam site for a trout hatchery. I am naturally very happy to have this report and I know that sportsmen all over Kentucky are pleased with the final determination made by the Fish and Wildlife Service.

I am informed that it is the usual practice of the Bureau of Sport Fisheries and Wildlife to prepare cost figures for the construction of the trout hatchery broken down into phases and their justification. I would like very much to have the opportunity to study and review these estimates and I would appreciate it if you would send me a copy as soon as your estimates on construction cost have been completed.

With best wishes for the New Year, I am,

Sincerely yours,

JOHN SHERMAN COOPER.

DEPARTMENT OF THE INTERIOR,
BUREAU OF SPORT FISHERIES AND WILDLIFE,
Washington, D.C., December 23, 1966.

Hon. JOHN SHERMAN COOPER,
U.S. Senate,
Washington, D.C.

DEAR SENATOR COOPER: Enclosed for your information is a copy of the Completion Report, Hatchery Site Investigations, Wolf Creek Dam, Russell County, Kentucky.

As you know, this investigation has been carried on for the past two years by this Bureau in cooperation with the Kentucky Department of Fish and Wildlife Resources, and other interested persons.

We trust you will find the report interesting and useful.

Sincerely yours,

JOHN S. GOTTSCHALK,
Director.

STATEMENT OF SENATOR MORSE

BUDGET REQUESTS SUPPORT AND INCREASES

Our natural resources—especially the soil, water, forests and rangeland—are a part of America's priceless heritage. Even more, they are the bedrock foundation of our great Republic.

All of the agencies receiving appropriations under this bill perform vital work. I support their budget. Even more, I urge certain increases, especially for the Bureau of Land Management and the Forest Service.

BUREAU OF LAND MANAGEMENT

To save the time of the Subcommittee, I ask there be included in the record at the close of my remarks, a letter dated March 9 from the Bureau of Land Management outlining the additional funds this agency could use, effectively and efficiently.

LETTER OF BUREAU

DEPARTMENT OF THE INTERIOR,
BUREAU OF LAND MANGEMENT,
Washington, D.C., March 9, 1967.

Hon. WAYNE MORSE,
U.S. Senate, Washington, D.C.

DEAR SENATOR MORSE: We are pleased to respond to your request for legislative service concerning information on the Bureau's proposed 1968 budget. We believe the proposed budget provides acceptable levels of management and conservation progress consistent with over-all administration goals and requirements.

You also requested a list of additional amounts, with justifications, which could be used to advance proper conservation, development and management of the resources under the Bureau's jurisdiction. Our tentative allocation of funds to Oregon's principal activities, based on the proposed 1968 budget, and the additional funds which could be used are in the following table:

	Tentative 1968 budget		Additional	
	Total BLM	Oregon	Total BLM	Oregon
Title, lease and records service	$5,273,200	$247,526	$60,000	----------
Land classification and mineral examination	4,658,000	431,000	1,040,000	$40,000
Range management	5,495,000	558,000	230,000	80,000
Forest management	7,646,700	5,464,000	----------	----------
Soil and watershed conservation	14,072,000	1,913,000	2,050,000	1,000,000
Protection	3,598,400	305,000	130,000	15,000
Cadastral survey	5,100,700	403,672	50,000	----------
Construction of recreation facilities	1,100,000	100,000	510,000	110,000

The proposed budget allocations for the Vale District are adequate to permit good progress. Though investments to date are less than originally planned, they have produced far greater benefits than anticipated. Since the Vale District is progressing so well, we feel the needs of other districts command a higher priority than increasing the level of work here.

The proposed budget provides a $560,000 increase to initiate a program of mortality salvage and thinning in western Oregon. The current planned program to offer 140 million board feet of salvage and thinning, in addition to the regular timber sale program and the salvage of timber from the Oxbow fire, is considered the proper level for 1968.

The following is of sufficient need for scheduling at a future date but could not be included in the proposed 1968 budget:

Oil Shale Development Program, $760,000

To initiate work connected with points 1 and 5 of the Secretary of Interior's 5 Point Oil Shale Development Program involving Colorado, Wyoming and Utah. There are three activities involved in this program:

> *The Title, Lease and Records Service Activity* will be involved in processing and adjudication of adverse proceedings against apparently invalid, unpatented mining claims, hearings and appeals.
>
> *The Land Classification and Mineral Examination Activity* will gather and record data on thousands of oil shale claims, examine the claims and initiate action against those claims believed to be invalid. Multiple resource planning will also be accomplished.
>
> *The Cadastral Survey Activity* will provide positive location of mining claims.

A breakdown of funds for this program is noted below in the descriptions of the involved activities.

Title, Lease and Records Service, $60,000

This amount is a portion of the funds to initiate the Secretary of Interior's 5 Point Oil Shale Development Program. See project description above.

Land Classification and Mineral Examination, $1,040,000

Identification of land and development of needed preliminary plans for recreation sites and areas having historical or archeological value; prompt processing of state selections, and agricultural land entries. Forty thousand dollars of this amount is needed for 20 additional sites in Oregon. A portion of the funds to initiate the Secretary of Interior's 5 Point Oil Shale Development Program—$650,000. See project description above.

Range Management, $230,000

To provide management needed to improve wildlife habitat on watershed lands Bureau-wide, and installation of management plans and systems to mitigate livestock adjustments and prevent further resource deterioration in Oregon will require $80,000 which is included in the above figure.

Soil and Watershed Conservation, $2,050,000

Needed investment to improve critical watershed lands; reduce erosion and silt discharge; raise water quality and assist in mitigation of livestock adjustments affecting dependent livestock industry. One million dollars of this amount would provide needed investments as cited above in eastern Oregon.

Protection, $100,000

Replacement of equipment and training of seasonal fire control forces, Bureau-wide. This increase would provide $15,000 more to Oregon.

The proposed budget for 1968 provides an increase of $125,000 over 1967, and an additional $10,000 for Oregon. We are conducting a comprehensive fire planning study to better identify protection program increases needed to keep pace with advancements in related land and resource programs and increasing public use. This study should be complete in two or three years.

Cadastral Survey, $50,000

This amount is a portion of the funds to initiate the Secretary of Interior's 5 Point Oil Shale Development Program. See project description above.

Construction Recreation Facilities, $510,000

To provide needed expansion of facilities at heavily used campgrounds and provide needed facilities at undeveloped sites now receiving heavy use. One hundred and ten thousand dollars of this amount to expand the popular Beavertail campground on the lower Deschutes River.

The above costs include the costs of necessary adminitrative support.

We appreciate your continuing interest in the Bureau's programs.

Sincerely yours,

EUGENE V. ZUMWALT,
Acting Director.

I am joining with Senator Metcalf and others in seeking to advance the conservation work needed on Bureau of Land Management lands. The testimony he will present has my full concurrence.

While part of the suggested additional funds are for oil shale, a mineral not yet known to exist in Oregon, I think it important that the work proceed to develop this source of fuel and energy.

SOIL AND WATERSHED CONSERVATION

No program of the Bureau of Land Management has a higher priority, in my judgment, than the watershed work. Great quantities of rangeland comprising these watershed areas of the west are eroding.

I urge a program that does three basic things:

1. Arrests the destruction of the soil and water resource base.
2. Assures grazing use on public rangelands at least at current levels, and preferably at increased levels.
3. Attempts to develop the real potential for multiple benefits these great range resources can give to this generation and posterity.

The budget request for soil and watershed conservation work for fiscal 1968 is $14,072,000. To do the job adequately, the figure should be increased to $16,122,000. This would enable the Bureau to undertake an additional $1 million of urgently-needed rehabilitation work in Oregon.

VALE, OREG., RANGE REHABILITATION PROJECT

I ask the Subcommittee to include in the record and to give careful consideration to an excellent report dated March 8, which I received from the BLM local manager at Vale, Oregon. This is a report he makes to the community and it tells a story of success and accomplishment in rangeland development and cooperation.

REPORT OF BUREAU MANAGER AT VALE, OREG.

DEPARTMENT OF THE INTERIOR,
BUREAU OF LAND MANAGEMENT,
Vale, Oreg., March 8 1967.

DEAR FRIENDS: About two years ago we gave a report on the amount of work done in each of the units in the district. In this report, we will do the same thing but go into more detail. The reason for making such a report is to bring you up to date and to assess where we stand with the Vale Project.

Generally speaking, we are about ***half-way finished with the Vale Project***, at least in some major work categories. That is to say, we have done about half of the work needed ***to meet the demand of livestock users*** of this federal range. But this needs careful explanation. In some units we are certainly more than half-done, in others considerably less than half-done. Also, the fact that project work is at the half-way mark *does not mean that we have half-way met the deficit in AUMs.* This is so because many rehabilitation projects have not yet entered into the picture. *A two-year lag* in grazing a project from the time that it was completed accounts for this. Another factor is *last year's drought* which has made it doubtful that last year's seedings will be used a year from now.

There are hopeful signs, however. This spring, for instance, all stock in the eastern half of Cow Creek Unit will go on seedings this spring and remains there for about a two-month period before going onto native range. The effect of this on the adjoining native range should be very beneficial. Each spring several new areas are ready for use. But even using these new areas does not meet the demand of a particular area in most cases. The demand, or licensed obligation, will probably be met when the native range used in conjunction with rehabilitaion areas has had a chance to benefit from better management and the rest provided by the use of seedings and brush control areas.

The following table lists ten practices pertaining to range rehabilitation and 16 units in which this work has been done. The figures include work from the fall of 1962 to the end of fiscal year 1967, this June 30.

Adm. unit	Brush control (acres)	Seeding (acres)	Fencing (miles)	Reservoirs	Springs	Wells	Pipeline (miles)	Water troughs	Cattleguards	Test plots and exclosures
Willow Creek	1,100	6,922	38.4	10	11				4	3
Westfall	9,660	24,088	138.1	13	62		25.1	26	54	4
Skull Springs	23,029	3,430	123.5	24	24	1	1.5	3	22	1
Black Butte	10,533	1,281	25.4	4	7				6	
Harper Basin	30,030	26,499	207.1	44	32	3	20.2	25	44	5
Mahogany	43,070	12,815	104.3	46	63				17	2
Cow Creek	20,500	18,605	61.4	11	3	2	32.2	39	21	
Soldier Creek	18,100	17,500	81.5	22	2	3	20.5	21	16	
Jackies Butte		9,011	35.7		1	1	10.4	10	4	
Brown Ridge			7.3	9						
Barren Valley			28.0	3		1				2
Fifteen Mile	18,367	23,959	170.0	26	35	2	18.2	22	24	7
Antelope	35,818	34,160	104.9	34	33	2	67.5	69	19	6
Star Valley			25.4	33		2	.1	2		2
Stockade			54.0	16	1	1			1	4
Sheepheads										
Total	210,207	178,270	1,204.6	293	274	18	195.7	217	230	36

A few comments are needed to explain some of these figures. Brush control for example—we will have actually sprayed (including this spring) about 291,000 acres, but some of this, the difference between this figure and 210,207 has been seeded and is called seeding. The seeding figure is accurate to date, but does not include the seedbed preparation, either plowing or spraying, that will be done this spring. This spring we plan to spray 60,205 acres, but only about 35,000 acres of this will be strictly brush control. The remainder will be seedbed, or in a couple of cases maintenance spraying on existing projects. This year and in the next we will do a little less seeding than done in previous years. But we are increasing the number of springs and reservoirs to be constructed or developed. More effort is going into maintenance work, and there is increased emphasis on wildlife habitat improvement and recreational development.

This coming fiscal year, starting July 1, the work program shapes up as follows:

Brush control	acres	31,000
Fencing	miles	232
Seeding	acres	41,540
Reservoirs	each	69
Springs	do	83
Wells	do	2
Pipeline	miles	47
Cattleguards	each	22
Stock trail	miles	75
Erosion control	reservoirs	10

You may have noted in the list of administrative units the inclusion of two new units, Stockade and Sheepheads. The attached map shows their location. These units have been established by adjusting the boundaries of Skull Springs and Barren Valley Units. The present Barren Valley Unit includes a portion of the former Fifteen Mile winter use area. These administrative unit changes have been made for these reasons:

1. The new Barren Valley unit now includes the old Fifteen Mile and Barren Valley winter range.
2. Some of the old Barren Valley summer area is now included in the Skull Springs unit. This is that portion of Barren Valley that had licensees using both of these units.
3. The remaining portion of the old Barren Valley unit is divided into Stockade and Sheepheads. These areas were divided because Stockade is made up of individual allotments whereas Sheepheads with one exception is a community use area, they have different licensees, and they are better managed individually.

The areas of use, seasons of use, and the licensed use of these areas have not been affected by these changes. Essentially, they can now be better managed.

Another change in unit boundaries concerns the former Black Butte Unit. This area has now been included into Skull Springs Unit and can now be considered an allotment or area of use within Skull Springs. The eastern boundary of Skull Springs has been changed to conform with the fence separating that unit from the Harper Basin Unit. As mentioned above, the south end of Skull Springs has been extended to include a portion of the old Barren Valley Unit.

Another change is in the administration of Brown Ridge Unit and the Whitehorse Allotment of Soldier Creek. The administration of these areas has been turned over to the Boise District, but officially they still remain within the boundaries of the Vale District. The reason for this change in administration is that the users of these areas run stock in both Idaho and Oregon. Administratively, it is better to have them licensed in one state or the other. In "exchange" we have taken over the administration of the Boise District "45" unit to the east of Star Valley. This area was difficult for Boise people to get to.

As mentioned before, there is *increased emphasis on wildlife habitat* improvement in the Vale District. This spring and early summer 20 gallinaceous guzzlers will be installed for big game and upland game birds. These guzzlers are large fiberglass apron-like devices set in the ground to catch precipitation. They hold 1,000 gallons and the deeper portion is covered to prevent evaporation. The guzzlers have been used in many places with good results. Four of them will be installed in the Harper Basin Unit, twelve in the Westfall Unit, and three in the Willowcreek Unit.

Also, 20 small concrete watering devices for game birds will be installed along pipeline systems, principally along the Louse Canyon and Rawhide Springs pipelines in the Antelope Unit. These "bird baths" will have a float valve to control inlet of water, and they will be fenced.

Ten existing reservoirs and 13 springs will be fenced to develop small wildlife habitat areas while still providing water for livestock. Seven new reservoirs and ten springs will be constructed or developed for wildlife use. Of course,when water is developed or fenced provision will be made for livestock use. An example of this is Mud Springs southwest of Vale in the Cow Hollow area. When this spring was re-developed last fall it flowed about 30 gallons per minute. A portion of the spring was piped into two stock tanks. The overflow and remainder of the water goes into a newly constructed reservoir within a fenced area. Another reservoir within the fenced area will be constructed below. Beyond the fenced area water will again be available for livestock.

Another wildlife activity increasing in size is browse and nomad alfalfa seeding. As of now we have 18,000 acres of nomad and 321 acres of browse plantings. Present plans are to seed this year an additional 9,892 acres of nomad and 1,200 acres of browse. Spring seeding of nomad alfalfa by aerial application has proved successful here providing that some rainfall occurs following the seeding. Browse species have been drilled or planted by hand. Two plants have been seeded, bitterbrush and 4-wing saltbush.

We recently made a District-wide compilation of use last grazing season on seedings and brush control areas. The following gives the area of use, the grazing unit, stocking rate, and total AUMs of use made.

Name of project	Grazing unit	Kind	Total use (in AUM's)	Stocking rate (acres/AUM)
North Harper	Harper Basin	Seeding	530	5.5
Page	do	do	598	3.7
Vines Hill	do	do	394	7.6
Winter Springs	do	do	396	5.1
Mesa	Westfall	Brush control	2,107	2.9
Chicken Creek	do	Seeding	504	14.4
Poverty Flat	do	Brush control	523	2.4
Horseflat	do	do	840	4.3
Drip Springs	Skull Springs	do	1,375	3.1

Lava Ridge	do	do	1,000
Callahan Springs	Harper Basin	Brush control	11,070
Total acreage			75,211

In addition there may be some light fall use on other projects not listed.

To fool around with some figures—it looks like we now have including projects prior to the Vale Project and those areas not yet ready to be used, enough rehabilitated areas to support possibly 80–90 thousand AUMs (450,000 acres at 4–5 acres per AUM). *If we are a little less than half-done with seeding and brush control work, and assuming twice this acreage, we may have upward to 180,000 AUMs or a little less than one-half of the licensed demand on the public range. And this on 16–20 percent of the total federal range. We expect the native range not treated to increase its carrying capacity through use of these rehabilitated areas and through management. Thus, the total carrying capacity of this land will be greatly increased.*

It's kinda dangerous though to monkey around with figures. They have a way of fooling people. Sometimes things don't work out the way it looks like they ought to. But, we know that crested wheatgrass will grow. We know that native grass comes back when the brush is controlled. We also know that the native range improves considerably if it's given a chance. So, if you accept these speculations the way they are given no one will be hurt (or embarrassed) by it all.

One of the problems that we are faced with (and ranchers too) is the fact that *some units within the District cannot be brought to the stage of development that the present use, non-use and suspended non-use can be satisfied. The areas either do not have the potential for development or the demand is so great that even when developed to full potential there will still not be forage enough to satisfy the needs of everyone consistent with good range management.*

In these cases it is probable that some use will have to be shifted to areas which will come up with an excess of grass. With this in mind, it will take good years, good management, and maybe good luck to satisfy the present demand on this public range District-wide. *But we are taking giant steps in this direction, giant steps to the tune of 70,000–80,000 acres a year plus water and other facilities to better manage the range.*

And now to management. We talk of management systems, better management, and increased management. But what are we talking about? Some may think of it in terms of having to handle cattle more and of increased control. This is not an objective. *Almost all of you practice management of stock and land on your own property to secure the greatest good. This is what we are after on the public range.* To put it on a dollar and cents basis no one can expect a great amount of money to be spent on this public range without attempting to see that these gains are assured and that the job will not have to be done over again in another generation. It is not enough to control the brush and make seedings and then simply use them. We have to use this range better than it was used before. We have to use it intelligently, making use of all the knowledge that we have because there is a greater need for it now and in the future.

Beginning in 1967 the BLM will introduce new emphasis on the management of livestock grazing on public lands. We have initiated a program requiring that all major allotments or areas of use have a grazing management plan in operation by 1975. In this District this means that 104 plans must be completed within the next seven years. Eighteen of these plans are scheduled for completion this year.

This report seems to be one of compilations and tables, but that's what we indicated at the start. Here's another one—*new areas that will be used this spring or fall.* In some cases some use of these areas was made last fall, but this will be the first spring use.

Some comments should be made about the above table. All use figures are based on actual use except for Granite Creek and Bull Creek which were estimated. Some areas were stocked lighter than they might have been due to lack of water—notably Tunnel Canyon, Starvation, and Chimney Creek. Steer Canyon, Andy Fife, Bull Creek, and Battle Creek were used lightly this last fall. The stocking rate given does not necessarily indicate a relative carrying capacity. But even so, it is apparent that there is a considerable difference in the way areas can be stocked. Also, it appears that the way a rehabilitation area will be used may vary from year to year. Good management would be to use these areas as heavily as is practical depending on the growing season, thus saving the native range wherever possible.

Generally speaking, one would expect greater use from a seeding than from a brush control area. But evidently last year was a better brush control year than a seeding year. There was little growth on seedings and in many places little old feed; whereas, on brush control areas there was quite a lot of old feed and in many places a considerable amount of growth. Another factor though, these brush controls were generally located in a better moisture area.

The above figures indicate that *use in rehabilitation projects during this past dry year made a significant contribution to grazing in this District. In many cases these areas were used more heavily than one would like to see them used. But it was necessary to do so. Within a few years there will be many more areas to turn into and droughts will be more easy to get through.*

With respect to the drought of last year—still undetermined is its total effect on 47,350 acres of seeding done a year ago this last fall. The survival of some seedlings is certain, but whether enough will survive plus those that might yet germinate to make a seeding remains to be seen. It does appear that additional protection will be needed. For purposes of this report two such seedings were inspected to see how much germination had occurred since last November when the rains finally came. In one seeding in which no seedlings could be found last summer a surprising number of crested wheatgrass plants were found. Fewer plants were found on the other.

Brush control areas are not so critical. In most areas protected last year there was still fair to good growth and assuming a reasonable grass year this spring they will most likely be ready to use on schedule.

At the present time range rehabilitation projects are carrying the heavy load of obtaining improved conditions on the native ranges. But the successful use of these projects does not eliminate the need for a program of intensified management. Objectives of management can be thought of as site improvement for watershed, soil stability, and forage production. The benefits received from a management plan cannot be expressed only in terms of forage production, however. Other benefits would include flexibility to meet unusual conditions, increased efficiency, and stability in livestock operations. A management plan or scheme takes into consideration the requirements of the plants, the land, the livestock, the game and other uses of the resource.

Completion of a management plan requires close cooperation with the ranchers in collecting data for designing a system and placing it into operation. *Once a system is started does not mean that it will necessarily work to perfection. It is a starting point from which* adjustments may have to be made to come up with a workable plan that will be satisfactory to the rancher and the resource. We will have to keep close records on grazing use in order to determine whether a particular area is under or overstocked. Actual use records plus studies on the ground will determine whether a system is working out or not. We have a new actual use form which will be sent out this season and we request your cooperation in its use.

An event not greatly publicized occurred last December at the Advisory Board meeting. John Archabal, Jr. retired from the Board. Our records of Advisory Board meetings date back to 1937. John was a member of the Board at that first meeting of record held in Burns. He was continuously on the Board up to the time he resigned. This came about as the Jump Creek Sheep Company's grazing privileges were transferred to several individuals in the Jordan Valley area. John Archabal is highly respected by ranchers and BLM.

A well-known conservationist in the Vale District is transferring. Kenny Irons, who for the past few years handled soil and moisture work in the Central Resource Area, is moving to Idaho Falls District to go into lands and minerals examination work. Kenny will be missed by many folks in the Jordan Valley area who came to know him.

This report reflects Vale Project activities which are of most interest to you, range work and forage production. There are other objectives to the Vale Project. As a matter of fact, this project can scarcely be justified on the basis of forage production alone. The general public viewing this program expects more. Wherever the range is improved soil conditions and the watershed are improved. The lessening erosion and siltation are tangible benefits of the program. The Project is demonstrating on a large scale how this land can be improved and from this standpoint alone the Project is worthwhile. In the coming years the people will probably be taking a good look at what is happening here. This must be a multiple use program and we must show multiple use benefits.

We have not said anything in this report about the weather or outlook for this coming year. After last year a person is a darn fool to predict what's going to happen. We won't, but things sure look a lot better than they did at this time last year. Another thing, we hope this report does what it is intended to do, bring you up to date on what we are doing. I think that it factually presents what we are doing. It does not reflect the entire program, only those activities which we believe are of most interest to you.

Well, so long for now,

MAXWELL T. LIEURANCE,
District Manager.

PROJECT RETURNS

It was with the cooperation of the Senate and House Appropriations Committees that additional funds were provided several years ago to launch this special rangeland work at Vale and also on three other areas in Nevada, Idaho and New Mexico.

The report shows that a little less than half of the seeding and brush control work is done. It points out that when the other half is done, this area will be able to carry upwards to 180,000 animal unit months of grazing or half this district's requirements on 16–20 percent of the total federal range in that district.

This program of intense development on the better acres, coupled with intensive management and wise use of native ranges is paying off in conservation benefits, in wildlife benefits, in watershed benefits and in livestock benefits.

Some of this range now carries stock at a rate of one acre to an animal unit month. The average is four or five acres to make an animal unit month. This project has been a resounding success. It has brought stability to the soil and thus, stability to the livestock operator.

One only has to read the report to see how these conservation projects enabled Vale ranchers to weather last year's drought to see the side benefits.

This is an illustrative case in support of my request to provide additional funds for soil and watershed, and range management funds. These funds would constitute wise investments paying handsome dividends.

FUNDING INCREASE

When I supported this program, initially, I agreed these were test programs. They have succeeded. I recommend that the Subcommittee increase this year's funds along the line suggested by Senator Metcalf, by me and many others.

Even more, I urge the Subcommittee to have the Bureau of Land Management instructed to make a dollar and cents report to Congress by September 1, 1967 on the potential for increasing its conservation work throughout the west. I urge that the Bureau of Land Management be instructed to come in with a realistic, overall conservation program next January in its budget.

The Vale project proves the need as well as the fact that it can be done. Now is the time to get on with conservation's basic business.

Timber thinnings and salvage

At this point, I wish to discuss the Bureau of Land Management's timber thinning and salvage program, briefly. The budget request for the coming fiscal year provides for 140 million board feet of additional timber offerings. I strongly support this program because it will start—and I emphasize *start*—an enlarged program of marketing timber previously wasted both in young stands and in older forests.

Bureau of Land Management Director Rasmussen earlier advised me of the extensive review he is conducting on allowable timber cuts. I understand he expects to complete it this year. Thus, this budget represents a good step forward, pending the outcome of this review. I urge approval of the increase of $560,000 for this work, which is included in the nationwide budget request of $7,646,000.

FOREST SERVICE

Reforestation and stand improvement

At present cost level, I am advised that $1 million will treat 4,000 acres for reforesting plus 20,000 acres of pre-commercial thinnings with a resultant increase in timber growth of 6,500,000 board feet per year. At current timber prices, this investment is recaptured in four of five years. This demonstrates that good forestry practices constitute good economics.

I am also advised that available planting stock is already obligated for planned work in Oregon. Therefore, a budget increase for planting would not get additional acres planted to trees.

What we need is more planting stock. I urge, therefore, that an appropriation of $250,000 be made to increase the production of young trees looking toward 1969 and $750,000 for increased thinnings.

Roads and trails

Last year, Congress authorized, and the President approved, the Highway Act with a $170 million authorization for Forest Development Roads and Trails. The budget request will permit obligations totaling only $120 million. I urge that sufficient funds be provided so that the full $170 million can be obligated. I hope that the full authorization be released for obligation. We have been building up a big deficit in road-building on the National Forests. Due to a shortage of funds, many roads are built to inadequate standards. These inadequate standards are attributable in part, to the fact that most of the roads have to be built by timber operators as a condition of timber sale contracts. I have been told that 143,000 miles out of a total of 190,000 miles of existing roads need to be reconstructed. Many additional miles of new road are urgently needed in the future. Timber is becoming more costly to reach since it is in the more rugged and distant country. Also, recreation demands are increasing at a rapid rate. There is a need of greatly increased funding of these roads by the Government to provide a safe and economical road system.

The report of the Senate Public Works Committee last year did an excellent job of stating the case for increased forest road funds as it increased the authorization to the current $170 million.

I can assure the Subcommittee that the best way to save money here is to appropriate the full authorization, or a major portion thereof.

During fiscal 1966, the Forest Service reduced the price of its timber by approximately $55.7 million for road construction which timber purchasers must build. The Forest Service estimates that for fiscal 1967 this price reduction will reach a total of $73 million. This reduces payments to the Treasury. It also reduces payments to local counties for schools and roads because they obtain less by way of Forest Service lieu payments. When timber purchasers have to build the roads they must appropriately temper their bids to reflect uncertainties in road construction and delays in logging the timber. Delays in logging may confront the timber purchaser with market price reductions.

Smaller firms often cannot properly compete for sales where there are large road costs. This means lost revenue to the Federal Treasury.

Recently, the General Accounting Office criticized both the Forest Service and the Bureau of Land Management in several aspects of their timber pricing and bidding. In my view, part of the situation, and a significant part, can be cured by constructing roads to timber sales in advance of the letting of the timber bids.

Currently, the Bureau of the Budget is reported to be reviewing timber pricing and bidding. I am disappointed that when they reviewed the budget for 1968 they missed this opportunity to improve Federal and County revenues and the competitive opportunity for timber firms. I urge a $50 million increase in obligational authority for the Forest Service, or at least a substantial increase in the present authority, with special instructions to increase the use of road contracts in areas of heavy timber demand.

Timber management

There has been a great deal of discussion in Oregon over whether the Forest Service and the Bureau of Land Management are meeting all of their timber selling opportunities.

LETTER OF PACIFIC NORTHWEST REGIONAL FORESTER

I have just received, and consider pertinent enough to ask inclusion in the record, a letter dated March 10, 1967 and attachment addressed to me by the Regional Forester in the Pacific Northwest Region of the Forest Service.

Inasmuch as the Oregon Legislature apparently construes its role to include informing the Congress of the United States, via a proposed Memorial, on the management of the national forests and in view of the Regional Forester's position that, "Many statements in the Memorial are not factually supportable," I take this opportunity to assure that the views of the Forest Service are available to you. I ask that this material also be included in the record relative to this hearing.

As this Subcommittee knows, I have never hesitated to criticize the Forest Service when I thought it was due them. However, and I am sure the Chief of the Forest Service will support me on this, I have always presented the allegations to him, obtained the facts and then advanced constructive solutions.

It is an unfortunate fact that the private timber in Oregon has been heavily liquidated, and thus there is an increased dependence on public timber stocks.

It is even more unfortunate that some people in my state, fortunately a minority, support increased timber sales and upping allowable cuts by questionable devices, but pay little attention to seeking funds for the basics of good forestry—reforestation and stand improvement and roads. Unfortunately, the budgetary councils of the Executive have also been neglectful on funds for these forestry basics.

The Committees on Appropriations have demonstrated again and again their understanding and their constructive interests in forest conservation.

Therefore, I hope that this Subcommittee will not be misled into thinking that the rank and file of active conservationists in the State of Oregon do not understand and appreciate the leadership this Congress has provided in authorizations and funds.

(The letter follows:)

DEPARTMENT OF AGRICULTURE,
FOREST SERVICE, PACIFIC NORTHWEST REGION,
Portland, Oreg., March 10, 1967.

Hon. WAYNE L. MORSE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MORSE: On March 8 a hearing was held in Salem concerning Senate Joint Memorial No. 2 as proposed by the Senate Committee on Natural Resources. The Forest Service was requested to testify at this hearing.

To keep you informed, I am enclosing a copy of my letter to State Senator Vernon Cook which is the statement that I presented at the hearing. Should you have any questions about my statement I would be happy to hear from you.

Sincerely yours,

J. HERBERT STONE,
Regional Forester.

DEPARTMENT OF AGRICULTURE,
FOREST SERVICE, PACIFIC NORTHWEST REGION,
Portland, Oreg., March 7, 1967.

Hon. VERNON COOK,
Chairman, Senate Natural Resources Committee,
Salem, Oreg.

DEAR MR. COOK: The interest your Committee is taking on the status of forest resources on public lands in the State of Oregon is commendable. Since the forest products industry is the prime industry in the State, it is most appropriate that your Committee be vitally concerned about its economic health. The public land forest resources are now serving and must continue in perpetuity to serve a vital role in furnishing the raw material needed to sustain a prosperous forest products industry, along with other important resources and services inseparably associated with these forests. Your Committee, I am sure, desires that the highest level of management that is practical be applied to the federal forest lands so that these lands will make their maximum contribution to the public welfare. Such an objective is fully compatible with Forest Service objectives in the management of the National Forests.

I want to believe that Senate Joint Memorial #2 is intended to be an objective statement for the express purpose of informing the President and the Congress of the United States of the importance of the federal forests to Oregon's economy and the need to provide a high level of management to these lands. As drafted, I do not think the Memorial serves this purpose. Many statements in the Memorial are not factually supportable. To a reader it conveys a tone of criticism, and is largely negative in that it gives no recognition of past progress or to programs under way.

The following discussion of points in the Memorial are called to your attention:

Page 2, lines 10 to 18: It is stated that Oregon is largely dependent on the federal forests, since they support about three-fourths of the state's standing commercial timber. Although this is true as to present timber volumes, the statement overlooks the fact that 61 percent of the commercial forest land, and less than 50 percent of the productive capacity of the forest land in Oregon is federally owned. The federal forests should not be expected to bear more than its sustained productive capacity in the long run.

Page 2, lines 19 to 23 and Page 3, lines 1 to 3: These statements are grossly exaggerated. According to "Timber Resource Statistics for the Pacific Northwest," PNW #9, the annual mortality for the entire state's commercial forest land was 4.1 billion board feet, International rule. A review of the inventories for National Forest Working Circles shows there is an annual inventoried mortality of 725 million board feet, Scribner scale. Converting National Forest mortality to International rule brings the 725 million up to about 910 million board feet. Thus mortality on the National Forests is less than 25 percent of the state total, and considering that they contain 55 percent of the sawtimber volume in the state, it is hard to understand the Memorial statement that "the salvage of dead and dying timber is far below levels achieved on other forest lands under expert management in this state." A substantial amount of mortality loss is harvested. It is our objective to currently salvage all economically merchantable and accessible material. We do not keep precise statistics of the volume of salvage harvested. In FY 1966 we estimated that 144 million feet of dead and down timber, and 212 million feet of cull material was harvested. All of the salvage material occurring in regular harvest areas is of course removed with the green timber and is a part of the calculated allowable cut. In FY 1966, 484,676 acres were cut on a salvage basis, and we made 242 sales of solely salvage type material. Some of the mortality occurs in material of sizes that is not presently marketable, and other is found in unroaded areas or on steep terrain not susceptible to salvage logging. There is an opportunity for more salvage harvest from the National Forests, but it is not accurate to say that the Forest Service salvage program is "far below levels achieved on other lands."

Page 3, lines 4 and 5: The statement is made that "Programs of thinning on the federal forests lag materially behind the programs on other forest lands under expert management." There may be a few properties in Oregon where a thinning program is applied at a higher level than on the National Forests, but these properties would only represent a fraction of the nonfederal land in Oregon. Without qualifying clarification, the Memorial can be interpreted to reflect that all nonfederal land in Oregon is under "expert management." This is not so. The present language distorts the picture.

In FY 1966 we thinned, released, or weeded 58,221 acres of young unmerchantable timber stands on National Forests in Oregon at a cost of about $1,860,000.

The intensity of management on the Siuslaw National Forest equals or exceeds that of any other owner group for a large administrative unit. On this Forest over 7,000 acres and 100 million board feet per year are being thinned from sawtimber-size stands.

No other owner category in Oregon and Washington has maintained the high proportion of satisfactorily stocked commercial forest land as is found on the National Forests. The Pacific Northwest Experiment Station's 1966 study for Bonneville Power Administration entitled "Pacific Northwest Economic Base Study for Power Markets" shows that on farm lands and miscellaneous private lands, 52.6 percent are unsatisfactory or nonstocked, 40.0 percent of industrial ownerships, and nearly 32 percent of other public ownerships are unsatisfactorily stocked. Only 18 percent of National Forests are in this category.

No other owner category in Oregon has kept hardwood encroachment to the low level found on the National Forests. Based on inventory volumes, the Pacific Northwest Experiment Station's report entitled "Timber Resource Statistics for the Pacific Northwest" shows that farmers and miscellaneous private owners have 22.3 percent of hardwoods, industrial owners 7.2 percent, other public 8.1 percent, while on the National Forests only 2.2 percent of inventory is in hardwoods. In 1933 there were 400,000 plus acres of hardwood types in western Oregon. Today there are 2,457,000 acres. In other words, about 69,000 acres per year, on the average have been converted from highly productive conifer sites to species which grow at only about one-fourth the growth rate of conifers.

It is inaccurate to reflect that the National Forest management program is lagging behind that on other lands in Oregon. However, there is opportunity to step up the thinning program.

Page 4, lines 20-24: It is implied that the Forest Service is only now revaluating the productive capacity of National Forest land. We have had a continuous program for several decades of studying our allowable annual cuts. Each working circle is inventoried every ten years. Following the inventory a new allowable cut is determined to reflect changes such as growing stock volume, growth rates, regeneration period, current timber utilization practices, and other factors that have a bearing on allowable cut. With 36 working circles in the Region, an average of three and one-half working circles are studied annually at a cost of approximately $300,000. Under this program the stated allowable annual cut in Oregon has increased from 2.4 billion to 2.9 billion board feet in the past seven years. This represents a 20 percent increase.

Early in 1966 we undertook, in cooperation with the Pacific Northwest Forest and Range Experiment Station, a study to improve the methods, procedures, and systems used in timber management planning. This study called "TIMADS" is employing the latest management and decision making methods (operations research, systems analysis, industrial dynamics, and econometrics) to develop computer programs to aid in decision making. Already a computer program has been perfected to perform the "area-volume" check of allowable cut calculations. The computer can do this task in seconds compared to the former tedious hand calculations. The most valuable result expected from the TIMADS project is that many more management alternatives can be rapidly examined in detail.

At the request of the Secretary of Agriculture last July, we are undertaking a special study of alternative harvesting and timber management programs for the National Forests of the Douglas-fir region. The purpose of this study is to examine, evaluate, and report on the economic, technical, and social feasibility of alternative programs. When completed the study will show the benefits, costs, advantages, and disadvantages of each of some 19 alternatives being studied.

Page 4, lines 25 and 26, and Page 5, lines 1 to 4: The Forest Service has made valuable use of advisory councils for several years. Each administrative unit above the ranger level has an active advisory council with members representing the broad public interest. The timber study has been presented and discussed with the Regional Advisory Council. It is suggested that this special study now under way in the Douglas-fir region be expanded to include the forests of Eastern Oregon. The study was undertaken in the Douglas-fir region because this is the area of the greatest imbalance between industrial capacity and timber supply. This imbalance is reflected by the intense competition for public timber on the west side as contrasted to the east side. In CY 1966 the bid ratio (the ratio of bids to appraised price) was 1.91 in the Douglas-fir region and 1.49 in the pine region. Likewise, purchasers on the west side overbid appraised prices by a weighted average of $18.12 per thousand board feet, as contrasted to a $5.22 overbid on the east side. Contrasting conditions between the pine and fir forests make it illogical to include both in the same study. The logistics of studying all the west side forests at once are staggering. To attempt to concurrently undertake a similar study on the east side is impractical and uneconomic.

This concludes my comments on Memorial #2. I welcome the assistance of your legislative body to help obtain the resources needed to accelerate intensive management practices on the National Forests of Oregon, but the Memorial as now drafted is of questionable value in accomplishing this objective.

You asked me in your February 15 letter to discuss six specific questions. The following comments are given in numerical order:

1. *Salvage and thinning programs:* There is the mistaken concept that a sharp line separates the regulated allowable cut portion of the total timber harvesting program from other parts such as salvage and thinning. Actually, the practical aspects of timber management require the integration of several categories of material into the regulated allowable cut. For example, since 1962, salvage types of material are a part of the regulated allowable cut when harvested from currently scheduled regulated cutting areas. Such salvage has increase both the allowable and the actual cuts. On the other hand, in some situations saw log material such as lodgepole may be unregulated. Likewise thinnings are sometimes regulated and in other circumstances unregulated. There are variations between forests as to the class of material included in the allowable cut because of differences in marketability, accessibility, multiple-use considerations, and the currency of plans.

Recently, and particularly since early in 1965, undue emphasis has been given to unregulated material. There is no magic in such pigeon holes for segments of the total timber supply. These are management conventions for the practicing foresters' use in administering the forest resource.

The Forest Service policy has been to include in the timber harvest program, to the full extent that funds are available and material can be harvested under sound public management principles, the maximum volume that operators can economically utilize, regardless of regulated status. From two to two and one-half years of allowable cut volume is under contract on a continuing basis.

Less emphasis should be placed on fringe areas such as unregulated material and more on the positive management programs in progress. The actual total harvest has climbed from 2.4 billion board feet in 1960 to 3.8 billion board feet in 1965. The 3.8 billion board foot harvest is 31 percent above the regulated allowable cut of 2.9 billion.

Actual harvest of both regulated and unregulated timber by calendar years since 1960 has been:

[In billion board feet]

1960	2.4
1961	2.6
1962	3.0
1963	3.3
1964	3.4
1965	3.8
1966	3.3

As a bookkeeping item, the unregulated cut has progressively increased from 59 million board feet for calendar year 1960 to 312 million in 1965. This volume includes both merchantable volume from nonchargeable salvage and thinnings as well as substandard timber that does not meet required utilization standards. Because of the slump in the last half of the year, the cut in 1966 will probably be about the same as 1965 or slightly lower

The enclosed graph shows the relationship between the regulated cut, the programmed cut, the actual cut, and the volume sold from 1960 to 1966 for western Oregon, where the supply problems have been most critical. The high volume sold in 1963 resulted from the October 12, 1962, windstorm. The graph shows a continued increase in the programmed cut and, since 1961, the actual cuts substantially exceeding the programmed cuts. Starting in FY 1966 we recognized increased opportunities, because of improved market conditions, for selling additional salvage and thinning material. We requested supplemental financing for this program. By program adjustment some funds were received late in the fiscal year. For FY 1967 we asked for funds to cover a regular timber program in Oregon of selling 3.147 billion board feet, and cutting 3.727 billion. Included in the sell program was 58.9 million of unregulated volume. At the same time we submitted an additional unregulated program for 212.7 million board feet in Oregon. Although the programs were not financed separately, we are funded for the total program. Our current unregulated sell goal for FY 1967 is 276.6 million board feet.

2. *Salvage and thinning potential:* We do not precisely know the full potential, nor the cost, of a salvage, thinning, and intermediate cutting program. These are some of the answers we expect to come up with in the Douglas-fir Supply Study. Since some of these practices were not economically practical until the last couple of years, our older inventories and management plans do not give the detailed data necessary to make firm estimates. Our current program is based on the best judgment of on-the-ground foresters taking into consideration all factors available to them.

We roughly estimate that with complete roading and with intensive management on all National Forest land in Oregon, thinnings, salvage, and other available classes of timber can be expected to contribute additional timber yields by as much as 600 to 700 million board feet. However, this is a broad, long-range figure attainable in the somewhat distant future. Progress from current rates to ultimate levels will be gradually reached and only as we can apply the degree of management necessary. Without investments in high levels of management, such goals are only a dream. The fruits of intensive management cannot be borrowed; the fruits are only there to the extent that applied management justifies. The attainment of ultimate yields are first and foremost dependent on industry's ability to utilize the types and sizes of timber available and willingness to use proper harvesting techniques, and secondly, the public must be willing to make the required investments in roading, reforestation, and forest culture practices.

3. *Insect infestation problems:* Two serious insect infestations are developing in eastern Oregon. Both are the result of attacks by the mountain pine beetle (*Dendroctonus ponderosal* Hopk.). Intensity of each infestation is expected to increase unless some control is achieved.

One infestation is centered in the Blue Mountains area in northeastern Oregon. It includes portions of the Umatilla, Wallowa-Whitman, Malheur, and Ochoco National Forests. Beetles are attacking overstocked immature stands of 50–100 years old ponderosa pine. These stands need commercial and precommercial thinning to improve vigor and growth which will alleviate stand stress and thus reduce susceptibiilty to mountain pine beetle attack.

On these Forests this susceptible type covers 483,700 acres with a volume of two to four billion board feet. A similar situation exists on adjacent private lands.

A market does not now exist for this smaller pine material. It is expected commercial thinning of these young pine stands may be feasible within five to ten years. However, a critical situation exists on an area of 90,000 acres where we cannot wait for commercial opportunities before starting prevention and control action. We expect mortality on those 90,000 acres in excess of 100 million board feet within the next five years.

To reduce stand pressure these areas should be reduced from 60 to 70 percent of normal basal area, thus making available for commercial thinning sales a potential volume of about 200 million board feet just from the critical area. As a market develops, manpower and money will be needed for sales work.

Since commercial markets do not now exist we are requesting insect control and thinning funds of about three million dollars over the next five-year period for these areas to enhance growth potential as well as beetle-proofing. Insect control work will be limited to just a delaying action until the major job of thinning can be accomplished. For F.Y. 1967 we expect to spend about $60,000 on control work as a delaying action until these stands can be thinned.

On the other National Forests of Eastern Oregon there are 845,000 acres of susceptible pine stands in need of thinning, both commercial and precommercial, to avoid a potential beetle epidemic. We are hopeful that if we can make such small thinning material available, that industry will develop profitable methods for utilization; thus accomplishing a part of the needed thinning and insect control work through commercial sales as well as supplying industry with a heretofore untapped source of material.

The second major infestation has occurred in mature and overmature stands of lodgepole pine in the Klamath Basin. The National Forests involved in this area are the Deschutes, Fremont, and Winema. The infestation is also occurring on adjacent private lands.

Mountain pine beetle attacks in lodgepole pine vary somewhat from those in ponderosa pine. Susceptibility in lodgepole pine is largely a function of age and stand condition. Treatment in lodgepole requires scheduling of logging activity in mature and overmature stands. Direct control or individual tree treatment cannot be justified economically. The area of susceptible type within the National Forests of the Klamath Basin is 767,000 acres. This area supports a volume of about 2.5 billion board feet.

Current infestations are expected to result in cumulative mortality of 150 million board feet in the next five years unless an accelerated program of prevention and control is initiated. Ideally, the entire acreage of susceptible type in the Klamath Basin should be worked over, through a combination of partial cutting and clear-cutting, within the next 20 years to alleviate or prevent serious outbreaks. In order to accomplish this, an accelerated cutting program of at least 100 million board feet per year would be needed—at least within the foreseeable future.

The present level of lodgepole cutting on the National Forest lands of the Klamath Basin is about 30 million board feet per year. We are optimistic that if we offer additional volumes, industry will respond by accelerated plant expansion and new development. Accordingly, beginning next year, we are hopeful that we can offer for sale 100 million board feet of lodgepole pine worth about $300,000 in stumpage. If successful, this program will be continued as long as industry is able to absorb this material and the lodgepole stands need accelerated cutting to avoid potential mortality.

4. *Reforestation programs:* Since its inception 60 years ago, the Forest Service has led the way in Oregon in reforestation, demonstrating good husbandry of forest land for all to see. It still is leading the way. The Wind River Nursery

was established in 1910 to produce forest seedlings. Today it produces about 15 million two-year-old seedlings annually that are planted on National Forest lands in Oregon and Washington. Planting of deforested National Forest lands started in 1912 on Mt. Hebo in western Oregon. It is a continuing program on the National Forest lands in this state. Naturally, this program has had its ups and downs, but it has never stopped although it has encountered considerable opposition at times.

Twenty years ago the Forest Service was being subjected to considerable criticism in Oregon for spending good money to plant trees on recent cutover areas. Spokesmen for some segments of the forest industry and some county courts contended that instead of planting we should give nature time enough and she would take care of the job. Time seems to have changed this opinion. The major question now seems to be whether the Forest Service is reforesting fast enough. I agree that an accelerated program would be desirable.

Now as to the record of what has been accomplished and what needs to be done. We can best understand this if we consider it under two broad categories: (1) reforesting areas that have been deforested by timber harvest, and (2) reforesting areas that have been deforested by wildfire. Our major tree planting and seeding job each year is the recurrent one of reforesting timber harvest areas where needed. As an illustration: In FY 1966 we planted or seeded about 46,000 acres of National Forest land in Oregon. About 37,000 acres were on recently clearcut timber sale areas. The remaining 9,000 acres were mostly on areas that had been deforested by wildfire, some recent but mostly in years long past.

In FY 1966, timber sale cutting had been done on some 848,000 acres of National Forest land in Oregon. This total included all types of cuttings—salvage, thinning, partial harvest cutting, and clear-cutting. Only about six percent of the total area cut, or some 48,000 acres, had been clearcut. It was in this same period that we planted or seeded the 37,000 acres of clearcut lands. The remaining 11,000 acres of clearcut included lands that had satisfactory natural reforestation or were expected to reforest naturally. Our policy and practice is to promptly reforest timber harvest areas that need planting or seeding. Fortunately, Congress has provided the Forest Service with authority to finance this work out of timber sale stumpage. This authority was included in the Knutson-Vandenberg Act of 1930. It is limited to reforesting and doing timber stand improvement work on timber sale areas cut over.

We do not have similar authority to use timber sale receipts to work on other deforested areas. Work on other than timber sale areas is financed directly by Congressional appropriation. An item of "Reforestation and Timber Stand Improvement" is included in the budget for National Forest Protection and Management. In FY 1966 the portion of this item allocated to the Pacific Northwest Region was $2,115,200. About 65 percent of this was spent on the National Forests in Oregon.

Your letter asked for information on accomplishments dating from the 1950's and current needs. Acreage accomplishments for the last 12 years and total to date by source of funds are shown on the enclosed table.

You will note that progress in reforesting other than timber sale areas was very slow prior to F.Y. 1961. At that time a real start was made by Congress in financing the program for the National Forests. Some may recall that this was a 10-year work program presented to Congress in 1959 by President Eisenhower and resubmitted in 1961 by President Kennedy. It was designed to bring the National Forests into a high state of productivity. When data for this program was put together some years previously, we estimated, based on earlier extensive surveys, that there were some 487,000 acres needing reforestation in the National Forests of Oregon.

As we were able to move into an accelerated reforestation program, our field personnel made a detailed survey of each deforested area. They found that most of the area previously classed as deforested was stocked with enough small trees that planting was no longer justified. In many cases the conifer trees were over-areas were eliminated from the backlog of areas needing reforestation, since they topped by brush and would need release to grow into a productive forest. Other areas were eliminated from the backlog of areas needing reforestation, since they were found to be too sterile or rocky to justify the expense. The net area found in need of reforestation in 1965 was 138,500 acres. At current rate of progress it will take about 15 years to reforest this backlog. It would be desirable if the financing for this work could be stepped up to at least double the current rate.

The National Forests of Oregon also support three-fourths of a million acres of young stands in need of precommercial thinning for optimum timber production.

5. *Relation of reforestation to allowable cut:* You asked for my comments on the relation of the reforestation program to timber offering.

As explained earlier the allowable annual cut is based on what the resource base will support on a sustained basis. Deforested land doesn't contribute anything to the allowable cut. Productive land contributes in proportion to its site, type, stocking, and age class. Each acre reforested adds to the base and is reflected in an increase in the annual allowable cut at the next recalculation. The amount or contribution may vary from about 200 board feet per acre per year to upwards of 1,000 board feet for the best sites. Thus, assuming an average annual growth of 500 board feet, a cost of reforesting of $100.00 per acre, and average stumpage value of $20/MBF, the investment in reforestation is liquidated in 10 years.

Further investments in reforestation, in release of overtopped trees, in precommercial thinning, and in other aspects of forest tending, will pay off in increased allowable cuts and timber harvest.

6. *Douglas-fir Supply Study:* As stated earlier, we do not believe it would be advisable to extend the Douglas-fir timber supply study to Eastern Oregon at this time. It would delay by several months the study on the west side, where a much greater demand for raw material by industry exists.

There is no precedent for a study of this kind. There is a tremendous amount of detailed planning, fact finding, searching for, and assembling supporting data, and other preparatory work which is extremely time consuming and must necessarily precede an evaluation of the situation. Study outlines and detailed work plans must be prepared before such a study can start. This phase alone required many months for the Douglas-fir Supply Study. Any change in area would seriously delay completion of the present Douglas-fir Supply Study. We agree that eventually such a study should probably be expanded to all forests in Region Six, or perhaps to other regions if it is found to be worthwhile.

The Forest Service views the study as a means for developing principles and techniques for application to other regions and possibly the entire National Forest system.

We see no advantages in having direct participation by outside groups at this time. Until a study procedure is developed and meaningful data assembled, such participation could only hinder orderly progress. When the study has been completed, outside groups and all interested people will have ample opportunity to review it and offer comment.

The fact that the Douglas-fir Supply Study is under way has been given wide publicity in the news media. Interested individual foresters and representatives of industry groups have inquired about and discussed the study outline with the Division of Timber Management staff members. The Region Six Forest Service Advisory Council has been given detailed information at regular meetings, and has had opportunities to present pertinent recommendations. This group consists of 15 highly respected and responsible people representing a broad spectrum of strong public interest in the National Forests and includes several members from the industry.

On December 12, 1966, a detailed description of the project was made to the Portland Chapter of the Society of American Foresters. The Society of American Foresters includes foresters from all fields—industry; education; federal, state, and local governments; and many independent forestry consultants. The SAF is to forestry as the AMA is to the medical profession.

The Douglas-fir Supply Study is a detailed study of comparative costs and returns of 19 alternative courses of action to increase timber supplies from the National Forests of the Douglas-fir region. The study will consider the prospective inputs and outputs by decades over the next 80 years, and the expected stand structure, growth rates, and sustained yield capacity at the end of that period. Included in the variables are five different rotation periods, three levels of forestry practices, and three levels of road development. Evaluations will be made of the impacts of the various timber alternatives on other forest resource values, including recreation, wildlife, fisheries, soil, and water. Also, evaluation will be made of the effects on the regional and national economy. This is a brief synopsis of the study. I will be pleased to cover more details if you wish during our discussions.

Sincerely yours,

J. HERBERT STONE,
Regional Forester.

Total	115, 295	369, 330	484, 625

[1] Mostly accomplished by CCC and other emergency programs during 1930's and early 1940's.

[2] The high P. & M. accomplishment in 1961 and 1962 included reforesting of the large burns of the 1959-60 years, mostly by aerial seeding.

BUDGET SHORTCOMINGS IN REFORESTATION AND ROADS

Again I urge your consideration of the need to correct budget shortcomings in reforestation and roads.

There are many millions of board feet of timber that can be marketed under sustained yield allowable cuts through the salvage and thinning programs.

Regional Forester Stone points out that "there is no magic in such pigeon holes for segments of the total timber supply. He urges, "Less emphasis should be placed on fringe areas such as unregulated material and more on the positive management programs in progress."

I hope the Subcommittee will support the Forest Service timber sales budget as presented as well as the Bureau of Land Management's. I think the record here is one of progress. I think the major need is to underpin the forestry program with the tools of reforestation and roads so that planned, sensible advances can be made in allowable cuts on a sustained yield base.

Since 1960 the Forest Service allowable cuts in Oregon have risen from 2.4 billion board feet to 3.3 billion board feet. Regional Forester Stone has explained the bulge in cutting in 1964 and 1965 which resulted from the 1962 windstorm.

The problem Oregon's timber industry faces is with private supplies diminishing, each bulge or plateau in cutting on the national forests from a catastrophe leads to a desire to make this the new perpetual level.

However, as Mr. Stone points out, since 1933 an average of 69,000 acres of conifer sites have been converted to hardwood types that grow only one-fourth as much wood as conifer areas. Only 2.2% of this inventory is on the national forests. Over 2,000,000 new acres have been added to the lower use hardwood growing areas and this represents a loss of over 1 billion board feet a year in growing potential.

However, the Forest Service has constantly raised its allowable cuts, kept its lands reasonably productive and stayed within sustained yield.

I think the Subcommittee knows what the facts are, but I wanted to make this Record in your behalf because you have provided the funds beyond budget requests that have made it possible for the Forest Service to have this record.

FORESTRY RESEARCH

The research program of the Forest Service is of paramount importance because it provides the means for protecting and increasing the yields of our Federal forests. It preserves and enhances an asset of enormous value to our nation.

I support the budget requests for Forestry Research, but I wish to emphasize that additional funds are needed immediately on these Oregon forest research projects.

(1) Bend, Oregon-Silviculture of Mixed Conifer Type

The forestry research at Bend deals with the silvicultural problems of the mixed conifer type. A modern forestry laboratory costing $231,000 was built at

Bend several years ago. Currently the staff consists of three scientists and three support personnel. The future research at this location will be concerned with developing management methods to sustain and improve the yield of conifers in the mixed conifer type including white fir, western larch, Englemann spruce, Douglas-fir, and lodgepole pine. To carry on research dealing with these tree species, the projected program provides for a staff of eight scientists and an equal number of support personnel. It is estimated that an additional $200,000 could be used to effectively support research on high priority problems.

With reference to this project, Robert W. Chandler, publisher of the *Bend Bulletin* has made these salient comments:

"I am once again writing in behalf of the programmed implementations of the U.S. Forest Service Silviculture Laboratory at Bend.

"As one interested in the economy of this section of Oregon, I am intrigued with the prospects of capturing the current $50 million per year gap between current and potential timber production on the 20 million acres of commercial land in eastern Oregon and eastern Washington—most of it in eastern Oregon.

"As a person with confidence in the future, I am fascinated with the possibilities that will come with new strains of trees, with application of chemical fertilizer and with development of ways to use wood wastes in the forest to enrich the soil.

"And, as a user of the forest landscape for personal enjoyment, I am aware of the magnitude of the recreation resource of our forests.

"In prospect, of all the opportunities for eastern Oregon to grow, none has greater potential than the one to intensively manage our forest lands. The vehicle for developing the scientifically sound management guidelines is the Bend-based silviculture project. But, the assignment to develop such guidelines for all categories of forest from prime timber lands to isolated wilderness areas is an impossible task for the present small staff of scientists.

"In elaborating on my personal points of view, I am mindful of your own interest and that of many other public and industry leaders who are familiar with the relationship of forest land resources to the development of eastern Oregon. Collectively, we must be successful this year in obtaining the necessary funds for getting on with the job of assuring maximum use of these lands."

The Western Wood Products Association, a very responsible timber organization of Oregon has adopted this resolution:

"Whereas, the current budget expenditure for the Forest Service Silviculture Laboratory at Bend, Oregon is $90,000 per year, and

"Whereas, the current program of the Laboratory is inadequate to serve the needs of the public and private timberlands located in Eastern Oregon and Eastern Washington, and

"Whereas, an adequately financed timber management research program promises to evolve land and timber management practices that promise the doubling of the current rate of timber production on public and private timberlands, and

"Whereas, current timber production on public and private timberlands is inadequate to meet the economic needs of the forest products industry based in Eastern Oregon and Eastern Washington.

"Now therefore be it resolved, that the Oregon and Washington Forest Practice Committees in joint session recommend that the Western Wood Products Association urge the Congress that the annual budget for the Bend Forest Service Silviculture Laboratory be increased. This is necessary to function effectively.

"Resolution adopted February 10, 1967."

(2) *La Grande-Range and Wildlife Habitat Laboratory*

At this location, the Forest Service research program places emphasis on problems relating to the improvement of wildlife habitat and livestock ranges. The scientists now doing research at La Grande are using space in an old hotel building which is to be demolished soon. In fiscal year 1967, Congress appropriated $28,000 to plan a modern laboratory. The plans for this laboratory will be completed in May 1967.

Funds for construction are not included in the fiscal year 1968 budget. A site for the proposed laboratory has been provided on the campus of Eastern Oregon College. Construction could begin in fiscal year 1968 if funds are appropriated. The estimated cost for construction of the laboratory is $350,000. An additional $100,000 is needed for a headhouse-greenhouse facility. I urge, most respectfully, the approval of this amount.

The Oregon Association of Soil and Water Conservation Districts supports the construction program for the La Grande Laboratory. Its President, Stanley R. Christensen, Jr., wrote to me on March 14, 1967 stating that the Association adopted a resolution to that effect last November. He added:

"The OACD has long advocated support and expansion of basic and applied research on soil, water, range and wildlife habitat relationships. This resolution pertains in particular to the laboratory facility needed for range and wildlife habitat research in the Pacific Northwest. The forest and range watersheds of Oregon are valuable grazing lands for livestock and game, and are also some of our most important water producing areas. The Forest Service now has a staff of eight scientists working on range and wildlife habitat problems at La Grande, Oregon, but their efforts are limited by inadequate research facilities.

"We wish to express our appreciation for your efforts in securing $28,000 planning funds for this laboratory last year. Our District Supervisors from Northeast Oregon had the opportunity to see the plans and model of the proposed building at their meeting in La Grande on February 28. We understand that the final plans will be completed by May 1, 1967.

"On behalf of OACD, I urgently request your consideration of this resolution and the appropriation of $350,000 for construction in fiscal year 1968."

The City Council of La Grande adopted a March 8 resolution supporting the request for construction funds. The resolution states:

"Whereas the United States Forest Service proposes to establish at La Grande on a site at Eastern Oregon College a Forest Service Research Laboratory for range and wildlife habitat, and

"Whereas planning therefor has been completed through the use of funds previously appropriated by the Congress and construction funds are needed to proceed with the project, and

"Whereas the construction and operation of said laboratory will be of inestimable benefit to the State of Oregon, Washington and Idaho, and particularly to the large portions of those states devoted to livestock range and wildlife. now, therefore,

"Be it hereby resolved by the City Commission of the City of La Grande, Oregon:

"That the City Manager of the City of La Grande be, and he is hereby, authorized and directed to advise the Members of Congress from Oregon of the interest of the City in the construction of said laboratory and the need for the appropriation of funds for construction, and to request those Members of Congress to make every effort to obtain an appropriation for construction of said laboratory immediately.

"Dated at La Grande, Oregon, this 8th Day of March, 1967."

(3) *Corvallis-Disease, Insect, and Genetics Programs*

The first stage of a research laboratory was completed at this location in 1963. Planning for a second stage was funded in 1967 and is progressing rapidly. The research program at Corvallis stresses fundamental biology and ecology of forest diseases and insects which are aimed at developing new methods of control. Closely related is research dealing with pesticide residues in forest soils and water. Research concerned with silviculture of coastal and mountain forests and breeding superior strains of Douglas-fir is centered here too. Small increases for the pest control and for the genetics research are provided for in the fiscal year 1968 budget. It is important that these research efforts be accelerated. A nationwide increase of $560,000 has been asked in the Forest Service genetic research program. The insect and disease research could use effectively an increase of $150,000 and the genetics research could be stepped up by $100,000, making the total increase $810,000. Such funding would make it possible to resolve some of the difficult problems confronting forest managers in the Northwest.

AERIAL LOGGING SYSTEMS

The fiscal year 1968 budget provides for an increase of approximately $90,000 to accelerate development of aerial logging systems. Such systems when fully developed should make it possible to harvest timber more economically. The limited research already underway has shown that aerial logging can possibly reduce by 50 percent the mileage of roads now required for timber harvest. In addition to the substantial savings in investment of roads, aerial logging in the Douglas-fir region could increase the timber harvest by over 500 million board feet from areas now considered inaccessible. To fully implement engineering research on aerial logging methods will require an increase of $500,000 annually. Such funding is needed to bring aerial logging into full operational use.

I thank the Subcommittee for its consideration of the items listed above which are of great importance to the resource development of Federally-owned lands in Oregon and other western states.

Summary—Interior and related agencies appropriations, fiscal 1968 (recommendations of Senator Wayne Morse)

BUREAU OF LAND MANAGEMENT

Program	Budget request, fiscal year 1968	Amount recommended by Senator Morse
Soil and watershed conservation	$14,072,000	$16,122,000
Timber thinnings and salvage in western Oregon—increase	560,000	560,000
FOREST SERVICE		
Reforestation and stand improvement	$17,640,000	$18,640,000
Roads and trails improvements	120,000,000	170,000,000
Forest research programs (Oregon):		
Bend Silviculture Laboratory—additional research	0	200,000
La Grande Range and Wildlife Habitat Laboratory	0	450,000
Corvallis Disease, Insect, and Genetics Laboratory—additional research	560,000	810,000
Aerial logging systems—additional research	90,000	500,000

East Glacier, Mont., Airport

LETTER OF SENATORS MANSFIELD AND METCALF

U.S. Senate,
Office of the Majority Leader,
Washington, D.C., March 7, 1967.

Hon. Carl Hayden,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.

Dear Mr. Chairman: Late last year, P.L. 89-763 was enacted. It authorized an increase of $1,500,000 in the $2 million fund authorized previously for the National Park Service to help develop airports in or near National Parks and other recreation areas.

We cosponsored this legislation, which was aimed at a new airport near Glacier National Park. A new airport at East Glacier, Montana, will make a substantial contribution to Montana's expanding tourist economy, in addition to providing for emergency service and administrative needs of Federal agencies, including the Forest Service.

Although most of the land required is already in Federal ownership, there are some small parcels which should be acquired as soon as possible. There is no money in the budget request for fiscal 1968 for such purchase. We urge that you consider the addition of $45,000 for land acquisition and planning of the East Glacier airport to the construction budget of Glacier National Park.

Very truly yours,

Mike Mansfield,
U.S. Senator.
Lee Metcalf,
U.S. Senator.

LETTER FROM NATIONAL PARK SERVICE

Department of the Interior,
National Park Service,
Washington, D.C., March 10, 1967.

Hon. Carl Hayden,
U.S. Senate, Washington, D.C.

Dear Senator Hayden: In response to Mr. Eaton's letter of March 9, we are pleased to furnish information relating to the proposal to develop airport facilities in the vicinity of East Glacier, Montana, to serve Glacier National Park.

Enclosed are two copies of a briefing statement dealing generally with the subject of airport construction as it affects this Service. Detailed cost estimates of specific airport proposals are shown, including those for the East Glacier proposal. The proposed East Glacier airport is estimated to require a total of $1,345,687, including $40,000 for land acquisition. Remaining costs are estimated at $1,305,687, including costs of plans, surveys, and supervision of construction. An advance appropriation of $5,000 is an anticipated requirement for site surveys, preliminary construction plans, etc. Of the total costs, it is estimated that $707,368 would be chargeable to the National Park Service and $638,319 to the Federal Aviation Agency. If $45,000 were appropriated for the 1968 fiscal year, presumably the Service would require appropriation of the remaining $662,368 for the 1969 fiscal year. The FAA would be required to finance approximately $638,319 for the 1969 fiscal year. Generally speaking, the FAA contribution is approximately 50 percent of the total cost.

Our plans must conform to those of the FAA. The latter agency must determine the projected availability of their authorization for the State, and we are writing to them in this connection, with the request that they inform you directly in this matter.

The Montana Aeronautics Commission recently reaffirmed its intent to sponsor the East Glacier project, including the assumption of maintenance and operation responsibilities upon completion of construction.

The proposed East Glacier airport site is on the National Airport Plan, as required by the Act of March 18, 1950 (16 U.S.C. 7a). The Secretary of the Interior recommended the airport be developed when seeking approval of P.L. 89-763. The acquisition of land is authorized specifically by Section 2 of the Act of March 18, 1950.

Section 6(a)(1) of the Land and Water Conservation Fund Act of 1965 (P.L. 88-578) authorizes the use of those funds "* * * for the acquisition of land * * * *within* the exterior boundaries of areas of the National Park System * * *" (italic supplied). Accordingly direct appropriation to the Service from the general fund of the Treasury would be required for acquiring the privately owned lands needed for the East Glacier project lying outside the park boundaries. The Service formerly budgeted for land acquisition under the title "Construction," and provision for land acquisition was included in the wording of the appropriate text. If acquisition funds were added to the 1968 appropriation bill, as suggested by Senators Mansfield and Metcalf, it is believed the appropriation text should be revised to include the underscored portion of the wording as shown: "* * * and the acquisition of *land and* water rights * * *."

Sincerely yours,

A. CLARK STRATTON,
Acting Director.

DEPARTMENTAL STATEMENT

Section 1 of the act of March 18, 1950, authorized the Department of the Interior to participate in the development of airport projects in or in close proximity to National Parks, National Monuments, and National Recreation Areas, along with State or local agencies and the Federal Aviation Agency. As of October 31, 1966, of the $2,000,000 contained in the authorization, $1,695,000 had been allocated for the National Park Service share of four airports, leaving a balance of about $305,000 as follows:

1963 fiscal year—Tusayan Airport, Ariz. (Grand Canyon NP)	$880,000
1966 fiscal year—Supplemental interagency agreement for terminal building (Tusayan Airport)	30,000
1963 fiscal year—West Yellowstone Airport, Mont	735,000
1964 fiscal year—Wright Brothers National Memorial, N.C	45,000
1965 fiscal year—Grand Teton Airport, Jackson Hole, Wyo	5,000
Total appropriated	1,695,000
Balance	305,000
Total authorized	2,000,000

An amendment to the act of March 18, 1950, P.L. 89–763 approved November 5, 1966, authorizes an increase of $1,500,000 from $2,000,000 to $3,500,000. Specifically mentioned in the Departments' report on the bill were proposed projects at Grand Teton National Park, Wyoming, and Glacier National Park, Montana.

At Grand Teton (Jackson Hole Airport), a 1965 FY appropriation of $5,000 provided for initial planning necessary to prepare a preliminary proposal. The total cost of this project is now estimated at aproximately $1,178,365 of which $539,744 would be borne by the National Park Service. It is expected that the balance will be contributed by the Federal Aviation Agency. It is expected that Teton County and the City of Jackson Hole, Wyoming, will pay the costs of operating and maintaining the airport.

At East Glacier, Montana, the construction of an airport facility is estimated at $1,345,687, of which about $707,368 would be contributed by the National Park Service. This will provide for use by feederline commercial aircraft and for emergency operations and administrative needs of the National Park Service, the Forest Service, and other Federal agencies.

Another project proposal of long standing and having high priority, is the Everglades City Airport, adjacent to Everglades National Park. The facility as proposed by Collier County, Florida, would require a construction amount of about $205,000, of which the National Park Service's contribution of $57,000 is included in the 1968 fiscal year program.

At Glen Canyon National Recreation Area, the Page Airport is operated by the Bureau of Reclamation. Bonanza Airlines is replacing its present fleet of jet-prop aircraft with the Douglas DC–9. This plane requires a minimum runway length of 5,000 feet at sea level, which is 500 feet longer than the present runway at Page. The FAA estimates $330,000 will be required for improvements to serve the new type plane, 61 percent of this cost to be provided by FAA. The Service has included $68,500 in the 1968 fiscal year program to provide its portion of this cost.

Balance, previous authorization	$305, 000
1968 fiscal year—Page Airport, Ariz. (Glen Canyon NRA)	68, 500
1968 fiscal year—Everglades City Airport, Fla. (Everglades NP)	57, 000
Subtotal	125, 500
Remaining balance	179, 500
New authorization	1, 500, 000
New balance	1, 679, 500
Current proposals not budgeted:[1]	
Jackson Hole Airport	539, 744
East Glacier Airport	707, 368
Subtotal	1, 247, 112
Free balance	432, 388

[1] Other proposals, estimated NPS costs and areas to be served are for Big Bend National Park, Tex. ($256,438); Yellowstone National Park (Gardiner, Mont.) ($117,858); Glen Canyon National Recreational Area, Ariz. and Utah (Halls Crossing, Utah, no estimate); Fort Vancouver National Historic Site, Wash. (no estimate); and Crater Lake National Park, Wash. (Diamond Lake, no estimate).

LETTER FROM FEDERAL AVIATION AGENCY

MARCH 20, 1967.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Mr. A. Clark Stratton, Acting Director of the Department of the Interior, National Park Service, wrote you on March 10, 1967, about this Agency replying directly to you on the matter of an airport facility in the vicinity of East Glacier, Montana.

The proposed program of the National Park Service would conform to program scheduling of this Agency considering the projected availability of appropriations under the Federal Airport Act. Public Law 89–647, approved October 13, 1966, amended the Act by authorizing appropriations of $75 million for each Fiscal Year 1968, 1969, and 1970.

Although we have this authorization we are not in a position to make an advance commitment of these funds for any specific project until an appropriation is approved and an annual program formulated. The program is prepared on the basis of requests filed each year by sponsoring agencies. Because these requests exceed many times the funding available, each project is carefully evaluated to assure that the most urgent requirements of the national airport system are taken care of.

It is true, as Mr. Stratton mentioned to you, that the East Glacier Airport site is in the National Airport Plan. The Agency, therefore, does recognize the requirement of the airport and will certainly give careful consideration to any request filed by the Montana Aeronautics Commission under the anticipated 1969 Program.

The funds apportioned for use in the State of Montana have in past years been sufficient to meet its aviation needs. In fact, the State is historically a "low use" apportionment State where sponsor requests seldom evidence a need for the full amount apportioned to the State under the provisions of the Act.

Sincerely yours,

William M. Flener
(For Chester G. Bowers,
Director, Airports Service).

Forest Service Laboratory, Delaware, Ohio

LETTER OF SENATOR LAUSCHE

United States Senate,
Washington, D.C., March 17, 1967.

Hon. Carl Hayden,
Chairman, Senate Appropriations Committee,
Washington, D.C.

Dear Senator Hayden: I am fully cognizant of the fact that for economy reasons, the Bureau of the Budget necessarily did not include for funding for fiscal 1968 many worthwhile public works and other Federal projects. In the interests of economy, I have no quarrel with the action of the Bureau of the Budget. Should your Committee, however, during its deliberations take action to fund projects not recommended by the Bureau of the Budget, it is only fair that the Committee consider very important unfunded projects in Ohio.

I refer, in particular, to the Forest Insect and Disease Research Laboratory, Forest Service, U.S. Department of Agriculture, located at Delaware, Ohio.

In the spring of 1966, Congress appropriated $72,000 for fiscal year 1967 to prepare architectural and engineering plans for an expansion of the Forest Service Insect and Disease Research Laboratory at Delaware, Ohio. This appropriation was recommended by the House and Senate Subcommittee on Appropriations for the Department of Interior and Related Agencies. The plans authorized will be completed late in 1967. Thus, construction contracts can be let during fiscal year 1968 or as soon thereafter as funds become available.

Firm estimates of construction costs have been made; $950,000 will be required for the additional laboratories and supporting facilities now being planned.

The Forest Service, as authorized by the Congress, constructed the existing Delaware Laboratory during 1959–1960. This Laboratory was designed specifically for research leading to new and improved methods of controlling serious forest and shade tree insects and forest tree diseases. When constructed and occupied, the facility was adequate for the research program and staff assigned to it.

Subsequently, public interest increased sharply in better control methods for forest and shade tree pests, especially in nonchemical methods. In response, the Congress authorized pest control research program increases. A part of these increases was allotted to the Delaware Laboratory. This resulted in serious overcrowding, inefficient use of scientists, makeshift laboratories in trailers and temporary buildings, and inability to install and use the most modern scientific instruments for intensive research. In fact, some promising new research attacks cannot be followed without the facilities being planned because they involve the use of chemical and physical materials that endanger other research as well as the scientists themselves.

To provide for more rapid and effective application of research discoveries, the Forest Service recently located a Pest Control Zone Office at the Delaware Laboratory. The expansion being planned includes offices, laboratories and other facilities needed by this group of technical specialists to obtain prompt application of control systems developed by research.

The existing laboratory with the planned expansion, provides for research on some of the most serious pests of our forest and shade trees in the eastern United States. For example, responsibility for all Forest Service research on control of oak wilt is assigned here. This disease is potentially one of the most serious tree diseases in our Nation. It is a constant threat to the oak forests that make up approximately one-half of the forest cover in the eastern United States. Furthermore, the Delaware Laboratory is headquarters for research leading to control of the Dutch elm disease. This disease has already wiped out many of the beautiful elms that graced the streets of our cities and it is constantly spreading over the eastern United States. Scientists at the Delaware Laboratory have developed a control system that will hold losses to a few percent per year. However, the methods are costly, difficult to apply, and are not entirely effective. New research in progress promises to provide sharp improvements and eventually eliminate the havoc wrought by this disease. Thus, the work at the Laboratory is contributing significantly to individuals, communities, industries, and forest landowners throughout the eastern United States.

Construction of the Laboratory addition being planned will increase the number of contributions now being made as well as make them available at a more rapid pace.

Sincerely yours,

FRANK J. LAUSCHE.

MARINE GAME FISH RESEARCH LABORATORY, PORT ARANSAS, TEX.

LETTER OF SENATOR YARBOROUGH

U.S. SENATE,
COMMITTEE ON APPROPRIATIONS,
March 16, 1967.

Hon. CARL HAYDEN,
Chairman, Interior Appropriations Subcommittee, Committee on Appropriations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: I wish to recommend for favorable consideration by your Committee a FY 1968 appropriation of $200,000 for continuing construction of the Marine Game Fish Research Laboratory at Port Aransas, Texas. Planning and construction of this facility has been undertaken under auspices of the Bureau of Sport Fisheries and Wildlife of the Interior Department. This project was initially funded for FY 1966 with an appropriation of $100,000 and for FY 1967 with an appropriation of $198,000. These appropriations, which represent 20% of the total estimated cost of this project, have allowed planning and site preparation to proceed in an orderly fashion.

There are several compelling reasons for approval of this requested $200,000 appropriation at this time. (1) The proposed facility will conduct research which is of inestimable value to approximately 1.5 million salt water sports fishermen who use the Gulf of Mexico coastal waters. (2) The $398,000 already appropriated has allowed preparations to proceed to the point of construction. Failure to provide the requested $200,000 at this point may jeopardize work already completed and would certainly undermine what has been a carefully planned project about to enter its most critical construction phase.

It seems to me that having committed considerable public funds to this project already, we should proceed to its completion. I hope that your Subcommittee will find it possible to add this appropriation to the Interior Department Appropriation bill.

With best wishes,

Sincerely yours,

RALPH W. YARBOROUGH.

CONCLUSION OF HEARINGS

Chairman HAYDEN. The hearings on the appropriation bill for the Department of the Interior and related agencies are concluded; and we will now adjourn, subject to call of the Chair.

(Whereupon, at 11:10 a.m., Tuesday, March 21, 1967, the hearings were concluded and the subcommittee was recessed subject to the call of the Chair.)

ADDITIONAL MATERIAL FOR THE RECORD

Clerk's statement: Pursuant to directions received from the chairman of the subcommittee the following material will be printed in the record.

BUREAU OF LAND MANAGEMENT

LETTER FROM SENATOR MCGOVERN

APRIL 3, 1967.

Hon. CARL HAYDEN,
Chairman, Interior Appropriations Subcommittee, Senate Appropriations Committee, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: I am enclosing four documents which Senator Clinton P. Anderson and I would appreciate your putting before your subcommittee. They constitute a request to include in the appropriations of the Bureau of Land Management, for management of lands and resources, the sum of $730,000 to permit the initiation of a much needed research effort.

The documents enclosed include a statement which Senator Anderson had prepared for presentation to your subcommittee and an exchange of correspondence between him and the Bureau of Land Management in regard to their research needs. The latter includes a letter written to the Bureau of Land Management March 9 by Senator Anderson, the Bureau's reply of March 17, justifications for the research proposed prepared by the Bureau at the Senator's request, and the Bureau's estimates of the first year and total cost of the research work proposed.

Please assure your subcommittee that the initiation of this look into the adequacy of research on arid lands management problems came from several of us in Congress from the arid lands states. For the past year numerous agencies in the Departments of Agriculture and Interior have been cooperating in a comprehensive report on resources in the Black Hills area in South Dakota and Wyoming at my request. There is considerable Bureau of Land Management land in this area. The completed study reflects an urgent need for improved watershed management practices in the area, which includes a great deal of BLM land. It also foresees a tripling of recreation use of the area, making increasingly urgent BLM research and preparation for such recreational use, and for maintenance of wildlife as well as improvement of grazing opportunities.

In discussion of various findings of the Black Hills study in this regard with colleagues from the Western States I learned that they, too, were concerned with similar problems. Senator Anderson kindly offered to take the lead in surveying the needs and formulating a proposal. His statement and correspondence with the Bureau of Land Management ensued.

My own interest in intensifying arid lands research is multiplied by my concern about world food problems. Thirty-five percent of the land of the world is arid, including vast areas in India, Pakistan and other countries where food supplies are critical. A considerable part of any research in the United States on arid and semi-arid lands will have worldwide applicability and value, and add to our country's ability to assist many of the developing nations of the world. The results of any research and development work on arid and semi-arid land management problems will accordingly have both domestic and foreign relations values.

I have reviewed arid and semi-arid lands research by agricultural agencies. This valuable research is oriented toward agricultural production problems, rather than the larger management problems which confront the Bureau of Land Management. The research now being proposed is not duplicatory but will supplement any ongoing work.

I am transmitting this material on behalf of Senator Anderson and myself because of his absence in New Mexico. We both regret that a misunderstanding on our part in regard to the subcommittee's hearing schedule makes it necessary to submit this request in this manner, rather than to appear before the subcommittee. If the committee desires further information, we will be happy to provide it.

Sincerely yours,

GEORGE MCGOVERN.

STATEMENT OF SENATOR ANDERSON

Mr. Chairman, several members of the Senate from the arid western states have long been concerned with improving the management of our arid and semi-arid lands for grazing and other uses. I have been looking into the Bureau of Land Management's need for studies of improved land management methods, which would also help private owners. I appear today to propose an increase in the appropriation for management of lands and resources in the 1968 fiscal year budget for the Bureau of Land Management in the amount of $730,000 to undertake some very much needed studies.

These funds are critically needed to augment the cooperative research program fundamental to the management, development and conservation of the arid and semiarid lands of the United States. The Bureau of Land Management administers a vast 150 million acre public land province of aridity from the western reaches of the Great Plains to the foothills of the Cascade-Sierra Mountains. These arid lands are those areas with substantial mean moisture deficiency, including the semi-arid lands, according to accepted geographical classification.

My own home State of New Mexico has over eight million public domain acres within this expanse of aridity. In New Mexico there are additional millions of acres of arid lands in other ownership. My distinguished colleagues from the great States of Nevada, Arizona, and California, South Dakota and North Dakota, Colorado, Wyoming and Montana, Utah, Idaho and Oregon know well of what I speak. The problems in deriving and applying resource conservation principles are immense but they are solvable. There is a challenge to develop techniques and sound data—and we must face and answer this challenge. Initially, we must start with a specifically oriented and sustained research program. The Bureau of Land Management in our view is the agency to carry out cooperatively this program with western research institutions. It administers much arid and semi-arid land and thus needs to be in a position to apply new techniques and knowledge. Also, it has a long history of cooperation with private and state agencies that administer similar lands. Working together they can meet the need to conserve that thin mantle of soil so vital to our western watersheds and the growing population of our West.

The distinguished geographer, Dr. Gilbert F. White, of the University of Chicago, writing on arid lands states, "The rapidly spreading invasion of dry sectors of North America during recent years reveals that new factors are shaping man's view and use of this diversified territory of thin soils, sparse vegetation and highly variable climate. Their consequences and the conditions which bear on decisions as to new uses are less apparent."[1]

The reasons for this troublesome uncertainty involve the great variation in altitude, land form, and length of day. Arid lands have in common three characteristics—mean deficiency in moisture, large variability in rainfall from year to year, and uncertainty as to the character of next season's weather. Closely associated with high risk and persistent uncertainty is the delicate equilibrium of climate, soil, vegetation, and water which makes this vast physical environment especially susceptible to drastic changes in the path of even man's minor modifications in vegetal cover and water flow.

One way to overcome uncertainty is a thorough research appraisal of the factors which play such a significant role in human decisions affecting the resources of water, air, soil, plants and animals in the arid regions. We have not adequately funded suitable cooperative research even though the Federal Government itself holds in its domain over 150 million arid acres.

Our amendment will speed the progress we must make.

---

[1] Darling, F. Fraser and Milton, John P., Editors. *Future Environments of North America.* Natural History Press, p. 172.

This research, directed at our domestic arid land problems, can have worldwide value. A third of this planet's lands are arid. Whatever we can learn about arid land use and management on our continent can have value worldwide in the impending food and population crisis.

WATERSHED PROTECTION AND EROSION CONTROL

The arid and semi-arid lands of the United States sweep from the Great Plains region to the Cascade-Sierra Nevada ranges in the west. They exclude the higher elevations of the Rocky Mountains and lesser mountain masses. It is these higher elevation islands that yield most of the water. The lower elevation arid zones yield most of the natural pollutants in the form of sediments and salinity.

Intensive arid land agriculture depends upon irrigation water. Now, urbanization and industrial development create increasing demands for water. Major research efforts are underway on these higher elevation watersheds and on problems related to more efficient use of water at points of consumption. But research on the soil and vegetation resources on the heart land of the West—its arid lands—has been inadequately financed in the past because of a too commonly held belief that these arid lands were of low value.

An understanding of the water-yielding potential of the arid and semi-arid zones in the western United States now is becoming vital. Because of relatively low total precipitation, some think it unlikely these zones will yield any substantial increases in water for agricultural, urban or industrial uses. It is known that much of the water yield derived from these arid lands is all too often received in a relatively short span of time and is frequently laden with sediment and charged with inorganic pollutants. Thus water quality is of real concern as well as reduction in reservoir storage capacity due to sediment disposition.

We need to accelerate efforts to determine inventory, analysis and land management techniques to secure the benefits these lands can give.

One major deficiency is that so little has been done to develop methodology for evaluating and planning watershed protection and development programs on arid lands. Programs are now carried out on an opportunity basis.

A moderately intensive technique known as the Hydrologic Soil-Cover Complex methodology has been developed and is widely used in the humid and semi-humid regions of the United States and with fine results. However, experimental data and knowledge of the hydrologic characteristics of small arid land watersheds are practically nonexistent. To apply the method requires research and study to obtain data on meteorological, soils, and vegetative influences in relationship to topographical and geological factors applicable to typical small arid land watersheds. Selected representative areas only would need to be studied. The increased appropriations will start the organized development of the Soil-Cover Complex technique for western arid lands.

ARID LANDS RECREATION STUDIES

Here is another area of need. For example, it is estimated that there are 15 million acres of the public lands alone—located in the desert regions of the Southwest that contain a vast array of primitive, natural, historic, archeological and unique scenic values that must be preserved. By reason of physical, climatic, and ecological factors, these desert lands differ from other public lands. The recreation resources must be managed under practices and techniques that are different from other lands.

These desert lands exhibit different land forms, vegetation and climatic extremes depending on geologic origins, latitude and general moisture distribution. They constitute a vast reserve of open space which, because of their fragility, pose particular management problems.

Ground cover varies from completely barren looking—but alive desert—to pinion-juniperwoodland. The way much of this land lies it gives an unobstructed and thrilling vista across the vastness of the West. Some high plateaus and mountain areas receive sufficient precipitation to support forest growth. These mountain ranges are scattered throughout the desert region like little humid islands in a rolling and sometimes jagged expanse of dry land. These form one of the factors which influence the pattern of man's attraction to the desert.

The appreciation of desert living is as old as man. Here in America it has developed with such rapidity during the past three decades that large numbers of people have migrated to the Southwest's desert areas. Increased leisure and mobility plus air conditioning have made the desert environment a sought out place for home and leisure. Coincident with this increase in desert population has been the rapid growth of West Coast cities. These two population trends have brought an increase in recreation pressure on the desert landscape which is causing serious types of deterioration. Areas of historic and archeological importance are being spoiled, fragile ecological balances are being disrupted, and litter and debris are causing deterioration of the charm of the wide open spaces.

Experts tell me there is a lack of balance in desert use. Some areas are overused while others are neglected. I also know there is a wide variety in the interests which pulls people to the desert in increasing numbers. But little research has been done in analyzing the variety of demand in the different fields of interest, or in estimating the quality of total demand and then channeling it properly into suitable areas. These areas ought to be located, inventoried and evaluated. Only through a study of demand, coupled with a proper inventory and evaluation of types of areas, can adequate planning, development and management of desert areas be accomplished. Such studies are the quickest and best way to assure that the desert can be efficiently used without destruction, for public recreation and education. For those of us who know the desert, know it isn't a desert really until man destroys the charm it has.

Techniques for accomplishing desert recreation demand are not perfected; however, a methodology has been partially developed. The increased appropriations will provide the means to improve the technique for projecting accurate estimates of future recreation pressures at specific locations and geographical areas showing potential. Use of such a technique will enable public land managers to assure proper capital investment in the right areas and provide for the distribution of use of the desert recreation resources so as to preserve its character.

This is a program for quality of environment and it needs our attention now.

EFFECTS OF FIRE AND ARID AND SEMIARID LANDS

Private and public land managers of land in the arid and semi-arid zones of the West are seriously handicapped because of a lack of knowledge relating to the physical, economic and social effects of fire.

Wild fires play a large role in the semi-arid and arid zones. Because of the dryness of the cover fires can sweep clean hundreds of thousands of acres every year. Uncontrolled fires affect water quality and quantity, hunting and fishing, natural beauty and scenic drives and views. These fires pollute the air and endanger property and lives. There is no question that a substantial impact occurs from such fires on the inherent properties of soils, vegetation, water, recreation and other social values associated with these lands. At present, land managers cannot accurately measure that impact in physical, economic or social terms, thus compounding the difficulty and complexity in making investment decisions and applying management programs. The social and economic effects of fires are becoming more and more apparent as the Nation expands its efforts to obtain a more livable and enjoyable environment. Programs for public recreation, natural beauty, water pollution and erosion control, and control of air pollution are being greatly intensified because of pressing public needs.

There has never been a comprehensive study to determine with adequate preciseness or relevancy, the physical, economic, and social effects of fire on the communities and the lands and resources which make up the arid and semi-arid zones in the West. Objective judgments must be based on a sound foundation of knowledge, which is not at present available. Collateral studies and research have been devoted almost entirely to the more moist forest lands, and even these studies are limited in scope to rather small geographical areas.

The increased appropriations we recommend will initiate a comprehensive study and research program, instituited to measure the physical, economic and social effects of fire on the various types of lands and resources which make up the western arid and semi-arid zones. The fire research would not be limited to wild fires because fire wisely used is a tool of management. In some situations, I hope it can be shown that fire, properly used and controlled, can benefit and enhance the value and management of arid and semi-arid lands and resources.

EVALUATIONS OF GRAZING MANAGEMENT SYSTEMS AND EFFECTS OF GRAZING ON RELATED RESOURCES, INCLUDING WILDLIFE

The approximately 150 million acres of public arid lands can potentially produce more forage for wildlife and livestock. The diverse vegetation complexes also have direct and significantly important relationships to watershed management, recreation and scenic beauty. It is important that the ecological interrelationship between plants, domestic and wild grazing animals, and man be thoroughly understood in order for these forces to be directed for the good of man and the conservation of the resources.

Historically, the grazing has been thought of as the most universal usage of the arid province. Significant usage for grazing will continue in the future—but adoptions and modifications are occurring.

Recently, the Bureau of Land Management embarked on a progressive program of range and wildlife habitat management and rehabilitation. The program incorporates known basic principles of good land use but still has far too little underpinning in the form of specifically adapted and tailored techniques for the diverse arid land types. Such knowledge is paramount if the influence of intensive range land management and habitat manipulation on the animals and related resources is to be practiced in a timely and fully sound manner.

The basic underlying resource for forage, soil protection, wildlife habitat and food is the vegetation complex. But vegetation is sparse in the arid province and the soils are thin and climate severe. It is essential that physiological requirements of major grass and browse species be researched to determine their reaction to grazing influence. Grazing systems must be developed, and adapted to local situations, for vegetation types in the arid province. Measurements of the effect of such systems in economic terms on forage, watershed, livestock, wildlife and recreation also is required. The research I would hope to augment would also involve the extent to which wildlife grazing is destroying its own habitat—why—and what might be done about it in the fragile arid zones.

Research takes time and thus the program we are suggesting is one which will give adequate and vitally needed knowledge in the best possible time.

In fairness to the Committee we have sought not only the first year cost but data on the study time involved and the total cost.

We hope the Committee can and will authorize the first year start on these four basic lines of arid land research.

LETTER FROM SENATOR ANDERSON

MARCH 9, 1967.

Hon. BOYD RASMUSSEN,
Director, Bureau of Land Management, Department of Agriculture,
Washington, D.C.

DEAR MR. RASMUSSEN: I have been discussing with a number of people the need for a program of arid land research. Enclosed is a proposed draft statement for the Committee on Appropriations which outlines the four lines of research that seem to be of the highest priority.

I would appreciate it if, as a legislative service, you would examine the statement and advise me whether these are the four lines of arid land research which you think are of highest priority. For each one which you think falls in the category can you provide me with a brief justification and cost estimate including the estimated duration of each project, the first year cost, and the total cost.

It would be my expectation that the major share of these funds would be used for contract research with qualified institutions such as New Mexico State University. It would be my further expectation that a concentrated effort would be made to rapidly disseminate and apply the results of this research to all of the arid type lands intermingled with the public lands your agency administers.

May I have a response at your earliest convenience, but no later than March 15, 1967.

Sincerely yours,

CLINTON P. ANDERSON.

LETTER FROM BUREAU OF LAND MANAGEMENT

DEPARTMENT OF THE INTERIOR,
BUREAU OF LAND MANAGEMENT,
Washington, D.C., March 17, 1967.

Hon. CLINTON P. ANDERSON,
Chairman, Committee on Aeronautical and Space Sciences, U.S. Senate, Washington, D.C.

DEAR SENATOR ANDERSON: In accordance with your request of March 9 and as a legislative service to you, there are enclosed brief justifications for each of the four lines of arid research indicated by you. Unquestionably research is needed in all.

There is considerable need for such research and only limited knowledge available. Within these constraints and the time limit set in your letter there are also enclosed our best estimates of the cost and time span required for each type of research.

The budget now pending before the Appropriations Committee is our best estimate of a balanced program which can be undertaken within existing budgetary limitation. Research which this Bureau has undertaken has been largely in conjunction with Universities and Experiment Stations and is expected to continue in this manner. Results are made available promptly for application in related areas.

If the Congress should provide funds for this desirable effort it would be expected that New Mexico State University would be requested to participate, together with other qualified institutions.

Your proposed draft statement is returned. Slight suggested revisions are entered on it.

Your interest in this program is sincerely appreciated.

Sincerely yours,

JOHN O. CROW,
Acting Director.

DEPARTMENTAL STATEMENT

1. HYDROLOGIC SOIL-COVER COMPLEX STUDY

The water-yielding potential of the arid and semi-arid zones in the West is becoming increasingly vital. Much of the water yield from these arid watersheds is received in a short period of time, such as in flash floods, and is commonly polluted with sediment and inorganic matter.

Although major research has been undertaken to study water yield on more humid area watersheds, research on the western arid land watersheds has been inadequately financed in the past.

The research work has been greatly deficient in the development of a methodology for planning and analyzing watershed protection and development programs on arid lands. A technique called the Hydrologic Soil-Cover Complex Methodology has been developed and is used for evaluation of humid and semi-humid land watersheds. However, the necessary data and knowledge of the hydrology of small arid land watersheds to apply this method do not exist. Research is required to obtain data on climaticological, vegetative and soil interaction with topographical and geological conditions of small arid watersheds. Research would be undertaken on sample areas to collect the required data.

2. ARID LANDS RECREATION DEMAND STUDY

In the Western desert regions, there are about 15 million acres of public lands administered by the BLM. These lands contain numerous areas of primitive, natural, historic, archeological, and scenic interest which should be preserved. A recent increase in recreation pressure on desert lands is causing serious deterioration of the historical and archeological values and disrupting ecological balances.

There is insufficient research about the reasons people seek desert recreational experiences. Additionally, we lack estimates of the total demand for desert recreation. In order to plan, develop and manage desert areas for recreational use, information about the quantity and types of desert recreation uses is required.

A beginning has been made in developing a desert recreation demand prediction methodology. Funds are needed to improve the partially developed technique and to widen the applicability of its use to larger geographical areas. Use of this technique will enable public land managers to estimate recreation demand at specific locations to determine proper capital investment and to assure proper location of facilities.

3. EFFECTS OF FIRE ON ARID AND SEMIARID LANDS

The effects of fire on arid and semi-arid lands of the West are largely unknown, even though wildfires play a large role in the economics, community life, and physical condition of the land. Uncontrolled fires affect water quality and quantity, recreation, natural beauty, and grazing. Fires cause air pollution and danger to property, human life and animal life. Fires affect the inherent properties of soils, vegetation and water, sometimes resulting in massive erosion and flooding.

Funds are needed to initiate a comprehensive research program to study the physical, social and economic effects of fire on the lands, resources and communities. The results of this research will aid land managers to more accurately assess the impact of wildfires on the resource in making investment decisions and operating resource conservation programs.

4. EVALUATION OF GRAZING MANAGEMENT SYSTEMS AND EFFECTS OF GRAZING ON RELATED RESOURCES

Grazing has traditionally been thought of as the most universal use of arid and semi-arid lands. However, the diverse vegetation complexes have direct and important relationships to watershed management, recreation and natural beauty.

The Bureau of Land Management has embarked on a progressive program of range and wildlife habitat management and conservation. It is important that the ecological interrelationships between vegetation, domestic and wildlife grazing, and man be more thoroughly understood in order to implement an effective program.

Grazing systems need to be developed, and adapted to local situations, for the vegetation types in the arid and semi-arid areas. The physiological requirement of major grass and browse species must be researched to determine their reaction to grazing forces. Measurement of the economic effects of such systems on forage production, water yield, and wildlife and recreation uses are required. The research might also involve the extent to which wildlife grazing destroys its own habitat and means of preventing this in the fragile arid lands.

Cost estimates and duration of the 4 lines of research

Study research	Study period (in years)	Estimated cost	
		1st year	Total
Hydrologic soil-cover complex	8	$345,000	$2,300,000
Recreation demand	6	73,000	325,000
Fire effects	8	156,000	525,000
Wildlife-livestock grazing systems and habitat	10	156,000	1,050,000
Total		730,000	4,200,000

The first year cost estimates broken down by Budget Activities is as follows:

Management of lands and resources appropriation

2. Resource Management, conservation and protection:	
(a) Land classification and mineral examination	$70,000
(b) Range management	150,000
(d) Soil and watershed conservation	330,000
(e) Fire protection	150,000
5. General administration	30,000
Total	730,000

BUREAU OF INDIAN AFFAIRS

Letter from Senator Jackson

U.S. Senate,
Committee on Interior and Insular Affairs,
April 3, 1967.

Hon. Carl Hayden,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.

My Dear Mr. Chairman: Each year, beginning in fiscal year 1963, the annual Appropriations Act for the Department of the Interior has contained langauge under the heading "Tribual Funds" to the effect that:

> "* * * funds derived from appropriations in satisfaction of awards of the Indian Claims Commission and the Court of Claims shall not be available for advances, except for such amounts as may be necessary to pay attorney fees, expenses of litigation, and expenses of program planning, until after legislation has been enacted that sets forth the purposes for which said funds will be used: * * *"

Very recently, in connection with judgments awarded by the Indian Claims Commission to the Southern Ute and the Flathead Tribes, the Department of the Interior advised our Committee that no additional legislation was required to distribute the judgment because of special statutory authority enacted many years ago which was still controlling. The Interior Committee disagrees with the Department's position. In the case of the two tribes mentioned, the Department of the Interior was requested to submit special bills (S. 1191 and S. 1177) authorizing the Secretary and the tribes to use their judgments. These bills have been considered, reported, and were passed by the Senate on March 13.

It is quite probable that in the future the Department will again try to avoid the limitation in the annual Appropriations Act. In order to make it absolutely crystal clear that any and all judgment funds are not to be advanced except for attorney fees and the like, until further legislation is enacted setting forth the purposes for which the funds may be used, we recommend that the following language be adopted by your Committee as a substitute for the existing provision in the fiscal year 1968 Interior Appropriations bill:

> "*Provided further*, That nothing contained in this paragraph or in any other provision of law shall be construed to authorize the expenditure of funds derived from appropriations in satisfaction of awards of the Indian Claims Commission and the Court of Claims, except for such amounts as may be necessary to pay attorney fees, expenses of litigation, and expenses of program planning, until after legislation has been enacted that sets forth the purposes for which said funds will be used:"

This proposed amendment was prepared by the Senate Legislative Counsel's office. I believe it would not be subject to a point of order on the Floor, and its adoption by the Congress would emphasize this Committee's firm position that the use of all Indian judgments for tribal purposes will continue to be subject to close scrutiny prior to expenditure.

Sicerely yours,

Henry M. Jackson, *Chairman.*

BUREAU OF OUTDOOR RECREATION

Statement by New York Conservation Commissioner

The Department of the Interior has requested an advance appropriation of $32 million to the Land and Water Conservation Fund to be allocated entirely to federal agencies. The Bureau of Outdoor Recreation has recommended that the advance appropriation be increased to $72 million to permit the allocation of an additional $40 million to the states. The proposal of the Bureau of Outdoor Recreation would permit total allocation from the Land and Water Conservation Fund for the 1968 fiscal year as follows:

Federal purposes—$77 million ($45 million recommended by the President plus $32 million from the advance appropriation)

State purposes—$105 million ($65 million recommended by the President plus $40 million from the advance appropriation)

On behalf of the State of New York, I would like to recommend approval by Congress of the $72 million advance appropriation recommended by the Bureau of Outdoor Recreation.

An advance appropriation of $72 million would permit an apportionment to New York State for the 1968 fiscal year of approximately $6.1 million.

During the Congressional debate over adoption of the Land and Water Conservation Fund Act of 1965, the annual apportionment under the Act to New York State was estimated at $6.5 million. New York State used the annual $6.5 million figure in planning its future programs to be financed partly with grants from the Land and Water Conservation Fund.

Moreover, the State of New York developed a financing proposal of its own, known as the "Next Step" bond issue, in the amount of $200 million to supplement the annual grants from the Land and Water Conservation Fund. This $200 million bond issue was based on the assumption that the annual federal grants would be approximately $6.5 million. The bond issue was approved by the people of the state at the general election of 1966 and is now in effect.

Although all of the recreation planning in New York State during the past three years has been based on annual apportionments from the Land and Water Conservation Fund in the amount of $6.5 million, the fact of the matter is that the annual apportionments have never come close to such a figure. The table below gives the apportionments to New York State during the past three years:

1965	$601, 610. 00
1966	4, 928, 780. 00
1967	3, 734, 894. 00

Disregarding the initial 1965 apportionment, it is obvious that during the past two years the apportionments to New York State have been more than $4 million less than anticipated.

Because the annual apportionments have been considerably less than anticipated and because the "Next Step" bond issue has not been available until the present time, New York has postponed a statewide publicity and educational campaign intended to advise municipalities in the state of the availability of recreational grants-in-aid. Despite the postponement of this campaign, the municipalities of the state have submitted requests for aid that have exceeded all available federal funds. By statute, New York State has allocated 50 per cent of each year's apportionment from the Land and Water Conservation Fund to state use and 50 per cent to municipal use. As of this date, both approved state projects and approved municipal projects have exceeded available federal funds so that both the state account and the municipal account are in a deficit position. The total deficit at the present date is approximately $100,000. Moreover, many of these projects have been approved for their initial phases only and it is certain that subsequent phases will require additional grants from the Land and Water Conservation Fund.

It should be kept in mind that the states have the year in which a federal apportionment is made plus two more fiscal years in which to obligate the apportioned funds, yet at the present time, with three months remaining in the current fiscal year, New York has committed every cent which has been apportioned and has even incurred a $100,000 deficit.

The fact that some states have not used all of the funds apportioned to them is not troublesome in view of the fact that they have a total of three fiscal years in which to obligate each year's apportionment. The tardy states still have adequate time to obligate their apportioned funds.

I would like to emphasize that New York is not objecting to the advance appropriation of $32 million for use by federal agencies. We have no objection to the purposes for which this advance appropriation reportedly is to be used. We do feel strongly, however, that an advance appropriation for federal purposes should be matched on an annual basis by advance appropriation for state purposes in the proportions prescribed by the Act.

The situation in New York is particularly critical because of the adoption of the "Next Step" bond issue. The adoption of this bond issue has resulted in a great deal of publicity for both federal and state recreational grant-in-aid programs. It is our belief, confirmed by reports from the field, that we are about to receive a deluge of applications for recreational assistance. An increase in our annual federal apportionment would enable us to honor more of these applications and to reject fewer than we will otherwise be able to do.

GEOLOGICAL SURVEY

LETTER FROM SENATOR KUCHEL

U.S. SENATE,
COMMITTEE ON APPROPRIATIONS,
March 20, 1967.

Hon. CARL HAYDEN,
Chairman, Subcommittee on Interior Department Appropriations,
U.S. Senate, Washington, D.C.

DEAR CHAIRMAN HAYDEN: The State of California long has participated actively in co-operative investigations into water problems, as I know you fully appreciate, and is fearful that the amount of monies proposed for such research activity by the U.S. Geological Survey for Fiscal 1968 is inadequate and unrealistic.

I am attaching a copy of a letter from the Director of the Department of Water Resources, urging an increased sum for this purpose, to meet the availability of non-Federal entities to finance such important studies. I hope that the capability of the Survey to carry on projects at the recommended level is being examined closely in connection with consideration of the pending Budget requests, because I feel that energetic activity in this field is imperative for the fast-growing Western region and that benefits are commensurate with expenditures.

With warm regards,
Sincerely,

THOMAS H. KUCHEL.

LETTER FROM CALIFORNIA DEPARTMENT OF WATER RESOURCES

MARCH 15, 1967.

Hon. THOMAS H. KUCHEL,
U.S. Senator, Senate Office Building, Washington, D.C.

DEAR SENATOR KUCHEL: We have been informed by the Council of State Governments that significant reductions have been made in the amount allocated in the President's budget to the United States Geological Survey for cooperative federal-state water resources investigation programs. We urge you to assist in obtaining adequate federal funding for this work.

We understand that the United States Geological Survey initially requested $14,700,000 for fiscal year 1967–68 to match the funds offered by the states, counties, and municipalities to support cooperative water resources investigations and that this sum was reduced to $13,740,000 while offerings by the states and local governments have increased to an estimated $15,223,800.

This Department has included in its budget for 1967–68 the sum of $772,755 for support of four cooperative water resources investigations under the United States Geological Survey program. These are: surface water flow measurements, ground water investigations, sediment data collection, and surface water quality data collection. This state appropriation, like the federal appropriation, requires that the funds be expended on a matching basis. It is not known whether the proposed $960,000 reduction in the budget for the Geological Survey will reduce the amount available for California programs. That is possible, however, and such reduction could seriously affect these vital programs.

In addition to the Department's programs, there are at least two dozen other state, county, and municipal agencies participating in cooperative water resources investigation programs. Although we do not have sufficient information to calculate the precise amount budgeted for these programs by all state and local agencies in California, it is estimated that a total of $1,165,000 has been budgeted by California agencies for expenditure in fiscal year 1967–68.

Our concern is not limited to the impact of the reduction on the program within California. We have a very real interest in the collection of water resource data in the other western states. The basic data which these programs develop is essential to future resources planning on a regional basis. The desire of the various state governments to participate in these programs reflects their recognition that any resource development project whether constructed by federal, state, or local government, requires a sound long-range data collection program.

Because of the importance of these cooperative water resources investigation programs to this Department, the State, and the western states as a whole, we ask that you support an increase in the United States Geological Survey's appropriations for these programs to the originally budgeted $14,700,000 and preferably, to the estimated $15,223,800 offering by state and local governments.

Sincerely yours,

BILL GIANELLI, *Director.*

LETTER FROM SENATOR BYRD

U.S. SENATE,
COMMITTEE ON ARMED SERVICES,
March 23, 1967.

Hon. CARL HAYDEN,
Chairman, Subcommittee on the Department of the Interior and Related Agencies, Senate Appropriations Committee, Washington, D.C.

DEAR MR. CHAIRMAN: I am enclosing a letter which I received today from Professor Paul H. Price of the Geological and Economic Survey of the State of West Virginia.

He presents such a good statement in support of the appropriation of funds for the International Hydrological Decade that I feel the subcommittee should have the benefit of his views.

With best wishes.

Sincerely yours,

ROBERT C. BYRD,
U.S. Senator.

LETTER FROM WEST VIRIGINIA GEOLOGICAL AND ECONOMIC SURVEY

MARCH 22, 1967.

Hon. ROBERT C. BYRD,
Member, U.S. Senate,
Washington, D.C.

DEAR SENATOR BYRD: It has been brought to my attention that Senate hearings are now underway to consider funds for the International Hydrological Decade.

Inasmuch as you are a member of the Senate Appropriations Subcommittee on Interior and Insular Affairs which is considering the program, I would like to state my approval to you.

Apparently, two points in particular are being questions: (1) Why should the IHD be undertaken now? (2) Why does the program have to be international?

The answer to the first question is that it should have been started sometime ago. Every year that we delay this important work of coordinating and correlating hydrologic research, eliminating duplication of effort, and training hydrologists brings us closer to the time when water problems become acute and dangerous for the people of the World. Now is the time to begin preventive measures and IHD is the initial step.

The answer to the second question is straightforward, two-thirds of the World's people have practically no hydrological advice available to them. For the sake of these people, more selfishly, for self protection, our knowledge of hydrology, its problems and cures, must be put on an international basis.

I hope these few observations will give you more insight into this very important international program of conservation.

Sincerely yours,

PAUL H. PRICE,
Director and State Geologist.

LETTER FROM NATIONAL ACADEMY OF SCIENCES

MARCH 28, 1967.

Hon. CARL HAYDEN,
Chairman, Senate Appropriations Committee,
U.S. Senate, Washington, D.C.

DEAR SENATOR HAYDEN: I am writing in regard to the budget request for the International Hydrological Decade, which is being presented by the Geological Survey of the Department of the Interior. Since your Committee is now examining the Geological Survey budget, I would like permission to present the

Academy's reasons for supporting the Decade request at a time like this when other commitments on the part of this nation deserve such serious consideration.

First, it should be recalled that the Geological Survey is presenting the IHD budget request on behalf of all federal agencies and the hydrological community and not as an additional program of its own. In this, the Survey is acting for the Department of the Interior because Interior "assumed the responsibility for submitting a consolidated budget request for the IHD program for all involved Federal agencies," as stated in a letter of January 26, 1967, from Mr. Phillip S. Hughes, Deputy Director of the Bureau of the Budget.

The Academy supports the activities of the IHD because the program has scientific merit, because it comes at a time when water problems are becoming increasingly critical everywhere, and because the United States stands to gain more than it expends by participating in this international cooperative investigation of the world's water resources. With nearly 100 countries collecting and analyzing water phenomena in a coordinated way, and all countries agreeing to exchange the information they obtain, it is possible for each country to draw upon a far larger pool of knowledge and experience than it would be able to do from within its own borders.

It also is pertinent that nearly all of the funds appropriated to the IHD will be spent in the United States and that the IHD program does not duplicate any on-going activities. Rather, it is concerned with new work, accelerating or extending on-going or neglected projects, encouraging objective evaluation of mission-oriented activities, and providing coordination where it otherwise has not existed.

I sincerely hope that the United States can support prompt and meaningful participation in this important international program.

Sincerely yours,

FREDERICK SEITZ, *President.*

BUREAU OF MINES

LETTER FROM SENATOR CLARK

U.S. SENATE,
Washington, D.C., March 28, 1967.

Hon. CARL HAYDEN,
Chairman, Subcommittee on the Department of Interior and Related Agencies, Committee on Appropriations, U.S. Senate.

DEAR SENATOR HAYDEN: The highly successful research blast furnace, operated by the U.S. Bureau of Mines, at Bruceton, Pennsylvania, has been ordered closed for lack of funds. This has been a joint blast furnace operation, with funds contributed in about equal amounts by the Bureau and as many as 22 iron and steel companies.

Recently, however, some of the larger firms, particularly those with their own research and model blast furnace facilities, have withdrawn from the project. The annual cost of the program, including both Federal and private contributions, has ranged between $1,432,000 in 1963 and $958,000, in 1967.

According to estimates I have received, full scale operation with normal down time for maintenance and alterations would require at least $1,244,000 for fiscal 1968. Because of the withdrawal of the larger companies, the total amount available from private sources for the next fiscal year is an estimated $450,000. The Bureau spent about $500,000 a year on the blast furnace program.

Although the scope of the project's activities were limited, the research results have been most impressive. For the American iron and steel industry, the findings have been helpful in its battle with foreign import competition. New technology devised by the Bruceton laboratory has saved the industry as much as $5 a ton on pig iron, which has been reflected in the industry's net income and in at least $60 million in additional Federal revenue in income taxes.

I should like to urge for the committee's consideration full Federal funding of the necessary research activity in blast furnace operations at the Bruceton laboratory. It seems to me this effort is too important for the national economy through continued technological advances, to leave to haphazard funding.

I am informed that there are sufficient funds available in the Bureau to repair the blast furnace during the balance of fiscal 1967. The assurance of Federal funds after July 1, 1967, would permit the blast furnace to retain its staff of skilled operators.

Copies of statements on behalf of employees at the laboratory and the companies which participated in previous research programs are attached.

Thank you very much for your consideration of this matter.

Sincerely yours,

JOSEPH S. CLARK.

BUREAU OF SPORT FISHERIES AND WILDLIFE

STATEMENT OF SENATOR ALLOTT

Mr. Chairman, as you know, last year the Senate approved my request to increase the funding of the Colorado Cooperative Wildlife Research Unit at Fort Collins, Colorado to $40,000 per year, a level comparable to the Federal support of the Cooperative Fisheries Research Unit. Other cooperative wildlife research units which the Senate authorized funding at the $40,000 level include: Missoula, Montana; Auburn, Alabama; Logan, Utah; Moscow, Idaho; Amherst, Massachusetts; Orono, Maine; Stillwater, Oklahoma; and Mississippi State University.

During the Senate-House conference on the Fiscal Year 1967 Interior and Related Agencies Appropriations measure, the funding level was reduced with respect to cooperative wildlife research units to approximately $15,000, with the following recommendation:

> "The conferees are in agreement that a review and analysis of the funding for the various cooperative wildlife research units shall be made by the Department and that the 1968 budget estimate shall provide uniform funding for these units at a level commensurate with the needs."

I am informed that the Department complied with the above recommendation of the Conference Committee and proposed funding at the $40,000 level; however, I understand that the Bureau of the Budget disapproved the proposal of the Department with respect to all of the cooperative wildlife units except the one in Ohio, and reduced the budget request to the $15,000 level. Only Ohio has succeeded in obtaining $40,000 in annual Federal support.

Colorado's Cooperative Wildlife Research Unit has had a significant record of achievement; however, its Federal funding level has remained essentially the same as it was when the unit was first established twenty years ago—$15,000. As the program has developed, with increased needs and increased costs, funding at the same 1947 level is unrealistic and it would seem not to be in accordance with the previously mentioned recommendation of the Conference Committee.

Colorado, like many other states, has both a Fishery and a Wildlife Unit, with the same major cooperators participating. The main difference is that the Federal contribution to the Fishery Unit is sufficient ($40,000 annually) to provide for two scientists (the unit leader and an assistant leader), together with some operating funds. The need for an additional professional, as assistant leader, to share the load of research administration, and directing the graduate students in the wildlife unit is general well recognized, and as the workload has grown over the past 20 years, this need has become urgent.

Other major cooperators have significantly increased their contributions, for example: the State Game, Fish and Parks Department has voluntarily increased its contribution by nearly 400% over what it contracted to contribute when the unit was first established. The University has also substantially increased its contribution. Only the Federal contribution has failed to take into account the increased demands on the unit by remaining the same over the past twenty years.

In light of the recommendation of the Conference Committee last year, and the fact that these wildlife research units are not being funded at a uniform level despite the Department's recommendation that Federal funding for all the units be raised to the $40,000 level, I respectfully request that the Subcommittee increase the appropriation and Federal contribution to the Colorado Cooperative Wildlife Research Unit to $40,000 for Fiscal Year 1968.

LETTER FROM SENATOR MUSKIE

U.S. SENATE,
COMMITTEE ON PUBLIC WORKS,
March 23, 1967.

Hon. CARL HAYDEN,
Chairman, Senate Appropriations Committee,
U.S. Senate, Washington, D.C.

DEAR CARL: Last year I wrote you concerning the need for inclusion of funds in the amount of $85,000 in the Interior Department Appropriations bill for preliminary engineering work on the establishment of the new Atlantic Salmon fish hatchery at Green Lake, Hancock County, Maine.

Funds were not included in the fiscal year 1967 appropriations but I do hope that they will be approved this year. The amount required for the engineering work has expanded to $100,000. Moreover, the Department of the Interior has expressed its intention to restore the Penobscot River in order that it may support salmon. This important objective will require the establishment of an additional Atlantic Salmon hatchery. Continued delays would only have the result of increasing the cost of the project and pushing back the final completion date of the Penobscot River restoration project. Any help you can extend in securing inclusion of these funds would be most appreciated.

With all best wishes, I am,

Sincerely,

EDMUND S. MUSKIE,
U.S. Senator.

LETTER FROM SENATOR JORDAN OF IDAHO

U.S. SENATE,
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,
March 23, 1967.

Hon. CARL HAYDEN,
Chairman, Subcommittee for Interior,
Senate Appropriations Committee,
Washington, D.C.

DEAR CARL: I appreciate the opportunity to call to your attention the need for funds in connection with the construction of a fish hatchery on Clear Creek, a tributary of the Clearwater River in Idaho. The Middle Snake River Basin, of which this area is a part, encompasses some of the richest fish and wildlife resources in the United States. The dams that have been constructed between this site and the mouth of the Columbia River have fish passage facilities but is also necessary through artificial propagation, to supplement the natural reproduction of salmon and steelhead trout.

This hatchery is located near the Middle Fork of the Clearwater River at Kooskia, Idaho. A site selection was made based on studies started in 1962 when $50,000 was appropriated for a feasibility study. An additional $475,000 was appropriated for fiscal years 1966 and 1967. It is now necessary to appropriate $445,000 for fiscal year 1968 for the next phase of construction. When completed the entire hatchery operation will cost $1.3 million. The migratory fishing resources for Idaho alone average $50 million a year and if we can stabilize and improve this resource, revenues will increase and this wonderful outdoor sport can be expanded so thousands of additional people can enjoy it.

This is important to the State of Idaho and to the entire Northwest. I respectfully request that the sum of $445,000 be approved by your committee for for the Bureau of Sport Fisheries and Wildlife to continue construction of this fine project. Thank you.

Sincerely yours,

LEN B. JORDAN,
U.S. Senator.

STATEMENT OF SENATOR MUSKIE

Mr. Chairman, the Cooperative Fishery Units program was authorized by Public Law 86–686 (74 Stat. 733) approved September 2, 1960. This program was established: "to facilitate cooperation between the Federal Government, colleges and universities, the States and private organizations for cooperative unit programs of research and education relating to fish and wildlife and for other purposes."

Congress has been very receptive to this cooperative research program as a practical example of creative federalism at work. The first State fishery unit was authorized and funded by Congress in fiscal year 1962 and by December 31, 1966, 23 units had been established.

Unfortunately, the first 12 State units authorized before 1965 were initially funded at $30,000 annually. Subsequently, seven of the 12 and the 11 more recently authorized State units have been funded at $40,000 annually.

Five State cooperative fishery units—Idaho, Louisiana, Maine, New York and Pennsylvania located at the State university in each State—continue to be funded at the $30,000 level annually. The inadequacy of the $30,000 annual Federal budget is apparent since it finances only the salaries of the unit leader, assistant unit leader, and minor incidental expenses. An increase of $10,000 to the $40,000 level of the other State units would provide support to three graduate students at each of these State units and permit the purchase of equipment and supplies for research projects.

This discrepancy in Federal funding in the State units was called to the attention of the Appropriations Committee last year. The Conference Report (No. 1538 for Fiscal Year 1967) stated: "The conferees are in agreement that a review and analysis of the funding for the various cooperative wildlife research units shall be made by the Department and that the 1968 budget estimate shall provide uniform funding for these units at a level commensurate with the needs."

Although the review by the Bureau of Sport Fisheries and Wildlife of the funding of these units supports the position that all State cooperative fisheries units should be financed at the same basic level of $40,000 annually, the Interior budget request for fiscal year 1968 provided for no increases for these five State units.

The total amount of money involved in the requested increase in the budget for the Bureau of Sport Fisheries and Wildlife is relatively small—only $50,000, which would be divided equally among the five State units in Idaho, Louisiana, Maine, New York, and Pennsylvania.

This increase was not reflected in the 1968 budget despite the specific directive in the conference report. While the amount is small, it represents a vital element in building effective continuing Federal-State cooperation in this and other fields. Minimum levels of support are required to maintain the vitality of these State units which carry out programs developed cooperatively with the universities and State fish and game departments to meet both State and national objectives. Such cooperative efforts represent effective examples of creative federalism and justify Congressional support. I have advised both the Senate and House Appropriations Committees of my interest in supporting an increased appropriation of $10,000 for each of these five underfunded State cooperative fishery units, and I will continue my support of this relatively small but significant budget item.

NATIONAL PARK SERVICE

National Park Service Statement

ADDITIONAL LIVE ELK TRAP INSTALLATIONS AT YELLOWSTONE NATIONAL PARK

As a result of the growing elk management problem at Yellowstone National Park, a management program has been instituted, as described in the enclosed statement. An effective wildlife management program at Yellowstone National Park requires additional emphasis on live-trapping as one part of the total program. To implement this facet of the program, an additional trap installation is needed at locations on Upper Lamar River and on Blacktail Creek to enable trapping operations at higher elevations not previously included in the program. The two additional traps plus augmented support activities will provide every reasonable effort to accomplish herd management, reducing to the minimum any requirement for direct reduction of elk in the park.

The estimated fund requirements to provide for the additional traps and augmented support activities are as follows:

Management and protection appropriation:	
Personnel compensation: GS-11 biologist, wildlife technician and supporting services	$16,500
Equipment operation:	
Aircraft (helicopter and fixed wing)	28,000
Ground and oversnow equipment (pickups, trucks, snowcat, weasels)	5,150
Total	33,150
Supplies and materials (hay, rope, tools, etc.)	1,900
Travel and transportation of persons	2,000
Other direct expenses (telephone, shop expenses, etc.)	600
Total, management and protection	54,150
Maintenance and rehabilitation of physical facilities appropriation:	
Maintenance of elk traps	2,800
Construction Appropriation: Portable live traps (2 @ $15,000) (Upper Lamar River and Blacktail Creek)	30,000
Parkway and Road Construction (Liquidation of Contract Authorization) Appropriation: Access roads	3,160
Total	90,100

LETTER OF FEDERATION OF CITIZENS ASSOCIATIONS OF THE DISTRICT OF COLUMBIA

MARCH 24, 1967.

Hon. CARL HAYDEN,
Chairman, Interior Subcommittee,
Senate Appropriations Committee.

DEAR SENATOR HAYDEN: I am submitting this letter and attached exhibit for inclusion in the printed Hearings of your Subcommittee relating to the appropriation of FY 1968 for the Interior Department, National Park Service—Wolf Trap Cultural Park.

I object to the appropriation of any funds for this proposed Wolf Trap Cultural Park for any purpose such as is contemplated by the National Park Service and the Department of the Interior for the following reasons:

1. It is the public policy of the Administration to discourage non-essential expenditures of Federal funds during fiscal year 1968. There is no demonstration of the need for Wolf Trap Cultural Park. On the contrary, the legislative history clearly shows the project to be of a local nature and demonstrates no present or future need.

2. The Federal funds being sought should be obtained from private sources. The legislative history shows that over $1.5 million is to be obtained by gift for the construction of an amphitheater. By reducing this highly inflated and completely unrealistic sum, the Federal funds requested by the National Park Service and the Department of the Interior could be deleted. For example, a covered amphitheatre was recently constructed for the Detroit Symphony Orchestra for less than $300,000. The National Symphony Orchestra is currently building a larger covered amphitheater at Columbia, Maryland for less than $600,000.

3. The project depends upon FAA acquiescence and support for the opening of Dulles Airport Access Highway to local traffic. Once opened for the Wolf Trap Cultural Park at a cost of several millions of dollars, the precedent will have been established for the opening of the Dulles Airport Access Highway to other communities along its route, all at further cost to the taxpayers. The position of the FAA, which has been strongly opposed to opening the Dulles Highway to local traffic, should be made clear before your Appropriations Committee provides any Federal funds for the Wolf Trap Cultural Park for any purpose.

I am,

Respectfully,

JOHN R. IMMER, *President.*

THE WOLF TRAP CULTURAL PARK IS A BAD DEAL FOR THE FEDERAL GOVERNMENT AND FEDERAL FUNDS SHOULD NOT BE PROVIDED FOR IT

I speak for the Federation of Citizens Associations of the District of Columbia, a representative body of 20,000 citizens organized into 38 local groups or associations, which devotes its efforts to the creation of a better life for the residents of the District of Columbia and for the Greater Washington area. We all have a particular interest in Federal appropriations since we are all taxed to provide them. When Federal appropriations in any field, including those for cultural and recreational activities, are fairly drawn, and have a purpose of benefitting all of our people, not just our own members, then we support it. We are not in support of, and have never supported, cultural and recreational, or any other projects, benefitting only an elite few. When we see a wasteful and totally needless appropriation we feel it is our duty as citizens to expose and oppose it.

A very phony project is now pending in Congress, and it will cost the taxpayers of this nation many millions of dollars—it is known as the Wolf Trap Cultural Park, and it is a wolf trap as far as the taxpayers are concerned.

We have studied this legislation very carefully. We have investigated a history of repeated promises and private failure which led to its sponsors and proponents taking the step of seeking legislation to secure Federal appropriations. The Wolf Trap Cultural Park will become an enormous burden on the Federal treasury; it will create monstrous traffic jams in a quiet suburban area of Virginia; it will force the opening of the Dulles Airport Road at a cost to the taxpayers of the nation of many millions of dollars to provide access roads to that highway for a number of Virginia communities; and it will set up a shaky, private organization as the permanent ward of the Federal Government at public expense. For these and other reasons we are opposed to the Wolf Trap Project as a boondoggle. We recorded our opposition in writing with the subcommittee of the House Interior Committee. We were denied the right to testify at the subcommittee hearings. Indeed, we could not find out until the last minute when and where these so-called hearings would be held. Small wonder! Even Congressman O'Brien of New York, a leading member of the full committee, could not find out about the hearings even though he asked about them in advance and asked to testify. Congressman Mathias of Maryland, who has demonstrated a deep interest in progressive cultural legislation, had the same trouble. He couldn't find out about the hearings until after they were over.

What goes on here? Why must a project for a so-called cultural park be handled like a clandestine operation?—so secret that even conscientious Members of Congress cannot themselves find out what goes on. The cloak-and-dagger atmosphere is preserved by the refusal of the subcommittee to print the hearing record and make it generally available. Buried inside that record is the revealing clue, furnished by the privately engaged counsel of the Wolf Trap proponents. Asked about an unpublished contract between the private owners of Wolf Trap and the Interior Department, this was the reply: "There are certain things that are confidential."

Congressman George Fallon of Maryland is one of the most respected of our legislators. He is Chairman of the powerful House Public Works Committee and he is not given to extravagant statements. Here is part of what he told the House about the Wolf Trap Cultural Park after he dug out most of the facts from beneath the sham of confidential arrangements. Congressman Fallon said:

"It is a bad deal for the Federal Government. I do not agree that it would be a gift. If it is a gift, it has too many strings attached to it. It would be in direct competition with the Kennedy Cultural Center, Constitution Hall and many other privately owned and operated cultural endeavors in and near the metropolitan area.

"This is an attempt to get Federal funds for what essentially is a private enterprise. It is a flagrantly unbalanced contract, with the scales weighted against the Federal Government."

The gift that is not a gift, the deal that is a bad one for the Federal Government originates from a proposal of two Fairfax County landowners to give one hundred acres of Wolf Trap Farm to the Interior Department. Except for an amphitheatre, which would be donated, the Federal Government would have to pay for all improvements, for adequate access roads, for about fifty percent more land and for annual administration and maintenance. One of the donors, the American Symphony Orchestra League, Incorporated, would remain in permanent occupancy of five acres of the park located right in the center of it. There is a reverter clause in the confidential contract that under certain conditions would allow the donors to take back the property after the United States had improved it.

The background of this amazing transaction gives the proof to Mr. Fallon's charges: That we are faced with an attempt to get Federal funds to develop a private enterprise, with the donors remaining in substantial control and occupancy of the land after it is conveyed to the Government.

For five years the donors have been urgently trying to develop a cultural office and facilities at the Wolf Trap property through private means. In June 1961 Mrs. Jouett Shouse announced the gift of 38 acres of her Wolf Trap Farm near Vienna, Virginia, to the American Symphony Orchestra League, Incorporated, for a headquarters. The League corporation promised to raise by public subscription $1,500,000 in order to improve the site with roads, bridges, buildings, water and sewage disposal.

Under the guidance of Broadcast Music, Incorporated (BMI), the TV-radio industry sponsored a nationwide, intensive and long-range campaign to raise the funds from the general public. The campaign was a dismal failure, as the League corporation regretfully reported to its members. Given the freedom to give voluntary support to the project, the American people voted a decisive NO.

Meanwhile, the League has been unsuccessfully trying to get its gift landscape removed from the Fairfax County tax rolls, a maneuver it now hopes to accomplish through Federal intervention. Wolf Trap for some time had been offered as a gift to the county, but later that proposal was withdrawn.

In the light of this history, the real intent of the Wolf Trap project becomes clear. It covers an ingenious and semi-secret plan to salvage a private failure through a so-called gift to the United States. A real gift would cost the American people nothing. When Andrew Mellon gave us his priceless art collection, he also paid for every penny of the cost of the National Gallery to house it, and the Gallery was placed where every resident of and every visitor to the Washington area can easily reach it. When Elizabeth Coolidge gave the Coolidge Auditorium to the Library of Congress, she paid all the bills and included a bequest of an endowment to maintain it and produce programs in it.

Not so with the Wolf Trap deal. Here the Government will have to spend millions to make the site usable and give it proper access. Despite the claims that have been made for it, Wolf Trap is not 13 miles from the White House, but about 20 miles over the most likely road routes. It is directly served by only one narrow road, a rural route, Virginia 676. This is a meandering country lane with several one-way wooden bridges. Its narrow width is controlled by a new overpass, bridging Dulles Airport Highway but providing no access to it. The director of the National Park Service has admitted that effective use of the proposed facilities by 7,000 people at a time—all coming in private automobiles—will require access to the Dulles highway. Based on the understandable policies of the FAA, as endorsed by Congress, such access is extremely unlikely. Even if it were to be authorized, the connections would cost several millions.

This will be no bargain, but a burden. It will be an extra burden to the good people of Fairfax County, whose land taxes must rise as Wolf Trap is removed from the tax base, and who will find all of their roads in the area tied up in monumental traffic jams when the proposed facilities are in use.

Even if the Wolf Trap project were a good one—which it isn't—there is no proper need to consider it in this session of Congress. The Interior Department has neither plans for nor possibility of getting a Wolf Trap appropriation before adjournment. Therefore, the proposal should be held over for the next Congress, when proper, open hearings may be held with due notice to all interested parties. Only in this way can Congress get the full facts and legislate with wisdom.

The only pressure for immediate consideration of the bill arises from another of the novel conditions of that unpublished gift contract. The offer, which was made only in June, specifies that this Congress in this session must approve this project in its present form, or the deal is off. It is a bald take-it-or-leave-it proposition—something that has no place in this or any other Congress. On this ground alone, the Wolf Trap deal should die.

FOREST SERVICE

MAMMOTH VISITOR INFORMATION CENTER—LETTER TO SENATOR KUCHEL

UNITED STATES DEPARTMENT OF AGRICULTURE, FOREST SERVICE,
Washington, D.C., March 17, 1967.

Hon. THOMAS H. KUCHEL,
United States Senate.

DEAR SENATOR KUCHEL: This is in reply to your March 14, 1967, letter requesting answers to specific questions relative to the status of the Mammoth Visitor Information Center in the Inyo National Forest.

1. What portion of the $25,000 appropriated for planning in FY 1967 has been spent?

Answer: Of the $25,000, the present obligation is $17,215, leaving a remainder of $7,785, which will be expended before June 1, 1967.

2. Have plans been developed for the construction of the Mammoth Visitor Center?

Answer: Planning has been completed on the amphitheatre and related structures; the Visitor Center building, utilities, roads, and parking areas are in working drawings. Final plans for these will be complete by June 1, 1967.

3. If so, can you supply me with a breakdown of the estimated costs of the Mammoth Visitors' Center as planned?

Answer: A breakdown of the estimates is as follows:

Mammoth visitor information center

VIS Building:	
Audio-visual room, reception, and display	$184, 100
District Ranger office	66, 400
Total	250, 500
Amphitheater and related structures	66, 000
Walks, landscaping, and sprinkler system	66, 000
Electrical distribution, sewage and water	35, 000
Inspection and contract administration	20, 000
Contingency	8, 500
Forest Land Management Appropriation, Subtotal	420, 000
Roads and Trails Appropriation,[1] Subtotal	60, 000
Grand Total	480, 000

[1] Proposed for construction from road and trail appropriation over 2 fiscal years.

4. How much money is requested by the Department in the FY 1968 budget for the Mammoth Visitors' Center?

Answer: There are no funds provided in the FY 1968 budget for the construction of this facility.

5. If funds were provided for the Mammoth Visitors' Center in FY 1968 would the Department be in a position to proceed with the construction of the Center?

Answer: The Forest Service would have the capability to construct this facility if funds were provided.

Sincerely yours,

A. W. GREELEY,
Associate Chief.

GEORGE ROGERS CLARK RECREATION WAY—LETTERS FROM SENATORS DIRKSEN AND PERCY

U.S. SENATE,
COMMITTEE ON BANKING AND CURRENCY,
March 23, 1967.

Hon. CARL HAYDEN,
Chairman, Interior Subcommittee, Senate Committee on Appropriations, New Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: We would like to take this opportunity to express our interest in and support for an appropriation of $260,000 to begin engineering and recreational surveys for the proposed George Rogers Clark Recreation Way in southern Illinois.

As you know, Congress declared in Public Law 88-657 that "the construction and maintenance of an adequate system of roads and trails within and near the national forests . . . is essential if increasing demands for timber, recreation, and other uses of such lands are to be met." We respectfully submit that the George Rogers Clark Recreation Way is fully qualified under the 1964 Act and that it should be considered a priority project.

In some counties in southern Illinois as many as a quarter of the population are on public welfare. Job opportunities are lacking and the population has been declining. Yet, studies have shown that the proposed George Rogers Clark Recreation Way would produce direct annual expenditures in a single year of about $8.5 million and that by 1976, the 29 counties of southern Illinois could expand their tourist and recreation business by an annual expenditure from tourists of $123 million. This would create in southern Illinois 6,000 new jobs, 70% of which could be filled with people living in the area.

Because the proposed recreation corridor would serve the dual purpose of opening up the vast recreational facilities of southern Illinois to large numbers in the nearby urbanized areas as well as giving an important initial boost to the economy in the area, we feel that it is indeed worthy of Federal assistance at this time.

Neither one of us believes that now is the time to overly burden an already overburdened budget. However, with the war in Vietnam and other exepnses at an all-time high we believe that it is more important than ever to establish fiscal priorities. Projects that can be begun with a modest amount of federal funds used as federal seed money to attract greater expenditures of private funds should, we believe, receive priority. The private sector of the economy can provide a sound basis for prosperity in southern Illinois if only the government will lay the foundation with good roadways and recreational potential.

We would appreciate your consideration of our request when the Subcommittee makes its decision on this matter.

Sincerely yours,

EVERETT MCKINLEY DIRKSEN.
CHARLES H. PERCY.

STATEMENT BY MAYOR OF ROSICLARE, ILLINOIS

Mr. Chairman, members of the Committee, I am Otis Lamar, Mayor of Rosiclare, Illinois. I also represent Hardin County, Illinois in region 9 of the Illinois Tourism Commission.

We in Southern Illinois are working to develop recreation—tourism as an economic resource for our area. Through such area-wide organizations as the Shawnee Hills Recreation Association, of which I am an active member, we are seeking to improve the social and economic use of the land, to reduce unemployment and underemployment, and to make our area a better, more attractive place to live.

During my many years in the hills of Southern Illinois, I have watched the development of the Shawnee National Forest. Checchi and Company, Washington, D.C. in their study entitled *The Economic Potential of Tourism and Recreation in Southern Illinois* has this to say about potential markets for tourism, "In our opinion, the three most significant developments underway that will benefit Southern Illinois are the Interstate Highway System, the creation of new water impoundments and the consolidation of the Shawnee National Forest. The latter two developments offer many additional opportunities to strengthen the tourism and recreation potential of Southern Illinois."

The creation of new water impoundments and the consolidation of the Shawnee National Forest are two developments I wish to talk with about today.

Tourism has a great potential for our area which is very near the nation's population center. Forty-nine million people live within a day's drive of Southern Illinois, and 6 million are within 150 miles.

We recognize that all of the area's potential cannot be developed overnight—perhaps not within the next decade. However, we do want to move forward, year by year, and step by step toward the ultimate goal of full development which will benefit millions of people.

In line with Checchi's study, I want to recommend some specific development projects of lakes and lands within the Shawnee National Forest. I ask that these sums be added to the Fiscal Year 1968 budget of the Forest Service, U.S. Department of Agriculture:

$260,000 for the George Rogers Clark Recreation Way. Studies by Southern Illinois University, Checchi and Company, the Illinois Department of Business and Economic Development and others have already demonstrated that this project is economically feasible.

For your further study, I am submitting a copy of a brochure *George Rogers Clark Recreation Way* to my statement.

It is important to note that this scenic highway and its corridor, when fully developed, will serve the outdoor recreation needs of about 3,000,000 persons annually. Service facilities will hire up to 6,000 local people.

Next, $250,000 is needed for the continued development of a 1700 acre tract of National Forest land, on the shores of Lake of Egypt. The Forest Service purchased the land from Southern Illinois Power Cooperative in 1965. During 1966 and early 1967, the Forest Service has contracted for a 4.2 mile entrance road. Family camp and picnicgrounds are under construction. We want to continue the step-by-step development. During Fiscal Year 1968, this sum of money, if appropriated, will construct a bathhouse, a swimming beach, a water and sewage system and additional campgrounds.

As with all our developments, we are looking for economically sound methods of making Southern Illinois a better place to live and for ways to create job opportunities. When fully developed at a total cost of 1½ million dollars, this tract of National Forest land is expected to generate just under $1,000,000 of income annually to area businesses.

Lusk Creek Lake in Pope County is needed for development of this area. There are no other large bodies of water in this part of Illinois.

The lake is economically sound. The geological study is in the process of being completed now.

We ask that $100,000 be added to the Forest Service budget for Lusk Creek Lake. Final engineering design of the structure will be financed with this sum. Studies on Lusk Creek Lake indicate that for each dollar invested $2.45 will be returned to the economy. This is good business.

The Checchi report states that the consolidation of the Shawnee National Forest is important. All of the major projects underway require land purchases. The Land and Water Conservation Fund provides for the purchase of land, primarily valuable for recreation, within proclaimed National Forest boundaries as such boundary existed on January 1, 1965. In the case of the Shawnee National Forest, boundaries have been extended since January 1, 1965 to accommodate specific projects of public interest.

We ask that $500,000 of Weeks Law Funds to the Fiscal Year 1968 budget of the Forest Service for land purchases on the Shawnee. This sum will be used to purchase lands not eligible for Land and Water Conservation Funds along the George Rogers Clark Recreation Way; for Kincaid Lake now authorized for construction by Illinois; for a PL566 recreation lake in Johnson County; and for recreational developments along the Ohio River near my city of Rosiclare.

Mr. Chairman, I appreciate this opportunity to appear before your committee. I sincerely hope your committee will act favorably on my recommendations.

FOREST FIRE PREVENTION—LETTER FROM SENATOR LONG (MO.)

UNITED STATES SENATE,
COMMITTEE ON BANKING AND CURRENCY,
March 24, 1967.

Hon. CARL HAYDEN,
Chairman, Senate Appropriations Committee,
United States Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Mr. Osal B. Capps, State Forester of Missouri and Vice President of the National Association of State Foresters, has called my attention to the need for an increase of $3 million in the budget request for forest fire protection.

Missouri presently has 15-million acres of forest land owned by some 200,000 persons. There is increased interest in good forestry practices, and this interest supports the need for intensification of fire control efforts as a protection to the investments being made.

Will appreciate your consideration of this request.

Kind personal regards.

EDWARD V. LONG,
United States Senator.

WILDLIFE HABITAT RESEARCH STATEMENT BY REPRESENTATIVE BURTON (UTAH)

Chairman Hayden, and Committee Members, I wish to review with you the need for an increased program of wildlife habitat research by the Forest Service at Provo, Utah. It is a logical outgrowth of action taken last year in appropriating Forest Service planning funds for the Western Browse Improvement Laboratory at Provo. In making this request for an expanded program, I have in mind that the research finding would ultimately be westernwide in importance.

The current estimate of construction costs for the Laboratory is $460,000. Were it not for other pressing needs at this time, I would be asking that these funds be appropriated this year. Moreover, I would be asking that you consider appropriating an additional $100,000 for research into means of protecting browse plants from damage by insects and disease. All that is needed for this important research to be started is this relatively small amount of money; the Intermountain Forest and Range Experiment Station, in cooperation with Utah State University at Logan, could be engaged profitably in these studies within a few weeks after receipt of funds.

This is a year in which the Nation has many pressing needs for funds, however, and I believe that the foregoing should be postponed at this time in favor of a program of research aimed at developing superior strains of native browse species. Admittedly, the immediate need for this research is in part due to the poor job its advocates have done in the past in obtaining funds for it—in large part, however, it is due to our human failing of deciding that existing programs of administration or construction, or some other such item, should take precedence over research whose contribution (we say to ourselves) will only be felt at some time in the indeterminate future. In reality, this is a form of borrowing from the future, of spending your principal instead of living on the interest.

Utah's big-game herds, numbering well over ½ million, like those of other Western States, are a major attraction. In Utah alone each year we have some 175,000 hunters—twice the number of 15 years ago. There are probably an even greater number of nature enthusiasts who enjoy wildlife for its aesthetic value alone. I won't attempt to place a dollar sign on the values of this resource, but we all know that it is an important one and that failure to meet current and future demands for it will result in losses of income, particularly in rural communities. In my State we have begun to feel concern I'm sure this is likewise true elsewhere.

The key to healthy and abundant big-game herds is browse production, especially on winter ranges. These ranges are for the most part in a badly deteriorated condition. Browse production must be increased if we are to realize fully the great potential of our game resources, and to meet future demands of both local and out-of-State people. New browse strains are needed that are more resistant to drought, fire, insects and disease. In order to effect genetic improvement of browse, a major expansion of research is needed. The findings would unquestionably be useful throughout the West and also would be applicable to other purposes such as livestock ranges, erosion control, recreation plantings, and roadside beautification.

In Utah we have taken some positive first steps to meet this problem. To date nearly 70,000 acres of critical deer winter range have been successfully restored by seeding methods developed during the past 10 years by a small cooperative research program carried out by our State Department of Fish and Game and the Forest Service.

In its search for suitable plant materials for use in the current big-game range restoration program, our scientists found some exciting and promising leads as to superior and more productive browse species, both native and exotic. The one Federally financed scientist and the two State biologists are convinced that superior species can be screened, or strains developed, which are better adapted to the variable climatic and soil conditions of our forests and rangelands.

Utah is an ideal location for such browse research because these shrubs dominate the natural vegetation there. It is centrally located with respect to the other Western States and its vegetation is sufficiently representative that the research findings would be of tremendous value to our neighboring States, as well as to Utah. As new strains are developed, experimental material could be shipped for testing to the Pacific Northwest Forest and Range Experiment Station at Portland, Oregon, for use at its project near La Grange; to the Pacific Southwest Station at Berkeley, California; and to the Rocky Mountain Station at Fort Collins, Colorado.

A promising start has already been made through the cooperative efforts the Utah Department of Fish and Game and the Forest Service. I hope the project can continue without interruption. In research of this kind, continuity is all-important.

HARDWOOD RESEARCH—STATEMENT IN BEHALF OF WARREN AREA (PENNSYLVANIA) CHAMBER OF COMMERCE

Chairman Hayden and members of the Sub Committee on Appropriations for the Department of the Interior and Related Agencies. My name is Michael Mead and I represent the Warren Area Chamber of Commerce. I am indeed grateful to you for giving me the privilege of appearing before you today.

I would like to talk about the high value hardwoods of the Allegheny Plateau, particularly Black Cherry. This is the second most valuable hardwood in the United States.

The supply of Black Cherry is being depleted at a growing rate. A wood in high demand, it is not regenerating itself nearly as rapidly as it is being cut off.

No one knows the precise reason or reasons for this failure to regenerate although the over population of deer seems to be a major factor. If true, this poses additional problems because hunting is a major leisure activity of the residents of the plateau areas and its fringes, including Pittsburgh, Youngstown, Cleveland, Erie and Buffalo.

An extensive research program seems to be necessary to:

1. Determine the reasons for this failure to regenerate naturally;
2. Develop solutions consistent with other needs and uses of our forests; and
3. Determine optimum growing conditions for Black Cherry, possibly to the extent of learning to culture Black Cherry artificially or producing fast growing, high quality varieties.

In short, apparently the forest people don't know enough about this valuable tree to protect it and meet the growing and various demands on the forests of the Allegheny Plateau. We need research to protect this asset and Warren, Pennsylvania, is the logical place for it to be centered.

Black Cherry is a fine hardwood which grows only in the parts of Pennsylvania, New York, Ohio, West Virginia and Maryland which comprise the "Allegheny Plateau".

Its color, grain and workability make it an ideal wood for furniture and veneers. The furniture industries increased their consumption of Black Cherry by a factor of about 15 between 1940 and 1960. The increases in demand are projected to continue at a strong, though lessor, pace into the foreseeable future. The furniture industries have come to depend on Black Cherry. They would suffer substantial economic strain if the supply diminishes, which it will.

The qualities of Black Cherry have given it a value second only to Black Walnut. And when I say Black Cherry is a national asset, I mean it literally. The people of the United States own 55 million dollars worth of Black Cherry stumpage in the Allegheny National Forest alone and the people of Pennsylvania own a considerable stand of Black Cherry in their state game lands.

To further illustrate the value of Black Cherry in our forests, note that it represents only 41% of the marketable lumber by volume in the Allegheny National Forest, yet this portion represents 72% of the dollar value of the marketable lumber there. In 1966, Black Cherry brought in 85% of the timber sales revenues of the National Forest, yet this represented less than one-third of the board feet sold.

The furniture industry, particularly in Jamestown and the Carolinas needs this wood. The Black Cherry has another difficult to measure value. Its fruit and seed play an important, perhaps irreplaceable part in the food supply of the deer, turkey and small game of these forest areas. The abundant wildlife has made Western Pennsylvania a favorite of hunters from the surrounding cities. So the hunters and sportsmen, even hikers, of Ohio, New York, and Pennslyvania have a major stake in Black Cherry.

As things are going now, the Black Cherry is not regenerating. The present technique is to clear cut 5 acres and larger areas to allow open areas for seedlings and sprouts to grow. By itself, this method is not working, for the seedlings are not developing into young trees. The natural new growth is not replacing the timber sold each year. This has been going on for some time—perhaps as long as twenty-five years. A major reason for this seems to be the over large deer herd, who browse on seedlings and sprouts after they have cleaned out their normal food. But the connection is not clear or precise, just as the forest managers don't know why Black Cherry prospers in one area and fails in another, although both areas are similar.

There is some evidence that some deer browsing is necessary to thin out the clumps of seedlnigs so one or two reach maturity, but again, no one knows whether there are too many deer or just a slight surplus.

It seems apparent, just from this example, that our forest managers, public and private, do not have adequate information. They apparently are totally in the dark on artificial regeneration, proper soil condition, and almost everything else about the Black Cherry.

Only extensive and coordinated research by wildlife experts, soil experts, geneticists, tree growth experts (silviculturists) and other sub-disciplines can provide answers. This will take an appropriation of about $500,000 this year. In addition to solving the regeneration problem, research might show us how to reduce the growth cycle, grow cherry trees where none have grown before and produce bigger trees, while increasing the hunting pleasures of hundreds of thousands of Americans.

Since it takes a long time to grow a tree, I would ask you to start now, this year, by providing the Forest Service with additional funds to start adequate research.

Warren County, Pennsylvania, is an ideal place to conduct research. The facilities already exist, virtually unoccupied, at the forest research laboratory. Some research is underway. The Black Cherry grows heavily there and the deer herd is typically over large.

Since we are twenty-five years behind already, I think now is the time to start.

I want to express again my appreciation to you for giving me this opportunity to meet with you. I am confident that you will give every possible consideration to my recommendation.

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

Statement by Columbia Artists Management, Inc., March 30, 1967

Two programs to become operative next season through the National Foundation on the Arts and Humanities are:

1. The plan for a National Chamber Orchestra. (Proposed grant $400,000).
2. The Carnegie Hall-Jeunesses Musicales program to subsidize the tours of 12 young artists. (Proposed grant $310,000).

In our opinion, though both programs appear to be commendable, they actually tend to, in one way or another, compete with programs that are already operative through private means and miss the mark of aiding our industry where needed.

In the matter of the first program, that of the National Chamber Orchestra, we feel that by subsidizing such a Chamber Orchestra, you will draw from an already diminishing supply of top string instrumentalists needed in the country's symphony orchestras. In addition, a federally subsidized program would be in direct competition for the box office receipts of the currently existing chamber groups here in New York and also in the touring market. There is no doubt that a privately subsidized Chamber Orchestra cannot make its total revenue from the box office, (ticket sales), but in varying degrees each of these privately sponsored chamber groups rely heavily on ticket revenues. In effect, the new National Chamber Orchestra will be competing for this same dollar market and will undoubtedly draw a portion of funds away from each of the existing chamber groups.

One of the major presentors of chamber music in our city, Jay K. Hoffman and George F. Schutz Presentations, after years of developing the market, is completely curtailing its operation next season because of the proposed National Chamber Orchestra. (Note Item I)

And finally, is there really a need for a National Chamber Orchestra to be based in New York City? Emphatically no. The list of chamber orchestras with appearances in New York City have mushroomed in such a proportion over the last eight to ten years as to more than cover the needs and wishes of this city's public. It would be equivalent to starting a poverty program for the Far Hills, N.J. community.

With regard to the second program—Carnegie Hall-Jeunesses Musicales—there are numerous non-profit organizations such as the National Music League, Young People's Concerts, Arts Program of the Association of American Colleges, the Leventritt Foundation, etc., that currently aid the gifted young artists who are not yet ready for our own type of management. These organizations each have had their varying degrees of success with the many individuals that have been helped by them. It is doubted, in our opinion, that any new organization would have any greater degree of success. Columbia has taken on numerous artists from these organizations such as Van Cliburn, winner of the Leventritt Competition in 1954, Gary Graffman and Malcolm Frager; artists such as Betty Allen and Lillian Kallir from the National Music League, and would be very interested in taking several young artists now being helped by Susan Wadsworth of the Young People's Concerts, among them, Peter Serkin, son of Rudolph Serkin, who is currently managed by this corporation.

However, what prompts our action more than any other of the above stated reasons, is the feeling that the programs of the National Arts Endowment are misdirected rather than harmful alone. If the Government is to involve itself in subsidizing the arts, it seams most apparent that such involvement should be in the areas where private capital from profit or non-profit organizations cannot or do not venture in sufficient degree.

Developing a broader base of interests in the arts really depends on educating and reaching the youth of this nation from the kindergarten through college level. If we may again draw a parallel, development of any industry is not dependent on turning out the largest possible quantity of product alone. It is far more important to realize a greater marketing potential.

We will be pleased, and have so stated to Roger Stevens of the National Arts Endowment, to sit down along with other professional and experienced colleagues in the field and work out programs that will accomplish a broader market and greater achievement for the arts in this country.

LETTER OF FEDERATION OF CITIZENS ASSOCIATIONS OF THE DISTRICT OF COLUMBIA

MARCH 24, 1967.

Hon. CARL HAYDEN,
Chairman, Senate Appropriations Committee.

DEAR SENATOR HAYDEN: We are submitting this letter and attached exhibits for inclusion in the record of your committee relating to the appropriation for fiscal 1968 for the National Foundation for the Arts and Humanities, with particular reference to the National Endowment for the Arts.

Our interest in the arts appropriation arises initially from our concern that the National Arts Endowment proposes to use public funds to compete with the privately supported National Symphony Orchestra of Washington, D.C. Upon investigating this matter, we find that this has become an issue of national concern to all privately supported musical organizations which have brought international luster to the performing arts of the United States. Since most of these organizations are tax exempt and hope to receive eventual funds from the National Arts Endowment, they are fearful of reprisals if they intervene directly in legislative matters. Nevertheless, representatives of such long-established organizations as the Philadelphia Orchestra, the New York Philharmonic, the Pittsburgh Symphony Orchestra, the Cleveland Orchestra the Minneapolis Symphony and others—including their trade organization, the American Symphony Orchestra League—have protested the use of Federal funds to set up an entirely new orchestra which will be in direct competition with the existing orchestras created by local initiative and private enterprise.

This matter has been discussed in the New York Times (March 12, 1967) with the conclusion "*the role of the Federal Government in the arts might be better applied . . . to helping existing organizations, rather than the creation of organizations to compete with those already in being.*" The entire article by Harold C. Schonberg is submitted.

A report of the American Symphony Orchestra League dated February 1, 1967, concludes, "*Question is raised as to the viability of using federal tax funds for the purpose of establishing a new professional national orchestra, which inevitably will be operating in direct competition with the existing orchestras that have been developed and are maintained primarily through private enterprise.*" A copy of the entire report is submitted herewith.

The New York Times commentary (see above) also refers to another grant by the National Arts Endowment of $310,000 to New York's Carnegie Hall which plans to use these funds to support an organization—Jeunesses Musicales of France—which will compete directly with privately owned management organizations, Columbia Artists Management and S. Hurok Attractions. The Washington Post reported this grant on February 28, 1967, under the headline, "*Howls Greet Musician Subsidy Plan.*" Professional management is quoted in this article (submitted herewith) as follows: "*The stark, staring needs are to take care of what we have and not to create a larger number of artists for the already small market.*"

For these reasons and for others, there should be thorough airing and investigation of the improvident proposals to use the new Federal arts funds for the benefit of a few insiders at the expense of American private enterprise and American taxpayers.

Sincerely,

JOHN R. IMMER, *President.*

MONEY: IT ALWAYS MAKES PROBLEMS

(By Harold C. Schonberg)

The National Foundation on the Arts and the Humanities has opened a hornet's nest, and angry concert managers are buzzing around, their stingers at the ready. It all started last year. Federal money has finally been appropriated for the arts, after all these centuries, and music is going to get its share. Fine; but it is how the money—or some of it, anyway—is going to be put to use that is agitating not only many of music's businessmen but also a large number of observers.

When N.F.A.H. (an unlovely collection of consonants and vowel; but one can't keep typing National Foundation on the Arts and the Humanities indefinitely) announced last year that federal money would go toward a chamber orchestra conducted by Alexander Schneider, an icicle of horror went through the concert business: an icicle that turned to an iceberg when it became noised around that Schneider was going to conduct a lengthy Carnegie Hall series in addition to one-night stands around the country. This, said managers, would put Schneider—backed by federal funds—into direct competition with the offerings of the private-enterprise concert business.

Schneider's musical competence was not called into question, but about everything else was. Where would the personnel of the orchestra come from? Would symphony orchestras be raided for string players? Who would do the bookings? Who needed still another chamber orchestra series in New York, anyway? And so on. The clamor was considerable.

ON THE ROAD

Now comes the announcement that N.F.A.H., together with the Jeunesses Musicales series of Carnegie Hall, intends to sponsor a concert artists program. The sum of $310,000 has been appropriated to select 12 young musicians, send them on the road at a fee of $250 clear per concert and expose them to concert life. Another storm has been created, and at a meeting between N.F.A.H. and concert managers a short time ago, there was quite a bit of remonstration. The balance sheet of the U.S. Post Office has also benefited from the volume of mail between N.F.A.H. and the concert business.

Transcripts of the meetings and the actual correspondence make fascinating reading. A certain amount of cant, humbug and hypocrisy is present. But the essential argument is real enough, and deserves airing. To the managers, the very idea of taxpayer money going toward the propagation of competing concerts is a specter. That is really what the fuss is about. Some peripheral matters, however, impinge, and those have been mentioned by the more thoughtful managers.

Their feeling is that the various advisers to N.F.A.H. are too oriented toward the performer, not enough oriented to the audience or to the economic side of music. People like Isaac Stern or Helen Hayes, they say, bleed when musicians or actors bleed. Stern and Hayes want to help the performing musician, the performing actor. But (say the critics), that is not the central problem. The problem is the audience and how to educate it. To these critics, the program of N.F.A.H. is only a federal handout, a dole.

The advocates of the N.F.A.H. program take a different point of view, naturally. Julius Bloom, who is head of Carnegie Hall, thinks that the N.F.A.H.-Jeunesses Musicales program is completely misunderstood by the concert managers. He insists that the program will help young artists (concert managers say no) and will expand audiences. Mrs. Fannie Taylor, consultant on music for N.F.A.H., has been saying to assure the concert community that there is no competition at all. "All contracts," she has written, "are in addition to the regularly scheduled series, and are in no way replacing existing programs, but are augmenting concert offerings."

Bloom adds that the new program is trying to open up outlets. About 90 per cent, he says, is aimed at colleges and universities, and at audiences in the late teens and early twenties. Student unions, fraternity houses, college managers—all will be approached. Many of these groups up to now have had no interest in serious music. An entire new audience conceivably could be developed. What is more, Bloom says, the successful young artists—that is, those who make the biggest hit with their audience—could be given foreign tours through Jeunesses Musicales in Europe.

Pooh! say the critics. Here N.F.A.H. is talking about "exceptional talent," selected by a mysterious panel, and this exceptional talent is going to be exposed to frat houses and the like. This kind of exposure is of no help to exceptional talent. The only kind of exposure good for that kind of talent is with major symphony orchestras or big concert halls. And (add the critics) where is this "exceptional talent" coming from? The really big talents are already under contract to major managements, and doing quite well, thank you.

But here we get into an area of high emotions. How much help does great talent really need? Everybody wants to help a sincere young musician, but there is beginning to arise an uneasy feeling that perhaps force-feeding is involved. Up to now, it is being pointed out, artists have had to sink or swim by themselves. The better ones swim, the great ones swim very fast, the lesser ones sink. The public has been the ultimate judge. Critics could help a career, but their words never have been of much importance in the long run. Managers could sell an artist who received a bad New York notice, but not for long if the artist did not make a hit with the public.

What the fuss about the role of N.F.A.H. boils down to is a conflict of interest that, to its critics, threatens the order of things and moves the Federal Government into the realm of free enterprise. But it is a complicated subject, and one that deserves much more thought and discussion than has been given, now that subsidy is a fact and not a hope. There is no harm in the order of things being shaken, but it should be shaken in every direction. Management's hands are none too clean, and its recent pious statements do not alter the fact that its record in helping young artists is highly spotted.

On the other hand, some of the aims of N.F.A.H. impress this writer as well-meaning but incredibly naive. And there remains the big question, far in the background: should the Federal Government be in this particular kind of thing to begin with? That the Government should have a role in our artistic life is unquestioned. Many of us have fought for subsidy for years, and we believe in it. But the role of the Federal Government in the arts might be better applied to national dissemination of culture through already existing organizations, or to helping existing organizations, rather than the creation of organizations to compete with those already in being.

AMERICAN SYMPHONY ORCHESTRA LEAGUE, INC. (MEMO NO. 460)

To: League Members.
From: John S. Edwards, President, Helen M. Thompson, Exec. Vice President.
Date: February 1, 1967.
Re: The New National Chamber Orchestra, Alexander Schneider, Musical Director. To be established by the National Endowment for the Arts.

The League office has been besieged the last couple of weeks by calls and letters from members seeking detailed information on the plans, financing, etc. of the new National Chamber Orchestra to be established by grants from the National Endowment for the Arts.

In order to make the requested information available to the membership, the League is filing this report together with suggestions for action that have been made by representatives of a number of member organizations.

Some months ago, the National Endowment for the Arts announced that a national chamber orchestra would be established primarily for the purpose of offering specialized training to young musicians who, at the end of a two or three year period of work with the orchestra, would be qualified to accept positions of leadership with the nation's professional orchestras.

The plan as originally outlined appeared to hold promise of providing a valued service to pre-professional musicians and to the orchestras seeking to engage trained personnel.

A planning grant of approximately $130,000 was made for development of the orchestra, and Alexander Schneider was chosen by the National Endowment to serve as the orchestra's artistic director.

As of the present date, the plans have developed as follows:

Name of the Orchestra.—National Chamber Orchestra—described as "a master chamber orchestra of virtuoso caliber which will serve as a training and educational institution as well as a performing group."

Sponsoring Group.—National Chamber Orchestra Institute, for which a board of directors is now being organized.

Personnel.—50 musicians, of which a small nucleus shall be chosen from among leading instrumentalists, the remainder to be recruited from available professional musicians (with emphasis upon free lance musicians) and outstanding pre-professional musicians.

Purpose.—"to provide opportunity for professional musicians, either as regular members or as guest artists, and for younger musicians of virtuoso caliber, to have the advantage of full-time concentration on a wide range of chamber literature under conditions that will enhance their own musical experience. The supply of instrumentalists qualified for leading positions and available to orchestras throughout the country will be increased through the project", according to Mr. Schneider.

Personnel Recruitment.—An advertisement was published in the January issue of the International Musician (official publication of the AF of M) inviting all interested musicians to contact the musical director and stating that salaries to be paid would not be less than salaries of the established orchestras. Mr. Schneider, now on tour with the Music From Marlboro players, is currently visiting various cities and holding auditions for interested musicians.

Financing.—Annual budget estimated at $700,000 to $800,000. Sources of funds: $300,000 to $350,000 annually through direct federal grants from the National Endowment for the Arts. Remainder from ticket sales, contributions, foundations, tour income, etc.

Salary scale.—$9,000 minimum salary for 9-months contract.

Performance Plans.—A. Annual series of concerts in Carnegie Hall, New York; Symphony Hall in Boston, Lisner Auditorium in Washington. B. Performances in other major cities. C. Visits to campuses of various colleges and universities in cooperation with the music departments of those institutions and local and state arts councils. D. Foreign tours in conjunction with the U.S. Department of State. E. Recording contract is being negotiated.

DISCUSSION

Whereas the original concept of a *training* orchestra was generally viewed as a constructive effort, the present plans for a virtuoso orchestra of this scope are viewed with considerable apprehension by representatives of many established orchestras, including their board presidents and/or chairmen, conductors and managers, and for the following reasons:

Question is raised as to the viability of using federal tax funds for the purpose of establishing a new professional *national* orchestra, which inevitably will be operating in direct competition with the existing orchestras that have been developed and are maintained primarily through private enterprise. It is believed that the new *national* orchestra and the established orchestras will be vying with each other for:

a. Personnel
b. contributions from individuals, foundations, business corporations, etc.
c. Touring dates, with special reference to new markets for music to be developed through federal funds granted to state arts councils, colleges and universities.

A small committee of managers, representing the major orchestras, discussed these matters with Isaac Stern in December. (Mr. Stern, as a member of the National Council on the Arts, made the original presentation of the proposed project to the Council.) Mr. Stern stated that he did not see that the new orchestra held any threat of competition for the established orchestras.

The committee of managers next discussed these matters with Mr. Schneider and with Mr. Roger Stevens, Chairman of the National Endowment for the Arts and of the National Council of the Arts.

Mr. Stevens expressed the opinion that the orchestra representatives were anticipating problems that would not actually develop, and that the program should, at least, be tried out for a couple of years. He stated that at the end of that time, if the new national chamber orchestra proved to be seriously detrimental to the work of established orchestras and such harm could be conclusively documented by the orchestras, that the Council could and would restudy the program.

He stated also that he felt the National Council on the Arts may have acted somewhat hastily in approving the project before full study had been given to the many ramifications of the proposal and extended an invitation to the committee to have one of its members sit in, as an auditor, on future meetings of the Council on the Arts.

The fact that the chamber orchestra project could have proceeded this far without full understanding on the part of the National Council of the many ramifications within the symphony orchestra world again points up the fact that within the membership of the National Council of the Arts there still is no representation from boards or administrators of symphony orchestras—an omission that is difficult to understand in view of the fact that symphony orchestras form the largest single unit of the performing musical arts of this country, and in view of the fact that Council membership has, from its inception, included a board and/or administrative representative from theater, opera, ballet, museums, and music education.

PROPOSED COURSE OF PROCEDURE

Representatives of many League member orchestras have requested the League to submit to the membership the attached suggestions for action. Your orchestra is urged to express opinion on the proposed action by returning one copy of the suggestions to the League office with comments, etc.

Individual members of the League likewise are invited to return their replies with their personal statements of approval and/or suggestions.

Howls Greet Musician Subsidy Plan

New York, February 27.—A modest program to provide financial aid to 12 young musicians ran into heavy crossfire here today when the sponsoring organization, the National Council on the Arts, presented it to a group of private and non-profit concert managers.

The program would allocate $310,000 to finance concert tours—mostly on college campuses—for highly talented young musicians, and to pay them $250 each for each performance. Its aim, according to the Council, is to give young artists who in the past have had difficulty being heard, an opportunity to develop and perform before audiences.

Today's meeting, at the Park-Sheraton hotel, was originally to be a press conference announcing the program. But it turned into a debate between a dozen or so concert managers and Roger L. Stevens, chairman of the Arts Council, and Julius Bloom, executive director of Carnegie Hall. Bloom is connected with Jeuneesses Musicales, all organization founded in France that sponsors tours by young artists, and which may be administering the new program.

MATTER OF EMPHASIS

The concert managers complained that the emphasis of the new program was misdirected. Rather than spending money to develop new artists—a job which they claimed they had been doing perfectly well for years—the Arts Council should use the funds to develop new audiences.

"The stark, staring needs are to take care of what we have and not to create a larger number of artists for the already small market," said Carl Dahlgren, vice president of Columbia Artists Management.

Claiming there is not enough demand now for the concert managers, Dahlgren young performers being handled by profit and non-profit added, "I do not believe that the program will generate new audiences. In the majority of cases, it will take away from the audiences we already have." Dahlgren's theory was that colleges and others who book concerts would naturally give preference to the cheaper subsidized artists.

Another contention of the managers was that the money should be fed through existing management operations rather than via a new organization which they claim would be competitive.

COULD QUADRUPLE CONCERTS

Susan Wadsworth, director of Young Concert Arts, Inc., a non-profit group said, "If I could say to colleges in the Middle West or the West, where expenses are higher, that I could offer a $250 subsidy for each of my artists, I would be able to quadruple the number of concerts for my people."

Another manager, who was unidentified, complained, "you are making a new organization that will be in competition to all of us. Why can't we book them? We invest our time and our life savings to help unknowns. You are getting taxpayers' money to do the same thing."

Other objections to the program were that it would discriminate against other artists who have been dulling their careers over the years and that two years—the duration of the program—will not be long enough to develop a young performer.

Stevens, apparently taken aback by the vehemence of the objections, told the group that the program was flexible and could be dropped in a year if it didn't work out.

"In effect, we're doing this hopefully to give money to the artists," he said. "There is nothing to stop management to stop managing. I don't think helping 12 artists is going to eliminate management. It's a drop in the bucket."

RANGE IMPROVEMENT AND WILDLIFE

STATEMENT OF SPORT FISHING INSTITUTE

Mr. Chairman, members of this Committee, I am Philip A. Douglas, Executive Secretary, Sport Fishing Institute, Washington, D.C., the only national non-profit, non-government, professionally-staffed fish conservation organization. The Institute is supported financially by a broad array of manufacturers of equipment and supplies used directly and indirectly by some 60 million anglers out fishing, as well as by a large and growing number of consumer groups and interested individuals. The Institute's program, as you and your colleagues may recall, Mr. Chairman, has three phases: (1) *research* in fishery biology, (2) *education* in concepts, principles and problems of fish conservation, and (3) professional *service* to official agencies and key citizen groups.

Dr. Robert Hutton, Executive Secretary for the American Fisheries Society, the nation's most venerable scientific society (organized in 1870), has asked that his organization of fishery scientists be associated with the testimony I am presenting on behalf of the Institute.

1. *National Reservoir Research.*—This program has been operating since 1961 on almost a deficit budget. The requested increase by the U.S. Bureau of Sport Fisheries and Wildlife for 1968 fiscal year amounts to less than 3 per cent over the $401,000 appropriated during fiscal year 1967 for this vital research program. Budgetary requests by the Department of the Interior amount to $167,000 for the South Central Reservoir Investigations headquartered in Fayetteville, Arkansas, up $5,000 from '67, and $87,000 for the North Central Reservoir Research program headquartered in Pierre, South Dakota, up $2,000 from '67. Also included is the Yankton, South Dakota, North Central Reservoir Research program amounting to $158,000, up $4,000 from '67. This, as a combined program, would amount to only $412,000, reflecting an increase of a mere $11,000 over this year's operating appropriations—all of it due to salary adjustments.

My organization considers the vital research efforts being conducted by the Federal Government in its White River studies in Arkansas and the Missouri River studies to be of utmost importance at this time. A three-fold increase in angling demand is anticipated to develop throughout the remainder of this century with one-third of this demand to be met by reservoir fishing. Much more must be learned about fishes in reservoirs in order to sustain the anticipated increase in fishing pressures on this natural renewable resource, possible only through research. The Congress has authorized some $2 billion of reservoir construction, as yet not implemented. It has an associated responsibility to assure the American taxpayer that he will realize the maximum benefits from these works. Recreational fishing has turned out to be one of the leading benefits to be expected! Static budgeting in this important area of reservoir research is causing us to fall behind in carrying out one of the most important related directives enunciated by the Outdoor Recreation Resources Review Commission. A doubling of the proposed budget amount requested for 1968 is certainly not unreasonable in the light of the fully expected and reconfirmed tripling of demand for fishing, which can only be met if we learn the facts that are needed to devise suitable reservoir fishery management programs. We therefore urgently request that for fiscal year 1968 the Congress appropriate at least $824,000 for the National Reservoir Research Program, instead of the $412,000 requested by the Administration—a $412,000 increase.

For the possible interest and information of this Committee, I am enclosing a copy of my organization's SFI BULLETIN No. 183 (March-April, 1967) which contains on pages 1 to 3, a summary report on progress being made under the National Reservoir Research Program. (Withdrawn for committee files.)

2. *Marine Game Fishery Research.*—Congressional committees charged with looking after the nation's resources are beginning to recognize the vital importance of such ecological complexes as estuaries and the effects of filling, dredging, and all the insidious forms of pollution on one of the greatest productive areas of our coastal oceans. In this respect, Mr. Chairman, it becomes doubly important that the life histories and ecology, behavior, significance of these estuaries and the effects of pollution of various sorts, influence of the various rates of harvest (both sport and commercial), and a myriad of other factors, require concentrated study by research scientists. Our corresponding testimony of last year pointed out the alarming course that high seas commercial fishing is taking with respect to the important offshore tunas, billfishes and other tuna-like fishes that constitute some of the most important big-game fishes. Some countries, notably Japan, are utilizing these magnificent fishes as ignoble binding elements in fish sausages, and raiding prime sport fishing areas near our own coasts in the process. The economic significance of the billfishes, in particular, to sport fishing is thoroughly recognized and, uniquely, most of these fishes are little used in our domestic commercial fishery. The attached pamphlet entitled "Competition for Billfishes and Tunas" prepared and published just a year ago by the U.S. Department of the Interior, Bureau of Sport Fisheries and Wildlife. Too, I call your attention to additional attachments representing two issues of our own publication: SFI BULLETIN No. 174 (pages 1–2) "Game Fish Long-Lining Confab," and No. 177 (pages 1–4) "Rio Conference on Tuna and Tuna-Like Fishes." (Withdrawn for Committee files.)

Mr. Chairman, the early implementation at full authorization of the Marine Game Fish Research funding program under P.L. 86–359 could by now have solved some of our marine game fish management problems. This seems to be another example where an authorization is utilized primarily to serve as a kind of damper to mute the cry for needed program funding which then seldom follows. As a result of depending upon the apparent intent of the Congress as expressed by its considered authorizations, conservationists and the broad public interest they represent have been left out on a limb more than once.

The $2.7 million that was authorized by this 1957 Act on an annual basis would have gone far to provide necessary funds at the Pacific Coast Marine Game Fish Laboratory, Tiburon, California. A five year program formulated in 1961 for the Tiburon facility should have given it an operating budget of at least $1 million by fiscal year 1966. Yet, here we are in 1967 operating on a mere $99,000 of approved budget with only $139,000 proposed for 1968. Fortunately, at least, this does provide a small step in the right direction, including the very modest increase of $40,000 to provide for three permanent positions to commence carrying out tuna and billfish investigations in the Atlantic and Pacific.

A considerable concern of U.S. big-game fishermen (as well as commercial fisheries for offshore species) is centered around the international situation involved in long-lining for billfishes and tunas. Research is needed to determine the extent and dollar value of the sport fishery for billfishes and tunas and to determine if there has been any change in the catch per unit of effort or average size of fish caught by commercial long-lining as well as by sport fishing. It is only with these basic facts that we may reach any rational agreement among nations concerning international management of fish stocks and future research to be carried out. In order to support such a program, the Commissioner from Puerto Rico, Santiago Polanco-Abreu, introduced House Joint Resolution 908 on March 17, 1966, calling for a first-year appropriation of $250,000 to get the work started and $500,000 annually in each of the succeeding 9 years in order to provide the necessary research funding to learn the vitally-important life-history and other facts about billfishes. These would include migration patterns, identity of stocks, growth rates, mortality rates, variations in natural abundance, distribution in relation to environmental properties, and the effects of fishing upon the stocks. Also needed are economic and statistical surveys to establish the locations, distribution and value of the business enterprises serving the thousands of American big-game anglers who engage in recreational fishing for these species in North, Central and South America, and the Carribean Islands.

Further, on March 1, 1967, the Senate ratified the treaty setting up an INTERNATIONAL CONVENTION FOR THE CONSERVATION OF ATLANTIC TUNAS, the provisions of which embrace "the populations of tunas and tuna-like fishes found in the Atlantic Ocean." "Tuna-like fishes," as defined in the treaty, include the billfishies, among other species, in addition to the true tunas. The treaty also establishes that the purpose of the Convention is conservation of these species to assure their maximum sustainable yields "for food and other purposes," the latter phrase being inclusive of use for recreational fishing. The provisions of the treaty impose responsibility on each of the signatory nations to collect and analyze statistical information relating to the current conditions and trends of these resources in the Convention area, and for studying the biology of these species and furnishing scietific information to the Commission established to implement the Convention as to measures needed to ensure maintenance of their populations.

The Sport Fishing Institute respectfully submits that this new responsibility cannot be met by the United States without a substantial increase in the appropriation for marine game fish research, to at least the level proposed in last session's H.J. Res. 908 and strongly urges that the 1968 appropriation for this item be increased to $250,000 to reflect this need and help implement this new international commitment.

The Board of Directors of the Sport Fishing Institute, regarding this as a most urgent matter, adopted the following resolution at its regular Semi-Annual Meeting:

"Whereas, there now appears to be an alarmingly high commercial harvest of our oceanic big-game fishes, particularly in the collective category of 'billfishes,' by foreign flag vessels, and these trophy fishes are highly esteemed and sought after by many thousands of recreational offshore ocean sport fishermen who, in turn, support a multi-million-dollar service-and-supply industry; and,

"Whereas, the Marine Game Fish Research Act of 1957 (P.L. 86-359) authorizes $2.7 million to be spent annually, from which amount but a small fraction has ever been appropriated for its authorized purposes, and, in turn, only a further small fraction has ever been available for vitally-important billfish tagging and statistical research now critically needed to save this important fishery from the threat of future disaster;

"Now, therefore, be it resolved, that the Directors of the Sport Fishing Institute, assembled in regular Annual Meeting at St. Louis, Missouri, this 24th day of May, 1966, do urge the Congress of the United States to appropriate $500,000 annually over a ten-year period as recommended in House Joint Resolution 908, for a concentrated study of the billfishes with regard to migrations, identity of stocks, growth rates, mortality rates, variations in abundance, distribution, fishing pressure effects and their economics, and optimum sustained yield."

The Atlantic Marine Game Fish Research laboratory at Sandy Hook, N.J., received some $650,000 in appropriations last year, with a $12,000 increase proposed for fiscal year 1968 to take care of salary adjustments only. We understand nothing is being requested for the Eastern Gulf Marine Laboratory at Panama City, Florida, but that funds are desperately needed to begin work there on estuaries and billfish research. Some $90,000 could provide a boat and the necessary operating expenses to commence to carry out this vital work. At this time, too, appropriation of $800,000 in new construction is needed to equip this station with essential buildings and other research facilites to operate efficiently. Too, a newly proposed marine game fish research laboratory at Port Aransas, Texas, would require at least $20,000 to put one fishery research man in the field in this initial stage, plus $800,000 to complete the construction program at this important location.

In completing our testimony on this particular phase of the U.S. Bureau of Sport Fisheries and Wildlife budgetary proposals for 1968, I would like to emphasize that the Institute is concerned that the West Coast game fish research effort has been neglected to the detriment of the broad national public interest It is disturbing that the program at the Pacific Game Fish Research Laboratory, Tiburon, California, has not been expanded at a rate equal to that applied to the marine game fish research effort at the Atlantic Game Fish Research Laboratory, Sandy Hook, New Jersey. Nearly five times the amount being requested for use by the West Coast facility at Tiburon is being requested for the East Coast lab. In order to bring things more into their appropriate perspective, we urge that at least $500,000 be appropriated for use by the Tiburon facility during fiscal year 1968. If granted, the total for the entire program would remain well under the $2.7 million that was authorized annually by P.L. 86–359.

3. *Anadromous Fish Program.*—Public Law 89–304 was passed by the Congress October 30, 1965. This authorized the Secretary of the Interior to initiate with the several states a cooperative program for conservation, development, and enhancement of the Nation's anadromous fish. The Act authorized, for the five-year period July 1, 1965 through June 30, 1970, a total amount not to exceed $25 million to carry out the purposes of this Act. This obviously contemplated that annual appropriations would average $5 million (half to the Bureau of Sport Fisheries and Wildlife, half to the Bureau of Commercial Fisheries). For fiscal year 1967, the appropriation for each Bureau for Anadromous and Great Lakes Fisheries restoration amounted to $2,675,000; however, the Administration permitted only $1.5 million to be expended in the current year. For fiscal 1968, the Administration has requested only $1,675,000 for expenditure by each Bureau. This is far less than the $2.5 million that should be appropriated annually to each Bureau during the five-year term if the full intent of P. L. 89–304 is to be realized. As a compromise, we strongly urge that your Committee recommend this item be increased to at least $2.5 million. These programs cannot operate significantly on less in all of the many states that are involved.

4. *Cooperative Fishery Units.*—A key finding of the late President Kennedy's Outdoor Recreation Resources Review Commission with respect to future development of the important sport fisheries was that an acute need exists to accelerate vital research efforts in order to generate the new and improved methods of fish management that will be required to meet the challenge of the three-fold increase in fishing pressure expected to develop in future decades. The development of a national system of Cooperative Fishery Units at selected universities, which is designed to help augment the limited supply of well-educated and highly-trained professional fish conservationists, is a major step in this direction. To date, the Congress has authorized 23 Cooperative Fishery Units that are now being administered by the Federal Government under the direction of the U.S. Bureau of Sport Fisheries and Wildlife. The total operating budget requested for 1968, to operate this important program within the Fisheries Services Activities item, is $888,300. The requested increase over last year's

appropriation is due entirely to salary adjustments. Unfortunately, five state Cooperative Fishery Units (Idaho, Louisiana, Maine, New York, and Pennsylvania) are still being required to operate at the sub-standard level of $30,000 each per year. May we call your attention, Mr. Chairman, to the fact that a $40,000 appropriation is needed at these Cooperative Fishery Units in order to bring them up to the level of training efficiency prevailing at the other 18 Units? We, therefore, strongly urge that your Committee recommend that the Congress increase this budget item by $50,000. Although such an increase has not been requested by the Department of the Interior, the need is recognized to be urgent.

5. *U.S. Forest Service Appropriation.*—The Sport Fishing Institute strongly supports the Forest Service plans to expand its facilities for watershed research. For this purpose a new laboratory is vitally needed at the U.S. Forest Service Coweeta Hydrologic Station, Dillard, Georgia, which is the site of the most intensive watershed study program—small though it is—ever to be inaugurated in these United States! With better than 30 years of detailed hydrologic data now recorded by this station, using various forms of manipulation on its test plots of 45 small watersheds, Coweeta now has the potential to provide needed answers to many puzzling technical questions concerning the precipitation-runoff relationships in certain types of forested areas. Vegetation, soils, and water involve complex relations between transpiration, interception, and evaporation. Improved understandings of these matters are of the utmost significance to hoped-for improvements in watershed management procedures. To further illustrate the program and potential of Coweeta, I refer you to the attached copy of SFI Bulletin No. 160, for March, 1965, particularly the marked pages numbered 4 through 7.

In the proposed 1968 budget, there is a $2,278,000 *Forest Research Construction* item. Included within this figure is an item of $57,000 for construction planning at Coweeta for a modest $650,000 laboratory (to be built as funds become available). We urge most strongly that your Committee support this proposed budget figure for *Forest Research Construction*, especially the $57,000 item it contains for planning of the contemplated expansion of research facilities at Coweeta.

Thank you for this opportunity to present before your Committee, Mr. Chairman, the Institute's views on these matters that are of such grave concern to nearly one-third of America's citizenry.

LETTER FROM AMERICAN NATIONAL CATTLEMEN'S ASSOCIATION

MARCH 30, 1967.

Hon. CARL HAYDEN,
Chairman, Senate Appropriations Subcommittee on Interior and Related Agencies, Senate Office Building, Washington, D.C.

DEAR SENATOR HAYDEN: Increased federal appropriations for needed range improvements are of vital concern to the range livestock operator who is highly dependent upon the use and availability of federal grazing lands. It is also of direct concern to those interested in efficient and practical land, forage, timber, water, fish and wildlife conservation practices.

About 62 percent of the total beef cattle which includes 62 percent of the total beef cows in the United States are located in the seventeen adjacent western states. As an example of how dependent the range livestock industry is on the use and availability of federal grazing lands, 60 percent of the total land area in the eleven adjacent western states is federally-owned. Without the use of federal lands for grazing livestock, many range livestock producers would be forced out of business.

Equally important, however, is that a large number of rural communities in the United States depend upon the economic activity (tax base) and the generation of new wealth by the range livestock industry. The cause of a "sick" rural community today can directly be traced to a "sick" livestock, timber or mining industry, etc.

The thousands of people who use the federal lands for recreational purposes also are highly dependent upon the condition and availability of various resources—water, trees, etc. Similarly, good range management which, of course, includes range improvements, has a very direct bearing on watershed protection, wildlife population, etc.

The need for additional range improvements is closely connected with the domestic demand for food and fiber, recreation, water development, and with future world demand for cereal, feed grains and other similar products. Should the United States attempt to supply any significant part of increased world demand for food and fiber, the supply of feed grains in this country may be reduced substantially due to our proven ability to interchange crops. Should this happen, it would tend to shift livestock back to their historical base of native and improved forage and crop residue. This development would greatly enhance the demand for federal lands suitable for crop and livestock production, but would emphasize the critical need for additional range improvements.

We believe there is ample justification for significant increases now in range improvements just to keep pace with these domestic demands. A well planned and managed, preventive-maintenance program, put into operation now, through increased appropriations for additional range improvements, would go a long way in meeting the increasing problem of adequate food supplies, before this particular problem is upon us in catastrophic proportions.

There are numerous economic and non-economic benefits from range improvements such as range reseeding, brush spraying, drainage, water development, fencing and cross-fencing, road developments, better distribution of livestock over the range, etc. Employment of these and other improved range or resource management practices, would provide more forage for the production of food and fiber while improving watershed development and protection, recreation and wildlife sanctuaries. This would put federal land and water resources in better condition for future generations.

Range livestock operators are willing to share, on a cooperative basis, in a number of needed range improvement projects. However, range livestock operators cannot and should not be expected to shoulder the entire cost of needed range improvements when these benefit all of society, which is the case at least 95 percent of the time.

At the existing level of appropriations for improvements, the public ranges cannot be properly managed and developed before the year 2,000, if by then. Range scientists and the livestock industry feel that such a deferment in range developments (improvements) would be of material detriment to the efficient and proper management of such vital renewable resources as water, soil, forage, etc.

The dollar requirements for all National Forests to adequately carry out a range management and improvement program within a reasonable period of time would be about $17,000,000 per year through 1972. The best estimate shows that range improvement *requirements* on forest lands will increase to about $22,000,000 per year by 1980. Expenditures projected for fiscal 1968 is about $11,800,000 or about half of that actually needed to carry out properly the range resource management responsibilities of the U. S. Forest Service.

Similar financing is needed by the Bureau of Land Management. The estimated budget allocation for range improvements for the BLM in F.Y. 1968 is about $1,600,000 which is at least *one-third* the amount needed to meet requests for cost-sharing range improvements in cooperative programs with the range livestock industry.

For the above reasons, we respectfully request that your Subcommittee give favorable consideration to increasing the funds required for range improvement and management work on Forest Service and Bureau of Land Management lands. Also, we respectfully request that this letter be made a part of the Subcommittee's hearing on the 1968 appropriations.

Cordially,

C. W. McMillan.

BUREAU OF COMMERCIAL FISHERIES

Letter From Governor McCall of Oregon

Office of the Governor,
State Capitol,
Salem, April 4, 1967.

Hon. Carl Hayden,
Chairman for the Department of Interior and Related Agencies of the Senate Committee on Appropriations, U.S. Senate, Washington, D.C.

Dear Senator Hayden: In fiscal years 1966 and 1967 your committee provided funding in the Department of Interior's budget in the amount of $600,000 for Phase A and $750,000 for Phase B of the Willamette Falls fishway project. Phase

A work is virtually completed, and Phase B work is scheduled to start in late April.

Construction necessary for completion of this project consists of two fish ladders and connections to the common exit structure above the falls. The preferred and most economical way of completing this project would be to fund and contract all the remaining work in fiscal 1968. If this can be accomplished, the money required from Federal appropriations would be $1,375,000. If the remaining construction is segmented into two portions, the Federal share for the first would be $750,000 and $775,000 for the second, or a total of $1,525,000.

It is my understanding that the Department of Interior's budget request for fiscal 1968 includes only $100,000 for this important project. In my opinion this sum is totally inadequate and will not substantially aid in an early solution of this long-standing block to anadromous fish.

I strongly recommend to your committee that an appropriation of $1,375,000 be made available in fiscal 1968 for completion of this project. However, if in your opinion budgetary considerations are such as to preclude the full amount, that a sum of $750,000 for construction of one ladder and connecting structures be approved.

Sincerely,

TOM MCCALL, *Governor.*

LETTER FROM OREGON FISH COMMISSION

STATE OF OREGON,
FISH COMMISSION OF OREGON,
Portland, April 5, 1967.

Hon. CARL HAYDEN,
Chairman, Senate Appropriations Subcommittee for Department of the Interior and Related Agencies, New Senate Office Building, Washington, D.C.

DEAR SENATOR HAYDEN: In fiscal year 1966, your committee provided add-on funding to the Department of the Interior's construction budget of $600,000 for construction of Phase A of the Willamette Falls Fishway Project. In fiscal 1967, your committee provided $750,000 for construction of Phase B of this project. We understand that the Bureau's fiscal 1968 budget contains $100,000 for construction work on this fishway. This letter is to request that this amount be increased to $1,375,000, and made available to the Department of the Interior to allow for completion of this necessary and beneficial fisheries project.

The construction of Phase A was begun in April of 1966 and will be complete in mid-April 1967. The contract for Phase B has been awarded, and work will begin in late April as water conditions permit. These first two phases provided for construction of the fish ladder from the cul-de-sac area of the falls and for the common exit structure. Still to be constructed are the two ladders from the main falls area and connections to the exit structure. A total of $1,375,000 federal funds is needed to complete the work. In addition to the Federal funding, 16.3 percent of all construction costs is being paid by a local utility, Portland General Electric Company. If the remaining work is to be done in two stages, or Phase C and Phase D, then the federal funds required are estimated at $750,000 for Phase C and $775,000 for Phase D, or a total of $1,525,000.

We have discussed future funding of the Willamette Falls fishway project within our agency, with the consulting engineers, and with the fishway designers, and collectively feel that the $100,000 included for fiscal 1968 is an insufficient amount to obtain any significant progress on this important project.

In order to continue construction of Willamette Falls fishway on a practical and prudent basis and to realize the best value for the dollars expended, we strongly urge the appropriation of $1,375,000 for fiscal 1968 for completion of this project. Your favorable consideration of this request will be appreciated.

Sincerely,

C. A. WEBERG, *Acting State Fisheries Director.*

BUREAU OF SPORT FISHERIES AND WILDLIFE

LETTER FROM SENATOR MOSS

U.S. SENATE,
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,
April 7, 1967.

Hon. CARL HAYDEN,
Chairman, Appropriations Committee,
U.S. Senate, Washington. D.C.

DEAR CARL: I find that only $70,000 has been requested in the fiscal year 1968 budget for the Ouray Wildlife Refuge in the Uintah Basin in Utah. This is far short of the amount needed. It will allow some progress in the construction of dikes, levees and drains in the refuge, and will permit the building of a limited number of control structures. But if we are to develop the Shepard Bottoms area to the extent that it will provide a nesting marsh for migratory waterfowl, an additional $125,000 should be appropriated for the fiscal year 1968.

Actually, the Ouray Refuge has been starved for funds for several years now. Last session I asked for extra funds for Ouray and the subcommittee graciously recommended them. The House, however, refused to go along with the amendment.

I am asking again this year, in the hope that the subcommittee will again grant my request, and that this year the House will not strike the funds from the appropriation bill. The waterfowl population in Utah is declining, and the best way to reverse that trend is to provide more nesting areas.

I should also at this time like to make one additional request. It is for the sum of $56,000 for the establishment of a Trout Disease Laboratory at the National Fish Hatchery in Springville, Utah.

Two factors in the production of trout have changed the needs of the scientific diagnosis of fish disease. The first is that during the past few years trout fishing waters in the Intermountain Area have been greatly expanded through the creation of many new fresh water lakes at reclamation dams. As a result, fish are being produced in Federal, state and private fish hatcheries in far greater quantities than ever before. The second is that the large-scale movement of fish and fish eggs throughout hatchery systems and across state boundaries has produced a vehicle for the rapid, widespread distribtution of fish disease. There is an urgent need now for a trout disease laboratory in the Intermountain Area. The Springville Hatchery is the logical site.

The Springville hatchery has adequate facilities to house a unit staffed and equipped to identify causes of fish mortalities in the Intermountain Area, and to provide on-site diagnostic services in this region of high fish hatchery production.

To produce the large numbers and pounds of fish required for resource management and recreational fishing, population densities must far exceed natural situations. The environment is favorable for outbreaks of serious diseases, resulting in losses to recreational resources, private enterprise and local economics. The best course of action to prevent the spread of fish diseases is a program of constant vigilance and control carried out at fish hatcheries across the country.

The annual operation and maintenance requirements of such a unit would be as follows:

1 unit leader, GS-12	$11,420
1 assistant unit leader, GS-11	9,630
1 laboratory technician, GS-7	6,740
1 clerk-typist, GS-4	4,990
Total salaries	32,780
Travel supplies and incidentals	13,220
Vehicular and laboratory equipment	10,000
Total	56,000

There is a wide support in the area for the establishment of a Trout Disease Laboratory at Springville, and I hope the subcommittee will write in the small sum of $56,000 which will inaugurate the laboratory in the fiscal year 1968.

Thank you for your consideration of these items.

Sincerely,

FRANK E. MOSS,
U.S. Senator.

NATIONAL PARK SERVICE—JEFFERSON NATIONAL EXPANSION MEMORIAL

LETTER FROM SENATOR HRUSKA

U.S. SENATE,
COMMITTEE ON APPROPRIATIONS,
April 4, 1967.

Hon. CARL HAYDEN,
Chairman, Interior Appropriations Subcommittee,
Washington, D.C.

DEAR MR. CHAIRMAN: Enclosed for your information is a copy of a letter received from Judge James M. Douglas, giving information that the voters of St. Louis have approved issuance by the City of $2,000,000 in bonds for the Jefferson National Expansion Memorial. It would be appreciated if this will be made part of the record in support of the construction appropriation for this purpose.

Sincerely,

ROMAN L. HRUSKA,
U.S. Senator, Nebraska.

LETTER FROM JEFFERSON NATIONAL EXPANSION MEMORIAL ASSOCIATION

ST. LOUIS, MO., *March 31, 1967.*

Hon. ROMAN L. HRUSKA,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HRUSKA: I was happy to have the pleasure of seeing you at the meeting of the Commission on February 3rd.

All of us here who have worked so long and so hard for the completion of the Jefferson National Expansion Memorial were overjoyed with the result of the March City election approving the issuance by the City of $2,000,000.00 in bonds for the Memorial. Payment of this amount for the Memorial will fulfill the City's obligation. The vote was 70% favorable to the issuance of the bonds, so the requirement of 66⅔ approval was well surpassed. Perhaps this information might be conveyed to the Appropriations Committee before its consideration of the item of $2,300,000.00 in this year's budget for the Memorial.

It appears that the City administration and the Park Service have reached an agreement continuing the 275 foot height limitation of buildings in the neighborhood of the Memorial. The only issue still to be resolved is to determine the boundaries of the area surrounding the Memorial where this limitation will apply.

With best wishes and cordial regards,

Judge JAMES M. DOUGLAS,
Chairman, Executive Committee.

OFFICE OF SALINE WATER

Letter to Senator Proxmire

U.S. Department of the Interior,
Office of Saline Water,
Washington, D.C., March 22, 1967.

Hon. William Proxmire,
U.S. Senate,
Washington, D.C.

Dear Senator Proxmire: In reply to your inquiry as to the reasons for the decline in Office of Saline Water funds devoted to activities within the State of Wisconsin, the following explanation is submitted.

The Fiscal Year 1966 figure of $2,437,998 includes two contracts totaling over $2,100,000 for design, construction and fabrication, which were awarded on a competitive bid basis and which are of a nonrecurring nature. The Fiscal Year 1967 figure represents work actually contracted for during part of the year and contracts currently under negotiation that will probably be obligated before the end of the current year. Fiscal Year 1968 figures are estimates based on current program plans, and the probable renewal of extension of certain current contracts. It would be difficult for us to accurately forecast where all of the research and development funds requested for Fiscal Year 1968 will be expended until proposals are submitted, bids received and evaluated, negotiations conducted, and contracts or grants awarded.

It should be pointed out that as a result of the Office of Saline Water's programs, desalting technology has been advanced to a point where private industry can manufacture desalting facilities that are capable of producing potable water that is competitive, in certain areas, with conventional water sources. The Aqua-Chem Corporation, located at Waukesha, Wisconsin, has participated in our programs over the past several years and, as a result, has been aided by the Office of Saline Water in developing their technology and improving their position in the manufacturing of desalting facilities.

Aqua-Chem's position as a leader in the desalting field is illustrated in their report for the six months ending November 30, 1966, which shows net sale at $5 million compared to $2.7 million for the same period in 1965. The Company's backlog of orders has also more than doubled, going from $5.6 million as of November 30, 1965, to $12.5 million as of the same date in 1966. Based on these trends, there is every reason to believe that the Aqua-Chem Corporation will improve its position among the leaders in the desalting field and continued growth can be expected.

Sincerely yours,

J. A. Hunter, *Director.*

FOREST SERVICE

Letter From Senator Randolph

U.S. Senate,
Committee on Public Works,
March 5, 1967.

Hon. Carl Hayden,
Chairman,
Senate Committee on Appropriations,
U.S. Senate,
Washington, D.C.

Dear Mr. Chairman: It might help in your review of the 1968 budget proposal for the Forest Service in the Department of Agriculture, if I commented on the request for forest development roads and trails. The authorization for this particular item is considered by the Committee on Public Works which over the past four years has given it a great deal of study. We have worked closely with the administration and the industries and communities dependent on federal forests in developing that authorization.

As you are aware the authorization for national forest roads and trails for fiscal years 1968 and 1969 was established at $170 million annually by the Federal-Aid Highway Act of 1966. This was a doubling of the authorization level for fiscal years 1966 and 1967.

The Committee on Public Works recommended this substantial increase based on extensive testimony presented before the Committee on the imperative need to open up additional federal forest lands to forest management, protection and the production of essential products and services. The economic viability of many rural areas of our country, particularly the western states is dependent on the full productivity of federal forest lands.

This recommendation received the unanimous support of the Committee because of the economic dependence of vast rural areas, on forest productivity and the need to open up these resources for management and development.

You have had considerable experience in federal timber matters and well understand the importance to the federal government, the forest products industry and the dependent communities of offering the full allowable cut for sale. In testimony before the Committee on Public Works both Forest Service and forest industry spokesmen pointed out that the basic difference between the available timber supply and that offered for sale was due to lack of access.

The emphasis was placed on the need for access to open up new areas. There was no justification presented for a major program of upgrading existing roads serving areas already under management. There has been some concern expressed to my staff that funds appropriated under this budget item may go more for unnecessary upgrading of roads or for building roads to unnecessarily high standards rather than concentrating on opening up the maximum amount of forest area to management.

I respectfully suggest that you may wish to consider language in the report on the Interior and Related Agencies Appropriation bill cautioning the agency against undertalking a major program of upgrading existing roads until the majority of the critically needed access routes have been constructed.

Truly,

JENNINGS RANDOLPH,
Chairman.

QUESTION BY SENATOR PROXMIRE

Question: I recently received a letter from the Conservation Director of the State of Wisconsin indicating that the full $2,500,000 authorized was needed for cooperative Forest Survey work. I note that $2,203,000 is included in the F.Y. 1968 budget for this purpose. Could an additional $297,000 be wisely used? Would such an increase be of specific help to Wisconsin? What other States would be aided?

Answer: An additional $297,000 could be very effectively used when such an amount is available to strengthen the Forest Survey. Out of the $103,000 increase in the F.Y. 1968 budget request we will be able to allocate only $10,000 to the Survey work in the Lake States region.

We are ready to begin a resurvey in Wisconsin. The State is generously planning to contribute $468,000 over the next three years to assist in this work. An increase for the Forest Survey would be of major assistance in completing a new survey of Wisconsin's important timber resources.

Such an increase as you mention would be used to speed up and intensify the Survey in a number of areas, including the State of Maine, for example, and southern States where rapid industrial expansion is underway.

As you know, we have been steadily falling behind in the nationwide Survey as costs have risen. The demand for and use of up-to-date forest inventory data is greater than ever before. The Survey is important because it provides the information on which industrial expansion depends and on which plans for all kinds of forestry programs are based.

STATEMENT BY SENATOR HRUSKA

For many years the field of forestry research has suffered from neglect, compared with other fields of plant research. As part of a program to repair this neglect, construction of a Shelterbelt Laboratory at Lincoln, Nebraska, has been programmed, and it is hoped that this construction program can be carried through without unnecessary delay. An appropriation for construction funds for fiscal year 1968 is needed to permit this program to proceed expeditiously.

In fiscal 1967 the Congress appropriated $28,000 for the planning of the Laboratory and related facilities to house Forest Service research programs at Lincoln. The General Services Administration has negotiated a contract with an architectural and engineering firm for the design of this laboratory. The estimated time for completing the design phases under this contract is estimated to be February, 1968. The plans and specifications will be completed in time for a construction contract to be awarded in fiscal 1968.

The estimated cost of this laboratory-office building is $350,000. An additional $150,000 will be needed to construct the headhouse-greenhouse and other facilities required in this phase of construction. Plans for these additional facilities are being developed under the present architectural and engineering contract. The University of Nebraska has provided a building site.

Trees can modify local climate, benefit crops and livestock, and control wind erosion of light soils. They can control snow drifting, improve wildlife habitat, and add substantially to the comfort and aesthetic appeal of Plains environment. In recognition of their value, large numbers of trees have been planted in windbreaks, since the time of first settlement. Only a few species have been able to withstand the rigorous climate. Also, the length of tree life and period of shelterbelt effectiveness has not been as great as would be desirable. The problem of diseases is also important. These and similar problems would be the subject of study at the Shelterbelt Laboratory. Funds are also needed for the expansion of the research program, and it is hoped that they can be provided.

LETTER FROM SENATORS SYMINGTON AND LONG (MO.)

U.S. SENATE,
COMMITTEE ON BANKING AND CURRENCY,
April 6, 1967.

Hon. CARL HAYDEN,
Chairman, Interior and Related Agencies Subcommittee,
Senate Appropriations Committee, U.S. Senate,
Washington, D.C.

DEAR MR. CHAIRMAN: We respectfully submit the statement of the Meramec Basin Association in support of an appropriation for H–25 Reservoir, to be known as Council Bluff Lake, which will be situated in the Clark National Forest, Missouri.

We fully support this fine statement and urge your committee to approve an appropriation of $170,000 which would be used for site preparation and the beginning of construction on the spillway or the foundation of the dam.

The construction design is now being completed and will be ready by July, 1967.

The President's Budget for fiscal year 1968 already includes funds to complete acquisition of all remaining tracts of land in the reservoir area. Approximately 65 percent of the land is part of the Forest. Another 9 percent has been acquired under fiscal year 1967 funds. Of the rest of the land, most is easily available. In a recent letter, George S. James, Regional Forester, informed us that "some of the landowners hesitate to option their lands because they are not sure there will actually be a lake constructed."

We would like to stress the increasingly urgent need for an early completion of this project. The population in the area is now increasing by 30,000 due to the new multi-million dollar lead, zinc, and iron mining industry which has just been launched near the reservoir site. Estimates already show that the reservoir will attract 162,000 visitor days annually. At present there is no recreation site of this kind in the Forest or on private land adjacent to the Forest.

On behalf of the citizens of Missouri and the Meramec Basin we would like to express our deep appreciation to you and your subcommittee for your continued interest and assistance in obtaining the full development of the Clark National Forest.

Sincerely,

STUART SYMINGTON,
U.S. Senator.
EDWARD V. LONG,
U.S. Senator.

RESOLUTION, BIBB COUNTY DELEGATION, GEORGIA STATE LEGISLATURE

Whereas Georgia's income from forest products exceeds one billion dollars annually; and

Whereas more than one hundred thousand Georgians are gainfully employed in harvesting, processing, manufacturing, and transporting products from Georgia's forests; and

Whereas there are 196,448 private forest land owners in Georgia; and

Whereas commercial forest land in Georgia totals 25,772,200 acres; and

Whereas Georgia's forest land is of the utmost importance in maintaining our excellent hunting, fishing and recreational facilities; and

Wheres Georgia's forest land is also important to tourism, water conservation and is unquestionably one of our State's most valuable assets; and

Whereas, the outstanding accomplishments of the Georgia Forestry Commission in protecting the State's forest lands from fire losses has resulted in an enormous build-up of fuel on the ground which creates potential conditions for large destructive wild fires during severe drought periods; and

Whereas preparations must be made to prevent the occurrence of large wild fires during periods of prolonged drought and severe fire weather conditions, in order that the fire menance does not exceed the capabilities of the State's fire suppression efforts; and

Whereas additional knowledge in fire behavior and new techniques in fire control and suppression must be provided through research; and

Whereas the State of Georgia, through the Georgia Forest Research Council, did construct the world's first forest fire laboratory at Macon, Georgia, with an agreement that the United States Forest Service would staff the laboratory and conduct programs of forest fire research; and

Whereas today there are 37 United States Forest Service Research personnel stationed at the Southern Forest Fire Laboratory and the Washington office of the United States Forest Service has indicated that their plans for the fire research program at Macon will require 110 personnel, or a 300% increase in the research staff by 1972; and

Whereas the Macon facility is already overcrowded and additional laboratory and office space will be required to house the anticipated increases in research activities; and

Whereas the Board of Commissioners of the Georgia Forest Research Council has approved an annex to the Southern Forest Fire Laboratory but were unsuccessful in obtaining funds from the 1967 General Assembly to construct the needed annex; and

Whereas because of pressing needs for education, mental health, highways, and services in other critical areas, it will be most difficult for the State of Georgia to allocate funds in the foreseeable future to construct this critically needed addition to the Southern Forest Fire Laboratory; and

Whereas the Southern Forest Fire Laboratory, one of the three major fire laboratories in the United States, serves the eastern half of the Nation, the research therefrom is beneficial to a broad area of the Nation: Now, therefore, be it

Resolved by the Bibb County delegation of the General Assembly of Georgia now in session on this 17th day of March 1967, in Atlanta, Georgia, That the members of said delegation do hereby express their belief that the expenses of building an annex to the Southern Forest Fire Laboratory should be the responsibility of the U.S. Government, and said members do, therefore, respectfully request the Honorable Richard B. Russell, U.S. Senator from Georgia, the Honorable Herman E. Talmadge, U.S. Senator from Georgia and the Honorable John J. Flynt, Jr., member of the U.S. House of Representatives of the 6th District of Georgia, to request the U.S. Congress to appropriate adequate funds for planning and building a structure of sufficient size to satisfy the present forest fire research program and those planned for the future; be it further

Resolved.—That the Bibb County Delegation shall assist in every way possible to obtain the needed funds and will petition the State of Georgia to give the United States Government a long-term lease of the land on which to erect an annex to the Southern Forest Fire Laboratory at Macon, Georgia.

Senator BILLY ADAMS.
Representative CARR G. DODSON.
Representative W. E LAITE, JR.
Representative F. RAGLAND.
Senator OLIVER C. BATEMAN.
Representative MITCH MILLER.
Representative G. ED KNAPP.
Representative ROGER W. WILSON.

JUSTIFICATIONS SUBMITTED PURSUANT TO SENATE DOCUMENT 22, APRIL 28, 1967

DEPARTMENT OF THE INTERIOR

OFFICE OF TERRITORIES

TRUST TERRITORY OF THE PACIFIC ISLANDS

For an additional amount for "Trust Territory of the Pacific Islands" $5,000,000, to remain available until expended.

Heading	Request pending	Proposed amendment	Revised request
Trust Territory of the Pacific Islands	$17,500,000	$12,500,000	$30,000,000

Additional funds are requested for the fiscal years 1967 and 1968 to provide grants for operations and capital improvements in the Trust Territory of the Pacific Islands. Additional operating grants are needed to improve medical and educational services, for community development, and for additional capital for economic development loans. Capital improvement grants are requested for hospitals and dispensaries; for new elementary and secondary schools; for power, water, and sewage projects; for improvement of transportation facilities and communications; and for other projects related to the urgently needed improvement of services in the trust territory.

Recent legislation authorizes the additional appropriations.

The amounts requested herein when added to the amounts previously requested will not increase the totals for the fiscal years 1967 and 1968 as shown in the 1968 budget.

* * * * * * *

PURPOSE AND NEED FOR ADDITIONAL FUNDS

The Trust Territory is requesting a supplemental appropriation of $12.5 million for Fiscal Year 1968. The 1968 supplemental funds are to be used primarily for the construction of facilities. A total of $1,100,000 is requested for programs, administration, and operations with $11,400,000 requested for capital improvement projects.

Program and financing

[In thousands of dollars]

	1968 request pending	1968 proposed amendment	1968 revised request
Program by activities:			
1. High Commissioner's Office	296	----------	296
2. Judiciary	247	----------	247
3. Grants	16,957	12,500	29,457
Total program costs, funded	17,500	12,500	30,000
Financing: New obligational authority (appropriation)	17,500	12,500	30,000
Relation of obligations to expenditures:			
Total obligations (affecting expenditures)	17,500	12,500	30,000
Obligated balance, start of year	1,254	----------	1,254
Obligated balance, end of year	−1,654	−9,024	−10,678
Expenditures	17,100	3,476	20,576

Object classification

[In thousands of dollars]

	1968, request pending	1968, proposed amendment	1968, revised request
41.0 Grants, subsidies, and contributions	16,957	12,500	29,457
No change in other objective classifications	543		543
Total obligations	17,500	12,500	30,000

JUSTIFICATION

The additional amount proposed in this amendment is distributed to the following activity:

Activity	Appropriation, 1967	Supplemental, 1968	House allowance, 1968	Additional request
1. High Commissioner's Office	$270,000			
2. Judiciary	202,000			
3. Grants	17,022,000	$12,500,000		$12,500,000
Total	17,494,000	12,500,000		12,500,000

A breakdown of the $12,500,000 by objects of expenditure follows:

41 grants, subsidies, and contributions $12,500,000

TRUST TERRITORY OF THE PACIFIC ISLANDS JUSTIFICATION

Supplemental Appropriation FY 1968, $12.5 Million

The United States of America accepted administrative responsibility and an obligation to the people of Micronesia through a Trusteeship Agreement between the United States and the United Nations Security Council, effective July 18, 1947. Under the terms of this agreement, the United States is responsible for promoting the economic, social, political, health, and educational development of the people of Micronesia. This responsibility was assigned to the Secretary of the Interior by Executive Order in 1951.

Appropriations by the United States Congress were at a level of $6,304,000 in 1962 but were increased by $15,000,000 in Fiscal Years 1963 and 1964, and to $17,500,000 in Fiscal Years 1965 and 1966. Over the years the increasing cost of service to a population widely dispersed among the many islands of the Territory and the very high cost of construction in the area resulted in decreased funds being available for new construction, as well as the deferment of maintenance, economic development, and other programs, in favor of education and health services. Legislation has passed the Congress which increased the annual appropriation authorization and permits an increase in the funds available to the Trust Territory for 1968, the current year.

The Trust Territory is requesting a supplemental appropriation of $12.5 million for Fiscal Year 1968. The 1968 supplemental funds are to be used primarily for the construction of facilities. A total of $1,100,000 is requested for programs, administration, and operations with $11,400,000 requested for capital improvement projects.

A. Programs, administration, operations

1. Community services:
    - (*a*) Public health:
        - (1) *Hospitals—$100,000.*—The total of $100,000 is required to permit the recruitment of four additional United States doctor personnel and three qualified registered nurses in FY 1968. These personnel are required to immediately up-grade services being rendered at our district hospitals, while at the same time, up-

grading the on-the-job training of our local national nursing personnel. The employment of these doctors will provide us also with much improved diagnostic capabilities and training of our local Micronesian medical practitioners. With the employment of registered nurses, the on-the-floor supervision for nursing services will be improved resulting in better patient care and conditions of service. These additions will change the doctor population ratio from 1 : 11,250 to 1 : 7,500. The nurse population ratio will be changed from 1 : 18,000 to 1 : 11,250.

(*b*) Education:

(1) *Elementary education—$68,000.*—The sum required will provide for the employment of 30 additional Micronesian elementary school teachers and $15,000 additional for badly needed materials and supplies. Increased enrollment will leave the teacher-pupil ratio essentially unchanged. A qualitative increase will take place among the Micronesian teachers since the number of degree-holding Micronesian teachers is expected to double in 1968 to a total of 29 and the Trust Territory teacher education program on Ponape will graduate an additional 40 teachers.

(2) *Secondary education—$23,000.*—This sum will provide for the employment of 10 additional Micronesian secondary education school teachers along with $5,000 additional for required materials and supplies.

(*c*) *Community development—$250,000.*—A total of $250,000 is required to provide for a Grant-in-Aid fund in FY 1968 to assist in Community Development for self-help type projects. Included in the range of these projects are the building of water systems, bridges, roads, sewage facilities and other community projects in health and education, generally. In each instance, the community furnishes all of the common labor and also frequently, some of the material costs. This program is more than simply a Grant-in-Aid, as it is also educational in teaching self-reliance while providing basic facilities in a community. The community self-help approach will be much accelerated by the presence of the Peace Corps volunteers in the Trust Territory.

2. Resources and development:

(*a*) *Economic Development Loan Fund—$250,000.*—In 1963, 1964, and 1965 this fund has been financed by annual appropriations of $100,000 each year. Loans are made directly or through commercial banks with the Fund guarantor for the loan. Public Law 88–487, approved August 22, 1964, authorized the transfer of the fund of $369,000 in assets of the former "Loans to Trading Companies" fund. No funds were requested in FY 1966 or in the FY 1967 regular submission pending analyses of economic development potentials and additional experience with the fund. From applications presently received, it is apparent that we can efficiently lend all of the remaining funds available for economic development at this time. For this reason, and from the anticipated report to be received from our American contractors on economic development, the additional financing of $250,000 will be required in 1968. The Economic Development Loan Fund currently has direct outstanding loan totalling $403,000 and has additionally guaranteed loans totalling $266,000. The Fund currently provides a 100% guarantee and maintains a 50 per cent reserve for such loans.

3. Administration:

(*f*) *Property and supply—$20,000.*—The $20,000 required for Property and Supply will provide for the employment of an Assistant Procurement Officer and a freight and claims clerk badly needed in our supply operations. With central procurement an established fact, and the much increased Capital Improvement Program, these additional personnel are badly needed to insure prompt action on purchase requests and proper documentation for shipment and claims of losses.

4. Operations, maintenance, transportation, and communications:

(*d*) *Operation and maintenance—Physical facilities—(4) District Public Works—O. & M. $152,000.*—The $152,000 required is for increased maintenance materials such as lumber, paint, nails, roofing materials, and screening.

5. Public affairs:

(*a*) *Political development—$73,000.*—The sum required will provide for additional political affairs staff at district level and headquarters, necessary supplies, equipment and travel and per diem expenses. Only minimum services are now provided in this crucial area of political development. Increased emphasis must be given in political development to meet an early plebiscite date. Management intern positions, both at headquarters and district staff level, will be funded. Provision will be made for sorely needed training programs at the municipal, district and territorial governmental level, for programs of political education of the public, and to sponsor conferences, and travel, both within the Territory and to the United States, by Micronesian leaders.

(*b*) *Public information—$95,000.*—The sum required is needed to improve and expand the public information program. In addition to informing the public and official agencies of its activities, the government provides newspapers and public information services to the district. There are no private news media in the Territory, with the exception of a weekly newssheet in the Marshalls and in Ponape District. Present staffing of Public Information services is confined to the Headquarters Information Office. The amount herein requested will provide for Micronesian public information officers and supplementary clerical and photographic staff in all six districts, supplies and equipment, travel and other essential information costs. Additional staff is required also at the Headquarters level.

(*c*) *Broadcasting—$69,000.*—This sum is urgently required to put the six broadcast stations in full operating condition. It will also provide for additional Micronesian broadcast studio staff, three U.S. station managers, at a cost of $35,000, and for essential broadcast equipment and supplies to operate a Headquarters Broadcast Center and six local stations. Both political development and informational services require increased broadcast services along with an increased emphasis on educational programs via radio broadcasting.

B. Capital improvements

Health facilities construction—$3,737,000.—A total of $3,442,000 is required to complete the funding for the 160-bed Truk Hospital designed for future expansion to 210 beds. The construction drawings for this hospital will be ready for invitation-to-bid in the first quarter of FY 1968. After prior year's approved re-programming, a total of $1,058,000 was available as the first increment of the construction of this facility which is estimated to cost $4.4 million. The funds requested herein will complete the funding for the Truk Hospital.

The cost of referring patients to the Naval Hospital in Guam for specialized care is now approximately $300,000 annually. It is anticipated that this cost will increase unless more intensified care can be provided locally. In addition to achieving the benefits of a properly equipped modern medical facility, the Trust Territory by the proposed construction will achieve eventually an annual avoidance of some of the medical referral costs.

Our outlying dispensaries are manned and equipped to act as obstetric wards for births, well-baby clinics, focal point for immunization, filariasis control, and tuberculosis control in outlying population centers, as well as providing a facility required for treatment when regular doctors make their periodic visits. The condition of many of our dispensaries is deplorable, and the dispensaries to be constructed will range from two to sixteen beds, with a magnitude of cost from $2,000 to $20,000 each. A total of $120,000 is requested for this construction. The balance of $175,000 will provide required funding for renovation of subcenter hospitals.

School construction.—In FY 1964, 65 and 66, an accelerated elementary school construction program was undertaken and many school classrooms were constructed for concrete block, wooden truss with metal roofs. High school classrooms were similarly constructed during this same period. With funds available after the approved re-programming in FY 1967, a design criteria was developed to permit the letting of an architectural and engineering contract for the design of a classroom module easily adaptable to our different island cultures. The design will result in more expensive construction than the concrete block classrooms built in the past; however, the aesthetic beauty of our islands and the potentialities for tourism makes it necessary to build the type of structure blending as much as possible with its natural surroundings. The construction of classrooms and dormitories, where required, will be of a permanent nature and completed with all necessary utilities and sanitary conveniences. As much as possible, construction of all facilities will be completed on an island-by-island basis to take advantage of contractor and of our force account mobilization to a maximum extent. In the beginning, we anticipate higher unit construction costs while training our Micronesian labor force; however, as projects go forward we fully expect expertise to be developed reducing costs.

Secondary school construction—$1,318,000.—A total of $1,318,000 is requested in FY 1968 for secondary school construction, students in grades 9 through 12. Increased enrollment is expected to be 1,478 in school year 1968–69. Secondary school construction will be in accordance with the master plan and will be accomplished on a permanent plant basis with capability of expansion as enrollment dictates. The funds requested herein will provide for the construction of a Territory Polytechnic High School at $718,000 and additional facilities, including dormitories in conjunction with the Agricultural and Technical School in Ponape for $600,000.

Teacher housing—$500,000.—In order to maintain current quality levels in instruction through recruitment of qualified teachers, 24 housing units costing a total of $500,000 are required. This housing and teacher recruitment is necessary to maintain a 1:25 teacher-pupil ratio. The amount of $20,000 per unit has been budgeted until we can design and construct a modular unit and gain some experience in costs. We believe that we should be able to construct employee housing for as little as $16–$17,000; however, due to the dearth of actual experience on good island designs and new construction, this estimate simply cannot be refined at this time.

Power development—$1,200,000.—The FY 1967 Supplemental request of $400,000 for the start of the Truk and Koror power rehabilitation along with the $1,200,000 herein will complete the first phase of the funding of new equipment required for the islands of Koror, Moen (Truk) and Saipan. This amount will provide new generating equipment for Saipan, installation of equipment procured FY 1967 for Palau; for a new distribution system in Palau; installation of the first increment of equipment procured FY 1967 for Truk; new distribution system for Truk.

Water development—$1,000,000.—The $1,000,000 requested herein is estimated to be adequate for the first phase of rehabilitation and additions to water requirements on Saipan, to provide sweet water sources and improvements to distribution to serve five major villages with adequate sanitary water supply presently of high saline content, and approximately $600,000 for water supply and distribution for Truk in the region of the new hospital. In addition, the water sources developed on Truk will be utilized by present communities at this district center alleviating as much as possible the water rationing which exists during draught periods at the present.

Sewage and sanitation development—$275,000.—This total is required for sanitary and sewer facilities for the Truk Hospital outfalls and is required to enable construction to be carried out concurrently with the Truk Hospital.

Communication construction—$775,000.—A total of $700,000 was requested in the FY 1967 Supplemental to provide the funds for immediate procurement of equipment required for the Trust Territory communication system. The Trust Territory Government is working very closely with the FAA on this requirement. Of the $775,000 total required herein, $660,000 completes the funding for the necessary structures, erection of antennas, and installation of equipment required for the system. The balance of $115,000 required is to up-grade the radio broadcast stations at Saipan, Truk and Palau.

Air field construction—$925,000.—Of the total required for Air Field construction in 1968 approximately $600,000 will be used to complete the fill for the Ponape Airfield. With the acquisition of the new 16-inch dredge, in FY 1967, we anticipate it should be possible to complete this airstrip and amortize most of the dredge cost within the funding previously estimated as required for this project. The remaining $325,000 would be used for impacting the Palau Airstrip.

Primary road construction—$350,000.—All funds required are to continue our build-up for the primary program. It is planned to acquire a large portable asphalt plant, spreaders, and road rollers in FY 1968. Work on paving of roads will not begin until FY 1969 when funds will be requested for the necessary labor and materials to begin placing sub-base course, base course and asphalting of selected primary roads. The equipment to be procured will also be used to pave airstrips when projects can be qualified and budgeted.

Harbor development and land reclamation—$300,000.—A study and complete construction design and engineering for a new commercial harbor and port facilities for the island of Ponape, which is now served only by lighterage, is estimated to cost $25,000. It is planned to construct this port facility on one end of Takatik island and land reclamation on this mangrove swamp area will be required for both port facilities and oil depots. Completion of the small harbor in Rota is estimated to cost $41,300 to provide breakwater armor and thus prevent rapid filling of the dredged channel. Other port facilities throughout the Trust Territory are in need of improvement and renovation. Funds remaining after the fill required for the port of Ponape will be used for this purpose.

Master planning—$100,000.—Funds required for 1968 are a continuation of the master planning required for districts and subdistricts so as to cover all major population developmental areas. The master planning will provide professional architectural/engineering services for schematic layouts of land use for each area as island-wide construction programs are authorized. Recommended type, location, and area of civic centers, commercial areas, shops and warehouses, waterfront/POL facilities, residences, hospitals, and park and recreational areas with magnitude of cost estimates for construction will be the information developed.

Emergency and minor construction—$100,000.—A total of $100,000 is requested for minor and emergency-type capital improvements that are not proper Public Works maintenance functions and which cannot be foreseen in this large area of the Pacific. Such construction inevitably is required and the status of these funds and their use will be reported annually in the budget document.

Equipment—$200,000.—The $200,000 required for heavy equipment is a modest increment for requirements in the dispersing of our construction effort to other islands. As construction of the hospital progresses toward the end of FY 1968, it will be necessary to leave some of the construction equipment on the island of Moen for maintenance and other construction purposes while we move to other islands of the Territory to begin major construction projects.

Boats—$320,000.—The sum of $320,000 is required to provide four inter-island boats, desperately required in the Marshalls, Truk, and Ponape Districts for medical evacuations, emergency food distribution and to carry out essential administrative services in island areas away from the district centers. The lack of such transportation at the present time is a serious omission in administrative services and one on which life and death often depends in the three districts mentioned where only transportation by such boats is feasible.

Agriculture—$200,000.—The sum of $200,000 is needed for purchase of major farm equipment to be available for rent to local people. The clearing and subjucation of arable land not now in production rests essentially on the farmers' ability to procure heavy farm machinery. The cost of such farm equipment is beyond the reach of the small farmer of the Territory. This project is one which will have maximum impact on the local economy and one which the Congress of Micronesia, the various district legislatures have urged the Administration to undertake since the program on a Territory-wide nature is one still beyond the local resources.

Dock warehousing—$100,000.—The sum of $100,000 is needed to provide essential dock warehousing for goods, supplies, materials. The lack of such dock warehousing at the present time makes for inefficiency in loading and unloading procedures and greatly increases the cost of handling ocean freight.

Fiscal year 1968 summary by activity of supplemental request

A. *Programs, administration, operations:*	
1. Community services:

JUSTIFICATIONS SUBMITTED PURSUANT TO HOUSE DOCUMENT 114, APRIL 28, 1967

DEPARTMENT OF AGRICULTURE

Heading	Request pending	Proposed amendments	Revised request
Forest Service: Forest roads and trails (liquidation of contract authorization)	110,500,000	500,000	111,000,000

Additional funds are required for the Forest Service program to meet increases in salary rates for certain scientists and engineers as authorized by the Civil Service Commission under Executive Order No. 11073 pursuant to 5 U.S.C. 5303 to become effective in February, 1967.

* * * * * * *

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Public Health Service

Heading	Request pending	Proposed amendment	Revised request
Construction of Indian health facilities	$22,211,000	$1,425,000	$23,636,000

These proposed additional funds, are required for construction of the 200 bed Indian Medical Center at Phoenix, Arizona because of (1) cost escalation and (2) modification and expansion of the project to make provision for a clinical research unit. Architectural development is well underway and construction contracts can be awarded by November 1967.

Total obligations	[1] 27,475,000	28,900,000	+1,425,000

[1] Reflects amended President's budget to include $4,950,000 obligations for Phoenix in 1968 rather than 1967.

JUSTIFICATION

Additional funds of $1,425,000 for a total of $6,725,000 are requested for the PHS Indian Medical Center at Phoenix, Arizona. To date $5,300,000 has been appropriated for this project. The additional funds are required primarily for price escalation. The current cost of $36.30 per square foot as compared to $31.09 per square foot at the time of the 1966 appropriation is based on the schematic drawings now completed by the Architect-Engineer Lescher and Mahoney, Phoenix, Arizona.

In appropriating the construction funds in 1966, $500,000 was deleted by the House-Senate Conferees. However, the conferees realized that the funds appropriated for construction might not be adequate and stated that, if additional funds of $500,000 were required, such funds may be included in subsequent appropriations (Report No. 513, Amendment 45, June 14, 1965).

It is estimated that a construction contract will be awarded in the fall of 1967.

AGENCY REQUESTS FOR AMENDMENTS TO HOUSE BILL

Bureau of Land Management

MANAGEMENT OF LANDS AND RESOURCES

(House hearings, pt. 1, pp. 138–165)

(Senate hearings, p. 346)

Appropriation, 1967	$49, 655, 000
Estimate	49, 573, 000
House allowance	49, 013, 000
Restoration requested	None

(P. 2, line 10)

AMENDMENT REQUESTED

This amendment is only to clarify the intent that the amount of $5,358,000 appearing in the statement on page 7 of the House Report, and quoted below, is available for "Forest Management, Western Oregon," including thinning and salvage.

HOUSE REPORT

"The reduction of $560,000 recommended by the Committee relates to salvage and thinning activity in Western Oregon. The budget estimate proposed an increase in appropriated funds of $560,000 for this purpose. The Committee recommends that instead of appropriating additional funds for this activity in the amount of $560,000, a total of $760,000 be deducted from the 25% available in the Oregon and California grant lands fund and be ear-marked for this purpose. Thus, with the $4,598,000 provided in the budget base for this activity, plus the $760,000 recommended by the Committee for deduction from the Oregon and California grant lands fund, a total of $5,358,000 will be available in fiscal year 1968 for thinning and salvage. Based on information received by the Committee, funding at this level should be ample for the thinning and salvage activity that can feasibly be conducted in fiscal year 1968."

Bureau of Land Management

CONSTRUCTION AND MAINTENANCE

(House hearings, pt. 1, pp. 165–177)

(Senate hearings, p. 364)

Appropriation, 1967	$3, 032, 000
Estimate	4, 300, 000
House allowance	3, 900, 000
Restoration requested	400, 000

(P. 2, line 14)

AMENDMENT REQUESTED

Page 2, line 14, strike out "$3,900,000" and insert in lieu thereof "*$4,300,000*"—the estimate, or an increase of $400,000 in the appropriation.

HOUSE REPORT

"The Committee approves the construction and maintenance program as submitted in the budget estimate. The recommended reduction of $400,000 is based on anticipated slippage in the actual performance of the construction program.

"To the extent that the anticipated slippage may be less than the $400,000 reduction recommended by the Committee, the proposed program for the construction of recreation facilities should be restricted in accordance with the priority listing as shown on page 175 of the hearings.

"Funds provided under this appropriation include $1,100,000 for the Boise Inter-Agency Fire Center; $150,000 for the Craig District Office Complex; $170,000 for the Kanab District Office Complex; and $30,000 for survey and design.

"Testimony developed during the hearings indicated to the Committee that a rather haphazard policy is being followed in the charging of admissions to the various recreation facilities administered by the Bureau of Land Management.

"It is the strong feeling of the Committee that this matter should be given immediate and concerted attention with a view not only to attaining uniformity in the charging of admissions at the various Bureau of Land Management recreation facilities, but also to obtaining uniformity to the degree practical, with admission charges being made by other Federal agencies operating similar recreation facilities.

"It is the further feeling of this Committee that when extensive Federal Funds are used for the development of these recreation areas, it is incumbent upon those enjoying these facilities to bear their fair share of the costs in the form of admission charges."

JUSTIFICATION

This amendment restores the reduction of $400,000 made by the House in the Budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance. 1968	Restoration requested
Construction	$1,482,000	$2,550,000	$2,270,000	$280,000
Maintenance	1,550,000	1,750,000	1,630,000	120,000
Total	3,032,000	4,300,000	3,900,000	400,000

A breakdown of the restoration request by objects of expenditure follows:

25.0	Other services	$120,000
32.0	Lands and structures	280,000
	Total	400,000

This amendment restores $280,000 for construction of recreation facilities, $70,000 in operation and maintenance of recreation facilities and $50,000 in maintenance of access roads for the total of $400,000 reduction made by the House in the Budget estimate.

The restoration of $400,000 will allow the construction of 184 family units at seven sites, the clean-up and maintenance of about 200 undeveloped sites located throughout the West and the preventative maintenance of about 450 miles of road. The recreation projects below are listed in descending priority:

Project name	State	Family units	Cost
Plains	Wyoming	24	$35,000
Wilson Reservoir	Nevada	46	83,000
Castle Dome	Arizona	33	37,000
Tangle Lakes	Alaska	31	45,000
Star Springs	Utah	15	26,000
White Mountain	Alaska	10	14,000
Point of Pines	Utah	25	40,000
Total		184	280,000

Although the above projects are the lowest in priority of the projects listed for development in FY 1968, they are urgently needed to provide facilities to areas presently receiving heavy public use.

For example, the Plains Recreation Complex is located in the Platte River Area. It has some of the best fishing in Wyoming and presently is receiving approximately 90,000 visits per year. The Wilson Reservoir, Nevada, site is located in a fishing area and is receiving about 7,000 fisherman days of use per year. The site is easily accessible and has no existing facilities. The Castle Dome, Arizona, Site is a continuing project. Funds are required to expand the developed portion to accommodate increasing desert camping use. The Tangle Lakes and White Mountain, Alaska, Sites are presently receiving 35,000 and 26,000 visits per year respectively. Absence of facilities has resulted in sanitation and littering problems. The Point of Pines and Star Springs, Utah, Sites are located in areas with excellent scenic views and are presently receiving about 15,000 visits per year.

The $70,000 reduction in operation and maintenance of recreation facilities will delay the clean-up and maintenance of about 200 undeveloped sites. This work is needed to safeguard the public health and to protect the natural resources at undeveloped sites which are currently being used for recreation.

The $50,000 reduction in maintenance of access roads will prevent timely maintenance of about 450 miles of access road. Roads not maintained when the need develops soon become a corrective maintenance item and maintenance costs are approximately double.

BUREAU OF LAND MANAGEMENT

PUBLIC LANDS DEVELOPMENT ROADS AND TRAILS

(Liquidation of Contract Authorization)

(House hearings, pt. 1, pp. 178–181)

(Senate hearings, p. 371)

Appropriation, 1967	$2,000,000
Estimate	3,000,000
House allowance	2,600,000
Restoration requested	400,000

(P. 2, line 20)

AMENDMENT REQUESTED

Page 2, line 20, strike out $2,600,000" and insert in lieu thereof *"$3,000,000"*, the estimate, or an increase of $400,000 in the appropriation.

HOUSE REPORT

"This appropriation is required to liquidate the obligations incurred under the contract authority provided in the Federal-Aid Highway Act for the development of roads and trails on the public lands.

"In view of the program deferral imposed on this activity for the 1967 fiscal year, and the unexpended balance as reported for December 31, 1966, it is the opinion of the Committee that this activity will be adequately funded for the 1968 fiscal year with an appropriation of $2,600,000."

JUSTIFICATION

This amendment restores the reduction of $400,000 made by the House in the Budget estimate. This amount is for the following activity:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
Public lands development, roads and trails	$2,000,000	$3,000,000	$2,600,000	$400,000

A breakdown of the restoration request by objects of expenditure follows:

32.0 Lands and structures	$400,000

The amendment restores $400,000 for the liquidation of contractual authority. Based on the current rate of liquidating outstanding obligations, the available cash appropriation is estimated to be fully expended at June 30, 1967. There will be a zero cash balance at June 30; but $720,000 of unliquidated obligations will be carried forward into FY 1968. Anticipated total obligations outstanding in FY 1968 will amount to $4,240,000; however, if the $400,000 is not restored, only $2,600,000 of cash will be available to liquidate these outstanding obligations. This is a gap of $1,640,000 between unliquidated obligations and available cash. Experience during FY 1967 has shown that the difference between programmed obligational authority and cash appropriated must be closed if we are to carry out an orderly road construction program. The restoration of the $400,000 in the cash appropriation is urgently needed, otherwise we must defer projects to the end of FY 1968.

If the amendment is not approved, the number of projcts to be obligated under current obligational authority must be reduced. The projects to be deferred are listed below in descending order of priority:

Project name	State	Miles	Costs
Big Knox Bull	Idaho	5	$100,000
Waugh Mountain	Colorado	9	80,000
Troublesome	Colorado	9	110,000
Bare Creek	California	14	70,000
Beatty Butte	Oregon	5	40,000
Total		42	400,000

Intensive management and public use require ready access to the public lands. For example, the Troublesome access road in Colorado will open 12,000 acres of inaccessible public lands for harvesting 26 million board feet of over-mature timber, hunting and fishing and early detection and control of fires. The Bare Creek road in California will provide access to about 50,000 acres of public lands for fire protection, management and recreation.

BUREAU OF INDIAN AFFAIRS

EDUCATION AND WELFARE SERVICES

(House hearings, pt. 1, pp. 766–803)

(Senate hearings, p. 686)

Appropriation 1967	$116,840,300
Estimate	129,478,000
House allowance	126,478,000
Restoration requested	3,000,000

(P. 6, line 2)

AMENDMENT REQUESTED

Page 6, line 2 strike out "126,478,000" and insert in lieu thereof "*129,478,000*", the estimate, or an increase of $3,000,000 in the appropriation.

HOUSE REPORT

"The amount allowed by the Committee by activity compared with the 1967 appropriation and the estimate 1968 is as follows:

"The decrease of $3,000,000 consists of a reduction of $500,000 for the operation of additional Federal school facilities; $500,000 of the increase requested for the adult education program; and $1,000,000 of the increase requested for additional trainees in relocation and adult vocational training.

"The Committee recommends an additional general reduction of $1,000,000 for this activity. This reduction is based on the continued high rate of position vacancies along with various personnel limiations imposed by the Bureau of the Budget.

"The Committee recommends that funds for maintaining law and order be distributed on the basis of tribes having the greatest need of financial assistance for this purpose."

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
1. Educational assistance facilities and services	$82, 909, 000	$87, 924, 000	$86, 244, 000	$1, 680, 000
2. Welfare and guidance services	13, 899, 000	16, 303, 000	16, 153, 000	150, 000
3. Relocation and adult vocational training	17, 123, 000	22, 267, 000	21, 097, 000	1, 170, 000
4. Maintaining law and order	2, 909, 300	2, 984, 000	2, 984, 000	----------
Total	116, 840, 300	129, 478, 000	126, 478, 000	3, 000, 000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	[1] $232, 000
12	Personnel benefits	18, 000
21	Travel and transportation of persons	35, 000
22	Transportation of things	24, 000
23	Rent, communications, and utilities	35, 000
24	Printing and reproduction	2, 000
25	Other services	47, 000
26	Supplies and materials	925, 000
31	Equipment	12, 000
41	Grants, subsidies, and contributions	1, 670, 000
	Total	3, 000, 000

[1] Related to requested restorations in operation of new schools.

General reduction—$1,000,000

The Bureau considered slippages in employment due to normal turnover, employment ceilings, and delays in initial recruitment as lapses in preparing our estimates and reduced personal services accordingly. The personal services estimate will fund the minimum staff necessary for carrying out Bureau programs. The additional reduction of $1 million made by the Committee results in a dual reduction for the same reason—lapses in employment. Therefore, this further reduction would generally be applied to object classes other than personal services.

If the reduction is not restored, the $1 million will be distributed to operating programs as follows: Educational assistance, facilities and services—$680,000, Welfare and guidance services—$150,000, and Relocation and Adult Vocational Training—$170,000. The impact of these reductions is shown in the discussion of each activity.

Education

Restoration of $1,180,000 is requested for the operation of Federal school facilities. This amount includes $500,000 identified by the House to new school facilities and $680,000 as the portion of the general reduction of $1 million allocated to this activity.

Operation of new school units—$500,000

The reduction of $500,000 for the operation of additional Federal school facilities would leave an increase of $285,000 for day school operations: $100,000 for additional units and $185,000 for increased food allowances. An additional 25 day school classrooms will be ready for operation in September 1967, and children are available for enrollment in these units, most of which are in Alaska.

Bureau-wide, the average cost of operating a day school unit is $21,000; the average in Alaska is $24,000. The allowance of a $100,000 increase for the additional units would provide but $4,000 per unit which would cover only minimum maintenance and protection of the facilities. It is requested that the $500,000 be restored in order that teachers may be employed, teaching supplies and materials obtained, and other necessary operating costs may be met.

If the restoration is not made, the Bureau must face the hard decision on whether to open the new day school units by reducing the amounts available for children now in school or to deny the benefits of education to over 600 Indian and Alaska Native children.

General reduction applied to education—$680,000

The general reduction of $1,000,000 results in a further decrease of $680,000 in funds for education programs. This reduction for Federal school operations would lower the proposed average per pupil expenditure for all students in Bureau boarding schools to $1,379 per pupil. This would mean that Federal boarding schools would continue operating at a level far below the standards found in other private boarding schools.

The average tuition rate charged in secondary boarding schools is $2,700 per pupil ("Boarding Schools For the Disadvantaged" by F. James Clatworthy, Phi Delta Kappan, March 1967). The reduction would have a conceivable impact of $23,000 in a single school. With our best efforts to minimize the impact, the reduction would have to be absorbed by the various schools in the way which would be least detrimental to the education of the children. This would mean that staff in some schools would continue to carry high pupil loads; in others, expenditures for instructional supplies, equipment and materials would be decreased; some facilities would be unable to upgrade their feeding program to the planned level; and certain needed educational experiences would be curtailed.

Adult education—$500,000

Restoration of $500,000 deleted by the House in Adult Education is seriously needed for the development of two programs considered of highest priority by this Bureau at the present time.

A part of the recent reorganization of the Bureau of Indian Affairs involved separation of Adult Education from Education in order to place it in Community Services and orient it more toward general community development. Since the Adult Education Program was reduced substantially in fiscal year 1967 from fiscal year 1966, $239,537 of the requested $800,437 increase is designated to partially restore the program to its 1966 level. In the last several months there has been an expanded interest in the on-going Adult Education Program in such fields as literacy training and the acquisition of high school equivalency certification. These activities and the others carried out by Adult Education are important. Motivation is the key factor. Opportunities for adults are becoming more available, but without the basic educational skills and attitudinal orientation to the world of work, the opportunities cannot be exploited beneficially.

The remainder of the increase requested was intended to initiate selected community development programs. Community development activity is most timely now and can support not only all of the programs of the Bureau among Indian people but the expanding efforts of other federal agencies in such fields as housing, economic development, and the like. Originally there was proposed $260,900 for grants and contracts to institutions of higher education in an effort to stimulate this activity and encourage action programs in Indian communities. This approach would have the two-fold benefit of providing demonstration projects for specific Indian communities and involving the resources and capabilities of the institutions working in the program so that their continuing involvement would far transcend the specific introductory programs. There was proposed also to provide community development specialists in the various area offices and, in some cases, at the reservation level to coordinate projects and exploit more fully than in the past all available resources, particularly those from sources other than the Bureau of Indian Affairs as well as an intensive training program for all Bureau superintendents, area directors, and selected field and central office staff.

With the current emphasis on self-direction and increased initiative by Indians and with the current interest generated in Indian affairs on the part of other federal agencies, state and local governmental agencies, private organizations and colleges and universities, there are few program efforts that have more promise or are more urgently needed than this community development effort. This specific program thrust will be impossible if $500,000 of the requested increase is deleted.

Housing improvement—$150,000

Restoration of the Housing Improvement program's $150,000 share of the general reduction made by the House is necessary to provide for repairs and renovations to over 50 Indian homes and new houses for 6 needy families living in unrepairable housing.

Relocation and adult vocational training—$1,170,000

The restoration of the $1,000,000 deleted by the House under the Relocation and Adult Vocational Training Program and $170,000 of the general $1,000,000 reduction is requested so that the Bureau can assist an estimated 530 additional applicants for institutional vocational training.

Since the inception of P.L. 959 there has always been an applicant backlog of approximately 25% who have not been furnished institutional training at the time it was requested due to the lack of funds. The restoration of these funds would assist in eliminating some of this backlog which has been created as a result of increased demand for vocational training by the Indian people.

BUREAU OF INDIAN AFFAIRS

RESOURCES MANAGEMENT

(House hearings, pt. 1, pp. 804–850)

(Senate hearings, p. 714)

Appropriation 1967	$44,086,000
Estimate	47,608,000
House Allowance	47,200,000
Restoration Requested	200,000

(P. 6, line 11)

AMENDMENT REQUESTED

Page 6, line 11 strike out $47,200,000" and insert in lieu thereof "*$47,400,000*",—an increase of $200,000 in the appropriation.

HOUSE REPORT

"The amount allowed by the Committee by activity compared with the 1967 appropriation and the 1968 budget estimate is as follows:

"The decrease of $408,000 recommended by the Committee consists of a reduction of $200,000 in the budgeted increase for additional staff to assist with the mutual help and low rent housing programs; and a reduction of $208,000 in the budgeted increase for the maintenance of new facilities * * *."

JUSTIFICATION

This amendment restores $200,000 of the $408,000 reduction made by the House in the Budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
1. Forest and range lands	$5,224,000	$5,438,000	$5,438,000	----------
2. Fire suppression	140,000	140,000	140,000	----------
3. Agricultural and industrial assistance	7,592,000	8,959,000	8,759,000	$200,000
4. Soil and moisture conservation	5,248,000	5,379,000	5,379,000	----------
5. Maintenance of roads	3,887,000	3,913,000	3,913,000	----------
6. Development of Indian arts and crafts	374,000	380,000	380,000	----------
7. Management of Indian trust property	6,780,000	7,200,000	7,200,000	----------
8. Repair and maintenance of buildings and utilities	13,631,000	14,988,000	14,780,000	----------
9. Operation, repair and maintenance of Indian irrigation systems	1,210,000	1,211,000	1,211,000	----------
Total	44,086,000	47,608,000	47,200,000	200,000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$162, 184
12	Personnel benefits	13, 000
21	Travel and transportation of persons	12, 000
23	Rent, communications, and utilities	5, 816
26	Supplies and materials	1, 000
31	Equipment	6, 000
		200, 000

Restoration of the $200,000 reduction made by the Committee is requested in order to permit the orderly development and operation of the housing programs which are primarily funded by other agencies (i.e., principally the Housing Assistance Administration). This reduction would reduce the amount of housing development under such programs because of the Bureau's reduced ability to provide the services and assistance to the Indians that are required in those programs.

The Committee reduction would eliminate 8 construction superintendents and 8 housing development officer positions. This would mean that construction of at lease 8 mutual help projects would have to be postponed until next fiscal year and that approximately 160 Indian families that have been involved in the planning of their houses would have to wait that much longer for their opportunity to build their mutual help homes. In addition, the reduction would reduce our ability to assist the tribes in planning for mutual help projects to be undertaken in the future and in the planning of regular low-rent and other housing developments for Indians.

BUREAU OF INDIAN AFFAIRS

CONSTRUCTION

(House hearings, pt. 1, pp. 851–899)

(Senate hearings, p. 741)

Appropriation, 1967	$56, 118, 000
Estimate, 1968	40, 407, 000
House allowance	40, 525, 000
Restoration requested	----------

(P. 6, line 17)

HOUSE REPORT

"The net increase of $118,000 recommended by the Committee includes a reduction of $642,000 for school equipment. This equipment has been budgeted for various new schools scheduled for construction in fiscal year 1968. Construction of these schools is seldom completed during the fiscal year for which construction funds are budgeted. It is the feeling of the Committee that equipment for these schools should therefore be funded in the fiscal year following that for which construction funds are appropriated for the schools.

"An additional reduction of $275,000 is recommended in connection with the proposed construction of swimming pools in schools at Santa Fe, New Mexico, and Sisseton, South Dakota. The Committee recognizes the potential benefit, both socially and physically, which construction of swimming pools might contribute to Indian youths. However, when there is still a shortage of adequate classrooms for Indian children, the use of Federal funds for construction of swimming pools is subject to question. The Committee would have no objection to the inclusion of swimming pools in the plans and specifications for the construction of Indian schools, however. This could be done at little or no additional cost as far as the planning is concerned, and would be predicated on the possibility that local civic groups or tribal councils might at some future date determine the pools to be of sufficient value to warrant financing of their construction with tribal funds; by subscription of local civic organizations; or in the case of integrated schools, by contribution of local governing bodies.

"A reduction of $90,000 is also recommended by the Committee in connection with funds requested for fallout shelters for various schools included in the 1968 construction program. This Committee has consistently followed the policy of disapproving expenditures for this purpose in the construction of Indian schools.

"The Committee recommends an increase of $250,000 for construction of the Eufaula Boarding School, Eufaula, Oklahoma, for which planning funds were included in the 1967 appropriation.

"The Committee also has approved $425,000 for the construction of dormitory facilities at the Phoenix Indian School at Phoenix, Arizona.

"An additional $450,000 is recommended to provide the required Federal funds as part of the total cost of a modern integrated junior high and high school facility at Tularosa, New Mexico."

STATEMENT

The Committee added two construction projects to the Bureau's request: Eufaula Boarding School—$250,000 and Boarding Facilities, Phoenix Indian School—$425,000. The amounts added are not sufficient to complete either project. Project estimates for the two schools are:

Eufaula Boarding School.—The $250,000 House allowance is not sufficient to construct a 128-pupil dormitory at Eufaula. The present site is too small to construct all of the needed new buildings; therefore, it has been planned to move to a new site approximately three-fourths of a mile away and build a completely new complex. The total cost for this construction is estimated at $1,129,000. This will provide for a new plant at Eufaula, including one 128 capacity dormitory; a multipurpose room with kitchen for food preparation and small stage for assemblies and school programs; three employees' quarters, utilities, site improvements, equipment and on-site inspection.

Phoenix Indian School.—The House allowance of $425,000 provides only for the estimated cost of the base contract for one 128 capacity dormitory at Phoenix, and funds are not included for utility work, on-site inspection, equipment, contingencies, design or site improvements which are necessary for a complete project. The estimated cost to construct one dormitory is $544,000. The construction of one dormitory, however, will not achieve the goal of replacing the existing sheet metal building which houses 240 boys. If only one dormitory for 128 is constructed, 112 boys must remain in the metal building. To construct the two dormitories, which is necessary to provide adequate housing for all of the boys currently housed in the sheet metal building, will cost an estimated $1,400,000. This will provide for construction of two dormitories, complete replacement of overloaded and old utility systems, site improvements, equipment, on-site inspection and design.

BUREAU OF OUTDOOR RECREATION

SALARIES AND EXPENSES

(House hearings, pt. 1, pp. 1069–1117)

(Senate hearings, p. 1339)

Appropriation 1967	$3, 910, 000
Estimate	4, 240, 000
House allowance	4, 140, 000
Restoration requested	100, 000

(P. 10, line 10)

AMENDMENT REQUESTED

Page 10, line 10, strike out "$4,140,000" and insert in lieu thereof "$4,240,000"—an increase of $100,000 in the appropriation.

HOUSE REPORT

"The Committee has disallowed the requested increase of $100,000 for services to the President's Council on Recreation and Natural Beauty, and liaison services for the new Citizens' Advisory Committee on Recreation and Natural Beauty."

JUSTIFCATION

The amendment restores the reduction of $100,000 made by the House in the budget estimate. This amount is distributed to the following activities:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
Planning and research	$2,596,000	$2,796,000	$2,796,000	
Federal coordination	793,000	912,000	812,000	$100,000
Technical assistance	521,000	532,000	532,000	
Total, salaries and expenses	3,910,000	4,240,000	4,140,000	100,000

The restoration of $100,000 will provide additional funds of $40,000 to finance on a full year basis the salaries of the staff of the Bureau assigned to assist the President's Council on Recreation and Natural Beauty which was established by Executive Order 11278, signed by the President May 4, 1966. The fiscal year 1967 Appropriation Act provided for an increase in staff to service the Council but did not provide for their salaries on a full year basis. The Executive Order directed that "The Council shall review plans and programs of Federal agencies for or affecting outdoor recreation and natural beauty." The Executive Order provides that the staff of the Council shall include an Executive Director from the Bureau of Outdoor Recreation. Bureau staff provides leadership in conducting the studies and preparing reports pursuant to Council directives.

The restoration of the House reduction for expenses of staff services provided by the Bureau will enable the Council to carry out its responsibilities more effectively and will preclude having to reduce other program levels financed under the Federal coordination activity.

The restoration of $100,000 also will provide funds of about $60,000 for: (1) travel expenses of the members of the Citizens' Advisory Committee on Recreation and Natural Beauty and (2) finance staff services to the Committee.

The Citizens' Advisory Committee on Recreation and Natural Beauty is a body established by Executive Order 11278, dated May 4, 1966, to advise the President and the Cabinet-level Council on Recreation and Natural Beauty on policies and substantive matters in this field. Mr. Laurance Rockefeller is Chairman of the Committee which is composed of eleven other prominent citizens from various sections of the country who are knowledgeable about such matters. All members serve without compensation, but are authorized by the Executive Order to be reimbursed for travel expenses and per diem in lieu of subsistence.

The Committee has a small staff financed during the current year by assessments from Federal agencies represented on the Council. For fiscal year 1968 these expenses have been budgeted under the Bureau's appropriation item "Salaries and Expenses" which will reduce administrative costs and provide a better basis for carrying on the work.

The Federal Government is receiving highly valuable services from the twelve members of the Committee at no cost other than travel expenses. Several important studies by the Committee are underway, such as:

(*a*) Problems of environmental quality associated with the electric utility industry—undergrounding distribution lines, potential for nuclear energy and the appearance of electric utility facilities.

(*b*) Highway planning—with emphasis on coordination of highway location problems and the implementation of Section 4(f) of the Department of Transportation Act.

(*c*) Recreation Use of Private Land—an analysis of how the private sector of the economy can be encouraged to plan a role in providing recreation opportunities on private lands.

(*d*) Organization of Federal Resource Agencies—A review of the need for improved interagency coordination among the many new and complex Federal programs.

(*e*) Conservation education—analysis of deficiencies in current conservation education programs and development of recommendations.

Unless these funds are restored the Committee's efforts will be seriously impaired and its studies may have to be discontinued. A breakdown of the restoration by objects of expenditure follows:

11.0	Personnel compensation	$63, 400
12.0	Personnel benefits	4, 600
21.0	Travel and transportation of persons	20, 500
24.0	Printing and reproduction	11, 500
	Total	100, 000

Bureau of Outdoor Recreation

LAND AND WATER CONSERVATION

(House hearings, pt. 1, pp. 1118–1220)

(Senate hearings, p. 1365)

(Appropriation of Receipts)

Appropriation 1967	$110, 000, 000
Estimate	110, 000, 000
House allowance	110, 000, 000
Restoration requested	----------

Advance appropriation

Appropriation 1967	----------
Estimate	$32, 000, 000
House allowance	9, 500, 000
Restoration requested	22, 500, 000

(P. 10, lines 21, 24; p. 11, lines 1, 2, 3, 4, 11)

AMENDMENTS REQUESTED

(1) Page 10, line 21, strike out "$119,500,000" and insert in lieu thereof "*$142,000,000*"—the estimate, or an increase of $22,500,000 in the appropriation.

(2) Page 10, line 24, strike out "$34,458,000" and insert in lieu thereof "*$48,225,000*"—the estimate, or an increase of $13,767,000 in this item.

(3) Page 11, line 1, and 2, strike out "$15,367,000" and insert in lieu thereof "*$18,000,000*"—the estimate, or an increase of $2,633,000 in this item.

(4) Page 11, line 3, strike out "$1,900,000" and insert in lieu thereof "*$3,000,000*"—the estimate, or an increase of $1,100,000 in this item.

(5) Page 11, line 4, insert after "Wildlife", the following:

> "*; and (5) not to exceed $5,000,000 shall be available to the Bureau of Outdoor Recreation for supplemental allocations to the above agencies*"

(6) Page 11, line 11, strike out "$9,500,000" and insert in lieu thereof "*$32,000,000*"—the estimate, or an increase of $22,500,000 in the repayable advance.

HOUSE REPORT

"With certain limitations, Public Law 88–578 approved September 3, 1964, provides for advance appropriations to the Land and Water Conservation Fund from any moneys in the Treasury not otherwise appropriated, in such amounts as to average not more than $60,000,000 for each fiscal year for a total of 8 years. The 1968 budget request for an advance appropriation of $32,000,000 is the first request under this legislation.

"Since the funds to be provided by the advance appropriation are to be used for the same identical purposes as those available by the appropriation of receipts of the fund, the Committee has considered the funding from the two sources as a combined fund.

"However, as a result of the various deletions recommended by the Committee, the decreased funding requirements for this program is applied against the advance appropriation.

"The Committee recommends a land acquisition program totaling $119,500,000 for the 1968 fiscal year. $110,000,000 of this amount is to be provided by appropriation of receipts from the fund, and $9,500,000 will be provided by advance appropriation.

"The following table reflects the action taken by the Committee on the budget request.

"Activity	Budget estimate	Committee bill, 1968	Change
1. Assistance to States	$65,000,000	$65,000,000	
2. Federal land acquisition program:			
National Park Service requirements for recently authorized areas:			
Whiskeytown-Shasta National Recreation Area	6,000,000	6,000,000	
Lake Mead National Recreation Area	783,000	783,000	
Indiana Dunes National Lakeshore	6,500,000		-$6,500,000
Assateague Island National Seashore	6,439,100	6,439,100	
Piscataway Park	2,738,900		-2,738,900
Pictured Rocks National Lakeshore	800,000	800,000	
Delaware Water Gap National Recreation Area	11,000,000	11,000,000	
Fire Island National Seashore	3,864,900	3,864,900	
Guadalupe Mountains National Park	1,800,000	354,000	-1,446,000
San Juan Island National Historic Park	1,750,000	750,000	-1,000,000
All other proposed acquisitions less than $500,000 per unit	2,247,700	1,228,900	-1,018,800
Subtotal, new areas	43,923,600	31,219,900	-12,703,700
Inholdings	4,301,400	3,238,100	-1,063,300
Total, Park Service	48,225,000	34,458,000	-13,767,000
Forest Service:			
Wilderness areas	2,294,359	2,294,359	
Primitive areas	340,640	340,640	
Other recreation areas	15,365,001	12,732,001	-2,633,000
Total, Forest Service	18,000,000	15,367,000	-2,633,000
Bureau of Sport Fisheries and Wildlife: Endangered species	3,000,000	1,900,000	-1,100,000
Bureau of Outdoor Recreation: Emergency planning and acquisition	5,000,000		-5,000,000
Total, Federal program	74,225,000	51,725,000	-22,500,000
Administrative expenses	2,775,000	2,775,000	
Total, 1968	142,000,000	119,500,000	-22,500,000

"National Park Service

"The reduction of $13,767,000 in the Federal Land Acquisition program of the National Park Service includes the following:

"Piscataway Park, Maryland	$2,738,900
Guadalupe Mountains National Park, Texas	1,446,000
Wolftrap Farm Park, Virginia	107,500
San Juan Island National Historical Park, Washington	1,000,000
Virgin Islands National Park, Virgin Islands	511,300
Herbert Hoover National Historic Site, Iowa	400,000
Indiana Dunes National Lakeshore, Indiana	6,500,000
Total	$12,703,700
Inholdings	
Everglades National Park, Florida	$1,048,000
Larimer County, Colorado:	
Tract 276A	1,200
Tract 630	11,000
Flathead County, Montana: Tract 221C	3,100
Total	$1,063,300

"*Forest Service*

"The reduction of $2,633,000 in the Federal Land Acquisition program of the Forest Service consists of low priority tracts as listed on page 1219 of the hearings, for which $1,288,050 was programed.

"In addition, the Committee did not approve acquisition of the following inholding tracts:

"1. Arkansas: Tract 68–6	$80,000
2. California: Whiskeytown Shasta-Trinity	499,350
3. Colorado: Tract 04002–68	78,000
4. Georgia: Tract 68–6	39,900
5. Illinois: Tract 2895	8,050
6. Kentucky: Tract 144–68	17,500
7. Michigan: Tract 8–2112–11	354,000
8. Minnesota:	
Tracts:	
B8–7	16,400
B8–10	4,000
5322	1,550
9. New Hampshire: Tract 8–467–4	5,500
10. Oregon:	
Tracts:	
131–68	6,000
83–68	54,000
11. West Virginia:	
Tracts:	
B8–33	155,000
B8–36	9,700
B8–37	16,000
Total	1,344,950

"Bureau of Sport Fisheries and Wildlife

"The reduction of $1,100,000 in the Federal Land Acquisition program of the of the Bureau of Sport Fisheries and Wildlife includes the following:

"1. Patuxent Wildlife Research Center, Maryland	$750,000
2. Columbia White-tailed Deer Sanctuary, Washington	350,000

"Bureau of Outdoor Recreation Contingency Fund

"The budget estimate included $5,000,000 as a contingency fund for emergency planning and acquisition of priority tracts of land. The Committee has not approved this request.

"While there may be certain advantages to the availability of such a fund, the Committee feels that this would in essence involve the granting of blanket authority to the Bureau to acquire $5,000,000 worth of land at its discretion. While the land acquisition program on a general basis has been reasonably good to date, the Committee has found it necessary to disapprove sufficient proposals for the acquisition of certain tracts that it is not ready to relinquish its review of proposed acquisitions until operating experience under this program has generated more confidence by the Committee.

"LAND AND WATER CONSERVATION FUND POLICY

"Income to the fund from admission and user fees is much less than was estimated. The Committee directs the Bureau of Outdoor Recreation and the participating agencies to be much more aggressive in the designation of fee areas and in the administration of the fee aspects of the Land and Water Conservation Fund. The Committee believes that the using public should pay a reasonable share of the cost of recreation facilities provided by the Federal government.

"The Committee reaffirms the reprogramming procedures followed during the past two years.

"The Committee is not responsive to programming on an administrative unit basis until it is evident through a material reduction in reprogramming requests that the agencies are doing a better job of selection and price estimation on the tracts recommended in the budget estimate.

"The Committee is also concerned that States have not obligated a larger portion of their allocations and it believes emphasis by the State should be on acquisition rather than development. In the opinion of the Committee a proper ratio between development and acquisition for the States would be about one-third for development and two-thirds for acquisition. It urges the Bureau of Outdoor Recreation and the States to work toward this objective.

"The Committee will look with strong disfavor on any developments under the State programs that involve luxury types of development in general, and it feels that the Bureau of Outdoor Recreation in approving State plans should give the very lowest priority to resort hotels and motels that can be funded by private financing."

JUSTIFICATION

Explanation of amendments (1), (2), (3), (4), (5), and (6).—These amendments restore all of the reductions made by the House in the limitation amounts for the Federal agencies. These amounts are distributed as follows:

	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
National Park Service	$23,471,500	$48,225,000	$34,458,000	$13,767,000
Forest Service	18,093,000	18,000,000	15,367,000	2,633,000
Bureau of Sport Fisheries and Wildlife	172,500	3,000,000	1,900,000	1,100,000
Bureau of Outdoor Recreation		5,000,000		5,000,000
Total Federal Programs	41,737,000	74,225,000	51,725,000	22,500,000

A breakdown of the restoration request by object of expenditure follows:

11.0	Personnel compensation	$114,000
12.0	Personnel benefits	9,000
21.0	Travel and transportation of persons	17,000
23.0	Rent, communications, and utilities	11,000
25.1	Other services	37,000
26.0	Supplies and materials	12,000
32.0	Lands and structures	22,300,000
	Total	22,500,000

Explanation of amendment (1).—This amendment is necessary in view of amendments (2) through (6) which restore the full amount of the House reduction.

Explanation of amendment (2).—The following is a justification of the individual acquisitions proposed for purchase by the National Park Service that have been deleted by the House:

Piscataway Park, Md.

The National Park Service urges in the strongest possible terms the restoration of the item of $2,738,900 included in the 1968 budget request for acquisition of lands in Piscataway Park, Maryland.

This area, intended primarily for the protection of the view from historic Mount Vernon, was first authorized by Act of Congress approved October 4, 1961. On July 19, 1966, after further study and hearings, the area was reauthorized under new concepts and with the ceiling on land costs raised.

In reliance on the establishment of the park, interested foundations in the area have donated or committed for donation over 460 acres, or about two-fifths of the total area authorized to be acquired in fee. Of this, a large and valuable tract of 151 acres has actually been conveyed to the United States, though subject to reversion to the grantor should the park not be established by August 8, 1967. In addition, scenic easements over 178 tracts totaling 1215 acres have been acquired.

The scenic easements, as well as the donated fee property, will revert, if this park is not established. Because of the reversion date in many of the deeds, it is vital that appropriations be obtained to prevent valuable donations secured by the Government from lapsing.

Collapse of present efforts by the Government at this time to protect the Mount Vernon overlook, however, will unquestionably open the gate to developments ruinous of this now pleasant scene.

Guadalupe Mountains National Park, Tex.

The National Park Service respectfully requests reinstatement of the amount of $1,446,000 disallowed by the House from its 1968 fiscal year land acquisition budget request in the amount of $1,800,000 under the Land and Water Conservation Fund for Guadalupe Mountains National Park.

Within this amount it is planned to accept an option that has been obtained for the J. C. Hunter ranch which comprises 67,518 acres of land. This tract alone represents 87% of all the private land ownerships within the authorized boundaries of the park. The option price is $1,500,000 and expires on February 26, 1968. It is our honest belief that if we allow this option to expire, further negotiations will result in a higher price. It will also result in the need of additional legislation to raise the present statutory monetary limitation of $1,800,000 for acquisition of lands and interests in lands, as contained in Section 6 of the Act of October 1966 (80 Stat. 920), which authorized establishment of this park.

The State of Texas legislature has approved the donation of the State-owned mineral rights to the United States Government and similar action is expected soon from the Gas Company. This will clear the way for the acquisition of the Hunter tract which in turn will permit early establishment and development of the park for the enjoyment of the visiting public.

Wolf Trap Farm Park, Va

This important park for the performing arts and related educational programs will encompass some 145 acres. All of the park except approximately 39 acres have been donated. The latter will be purchased in fee and easement to round out the area and to provide scenic easement protection. We respectfully request that $107,500 be restored for this purpose. Failure to proceed as soon as possible can result in encroachment from adjoining housing developments which are planned for the area and would result in increased acquisition costs, or permitting of the higher density dwelling unit per acre which could have a seriously adverse effect on the park and the purpose for which it was authorized.

San Juan Island National Historical Park, Wash.

The National Park Service respectfully requests the reinstatement of the amount of $1,000,000 disallowed by the House on the $1,750,000 1968 fiscal year land acquisition budget request for San Juan Island National Historical Park.

The amount of the budget request for this park is for $1,750,000 which is the total authorized by the enabling act. A delay in proceeding with the entire acquisition immediately after authorization of the park will result in price escalation and possible need of additional legislation to raise the monetary limitation to meet the continuous increase in land values which are more predominant in the western part of the United States. It will also result in additional acquisition costs.

Virgin Islands National Park, V.I.

The Virgin Islands National Park in the United States Virgin Islands comprises lush green hills, white sandy beaches, supports tropical plant and animal life, contains relics of the prehistoric Carib Indians, and remains of old colonial sugar plantations. The parks gross area of 15,150 acres consists of 5,367 acres of land donated to the United States by one donor. These lands are scattered along the beaches, on the hillsides, and atop the mountains. Interspersed among the now Federal lands are 4,119 acres of land mostly in large holdings situated also along the beaches and on the mountains. The Service's long-range recreation and conservation plans require the consolidation of all lands in Federal ownership. The upward trend of visitors supports a forecast of about 237,000 visitors a year by 1973, with an approximate estimate of an annual increase of 15,000 visitors. About 5,650 acres of United States owned contiguous offshore tidal lands are a part of the park.

It is imperative that we move forward immediately and take advantage of every opportunity to eliminate these inholdings in view of the rapid rise in land values. Delay in acquisition, in all likelihood, would result in the land being developed for uses not compatible with the true spirit of the park. It is, therefore, respectfully requested that the $511,300 requested for Virgin Island National Park for fiscal year 1968 be reinstated.

Herbert Hoover National Historic Site, Iowa

The land acquisition program at Herbert Hoover NHS commenced with the availability of fiscal year 1967 funds.

Exceptional progress has been made and all funds appropriated to date for this area have been committed. Options are now being negotiated, subject to the availability of funds, for acceptance when the fiscal year 1968 funds become available.

The land required for this area can be purchased within the statutory ceiling provided this program is allowed to be completed without delay. If the $470,000 requested in the fiscal year 1968 program is reduced by $400,000 and the program is not completed until fiscal year 1969 or later, an increase in the statutory limitation will be needed.

It is our intention to complete the negotiations at this area by July 1, 1967, and then utilize the services of this well qualified Land Acquisition Officer at Pictured Rocks NL.

It is believed to be in the best interest of the U.S. Government to reinstate the $400,000 for Herbert Hoover NHS.

Indiana Dunes National Lakeshore

Indiana Dunes National Lakeshore was authorized November 5, 1966 and a statutory limitation for land acquisition of $27,900,000 was specified. The authorization placed approximately 8,721 acres of privately owned land within the boundaries of this park, positioning the landowners so that they are not able to use their property as they desire because of the eventual acquisition of it by the United States. This enables persons interested primarily in profit to purchase land merely for speculative purposes.

The amount which was included in the 1968 fiscal year budget request was determined to be adequate to initiate land acquisition and to consummate a measurable portion of the land acquisition program. The deletion of this item will cause a loss of time which can be measured in dollars lost due to the natural escalation of land costs. Lands situated in an area as suitable for public recreation as those within the boundaries of Indiana Dunes NL are increasing in value at an average rate of over ten percent annually. A practical application of this indicates that the land which could be purchased now for $6,500,000 will increase to $7,150,000 in the following year.

The National Park Service respectfully requests the reinstatement of $6,500,000 for Indiana Dunes National Lakeshore.

Everglades National Park, Fla.

The National Park Service respectfully requests the reinstatement of the amount of $1,048,000 included in the 1968 fiscal year land acquisition budget request under the Land and Water Conservation Fund for Everglades National Park. This request covers the proposed purchase of 52 tracts, all under option, which are located in Monroe and Collier Counties in the northwest corner of the park. These tracts are not within the "Hole-in-the-Donut" section which is in Dade County.

The establishment of Everglades National Park was authorized by the act of Congress approved May 30, 1934 (48 Stat. 816), as supplemented and amended by later acts. In accordance with this authority over 1,300,000 acres of land were acquired without cost to the United States through donation of lands and funds to purchase lands by the State of Florida and other donors.

By the act of July 2, 1958 (72 Stat. 280), the boundary of the Park was redefined, with some lands to the southeast of the then boundary added to the authorized area and a considerably greater amount of lands, which were considered to have lesser park values, excluded from the area. The non-Federally owned lands presently within the authorized boundaries of the Park total approximately 93,700 acres, to a large extent lands included within the boundaries by the 1958 act.

Everglades National Park represents something different from prior established Natonal Parks in that it was the first Park in which biological rather than geological features are stressed.

The acute problem of price escalation on private lands located within the boundaries of National Parks, added to ever present danger of the use of these lands for purposes adverse to those for which the Park was established, requires immediate action in proceeding with the acquisition of these inholdings.

Larimer County, Rocky Mountain National Park, Colo.

The National Park Service respectfully requests the reinstatement of the $12,200 disallowed by the House on the $120,800 land acquisition budget request for Rocky Mountain National Park under the Land and Water Conservation Fund. This reduction specifically covered Tract No. 276A, owned by the Rocky Mountain Natural History Association and Tract No. 630, Griffin, programmed in the amounts of $1,200 and $11,000, respectively.

Tract No. 276A is in high priority for acquisition for development of a picnic area which will provide additional recreational facilities in a park that received 907,800 visitors in calendar year 1966. This picnic area is in the park's approved master plan and only the acquisition of the land is needed to proceed with its development. The Rocky Mountain Natural History Association purchased this tract several years ago to prevent adverse development and price escalation. We have obtained an option on the tract. We are very proud of our good relations with the Association and are grateful for their support and cooperation as it relates to the management and protection of Rocky Mountain National Park. We wish to keep maintaining these relations in good order.

Tract No. 630, Griffin, is also a high priority acquisition. It will be sold to others if we fail to acquire it now. Delay in its acquisition will no doubt result in a higher price later. The tract is needed for expansion of the utility and residential area.

Flathead County

(Glacier National Park, Tract 221–C Glacier National History Association)

This Service has utilized various associations, such as the Glacier Natural History Association, to acquire land and hold until appropriated funds are available. This practice is followed in selected instances to prevent lands from falling in the hands of individuals who may develop for uses not compatible with the true spirit of the park. It must be recognized, however, that these associations operate on a limited budget and thereby cannot hold such land for an indefinite period. The Glacier Natural History Association is in need of operating funds and has requested the Service to acquire these tracts from them.

It is requested that the $3,100 disallowed for tract 221–C be reinstated.

Explanation of amendment (3).—This amendment restores the reduction of $2,633,000 made by the House in the Federal Land Acquisition Program of the Forest Service.

Forest Service, the Federal agency having the largest number of recreation users, urgently needs to acquire additional recreation lands, particularly in the eastern United States. The program submitted to the Congress reflected this need through scheduling of 93% of the acreage in the heavily populated eastern United States. All of these properties are within three hours driving time of at least one urban population center of 50,000 or more. Acquisition of these lands will permit sounder recreation development of existing National Forest lands as well as providing new development sites, primarily water oriented. Careful study and analysis of the needs for new recreation installations in the National Forest System shows that by 1972, a person-at-one-time capacity of 2.5 million in 26,400 developed sites will be required. At the beginning of F.Y. 1968, the National Forest System will have only 9,500 developed sites that can accommodate only 626,500 persons-at-one-time. If steps are not immediately taken to acquire additional land, it will be extremely difficult to provide the type of recreation demanded by the American public. Many of the tracts proposed for purchase will be needed before development of expansion facilities at existing Forest Service recreation areas can proceed. In addition, tracts are also needed before construction can proceed on proposed recreation areas. Further delay in purchasing the needed properties will result in a corresponding delay in construction schedules. Increases in land values can also be expected.

The selection of properties to be included in the F.Y. 1968 Land and Water Fund Act purchase program by the Forest Service was highly selective. As was stated in the testimony by Mr. M. N. Nelson, Deputy Chief, Forest Service, on page 1200, the budget preparation started off at a planning level of $8 million more than the final budget submisison. This was progressively reduced through careful review and coordination with the Bureau of Outdoor Recreation. No tracts of land were included that were not considered of high priority. If these lands are not acquired promptly, the opportunity for acquisition may well be lost and use detrimental to sound recreation development and management of the National Forest System can occur.

While at the request of the Committee, a tabulation of the lowest priority tracts totaling $1,299,050 was prepared, "lowest priority" in the context of the highly selective system of coordination and review is relative. We do not consider any tract in the F.Y. 1968 program of sufficiently low priority that its acquisition should be delayed. Restoration of this portion of the budget reduction is respectfully requested.

In addition to the lowest priority tracts listed on page 1219, funds for 16 additional properties were included in the budget reduction. The need for each of these properties is individually justified.

Arkansas—Ozark National Forest

Tract 68-6: 80 acres, total cost $80,000.

This 80-acre property is needed for intensive recreation development and public access to the scenic Buffalo River, Arkansas. This river is in a beautiful mountain setting with vertical rock bluffs rising along the bank to a height of 600 feet and is a popular float fishing river. Landowners adjoining the river are denying public access and there are no public recreation facilities. A part of the Buffalo River is proposed under current introduced legislation as the Buffalo National River. Publicity is already resulting in increased land prices.

The property lies about equally on both sides of the river and has a quarter of a mile of frontage. Arkansas State Highway 7 crosses the river at the property. This highway is considered to be one of the ten most scenic highways in the United States and receives very heavy tourist use, primarily from the Midwestern States, Louisiana, Oklahoma, Texas and Arkansas. No public recreation facilities are located on this highway north to the Missouri line and to the south for 15 or more miles.

The Forest Service plans to construct 120 family camping and picnicking units, a boat ramp, a swimming area on the tract, and related recreation facilities. Both sides of the river are developable.

The improvements on the tract consist of a residence, a cafe (modernized to a limited extent), and six individual cabins. These are not high grade improvements.

California

Whiskeytown-Shasta-Trinity N.R.A.: $499,350.

The first stage Land Acquisition Plan has been completed for the Forest Service acreas at Shasta and Claire Engle Lakes within the National Recreation Area boundaries. This plan specifically identifies lands needed for intensive development of public use recreation facilities, lands needed for protection of natural beauty and lands in which public service type facilities are required.

Guidelines have been prepared for proposed local zoning ordinances and hopefully favorable local government action will be taken. If favorable action is not taken, prompt action by the United States in conformity with the requirements of the Act will be necessary.

Land acquisition personnel are on the job and proceeding with negotiations for needed properties. Purchase of one tract has been completed and an option obtained for another—these total 460 acres. Appraisals have been completed for 5 other properties totaling 330 acres and negotiations for purchase are continuing. Full commitment of all funds appropriated to date is expected by June 30, 1967. Unless additional funds are appropriated to the Forest Service for F.Y. 1968 for the Whiskeytown-Shasta-Trinity National Recreation Area, no further land purchases can be made within the area for at least another year. This delay can only result in increased cost to the United States when the purchase program is again implemented.

Colorado—Grand Mesa-Uncompahgre National Forest

Tract 04002(68): 160 acres, total cost $78,000.

Two State of Colorado properties, this tract and tract 13009(68) for $120,000 on the San Juan National Forest (included in list of lowest priority tracts on page 1219, Part 1, of House Hearings), should be considered as a unit. A three-way transaction is involved by which a Mr. Charles Redd, Moab, Utah, would acquire the two tracts for sale to the United States in exchange for his lands that are critical game lands needed by the State of Colorado.

Both of the tracts of land cannot be and will not be economically developed and managed for recreation purposes by the State. Both are surrounded or nearly surrounded by National Forest lands having same present recreation development. Under the present status the mix of State and Federal recreation use makes it impractical to designate the National Forest recreation areas under the "Golden Eagle" L&WCF recreation fee system. Once acquired and fully developed these areas and the additional development would be so designated.

Georgia—Chattahoochee National Forest

Tract 68-6: 17 acres, total cost $39,900.

This tract of land was included in the lowest priority tract list on page 1219. The inclusion as an individual tract reduction results in a duplicate reduction for this property.

This tract of land is adjacent to lands being acquired by exchange fronting on Lake Burton. A planned recreation development will be installed on the properties. Access to the recreation area will be through this tract. There is a new house on the property that will be used in administration of the recreation facilities.

The shore line of Lake Burton is almost 100% privately-owned. There is an urgent need to provide recreational facilities and access to the lake.

Illinois—Shawnee National Forest

Tract No. 2895: 7 acres, total cost $8,050.

This tract is located on the shoreline of the proposed Kincaid Lake. The project has been started and will be constructed by the State of Illinois.

Upon completion, a portion of the lake will lie within the Shawnee National Forest. The lake will offer superlative water-oriented recreational opportunities which will be readily available to the metropolitan areas of St. Louis and Chicago.

This private property within the Shawnee National Forest is presently accessible by road and is suitable for immediate recreational development. It is also excellently suited for public recreation developments.

The property has been appraised, negotiated and is under option to the United States.

Kentucky—Daniel Boone National Forest

Tract No. 144-68: 481 acres, total cost $17,500.

This tract is adjacent to the proposed Jellico Creek Corps of Engineers Reservoir and will be developed with public use recreation facilities. Consequently the land is also very desirable for development of private non-conforming facilities.

Experience over the past decades has shown that the purchase of lands of this type adjacent to proposed reservoir projects is opportune during the proposal stages of those projects. Delays in acquiring the needed lands result in either escalated prices at a later date or the private market absorbs the most desirable land first. The latter in many cases has resulted in development of private facilities that do not conform to the public developments planned for the area.

Michigan—Huron-Manistee National Forest

Tract No. 8-2112-11: 5,466 acres, total cost $354,000.

These lands straddle the Pine River for approximately 12 air miles and consist of some of the best recreation land left in the lower peninsula of Michigan. Approximately 1,500 acres are planted in Red Pine. There are large numbers of wildlife including deer, partridge, wild turkey, mink, beaver, otter and migratory water fowl. The Pine River is considered to be one of the best canoeing rivers in the United States. It is an excellent trout river having widely diversified kinds of water, varying from long deep running holes to fairly long stretches of "white river". It is located within 4 hours driving time of 25 percent of the Nation's population.

The Forest Service considers the acquisition of this tract of land to be one of the highest priorities in the National Forest System. Negotiations with the owners have been conducted for the past several years and substantial agreement has now been reached. They are now willing to sell to the United States. If we cannot proceed with the purchase, the owners will sell to private individuals as they have been doing in the past and the opportunity to acquire the property for the general public will be lost.

Additional far reaching impacts on negotiations for other properties of these owners will result. This is a test purchase as far as they are concerned. They own a very substantial acreage of the best water front lands in this area of Michigan. They have started disposing of these lands to hunting and fishing clubs and other private individuals. Both the State of Michigan and the Forest Service are making concentrated efforts to acquire part of these lands for the general public.

Minnesota—Chippewa National Forest

Tracts B8–7, B8–10 and 5322: 6 acres, total cost $21,950.

These three properties aggregating 6 acres at a total cost of $21,950. One of the properties (No. 5322) has been appraised, optioned and approved for purchase by the National Forest Reservation Commission. This tract is located on O'Niel's Point on Star Island in Cass Lake.

O'Niel's Point was the site of the Chippewa Indian Village used by Henry Rowe Schoolcraft as a base camp during his search in 1882 for the source of the Mississippi River. This village was in existence until 1890. Much evidence of the early inhabitants remains, including wild rice storage pits, agriculture clearings, building site clearings, and deeply worn trails to the lakeshore. Timber and vegetative cover remain essentially the same as at the time of the Indian's departure. Pot shards have been found which also indicate an earlier culture, possibly prehistoric.

Forest Service plans and recommendations are for acquisition of the remaining outstanding private ownership in the vicinity to prevent destruction of the area through summer home development. Although private ownership in this area is a small proportion of the total, this valuable historic site will be destroyed through development and use as a summer home area.

Sale in the market is imminent, if the Forest Service does not proceed with the purchases. The properties are on the market and will be sold.

New Hampshire—White Mountain National Forest

Tract No. 8–467–4: 0.1 acre, total cost $5,500.

This tract is presently occupied by a summer cottage. The tract is a 0.1 acre lot in an area proposed for development of additional public use facilities in the South Pond Recreation Area. It is one of several similar-sized lots located in the middle of two existing recreation areas. Plans are to expand the two areas into a single more intensively developed recreation complex. The location of several summer cottages in the middle of the public recreation facilities is completely incompatible with sound management.

The property is on the market and available to the Forest Service at a fair price. Delay in purchasing at this time could result in a possible condemnation at a later date. Experience has shown that court awards in similar cases have resulted in much higher acquisition costs.

Oregon—Mount Hood National Forest

Tract No. 131–68: 1 acre, total cost $6,000.

This one-acre tract is located within the Toll Gate Recreation Area located approximately 24 miles from Portland, Oregon, on a heavily used recreation highway. The existing facilities are not sufficient to satisfy an increasing demand.

Proposed development plans for the area include this tract of land. This small parcel if in private ownership would be used for construction of a summer home. A summer home in a public use recreation area such as this is not compatible with public recreation management.

If this tract is lost to the public through private sale and subsequent development, increased construction costs of the proposed facilities will result.

Siskiyou National Forest

Tract No. 83–68: 40 acres, total cost $54,000.

Public Law 85–833 was passed in 1958 to extend the boundary of the Siskiyou National Forest to include approximately 30 miles of Rogue River and Illinois River frontage for protection and preservattion of an outstanding scenic area. Public ownership is needed to prevent indiscriminate private use of the areas visible from the river. Many river travelers visit the area not only to enjoy the scenery but to take advantage of the outstanding fishing that the rivers offer.

This tract is a highly desirable river property suitable for development of a public campground. The area is presently used as a parking area for mobile-house trailers. Acquisition will protect the scenic aspects of the area and eliminate a private non-conforming use in conformity with the objectives of P.L. 85–833. The improvements are suitable for use in the campground development, and will be incorporated and used when the area is developed.

West Virginia—Monongahela National Forest

Tract No. B–8–33: 320 acres, total cost $155,000.

This property is a "must acquisition" needed for right-of-way and protection of the scenic values along the Spruce Knob Scenic Drive. The Scenic Drive will extend from State Route 28 and U.S. Route 33 to Spruce Knob, which is within the National Recreation Area. The tract includes six ownerships.

Improvements on the tract includes 2 frame houses, an old sawmill structure, office building and associated buildings. The improvements are valued at $75,000.

Construction of segments of the Scenic Highway has started. Delays in acquiring the needed right-of-way will result in corresponding delays in construction starts and subsequent delays in completion. In addition, the development of nonconforming private faciilties is highly probable if the tracts are not purchased when they become available.

Tract No. B8–36: 330 acres of mineral interests, total cost $9,700.

Mineral rights on these lands are needed to protect the proposed campground expansion site at Summit Lake. This development is scheduled for construction in 1968 or 1969. The existing recreational facilities that would be protected by the acquisition of mineral rights are 17 camping sites, a boat launching site, parking area, and fishermen and hiking trails.

The Master Development Plan for Summit Lake includes the following proposed additional facilities: 52 camp sites, 1 boat launching site, 10 picnic sites, one overlook, and numerous trails. The purchase of the mineral rights is necessary before these facilities may be constructed. The existing and proposed facilities will also be aesthetically protected by this mineral purchase.

Coal deposits are present in this area and should they be developed, unsightly open pit strip mines would result, severely damaging or destroying the recreation resource.

Tract No. B8–37: 90 acres, total cost $16,000.

This tract adjoins the proposed Mouth of White Oak campground area. Development of this area is scheduled in the 5-year plan for recreation construction. Location of tract B8–37 limits the development potential of the Mouth of White Oak area to approximately 10 to 15 camping units. This capacity is inadequate to serve the current demand for camping facilities in the area. Acquisition of this tract bordering the Mouth of White Oak site would increase the development potential to approximately 50 camping units.

The Mouth of White Oak Campground combined with development of this tract will provide one of the few opportunities for a development easily accessible to the 15 mile stretch of Williams River, a major trout stream in the southwest portion of the Forest.

The tract is on the market now. Delay in purchasing could result in a sale to a private buyer. Private demands for recreation type development land are increasing. If the tract is not purchased now it could be lost to public use or an inordinate price escalation could occur.

Improvements consist of a residence and related out-buildings and pasture fences at a valuation of $7,000.

Explanation of amendment (4).—This amendment restores the reduction of $1,100,000 made by the House in the Bureau of Sport Fisheries and Wildlife program.

Of this reduction, $750,000 is needed for land acquisition for the Endangered Species Research Center at Patuxent, Maryland. The total proposed acquisition is 470 acres, of which 253 acres are proposed for acquisition in fiscal year 1968. This is the maximum amount allowed for acquisition for any one area under the Endangered Species Preservation Act and specific authority must be obtained for the additional land needed.

Detailed research is prerequisite to a full program to preserve endangered species. The limiting biological factors must be determined for each species before a realistic program can be developed. The Endangered Species Research Center which is an addition to the Patuxent Wildlife Research Center will provide laboratory facilities for research in nutritional requirements, genetics, disease, propagation, and behavior. The station will hold a variety of species to serve as breeding stock for testing, captive propagation, imprinting, and release. One of the major objectives of the station is to develop techniques for propagating certain species in captivity, and reintroducing the resulting stock into the wild.

Development of the center is now reaching a point where additional land is urgently needed for propagation and conditioning pens and facilities. One hundred or more species and from 50 to 100 pairs of each species, when the project is fully operational, will be held throughout the year. To maintain up to 1,000 breeding pairs and to rear many times that number properly conditioned for release to the wild, will require additional acreage. Intolerance of breeding birds and conflict among species as well as disease prevention in irreplaceable stock makes it necessary to provide greater space than considered necessary for a purely game farm type of operation.

When Patuxent was selected as the site for a new Endangered Wildlife Research Center it was realized that additional lands would be required on which to construct the complete facility. The proximity to our own, as well as other, research institutions, favorable climate and having part of the land needed already under Government ownership, were determining factors in this site selection and outweighed the high land value factor of the area. The funds requested will permit acquisition of lands, the cost of which, although already high, is rapidly rising and commercial development is encroaching upon the area.

The remaining amount of $350,000 is needed for the proposed acquisition of 970 acres in fiscal year 1968 of a proposed total acquisition of 2,000 acres, for the Columbia White-tailed Deer Refuge in Wahkiakum County, Washington. The last of the Columbia White-tailed Deer habitat is being cleared at a rapid rate. The deer are very restricted in range and highly selective in habitat and it has been found they cannot adapt to available coastal range woodlands occupied by the Columbia Black-tailed Deer. The Columbia White-tailed Deer is threatened with extinction from loss of its selected and limited habitat to intensive agricultural development. Unless enough of its habitat is permanently protected this deer is destined for addition to an already overly-long list of extinct animals. To obviate this situation, acquisition of acreage for this refuge is recommended.

Explanation of amendment (5).—The problem of recreation land price escalation has been of concern to the Executive Branch and to the Congress. There is no easy solution to the problem of rapid price increases on lands at newly authorized recreation areas. Studies have shown that land prices throughout the Nation are increasing 6 to 10 percent annually and that recreation lands are increasing more rapidly.

One effective means of combating this problem is to move quickly into a newly authorized area and acquire prime tracts before speculation occurs. This action also establishes a price pattern that will be useful in future negotiations. The purpose of the $5,000,000, deleted by the House, was to provide funds to develop ownership data, prepare maps and acquire prime parcels promptly rather than having to wait 12 to 18 months to obtain funds through the normal budgeting process.

The report issued by the House Committee indicates a reluctance to make available $5,000,000 to the Bureau for acquisition of land "at its discretion". The Bureau of Outdoor Recreation failed to make clear that it would not use this money without Committee clearance. It was the Department's intention, and still is, that any proposed use of these funds would be presented to the House and Senate Subcommittees on Appropriations for review prior to being expended for developing ownership data, land acquisition or any other purpose. It should also be known that existing reprogramming authority would not be used insofar as these funds are concerned. Instead of utilizing such authority as is available, the Department would present all proposals for the use of these funds to the Committees. This would provide the Committees an opportunity to disallow any proposal that appeared unreasonable or undesirable.

Explanation of amendment (6).—This amendment restores the reduction of $22,500,000 made by the House in the repayable advance appropriation. The increase requested will provide the Federal agencies with immediate cash to acquire lands in newly authorized areas before land price escalation has made the lands prohibitively expensive. Lands that are to be purchased from revenues to the Fund cannot be obtained until sufficient receipts have occured to cover costs. Therefore, revenues accruing to the Land and Water Conservation Fund are not immediately available to the land acquiring agencies. Funds accruing in one month are not warranted by the U.S. Treasury until the following month.

It will be September before the agencies will have available any revenues from fiscal year 1968 receipts for land acquisition. The $32,000,000 advance appropriation requested will be repaid from receipts in the Land and Water Conservation Fund beginning in 1976, the eleventh year of the program.

Geological Survey

SURVEYS, INVESTIGATIONS, AND RESEARCH

(House hearings, pp. 180–335; Senate hearings, p. 397)

Appropriation 1967	$80, 032, 000
Estimate	88, 199, 000
House allowance	85, 499, 000
Restoration requested	2, 700, 000

(p. 14, line 17)

AMENDMENT REQUESTED

Page 14, line 17, strike out "$85,499,000" and insert in lieu thereof "*$88,199,000*"—the estimate, or an increase of $2,700,000 in the appropriation.

HOUSE REPORT

"The amount allowed by activities as compared with the 1967 appropriation and the estimate for 1968 is as follows:

"Activity	Committee bill, 1968	Bill compared with—	
		1967 appropriation	Estimate, 1968
Topographic surveys and mapping	$24, 488, 000	+$1, 802, 000	
Geologic and mineral resource surveys and mapping	26, 223, 000	+1, 580, 000	−$551, 000
Minerals discovery loan program	425, 000	+4, 000	
Marine geology and hydrology	1, 170, 000	+308, 000	
Water resources investigations	26, 432, 600	+2, 004, 600	−1, 649, 000
Soil and moisture conservation	250, 000	+4, 000	
Conservation of lands and minerals	4, 814, 000	+121, 000	
General administration	2, 241, 400	+207, 000	
General reduction, travel	−500, 000	−500, 000	−500, 000
Transfers in the estimate		−63, 600	
Total, Geological Survey	85, 499, 000	+5, 467, 000	−2, 700, 000

"The reduction of $551,000 below the budget estimate for 'Geologic and Mineral Resources Surveys and Mapping' consists of a decrease of $280,000 for the heavy metals program and a decrease of $271,000 for earthquake research. The Committee recognizes the importance of the heavy metals program and does not wish by this reduction to convey any disapproval of activities in this connection. Even with the recommended decrease, this Bill provides an additional $1,500,000 over the $6,396,000 available in 1967. With careful administration, the Committee feels the program objectives can be accomplished in 1968 with the lesser amount of funds.

"Information received by the Committee would indicate there is an increasing duplication of effort in earthquake research. Notwithstanding the $271,000 reduction recommended by the Committee, there will still be $1,097,000 available for this work in 1968. With frugal administration, the 1968 program objectives in all probability can be achieved at the lower level of funding.

"For 'Water Resources Investigations', the Committee recommends a decrease of $1,649,000 below the budget estimate. $199,000 of this reduction relates to the requested increase for development and application of modern scientific methods of research and support of water conservation planning and management.

"An additional reduction of $1,500,000 is recommended below the requested increase of $2,000,000 for the International Hydrological Decade. A total of $668,000 would be available for this activity. Based on testimony received during the hearings, the Committee is of the opinion that this in essence is a 'Foreign Aid' program for water. As such, there is some question whether or not it is properly for funding in this appropriation account. At any rate, in a year of severe budget limitations, and in view of the pressing water needs of this country, the Committee does not feel that this is an appropriate time to initiate a greatly accelerated international water program.

"The Committee recommends an increase of $50,000 to initiate a comprehensive study and investigation of the water resources of the Delmarva Peninsula as authorized by Public Law 89–618, approved October 4, 1966.

"A reduction of $500,000 below the budget estimate of $4,060,000 for travel and transportation of persons is recommended. Actual expenditures for this purpose amounted to $2,990,798 in fiscal year 1966. Notwithstanding the fact that the agency's activities will have expanded to some extent since 1966, the Committee is of the opinion that the budgeted increase for this purpose is out of proportion to the expansion of the program. In addition, information available to the Committee indicates that proper precautions are not being taken to insure that travel costs are held to a practical and reasonable minimum."

JUSTIFICATION

The amendment restores the reduction of $2,700,000 made by the House in the budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
(1) Topographic surveys and mapping	$22,686,000	$24,488,000	$24,488,000	
(2) Geologic and mineral resource surveys and mapping	24,643,000	26,774,000	26,223,000	$551,000
(3) Minerals discovery loan program	421,000	425,000	425,000	
(4) Marine geology and hydrology	862,000	1,170,000	1,170,000	
(5) Water resources investigations	24,428,000	28,081,600	26,432,600	1,649,000
(6) Soil and moisture conservation	201,000	205,000	205,000	
(7) Conservation of lands and minerals	4,693,000	4,814,000	4,814,000	
(8) General administration	2,098,000	2,241,400	2,241,400	
General reduction, travel			−500,000	500,000
Total	80,032,000	88,199,000	85,499,000	2,700,000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$163,000
12	Personnel benefits	13,000
21	Travel and transportation of persons	500,000
25	Other services	780,000
	Services of other agencies	950,000
26	Supplies and materials	100,000
31	Equipment	194,000
	Total, Geological Survey	2,700,000

(2) *Geologic and mineral resource surveys and mapping*

(*a*) *Heavy metals.*—The Geological Survey appeals the reduction of $280,000 in funding for the heavy metals program recommended by the House Committee.

In its first year, the heavy metals program has resulted in—

identification of exploration targets that can be followed-up immediately by industry, as at Cortez, Nevada.

identification of extensive deposits that may be made mineable by improved technology, toward which the Bureau of Mines will work, as in northwestern Wyoming.

identification of favorable areas that can be only partly evaluated by surface geologic and geochemical studies and that will require geophysical studies or drilling to provide information in the third dimension before exploration targets can be developed sufficiently to be attractive to private industry.

The first year of this program has been markedly successful. The requested funds provide for continuation of the program at a level endorsed by representatives of several agencies of the Federal Government. Reduction in the requested funds will impair the capability to carry studies to conclusion. In addition it will force cancellation of at least three planned projects in three states, and cancellation of marine and research contracts with four universities.

(*b*) *Earthquake research.*—We earnestly request restoration of the decrease of $271,000 in funds for earthquake research.

In September 1965, a special Ad Hoc Committee appointed by the Science Advisor of the President, and comprised of leading authorities in the Nation, reported the results of an intensive study of the needs for a program of earthquake research. Because of the great potential dangers to life and property in the earthquake-prone areas of the country, the Committee recommended a major increase in the level of research and a 10-year program at a cost of $137,000,000.

In response to this recommendation, the Geological Survey immediately reoriented a significant part of its geological and geophysical capability to focus on the earthquake problem, and in October, 1965 established the National Center for Earthquake Research at Menlo Park, California. The total program so constructed is at a funding level of $1,097,000 in fiscal year 1967. Potential losses from earthquake in the great urban centers of the West Coast are enormous and present knowledge of earthquakes and their effects is still grossly inadequate to guard against such losses.

Important steps have been taken within the past year to eliminate the possibility of duplication of work in the Federal earthquake program. Dr. Hornig of the Office of Science and Technology has established the Ad Hoc Interagency Group for Earthquake Research. The U.S. Geological Survey, as the acknowledged leader in the field, was designated to chair this unit, which consists of representatives of research organizations and of "user" groups such as HUD. A series of meetings has been held to review on-going activities, to consider future needs, and to recommend a coordinated program.

The requested increase of $271,000 is urgently needed to (1) Establish additional instruments along active fault zones on the West Coast, so as to measure possible premonitory movements and accumulated strain; and (2) to inaugurate a totally new endeavor in earthquake engineering as part of the Engineering Geology program. This effort is designed to determine the physical properties of soft, saturated sediments of the San Francisco Bay area and their response to ground motion. Data to be obtained from this research is needed immediately by insuring offices of FHA and the Veteran's Administration, as well as by other public and private groups to diminish future losses from major earthquakes.

(*5*) *Water resources investigations*

(*a*) *Development and application of modern scientific methods.*—Restoration of the House reduction of $199,000 in funds requested for development and application of modern scientific methods is urged. No specific reason is given by the House Committee for disallowing the entire increase requested for this important program element.

This reduction will seriously hinder the Geological Survey in its efforts to supply timely and useful data for modern water managers. Conjunctive use of ground water and surface water is imperative in modern management and such use depends on extensive knowledge of ground-water systems which can be obtained quickly and accurately only with the help of geophysical logging techniques. Geophysical tools already developed cannot be used if funds are not available. Dispersion patterns and travel times of pollutants in surface waters (including heat) can be measured most effectively and economically with the help of areal sensors and automatic river monitors, and certain phenomenon, such as lake circulation patterns, can be determined only by remote sensing. Both quantitative and qualitative changes now are occurring so rapidly in lakes, reservoirs and streams that it no longer is practicable to monitor these changes with conventional tools. Wide scale areal coverage, automatic monitoring, underground logging and scientific modeling are needed for supplying real time information to a growing number of water managers. Eliminating the relatively small increase requested for orderly expansion of this work will seriously retard the Geological Survey's plan for tooling up to meet increasing demands for better and faster data collection.

(*b*) *International hydrological decade.*—The House reduced by $1,500,000 the requested increase of $2,000,000 for the International Hydrological Decade program. The principal reason given is the Committee's opinion that the proposed work is in essence a foreign aid program for water.

The IHD definitely is not a foreign aid program for water. In fact, it is aimed in part at reducing the need for such foreign aid. The request does include $450,000 for a fellowship program of advanced study by foreign students. However, this is justified on the basis that it is in the interest of the United States to increase the ability of foreign countries to cope with their own problems, thereby reducing global effects of such problems as well as the need for direct U.S. aid. Similar justification applies to on-the-job training at the requested level of $100,000.

The remaining 72.5 percent of the requested increase is for activities of direct interest and major importance to this Nation. For example, extremely important boundary resources such as the Great Lakes and surface water and ground water systems bordering Mexico can be studied properly only through international cooperation. Also, global data are required to improve predictions of floods, droughts, and fallout contamination, and to cope with decreasing tolerance in this country for variation in quantity and quality of water.

It is requested that funding be restored to the $2,000,000 level, the estimated minimum required for an effective start on this important interagency program.

(c) *Delmarva Peninsula study.*—The amendment eliminates $50,000 provided by the House for partial implementation of a comprehensive study and investigation of the water resources of the Delmarva Peninsula as authorized by Public Law 89–618, approved October 4, 1966. Full implementation of this study is being considered for inclusion in a future budget.

General reduction, travel

Restoration is requested of the $500,000 House reduction in funds for travel and transportation of persons.

An analysis of travel costs in the Geological Survey in FY 1966 showed that about 90 percent was directly related to field surveys and only 10 percent was what might be classed as administrative in nature. Any curtailment of field, or operational travel has the inevitable effect of retarding field work, with resultant inefficiencies in the prosecution of the programs. The 10 percent, for administrative travel, includes supervisory inspections, attendance at meetings, and change of headquarters. Funds for administrative travel have been reduced already far below an optimum level. For example, $108,000 is budgeted in FY 1967 for participation in scientific meetings and conferences—a decrease from that budgeted in FY 1966.

It is estimated that $200,000 increase over 1966 will be needed for family moving expenses pursuant to Public Law 89–516. An additional $869,000 is for expanded programs, which is disproportionate to appropriation increase, but justified on the basis that the new programs require greater emphasis on field surveys than laboratory oriented studies. Notable among new and expanded programs involving unusually large amounts of field operations are the heavy metals, wilderness area mineral surveys, and marine programs, for which additions to professional staff have been allowed. The areas to be covered are larger than those involved in our regular mapping programs, and they require a greater percentage of time in the field. Any reduction or forced curtailment of field operations reduces the production of maps, field survey, and land information which are basic to our mission.

BUREAU OF MINES

CONSERVATION AND DEVELOPMENT OF MINERAL RESOURCES

(House hearings, pp. 199–206, 215–288, 328–339; Senate hearings, p. 870)

Appropriation, 1967	$34, 740, 000
Estimate, 1968	39, 825, 000
House Allowance	38, 180, 000
Restoration Requested	1, 780, 000

(P. 16, line 8)

AMENDMENTS REQUESTED

(1) Page 16, line 8, strike out "$38,180,000" and insert in lieu thereof "$39,960,000"—an increase of $1,780,000 in the appropriation.

(2) Page 16, line 8, strike out "2,224,000" and insert in lieu thereof "$2,724,000"—the estimate, or an increase of $500,000 in the amount to remain available until expended for the conduct of a tunneling technology program.

HOUSE REPORT

"Activity	Committee bill, 1968	Bill compared with—	
		1967 appropriation	Estimate, 1968
Research:			
Coal	$6,745,000	+$455,000	−$15,000
Petroleum	2,360,000	+235,000	------------
Oil shale	1,620,000	+311,000	−300,000
Metallurgy	10,371,000	−495,000	------------
Mining	6,742,000	+2,466,000	−700,000
Marine mineral mining	1,433,000	------------	------------
Explosives	578,000	+8,000	------------
Resource development:			
Statistics	1,777,000	−26,000	------------
Economic analysis	450,000	+120,000	−130,000
Bituminous coal	905,000	+12,000	------------
Anthracite	370,000	+4,000	------------
Petroleum	700,000	+108,000	------------
Minerals	3,565,000	+237,000	−500,000
International activities	564,000	+7,000	------------
Transfers in the estimates	------------	−2,000	------------
Total, conservation and development of mineral resources	38,180,000	+3,440,000	−1,645,000

"The net reduction of $15,000 for Coal Research consists of a decrease of $150,000 in the request of $650,000 to fund an investigation of new processes for removal of sulphur oxides from stack gases after combustion, and an increase of $135,000 for "Operation Anthracite Refuse". This is a proposed research project to establish approaches and capabilities for use in removal of refuse from anthracite mines by determining characteristics, economic value, utilization and disposal of current and in-situ refuse.

"The Committee recommends an appropriation of $576,000, a reduction of $300,000 below the budget estimate, for oil shale research for in-situ work on Federal lands. The amount provided is more than double the funding available for this activity in fiscal year 1967.

"The reduction of $700,000 for mining research includes a decrease of $200,000 in the total funding requested for the heavy metals program. Funding for this activity at the level recommended by the Committee will provide a total of $1,600,000 in fiscal year 1968, an increase of $409,000 over funds available in fiscal year 1967. The Committee is of the opinion that the funding level provided in this Bill for the heavy metals program will be sufficient to accomplish the objectives of the 1968 program if adequate attention is given to administering the program as economically as possible.

"The reduction also includes a decrease of $500,000 below the $2,724,000 requested to start "Project Badger", a program of research and development in tunneling technology aimed at reducing the cost and increasing the speed of tunneling for such purposes as urban and inter-city transportation, waste disposal, water supply, underground power distribution and other civilian and military uses.

"A reduction of $130,000 is recommended below the increase of $250,000 requested for economic analysis. This provides about a 50% increase above the funding level for this activity in fiscal year 1967.

"The Committee also recommends a reduction of $500,000 the amount of the budget estimate, for studies on technologic and economic changes upon supply and demand of resources. Testimony developed during the hearings indicated all this work would be done under contract. It is the opinion of the Committee that further consideration should be given the possibility of performing these studies in-house."

JUSTIFICATION

Explanation of amendment (1)

The amendment increases the House allowance by $1,780,000. This amount is distributed by activities as follows:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
Research:				
(*a*) Coal	$6,290,000	$6,760,000	$6,745,000	$150,000
(*b*) Petroleum	2,125,000	2,360,000	2,360,000	----------
(*c*) Oil shale	1,309,000	1,920,000	1,620,000	300,000
(*d*) Metallurgy	10,866,000	10,371,000	10,371,000	----------
(*e*) Mining	4,276,000	7,442,000	6,742,000	700,000
(*f*) Marine mineral mining	1,433,000	1,433,000	1,433,000	----------
(*g*) Explosives	570,000	578,000	578,000	----------
Resource development:				
(*a*) Statistics	1,803,000	1,777,000	1,777,000	----------
(*b*) Economic analysis	330,000	580,000	450,000	130,000
(*c*) Bituminous coal	893,000	905,000	905,000	----------
(*d*) Anthracite	366,000	370,000	370,000	----------
(*e*) Petroleum	592,000	700,000	700,000	----------
(*f*) Minerals	3,330,000	4,065,000	3,565,000	500,000
(*g*) International activities	557,000	564,000	564,000	----------
Total	34,740,000	39,825,000	38,180,000	1,780,000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$247,000
12	Personnel benefits	18,000
21	Travel and transportation of persons	48,000
22	Transportation of things	20,000
23	Rent, communications, and utilities	25,000
24	Printing and reproduction	12,000
25	Other services	1,162,000
26	Supplies and materials	82,000
31	Equipment	166,000
	Total	1,780,000

Research

(*a*) *Coal.*—Restoration is requested of the $150,000 reduction for the investigation of new processes for removal of sulfur oxides from stack gases.

The removal of sulfur oxides from the flue gases of coal burning installations is one of the most pressing problems facing the Nation today. Although the effect of exposure to low levels of concentration of sulfur oxides for extended periods is not fully known, there is ample evidence of severe effects in human health and damage to land, plants, and materials of construction during periods of high concentration. A comprehensive research program will be undertaken to minimize the sulfur from combustion of coal either by removing the sulfur prior to combustion or removing the sulfur oxides from stack gases after combustion. Unless this problem can be solved effectively, efficiently, and immediately, the Nation's energy supply situation will be severely unbalanced with the possible result that heavily populated parts of the Nation will be without electric power and fuel for home heating.

The urgency of this problem is emphasized by the President's message to Congress on January 30, 1967. Among the targets for immediate action specified in this message is low sulfur or sulfur-free fuels.

On April 27, 1967, the President sent a memorandum to the Heads of all Departments having a responsibility in the air pollution area. The President designated two areas of immediate attention, research and economic incentives. In part, the memorandum reads, "The first of these areas is air pollution control research and development. We need a greatly accelerated program to develop methods to control sulfur emissions. This must be a targeted program directed at providing control technology for existing and new facilities at the earliest possible time."

Later the memo reads, "Maximum use should be made of the expertise of other Federal agencies, particularly the Department of Interior's knowledge of the production, treatment, and utilization of fossil fuels."

In view of the urgency for accelerated research on the removal of sulfur oxides from stack gases, the Bureau of Mines respectfully requests a reconsideration of the $150,000 decrease in its budget request for this purpose. The principal part of these funds were earmarked for exploratory research and feasibility studies on new processes for sulfur oxide removal, many of which have been suggested within the last year. Several sulfur dioxide removal processes, one by the Bureau of Mines, are under active development, but all are expected to materially increase the cost of energy production. However, we believe it possible that other processes not now being developed may prove more economically feasible. For example, it has recently been discovered that certain shales are almost as effective as the alkalized alumina absorbant now in pilot scale testing—yet the shales can be procured at a few dollars per ton while alkalized alumina costs 25 cents per pound. It has been discovered also that the waste from one of the aluminum processes is a very active absorbant for sulfur—this waste material has essentially no value. The additional funds will support investigation of the potential value of these and other new processes.

(*c*) *Oil shale.*—Restoration of the House reduction of $300,000 for in-situ oil-shale retorting is requested for the following reasons:

The Bureau of Mines is specifically charged by the Congress in the Organic Act as follows, ". . . on behalf of the government to investigate the minerals fuels and unfinished mineral products belonging to, or for the use of, the United States, with a view to their most efficient mining, preparation, treatment and use; and to disseminate information concerning these subjects in such a manner as will best carry out the purposes of this act." The vast Green River oil-shale deposits of Colorado, Utah, and Wyoming largely are owned by the Federal Government and the people of the United States. Development of this resource with the objectives of conservation; preservation of land, water, and air values; and equitable income to the Government requires an optimum research program on shale-oil production techniques by the Federal Government. The proposed increase of $600,000 is a minimal increase to achieve that objective.

Current interest in oil-shale research and development is great enough that the Bureau of Mines needs to develop and maintain the technology necessary to advise the Secretariat and other agencies responsible for formulating oil-shale policy.

The current level of effort on in-situ retorting (about $400,000 annually) is not adequate to provide that competence, nor would a total expenditure of $700,000 be adequate for that purpose for fiscal year 1968 because of the inherent high costs of field in-situ retorting research.

Research this year is principally centered on experiments at the Laramie Petroleum Research Center utilizing a small (about 10-ton capacity) batch retort and random sized blocks and pieces of shale in a size range (up to 20 inches in two dimensions) such as would be expected in a chimney resulting from a contained nuclear explosion. While the results of that research have been encouraging, it is not practicable to scale up from 10 tons to the million+ tons of broken shale expected to be present in a nuclear chimney. Therefore, tentative work plans for fiscal year 1968 include intermediate experiments to simulate a nuclear experiment (at a smaller than actual nuclear scale but considerably larger than the present retort capacity). This may be done either in a larger surface vessel or in a subsurface, excavated "chimney." The exact design of the experiment will depend upon the funds available. However, any reduction in the funds requested will preclude conducting an optimum, meaningful experiment because of the high cost of designing and constructing equipment, procuring oil shale, and actually conducting experiments. The experiments are needed to have adequate background to design and conduct an actual nuclear-explosive in-situ retorting experiment beginning in fiscal year 1969.

Other current in-situ retorting research, including electrical and chemical explosives fracturing applicable to deposits too shallow for nuclear fracturing, spent-shale burning, and core drilling for site selection, is vital to the overall study of in-situ retorting and should be continued.

The proposed increase in the in-situ retorting research is in line with Secretary Udall's recently announced five-point oil-shale development program. Point five of that program is an accelerated program of research and development and investigations. The proposed level for fiscal year 1968 is necessary to go ahead with the actual full-scale in-situ retorting experiments proposed therein.

(*e*) *Mining.*—The House Committee decreased the Heavy Metals program by $200,000 and "Project Badger" by $500,000. Restoration of the total reduction of $700,000 is requested.

Heavy metals.—The requested increase of $609,000 to accelerate mineral deposit delineation, design research, and mine systems deevlopment for heavy metals was reduced by $200,000. Restoration of the cut is essential if the program is to progress at the intended rate to fullfill the purpose of the program. Time is an important element of this program as heavy metals are already in critical short supply. New sources must be uncovered within a short time-frame if vital national requirements are to be met. The program is a joint effort of the U.S. Geological Survey and the Bureau of Mines, with the Geological Survey having responsibility for indicating favorable areas to the Bureau for further deposit delineation development of mine design criteria. Favorable areas indicated by the Geological Survey have exceeded original expectations to a point that it will be difficult to investigate these possibilities at the original requested level of funding. A cut of $200,000 will seriously delay the progress of this program.

Project Badger.—The funds recommended for the development of rapid excavation technology are $500,000 less than those estimated as necessary for fiscal year 1968. It is requested that this cut in appropriation be restored.

In a special message to the Congress dated January 30, 1967, the President recommended a program of research to develop rapid and low-cost excavation technology. In the same message the President directed the Secretary of the Interior to initiate a cooperative research program with industry to find solutions to these technical problems.

Nine governmental departments have an interest in rapid excavation technology. The President has designated the Bureau of Mines of the Department of the Interior, because of its unique competence, as the head Bureau to develop and implement a government-wide research and development program in excavation technology.

This is a program for research and development to establish technology for rapid subsurface excavation essential for future development of our mineral resources and the subsurface space requirements of our urban development of urban and intercity transportation, water and power distribution, waste disposal and related civilian and military requirements. The goal is to double the speed of excavation and cut the cost in half within five years. Funds in the first year will be used almost entirely to establish through contracts the wide base of participation by universities, research organizations and industry in the elements fundamental to the purpose of this program. The reduction of $500,000 seriously restricts the scope of work that will provide the base for success of the program and will delay fulfillment of its objective at a time when each year brings a compounding need for the goal set for this work that will result in a disproportionate loss to other vital programs.

Resource development

(*b*) *Economic analysis.*—Restoration of the House reduction of $130,000 is requested to permit expansion of the regional mineral economic and the heavy metals studies beyond the current minimal level.

Provision of additional funds for the regional studies will permit investigation of the relationship between the mineral industry and the regional economy. Such studies will analyze the effect of minerals on the development of an area and the relationship of local resources to regional demand; the studies would also permit development of regional energy balances. These studies are important in developing an integrated analytic system designed to warn of impending problems, and to test alternative solutions. In this regard it might be noted that some metals, such as lead, have exhibited a downward trend lately. Through the type of studies proposed for expansion, it would be possible to evaluate the impact of regional economic well-being as a result of such declines and to test solutions to these problems.

The heavy metals economic studies are designed to permit more definitive analysis of the effects of economic and technologic changes on a given property as well as on national reserves. They will also provide guides for research. Expansion to the requested level would allow acceleration of these studies and extension to metals other than gold.

If these funds are not restored, the putting in place of integrated economic industry models for use in Bureau and Government programing decisions will be delayed by at least one year.

(*f*) *Minerals.*—Restoration of the House reduction of $500,000 is requested for supporting studies to determine the impact of technologic and economic changes upon the resource supply potential and the capacity of the mineral industry to meet foreseeable demands.

The President, in his message to the Congress on January 30, 1967, called for the study to provide him with the fundamental knowledge he needs to establish governmental policy in the non-fuel minerals area. The last such comprehensive review was completed in 1952. Rapid economic growth throughout the world since that time has tended to exhaust the more accessible and high-grade deposits of many minerals. Rapid and revolutionary technological change in both the production and utilization of non-fuel minerals has sharply altered underlying conditions, and future changes promise to be of even greater importance.

The sharply increased pace of change over the last 15 years has created greater uncertainty in private investment decisions, and the rising cost and complexity of technology has increased the period over which advanced planning is required. Government policies in a wide spectrum of fields have direct and indirect effects upon the minerals industries, some of which are subtle but powerful in nature.

The proposed study will make an objective evaluation of all major aspects of the problem of assurance of an adequate supply of non-fuel minerals. It will examine the nature of the technological and economic changes taking place in the minerals industry, both past and prospective, and the probable effect of these changes on the industry's ability to meet the Nation's needs. It will, among others, look into such questions as—

(1) The long-range supply and requirements outlook under various contingencies.

(2) The adequacy of incentives for exploration, research, development, and technological innovation needed to provide mineral requirements.

(3) The adequacy and consistency of existing Government policies, plans, and programs.

(4) The adequacy of private industry practices in these areas.

The study will examine the policy alternates facing the Federal Government, but will not make recommendations with respect to them. It will provide the analytical and factual material to create a comprehensive understanding of the nature of the problems we face. This study, upon its completion, will enable the President's advisers, such as the Chief, Council of Economic Advisers, the Science Adviser, and the Secretary of the Interior, to better analyze the impact of proposed programs and to recommend decisions which will insure that adequate and low-cost mineral supplies remain available in the future. Private industry will obtain a firmer basis for existing decisions and will be able to more efficiently allocate its efforts.

If these funds are not restored, the "New Examination" needed by the President and of great value to the domestic industry will not be forthcoming.

Explanation of amendment (*2*)

The amendment restores the reduction of $500,000 in the amount to remain available until expended for the conduct of a tunneling technology program. The justification for the restoration is the same as for item (e) "Project Badger" under amendment (1) above.

BUREAU OF MINES

HEALTH AND SAFETY

(House hearings, pp. 207, 288–299; Senate hearings, p. 938)

Appropriation, 1967	$9,590,000
Estimate, 1968	10,821,000
House allowance	10,721,000
Restoration requested	100,000

(P. 16, line 15)

AMENDMENT REQUESTED

Page 16, line 15, strike out "$10,721,000" and insert in lieu thereof "$10,821,000"—the estimate, or an increase of $100,000 in the appropriation.

HOUSE REPORT

"The Committee recommends a reduction of $100,000 below the budget estimate. This amount was requested for an exhaustive review of current safety educational material."

JUSTIFICATION

The amendment restores the $100,000 reduction made by the House in the budget estimate for this appropriation. This amount is distributed by activities as follows:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
1. Inspections, investigations, and rescue work	$7,453,000	$8,469,000	$8,369,000	$100,000
2. Control of fires in coal deposits	203,000	203,000	203,000	
3. Health and safety research	1,934,000	2,149,000	2,149,000	
Total	9,590,000	10,821,000	10,721,000	100,000

A breakdown of the restoration request by objects of expenditure follows:

24	Printing and reproduction	$5,000
25	Other services	80,000
26	Supplies and materials	15,000
	Total	100,000

Inspections, investigations, and rescue work.—The second session of the 89th Congress enacted two laws which require special attention to mining safety educational programs. Public Law 89–376, Federal Coal Mine Safety Act Amendments of 1965, requires the enlargement and intensification of educational programs of the Bureau of Mines with respect to the advancement of health and safety in coal mines. Similarly, Public Law 89–577, Federal Metal and Nonmetallic Mine Safety Act, requires the development of expanded programs for the education and training of employees in the recognition, avoidance and prevention of accidents or unsafe or unhealthful working conditions in mines subject to the Act.

As part of the initial steps in carrying out these mandates from the Congress in an efficient, effective manner, the Bureau feels it important to have the benefit of professional adult education guidance for the preparation of courses, the choice of visual aids, selection of teaching techniques, and in motivation of voluntary attendance and participation by miners and supervisors. All of these involve an evaluation by skilled professionals in terms of motivation of the class members, their level of educational background, and psychological factors as well as information on effectiveness of instructors. This evaluation and review of methods and teaching materials will have an added benefit of making the most efficient use of the time of students and Bureau instructors.

The $100,000 in the budget estimate will enable the Bureau to secure both the basic information and suggestions to improve its approach, course materials, methods of instruction, and effectiveness. It is intended to respond fully to the requirements of both Acts for intensified, expanded programs at a minimum continuing cost in the most effective manner.

BUREAU OF MINES

GENERAL ADMINISTRATIVE EXPENSES

(House hearings, pp. 299–304; Senate hearings, p. 948)

Appropriation, 1967	$1, 556, 000
Estimate, 1968	1, 616, 000
House Allowance	1, 532, 000
Restoration Requested	84, 000

(P. 16, line 22)

AMENDMENT REQUESTED

Page 16, line 22, strike out "$1,532,000" and insert in lieu thereof "1,616,000"—the estimate, or an increase of $84,000 in the appropriation.

HOUSE REPORT

"The Committee recommends an appropriation of $1,532,000, a decrease of $84,000 below the budget estimate."

JUSTIFICATION

The amendment restores the $84,000 reduction made by the House in the budget estimate for this appropriation. The amount is for the following activity:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
General administrative expenses	$1, 556, 000	$1, 616, 000	$1, 532, 000	$84, 000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$70, 000
12	Personnel benefits	5, 000
21	Travel and transportation of persons	2, 000
23	Rent, communications, and utilities	1, 000
24	Printing and reproduction	1, 000
25	Other services	1, 000
26	Supplies and materials	2, 000
31	Equipment	2, 000
	Total	84, 000

General administrative expenses.—Restoration of the House reduction of $84,000 is requested to provide administrative support of the Bureau's expanded substantive program. The additional funds will provide for seven additional positions, as well as increased costs of within-grade salary advances. The new positions will be utilized to meet increased workload in contractual services, budget, and personnel activities.

Contractual services.—Since passage of the Solid Waste Disposal Act on October 10, 1965, the Bureau has entered into 6 contracts and 13 grants for research totaling $612,739. During fiscal year 1968 we expect to have approximately 9 contracts and 16 grants in effect under this authority.

Under authority of Public Law 89–672, we have entered into 3 contracts and 5 grants for research totaling $106,519. We expect to have grants and contracts in effect during fiscal year 1968 totaling approximately $3,000,000.

Most grants and contracts are made for one-year periods so that we may review the results obtained during that period and determine whether to continue the research. This necessitates annual review and negotiation of agreements and also provides greater control over our limited funds for contract and grant research.

Negotiation of new agreements and review of contracts subject to renewal during the coming fiscal year cannot be adequately handled by the Bureau's current staff.

Budget program.—Because of new and expended programs such as heavy metals, Appalachia, solid waste, etc., the volume and scope of budget work has materially increased. This requires additional analyses to assure that program objectives are appropriately translated into budget context for presentation to the Bureau of the Budget and Congressional Appropriation Committees. Also, it requires analysis of alternative methods to meet the program objectives. To provide for this additional workload we are requesting funds for an additional budget analyst and a clerk-typist.

Personnel activities.—The ability of the Bureau of Mines to obtain essential technical manpower is sharply conditioned by the relative scarcity of trained scientists and engineers and the limited number of new graduates in essential disciplines. In order to overcome manpower shortages, both short- and long-range recruiting plans must be implemented. Short-range objectives include expanded and intensified recruitment efforts, improved coordination of recruitment programs, and many more contacts with universities and other manpower sources. Long-range objectives include improving the image of the minerals professions and expanding contacts with secondary schools, minority groups, and women's organizations in order to increase the future supply of trained personnel and to tap all potential sources of manpower supply. To accomplish these objectives, one additional position of Personnel Staffing Specialist (GS–9) is required.

The Bureau of Mines must also insure maximum utilization of available technical personnel. The key to effective manpower utilization is proper and imaginative job design. The position classification function in the Bureau is being expanded and reoriented toward the implementation of true position management. Position classification specialists are analyzing existing operations and establishing procedures to free professional technologists from subprofessional duties and to create adequate technician and other support positions. This will create job opportunities for lesser skilled individuals who are in greater supply and will enable the Bureau to accomplish its research and development programs despite the limited supply of professional scientists and engineers. To achieve maximum manpower utilization, one additional position of Position Classification Specialist (GS–12) is required.

BUREAU OF MINES

HELIUM FUND

(House hearings, pp. 203, 208–211, 316–332; Senate hearings, p. 967)

Payment authority, 1967	$47,500,000
Borrowing authority, 1967	26,000,000
Estimate, 1968:	
Payment authority	60,000,000
Borrowing authority	18,200,000
House allowance:	
Payment authority	47,500,000
Borrowing authority	16,200,000
Restoration requested: Payment authority	12,500,000

(P. 17, line 18)

AMENDMENT REQUESTED

Page 17, line 18, after "The Secretary is authorized to" insert the following: *enter into contracts and agreements pursuant to section 3(a)(2) of the Helium Act Amendments of 1960 which may require payments for helium in any one fiscal year in an amount not to exceed $12,500,000 in addition to amounts heretofore specified: Provided, That the Secretary is also authorized to*

HOUSE REPORT

"This borrowing authority is required to finance helium purchases under the existing contracts for the conservation of helium. Testimony developed during the hearings indicated that total funding available for fiscal year 1968 would be $49,502,000 based on additional borrowing authority of $18,200,000. Purchases for fiscal years 1966 and 1967 indicated an annual rate of $42 million. It is on this basis that the Committee is recommending a reduction of $2 million in the borrowing authority for helium.

"CONTRACT AUTHORIZATION

"The budget estimate proposes an increase of $12,500,000 over the current annual limitation of $47,500,000 on the contracting authority for the purpose of helium for storage under the conservation program. Under this increase, the Department would enter into additional long-term contracts (20 to 25 years), committing the United States to the purchase of an additional $250 million worth of helium. The present contracts under the annual authority of $47,500,000 obligate the United States to the expenditure of over a billion dollars for the purchase of 62.5 billion cubic feet of helium.

"It is the recommendation of the Committee that this request be denied."

JUSTIFICATION

The amendment restores the reduction of $12,500,000 in the annual limitation on the authority to contract for purpose of helium under the conservation program.

The Bureau of Mines requests reconsideration of the requested increase of $12,500,000 over the current annual limitation of $47,500,000 on the contracting authority for the purchase of helium for storage under the conservation program. The helium program is self-liquidating, and all costs including interest will be repaid out of income from the sale of helium. Currently, more than half the program costs are financed from such income. Program assets as of June 30, 1966, were $162.7 million. Liabilities, which include borrowed funds and accrued interest, were $90.2 million, resulting in net worth of $72.5 million. Helium stored underground for future use has a book value of $120.4 million. At the current $35.00 a thousand cubic foot price, the stored helium will yield future income of more than $380 million. The present program and the requested increase are sound investments and offer a unique opportunity for farsighted resource conservation.

OFFICE OF COAL RESEARCH

SALARIES AND EXPENSES

(House hearings, pt. 2, pp. 130–180; Senate hearings, p. 997)

Appropriation, 1967	$8, 220, 000
Estimate, 1968	9, 725, 000
House allowance	9, 180, 000
Restoration requested	545, 000

(P. 18, lines 8 and 9)

AMENDMENTS REQUESTED

(1) Page 18, line 8 strike out "$9,180,000" and insert in lieu thereof "$9,725,000"—the estimate or an increase of $545,000 in the appropriation.

(2) Page 18, line 9 strike out "$380,000" and insert in lieu thereof "$425,000"—the estimate or an increase of $45,000 in the limitation on the amount available for administration and supervision.

HOUSE REPORT

"This appropriation provides for contract research to develop new methods of mining, preparing, and utilizing coal. The amount allowed includes $8,800,000 for contract research and $380,000 for administration and contract supervision.

The Committee has disallowed the request of $500,000 for the initiation of new research projects, and $45,000 for administration and contract supervision.

The budget estimate failed to include funds for the continuation of three research projects currently in progress. Sizable amounts of Federal funds have been invested in these projects and according to information received by the Committee, failure to continue work on these projects will to a large extent negate the benefit to be received from the previous investment of funds on this work. Until a realistic policy is developed in connection with research projects that extend over a period of several years, the Committee is not inclined to recommend appropriations for new research projects."

JUSTIFICATION

Explanation of amendment (1)

The amendment restores the reduction of $545,000 made by the House in the Budget estimate for this appropriation. This amount is distributed to activities as follows:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
(a) Administration and contract supervision	$376,000	$425,000	$380,000	$45,000
(b) Contract research	7,844,000	9,300,000	8,800,000	500,000
Total	8,220,000	9,725,000	9,180,000	545,000

A breakdown of the restoration request by objects of expenditures follows:

11	Personnel compensation	$6,000
12	Personnel benefits	1,000
21	Travel and transportation of persons	6,000
22	Transportation of things	1,000
23	Rent, communications and utilities	3,000
24	Printing and reproduction	10,000
25.1	Other services	500,000
25.2	Services of other agencies	16,000
26	Supplies and materials	1,000
31	Equipment	545,000
	Total	545,000

The original total sum requested of the Congress ($9,725,000) represents the absolute minimum needs of Office of Coal Research for Fiscal Year 1968, and the proposed cuts should be restored to continue a viable and on-going research program, the end results of which can do much to insure that coal will remain a competitive factor in the Nation's energy industry.

(*a*) *Administration and contract supervision*

The $45,000 which was disallowed from the administrative and supervisory funds represents a reduction which in the long run can prove costly and harmful to the program all out of proportion to the benefits on savings from such reduced appropriation.

The elimination of these funds will require the Office of Coal Research to forego two additional positions which are sorely needed to properly handle and monitor all of the requirements of the contracts which are getting into the larger phases of pilot plant efforts. The additional program costs commensurate with these pilot plant programs require more frequent and careful evaluation of a project's activity and its needs in order to insure the best utilization of the research expenditures being made by this Office.

The coal research Act requires the Office of Coal Research to make available to the public the results of the research performed. This is done through published technical reports of an interim or final nature. The nature of the work is such that several reports are presently scheduled to be made available in Fiscal Year 1968. Such reports represent a vital source of research knowledge to interested organizations who are potentially interested in carrying such results into the stage of commercial development, and thus achieving the ultimate objective for which the Office of Coal Research was created—the expanded use of coal and creation of new jobs in connection therewith.

The foregoing and the other lesser, but equally important, elements of costs in connection with properly administering and supervising the program, dictate the need for restoration of the sum of $45,000 for these purposes.

(b) Contract research

The $500,000 for new research projects which was disallowed by the Committee will preclude any new research effort in fiscal year 1968. Such action, if allowed to stand, could effectively signal the beginning of the end of research efforts seeking to permit fuller utilization of our Nation's extensive coal resources. This will also result in delaying other projects seeking new and expanded uses for coal, as well as inhibit, or dry up, the interest of qualified research and development sources throughout the country who are interested in performing work for the Office of Coal Research, and who would otherwise be expected to submit proposals for the Office of Coal Research's consideration.

At the present time, the Office of Coal Research continues to receive proposals for worthwhile research at the rate of forty to fifty each year. These are carefully evaluated by the Office of Coal Research, by private consultants, by Office of Coal Research's General Technical Advisory Committee, and the Bureau of Mines to check on technical feasibility and desirability and to prevent duplication of present or past work. The cost of performing these evaluations is borne by the Office of Coal Research. They represent a considerable culling-out process, which is still further refined and enforced by the limitations of the budget and appropriations, thus requiring ultimate maximum selectivity by the Office of Coal Research to proceed only with those few projects permitted within the $500,000 requested, and which show maximum promise for early and substantial results.

It is not anticipated that any of the proposed new research—which Office of Coal Research would undertake in Fiscal Year 1968 within the limitations of the $500,000 appropriated for such purposes—would be for projects of a long-range nature, or for projects which might proceed subsequently to an advanced stage of effort requiring pilot plants or additional heavy commitment of funds. It is contemplated that the results will be beneficial primarily as corollary efforts to the Office of Coal Research's other on-going research projects by providing necessary work and data. We request that the entire amount be restored.

Explanation of amendment (2)

This amendment restores the reduction of $45,000 in the limitation on funds available for administration and contract supervision. The justification for this restoration is the same as for item (a) under amendment (1) above.

OFFICE OF OIL AND GAS

SALARIES AND EXPENSES

(House hearings, pt. 2, pp. 100–130; Senate hearings, p. 833)

Appropriation, 1967	$722,000
Estimate, 1968	926,000
House allowance	740,000
Restoration requested	74,800

(P. 18, line 17)

AMENDMENT REQUESTED

Page 18, line 17, strike out "$740,000" and insert in lieu thereof "$814,800"—an increase of $74,800 in the appropriation.

HOUSE REPORT

"The amount recommended by the Committee provides $567,900 for coordination of oil and gas activities; $156,700 for administration of the oil import program; and $15,400 for the oil import appeals board.

$111,200 of the reduction for the coordination of oil and gas activities relates to defense functions previously carried in the schedules for "Civil Defense and Defense Mobilization Functions of Federal Agencies, Office of Emergency Planning". Funding for this activity will be considered in the appropriation for the Office of Emergency Planning.

A reduction of $74,800 in funds requested for administration of the oil import program is also recommended. During the hearings the Committee tried unsuccessfully to determine how the decisions are made on the oil import program. The Committee was assured that no decisions were made by those responsible for the administration of this activity, and that it served merely as a statistical function. In this case, little responsibility is delegated to this activity, and in the opinion of the Committee $156,700 will be ample to provide for the accumulation of statistics in fiscal year 1968."

JUSTIFICATION

The amendment restores $74,800 of the reduction of $186,000 made by the House in the Budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
1. Coordination of oil and gas activities	$548,800	$679,100	$567,900	----------
2. Administration of oil import program	158,000	231,500	156,700	74,800
3. Oil import appeals board	15,200	15,400	15,400	----------
Total	722,000	926,000	740,000	74,800

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$60,000
12	Personnel benefits	4,500
21	Travel and transportation of persons	2,000
22	Transportation of things	500
23	Rent, communications, and utilities	2,100
24	Printing and reproduction	3,000
25	Other services	700
26	Supplies and materials	1,000
31	Equipment	1,000
	Total	74,800

The disallowance by the House of $74,800 will not only prevent the recruitment of four additional permanent staff positions and the employment of needed industrial specialists and consultants for peak operating periods requested in the estimate, but will result in a decrease in the present staff. Expanding programs, notably the addition of the petrochemical industry to the oil import control program, have placed additional responsibilities and technical competence requirements on the present eleven regular staff members. The requirement for additional industrial specialists (petrochemicals) staffing is especially pressing and significant; since decisions concerning allocation requests from the petrochemical industry are based upon very complex, varied and highly technical judgments by the Oil Import Administration.

Unless the requested $232,000 is provided for the oil import administration for 1968 operations, the present limited staff will be unable to make expeditious, careful decisions and acquire the technical knowledge needed to execute its assigned responsibilities. These decisions by the Oil Import Administration concern evaluation of allocation requests, granting of import licenses, surveillance and compliance with import regulations and to properly advise the Secretary of developments in the oil import area and recommend required changes in the regulations and presidential proclamation. The oil import control program exerts an immense monetary and economic effect upon two of the largest industries in the United States (petroleum and chemical). Each year the Oil Import Administration issues licenses and allocates economic values conservatively estimated at one-half billion dollars.

The Oil Import Administration is directly involved in such vital areas of interest as national security, preservation of a healthy domestic petroleum industry, water and air pollutions, international balance of payments and international trade relations. It is urgently requested that the amount disallowed be fully restored.

BUREAU OF COMMERCIAL FISHERIES

MANAGEMENT AND INVESTIGATIONS OF RESOURCES

(House hearings, pt. 1, pp. 365–420; Senate hearings, p. 1046)

Appropriation, 1967	$20, 701, 000
(Appropriation of receipts)	(1, 000, 000)
Estimate, 1968	23, 835, 000
House Allowance	23, 194, 650
Restoration Requested	640, 350

(P. 19, line 3)

AMENDMENT REQUESTED

Page 19, line 3, strike out "$23,194,650" and insert in lieu thereof "$23,835,000",—an increase of $640,350 in the appropriation.

HOUSE REPORT

"The amount allowed by the Committee by activity compared with the 1967 appropriation and the 1968 budget estimate is as follows:

"Activity	Committee bill, 1968	Bill compared with—	
		1967 appropriation	Estimate, 1968
Management	550, 800	+60, 500	
Marketing and technology	6, 913, 850	+1, 460, 375	−310, 350
Research	11, 680, 400	+93, 600	−250, 000
Research on fish migration over dams	1, 405, 100	−263, 849	−30, 000
Fishing vessel mortgage insurance	45, 300	+1, 000	
Columbia River fishery development	2, 599, 200	−119, 800	−50, 000
Transfers in the estimate		+261, 824	
Adjustment for Pribilof Island transfer		+1, 000, 000	
Total, management and investigations of resources	23, 194, 560	+2, 493, 650	−640, 350

"The decrease of $310,350 recommended by the Committee for 'Marketing and technology' consists of $38,000 for expansion of the economic research program; $214,350 for fishing gear research and development, underutilized fish, Gulf of Mexico; and $58,000 for development of a foreign trade expansion program.

"The decrease of $280,000 in research recommended by the Committee consists of a reduction of $100,000 for Pacific anchovy studies; $150,000 for EASTROPAC inter-agency oceanographic studies; and $30,000 for research on fish migration over dams.

"An additional reduction of $50,000 is recommended for Columbia River fishery development."

JUSTIFICATION

This amendment restores the reduction of $640,350 made by the House in the Budget estimate.

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
Management	$490, 300	$550, 800	$550, 800	
Marketing and technology	5, 474, 500	7, 224, 200	6, 913, 850	$310, 350
Research	11, 586, 800	11, 930, 400	11, 680, 400	250, 000
Research on fish migration over dams	1, 676, 100	1, 435, 100	1, 405, 100	30, 000
Fishing vessel mortgage insurance	44, 300	45, 300	45, 300	
Columbia River fishery development	2, 429, 000	2, 649, 200	2, 599, 200	50, 000
Total	21, 701, 000	23, 835, 000	23, 194, 650	640, 35

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$170, 700
12	Personnel benefits	12, 300
21	Travel and transportation of persons	20, 800
22	Transportation of things	6, 000
23	Rent, communication, and utilities	18, 000
24	Printing and reproduction	7, 000
25	Other services	307, 050
26	Supplies and materials	23, 000
31	Equipment	75, 500
	Total	640, 350

Restoration of the $640,350 reduction made by the House is needed to fund the following programs:

(1) $38,000 for expansion of the economic research program. The reduction made by the House will seriously impair our efforts to improve the economic condition of the domestic fishing industry. With fewer personnel and less funds the program will not accomplish the needed results during fiscal year 1968.

Our domestic fishing industry faces increased foreign competition for interternational fishery resources and a share of our domestic markets. As a result it is encountering serious economic difficulties. Income of labor and return on invested capital in this industry is low as compared to many other industries. The economic research program is designed to identify and evaluate economic difficulties acting upon the fishing industry. Identification and evaluation of the economic constraints are necessary so as to know where economic efficiency can be applied to improve the economic position of the industry. The results of the eonomic research studies provide a guide to industry as well as to other disciplines in the Bureau of Commercial Fisheries (i.e., Biology, Technology, Exploratory Fishing, and Marketing) as to where service, research, and development efforts sholud be concentrated, in order to overcome the most limiting constraints.

(2) $214,350 for fishing gear research and development for underutilized fish in the Gulf of Mexico.

This program is considered top priority in its objective of substantially increasing landings of fish by 1972. Industry has expressed considerable interest in the program especially since it is designed to make available fish resources to supplement the present reduced landings of menhaden. In addition, availability of other fish may help to stabilize the industry in creating a fishery during the menhaden closed season.

It was felt that such a program would result in making available to the fishing industry an estimated 500 million pounds of industrial-type fish by 1972. The amount requested was considered a minimum to carry out the proposed work within the time schedule.

The program called for coordinated activities including: (a) charter of planes to delineate areas of surface fish school concentrations; (b) charter of vessels to conduct multivessel gear studies; (c) conduct experiments in locating and identifying fish concentrations; (d) development of light attraction techniques, fish pump and seine harvesting methods.

This reduction would reduce the effectiveness of the program to a point where it would not be possible to produce significant results within the projected 5 year period, and limit the area of activity to small segments of the Gulf.

At the reduced level of funding the only activities considered for implementation are delineation of surface fish concentrations through plane charter and photographic techniques, and development of fish attraction techniques with use of the existing Bureau vessel. It would be difficult to determine when these reduced activities would show significant results.

(3) $58,000 for development of a foreign trade expansion program.

This will provide for a total program of $108,000, which is needed to provide the level of effort required to develop the untapped potential for the sale of U.S. fishery products in foreign markets. The record proves that the foreign trade expansion program conducted by the Office of International Trade Promotion has been extremely successful in effecting sales in many major European countries. These sales have resulted from promotional activities conducted through food trade fairs and trade center exhibits in Western Europe. Thus far, the Bureau has participated, in cooperation with the Foreign Agricultural Service, in 11 such food trade exhibits and, actual sales as reported by industry members have averaged approximately $100,000 per show. In addition, projected sales for a 12 month period are anticipated to average $275,000 as a result of each promotional effort. To date, approximately 40 U.S. fishery firms have participated in one or more of our shows, at which many varieties of fishery products were promoted. Each participant who has shared in the benefits derived from these endeavors is very enthusiastic about the foreign trade expansion program which has enabled them to test and develop foreign markets.

(4) $100,000 for Pacific anchovy studies.

This restoration would make available to the Bureau $222,000 for investigations of a resource estimated at 5 million tons with a potential annual harvest of 500,000 tons worth approximately $10 million to the fishermen. Of west coast fishes, the anchovy is one of the most promising sources of raw material for Fish Protein Concentrate (FPC). This is an international resource with much of the population occurring in international waters or in the territorial waters of Mexico. Investigations on the anchovy are conducted cooperatively with the California Department of Fish and Game, the University of California, and the Bureau of Commercial Fisheries sharing responsibilities for the research program.

The California Department of Fish and Game has just recommended to the State Fish and Game Commission that a quota of 200,000 tons of anchovy be set for the 1967–68 commercial season, and that the season be lengthened by 30 days. The quota for the 1966–67 season is 75,000 tons. There is every indication that this fishery will expand rapidly in the next several years, if the sport fishing interests can be assured that the resource is being adequately safeguarded.

The $100,000 is required for the Bureau to carry out its responsibilities in the cooperative anchovy research program and would be used for vessel charter for monitoring the abundance and distribution of the anchovy and to expand studies designed to gather the biological information that is essential for management of the fishery, particularly the setting of catch quotas and seasons. Because of the rather strong feeling in California between sport and commercial fishing interests, it is necessary that the anchovy stocks be monitored very closely to determine the effects of the fishery. If this restoration is not made, close monitoring of the stocks will be impossible and pressure will most likely be brought to bear on the Commission to close the fishery.

(5) $150,000 for EASTROPAC inter-agency oceanographic studies.

EASTROPAC is a cooperative inter-agency and international study with the Bureau of Commercial Fisheries playing the "lead agency" role. Eight U.S. agencies and two foreign countries, Peru and Chile, are taking part. In the United States, the program has been approved by the Interagency Committee on Oceanography, the National Academy of Sciences Committee on Oceanography, the Office of Naval Research, and the Eastern Pacific Oceanic Conference. The Bureau will not be able to carry out commitments made to other agencies participating in the program if the increase in funding is limited to $100,000.

Planning for the program started in FY 1966, and full-scale field operations got underway in January 1967. The plan for the study calls for the physical oceanographic work to be continued through FY 1968, and this to be followed by fishery surveys in FY 1969.

The full increase of $250,000 is required for vessel operations and to process and analyze the data ashore. If an increase of only $100,000 is received, the Bureau will have to terminate its participation in the field aspects of EASTROPAC in January 1968 and will have difficulty finding sufficient funds to process the data collected up to that point. The vessel operations cannot be terminated prior to June 1968 without great loss of information. As originally planned, the physical—oceanographic phase of the program was to extend for 18 months and would provide a comparison of the changes in the ocean between seasons and between years. If this phase is terminated in January 1968, only between-season comparisons can be made not between-year comparisons.

The program has been very carefully planned and any reduction in the field operations will result in the loss of data that are urgently needed to ensure the future success and effectiveness of our West Coast tuna industry. The Bureau's planned total investment in EASTROPAC in FY 1968, including direct and related programs, is approximately $1 million. It is estimated that the information resulting from this program could lead to an annual increase in our Pacific tuna catch of 100,000 tons valued at $25 million to the fishermen.

(6) $30,000 for research on fish migration over dams.

The reduction of the Fish Passage Research Program on the Columbia River by an additional $30,000 will necessitate curtailment of studies on Roosevelt Lake, the Grand Coulee impoundment, which are designed to develop methods of using landlocked sockeye salmon stock to establish sea-run populations below Grand Coulee and Chief Joseph Dams. This program is new and contributes to the objectives of preservation and enhancement of the more valuable Columbia River salmon runs and achieving full use of the productive potential of the entire river.

The reestablishment of runs in areas made inaccessible by high dams would put valuable spawning areas back into production and increase the size of the resource available to fishermen.

(7) $50,000 for the Columbia River fishery development program.

The reduction of $50,000 for operation and maintenance in the Columbia River fishery development program will result in curtailment of hatchery fish production and/or operation of some facilities. Through voluntary reductions of $74,000 below the fiscal year 1967 level, coupled with recent significant pay increases for State(s) employees, operation and maintenance already has been trimmed to a minimum level. Operation and maintenance of screens, fishways and stream clearance projects is at such a level that further reductions will necessitate closure or lack of operation of some facilities. The alternative is to curtail production of hatchery operations, with a subsequent decline in release of fish, ranging from one to seven million fish (depending on species). Preliminary results from the current hatchery evaluation program indicate that the hatcheries are playing a significant role, at favorable cost-benefit ratio, in maintaining the salmon runs of the Columbia River. In either case decreases in production or protection would effect, detrimentally, the size of future runs and would to that extent compromise the mitigation program of the Federal Government.

BUREAU OF COMMERCIAL FISHERIES

CONSTRUCTION OF FISHING VESSELS

(House hearings, pt. 1, pp. 440–441; Senate hearings, p. 1117)

(P. 20, line 1)

AMENDMENT REQUESTED

Page 20, line 1, after the amount "$6,000,000," insert the following:

to be immediately available and

HOUSE REPORT

The House Report made no statement concerning this item.

JUSTIFICATION

There is currently only about $1,000 unobligated in this appropriation for the payment of subsidies for the construction of fishing vessels. This amount, or more, could be required to meet increased subsidy costs if a positive change order of any significance should be necessary to continue the construction of a vessel involving a subsidy agreement. The possibility of delays in construction due to lack of funds to cover change orders involving increases in subsidy costs would be less if the funds in the FY 1968 appropriation became available prior to July 1, 1967.

BUREAU OF COMMERCIAL FISHERIES

GENERAL ADMINISTRATIVE EXPENSES

(House hearings, pt. 1, pp. 456–463; Senate hearings, p. 1131)

Appropriation, 1967	$739,000
Estimate, 1968	743,000
House Allowance, 1968	693,000
Restoration Requested	50,000

(P. 20, line 22)

AMENDMENT REQUESTED

Page 20, line 22, strike out "$693,000" and insert in lieu thereof "$743,000", an increase of $50,000.

HOUSE REPORT

"The Committee recommends an appropriation of $693,000, a reduction of $50,000 below the budget estimate. The additional funding requested for fiscal year 1968 was for executive direction and supervision of administrative services in the Washington, D.C. office.

"The Committee has no objection to the purpose for which the additional funding was requested, but it is of the opinion that the additional cost can be absorbed."

JUSTIFICATION

The amendment restores the reduction of $50,000 for departmental expenses in this appropriation.

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
Departmental expenses	$352,893	$344,893	$294,893	$50,000
Regional office expenses	386,107	398,107	398,107	
Total	739,000	743,000	693,000	50,000

A breakdown of the restoration request by objects of expenditure follows:

11	Personnel compensation	$42,400
12	Personnel benefits	3,400
21	Travel	3,000
31	Equipment	1,200
	Total	50,000

Restoration of the $50,000 reduction made by the House will enable the Bureau to strengthen its administrative staff by the addition of an automatic data processing officer, a finance officer and a labor relations officer. The House has no objection to the Bureau's effort to improve its administrative staff but feels that these costs can be absorbed. However, absorption of these additional costs by the Bureau's programs would unduly curtail and restrict their effectiveness.

BUREAU OF SPORT FISHERIES AND WILDLIFE

(Housing hearings, pt. 1, pp. 481, 484–486, 488–568, 580, 615; Senate hearings, p. 1163)

Appropriation 1967	$38,145,800
Estimate	43,159,000
House Allowance	43,010,000
Restoration Requested	624,000

(P. 22, line 16)

AMENDMENT REQUESTED

Page 22, line 16 strike out "$43,010,000" and insert in lieu thereof "$43,634,000", an increase of $624,000 in the appropriation.

HOUSE REPORT

"The amount allowed by the Committee by activity compared with the 1967 appropriation and the 1968 budget estimate is as follows:

"Activity	Committee bill, 1968	Bill compared with—	
		1967 appropriation	Estimate, 1968
Fish hatcheries	$8,816,000	+$674,300	−$90,000
Wildlife refuges	13,074,000	+2,710,384	−160,000
Soil and moisture conservation	713,000	+5,000	
Management and enforcement	3,679,000	+290,000	−13,000
Fishery research	3,666,500	+182,500	−58,500
Wildlife research	6,671,500	+790,500	+192,500
Fishery services	1,716,000	+159,000	−10,000
Wildlife services	2,845,000	+124,000	−5,000
River basin studies	1,457,000	+43,000	−5,000
Pesticides review	372,000	+9,000	
Transfers in the estimate		−123,484	
Total management and investigations of resources	43,010,000	+4,864,200	−149,000

"The net decrease of $149,000 below the budget estimate consists of various reductions in the budget estimates totaling $624,000 and increases recommended by the Committee totaling $475,000.

"Decreases below the budget estimates recommended by the Committee are as follows:

"Fish hatcheries

"$90,000 for the operation of new facilities.

"Wildlife refuges

"$70,000 for deferred maintenance.

"$90,000 for the operation of six new refuges and waterfowl production areas.

"Management and enforcement

"$13,000 for increased costs of operation and maintenance of automotive, aircraft, and boating equipment.

"Fishery research

"$14,000 for operations at existing facilities.

"$32,000 for operation of new facilities at four laboratories and an increased program at the fifth laboratory.

"Wildlife research

"$20,000 increased costs of current programs.

"$100,000 for handling an expanding volume of bird banding and recovery data, and to update data processing equipment.

"$150,000 for the initiation of a comprehensive rare and endangered species preservation program.

"Fishery services

"$10,000 for increased operational costs of current programs.

"Wildlife services

"$5,000 for maintenance of the wildlife enhancement field program at its present operational level.

"River basin studies

"$5,000 for increased operating costs.

"In addition, the Committee has recommended a decrease of $25,000 relative to the proposed acquisition of 17 automobiles which will not be necessary in fiscal year 1968.

"The Committee recommends the following increases over the budget estimate:

"$75,000 for additional staffing to work on forest animal damage research at Olympia, Washington.

"$400,000 for the control of blackbirds. Of this amount, $250,000 shall be allocated for research and $150,000 for operations. In addition, the Committee directs that of the $800,000 included in the budget estimate for bird control, the major portion of these funds be utilized for the control of blackbirds.

"During the hearings, the Committee received extensive testimony of the increasing severity of damage to corn and other crops by blackbirds. The Committee is not convinced that agency officials are giving this problem sufficient attention in proportion to the huge losses in farm income that are occurring.

"It is therefore the expressed desire of the Committee that activity in the blackbird control program be greatly accelerated and that the Committee be furnished with quarterly reports during the next fiscal year on progress that is being made in this connection.

"The Committee has had extensive discussion with officials of the Department of the Interior relative to obtaining more uniformity in the funding of cooperative fish units and cooperative wildlife research units. In fact, a special request was made of the Department to give this matter consideration in the submission of the 1968 budget estimate. The Committee is disappointed to find that no action had been taken to accomplish this in the 1968 budget estimate. Therefore, the Committee directs that the funding for the cooperative fish units in Idaho, Louisiana, Maine, New York and Pennsylvania be increased by $9,200 each in fiscal year 1968. In addition, the cooperative wildlife research unit in Massachusetts should be increased $24,500 over the amount provided in the budget estimate. The total cost of these increases amounts to $70,500 and shall be absorbed by the Bureau.

"Once again the Committee suggests that consideration be given to the uniform funding of the cooperative wildlife research units in the submission of the 1969 budget estimate. Unless this is done, the Committee undoubtedly will find it necessary next year to adjust the funding for wildlife research units accordingly, and to direct that the additional costs be absorbed by the agency.

"The Committee is gratified at the efforts which have been made to improve the administration of the predator control program. However, it would suggest that more effective results might be obtained if greater attention is given to improving operations at the field level in 1968 rather than concentrating efforts for program improvement at the Washington headquarters level."

JUSTIFICATION

This amendment restores the reduction of $624,000 made by the House in the Budget estimate, and retains $400,000 for the control of blackbirds, plus $75,000 for research on forest animal damage as added by the House.

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
1. Fish hatcheries	$8,174,700	$8,906,000	$8,816,000	$90,000
2. Wildlife refuges	10,439,100	13,234,000	13,074,000	160,000
3. Soil and moisture conservation	708,000	713,000	713,000	
4. Management and enforcement	3,389,000	3,692,000	3,679,000	13,000
5. Fishery research	3,484,000	3,725,000	3,666,500	58,500
6. Wildlife research	5,891,000	6,479,000	6,671,500	282,500
7. Fishery services	1,562,000	1,726,000	1,716,000	10,000
8. Wildlife services	2,721,000	2,850,000	2,845,000	5,000
9. River basin studies	1,414,000	1,462,000	1,457,000	5,000
10. Pesticides registration	363,000	372,000	372,000	
Total	38,145,800	43,159,000	43,010,000	624,000

The President's Budget for fiscal year 1968, while being an austere one, is a well-balanced document. The fiscal program for 1968 was designed to meet three essential requirements. First, and uppermost, was the need for additional funds to carry out stepped-up activities in Vietnam. Second, it has to carry forward urgent domestic programs at the lowest possible cost, while curtailing all lower priority activities. And, third, it had to insure that the overall impact on the economy would be non-inflationary. The budget submitted to the Congress was carefully tailored to accommodate these constraints. Across the board, the Bureau is proposing to operate at levels substantially below the optimum. Hatcheries are scheduled to continue operations at 81% of full production capacity; refuges are operating at approximately 66% of most efficient management; and there is a belt-tightening in other activities.

Therefore, restoration is requested of the several reductions made in the various operating programs under this appropriation so as to bring them to the level reflected in the President's Budget. Specifically, we wish to emphasize the request for restoration in the Wildlife research activity of (1) the $150,000 reduction in the budget estimate of $300,000 in the rare and endangered species program and (2) the $100,000 reduction in the budget estimate of $137,000 in the bird banding recovery data program.

(1) Because of its sudden transition from primitive to highly civilized conditions, North America has experienced the most drastic changes in abundance of wildlife and the greatest number of extinctions in historic times. The technological ability that the nation possesses, if properly directed, can reverse this trend. To achieve this, the Congress recently authorized the rare and endangered species program by passing the Endangered Species Act, P.L. 89-669.

This reduction will delay the Regional coordination and servicing of a sound program for preservation and protection of endangered species. Liaison with Federal, State, and private agencies, provision of published information as well as direct technical assistance are required to insure complete cooperation in such a program. Personnel assigned to the program would also delineate and select suitable lands for the preservation of habitat required by these species and would provide guidance to other agencies in the improvement of habitats through management, development, and protection. This field level program is urgently needed to gain the complete understanding and cooperation of all agencies that should share the responsibility in protecting remaining populations of endangered wildlife.

(2) The processing and analysis of band recoveries, data from mail questionnaires and duck wing and goose tail surveys provide the factual basis for establishing migratory game bird hunting seasons and bag limits. An expanding volume of such data and the need to update data processing equipment to complete annual population dynamics studies of the individual species, prompted the requested increase in funds and manpower in FY 1968. Without the increase it will be impossible to continue the detailed analyses required to establish special seasons and bag limits on individual species of migratory birds. These special seasons have added materially to the recreation provided by migratory game bird hunting. The updating of ADP equipment, in addition to providing more efficient classification, storage, retrieval and analysis of data will result in more rapid response to hunters requesting information concerning returned bands.

The banding records for the entire continent are maintained at the Migratory Bird Populations Station at Laurel, Maryland. The United States has an obligation to see that this information is properly recorded in a manner that will permit rapid retrieval and analysis. The requested funds represent the minimal needs for continued, efficient operation of this program.

The House added $9,200 each for the cooperative fishery units in Idaho, Louisiana, Maine, New York and Pennsylvania and $24,500 for the cooperative wildlife research unit in Massachusetts. The total cost of these increases, $70,500, is to be absorbed by the Bureau. Since there are no other sources of funds, the increases for the units can be obtained only by reducing the funds available for other programs. This would be compounding the curtailments already imposed upon other programs by budgetary constraints. Such a circumstance would unquestionably further reduce program effectiveness, possibly even beyond tolerable limits.

BUREAU OF SPORT FISHERIES AND WILDLIFE

CONSTRUCTION

(Housing hearings, pt. 1, pp. 481–482, 486, 569–584, 614; Senate hearings, p. 1250)

Appropriation 1967	$8, 618, 600
Estimate	2, 568, 000
House allowance	2, 568, 000
Restoration requested	50, 000

(P. 22, line 22)

AMENDMENT REQUESTED

Page 22, line 22 strike out "$2,568,000" and insert in lieu thereof "*$2,618,000*",—an increase of $50,000 in the appropriation.

HOUSE REPORT

"This item finances the construction of fish hatchery and wildlife refuge facilities, and fishery and wildlife research facilities. The amount allowed includes the following items included in the budgeted program:

Fish hatchery facilities:	
McNenny, S. Dak	$20,000
Quinault, Wash	246,000
Wildlife facilities:	
Various wildlife refuge facilities	678,000
Sanitary facilities on national wildlife refuges	434,000
Advance planning and water rights	200,000
Wildlife research facilities:	
To plan and construct suitable sanitary facilities at the Patuxent Wildlife Research Center	200,000
To construct 16 ponds at the Northern Prairie Wildlife Research Center at Jamestown, N. Dak	50,000

"A general reduction of $83,000 is recommended on the basis of anticipated slippage in program activity.

"The recommended appropriation also includes increases of $240,000 for the second stage of construction on the Marine Game Fish Laboratory at Panama City, Florida; $200,000 for the second phase of construction on the Marine Game Fish Laboratory at Port Aransas, Texas; $100,000 for rehabilitation of facilities at the hatchery at Saratoga, Wyoming; and $233,000 for construction of the Wolf Creek Dam Hatchery in Kentucky.

"In addition, $50,000 is included for the site selection of a blackbird research center."

JUSTIFICATION

The amendment restores the program to the program as reflected in the President's Budget, which is a well-balanced document, and increases the budget estimate by $50,000, the amount added by the House for the site selection of a blackbird research center.

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Changes requested
1. Sport fish facilities	$3,431,000	$706,000	$1,039,000	−$333,000
2. Wildlife facilities	5,187,600	1,862,000	1,612,000	+300,000
Anticipated program slippage			−83,000	+83,000
Total	8,618,600	2,568,000	2,568,000	+50,000

Sportfish facilities

Eastern Fish Nutrition Laboratory, Cortland, New York—$440,000. This laboratory is one of the two oldest fishery research facilities in the Bureau of Sport Fisheries and Wildlife. The laboratory operates under a cooperative agreement with the New York Conservation Department and Cornell University.

The research conducted there during the past 25 years is justly world famous. These studies have formed a substantial part of the scientific foundation upon which most of today's commercially available trout feeds are based. It is notable that the feed costs to produce a pound of trout have decreased from 28 cents in 1959 to only 18 cents in 1965. Without this improvement it would have cost the Bureau $374,000 more for the 3,740,000 pounds of trout produced in 1965. A significant part of this annual saving is attributable to the research results achieved at Cortland.

The research facilities at Cortland are old and dilaplidated. It is not feasible to repair them and it is questionable how long we can safely work there. In FY 1967, $84,000 was appropriated for detailed engineering plans and site preparations and now the next logical step is to continue with the construction or the site preparation cost might very well be wasted. This laboratory is a vital part of the fishery research program which supports sport fishery conservation efforts.

Wildlife facilities

Wildlife refuges—$250,000. The Nation's wildlife habitat continues to shrink and deteriorate under the pressures of population growth and technological development. Only fragments of pristine water and marshland remain. Segments of excellent habitats are retained as national wildlife refuges and these must be developed intensively to partially offset the loss of wildland areas. Further, once the Bureau acquires land for refuge purposes, it becomes incumbent upon the Bureau to develop such lands in order to obviate local criticism. Because of the rapidly shrinking habitat, an enormous backlog in refuge development has resulted and any delay intensifies the situation.

Wildlife research facilities—$50,000. An essential unit of the Endangered Wildlife Research Program is the laboratory-administration building planned for construction in FY 1969. Fundamental studies on the less well known aspects of avian and mammalian biology and behavior are to be carried out in this laboratory. It will be staffed with specialists in nutrition, physiology, pathology, genetics behavior, biometry and closely related sciences, and will provide supporting services for the field investigations and propagation science programs.

The $50,000 requested in FY 1968 is for plans and specifications so that construction could be undertaken early in FY 1969. Postponement of the planning funds will mean nearly a year's delay in constructing this urgently needed facility.

Although other items added by the Congress through a shifting of program would represent reasonable additions to a future Bureau program, they are not considered appropriate in the contemplated use of resources for F.Y. 1968.

It is requested that the appropriation be restored to the program requested in the President's Budget for F.Y. 1968 and increased by the $50,000 added by the House for the site selection of a blackbird research center.

BUREAU OF SPORT FISHERIES AND WILDLIFE

MIGRATORY BIRD CONSERVATION ACCOUNT

(House hearings, p. 1, pp. 482, 591–599; Senate hearings, p. 1274)

(P. 23, line 4)

AMENDMENT REQUESTED

Page 23, line 4, after the amount "$7,500,000," insert the following:

to be immediately available and

HOUSE REPORT

The House Report made no statement concerning this item.

JUSTIFICATION

This language makes the funds immediately available for obligation upon approval of the appropriation bill by the President which may be before July 1 of the fiscal year for which the funds are appropriated.

The language is needed to permit the Bureau to enter into contracts for land acquisitions, negotiations for which may be concluded prior to the start of the fiscal year.

Currently, the Bureau is negotiating for two rather large tracts of land for which funds are not available in FY 1967. In land acquisitions, the availability of a tract is often a fleeting situation requiring ability to exercise options immediately or the lands may very well be sold to a higher or next-higher bidder.

The "immediately available" provision is needed so that in case the agreements are reached in the latter part of this fiscal year, the lands may be acquired.

BUREAU OF SPORT FISHERIES AND WILDLIFE

APPALACHIAN REGION FISH AND WILDLIFE RESTORATION PROJECTS

(House hearings, p. 1, pp. 599–604, 618; Senate hearings, p. 1282)

Appropriation 1967	$500,000
Estimate	400,000
House allowance	
Restoration requested	400,000

(P. 23, after line 5)

AMENDMENT REQUESTED

(1) Page 23, after line 5, insert the following:

Appalachian Region Fish and Wildlife Restoration Projects

For expenses necessary in carrying out a fish and wildlife restoration program, as authorized by section 205 of the Appalachian Regional Development Act of 1965, $400,000, to remain available until expended; Provided, That this appropriation shall not be available for the purchase, or for sharing in the cost of purchase, of lands or interests therein.

HOUSE REPORT

"Funds provided under this item are to implement a program for assisting the States in recovering from damages caused by stripmine operations where the land is exhausted of its mineral resources, and where mining operations have been abandoned, as provided in Section 205 of the Appalachian Regional Development Act of 1965, Public Law 89–4.

"Progress on this program has been extremely slow. As of January 31, 1967, there was an unobligated balance of $1,775,540 previously appropriated for this purpose. Therefore, it is the opinion of the Committee that activity under this program can continue unimpeded in fiscal year 1968 without the appropriation of additional funds."

JUSTIFICATION

This amendment restores the language eliminated because the House disallowed the entire amount requested. This amount is for the following activities:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
1. Payments to States	$500,000	$360,000		$360,000
2. Administration		40,000		40,000
Total	500,000	400,000		400,000

A breakdown of the restoration by objects of expenditure follows:

11.1	Personnel compensation	$33,000
12.0	Personnel benefits	2,000
21.0	Travel and transportation of persons	4,000
26.0	Supplies and materials	1,000
41.0	Grants, subsidies, and contributions	860,000
	Total costs, funded	900,000
94.0	Change in selected resources	−500,000
99.0	Total obligations	400,000

Restoration of the $400,000 reduction made by the House is essential in order to permit an orderly development of the program.

The Appalachian Regional Development Act of 1965 (P.L. 89–4) was approved March 9, 1965 providing basic authority for development of Appalachia. Promptly after, the Second Supplemental Appropriation Act, 1965 (P.L. 89–16) was approved April 30, 1965 providing funds for Appalachia.

The following funds have been appropriated:

Fiscal year 1965 supplemental	$1, 350, 000
Fiscal year 1966	----------
Fiscal year 1967	500, 000
Total appropriated to date	1, 850, 000
Proposed for restoration—fiscal year 1968	400, 000
Total proposed funds	2, 250, 000
Less funds obligated for administrative purposes for fiscal year 1966, estimate for fiscal years 1967 and 1968	—190, 000
Total possible availability for payments to States	2, 060, 000

In accordance with the following tabulation projects presently approved and in various stages of development exceed by some $700,000 the total available funds if the proposed restoration is enacted.

Project and State	Status	Total cost	Federal cost	Obligated Federal funds
Harrison County and Jefferson County, Ohio.	Contract approved by Bureau, State to advertise bids May 1.	$610, 000	$457, 500	$457, 500
Perry County, Ohio	Partially approved by Commission.	885, 000	661, 770	None
Friendship Park, Ohio	Tentatively approved by Commission; documents being prepared.	1, 200, 000	900, 000	None
City of Jellico, Tenn	Approved by Commission and Department of the Interior.	306, 000	229, 500	[1] None
Jefferson National Forest, Va	Has tentative approval of Commission.	270, 000	270, 000	None
Daniel Boone National Forest, Ky	Under informal consideration by the Commission.	170, 000	170, 000	None
State game funds, Pennsylvania	Not formally proposed	18, 500	13, 875	None
Wayne National Forest, Ohio	do	40, 100	40, 100	None
Total, payments to States		3, 499, 600	2, 742, 745	457, 500

[1] Expected to be obligated in May 1967.

Numerous difficulties have been encountered in the development of a program; such as, rapid enactment of basic authority followed almost immediately by appropriation of funds; certain limiting provisions which tended to slow up the development of the program; approvals of regulations; the selection of a prospective project and development of a concrete proposal. All of these obstacles have been confronted and the program is now ready to get on its feet.

The welfare of the people in Appalachia is directly related to the full utilization of its land and resources. The proposed projects will in many ways develop such land and resources. The completion of the above projects will not only aid the people of Appalachia, but will, to an immeasurable extent, contribute to the recreational benefit of the millions within easy distance of the resource.

Restoration of the reduction will allow the program, now accelerating, to proceed at nearly the planned rate in FY 1968.

(P. 23, line 12)

AMENDMENT REQUESTED

Page 23, line 12 strike out "$1,572,000" and insert in lieu thereof, "$1,613,000",—the estimate, or an increase of $41,000 in the appropriation.

HOUSE REPORT

"The reduction of $41,000 is in connection with the increase requested to replace refuge receipt funds no longer available to this appropriation. In the opinion of the Committee, the minor increase requested in the budget estimate can be absorbed."

JUSTIFICATION

The amendment restores the $41,000 reduction made by the House in the Budget estimate. This amount is for the following activities:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
1. Departmental expense	$214,000	$183,000	$182,000	$1,000
2. Regional office expense	1,335,000	1,430,000	1,390,000	40,000
Total	1,549,000	1,613,000	1,572,000	41,000

The restoration of $41,000 will replace refuge receipts funds no longer available due to increased payments to counties pursuant to the August 30, 1964 amendments to the Refuge Revenue Sharing Act.

The General Administrative Expenses appropriation, for the last several years, has not been increased in proportion to the expansion of operating programs. This has resulted in reduced services to other programs and unless these funds are restored, that situation will be further aggravated.

Personal services and associated benefits account for 87 percent of this appropriation, the remainder providing for other objects of expenditure at a minimal level. Although the restoration requested is only about 2½% of the total appropriation, it is of significant importance. Little flexibility exists for making program adjustments to absorb even a modest reduction because of the high proportion of personal services in this appropriation and the relative stability of the staff.

The total amount requested for the administrative program is only 1.9% of the total funding for the entire Bureau. This ratio is extremely low.

NATIONAL PARK SERVICE

MANAGEMENT AND PROTECTION

(House hearings, pt. 1, pp. 1285–1352, Senate hearings, p. 555)

Appropriation 1967	$35, 932, 800
Estimate	40, 822, 000
House allowance	40, 442, 000
Restoration requested	380, 000

(P. 25, line 5)

AMENDMENT REQUESTED

Page 25, line 5 strike out "$40,442,000" and insert in lieu thereof "$40,822,000"—the estimate, or an increase of $380,000 in the appropriation.

HOUSE REPORT

"Appropriation, 1967	$35, 932, 800
Estimate, 1968	40, 822, 000
Recommended, 1968	40, 442, 000
Comparison:	
Appropriation, 1967	+4, 509, 200
Estimate, 1968	−380, 000

"The following table summarizes the increases recommended by the Committee and the reductions made in the budget estimate:

"Activity	Committee bill, 1968	Bill compared with—	
		1967 appropriation	Estimate, 1968
Management of park and other areas	$33, 725, 900	+$3, 279, 100	−$380, 000
Forestry and fire control	1, 835, 000	+127, 000	
Soil and moisture conservation	206, 900	+900	
Park and recreation programs	4, 376, 700	+89, 700	
Concessions management	297, 500	+7, 500	
Transfers in the estimates		+1, 005, 000	
Total, management and protection	40, 442, 000	+4, 509, 200	−380, 000

"The decrease of $380,000 includes the following items:

"Cape Lookout	$20, 000
Delaware Water Gap	20, 000
Guadalupe Mountains	70, 800
Herbert Hoover	27, 000
Indiana Dunes	108, 700
Jefferson National Expansion Memorial	54, 400
New York City Group	40, 000
San Juan Island	6, 500
Wolf Trap Farm	32, 600
Total	380, 000

"The Committee has received estensive adverse comment on the control of elk herds in Yellowstone National Park. It is suggested that this problem be given concerted attention by officials of the National Park Service with the view of controlling these herds through the use of suitable traps. Any additional costs occasioned by this activity shall be absorbed within available funds of the agency."

JUSTIFICATION

The amendment restores the following reductions made by the House in the Budget estimate for this appropriation:

Operation of new park areas	$238, 600
Operation of new facilities and requirements generated by increased visitor use and extension of the visitor season in existing park areas	141, 400
Total	380, 000

The amendment restores the reduction of $380,000 made by the House in the Budget estimate for this appropriation. This amount is distributed to actiivties as follows:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
1. Management of park and other areas	$30, 468, 800	$34, 105, 900	$33, 725, 900	$380, 000
2. Forestry and fire control	1, 708, 000	1, 835, 000	1, 835, 000	
3. Soil and moisture conservation	206, 000	206, 900	206, 900	
4. Park and recreation programs	3, 260, 000	4, 376, 700	4, 376, 700	
5. Concessions management	290, 000	297, 500	297, 500	
Total	35, 932, 800	40, 822, 000	40, 442, 000	380, 000

A breakdown of the restoration request by objects of expenditure follows:

11.0	Personnel compensation	$218, 000
12.0	Personnel benefits	23, 000
21.0	Travel and transportation of persons	12, 000
22.0	Transportation of things	11, 000
23.0	Rent, communications, and utilities	20, 000
24.0	Printing and reproduction	9, 000
25.1	Other services	32, 000
25.2	Services of other agencies	5, 000
26.0	Supplies and materials	31, 000
31.0	Equipment	19, 000
	Total	380, 000

1. *Management of park and other areas.*—The restoration of $380,000 requested under this actiivty is for the following:

Operation of new park areas	$238, 600
Operation of new facilities and requirements generated by increased visitor use and extension of the visitor season in existing park areas	141, 400
Total	380, 000

NEW PARK AREAS

Ten new park areas have recently been authorized for addition to the National Park System for which funds are required but for which no funds have heretofore been provided. The amount requested under this item was determined to be the minimum amount required to activate these areas in fiscal year 1968, including making provision for initial staffing, general expenses, and equipment. Funds were not requested for full-year salaries of permanent positions in most cases, as it was planned that some positions would be filled at such times during the year as the visitor and administrative workload gradually increased in them.

The House action in reducing the budget request for operations in these new park areas has eliminated entirely the funds requested for three of them (Guadalupe Mountains National Park, Texas; Indiana Dunes National Lakeshore, Indiana; and Wolf Trap Farm Park, Virginia) and reduced the funds requested for two others (Cape Lookout National Seashore, North Carolina and San Juan Island National Historical Park, Washington) to what is considered to be less than an adequate level.

It is necessary to provide some staffing without delay in newly authorized park areas to perform a wide variety of duties, and to gradually expand the staffs as needed. Experience has indicated that the presence of Service personnel is needed, among other things, to establish and to expand public and community relationships; to prepare and coordinate land acquisition programs; to prepare plans for developing interpretation, resource management, and maintenance programs to meet visitor needs, etc. It is also essential to have an adequate number of qualified Service representatives assigned to each park area on a full-time basis to protect the Government's interests, and also so that vital cooperative relationships with State, Federal, and municipal agencies can be maintained or established on a continuing basis. It should also be pointed out that during the formative stages of a new park area many important policy decisions must be made.

The restoration herein requested will provide funds for the following new park areas:

Cape Lookout National Seashore, N.C	$20,000
Guadalupe Mountains National Park, Tex	70,800
Indiana Dunes National Lakeshore, Ind	108,700
San Juan Island National Historical Park, Wash	6,500
Wolf Trap Farm Park, Va	32,600
Total	238,600

It is respectfully requested that the $238,600 disallowed by the House be restored so that all of the 10 recently authorized park areas can be staffed and activated early in the 1968 fiscal year on the limited basis contemplated in the budget.

OPERATION OF NEW FACIITIES AND REQUIREMENTS GENERATED BY INCREASED VISITOR USE AND EXTENSION OF THE VISITOR SEASON IN EXISTING PARK AREAS

The amount of $141,400 was disallowed by the House under this category for the following park areas:

Delaware Water Gap National Recreation Area, N.J.-Pa	$20,000
Herbert Hoover National Historic Site, Iowa	27,000
Jefferson National Expansion Memorial National Historic Site, Mo	54,400
New York City Group, N.Y	40,000
Total	141,400

The full amount of the increase requested under this category is needed to meet visitor needs and the related minimum requirements for management, protection, and interpretation of the park areas. In two of the parks (Herbert Hoover and Jefferson National Expansion Memorial National Historic Sites) the entire increase requested in the 1968 budget estimate was eliminated and in the other two (Delaware Water Gap National Recreation Area and New York City Group) the increase requested was partially allowed.

Pertinent information with respect to each of the areas follows:

DELAWARE WATER GAP NATIONAL RECREATION AREA, PA. AND N.J.

With the imminent transfer to the Service by the Corps of Engineers of acquired lands at Delaware Water Gap National Recreation Area, protection (both of Federal property and park visitors) will become increasingly important. It is anticipated that the area will cover an estimated 30,000 acres by the end of 1968 fiscal year. An important aspect of the authorizing legislation pertains to the preservation of scenic and scientific values which must also be evaluated and interpreted for visitor enjoyment. The House reduction of $20,000 should be restored so that the full increase requested for the area will be available to supplement the funds that were provided in the 1967 fiscal year appropriation to cover the initial activation of this recently authorized park area.

HERBERT HOOVER NATIONAL HISTORIC SITE, IOWA

The National Park Service will assume full operating and management responsibilities at Herbert Hoover National Historic Site from the General Services Administration on July 1, 1967, including the employment of 3 Park Guards, GS-3.

The services now provided by that Agency include public contact and protection duties at the grave site, blacksmith shop, Quaker church, and the birthplace cottage. These services are required on a 7-day week basis and the $27,000 is needed to finance these services in the 1968 fiscal year.

JEFFERSON NATIONAL EXPANSION MEMORIAL, MO.

The increase of $54,400 and seven permanent positions for Jefferson National Expansion Memorial will provide for meeting a greatly expanded workload incident to management and operation of newly constructed facilities, including the Memorial Gateway Arch and related improvements, and for meeting increased visitor use. The dimension of the management, interpretation and protection programs at this area will change materially when the Memorial Gateway Arch is opened to the public. This will take place and the full operating function will be assumed prior to the beginning of the 1968 fiscal year. In the 1968 fiscal year, this will involve the employment of four park guides, GS-4, at the arch for a 7-day week operation; 10 hours per day in winter and 14 hours per day in summer. It will also involve the employment of three additional guards, GS-4, to provide for adequate night guard services at the arch and Old Court House. Without the increased funds and staffing requested, the Service's current responsibility to the public cannot be fulfilled.

NEW YORK CITY GROUP, NEW YORK

The budget request includes a Curator, Museum Specialist, and interpretive, protective, and guide staffing and related general expense funds (a total of 15 permanent positions) to provide for rapidly expanding developments and increased visitation at the American Museum of Immigration, Federal Hall National Memorial, Castle Clinton National Monument, and Sagamore Hill National Historic Site. It should be noted that there was a total of 1,345,900 visits to the New York City areas during the 1966 calendar year. The House allowance would provide for less than full-year funding requirements to operate the newly constructed facilities and to meet the increased work load at these areas. The reduction of $40,000 made by the House should be restored so that adequate funds and staffing will be available to fulfill the Service's responsibility in the New York City Group of Park areas.

It is respectfully requested that the amount of $141,400 disallowed by the House be restored in order that the standard of operation contemplated in the estimate will not have to be lowered.

NATIONAL PARK SERVICE

MAINTENANCE AND REHABILITATION OF PHYSICAL FACILITIES

(House hearings, pt. 1, pp. 1353–1369; Senate hearings, p. 616)

Appropriation 1967	$26,680,000
Estimate	29,942,000
House allowance	29,581,000
Restoration requested	361,000

(P. 25, line 13)

AMENDMENT REQUESTED

Page 25, line 13 strike out "$29,581,000" and insert in lieu thereof "$29,942,000"—the estimate, or an increase of $361,000 in the appropriation.

HOUSE REPORT

"Appropriation, 1967	$26,680,000
Estimate, 1968	29,942,000
Recommended, 1968	29,581,000
Comparison:	
Appropriation, 1967	+2,901,000
Estimate, 1968	−361,000

"The decrease of $361,000 includes the following items:

"Guadalupe Mountains	$30,000
Indiana Dunes	19,200
Jefferson National Expansion Memorial	100,000
National Capital Parks	100,000
New York City Group	10,000
San Juan Island	20,900
Wolf Trap Farm	34,800
General	46,100
Total	361,000"

JUSTIFICATION

The amendment restores the following reductions made by the House in the Budget estimate for this appropriation. This amount is distributed to activities as follows:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
1. Roads and trails	$10,621,200	$11,665,200	$11,606,800	$58,400
2. Buildings, utilities, and other facilities	16,058,800	18,276,800	17,974,200	302,600
Total	26,680,000	29,942,000	29,581,000	361,000

A breakdown of the restoration request by objects of expenditure follows:

11 Personnel compensation	$183,000
12 Personnel benefits	12,000
21 Travel and transportation of persons	5,000
22 Transportation of things	6,000
23 Rent, communications, and utilities	25,000
24 Printing and reproduction	2,000
25 Other services	32,000
Services of other agencies	2,000
26 Supplies and materials	69,000
31 Equipment	25,000
Total	361,000

The restoration of $361,000 requested under this appropriation item is for the following:

	Roads and trails	Buildings, utilities, etc.	Total
Operation of new park areas	$22,300	$82,600	$104,900
Operation of new facilities and requirements generated by increased visitor use and extension of the visitor season in existing park areas	36,100	220,000	256,100
Total	58,400	302,600	361,000

NEW PARK AREAS

Nine new park areas have recently been authorized for addition to the National Park System for which funds are required under this appropriation item but for which no funds have heretofore been provided. The amount requested under this item was determined to be the minimum amount required for maintenance and operation of the new areas when activated in fiscal year 1968, including making provision for initial staffing, general expenses and equipment. Funds were not requested for full-year salaries of permanent positions in most cases, as it was planned that some positions would be filled at such times during the year as the visitor and maintenance workload increased in them.

The House action in reducing the budget request for maintenance and operations in these new park areas has eliminated the funds requested under this appropriation for three of them (Indiana Dunes National Lakeshore, Indiana; San Juan Island National Historical Park, Washington; and Wolf Trap Farm Park, Virginia) and reduced the funds requested for Guadalupe Mountains National Park to what is considered to be less than an adequate level.

Experience has indicated that maintenance personnel are needed at the time of activation of new areas to prepare existing buildings for occupancy, install or repair sewage and water systems, etc., and for clean up and general maintenance of the grounds for the benefit of the visiting public.

The restoration herein requested will provide funds for the following new park areas:

	Roads and trails	Buildings, utilities, etc.	Total
Guadalupe Mountains National Park, Tex	$15,000	$15,000	$30,000
Indiana Dunes National Lakeshore, Ind	2,300	16,900	19,200
San Juan Island National Historical Park, Wash	5,000	15,900	20,900
Wolf Trap Farm Park, Va	----------	34,800	34,800
Total	22,300	82,600	104,900

It is respectfully requested that the $104,900 disallowed by the House be restored so that all of the nine new park areas for which funds are required under this appropriation can be activated early in the 1968 fiscal year.

OPERATION OF NEW FACILITIES AND REQUIREMENTS GENERATED BY INCREASED VISITOR USE AND EXTENSION OF THE VISITOR SEASON IN EXISTING PARK AREAS

The amount of $256,100 was disallowed by the House under this category for the following park areas:

	Roads and trails	Buildings, utilities, etc.	Total
Jefferson National Expansion Memorial	----------	$100,000	$100,000
National Capital Parks	----------	100,000	100,000
New York City Group	----------	10,000	10,000
General	$36,100	10,000	46,100
Total	36,100	220,000	256,100

The full amount of the increase requested under this heading is needed to meet visitor needs and the related minimum requirements for maintenance and operations of the park areas.

For Jefferson National Expansion Memorial the entire increase requested in the 1968 budget estimate plus $11,100 of the Park's base was eliminated and for the National Capital Parks and the New York City Group the increase requested was only partially allowed.

Pertinent information with respect to each of the areas follows:

JEFFERSON NATIONAL EXPANSION MEMORIAL

The scope, complexity and workload incident to the maintenance and operation of the physical facilities at this area will change materially when the Memorial Gateway Arch, including a 10,000 square feet visitor center and related facilities, is opened to the public. The uniqueness of the Arch is certain to substantially increase visitor use. A technically trained employee (Chief of Maintenance) must be provided to supervise the maintenance and operation of the stainless steel arch which is 630 feet high and which includes air-conditioning and heating systems, two elevators and two electrically driven eight-car trains which run to the top of the Arch. A maintenanceman, a caretaker and a laborer will be required for painting, cleaning, adjusting, servicing, and performing minor repair work. This force will be assisted by temporary employees for which the budget increase requested includes $39,000 for five man-years. To meet peak loads, it is planned that the staff requested for the Arch will be fully integrated with the staff presently available. Without the increased funds and staffing requested, the Service cannot meet the greatly expanded workload and fulfill its responsibility to the public.

NATIONAL CAPITAL PARKS

The increase included in the budget was requested to meet wage rate increases and to provide for meeting a greatly expanded workload incident to maintenance and operation of newly constructed facilities in the National Capital area and for meeting increased visitor use. A police substation, a sub-maintenance unit, three comfort stations, 50 picnic areas, and 100-site campground at Greenbelt Park; a 50-site campground, 25 picnic areas and three comfort stations at Catoctin Mountain Park; newly reconstructed roadways and additional parking areas and drainage structures in East Potomac Park; and the program for a more beautiful Capital are just a few of the many additional improvements and facilities that must be operated and maintained in the National Capital area. The maintenance of the floral displays provided under the Construction appropriation and through donations is a very costly item. Based on experience since July 1, 1966, annual cost of Class A maintenance of these displays is from 25 to 30% of the capital investment. The reduction of $100,000 made by the House should be restored so that the funds and staffing will be available to fulfill the Service's responsibility in the Nation's Capital.

NEW YORK CITY GROUP

The reduction of $10,000 made by the House should be restored as the full amount of increase requested in the budget is needed for operation and maintenance of newly opened Old Orchard Museum at Sagamore Hill National Historic Site; expanded nightboat service for Ellis-Liberty Islands; additional janitorial and maintenance services at Castle Clinton National Monument, General Grant National Memorial, and Federal Hall; and to meet the rise in cost of supplies, materials and equipment.

GENERAL

The amount of $46,100 disallowed by the House under this item should be restored as the full amount of the increase requested in the budget is needed so that maintenance and operating requirements of existing park areas can be met. The additional funds are needed to operate and maintain new or reconstructed roads, trails, buildings, utilities, campgrounds, visitor centers, etc., and to meet increased operating costs brought about by increased visitor use and the increased costs of supplies, materials, and equipment.

It is respectfully requested that the amount of $256,100 disallowed by the House be restored in order that the standard of maintenance and operation contemplated in the estimate will not have to be lowered.

NATIONAL PARK SERVICE

CONSTRUCTION

(House hearings, pt. 1, pp. 1369–1376; Senate hearings, p. 627)

Appropriation 1967	$22, 894, 000
Estimate	17, 579, 000
House allowance	11,197,000
Restoration requested	5,427,000

(P. 25, line 23)

AMENDMENT REQUESTED

Page 25, line 23 strike out "$11,197,000" and insert in lieu thereof "$16,624,000"—an increase of $5,427,000 in the appropriation.

HOUSE REPORT

"Appropriation, 1967	$22, 894, 000
Estimate, 1968	17, 579, 000
Recommended, 1968	11, 197, 000
Appropriation, 1967	—11, 697, 000
Estimate, 1968	—6, 382, 000

"The net decrease of $6,382,000 consists of the following reductions:

Interpretive production facility, Harper's Ferry, W. Va	$618, 000
Replica locomotives and tenders, Golden Spike, Utah	326, 500
Completion of visitor center, Jefferson National Expansion Memorial, Missouri	2, 325, 000
Amphitheater, Yellowstone, Wyo	200, 000
Various projects in park system general, District of Columbia	600, 000
Various facilities—Wolf Trap Farm Park, Va	157, 500
Recreation building, Catoctin Mountain Park, Md	200, 000
Total	4, 427, 000

"While the Committee approves the construction program with the exceptions noted above, it is of the opinion that there will be sufficient delay in the construction program as a result of the 1967 deferrals to warrant a further reduction of $1,000,000 for slippage in the program.

"The Committee recommends the transfer to the construction program of $1,000,000 of the unobligated balance of funds previously appropriated under this appropriation for the acquisition of land and water rights.

"The Committee also recommends an increase of $45,000 for land acquisition and planning of the East Glacier Airport.

"The amount provided by activity consists of the following:

Camping and picnicking facilities	$2, 338, 000
Public service and administrative units	5, 002, 000
Utilities	3, 755, 000
Employee housing	462, 000
Miscellaneous	1, 140, 000
Acquisition of water rights	500, 000
Total	13, 197, 000
Less:	
Slippage	—1, 000, 000
Transfer of unobligated land acquisition funds	—1, 000, 000
Net appropriation	11, 197, 000"

JUSTIFICATION

The amendment restores $5,427,000 of the reduction of $6,382,000 made by the House in the Budget Estimates. This amount is distributed to activities as follows:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
1. Buildings, utilities, and other facilities	$22,394,000	$17,079,000	$11,652,000	$4,427,000
2. Acquisition of:				
(a) Lands			−955,000	1,000,000
(b) Water rights	500,000	500,000	500,000	
Total	22,894,000	17,579,000	11,197,000	5,427,000

A breakdown of the restoration request by objects of expenditure follows:

25.1	Other services	$400,000
32.0	Lands and structures	5,027,000
	Total	5,427,000

1. *Buildings, utilities, and other facilities.*—The restoration of $4,427,000 requested under this activity is for the following:

Interpretive production facility, Harpers Ferry, West Virginia

This facility is programed to meet the enormously expanding responsibility of the Service to provide information and interpretation to park visitors, to achieve more efficient and effective use of manpower, effect cost savings through centralization of space, equipment, and administrative services, and to achieve higher standards of quality in the interpretive services provided to visitors in the parks. As the National Park System expands, and the number of park visitors accelerates, the providing of information and interpretation program materials by the Harpers Ferry production facility will be increasingly important. Traditional personal services can provide only a small part of the needs.

It is proposed to consolidate the staff people who now produce all publications, museum and wayside exhibits, graphics, and audiovisual programs. Present production facilities are inadequate, widely separated, and as a result, inefficient. The 45 museum production people are now located in two laboratories, resulting in duplication of equipment and facilities.

It is planned that the building will be a three-story masonry structure—probably concrete block. While construction of the new facility can be accomplished in two phases, if the amount of $618,000 disallowed by the House is restored, the construction schedule can be integrated with resulting savings and economies: avoiding expense of advertising and administering two contracts and perhaps having two different contractors working on the same building; avoiding a possible increase in construction costs involved in stretching out the construction period and avoiding the difficulty in occupying a building while construction is underway. Additionally, the above described annual savings in staff and operating expenses will not be realized until the second phase is completed. It is recommended that the reduction of $618,000 made by the House be restored so that the combined facility can be constructed at one time.

Replica locomotives and tenders, Golden Spike, Utah

The National Park Service has assured the Utah Governor's Centennial Commission that, if possible, major interpretive features will be installed at Golden Spike National Historic Site, Utah, prior to the commemoration of the completion of the first transcontinental railroad. The centennial anniversary of the joining of the rails will occur on May 10, 1969. The replica locomotives and tenders are to be the principal interpretive facility at Promontory Summit. The Union Pacific Railroad has donated a mile of period 56-pound rail on which the replicas will stand. The Golden Spike site itself and most of the historic railroad grade is now in Federal ownership. Planning has been underway for appropriate commemoration of the event with funds authorized in the 1967 fiscal year. It is respectfully requested that the $326,500 for the replica locomotives and tenders be restored. If the funds are not available prior to the 1969 fiscal year, it will be most difficult to complete construction of these replica locomotives prior to the 1969 anniversary date.

Completion of Visitor Center, Jefferson National Expansion Memorial, Missouri

Pursuant to the Act of May 17, 1954, as amended, the Secretary of the Interior is authorized to construct upon the Jefferson National Expansion Memorial National Historic Site, St. Louis, Missouri, an appropriate national memorial to those persons who made possible the territorial expansion of the United States. Visitation to the memorial is approaching five million persons per year who come to visit, among other things, the completed Arch. The transportation system to the top of the Arch and a small lobby area to serve as an interim Visitor Center, are now under contract and will be completed before the end of the 1968 fiscal year. These facilities will accommodate about 7,000 persons per day. Average daily visitation during the months of June, July, and August was approximately 16,600 in 1965 and 21,100 in 1966. This figure is expected to reach 25,000 for the same period in 1967 and 28,000 in 1968. The theater, and the Museum of Westward Expansion, which are included in this project, are designated to accommodate 30,000 persons per day. Completion of the Visitor Center, theater, restrooms, and supporting facilities within the programed project are urgently needed to accommodate this anticipated visitation. The $2,325,000 requested for the Federal portion of this project is to be matched by $775,000 in donations (on a $1 to $3 basis) by the Albert P. Greensfelder Trust, St. Louis, Missouri. It is recommended that the reduction made by the House be restored so that this portion of the project can be completed to fulfill the Service's responsibility to the public.

Amphitheater, Yellowstone, Wyoming

The Old Faithful Geyser has the heaviest vistor use and concentration of traffic in Yellowstone National Park. Present visitor facilities and traffic circulation are obsolete and completely inadequate to serve the millions who enjoy a visit to Old Faithful Geyser and other thermal features each year. To alleviate the situation, a road to provide a bypass of the Old Faithful area for through traffic and to provide a better access for the heavy traffic into and out of the Old Faithful Geyser area was authorized in the 1967 fiscal year. This rerouting of the Grand Loop Road at Old Faithful will eliminate several old and deteriorated structures, among them being the visistor center, amphitheater, public comfort station and employee residences, some of which are located so close to the Old Faithful cone as to be an intrusion on the natural feature and an impediment to visitor enjoyment. The amphitheater is estimated to cost only $42,700. A reduction of $200,000 as proposed by the House would also take away funds for about eight of the 20 employee apartment units proposed in the budget. In order to provide for this public need, it is recommended that the reduction of $200,000 made by the House be restored.

Various projects in park system general, District of Columbia

The construction program under this heading includes the following projects:

Reconstruct small parks and reservations	$300, 000
Beautification and development of the Mall	500, 000
Ford's Theater (sound and light)	400, 000
Development of the Ellipse	400, 000
Total	1, 600, 000

The reduction of $600,000 would be applied to the three projects other than the Ford's Theater (sound and light).

Although the consultant's plan for developing The Mall and the Ellipse is not yet final, the plans propose expansion of "people serving" facilities as well as beautification. They will include among other things, additional fountains, a sculpture garden and sitting areas in the vicinity of the skating rink, facilities for on foot visitors to The Mall area and additional planting. The reconstruction of small parks and reservations item will permit continued redevelopment and refurbishing of a portion of the more than 700 small parks and reservations administered by the National Capital Region. This work will include adding floral displays, providing utilities, and in some cases, walks, benches, play areas, replanting of dead and overgrown plant material to implement the Administration's program for a more beautiful National Capital. The reduction of $600,000 made by the House will seriously impair these programs and it is respectfully requested that the reduction be restored so that all of the foregoing may be accomplished.

Various facilities—Wolf Trap Farm Park, Virginia

The construction projects proposed in the National Park Service 1968 development program for the Wolf Trap Farm Park would fulfill the Government's commitment which was made when P.L. 89–671 was enacted. Planning is proceeding for the construction of the amphitheater on lands being donated. The amphitheater will be funded from the $1,750,000 being provided by donation of Mrs. Jouett Shouse. The $157,500 requested in the National Park Service budget is required to provide for a comfort station, utilities, the conversion of a farm house to an administration building and related facilities necessary in connection with the operation of the amphitheater and the park. It is recommended that the reduction of $157,500 made by the House be restored so that all required development can be accomplished in a logical order.

Recreation building, Catoctin Mountin Park, Maryland

The 1968 development program includes $317,400 for Catoctin Mountain Park, of which $200,000 was disallowed by the House. The program included two projects: (1) the construction of a shower and laundry building and a recreation building at Camp Misty Mount; and (2) the reconstruction of the utility systems in the Camp Misty Mount headquarters area and the Park's main power line. The first project consists of an assembly room, storage and toilet rooms, visual aid rooms, laundry and shower facilities, etc., which will provide community type facilities to be used by organized group campers such as Girl Scouts, 4-H Clubs and Washington County School Children and Mentally Retarded Adults. The second project includes the replacement of sewer lines and disposal fields, replacement of water feeder lines and installation of fire hydrants, replacement of water main from the supply and well to the headquarters area. The existing storage supply (37,000 gallons) is not adequate to supply the new fire hydrants and the need for larger quantities of water in case of fire necessitates a new 50,000 gallon storage supply. In addition the existing main powerline is partly on poles and in places the poles have rotted and are in danger of collapse. The amount of power is inadequate since construction of the visitor center-administration building, an employee residence and location of the maintenance building on the south side of the Park.

The reduction of $200,000 made by the House would completely eliminate the first project and seriously hamper the second. It is respectfully requested that the reduction be restored so that the necessary developments may be accomplished to meet the public need.

2. *Acquisition of lands and water rights.*—The restoration of $1,000,000 of the unobligated balance of funds previously appropriated for acquisition of lands is requested under this activity.

Of the $1,885,932 unobligated balance carried forward at the beginning of the 1967 fiscal year, only $510,000 remains unobligated on April 30, 1967, which is needed to meet programing commitments already made or underway, as follows:

Area	Amount to be obligated	Reason for obligation
Blue Ridge Parkway	$900	Committed for a declaration of taking.
Grand Teton	8, 758	Being held to supplement funds donated for land acquisition.
Home of Franklin Delano Roosevelt	123, 083	Being held to satisfy pending court judgment
Independence	79, 654	$46,200 earmarked for St. Joseph's Church property; agreement now being negotiated.
Manassas	9, 867	For acceptance of option and related expenses.
Minute Man	14, 627	To be used for options under negotiation.
Point Reyes	221, 410	Being held to satisfy pending court judgments.
	51, 682	Contingencies for overruns, appraisals, surveys, title, etc.
Total	509, 981	

So that the land acquisition commitments under way may continue unabated and that the accounting records may remain intact with respect to the many obligation documents already recorded, it is respectfully requested that the $1,000,000 transfer to the construction program as proposed by the House be restored to the lands program.

NATIONAL PARK SERVICE

PRESERVATION OF HISTORIC PROPERTIES

(House hearings, pt. 1, pp. 1386–1404; Senate hearings, p. 645)

Appropriation 1967	----------
Estimate	$2, 323, 000
House allowance	1, 000, 000
Restoration requested	1, 323, 000

(P. 26, lines 17 and 18)

AMENDMENT REQUESTED

Page 26, lines 17 and 18 strike out "$1,000,000" and insert in lieu thereof "$2,323,000", the estimate, or an increase of $1,323,000 in the appropriation.

HOUSE REPORT

"Appropriation, 1967	----------
Estimate, 1968	$2, 323, 000
Recommended, 1968	1, 000, 000
Comparison:	
Appropriation, 1967	+1, 000, 000
Estimate, 1968	–1, 323, 000

"Funds recommended under this appropriation item are required to carry out the provisions of Public Law 89–665, approved October 15, 1966. This legislation was enacted to establish a program for the preservation of additional historic properties throughout the nation.

"Of the amount provided, $677,000 is for matching grants-in-aid, and $323,000 is for administrative and technical support."

JUSTIFICATION

The amendment restores the reduction of $1,323,000 made by the House in the Budget estimate for this appropriation. This amount is distributed to activities as follows:

	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
1. Matching grants-in-aid	----------	$1, 853, 000	$677, 000	$1, 176, 000
2. Administrative and technical support	----------	470, 000	323, 000	147, 000
Total	----------	2, 323, 000	1, 000, 000	1, 323, 000

A breakdown of the restoration request by objects of expenditure follows:

11.0	Personnel compensation	$101, 000
12.0	Personnel benefits	6, 000
21.0	Travel and transportation of persons	14, 000
22.0	Transportation of things	2, 000
23.0	Rent, communications, and utilities	4, 000
24.0	Printing and reproduction	5, 000
25.1	Other services	6, 000
26.0	Supplies and materials	5, 000
31.0	Equipment	4, 000
41.0	Grants, subsidies, and contributions	1, 176, 000
	Total	1, 323, 000

PRESERVATION OF HISTORIC PROPERTIES

The House action reduces the total request for $2,323,000 to $1 million, $677,000 of which is earmarked for grants-in-aid and $323,000 for administrative and technical support. Actually, the $323,000 for administrative and technical support represents amounts currently available for the Historic Sites Survey and the Historic American Buildings Survey programs which have previously been funded in the Service's Management and Protection appropriation. This amount is being transferred in the estimates from the Management and Protection appropriation to the new Preservation of Historic Properties appropriation and does not represent an increase. Also, as the entire $323,000 will be required in 1968 for execution of the Historic Sites Survey and the Historic American Buildings Survey programs at the same level as that currently obtaining, the House action actually makes no provision for additional staffing for administrative and technical support to handle the functions authorized by Public Law 89–665. The estimate requested, within the total increase of $2 million, an increase of $147,000 for administrative and technical support over and above the $323,000 included for Historic Sites Survey and Historic American Buildings Survey.

A detailed breakdown of the $147,000 request is as follows:

Additional staffing and general expense funds required for program execution:	
Permanent full-time positions:	
Chief, Office of Archeology and Historic Preservation, GS–16	$20, 075
Historian (architectural), GS–13	12, 873
Historian, GS–13	12, 873
Administrative assistant, GS–9	7, 696
Clerk-stenographer, GS–5	5, 331
Total salaries (5 positions)	58, 848
Less estimated lapse	8, 000
Net salaries	50, 848
Other general expenses, including personnel benefits, travel, supplies and materials, equipment, space rental, etc	24, 152
Subtotal	75, 000
Additional staffing and general expense funds required to support National Advisory Council:	
Permanent full-time positions:	
Staff assistant, GS–14	15, 106
Clerk-stenographer, GS–6	5, 867
Clerk-stenographer, GS–4	4, 776
Total salaries (3 positions)	25, 749
Less estimated lapse	2, 749
Net salaries	23, 000
Positions other than permanent:	
10 Council members ($100 per day, based on an estimate of 6 meetings of 5 days each, including travel time)	30, 000
General expenses, including personnel benefits, travel for Council and staff assistant, supplies, equipment, etc	19, 000
Subtotal	72, 000
Total	147, 000

The passage of P.L. 89-665 and the subsequent appointment by the President of the National Advisory Council on Historic Preservation has aroused intense interest throughout the Nation, and the pressure on the Service for information and guidelines for the execution of the program has already become more than the existing staff can cope with. Without the modest additional staff requested, the Service would be unable to expand the National Register or promulgate the criteria and guidelines essential for the States to be prepared to participate in the program when funds become available. Programs of survey and planning already initiated in many States in anticipation of the Federal program would lose momentum or be deferred altogether. Much of the stimulus to the historic preservation movement caused by enactment of P.L. 89–665 would be lost. Restoration of the $75,000 requested for additional staffing would enable the Service to form a skeleton staff to establish the working relationships with the States that will be essential if a State grant program is to be activated in the 1969 fiscal year as anticipated.

Elimination of the $72,000 requested for the National Advisory Council would, if sustained, mean that no meeting can be held for more than a year. The Council is charged with important responsibilities by Section 106 of P.L. 89–665, which has already invoked interagency procedures that will present issues to the Council for consideration during the 1968 fiscal year. It is therefore vital that activation of the Council not be delayed until the 1969 fiscal year. Restoration of the $72,000 would permit the work of the Council to proceed at once.

The budget submission called for $1,750,000 in grants to the National Trust in 1968. Pending the establishment of the grants program to the States, the Trust was conceived as the principal mechanism for making the new program immediately effective in emergency cases and in stimulating maximum participation and effort in the private sector—a mission for which the Trust is peculiarly well equipped.

Restoration of the full sum requested is essential to sustain the momentum throughout the Nation generated by passage of the Act.

OFFICE OF SALINE WATER

SALARIES AND EXPENSES

(House hearings, pp. 625–694; Senate hearings, p. 1571)

Appropriation, 1967	$27,500,000
Estimate, 1968	20,982,000
House allowance	7,500,000
Restoration requested	13,482,000

(P. 27, line 15)

AMENDMENT REQUESTED

(1) Page 27, line 15, strike out "$7,500,000" and insert in lieu thereof "$20,982,000", the estimate or an increase of $13,482,000 in the appropriation.

HOUSE REPORT

"The amount allowed includes $5,950,000 for research and development and $1,550,000 for administration and coordination."

"The total amount approved for this appropriation represents the balance of authorized funds not yet appropriated. Legislative action is currently in process for the extension of this authorization. However, pending the enactment of the legislation, the Committee has decided to pass over without prejudice the remaining balance of funds requested."

JUSTIFICATION

Explanation of amendment

The amendment restores the reduction of $13,482,000 made by the House in the budget estimate. This amount is distributed to activities as follows:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
1. Research and development:				
(a) Contracts and grants (non-Federal)	$25,695,000	$18,637,000	$5,655,000	$12,982,000
(b) Federal laboratories	320,000	795,000	295,000	500,000
2. Administration and coordination	1,485,000	1,550,000	1,550,000	----------
Total	27,500,000	20,982,000	7,500,000	13,482,000

The restoration is distributed by objects of expenditudes as follows:

25 Other services	$12,982,000
Services of other agencies	500,000
Total	13,482,000

Legislation to extend and increase the Office of Saline Water authorization is currently under consideration by the appropriate Congressional Committees. This legislation, when approved by the Congress, will be sufficient to cover the restoration requested herein. Therefore, it is requested that the reduction of $13,482,000 within this activity be restored contingent upon the passage of the authorizing legislation. This action would also eliminate the necessity of requesting a supplemental appropriation if the authorizing legislation was approved subsequent to the passage of the appropriation act.

OFFICE OF WATER RESOURCES RESEARCH

SALARIES AND EXPENSES

(House hearings, pt. 1, pp. 695–741; Senate hearings, p. 271)

Appropriation, 1967	$6,894,000
Estimate, 1968	12,700,000
House allowance, 1968	11,130,000
Restoration requested	1,500,000

(P. 28, line 7)

AMENDMENT REQUESTED

Page 28, line 7 strike out "$11,130,000" and insert in lieu thereof "$12,630,000", an increase of $1,500,000 in the appropriation.

HOUSE REPORT

"The Committee recommends an allowance of $11,130,000 for administration of the Water Resources Research Act of 1964 (Public Law 88–379), as amended.

Funds included in this item will provide a total of $5,100,000 for assistance to States. This provides $100,000 for each of the 51 Institutes as authorized under the Act.

The recommended amount also includes $3,000,000 for matching grants to Institutes as provided by the Act, an increase of $1,000,000 over 1967.

The amount recommended by the Committee also includes $2,000,000, a reduction of $1,000,000 below the budget estimate, for water resources research to be performed by any qualified entity or individual as provided under Title II of the Act. The Committee is not convinced that plans and guidelines have been sufficiently developed for this phase of the program to warrant approval of the total budget request.

The budget estimate included an increase of $1,000,000 to operate a Water Resources Scientific Information Center. The amount recommended by the Committee provides $500,000 for this activity.

Of the amount approved by the Committee, $530,000 is included for administrative expenses in fiscal year 1968."

JUSTIFICATION

The amendment restores $1,500,000 of the reduction of $1,570,000 made by the House in the Budget estimate for this appropriation. This amount is distributed to activities as follows:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
1. Assistance to States for institutes	$4,463,000	$5,100,000	$5,100,000	
2. Matching grants to institutes	2,000,000	3,000,000	3,000,000	
3. Additional water research		3,000,000	2,000,000	1,000,000
4. Scientific information center		1,000,000	500,000	500,000
5 Administration	431,000	600,000	530,000	
Total	6,894,000	12,700,000	11,130,000	1,500,000

A breakdown of the restoration by objects of expenditure follows:

21	Travel and transportation of persons	$3,000
23	Rent, communications, and utilities	2,000
24	Printing and reproduction	4,000
25.1	Other services	25,000
25.2	Services of other agencies	463,000
26	Supplies and materials	1,000
31	Equipment	2,000
41	Grants, subsidies, and contributions	1,000,000
	Total	1,500,000

It is essential that the recommended reductions of $1,000,000 for water research to be performed by qualified entities or individuals under Title II of the Water Resources Research Act, and $500,000 for operation of a water resources scientific information center, be restored to the fiscal year 1968 budget estimate. Such restoration is required to ensure a well-balanced, effective, and productive water resources research program pursuant to the objectives of the Act, and to promote improved coordination of Federally supported water research activities, thus serving to avoid undesirable duplication of research effort and promoting effective dissemination of research results to scientists and managers working in the water resources field.

Additional water research

The proposed reduction of $1,000,000 for water research under Title II would have a serious adverse impact upon the Title II program. The funds originally requested ($3,000,000) represent only 50 percent of the amount authorized for Title II research in 1968, and the additional proposed reduction would seriously impair the opportunity that currently exists for making effective use of the water research talent that is available, at many universities and private research organizations, to seek new ways, discoveries, and bases essential for solution of critical Nation-wide water problems relating to such priority subject areas as: water resources planning and management, and socio-economic aspects of water resource problems; processes of the hydrologic cycle; and conservation of water quantity and quality.

Positive actions to implement the Title II program immediately following program funding have already been taken by our office. Title II policies, supplementary to those contained in the Act, have been developed and were distributed to potential program participants in January 1967. Similarly, research proposal preparation guidelines and a statement of suggested areas for priority research attention were prepared and distributed. Several meetings have also been held with officials of Federal agencies, both within and outside the Department of the Interior, in order to establish effective lines of communications for the evaluation of specific research project proposals and the coordination of the Title II research effort so as to achieve most effective research results with funds made available.

Within the past several weeks the Office of Water Resources Research has already received 245 Title II research proposals involving requests for approximately $29 million. It is expected that many additional proposals will be received following announcement of the availability of fiscal year 1968 funds. The 245 already received, which were submitted by competent research organizations from the private sector of the economy, by public and private universities, by private research foundations, and by others, have confirmed that a wide spectrum of highly qualified scientists, engineers, and research organizations are desirous of and qualified to undertake water resources research with Title II support. These proposals also demonstrate that Title II research can be oriented toward finding solutions for major water resources problems and, further, they demonstrate that Title II research-performing organizations, and the individual scientists and engineers associated with them as principal investigators and consultants, will significantly enhance the technical strength and diversity of the Federal Government's research capability. Additionally, it is evident that water research organizations not effectively reached through the Title I authorization can, under Title II, open up new research approaches. This is notable particularly in such scientific research areas as operations research and in the coupling of hydrologic and economic models for water resources research.

It is apparent that a balanced water resources research program will be unable to operate most effectively in the absence of participation by eligible and qualified organizations under Title II of the program. Therefore, restoration of the $1,000,000 House Committee reduction is requested.

Scientific Information Center

The House Committee reduction of $500,000 for operation of a Water Resources Scientific Information Center, leaving $500,000 for this program activity, would seriously impair the opportunity for achieving effective center operations. If only $500,000 is made available for center operations in fiscal year 1968, it will not be possible to provide the quality and scope of technical information dissemination, storage, and retrieval activities that is urgently desired by Federal agencies and other organizations engaged in Federal water resources research activities.

The principal objectives sought by the center are: the avoidance of undesirable duplication of research; insuring improved coordination of efforts among persons engaged in Federal water-related research activities; and extending the capacity of the water resource scientist and manager to carry out productive and additional urgent research, program operations, and management work, as well as to facilitate the application of newly developed knowledge to the water resource scientist's and manager's activities. With only $500,000 available for center activities these objectives could not be achieved. Rather, center operations would need to be restricted so as to encompass only a very limited percentage of the total number of persons who would profit from being participants, or customers, in the information system, and severe restrictions would need to be placed on the number of scientific and technical water resources publications and documents taken into the center for processing. Or, as an alternative, the center could be staffed and equipped only to the extent necessary to ensure collection and processing of system inputs, including customers interest profiles, but providing no selective dissemination of information and copy services to system customers until fiscal year 1969 at which time, with adequate funding, full-scale service would be available.

All Federal agencies with significant water-related program activities, and collaborating state water research institutes, have expressed a keen interest in being participants in an effective Government-wide water resources technical information center. In the absence of such a center these agencies would likely need to establish separate individual systems responsive to their urgent and immediate scientific information handling needs. Quite possibly, such individual systems would not be compatible with the planned Government-wide system that is involved in this appropriation request. Hence, the establishment of a single, consolidated water resources scientific information center to effectively serve all Federal interests, at the earliest possible date, would appear to be in the best interest of achieving overall cost savings to the Government.

Much work has already gone into the design of the proposed Governmentwide water resources information system. In fact, the system to be used will represent an extension, with certain modifications as may be appropriate, of a technical information handling system currently in operation by the Bureau of Reclamation but now meeting that bureau's needs only. Hence, with this ongoing system to build upon, it will be possible to rapidly expand system inputs, customers, etc., to meet the needs of other agencies. Only a minimum amount of time will be required for system planning and implementation.

In view of these circumstances, and in order to achieve a fully effective information center operation in 1968, the full amount of funds requested for center operations should be made available.

OFFICE OF THE SECRETARY

SALARIES AND EXPENSES

(House hearings, pt. 2, pp. 20–99; Senate hearings, p. 81)

Appropriation, 1967	$4,998,900
Estimate, 1968	7,570,000
House allowance	6,776,500
Restoration requested	607,500

(P. 28, line 23)

AMENDMENT REQUESTED

Page 28, line 23, strike out "$6,776,500" and insert in lieu thereof "$7,384,000", an increase of $607,500 in the appropriation.

HOUSE REPORT

"The total decrease of $793,500 includes $74,300 for salary and related cost increases in the Office of the Secretary and the Office of the Under Secretary; $65,100 for the Office of Program Analysis; $184,000 for the Office for Equal Opportunity; $49,100 for the Office of the Science Advisor; $8,000 for Interior coordination, Water Resources Council; $75,000 for the Office of Ecology; $105,000 for the Office of the Assistant Secretary for Water Pollution; and $47,000 for the Office of Survey and Review.

In addition, the recommended decrease includes a reduction of $186,000 representing defense funds previously carried in the schedules for Civil Defense and Defense Mobilization Functions, Federal Agencies, Office of Emergency Planning. This item will be considered in the appropriation for the Office of Emergency Planning.

As was noted in the hearings, the Committee is becoming increasingly concerned with the funding practices being followed by the Office of the Secretary. The total appropriations for the Office of the Secretary in the 1967 fiscal year amounted to $4,998,900. Yet in the budget justifications for the 1968 estimate, the total amount available in fiscal year 1967 was shown as $6,795,500. This of course resulted from the transfer of various functions and funds, some of which the Committee is not inclined to question.

However, there seems to be an increasing tendency in the Office of the Secretary to revise organizational structures and realign the application of funds regardless of the pattern set forth in the budget submission. The Committee recognizes that to a certain extent such practices are feasible and practicable when done within reason. Notwithstanding, the Committee wishes to go on record that it will not countenance the continued manipulation of appropriated funds to the extent that has occurred during the past few years."

Justification

The amendment restores $607,500 of the $793,500 reduction made by the House in the Budget estimate for this appropriation. This amount is distributed to activities as follows:

Activity	Appropriation, 1967	Budget estimate, 1968	House allowance, 1968	Restoration requested
1. Departmental direction	$1,026,100	$1,694,100	$1,238,600	$455,500
2. Program direction and coordination	1,520,200	1,880,000	1,589,000	105,000
3. Administrative management	2,125,300	3,656,800	3,609,800	47,000
4. Commissioner of Fish and Wildlife	148,300	150,500	150,500	----------
5. General services	179,000	188,600	188,600	----------
Total	4,998,900	7,570,000	6,776,500	607,500

A breakdown of the restoration by objects of expenditures follows:

11	Personnel compensation	$469,400
12	Personnel benefits	33,100
21	Travel and transportation of persons	37,000
22	Transportation of things	500
23	Rent, communications, and utilities	8,900
24	Printing and reproduction	8,300
25.1	Other services	9,000
25.2	Services of other agencies	24,500
26	Supplies and materials	6,800
31	Equipment	10,000
	Total	607,500

Office of the Secretary

Restoration of $50,300 for the immediate Office of the Secretary is requested. Reflecting the requirements placed upon the Secretary, he continually finds it necessary to make adjustments in his immediate staff. This may involve the employment of a consultant to perform a special assignment; an addition to the staff to assist him in a new assignment; or changes in staff which may result in the employment of an individual at a higher grade. The Secretary must be permitted this flexibility.

The increase requested is required to assure sufficient funds to continue at the current operating level. Unless the additional funds are available, positions in this or other areas must be held vacant, placing a very difficult burden on available staff.

Office of the Under Secretary

An increase of $24,000 is requested for the Office of the Under Secretary. Substantially the same situation exists here as in the immediate Office of the Secretary. Relief is urgently needed.

Office for Equal Opportunity

During the current year the Office for Equal Opportunity is operating under a total budget of $285,000 of which $81,200 is made available as part of the direct appropriation for the Office of the Secretary. The remainder is being provided by reimbursements from the bureaus and offices of the Department. An increase of $184,000 has been requested for the Fiscal Year 1968 in direct funding but this has been eliminated by the House. The reimbursable arrangement is not considered to be a satisfactory method of financing and restoration of the $184,000 is requested.

The Department's workload in equal opportunity continues heavy. Although it is contemplated that bureaus and offices will assume the major responsibility and workload in equal opportunity, rapid developments in the regulatory requirements of the Federal agencies charged with coordinating responsibility have made it necessary to retain major operational responsibilities and program direction in the Office of the Secretary.

The Department administers over 80 programs which are subject to Title VI of the Civil Rights Act of 1964, and which are widely diversified. The accession of the Federal Water Pollution Control Administration to this Department has added major new responsibilities and programs.

Office of Program Analysis

A reduction of $65,100 was made in the funds requested for the Office of Program Analysis. Restoration of this reduction is essential for effective operation of the Department's planning-programming-budgeting system.

The President and the Congress repeatedly have emphasized the need for efficient and effective operation of Federal programs. This can be greatly facilitated by using the most modern management techniques and skills available.

The President's direction for the initiation of a fully coordinated and integrated planning-programming-budgeting system was particularly timely for the Department of the Interior. The urgency and challenge of meeting the major problems associated with a soaring population, constantly improving standards of living, a shrinking share of space and natural resources combined with increased demand per person, the need for the most effective management of both renewable and non-renewable natural resources, and the need to restore and protect the quality of our environment both for present and future generations have focused attention on the vital and expanding role that must be played by the Department of the Interior. This has been recognized by recent enlargement of Interior's responsibilities and authorities in major resource areas such as water, recreation, and the multiple use management of public lands.

Interior programs involve every natural resource. Specific resource assignments are widely dispersed throughout the Federal government. For example, there are over 70 bureaus and offices having direct or indirect involvement in outdoor recreational activities. Within the Department of the Interior there are 12 bureaus having significant recreational involvement. Similarly the management of the Nation's water resources involve over 40 bureaus and offices with 14 Interior units having major responsibilities and involvement. In view of the importance of these and our other resources, planning must be fully coordinated at all levels of the Federal government—bureau, department, President, and the Congress. Federal/State resource management relationships are of constantly increasing importance. Proper consideration of State and local roles in Federal programs is essential.

The PPB system is an important tool that can provide the necessary analysis, data, program evaluation and formulation, and planning concepts that must be made available to the bureau head, the Secretary, the President, and the Congress as a basis for making the hard and essential decisions that must be made. The need and demand for Federal services will continue to increase. Decisions must be made relative to providing for such programs within the dimensions of Federal funds that are or can be made available. Relative priorities must be established and evaluated. Alternatives and related factors must be adequately developed, appraised, and presented to the decision maker.

The Office of Program Analysis has been established in the Department of the Interior to meet this need. It has been in operation for approximately a year and a half. Fourteen of its twenty positions have been provided for by internal adjustments within the Office of the Secretary through consolidation of the major planning and analysis effort into this one central unit. The new system is now operational but not fully staffed. In developing the departmental system, primary emphasis has been given to:

The identification of national needs and goals with greater precision.

The determination of specific objectives and goals and the determination of relative priorities and urgencies.

The development of alternative means of reaching these goals most effectively.

The determination of probable costs and relative effectiveness of both ongoing and proposed programs.

The evaluation of accomplishments for both current program management and as a basis for improved program planning.

The development of fully coordinated long-range plans.

The PPB system does not make decisions but it will provide the decision maker with the best possible data for the making of necessary decisions. The quality of the planning and programming effort is primarily dependent upon the quality of the data and analysis which forms the basis for program plans, determination of alternative courses of action, and other considerations for evaluating program proposals and making program decisions.

In installing the departmental system, first attention was given to the development of a uniform, fully integrated system. This is now fully operational. Next provision was made for both initial and continuing comprehensive review and coordination of departmental programs and evaluation of public needs and benefits. This too now is in operation. Additional skills are needed to round out the system and its related organization to provide for adequate in-depth analysis of existing and proposed programs. Initial staffing concentrated on technical resource oriented professional disciplines and skills such as hydrology, engineering, minerals, forestry, recreation, public administration, etc. In order to complete the essential mix of skills, additional staffing in the areas of economics, statistics, systems analysis, etc. are required. These are the positions involved in the reduction proposed.

The $65,000 reduction would make it impossible to fill 5 analyst positions which are required for operation of an effective system incorporating the proper mix of professional skills which must be applied to the wide variety and complexity of departmental programs. Without these additional skills, the effectiveness of the Department's planning-programming and analysis effort will be seriously impaired as fully adequate professional leadership, direction, analysis, and program evaluation must be provided at the level of the Secretary. The staffing proposed in the Fiscal Year 1968 budget is the minimum for effective operation of the departmental PPB system. It, therefore, is requested that the $65,100 be restored.

Office of the Science Adviser

This request relates to restoration of $49,100 for the Office of the Science Adviser.

The Science Adviser has assumed a growing role in the planning and management of the Department's scientific efforts. He has provided the top leadership in weather modification planning, for resources satellites, for earthquake prediction and other solid earth sciences programs, for marine resource questions and for numerous international scientific activities. These functions have been performed in addition to those arising from the growing requirements in water resources research.

There is need for full time staff on water resources research which cannot be provided by the present staff. This is caused by the rapid increase in the size and diversity of water resources research activities in the Department, the lack of water research specialists on the present staff, and the high volume of work on other scientific affairs expected of the Science Adviser.

The importance of the application of science and engineering to the solution of our water problems is evidenced by the support of the Congress for such activity in many of Interior's Bureaus. The role of the Science Adviser for coordination, increasing communication and prevention of duplication must, as a result, receive high priority in the light of this greatly increased effort. These funds will provide a capability for review and oversight which the Congress would expect for the efficient management of water resources research.

Office of Ecology

The budget included a request for $75,000 for a new Office of Ecology. Restoration of this amount is requested.

The proposal to expand leadership and planning capabilities so that we can learn more about trends in the quality of our environment is very timely. The Department places a high priority on this matter. The reasons for this are several.

1. The system within the federal and national structure to determine potential environmental hazards is poorly organized. There is no one focal point which is charged to think about and furnish the technical capability to determine broad trends in the total environmental complex. Increased efficiencies for purposes of environmental protection can be realized from present programs if improved coordination and leadership are provided.

2. Baseline information in a form useful for comparison purposes is lacking.

3. There are numerous places such as weather modification where it is obvious that problems and misunderstandings will develop from environmental modification which is planned or is already in process. Information on these

from an unbiased source will be helpful for improved decision making and in successful project accomplishment.

We believe this program offers a start on solutions to many problems of national significance. It is not in the nation's best interest to delay further organization for improved ecological research.

Assistant Secretary for Water Pollution Control

Within the past year, the responsibility for water pollution control has been transferred to the Secretary of the Interior while at the same time these responsibilities have increased due to the intensified Federal and State effort to prevent further water pollution and to clean up what pollution remains. The Office of the Assistant Secretary of the Interior for Water Pollution Control was, therefore, created to give this program the urgently needed impetus and policy direction which are required for the Department of the Interior:

(1) To fulfill its responsibility to control water pollution;

(2) To discover economic means to convert saline water to fresh water;

(3) To provide critically necessary coordination with other Federal and State water use and waste management activities;

(4) To provide an adequate supply of fresh water to meet the increasing demands of the United States' expanding population. The reduction of $105,000 in the increase requested for the Assistant Secretary for Water Pollution Control will seriously handicap him in these increasingly important tasks.

The amount requested would permit attainment of an operating level commensurate with the other Assistant Secretaries.

Interior coordination—Water Resources Council

An increase of $23,000 was requested for providing a staff assistant to the Secretary together with a secretary and other expenses for the purpose of assisting the Secretary in coordinating the work of the Water Resources Council as it relates to the programs of the Department of the Interior. The activities of the Council as they develop will require a geat deal of participation by the various bureaus. This participation must be coordinated within the Department and the Secretary must be kept advised regarding the plans and the effect on Department programs, as well as providing guidance to the bureaus in this cooperative program. This is particularly true since the Secretary is the Chairman of the Council.

The increase of $15,000 authorized by the House would not be sufficient to cover the full salary and benefits of the staff assistant and restoration of $8,000 is requested to provide full coverage of his salary and expenses as well as that of a secretary.

Office of Survey and Review

The increase of $94,000 in the Budget request for the Audit Operations activity in the Office of Survey and Review represented a bare minimum to cope with workload developments traceable directly to expansion in key Department programs. The fund increase, if granted, will permit only a very reasonable amount of internal audit activity related to the Federal Water Pollution Control Administration. No funds for this purpose were available when the Audit Operations consolidation took place. In a relatively new and growing agency like Federal Water Pollution Control Administration some internal auditing is essential to good management. With respect to the same agency, certain grant auditing is exceeding original estimates with program volume substantially above the level at which the agency operated in Health, Education and Welfare.

In the interest of staffing economy and efficiency, the Office of Survey and Review makes selective use of non-Interior agency staffs in contract audit. Of the increased fund request for 1968 ($94,000) $20,000 is to finance (1) additional audit assistance by the Defense Contract Audit Agency in relation to Federal Water Pollution Control Administration and other contracts and (2) audit services by Housing Assistance Administration for Indian Public Housing Projects which are expected to increase 100 percent over fiscal year 1967.

The House Committee action, which reduced the requested increase by half, will seriously impair the ability of Survey and Review to render vital audit services to Federal Water Pollution Control Administration; will make it impossible to arrange audits of certain Interior contracts involving substantial values; and will impose new structures on a function already operating under a self-imposed economy factor of 25 percent and already handling a workload far above normal ratios to staffing and funds.

GENERAL PROVISIONS, DEPARTMENT OF THE INTERIOR

SEC. 104

(Limitation on funds for hiring of consultants)

(House hearings, pt. 2, pp. 77–78; Senate hearings, p. 113)

(P. 30, line 16)

AMENDMENT REQUESTED

Page 30, line 16 after the word "Secretary" strike out the following: ", in total amount not to exceed $250,000".

HOUSE REPORT

No statement is made in the House Report concerning this provision.

JUSTIFICATION

It is recommended that the language limiting the use of appropriations made to the Department of the Interior in this Bill and in the Public Works Appropriation Bill for consultant services to $250,000 be eliminated from the Bill.

The Department has established procedures which limit the employment of consultants to those cases which are absolutely necessary.

However, with the transfer in 1967 of the Water Pollution Control Administration to the Department of the Interior, the hire of consulants for that organization will fall within the limitation in this Bill. We have been unable to estimate with any degree of accuracy to what extent the limitation on the use of appropriated funds for the hire of consutlants should be increased because of the transfer of that organization. Another difficulty in trying to gage the amount of limitation that will be needed in 1968 is the fact that the water pollution control programs are expanding because of the increased responsibilities resulting from legislation enacted during the last session of Congress. Furthermore, we feel that some margin should exist for taking care of unforeseen problems which may arise in connection with the programs of the other bureaus of the Department.

The most economic and advantageous means of obtaining needed talent to help solve the many problems which confront the Department is to hire consultants on a relatively short-term basis. The alternative is to hire more employees. With the inclusion in this section of the words "*when authorized by the Secretary*", the employment of consultants is under the administration of the Office of the Secretary, thereby assuring that a very tight control is exercised on the use of consultant services. We shall continue to hold expenditures for this purpose to as low an amount as practicable.

DEPARTMENT OF AGRICULTURE,
Washington, D.C., April 28, 1967.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Enclosed are statements in support of the amendments which we request be made in the Forest Service portion of the Department of the Interior and Related Agencies Appropriation Bill, 1968, as passed by the House.

These proposed amendments would restore the budget estimates, with the exception noted below. The House reductions are particularly serious since the budget estimates provided only the minimum needed to do an effective job of protecting and managing the National Forest resources and conducting our Forestry Research Programs.

The House Bill, page 33, line 1, under heading "Forest Roads and Trails (Liquidation of Contract Authorization)" provides $110,000,000 for construction and maintenance of forest development roads and trails. The amount requested was $110,500,000. We are not requesting restoration of the $500,000 even though the need for construction and maintenance of forest development roads and trails continues to increase with expanding programs. The Forest Service now estimates, based on later information, that increased receipts from Forest Service activities, (10% of which are appropriated for roads and trails) will likely offset this decrease.

Representatives of the Department will be glad to furnish any additional information you may need, or to appear before your Committee as necessary to further discuss the 1968 budget estimates of the Forest Service.

Sincerely yours,

John A. Schnittker,
Under Secretary.

Forest Service

Forest Projection and Utilization

FOREST LAND MANAGEMENT

(House hearings, pt. 2, p. 1074; Senate hearings, p. 1639)

1967 appropriation	$176,150,000
1967 appropriation (including pending pay cost supplemental)	178,707,000
1968 budget estimate	186,238,000
House bill	185,063,000
Restoration requested	1,175,000

AMENDMENT REQUESTED

Page 31, line 21, strike out "$185,063,000" and insert in lieu thereof "$186,238,000", an increase of $1,175,000 to restore the budget estimate.

HOUSE REPORT (P. 34)

"Total reductions of $1,350,000 below the budget estimate include: $750,000 for the upgrading of waste treatment systems at 25 recreation sites and the development of recreation facilities; $100,000 for development and operation of a mechanical gravel cleaner; and $500,000 for management and development needs relating from water development projects proposed and constructed by other agencies.

"The amount recommended by the Committee also includes an increase of $175,000 to complete the water system at Blanchard Springs Caverns, Arkansas.

"If the anticipated regular harvest program fails to materialize, the Forest Service indicates that savings can be shifted to additional sales of salvage and thinning material to the extent that such can be marketed. Should this occur, the Committee will consider reprogramming available funds from within the total timber sales item for additional thinning and salvage work."

JUSTIFICATION OF THE AMENDMENT BY THE DEPARTMENT

The amendment proposed by the Department would eliminate the $175,000 increase added by the House and restore the reductions totaling $1,350,000 in the House Bill. These amounts are distributed to subactivities as follows:

Forest protection and utilization

	Fiscal year 1967		1968 budget estimates	1968 House bill	Restoration or amendment requested
	Appropriations	Appropriations (including pending pay cost supplemental)			
Forest land management:					
National forest protection and management:					
Timber resource management:					
(*a*) Sales administration and management	$33,935,000	$34,575,000	$35,900,000	$35,900,000	
(*b*) Reforestation and stand improvement	17,430,000	17,640,000	17,640,000	17,640,000	
Recreation, public use	30,770,000	31,248,000	34,638,000	34,063,000	+$575,000 (1)
Wildlife habitat management	3,897,000	3,971,000	4,301,000	4,201,000	+100,000 (2)
Range resource management:					
(*a*) Management	5,404,000	5,527,000	5,682,000	5,682,000	
(*b*) Revegetation	2,820,000	2,854,000	2,854,000	2,854,000	
(*c*) Improvements	3,395,000	3,442,000	3,442,000	3,442,000	
Soil and water management	6,261,000	6,361,000	6,361,000	6,361,000	
Mineral claims, leases, and special uses	4,004,000	4,097,000	4,097,000	4,097,000	
Land classification, adjustment, and surveys	5,605,000	5,725,000	6,349,000	6,349,000	
Forest fire protection	25,120,000	25,577,000	26,172,000	26,172,000	
Structural improvement for fire and general purposes (construction and maintenance)	10,909,000	11,040,000	11,040,000	11,040,000	
Payments to employees' compensation fund	733,000	733,000	759,000	759,000	
Subtotal	150,283,000	152,790,000	159,235,000	158,560,000	+675,000
Amounts advanced from cooperative range improvements	−700,000	−700,000	−700,000	−700,000	
Subtotal, national forest protection and management	149,583,000	152,090,000	158,535,000	157,860,000	+675,000
Water resource development related activities	6,716,000	6,766,000	8,660,000	8,160,000	+500,000 (3)
Fighting forest fires	5,000,000	5,000,000	5,000,000	5,000,000	
Insect and disease control:					
White pine blister rust control	3,695,000	3,695,000	2,270,800	2,270,800	
Other pest control	8,676,000	8,676,000	9,292,200	9,292,200	
Subtotal, insect and disease control	12,371,000	12,371,000	11,563,000	11,563,000	
Acquisition of lands, Weeks Act	2,480,000	2,480,000	2,480,000	2,480,000	
Total, forest land management	176,150,000	178,707,000	[1] 186,238,000	[1] 185,063,000	+1,175,000

---

[1] Excludes $319,000 for space rental which was transferred to the General Services Administration in 1967.

(1) *The Department recommends that the reduction of $750,000 for recreation facilities be restored and the House increase of $175,000 for improvements at Blanchard Springs Caverns, Arkansas be eliminated.*—A reduction of $750,000 in the increase of $1,951,000 for the upgrading of waste treatment systems proposed in the 1968 budget would curtail critically needed facilities. It would prevent the Forest Service from taking effective measures to abate water pollution from these facilities, pursuant to administration policy in Executive Order 11258 (November 17, 1965). Facilities and sites are now receiving human use beyond designed capacity. To delay the installation of these critically needed facilities another year would result in added damage to the vegetation and soils and create more serious pollution problems. To restore this damage to the basic resources would increase costs and in some cases a delay would result in irreparable loss. The $750,000 reduction would be made as follows:

Project and State:	*Reduction*
Gull Lake Campground, Calif	$144, 700
Wright Lake, Fla	13, 800
Big Scrub, Fla	27, 600
Mill Dam, Fla	13, 800
Glenn Ellis, N.H	20, 000
South Pond, N.H	35, 000
Russel Pond, N.H	30, 000
Lake Dorr, Fla	33, 100
Fore Lake, Fla	33, 200
Garden's Bluff, Tenn	30, 400
Shook Branch, Tenn	18, 300
Parksville Lake, Tenn	32, 200
Choctaw Lake, Miss	90, 000
Campton Pond, N.H	40, 000
Diamond Lake, Oreg	187, 900
Total	750, 000

The House increase of $175,000 to complete the water system at Blanchard Springs Caverns, Arkansas should be eliminated in view of high priority needs for other projects as reflected in the budget estimates.

(2) *The Department recommends restoration of the $100,000 for wildlife habitat management.*—A reduction of $100,000 in the budget increase of $155,000 for development and operation of a mechanical gravel cleaner will substantially reduce test operations, evaluation of equipment, and adaption to inland tributary streams of equipment designed to desilt or remove the silt and other fine material from salmon spawning beds. This equipment, developed during the past two years under contract, is adapted for operation in the larger coastal streams of Alaska and the Pacific Coast States. A modified design is needed so that the machine could effectively operate in smaller headwater streams. Sedimentation of spawning beds, as a result of flood and erosion due to man's activities, reduces salmon reproduction potential unless these gravels can be cleaned and restored.

(3) *The Department recommends restoration of the reduction of $500,000 for water resource development related activities.*—The reduction of $500,000 in the budget increase of $1,894,000 for the planned water resource development related activities item would curtail critically needed public use, management, and access facilities at authorized water development projects of other agencies. The shortage of these facilities will result in our inability to properly manage public use at these water bodies with the resultant threat to project investment, water quality and public health through human contamination. A deterioration of natural beauty because of unmanaged use will result in greater long term costs for rehabilitation. Public use, management, and access facilities are urgently needed on National Forest lands at many water development project locations. This work is essential in making the areas suitable and safe for public use and to prevent water pollution.

The Forest Service has less than the usual amount of flexibility in the programming of funds for public use, management and access development. This is because construction of such public facilities called for in the project authorization is in direct response to programs of the construction agencies, Corps of Engineers, Bureau of Reclamation and others—the timing of which is beyond Forest Service control. The reduction would be made as follows:

Project and State:	*Reduction*
Boundary Reservoir, Mont	$30,000
Lyman, Wyo	50,000
Courtright, Calif	47,000
Wishon, Calif	43,000
Cle-Elem Kachees, Wash	80,000
Laurel River, Ky	50,000
Allegheny Reservair, Pa	200,000
Total	500,000

FOREST SERVICE

FOREST PROTECTION AND UTILIZATION

FOREST RESEARCH

(House hearings pt. 2, p. 1140; Senate hearings, p. 1639)

1967 appropriation	$37,821,000
1967 appropriation (including pending pay cost supplemental)	38,567,000
1968 budget estimate	40,032,000
House bill	40,180,000

AMENDMENT REQUESTED

Page 32, line 11, strike out "$40,180,000" and in lieu thereof insert "$40,032,000", decrease of $148,000 to restore the budget estimate.

HOUSE REPORT (P. 35)

"Total decreases of $1,482,000 below the budget estimate include $700,000 for the construction of a forestry sciences laboratory at Albuquerque, New Mexico; $200,000 for forest genetics research; $182,000 for research on ecology, protection, and management of areas, and measurement of recreation use and trends; $100,000 for research on electronic fire detection systems; $100,000 for the expansion and acceleration of research on wood fiber products and related chemical research; $100,000 for research on aerial logging systems; and $100,000 for research on the cost and benefits of forestry investments and the effectiveness of forestry programs for small forest owners.

"The increases recommended by the Committee over the budget estimate include: $950,000 for the construction of a forest insect and disease laboratory at Delaware, Ohio; $350,000 for the construction of a range and wildlife habitat laboratory at LaGrande, Oregon; $290,000 for the construction of a forest seed laboratory at State College, Mississippi; and $40,000 to provide additional staffing at the wildlife habitat research laboratory in Columbia, Missouri."

JUSTIFICATION OF THE AMENDMENT BY THE DEPARTMENT

The amendment proposed by the Department would eliminate the increase of $1,630,000 made by the House Bill. Also, this amendment would restore the $1,482,000 reduction in the House Bill. The net adjustment totaling $148,000 is distributed to subactivities as follows:

	Fiscal year 1967				
	Appropriations	Appropriations (including pending pay cost supplemental)	1968 budget estimates	1968 House bill	Restoration or amendment requested
FOREST RESEARCH					
Forest and range management research:

---

[1] The House recommended an increase of $40,000 over the 1968 budget for additional staffing for wildlife habitat research in Columbia, Mo., under the subactivity "Forest research construction". This increase does not involve construction and, for clarity, is included under the subactivity "Wildlife habitat research in this tabulation.

[2] Excludes $108,000 for space rental which was transferred to the General Services Administration in 1967.

(1) *The Department recommends restoration of the reduction of $200,000 made by the House for forest genetics research.*—The increased forestry research program contained in the President's fiscal year 1968 budget was developed after carefully considering the alternatives available for meeting the Nation's need for timber in the year 2000 and beyond. None of the alternatives offered more promise than a stepped-up research program of forest genetics and tree improvement to develop fast-growing, pest resistant trees. This cut in the $560,000 increase for genetics research in the budget would prolong the time needed to develop superior forest trees.

Forest genetics research primarily concerned with Douglas fir in Oregon and Washington, Northern conifers in Wisconsin, and the Southern pines in Mississippi, Georgia, and Florida would be seriously curtailed.

These are the important conifers that must supply the vast bulk of wood to meet the Nation's needs for pulp, paper, and construction lumber in the decades ahead.

(2) *The Department recommends elimination of the $40,000 increase added by the House for wildlife habitat research.*—Page 35 of the report stated that $40,000 was being made available to provide additional staffing at a "wildlife habitat research laboratory" in Columbia, Missouri. The Forest Service does not now conduct wildlife habitat research at Columbia. The need for initiating wildlife habitat research there was considered during the formulation of the budget. This research program can be deferred until higher priority needs are met.

(3) *The Department recommends restoration of the reduction of $182,000 made by the House for Forest Recreation Research.*—The state of the art of measuring recreation use—"How many people are where, doing what?"—is not good, and the manager's ability to estimate accurate trends in land use is even worse. As a consequence, managers are unable to measure amount and types of recreation use and to predict future use for which they must provide. Research has developed approaches to these and related user problems. If the House cut in the $332,000 increase proposed in the budget is sustained, research on recreation use and trends in North Carolina and Washington cannot be pursued effectively. As a result, managers in some situations will not have adequate information on which to plan multi-million dollar investments. The maintenance and management of facilities will suffer.

Similarly, without a considerably strengthened program of research in Montana, California, and Minnesota dealing with the ecology, management, and protection of wilderness areas, costly mistakes will be made. The 1964 Wilderness Act demands that wilderness areas be maintained as they exist today or, in some cases, restored as they once were. Increasing numbers of visitors have generated new problems. Even in the wilderness, vegetation is trampled, soils are compacted and eroded, and water supplies are polluted. Man-caused fires and disease and insect pests are changing scenic vistas and desired ecological relationships. Wilderness use is increasing faster than any other recreation use, and wilderness values have no price. If needed research is not done now, managers of recreation areas, particularly wildernesses, may make mistakes that will be costly or impossible to repair.

(4) *The Department recommends restoration of the reduction of $100,000 made by the House for electronic fire detection research.*—This research, headquartered at the Northern Forest Fire Laboratory, Missoula, Montana, is developing a new and improved forest fire detection system urgently needed by all forest protection agencies throughout the United States.

Work performed to date has been a cooperative effort of the Forest Service and the Department of Defense. Research results show that an airborne infrared scanner can quickly and accurately locate tiny heat sources in a variety of forest types. This discovery provides the basis for a heat sensing detection system. The system can locate fires at night or in the daytime under conditions of dense smoke. Presently used visual systems fail under these conditions. The heat sensing system can perform the fire detection job more efficiently. Thus, it can be a major factor in reducing costly forest fires resulting from delayed, inaccurate or incomplete fire detection information.

Defense aspects of this research will be completed in 1967. However, these new techniques can be made useful to forest protection organizations. Increased research is needed to develop and test a complete electronic system designed to meet the specific requirements of forest fire detection. This essential research would be halted by the proposed reduction in funds because Department of Defense funds would no longer be available. A highly efficient team of scientists and technicians, available to perform the research, could not be maintained. The reduction would result in serious delay of needed improvements in forest fire control which are heavily dependent upon an efficient fire detection system.

(5) *The Department recommends restoration of the reduction of $100,000 made by the House for the expansion and acceleration of research on wood fiber products and related chemical research.*—Current forest products utilization research on wood fiber products and wood chemistry is grossly inadequate in terms of potential economic and consumer benefits. The accelerated and expanded program proposed in the 1968 budget is now possible because of the completion of new laboratories for wood fiber and fiber products research at the Forest Products Laboratory, Madison Wisconsin.

The proposed program reduction would delay accomplishment and benefits from research on promising new pulping processes. Cost/benefit ratios from such research are highly favorable, as they involve process improvement for high pulp yield with resulting lesser manufacturing costs or reduction of the cost of a product. An important benefit from intensified research on pulping and fiber and chemical processes is the reduction of water and air pollution. Success in this work would eliminate harmful impacts of pulpmills on the environment and would multiply the number of feasible locations for pulpmills.

(6) *The Department recommends restoration of the reduction of $100,000 made by the House for research on aerial logging systems.*—Without increased funds aerial logging systems research conducted in Washington and Oregon would be stagnated for all practicable purposes. Very limited funding to date permitted researchers to pinpoint the critical problems in these systems and to formulate approaches for their solution. The solutions will require increased funding. The budget cuts proposed by the House would delay solutions to the critical problems of harvesting timber from inaccessible lands and would result in a loss of many millions of dollars to timberland owners, to industry, to communities, and to the Nation.

Development of successful aerial logging systems will permit the capture of 500 million board feet of annual allowable cut lost on timberlands not now loggable with conventional systems in the Douglas-fir region of the West. This additional harvest is urgently needed since the wood industries of the Pacific Northwest are currently using the full allowable cut from accessible public and private lands. An annual increase of 500 million board feet would mean about $5 million annually to the owners of these timberlands with $3 million going to the Federal Treasury from public timber sales. Over $800,000 will be returned to the counties as their share of stumpage receipts.

In Alaska, an additional 440 million board feet of annual allowable cut on National Forest lands could be captured—adding over $1 million each year to stumpage receipts.

(7) *The Department recommends restoration of the reduction of $100,000 made by the House for research on the costs and benefits of forestry investments and on the effectiveness of forestry programs for small forest owners.*—A reduction of the increased funds budgeted for this research would curtail studies of forest investment opportunities in important timber growing regions such as the South and the Pacific Coast region. Work would be curtailed in Louisiana, Oregon, and California especially. Studies of the costs and benefits of alternative forestry measures are essential for more efficient program planning and budgeting analyses of forest conservation programs. A reduced level of effort would not provide the management guides that are urgently needed by both public and private forestry agencies. Increased knowledge and improved guidelines are necessary for improving the efficiency of management of the Nation's timber resources.

(8) *The Department recommends elimination of the net increase of $930,000 for research construction.*—The House Bill provides for a decrease of $700,000 for the construction of the Forestry Sciences Laboratory at Albuquerque, New Mexico, and it provides an increase for construction at three other locations:

Delaware, Ohio	$950,000
LaGrande, Oreg	350,000
State College, Miss	290,000

The Department recommends that both the $1,590,000 increase by the House for constructing three laboratories be eliminated and that the $700,000 decrease by the House be restored.—The construction of the laboratory at Albuquerque, New Mexico, planned with funds appropriated in fiscal year 1965, is of high priority because it will provide facilities for insect, disease, and watershed research important to New Mexico, Arizona, and adjacent States. The construction of the other three laboratories proposed by the House is also important but of lower priority than the Albuquerque project. They were planned with funds appropriated in fiscal years 1966 and 1967.

THE SECRETARY OF HEALTH, EDUCATION, AND WELFARE,
Washington.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
United States Senate, Washington, D.C.

DEAR MR. CHAIRMAN: On Thursday, April 27, the House of Representatives completed action on H.R. 9029, the bill making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1968. The Department of Health, Education, and Welfare receives appropriations in this bill for the arts and humanities educational program of the Office of Education and for the Public Health Service's Indian health program.

For arts and humanities educational activities, the House recommended an appropriation of $1,000,000, the full amount of the President's budget request.

For the account, "Indian health activities," the House included $82,000,000 in the bill, a reduction of $133,000 from the President's request. Although we are not appealing for restoration of this reduction, we would prefer to absorb it in a different budget activity than recommended by the House. The report of the House Committee on Appropriations indicated that the entire reduction should be made in the amount requested for headquarters administrative staff of the Division of Indian Health. This would not only completely eliminate the nine new positions requested for this activity for fiscal year 1968, but it would also reduce available man-years below the level of the current fiscal year. In view of the expansion of the Indian health program over the past several years, this small increase in headquarters staff is vital if we are to maintain and improve the quality of our program management. Therefore, instead of reducing our request for administrative support, I would propose reducing the amount requested for the purchase of equipment by $133,000, the amount of the House reduction in this appropriation account. This action would entail a decrease from $2,276,000 to $2,143,000 in funds budgeted for equipment and would require us to postpone a small portion of our planned equipment replacement program until fiscal year 1969.

Within the Indian health construction account, the House recommended an appropriation of $14,733,000, a net reduction of $7,478,000 from the President's budget request of $22,211,000. The House made the following reductions: (1) $6,542,000 for construction of a 125-bed replacement hospital and 121 units of personnel quarters at Tuba City, Arizona; and (2) an unallocated reduction of $1,000,000 based on the assumption that such an amount could not be used in 1968 due to slippage in the schedule for constructing Indian health facilities. The House also added $64,000 for an alteration project which would consolidate shop space and provide a new incinerator for the Indian hospital at Talihina, Oklahoma.

The 1968 budget plan for the Tuba City, Arizona project provided for an expanded replacement hospital and personnel quarters to both replace existing substandard housing and provide housing for the additional staff required to operate the new hospital. Our original plans called for the award of a contract for construction of this hospital toward the end of fiscal year 1968. There has since been some delay in awarding the contract for architectural planning so that it is now unlikely that we could be in a position to award a construction contract during the next fiscal year. Consequently, we are not appealing for the restoration of construction funds for the hospital or for the quarters needed to house the additional personnel to staff the new facility. We do request, however, that the Senate restore $1,100,000 to permit us to construct 55 units of personnel quarters which would replace 43 temporary units of World War II vintage now in use and provide 12 additional units to accommodate staff planned to be assigned to the existing hospital during 1968. The adequacy of personnel quarters is a critical problem at Tuba City and we want to make every effort to at least overcome existing deficiences and provide for newly authorized staff in 1968.

As a result of the unallocated reduction of $1,000,000 recommended by the House we have re-examined our entire Indian health construction program to see what slippage in the award of planning or construction contracts might occur outside of the Tuba City project. As a result of this review we have determined that all pending projects as well as those other projects contained in the 1968 appropriation request can reasonably be expected to be under contract before the end of fiscal year 1968. We, therefore, request that the $1,000,000 unallocated reduction be restored by the Senate. In the enclosed tabular material detailing the effect of the House action we have identified a series of projects which would have to be deferred if these funds cannot be restored. As indicated in this material, work would have to be postponed on 5 health centers, 2 health stations, and 5 alteration projects. I want to emphasize that these projects would be deferred until fiscal 1969 only because we would take specific action to postpone them and not because it is impossible to proceed with construction in 1968.

In addition to the tabular material on the effect of House action, we have also enclosed language which would amend the bill as enacted by the House to reflect our recommendations as set forth above. We shall be happy to supply any additional information which the Committee might need.

Sincerely,

JOHN W. GARDNER, *Secretary.*

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

PUBLIC HEALTH SERVICE

CONSTRUCTION OF INDIAN HEALTH FACILITIES

On page 37, line 17, delete "$14,733,000" and insert in lieu thereof "$16,833,000."

INDIAN HEALTH ACTIVITIES

EFFECT OF HOUSE ACTION

The House allowed $82,000,000, an increase of $5,676,000 over the amount anticipated to be available in 1967 and a decrease of $133,000 from the 1968 budget request.

The House Committee on Appropriations recommended that the decrease of $133,000 be absorbed in the Administration Activity. The House action would eliminate 9 new positions requested for this activity as well as make it necessary to reduce the average employment in previously authorized positions below the current level.

Resources required to provide administrative direction have not been commensurate with the over-all growth of the program both in volume and complexity as evidenced by the fact that there has been no increase in staff for the Administration Activity in the last ten years. Accordingly, it is requested that the reduction of $133,000 be absorbed in the equipment replacement program. As a result, a small quantity of equipment planned to be replaced in 1968 will not be replaced until 1969.

Total increases	464	5,809,000	455	5,676,000

CONSTRUCTION OF INDIAN HEALTH FACILITIES

EFFECT OF HOUSE ACTION

The House allowed $14,733,000, an increase of $244,000 over the 1967 appropriation and a decrease of $7,478,000 from the budget estimate of $22,211,000.

The House allowance excluded $6,542,000 requested for construction a 125-bed replacement hospital and 121 units of personnel quarters at Tuba City, Arizona. Some delay has been experienced in awarding a contract for architectural planning for the new hospital, making it unlikely that a construction contract could be awarded in fiscal year 1968. Sixty-six units of the personnel quarters planned for Tuba City are directly related to the new hospital facility which will have a significantly larger capacity than the existing facility. However, 55 of the proposed units are needed to replace 43 substandard temporary units dating from World War II and provide 12 units for staff increases planned for 1968. It is requested that $1,100,000 be restored so that work can proceed on these 55 units in 1968.

The House made an unallocated reduction of $1,000,000 anticipating that there would be at least that much slippage in the total Indian health construction program. A review of currently authorized and requested projects indicates that all projects can reasonably be expected to be under contract within fiscal year 1968. Consequently, it is requested that the unallocated reduction of $1,000,000 be restored. Should these funds not be restored, specific action would be taken to postpone work on the following projects: health centers at Stewart, Nevada; Chilocco, Oklahoma; and Teec Nos Pos, Nazlini and Oraibi, Arizona; health stations at Red Water, Mississippi and Rock Point, Arizona; and alteration projects at Sells, Arizona; Crownpoint, New Mexico; Cass Lake, Minnesota; Winterhaven, California; and Kotzebue, Alaska.

The House also added $64,000 for an alteration project which would consolidate shop space and provide a new incinerator for the Indian hospital at Talihina, Oklahoma.

NATIONAL CAPITAL PLANNING COMMISSION,
Washington, D.C., May 1, 1967.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
United States Senate,
Washington, D.C.

DEAR SENATOR HAYDEN: The House of Representatives has passed H.R. 9029 containing an appropriation for the National Capital Planning Commission for Fiscal Year 1968 in the amount of $995,000 for salaries and expenses. This represents a $105,000 decrease from the $1,100,000 requested.

The Commission respectfully requests that the $105,000 deleted by the House of Representatives be restored in full by the Senate Committee on Appropriations.

The House Committee on Appropriations recommended the $105,000 reduction because of (1) the elimination of the National Capital Regional Planning Council, (2) its belief that the District of Columbia should finance "more of the planning that relates directly to the District's facilities," and (3) "the increasing probability of the transfer of funds from other agencies on joint planning projects."

The Regional Planning Council was abolished by Reorganization Plan No. 5 in 1966. In his message transmitting the reorganization plan to the Congress, the President stated:

"The reorganization plan will not alter the basic responsibilities of the National Capital Planning Commission. That Commission will continue to represent the Federal interest in the planning and development of the Region. Indeed, its work should increase as comprehensive regional planning by the Council of Governments is accelerated. In accord with the reorganization plan, the Commission will work closely with the Council of Governments in regional planning. The Commission will also deal directly with the suburban jurisdictions and assume the liaison functions now exercised by the National Capital Regional Planning Council."

A reduction predicated in part on the elimination of the Regional Planning Council will seriously impair the Commission's ability to meet its increased responsibilities in representing the Federal interest in the National Capital region.

The Commission was created by the National Capital Planning Act of 1952 as the central planning agency for the Federal and District of Columbia Governments in the National Capital Region. The Commission will examine carefully the possibility of the District of Columbia financing part of the Commission's planning activities, as suggested by the House Committee on Appropriations. In the meantime, it is essential that the Commission continue to perform the District planning functions with funds appropriated to it in the Department of the Interior and Related Agencies Appropriation Act. The requested increase in appropriations results from an increased number of projects and proposals submitted to the Commission by the various agencies of the Federal and District of Columbia Governments. The increases are entirely consistent with the objectives of the National Capital Planning Act of 1952. However, in order to properly carry out its responsibilities under an increased work load the Commission requires additional qualified staff.

We are unable to concur in the view of the House Committee on Appropriations that transfers of funds from other agencies for joint planning projects is a potential source of meeting the increased staff needs of the Commission. Our experience in recent years indicates that such joint studies usually require matching funds not ordinarily available to the Commission from its appropriations and do not meet the problem of the increasing number of Federal and District projects and proposals toward which a substantial part of the requested increase is directed.

H.R. 9029, as passed by the House of Representatives, prohibits the use of appropriations to the Commission for foreign travel. We believe that this limitation is unnecessarily restrictive. Members of the Commission staff have, in the past, represented the United States at meetings of the World Congress for Housing and Planning. These trips have enabled the Commission's representatives to examine outstanding examples of contemporary city and regional planning in other countries and to participate in exchanges of information on important new concepts and techniques concerning urban development and growth.

As shown on the attached table, the Commission's expenditures for this purpose have been modest. We do not feel that the Commission should be precluded from occasional attendance at such meetings in the future. In addition, the American Society of Planning Officials and other professional societies sometimes meet in Canada. This provision would preclude Commission representation at such meetings as well.

Amendatory language to restore the $105,000 deleted by the House of Representatives and to eliminate the travel restriction is as follows:

DEPARTMENT OF THE INTERIOR AND RELATED AGENCIES APPROPRIATION BILL, 1968—H.R. 9029

SALARIES AND EXPENSES

On page 39, line 7, strike out "$995,000" and insert in lieu thereof "$1,100,000."

On page 39, lines 7 and 8, delete "*Provided*, That none of the funds provided herein shall be used for foreign travel".

Sincerely yours,

CHARLES H. CONRAD,
Executive Director.

Foreign travel from January 1962 to Mar. 2, 1967

Name and title	Date	Amount	Remarks

NATIONAL CAPITAL TRANSPORTATION AGENCY,
Washington, D.C., April 28, 1967.

Hon. CARL HAYDEN,
Chairman, Subcommittee on Department of Interior and Related Agencies, Committee on Appropriations, United States Senate, Washington, D.C.

DEAR MR. CHAIRMAN: As requested by Mr. Paul Eaton, Staff Assistant to the Subcommittee, attached are the Agency's proposed amendments to the Interior and Related Agencies Appropriation Act, 1968, (H.R. 9029) as enacted by the House of Representatives on April 27, 1967.

The amendments proposed by the Agency are self-explanatory and I trust that the justification material is persuasive. I feel very strongly about the effect of the House action and believe that the amount requested for restoration is the minimum required for our operations during the three months of the fiscal year. I would hope that we might have the fiscal capability of meeting the transitional problems to the interstate Authority in a proper manner. To impose any delay in terminal leave and severance payments after the Agency goes out of existance would, in my opinion, be unfair. I am also concerned about how a supplemental request would be handled after the Agency has been phased out. Administrative difficulties such as this could be avoided by providing adequate funds as a part of the regular appropriation process.

I would be very pleased to discuss this matter further with you, if you so desire.

Sincerely yours,

WALTER J. MCCARTER, *Administrator.*

NATIONAL CAPITAL TRANSPORTATION AGENCY

SALARIES AND EXPENSES

(House hearings, pp. 414–446)

(Senate hearings, p. 1933)

Appropriation 1967	$1, 400, 000
Estimate 1968	400, 000
House Allowance	250, 000
Restoration Requested	70, 000

(P. 39, lines 11, 12 and 13)

AMENDMENTS REQUESTED

Page 39, line 11, strike out "$250,000" and insert in lieu thereof "$320,000"—an increase of $70,000 in the appropriation.

Page 39, lines 12 and 13, strike out "Construction, Rail Rapid Transit System shall be" and insert in lieu thereof "this heading for the fiscal year 1967 shall remain"—the original language proposed in the President's budget.

HOUSE REPORT

"Effective September 30, 1967, the National Capital Transportation Agency will go out of existence. In accordance with the provisions of Public Law 89–774, enacted November 6, 1966, its functions will be transferred to the Washington Metropolitan Area Transit Authority.

"The Budget estimate proposed appropriation language that would make $400,000 of unobligated funds appropriated in 1967 for salaries and expenses available during fiscal year 1968.

"The Committee recommends that $250,000 be transferred from funds available in the 'Construction, Rail Rapid Transit System' appropriation for necessary expenses to be incurred in fiscal year 1968.

"The Committee is most disappointed in the progress that has been made on the construction of this system. Despite the expenditure of several millions of dollars already on this project, it would appear that a definite routing of the system has not yet been decided upon. The metropolitan area of the Nation's Capital urgently needs a rapid transit system at the earliest possible date. To achieve this will take a determined and concerted effort by those responsible for its construction, with the fortitude to repel the multitude of recommendations on how the system should be built and which sections of the area the system should serve. Otherwise, completion of the system will be materially delayed, and the construction costs will soar to astronomical heights."

JUSTIFICATION

The proposed amendments requesting restoration of $70,000 and providing for reappropriation of funds from unobligated balances of the appropriation "Salaries and expenses", are considered essential to orderly phasing out of activities of the Agency and transition to the Washington Metropolitan Area Transit Authority on September 30, 1967.

The basis for the Agency's estimate is as follows:

Salary payments for present staff of 42 employees for 3 months at $50,000 per month[1]	$150,000
Personnel benefits for above	10,800
Terminal leave payments	54,800
Severance pay	97,400
Minimal support costs at $2,000 per month	6,000
Uptown Centers Study	20,000
Subtotal	339,000
Less anticipated reimbursements from WMATA	19,000
Total	320,000

[1] Actual obligations, March 1967, $49,202.

The amount recommended by the House would preclude the payment of entitlements to some career employees for terminal leave or severance pay as prescribed by law. Payment of terminal leave is authorized by the Lump Sum Leave Payment Act, as amended, (5 U.S.C. 61b) and payment of severance pay is authorized by section (9) of the Federal Employees Salary Act of 1965 (79 Stat. 1111). The right to a lump sum leave payment vests on the date of separation (33 Comp. Gen. 85) and the right to severance pay not only vests at the time of separation but, pursuant to statute, payments are to be made in the same pay period intervals as if the individual were still employed. Thus, it would clearly be in derogation of employees' rights for the Government to delay such payments until other funding could be arranged. If requested to wait for a supplemental appropriation, for example, this delay could amount to several months, with obvious injustice to the individuals so affected.

Upon the transfer of functions from NCTA to the Authority on September 30, 1967, the processing of final personnel actions should include the payment of terminal leave to employees entitled to such payments and it was expected that funds would be deposited with the Agency's fiscal agent to make the severance pay disbursements on a bi-weekly basis. Since the Agency will be out of existence after that date there is no regular procedure for the preparation of a supplemental request on behalf of the Agency.

The transfer of funds for this purpose from the appropriation "Construction, Rail Rapid Transit System", as proposed by the House, would establish a precedent which could adversely affect future participation of regional organizations in funding for the operations of the Washington Metropolitan Area Transit Authority. All funds provided under the title "Construction, Rail Rapid Tranist System" were justified as a part of the scientific programs authorized by the Congress in the National Capital Transportation Act of 1965 (P.L. 89–173, 79 Stat. 663) and expressly precludes administrative support costs. Except in one instance, the Agency has always requested funds for administrative operations under a separate appropriation and, in that one instance—fiscal year 1966, funds were requested by transfer from the appropriation "Land Acquisition and Construction" only after Congress had initiated a similar transfer in fiscal year 1965. These two instances, however, should not be used as a precedent because there had been no obligational activity under the particular appropriation for some time and it was scheduled to be eliminated.

An essential feature of the regional approach to transit planning is joint participation by each of the regional governmental entities, including financial support. This concept has been emphasized by the Congress on many occasions.

Funding arrangements for the currently authorized system provide for the raising of funds, over and above the $150 million in grants, through the sale of bonds underwritten by the signatories to the Authority. It was never contemplated that the administrative costs of the Authority would be provided in this fashion but rather by direct appropriation of funds by the participating members of the Authority. To transfer funds from the Construction appropriation, as proposed by the House, would set a precedent which could make it difficult for the Authority to impose administrative budget requirements on its signatories.

If the Congress is concerned that the unobligated balances of any appropriation made for the purpose of terminating the Agency might transfer to the Authority and provide an additional benefit, the Agency suggests that language be included to provide that such unobligated balances should revert to the Treasury of the United States.

CONCLUSION

For the reasons stated and in order for the Agency to meet its statutory obligations to career employees who are to be separated from Federal Civil Service benefits through no fault of their own, the appropriation of $320,000 and the provision of these funds from the unobligated balance of "Salaries and Expenses" rather than the Construction appropriation are most strongly urged.

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

Estimate, 1968	$16, 370, 000
House Allowance	11, 700, 000
Restoration Requested	4, 670, 000

AMENDMENTS REQUESTED

Page 39, line 20, delete "$10,700,000" and substitute "$14,370,000."
Page 39, lines 20 and 21, delete "$4,500,000" and substitute "$5,000,000."
Page 40, line 1, delete "$3,000,000" and substitute "$5,000,000."
Page 40, line 2, delete "$2,000,000" and substitute "$2,750,000."
Page 40, line 9, delete "$1,000,000" and substitute "$2,000,000."

The effect of these amendments would be to restore the total appropriation to the amount requested in the President's budget.

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES,
Washington, D.C., April 27, 1967.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations, United States Senate, Washington, D.C.

DEAR MR. CHAIRMAN: In his budget for fiscal 1968, the President has recommended for the National Endowment for the Arts (a) $5 million to carry out national programs which will be beneficial to the arts throughout our country and (b) $2.75 million to assist the States in the development of their own effective agencies for the encouragement of the arts.

Action taken by the House of Representatives on the Endowment's programs for 1968 reduces the President's budget request as follows:

> Instead of the $5 million recommended to carry out the national programs under section 5(c) of our enabling legislation, $4.5 million was approved—representing a cut of $500,000.
>
> Instead of the $2.75 million recommended for assistance to the states under section 5(h) of the enabling legislation, $2 million was approved—representing a cut of $750,000.

We respectfully appeal for a restoration of funds to the levels recommended in the President's Budget.

We are convinced that any cut in the funds recommended by the President would seriously hinder the Endowment's ability to carry out its mandate from the Congress.

The arts in the enabling legislation cover some 16 major categories in the performing and creative fields. In music alone, to take one category, the authorized $5 million could not begin to answer the needs in this area. The same applies to other categories. The performing arts, in particular, as has been carefully documented by The Rockefeller Panel Report and a current study sponsored by the Twentieth Century Fund, are facing a time of acute financial crisis which now threatens the very existence of our most renowned arts institutions and places most difficult burdens on any new or developing arts organizations. The volume of mail daily received by the Endowment underscores this time of crisis. It also emphasizes the hope artists and arts organizations throughout the country have placed in the Endowment, to whom they are turning in ever increasing numbers. A cut in the President's Budget would compel the Endowment to curtail its minimal plans for 1968, to eliminate hopes which have already been too long postponed. To date the Endowment's pilot projects have received general acclaim from the press, both liberal and conservative in philosophy. The program has been hailed as a milestone in Government. Its basic purpose is to develop a beneficial partnership between the Government and the private community in behalf of our nation's cultural progress.

There are hundreds of thousands of our citizens who have never had the opportunity of hearing great music performed or seeing excellence in the living theatre. The goal of the Endowment is to make excellence in the arts available to the widest possible audience, and at the same time to encourage our nation's artists and to recognize the value of their inspirational and creative work. These efforts are of particular importance at this time. They are important to young people, as well as to our older citizens who have greater leisure time and a longer retirement to enjoy. They are important to an increasingly educated people and to the whole process of education. They are important to the impact we make throughout the world and to the image we project of ourselves abroad, especially at this moment in our history. The arts speak in an international language and can cross boundaries which otherwise may be closed.

In particular, these efforts are important because of the crisis facing the arts at home. The traditional sources which sustained the arts in the United States in the past are manifestly unable to meet new demands. The arts do not lend themselves to the economics of mass production. They must receive substantial transfusions of new support if they are to fluorish. The "seed money" which the Endowment can supply is necessary to their growth. To reduce the Endowment's ability to provide this urgently required "seed money" would appear to us a most unwise economy, considering the magnitude of the need and the investment which full funding could provide in terms of our country's future, and the hopes of its artists in all fields.

With regard to the support of State arts agencies, all fifty States and four special jurisdictions have again applied for assistance under the Federal-State partnership provisions of our Act.

In the first year, 295 new projects were submitted for funding and $3 million of non-Federal money was spent on these new services. Last Spring, no more than one dozen States were employing full-time professional executive directors for their State agencies. By April 1st, 1967, forty-seven States had full-time executives on the job. More than half the States were able to secure enabling Acts in State legislatures to establish permanent arts councils during this year, bringing the total number of permanent councils to fifty-one.

This year, applications list more than 700 separate new projects designed to serve 27,500,000 people in all the States. These projects require $2.75 million of Federal funds, but will generate $4 million in non-Federal funds. In other words, at a Federal cost of ten cents per person, more than 10 percent of our national population will be served and non-Federal funds will bear more than half the cost of these new programs.

This State partnership program is the most far-reaching of the Endowment's efforts, and relates to the development of the arts at a local and community grass-roots level. The enabling legislation requires that appropriations for this program be allotted equally among the States. If the House appropriation stands, all the States will receive only $36,363 for their cultural plan instead of $50,000. The State arts councils and legislatures have organized and worked in terms of $50,000 units for State and private support to match Federal grants. To receive less support than planned from the Federal Government will seriously damage the future development of State programs and our developing partnership with the States. Since almost all of the States have now established permanent agencies for the arts and can qualify for announced Federal grants, restoration of curtailed appropriations is requested.

Finally, the Endowment appeals for restoration of its appropriate share of the $2 million recommended by the President to match the receipt of unrestricted gifts. The figure approved by the House would reduce this total by $1 million, and assumes equal distribution of the available funds between the Arts Endowment and the Humanities Endowment, or $500,000 each. Restoration of the funding in this case would mean an additional $500,000 for the Arts Endowment.

It should be stressed that this provision in the Public Law, under Section 11(b) means that one Federal dollar appropriated can generate three additional dollars from the private community in behalf of the arts. One dollar in an unrestricted gift is equalled by a Federal dollar and these two dollars must in turn be matched by the private arts organization receiving a grant.

The Arts Endowment has made strenuous efforts to encourage private philanthropy to donate unrestricted gifts to the Endowment. The present ceiling of Federal appropriations, in this respect, is $2 million, covering two fiscal years. There are now strong indications that unrestricted gifts totaling the current $2 million ceiling in effect will be made before the conclusion of fiscal 1967. Because we believe the Endowment can generate at least $1 million in unrestricted gifts in 1968, we respectfully appeal for full restoration of this funding. It involves a basic purpose of the Public Law which is to stimulate additional private philanthropy to support worthwhile cultural endeavors.

Should you desire any additional information with respect to this appeal, we would be most happy to supply it.

Very truly yours,

ROGER L. STEVENS, *Chairman.*

SUMMARIES OF TYPICAL STATE PLANS

Arizona: Although the Arizona Commission on the Arts and Humanities has no State subvention, the members of the Commission intend to raise privately more than $86,000 for programs, plus funds for the administration of the Commission's activities which will more than match the Federal grant under Section 5(h). The program funds will support 22 on-the-road concerts by the Phoenix, Tucson, and Flagstaff Symphonies—$34,080; 10 tour performances by the Francesco Chamber Music Trio—$5,000; and 6 concerts by the Arizona Chamber Orchestra—$2,600. In dance, the funds will support 50 touring performances in Arizona schools by the Desert Arts Ballet, the Janey Jones Dance Company, the Kadimah Dancers and Arizona State University's Orchesis Dancers—$10,000. Theatre is represented in the Commission's touring program through 24 performances of the Arizona Repertory Theatre, Actor's Inner Circle, and the Arizona Mobile Theatre—$26,400. The Commission will also assist in the expansion of the Flagstaff Summer Festival of the Arts from one week to three weeks—$30,935; sponsor the first Arizona Film Festival—$1,500; and assist the Phoenix Art Museum, the Tucson Art Center, and the University of Arizona Art Gallery in making materials and exhibitions available to out-lying communities—$7,000. One additional $6,000 project may be submitted shortly.

Total program cost: $130,015; Federal share: $47,000.

Arkansas has elected to provide a series of grants-in-aid to selected State arts organizations for the purpose of strengthening their operations and raising their artistic quality. Six community theatre organizations will receive aid for purposes, such as, hiring professional actors, directors and technicians and to aid in beginning tour activities—$13,076. Eight organizations active in the visual arts will receive grants to assist them in expanding their educational services, exhibit activities, and art competitions—$27,424. Four music organizations, including an opera producing group, will receive aid for obtaining professional musicians and raising the standards of their performances—$39,000. In addition, the Arkansas Educational Television Commission will benefit through a grant to lease performing art films for general broadcast—$500; and the Arkansas State Ballet Company will be assisted in mounting touring performances throughout the State—$20,000.

Total program cost: $100,000; Federal share: $50,000.

Georgia: The Georgia Art Commission proposes seven projects for FY 1968. *Visual Arts*—$66,000—the continuation and expansion of a pilot project begun in FY 1967 whereby three additional centers will be established in addition to the two existing centers for the housing of art collections which are made available to the public schools of the State. The materials in the collections will also be made available for a video-tape series on art to be produced for the State's ETV network. *Music*—$5,200—the commissioning, scoring and premier performance by the Atlanta Symphony of a major new orchestral work by a Georgia composer. *Dance Workshop*—$7,400—a series of dance workshops for teachers and serious students to be conducted by a nationally recognized modern dancer. *Poetry*—$8,400—a series of poetry readings by promising young writers to be made available to colleges, universities and community groups. *Chattahoochee Literary Magazine*—$4,000—to encourage and assist in the development of a new literary magazine in the State. *Appletree Theatre*—$4,000—to assist the Georgia Mountain Planning and Development Commission in this project to bring understanding and active participation in live theatre to persons in a four-county underdeveloped area of Georgia. *Financial Assistance*—$12,500—to establish a low-interest emergency loan found for Georgia writers, composers and artists.

Total program cost: $107,500; Federal Share: $50,000.

Hawaii intends to continue its wide-ranging program in all the arts using both private funds and State appropriations which more than match the requested Federal grant. *Music*—$14,500—to extend the music resources of the major islands to the outlying islands through tours, workshops and festivals, and provide technical assistance to these same groups for improving their quality. Very similar programs would be supported in *Dance*—$14,500 and *Theatre*—$22,000. In the *Visual Arts*—$35,000—the program would include traveling exhibits, workshops, studio and master classes, competitions, marketing studies for the craft artists on the islands, and an artist-in-residence project. *Environmental Design*—$18,000 would receive extensive attention through audio/visual promotional techniques, international exchange of ideas through the Hawaii Chapter, A.I.A. advisory services, and a two-week post-professional urban design course for architetsts, engineers, and planners. *Education in the Arts*—$12,000—would be supported through assistance to the State's educational agencies and master classes for teachers in all of the art disciplines. In addition, a *Newsletter* and *Calendar* would be published to promote and publicize the art activities of the islands—$12,000.

Total program cost: $134,000; Federal share: $50,000.

Iowa: The Iowa State Arts Council has elected to open a two-pronged attack on the artistic problems of this predominantly rural State. One aspect of this effort is to provide technical assistance in the organization of community effort as well as the technical problems faced by individual art organizations. The other inter-related aspect is to provide support for an extensive touring program. The *Technical Assistance* program—$40,000—will use the services of professional consultants and artists-in-residence to provide communities and art organizations advice and service in both administrative and artistic matters. The consultants will also advise the Council on how to improve its services and how to solve new problems uncovered within the State. It is estimated that the *Touring Program*—$60,000—will provide the means to sponsor five symphony orchestra concerts or opera productions, ten major one-month art exhibitions, eight small music ensemble concerts, 10 college or community theatre dramatic productions, 10 month-long low-cost art exhibits, 10 solo musical performances, 15 month-long craft shows, and four dance productions. All of these attractions would receive up to 75 per cent support from the Council.

Total program cost: $100,000 (plus local support for touring productions); Federal share: $50,000.

Kansas: The Kansas Cultural Arts Commission has submitted a well documented proposal supporting their State-wide program. The program makes provision for 10 touring performances by the Wichita Symphony—$25,000; six pairs of concerts by the Kansas City Philharmonic—$33,000; and four touring performances by the Kansas City Lyric Opera—$30,000. A technical assistance program for the State's art organizations will be implemented through the use of professional consultants—$10,000. Through the efforts of the Commission, a Kansas Chapter of Young Audiences is being organized and the Commission will support its goal of 200 musical performances during the 1967–68 school year—$30,000. In the visual arts, a series of circulating art exhibits will be funded—$20,000. An allocation has been requested for the support of various special projects as they arise during the year—$20,000, and the Commission will undertake limited publication responsibilities as well as the sponsorship of the second State Conference on the Arts—$32,000.

Total program cost: $200,000; Federal share: $50,000.

Massachusetts: The Commonwealth of Massachusetts in 1966 created through legislative action a permanent Council on the arts and Humanities which is proposing a varied course of action in four program areas. Program Area I (Professional Touring Performances) provides support for the touring projects of three professional theatre groups: the Charles Playhouse, the Theatre Company of Boston, and a newly created street theatre organization, Mobile Theatre of Boston—$82,000. Program Area II (Visual Arts) is made up of a State-wide exhibition of the works of Massachusetts artists—$7,000. Program Area III (Educational and Special Projects) gives support for the expansion of three existing projects: a workshop for professional playwrights created through the cooperation of Tanglewood's Berkshire Festival Committee and Boston University, a series of chamber music concerts offered through Young Audiences, Inc., and a regional workshop and festival for art teachers and their most promising students—$41,000. Program Area IV (Technical Assistance) consists of providing professional consultants to the amateur art organizations of the State as well as a program of assistance to the community orchestras of the State in obtaining additional professional musicians—$31,000.

Total program cost: $161,000; Federal share: $50,000.

New Jersey's proposal is its first under their new legislative authority and contains 14 projects with all of the art forms represented. The projects include: Theatre—$12,000—assistance in the development of a semi-professional theatre company to present 18th Century American plays in the amphitheatre at Washington Crossing Park; to provide a professional writer-producer of children's theatre for the Rider College Childrens Theatre, and a pilot project in theatre audience development using a series of video-taped plays presented in local libraries with professional personnel available on the scene for interepretation; *Music*—$32,000—support a new touring activities by six of the State's music organizations and to organize 20 all-day contemporary music workshops for high school students; Visual Arts—$27,500—encouragement of the art of print-making by touring a printmaker and his press on a circuit of art centers, museums, and classrooms, to provide extensive visual arts experiences for the people of six Northwest New Jersey communities lasting nine days in each center, and a project similar to the previous one for Southern New Jersey; *Dance*—$7,000—the commissioning of new dance works to be performed before college and university audiences; *Literature*—$1,000—to organize a one-day Creative Writing Conference; and Special Projects—$20,500—a novel program to train public school teachers in such topics as urban design, city planning, architecture and the relation of these to the welfare of the population so that the teachers may introduce these materials in their classes, a similar project with the art of photography as its subject, to add significant films on art subjects to the existing Garden State Film Circuit which uses the facilities of local libraries, and a public opinion survey of public attitudes and involvement in the arts for the purpose of helpng the Council plan its long-range programs.

Total program cost: $100,000; Federal share: $50,000.

New Mexico proposes 31 projects for their 1967–68 program. *Music*—$26,610—to assist the Albuquerque and Roswell Symphonies, to support two professional touring chamber music series, to sponsor a demonstration and performance by Shinichi Suzuki and 10 of his students at the New Mexico Music Educators Association convention, to assist the Santa Fe Opera prepare two American premieres, to provide scholarships for advanced chamber music study, and to copy a wax cylinder collection of Navajo songs and chants onto modern tapes. *Dance*—$6,000—to sponsor a 15-city tour of a flamenco dance troupe, the Teodoro Morca Group. *Theatre*—$31,034—to help sponsor the tours of two theatre groups and provide technical and production assistance to seven others. *Craft and Folk Arts*—$16,738—assistance in exhibitions, competitions and lecture/demonstrations to six craft organizations. *Graphic and Visual Arts*—$2,440—to provide for a traveling art exhibition and to sponsor a painting workshop instructor. *Literature*—$1,000—to provide funds for increasing the circulation of a booklet containing award winning stories and poems by high school students of the State. *Architecture*—$5,600—to establish an award for New Mexico architects and for publishing a book on the history of the architecture of New Mexico. In addition, two special projects will be funded—to publish a monthly State-wide calendar of cultural events—$8,000, and to provide New Mexico's share of the expense of a regional art exhibit—$3,808.

Total program cost: $101,230; Federal share: $50,000.

NATIONAL ENDOWMENT FOR THE HUMANITIES,
Washington, D.C., April 28, 1967.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
United States Senate, Washington, D.C.

DEAR MR. CHAIRMAN: In the letter of April 28th signed jointly by Roger Stevens and me, we appealed for the action taken on April 27th by the House of Representatives in reducing the fiscal year 1968 request for the National Foundation on the Arts and the Humanities. That letter set forth the grounds for an appeal in regard to the administrative funds of the Foundation. This letter urges restoration of program funds for the National Endowment for the Humanities to the level of the President's budget request.

The President's budget asked that the sum of $5 million authorized by Public Law 89–209, Section 11(a) be appropriated for fiscal year 1968 to carry out the purposes of Section 7(c) of that Act and that $2 million authorized by Section 11(b), which provides for matching private gifts with appropriated funds, be appropriated in accord with the provisions of Section 10(a)(2) without allocation by Endowment. The House of Representatives on April 28th acting on the Department of the Interior and Related Agencies Act, 1968, HR–9029, fixed the appropriation for the National Endowment for the Humanities at $3 million to conduct programs authorized by Section 7(c) and fixed the level of matching private gifts with appropriated funds at $500,000.

Specifically, this letter respectfully requests the restoration of funds to carry out the purposes of Section 7(c) to $5 million, the amount authorized by law and requested by the President. Additionally it requests that the level of funds to match private gifts be restored to $1 million, the amount requested by the President.

The committee has requested this Endowment to indicate wherein it would make reductions in the programs proposed for the fiscal year 1968 to achieve the program levels established by the House action and further requested the Endowment to justify the requested restoration.

The most salient aspect of the reductions imposed by the House action is not that it would cut the President's request by 40%—which is in itself an unusual action even in this year of fiscal restraint, the reduction in the Interior and related agencies as a whole being 6.9%—but that it would force a decrease by 33% of programs actually conducted this year. The 1957 appropriation was 2,000,000 but about 2,500,000 was available in carryover funds, a total of 4,500,000. These programs, although dwarfed by the magnitude of needs in the humanities, have been hailed by scholars, educators, community cultural leaders, and a wide range of concerned citizens as a most promising beginning. By the end of fiscal 1967, the Endowment will have made grants totalling about 4,500,000. By March, it had received requests for grants totalling 53,000,000. The volume of requests is expected to increase in fiscal 1968, and with a reduction in funds, the Endowment will be unable to make more than a token response.

In complying with the committee's request that it delineate the outlines of a program consistent with the funds appropriated by the House, the Endowment is painfully aware that to set forth the dimensions of such a program is to raise a question of whether it is appropriate or meaningful to retain an agency of the United States Government to conduct so small a program.

A reduction in funds to 3,000,000 would permit a program as follows:

I. Fellowships: a reduction from 50 senior fellowships to about 25, thereby cutting in half the opportunity for our most mature scholars to complete work of great potential value to education and society as a whole.

A reduction in fellowships for younger scholars, from 100 to about 55, thereby reducing the opportunity for the development of our best young talent in the humanities.

A reduction in summer stipends for the same group of people from 200 to 115, thereby reducing the opportunity for significant short-term work.

There are approximately 39,000 humanists of professional rank in the more than 2,000 degree-granting institutions in the country. The reduction would mean that there would be one fellowship for a younger scholar for every 37 institutions and one summer fellowship for every 17 institutions.

II. Research: would permit the funding of about 3% of the anticipated requests for research grants from the nation's educational institutions, individuals, and research organizations. Among other programs that would be damaged would be the effort to prepare pure texts of the great American authors of the 19th century, a program which has already had considerable effect and great acclaim. It is estimated that federally supported research activities in sciences, mathematics and engineering, will be in excess of 15,000,000,000 as against roughly 1,000,000 that would be available under this appropriation for the humanities, thus further increasing the gap between federal support of science and technology and the humanities, deplored in the Declaration of Purpose of the Act establishing the National Foundation on the Arts and Humanities.

III. Educational and special programs: would permit a response to the mandate of the National Foundation on the Arts and Humanities "to foster public understanding and appreciation of the humanities" by holding educational and public programs at the level established in fiscal 1967. This level permitted the Endowment to conduct only six limited programs in curriculum dissemination, one for culturally deprived students, one to encourage institutional cooperation, one for a physically deprived group, and one to improve instructional television. It would permit the maintenance of a very promising program to improve college and university teaching only at its present level and would limit the program to upgrade the competence of the staffs of the 4,000 museums and historical societies in the country to only 13 persons, a trivial number in a vast pool of partly trained personnel. The program would allow no innovation and no effort to develop new methods of teaching the humanities in the colleges.

IV. Planning and analysis: would permit funds for planning and analysis, which are especially important to a new agency developing a new program in a new field, at a level 40% below that requested and 65% below fiscal 1967. It would interfere with careful evaluation of existing and new programs and would therefore reduce the care that must necessarily be taken in the expenditure of public funds.

It is perfectly clear, however, that the Endowment for the Humanities could continue to exist at this level of funding, but there is serious doubt as to whether or not it should.

An analysis of reduction in program expenditures required by the House action follows:

	Fiscal year 1967 actual (estimate)	Fiscal year 1968 request	Fiscal year 1968 appropriations H.R. 9029	Required reductions
Fellowships	$1,900,000	$1,950,000	$1,040,000	$910,000
Research and publication	1,508,000	1,750,000	1,040,000	710,000
Educational and special projects	832,000	1,150,000	830,000	320,000
Planning and analysis	260,000	150,000	90,000	60,000
Total	4,500,000	5,000,000	3,000,000	2,000,000

Since the Chairman of the Endowment is required by law to hear the advice of the Council on the Humanities, this reallocation must be presented to them. Therefore, it should be understood that we may subsequently need to request the Committee's permission to readjust the distribution.

The justification for restoring program funds of the National Endowment for the Humanities to the level of the President's budget request are as follows:

1. As a public agency, the National Endowment for the Humanities has the responsibility for encouraging the widest possible participation of the nation's educational and cultural institutions in NEH programs. In its second year of operation, the Endowment is certain of an increased volume of applications for support. The President's budget allows the Endowment to meet these increased applications with a minimally increased program. A smaller program can only mean a substantial increase in the percentage of meritorious and significant proposals which must be rejected.

2. The passage of the National Foundation on the Arts and Humanities Act of 1965 was hailed by the nation's academic and intellectual community as a belated but welcome recognition of their role in the nation's life. The President's request reinforces their belief in a national commitment to the fields of the humanities. A reduction in funds which borders on the punitive will be widely interpreted as a rejection of that prior commitment.

3. In the past decade the gap in the opportunities for teachers and scholars in the humanities and those in the physical sciences and technology has steadily widened. One ultimate result of sustained and adequate support of the humanities by the Federal Government will be the reduction of that gap. To decrease support for the humanities now can only confirm promising young students' conviction that economic security and professional reputation can only be attained in fields other than the humanities.

4. The nation's liberal arts colleges and university programs in the humanities have been largely unaided by massive Federal expenditures in higher education. This imbalance has deeply concerned educational leaders and was one of the major reasons for the establishment of the National Endowment for the Humanities. The President's budget request, small as it is, has encouraged educational leaders to hope for an amelioration of the present situation. Funding at a level lower than the President's request insures only an increasing imbalance between humane and scientific knowledge.

5. If the war in Vietnam is indeed a war for men's minds, then now is precisely the time to expand the resources which the humanities offer the nation's citizens to increase their knowledge of the nation's intellectual heritage and to clarify and refresh their understanding of the nation's aspirations.

Sincerely yours,

BARNABY C. KEENEY, *Chairman.*

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES,
Washington, D.C., April 27, 1967.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: As Chairman of the National Endowment for the Arts and the National Endowment for the Humanities, we are respectfully appealing for full restoration of the $420,000 by which the House of Representatives reduced the administrative budget of the National Foundation on the Arts and the Humanities.

The reduction approved by the House action if left unrestored will most seriously handicap both Endowments in administering their programs. At the present time best estimates of the effect of this reduction are as follows:

1. The present staff level of 32 positions for the Arts Endowment could not be increased. It should be pointed out that in order to effect necessary economies in the 1967 administrative budget, several Arts Endowment positions were lapsed. These included a public information specialist, a liaison officer acting in behalf of the Endowment with respect to other Federal agencies, and the assistant in the visual arts program.

Since early in this calendar year the Endowment has been without the assistance needed in these fields to maintain the level of efficiency considered essential at the beginning of 1967. Toward the end of fiscal 1966 the General Services Administration, which was then providing the Foundation with administrative assistance, estimated that there would be carry-over administrative funds amounting to approximately $180,000 which could be used by the Foundation in fiscal 1967. This estimate did not prove correct; it was lowered by approximately $87,000. Therefore, adjustment had to be made in the Arts Endowment staff, leaving positions vacant in order to live within available funds.

The Endowment submitted a budget for 1968 showing eight new positions above the present level of 32. All these positions were carefully planned on the basis of minimal needs and maximum efficiency. Particularly are assistants needed for the six program directors now serving the Endowment. However, in the interest of economy, we are actually requesting only three. We feel the program directors should constantly be assisting the needs in the arts outside Washington. When they are out of the office on such missions, as things now stand, their only back-up are their secretaries. The national scope of the program emphasizes the need for greater flexibility and service by the staff than is presently possible. Therefore, the minimum of three new program assistants is considered of utmost importance.

Similarly, the Arts Endowment requested provision for an Office of Planning and Analysis. This is urgently needed to develop the type of activity beneficial to the longer range needs in the arts. The heavy workload on the current small staff underscores the need for these two added positions whose responsibilities would focus on areas beyond day-to-day operations. Similarly also, the three added secretarial positions requested are considered important, especially in the area of state programs now served by one director and one secretary. In sum, merely to maintain the staff at its present level would not appear in the interests of the kind of effective administration we hope so much to provide.

2. If the House cut remains in effect, the staff of the Humanities Endowment would similarly be held to its current level of 26 positions. This level was reached late in the present fiscal year because of the need to postpone staffing to balance the budget. Efficiency suffered. The four new positions requested include one Public Information Officer, a secretary for this Officer, and two program analysts. The Endowment, due to limitations of the present administrative budget, has not yet had the opportunity to employ a full-time information specialist; and this position, with the one secretary to assist in this very important area, is considered urgently needed. The two program analysts are also considered of essential importance to the proper functioning of the Endowment to help handle the increased volume of applications anticipated in both the Division of Fellowships and the Division of Research and Publications. It should be emphasized that, regardless of whether the level of funding for the Endowment is increased, the volume of applications is expected to increase substantially over 1967, and that each must be considered very carefully, not only in the interest of common justice, but to insure wise use of public funds.

3. In-house operation of the Foundation's administrative procedures are an absolute necessity. To date, GSA at first and the National Science Foundation subsequently, have been assisting the Foundation on a reimbursable basis, of $25,000 per year. This arrangement is scheduled to terminate at the close of the present fiscal year. Thus the four new positions requested to begin in-house administrative capability cannot be altered. They are the basic minimum required. However, the House cuts would prevent the funding of any other administrative positions requested. These include two grant specialists, an additional research assistant, a secretary for the Federal Council on the Arts and the Humanities, and a second attorney and a secretary for the legal counsel's office. The needs for these positions were explained in our budget justification. To summarize: the present grants office staff is currently operating at a minimal level of positions. It very much needs strengthening for 1968; the same applies to the research staff; one assistant for the Federal Council is considered a minimum need by its members; and the two positions in the legal counsel's office are most urgently needed. Our legal counsel is extremely competent, but under present circumstances he has no back-up whatsoever, and as programs develop he will have a steadily increasing workload.

4. Our best estimates show that travel expenditures would have to remain substantially at the 1967 level for both Endowments if the House approved figures remain. Since travel by the National Council on the Arts and the National Council on the Humanities remain as fixed items, cuts in travel would apply to panels and staff. As indicated above, it is of the greatest importance to the programs of both Endowments for the staff to travel sufficiently to be fully cognizant of needs in their areas from first-hand observation. It is also of great value to our programs for the staff to develop new ideas to meet these needs. They cannot do this properly from their desks in Washington. Both Endowments have been handicapped to date by an acute shortage of travel money.

The House Report accompanying our appropriation legislation, on page 40, reads as follows:

"With proper and careful administration, this program offers distinct cultural benefits to our people that must be available if we as a nation are to participate in a full life spiritually and intellectually.

"This requires, prudent, sensitive, intelligent administration supervision in the highest degree. One of the best ways to achieve this is by continual appointment of panelists of the very highest caliber who are responsible for recommending awards of grants and loans. This not only materially assists in grant awards for the most meritorious projects, but also develops the highest quality of criteria available in this nation whose cultural heritage is magnificent."

Both Endowments share equally in the conviction that panels are most necessary and that we should utilize expert advice from the private community in all program areas and from all areas of the United States. The House cut makes it extremely difficult to carry out this concept, for travel is essential to the proper operation of panels, and these panels should have the widest possible geographic distribution.

5. The above section relates directly to the Endowments' ability to provide funds for intermittent employment and consultants. Panelists are paid from such funds. Again, these funds would have to remain at virtually their present levels if the House cut in administrative costs should remain. In addition, substantial cuts would have to be made in all other items of the administrative budget below the figures estimated in our proposed budget.

Current estimates of reductions can be summarized as follows:

a. Employment benefits cut by $17,000
b. Rent cut by $22,000
c. Communications cut by $18,000
d. Printing cut by $11,000
e. Other services cut by $49,000
f. Supplies and materials cut by $2,000
g. and Equipment cut by $45,000

Some of these cuts apply to the lower level of staff mentioned above. Others, such as printing and communication, would reflect serious cutbacks on the Endowments' plans. For example, in the area of printing, a cut of this magnitude would seriously handicap the Endowments' abilities to produce the type of information which is urgently needed to answer the increasing volume of requests for information we are receiving. It would seem essential that we have the capability of supplying the public with the materials required.

To summarize, it is our conviction that the administrative budget for 1968 was a thoroughly economical one, that it pertained to basic and minimal needs for 1968, and we therefore urge the Committee to restore these funds to the full amount requested in the President's Budget.

Sincerely,

BARNABY C. KEENEY,
Chairman, National Endowment for the Humanities.
ROGER L. STEVENS,
Chairman, National Endowment for the Arts.

SMITHSONIAN INSTITUTION,
Washington, D.C., April 29, 1967.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
United States Senate, Washington, D. C.

DEAR SENATOR HAYDEN: The Smithsonian Institution respectfully submits this request for restoration of certain reductions in the appropriations for the fiscal year 1968 as now included in H. R. 9029, passed by the House of Representatives on April 27, 1967. The following tabulation summarizes our request.

Smithsonian Institution, fiscal year 1968

Appropriation	Budget estimates	House approved	Total request to Senate
Salaries and expenses	$25,100,000	$23,790,000	$25,030,000
Museum programs and related research (special foreign currency program)	6,100,000	3,000,000	4,000,000
Construction and improvements, National Zoological Park	485,000	400,000	400,000
Restoration and renovation of buildings	1,353,000	1,100,000	1,308,000
Construction	803,000	803,000	803,000
Total	33,841,000	29,093,000	31,541,000

We believe that the full amount carried in the 1968 Budget is needed for effective performance of the Institution's functions. The Budget request was held below the level of demonstrated needs in every area. Nevertheless, in order to strengthen this appeal for needs considered to be critical, our request is limited to $31,541,000, compared to the Budget amount of $33,841,000 and the House approved amount of $29,093,000.

The following justifications highlight critical needs which necessitate this appeal for restoration of 52 percent of the House reduction, a restoration of $2,448,000 of the House reduction of $4,748,000.

Your favorable consideration will be greatly appreciated.

Sincerely yours,

James Bradley,
Acting Secretary.

SMITHSONIAN INSTITUTION

"Salaries and Expenses"

CHANGE IN AMOUNT

On page 41, line 16, change $23,790,000 to $25,030,000.

Museums of science and history (including research)

1967 Appropriation	$8, 342, 000
1968 Increase Requested	598, 000
Increase by House	158, 000
Additional Increase Requested	390, 000

The United States National Museum requires an additional $156,000, primarily for the beginning of services to other museums as authorized by the new National Museum Act of 1966. Requests have been received from museums in every State for assistance to train personnel and to advise on preservation, education, and exhibition. The Museum of History and Technology is directly concerned with the directive of the House "that the Smithsonian Institution shall take a very active part in the celebration of the Bicentennial of the American Revolution." $35,000 for curators of history and related expenses are required to perform as directed.

The Museum of Natural History requires $199,000 for a high priority research program utilizing the largest collection of scientific specimens in the Nation. Supporting technicians should be employed to increase the effectiveness of the professional staff by relieving the professionals of subprofessional duties. The adaptation of the techniques of electronic data processing to the needs of the National Collections for data storage and retrieval will substantially increase effectiveness.

Art galleries

1967 Appropriation	$1, 381, 000
1968 Increase Requested	466, 000
Increased by House	343, 000
Additional Increase Requested	116, 000

The National Collection of Fine Arts and the National Portrait Gallery have just begun to occupy the completely reconditioned Fine Arts Building. Both of these major galleries will be opened to the public next year. Six years of planning and nearly $7,000,000 have been invested in the renovation of this historical structure. Both galleries now require additional funds urgently and immediately in order to prepare the galleries and collections for the opening.

Research bureaus

1967 Appropriation	$2, 703, 000
1968 Increase Requested	421, 000
Increase by House	132, 000
Additional Increase Requested	276, 000

The House Report directed that the Tropical Research Institute be scrutinized to assure that it is working toward achievement of specific and practical research projects and that the results of this research effort are commensurate with costs. The Smithsonian will follow these instructions diligently and will be prepared to report results periodically.

This research program requires $78,000 to strengthen the small staff of only 5 professional employees. In addition to conducting a limited program of tropical research, the Institution manages a biological research preserve for utilization by students and professional investigators from other institutions. The number of working scientific visitors in 1966 was 224 as compared with 109 scientists in 1965.

This valuable preserve requires a modest increase in funding in order to increase its research potential and productivity.

The Radiation Biology Laboratory is developing and supplying solar radiation information to scientists throughout the United States. No other laboratory is known to be attempting an attack on the same problems and unknowns. The Laboratory requires $35,000 to add laboratory technicians and to provide computer services for large volumes of data developed in scientific experimentation.

Traditional Smithsonian programs of research in the natural sciences are now identified as Ecology and Oceanography. For these purposes $163,000 are needed. The small staff of 5 in Ecology requires an addition of $42,000. This will develop a coordinated program of field and laboratory work within the Smithsonian's own research bureaus and in collaboration with the research of other Governmental agencies and universities. The availability of the Smithsonian's biological reference collections and the availability also of our Chesapeake Bay Center for Field Biology provide unique opportunities which can be realized with the increase requested.

The Oceanographic Sorting Center is utilized by Federal agencies and universities throughout the country for the initial identification of marine specimens which are collected by expeditions of other organizations. The shortage of competent taxonomists has retarded national progress in oceanic biology.

The Center increases the efficiency of available scientists by providing the sorting services and also by providing training for young biological technicians. The requested increase of $121,000 will assist in meeting the known demand for these services.

Buildings management department

1967 Appropriation	$6, 740, 000
1968 Increase Requested	530, 000
Increase by House	400, 000
Additional Increase Requested	130, 000

To maintain and operate additional building spaces, the Buildings Management Department needs an increase of $130,000.

The Fine Arts and Portrait Galleries Building is scheduled for public opening in fiscal year 1968. Also, four new major exhibition halls will be opened in the Museum of History and Technology. The operating budgets for these buildings have been most rigorously calculated in the light of our experience and in consultation with experts of the Public Buildings Service. The additional amount of $130,000 is necessary to provide minimal service for these extra building spaces and to cope with the increasing use of the buildings by over 12 million visitors annually.

Other activities (including administrative and technical support)

1967 Appropriation	$3, 357, 000
1968 Increase Requested	562, 000
Increase by House	234, 000
Additional Increase Requested	328, 000

Administrative and technical support at the level of the Budget Request is essential to enable the programs of the Institution to perform effectively. The Office of the Secretary requires $50,000 for technical and administrative services to enable the Secretary to direct and evaluate the programs of the Institution. To utilize the economy and efficiency of automatic data processing in the work of the Institution, $25,000 are needed. To enable one of the oldest and most carefully selected library collections of natural science and history to serve the scientists and scholars of the Institution, $50,000 are required to meet existing needs. In order to document the results of historical and scientific research, the Press requires $50,000 for increased editing and printing costs.

The Fiscal Division's accounting work is directly related to the volume of transactions of the Institution. $5,000 is required for an additional fiscal clerk to handle the increase workload.

To supplement the traditional museum exhibitions, special events of a cultural, educational, and historical nature are planned for the benefit of the millions of visitors to the city. $10,000 is needed for the services of one assistant to plan and produce these events.

The Personnel Division requires an additional amount of $16,000 to provide additional personnel to handle the workload resulting from the substantive programs of the Institution.

To assure that the resources of the Institution are used to maximum effectiveness by citizens and organizations throughout the country, the Institution promotes understanding of its programs in science, history, and art. This mass communication should be improved by more effective utilization of radio, TV, and film. An increase of $25,000 is requested for the employment of two professionals for this purpose.

The Photographic Services Division requires $17,000 for two employees and supplemental commercial photography in order to fill requests on a timely basis and to copy historically important prints to forestall their loss through deterioration.

An additional increase of $35,000 will enable the Office of Education and Training to make more effective educational use of the museums. Teachers would be instructed in the use of the museums, educational materials based on the museums' collections will be prepared, leaflets will be drafted to provide informative responses to thousands of inquiries received annually, research on the educational effectiveness of museum exhibits will be undertaken, and tours will be developed to serve the millions of visitors who come to the museums and art galleries.

For International Activities, an increase of $45,000 is requested. The Office of International Activities administers the foreign currency program and assists the Institution's professional staff in administering research projects and exhibits programs involving international cooperation. The increase in these activities requires additional administrative assistance for the existing staff of six employees. The International Exchange Service as the official agency for the exchange of Government documents and private scientific and literary publications with foreign governments requires an additional clerk to handle the increased volume of shipment and funds to meet increases in transportation costs.

SMITHSONIAN INSTITUTION

"ARCHEOLOGICAL RESEARCH AND EXCAVATION (SPECIAL FOREIGN CURRENCY PROGRAM)"

CHANGE IN AMOUNT

On page 42, line 5, change $3,000,000 to $4,000,000.

Museum programs and related research (special foreign currency program)

1967 Appropriation	$2,316,000
1968 Increase Requested	3,784,000
Increase by House	684,000
Additional Increase Requested	1,000,000

Restoration of $1,000,000 of the House reduction of $3,100,000 is requested for three urgent purposes:

$250,000 is needed to accelerate the translation of foreign reference works in systematic biology. With present funding, the Institution cannot obtain foreign monographs needed for comparative studies of materials in its own collection. For example, the urgently needed *Flora of the U.S.S.R.* in 30 volumes will not be received under present funding for over 20 years. This is an excellent scientific work which is considered indispensable to preparing a revised *Flora of North America.*

$400,000 is required for research in systematic and environmental biology as a part of the International Biological Program. This work would be carried out by the Institution in collaboration with other American institutions. It is needed to enlarge the National Collections in entomology, botany, and zoology.

$300,000 is required for cooperative programs with other museums of the United States and abroad. The funds would provide training courses and conferences for museum professionals, for advisory services of American museum professionals requested by foreign museums, and for the production of model science teaching exhibits in India, Egypt, and Israel under a plan submitted by the International Council of Museums.

$50,000 is needed for program development and administration, commensurate with the increased responsibilities under the program as passed by the House of Representatives.

SMITHSONIAN INSTITUTION

"RESTORATION AND RENOVATION OF BUILDINGS"

CHANGE IN AMOUNT

On page 42, line 21, change $1,100,000 to $1,308,000.

Restoration and renovation of buildings

1967 Appropriation	$2, 300, 000
1968 Estimate of Appropriation	1, 353, 000
Appropriation Approved by House	1, 100, 000
Appropriation Requested of the Senate	1, 308, 000

Restoration of $208,000 of the House reduction of $253,000 is necessary to accomplish the following improvements.

As a part of the current renovation of the original Smithsonian Institution Building, estimated to cost $2,744,000, a small kitchen and dining room are planned at an estimated cost of $100,000. The intensified use planned for this fine old building combined with the inadequacy of restaurants in this area have created the need for a small dining facility in this building. The facilities can be installed most economically during the general building renovation which will be placed under contract within 4 months.

The House allowance of $100,000 for additional renovation work in the Fine Arts and Portrait Galleries Building will make possible accomplishment of work excluded from the original contract because of the limitation of funds. Included are the repointing and cleaning of stone work, birdproofing, landscaping of the courtyard, cleaning of interior marble work, and correcting ceiling heights. Because of the general increase in construction costs, however, it is necessary to request restoration of $25,000 in order that all of these essential improvements can be completed.

To repair a portion of the existing farm structures and provide necessary utilities and roadways at the Chesapeake Bay Center for Field Biology, restoration of $40,000 of the House reduction of $75,000 is requested. By accomplishing minimum repairs and improvements, this unrivaled natural preserve of 700 acres will provide a unique opportunity for research in field biology, in cooperation with local universities.

The House allowance of $139,000 for relocation of the Radiation Biology Laboratory will finance a portion of the necessary repairs to a suitable laboratory building located on the reservation of the old Bureau of Standards. Restoration of the $43,000 which was not included by the House is urgently needed in order to accomplish sufficient improvements in the fiscal year 1968 to permit partial occupancy by the Radiation Biology Laboratory. The removal of the Laboratory from the basement of the original Smithsonian Institution Building is required as soon as possible in order to permit the scheduled renovation of that building to proceed this calendar year.

NATIONAL GALLERY OF ART,
Washington, D.C., May 1, 1967.

Hon. CARL HAYDEN,
Chairman, Committee on Appropriations,
United States Senate, Washington, D.C.

DEAR MR. CHAIRMAN: H.R. 9029, making appropriations for the Department of Interior and related agencies for the fiscal year ending June 30, 1968, was approved by the House of Representatives on April 27, 1967. We respectfully request that the appropriation provided thereby for "Salaries and Expenses, National Gallery of Art," be amended as follows:

Page 44, line 8, "$3,000,000," change to, "$3,054,000."

The requested change will restore the $54,000 reduction made by the House in the budget estimate of $193,000 for alterations and improvements in the Gallery building. We believe that the full amount requested for this item is justified for the following reasons:

> (1) The work covered by the $193,000 is a cohesive part of the total five-year program, and in our judgment can be accomplished at an estimated savings of $20,000 under the cost of doing the same work under two contracts over a two-year period.
>
> (2) Additional storage, office, and other work space for the supporting activities of the Gallery is urgently needed to permit modernization of facilities and to promote greater efficiency of the present staff. The five-year plan proposed on pages 13, 14, 15, and 16 of our budget submission represents minimal planning for the accommodation of growth in the Gallery's program. Any material deferment of parts composing logical segments thereof will seriously affect our ability to discharge our public-service responsibilities.

We are not unmindful, in requesting this restoration, of the necessity to curtail and defer some needs which in more normal times could be justified. For that reason we are restricting our request to the improvement item which we believe, in the best interest of the Government, should not be deferred.

Respectfully yours,

E. JAMES ADAMS, *Administrator.*

FEDERAL FIELD COMMITTEE FOR DEVELOPMENT PLANNING IN ALASKA,
Anchorage, Alaska, April 27, 1967.

Hon. CARL HAYDEN,
Charman, Committee on Appropriations,
United States Senate, Washington, D.C.

DEAR MR. CHAIRMAN: This is in reference to Title II of H.R. 9029, the Department of the Interior and Related Agencies Appropriation Act, 1968, and the accompanying House Report No. 206. This bill contains an appropriation of $190,000 for the Federal Development Planning Committees for Alaska, a reduction of $135,000 from the request of $325,000.

After a most thorough review of the effect of the House action on the program requirements and objectives of the Alaska Planning Committees, we are appealing for full restoration of the reduction of $135,000. Provided as an attachment to this letter is a data sheet and justification for the amendment requested.

Your favorable consideration of this amendment to H.R. 9029 is respectfully requested.

Sincerely yours,

DAVID M. HICKOK,
(For Joseph H. FitzGerald,
Chairman, Federal Field Committee).

FEDERAL DEVELOPMENT PLANNING COMMITTEES FOR ALASKA

Salaries and Expenses, Fiscal Year 1968

(House Hearings, pp. 488–518)

1967 appropriation	$190,000
1968 request	325,000
House allowance	190,000
House reduction	135,000
Amendment requested	135,000

AMENDMENTS REQUESTED

Page 45, line 3, strike out "$190,000" and insert "$325,000", an increase of $135,000 in the appropriation.

HOUSE REPORT

Salaries and expenses. The amount of $190,000 is provided for necessary expenses of the Federal Development Planning Committees for Alaska, as established by Executive Order 11182 of October 2, 1964. The hire of passenger motor vehicles and services, as authorized by 5 U.S.C. 3109 is included. This amount is $135,000 below the budget estimate and is the same amount as was appropriated for fiscal year 1967.

The Committee has serious reservations with regard to the effectiveness and objectivity of work being performed by the Federal Development Planning Committees for Alaska. It is of the opinion that there is a lack of practical purpose in a good portion of the economic research currently being performed by this agency. In addition, the Committee noted apparent duplication of effort along various lines of research.

The increasing assistance being received by this activity from the Economic Development Administration was taken into consideration when the Committee arrived at its recommended appropriation level.

Application of House allowance

[Amounts in thousands]

Activity	1967 appropriation		1968 request		House allowance		Increase (+) or decrease (−), bill compared with request		Amendment requested	
	Permanent positions	Amount	Permanent positions	Amount	Permanent positions	Amount	Permanent positions	Amount	Permanent positions	Amount
Field committee	7	$166	14	$325	7	$190	−7	−$135	+7	+$135
Review committee		24								
Total	7	190	14	325	7	190	−7	−135	+7	+135

EFFECTS OF HOUSE ACTION

The House allowance has not provided an increase over the 1967 appropriation.

JUSTIFICATION

The estimate for this appropriation in FY 1968 was $325,000. The House Report provides $190,000, a reduction of $135,000. Restoration of the entire amount is requested.

Impact of House Action on the Program

The House allowance will mean that the seven additional positions requested cannot be financed. Subsequently, the Federal Field Committee will be deprived of an adequate staff secretariat essential to achieve a high output in *all functional fields of planning.* Planning Officers in the several fields requested in the budget are required to correlate and coordinate State and Federal agency efforts.

It is axiomatic that such a small professional staff "speaking the language" and "knowing the territory" in their fields is the bare essential of any intelligent regional planning effort to enhance and speed the development of Alaska's economy. By comparison with the dollar outlays for regional planning in other sections of the United States: i.e. Appalachia, New England, the Upper Great Lakes, the Ozarks, the Four Corners, and the Atlantic Coastal Plains, the 1968 budgeting requirements of the Alaska Development Committees is of a ratio of 1 to 4.

Restoration of the full budgetary request of $325,000 is essential to the Committee's task at hand. Without full restoration the task is impossible at an acceptable quality level.

House Committee Comments

The House Committee made several comments pertaining to the operation of the Federal Development Planning Committees for Alaska. The following points are made in an effort to clarify the organization, mission, and accomplishments of these Committees.

Point 1.—Effectiveness, objectivity and practical purpose of Committee work. The mission of the Federal Field Committee for Development Planning in Alaska, as enunciated in Executive Order 11182, is precisely to achieve the greatest effectiveness, objectivity and practical purposes possible for the conduct of Federal agency programs and developments in Alaska through inter-agency coordinated effort and the close correlation of State and Federal program objectives.

With this end in mind the Field Committee initially organized and utilized several inter-agency (State and Federal) Task Force groups to examine the needs of Alaskan development and economic enhancement which could be met through State and Federal programs. Agency missions, objectives and specific programs were examined and questioned within an overall search for valid contributions to the Alaskan economy and identification of gaps in Federal and State efforts.

The Field Committee's report to the President, endorsed by the Cabinet Review Committee, provided an initial perspective of Federal and State activities in Alaska. Such an overview of the Alaska "frontier" economy had never before been undertaken. It provided a prerequisite conceptual view for the focus of combined State-Federal program efforts for Alaskan development. It enunciated program strengths and program weaknesses within the State agencies and particularly within Federal Departments and Agencies.

This initial overview provided analysis for programming a series of priority State-Federal research and planning efforts on particular nagging problems affecting the Alaska economy. Such priority efforts undertaken in FY 1967 encompass four goals:

(a) The economic development of the State on a long range basis with special emphasis placed upon the broadening of the private sector within the total economy;

(b) The mitigation of serious economic problems of many sectors of the economy, such as for Native populations who have only seasonal employment;

(c) The reduction of costs for a more competitive economy and broadened range of business opportunity within the State through public sphere activities to improve communications, provide low cost power and the development of transportation networks etc.; and

(d) The achievement of a better integration of the Alaskan economy within the economy of the United States as a whole and the international trade pattern of the United States.

Some of the specific practical steps toward these goals taken by the Field Committee are as follows:

1. Background analysis on the Alaska Communications System in support of legislation for sale to the private sector;
2. Recommendations to the bureau of the Budget, Civil Service Commission and individual Federal agencies for the hire of native Alaskans to fill Federal job opportunities in Alaska;
3. The integration of Federal and State agency efforts in a concerted analysis of the Native social, economic and resource problem;

4. The correlation of several State and Federal agency Alaska transportation studies and program efforts to pinpoint deficiencies and gaps in the achievement of an integrated land-sea-air transport system for Alaska;

5. Coordinated efforts with the Federal Power Commissions "Alaska Power Survey" leading to enunciation of Alaska power development policies.

6. In-depths analysis of Alaska-Japanese and Alaska-Canadian trade relations, problems and opportunties; and

7. Cooperation with the Public Land Law Review Commission in the funding and execution of the Alaska Public Land Law and Policy review.

Point 2.—Duplication of Agency Effort.

Rather than duplicating individual agency effort, exactly the opposite is true of the Committee program. All Alaska Federal and State agencies are for the first time currently aware of the efforts of others. Agencies are complementing each other and the staff of the Field Committee, in-house or by contract, further supplements and complements agency work to fill in gaps. Together all for the first time are being correlated toward the development of a comprehensive State-wide plan of development. To these coordinated ends the Federal Power Commission will contribute its Alaska Power Survey, the Federal Maritime Administration its marine transportation analysis and solutions, the Department of the Interior its several resource development planning efforts in minerals, mining, land management, fisheries and recreation and the Corps of Engineers and ESSA their recommendations for harbor and coastal developments, and so forth.

Most important of all is that for the first time on such a broad scale resource planning, transportation planning, industrial opportunity and human needs, etc. are being considered concurrently in joint effort. Personnel of individual agencies are detailed to work with the Field Committee staff as in the case of a Bureau of Indian Affairs Officer on the native problem. Field Committee staff has close contact with Washington and Regional Office personnel in their assigned study areas. For example, in the recreation field, close coordination is not only extant with the Bureau of Outdoor Recreation but also with the Federal recreation management agencies: National Park Service, U.S. Forest Service, Bureau of Sport Fisheries and Wildlife and Bureau of Land Management. Each agency contributes to staff activity through the interagency task force arrangement and high executive contact is frequent between the Field Committee Chairman and the Secretaries of Interior and Agriculture and their Bureau Directors in order to achieve broad policy understanding and control.

Point 3.—Increased Assistance from the Economic Development Administration.

Executive Order 11182 provides that assistance be rendered to the Alaska Field Committee from all Federal agencies. These contributions take various forms, the assignment of personnel, contributions of data, etc. Only the Economic Development Administration has provided financial support. This support has been drawn from the regional planning program of Title V of P.L. 89–136.

It was offered with the premise that the present Alaska Development Committee planning apparatus might evolve into a Regional Commission as authorized by P.L. 89–136. Because of the unique Federal-State involvement in Alaska it has been determined to continue the present organization. This decision precludes any further EDA assistance to the Alaska Committees under the Title V Regional Planning Program in FY 1968. Therefore, direct appropriations are required to carry on activities begun in part with EDA assistance in fiscal years 1966 and 1967.

LEWIS AND CLARK TRAIL COMMISSION

SALARIES AND EXPENSES

(House hearings, Pt. 2, pp. 518–523)
(Senate hearings, p. 1333)

Appropriation 1967	$25,000
Estimate	35,000
House Allowance	25,000
Restoration Requested	10,000

(P. 45, line 9)

AMENDMENT REQUESTED

Page 45, line 9 strike out "$25,000" and insert in lieu thereof "$35,000",—an increase of $10,000 in the appropriation.

HOUSE REPORT

"The Committee recommends an appropriation of $25,000, a reduction of $10,000 below the budget estimate, for operating expenses of the Lewis and Clark Trail Commission authorized by Public Law 88–630, as amended. This legislation provides for the establishment of a 28 member commission for a five-year period to advise on and coordinate activities of agencies and individuals interested in preserving and marking as much as possible of the route followed by Lewis and Clark in 1804–1806".

JUSTIFICATION

The amendment restores the reduction of $10,000 made by the House in the budget estimate. This amount is for the following activity:

Activity: Lewis and Clark Trail Commission:	
Appropriation, 1967	$25,000
Budget estimate, 1968	35,000
House allowance, 1968	25,000
Restoration requested	10,000

A breakdown of the restoration requested by object of expenditure follows:

11.0	Personnel compensation	$263
12.0	Personnel benefits	30
21.0	Travel and transportation of persons	607
24.0	Printing and reproduction	6,000
25.2	Services of other agencies	3,000
26.0	Supplies and materials	100
	Total	10,000

Restoration to the full amount of the estimate is required in order to finance the reprinting and reproduction costs of the study report "The Lewis and Clark Trail—a Proposal for Development", and to provide funds to carry out the preliminary work required toward the making of a movie to be produced by Metro-Goldwyn-Mayer Studios.

A limited number of copies of the report was produced a year ago and since that time the demand for the report has exceeded the original printing order and the Bureau can no longer fill this demand.

The Metro-Goldwyn-Mayer Movie Studio has agreed to make a documentary movie on the Lewis and Clark Trail provided the preliminary work required in preparation for the movie is carried out by the Bureau. This documentary movie will cost many thousands of dollars and the Bureau's contribution will be very small in comparison to the contribution to be made by Metro-Goldwyn-Mayer in producing this film.

LEWIS AND CLARK TRAIL COMMISSION

SALARIES AND EXPENSES

(House Hearings Pt. 2, pp. 718–723;
Senate hearings, p. [illegible])

Appropriation 1967	$25,000
Estimate	35,000
House Allowance	25,000
Restoration Requested	10,000

H.R. [illegible], Page [illegible]

AMENDMENT REQUESTED

Page [illegible], line [illegible] strike out "$25,000" and insert in lieu thereof "$35,000", an increase of $10,000 in the appropriation.

HOUSE ACTION

"The Committee recommends an appropriation of $25,000, a reduction of $10,000 below the budget estimate, for operating expenses of the Lewis and Clark Trail Commission authorized by Public Law [illegible], as amended. This legislation provides for the establishment of a [illegible] member commission for a five-year period to advise on and coordinate the activities of agencies and individuals interested in preserving and marking as much as possible of the route followed by Lewis and Clark in 1804–1806."

JUSTIFICATION

The amendment restores the reduction of $10,000 made by the House in the budget estimate. This amount is for the following activity:

Activity: Lewis and Clark Trail Commission:

Appropriation, 1967	$25,000
Budget estimate, 1968	35,000
House allowance, 1968	25,000
Restoration requested	10,000

The breakdown of the restoration requested by object of expenditure follows:

11.0 Personnel compensation	[illegible]
12.0 Personnel benefits	[illegible]
21.0 Travel and transportation of persons	[illegible]
24.0 Printing and reproduction	[illegible]
25.2 Services of other agencies	[illegible]
26.0 Supplies and materials	[illegible]
Total	10,000

Restoration of the full amount of the request is required in order to continue the reprinting and to provide for costs of the study report "The Lewis and Clark Trail—a Proposal for Development", and to provide funds to carry out the preliminary work required toward the making of a movie to be produced by Metro-Goldwyn-Mayer Studios.

A limited number of copies of the report was [illegible]. Since that time the demand for the report has exceeded the original [illegible] and the Bureau can no longer fill this demand.

The Metro-Goldwyn-Mayer Movie Studio has agreed to make a documentary movie on the Lewis and Clark Trail provided that the preliminary work required in preparation for the movie is carried out by the Bureau. This documentary movie will cost many thousands of dollars and the Bureau's contribution will be very small in comparison to the contribution to be made by Metro-Goldwyn-Mayer in producing this film.
