FOREIGN ASSISTANCE AND RELATED AGENCIES APPROPRIATIONS FOR FISCAL YEAR 1974

MONDAY, APRIL 2, 1973.

DEPARTMENT OF STATE

MIGRATION AND REFUGEE ASSISTANCE

WITNESSES

FRANK L. KELLOGG, SPECIAL ASSISTANT TO THE SECRETARY FOR REFUGEE AND MIGRATION AFFAIRS
ORSON W. TRUEWORTHY, DEPUTY DIRECTOR, OFFICE OF REFUGEE AND MIGRATION AFFAIRS
ROBERT V. CAREY, BUDGET AND FISCAL OFFICER, OFFICE OF REFUGEE AND MIGRATION AFFAIRS
MICHAEL M. CONLIN, DIRECTOR, BUDGET PLANNING AND PRESENTATION, DEPARTMENT OF STATE

PROGRAM AND FINANCING (IN THOUSANDS OF DOLLARS)

[Note.—The appropriation provision for this account for 1973 had not been enacted at the time this budget was prepared. A temporary continuing appropriation is in effect for the period Oct. 15, 1972, to Feb. 28, 1973. The amounts shown below for 1973 are based upon this continuing resolution and do not reflect the President's initial budget request for 1973]

	1972 actual	1973 estimate	1974 estimate
Program by activities:			
Direct program:			
1. Contribution to Intergovernmental Committee for European Migration	3,150	3,307	3,250
2. Contribution to United Nations High Commissioner for Refugees	1,050	1,000	1,100
3. Refugees from European Communist countries	6,702	2,550	2,400
4. Refugees from Communist China	500	500	500
5. Contribution to International Committee of the Red Cross	50	50	50
6. Refugees from East Pakistan	75		
7. African refugees	3,900	1,050	300
Total calendar year program	15,427	8,457	7,600
8. Administration	1,133	1,093	1,200
9. Adjustments to fiscal year basis:			
Calendar year 1971 program funds obligated in 1972	9,710		
Calendar year 1972 program funds obligated in 1973	−4,631	4,631	
Calendar year 1973 program funds obligated in 1974		−450	450
Calendar year 1974 program funds obligated in 1975			−450
Total direct program	21,639	13,731	8,800
Reimbursable program:			
10. Cuban refugee program	513	240	50
Total obligations	22,153	13,971	8,850
Financing:			
Receipts and reimbursements from: Federal funds	−513	−240	−50
Unobligated balance available, start of year	−5,088	−1,231	
Unobligated balance transferred from other accounts	−2,000		
Unobligated balance available, end of year	1,231		
Unobligated balance lapsing	99		
Budget authority	15,881	12,500	8,800

Grants, subsidies, and contributions		49,975	
Total obligations		50,000	

Mr. Passman. The committee will come to order.

We begin this morning the hearings on the foreign assistance appropriation bill for fiscal year 1974. So many times in the past we see in the press where the administration asks for a certain amount of money for aid. Well, AID is an abbreviation for the Agency for International Development. It has nothing to do with the grand total of foreign aid. The fact of the matter is that AID represents a small percentage of the total amount requested for foreign aid, if you put all pieces of foreign aid and assistance together. I wanted the record to show that AID is an abbreviation for this one agency, and it doesn't represent the total amount requested for foreign aid.

SUBCOMMITTEE MEMBERS

We have several new members on our subcommittee this year and I would like to welcome them to the subcommittee at this time.

FISCAL YEAR 1974 REQUEST

Mr. Passman. The first item that we will consider will be that of the migration and refugee assistance program under the Department of State.

The fiscal year 1973 appropriation in the continuing resolution, I believe, was $8,500,000; is that correct?

Mr. KELLOGG. Yes, sir.

Mr. PASSMAN. But your fiscal year 1974 estimate is $8,800,000; is that correct?

Mr. KELLOGG. It is, Mr. Chairman.

Mr. PASSMAN. Dr. Hannah has said many, many times before, and I think this pretty generally applies to all agencies, that there is an asking price and a taking price. This inflated figure over last year is your asking price at this point; is that correct, sir?

Mr. KELLOGG. It is, Mr. Chairman.

Mr. PASSMAN. And the taking price will be determined later, after we complete the examination. You will agree with that, will you not?

Mr. KELLOGG. Yes, Mr. Chairman.

GENERAL STATEMENT

Mr. PASSMAN. Our first witness will be the Honorable Frank Kellogg, Special Assistant to the Secretary of State for Refugee and Migration Affairs. I assume you have a statement you would like to make to the committee.

Mr. KELLOGG. I have, Mr. Chairman.

Mr. Chairman and members of the subcommittee: gentlemen, this is my third successive appearance before this subcommittee, and it is the first of my appearances at which I can report what I feel to be some measurable progress in the area in which I am engaged—that is, the alleviation of human misery in refugee situations, the reinforcement of the principles of protection of the persecuted, and the provision to large numbers of people of opportunities to seek to fulfill their aspirations in conditions of political freedom and personal dignity.

REFUGEE SITUATION

Indeed, I wish I were able to say that we are noting the early part of a trend leading toward a general easing of refugee and migration problems around the world, and to acceptance everywhere of the provisions of the Universal Declaration of Human Rights. In view of recent détentes in international relations, I hope profoundly that this is the case. But I think it is obvious that it is too early to draw meaningful conclusions. We continue to have refugees in large numbers from communism, from political and military conflict, from tribal, religious and other persecutions. We detect grounds for encouragement but overall, at this time, we see no significant relief in the total operational load abroad. Locales and situations change, but as we have for many years, we continue to count the world refugee population in the millions of human beings.

SOUTH ASIA

When I last testified here, the most pressing refugee situation involved the nearly 10 million Bengalis who had fled their homes in what was then East Pakistan, and who were being cared for in India in one of the most massive single humanitarian assistance programs in history. What we most feared, at that time, was deterioration into another UNRWA-type, long-range relief program involving multitudes

of people required to subsist for years on end in crowded camps, deprived of identity, self-respect, and hope.

The South Asian situation, as you know, has largely resolved itself. There still are human problems in the subcontinent—Biharis in Bangladesh, Bengalis in Pakistan, prisoners of war under continued detention. But the great mass of refugees in India returned swiftly to their towns and villages soon after establishment of Bangladesh, where, if conditions are uncertain, at least they are back at their homes and are reestablishing their lives free of the threat of physical violence.

SUDAN

A less dramatic but equally satisfactory development has come in the Sudan. There, after 17 years of conflict, government and rebel leaders have reached an accommodation which has resulted in a resettlement program in the south, operated under United Nations auspices with the support of governments and voluntary agencies including our own. Scores of thousands of refugees already have returned and are resettling at their former homes. The total, we believe, will reach 680,000 over coming months.

SOVIET JEWS

A third development on the encouraging side has been the movement from the Soviet Union of Jews wishing to settle in Israel. This migration, which Soviet authorities permitted to accelerate during 1971, picked up momentum during 1972; Israel received about 31,500 of these immigrants during the year. The Congress provided $50 million in fiscal year 1973 to help with their transport and resettlement. We are expending these funds through the Intergovernmental Committee for European Migration (ICEM) and through voluntary agencies, principally United Israel Appeal (UIA). In August 1972, Soviet imposition of fees—to reimburse the state for education costs of migrating citizens—threatened to inhibit the departure to Israel of some individuals. Since then many Soviet Jews have had to pay the fees in order to depart, and there are known cases where departures have not taken place because of inability to pay the fees; more recently there have been cases of the fees being waived. Meanwhile the annual rate of immigration to Israel from the Soviet Union has held up at pre-August 1972 levels—that is, to the rate of about 31,500 persons per year.

EMERGENCY RELIEF SITUATIONS

One event during the past year has been ominous in its implications, but satisfying in its demonstration that the international humanitarian community remains responsive in emergency refugee situations. When Uganda, on short notice, expelled about 45,000 residents of Asian origin, the crisis was met with decision, compassion, and in many cases with happy results. Already we are hearing success stories from some of the 1,500 Ugandan Asians who were admitted to the United States and who were established by generous and compassionate Americans in communities across the country. A final 1,700

of those who were removed from Uganda remain in European camps, and it is a present concern of the U.N. High Commissioner to find homes for them also.

U.S. LEADERSHIP IN REFUGEE AND MIGRATION AFFAIRS

I am proud as an American that in the programs I have cited, and in the longer standing programs in which my office is engaged, the United States continues to play a role of leadership in refugee and migration affairs. Our financial contributions to these programs—almost all of which are international in character—are not overriding. Indeed, some nations, particularly in Western Europe, in terms of population and wealth are more generous than we. But in the case of the Sudanese operation, as earlier in the South Asian emergency, it was the United States which responded immediately and first to an appeal for help from the U.N. High Commissioner for refugees.

We have not sought to dominate these programs, but we have, in my opinion, maintained international respect for American principles of humanitarianism and the dignity of man, and in specific cases we have set examples and led the way. By we, I mean not the Government alone, but our Government in concert with our voluntary agencies, and with the millions of Americans who contribute to, work for and believe in these organizations. All of our programs are conducted in intimate association with operations of the voluntary agencies, a fact which we think is one of the strengths not only of American but of international refugee assistance.

Refugees have been with us, and have contributed to world problems, for as long as any of us can remember—and as I said earlier, despite success in resettlement, they still are with us.

Communism in Asia, in Europe, in the Caribbean continues to generate refugees and migrants. The rates of flow vary from individual countries, but still people stream out, fugitives from oppression, seekers of freedom and of social and economic fulfillment.

CONFLICTS OF EMERGING NATIONS

Conflicts between and within some of the emerging nations, particularly in Africa, are of additional concern. Refugees this year from tribal conflict in Burundi alone, as an example, number 85,000 people. Others have fled from southern Africa, including the students whose tuition—the smallest item in our line budget—my office is assuming from AID. In total, according to the U.N. High Commissioner, refugees in Africa as of now number nearly a million souls.

INTERNATIONAL REFUGEE ORGANIZATIONS

We deplore situations which generate refugees, not only because these situations stem from oppressions which violate what Americans believe and from disturbances between nations, but also because the mere existence of refugees tends to exacerbate international relations. In this context it is satisfying, I think, that the international organizations which have been established to operate refugee programs continue to prove themselves equal to the demands of old and new refugee problems. The U.N. High Commissioner for Refugees (UNHCR), the Intergovernmental Committee for European Migration (ICEM), the International Committee of the Red Cross (ICRC), all of which receive U.S. Government support under this appropriation, are in my opinion indispensable to our conduct of foreign affairs. The U.S. refugee program (USRP) and the modest Far East refugee program (FERP) support some of these programs and also assist in the programs of the voluntary agencies—organizations which draw most of their resources from the generosity of the American people, and whose employees and volunteers can be found in the frontlines in every refugee operation.

Our appropriation requests are detailed in accompanying documents. Mr. Chairman, I believe we can substantiate the need in each case. I will be happy to elaborate, or to answer any questions.

Mr. PASSMAN. Thank you for your statement.

JUSTIFICATION MATERIAL

We will insert the justification material in the record at this point.

MIGRATION AND REFUGEE ASSISTANCE

General Statement

This request for $8,800,000 is to provide funds to the Department of State for contributions to the Intergovernmental Committee for European Migration (ICEM), the United Nations High Commissioner for Refugees (UNHCR) and the International Committee of the Red Cross (ICRC); for assistance to refugees from Eastern Europe, the Far East, and Africa. These programs are authorized under Public Law 87-510, the Migration and Refugee Assistance Act of 1962, except for the contribution to the International Committee of the Red Cross which is under the authority of Public Law 89-230.

The objectives of this program are to promote, through humanitarian means, peace throughout the world, the stability of nations, the preservation of asylum and to seek the extension of individual human liberties. We support self-determination and encourage the development of free institutions. To realize these objectives, we must exemplify in our national behavior the freedom and humanity which we believe belong to all men.

The existence of unresolved refugee problems is a challenge to the sincerity of our objectives. Refugee problems arise from oppression or aggression by Communist or other totalitarian regimes or from political conflict between or within nations. They usually are of international political concern because they constitute symbols of human want and loss of personal dignity, cause international controversy and threats to the peace, and impede over-all stability, especially in developing countries. It is important that we deal with these problems in a manner consistent with our national heritage and purposes and in a way which will help to bring about solutions to the broader problems from which they stem.

Although by working in concert with other nations and international organizations a great deal has been accomplished in helping refugees become independent and productive citizens, refugee problems are as important as ever in relation to our national objectives. As long as unresolved refugee problems exist, the United States must continue to take all necessary action for their solution.

1. INTERGOVERNMENTAL COMMITTEE FOR EUROPEAN MIGRATION (ICEM) - $3,250,000

The amount proposed for the United States contribution to the Intergovernmental Committee for European Migration (ICEM) for 1974 is $3,250,000. It is $57,000 less than that proposed for 1973.

ICEM was established in 1951 by non-communist governments, dedicated to the principle of freedom of movement. Its formation was an initiative of the U.S. Congress. The organization, comprised of 31 member governments, repeatedly has demonstrated its value to the United States and other countries by helping the major asylum countries keep the doors of asylum open. It is the best equipped organization for the large scale and economical movement of refugees and migrants. For example, ICEM is playing a major role in assisting Jewish refugees from the Soviet Union and other Eastern European countries in their transportation from Vienna to Israel. In Africa in October of 1972, ICEM was called upon to assist in the emergency situation in Uganda. In a ten-day period, ICEM completed the processing and evacuation of some 4,600 Asians from Uganda to Europe.

As in previous years, the proposed contribution to ICEM in 1974 will be allocated to the Refugee and Latin American Sections of ICEM's Operational Budget and to its Administrative Budget. In addition, funds will be allocated from reserve loan funds to replenish the ICEM Travel Loan Fund for Chinese Refugees, which ICEM is administering at our request. The Loan Fund provides interest-free travel loans to needy Chinese refugees entering the U.S. under 7th Preference, (Section 203(a)7 of the Immigration and Nationality Act) similar to that provided for refugees of European origin entering the U.S. Also reserve loan funds will continue to be used to the maximum extent to provide loans for Jewish and other refugees from Eastern Europe.

2. UNITED NATIONS HIGH COMMISSIONER FOR REFUGEES (UNHCR) - $1,100,000

For 1974 it is proposed that the United States contribute $1,100,000 to the United Nations High Commissioner for Refugees (UNHCR). The Office of the UNHCR is the focal point for international assistance to refugees, and is the key instrument throughout the world for providing international protection for refugees and for promoting permanent solutions to their problems.

The United States contribution to the High Commissioner's world-wide assistance program reflects the traditional humanitarian concern of the American people; it relates directly to U.S. interests by seeking to ease the tensions inimical to the preservation of peace which arise out of economic and political difficulties connected with refugee situations. In addition, it asures that he is available when called upon to step into, on an extraordinary basis, such major refugee problems as that resulting from the flight of approximately 10 million Bengali refugees into India in 1971 and more recently the resettlement of some 680,000 refugees returning to their homes in the Southern provinces from within and outside of the Sudan.

While the UNHCR material assistance program aids refugees in Asia and Latin America and other continues to function as an essential supplement to USRP and ICEM in Europe, its major emphasis continues to be in Africa. In his efforts to alleviate the cruel and persistent refugee problems in Africa, the High Commissioner's program has been of particular importance to the U.S. by assisting in the solution of such problems where it would not be feasible or politically wise for the U.S. to provide direct assistance.

Due largely to the continually increasing numbers of refugees, the cost of the assistance program has steadily risen over the past several years. The 1970 program was for $6.0 million while the 1974 program is expected to exceed $8.5 million. The U.S. contribution since 1970 has remained at the $1 million level. In the same range of years other countries have increased their contributions by over 30% in the aggregate. An increase of $100,000 for 1974 is necessary to help keep pace with the urgent and growing refugee needs, to continue to demonstrate United States interest in sharing the increased burden of refugee problems and to encourage international support to reduce the severity of the problems caused by the flight of

persecuted people. This contribution of $1,100,000 will approximate 16% of all government contributions.

More specifically, approval of such an increase would be a step toward (1) supporting the kind of efforts we believe are consistent with U.S. foreign policy objectives; (2) enhancing the U.S. image of leadership in promoting effective humanitarian assistance for persecuted refugees and for the resolution of refugee problems; and (3) upholding our standing and views among the 31 member nations of the UNHCR Executive Committee, and indeed among the members of the United Nations generally.

3. UNITED STATES REFUGEE PROGRAM (USRP) - $2,400,000

The sum of $2,400,000 is being requested for 1974. This is $150,000 less than the availability for 1973.

U.S. Government activities on behalf of refugees throughout the world demonstrate the concern of the American people for the victims of persecution and oppression. This is in accord with the principle of freedom of movement for all persons and with our obligations under the 1951 Convention Relating to the Status of Refugees and the Protocol thereto. Other objectives include:

- to restore and advance peace through the reduction of tensions and unrest that refugees may engender.

- to assist in the integration of uprooted people in asylum countries, in new communities or in their former homes, including acceptance in the United States of a fair share of these people.

- to stimulate generous sharing by other governments of assistance requirements in meeting the needs of refugees.

Since its inception in 1952, the United States Refugee Program (USRP) has met the above objectives on behalf of refugees from communist countries. Most of these refugees are temporarily havened in Western European countries. Other have received temporary asylum in countries throughout the world. These countries pay all the costs for maintaining refugee camps, including utilities, upkeep and food.

The immediate aim of the USRP program is to ensure that the refugees do not become a prolonged burden of these countries of first asylum and to thereby induce these countries to maintain a liberal asylum policy. This is accomplished by

permanently resettling these refugees in countries throughout the world. Working through contacts with such agencies as the American Fund for Czechoslovak Refugees (AFCR), the Polish American Immigration and Relief Committee (PAIRC), the International Catholic Migration Committee (ICMC), the World Council of Churches (WCC), the Tolstoy Foundation (TF), the International Rescue Committee (IRC), the American Jewish Joint Distribution Committee (AJDC), and the Hebrew Immigration Aid Society (HIAS), as well as with the Intergovernmental Committee for European Migration (ICEM) and in cooperation with the United Nations High Commissioner for Refugees (UNHCR), the program assures expert resettlement counselling, including a wide range of visa documentation, medical, language and orientation and transportation assistance, all designed to speed the refugees' establishment in his new homeland. When determined vital to the successful completion of such resettlement, the agencies also accord selective interim material assistance on the basis of demonstrated need. Through such projects we have helped more than 365,000 refugees.

Because of the nature of communist societies, it is not possible to project accurately the exodus of refugees. Many imponderables are present, including tension, unrest and ferment that have existed in Eastern Europe with small chance of permanent abatement. The relaxation of travel restrictions within these countries results in a sharp rise in the number of refugees.

Although the number of refugees leaving Eastern Europe with the exception of Jews from Russia has not appreciably changed over the past couple of years, the unsettled potential remains and could result in a dramatic increase in the refugee flow. The Department's estimate is based on an experience factor from the past two years and is the minimum necessary to meet the requirements of conducting an effective program which will continue to provide essential services to individual refugees.

4. FAR EAST REFUGEE PROGRAM (FERP) - $500,000

This request of $500,000, the same amount available in the current fiscal year, is for assistance to refugees from mainland China under the Far East Refugee Program (FERP).

The objectives of the FERP are to demonstrate the continuing friendship of the American people for the Chinese people. We also feel that it is important to show through this modest effort that our country's well-known global concern and assistance for the homeless and persecuted includes Chinese among other Asians.

The FERP program concentrates on projects undertaken on a very selective basis, designed to meet highly conspicuous needs. The program attempts to meet the immediate requirements of Chinese refugees who have fled the mainland and demonstrate visibly our continuing interest in the well-being of those who have sought freedom at great risk. Through contracts with voluntary agencies such as Catholic Relief Services (CRS), Hong Kong Christian Service (HKCS), International Rescue Committee (IRC), International Social Service (ISS), and Lutheran World Federation (LWF), FERP assistance includes such other selective assistance as temporary care and maintenance, local re-establishment, counseling for emigration to the U.S. of those refugees who qualify under 7th Preference (Section 203(a)7 of the Immigration and Nationality Act). Also included in this budget are construction projects such as housing, community centers, and clinics in selected areas of greatest need.

In 1971, and again in 1972, there was a sharp increase in the number of refugees who fled from China into Hong Kong. With many of them publicized as "freedom swimmers", these refugees were double the number of those who fled to Hong Kong in 1970.

Given the increase in the flow of Chinese refugees, and continuing inflation, it is essential to maintain FERP funding at the present level. During 1974, it is anticipated that $250,000 will be allocated for services to individual refugees and $250,000 for construction projects.

5. THE INTERNATIONAL COMMITTEE OF THE RED CROSS (ICRC) - $50,000

The United States, under the authority of Public Law 89-230, has contributed $50,000 annually toward the basic expenses of the International Committee of the Red Cross since 1966. The fundamental purpose of ICRC is the promotion and supervision of the application of the provisions of the Geneva Conventions of 1949 to which the United States is a party. These international treaties deal with the humanitarian treatment of prisoners of war, the protection of civilians in time of war and the amelioration of the conditions of wounded, sick and shipwrecked members of the armed forces. These activities of the ICRC have been effectively continued throughout the years with related and consistently increased activity in the fields of humanitarian relief and disaster and supporting assistance. In many cases, their assistance is in direct response to a request from the United States Government. This organization is Swiss in its constitution and personnel. But it operates on an international level, has the ability to act as a neutral institution, whether in cases of international or national sensitivities, hostilities or tension. The scrupulous adherence of ICRC to the principle of political impartiality is recognized throughout the world. ICRC is thus often able to enter and act decisively and in a timely way in situations in which, because of political sensitiveness, other organizations or governments are either unable to act effectively or are not permitted to participate. Under such circumstances ICRC is often additionally called upon to meet compelling relief needs, examples being the Nigerian civil war and the Arab-Israeli conflict.

Recent major ICRC activities include its persistent efforts on behalf of prisoners of war in the Indo-Chinese conflict. With its role of inspecting POW camps in Southeast Asia coming to a close, ICRC plans to direct its attention and energy toward other needs, in Southeast Asia, including care of war victims.

Another area of concern to ICRC is India-Pakistan. Its activities there include protection of prisoners of war and civilians, care of the wounded and sick, the tracking of missing persons and the transmission of family messages.

Also worthy of note among ICRC's relief and disaster efforts are its supporting assistance activities in the Middle East, negotiations for the release of passengers of hijacked aircraft, visits to detainees in countries of all areas of the world, the issuance of ICRC travel documents to thousands of stateless Asian-Ugandians, and sponsorship of international conferences on humanitarian law in armed conflicts (the Geneva Conventions). All these activities are directly related to protection, relief and disaster assistance, and all serve the national interests of the United States, including the attainment of our foreign policy objectives.

6. SOUTHERN AFRICAN REFUGEE EDUCATION PROJECT - $300,000

In 1974, the Department will assume the administration and funding of the Southern African Refugee Education Project. The budget request for this program is $300,000.

This project provides assistance to asylum countries to finance the education of selected refugees from minority-controlled areas of Southern Africa. Students are supported at the secondary level in Zambia and at secondary and higher levels elsewhere in independent Africa.

This is successor to an AID-administered project which began in 1963, the project is concentrated around the Nkumbi secondary school in Zambia. Built specifically for refugee education, this school was transferred in January 1971 to the Government of Zambia, which assumed full responsibility to continue and expand refugee training with multi-donar assistance.

In addition to the normal academic curriculum to permit college entrance to those best qualified, the school provides special courses, (e.g., office management, typing and shorthand) and vocational training opportunities (e.g. agriculture and motor mechanics) for those not scheduled or suited for college entrance.

Aside from meeting obvious educational and humanitarian needs, this project is directly related to U.S. foreign policy interests:

-- It provides tangible evidence of U.S. sympathy and support for the goal of self-determination.

-- It helps ensure that, should independence come to one or more of the minority-controlled areas, there will be a cadre of trained and qualified individuals available to operate vital services of government and business.

-- It provides a means for a continuing dialogue with the present and potential leadership of the liberation movements.

-- It provides the individual refugee student with an alternative to educational opportunities offered by communist countries.

It is envisioned that the project in 1974 would support up to 145 students at an annual cost of approximately $2,000 per student.

7. ADMINISTRATION - $1,200,000

The request for administrative expenses is $1,200,000, an increase of $107,000 over the 1973 request. This increase is to fund mandatory within-grade salary increases, overseas wage and price increases and other necessary administrative increases. It is the minimum necessary to meet day-to-day management and support requirements in 1974.

In addition to providing immediate support and direction to the ongoing programs for which funds are being requested in this budget, the Office of the Special Assistant for Refugee and Migration Affairs is responsible for the formulation of broad U.S. Government refugee and migration policy as well as coordination and evaluation of the U.S. effort in this field. The responsibilities include such varied activities as (1) asylum requests and policies, (2) the implementation of the Refugee Protocol (e.g. the refugee travel document) and (3) coping with emergency and chronic world wide refugee problems.

Responsibility for refugee and migration operations, reporting and liaison in the European and Near East area is centralized in the Refugee and Migration Section, U.S. Mission, Geneva; in the Far East, the Refugee and Migration Unit, Consulate General Hong Kong. The overseas personnel are responsible for all refugee and migration matters arising within their assigned geographic areas, including preparation of field program proposals, maintenance of registration lists of refugees, screening of refugees, and supervision of contracts including end-use audits to assure contract compliance. The overseas staff observe and report on refugee programs conducted by the host governments, the Intergovernmental Committee for European Migration (ICEM), the U.N. High Commissioner for Refugees (UNHCR) and private voluntary agencies. Further, they undertake, where appropriate, to ensure that United States interests in refugee and migration matters in their areas are protected. The personnel also maintain liaison with officials of the host governments, international organizations, and voluntary agencies to ensure the coordination of the various refugee programs.

COMMITTEE RULES

Mr. PASSMAN. We are going to abide by the 5 minute rule as set forth in the rules of the committee. I am going to yield to the distinguished gentleman from Kansas, Mr. Shriver.

Mr. SHRIVER. Thank you, Mr. Chairman.

SOVIET UNION EXIT FEES

Mr. Kellogg, on page 4 of your statement you say there have been cases recently wherein exit fees charged by the Soviet Union for emigrating Jews are being waived. Is this a general policy change, or has this just happened in isolated cases?

Mr. KELLOGG. Mr. Congressman, it has been very hard to determine exactly what the Soviet position is with respect to the emigration fees. In certain instances they have been charged. In other instances, for no apparent or discernible reason, they have been waived. Recently the trend seems to be more forgiveness of the emigration fee for education than in the past.

AFRICAN REFUGEES

Mr. SHRIVER. The United States put up $4 million in fiscal 1973 for African refugees, due to a Presidential determination. What program was that?

SUDAN

Mr. KELLOGG. This was for two emergencies, Mr. Congressman. One was the Sudanese emergency program resulting from the cessation of war and the peace of Addis Ababa, which brought a frail and fragile peace to that part of the world after a civil war that lasted 17 years. It permitted some 600,000 refugees to start homeward, and to aid that very important chance for peace, we asked for and received $2,500,000 in Presidential determination orders.

UGANDA

The second program was $1,500,000, which we asked, through a Presidential determination order, for the dramatic and urgent Ugandan-Asian program. Those were the two programs that you refer to, Mr. Congressman.

Mr. SHRIVER. The last one was the Ugandan?

Mr. KELLOGG. Yes, sir.

Mr. SHRIVER. What was our role in that?

Mr. KELLOGG. The circumstances were as follows, Mr. Congressman: General Amin, President of Uganda, without prior notice, determined to evict some 40-odd thousand Ugandan Asians who considered Uganda to be their home. Of these, people in the area of between 4,000 and 5,000 were stateless; that is to say, they had no status either in Uganda itself, or in any other country. The balance were nationals of the United Kingdom or India or Pakistan, and therefore they had a claim on somewhere to go.

The United States determined that the most tragic, those that most needed help, were the Ugandans who were in fact stateless. Therefore a portion of the $1,500,000 which we received was used to help pay

for care and maintenance and transport these stateless Ugandans to various points in Europe—notably Italy, Austria, Belgium, Spain, and Malta—wherever they could find a place to give them temporary refuge. The balance of the money was used for the care and maintenance, transportation, and resettlement of approximately 1,000 who came to this country.

Mr. SHRIVER. Through what agency was this money contributed?

Mr. KELLOGG. Two international agencies, Mr. Congressman, one being the Intergovernmental Committee for European Migration (ICEM), and the other the United Nations High Commissioner for Refugees. The money used for the stateless Asians coming to this country was channeled through the seven American voluntary agencies participating in the resettlement program.

RELOCATION OF UGANDAN REFUGEES TO GREAT BRITAIN

Mr. SHRIVER. Did many of the people go to Great Britain?

Mr. KELLOGG. Most of the Ugandan Asians who had United Kingdom passports did go to Great Britain.

Mr. SHRIVER. Which would be approximately how many?

Mr. KELLOGG. Some 26,000.

Mr. SHRIVER. Great Britain participates in the agencies that you mentioned a moment ago, like ICEM, do they not?

Mr. KELLOGG. In this particular instance, Mr. Congressman, Great Britain did use the facilities of ICEM for the organization of the movement of the Asians to resettlement camps in the United Kingdom.

Mr. SHRIVER. But Great Britain is not a member of ICEM?

Mr. KELLOGG. No, it is not, sir.

Mr. SHRIVER. I think my 5 minutes have gone by.

COMMITTEE RULES

Mr. PASSMAN. Under the rules by which this subcommittee is operating, so as to adhere to the rules adopted by the full committee, each member of the subcommittee may use 5 minutes to question the witness. After they have consumed 5 minutes, the floor is returned to the chairman and the chairman consumes all the time that is required to make the record, after which he yields to the members and they can take as much time as they wish to ask questions. There is no time limitation on the members of the committee. You can consume a day or more if it is your desire.

So if you do not have time to ask all your questions under the 5-minute rule, you will be privileged to go into greater detail later. At this time I yield to Mr. Bevill from Alabama.

Let me state for the record, also, that we alternate from the Republicans to the Democrats when we are asking questions. I think that is a fair way to handle it, so each one will have an opportunity to examine.

Mr. Bevill?

FISCAL YEAR 1973 AVAILABILITY—FISCAL YEAR 1974 REQUEST

Mr. BEVILL. Mr. Secretary, you are seeking $8.5 million. Is that your request?

Mr. KELLOGG. No, sir

Mr BEVILL. $8,500,000?

Mr. KELLOGG. $8,800,000.

Mr. BEVILL. For 1974?

Mr. KELLOGG. That is correct, sir.

Mr. BEVILL. And you had $8,500,000 last year, but you also had from the Presidential funds some $4 million. You are really spending this fiscal year $12,500,000.

Mr. KELLOGG. Yes, sir.

Mr. BEVILL. Actually you are going to reduce your expenditure under this plan by 30 percent, or $4,300,000.

PRESIDENTIAL DETERMINATION ORDER

Mr. KELLOGG. The exact reduction, Mr. Congressman, is $3.7 million, but may I add this. In the refugee business, we go from one emergency to another, and it is impossible to forecast what may happen. That is the reason why Congress, in its wisdom, created the Presidential determination order apparatus, so that we can deal with those emergencies if and when they arise.

Mr. BEVILL. You have anticipated my next question. Of course, in making this request you are considering the fact that you have these emergency funds to call upon that the President really controls.

Mr. KELLOGG. Yes, sir; that is correct. From this particular point in time, the $8,800,000 is what we can see and anticipate as the need for the programs for which we are here this morning.

Mr. SHRIVER. Will you yield?

Mr. BEVILL. Yes.

DEVALUATION SUPPLEMENTAL—FISCAL YEAR 1973

Mr. SHRIVER. You are also asking for a supplemental of $636,000, are you not?

Mr. KELLOGG. That is entirely correct, sir, as a result of the devaluation. We are asking for an additional $636,000.

FISCAL YEAR 1974 REQUEST

Mr. BEVILL. Actually then, discounting what you are receiving from the President's funds, you are really asking for $300,000 more, disregarding the funds that you received from the President's two funds, aren't you?

Mr. KELLOGG. That is entirely correct.

Mr. BEVILL. Then you are asking for the $6 million plus, so really you are asking for about $1 million more than you had this fiscal year, aren't you, roughly?

Mr. KELLOGG. May I correct that impression, Mr. Congressman. The $8,800,000 which we are here this morning to discuss with you is what we are asking for our programs for the year 1974. The $636,000 that we are asking as a supplemental, because of the devaluation that occurred on February 12, 1973, is for the year 1973.

OTHER COUNTRIES PARTICIPATION IN REFUGEE PROGRAMS

Mr. BEVILL. I was about to add apples and oranges there. Thank you. On these various programs that you have mentioned in your testimony,

are we getting any help from any other countries on these, like the Sudanese? Did we get any help from any other countries on this, or did the United States just take it up by itself?

Mr. KELLOGG. Could I turn that around and answer this way, Mr. Congressman. I do not believe there is any program, with two exceptions, in which the U.S. Government is participating alone. The only two programs before us this morning which are totally and completely American are the USRP (U.S. refugee program), which is our own program mostly in Europe, and the other one is FERP (Far East refugee program). All the others are multinational.

COUNTRIES PARTICIPATING IN SUDAN REFUGEE SITUATION

Mr. BEVILL. Using the Sudan situation as one there, would you have the information available—if you don't you can put it in the record—as to what other countries participated, what percentage, how much did they participate in these funds in this particular instance.

Mr. KELLOGG. I will be very glad to provide that for the record, Mr. Congressman. We do have those figures, and we were only one of a good many nations that were involved in that program.

[The information follows:]

PLEDGES OF ASSISTANCE TO SOUTHERN SUDANESE RETURNEES AND DISPLACED PERSONS THROUGH THE UN PROGRAM COORDINATED BY THE UNITED NATIONS HIGH COMMISSIONER FOR REFUGEES—STATUS AS OF MAR. 1, 1973

Donor	Amount pledged	Percent of total pledged
Austria	$4,978	0.03
Botswana	2,500	0.01
Brazil (medical supplies—value unknown)		
Canada	510,204	2.97
Denmark	502,181	2.92
Finland	241,897	1.41
France	215,054	1.25
Germany, Federal Republic	771,698	4.49
Hellenic Red Cross	3,333	0.02
Iran	3,000	0.02
Japan	20,000	0.12
Lebanon	2,046	0.01
Liberia	5,000	0.03
Libyan Arab Republic	303,951	1.77
Nepal	500	
Netherlands [1]	192,245	1.12
Norway	251,153	1.46
Pakistan	6,545	0.04
Private donors	664	
Sterling Airways, Denmark	515,988	3.00
Sweden	1,477,263	8.60
Switzerland	113,235	0.66
Togo	800	
Tunisia	2,000	0.01
Turkey	857	
United Kingdom	1,173,708	6.83
UNHCR (emergency fund)	300,000	1.75
UNHCR (regular program)	530,450	3.09
United States of America:		
Food for Peace	7,560,000	
Cash donations	2,475,000	
Subtotal	10,035,000	58.39
Total	17,186,250	100.00

[1] The Netherlands Government also pledged an amount of 2,000,000 guilders (now equivalent to about $590,000) toward the construction of a bridge at Juba.

Note: Pledges of assistance made directly to the Government of Sudan and not through the U.N. program have reached an estimated total of about $10,000,000.

Mr. BEVILL. That is all I have.
Mr. PASSMAN. Mr. Miller?
Mr. MILLER. No questions at this time.
Mr. PASSMAN. Mr. Yates?

DEFINITION OF "REFUGEE"

Mr. YATES. As a new member of the committee, I am not entirely sure as to what is meant by the word "refugee" in your context. Can you tell me what a refugee is?

Mr. KELLOGG. Yes, sir; the definition for "refugee" which is used in my office is approximately parallel to that used by the United Nations High Commissioner for Refugees. Basically a refugee is someone who has had to flee his own country into a country of asylum. In other words, he has crossed a border, and he fears to return for fear of persecution—freedom, religion, communism, and so forth, those reasons.

FAR EAST REFUGEE PROGRAM

Mr. YATES. In your justification on page 8 you refer to the Far East refugee program. You say that the objectives of the FERP, "Are to demonstrate the continuing friendship of the American people for the Chinese people." Is this in contrast to the Chinese Government?

Mr. KELLOGG. I would say very definitely yes, sir. The justification for FERP—which is small in terms of dollars, only $500,000—is that it is the only expression that exists that helps Chinese refugees who are escaping oppression (like the famous freedom swimmers who cross at the risk of their lives and many of whom are lost) to seek the freedom that they can find in Hong Kong and Macao.

Mr. YATES. Has this been the subject of any discussions between the White House and the Peoples Republic of China, under the new détente?

Mr. KELLOGG. I can't answer that positively. Obviously I wasn't a party to those discussions. I would think not. It is a program that has been in existence some time. It is very small. The main purpose of it is to show that the U.S. Government is not only helping escapees from communism in Europe, but also worldwide.

Mr. YATES. Are there any escapees from Taiwan who qualify for this program?

Mr. KELLOGG. No, sir.

Mr. YATES. I notice also on that page you said that the refugees were double the number of those who fled to Hong Kong in 1970. The number who fled to Hong Kong in 1970 is not given.

Mr. KELLOGG. Mr. Congressman, I can supply the exact figures. When I say exact, the estimated influx of refugees into Hong Kong. The number in 1970 was estimated at 7,500; in 1971 it was 13,500, and the estimated number for 1972 is in the area of 14,500.

Mr. YATES. That is all, Mr. Chairman.

Mr. PASSMAN. Mr. Coughlin.

RESETTLEMENT OF SOVIET JEWS

Mr. COUGHLIN. Thank you, Mr. Chairman.

I have just one question. On page 3 of your testimony you indicate

that Congress provided $50 million in fiscal year 1973 for resettlement of Soviet Jews in Israel. Where does that show in your other figures?

Mr. PASSMAN. That is in addition.

Mr. KELLOGG. It does not show on the blue sheet that probably you have in front of you. Yes, I see you do. It is not on that sheet at all. My fiscal officer will correct me if I am wrong, but I believe the reason is because this is something which Congress passed, and which we have only recently received since this particular budget was drawn up. It is not a request that we initiated, but rather a sum of money that was voted by Congress, and funds appropriated to the President.

Mr. COUGHLIN. Thank you. That is all.

DOLLAR DEVALUATION

Mr. PASSMAN. Thank you, Mr. Coughlin. I think this is your third year to appear before this committee, Mr. Kellogg.

Mr. KELLOGG. That is correct, Mr. Chairman.

Mr. PASSMAN. We have always been very considerate of your request, but I am not too sure but that we haven't reached the point where it is going to be necessary to tighten up on this program, because we are spending money we don't have for things we don't need, trying to be everything to everybody everywhere on borrowed money. We are beginning to feel the result today, because I notice you are requesting $636,000 to offset the devaluation of the dollar; is that correct?

Mr. KELLOGG. That is correct, Mr. Chairman.

EUROPEAN ORIENTED REFUGEE PROGRAMS

Mr. PASSMAN. I read an article in the morning paper which didn't please me very much. Practically every European nation is now running from the dollar rather than trying to acquire dollars. They are trying to convert their dollars into some other currency. Isn't that statement a fact?

Mr. KELLOGG. It is a fact, yes, sir.

Mr. PASSMAAN. This program is mainly a European refugee progam; is it not?

Mr. KELLOGG. No, Mr. Chairman.

Mr. PASSMAN. It takes on that name at certain places, does it not, the European refugee program?

Mr. KELLOGG. But that is only one program out of a number of programs.

TOTAL REFUGEE PROGRAM

Mr. PASSMAN. But this is the largest part of it, is it not? You have a breakdown on page 1. It is all spelled out there. For instance for the Intergovernmental Committee for European Migration you are requesting $3,250,000. For the U.N. High Commissioner for Refugee, you are requesting $1.1 million. For the U.S. refugee program you are requesting $2.4 million. All of this is set forth on page 1, and that is far from being the total story. Don't you think possibly it should be made clear in the record the total amount? Certainly I recommended, and I think this subcommittee was unanimous in recommending $50 million for the relocation of Jews from the U.S.S.R. It is a refugee program is it not?

Mr. KELLOGG. Oh, yes, sir.

Mr. PASSMAN. So actually the request that we approved last year specifically to your agency is a very small part of the total amount that will be spent on refugees, is that true? Did you make it all inclusive and include the $50 million for Soviet Jews, which is a direct refugee program?

INTERGOVERNMENTAL COMMITTEE FOR EUROPEAN MIGRATION

Mr. KELLOGG. Mr. Chairman, I think I have in front of me now three separate questions. The first is whether our programs are European oriented. Then you cited our first three programs. If I may, sir, I would like to say that in the case of Intergovernmental Committee for European Migration, the title is somewhat misleading because the word "European" does not limit this organization to operate only in Europe. For example, it was the major transporter of refugees from Africa, from Uganda specifically. Similarly the United Nations High Commissioner for Refugees is not European oriented.

Mr. PASSMAN. No; that particular one is not.

U.S. REFUGEE PROGRAM

Mr. KELLOGG. It is largely African. The U.S. refugee program, which is our own, is similarly not limited to Europe, but operates elsewhere throughout the globe.

SOVIET JEW REFUGEES

Finally, sir, with respect to the $50 million for Soviet Jews, that money is under my jurisdiction; it is a refugee program, and I am prepared to talk about it at length this morning if you wish.

Mr. PASSMAN. We do have questions later. That is a bilateral program.

Mr. KELLOGG. Yes, sir.

Mr. PASSMAN. Of course, the others are all multilateral programs.

Mr. KELLOGG. Yes, sir.

COUNTRIES CONTRIBUTIONS TO REFUGEE PROGRAMS

Mr. PASSMAN. Would you place in the record at this point a list showing our contribution and the contribution by all other nations for each one of the programs we are discussing this morning?

Mr. KELLOGG. Yes, sir.

[The information follows:]

1972 CONTRIBUTIONS

	U.S. contribution	All other government contributions
ICEM	$3,150,000	$9,872,398
UNHCR	1,000,000	4,977,514
ICRC	50,000	2,548,108
Ugandan Asians	1,500,000	[1] 1,923,820
Sudan	10,035,000	7,151,250

[1] This does not include direct maintenance and resettlement costs incurred by nations who accepted many of these refugees for permanent residence.

PROPOSED CONSOLIDATION OF REFUGEE PROGRAMS

Mr. PASSMAN. Until about 3 years ago most of your refugees came out of the European countries, did they not?

Mr. KELLOGG. They did, yes, sir.

Mr. PASSMAN. That is really where it got its name, the European refugee program. We gave some thought last year to consolidating several of these programs. After discussing it with the people in Geneva, they thought it would be unwise to try to consolidate some of these programs. What do you think about it?

Mr. KELLOGG. I have given that a great deal of thought, Mr. Chairman, in the 3 years that I have been here in Washington. We have considered it with great care. We have concluded in my office, just as they did in Geneva, that increased efficiency and savings could not be achieved through this means.

ADMINISTRATIVE EXPENSES

Mr. PASSMAN. What percentage of the total appropriation goes for administrative expenses?

Mr. KELLOGG. In which program?

Mr. PASSMAN. All of them.

Mr. KELLOGG. Our administrative expenses are 13½ percent of the total request, Mr. Chairman.

CUBAN REFUGEE PROGRAM

Mr. PASSMAN. We have another refugee program. That is the Cuban refugee program, is that true?

Mr. KELLOGG. That is correct.

Mr. PASSMAN. What does that amount to? What is the request for fiscal 1974, do you know?

Mr. CAREY. $90 million.

TOTAL REFUGEE PROGRAM

Mr. PASSMAN. Really the total refugee program is around $150 million, isn't it, if you put all pieces together?

Mr. KELLOGG. Yes, Mr. Chairman, that is correct.

EFFECT OF DOLLAR DEVALUATION

Mr. PASSMAN. That is quite different than what we see on the surface. I want the record to show that we are heavily involved in refugee programs. I wonder, Mr. Kellogg, if the dollar devaluation will have the same effect on all the other programs.

Mr. KELLOGG. I don't believe it will, Mr. Chairman, because the dollar devaluation affects only overseas programs. The Cuban refugee program is in this program, is in this country, and therefore should not be affected.

PRESIDENTIAL DETERMINATION FUNDS

Mr. PASSMAN. Again you have transferred into the program funds totalling $4 million in fiscal 1973 which were added to the amounts

appropriated for this item. Would you explain where these additional amounts were allocated, and why the additional amounts were actually needed?

SUDAN REFUGEES

Mr. KELLOGG. $2.5 million was spent in the Sudan to help resettle returning refugees who had been forced out of that country by the 17-year civil war.

Mr. PASSMAN. Forced out of the Sudan?

Mr. KELLOGG. Forced out of their homes, some of them in the bush.

Mr. PASSMAN. In Sudan?

Mr. KELLOGG. Others across the border into neighboring countries.

Mr. PASSMAN. Out of the Sudan?

Mr. KELLOGG. Yes, sir.

DOMESTIC VERSUS FOREIGN PROJECTS

Mr. PASSMAN. You know that is strange. I certainly don't want to be too critical, but some of us have to do a little explaining back home. I am not going to direct any criticism at the President, because I think he is a great President. I know he has done a commendable job, but if we look at the operation of some of these domestic programs we become a little irritated. In a little town of Vidalia, La., the people had an Economic Development Administration grant approved of $400,000. They sold bonds, and they received $310,000 for their bonds and placed it in the bank. Then these funds were impounded, so they are paying interest on the bonds and the $400,000 was not forthcoming. I was able to help on that situation but I go over to Lake Providence, La., where we have a new port. They are making great progress, far beyond what we expected when the port was opened on the Mississippi River at this small town. They needed $320,000 from EDA, which would have provided additional employment for 72 individuals. They likewise sold their bonds and put the money in the First National Bank at Lake Providence, La., but these funds were impounded.

However, I picked up a letter on my desk which came from the International Development Association last week. They approved a $42 million credit for the Sudan for an irrigation project. There was no benefit to cost ratio, they just approved $42 million.

Then we see the United States puts up 40 percent of the funds for IDA. What are the terms of these credits? Fifty years, no interest, with a 10-year grace period.

Here we are giving these people $42 million, and at the same time taking the refugees out of the Sudan, locating them at our expense somewhere else. It just doesn't make sense. We find that the domestic projects are being discontinued and funds are being impounded but all the foreign aid projects are going full steam ahead. Projects in my district are being closed down. It doesn't make sense to me. We have to get our contracts renewed every 2 years. Yours is pretty much on a permanent basis, isn't it?

Mr. KELLOGG. Mr. Chairman, I appear before you every year, so that I would like to think it were permanent. However, I do serve at the pleasure of the President.

COST OF SUDAN REFUGEE PROGRAM

Mr. PASSMAN. What does this Sudan program cost?

Mr. KELLOGG. In the year 1973 it was $2.5 million.

Mr. PASSMAN. If I could have just gotten $1 million of that I could have had both of these projects funded. There would have been 72 people employed down in Lake Providence, La., and 112 people at the other location. Could you have gotten by on $1.5 million so I could have gotten the other $1 million?

Mr. KELLOGG. Mr. Chairman, I think I could defend the $2.5 million. It was for the benefit of the people whom you are referring to in your State of Louisiana.

Mr. PASSMAN. The benefit of the people in the State of Louisiana?

Mr. KELLOGG. Yes, sir.

Mr. PASSMAN. You mean these two projects from which they withheld funds while giving the Sudan $42 million?

PURPOSE OF REFUGEE PROGRAMS

Mr. KELLOGG. The whole point and purpose, Mr. Chairman, of any refugee program is to not only alleviate human suffering, which is something that the American people are interested in, but also it is vital toward establishing peace in the world.

Mr. PASSMAN. What kind of peace are you talking about?

Mr. KELLOGG. Every American wants to see peace throughout the world.

Mr. PASSMAN. Why sure. We haven't done such a good job, have we?

Mr. KELLOGG. And refugees are a cause of suffering, and a possible cause of war.

Mr. PASSMAN. It appears to me we have at least been involved in more wars and financed more wars since you had this program than we ever did before. You couldn't deny that fact, could you?

Mr. KELLOGG. I think perhaps there might have been more wars, if these programs hadn't been——

Mr. PASSMAN. And some of the longest wars too. I think we just got out of the longest war we ever had.

Mr. KELLOGG. I think that is correct, Mr. Chairman.

Mr. PASSMAN. Do you think it would have been longer if you hadn't had this program?

Mr. KELLOGG. The particular programs before us, sir, are not in that part of the world.

Mr. PASSMAN. I see. You are in Southeast Asia, aren't you, a part of it?

Mr. KELLOGG. We follow it very closely and we are involved from a policy point of view but we are actually not operating those programs in Southeast Asia.

PRESIDENTIAL DETERMINATION ORDERS

Mr. PASSMAN. Could you tell us the amount of money that the Agency for International Development transferred into this program in fiscal 1973?

Mr. KELLOGG. Do I understand the question——

Mr. PASSMAN. How much did they transfer out of AID into this program?

Mr. KELLOGG. The amount was $4 million, Mr. Chairman.

Mr. PASSMAN. I don't believe that the Agency for International Development justified this when they appeared before our committee last year, did they?

Mr. KELLOGG. No, they did not, Mr. Chairman.

Mr. PASSMAN. They certainly had a very tight program and didn't know where they could spare a dollar from any other program. Could you tell me out of what fund this came?

Mr. KELLOGG. Yes, Mr. Chairman. They have a contingency fund. Through an act of Congress that created my office, my office is able to draw up to $10 million on an annual basis from that emergency fund.

Mr. PASSMAN. You mean if there is an emergency? You are talking about the President's emergency fund?

Mr. KELLOGG. Yes, sir.

Mr. PASSMAN. Some years it has been as low as $5 million.

Mr. KELLOGG. That is correct.

Mr. PASSMAN. Some years it has been as high as $100 million. If we had only given them $2 million last year you couldn't have drawn down $4 million, could you?

Mr. KELLOGG. That is correct.

NEED FOR PRESIDENTIAL DETERMINATION ORDERS

Mr. PASSMAN. Mr. Kellogg, for the past 5 years, you have found it necessary to obtain Presidential determinations to transfer funds into this account. Could you tell us why you were unable to anticipate the need for these additional funds each year?

Mr. KELLOGG. I can answer that question, Mr. Chairman. For example, it is totally imposible to anticipate that General Amin in Uganda will suddenly decide overnight (because of a dream, he said) to force the Ugandan Asians out of that country. Or similarly, who could have anticipated that in 1 year 10 million Bengalis would be forced out of East Pakistan into India. These situations were totally impossible to anticipate.

Mr. PASSMAN. What would be the position in that part of the world if we just kept our hands off and let those people straighten out some of their own affairs?

Mr. KELLOGG. In the case, for example, of the Sudan, the role that the United States played did at least three things. It alleviated the suffering of starving people who didn't have hand agricultural tools, food, or shelter. Secondly, it permitted them to come back into southern Sudan and help to keep the peace. The third thing that it did was to help reestablish diplomatic relationship between the Sudan and the United States, which had been broken off at the time of the 6-day war.

ADMINISTRATION OF REFUGEE PROGRAMS

Mr. PASSMAN. You don't administer the Sudan program, do you?

Mr. KELLOGG. I administered the refugee relief program in the Sudan.

Mr. PASSMAN. Not Southeast Asia?

Mr. KELLOGG. Not Southeast Asia, no, sir.

BUDGET ECONOMIES

Mr. PASSMAN. You do know, Mr. Kellogg, we have 4,406 projects going in 101 nations of the world, do you not?

Mr. KELLOGG. I have never made that count, no, sir.

Mr. PASSMAN. Have you referred to the record and know actually how many programs we have and how many countries we are now operating in? You must remember we are in serious trouble with our finances in this country. Even after the President impounded billions of dollars this year, we are still going to have a $28 billion deficit in fiscal year 1973. There are so many small programs that make up the total Federal budget that we are going to have to start looking a little closer at the thousands of small programs considerd by the Congress.

Mr. KELLOGG. Could I comment, Mr. Chairman.

Mr. PASSMAN. Certainly.

EFFECT OF REFUGEE PROGRAMS ON WORLD PEACE

Mr. KELLOGG. In my opinion my programs are vitally important to the United States, primarily for two reasons. One, they help establish peace throughout he world, and second, they are an expression——

Mr. PASSMAN. Really, how can you explain that, Mr. Kellogg, that these programs help establish peace throughout the world?

Mr. KELLOGG. I think a perfect example is in the southern Sudan.

Mr. PASSMAN. But aren't we supporting both sides in every instance? We are pouring money by the millions of dollars into the Sudan. I referred to only one credit under the International Development Association for $42 million to the Sudan. Various types of other aid programs are going into the Sudan, and at the same time we are appropriating other funds to help refugees in the Sudan.

Mr. KELLOGG. Mr. Chairman, the peace itself is an outgrowth of what my program was able to do. My program is helping the refugees to return to their homes in the Sudan. That is the point I am trying to make this morning.

Mr. PASSMAN. Are you saying if you had gotten in a little earlier, that this $154 billion we spent in Vietnam could have been avoided?

Mr. KELLOGG. Possibly so.

Mr. PASSMAN. By bringing about peace?

Mr. KELLOGG. Posssibly so, Mr. Chairman.

Mr. PASSMAN. Aren't you borrowing pretty heavily upon your imagination?

VOLUNTARY AGENCIES PARTICIPATION

Mr. KELLOGG. May I also say, Mr. Chairman, I think a single statistic I can give you this morning is illustrative of the tremendous interest of the American people of all creeds and colors in the work which these programs do. For example, in 1972, 90 American voluntary agencies raised, among their constituency, $430 million, which exceeded by almost double——

Mr. PASSMAN. Who raised this money? What agency are you talking about?

Mr. KELLOGG. I am talking about the voluntary agencies in the United States that are a tremendously important factor.

Mr. PASSMAN. We are financing the voluntary agencies too; aren't we?

Mr. KELLOGG. But by only half the amount that was raised from the American people, that is the interesting thing.

Mr. PASSMAN. But it is the U.S. Government's money that is really keeping life's blood in them, isn't it? You referred to a mighty big figure there but you are not going to follow through and state that the U.S. Government appropriated millions of dollars to all these agencies. I had to think about that, didn't I?

Mr. KELLOGG. Yes, sir.

TEMPORARY AGENCIES

Mr. PASSMAN. Do you know of any bad program in Government? I am trying to make a case. No government cuts off an expense capable of voting. The most permanent thing in Washington is a temporary agency. We get these agencies started and, you know as well as I do, there are a lot of plush jobs attached to them. They go to Geneva where they can have four or five servants, and they can be a little king in their own kingdom over there. There are some jobs I would much prefer to have than the one I have, if I believed in really high living. You know, I know what this is all about.

Mr. KELLOGG. Yes, sir.

Mr. PASSMAN. There is just no such thing as abolishing one of these agencies, once they get started. I am not blaming you. You go to Geneva quite often, don't you?

Mr. KELLOGG. Yes, Mr. Chairman.

Mr. PASSMAN. You know something about what I am talking?

Mr. KELLOGG. Yes, sir.

Mr. PASSMAN. All these agencies are domiciled right there in Geneva, aren't they?

Mr. KELLOGG. They are, sir.

POSSIBILITY OF UNFORESEEN REQUIREMENTS FOR FISCAL YEAR 1974

Mr. PASSMAN. Do you anticipate additional funds will be needed for fiscal 1974 other than what you are requesting this morning?

Mr. KELLOGG. As we sit here, Mr. Chairman, I do not, no, sir.

Mr. PASSMAN. You don't see any trouble brewing in any of these countries where we presently have big aid programs going?

Mr. KELLOGG. When I say I do not, I have to admit at the same time that no one can look into the future of what is going to happen around the world. Something could occur in one country or another very, very easily.

Mr. PASSMAN. What would happen if the committee just gave you your appropriation, making whatever adjustments it felt proper, and said this is all you get. You are going to have to operate through fiscal 1974 on this amount. You would still have a program, would you not?

Mr. KELLOGG. I would, yes, sir.

BUDGET ECONOMIES

Mr. PASSMAN. Don't you think the time has come when possibly we are going to have to tighten upon all these programs, not just yours but throughout the budget? We always point out the amount of money that we have cut the budget. I always say for each $1 we cut the bureaucrats come down and get $2. They get the dollar back plus another one because we caused them to go to the trouble of coming back for a supplemental. We are actually making a mockery of our processes. If we should tighten up on these programs, taking your testimony and statement with respect to your needs and go as far as we can with you and just rest our case, you would still have a program, would you not?

Mr. KELLOGG. I would, yes, sir.

FUND TRANSFER AUTHORITY

Mr. PASSMAN. Thank you very much. I believe you stated earlier that you do have the authority under the legislation to transfer $10 million in any fiscal year to this program from activities funded under the Foreign Assistance Act of 1961.

Mr. KELLOGG. That is currently correct, yes, sir.

Mr. PASSMAN. Would you object to other agencies or other spigots of the aid program operating in the same manner?

Mr. KELLOGG. Mr. Chairman, I think our programs are so realistic and so lean, if I may use that word, that I would very much object to any other agency being able to draw on our funds.

Mr. PASSMAN. That is right, but you want the right to draw on their funds.

Mr. KELLOGG. Only on AID's emergency fund which is created for that very purpose.

Mr. PASSMAN. Not for that very purpose, but for various purposes. Many times they have transferred funds out of the contingency fund into other accounts where we have made reductions and therefore offset our reductions. You are familiar with that procedure too, aren't you?

Mr. KELLOGG. Yes, sir, I am.

POSSIBLE CONSOLIDATION OF REFUGEE PROGRAMS

Mr. PASSMAN. Mr. Kellogg, in last year's hearings I asked you to give some thought to the possibility of combining the Intergovernmental Committee for European Migration program and the United States refugee program. You indicated then as you did this morning that you would give some thought to the possibility of this consolidation. Are you still giving thought to it or have you concluded that it wouldn't be wise?

Mr. KELLOGG. Mr. Chairman, I have given it thought, and I continue to do so. I have many reasons, which I won't take the time of the committee to explore, as to why I don't think that this is a workable idea.

Basically, gentlemen, the real reason why it won't work is that the two organizations are very different in their reasons for existing. ICEM is basically a transportation organization. It is designed to move refugees from one place to another. USRP is the American expression

of interest in refugees primarily in Europe, and its importance is to resettle refugees out of asylum countries so that those countries will continue to be asylum countries.

TOTAL COST OF REFUGEE PROGRAMS

Mr. PASSMAN. Your request is for $8,800,000 for migration and refugee assistance, but if we will turn to page 527 of the hearings of last year, we get the total cost of the refugee programs. It was a staggering figure of $305,965,539 for fiscal year 1971. That is why when you scatter the programs everywhere, it is almost impossible for the most astute Member of Congress to know what any of these programs is costing in total. You just come in and testify for one small part. You make a good case, but it is the responsibility of this committee to put it all together. You are familiar with this table, aren't you?

Mr. KELLOGG. I believe I am, yes, sir.

BENGALI REFUGEES

Mr. KELLOGG. Out of that $305 million at least $100 million was spent in India for the Bengali refugees.

Mr. PASSMAN. $97 million, I believe.

Mr. KELLOGG. Yes, sir.

Mr. PASSMAN. Of course that is true, but they are still refugees, aren't they?

Mr. KELLOGG. Yes, sir.

Mr. PASSMAN. This year you are requesting $7,550,000 to be made available until December 31, 1974, which goes 6 months beyond the end of the fiscal year. This is necessary, I guess, because the organizations operate on a calendar rather than a fiscal year basis?

Mr. KELLOGG. That is correct. We contract with organizations that operate on a calendar year, yes, Mr. Chairman.

Mr. PASSMAN. East Pakistan is called Bangladesh now?

Mr. KELLOGG. Bangladesh.

Mr. PASSMAN. Has that situation been mainly resolved now?

Mr. KELLOGG. With respect to refugees and the definition that I gave earlier, the refugees, all 10 million of them, have returned to Bangladesh. Unfortunately there are approximately 75 million people living in a country the size of Louisiana, and the crop failures have been staggering. It is one of the poorest countries in the world, and there are many, many problems that still continue, Mr. Chairman, I am sorry to report.

Mr. PASSMAN. And there always will be problems there, wouldn't you think?

Mr. KELLOGG. I would think so.

Mr. PASSMAN. Is your agency directly involved in any way in the present situation in Bangladesh?

Mr. KELLOGG. No, sir, not at all.

Mr. PASSMAN. Have there been any refugee movements out of Bangladesh since the mass movement last year?

Mr. KELLOGG. Not that I am aware of, no, sir.

TEN-YEAR TABLE ON REFUGEE MOVEMENT

Mr. PASSMAN. Mr. Kellogg, would you supply a table which will show the refugee movements for the past 10 years, if it is readily available?

Mr. KELLOGG. Yes, sir.

(The information follows:)

Refugee movements—1963–72, movements by ICEM

1963	33,657
1964	37,160
1965	37,343
1966	30,452
1967	35,410
1968	51,070
1969	59,528
1970	52,357
1971	44,756
1972	62,888

In addition to the above, we estimate that over 12,000,000 refugees crossed international borders during the last 10 years. Some examples of the movements follow:

Refugees from Cuba	600,000
Refugees from East Pakistan	9,085,000
Refugees from Peoples Republic of China	161,000
Ugandan Asians expelled from Uganda	45,000
Refugees from 1 African country to another African country	1,500,000

MOVEMENT OF REFUGEES

Mr. PASSMAN. I believe you have some instances where refugees leave country A and go to country B, and later they leave country B and return to country A, do you not?

Mr. KELLOGG. This happens very frequently; yes, sir.

Mr. PASSMAN. So they really go on a hayride or take a little vacation to see whether the grass is a little greener on the other side.

Mr. KELLOGG. I would hardly think so, Mr. Chairman.

Mr. PASSMAN. But they did go from country A to country B, then return from country B to country A, as returning refugees?

Mr. KELLOGG. My experience is that the reason they left was because of outbreak of war, or fear or persecution, or fear of death.

Mr. PASSMAN. But most of the refugees do return to their home country, do they not?

Mr. KELLOGG. I would think the only reason for the return is because of a very decided change in the political atmosphere.

Mr. PASSMAN. But they do return. I made a statement of fact, did I not?

Mr. KELLOGG. They do return; yes, sir.

U.S. ASSISTANCE TO REFUGEES

Mr. PASSMAN. Mr. Kellogg, would you place in the record a table similar to the one which appeared on page 527 of last year's hearings, showing the total U.S. assistance to refugees for fiscal 1972 under the various programs?

Mr. KELLOGG. I will.

[The information follows:]

U.S. ASSISTANCE TO REFUGEES FOR FISCAL YEAR 1972

Categories of refugees assisted	Program managed by	Source of funds	Amount of program assistance	Value of Public Law 480 funded by department of agriculture [1]	Total
Refugees in Europe and elsewhere from European Communist countries	State/AID	Foreign assistance	$4,694,300		[2] $4,694,300
Chinese refugees in Hong Kong and Macao	State	do	[2] 500,000	$160,000	660,000
Refugee students from southern African countries in the United States	do	State	375,530		375,530
Refugee students from southern Africa in other African countries	AID	Foreign assistance	180,000		180,000
Palestine Arab refugees	U N Relief and Works Agency for Palestine refugees in the Near East (UNRWA)—State/AID	do	[3] 23,200,000	1,175,625	24,375,625
Various categories of refugees worldwide	United Nations High Commissioner for Refugees (UNHCR)—State	do	1,050,000		[2] 1,050,000
Refugees moved from Europe, the Near East and other areas	Intergovernmental Committee for European Migration (ICEM)—State	do	[4] 3,150,000		[2] 3,150,000
Vietnamese refugees displaced within South Vietnam	AID	do	53,905,100	6,094,900	60,000,000
Laotian refugees displaced within Laos	do	do	13,290,100	3,709,900	17,000,000
Cuban refugees in the United States	HEW	do	138,990,000		138,990,000
Various sub-Sahara African groups	AID	Agriculture		2,685,800	2,685,800
Refugee nationals in Indonesia	do	do		221,900	221,900
Sudanese refugees returning to the Sudan	do	Foreign assistance	475,000		475,000
Refugees in Nepal from surrounding countries	do	do		587,000	587,000
East Bengal refugees in India	State/AID	do		3,486,000	3,486,000
Burundi refugees in surrounding countries	State	do	75,000		75,000
Selected Refugees in the United States	do	do	1,788,235		1,788,235
Total			241,673,265	18,121,125	259,794,390

[1] At commodity Credit Corporation costs and includes transportation.
[2] Includes obligations incurred in calendar year 1972.
[3] Includes $8,900,000 in Public Law 480 commodities at world prices.
[4] Includes national migrants to Latin America.

INTERGOVERNMENTAL COMMITTEE FOR EUROPEAN MIGRATION

Mr. PASSMAN. The Intergovernmental Committee for European Migration, ICEM, is the first program for which the fiscal 1974 request is $3,250,000. Your request is $57,000 less than the program level for fiscal 1973, isn't that true?

Mr. KELLOGG. $57,000, sir.

PRESIDENTIAL DETERMINATION ORDER—1973

Mr. PASSMAN. The additional funds transferred from AID to the general refugee program, could you give us a breakdown under each heading where the allocation was made?

Mr. KELLOGG. For the year 1973?

Mr. PASSMAN. 1973.

Mr. KELLOGG. Yes, sir.

[The information follows:]

TRANSFERS OF FUNDS FROM AID

	Sudan	Ugandan Asians	Total
Intergovernmental committee for European migration		[1] $270,000	$270,000
United Nations High Commission for Refugees	$2,225,000	[2] 500,000	2,725,000
United States refugee program (voluntary agencies)	275,000	730,000	1,005,000
Total	2,500,000	1,500,000	4,000,000

[1] ICEM loan fund.
[2] Special contribution to the UNHCR for expenses incurred by ICEM and UNHCR. ICEM will receive a share from the UNHCR.

REFUGEE MOVEMENTS HANDLED BY ICEM

Mr. PASSMAN. What is the estimate of the number of refugee movements to be handled by ICEM this year and how does it compare to last year?

Mr. KELLOGG. The estimated movement in 1974, Mr. Chairman, is 53,300 refugee movements as compared to an estimate of 57,700 in 1973.

JEWISH REFUGEES FROM SOVIET UNION

Mr. PASSMAN. Would you please indicate the number of refugee movements that are Jewish?

Mr. KELLOGG. Yes, sir. Would you like me to supply that for the record or now? It is 30,000 from the Soviet Union to Israel, Mr. Chairman.

Mr. PASSMAN. How much have you expended out of the fund on this 30,000?

Mr. KELLOGG. Out of the $50 million, Mr. Chairman?

Mr. PASSMAN. Yes.

Mr. KELLOGG. We have just negotiated the contract for part of the $50 million within the last 2 weeks. The actual signing of the contract will take place this coming Friday.

[Discussion off the record.]

Mr. SHRIVER. Would you yield?

Mr. PASSMAN. Yes.

Mr. SHRIVER. Who was in on the negotiations?

Mr. KELLOGG. My office, my fiscal officers, and Mr. Gottlieb Hammer of UIA, United Israel Appeal. Mr. Max Fisher, chairman of the board of governors, Jewish Agency for Israel, also was following it on an almost day-to-day basis.

Mr. SHRIVER. Are you dealing with the Government of Israel?

Mr. KELLOGG. No, sir. We are dealing with the voluntary agencies which is our usual and customary procedure.

Mr. SHRIVER. Just one agency?

Mr. KELLOGG. In the main, one, UIA.

UNITED ISRAEL APPEAL—VOLUNTARY AGENCY

Mr. SHRIVER. Put more in the record about this agency with which you have negotiated a contract that could eventually involve $50 million.

Mr. KELLOGG. I will be glad to do so.

[The information follows:]

UNITED ISRAEL APPEAL

(Formerly the Jewish Agency for Israel)

The United Israel Appeal is an American voluntary agency which was incorporated on February 21, 1949, in the State of New York. It was registered with the Advisory Committee on Voluntary Foreign Air in March 1962. It received Internal Revenue Service authorization for income tax deduction purposes on September 30, 1966.

The UIA is governed by a board of directors of 27 and by a board of trustees of 200. The latter are designated in part by American Zionist groups in part and by a nominating committee working in consultation with Federation or Welfare funds in various U.S. cities, The current chairman of the board of directors is Melvin Dubinsky. Max M. Fisher, a board member, is chairman of the finance committee.

The UIA is the principal beneficiary of the United Jewish Appeal, an organization which raises funds in the United States for Jewish welfare programs. In turn, the UIA supports the programs of the Jewish Agency for Israel. These programs provide maintenance, transportation and absorption assistance for immigrants to Israel.

REFUGE MOVEMENTS THROUGH VOLUNTARY AGENCIES

Mr. PASSMAN. Why do you have to move through these voluntary agencies? I am not being critical of it but I think we should have some explanation as to why we have always got to handle this through some voluntary agency.

Mr. KELLOGG. In my opinion, there are several reasons for that, one being they are efficient. They work in the field. They can work in a way that bureaucracies cannot. They are person-to-person organizations, which governments normally are not. However, I could say in the case of Israel, I understand that the voluntary agencies work very closely with the Government.

Mr. PASSMAN. This is just another layer of bureaucracies, just more expense involved in handling funds through them, is that not true?

Mr. KELLOGG. I would think quite the reverse.

Mr. PASSMAN. How could you say quite the reverse when the United States has to furnish them the money with which they do this work, do we not?

JEWISH VOLUNTARY AGENCIES

Mr. KELLOGG. In the case of the Jewish voluntary agencies, they do one of the most extraordinary jobs of raising money worldwide that exists. They raise something in the area of $600 million annually.

COST PER SOVIET JEW FOR RELOCATION

Mr. PASSMAN. There is no question about that. What is it costing per Soviet Jew to relocate them?

Mr. KELLOGG. Roughly $1,500, Mr. Chairman.

Mr. PASSMAN. Out of 30,000 Soviet Jews that have come out during the year, what percentage of them are going to Israel?

Mr. KELLOGG. Almost the entire 30,000 are going to Israel.

JEWISH REFUGEES IN ISRAEL

Mr. PASSMAN. Let me just state for the record that I supported this program. I have been to Israel many times. They are doing a great job. They are building an industrial complex there that should be a good example for people everywhere in that part of the world. When I traveled from Tel Aviv to Jerusalem and saw those bare rock hills that I observed some 25 years ago and now they have pine forests growing on them, it is almost unbelievable. After all, that country can absorb just a certain number of people, and that is all. Aren't they going to have problems if this continues?

Mr. KELLOGG. That is part of the reason I think Mr. Chairman, that Congress voted the $50 million.

Mr. PASSMAN. You miss the point altogether. We voted the $50 million, of course, to help move these Jews out of Russia and relocate them. You said they were all going to Israel. They can only absorb a certain number of them. There won't be standing room if this continues indefinitely, will there?

Mr. KELLOGG. It is my understanding, Mr. Chairman, that with a certain amount of language training, that they are being absorbed in a very remarkable way, and are contributing to the economy of that country.

Mr. PASSMAN. But there is a saturation point. I want to help them and I will continue helping them, and I feel the committee feels the same way, but on the other hand, the land area is small. Are there about 3.5 million people in Israel?

Mr. KELLOGG. I believe so, yes, sir.

Mr. PASSMAN. There is a limit to how many people they can absorb in the country and the economy, is that true?

SOVIET EXIT FEES

Mr. KELLOGG. Right, sir.

Mr. PASSMAN. I wouldn't want to be placed in the position of defending the acts of the Soviet Union in any way, shape, form or fashion. With the tremendous charges they assess for the Jewish people to leave, do you have any information on why they want to assess such large amounts for each person leaving? Did they ever give any explanation as to why they take this position?

Mr. KELLOGG. There is no official explanation, none at all.

Mr. PASSMAN. Unofficial?

Mr. KELLOGG. Unofficially there are many theories, but nobody really knows, other than the U.S.S.R. top officials.

Mr. PASSMAN. Are the funds to handle this increased movement from the Soviet Union already included in the ICEM budget as presented this year?

Mr. KELLOGG. No, they are not, sir.

STATISTICS RELATING TO ICEM PROGRAM

Mr. PASSMAN. Mr. Kellogg, please place in the record a table showing the number of refugees handled by ICEM for the past 5 years. Also show what the total budget has been for ICEM for the same 5 years. Place a list in the record showing the 31 member governments, the amount each contributes to ICEM, and indicate what percentage each represents of the grand total.

Mr. KELLOGG. I will do so.

[The information follows:]

ICEM REFUGEE MOVEMENTS AND TOTAL BUDGETS 1968-72

Year	Refugee movements	Total budget
1968	51,070	$22,492,191
1969	59,528	25,582,451
1970	52,357	24,146,596
1971	44,397	20,563,700
1972	62,888	20,345,290

INTERGOVERNMENTAL COMMITTEE FOR EUROPEAN MIGRATION: GOVERNMENTAL CONTRIBUTIONS TO THE ICEM BUDGETS—1972

Country	Total	Percentage
Argentina	$104,848	0.81
Australia	4,170,886	32.03
Austria	56,331	.43
Belgium	194,583	1.49
Bolivia	4,553	.04
Brazil	150,001	1.15
Chile	30,876	.24
Colombia	39,596	.30
Costa Rica	7,153	.05
Denmark	47,138	.36

Uruguay	7,331	.06
New Zealand[1]	50,552	.39
Vatican[1]	2,000	.01
Total	13,022,398	100.00

[1] Not ICEM member in 1972.

MAIN FUNCTION OF ICEM

Mr. PASSMAN. Will you also please list for the record the main functions of ICEM and particularly indicate why it is necessary for the United States to participate in ICEM?

Mr. KELLOGG. I will do that, Mr. Chairman.

[The information follows:]

The main functions of ICEM are to promote the movement of refugees and migrants from Europe and assist in their expeditious resettlement abroad. ICEM thereby helps keep the doors of asylum open for refugees, while broadening the scope of economic, social, and human opportunity for migrants and refugees. It is in the interest of the United States to participate in ICEM because ICEM has demonstrated its unique ability to move rapidly in solving, through migration, human problems ranging from those of the individual to the masses of refugees generated in periods of political crises. ICEM is an indispensable part of the collective international refugee assistance mechanism. In preventing large accumulations of refugees by prompt movement and resettlement abroad, ICEMM contributes greatly to the continuation of liberal and humane asylum practices, and also to the reduction of tensions and to the stability of the countries concerned. Through its movement of refugees and other migrants, it helps broaden the scope of economic, social, and human opportunity and development in countries of immigration.

PERCENT OF AMERICANS ON ICEM STAFF

Mr. PASSMAN. Would you please place in the record what percentage of the staff are Americans?

Mr. KELLOGG. Yes, sir.

[The information follows:]

Of the ICEM staff, 4.3 percent are Americans.

ADMINISTRATIVE BUDGET FOR ICEM

Mr. PASSMAN. Provide for the record a copy of the administrative budget for ICEM for the last full year, either fiscal or calendar.

[The information follows:]

ICEM administrative budget—Calendar year 1972

Conference costs	$60,600
Staff costs	2,483,100
Other administrative costs:	
Travel	50,000
Communications	54,000
General office costs	191,000
Contractual services	63,350
Maintenance of vehicles	3,950
Post allowances and representation costs	24,600
Subtotal	386,900
Total	2,930,600

PERCENT OF ICEM BUDGET DEVOTED TO ADMINISTRATION

Mr. PASSMAN. Mr. Kellogg, could you tell the committee what percentage this administrative budget represents of the total budget of ICEM?

Mr. KELLOGG. Mr. Chairman, the administrative program for ICEM is $3,126,000 in 1973, estimated out of a total program of $21,951,000, or 14 percent.

AMERICAN PERSONNEL IN ICEM DOMICILED IN GENEVA

Mr. PASSMAN. In this particular program, the American personnel are domiciled in Geneva where most of the top officials are, is that correct?

Mr. KELLOGG. It is correct; yes, sir.

Mr. PASSMAN. Do they pay U.S. income taxes?

Mr. KELLOGG. Until a certain number of years have passed, Mr. Chairman, they pay——

Mr. CAREY. They pay the first couple of years.

Mr. PASSMAN. After their probation period, you know what I am talking about, which is 24 months, then they do not have to pay any income tax.

Mr. CAREY. That is right.

Mr. PASSMAN. Neither do they pay income tax in Geneva, do they?

Mr. CAREY. That it right.

Mr. PASSMAN. Do they have any jobs open?

U.S. INCOME TAX—ICEM AMERICAN PERSONNEL

Mr. ROYBAL. Will you yield, Mr. Chairman? On that particular point will you supply for the record the number of months that they are overseas before they are exempt from paying income tax? It is not, I believe, a matter of years. It is a matter of months. I believe 18 months is the correct number. Will you supply that for the record?

Mr. KELLOGG. We will.

Mr. ROYBALL. I don't want this to appear that they must be away from the United States for a number of years. It is a number of months.

[The information follows:]

Title 26—United States Code 911(a)2 provides "presence in foreign country for 17 months. In the case of an individual citizen of the United States who during any period of 18 consecutive months is present in a foreign country or countries during at least 510 full days in such period, amounts received from sources without the United States (except amounts paid by the United States or any agency thereof) which constitute earned income attributable to services performed during such 18-month period. The amount excluded under this paragraph for any taxable year shall be computed by applying the special rules contained in subsection (c)."

Employees attached to international organizations are generally guaranteed a fixed income with the provision that the employer is responsible for reimbursement of income taxes. Therefore the employee receives the same net income in the first year of employment as in subsequent years. U.S. employees who qualify under the 18-consecutive-month provision are subject to income taxes on salaries in excess of $20,000. The international organization usually guarantees the employee a fixed net income.

JOHN F. KENNEDY SPASTIC CENTER

Mr. PASSMAN. We are not directing any criticism at your administration, Mr. Kellogg, but I do know not too long after the assassination of President Kennedy, we thought we wanted to do something for the people in the Far East, and we built the John F. Kennedy Spastic Center. After making the recommendation that we would build this hospital, the then Consul General there agreed with the British authorities that we would call it the Kennedy Spastic Center.

I was happy to be out there at the time, and I found out that you had the Kennedy Boulevard, the Kennedy Street, the Kennedy Museum, the Kennedy Library, the Kennedy statue, and all this was built around a former Governor of the British Crown Colony by the name of Kennedy.

I said this will not work. It will be the John F. Kennedy Spastic Center or there won't be any. This was a donation or contribution by the American taxpayer. We won that battle.

It is actually a beautiful hospital to take care of these poor little spastic and polio children. We made sure that it was known that the building was named after our late President John F. Kennedy.

FAR EAST REFUGEE PROGRAM

After making the allocation, we found they had money left to build two other hospitals out there and did not say anything to us about it. Is the program still that loose?

Mr. KELLOGG. I do not believe it is.

Mr. PASSMAN. You are familiar with what I am talking about, are you not?

Mr. KELLOGG. I have heard something about it. It was before my time.

Mr. PASSMAN. I am not directing the criticism at you.

[Off the record.]

Mr. PASSMAN. The program is a little tighter today, is it?

Mr. KELLOGG. Very much so.

Mr. PASSMAN. As you know, Mr. Kellogg, you could spend 2 weeks on this one program asking, I would say, legitimate questions. The committee is familiar with your work. We feel it should be tightened up, especially the European program. Those people are waxing fat with wealth. Certainly, they could finance every penny of this program and never miss it.

We were told during our trip there that we just wanted to keep our name before the people and let them know that we were participating in the refuge program. Is that not a statement of fact with respect to this one program? They are financially able to finance it in its entirety if need be.

Mr. KELLOGG. That may be so, as far as——

Mr. PASSMAN. I am talking about the $3,250,000 for ICEM, the one appropriation. It is mainly just to keep America before these people. Is that not the fact?

Mr. KELLOGG. The American people have always stood for freedom of movement. As Thomas Jefferson called it, the blessings of freedom.

Mr. PASSMAN. I would never be guilty of putting words in your mouth. You have used different words to say, yes, you are absolutely correct. Isn't that right?

Mr. KELLOGG. Yes, sir.

TOTAL AVAILABILITY OF FUNDS

Mr. PASSMAN. Would you please update the table appearing on page 532 of last year's hearings which showed the original budget requested, the additional amounts transferred into the account, and indicate the grand total?

Mr. KELLOGG. Yes, sir.

[The information follows:]

10-YEAR TABLE ON AVAILABILITY OF FUNDS

[In thousands of dollars]

	Original budget request (including supplementals)	Available regular appropriation	Available Presidential determination	Total
1964	$10,683	$10,550	----------	$10,550
1965	8,200	8,200	----------	8,200
1966	7,946	7,946	$271	8,217
1967	6,050	6,050	----------	6,050
1968	5,660	5,500	125	5,625
1969	5,511	5,511	5,019	10,530
1970	5,580	5,580	3,573	9,153
1971	5,844	5,706	12,866	18,609
1972	9,031	9,031	8,850	17,881
1973	8,644	8,500	4,000	12,500

OPERATION ON CALENDAR YEAR

Mr. PASSMAN. Would you please indicate which items operate on a calendar year basis and indicate the sums for each item which make up this $7,550,000 amount?

Mr. KELLOGG. The following programs operate on a calendar year basis.

Intergovernmental Committee for European Migration	$3,250,000
United Nations High Commissioner for Refugees	1,100,000
U.S. refugee program	2,400,000
Far East refugee program	500,000
African refugees	300,000
Total	7,550,000

INTERGOVERNMENTAL COMMITTEE FOR EUROPEAN MIGRATION

Mr. PASSMAN. What does the U.S. contribution represent as a percentage of the total contributions received by ICEM?

Mr. KELLOGG. Our contribution represented 24 percent in 1972.

ICEM STAFF

Mr. PASSMAN. What is the size of the present staff of ICEM?

Mr. KELLOGG. ICEM has a staff of 513 employees.

ADMINISTRATIVE EXPENSES

Mr. PASSMAN. How does the percentage of administrative expenses of the total budget of ICEM compare to other comparable Government agencies?

Mr. KELLOGG. In 1972, ICEM's administrative budget was 14 percent of its total budget. This is 4 percentage points higher than UNHCR's administrative costs, which are computed at an annual rate of 10 percent.

PROGRAMS FINANCED

Mr. PASSMAN. Could you please tell the committee exactly what programs the U.S. contribution finances in ICEM?

Mr. KELLOGG. In addition to the administrative budget, the United States contributes to ICEM's refugee program and its Latin American program. It does not contribute to the national migration program.

MAIN BENEFICIARIES OF ICEM

Mr. PASSMAN. Could you please tell the committee which countries are receiving the main benefits from the efforts of ICEM? What I

mean by this question is a country receiving skilled labor from refugees entering that particular country.

Mr. KELLOGG. ICEM recruits skilled workers for its selective migration program. These workers are migrants, not refugees. The selective migation program operates for Latin American countries, and the leading beneficiaries are Argentina and Brazil.

In 1972, the largest recipients of refugees resettled through ICEM were Israel, the United States, and Australia.

Mr. PASSMAN. Could you also tell the committee that of these countries receiving the main benefits of this refugee movement, how much they are in fact contributing to ICEM?

Mr. KELLOGG. The 1972 contributions of the aforementioned countries to ICEM were: Argentina, $104,848; Brazil, $150,001; Israel, $1,111,807; United States, $3,150,000; and Australia, $4,170,886.

UNITED NATIONS HIGH COMMISSIONER FOR REFUGEES

Mr. PASSMAN. The next program is the United Nations High Commissioner for Refugees (UNHCR). The fiscal year 1974 estimate is for $1,100,000, which is $100,000 above the fiscal year 1973 program. Explain briefly the duties of the UNHCR.

Mr. KELLOGG. The Office of the UNHCR was established in 1951 by the U.N. General Assembly for the purpose of securing international legal and political protection for refugees. That is the legal and political protection to assure that the repatriation of refugees is voluntary, and that they are given effective asylum from persecution.

Also, to assure the rights of refugees, such as the right to work, the right of nondiscrimination as to race, religion, or country of origin, the right of free access to the courts, freedom of movement and religion and other essential rights to enable them to cease being refugees.

In 1955, the UNHCR initiated a material assistance program for which funds are contributed voluntarily by governments and other entities.

He was also given the task of promoting efforts of governments and private agencies toward permanent solutions to refugee problems.

CONTRIBUTION TO UNHCR

Mr. PASSMAN. Would you provide for the record a list of the countries that contribute to the program, the amount each contributed last year, and indicate what percentage each represents of the total?

Mr. KELLOGG. Yes, sir.

[The information follows:]

GOVERNMENTAL CONTRIBUTIONS PAID OR PLEDGED TO THE UNHCR PROGRAM FOR 1972, SITUATION AS OF DEC. 31, 1972

Country	Amount	Percentage
Algeria	$7,824	0.13
Argentina	20,000	.33
Australia	208,390	3.49

Vietnam, Republic of	1,000	.02
Yugoslavia	10,000	.17
Zaire	4,000	.07
Zambia	5,000	.08
79 countries total	5,977,514	100.00

U.S. PERCENTAGE OF TOTAL CONTRIBUTION

Mr. PASSMAN. What percentage does the U.S. contribution represent of the total contributions received by the UNHCR on a yearly basis?

Mr. KELLOGG. The percentage of U.S. contribution representing total contributions received by UNHCR from 1969 to 1973 are as follows:

Year:	*Percent*
1969	18.6
1970	21.6
1971	19.1
1972	16.7
1973	16.0

OTHER CONTRIBUTIONS

Mr. PASSMAN. What other contributions does the UNHCR receive besides the country contributions?

Mr. KELLOGG. I will provide that for the record.

[The information follows:]

PART A

The nongovernmental contributions in 1972 were as follows:

Danish Refugee Council	$10,714
Miscellaneous donations	1,669
Proceeds from legacies	3,214
Finnish Refugee Council	35,900
Protestant church in Germany	100,000
Radda Barnen, Sweden	70,810
United Nation's Association, Canada	5,950
UNESCO gift coupons	255
Total	228,512

$92,357 for 1972 program and $136,155 for previous year's program.

PART B

Contributions received in 1972 for projects outside the annual program situation:

Nongovernmental contributions

1. For the refugee education account:	
Individual Manneskobgalp, Sweden	$29,759
Radda Barnen, Sweden	11,966
Miscellaneous donations	31
Total	41,756
2. For assistance to refugees in the Middle East:	
Howard Karoghensian Commemorative Corp., New York	2,000
Jinishian Memorial Fund, New York	10,000
Total	12,000
3. Other specified contributions:	
Miscellaneous donations	1,500
Total nongovernmental contributions	55,256

BENEFITS TO THE UNITED STATES

Mr. PASSMAN. Why is it beneficial for the United States to provide a contribution to the UNHCR?

Mr. KELLOGG. UNHCR material assistance program complements the effectiveness of UNHCR legal and political protection for refugees.

This assistance program brings about the rehabilitation primarily through local integration in asylum countries of refugees who cannot or should not emigrate to other countries.

These programs are conducted in developing countries, especially in Africa where there is a proliferation of sensitive refugee problems. The mass agricultural programs which promote the rehabilitation of these refugees are instrumental in resolving amicably and constructively problems which seriously affect the maintenance of friendly relations of African countries, and by assisting asylum countries with an unduly large additional economic burden.

TOTAL BUDGET AND ADMINISTRATIVE EXPENSES

Mr. PASSMAN. What will the total budget of the UNHCR be for the next year?

Mr. KELLOGG. The total UNHCR assistance program budget for 1973 is $7,839,400.

Mr. PASSMAN. Could you please tell the committee what the percentage of this total budget will be used for administrative expenses?

Mr. KELLOGG. The grant-in-aid payable to the United Nations budget for expenses relating solely to the administration of the UNHCR material assistance program is $710,000. This amount is 9 percent of the UNHCR material assistance program funds.

Mr. PASSMAN. How does this percentage spent for administrative expenses compare with other comparable government agencies?

Mr. KELLOGG. The definition of administratve expenses varies from agency to agency in accordance with their programs and objectives.

The administrative costs of UNHCR are computed annually by the U.N. at 10 percent.

By 1972 Cuban program as administered by the Department of Health, Education, and Welfare:

	Millions
Total budget	$145
Distributed to the States for welfare programs	121
Administrative costs	2
Amount exclusive of the State welfare programs	24
H.E.W. administrative expenses of total budget (percent)	8

AGENCY FOR INTERNATIONAL DEVELOPMENT

(1) Total operating costs funded out of administrative expense appropriations and program appropriations—approximately 8 percent of total funds administered by the Agency.

(2) Administrative expense appropriations represent about 2.8 percent of total funding.

STAFF POSITIONS

Mr. PASSMAN. Could you please tell the committee how many staff people they have under the UNHCR?

Mr. KELLOGG. The UNHCR staff is composed of 109 professionals and 206 nonprofessionals, a total of 315.

Mr. PASSMAN. How many Americans work for the UNHCR and what does this represent as a percentage of the total staff on the roles of the UNHCR?

Mr. KELLOGG. There are 11 professional and 3 nonprofessional Americans working for the UNHCR. This represents 4 percent of the total staff.

NEED FOR INCREASE

Mr. PASSMAN. Would you please tell the committee why you were requesting a $100,000 increase over last year's level?

Mr. KELLOGG. Due largely to the continually increasing number of refugees, the cost of the assistance program has steadily risen over the past several years. The 1970 program was for $6 million while the 1974 program is expected to exceed $8.5 million. The U.S. contribution since 1970 has remained at the $1 million level. In the same range of years other countries have increased their contributions by over 30 percent in the aggregate. An increase of $100,000 for 1974 is necessary to help keep pace with the urgent and growing refugee needs, to continue to demonstrate U.S. interest in sharing the increased burden of refugee problems and to encourage international support to reduce the severity of the problems caused by the flight of persecuted people.

U.S. REFUGE PROGRAM

Mr. PASSMAN. The next program is the U.S. refugee program (USRP). The fiscal year 1974 estimate is for $2,400,000, a decrease of $150,000 below the fiscal year 1973 amount.

Would you please explain the functions of the USRP?

Mr. KELLOGG. The main function of the U.S. refugee program (USRP) is to assist in the resettlement of refugees who first arrive in countries contiguous to the Communist countries of Eastern Europe. It is in the U.S. foreign policy interest that these countries of first asylum maintain a liberal asylum policy. However, such a policy is difficult in the face of the economic and political burdens of an ever-increasing refugee population if there is no assurance that the refugees have the opportunity to move onward to other countries where they can be resettled. This program attempts to resettle refugees throughout the world, including a share by the United States. U.S. Government activities thus demonstrate American concern for the victims of persecution and oppression and help meet our obligations under the 1951 Convention Relating to the Status of Refugees.

OPERATION OF THE PROGRAM

Mr. PASSMAN. Would you also please explain briefly how this program operates?

Mr. KELLOGG. The USRP operates through American and international voluntary agencies which provide all the services necessary for resettlement of refugees. These services include counseling, visa documentation, medical, language, orientation, and transportation assistance. All are designed to speed the refugee's establishment in his new homeland. The agencies also provide selective interim material assistance on the basis of need when such assistance is absolutely necessary to resettlement. The refugees are made aware by the voluntary agencies that the assistance they receive is coming from the American people. In addition, our representatives in Geneva conduct periodic field surveys to the main countries of first asylum to review refugee operations and visit host country refugee camps.

ORGANIZATIONS RECEIVING FUNDS

Mr. PASSMAN. Would you please list for the record the voluntary agencies and international organizations the USRP deals through and provides funds to in order to assist the refugees from European Communist countries?

Mr. KELLOGG. We have contracts with the following voluntary agencies:

The American Fund for Czechoslovak Refugees, the Polish American Immigration and Relief Committee, the International Catholic Migration Committee, the World Council of Churches, the Tolstoy Foundation, the International Rescue Committee, the American Jewish Joint Distribution Committee, and the United HIAS Service.

In addition, many USRP refugees who are being resettled in the United States and elsewhere are transported by the Intergovernmental Committee for European Migration.

REFUGEE CAMPS

Mr. PASSMAN. You indicate in the justifications that refugee camps are maintained in several countries throughout Europe. Would you please tell the committee where these refugee camps are located?

Mr. KELLOGG. The principal refugee centers housing refugees from Communist and Communist-dominated countries of Eastern Europe are located in the following areas: Austria, Traiskirchen (near Vienna); Germany, Zirndorf (near Nurnberg); Italy, Padriciana (near Trieste); Latina (between Rome and Naples); and Capua (near Naples); and Greece, Lavrion (near Athens).

Mr. PASSMAN. You also indicate that these refugee camps are maintained entirely by the country where the refugee camp is located. Does the United States provide any people to these camps to train the refugees and provide other services?

Mr. KELLOGG. No U.S. Government personnel are directly involved in the operation of the refugee camps or providing services to refugees there. This is a function of the country in which the camp is located and the various voluntary agencies that are involved in resettlement. Official U.S. personnel have access to the camps and make periodic visits as part of the general supervision and administration of the USRP.

STAFF SIZE

Mr. PASSMAN. Would you please tell the committee what the size of the staff is that is involved in the USRP?

Mr. KELLOGG. The Refugee and Migration Unit of the U.S. Mission in Geneva directly supervises and administers the USRP in addition to working with the International Red Cross and the Intergovernmental Committee on European Migration. The staff consists of four officers, two American secretaries, and 10 local employees.

REFUGEES ENTERING THE UNITED STATES

Mr. PASSMAN. Could you tell the committee how many refugees the United States received last year?

Mr. KELLOGG. In fiscal year 1972, the United States received 28,795 refugees. This included those who entered under seventh preference, Cuban refugees paroled into the United States, and those who entered under the provisions of special acts.

FAR EAST REFUGEE PROGRAM

Mr. PASSMAN. The next program is the Far East refugee program (FERP). The fiscal year 1974 estimate is for $500,000, the same as last year. I gather you do not anticipate any increase in workload in fiscal year 1974?

Mr. KELLOGG. We do not anticipate any significant increase.

OPERATION OF PROGRAM

Mr. PASSMAN. Would you explain briefly how this program operates?

Mr. KELLOGG. Through annual contracts with voluntary agencies, the FERP undertakes projects for refugee assistance. The projects are of two kinds: construction projects and service projects. Construction projects include such projects as refugee housing, hospital facilities, clinics, and community and youth centers in areas of high refugee population. Service projects are similar to those provided for European refugees under USRP. They also include, in addition to assistance in the processing of applications for conditional entry, assistance to refugees to help them become reestablished, student aid, rehabilitation of handicapped and disabled refugees, and vocational training. One aspect of the FERP is that it augments the work of the American voluntary agencies, and thus adds to the American image. In fact, although many FERP projects are only partially FERP assisted, the U.S. Government often receives recognition beyond the extent of its contribution.

ORGANIZATIONS RECEIVING FUNDS

Mr. PASSMAN. Would you please list for the record the agencies we provide the funds to for this program?

Mr. KELLOGG. The agencies currently under contract are Catholic Relief Services, Cooperative for American Relief Everywhere, Inc. (CARE), Hong Kong Christian Service, International Rescue Committee, International Social Service, and Lutheran World Federation.

Mr. PASSMAN. Could you provide for the record an updated table similar to the one appearing on page 541 of last year's hearings showing the amount of funds provided by the United States to Hong Kong and Macau including the Public Law 480 commodities provided?

Mr. KELLOGG. Yes, sir.

[The information follows:]

U.S. GOVERNMENT ASSISTANCE TO CHINESE REFUGEES IN HONG KONG AND MACAU

Fiscal year	Far East refugee programs	Value Public Law 480 surplus commodities [1]	Total
1954	$285,526	$150,650	$436,176
1955	956,770	725,650	1,682,420
1956	831,705	3,979,000	4,810,705
1957	747,463	7,618,750	8,366,213
1958	951,651	3,520,150	4,471,801
1959	1,520,901	3,611,000	5,131,901
1960	1,764,013	5,797,150	7,561,163
1961	617,079	7,208,200	7,825,279
1962	1,072,571	4,404,500	5,477,071
1963	2,066,670	3,186,650	5,253,320
1964	1,747,056	1,616,900	3,363,956
1965	611,989	3,691,200	4,303,189
1966	597,489	2,080,800	2,678,289
1967	234,723	1,357,400	1,592,123
1968	220,897	602,100	822,997
1969	500,000	941,200	1,441,200
1970	500,000	773,500	1,273,500
1971	500,000	427,000	947,000
1972	500,000	160,000	660,000
1973	500,000	98,000	598,000
1974	[2] 500,000		500,000
Total	17,226,503	51,949,800	69,176,303

[1] Incudes estimated cost of ocean freight.
[2] Requested.

HAY LING CHAU LEPROSARIUM

Mr. PASSMAN. Could you please tell me if the Hay Ling Chau Leprosarium has been phased out yet or not?

Mr. KELLOGG. The leprosarium on Hay Ling Chau will not be closed until leprosy patients can be accommodated in the special infectious disease unit of the new Princess Margaret Hospital, due for completion in 1974.

IMPORTANCE OF FERP

Mr. PASSMAN. Does the Department still consider the FERP program to be important to U.S. interest in that area of the world?

Mr. KELLOGG. Yes, we continue to believe that it is a fundamental concern of a free society to offer humanitarian assistance to those in need who have fled oppression because they value human dignity and human rights. Specifically, the FERP gives us an opportunity to apply these principles in East Asia on the same basis as we do in other parts of the world. The program is under constant review.

SEVENTH PREFERENCE

Mr. PASSMAN. Would you explain the term "seventh preference" and how it relates to the movement of Chinese refugees to the United States?

Mr. KELLOGG. Section 203(a) of the Immigration and Nationality Act establishes six "preferences" based on family relationships and technical and professional skills under which persons may apply for immigrant visas to enter the United States. A "seventh preference" under that section provides for the "conditional entry" of refugees to the United States, with a numerical limitation of 10,200 persons per year. Since November 1970 this preference has been applied in Hong Kong, and about 3,000 Chinese refugees per year are entering the United States under this preference.

CAPITAL PROJECTS

Mr. PASSMAN. Do you still think the U.S. funds should be used to make capital improvements in order that the people in that part of the world can see what the United States has done rather than provide funds for budget support?

Mr. KELLOGG. We have been trying to hold the line on our annual requests for appropriations, in the case of FERP, at $500,000 annually, about half of which is spent on services which we ask the voluntary agencies to provide refugees. We do not support agency activities which are unrelated to the refugee problem. With continuing inflation in Hong Kong and the recent currency revaluations, it is becoming increasingly difficult for our construction projects to have an impact. I should also add that the Hong Kong government and private sources have greatly extended the facilities available to all people, including refugees. Nonetheless, there still remain areas of need, and we are planning to assist refugee fishermen in a cooperative housing project as well as establish refugee clinics in fiscal years 1973 and 1974. Beyond that, we will have to determine at such time whether suitable projects can be found that will serve the U.S. interest.

Mr. PASSMAN. What sort of capital improvement projects do you have planned for this area of the world in the near future?

Mr. KELLOGG. For fiscal year 1973, we are planning a fishermen's housing project in Saikung in the new territories. For fiscal year 1974, we are planning to construct outpatient clinics in connection with the new United Christian Hospital in Kwuntong.

SERVICES TO INDIVIDUAL REFUGEES

Mr. PASSMAN. In the justifications, you indicated that $250,000 will be allocated for services to individual refugees. Could you please tell the committee what types of services you have in mind here?

Mr. KELLOGG. First, there is assistance to refugees entering the United States under seventh preference: Assistance with documentation, reimbursement of necessary medical examinations, language training. Second, is assistance in local reestablishment. This includes assistance for young, newly arrived refugees; vocational training; and school aid.

INCREASE IN REFUGEES

Mr. PASSMAN. You also indicate in the justifications that there have been sharp increases in the number of refugees who fled from China into Hong Kong. Would you please tell the committee the reason for this sharp increase?

Mr. KELLOGG. The reasons are difficult to identify, but seem to be related to the aftermath of the cultural revolution. The great majority are under 30 years of age, and at least a third are students or youths who have been sent down to the country to work with farmers. Perhaps another third are farmers, fishermen, and unskilled workers. The exodus of these refugees appears to reflect a general disillusionment with their prospects for the future and frustration in their hopes for meeting their aspirations.

INTERNATIONAL COMMITTEE OF THE RED CROSS

Mr. PASSMAN. The next item is the International Committee of the Red Cross (ICRC). The fiscal year 1974 estimate is for $50,000, the same as last year. Would you please list for the record the countries contributing to the ICRC, the amount they contributed this past year, and the percentage these contributions represent of the total?

Mr. KELLOGG. Yes, sir.

[The information follows:]

Country	Amount	Percentage	Country	Amount	Percentage
Arab Republic of Egypt	10,400	0.40	Lebanon	4,125	.16
Australia	23,972	.92	Liberia	5,000	.19
Austria	6,560	.25	Liechtenstein	4,000	.15

Kuwait	13,333	.52			

FUNCTIONS OF ICRC

Mr. PASSMAN. What are the functions of the ICRC?

Mr. KELLOGG. The International Committee of the Red Cross, founded in Geneva in 1863, is the mother organization of all Red Cross societies and the promoter of Red Cross principles. It is formally recognized in the texts of the Geneva Conventions of 1949 as the agency to supervise the application of the provisions of the conventions, to which the United States is a party. The specific conventions are: (1) Geneva Convention for the amelioration of the conditions of the

wounded and sick in armed forces in the field; (2) Geneva Convention for the amelioration of the wounded, sick, and shipwrecked members of armed forces at sea; (3) Geneva Convention relative to the treatment of prisoners of war (POW's); (4) Geneva Convention relative to the protection of civilian persons in time of war.

During the last several years, activity of the ICRC has consistently increased in the fields of humanitarian relief and disaster and supporting assistance—in many cases, in response to requests from the U.S. Government. This organization is Swiss in its constitution and personnel. But it operates on an international level, and has the ability to act as a neutral institution in cases of international hostilities or tension. The scrupulous adherence of the ICRC to the principle of political impartiality is recognized throughout the world. ICRC is thus often able to enter and act decisively and in a timely way in situations in which, because of political sensitiveness, other organizations or governments are either unable to act effectively or are not permitted to participate in the humanitarian action required.

OTHER FUND AVAILABILITIES

Mr. PASSMAN. What other funds will be made available to the ICRC in 1974 besides the country contributions? Please list amounts and sources.

Mr. KELLOGG. It is anticipated that other funds made available to ICRC during 1974 will be provided as follows:

70 Red Cross societies	$266,666
(1) Balance of extraordinary contribution from USG	213,333
(2) Private donations	100,000
(3) Gifts and legacies	44,000
Investment income	72,000
Total	695,999

PAST YEAR ACTIVITIES

Mr. PASSMAN. Could you briefly tell the committee what activities the International Committee of the Red Cross has been involved in the last year?

Mr. KELLOGG. During the last year, 1972, the ICRC continued to give assistance to persons in Israel, the occupied territories, and the Arab countries under the terms of the 1949 Geneva Conventions. This assistance included visiting military and civilian prisoners, transmitting family messages, organizing the reuniting of dispersed families, and providing relief supplies to the needy population. In Southeast Asia (Vietnam, Laos, and Cambodia), ICRC visited hospitals and inspected POW camps; provided medical assistance, especially to children; and distributed food, clothing, and medicines to displaced civilians and refugees.

The ICRC also issued ICRC travel documents to thousands of stateless Asian Ugandans, assisted in the exchange of prisoners between India and Pakistan, and sponsored international conferences of government experts on humanitarian law applicable in armed conflicts the Geneva Conventions).

Mr. PASSMAN. What role does the ICRC play with respect to the India-Pakistan situation at the present time?

Mr. KELLOGG. In addition to prisoner exchanges, the ICRC visits POW camps, delivers mail and family messages, and repatriates the sick and wounded from both countries. The ICRC has served as an intermediary between India and Pakistan on questions regarding prisoners and civilian internees.

Mr. PASSMAN. Is the ICRC heavily involved in the new nation of Bangladesh?

Mr. KELLOGG. The ICRC tracing service is involved in reuniting Bangladesh families. On a regional basis, ICRC has made possible the transfer of stranded persons from Pakistan to Bangladesh, and from Bangladesh to Pakistan. To support activities among the Biharis located in several refugee camps, ICRC administers the Public Law 480 program, high-protein foods, gives medical assistance, and conducts a training program to care for the sick.

BUDGET PROBLEMS

Mr. PASSMAN. Is the ICRC facing any serious budget problems at the present time?

Mr. KELLOGG. Yes. The ICRC has informed us that it is experiencing serious shortfalls in the financing of its structure and operations. They have expressed the hope that the United States and other governments will substantially increase annual contributions to the ICRC to remedy this situation. Information on this situation is contained in a "Note on ICRC Financing" prepared by the ICRC in Geneva, the text of which follows:

The International Committee of the Red Cross is making a sustained effort to insure increased control over its financing and to provide clear accounts.

The requirements which it has to meet are continuity in the financing of its regular activities and flexibility in its varying activities.

To reconcile these two requirements, the ICRC has adopted financial structure which is subdivided into three parts:

1. Permanent structure, constituted by the professional staff necessary for the discharge of the ICRC's regular duties and the equipment available to that staff. To be effective, this structure must be kept within strict limits and should be of a high professional standard. It requires continuity.

2. Temporary structure, constituted by supernumerary staff, essentially delegates and local staff, recruited for a specific period of service with ICRC delegations. The more or less rapid renewal of such staff insures some degree of flexibility, and hence avoids the need for a large permanent structure.

3. Occasional structures, such as those set up by the ICRC when it has to mobilize considerable resources to meet urgent and unexpected needs or to undertake duties clearly beyond its regular activities. Here flexibility is the first consideration.

Occasional structures have a budget of their own, financed by special fundraising appeals. Since such appeals relate to specific events that tend to rouse public opinion, governments and national societies can provide the ICRC with the requisite funds.

For the sake of convenience, the temporary structure is at present being financed by the Swiss Government alone.

The ICRC is very much concerned about the financing of the permanent structure. Despite the arrangements made to maintain the structure within strict limits, in the discharge of its regular duties it requires highly qualified permanent staff adequately remunerated and provided with the requisite equipment. To insure the essential continuity in the financing of its permanent structure, the ICRC is applying itself to the task of closing the gap which exists between the cost of that structure and the annual contributions received.

The Swiss Government's annual contribution, for instance, has been raised from 2.5 to 7.5 million francs. The ICRC would therefore wish to receive an aggregate equivalent sum from the Governments of other States Parties to the Geneva Conventions. Apart from the fact that regular government contributions totaling 15 million Swiss francs, in addition to the annual contributions from National Red Cross societies and its other sundry annual resources, would enable it to cover the cost of its permanent structure, the ICRC considers it an obvious advantage to have the burden of its advantage to have the burden of its principal annual resources shared equally between the Swiss Government on the one hand and other governments on the other hand.

Governments wishing to fix their own annual contribution in relation to the contributions made by other governments can find guidance to this effect by applying to the 7.5 million franc target the same assessment as established in the United Nations scale, which shows the extent to which the various governments agree to bear the cost of organizations which serve the international community.

Southern African Refugee Education Project

Mr. Passman. I note this year you are requesting $300,000 for a new program called the Southern African Refugee Education project. Could you briefly explain to the committee the functions of this program?

Mr. Kellogg. Certainly Mr. Chairman. Broadly, the purpose of this project is to make a contribution to the general education and welfare of selected refugees from Southern Africa. The low levels of education in their homelands, the unavailability of university training, the problems of segregated education and systems which serve to terminate African education below the university level—all create special education needs which can only be satisfied by creating educational opportunities elsewhere. This project provides such an opportunity and enables selected Southern African refugees to attain the necessary credentials for university or other post secondary training and, a better opportunity for gainful employment.

In doing this, the project provides tangible evidence of our support of the principle of self-determination.

Mr. Passman. In the justifications you indicate that the Department will assume the administration of the program this year. Could you tell the committee who operated the program in the past?

Mr. Kellogg. Yes, sir. The program since its inception in the early 1960's has been operated by AID.

SELECTION PROCESS

Mr. PASSMAN. You also indicate that the project provides assistance to asylum countries to finance the education of selected refugees. Could you please tell the committee how these refugees are selected for education?

Mr. KELLOGG. Briefly, the refugee either applies directly or is referred by an organization, such as the Organization of Africa Unity. For those going to the school in Zambia, the application is considered by the Zambian Government's Commission for Technical Education and Vocational Training and the headmaster or principal of the school. For those going elsewhere, the selection is made on the basis of the proposed course of study and the admissibility of the applicant in an appropriate school or training program.

COUNTRIES INVOLVED

Mr. PASSMAN. Could you also tell the committee what asylum countries are involved here?

Mr. KELLOGG. Yes sir. In addition to Zambia, there are students studying under this program in Liberia, Zaire, Ethiopia, Botswana, Kenya, and Tanzania.

Mr. PASSMAN. Would you also tell the committee the source of these refugees?

Mr. KELLOGG. These refugees have fled from Angola, Mozambique, South Africa, Namibia—South West Africa—and Rhodesia.

U.S. INVOLVEMENT

Mr. PASSMAN. Could you tell the committee why the United States feels that it is obligated to get involved in the refugee education?

Mr. KELLOGG. I don't believe we feel obligated in the sense that we have to or must help provide an educational opportunity for Southern African refugees. It is more of a case that it has been and, we believe, continues to be in our own direct interests to do so. Aside from the humanitarian aspects of providing a measure of greater dignity and a chance of a better life for those who are able to benefit from the program, this project is recognized and welcomed by independent African countries as a meaningful symbol of USG support for the goal of self-determination.

ADMINISTRATION EXPENSE

Mr. PASSMAN. This year you are requesting $1,200,000 for administration which is an increase of $107,000 above the fiscal year 1973 amount. Could you please tell the committee the need for this very large increase?

Mr. KELLOGG. The increase is to fund mandatory within-grade salary increases—$8,000—overseas wages and price increases including administrative support—$74,000—and other necessary increases for travel, contractual services, communication, supplies, et cetera. ($25,000).

Mr. PASSMAN. Would you please provide a breakdown of these expenses for the record.

Mr. KELLOGG. Yes, sir.

[The information follows:]

American salaries and benefits	$733,000
Local salaries and benefits	97,000
Travel	23,000
Transportation of things	2,000
Communication, rents, utilities	20,000
Miscellaneous contractual services	15,000
Shared administrative support costs	300,000
Supplies	4,000
Equipment	6,000
	1,200,000

Mr. PASSMAN. Just what do these administrative expenses cover?

Mr. KELLOGG. The administrative funds are used to support my staff in Washington and personnel in Geneva and Hong Kong. The funds will be used for salaries, allowances, travel, communications, supplies, office equipment, shared administrative support costs, et cetera.

Mr. PASSMAN. How many people are involved in the administration item?

Mr. KELLOGG. There are a total of 43 positions.

Mr. PASSMAN. Are these people stationed only in Washington, or do you also have people in Geneva and Hong Kong?

Mr. KELLOGG. The total staff includes 23 positions in Washington, 16 positions in Geneva—of which 10 are local employees—and four positions in Hong Kong—of which three are local employees.

Mr. PASSMAN. This seems like an awful large amount to be used for administration for such a small program. Could you please explain this fact to the committee?

Mr. KELLOGG. This request covers the costs for 43 positions in Washington and overseas, and related administrative costs. In addition to administering the programs for which funds are specifically requested—ICEM, UNHCR, USRP, FERP, ICRC, and African refugees—the staff and funds are needed to perform a number of other refugee functions of the Department of State for which no program funds are requested.

Over 50 percent of the staff time and administrative funds requested are for general ongoing functions of the Office of the Special Assistant to the Secretary for Refugee and Migration Affairs which are not directly connected to operational programs.

Examples of these functions are (1) refugee asylum policy, (2) executive coordination on refugee matters, (3) negotiations and relations with other governments and international organizations, (4) refugee problems in Asia, Africa, and Latin America, (5) congressional and public information, and (6) advisory opinions as to validity of political asylum claims by aliens in the United States.

Mr. PASSMAN. Could you please tell the committee how much was spent in travel for the last full year?

Mr. KELLOGG. $21,000 was spent in travel during 1972.

Assistance to Refugees From the Soviet Union

Mr. Passman. As you know in the last several weeks there has been much discussion and many articles appearing in the papers concerning the suspension of exit taxes by the Soviets on Jewish people leaving the U.S.S.R. Would you tell the committee briefly what the latest situation is with regard to this subject?

Mr. Kellogg. The press has consistently reported in the last couple of weeks that collection of the tax has been suspended. We have received reports that several scores of educated emigrants have been permitted to leave without paying the tax. We hope that these reports indicate that Soviet policy will continue to evolve favorably with regard to emigration.

Mr. Passman. As everybody knows Senator Jackson has proposed as amendment which would block certain trade concessions to the Soviet Union unless they do lift this exit tax. Do you feel that this would in effect force the Soviets to lift this exit tax?

Mr. Kellogg. As I understand, the Jackson amendment addresses more aspects of emigration than just the exit fees. We believe in regard to emigration that the Soviet authorities are well aware of the strong U.S. public and congressional feelings on this subject. As regards trade concessions, we have sought to make sure that the Soviets understand the political process involved in the MFN legislation. The trade legislation submitted by the President to the Congress on April 10, and the President's accompanying message concerning this legislation, specifically address the administration's position on this subject matter.

Number of Refugees

Mr. Passman. What are your latest estimates of the number of Jews which will leave Russia in 1973 and how does this compare to the last year?

Mr. Kellogg. The latest figures indicate that more than 7,000 Soviet Jews entered Israel in the first 3 months of this year. This is about the same level for the same period of 1972.

No Need for Additional Funds

Mr. Passman. As you know, last year we provided $50 million for assistance to refugees from the Soviet Union but I know that this year you are not requesting any funds for this purpose. Do you feel that the appropriation made in fiscal year 1973 is sufficient to carry you through the fiscal year 1974?

Mr. Kellogg. Yes. Our discussions with the United Israel Appeal, the voluntary agency conducting the major part of the programs financed with these funds, resulted in agreements on projects for both fiscal year 1973 and fiscal year 1974.

Mr. Passman. Do you feel that any additional funds will be needed in fiscal year 1974 for this purpose?

Mr. Kellogg. At this time, we do not anticipate the need for further funds for these programs in fiscal year 1974.

USE OF FUNDS

Mr. PASSMAN. Would you please outline for the committee and for the record exactly what these funds were used for in fiscal year 1973 and also what the funds will be used for to finance the outlays in fiscal year 1974?

Mr. KELLOGG. Following is a list of programs which will be assisted by the $33 million expenditure planned for calendar year 1973.

[The information follows:]

	Amount
I. Agreement with United Israel Appeal (UIA):	
1. En route care and maintenance costs in Vienna, Jan. 1, 1973 to Dec. 31, 1973, for 30,000 refugees	$1,200,000
2. Construction or enlargement of transit center in Vienna	500,000
3. Construction of new absorption center and hostels	4,000,000
4. Construction of hospital wing	2,000,000
5. Construction and procurement of apartments and/or mobile homes	15,700,000
6. University scholarships	1,100,000
7. Training and retraining for artisans and technicians	1,000,000
8. Maintenance costs for on-the-job trainees	1,250,000
9. Maintenance costs at Ulpanim, absorption centers and hostels	4,250,000
Subtotal	31,000,000
II. Travel assistance through ICEM loan fund	2,000,000
III. Agreements with other voluntary agencies for movement of refugees to countries other than Israel	475,000
IV. Administrative expenses	25,000
Total	33,500,000

Mr. KELLOGG. Discussions are now in progress on programs for fiscal year 1974. Transportation, maintenance while in transit, housing and education assistance will definitely continue.

Mr. PASSMAN. Are these funds entirely adminstered by your office?

Mr. KELLOGG. Yes.

OTHER ORGANIZATIONS INVOLVED

Mr. PASSMAN. Have you used certain voluntary agencies to administer some of these funds and provide assistance to these refugees? If so, would you please provide a list of these voluntary agencies for the record?

Mr. KELLOGG. The United Israel Appeal (UIA) is the agency which will administer most of the projects. It will work through the Jewish Agency for Israel (JAI) in conducting the actual projects.

The following agencies will administer programs to assist Soviet refugees not going to Israel:

American Joint Jewish Distribution Committee;
United HIAS Service;
World Council of Churches;
International Rescue Committee;
Tolstoy Foundation;
International Catholic Migration Committee;

99-614 O - 73 - pt. 1 - 5

Polish American Immigration and Relief Committee; and
American Fund for Czechoslovak Refugees.

FUTURE REFUGEE MOVEMENT

Mr. PASSMAN. Do you feel that this Jewish refugee movement from the U.S.S.R. has been evened out or do you expect an increase in the refugee movement from the Soviet Union in the next several years?

Mr. KELLOGG. This depends on how many Soviet Jews may wish to emigrate and how many may receive permission. We are not really in a position to make any useful speculation about developments over the next several years, but I would repeat our hope that Soviet policy in regard to emigration will continue to evolve favorably.

OTHER COUNTRIES INVOLVED

Mr. PASSMAN. Are other countries providing aid to these Jewish refugees?

Mr. KELLOGG. No other countries are providing direct governmental assistance to these refugees. The JAI does receive voluntary contributions from other countries.

Mr. PASSMAN. Are all these refugees migrating to Israel or are they also going to other countries? If so, would you please again provide for the record the countries and the number of Jewish refugees migrating to these countries?

Mr. KELLOGG. Some Soviet migrants, not all of whom are Jewish, are coming to the United States and a small number are going to countries in Western Europe and South America as well as to Canada and Australia. In 1972, over 500 entered the United States. There has been a continuing but varying migration to West Germany, a movement in which the United States is not involved. During 1972, 3,300 ethnic Germans emigrated to Germany from the USSR; in January of this year 140 did.

Mr. PASSMAN. Mr. Roybal.

RATIO STUDENTS AMONG REFUGEES

Mr. ROYBAL. You stated that the refugees in Africa now number 1 million souls. You made reference to students being included in that 1 million. Can you tell us how many were students and whether or not there is a difference in the allocation of funds between students and nonstudents?

Mr. KELLOGG. If I understand your question correctly, Mr. Congressman, there is a flow of refugees from Southern Africa into the surrounding African states, and the U.S. Government has felt it important to help a very small, limited number in the area of 300 students annually with scholarships. That is the extent of that particular program. So, it is 300 students versus 1 million refugees, if I am answering your question correctly.

Mr. ROYBAL. The students, then, are actually placed in an institution of higher learning, or are there students also who may be at the high school level?

Mr. KELLOGG. It is high school and university level, Mr. Congressman. The students are carefully chosen and are given this opportunity

both as an expression of U.S. Government interest in them, and because it is felt that these students will become leaders in Southern Africa when self-determination takes effect.

REFUGEE KNOWLEDGE OF U.S. SPONSORSHIP

Mr. ROYBAL. In all your programs dealing with refugees, do the refugees know they are being helped by the United States?

Mr. KELLOGG. The answer is, they do, yes. I can testify to that from personal knowledge and personal visits to the field.

In certain cases, obviously, there is more consciousness of the American help than in others, primarily where there is a USRP program, which is purely American. We contract with American voluntary agencies. The result is that there is a great consciousness of the American presence.

Mr. ROYBAL. In most places where there is no consciousness of the American presence, why is it that they are not told and they do not know that it is U.S. dollars that are helping them in some cases?

BENGALI REFUGEE SITUATION

Mr. KELLOGG. I think perhaps an example answers your question best. In the instance of the Bengali refugees where 10 million had fled from what is now Bangladesh to the surrounding area of India, the Indian Government did not allow voluntary agencies other than those that were present at the time of hostilities between Pakistan and India. Therefore, the extent to which the American flag was visible was very limited.

Mr. ROYBAL. I cannot really understand how you can claim that this program establishes peace throughout the world if the United States in most instances is not recognized as being the nation that is helping.

INDIAN VOLUNTARY AGENCIES

Mr. KELLOGG. Again, if I may use the Bengali situation, in that particular refugee situation the greatest amount in dollars from the international community was collected, I believe, for any particular refugee program, touching the area of $250 million. Every other contribution country was in the same situation as the United States. In other words, the money was turned over to the High Commissioner for Refugees, who in turn gave it primarily to Indian voluntary agencies that dispensed the food, medicine, and so forth, in the field.

Mr. ROYBAL. This is exactly what I am worried about, the fact that moneys are turned over to someone else, and we do not really know how that someone else spends that money. How do you follow through, once you turn that money over to the Indian agency? How do you know how they spend the money?

Mr. KELLOGG. This is a matter of concern to the State Department and to my office. We had to answer to the General Accounting Office and others.

The efficiency of the Indian Government and the lack of diversion of refugee supplies into other areas was absolutely extraordinary. People were in the field. Accounts were kept. Despite every effort that

the GAO made, there was no evidence that there were discrepancies or diversions.

Mr. ROYBAL. In other words, you contend that you are safe in the administration of funds by transferring funds to the agency that you now say is so efficient, that this is a proper administrative procedure?

Mr. KELLOGG. Our experience over a good many years has been excellent in this regard.

JEWISH VOLUNTARY AGENCY

For example, in the present instance of the $50 million that we are about to contract with UIA, our contract has all kinds of safeguards built into it. The Jewish representatives are just as anxious as we are that nothing happens to those funds other than what they are intended for. They have an interest in efficient administration and honesty the same way we do.

Mr. ROYBAL. May I say you have met with a lot better luck than this committee has, because for years now we have been handing out money to various agencies, and any one of us can name several agencies that are not half as efficient as the agency you have described. I would say you have been more fortunate than we have been in that respect.

ADMINISTRATION OF VOLUNTARY AGENCIES

As we look into this matter, I hope each one of these agencies is properly administered. I feel this committee does not oversee most of these things. I would like to see this committee actually take each one of these departments and even go to the extent of spot auditing to try to make some determination of how these funds are really spent.

I do not think anyone on this committee or anyone in Congress, including the chairman of the committee, can tell you precisely how this money is spent in each and every one of these agencies; $8.5 million is a lot of money.

Anyway, it is my hope that something like this can be done in the future.

One more thing.

ETHNIC ORIGIN OF AMERICAN STAFFS

You were asked to give the percentage of Americans on the staff. I would like to break that down even more than that. I would like to know how many blacks there are on the staff all over the world, how many Mexican-Americans. Break it down into the ethnic minorities in the United States to try to determine how your percentages bear out.

Mr. KELLOGG. We will be glad to supply that information.

Mr. ROYBAL. Thank you very much.

That is all, Mr. Chairman.

[The information follows:]

The total American staff of ICEM is 22 Americans. In this total there is one black and one American Indian or 9 percent of the U.S. staff are minority employees.

The total American staff of the UNHCR is 14 Americans. In this total there is one black and one oriental or 14 percent of the U.S. staff are minority employees.

Mr. PASSMAN. Thank you, Mr. Roybal.

I believe it would be proper to repeat for the record at this point that as of the last count there were 4,406 programs or projects or subprojects in 101 nations of the world.

VARIOUS FACETS OF FOREIGN AID PROGRAMS

You have a small item here of $8 million. When we finish looking at all the facets of foreign aid before we finally mark this bill up it will exceed $18 billion. It is absolutely impossible for us to have too much knowledge of it.

Even our bilateral programs, we go out around the world and do our very best to mingle with the people and find out if they know where this aid is coming from. On bilateral programs they do not know because the government officials are smart enough to take the full credit. The intellectuals know it is coming from America, but certainly not the people that we are helping.

When you move over to the multilateral organizations, it is absolutely impossible for these people to know who is making the contribution. They do not know the donor. In many instances, we do not know the recipients.

Let us let the record show that when we make a contribution to these multilateral organizations, we usually put in the largest percentage of funds. Other nations put in little tidbits. It is then stirred up. When the allocation is made to a project in a nation, it is made in the name of that international organization, is it not?

Mr. KELLOGG. Yes.

Mr. PASSMAN. Of course, the recipient has no idea of America's generosity. That is pretty well indicated by some of the visits we make around the world when we find people are not appreciative and they cannot be appreciative because they do not know anything about our generosity.

I think the time is long overdue to get a lot of these programs under better control. I do not actually believe that our President realizes that these international financial institutions are making questionable loans for projects when you are actually impounding funds for the same projects here in America. It has gotten out from under control. I do not know whether we will ever bring it under control or not, but we will try.

Mr. Shriver.

Mr. SHRIVER. Thank you, Mr. Chairman.

LACK OF FUND CONTROL—VOLUNTARY AGENCIES

This committee has always supported assistance for refugees in various parts of the world, particularly in India, and in the ICEM program.

I concur with the chairman and Mr. Roybal in the matter of the lack of control that this committee or any committee of the Congress has, particularly as it relates to what happens to these funds after you release them.

You mentioned that you were negotiating a $50 million contract with an agency that none of the members of the committee knew anything about. This is an example of how money is appropriated

without much explanation of its use or any post audit of its use. There is no accounting made to this committee or to some other committee of the Congress.

SOUTHERN AFRICA REFUGEE EDUCATION PROJECT—FUND TRANSFER FROM AID TO MIGRATION AND REFUGEE ASSISTANCE

You are requesting $300,000 for the southern Africa refugee education project which has been taken over from AID. We have heard this before. Why has this program been removed from the request of the Agency for International Development and put into your shop?

We have had this program before, but it has never been in your request.

Mr. KELLOGG. That is correct, Mr. Congressman. It has always been in AID.

Mr. SHRIVER. It is supposed to be an educational program, is it not?

Mr. KELLOGG. That is what the funds were for, but basically it is for a foreign policy objective. That is one of the reasons.

Mr. SHRIVER. Of course, that is partly the reason that we have the Agency for International Development.

Mr. KELLOGG. That is right, sir. The foreign policy aspect is where the State Department and my office are directly involved. The objective is to create a cadre of educated leaders or potential leaders who will return one day, it is hoped, to Southern Africa to play a very substantial role in those countries.

AD HOC WORKING COMMITTEE ON SUPPORTING ASSISTANCE

Mr. SHRIVER. I think we should have more of an explanation of the reason for its transfer from the Agency for International Development over to you.

Mr. KELLOGG. A committee which was known as the Ad Hoc Working Committee on Supporting Assistance felt that the project could no longer be properly classified or justified as "supporting assistance." It was for that reason.

Mr. SHRIVER. What committee?

Mr. KELLOGG. The Ad Hoc Working Committee.

Mr. SHRIVER. Is that a committee around here?

Mr. KELLOGG. That is an administration committee, one that was working within the AID agency.

Mr. SHRIVER. Have we heard about this before?

Mr. PASSMAN. It is new to me.

VOLUNTARY ORGANIZATIONS CONTRIBUTIONS

Mr. SHRIVER. Last year you inserted information showing that voluntary organizations contribute $10 million for the benefit of the refugees dealt with by these organizations. Will you update that information for the record?

Mr. KELLOGG. Yes, sir.

[The information follows:]

The voluntary agencies report that they contribute $11 million per annum to assist the same group of refugees that are supported by the U.S. refugee program. The voluntary agencies report that indirect support and voluntary services are equal to additional millions of dollars.

INTERNATIONAL COMMITTEE OF THE RED CROSS (ICRC)

Mr. SHRIVER. You also told us last year that the International Committee of the Red Cross needed more money, but that you were not allowed to request more than $50,000 by law. What is the situation now?

Mr. KELLOGG. It is exactly the same. It has not changed. That law still stands and the amount of money is still $50,000.

Mr. SHRIVER. Is the administration proposing legislation to increase our contribution?

Mr. KELLOGG. Not to my knowledge.

RED CROSS MIA ROLE IN SOUTHEAST ASIA

Mr. SHRIVER. What role is the Red Cross playing in the search for the U.S. missing in action in Southeast Asia?

Mr. KELLOGG. It is my understanding that it is one of the primary organizations that are in the field attempting to locate missing in action.

Mr. SHRIVER. Have you any recent reports?

Mr. KELLOGG. When we met a year ago, I had a recent report, within a week of the time that we sat in this very room. I have not personally had any recent report.

Mr. SHRIVER. I think we had better have in the record a report of their activity, because there is still a tremendous amount of interest in the subject here in Congress and in the country.

Mr. KELLOGG. I will be glad to supply that for the record.

[The information follows:]

The ICRC has continued its efforts to aid prisoners of war and other war victims in Indochina, and to search for information about American missing in action personnel, including civilians. ICRC delegates in each of the Indochina countries work directly with the local population and with host governments on this subject. In addition, the ICRC's Central Tracing Agency maintains records on our missing in action, on the basis of which it carries forward its traditional efforts in this area.

FINANCIAL ASSISTANCE TO THE RED CROSS

Mr. SHRIVER. Do we furnish financial assistance or any other kind of assistance to this effort in addition to the amount we contribute to the Red Cross?

Mr. KELLOGG. We have on one or more occasions. I think the last time was in 1971 when there was an ad hoc contribution of $1 million. This was because the ICRC had run heavily into debt as a result of their efforts on behalf of the Prisoners of War in Vietnam.

Mr. SHRIVER. Where did that come from?

Mr. KELLOGG. AID.

LOAN TERMS FOR REFUGEES

Mr. SHRIVER. What are the loan terms that ICEM has with the refugees, Jewish or otherwise, from Eastern Europe?

Mr. KELLOGG. They vary slightly. In the case of the Jewish refugees, the loans are guaranteed by the Israeli Government. A total of 45 per-

cent is returned to the loan fund for each refugee who borrows from it.

Mr. SHRIVER. What kind of loans are they? How long do they have to repay them?

Mr. KELLOGG. They are interest-free loans. The amount is roughly $95 per refugee who was traveling from Vienna to Tel Aviv. Of that $95, the Israeli Government returns approximately 45 percent within 30 months.

Mr. SHRIVER. What is the payment history from the refugees?

Mr. KELLOGG. In the case of the refugee, if the refugee is a Jewish refugee, we are not aware of whether or not the Government attempts to get back from the refugee any portion of this loan fund. Perhaps they do.

Mr. SHRIVER. Forty percent?

Mr. KELLOGG. Or even 100 percent. I do not know.

In the case of the loan fund extended for refugees from Communist Europe, the return has been excellent, and particularly outstanding in the case of Chinese refugees in Hong Kong who borrow from our loan fund to come to this country.

ICEM—REPAYMENT OF LOANS HISTORY

Mr. SHRIVER. You are talking in generalities. Will you put in the record a summary of the repayment history, the terms, and such information, so we can be informed concerning the work of ICEM?

Mr. KELLOGG. I will be glad to do that, sir.

[The information follows:]

The following is a breakdown of withdrawals and collections (prepayments and repayments) under ICEM Refugee Loan Fund during period 1964–1972:

Year	Withdrawals	Collections, prepayments, and repayments
1964–66	$618,298	$539,233
1967	267,220	567,329
1968	679,500	737,963
1969	1,102,300	595,279
1970	808,913	876,669
1971	487,687	922,147
1972 (excluding Israel)	557,544	564,708
1972 (Israel movements)	1,963,409	
Total	6,484,871	4,803,328

Note: The amount of $1,963,409 shown for Israel is the amount withdrawn to finance movements to that country under special loan fund arrangements. The first repayments are expected by June 30, 1973.

The procedure for loan assistance given by volags from ICEM Refugee Loan Fund is as follows:

A. As soon as the refugee is approved for entry to an immigration country, the voluntary agency office requests ICEM to arrange transportation, indicating the case is in need of loan fund assistance. ICEM then notifies the voluntary agency of the movement arrangements made, and the transportation rates to be included in the promissory note signed by the individual refugee. The promissory note is then sent to the voluntary agency office in the immigration country for collection purposes.

B. The promissory note provides for installment payments without interest which the refugee should commence to make normally 3 months after arrival in the country of immigration. A small prepayment may be collected overseas from the refugee if he is able to make such a payment, and this is deducted from the total amount of his loan.

C. The period of loan repayment is initially governed by the size of the loan in the case of family groups and normal installment payments may be spread over a period of 18 months to 3 years. The voluntary agency offices follow up with the individual the payments of his installments. If the individual encounters financial problems, such as hospitalization, it may be mutually agreed to waive installment payments for a period; if these difficulties are of an extremely serious nature, the voluntary agency may decide to cancel the promissory note after consulting ICEM.

D. In order to support the collection machinery of the voluntary agencies, they are entitled to retain as a collection fee 25 percent of the collections received against the ICEM transportation loan and to transfer the balance to ICEM.

E. At the end of a 5-year period for the loans issued in any particular year, there is a review between ICEM and the voluntary agencies to determine whether any outstanding loans at that point should be written off.

ICEM—CHANGES IN LEVEL OF MEMBER CONTRIBUTIONS

Mr. SHRIVER. Have the contributions made by the 31 member governments of ICEM changed markedly after the general lessening of tensions in the area?

Mr. KELLOGG. It has generally followed the same pattern over the years, as I understand it. Australia has been by far the largest contributor to the migration aspect of ICEM.

Mr. SHRIVER. Of course, there is a great number of refugees to be assisted.

Mr. KELLOGG. Whereas we are the largest contributor to the refugee aspect of their work.

Mr. SHRIVER. You are going to put into the record a table showing the information I requested previously?

Mr. KELLOGG. Yes, I will be glad to supply it.

U.N. HIGH COMMISSIONER FOR REFUGEES—PERCENT OF U.S. CONTRIBUTIONS

Mr. SHRIVER. You are asking for a 10-percent increase in our contribution to the U.N. High Commissioner for Refugees. With this increase, our contribution will be 16 percent of all government contributions, I believe. Is that correct?

Mr. KELLOGG. That is correct, yes, sir.

Mr. SHRIVER. What would be our percentage without this increase that you are requesting?

Mr. KELLOGG. I do not believe I have that figure.

Mr. SHRIVER. Put it in the record.

Mr. KELLOGG. We will be glad to put it in the record.

[The information follows:]

A contribution of $1 million from the United States would be 15 percent of the anticipated government contributions to the UNHCR's program for 1974.

INCREASE IN U.S. CONTRIBUTION TO U.N. HIGH COMMISSIONER FOR REFUGEES

Mr. SHRIVER. You say this increase will be a step toward enhancing the U.S. image and upholding our views among United Nations members. Do you think it is necessary to enhance our image?

Mr. KELLOGG. I have a very strong——

Mr. SHRIVER. What can $100,000 do to enhance our image?

Mr. KELLOGG. The amount that we have given has stood still the last

4 years, if I recall correctly, whereas other countries have increased by more than 30 percent during the same period of time.

Mr. SHRIVER. I am on another subcommittee of appropriations where there are large decreases, cuts and reductions in domestic health and education programs at a time when we are trying to control inflation and to avoid the necessity of an added tax on the people.

Here you are asking for an increase for the United Nations. It is a rather small amount, but according to what you say, it is just to enhance our image.

Mr. KELLOGG. As I mentioned a minute ago, we have not increased the amount we have given in 4 years, but at the same time world turmoil and the problems of refugees are greater today than they have been at any particular time.

Mr. SHRIVER. So are our fiscal problems.

Mr. PASSMAN. Would the distniguished gentleman yield?

Mr. SHRIVER. Certainly.

AID HANDLING OF INDUS BASIN PROJECT

Mr. PASSMAN. This is pursuing your line of examination.

We are not directing the criticism to you, Mr. Kellogg. I refer you to the committee's report last year on the Indus Basin. AID made a request for $43 million for the Indus Basin Development Fund. This committee, after long deliberation, recommended $22 million with this language:

> The committee would like to point out that many projects in the United States are faced with the same problems. The committee feels foreign aid projects should wait in line for U.S. funds just as projects in this country are required to do and it has recommended the same appropriation amount as we provided last year for both of these items.

After specifically reducing this item by $21 million and writing this language in the report, AID, without any consultation with any member of this committee, went ahead and made an additional allocation of $5.7 million to the Indus Basin using as the excuse that the costs would increase because of possible construction delays.

We are delaying all types of projects in this country.

This is pretty much par for the course. They do not pay any attention to the recommendations of the committee and do not pay any attention to what the Congress says.

I am merely asking the gentleman to yield to put this in the record so the new members will understand how completely the administrators of these programs ignore the recommendations of the committee. I hope it will be different this year from previous years.

I thank the gentleman.

FAR EAST REFUGEE PROGRAM—CHANGE IN RELATIONSHIPS WITH PEOPLE'S REPUBLIC OF CHINA

Mr. SHRIVER. Do you see any major change in direction for the Far East refugee program because of the better relations between our Government and the Government of the People's Republic of China?

Mr. KELLOGG. No, I do not. As I mentioned earlier in my testimony, I reported to you that it is the one program anywhere in the whole

Far East that indicates our interest in people who are escaping from Communist China. The Bureau of Far Eastern Affairs of the Department has felt that this interest was a very important one, despite what has been going on between the United States and Peking. Of course, the program is under constant review—as are all our programs.

Mr. SHRIVER. Are any of your programs dealing with the problem of Pakistani prisoners still held in India?

Mr. KELLOGG. No, sir.

U.S. REFUGEE AND MIGRATION POLICY—CUBA

Mr. SHRIVER. You are responsible for the formulation of U.S. refugee and migration policy, are you not?

Mr. KELLOGG. That is correct.

Mr. SHRIVER. What is the situation between the United States and Cuba regarding migration of Cuban refugees, and what is our policy under the antihijacking agreement?

Mr. KELLOGG. May I answer the first part of your question initially, and then address myself to the second portion?

With respect to Cuban refugees, the major change within the last very short period of time is that it is our understanding that the airlift is finally coming to a complete stop. This has been rumored before. There are indications that this is a total and complete windup.

If true, this will mean that many fewer Cuban refugees will be arriving on the shores of the United States.

With respect to the hijacking agreement with Cuba, as I understand it, it refers directly to commercial airlines, as well as registered ships. The agreement specifies that hijackers apprehended either in the United States or in Cuba will face prosecution in either country.

Have I explained that at all?

Mr. SHRIVER. I just wondered what our policy is. You are involved in this.

Mr. KELLOGG. My involvement is in a slightly different area, and that is a refugee found in this country will not be returned to face possible imprisonment or prosecution, through the asylum policy. There may be a certain amount of conflict between these two.

ADMINISTRATION OF AID PROGRAM

Mr. SHRIVER. You do not administer the AID program we have, really a foreign welfare program, which comes before this committee. I think you mentioned $90 million a little while ago.

Mr. KELLOGG. That is correct.

Mr. SHRIVER. You anticipate that will decline, do you not?

Mr. KELLOGG. I understand that is true, yes, sir.

Mr. SHRIVER. How about the decline from last year's request to this one?

Mr. KELLOGG. $145 million in 1973.

Mr. SHRIVER. Down to $90 million?

Mr. KELLOGG. Yes.

Mr. SHRIVER. Thank you, Mr. Kellogg.

Thank you, Mr. Chairman.

Mr. PASSMAN. Mr. Bevill.

U.N. HIGH COMMISSIONER FOR REFUGEES

Mr. BEVILL. Mr. Kellogg, how long has this program been in existence?

Mr. KELLOGG. The High Commissioner's Office, for example, was formulated in 1951, and our office was a result of the Migration and Refugee Assistance Act of 1962.

Mr. BEVILL. Then the United Nations High Commissioner for Refugees was set up prior to this program, is that right?

Mr. KELLOGG. In the present form, yes, sir.

Mr. BEVILL. Is there any reason that these programs which are scattered about cannot be handled through the United Nations Commissioner for Refugees?

PURPOSE OF PROGRAM

Mr. KELLOGG. The primary purpose of the United Nations High Commissioner for Refugees, the very fact that he came into existence at all, was for legal protection of refugees; in other words, one aspect of the refugee problem.

Approximately 15 years ago the United Nations High Commissioner for Refugees broadened his activities to include actual material assistance, but still his main raison d'etre is for legal protection, and that is why he has offices around the world.

POSSIBLE OVERLAP OF PROGRAMS

Mr. BEVILL. You can see why I am asking that question. Here the different countries participate. We are putting in $1,100,000 for 1974, as I understand it.

Mr. KELLOGG. That is correct, sir.

Mr. BEVILL. This makes much more sense to me than the United States taking on these programs itself to handle these refugee problems, because there you have an organization. We have no organization, I gather. We are using the various committees in the various countries.

Mr. KELLOGG. That is right, sir.

Mr. BEVILL. There are overlapping programs. This concerns me.

Why not let the International Red Cross handle these matters? That is an international organization. You have two international organizations, the United Nations High Commissioner for Refugees and the International Red Cross, which I understand is handled by the Swiss. Here are two international organizations. Yet we here in the United States are taking the American taxpayers' money and handing it to this committee or that committee scattered all over the world. This does not seem right to me.

DIFFERENT ROLES OF PROGRAMS

Mr. KELLOGG. The two organizations to which you refer have quite different roles in the international community.

The High Commissioner, as I mentioned before, is basically concerned with the protection of a refugee, to see that he is not deterred——

Mr. BEVILL. The million dollars we are giving to the High Commissioner is not for protection?

Mr. KELLOGG. No, sir, it is not. It is for the material assistance program.

Mr. BEVILL. Which is what you are doing, is it not?

Mr. KELLOGG. Yes, sir, except that there are many reasons why the U.S. Government is inhibited from direct participation, particularly in Africa.

In other words, it is much better for the U.S. Government to work through the High Commissioner's office in the case of his material assistance programs in Africa.

Mr. BEVILL. The work your agency is doing is a very commendable thing. We all want to alleviate human suffering. There is no question that you and your personnel are very dedicated people, and I am not questioning anything that you are doing.

FUNDING PRIORITIES

I am questioning the whole program in this respect: We have to determine priorities. Is it more important that your agency have this money for these various projects in foreign countries, or is it more important for Chairman Passman to have a project in his district? This is what we are faced with, as you know.

There is no question about your program doing some good, but there is a question of priorities which we have to face. We have to make that decision.

That is why I am asking these questions. It is pretty hard for me to go back to Alabama and say we could not get this water system because the funds were frozen because of inflation, and then say we did pass an appropriation where we are spending $2,000 per student to train students over in Africa. It is pretty hard for us to explain this, as you can understand.

Mr. PASSMAN. Or a $100 million loan to Sudan.

Mr. BEVILL. Even more difficult, the $100 million for Sudan, with which we recently had a problem.

I cannot say this is to keep peace on Earth. I think that is a term you used. You can imagine how far I would get with that.

This is what concerns me, frankly, about the whole program. Why should the United States, which has a bigger national debt than all the other countries on Earth, be playing Santa Claus, in effect—gifts. We participate in international banks that loan these countries money. The countries need money, and they can go to these banks and borrow it, in which 25 or 30 countries participate.

But your program is just Uncle Sam giving out the money.

At least other countries think enough of the programs of the United Nations and the International Red Cross to participate in their programs.

This is what concerns me. Of course, I am a new member of this committee. Maybe I will learn more. I will certainly keep an open mind. I did want to express the way I see it at this time.

That is all, Mr. Chairman.

Mr. PASSMAN. Thank you.

FOREIGN EXCHANGE CREDITS

So many of these so-called recipient countries have large foreign exchange credits. We went out and borrowed $100 million in U.S. dollars from Thailand, and almost created an incident. We wanted a quarter of a billion dollars, but they said, "We will let you have $100 million." We wanted it for 8 years. They said, "We will let you have it for 4½ years at an interest rate of 6 percent." That $100 million will be due in about 60 days.

That is only one example which shows you how really ridiculous this program is. We were pouring grant aid in the back door, and we were borrowing out of the front door.

Mr. Miller?

MOVEMENT OF REFUGEES

Mr. MILLER. Thank you, Mr. Chairman.

Mr. Kellogg, I notice in your testimony you say:

> The South Asian situation, as you know, has largely resolved itself. There still are human problems in the subcontinent—Biharis in Bangladesh, Bengalis in Pakistan, prisoners of war under continued detention. But the great mass of refugees in India returned swiftly to their towns and villages soon after establishment of Bangladesh. . . .

Then you go on to another area:

> A less dramatic but equally satisfactory development has come in the Sudan.

You tell there of the refugees returning.

Those two instances make me wonder if we are supporting immigrants who will migrate in both directions, out of their country to another country, and then decide to return. We would support them on the return trip?

BENGALI REFUGEES

Mr. KELLOGG. Not at all. These were true refugees in every sense of the word. They fled in the case of the Bengalis from what is now Bangladesh, in genuine fear of their lives. I saw them myself.

The facts of what happened in what was then East Pakistan are too well known for me to take the time of the committee to repeat them. They fled. Their houses were burned. Their crops were destroyed. They were not migrating. They were fleeing for their lives.

Mr. MILLER. You helped support them at least in the migration. They moved out, is that not correct?

Mr. KELLOGG. That is correct.

Mr. MILLER. Our dollars helped move them out.

Mr. KELLOGG. No, it did not move them at all. They came on their own feet, creeping out at night. They were not visible in the daytime. They were avoiding two armies that were drawn up facing each other. Many of them suffered terrible privation.

Mr. MILLER. Did we help them return?

Mr. KELLOGG. Yes, we did.

Mr. MILLER. So, we helped at least one way of the passage. That was my question.

Mr. PASSMAN. Will the distinguished gentleman let me make clear a contradiction in previous testimony.

You do have refugees from country A going to country B. Some of

the same refugees leave country B and return to country A, do they not?

Mr. KELLOGG. Yes.

Mr. PASSMAN. And you finance them both ways?

Mr. KELLOGG. No.

Mr. PASSMAN. You provide assistance.

Mr. KELLOGG. Not on the way out.

Mr. PASSMAN. But after they come out, you do reimburse them. You give them food and lodging and medical expenses. You incur the expense after they come out.

Mr. KELLOGG. That is correct.

Mr. PASSMAN. You do take them out of country A and bring them over to country B. Then they decide they want to go back to country A, and you provide the transportation back, do you not, whatever the cost may be?

I wanted the record to show that you do have a two-way street there. We endorse their coming out, and we endorse their going back.

Mr. KELLOGG. Mr. Chairman, we do not endorse them coming out. They come out under duress.

Mr. PASSMAN. But that is where your money goes. After they get out, they come to you. We start incurring these expenses to help these people after they get out.

Mr. KELLOGG. In the camps wherever they may be.

Mr. PASSMAN. That is a statement of fact. That is where we become involved with these expenditures in helping these refugees after they come out, is that right?

Mr. KELLOGG. That is correct, yes, sir.

Mr. PASSMAN. If later some of them want to go back, you pay their expenses back.

I thank the gentleman for yielding. I wanted to get the record a little clearer on that.

Mr. MILLER. I thank the gentleman.

SOVIET JEW REFUGEES

"A third development on the encouraging side," your testimony states, "has been the movement from the Soviet Union of Jews wishing to settle in Israel."

You go on to tell that the Congress provided $50 million in fiscal year 1973.

My question is: Your testimony states that in August 1972, the Soviets imposed fees to reimburse the state for education costs of migrating citizens, which threatened to inhibit the departure to Israel of some individuals, and "since then many Soviet Jews have had to pay the fees in order to depart."

Are any of our funds being used to reimburse the Soviet Union for educational fees or costs of the migrating citizens?

Mr. KELLOGG. No, sir; not 1 penny.

SOUTHERN AFRICA STUDENT EDUCATION PROJECT

Mr. MILLER. You also state on page 6 of your testimony:

> Others have fled from southern Africa, including the students whose tuition—the smallest item in our line budget—my office is assuming from AID.

You state that this will cost $300,000 compared to the total.

A few minutes ago I understood you to say that there would be some 300 students in that program. On page 12 of your justification for fiscal year 1974, you indicate that this amount of money would support up to 145 students at an annual cost of approximately $2,000 per student.

Apparently there is another budget that will support the other 155 students.

Mr. KELLOGG. I am indebted to you for correcting my testimony. The correct figure is 145 students.

Mr. MILLER. Very good.

Where are these students educated? Are they moved to our country, or are they educated in universities in Africa?

Mr. KELLOGG. About 8 or 9 years ago, through an AID program, a secondary school was built in Zambia. In addition, approximately 45 students attended nearby universities.

Mr. MILLER. In our country and in my congressional district, we have quite a few students who have national defense loans. They must repay those loans over a fairly long period of time. Is there any repayment from these students back to you for the assistance given to them in order to gain their education?

Mr. KELLOGG. This is not part of the program. One reason for it is that at this particular moment there is very little hope for employment, and there is no definite known time when they will return to their own country and be able to be gainfully employed.

Mr MILLER. We are saying, then, that this would be an outright grant, compared to the loans given to my constituents?

Mr. KELLOGG. It is an outright grant, yes.

Mr. MILLER. Thank you.

ZAMBIAN SITUATION

Mr. SHRIVER. These people are in Zambia because they are dissatisfied with their own government?

Mr. KELLOGG. That is right. They fled from their own countries. They are minorities facing persecution and escaping for that reason.

Mr. SHRIVER. Could U.S. citizens who are unsatisfied with our Government qualify for this school? What would prevent them from doing so?

Mr. KELLOGG. This program is for African refugees who fled under duress, pressure, only because of their belief in a different form of government.

Mr. PASSMAN. Mr. Coughlin.

Mr. COUGHLIN. No questions, thank you, Mr. Chairman.

AID STUDENT PROGRAMS

Mr. PASSMAN. I think under AID they have financed thousands of students, have they not?

Mr. KELLOGG. Yes.

Mr. PASSMAN. It is a frighteningly high number. Some of them come from fairly wealthy countries. Let us not let the record show all these students are coming from poor countries.

Mr. Yates, we were just concluding, unless you have some more questions.

Mr. YATES. No. I just came from my other subcommittee, Mr. Chairman. Not having the benefit of your examination, I think I will just defer.

Mr. PASSMAN. Mr. Long was unable to be here but he has submitted the following questions for the record.

[The questions follow:]

Mr. LONG. Regarding the Far East refugee program, do you feel that the administration's present policies toward mainland China conflict with the continuation of funding for this program as a separate program?

Mr. KELLOGG. The United States has traditionally continued to assist refugees who have fled from persecution, even when they have fled from countries with which we have had full diplomatic relations.

Mr. LONG. In the budget justification you mention the increase in numbers of refugees from mainland China in 1971 and 1972. What were the numbers of refugees from mainland China from 1969 to 1972 by year?

Mr. KELLOGG. We estimate the number of Chinese refugees arriving in Hong Kong to have been:

1969	11,000
1970	7,500
1971	13,500
1972	14,500

Mr. LONG. What are the numbers of Chinese refugees presently living in the United States, who are receiving assistance through voluntary agencies who have contracts with FERP? How many refugees have been receiving assistance for less than 2 years and how many for more than 2 years?

Mr. KELLOGG. The FERP provides funds to voluntary agencies which assist refugees in various ways in their immigration, including paying for medical examinations, documentation fees, language study, and arranging for travel loans. The Office of Refugee and Migration Affairs also worked with the ICEM in the establishment of a travel loan fund from which a relatively few needy refugees from Hong Kong have sought loans. However, the FERP does not provide funds to the voluntary agencies to assist in the reestablishment of these refugees after they have arrived in this country.

Mr. LONG. How are refugees selected to participate in this program?

Mr. KELLOGG. As I noted earlier, Mr. Congressman, those going to the school in Zambia are screened by the Zambian Government's Commission for Technical Education and Vocational Training and the principal of the school. The selection of those applying to go elsewhere is based on the proposed course of study and their admissibility in the training program.

Mr. LONG. What percent of the student body of the Nkumbi secondary school in Zambia are refugees supported by the program?

Mr. KELLOGG. Under the terms of the agreement which transferred the title of the school to the Zambian Government, roughly one-third of the school's capacity is to be available for refugee education—or 125 out of 300 places. At the moment there are some 80 students being supported by this program.

Mr. LONG. How many students are enrolled in college entrance curriculums, office management, agriculture, motor mechanics, and other courses (please specify courses and number of students supported by the project in each)?

Mr. KELLOGG. Although the school offers specialized training in business, mechanics, and agriculture, all 80-some-odd students now being supported by this project are pursuing straight academic courses leading to a secondary school completion certificate.

Mr. LONG. What information is available on where past beneficiaries of the program are now living and working?

Mr. KELLOGG. I'm afraid, Mr. Congressman, that I simply cannot give you a responsive answer to your question. Such followup information is not now available.

Mr. LONG. Has any manpower survey ever been performed to determine whether former refugee students are using their training? If so, what are the results? If not, why not?

Mr. KELLOGG. Again, Mr. Congressman, I'm in the awkward position of not being able to give you a substantive response. As I noted in answer to your earlier question, we don't have the followup information which would enable us to make such a survey. I would like to say in this regard that I share what I believe to be your purpose in asking these questions. I agree that such information would be invaluable both in evaluating the success of this program and in planning for the future. I wish to assure you and the committee that as my office takes over the administration of this project, we will endeavor to develop statistical information of this type.

Mr. PASSMAN. Thank you very much, Mr. Kellogg.

We stand in recess until 2 o'clock.

Mr. PASSMAN. The committee will come to order. We shall consider this afternoon the budget request for the Overseas Private Investment Corporation. We have as witnesses Hon. Bradford Mills, President, Overseas Private Investment Corporation and supporting witnesses.

I believe, Mr. President, that you had requested in fiscal 1973, $85 million, but the Congress in its wisdom only appropriated $12,500,000 under a continuing resolution.

Mr. MILLS. That is correct.

Mr. PASSMAN. This year you are requesting $72,500,000.

Mr. MILLS. Correct.

Mr. PASSMAN. Of course, the sins of the past shouldn't be charged to you, Mr. Mills. This agency is actually not a new one. When did the previous organization start

Mr. MILLS. 1948 under the Marshall plan.

OPIC'S FINANCIAL CONDITION

Mr. PASSMAN. If we are going to be fair to you as the President of the Overseas Private Investment Corporation, and also in all fairness to the taxpayers, I think we have to make a very positive and definite record. Would you place in the record a table showing the total amount of income received by not only OPIC, but your predecessor agencies, indicating the amount they received per year in collections from insurance sold, then in another category the amount appropriated by the Congress for the same years, and then in a third category the total amount of administrative expenses incurred from 1948 to 1972 inclusive. Then by subtracting the administrative expenses from the amount of funds received, it will immediately show the net loss or the net profit for the time that the agencies operated, because we are charging to you or the present agency for all of the operations of the past. I think this is the best way to make a record.

If you will, I think you should also show the amount of claims you have paid during this same period of time. At one time you had an extremely favorable picture, but that situation has reversed itself in the past few years.

Also state for the record the amount of claims pending and the potential claims which could be presented to OPIC at some future time. If we are to get OPIC on a sound, operating basis, then it is going to be necessary to state to the committee, to the Congress, and to the public that during the 25 years of operation we have had a net loss of this figure, but had we operated in the past as we are presently operating and we expect to operate in the future, it would have been a different story. Do you agree with me?

Mr. MILLS. Yes, we have some of those figures now.

Mr. PASSMAN. Not some of them. We want the entire picture. I spent considerable time with you in the past. I have a lot of respect for you. I know you want to put your best foot forward but at the same time you want to be fair with the committee. Let us look at Chile. We know we have had tremendous losses in that country. We know we have a lot of other claims pending that we are going to have to pay. It is just a question of finally agreeing upon the amount and meeting the payment. As far as I am concerned, rather than defer these payments over a period of years I think we should meet this obligation. I think it would be much better to ask for a supplemental. Since we absolutely must pay it, pay it and get it behind us.

I think you had another claim in which you had reached an agreement. The money is due but you are actually negotiating some kind of an installment system. Help us make a complete record. I don't think we are unreasonable in that request?

Mr. MILLS. No.

Mr. PASSMAN. Let us have these figures for the record.

Mr. MILLS. We will be pleased to do that, Mr. Chairman.

[The information follows:]

SUMMARY OF INSURANCE FEES, APPROPRIATIONS, CLAIM PAYMENTS, CLAIM RECOVERIES AND ADMINISTRATIVE EXPENSES, FISCAL YEAR 1949 THROUGH MAR. 31, OF FISCAL 1973

Fiscal year	Insurance fees	Appropriations	Claims payment	Claims recovery	Administrative expense
1949	$16,763				
1950	172,609				
1951	205,663				
1952	277,584				
1953	216,680				
1954	205,662				
1955	235,687				
1956	330,873				
1957	416,515				
1958	654,482				
1959	1,367,334				
1960	1,356,227				
1961	1,672,830				
1962	2,298,860	$27,861,484			
1963	2,926,017	30,000,000			
1964	4,674,441				
1965	7,767,432				
1966	9,867,673		$205,947	$193,629	
1967	9,117,164		128,247	97,471	
1968	14,546,713		327,304	264,838	
1969	19,721,714		2,839,898		
1970	21,537,152	37,500,000			[1] $962,612
1971	24,053,861	18,750,000	345,230	349,899	[1] 1,747,876
1972	26,828,962	12,500,000	1,355,015	1,334,923	[1] 2,784,464
1973 through Mar. 31	19,139,785	12,500,000	18,075,999	164,501	[1] 1,851,188
Total	169,618,683	[2] 139,111,484	23,277,640	2,405,261	[3] 7,346,140
Income taken away	[4] (50,000,000)				
Total	119,618,683				

[1] Estimate.
[2] $44,111,484 of appropriations allotted by Board of Directors to guaranty Reserve.
[3] Administrative costs are not available prior to fiscal year 1970 as AID and other predecessor agencies did not segregate its administrative costs against specific programs.
[4] Insurance fees transferred by Congress to AID housing guaranty program.

Note: As of Mar. 31, 1973, OPIC had 17 claims pending totaling approximately $121,300,000. OPIC also had 8 situations which might be considered potential claims involving approximately $51,500,000 of liability.

General Statement

Mr. Passman. I assume you have a statement you would like to make to the committee? If so, please proceed with the statement.

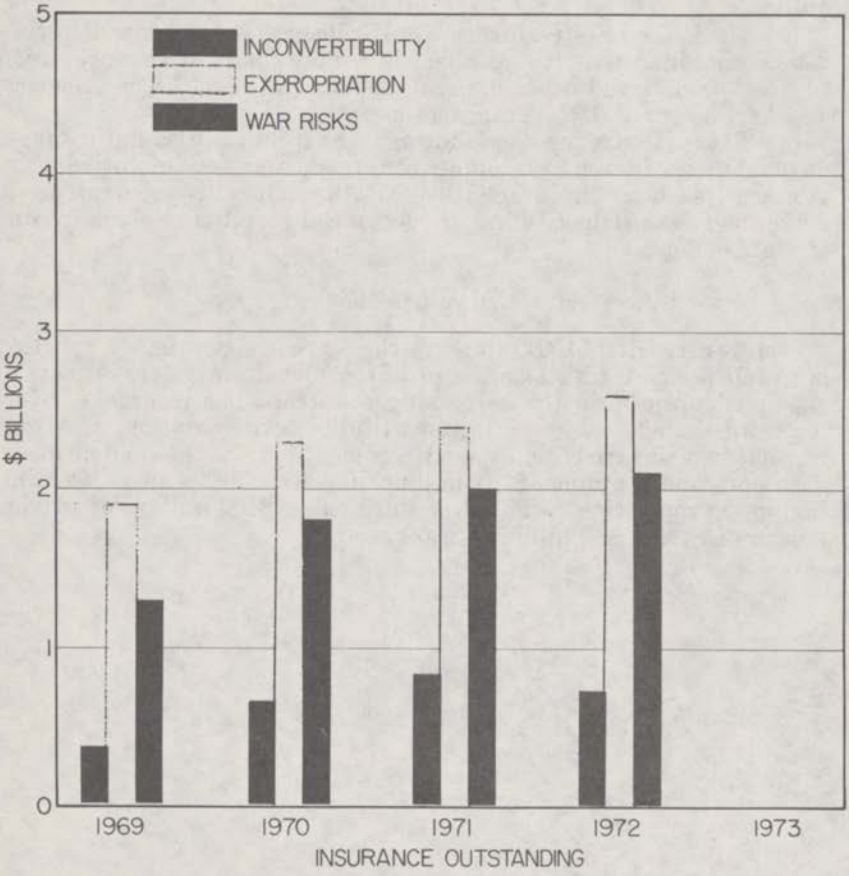
Mr. Mills. Mr. Chairman and members of the committee, I appreciate this opportunity to report to you on the programs and progress of the Overseas Private Investment Corporation (OPIC). In the 2 years that this Government Corporation has been managing insurance and finance programs for selectively encouraging U.S. private investments in developing countries. OPIC has solved many of the problems it inherited and introduced new methods of operating its programs.

In evaluating any program, be it public or private, three basic questions should be answered. First, is there a need for it? Second, is it doing what it is supposed to do? Third, will it continue to serve its purpose in the future? In this statement I will summarize factual evidence responsive to each of these questions.

The need for OPIC is well established.

(1) World markets are changing. The developing countries are the growth markets of the future. They contain more than three-fourths of the population of the world. In order to compete in these markets, U.S. companies often have no realistic alternatives to investing in them.

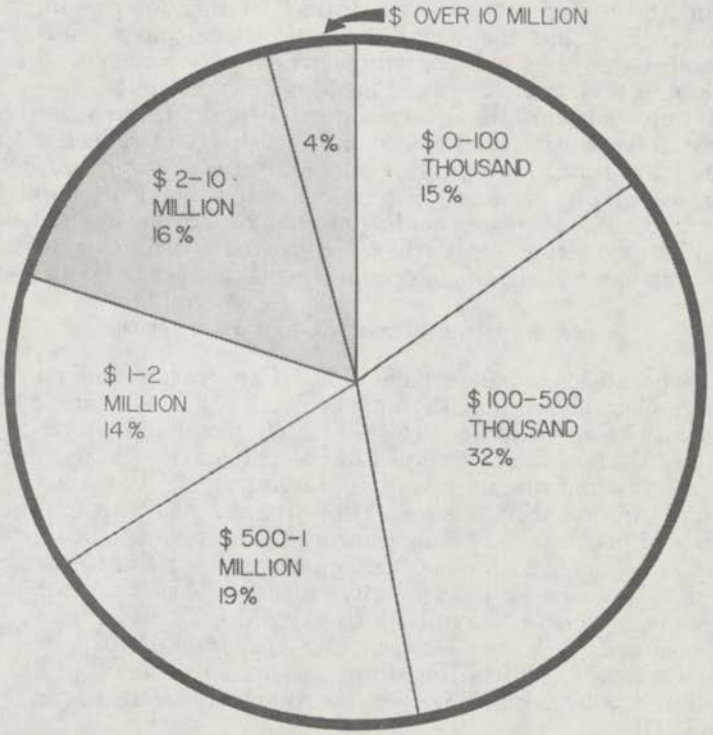
(2) The return to the United States from foreign investment is producing a growing surplus in long-term capital accounts of our international balance of payments. In 1971, net of returns of dividends, interest and fees to the United States from nonpetroleum investment in the developing countries, OPIC's field of activity, were nearly $390 million.



(3) The United States, formerly self-sufficient in most raw materials is becoming increasingly dependent in a more competitive world upon sources of fuels and other mineral resources in Asia, Latin America, and Africa, where OPIC programs operate.

(4) There is a tremendous shortage of capital, skills, and management abilities in the developing countries, and foreign private investment, such as encouraged by OPIC, enables these countries to make the most productive use of substantial investment made by foreign aid donors.

WHAT OPIC DOES



Congress created OPIC to serve these needs. Its primary function is to sell political risk insurance to U.S. private investors on new or expanded projects in the developing countries. The insurance covers the unpredictable risks of inconvertibility, expropriation, and war, revolution or insurrection. As of December 31, 1972, the current insurance portfolio contained $764 million in convertibility risks, $2.1 billion in expropriation risks (after subtracting $400 million of private reinsurance) and $2.1 billion in war risks.

GROWTH OF CURRENT OPIC INSURANCE PORTFOLIO

Of the projects it has insured, 80 percent represents investments of under $2 million.

PERCENT OF INVESTMENT TRANSACTIONS INSURED BY SIZE 1972

OPIC also assists in financing projects in the less developed countries primarily through guaranties of loans from U.S. institutional lenders or direct loans. OPIC's financing is extended on commercial terms, and the agency often takes convertible debentures to share in the profits and to maintain its financing services on a self-sustaining basis. As of December 31, 1972, guaranteed loans totaled $194 million in 21 projects. The direct loan portfolio, funded from the Corporation's $40 million capital, was $15.4 million in 19 projects as of the same date.

In addition, OPIC offers preinvestment financing to U.S. agribusiness companies and other enterprises to encourage them to investigate and pursue sound project opportunities in less developed countries. In fiscal 1972, about $350,000 was committed toward surveys by 13 firms, and about $550,000 is planned for fiscal 1973.

To encourage small- and medium-size investors to take an active role in LDC's, OPIC is now offering a special project development program and giving priority in its direct lending for this important segment of U.S. indutry. Smaller firms with adequate management and capital resources can contribute to our development objectives even though their scale of investment capacity is limited.

OPIC also administers an experimental local capital mobilization program in five Latin American countries called the Productive Credit Guaranty Program. Through this pilot effort the Corporation is determining whether government guaranties can make more local bank lending accessible to poor people for farming and business development. This promising idea, which originated in the Congress, will require further testing to determine the best method of operation.

WHAT OPIC HAS ACCOMPLISHED IN 2 YEARS

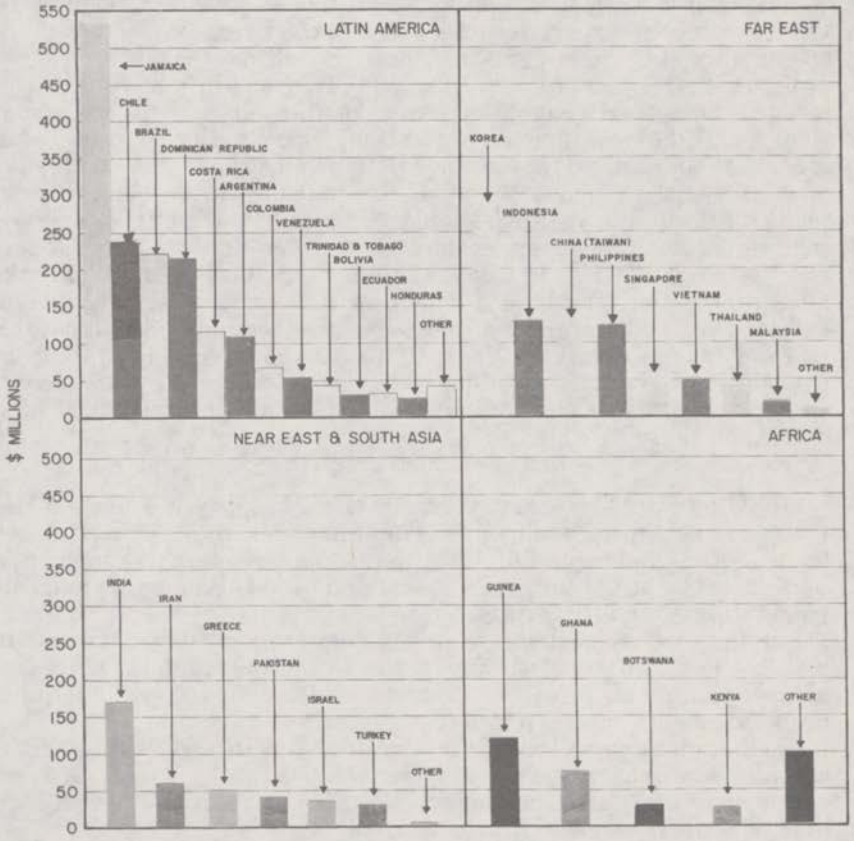
The corporate-style management of OPIC, operating under a statute stressing selectivity and risk management, has made fundamental changes in the operating policies which characterized previous programs. For the first time, principles of risk management long employed by the private insurance industry have been applied.

Our goal in operating the insurance program has been to establish a pooling of political risks among insured investors. The pool is being built up from funds paid in as premiums by the users of the program. Through wise management and investment policies, the pool can be increased over time to be available to pay ordinary claim losses.

The insurance program, between 1948 and June of 1973, will have paid to it a total of $180 million in premiums. About one-third of that total—nearly $60 million—has been realized since OPIC began operations in 1971.

An additional $40 million in gross revenues from premiums and fees is anticipated for the next fiscal year. These funds, minus operating costs, also will go into OPIC's reserves to pay claims.

When OPIC took over management of the insurance program in January 1971, it was confronted with over $440 million in potential claims on old contracts. At that time, its insurance reserve amounted to only $85 million. Today those figures are substantially reversed. During the first 2 years the insurance reserve has been built up to almost $126 million, with an additional $24 million of earnings not yet allocated. OPIC has settled 18 claims, more than twice the number of claims paid during the first 20 years of the program. Of these, 13 were resolved by OPIC cash settlements to insured investors, totaling over $14 million; three were settled by OPIC guaranties which enabled the investors to receive cash payments (OPIC's present liability excluding interest is $70.8 million); and two were settled by host Government commitments, backed by OPIC guaranties with a current value of $25.3 million excluding interest, for installment settlements.



One claim of $154 million was denied, and is in arbitration. The remaining claims, on which OPIC has not determined liability, total $113.7 million.

We have taken very seriously our obligation to follow the congressional directive to conduct insurance operations with due regard to principles of risk management. In carrying out this mandate, management has:

Reinsured with Lloyd's of London 50 percent of OPIC's expropriation risks in approximately 80 percent of the countries in which we have expropriation coverage outstanding, or where we are currently offering such coverage to U.S. investors. In the remaining 20 percent of the countries, the agreement provides a smaller percentage of reinsurance within a maximum per country limit of $14 million;

Placed limits on growth of exposure in countries of heavy concentration;

95 PERCENT OF OPIC EXPROPRIATION COVERAGE EXPOSURE

Insisted that the investor take part of the risk through special policies for large and/or sensitive projects, and through a first loss deductible;

Increased premiums and instituted multiple premium schedules reflecting the form and field of investment;

Specified coverage requirements to avoid adverse selection of risk against the Corporation;

Requested multinational participation of certain large and sensitive projects.

OPIC has introduced many new dimensions to the insurance and finance programs. In addition to enlisting the resources of the private London market to reinsure a portion of our expropriation risks, we are now working with the U.S. private insurance industry to determine in what ways they, as a group or as individual firms, can most effectively share part of the expropriation liabilities which OPIC underwrites, OPIC also has adapted its programs to cover new modes of investment, such as construction and other technology contracts.

OPIC now is negotiating with insurance agencies of other developed nations to establish an investment insurers union. The union would provide international conciliation, mediation, and appraisal services for member agencies, and would facilitate reinsurance pooling by OPIC with counterpart agencies of other countries.

Probably the most significant new dimension that has emerged from our first 2 years of operation is OPIC's role in resolving investment disputes, thereby avoiding government-to-government confrontation. As a U.S. Government corporation, with a majority of its board members from the private sector, OPIC is able to act as a bridge between foreign governments and U.S. companies in developing commercial solutions to political problems. In addition, OPIC's expertise in international financing enables us to offer new solutions to expropriation situations. In several claims OPIC has been able to take an expropriation problem to which an investor reacts with characteristic fear, and translate it into a business arrangement which presents an acceptable solution for both the host government and the U.S. investor. In Bolivia, for example, OPIC resolved the expropriation of two U.S. companies clearly improving relations between the United States and Bolivia.

OPIC'S SELECTIVE CRITERIA

OPIC's distinctive characteristic is the selectivity it applies to investments it insures or finances. This involves a series of qualitative underwriting judgments of the invstment's potential developmental impact on the host country, its effects upon the U.S. economy, and its vulnerability to political risks.

Foreign private investment can be a highly beneficial contributor to both the developing nation and to the U.S. economy, but OPIC recognizes that not all projects will meet the tests. Thus, it evaluates each proposal against criteria which require that:

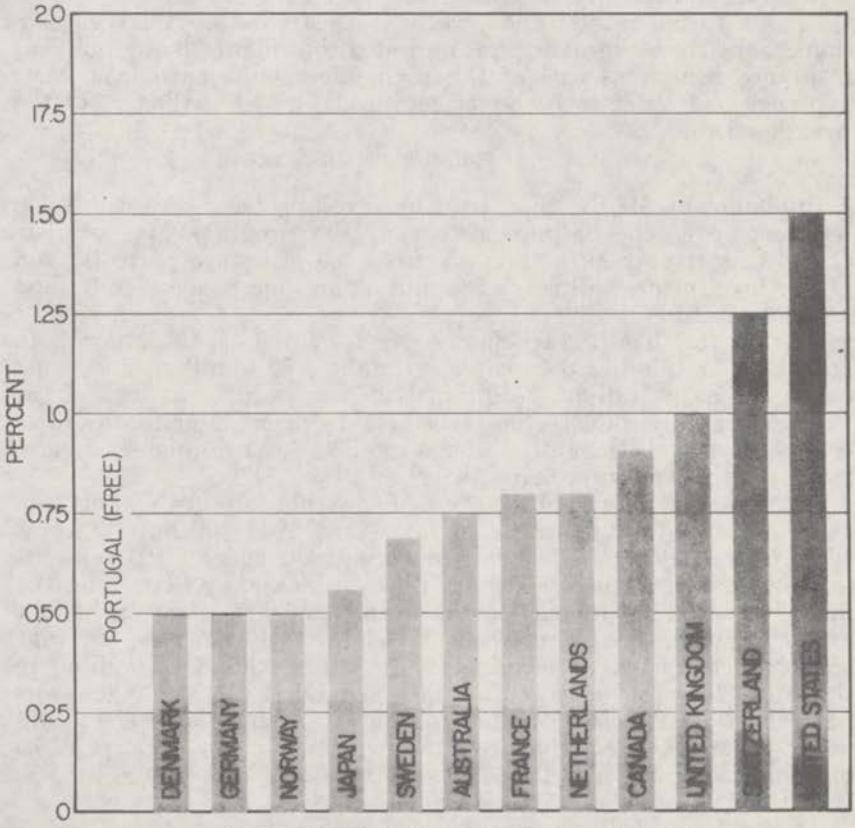
Each project be approved by the host government before OPIC will insure or finance it;

The investor demonstrate how the proposed project will benefit both the host country and the U.S. economy;

OPIC refuse to assist "runaway" projects;

Ownership and financing structure, dispute settlement terms and other features of proposed projects be satisfactory to OPIC;

Ways are devised to help reduce potential political vulnerability and to improve the project's contributions to host country development and the U.S. economy; and



Through its contract terms, OPIC seek to assure responsible and prudent behavior by all concerned, thereby minimizing political risks.

Violation by the investor of any of OPIC's covenants, or taking actions that would create political problems and provoke expropriation, can result in refusal by OPIC to pay a claim.

FOREIGN PROGRAMS SIMILAR TO OPIC'S

OPIC today is no longer unique. At least 15 other nations have set up insurance programs to stimulate private investment in the less-developed countries. The coverage offered is similar to OPIC's, but their premium rates and terms indicate policy decisions to subsidize investment insurance. For example, the Japanese and German fees are about one-third of OPIC's premium rate.

OPIC INSURANCE FEES COMPARED WITH OTHER NATIONS

FEES CHARGED BY DEVELOPED COUNTRIES
FOR CURRENT INVESTMENT INSURANCE

Recently, the Commission of the European Economic Community announced a proposal to establish a European investment insurance scheme to fill gaps between the national programs of European governments in insuring European-based private investors going into the LDC's.

The significance of the proposal was pointed out by the Commission in its introduction:

"Since investment guaranties can favor the commercial growth of the Community, and since most of the competing industrial and commercial powers have had broad recourse to this form of insurance, the introduction of a Community guaranty would place all of the member countries of the Community in a position equivalent to that of its principal competitors."

In addition, the Japanese and the French have announced special programs to encourage their investing companies to seek out and develop foreign sources of needed raw materials. The Japanese program includes preinvestment assistance and long-term, low-interest loans to help finance the mining ventures.

Supplementing insurance and export credit programs, the Japanese have two public corporations to promote overseas exploration and development of mines and oil/gas fields. The French are developing a program to diversify sources of supply for a number of basic raw materials through intensified worldwide exploration by their nationals, and the Government has indicated that it will use its political insurance facility as part of this plan. We should learn from their experience in order to be better equipped for the challenges of the next decade.

WHAT THE INSURANCE PROGRAM COSTS

Premiums of $180 million paid by investors have exceeded claim payments over the 25-year history of the program. We estimate OPIC's fiscal year 1973 revenues from the insurance portfolio and OPIC investments will reach $34 million and increase to $40 million in fiscal year 1974.

On the other hand, gross claim losses to March 15, 1973, have been only $23.2 million with recoveries totaling $2.4 million for a net outlay of $20.8 million. Additional recoveries are expected in the future. In addition OPIC has settled claims through guaranties presently carrying contingent liabilities totaling $96.1 million, excluding interest, spread out over many years.

No one can state with absolute confidence that the existing portfolio can be managed at no cost to the taxpayer. Proof will have to await the expiration of some 2,000 long-term contracts which OPIC inherited. Important evidence can be obtained, however, by examining the financial record of the completed insurance contracts. Over the history of the insurance program, about $2.9 billion of insurance coverage has been completed or terminated. Investors paid $37.3 million in premiums to purchase this insurance and OPIC or its predecessors paid about $20.8 million of that to liquidate claims under the terminated coverage. Thus the program registered a net gain of $16.5 million before administrative costs on the terminated coverage.

OPIC APPROPRIATION REQUEST FOR RESERVES

Unfortunately, not all the funds paid by insured companies are still available to OPIC. OPIC, therefore, is requesting an appropriation of $72.5 million in fiscal year 1974 to restore to the insurance program's reserve the income which has been diverted from the program to other uses by actions of the Congress.

This request represents the balance of the $85 million sought last year, of which the House-Senate conference committee tentatively approved half, or $42.5 million, but which was reduced to $12.5 million in the process of substituting a continuing resolution for a regular appropriation act.

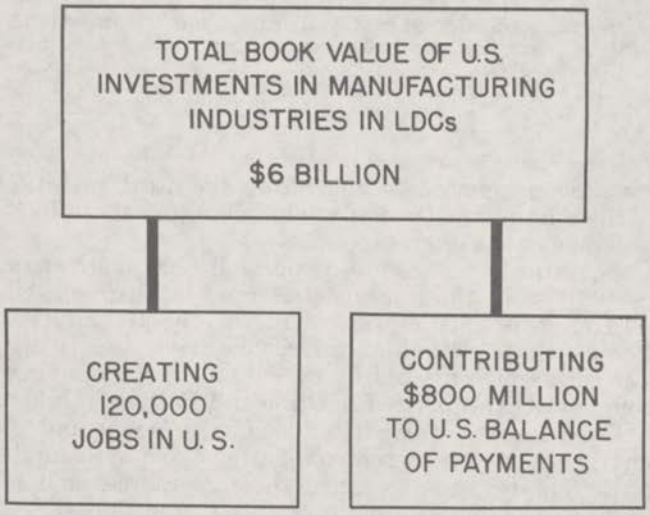
The nearly $180 million in premiums paid since 1964 should have been kept and invested to meet losses suffered by the contributors to the pool, the insured investors. Instead, none of the premium income could be invested under the laws governing OPIC's predecessor agencies. Further, when OPIC was created, $50 million in cash insurance premiums was transferred by Congress to the AID housing guarantee program.

The sum of these drains on OPIC's reserve is approximately $85 million:

	Millions
Insurance premiums transferred to AID housing guaranty program	$50.0
Interest lost on insurance premiums because they could not be invested between 1948 and 1969	16.5
Interest lost between 1969 and 1973 on the $50 million transferred to AID and on the previously lost interest	17.4
Total	83.9

Despite a determination to hold down the fiscal year 1974 budget requests, the administration has again submitted the OPIC reserve-restoration request to Congress because—

> The political risk insurance portfolio has more than doubled since 1967, while the insurance reserve has been reduced by Congress from over $300 million in 1967 to the present $126 million.
>
> Against this $126 million reserve, we have already issued guarantees with a present liability of $96.1 million, excluding interest, to companies expropriated in Chile and Bolivia. While we expect the Governments involved to continue to honor and eventually discharge their contractual obligations to pay, sound business practice requires us to recognize these guarantees as liabilities.
>
> Users and potential users must be assured that OPIC's insurance program runs on a businesslike basis as Congress intended. If an insured investor suffers a large loss, he should be able to count on payment in accordance with the terms of his contract instead of the prospect of a long wait for passage of a special appropriation bill by the Congress.



CONCLUSIONS

The administration and the OPIC Board believe this appropriation request will be in the best interests of the United States because:

1. OPIC PROGRAMS HELP THE U.S. ECONOMY BY CREATING JOBS IN THE UNITED STATES, IMPROVING THE U.S. BALANCE OF PAYMENTS, AND ASSISTING U.S. EXPORTS

Many studies have demonstrated the positive effects of foreign investment. One made by Prof. Robert Stobaugh of the Harvard Business School indicates that direct private manufacturing investment in the developing countries has contributed a net increase in U.S. domestic employment of 120,000 jobs and a net benefit to the U.S. balance of payments, including export benefits of more than $800 million.

SIZE OF TOTAL U.S. INVESTMENTS IN LDC MANUFACTURING INDUSTRIES/ AND NET IMPACT ON U.S. BALANCE OF PAYMENTS AND JOBS IN 1972

Source : Stobaugh Report.

This is only a partial estimate of the benefits to the United States of OPIC's investment encouragement programs since it does not include extractive and service industry investments, which have almost wholly positive effects on the U.S. economy. Also it does not take into account OPIC's selectivity in screening out projects that might have a negative effect on the U.S. economy.

2. OPIC-ASSISTED INVESTMENTS BENEFIT THE LESS-DEVELOPED COUNTRIES

Foreign private investment is generally recognized as beneficial to development. This is evidenced by the extensive incentives offered by the Governments of developing countries to attract foreign investors. A study commissioned by the Development Assistance Committee of the OECD, to be published this year, shows that foreign investment plays a significant role in the economies of most developing countries, and that an even larger role will be needed if these countries are to make significant progress in reducing poverty. OPIC's selecivity helps assure developing countries that the U.S. investments encouraged by OPIC will have a beneficial development impact.

3. OPIC PARTICIPATION CAN HELP SOLVE INVESTMENT PROBLEMS AND AVOID GOVERNMENT-TO-GOVERNMENT CONFRONTATION IN INVESTMENT DISPUTES

Our experience shows that it is the insured investor who acts most responsibly. The uninsured investor having no protection is the most likely to escalate an investment problem into a confrontation between respective Governments. Existence of OPIC coverage in an expropriation situation helps to change an emotionally charged atmosphere into more rational one where the investor can negotiate compensation issues under businesslike conditions. We have learned that investment dispute settlement requires case-by-case, pragmatic approaches, based on a capacity to establish the facts, evaluate the objectives of the host Government and investors, and compose differences in businesslike discussions which recognize the essential interests of the parties involved. OPIC has developed a unique expertise to perform this service.

4. OPIC CLAIMS PAYMENTS ARE MADE TO U.S. FIRMS—NOT FOREIGN GOVERNMENTS

OPIC is not foreign aid. Its clients are U.S. citizens and taxpayers, and all claims are paid directly to them for insured losses they have suffered.

5. THE 25-YEAR FINANCIAL HISTORY OF THE INVESTMENT INSURANCE PROGRAM SHOWS THAT OPIC PROGRAMS HAVE NOT BEEN A SUBSIDY TO U.S. INVESTORS

Users of OPIC's programs have paid into the U.S. Treasury substantially more than has been paid out for political risk claims. Risk management policies, which OPIC is implementing on new insurance contracts, are designed to make the OPIC-written insurance portfolio self-sustaining, except in the most unlikely situations involving simultaneous expropriations in a number of countries without effective compensation, or wars in a number of nations.

6. OPIC IS IMPROVING ITS POLICIES AND PROGRAMS TO MEET THE CHANGING NEEDS OF THE INVESTORS AND THE U.S. GOVERNMENT

U.S. private participation in reinsurance of OPIC contracts is already a fact, and there are indications that the U.S. insurance industry may be interested in taking a part in direct expropriation risk under-

99-614 O - 73 - pt. 1 - 7

writing. We are seeking to develop an effective international reinsurance plan involving the investment insurance agencies of other governments. We are consulting with policymaking departments about OPIC's role in meeting our country's foreign trade and investment needs, including reliable, long-term sources of raw materials.

With the emergence of a global market economy, governments and multinational companies are increasingly and inevitably interrelated. The actions of each bear upon the other, and frictions may be generated. The question which we must consider is to what extent, if any, the U.S. Government should attempt to influence these relations. We believe that there must be a continuing growth and strengthening of government-private cooperation and that OPIC's programs represent a pragmatic advance in this relationship.

JUSTIFICATION MATERIAL

Mr. PASSMAN. Thank you for you statement. We will insert the justification material in the record at this point.

[The material follows:]

OPIC APPROPRIATION REQUEST FOR RESERVES

OPIC requests appropriation of $72.5 million in fiscal year 1974 to increase its reserves. This request represents the balance of the $85 million sought last year, of which the House-Senate Conference Committee tentatively approved half, or $42.5 million, but which was reduced to $12.5 million in the process of substituting a continuing resolution for a regular appropriation act.

JUSTIFICATION OF REQUESTED AMOUNT

This appropriation would restore to the insurance program's reserve the amounts which have been diverted from the program to other uses by actions of the Congress.

Insured U.S. private investors have paid nearly $180 million in premiums over the 25-year history of the insurance program. This pool of funds should have been kept and invested to meet losses suffered by the contributors to the pool, the insured investors. Instead, none of the premium income could be invested under the laws governing OPIC's predecessor agencies, and when OPIC was created $50 million in insurance premiums were transferred by Congress to the AID housing guaranty program.

The sum of these drains on OPIC's reserve is approximately $85 million:

	Millions
Insurance premiums transferred to AID housing guaranty program	$50.0
Interest lost on insurance premiums because they could not be invested between 1948 and 1969	16.5
Interest lost between 1969 and 1973 on the $50 million transferred to AID and previous interest lost	17.4
Total	83.9

JUSTIFICATION FOR ACTION BY THIS SESSION OF CONGRESS

Despite a determination to hold down the fiscal year 1974 budget requests, the administration has again submitted the OPIC reserve-restoration request to Congress because:

The political risk insurance portfolio has more than doubled since 1967, while the insurance reserve has been reduced by Congress from over $300 million in 1967 to the present $126 million.

Against this $126 million reserve we have already issued guaranties with a present liability of $96.1 million, excluding interest to companies expropriated in Chile and Bolivia. While we expect the Governments involved to continue to

honor and eventually discharge their contractual obligations to pay, standard accounting practice requires us to recognize these guaranties as liabilities.

Users and potential users must be assured that OPIC's insurance program runs on a businesslike basis as Congress intended. If an insured investor suffers a large loss he should be able to count on payment in accordance with the terms of his contract instead of the prospect of a long wait for passage of a special appropriation bill by the Congress.

EFFECT OF INCREASED RESERVES ON OPIC'S CLAIM-SETTLEMENT DECISIONS

It is sometimes argued that increased reserves would cause OPIC to be too generous in claim settlements. This reason might be sound in predicting the behavior of a normal public agency which is usually under pressure to spend its annual appropriated funds before the end of the fiscal year. But OPIC, as a corporation, is constitutionally biased in the opposite direction. It presents itself to the Congress on the basis of its overall balance sheet. Therefore, management constantly strives for tighter risk management, greater earnings, and smaller outlays.

Among the many measures taken to achieve this position is the current program with Lloyd's syndicates which are reinsuring 50 percent of OPIC's expropriation coverage in more than 80 percent of the countries where such coverage is available. OPIC also has been working with the American insurance industry on a joint underwriting proposal.

Finally, OPIC claim settlements must conform to the contractual rights and facts of each case, not to the discretion of management. Where substantial differences arise issues may be submitted for independent arbitration. OPIC is also audited annually by the General Accounting Office.

In short, increased reserves will not make OPIC "soft." Rather, increased reserves would make OPIC more businesslike.

ADMINISTRATIVE BUDGET

OPIC's administrative obligations are wholly funded from its own earnings. Administrative costs were $4,190,000 in fiscal year 1972; $5,089,000 is estimated for fiscal year 1973; and $4,633,000 is proposed for fiscal year 1974.

The decrease in administrative costs of $456,000 is entirely related to the expectation that claims-review and settlement costs, including outside legal counsel and auditors, should peak in fiscal year 1973 and decrease in fiscal year 1974. The timing of this type of expenditure is only partially controllable by OPIC and there is now a strong probability that obligations in this category estimated for fiscal year 1973 will be shifted to fiscal year 1974.

OPIC's full-time staff at the beginning of fiscal year 1974 will be about 132 persons compared with 133 at the beginning of fiscal year 1973. In fiscal year 1973 we had budgeted a level of 143. However, through reorganization we have operated with a full-time staff which has averaged slightly less than 130 persons and we intend to continue to hold our staffing levels. While we have managed to control the numbers of personnel, the dollar level of our personnel costs continues to rise because of pay raises authorized for Federal employees.

In summary, while OPIC's personnel costs are budgeted to increase due to authorized pay raises, such cost increases should be offset by reductions in claims review and settlement costs and the final overall budget results in a decrease of $456,000. However, it should be understood that costs required to administer and adjust claims and to manage and dispose of claims related assets cannot be accurately predicted in advance either in terms of dollar levels or timing. Since such costs are a significant part of OPIC's administrative budget, variations due to such items may cause OPIC to materially exceed or be under the administrative budget submitted for fiscal year 1974.

PREINVESTMENT ASSISTANCE

For fiscal year 1974 OPIC has budgeted $745,000 for preinvestment assistance. This is approximately the same level as in fiscal year 1973. Funds to operate this program come out of OPIC's operating revenues. Experience to date indicates that these expenditures represent a sound use of corporation resources.

PROJECTED PROGRAM VOLUMES FOR FISCAL YEAR 1974

In projecting budgeted revenues and costs and estimated financial statements for inclusion in OPIC's annual budget presentation, it is necessary to estimate program volumes. The attainment of these estimated results is subject to a multiplicity of factors outside of OPIC's control such as the political stability of the LDC's, the general availability of financing, the stage of sponsor negotiations with partners, United States and foreign fiscal policies, the carryover of proposed project financing from the prior year, et cetera.

Projected program volumes upon which the fiscal year 1974 budget is based are as follows:

Political risk insurance.—Insured investments of $275 million.

Financial guaranties.—Guaranteed loans of $50–75 million.

Direct investment fund.—Net lending of $15 million.

[2] Assumes receipt of $72,500,000 appropriation requested for fiscal year 1974.

Mr. PASSMAN. I yield to Mr. Shriver.

LEVEL OF RESERVES

Mr. SHRIVER. You told us last year if you could get OPIC's reserves to around the $200 million level, that would probably be sufficient so you would not have to come back here for annual appropriations. Is this figure still correct?

Mr. MILLS. Yes, it is Congressman. We are hoping to get this figure to $200 million. The request we are making this year is based on the request we made last year less the $12.5 million received from Congress, which would boost the reserve to about $200 million. As I stated last year this will simply restore cash premiums the programs earned before OPIC was established, and we would not be back any more, barring of course a catastrophic loss.

AVAILABILITY OF FUNDS

Mr. SHRIVER. Has the $12.5 million amount been decided upon?

Mr. MILLS. If I understand correctly, it has been decided upon, and it will be given to us. We understand the final continuing resolution to be equivalent to a regular appropriation of these reserves to remain available until expended. It should have been entered on the books.

Mr. PASSMAN. If the gentleman will yield? Yes, it is in the continuing resolution. It is locked in. That is the amount that the House and Senate committees finally agreed upon and it is locked in $12,500,000.

Mr. SHRIVER. There was some question.

Mr. MILLS. There was some question whether it was available. I understand as of Friday it was made available to us.

Mr. SHRIVER. That leaves them a balance of?

Mr. MILLS. $72.5 million.

Mr. SHRIVER. The amount you are requesting?

Mr. MILLS. That is correct.

KENNECOTT SETTLEMENT

Mr. SHRIVER. Could you tell us about the compromise that was reached last December between OPIC and Kennecott Copper?

Mr. MILLS. I would be pleased to. I would like to have my general counsel, Mr. Mays, who negotiated and worked on this settlement, to report.

Mr. MAYS. Yes, Congressman, Braden Copper Co., a subsidiary of Kennecott, loaned $80 million to the El Teniente Mining Co. in Chile AID had insured, the $80 million principal plus interest up to $84.6 million. There was no insurance on Kennecott's equity in this mine. Under the terms of the contract with AID, which was written in 1967, the debt investment was insured against expropriation. The mine was expropriated by the Government of Chile by constitutional amendment. The Government of Chile nevertheless had continued to make payments on this debt, but Kennecott's claim against OPIC was for the full amount of the remaining balance. At the time we reached that settlement with Kennecott, this amounted to $76 million, and the interest rate of the loan was 5¾ percent.

Because of the low interest rate Kennecott was willing to make a settlement for considerably less. They discounted the loan to $66.9 million, the amount which Kennecott received through this settlement. The settlement was accomplished in this way.

Kennecott assigned the notes to a trustee, who in turn sold participation certificates in the trust instruments to a number of commercial banks in the United States. OPIC guaranteed these participation certificates under its claim settlement authority. We now have a contingent liability under this arrangement for the next 5 years with a lump-sum payment at the end of that period.

Mr. MILLS. Chile has openly stated these notes are going to be paid by Chile, and so we expect that they will continue to meet payments on them. In the meantime Kennecott has received its money and we are waiting to receive the money from Chile.

Mr. SHRIVER. My 5 minutes are up.

Mr. PASSMAN. If I may expand a little on that, Mr. Shriver, our experience with Chile would not indicate that there is any positive assurance these payments will be made, is that correct?

Mr. MILLS. Not positive, Mr. Chairman.

Mr. PASSMAN. That is what I am talking about. The overall actions of Chile, the way they repudiated other obligations, it is not a very good assurance on which to base credit.

Mr. MILLS. I am optimistic, but I am also a realist.

Mr. PASSMAN. But the answer to my question is in the affirmative, is that correct? I don't want to put words in your mouth, but I want an answer.

Mr. MILLS. Yes, Mr. Chairman.

Mr. PASSMAN. Thank you very much. Dr. Long.

CLAIMS IN CHILE

Mr. LONG. I have a total of $9 million paid to OPIC in insurance premiums by ITT, Kennecott and Anaconda. Would that be accurate?

Mr. MILLS. I can tell you that, Mr. Long, $4.9 million for ITT, $2.4 million for Kennecott and roughly $1.7 million for Anaconda. It is roughly about $9 million.

Mr. LONG. I understand that the total claims that have been settled are around $78 million, with $93 million of claims that are pending, being adjudicated. That totals about $160 million which is about 15 times the premiums paid in. Is that right? Do you see anything that justifies that kind of payout? Isn't this in line with some of the predictions made in this committee some time ago, when OPIC was being set up, that this was just about what was going to happen?

Mr. MILLS. Let me review a couple of things. As you may know one company, Anaconda tried to save substantial premium costs by placing their coverage on standby. We denied their claim of $154 million. The only Anaconda claim that we have paid is $12 million.

Mr. LONG. That amount alone is greater than all the premiums that were paid to OPIC by these three companies.

Mr. MILLS. Of course, but that is the principle of insurance. Individual premiums are always less than potential individual losses. It is the same principal of some person's house burning down. His premiums paid are never equal to the value of his house. We have received $185 million in premiums over the life of the program.

Mr. LONG. That could all go out in Chile alone.

On that sum of money that has been promised to Kennecott in promisory notes, would you endorse those notes?

Mr. MILLS. Personally? If my family didn't want to eat, I think certainly could, depending upon how the final claims are being handled.

Mr. PASSMAN. That is a fair answer.

PRODUCTIVE CREDIT PROGRAM

Mr. LONG. Now you are levelling. Mr. Mills, you talk here about an experimental capitalization mobile savings program in five Latin American countries, and you mention that this program will try to expand credit to poor people for farming and business development. Do you equate community development and business development?

Mr. MILLS. What we are trying to do, to give you an example of how in one sense they are one and the same in certain instances, in one town we did a project.

Mr. LONG. If you enhance business development that is going to improve community development.

Mr. MILLS. It is like a local water system. Under the productive credit guaranty program, we put a little water well and the community residents are paying to build the waterplant. This water supply will help encourage new small businesses to develop. In another instance, a new community store was financed so that the community had two stores to buy at instead of one store, at competitive prices. I think the answer is that in certain cases the two factors can be mutually reinforcing.

Mr. LONG. Have you been to many of these underdeveloped countries?

Mr. MILLS. Yes; I have been to a lot of them.

Mr. LONG. I have been to a dozen or more. What I have noticed is that the urban sector is the one that is moving along and, in fact, in some cases looks better than the United States, but when you get out in the rural area, you are told and you can see that there hasn't been much change for a thousand years.

Mr. MILLS. Yes; I would completely agree. We are not talking about business.

Mr. LONG. In talking about community development you are talking about agriculture, the sector where most of the people live. This is what community development is. It isn't in the cities at all. It is agriculture.

You set out to improve the life of the ordinary guy.

Mr. MILLS. That is precisely right. We have some wonderful examples where this has worked.

Mr. LONG. What are the five Latin American countries in which this program is going on?

Mr. MILLS. Honduras, Guatemala, Colombia, Brazil, and Panama, big and small.

Mr. LONG. When did you start them?

Mr. MILLS. About 2 years ago.

Mr. LONG. I visited those countries I guess not more recently than that. I just hope you are getting better results there than what I have seen.

PROJECT EVALUATION

With regard to the host country, do you require feasibility studies with cost/benefit and internal rate of return calculations to show the benefits?

Mr. MILLS. We require more importantly, I think, that all projects be approved by the host government.

Mr. LONG. That is a different thing. That is where I differ with you completely. I think that I and some members of this committee don't trust the host governments. They will put money in anything. When I talk about cost/benefit ratio, I mean something that shows quantitatively that these are sound projects.

Mr. MILLS. I think Mr. Price, who is head of our insurance department, can give you the answers on this, because we do go into this quite extensively.

Mr. PRICE. The kind of quantitative evaluation you describe is new with OPIC. Today we do two analyses before we write an insurance contract. One is a U.S. effects analysis designed to show the effect on U.S. jobs and U.S. balance of payments of the proposed investment. That is addendum No. 1 to an action memorandum that would be prepared by the insurance officer.

Mr. LONG. I hope you don't regard that as the same thing as benefiting the United States. Digging holes and filling them up would provide jobs in the United States, but it might not be a very good use of resources. You recognize that?

Mr. PRICE. I recognize that. The second addendum to the action memorandum is an analysis of developmental effects. I think this gets to the point that you raise. I can give you copies or submit for the record the form of the two addenda that we use.

Mr. PASSMAN. Without objection, they will be inserted in the record at this point. The time of the gentleman has expired. We will get back to you after we go around the table under the 5-minute rule.

[The information follows:]

Revised 8/23/72

ANALYSIS OF U.S. EFFECTS FOR
MANUFACTURING PROJECTS 1/ 2/

ADDENDUM NO. 1 TO ACTION MEMORANDUM
ON INSURANCE CONTRACT NO. _____

WORK SPACE FOR CALCULATIONS

1. U.S. Trade Effects

(A) List gross exports of U.S. capital goods, materials, and production inputs to the project 2/ in the first five years. (FA Question 19 II D and A) 1/

Original U.S. Procurement $

Exports of Production Inputs
$
$

Total for Five Years $

(B) List U.S. exports in first five years which project production will displace (FA Question 19 II F if information given), and U.S. imports project will produce (FA Question 19 II G).

$_____ U.S. Exports Displaced

$_____ U.S. Imports Projected

Total for Five Years $_____

(C) Determination of net project-connected U.S. trade.

(A) less (B) above = NET DIRECT PROJECT-CONNECTED U.S. TRADE FOR FIVE YEARS $_____

(D) Divide figure arrived at in (C) above by $45,200 or, if more appropriate, use the three-digit SIC industry ratio from Annex C.

Net Direct Project-Connected US Trade $_____ = _____ MAN YRS. OF U.S. EMPLOYMENT FROM DIRECT U.S. TRADE DURING FIRST FIVE YEARS

$45,200 or Industry figure from Annex C $_____

(E) Determination of U.S. indirect exports expected.

Net annual foreign exchange saving estimated in FA Question 8

1/ Based on information furnished in answer to Formal Application questions.

2/ Unless otherwise indicated, information should relate to the effects caused by the new investment for which insurance is sought.

ORK SPACE FOR
CALCULATIONS

B 5 is $_____. Using percentage figures in Annex B for U.S. share of host country's imports, determine indirect effect on U.S. exports for first five years.

$_____ x 5 x _____% = FIRST FIVE YEAR INCREASE IN INDIRECT U.S. EXPORTS
$_____

(F) Convert figure arrived at in (E) above by using the $45,200 All Manufacturing figure from Annex C.

Increase in Indirect Exports $_____ / All Manufacturing figure $45,200 = _____ MAN YRS. OF U.S. EMPLOYMENT FROM INDIRECT U.S. EXPORTS DURING FIRST FIVE YEARS

2. Cumulative U.S. Financial Flows

(A) Total dollar capital investment by U.S. investors in the project over the first five years. (FA Question 19 I A and B)

By Insured Investor $

By Other U.S. Investors $

$

Minus $_____ Eurodollars

And Minus $_____ U.S. Procurement

TOTAL $_____

(B) Estimated return flows to the U.S. of funds from the project over the first five years. (FA Question 19 II E)

Interest Installments	$
Dividends	$
Royalties & Fees	$
Subtotal of earnings	$
Return of Capital	$
Principal Installments	$
TOTAL EARNINGS + CAPITAL RECOVERY	$

(If available, include all return flow, not just those of this investor.)

Addendum No. 1 to Action Memorandum
on Insurance Contract No._____

SCRATCH SPACE FOR CALCULATIONS

(C) NET U.S. FINANCIAL FLOW: (B) Total - (A) Total = $_____

(D) Convert earnings subtotal in (B) into potential gain or loss of U.S. employment equivalents by using $25,300, or, if more appropriate, the three-digit SIC industry ratio in Annex D.

Earnings = $_____ / $25,300 or Industry Amount from Annex D = _____ MAN YRS. OF U.S. EMPLOYMENT FROM EARNINGS DURING FIRST FIVE YEARS

3. Summary

1. Net Direct Project-Connected U.S. Trade
_____ Man Yrs. U.S. Employment

Increase in Indirect U.S. Exports
_____ Man Yrs. U.S. Employment

Earnings
_____ Man Yrs. U.S. Employment

NET TOTAL EFFECT ON U.S. EMPLOYMENT FOR FIRST FIVE YEARS

_____ Man Yrs. U.S. Employment

2. Net Direct Project-Connected U.S. Trade $_____

Increase in U.S. Indirect Exports $_____

Net U.S. Financial Flow $_____

NET EFFECT U.S. BALANCE OF PAYMENTS FOR FIRST FIVE YEARS $_____

ADDITIONAL QUESTIONS ON U.S. BALANCE
OF PAYMENTS AND RELATED ISSUES

In order that OPIC may consider certain effects which your proposed foreign production may have on the U.S. balance of payments, please answer the following questions to the best of your ability.

1. Competitive Position of U.S. Production. What is the competitive position at this time of U.S. domestically produced articles comparable to those which the Foreign Enterprise will be manufacturing?

U.S. Domestically Produced Share	Position In U.S. Market	Position In Host Country Market	Position In Other Major Market(s)
increasing	( )	( )	( )
stable	( )	( )	( )
decreasing	( )	( )	( )

Comment briefly in explanation of answer:

2. Investment Decisions by Competitors. Are any non-U.S. investors actively considering investing in a manufacturing facility which would be an alternative to your project in the same country or another LDC? Is this a factor in your decision to invest? Explain.

3. U.S. Export Displacement. What do you estimate to be the dollar volume in the first five years of direct U.S. exports to all countries which will be displaced by the anticipated production from your proposed project once in operation? If investment plans by non-U.S. investors are being actively considered (question 2. above) what do you estimate to be the dollar volume effect on direct U.S. exports that would result from your competitor's project?

	By Your Project	By Alternative Non-U.S. Project(s)
Direct U.S. Exports Displaced Over Five Years		
Exports to Project Country	$	$
Exports to Other Countries	$	$
	TOTAL	TOTAL

Explain the basis of your estimate:

4. U.S. Export Encouragement. If you are a minority investor in the project, is your investment decision critical to assuring that exports of U.S. source capital goods, materials and/or production inputs to the project country will take place which otherwise would not occur? If yes, explain your answer.

5. Defensive Investment Decisions. Do you regard your investment as necessary either to secure or retain participation in the host country market or in a third country market? If so, explain why, briefly.

6. Projected Imports to the U.S.

(a) In answer to OPIC's Formal Application Question 19 II G you have estimated the aggregate amount of sales by the project enterprise to the U.S. market after production is reached. With reference to the first five years after production begins, would you indicate the product(s) intended for export to the U.S. and export amounts.

Product	Aggregate Exports to U.S. in $

(b) If non-U.S. competitors are also considering investing in a local production facility which would be alternative to your project (Question 2), what would you estimate to be the amount of sales of these products in the U.S. in the same five-year period from the non-U.S. owned production facility?

$_____

(c) What effect, if any, do you expect the U.S. imports in (a) above to have on U.S. price levels for the same or related products? (Give figures if possible)

Name of Applicant	Signature
Project Country	Title

DEVELOPMENT EFFECTS WORK SHEET FOR
PROJECTS WITH $1 MILLION OR MORE OF
INSURED INVESTMENT 1/

ADDENDUM NO. 2 TO ACTION MEMORANDUM
ON INSURANCE CONTRACT NO. _____

I. CALCULATIONS

A. HOST COUNTRY FOREIGN EXCHANGE: (Question 8(b))

Net annual foreign exchange earnings and/or savings for first five years following Project completion, reduced to yearly average.

1. Yearly value (cif) of imports replaced $_____
2. Yearly value (fob) of exports generated $_____
   (A) Total $_____ (saving)
3. Yearly value (cif) of imports for production $_____
4. Yearly remittance of profits, loan repayment, etc. $_____
   (B) Total $_____ (cost)
5. Net foreign exchange saving or cost:
   (A minus B) $_____ saving/cost
6. Ratio of foreign exchange earnings to costs $\frac{A}{B}$ = _____%

Evaluation:

_____ Good (net savings or earnings are 150% or more of costs)
_____ Acceptable (net savings or earnings are positive)
_____ Adverse (net savings or earnings are negative)

B. HOST COUNTRY DOMESTIC REVENUE: (Questions 8(A) 1, 19 I)

(a) Net annual average taxes and duties to be paid by project during first five years of production:

1. _____ (annual average taxes and duties paid by the project in first five years)
2. _____ (annual average taxes and duties lost due to import substitution)
   _____ (A) Total

(b) Total investment in project (all sources): (B) _____
(c) Ratio of taxes paid/investment for the project: $\frac{A}{B}$ equals (C) _____%

(d) If (c) is less than 10%, indicate duration of applicable tax holiday and effect its termination will have on tax revenues:

1. Period of tax holiday: _____ years
2. Effect of termination: _____

_____

1/ Based on correspondence with OPIC and information furnished in answer to Formal Application questions.

Evaluation:

_____ Good (net annual average tax revenues equal 10% or more of total investment in project)
_____ Acceptable (revenues produced will be significant when reasonable tax holiday ends)
_____ Adverse (insignificant revenues produced or excessively long tax holiday)

C. TARIFF PROTECTION ON PRODUCT(S): (Questions 9, 18)

(a) Pre-existing level of protection in the product field in the host country: (laws of general application)

1. Product or products considered: _____
2. Quantitative restrictions (describe): _____
3. Tariff level: _____
4. Other existing protection (describe): _____

(b) New protection (special agreements negotiated with gov't by the Investor):

1. Quantitative restrictions (describe, including duration): _____
2. Tariff level (include duration) _____
3. Other protection (describe): _____

Evaluation:

_____ Good (no quantitative restrictions on competing imports; plus tariffs are less than 30% of cif value; plus duration of negotiated protection, if any, is five years or less)
_____ Acceptable (any quantitative restrictions on competing imports are pre-existing and less than 100% exclusion exists; plus tariff duties on competing imports do not exceed 50%; plus duration of negotiated protection, if any, is less than 8 years)
_____ Adverse (new quantitative restrictions and/or more than 50% tariff duties on competing imports, with duration of negotiated protection 8 years or more)

If export monopoly concession, check here _____

D. LOCAL CAPITAL MOBILIZATION: (Question 8(A) 2)

(a) Amount of local capital invested in the project (including host government):

1. Equity: _____ Amount ____ Per Cent of Total Project
2. Other than Debt (describe): _____

_____

(b) Describe any plans or requirements for local private equity participation to increase (do not include host government participation):

_____

_____

_____

Evaluation:

_____ Good (local investment is a substantial portion of initial total investment in the project, or local private equity participation is expected to increase to a significant percentage)

_____ Acceptable (there is or will be some local capital investment in the project)

_____ Adverse (there is no local private investment in the project)

E. LOCAL MARKET PRICES OF THE PRODUCT(S): (Question 8(A) 4)

(a) Products considered (list): _____

(b) Existing local market prices of similar products: _____

_____

(c) Projected local market prices of the Foreign Enterprise: _____

_____

(d) Difference: _____

_____

Evaluation:

_____ Good (projected prices of main products are lower than current prices of those products)

_____ Acceptable (projected prices of main products are less than 20% above current prices and project has a strongly positive effect on the country's balance of payments, see Evaluation A)

_____ Adverse (projected prices are more than 20% above current prices; or projected prices are 0-20% above current prices and project's effect on the country's balance of payments is not strongly positive)

F. EFFECTS ON LOCAL SUPPLIERS AND/OR DOWNSTREAM INDUSTRIES: (Question 8(A) 3)

(a) Identify new local investment or increased economic activity that can be foreseen as a result of the project: _____

_____

_____

(b) Is the project's effect listed in (a) likely to substantially increase the local production of supplies and components or to substantially increase downstream fabrication, packaging or distribution?_____

_____

Evaluation:

_____ Good (project substantially increases local market for production supplies and components and/or local fabrication, packaging or distribution of the end product)
_____ Acceptable (the project will have some incremental stimulus effect on local industries)
_____ Adverse (project will have no identifiable stimulus effect on local industries)

G. EMPLOYMENT AND SKILL CREATION: (Question 8(C), (D))

(a) Capital/employment ratio of the project (divide total new investment in the project from all sources by total employment in the fifth year; if new investment is vital to continuing the operations of the Foreign Enterprise divide new investment by total employment):
_____ = $_____ per employee

(b) Describe specific plans, if any, for local staff training in the project:_____

_____

(c) Number of local nationals to be employed in the project: construction period _____; first year _____; fifth year _____.

Evaluation:

_____ Good (ratio of invested capital to employment in fifth year is $10,000 or lower)
_____ Acceptable (project will make a significant net increase in employment in the host country, and includes specific plans for local staff training)
_____ Adverse (net increase in employment is less than significant; or project includes no specific plans for local staff training)

H. OTHER SIGNIFICANT FACTORS: (Questions 8(A) 6, 8(D))

Summarize any significant positive or negative factors important to determining the project's developmental impact (e.g., technological contributions, ecological factors, project-financed additions to host country infrastructure)_____

_____

_____

_____

_____

_____

Evaluation:

_____Good (if other significant positive factors are present)
_____Acceptable (if no other significant negative factors are present)
_____Adverse (if other significant negative factors are present)

I. SUMMARY EVALUATION:

1. Number of evaluations in A through H marked "good":_____
2. Number of evaluations in A through H marked "acceptable":_____
3. Number of evaluations in A through H marked "adverse":_____

OPIC/ID:EEWright:tlf:7/26/72

Mr. PASSMAN. Mr. Miller.
Mr. MILLER. No questions at this time.
Mr. PASSMAN. Mr. Roybal.

CLAIMS SETTLEMENT

Mr. ROYBAL. In the settlement of a claim wouldn't the increased costs to OPIC be more generous on a claims settlement?

Mr. MILLS. No. This is one of the questions that has been asked us often, Congressman. We feel it is not a question of being more generous. We are tough in settling our claims. We are very fair. I think we also have to be fair in the promptness of paying a claim. If we approve it, we have to be able to say we will pay you if we decide you have a valid claim. My concern, as I mentioned last year, is with our ability to pay valid claims promptly. In the case of the *Carib Queen* when the Maritime Administration guaranteed certain private investors and then did not have any reserve funds to pay them when the loans defaulted. It took almost a year for them to get paid, through an appropriation, which was very embarrassing to everybody, to the Government and to the investors.

We are simply trying to establish that in good, sound business practices a reserve level of about $200 million is what we think we should maintain.

Mr. ROYBAL. What happens when there is a difference of opinion as to the amount to be paid in settlement?

Mr. MILLS. Two things can happen. No. 1, we can negotiate a compromise or the differences can be submitted to arbitration. Almost every claim is adjusted somehow. We either compromise the difference or we go to arbitration. We have gone to arbitration only twice in the history of OPIC and have won both times. We have denied the claim and we have been taken to arbitration. I think our General Counsel does a very good job. We just won one case involving a timber operation in the Dominican Republic this year for approximately $350,000, the same firm that represented us on this case is now representing us in the Anaconda arbitration.

Mr. ROYBAL. When you say you "won it," what do you mean?

Mr. MILLS. It means the arbitrators decided unanimously OPIC was right in denying the claim and we are not paying anything.

Mr. ROYBAL. The same thing can be true of the claim you just denied of $154 million.

Mr. MILLS. Yes, this is the one I just mentioned. The Anaconda claim, where the company is taking us to arbitration. They have so advised us.

Mr. ROYBAL. Who pays the arbitrators?

Mr. MILLS. Both parties split the costs; isn't that correct, Marshall?

Mr. MAYS. Yes.

Mr. ROYBAL. This is not something paid by them or you but both.

Mr. MILLS. No, we both split the cost.

CREATION AND OPERATION OF OPIC

Mr. ROYBAL. I have been wondering right along why it was necessary for you to go into the insurance business to begin with.

Mr. MILLS. I am not sure I understand.

Mr. ROYBAL. In your statement on page 6 you say, "When OPIC took over management of the insurance program January 1971, that it was confronted with a $440 million potential claim on old contracts." What I am asking is why was it necessary for you to take over the insurance program in January 1971?

Mr. MILLS. OPIC was created to manage the old and new insurance portfolios and to try, among other things, to operate them on a businesslike basis.

Mr. ROYBAL. But you had been in existence long before 1971, had you not?

Mr. MILLS. No, we have only been formed 2 years. We inherited a program which had been going for 23 years. I think I can state here quite categorically that the programs managed by OPIC are vastly changed in 2 years compared to what this program was prior to this time. Through such people as Mr. Price and Mr. Mays and the other staff, I think we have brought some substantial changes in risk sharing, the principles of insurance that Congressman Long brought out. In the past, risk management principles were not applied. Do you realize, at one time 26 percent of our whole portfolio was in Chile? No wonder we have a problem. Why? Because these were not business decisions. That can't happen today. Our maximum exposure in any one country is down to about 12 percent, except for Jamaica, isn't it?

Mr. PRICE. That is right, and the board policy is to limit the rate of growth when it reaches 10 percent.

Mr. MILLS. This is the kind of thing that has got to be done or we do have these terrible problems referred to by Congressman Long.

Mr. ROYBAL. I was in another committee at the time this was being discussed.

Mr. PASSMAN. This was a facet of the AID program for many years. It became a complete independent organization 3 years ago.

Mr. MILLS. That is correct.

Mr. ROYBAL. My questions were going in another direction. It is not the same agency that I had in mind even though it is quite similar in many respects. That is why I was inquiring with regard to your taking over in 1971. From your statement it appears that you were involved in other matters, and then took over the insurance program in 1971, which is not the case, is it?

Mr. DICKERSON. That is correct.

Mr. ROYBAL. That will be all, Mr. Chairman.

Mr. PASSMAN. Mr. Coughlin.

EFFECTS OF OPIC ON U.S. EMPLOYMENT

Mr. COUGHLIN. Thank you.

Mr. Mills is a personal friend of long standing. As a new member of the committee I have just one question.

I am sure one of the things that we would be attacked on or that OPIC could be attacked on is that this is a business of exporting jobs. Can we get any detailed information as to the nature of the projects, the location of the projects that would refute that in the record?

Mr. MILLS. Yes. First of all, Mr. Chairman, I would like to submit for the record an interim report by Mr. Stobaugh, of the Harvard Business School, who is doing a study for us, that U.S. investments in

manufacturing in less developed countries where OPIC operates, has created approximately 120,000 U.S. jobs, and a net positive balance of payments of approximately $800 million per year. This is a study which is being made independently for us. If I may submit it for the record, Mr. Chairman, rather than read it.

Mr. PASSMAN. Without objection, it will be included in the record at this point.

[The information follows:]

INTERIM REPORT—U.S.-OWNED MANUFACTURING FACILITIES IN LESS DEVELOPED COUNTRIES AND THE U.S. ECONOMY

(By Robert B. Stobaugh, Harvard Business School)

January 31, 1973.

The Harvard University Graduate School of Business Administration has contracted with the Overseas Private Investment Corp. to make case studies of expansions of manufacturing facilities abroad in developing countries by U.S. firms and analyze these cases to determine the effect of such expansions on U.S. employment and the U.S. balance of payments. The analysis is to be based on a number of case studies available to Harvard from other research and upon some new cases to be studied explicitly as part of the OPIC-Harvard contract.

This is a progress report and presents estimates based on case studies completed prior to February 1, 1973. A more detailed report, including the results of additional case studies, will be published at a later date.

In 1971, a team of researchers under my direction at the Harvard University Graduate School of Business Administration made a detailed case study of foreign direct investments by U.S. multinational enterprises in the nine major industries that account for 90 percent of U.S. foreign direct investment in manufacturing. These case studies, along with attendant analyses and industry reference notes, were analyzed to determine the effect of such investments on U.S. employment and the U.S. balance of payments. This study included foreign direct investment both in developed and developing countries, the latter of which are located in Africa, South America, and Southeast Asia.

This study, released by the U.S. Department of Commerce early in 1972, concludes that manufacturing expansions abroad by U.S. firms has a positive effect on U.S. employment and the balance of payments, because most such expansions are defensive in the sense that if the producer continued to operate only in the United States, it would have lost its markets to competitors, mostly from Europe and Japan. U.S. investment abroad in manufacturing facilities provides jobs for production workers in the U.S. manufacturing capital equipment for use in the foreign plants, components for further processing or assembling in foreign plants, and goods for resale abroad or for sale on a commission basis that would otherwise not be sold abroad (so-called associated exports). Further jobs exist for whitecollar workers in the home office providing services for the foreign plants, technical personnel providing engineering and similar services, and research and development activities that could not be justified without the possibility of gaining income from the foreign plants.

This study estimated that some 600,000 jobs in the United States are dependent on U.S. foreign direct investments, and that the net effects of foreign direct investments on the U.S. balance of payments is a positive $3.5 billion.[1]

Our best estimate is that the portion of these positive effects attributable to manufacturing facilities of U.S. firms in developing countries is 120,000 jobs in the United States and a net positive U.S. balance of payments of $800 million. These numbers are approximations, of course, but are based on econometric models combined with the best assumptions derived from our case studies. Varying the assumptions within any reasonable range still results in positive effects to the U.S. economy in terms of employment and balance of payments.

---

[1] See Robert B. Stobaugh, et al., "U.S. Multinational Enterprises and the U.S. Economy," in "The Multinational Corporation," U.S. Department of Commerce, Bureau of International Commerce, March 1972; and Piero Telesio, "An Analysis of the Effect on the U.S. Balance of Payments and U.S. Employment of U.S. Foreign Direct Investment in Manufacturing," a working paper for the New York University project on "The Multinational Firm and the U.S. and World Economy," November 1972.

Mr. LONG. Could you put in the record what his fee was for making this study?

Mr. MILLS. Certainly.

[The information follows:]

FEES PAID BY OPIC FOR HARVARD STUDY BY PROF. ROBERT STOBAUGH

OPIC did not contract with or pay Professor Stobaugh for this study. OPIC contracted directly with the Harvard Graduate School of Business and will pay Harvard a fee of $20,000 when an acceptable final report is received. This fee will cover all costs incurred in making the study, including salaries, materials, overhead, secretarial assistance, communications costs, and others. Professor Stobaugh was assigned by Harvard to do the study, and during that time received his normal professor's salary and nothing additional.

Mr. PASSMAN. I am a great admirer of yours, Mr. Mills, but all of you have to use your imagination an awful lot to say this operation is creating jobs. You make a good case and we are going to buy it at face value as far as possible. It is going to be a little bit hard for me to be convinced.

Mr. MILLS. Mr. Chairman, here is a perfect example.

Mr. PASSMAN. How about making one case orally.

Mr. MILLS. Here is a perfect example of bauxite mines in Jamaica which ship bauxite to Scottsboro, Ala., where it is processed in aluminum. That is a perfect example of how an investment in Jamaica produced jobs in Alabama.

Mr. PASSMAN. If I may proceed on the gentleman's time, how do you know this same process wouldn't be followed if you didn't have OPIC? Let's tie OPIC into it directly, because you had commerce between nations long before you had OPIC or AID either.

Mr. MILLS. What these companies have stated to us, for instance, American Metals Climax is doing exactly the same thing when they are shipping to Braithwaite, La., from Botswana where they are going to create 350 jobs in Braithwaite, La., to refine this copper-lead-zinc mat.

Mr. PASSMAN. How do you know the same process wouldn't have been followed, the same sales made, the same number of jobs generated without OPIC. You haven't tied OPIC into it yet.

Mr. MILLS. I have sat with presidents of many companies, Mr. Chairman, who said they will not invest in the developing countries without OPIC investment insurance. In these particular mines today——

Mr. PASSMAN. You are talking about insurance, aren't you?

Mr. MILLS. I am talking about insurance.

Mr. PASSMAN. Not about OPIC loans?

Mr. MILLS. Not about OPIC loans. This is the insurance.

Mr. PASSMAN. Now, I think you have tied it in.

Mr. MILLS. I have a letter here on Alcoa, which I would like to place in the record. The direct impact of Alcoa's Jamaica exports is 3,250 U.S. jobs in the companies refining and smelting.

(The information follows:)

IMPACT OF ALCOA'S JAMAICAN INVESTMENTS ON THE U.S. ECONOMY

Bauxite is the ore currently used for all the aluminum produced in the United States, as in the rest of the Free World. The United States has only relatively small deposits of bauxite, in Arkansas, and these are being processed to the limit of their economic capability. For most of its bauxite, the U.S. industry relies on imports from the Caribbean, Australia, Africa, and the Far East.

These imports are either as unprocessed bauxite or as alumina (aluminum oxide) refined from bauxite ore prior to import. Jamaica has been the largest source of bauxite and alumina imported into the United States, although imports from Australia have grown to a level that will exceed those from Jamaica.

Alcoa Minerals of Jamaica, Inc., supplies one-sixth of Alcoa's total U.S. bauxite/alumina requirements. It is in that sense valid to state that Alcoa's Jamaican investment supports one-sixth of the company's integrated U.S. operation.

Until 1972, the initial impact of our Jamaican operations could be directly measured at Alcoa's Point Comfort, Tex., bauxite refinery which was supplied by Alcoa's Jamaican mines. The alumina produced there was used at Alcoa's Point Comfort smelter and at other Alcoa smelting locations.

In 1972, Alcoa began operation of its new Jamaican refining plant. While Alcoa will continue to export bauxite from Jamaica for an interim period—and has an option for future bauxite exports—the impact of its Jamaican operations has now shifted to alumina exports. Currently, these are supplying Alcon smelters at Warrick, Ind., and at Vancouver and Wenatchee, Wash.

The direct employment impact of Alcoa's Jamaican exports is 3,250 jobs in the company's U.S. refining, smelting, and fabricating operations, according to conservative estimates. These figures do not include any allocation of general administrative, research and development or other groups of employees whose positions are only partially dependent on a continuing ore supply.

The 3,250 jobs generate an annual payroll cost estimated at $48,700,000, including fringe benefits. They provide direct employees' withholding tax to the Federal Government of $3,300,000. The economic impact of the production and sales activities related to this supply of raw materials is beyond reasonable determination. Federal, State, and local taxes available from gross profits—together with business benefits to the local communities in which Alcoa operates as well as to the business community nationwide—are only some of the beneficial effects resulting from the Jamaican investment.

Approximately 92 percent of Alcoa's supply of bauxite and alumina originates from foreign locations. The geographical location of commercial grade aluminum ores dictates the place of investment. The extent of the investment as to mining or refining is dictated both by economics and by political factors in the host country. Elimination of these raw material investments would neither generate more jobs in the United States nor benefit this country's balance-of-payments position. Without question, the necessity to purchase ore from parties outside Alcoa's integrated system would substantially weaken the competitive position of Alcoa, jeopardizing the jobs of Alcoa's 44,000 employees and the payroll and tax benefits related to them. The adverse side effects of such an alternative are too enormous and pervasive to estimate.

Alcoa believes that the insurance protection available through OPIC and actuarily funded by premiums paid to OPIC encourages the development of raw material sources upon which the U.S. aluminum industry is so dependent. We feel the importance of foreign raw material sources to the aluminum industry and its reliance on such foreign sources cannot be overemphasized.

Mr. PASSMAN. I want to thank the gentleman. This is a very valuable point. You just about lost the entire item last year on the floor with an amendment. I think you have made a valid case and I thank you for yielding.

Mr. COUGHLIN. That is all I have.

Mr. SHRIVER. Will you yield a moment on that? If our investors did not want to make an investment in Jamaica because of the insecurity of the country or something like that, you would secure it. Is that correct?

Mr. MILLS. I don't want to use any specific country, Mr. Congressman. The purpose of the insurance is to say, look, invest in Jamaica or in these other countries rather than investing in developed areas such as Australia or Canada simply to give these nations a chance also to develop. What we are simply saying is we put it on an equal basis. The president of a company or a board member asks whether it is safe to invest in a particular developing country. You say let's

go to Australia or Canada and so no significant investments move to these countries without this kind of protection, because the risks are too large.

OTHER NATIONS INVESTMENT PROTECTION PROGRAMS

Mr. PASSMAN. Before yielding to Mr. Bevill, is it not a fact that most industrialized nations have a similar program.

Mr. MILLS. Yes, but not only industrialized countries. There are similar programs in all major creditor nations and now the Arabs are starting programs for Arab investment in the Arab nations. Africans are starting it, to attract and protect private investment.

U.S. EMPLOYMENT EFFECT

Mr. LONG. Would the chairman yield on that point?

Mr. PASSMAN. Yes.

Mr. LONG. Every Congressman is constantly getting flak on this. From our constituents and from the unions we are being asked, why don't our capitalists invest the money in our own country? We have a great lack of capital in many of the underdeveloped areas of cities. A question that is very difficult to answer is why the money is going instead to so many underdeveloped or developed countries overseas. My constituents don't care whether it is a developed or an underdeveloped country. They would like to see the money stay here and create jobs.

This Professor Stobaugh or whatever his name is, does he claim that more jobs are created in the United States by exporting capital overseas than would have been created if we had invested that same amount of capital in the United States?

Mr. MILLS. I don't think he states that.

Mr. LONG. Isn't that the point?

Mr. MILLS. No. The point is do investments abroad create jobs in the United States.

Mr. LONG. I wouldn't doubt that. Of course if they have to spend the money back in the United States it is going to have that effect, but at the same time we are working our heads off and giving the goods away to some other country. The real question is different. Does Mr. Stobaugh claim you get more of an employment multiplier from sending your money abroad than you get from keeping it here in the United States?

Mr. MILLS. That specific question wasn't asked.

Mr. LONG. Why wasn't it?

Mr. MILLS. Because that overlooks the realistic choices an investor has—let's take bauxite. There is no bauxite in the United States.

Mr. PASSMAN. Let's put something in the record on it. We don't have all the raw materials in this country. We are in short supply in some areas. In many instances it is necessary to buy these materials abroad and import them into this country. We are finding that true more so in petroleum now than ever before, isn't that true?

Mr. MILLS. Yes, it is true.

Mr. PASSMAN. Mr. Bevill.

TRANSFER OF FUNDS TO HOUSING PROGRAM

Mr. BEVILL. Thank you, Mr. Chairman.

Mr. Mills, I notice that your summary indicates $83.9 million which includes the insurance premiums transferred to AID housing guaranty program, $50 million.

Mr. MILLS. That is correct, sir.

Mr. BEVILL. Did Congress authorize this transfer?

Mr. MILLS. They not only authorized it, they required it. That is why we are back to you. They transferred the $50 million. That was paid in cash. For instance, this cash paid in by all the companies was taken away from our program and given to AID housing. That is why we are here, Congressman, trying to get this money back.

NO NEED FOR ADDITIONAL APPROPRIATION

Mr. BEVILL. Really what you are saying in effect, if Congress had not transferred to the AID housing guaranty program the sum of $50 million, then you wouldn't even be coming before the Appropriations Committee this year.

Mr. MILLS. We are required to come every year, under the provisions of the Government Corporation Control Act.

Mr. BEVILL. As far as asking for any more money is concerned?

Mr. MILLS. As I stated here last year, Congressman, we think if we had received the $85 million request which is the $50 million plus the lost interest, that we would not be here this year except if we had some major disaster. We have not had any major disasters that would bring us back here.

Mr. BEVILL. When you say major disaster, you would be referring to expropriation.

Mr. MILLS. Some additional expropriations other than what we had in Chile. For instance, if we should lose the arbitration case with Anaconda, it depends on whatever the award is, if it is zero we are in good shape. If it is $154 million that would be different.

Mr. BEVILL. Of these funds that you have on hand, you are investing them.

Mr. MILLS. Yes, sir. Since 1969 earnings have been invested.

Mr. BEVILL. I gather that that started in 1969 because that is when you were authorized to do it, is that right?

Mr. MILLS. That is correct, sir.

OPIC TO BE SELF-SUSTAINING

Mr. BEVILL. So actually your ultimate goal is to be self-sustaining, isn't it?

Mr. MILLS. That is exactly what our ultimate goal is, and I think with our risk management policies the new portfolio can be made self-sustaining. I have some charts. If I may just take some of my time, Mr. Chairman.

Mr. PASSMAN. You have already used it, but we will yield to you additional time.

Mr. MILLS. What we are trying to do is put some principles of insurance risk management in here and not just be a program which is

drain of the taxpayers' dollars. We are today in 90 countries. Why do I say a reserve maintained at $200 million? The only country left in the world today where we have a major exposure is Jamaica, which is $500 million. Then you drop right down here to Chile. Then you go down here to Brazil, which is $200 million.

Gentlemen, therefore that means with $200 million of reserves, I can take a wipeout in any country, and be able to pay for it out of the reserve. That is I think very significant.

However, what we also have is risk management by industry within the country. We break up the portfolio into industries, like agriculture, mining, mining manufacturing, utilities, finance, and others. When a country expropriates, it is not always in every industry. In Chile we have reached some solutions outside of the copper field, where Chile is paying. So everything doesn't appear to fall due at one time.

If we come back to this $200 million goal that I mentioned and if we will use these principles of risk management, the insurance program can be run on a businesslike basis in the future. Mr. Price can give you some examples of what we have done that is new. I think the committee might appreciate it.

RISK SPREADING

Mr. PRICE. I think the most important thing any insurance company would do, looking at a portfolio the size of ours, would be to ask about spreading some of these risks and sharing them. That is exactly what we did in looking into reinsurance. It took us about a year and a half of negotiations but finally for the first time we reinsured expropriation risks with Lloyds of London in 1972. We have now renewed that program for 1973. In 80 percent of the countries in which we have insurance contracts outstanding or are offering insurance, Lloyds will pay 50 percent of any claim we pay.

We are also working with the U.S. private insurance sector to try to get them involved, so that some of our risks can be spread thus protecting our reserve. This, of course, is a common insurance principle.

Mr. PASSMAN. Thank you.

Mr. BEVILL. That is all.

Mr. PASSMAN. I want to apologize for this 5-minute rule. I didn't create this rule but we are going to operate by it because there are 12 members of the subcommittee. After we go around the table it is understood that every member of this committee can take a full day on any subject.

Mr. MILLS. I will be glad to answer any questions.

BALANCE OF OPIC'S RESERVES AFTER PAYING ALL CLAIMS

Mr. PASSMAN. You will have plenty of time to answer questions. Could you tell the committee at this time the amount of money that has been appropriated by the Congress to this particular program, not only OPIC, but OPIC's predecessor?

Mr. MILLS. Yes, I can. If we add in the $12.5 million we just got, it is $139 million.

Mr. PASSMAN. Including the $12.5?

Mr. MILLS. Including the recent $12.5 million, Mr. Chairman.

Mr. PASSMAN. Had we not appropriated this $12.5 million and when you add up the amount of claims you paid and the amount of claims you know you are going to have to pay, what would be your position? What would be your overdraft?

Mr. MILLS. It is interesting. Our position would be almost the same because under the law we had to allocate a 25-percent fractural reserve when we came into existence to back up the guarantee program; $70 million was allocated. We would have approximately $40 million left. We would have about $100 million in earnings.

Mr. PASSMAN. Take your total income from insurance premiums, since you went into business, and subtract from that the administrative expenses. Then what is the net balance?

Mr. MILLS. We have a net balance today, Mr. Chairman, of about——

Mr. PASSMAN. I am trying to get your bookkeeping from the inception of this project.

Mr. MILLS. It is right here.

Mr. PASSMAN. I have been sitting here as chairman of this committee 19 years and they made just as good a case 19 years ago as you made. Your appropriated funds have been $139 million.

Mr. MILLS. Right, and we have earned $185 million.

Mr. PASSMAN. What has been your administrative expenses during the same period of time properly allocated to AID and to OPIC?

Mr. MILLS. We have only allocated administrative expenses in the last 4 years.

Mr. PASSMAN. I am talking about since its inception. I am trying to be fair and show the total picture. How about the past 4 years?

Mr. MILLS. About $7 million from fiscal year 1970 to fiscal year 1973.

Mr. PASSMAN. What is the total gross earnings?

Mr. MILLS. Our gross earnings is about $185 million before interest.

Mr. PASSMAN. Subtract from that the $7 million. That would give you $178 million.

Mr. MILLS. Right.

Mr. PASSMAN. What has been the total amount of claims paid?

Mr. MILLS. $20 million.

Mr. PASSMAN. What is the total amount of claims pending, all inclusive?

Mr. MILLS. Pending, about $113 million.

Mr. PASSMAN. All right, does that include ITT?

Mr. MILLS. Includes ITT.

Mr. PASSMAN. What other claims?

Mr. MILLS. That is it. Today I have $113 million pending. We have, Mr. Chairman, quietly solved a lot of our problems.

Mr. PASSMAN. What?

Mr. MILLS. We are solving a lot of our problems.

Mr. PASSMAN. I want to commend you. I am not being critical. I am trying to understand whether you have operated your insurance at a profit or loss. That is what we are trying to establish.

Mr. YATES. Mr. Chairman, may I ask a question?

Is there only one claim pending for $113 million?

Mr. MILLS. No, no, there are many claims pending.

Mr. YATES. I thought your answer to the chairman was you have the ITT claim pending for $113 million.

Mr. MILLS. No, ITT is included in the $113 million.

Mr. PASSMAN. So what would be your net balance from the time you went into business under AID through your last accounting period forgetting about appropriated funds? Let's deal entirely with your receipts and subtract the administrative expenses.

Mr. MILLS. Receipts and cash, Mr. Chairman, are approximately $160 million positive.

Mr. PASSMAN. Positive?

Mr. MILLS. That means income to the United States.

Mr. PASSMAN. To this program and to the Treasury?

Mr. MILLS. This is correct.

Mr. PASSMAN. You are not counting appropriated funds?

Mr. MILLS. No.

Mr. PASSMAN. Premiums and cash collected.

Mr. MILLS. Premiums paid by the U.S. businessman. That excludes interest that we could have earned on this. It excludes all interest.

Mr. PASSMAN. You don't take your capital account that you use daily to pay bills and invest it. You know you have to have a balance there to meet these claims. Then what has been the net profit or net loss since the inception of the program?

Mr. MILLS. Roughly about $160 million profit.

Mr. PASSMAN. You haven't collected that much.

Mr. MILLS. Oh, yes, we have. We collected $185 million.

Mr. PASSMAN. $185 million? What do you subtract?

Mr. MILLS. You subtract the $20 million in claims.

Mr. PASSMAN. All right, then pending claims.

Mr. MILLS. Pending claims we may not pay.

Mr. PASSMAN. You know very well you are going to pay ITT. We have already agreed that it is a bona fide claim. I don't think you are intentionally being unfair but you are not stating the case as I and as you understand it. What are the potential claims? Then we will make up our own minds.

Mr. MILLS. $113 million potential claims.

Mr. PASSMAN. How about the other claim you settled on promissory notes?

Mr. MILLS. Over a 5-year period.

Mr. PASSMAN. What is the total amount of the claim?

Mr. MILLS. $66 million.

Mr. PASSMAN. We agreed you wouldn't want to put your savings in these notes.

Mr. MILLS. $66 million.

Mr. PASSMAN. Add that to the figure you just gave.

Mr. MILLS. Mr. Chairman, we have got to consider OPIC's future income too if one is going to add in future potential liabilities.

Mr. PASSMAN. This is a claim we know very well. We all agreed there is a chance it will not be paid.

Mr. MILLS. You are talking about Kennecott?

Mr. PASSMAN. Yes.

Mr. MILLS. That is $66 million, Mr. Chairman.

Mr. PASSMAN. If you take that into account, then you take the pending claims and take what you have paid out; I want to be fair, on that basis you are in the red.

Mr. MILLS. I think there is only one figure I will dispute, the pending claims. I had $250 million pending last year and OPIC settled many of those claims. One claim was denied for $154 million.

Mr. PASSMAN. You did that because they hadn't paid premiums?

Mr. MILLS. Right.

Mr. PASSMAN. And you know I know that, but ITT paid their premiums.

Mr. MILLS. I think, Mr. Chairman, if I may introduce a statement here on ITT.

Mr. PASSMAN. Certainly, put it in the record. We don't want to confuse claims where people say we have this claim and they did not pay the premiums. There is a difference, isn't there?

[The statement for the record follows:]

STATEMENT OF MR. MILLS

Mr. Chairman, as you know, ITT has an application for compensation pending before OPIC. For the past year or so, with the assistance of outside lawyers, CPA's and engineers, OPIC has been evaluating this claim. At this moment, OPIC is in the final process of analyzing the available evidence and legal issues, with a view toward acting on the claim in the near future. I have been advised by our counsel that it would be inappropriate for me to comment in any way on the ITT claim as long as the question of ITT's right to compensation is still undecided. After the issue has been finally resolved, I shall be happy to testify about it if you so desire. In the meantime, I am, of course, available to testify about other aspects of the OPIC insurance program.

Mr. LONG. Will the chairman yield?

Mr. PASSMAN. As soon as I make this point. I want to be fair about this thing. A lot of this is not chargeable to your administration. You have a policy today that most of us can embrace. That is that you will not insure over 10 percent of the account in any one country, but if we don't make this record clear when you come in for a supplemental you are not going to be able to get it. We previously agreed you would be in better shape to go ahead and establish what your losses are, get a supplemental, pay it and start all over. We discussed that.

Mr. MILLS. Right, that was discussed.

Mr. PASSMAN. And I think we agreed that would be the proper way to handle it, but if we just keep saying yes, we have a loss, no, we don't have a loss, who is going to understand it.

Mr. MILLS. If you take the $20 million in net claims payments, and the $66 million in the Kennecott settlement, that is $86 million. We will have been paid $185 million by June 30.

Mr. PASSMAN. How about the claims?

Mr. MILLS. That are pending? That is $113 million.

Mr. PASSMAN. Add that up.

Mr. MILLS. That is $199 million.

Mr. PASSMAN. Subtract that from total receipts.

Mr. MILLS. From $185 million, I am down $10 million if you do not take into account future income and interest.

Mr. PASSMAN. There you are. Your appropriated funds is really what is bailing you out, isn't it?

Mr. MILLS. The appropriated funds help us in case we have to meet a claim.

Mr. PASSMAN. What I wish you would do, Mr. Mills, is to make it abundantly clear the amount of money you actually need to get your operation on a sound, operating basis. I think you are doing a good job. I like most of the policies by which you are actually operating today with the exception of something I am going to get into a little later. It would appear to me you are putting the insurance program on a business basis; and when you do that, recognizing other countries have a similar program, I am going to support you.

Mr. LONG. Will you yield?

Mr. PASSMAN. I yield.

USE OF ACTUARIES

Mr. LONG. Are you in the private insurance business?

Mr. MILLS. Am I or have I ever been? No.

Mr. LONG. You know a little bit about it, don't you?

Mr. MILLS. A little bit.

Mr. LONG. You realize that any private insurance company would have set up an actuarial estimate of what the future losses might be, or try to.

Mr. MILLS. We have tried to. That is a very good request. The first thing we did was try to hire actuaries, and they came back and said it was not actuarially possible to calculate future losses because claims paid were so few in number, and over a fairly short period of time.

Mr. LONG. The situation is so bad that you can't even set up an estimate. Yet a few minutes ago you were about to claim the future revenues here that might come in. You just threw up your hands at the idea of the future losses you might have. I think you are a little disingenuous with this committee. You ought to tell us what the situation really is; namely, that it is a pretty bad one, that Congress is going to have to pay for it.

DESIRED SIZE OF RESERVE

Mr. PASSMAN. Do you have an account known as a contingency liability account? You know you are going to have some claims.

Mr. MILLS. All our income goes into the reserves.

Mr. PASSMAN. That isn't quite fair because everything that you collect and all your appropriated funds are not expected to go down the drain. You have had enough experience in the underdeveloped countries around the world; do you have any idea of what a fair amount would be to set up as a reserve?

Mr. MILLS. I believe OPIC should maintain a reserve of about $200 million.

Mr. PASSMAN. You would like $200 million.

Mr. MILLS. Because the present country liability spread, with the exception of Jamaica, suggests this approximate level.

Mr. PASSMAN. With respect to the $200 million reserve, you won't necessarily spend the $200 million.

Mr. MILLS. Oh, no, I do not necessarily mean a cash payout. It is a reserve.

Mr. PASSMAN. Maybe like some of these banks call callable capital.

Mr. MILLS. Similar to callable capital.

Mr. PASSMAN. Is that the way you are going to describe it in your request?

Mr. MILLS. That is precisely what it is, callable capital.

Mr. PASSMAN. Do you think there is any merit to my recommendation that you go ahead, pay all these claims and get it behind you? I think the best thing to do is go ahead, arrive at the total cost and pay it. Didn't you say 26 percent of all the insured capital was in Chile at one time?

Mr. MILLS. Twenty-six percent of the worldwide portfolio was in Chile in 1968.

Mr. PASSMAN. That is not chargeable to you, but I think certainly it is good to make a correct picture so we will know where we stand on this matter.

OPIC'S LOAN PROGRAM

You also have, and I sure don't like this part of your operation, a lending program. Let me read into the record at this point the different agencies who are now making loans. You have the Agency for International Development's development loan fund, the International Bank for Reconstruction and Development, the International Development Association, the International Finance Corporation, the International Monetary Fund, the Inter-American Development Bank, the Asian Development Bank, the foreign military credit sales program, the Export-Import Bank long-term credits, the Export-Import Bank regular operations, the Export-Import export expansion program, the Public Law 480 economic development loans, the Public Law 480 Cooley loans, the Overseas Private Investment Corporation, and the Inter-American Foundation. There are 15 specific agencies making loans, are they not? Now, you have had to get into this business. How much funds are you asking for loans?

Mr. MILLS. Nothing.

Mr. PASSMAN. You are going out of the lending business?

Mr. MILLS. No. We have the subscribed capital of $40 million.

Mr. PASSMAN. How much do you anticipate you are going to disburse for loans in fiscal 1974?

Mr. MILLS. We provide loan funds in two ways, Mr. Chairman. We have our $40 million capital, which has been paid in, and we are not requesting additional capital in fiscal year 1974. The second way is we guarantee loans made by American banks. That is disbursed by the American banks or American insurance companies, not by us.

Mr. PASSMAN. You do make direct loans.

Mr. MILLS. We make direct loans with our capital.

Mr. PASSMAN. You know exactly what I am referring to.

Mr. MILLS. Out of our $40 million capital.

Mr. PASSMAN. How many loans have you made, to what countries and in what amounts?

Mr. MILLS. Can I submit that for the record?

Mr. PASSMAN. Let's discuss it a little bit because members of your very board said as long as they were on the board they would not permit you to make any loans, and I mean important members of your board.

Mr. MILLS. We have made this year two guarantees.

Mr. PASSMAN. I am not talking about guarantees, but your loans, Mr. Mills. Let's not mix the two.

DETAIL ON LOANS

Mr. MILLS. We have made eight direct loans.

Mr. PASSMAN. Who were they made to?

Mr. MILLS. Three to Indonesia.

Mr. PASSMAN. Wait now if you will. The name of the company?

Mr. MILLS. United Coconut.

Mr. PASSMAN. That is one. How much?

Mr. MILLS. $500,000.

Mr. PASSMAN. The next one.

Mr. MILLS. Daralon Textile, $1 million.

Mr. PASSMAN. Proceed.

Mr. LONG. The country.

Mr. MILLS. Indonesia.

Mr. MILLS. Cargill do Brazil, $1,250,000, Seaboard Overseas, Africa regional. This is the one which exports grain from the United States which I brought up here last year. P. T. Kayan River in Indonesia, $1.6 million, Residence Pauline in Haiti, $415,000; Olin Kraft in Brazil for $2.5 million and Compania de Papeis to Brazil. Total loans made is $19,915,000, less participations $4,500,000, for a net loan portfolio of $15,414,000.

Mr. PASSMAN. That is the total amount of loans you have made since you got into that business.

Mr. MILLS. That is the total amount, that is correct.

Mr. PASSMAN. Don't you think you really ought to stay in the insurance business? You will find the committee in all probability will want to back you up because I think you are doing an excellent job in the insurance business but it seems every agency of Government has to start up a little loan office. To be frank with you, there are many others I could have mentioned for the record, but they are so voluminous I decided to cut them out, like the Pan American Development Foundation. We make the grants and they set up a little lending agency, some kind of a building and loan or a little side street bank.

TERMS OF LOANS

Mr. MILLER. Could you tell us the terms of those loans, what length of time and what interest rate?

Mr. MILLS. Yes, our long terms are all commercial. The average interest rate, the lowest is 8.5 percent and the highest was 12 percent. Many of the loans have profit features such as convertible debentures. What we are trying to do frankly is to get sufficient income coming in from good projects, which we think will help the United States and will help the developing countries, to enable the fund to average 10 percent on $40 million. That is $4 million which is available for reserves or for additional lending.

Mr. MILLER. Time?

Mr. MILLS. Maturities will run from 5 to 15 years.

Mr. MILLER. Thank you, Mr. Chairman.

Mr. PASSMAN. The point is we have 15 agencies presently making loans, some of them up to the billions of dollars a year, do we not?

Mr. MILLS. I believe we do.

Mr. PASSMAN. It would appear to me that you could very well afford to stay in the insurance business and not start another lending agency, and that is exactly what you are doing. You are up to $15 million now. Don't you like the insurance business better?

Mr. MILLS. I think the insurance business is a good business. I also think, Mr. Chairman, that the loan financing is important for encouraging investment in the LDC's and helping companies compete in these important markets.

Mr. PASSMAN. You could lend up to $40 million but you have only actually disbursed a little over $15 million in loans.

Mr. MILLS. We disbursed net lending of about $15 million.

LOANS MADE BY OPIC

Mr. PASSMAN. Will you place in the record the total amount of loans made? The Export-Import Bank could make loans in that amount early some Monday morning, couldn't it?

Mr. MILLS. Probably Sunday morning; but there is a big difference between setting up a business overseas and simply exporting from the United States.

Mr. PASSMAN. They are dealing in billions of dollars, and it is to handle U.S. commodities, to finance our exports. I just don't understand why you people along with all the other agencies now have to start a little bank within your organization. I don't want to deal in personalities, because all of you are fine people. I was assured that you people just wouldn't be permitted to get into this business.

Dr. Hannah is on your board.

Mr. MILLS. That is correct, Dr. Hannah is our chairman.

Mr. PASSMAN. And he is a very fine man. You know what he said. I asked a question and he said ". . . I am only saying so long as I am chairman of the board of OPIC we are not going into the loaning business."

So many times you people do just the opposite of what you say you are going to do. Maybe not the smartest people are on this side of the table, but we are the ones elected to oversee this spending. I would hate to think we have reached the point where the bureaucrats downtown ask for funds and say, "Give it to us and keep your mouths shut. We will make up our minds what to do with it." The hearings indicate that has been the practice, not so much you, but a good many of these agencies. List in the record if you will the loans you have made and to what countries.

[The information follows:]

LOAN IN BRAZIL

Mr. PASSMAN. I know there is some particular arrangement with the country where their companies are going to invest the money, and I am reasonably sure they are paying about one and a half times as much as they could get the same money in New York; is that about right?

Mr. MILLS. The company is paying more; that is correct. OPIC financing does not compete with U.S. private banks.

Mr. PASSMAN. It is about one and a half times. I just can't understand these things.

Mr. MILLS. The rate was about 6 percent. We made it at about 8.5 percent.

Mr. SHRIVER. Why did you make the loan?

Mr. MILLS. Because we think this is a good project which we think will help the development of Brazil.

Mr. SHRIVER. Why didn't they go to one of the other regularly authorized agencies that have long been in the loaning business, such as IDA or the AID program?

Mr. MILLS. Because they don't qualify for soft terms. We have to loan on commercial terms. Our legislation requires that we be self-

supporting in our financing. This is not an aid program. This is a lending program done on commercial terms to assist the developing countries, and to assist the U.S. private businesses. It has got to be a combination of the two.

Mr. SHRIVER. You mean all these other agencies enumerated by the chairman, that they couldn't get a loan because of their capability of repaying.

[Discussion off the record.]

USE OF CAPITAL ACCOUNT

Mr. LONG. This is your capital that you want to use to back up your guaranties in case any of them go sour, is that right?

Mr. MILLS. We want to use the Corporation's capital as one means of making the financing program self-sustaining. Maybe Mr. Mays can answer your specific question. The capital in my opinion could be available for backing up quantities but I don't believe it is. Could you answer that question?

Mr. MAYS. The capital of the Corporation is available for lending and ultimately for the Corporation's liabilities.

Mr. LONG. Would you think a prudent company, which is in the business of insuring loans all over the world in countries which suddenly expropriate companies, like Chile and other countries have done, and needed money to pay off these claims when the time comes; would you think it was a very prudent company that would take those moneys that you will need in a hurry and put them into countries like Brazil and Indonesia? Is that a very sound use of your money?

Mr. MAYS. I might try to answer that in terms of the statute and what OPIC is authorized to do, Congressman Long. The statute requires us to maintain a 25-percent reserve for our guaranties. The capital of the Corporation, which is $40 million, is the only fund at present for these direct investments. We are authorized there to take convertible debentures on our lending, which enables us to share in the profits of the successful enterprise, to help cover those projects which may not turn out successfully. So you need this to provide OPIC a share of the profits in the successful enterprises, to offset its losses, in order to be self-sustaining as the Congress directed.

Mr. LONG. Aren't Indonesia and Brazil troubled areas?

Mr. MILLS. Every company invests its capital and that is what we are trying to do.

Mr. LONG. Do any American insurance companies invest their capital in places like that?

Mr. MILLS. Maybe not in places like that, but that is not their business. They may invest in Penn Central.

Mr. LONG. Do they do that intentionally?

Mr. MILLS. They intentionally invest it in Penn Central, yes.

Mr. LONG. Knowing that it is going to be as bad a situation?

Mr. MILLS. I hope that Olin Kraft——

Mr. YATES. Congress put in $250 million.

Mr. LONG. We are as dumb as they are?

Mr. PASSMAN. Mr. Mills, I think you are doing a good job with your insurance business.

Mr. LONG. He is doing a good job of squirming right now.

CHANGES IN PROGRAM OPERATION

Mr. PASSMAN. I want to be fair about this thing. Since you took over this operation you put the insurance program on a business basis.

Mr. MILLS. We have tried.

Mr. PASSMAN. You can no longer have 26 percent of the total investment in any one country. Your board has limited it to 10 percent and your average is about 6 percent. I think you are moving in the right direction.

Mr. MILLS. Thank you.

Mr. PASSMAN. I think had we been operating on the same basis as you were operating in the past——

Mr. MILLS. We wouldn't have had these problems.

Mr. PASSMAN. You would have had a substantial profit for the U.S. Treasury rather than a potential red figure.

Mr. MILLS. That is correct; we believe OPIC's new insurance is much more sound.

Mr. PASSMAN. You are doing a good job. I am not criticizing OPIC for its present operation other than the lending portion.

OBJECTION TO LOAN PROGRAM

This year, if you take all facets of foreign aid and foreign assistance, good, bad, and in between, the requests are going to top $18 billion. This $18 billion is going to be available either in grants or loans all over the world. We are operating in 101 nations now. It would appear to me you could do a much better job if you would stick to the insurance business. Where you put in $1 to some country for loans some other facet of aid may be putting in $100, isn't that true?

Mr. MILLS. In certain countries they may.

Mr. PASSMAN. I am talking about on the average. Some of the people in your own agency oppose——

Mr. MILLS. Not private business.

Mr. PASSMAN. They oppose just as strongly as I do that the OPIC people are in the money lending business, don't they?

Mr. MILLS. I am not sure to whom you are referring.

Mr. PASSMAN. I am referring to members of your own board. I read it in the record a while ago. I think he is the greatest AID director we ever had. He feels just as I do about this thing. He said he would never permit you to get into that business as long as he was on that board. Is he still on the board?

Mr. MILLS. He told me he meant concessional lending and I think he is absolutely right. We don't make concessional lending.

Mr. PASSMAN. Let me read from the 1972 hearings. "* * * I am only saying so long as I am Chairman of the Board of OPIC we are not going into the loaning business." I am not reading anything out of context.

Mr. MILLS. We submitted a statement in that regard last year about a misunderstanding.

Mr. PASSMAN. I don't want to pull this old horse back over the coals, but I want you to know that you are almost alone in the idea of getting into the money lending business. Do you have any language that you could suggest that we could write into our bill to take you out of that business?

Mr. MILLS. Mr. Chairman, what I am trying to do is put the lending business and the guaranty business which we inherited, on the same business like basis that I am doing to the insurance business. When we took over this business they had $12 million of losses and about $500,000 of income.

Mr. PASSMAN. I am only saying that I wish you would, and I think possibly members of your own board endorse my position, get out of this money lending business and stay in the insurance business.

Mr. MILLS. We do have an income of about $7.5 million on our financing operations.

Mr. PASSMAN. You had to borrow this money at 6 percent before you could possibly make loans to these doubtful countries. Let's see if you agree with this. You are making loans?

Mr. MILLS. We have made approximately $15 million, net of participations.

Mr. PASSMAN. You are making some loans?

Mr. MILLS. Yes, sir.

Mr. PASSMAN. Let me rest my case there. Whatever I say, you are going to come right back and get completely off the subject and try to tie something else into it. I just don't think you should be allowed to make loans but until the law is changed or we write in restrictive language you can continue doing it, can't you?

Mr. MILLS. Thank you, Mr. Chairman.

ENCOURAGING INVESTMENT ABROAD

Mr. PASSMAN. Mr. Mills, let's look at another angle. With the present international monetary situation, the shape we are presently in concerning our domestic economy, and facing the fact that over $80 billion is held outside of the United States, should OPIC now be encouraging countries to invest abroad at increasing rates?

Mr. MILLS. Mr. Chairman, this is a question——

Mr. PASSMAN. I just asked you a good question.

Mr. MILLS. A very good question, this is precisely right. The sole positive element in the capital accounts section of United States balance of payments today is its earnings on its investments abroad. These investments are now having a positive balance-of-payments effect.

Mr. PASSMAN. A what?

Mr. MILLS. A positive balance-of-payments effect of over $5 billion. We also estimate U.S. nonpetroleum investments in developing countries run between $300 and $500 million positive balance-of-payments effect each year. Today it is the overseas investments which are bringing a return which we expect will increase.

Mr. PASSMAN. Aren't you looking out into the future 40 years when you make that statement? You are saying if certain things happen in future years then it will affect the U.S. payment position. Isn't that really what you are saying for the record?

Mr. MILLS. No, we are having it today.

Mr. PASSMAN. It doesn't have its effect tomorrow.

Mr. MILLS. Today the net investment income in 1971 was $9,200 million.

Mr. PASSMAN. How about a new company going overseas, what would be the immediate effect on the balance of payments?

Mr. MILLS. It would depend on how they financed it, and the initial U.S. exports associated with the project. Many of these companies going abroad finance in Europe, Japan, and all around the world, to launch a project.

Mr. PASSMAN. Mr. Mills, let's be fair. Before we complete our hearings this year no doubt we will listen to 100 fine witnesses like you, and I can assure you in advance, and make you a little bet, that every one of them will say "We don't hurt the balance of payments, we help it." But it follows nevertheless that we had our first trade deficit since 1888 in 1971 of some $2 billion. We also had the second trade deficit in 1972 of some $6.4 billion.

Mr. MILLS. That is right.

Mr. PASSMAN. Isn't it true that in the past 20 years by our policies of trying to be everything to everybody everywhere on borrowed money and, at the expense of unborn generations that our gold reserves have dropped from $23 billion to about $10 billion? As we sit here as friends across the table this afternoon and discuss the continuation of the foreign aid program of which OPIC is only one little piece, there are $80 billion U.S. dollars floating around all over the world that was due yesterday, not today or tomorrow but due yesterday, and we don't have the money to pay for them, do we?

Mr. MILLS. That is correct, Mr. Chairman.

Mr. PASSMAN. And nations and individuals are running from the dollar.

Mr. MILLS. That is correct.

Mr. PASSMAN. Taking the dollar and trying to turn it into some other currency. Isn't that the position we have gotten ourselves into?

Mr. MILLS. By giving——

Mr. PASSMAN. We are not blaming OPIC for all of it but we have gotten ourselves into that position; haven't we?

Mr. MILLS. Mr. Chairman, we must differentiate between government-to-government aid and what private business is doing.

Mr. PASSMAN. You are talking about taking private businesses abroad.

Mr. MILLS. That is what is bringing the surplus.

Mr. PASSMAN. You are going to repudiate your own testimony. The statistics I have cited are true; are they not?

Mr. MILLS. Of the government to government? That is correct.

Mr. PASSMAN. Government to government. Some hotels won't even take our money over there. They run from it, and tourists have to go out and discount the dollar to get money to pay their hotel bills; don't they?

Mr. MILLS. I haven't been abroad recently.

Mr. PASSMAN. What a mess we are in. About 5 years ago under the previous administration black satchel men were sent all over the world to every nation they could find with a surplus in the foreign exchange account and we tried to borrow money from them. We got out to Thailand and found that those people had a $1 billion surplus in their foreign exchange account. We tried to borrow a quarter of a billion and they laughed at us, so finally we compromised. We borrowed $100 million U.S. dollars from Thailand at 6-percent interest to be repaid in 4½ years, isn't that true?

Mr. MILLS. I don't happen to know that particular transaction.

Mr. PASSMAN. Let me make it as a statement of fact. It is true. Are you familiar with it?

Mr. MAYS. No, sir, I am not.

Mr. PASSMAN. You mean you are a part of this aid distributing business and you don't know the mechanics of the way this thing operates? That is correct, and I believe the $100 million is due in about 90 days. We don't have the money to pay it. What are we going to give them? We might have to give them another bond. Undoubtedly we are not going to give them our gold. This is the mess we are in and I'm afraid I don't actually know how to contribute greatly to straightening it out, but we just cannot continue, in the future, foreign aid programs at the same magnitude that we have had in the past.

This year, as I said earlier, we put all the statistics together right out of the budget, and foreign aid requests run over $18 billion. Yours is only one little piece of it.

Mr. MILLS. Our reserve funds do not go abroad, Mr. Chairman. The appropriation that we are requesting would be paid to U.S. firms, if a claim payment is made.

Mr. PASSMAN. How about the Brazil loan? That certainly went abroad.

Mr. MILLS. The lending is a separate matter.

Mr. PASSMAN. You have the money, take it abroad and build plants. You don't send the labor down from America to build those plants. You pay it out of this loan to build those plants, don't you?

Mr. MILLS. Mr. Chairman——

Mr. PASSMAN. You are building that plant with locals mainly, aren't you, local laborers?

Mr. MILLS. Yes, with Americans and in fact there was an American engineering company.

Mr. PASSMAN. But mainly to build that plant for which you made the loan, it will be locals and they will be paid out of that loan.

Mr. MILLS. Loan funds are often used for construction costs including U.S. equipment purchases, contractor services, and local labor and supplies.

Mr. PASSMAN. I want to be sure that the record shows that they did go abroad.

Mr. MILLS. Brazil offers us an example why U.S. private industry must make these investments. An article which appeared on February 26 in the Wall Street Journal says, "Japan's Brazilian investments worth only a few million dollars a dozen years ago, now exceed $500 million. The total should pass $1 billion mark by mid-decade. A Japanese group predicts more than $2 billion more will be plowed into Brazilian ventures in the next 5 years." That is what is happening to our export markets. The Japanese are getting them by investing in them.

Mr. PASSMAN. But it follows nevertheless we are being outsmarted at every turn. You know these nations are not running from the yen. They are not running from the mark. They are not running from the Swiss or the French franc. We are in trouble, aren't we?

Mr. MILLS. On our overall balance of payments we are in trouble. We are trying to correct it.

Mr. PASSMAN. Not only do we have $80 billion floating around the world that were due yesterday but we are also increasing the public debt in this country; isn't that true?

This year people jump on the President about impounding funds. I don't like the priority system he used but I commend the man because even after impounding the funds we are still going to finish this fiscal year with a $28 billion deficit. Somewhere along the way we are going to have to bring this thing under control. As I am concerned, first priority goes to American projects. Before we finish the hearings this year, we will make a record that there are literally thousands of projects being financed abroad with very, very doubtful justification, while the same types of projects are being suspended in this country.

BENEFITS TO THE UNITED STATES FROM OPIC

I would like you to provide detailed facts for the record showing just how OPIC's programs benefit the U.S. economy and the American taxpayer.

Mr. MILLS. In answering your question it is important to look at how we do our business and what policies we follow. OPIC is selective. OPIC analyzes and screens every application for investment assistance to be sure that the proposed project, while benefiting development, will benefit the United States and will not be harmful to domestic employment, or U.S. balance of payments. Overall, we believe private U.S. investment in the developing countries produces significant net benefits to both U.S. employment and the U.S. balance of payments. However, some investments do not, and these we try to screen out in examining applications for OPIC services.

OPIC has strong supplemental eligibility criteria which clearly prohibit any assistance to "runaway industries," manufacturing projects substantially aimed at serving the U.S. market (unless there are clear net benefits to the U.S. economy in the particular case), any agricultural project to produce goods in U.S. surplus which would have the effect of injuring U.S. agriculture, any project with significant proposed procurement from developed nations other than the United States, and other types of investments.

An in-depth study was recently completed by Harbridge House, Inc., an independent Boston research firm, on 20 mature, operating projects that had been assisted by OPIC's predecessor, AID. The study attempted to determine the balance-of-payments effects of these overseas investments compared to what would have been the situation had each investment not been made. The findings were that the projects as a group had a highly favorable effect on the U.S. balance of payments. Capital reflows from the projects to this country in the form of fees, dividends, interest, and loan repayments substantially exceeded the $65 million total capital investment, usually over a period of 5 years or less. U.S. exports of capital equipment and supplies to these projects exceeded $322 million over the period studied. Against this strictly positive benefit to the U.S. balance of payments and trade accounts, the study found only insignificant and usually short-term offsetting losses of U.S. exports resulting from the operation of these companies.

The vast majority of OPIC-assisted projects are in the fields of mineral extraction, local service operations, and manufacturing to serve local or regional markets that cannot be reached competitively

from a U.S. production base. Such projects have increased and will continue to increase our exports and employment as they purchase needed equipment and materials.

Only a comparatively few of the projects which OPIC has assisted are even in general fields of operation which might be considered as possibly having some negative impact on U.S. employment. However, all these projects passed OPIC's screening processes and will not harm our domestic employment or balance of payments.

On the other side of the ledger, in fiscal year 1972 and the first half of fiscal year 1973, OPIC rejected six formal applications for insurance because the investment would harm employment, and many other potential applicants were disqualified and turned down before they ever submitted formal applications. The following cases are a fair sampling of our decisions during the past year. They illustrate just how rigidly OPIC applies its policy guidelines and how we use our selectivity to encourage or discourage U.S. private investments consistent with the public interest.

[The information follows:]

Inquiry by a U.S. cement manufacturer proposing to build a plant in a Central American country to produce substantially for the Southeastern U.S. market. Rejected.

Application by a U.S. electric goods manufacturer to produce radios in Singapore in order to retain a share of the U.S. market formerly served by its U.S. plant, which had closed because its costs were uncompetitive with imports. Rejected.

Application by a U.S. publisher to produce an encyclopedia in Israel for sale in the United States. Rejected.

Inquiry of a U.S. electronics firm planning to ship an already closed down plant to Yugoslavia to manufacture circuitry for European and probably also U.S. markets. Rejected.

Inquiry by a U.S. manufacturer planning to produce children's clothing in several Central and South American countries, partially to serve the U.S. market. Rejected.

Request for approval in principle of projects to undertake labor-intensive parts of production of shoes in Taiwan or Brazil, for ultimate sale in the United States. Rejected.

Application of a recreational vehicle manufacturer to produce components in Taiwan for final assembly and sale in the United States. Rejected.

Application of a U.S. investor to revive a U.S. motorcycle company, which had been put out of business years ago by imports, by setting up a plant in Taiwan to produce lightweight motorcycles for the U.S. market. Approved, because its U.S. sales would be entirely in competition with imports from Japan, there being no U.S. production of lightweight motorcycles and no possibility of competitively producing them in the United States; and because the investment would contribute developmental benefits to Taiwan and dividend earnings for the United States which otherwise would go to Japan.

Inquiry by a U.S. garment maker proposing investment in a project to transfer the sewing and finishing of a line of ladies' garments from the United States to El Salvador, to serve the U.S. market. Rejected.

Application for insurance on a project to assemble ladies handbags in the Dominican Republic for sale substantially in the United States. Rejected.

Application by a U.S. textile manufacturer to invest in an Indonesian company to produce textiles exclusively for the Indonesian market (which cannot be reached competitively by U.S. textile exports). Approved, with a covenant absolutely barring any exports by the company to the United States, with severe financial penalties for violation of the covenant.

Foreign investment in assembly and reexport operations just across the Mexican border from the United States has been severely criticized as injuring domestic employment and the national balance of payments. OPIC does not and never has had any programs or operations

in Mexico and has not in any way encouraged or assisted the establishment of these Mexican assembly facilities.

There is an additional important way in which OPIC is benefiting the United States, and this is OPIC's ability to settle investment disputes which might otherwise strain relations between the United States and a foreign nation.

U.S. foreign relations have been or continue to be severely strained due to conflicts over the expropriation of several uninsured investments in Latin America. On the other hand, OPIC has been able to contribute to businesslike settlement of differences of avoidance of disputes over two dozen insured investments.

RESERVES AND CLAIMS ON HAND

Mr. PASSMAN. Could you tell the committee the total reserves you presently have on hand and please break that down into insurance and guaranty reserves?

Mr. MILLS. Our present insurance reserve is $126,357,323 and our guaranty reserve is $75 million.

Mr. PASSMAN. Could you tell the committee the total claims that have actually been filed, total claims that you feel will be filed in the near future and total claims that could possibly be filed at a later date? What would the grand total amount to?

Mr. MILLS. As of January 31, 1973, there have been 18—17 companies—actual claims filed totaling $113,717,563. In addition, OPIC faces seven probable claims totaling $63,376,768 and 12 possible claims totaling $56,107,211. Taking all these categories together the total would be $233,201,542.

Mr. PASSMAN. Would you provide the committee with the name of the company and the amount of the major claims now pending before OPIC?

Mr. MILLS. As of January 31, 1973, the following major claims were pending:

Belbagco, Inc., $1,836,645 expropriations; $762,769 war risk.
Bank of America, $2,913,021 inconvertibility.
Cerro Corp., $14,201,000 expropriation.
Fearn Foods, Inc., $612,820 expropriation.
First National City Bank, $140,000 expropriation.
Georgia Pacific Int. Corp., $150,000 expropriation.
International Chemical Fibers, $29,494 inconvertibility.
I. T. & T. Corp., $92,500,000 expropriation.
NIBCO, Inc., $111,000 expropriation.
Ralston Purina, $212,000 expropriation.
Ford Motor Co., $276,000 expropriation.
Socomet, $60,000 inconvertibility.
Vinnell Corp., $26,392 war damage.

CHILE SITUATION

Mr. PASSMAN. What are the total claims pending for Chile alone?

Mr. MILLS. There were 12 actual claims pending as of January 31, 1973, by U.S. investors in Chile. The estimated value of these claims was $110,771,515.

Mr. PASSMAN. Would you provide for the record what U.S. aid has been provided to Chile from any source over the past 2 years?

Mr. MILLS. OPIC has not issued any insurance or made any loans or guarantees of new investments in Chile in the last 2 years. The only activity of OPIC has been to settle expropriation and inconvertibility claims arising from previous contracts outstanding Chile.

As for U.S. aid to Chile from other sources, AID has not made any new loans to Chile in the past 2 years. AID expenditures in Chile have averaged about $1 million over the past 2 years, and currently are operating below that amount. Most of this money is assisting small people-to-people training and community development programs and narcotics control efforts. The food-for-peace program has operated at a level of between $2 to $3 million during the past 2 years. During this time, the Peace Corps has had about 40 volunteers in Chile, working mainly in conservation efforts, such as reforestation. I do not have any knowledge or data about any programs or operations that other agencies might have in Chile.

Mr. PASSMAN. Could you tell the committee if negotiations are still being conducted with Chile concerning the settlement of claims by American firms which had their operations expropriated.

Mr. MILLS. Yes, several companies are still negotiating with the Government of Chile.

CLAIMS PAID

Mr. PASSMAN. What claim payments has OPIC made in the last year?

Mr. MILLS. Total net claims paid in calendar year 1972 were $13,031,367 after recovering $516,918.

CONTINGENT LIABILITY

Mr. PASSMAN. What is the total contingent liability of OPIC at the present time when you consider each program and include the current and standby coverages?

Mr. MILLS. As of March 31, 1973, OPIC had outstanding $794 million of current inconvertibility insurance and $2.2 billion inconvertibility insurance on standby, for a total of $3 billion. OPIC outstanding current expropriation insurance totaled $2.5 billion with an additional $873 million on standby, for a total of $3.4 billion. Current war damage insurance totaled $2 billion, with $712 million on standby, for a total of $2.7 billion.

REDUCING EXPOSURE

Mr. PASSMAN. In view of the situation that has taken place with regard to Chile, do you think OPIC might want to decrease her future exposure by possibly only insuring or guaranteeing 25 percent of the total investment?

Mr. MILLS. A 25-percent coverage would not be an incentive to investors, would reduce our influence on investor conduct, reduce income, and reduce spreading of our insurance risks. In 1970, we tried hard to persuade investors in Korea to accept only 50-percent coverage. The best we could do was to arrange for coverage to begin at the 75-percent level, and decline as investors recovered their initial invest-

ment. We now insure all large and sensitive projects only on a declining coverage basis, with a ceiling of 50-percent coverage in and after the seventh year.

Mr. PASSMAN. Last year, you indicated that OPIC was reducing its exposure by reinsuring some of its insurance with private underwriters. Could you tell the committee how much you have reinsured, with what company, and how does this reinsured total compare to OPIC's total contingent liability?

Mr. MILLS. During calendar year 1972, OPIC reinsured a total of $284 million, or approximately 12 percent of its outstanding current expropriation portfolio, with private underwriters. For calendar year 1973, the total amount of reinsurance has been increased to $410 million, or approximately 17 percent of OPIC's outstanding current expropriation portfolio. The reinsurance policy is written on a 50-percent quota share basis, with a maximum per country limitation of $14 million. This means that in approximately 80 percent of the countries in which OPIC either has expropriation coverage outstanding, or is currently offering such coverage to U.S. investors, the reinsurers will pay 50 percent of any expropriation claim judged valid by OPIC. In the remaining 20 percent of the countries, the reinsurers' percentage participations in claims payments range below 50 percent because of the size of OPIC's current exposure, but nevertheless provide a maximum commitment of $14 million per country.

The bulk of the 1973 reinsurance has been placed with syndicates of Lloyds of London. Also participating in smaller amounts, however, are 18 British insurance companies, 2 other European insurance companies, and the following 7 American insurance companies: Insurance Company of North America (Philadelphia), Liberty Mutual (Boston), Home Insurance Co. (New York), North Western National (Milwaukee), American Agricultural Insurance Co. (Indianapolis), Unionamerica Insurance Co. (Los Angeles), and Bellefonte Insurance Co. (Covington, Ky.).

Mr. PASSMAN. If I am not mistaken, you reinsured some of your exposure with the U.S.S.R.'s Black Sea and Baltic Insurance Co. Could you tell the committee how this procedure works and how it is beneficial to OPIC to operate in this manner, does the fee OPIC charge the U.S. company more than offset the fee charged by the private underwriters and when the coverage is reinsured, is OPIC completely excluded from any liability on the reinsured coverage?

Mr. MILLS. The Black Sea and Baltic Insurance Co. did participate in OPIC's 1972 reinsurance placement, but did not renew for 1973. Black Sea and Baltic is a registered British insurance company which is owned by Ingosstrakh, a U.S.S.R. state insurance agency. The reinsurance of OPIC's expropriation risks was offered on the London market as a purely commercial transaction, and Black Sea and Baltic participated on this basis.

In its reinsurance efforts, OPIC is seeking not only to reduce the amount of its own liability by means of risk sharing with the private sector, but also to multinationalize the coverage of the risks which it has assumed. In this way, a country which is considering expropriating a U.S. investment must take into account the effects its action will have not only on the United States but on other countries which are involved through reinsurance as well. For this reason, the Soviet par-

ticipation in insuring U.S. investments overseas against expropriation was particularly noteworthy and, in my opinion, quite beneficial to both the U.S. private investor and the U.S. Government.

The reinsurers receive as a fee 85 percent of the premiums paid on that portion of the current expropriation portfolio which they have reinsured. Thus, not only does the fee paid by the U.S. company more than offset the fee charged by the private underwriters, but 15 percent is left over for OPIC.

Under the terms of the reinsurance policy, OPIC retains absolute authority to determine the date of an expropriation, the existence of expropriatory action, the nature, time and liability therefor, and all other relevant factors under the insurance contract. The reinsurer simply pays his proportionate share of any claim which OPIC has judged to be valid.

As is the custom with reinsurance, however, the reinsurance contract is between OPIC and the reinsurers, while the investment insurance contract is between OPIC and the U.S. investor. Thus, the U.S. investor looks to OPIC for payment under this contract, and OPIC looks to the reinsurers for reimbursement under the reinsurance contract. Should the reinsurers default on a required payment, OPIC would still be required to pay off the investor in full. It should be pointed out, however, that in its over 300 years of operations, Lloyds of London has never defaulted on a valid claim.

INSURANCE AND GUARANTY FEES

Mr. PASSMAN. What fees do you charge for insurance and guaranties?

Mr. MILLS. I will provide that for the record.

[The information follows:]

	Current insured amount		
	Ordinary projects	Large or sensitive projects	Standby amount
Equity and other nonloan investments:			
Inconvertibility	3/10 percent per annum	3/10 percent per annum	1/4 percent per annum.
Expropriation	5/10 percent per annum	5/10 percent per annum	Do.
War, revolution, and insurrection.	do	5/10 percent per annum	Do.
Loan investments:			
Inconvertibility and expropriation.	7/10 percent per annum on outstanding balance.	9/10 percent per annum on outstanding balance.	1/2 percent per annum on amount not drawn down.
Inconvertibility and war	9/10 percent per annum on outstanding balance.	do	Do.
Inconvertibility, expropriation, and war.	1 3/10 percent per annum on outstanding balance.	1 5/10 percent per annum on outstanding balance.	Do.

Mr. MILLS. Fees for OPIC expropriation coverage may vary within 2/10 percent higher or lower than the above schedule in usual instances depending upon OPIC's evaluation of the degree of risk involved in insuring the project.

A registration fee of $100 is charged for processing applications for insurance on proposed investments of $100,000 or more; the registration fee is $50 if the proposed investment is less than $100,000.

FINANCIAL GUARANTIES

OPIC's base guaranty fee is 1¾ percent, to which is added a variable fee depending upon the risk involved in the particular project. OPIC will also attempt, when possible, to share in the future profits of a project it assists in order to further compensate for its risks.

RUSSIA AND RED CHINA

Mr. PASSMAN. Does OPIC have any possible dealings on the books or in the future with Russia or the People's Republic of China?

Mr. MILLS. No. Our statute prohibits this.

IT & T GUARANTIES

Mr. PASSMAN. As we all know, IT & T has been in the news lately in connection with the Senate hearings on multinational corporations. It has been indicated that IT & T may have tried to prevent the election of Chile's President Allende. If it was found that IT & T in fact did attempt to interfere with this election, would that void the claim that IT & T presently has pending before OPIC and what is the amount of the IT & T claim?

Mr. MILLS. The IT & T claim may go to arbitration. Outside counsel advises us that it would be inappropriate for me to comment on the IT & T claim in any way so long as the question of IT & T's rights to compensation is still undecided.

International Telephone and Telegraph Corporation Sud America, a wholly owned subsidiary of IT & T, has filed a claim with OPIC in the amount of $92,567,000.

CONTINUING RESOLUTION FUNDS

Mr. PASSMAN. On page 1 of the justifications you indicate that OPIC will not receive the $12.5 million provided in the continuing resolution for fiscal year 1973. Would you please explain to the committee why this money will not be provided to OPIC?

Mr. MILLS. That statement will be corrected, Mr. Chairman. That original submission was prepared on the basis of the situation existing when we had a continuing resolution that expired February 28. We prepared our fiscal year 1974 request on the basis of receiving at least $12.5 million for reserves in fiscal year 1973, but we did not enter it in our books because the appropriations process had not been completed. We now understand the final continuing resolution to be equivalent to a regular appropriation. These reserves remain available until expended and should now be entered on our books.

CANCELLATION OF CONTRACTS

Mr. PASSMAN. Can OPIC cancel these insurance and guaranty contracts if it was deemed desirable to reduce their exposure?

Mr. MILLS. No. It would defeat the purpose of providing reasonable long-term protection through the coverage. In general, cancellation by the Government is possible only by reason of a return on the investor's capital, fraud or material misrepresentation by the investor, nonpayment of fees, or failure by the investor to comply with specific obliga-

tions of the contract. Since about 50 percent of our coverage relates to loans, about 7 percent of the portfolio per year is automatically canceled as loan repayments occur.

STANDBY OPTIONS

Mr. PASSMAN. Does OPIC have to honor the standby options for insurance or is there language saying that additional coverage will have to be negotiated at a later time?

Mr. MILLS. OPIC is obliged to honor the standby options in existing contracts so long as the contract fee is paid by the investor. In March 1971 we increased our fees for standby coverage in new contracts from an effective earlier rate of 2/10 of 1 percent to 3/4 of 1 percent (an increase of 375 percent). About this time we also imposed new requirements reducing the amount of coverage for war and expropriation an investor can allocate to stand by in new contracts, and increasing the amount that must be carried on current. About 2/3 of the total of existing standby coverage relates to insurance for convertibility. This insurance has produced a fee income far in excess of losses over the 25 years of its existence. In general, we have retained standby coverage in our new contracts because for business reasons we believe we are receiving a fee income disproportionate to the risk assumed in writing standby coverage.

TERMS OF CONTRACTS

Mr. PASSMAN. For what period of time are these insurance policies written?

Mr. MILLS. In the past, virtually all contracts were written for a duration of 20 years. We have continued to write 20-year policies for most investments, but have shortened the term of coverage on large and/or sensitive equity investments to 12 years. Our contracts covering debt investments are being written more restrictively than in the past and usually are now no longer than the schedule of repayments. We limit debt coverage for large or sensitive projects to 12 years or less.

Mr. PASSMAN. Is the premium paid each year?

Mr. MILLS. Yes. The premium is paid in advance each year on the anniversary date of the contract.

Mr. PASSMAN. Can the policyholder terminate the policy at any time?

Mr. MILLS. Yes. The policyholder can terminate the policy at any time. Normally, this occurs on the anniversary date through nonpayment of the premium due for the following year. It may also occur because of a sale or transfer of the investment.

LOAN PROGRAM

Mr. PASSMAN. How much of the $40 million provided to the capital account by transfer from AID has now been obligated to finance loans?

Mr. MILLS. OPIC has obligated $20,165,000 of the Direct Investment Fund as of March 31, 1973, less $4,565,000 of the participations sold to U.S. financial institutions, for a net lending position of $15,600,000.

Mr. PASSMAN. Would you please list each loan that has been made in the record with the amount of the loan, a brief description of the company receiving the loan and the purpose of the loan?

Mr. MILLS. I am pleased to submit a table on this for the record.

[The information follows:]

OPIC DIRECT LOAN PORTFOLIO, AS OF MARCH 31, 1973

Name of project	Country	Description of project	Purpose of OPIC financing	Amount obligated	Less participations to U.S. financial institutions	Net OPIC lending position
Private Investment Co. of Asia	Asia (regional)	Private multinational development bank	Private sector subloans in Asia	$2,000		$2,000
Korea Capital Corp	Korea	Private venture capital	Investments in Korea	700		700
ADELA	Latin America (regional)	Private multinational development bank	Private sector subloans in Latin America	3,000		3,000
Indian Motorcycle Co	Taiwan	Motorcycle assembly	Establish new business	200		200
			Expansion	250		250
P. T. United Coconut	Indonesia	Desiccated coconut plant	Establish new business	500		500
P. T. Daralon	do	Polyester textile plant	do	1,000		1,000
Cargill Argicola, S.A	Brazil	Soybean processing facility	do	2,500	1,250	1,250
P. T. Kayan River	Indonesia	Logging/sawmill operation	Expansion	1,600		1,600
Residences Pauline, S.A	Haiti	Tourist Hotel	Establish new business	415	415	0
Olinkraft Celulose e Papel	Brazil	Paper and pulp mill	Expansion	2,500	1,500	1,000
Companhia de Papeis	do	Tissue paper mill	Establish new business	3,500	1,400	2,100
Seaboard Overseas Ltd	Liberia and Nigeria	Flour milling	do	2,000		2,000
Total				20,165	—4,565	15,600

Mr. PASSMAN. What additional loans do you have planned for the immediate future?

Mr. MILLS. We have seven loans under active negotiation involving approximately $6,500,000 of OPIC financing net of participations.

Mr. PASSMAN. What are the total amounts of loans you estimate are to be obligated in fiscal year 1973 and fiscal year 1974?

Mr. MILLS. I would estimate a net lending volume of approximately $15 million in fiscal year 1973 and approximately $15 million in fiscal year 1974.

Mr. PASSMAN. What are the terms of these loans?

Mr. MILLS. The terms will vary according to our assessment of each project, the risks involved and changing market conditions at the time of negotiation. Interest rates on our loans have varied from 7 percent to 12 percent and maturities range from as little as 6 years to as much as 15 years including an appropriate grace period.

INDIAN MOTORCYCLE LOAN

Mr. PASSMAN. Have you provided any loans to domestic corporations such as the Indian Motorcycle loan that was mentioned last year, how had the Indian Motorcycle loan worked out over the past year and has this company been able to regain some of the domestic market for motorcycles that has been dominated by foreign corporations?

Mr. MILLS. Indian Motorcycle Co. has been successful in recapturing some of the domestic U.S. motorcycle market from foreign firms. The company's sales, made in direct competition with Japanese corporations, will be approximately $3 million this year, compared to $1.7 million last year. Indian began to make progress in foreign markets during the past year with its first sales in Canada, Australia, and Panama.

The OPIC loan to Indian Motorcycle was increased from $200,000 to $450,000 during the past year, in view of its successful operations in the face of stiff Japanese competition and the need to expand its facilities in Taiwan.

OPIC financing was the major factor in enabling this small business to begin to control its own sources of production. Now that this company has gotten on its feet and established good financial performance, one of the largest private financial institutions in the United States has been attracted to lend to the project. Indian is now negotiating with this financial institution for a new infusion of capital which will replace most of the OPIC loan and will enable Indian to further expand.

Thus, the OPIC loans enabled this small company, which could not attract private funds due to its size and to the location of its manufacturing facilities in a developing country, to establish itself to the point where the private sector is ready to assume the major financing role for the company, and to recapture some of the motorcycle market for U.S. companies.

No loans have been provided to any domestic corporation other than the Indian Motorcycle Co.

CAPITAL INCREASE

Mr. PASSMAN. Will it be necessary for you to request additional authorization for capital in the near future?

Mr. MILLS. We have not requested any addition to OPIC capital for fiscal year 1974. Originally the OPIC legislation in 1969 had proposed capitalizing the corporation at $100 million, paid in over a 5-year period. However, that was reduced to $40 million over 2 years when the bill was enacted. We are not now planning any increase in OPIC's capital.

Mr. PASSMAN. Do you propose to modify your authorization through additional legislation this year?

Mr. MILLS. Yes, sir, we do.

Mr. PASSMAN. Would you please tell the committee what sort of modification you've planned?

Mr. MILLS. While the legislation has not yet been sent up and I cannot get into the specifics, generally I believe the new legislation will request among other things a 2-year extension of OPIC's authorities, and an undertaking by OPIC to attempt to put new insurance written on a self-sustaining basis.

NUMBER OF COUNTRIES OPERATING

Mr. PASSMAN. In how many countries are you presently operating programs administered by OPIC?

Mr. MILLS. OPIC programs now operate in 90 less-developed countries.

PROGRAM DESCRIPTION

Mr. PASSMAN. Would you briefly describe each program handled by OPIC?

Mr. MILLS. OPIC's programs are:

Preinvestment assistance, which includes information, counseling, and partial financial support for feasibility studies and project development, particularly for small businesses;

Investment insurance against the political risks of expropriation, currency inconvertibility, and war, revolution, or insurrection;

Financial assistance through loan guaranties which assure repayment of private U.S. loans to foreign enterprises in which there is a substantial U.S. interest and through direct loan in dollars or local currencies.

OPIC also has several special programs to serve groups with special needs. The programs provided include help to:

Small businesses (independently owned companies with assets of less than $7.5 million): OPIC will advance funds for reconnaissance surveys, feasibility or market studies, and pilot programs to assist smaller firms to identify suitable investment opportunities abroad. Approved companies also qualify for the other OPIC insurance and finance programs described earlier;

Construction firms: OPIC provides a special insurance coverage to protect U.S. contractors in developing countries against confiscation of assets, nonpayment of contracts, and other hazards. OPIC will issue a binder letter to the contractor before he bids, thereby permitting him to calculate lower bids by not having to factor in self-insurance;

Agribusiness firms: OPIC shares with the nonprofit Agribusiness Council, Inc., the cost of reconnaissance surveys and feasibility studies to help U.S. firms locate investment opportunities in processing, marketing, and storing agricultural commodities;

Cooperatives and credit unions: OPIC incentives are available to U.S. cooperatives, credit unions, foundations, and voluntary agencies that wish to foster cooperatives and credit unions in developing countries, or that want to broaden their investment portfolios;

Small Latin American borrowers: Under the experimental "productive credit guarantee program" OPIC guarantees made credit available in four Latin American countries to very low income individuals and communities that need small amounts of capital to finance local business or community projects but lack enough collateral or other requisites to obtain credit from banks.

To be eligible for OPIC insurance or finance, investment projects must be:

New projects or expansions of existing projects;

Approved by the host countries and contribute to their social and economic development;

Economically beneficial to the United States (export growth, tax revenues, job creation, or access to strategic supplies);

Financially sound (all fees and interest are at the going market rate).

LIMITATION ON LIABILITY

Mr. PASSMAN. What is the total amount of insurance and guarantees you can have outstanding at any one time?

Mr. MILLS. The maximum contingent liability outstanding at any one time pursuant to insurance issued under section 234(a) of our act is $7,500 million. The maximum contingent liability outstanding at any one time pursuant to financial guarantees issued under section 234(b) is $750 million. However, OPIC may not make any commitments to issue any guarantee which would result in a fractional reserve less than 25 percent of the maximum contingent liability then outstanding against guarantees issued or commitments made pursuant to section 234(b) or similar predecessor guarantee authority.

Mr. PASSMAN. Does this restriction apply only to OPIC and does not cover what has been issued prior to the creation of OPIC?

Mr. MILLS. The ceilings apply only to OPIC and does not cover the liabilities issued by AID, which OPIC inherited.

NET INCOME

Mr. PASSMAN. What was the net income earned by OPIC in fiscal year 1972 and what are the estimates for fiscal year 1973 and fiscal year 1974?

Mr. MILLS. The net income for fiscal year 1972 was $28,900,910. The net income, based upon our budget submission for fiscal year 1973 and fiscal year 1974 is $27,570,000 and $35,297,000, respectively.

Mr. PASSMAN. Is the net income transferred to the reserve account each year?

Mr. MILLS. A major portion of the net earnings each year is transferred by the board of directors to the reserve accounts. A small amount is left in an unallocated reserve for future allocations.

TERMINATION OF APPROPRIATED FUNDS

Mr. PASSMAN. Do you have any idea when OPIC would be able to operate without any appropriation whatsoever?

Mr. MILLS. In my prepared statement I said, "No one can state with absolute confidence that the existing portfolio can be managed at no cost to the taxpayer. Proof will have to await the expiration of some 2,000 long-term contracts which OPIC inherited." The new portfolio which OPIC is writing embodies many risk management features which we believe will put the program on a businesslike footing. If the current request for restoring funds taken from the insurance pool in the past is granted, I believe OPIC will no longer need to seek appropriations to expand reserves except in the event of wholesale confiscations, a very unlikely event, or a multicounty war effecting many insured properities simultaneously. Full faith and credit backing of the insurance is and will continue to be essential to meet this threat, however remote it may be. These comments apply to an OPIC operating in the fields of investment it now insures or guarantees.

INVESTMENT PROMOTION PROGRAMS

Mr. PASSMAN. What type of investment promotion programs are presently being carried on by OPIC?

Mr. MILLS. We are doing several things in this area. By means of brochures, speeches and calls on executives of U.S. firms, large, medium-size and small, we attempt to make U.S. investors aware of the opportunities which exist in the developing countries and the degree to which our programs of insurance and finance can make such investment feasible.

The nature of OPIC's business is such that we have acquired a great deal of experience and knowledge about LDC's. We try to pass this on the prospective U.S. investors. Counseling these firms is time consuming and takes a substantial part of our work day, but it is important; and we spend the time because investing in LDC's is a risky business and the U.S. firm should do so with maximum beforehand knowledge, care and planning.

To a limited extent, primarily in agribusiness and small business investment promotion, OPIC finances some of the costs of a private investor's investigations of project feasibility. This may be done through a loan or through a form of joint venture participation under which our original cost participation will be converted into an income producing security of a project that goes forward. In the usual case OPIC provides political risk insurance and long-term financing to such projects. In these ways OPIC earns income from the successful projects to offset costs incurred in those studies which result in a decision by the U.S. company not to carry out the project.

OPIC has special investment promotion programs for small business. These include the appointment of an OPIC Small Business Officer, who focuses OPIC's resources specifically for the benefit of smaller U.S. firms interested in LDC investment, and the inauguration of a special program of financial assistance for feasibility studies which such firms seek to carry out.

INTERNATIONAL EXECUTIVE SERVICE CORPS

Mr. PASSMAN. Would you please explain briefly OPIC's role in connection with the International Executive Service Corps and does OPIC provide any funds that would share in the cost of sending executives abroad in connection with this Executive Service Corps?

Mr. MILLS. The IESC is a private corporation based in New York City, which receives a grant from AID and, until January 1, 1973, the administration of that grant was shared by OPIC and AID. On that date the administration was fully lodged in AID at the request of the IESC, because AID was able to provide additional funding to allow the IESC to increase its annual project level.

At no time during the 2 years when OPIC administered the AID grant to the IESC were any OPIC funds used. Financial support for the IESC during the 9 years of its operations has always come from AID, private corporations and IESC's own fee structure.

CHILE

Mr. PASSMAN. Is OPIC still writing insurance for investments in Chile?

Mr. MILLS. No new insurance has been written in Chile since July, 1970. OPIC is not now writing coverage in Chile because of that Government's present policy regarding expropriation.

MAXIMUM RESERVE

Mr. PASSMAN. Do you think there is a maximum level the reserve accounts should reach and then just maintain that level?

Mr. MILLS. OPIC should have a minimum insurance reserve in the neighborhood of $200 million and 25 percent of projects guaranty portfolio in finance.

PUBLIC CONFIDENCE

Mr. PASSMAN. Do you feel public confidence in OPIC's ability to promptly pay claims needs strengthening when the full faith and credit of the U.S. backs the corporation?

Mr. MILLS. Yes, definitely. In the event the reserve fund is insufficient to meet approved claims, we must implement action through the budget authorities and obtain a congressional appropriation. The appropriation process usually takes a long time, and delays could be costly to an investor who expects prompt payment on his coverage for which he has paid substantial fees.

SIZE OF INSURANCE AND GUARANTY PROGRAMS

Mr. PASSMAN. How much insurance do you expect to write in fiscal year 1974 and how does that compare to fiscal year 1973?

Mr. MILLS. In the first 6 months of fiscal year 1973, taking the total for all three coverages, we have written $284 million of insurance, compared with $247 million in the first 6 months of fiscal year 1972, and $1,415 million written by our predecessor agency in the first six months of fiscal year 1971. Our more conservative policies and guidelines are responsible for roughly half of this decline during the past years, with the remainder attributable to reduced U.S. overseas

investment in new projects. We project an aggregate insurance volume of $600 to $700 million for fiscal year 1973, similar to the total of $671 million for fiscal year 1972, with an increase to $900 million in fiscal year 1974 likely as a number of heretofore postponed projects are implemented.

Mr. PASSMAN. Please provide the same information for the guaranty program.

Mr. MILLS. I would estimate OPIC will issue approximately $25 million in guaranties in fiscal year 1973 and $50 to $75 million in fiscal year 1974.

PERSONNEL

Mr. PASSMAN. What will be the total number of people you estimate to have on board in fiscal year 1974 and how does this compare to fiscal year 1973?

Mr. MILLS. In June 1972 the Corporation had a total of 139 employees including full-time and temporary employees as well as intermittent employees such as the Board of Directors and consultants. We will probably have a total of about 136 employees on board in June 1973, and we anticipate the same number in June 1974.

Mr. PASSMAN. In your justifications, you indicate that claims review and settlement costs should peak in fiscal year 1973 and decrease in fiscal year 1974. Could you tell the committee why this is the case?

Mr. MILLS. The administrative budget for fiscal year 1974 represents a decrease of $461,000 over fiscal year 1973. This decrease comes largely from a reduction in outside legal and other professional costs related to claims investigation, particularly with respect to Chile claims.

REORGANIZATION

Mr. PASSMAN. You indicate that through reorganization you have been able to operate with a full-time staff which has averaged slightly less than 130 persons. Could you tell the committee the nature of this reorganization?

Mr. MILLS. The nature of the reorganization that has enabled us to operate on less than 130 full-time employees has been mostly in the form of consolidation of some of our functions under fewer managers. For example, earlier last year, the Finance and Insurance Departments were each organized into four different divisions, that is, East Asia, Near East/South Asia, Latin America, and Africa. In the Insurance Department we combined Latin America and Africa into one division and East Asia and Near East/South Asia into a second division. A similar reorganization was conducted in the Finance Department. The result was that it gave management more flexibility in staff assignments and permitted our staff members to be more effectively utilized. We also found that we could operate more efficiently with fewer managers and secretaries in each department under the new organizational arrangement.

Reorganization throughout the rest of the Corporation is more of a continuing position-by-position review. We have not rushed to fill positions as they have been vacated but, rather, have reviewed the utility of the vacated position with an eye toward redistributing the duties among occupied positions.

By exercising this kind of position management, we have not only stopped a staff expansion for the Corporation but actually have managed to decrease the number of employees over the past year. However, I do not anticipate any further reductions with the maintenance of our present program responsibilities.

INTEREST ON U.S. OBLIGATIONS

Mr. PASSMAN. In your income statement you indicate that you will earn $6,875,000 interest on U.S. obligations in fiscal year 1974. Could you tell the committee what sort of obligations you hold?

Mr. MILLS. U.S. obligations held by OPIC consist of U.S. Treasury bills and notes. A majority of the holdings are in Treasury bills, maturing within 3, 6, 8, and 12 months. Notes mature within 2 to 3 years.

TRAVEL EXPENSE

Mr. PASSMAN. In your administrative expenses you list $351,000 for travel and transportation costs for fiscal year 1974. Would you please explain to the committee why you need such a large amount of this purpose?

Mr. MILLS. OPIC's enabling legislation does not permit it to establish overseas offices. As a result, OPIC must send its project officers and claims attorneys to the countries to evaluate project proposals, to monitor project performance, and to investigate and negotiate claims. Travel expenses are expected to peak in fiscal year 1973 as claims investigations in Chile are completed. The travel estimate for fiscal year 1974 is somewhat less than for fiscal year 1973.

CAPITAL INVESTMENT

Mr. PASSMAN. In footnote A of the balance sheet you indicate that appropriated capital for direct investments may not be invested. I assume this is a restriction placed in the authorization, is that correct?

If so, have you given any thought to amending this authorization to allow you to invest these funds?

Mr. MILLS. Yes, OPIC's legislation only permits it to invest earned income in U.S. Treasury securities but not its appropriated funds. The appropriated capital may be invested only in overseas projects.

That is not in our present legislative proposals, but I think your idea has considerable merit. I certainly believe that the Corporation should have authority to hold its idle capital in income earning accounts as any prudent business does.

Mr. PASSMAN. Mr. Shriver.

COOLEY LOANS

Mr. SHRIVER. Thank you, Mr. Chairman. These loans we were talking about a little while ago, are those the same as the old Cooley loan program?

Mr. MILLS. No, the Cooley loan programs are in local currencies in a limited number of countries to U.S. businesses.

Mr. SHRIVER. Do you still administer the Cooley loan program?

Mr. MILLS. Yes, we do.

Mr. SHRIVER. Have you had any new Cooley loans this last year?

Mr. MILLS. We are practically out of the new lending business, Congressman. No loans in fiscal year 1973.

Mr. SHRIVER. So the chart as shown on page 612 of the hearings of last year would be the last loans and would represent the present status of them.

Mr. MILLS. That is approximately correct. There were some loans made in fiscal year 1972, but there has been really very little change. We have some loans which were in trouble that we have gotten in good shape. The program is proceeding quite well as a matter of fact. Our loss ratio is less than 3 percent on that whole portfolio.

FUNDS TRANSFERRED TO THE HOUSING GUARANTY PROGRAM

Mr. SHRIVER. From your previous testimony you referred to $50 million which was transferred to the AID housing guaranty program by the Foreign Assistance Act.

Mr. MILLS. Correct.

Mr. SHRIVER. Why haven't you gone to the authorizing committee and requested that this money be returned to you from the housing guaranty program, instead of using new money out of the Treasury?

Mr. MILLS. We have just simply not appeared recently before the House or the Senate authorizing committees. We expect we will be coming up this year for additional extension of our authority. We will be appearing and at that time we may do this.

Mr. SHRIVER. My question is, Why should it come from the General Treasury when the request is in direct competition with all of the domestic demands for health, welfare, and education, where cuts are now being made? Our other subcommittees are hearing requests for reductions in expenditures for domestic programs in 1974.

Mr. MILLS. It was the administration's decision to do it this way because it feels that funds taken away must be restored to the reserve by appropriation.

Mr. MAYS. I can add to that. We have assumed if authorizing action was taken there would still have to be an appropriation for the Latin American housing guaranty reserve.

Mr. MILLS. The net effect is the same.

Mr. SHRIVER. Except it looks worse from the appropriating standpoint at a time when we have the problem of a huge deficit.

YUGOSLAVIA AND ROMANIA

Part of your role is to facilitate the use of private investment for the economic development of poor or underdeveloped countries, is that correct?

Mr. MILLS. That is correct.

Mr. SHRIVER. You have been underwriting U.S. firms' investments in Yugoslavia and Romania, have you not?

Mr. MILLS. Not yet. We are about to sign a treaty with Romania and we have just signed a treaty with Yugoslavia, but we have not made any commitments have we, Joe?

Mr. PRICE. No, there has been some interest expressed and applications filed, but no policies executed.

Mr. SHRIVER. Do you consider those countries underdeveloped?

Mr. MILLS. They were so designated by the President and it was approved by Congress.

Mr. PRICE. An amendment was added to the legislation that included those two countries.

Mr. MILLS. This is part of the East-West rapprochement.

Mr. SHRIVER. This was approved by Congress.

Mr. MILLS. It was a special request that the President made, and it was sent to Congress and approved last year.

Mr. MAYS. Voted on by both Houses.

Mr. SHRIVER. Are you intending to do the same for the Soviet Union?

Mr. MILLS. We have no intention at this time at all. We have no Presidential request. From what I know there is nothing being considered at this time, Congressman.

COMMON MARKET COMPETITION

Mr. SHRIVER. You mentioned the competition from similar agencies in other developed countries. The Common Market has organized something called OPIG—the Office for Private Investment Guaranty. Tell us about that organization.

Mr. MILLS. The EEC scheme. This is the German scheme?

Mr. SHRIVER. No, the Common Market scheme.

Mr. MILLS. Mr. Price will respond to that.

Mr. PRICE. This is designed to be just exactly like OPIC, the German and Dutch programs and the others except it is to serve the Common Market generally. It is a proposal that has been made. It is interesting the rationale behind the proposal is not for development purposes, but to make the European Common Market more competitive with its other competitors unnamed but presumably the United States and Japan. I think it is just another indication that these programs, particularly the insurance protection, are considered by the industrialized countries as means of competing for world markets and for world sales, and the Common Market has recognized this in their proposal.

Mr. SHRIVER. They are interested in the insurance feature, not the lending feature, I assume.

Mr. MILLS. It is strictly insurance, that is correct.

Mr. SHRIVER. Concerning this competition which you mentioned on page 12 of your statement, you point out the lower insurance fees charged by all the other countries' agencies. Are you recommending a lowering of your insurance fees?

Mr. MILLS. No, we are suggesting that other agencies raise their fees because they are openly subsidized. The other nations openly acknowledge this. The chairman said, Why are we in trouble? One of the reasons we are in trouble is because the other nations say their insurance fees will be one-half of 1 percent and I have to be as self-sufficient as possible. I believe in it. I believe that is the way we should operate but I am also saying every American businessman going abroad, when he goes into Brazil he has a 1-percent charge over and above the Japanese. So the Japanese just say, "We are going to do better." This is our problem. That is why these other nations who openly subsidize and openly help their businesses are getting the exports, because they are getting the markets. They are getting in these investments.

Mr. SHRIVER. I yield to the chairman. I had to get that in the record, Mr. Chairman.

Mr. PASSMAN. Let's get this in the record also. Our net disbursements on foreign aid and assistance since it started after World War II, now is about $250 billion. Do you think that has anything to do with it?

Mr. MILLS. I do, Mr. Chairman, but it is government to government.

Mr. PASSMAN. You and I know all this tremendous expenditure has to be billed into our economy and it certainly created inflation. We have priced ourselves out of the world market on account of our extravagance. You don't quarrel with that, do you?

Mr. MILLS. What I quarrel with is the differentiation—government to government is one thing, but OPIC is involved in the private sector, and that is completely different.

Mr. PASSMAN. You didn't answer my question. Our extravagance has priced us out of world markets in many fields, has it not?

Mr. MILLS. We have priced ourselves out of world markets.

Mr. PASSMAN. I can't ask for any better answer. Thank you, Mr. Mills, and thank you, Mr. Shriver, for yielding.

PARTICIPATION OF COMMUNIST COMPANY

Mr. SHRIVER. I believe the Washington Post reported last April part of your insurance written to protect U.S. investment in developing nations had been underwritten by the Black Sea and Baltic Insurance Co., a subsidiary of the state insurance agency of the Soviet Union. Could you tell us about that?

Mr. MILLS. It was reinsured. Mr. Price will explain.

Mr. PRICE. In our reinsurance efforts, one of our purposes has been to multinationalize our risk, so when we go to a country that is planning expropriation and we sit down to negotiate with them, we say this involves not only OPIC's money, but moneys of a British or Italian or other insurance company as well.

In effect, the Russian insurance company was insuring during 1972 U.S. investments all over the world, including Vietnam, against expropriation. This was an additional leverage for us in our negotiations. We would like to further this effort to get other national schemes involved—the French, the British, the Germans—so that we all stand together when negotiating with countries threatening expropriation. We can say this affects all, not just one of us.

Mr. MILLS. We have a major effort now underway to have all the other national schemes joined together in some sort of multinational arrangement so we can start sharing our experience together, as well as discuss risk sharing.

[Discussion off the record.]

Mr. MILLS. I think it leads to a better understanding of the problem. Norway has just been expropriated in Zambia. It tells us about their experience and what some of the problems may be.

Mr. PASSMAN. If we can't handle it bilaterally, you can't handle it multilaterally. The record shows that.

Mr. MILLER. If the gentleman would yield, I would like to hear a little more about Russia reinsuring our loans in South Vietnam. Would you elaborate on that. I am sure I heard that.

Mr. PRICE. Not loans, Congressman. The reinsurance policy was sold on the London market as a straight commercial arrangement, and to the best of our knowledge the agent who made the deal for the Soviet Government entered into it on that basis. In effect, however, he was signing an agreement which reinsured OPIC's expropriation insurance contracts worldwide except Chile. Since we do have a couple of projects outstanding in Vietnam——

Mr. MILLS. It meant it would have been theoretically possible. We didn't have any claims, so it didn't occur. It was also in Israel and Pakistan. We have 90 countries.

Mr. PRICE. A very interesting speech was made on the floor of the Chilean Congress in which a Senator chided President Allende's party about the Soviet Union signing up to reinsure the U.S. investors overseas.

Mr. PASSMAN. Will the gentleman yield?

You mean that the Russians in effect have gone out and created unrest among U.S. investments that we guaranteed, and now they are placing their guarantee to those countries to cover our investments?

Mr. MILLS. If we had had an expropriation claim and we paid it——

Mr. PASSMAN. Now the Russians are guaranteeing a second guarantee.

Mr. PRICE. No. If we had to pay $100 claims, they would have to pay a certain percent of that.

Mr. PASSMAN. But it is the same thing. They are placing their guarantee on top of ours, are they not?

Mr. MILLS. Behind ours.

Mr. PASSMAN. If we default, then they come in and pay it?

Mr. MILLS. No. If we pay, they pay.

Mr. MILLER. Their share?

Mr. MILLS. They pay their share.

Mr. PRICE. Only on the insurance.

Mr. YATES. This is coinsurance, isn't it?

Mr. MILLS. Reinsurance. This is what we have done with Lloyds of London. Up until 2 years ago, the U.S. Government took 100 percent of the risk. Now we are sharing it with private insurers in other nations.

Mr. PASSMAN. With Russia?

Mr. YATES. Will the chairman yield? As I understand what you did, you reinsured with Lloyds, and Lloyds in turn reinsured with Russia. Is that what happened?

Mr. PRICE. Their company was a participant along with a number of other syndicates and insurance companies in the reinsurance placement.

Mr. YATES. Lloyds was?

Mr. PRICE. The Black Sea & Baltic Co.

Mr. YATES. But the United States reinsured with Lloyds of London.

Mr. MILLS. Correct.

Mr. YATES. And your interest in it stopped there. Lloyds of London then reinsured, didn't it?

Mr. PRICE. I think more accurately you could say we reinsured in the London insurance market. Included in that market were Lloyds syndicates, British insurance companies and the Black Sea & Baltic which operates as a British insurance company. The Black Sea &

Baltic is a British insurance company wholly owned by Ingerstok which is a Soviet insurance agency.

Mr. YATES. They took our portion of the insurance offered on the London market.

Mr. PRICE. They took a portion of the complete placement.

Mr. MAYS. If I could add to that this was a relatively small portion. If Lloyds had had to pay a $7 million loss I think Black Sea and Baltic's portion would not have exceeded $15,000.

Mr. PRICE. Per country.

Mr. MAYS. This was only in the first year and they are not on the risk this year I don't believe, are they, or do you know?

Mr. PRICE. That is right. They decided through orders to the London company not to renew in 1973.

Mr. PASSMAN. If the gentleman will yield further, we are not involved in this directly?

Mr. MILLS. No.

Mr. PASSMAN. This is just something that happens over which you have no control, is that correct?

Mr. MILLS. We were very fascinated that they took our reinsurance.

Mr. PASSMAN. I am fascinated too, but that has nothing to do with our responsibility. You had no part of the negotiation about this reinsurance with Lloyds, did you?

Mr. MILLS. The broker did, didn't he?

Mr. PRICE. That is right.

Mr. PASSMAN. What?

Mr. MILLS. The agent who put it together at Lloyds.

Mr. PASSMAN. But as far as OPIC's concern this is completely removed from your operation, is it not?

Mr. MILLS. The reinsurance is, yes.

Mr. PASSMAN. The reinsurance feature of it, that is what we are talking about. You can't stop Lloyds from placing the insurance with anyone they want to, can you? You have no choice and it is in no way multinational, is that right?

Mr. MILLS. No way multilateral.

Mr. PRICE. The important thing is that we make all of the decisions with respect to the policy, the claims payment if a payment is to be made, how much is to be paid. Then if we make a decision that we owe $100 the reinsurance kicks in automatically and pays $50 of that.

Mr. PASSMAN. Then you have to be involved with these contracts that the Russians have participated in?

Mr. MILLER. If the chairman will yield, I also believe that you would necessarily be involved. You could not sell that insurance or that reinsurance to the countries if they did not want to buy it. They must have had some reason for purchasing, and in purchasing they in turn would know the limitations in the contract that you have made.

Mr. PRICE. Let me say our statute says we are required to make every effort to share and spread our risk. In following the congressional directive to do that and trying to operate this as a business as I indicated earlier——

Mr. MILLER. You are not going to sell it to me unless I know what is in the contract.

Mr. PRICE. In effect you get one or two underwriters in the London market who are familiar with this kind of risk and you go through the

contract with them. They understand it and become leaders in the syndicate and then others will follow. In the first year we sold reinsurance approximating around $270 million. In other words, we sold out of our risk $278 million that Lloyds would have to assume. This year it is up to $410 million, so that as I indicated earlier, in 80 percent of these countries whenever we pay a claim, rather than the OPIC reserves or the U.S. taxpayers having to pay 100 percent of that claim, these reinsurers will have to pay 50 percent and we will have to pay 50 percent. It is an effort really to reduce our risk and spread the risk.

Mr. MILLER. I know what it is on the reinsurance, but it is hard for me to believe that anybody would buy part of that insurance, and that is what they are doing. They are going to be backing you up.

Mr. PRICE. That is right.

Mr. MILLER. Paying 10, 30 or 50 percent, whatever it may be.

Mr. PRICE. That is right.

Mr. MILLER. But they surely will know what risk they are moving into at the time.

Mr. PRICE. This in effect is the test of the marketplace. A lot has been said about these countries being so dangerous that OPIC would lose all its money. If you look at the history of this program over the last 20 years, there have been two major catastrophes, Cuba and Chile. We didn't have any contracts outstanding in Cuba. Unfortunately when OPIC took over this program 2 years ago we were faced with a catastrophe in Chile. But basically there have not been mass expropriations and this is the basis on which Lloyds makes its judgment commercially in the marketplace to take a piece of this risk.

Mr. MILLS. For instance, we told you about potential claims in Bolivia when we were here last year. We have solved Bolivia without any cost to the American taxpayer which I think is a very important thing that we have been able to accomplish.

FEES PAID TO LLOYDS OF LONDON

Mr. PASSMAN. In effect you do then give a part of your premiums to Lloyds.

Mr. MILLS. To Lloyds, we do, sir.

Mr. PASSMAN. Will you place in the record the total premiums that you collected in 1972 on insurance, and what part of it you sold to Lloyds of London. Who are really agents for thousands of insurance companies.

Mr. MILLS. We certainly will.

[The information follows:]

INSURANCE PREMIUMS COLLECTED AND REINSURANCE PREMIUMS PAID BY OPIC

The total reinsurance premiums paid by OPIC during calendar year 1972 were about $1,143,258. The total premiums paid to OPIC for expropriation insurance in fiscal year 1972 were $12,021,810.79. Premiums paid to OPIC for inconvertibility and war risk insurance are not included because no reinsurance is in force on these two types of insurance coverage. Premiums paid to OPIC are computed on a fiscal year basis, while the reinsurance contracts became effective and operate on a calendar year basis.

Mr. SHRIVER. I yield to Mr. Yates.

Mr. YATES. That was my question. Inasmuch as they reinsure what portion of the premium which you receive do you pay to Lloyds?

Mr. MILLS. Eighty-five percent of that premium. We make a 15 percent administrative charge.

Mr. PRICE. In other words, on that portion of the portfolio for which they accept liability, they receive 85 percent of the premiums attributable to that portion. We get the other 15 percent. We estimate that our administrative costs on the insurance side don't exceed 7 percent of premium income so the other 8 percent is really profit to us on those contracts.

Mr. PASSMAN. The country on which you had the most insurance and faced the largest loss was excluded?

Mr. MILLS. We excluded because it had already been negotiated and claims filed.

Mr. PASSMAN. You could save money if you let Lloyds of London buy part of it.

Mr. MILLS. If they had been on it 10 years ago.

SYSTEM OF REINSURANCE

Mr. MILLER. I understood Mr. Yates asked a question as to whether Lloyds had purchased and then they reinsured. That would be the third time around. I understood you people to say no, that did not happen, that you sold it out on the market, which would mean you would sell to the Russian-owned company directly. Is that correct? That is what I understood the answer to Mr. Yates' questions to be.

Mr. PRICE. We told the broker, and you have to approach Lloyds' underwriter through a broker, who handled the placement in London, that we would like to get up to $10 million per country the first time around. We would like to sell that much per country of our expropriation portfolio.

Mr. MILLER. Were you thinking of Russia?

Mr. PRICE. We just said, we would like to sell as much as we can in the United States and we would like you to sell as much as you can worldwide as long as the purchasers have good credit ratings.

Mr. MILLS. You get a list of 50 companies.

Mr. PRICE. We went first to Lloyds and they took the bulk of it. Then we went to British insurance companies and included in the British insurance companies that were approached and which took a portion of the reinsurance was the Black Sea and Baltic, a British insuranace company wholly owned by Ingerstok.

Mr. PASSMAN. You actually have a broker selling this insurance, You receive about 15 percent from this insurance which is sold?

Mr. MILLS. On that portion.

Mr. PASSMAN. It would appear to me you have a system there where about three different levels are making a profit. You are talking yourself out of business and I like that approach.

Mr. MILLS. This is what we were asked by Congress to investigate, Mr. Chairman.

Mr. PASSMAN. It looks to me like you could fold up at the end of this year because you have already made a record that of all the insurance you write the brokers or Lloyds have taken a large portion. You ought to get out of the picture and return to whatever business you were in before.

Mr. MILLS. In the last line of our authority it says we shall make a report to Congress by March of next year on how we could sell all or a portion of this to the private sector. I am not certain that we can at this time. I do not think the U.S. Government ever can get out wholly, but what I have tried to do in the last 2 years is to see whether there is a market privately. We now have determined there is a market for some of the risks.

Mr. PASSMAN. For 85 percent of the total?

Mr. MILLS. No, we have established that there is a market for $14 million in every country we are in. The major risks, such as a bauxite mine involving hundreds of millions of dollars, will still have to be covered by the U.S. Government. But I think the smaller risks can be worked out on a commercial basis. We were told it was impossible when we came here 2 years ago. What we are trying to prove is that it is possible and that a portion of the risk can be transferred to the private sector.

Mr. PASSMAN. The private sector covered a lot of this actually before we got into the business for many, many years.

Mr. MILLS. Not of expropriation.

Mr. PASSMAN. There have been different types of insurance I guess depending on the country and the company you were dealing with, but almost every type of insurance had been sold prior to the creation of this spigot under AID.

Mr. MILLS. If you will remember, what was it, the Federal housing loan thing started as all Government, then went to semi-Government-private and has now moved to private.

EFFECTS ON BALANCE OF PAYMENTS

Mr. SHRIVER. Tell us more about the balance-of-payments effects of your operations. You might furnish something for the record showing what goes out and what comes in under your various programs.

Mr. MILLS. We have analyzed a sampling of our portfolio and have commissioned a more general study of the U.S. balance-of-payments effects of U.S. investment in the less-developed countries. Both indicate positive U.S. effects on the balance-of-payments accounts.

As I indicated to Congressman Passman earlier, the recently completed study by Harbridge House of 20 mature operating investments assisted by OPIC's predecessor, AID, indicates substantial net benefits to the U.S. balance of payments both in dividend, interest, and fee returns to the United States and increased U.S. exports of equipment and supplies directly resulting from construction and operation of these projects.

Data and studies relating to foreign investment in general in the developing nations also show a similar positive impact on the U.S. balance of payments. The Harvard Business School, in its study of the effects of multinational corporations and their impact on U.S. trade, concluded that U.S. investment in manufacturing projects in the developing nations resulted in a net benefit to the U.S. balance of payments of $800 million in 1970.

Department of Commerce statistics similarly indicate that the capital accounts impact of U.S. private foreign investment transactions with the developing nations, even when the petroleum industry is excluded from consideration, has been positive in past years. Com-

paring dividends, interest, royalties, debt repayments, and other inflows against direct investment and other outflows, the U.S. balance-of-payments capital account (not counting trade impact) benefited by approximately $600 million in 1970 and $390 million in 1971. If the petroleum industry statistics were included, the positive impact would be much greater.

EFFECTS ON U.S. EMPLOYMENT

Mr. SHRIVER. Much of the criticism of OPIC we heard on the House floor last year stemmed from the allegations that your programs are responsible for "exporting" U.S. jobs. We need concrete figures on this, not just the theory that U.S. jobs are also created.

Mr. MILLS. OPIC is selective in encouraging only those investments which are beneficial to U.S. employment as well as our balance of payments and the development of the host country. OPIC's eligibility criteria, which I mentioned earlier, are strictly enforced, and the effect of these policies is readily apparent in the actual results of OPIC's operations. In fiscal years 1972 and 1973 (through mid-March), OPIC issued insurance covering 117 projects with a proposed investment of approximately $267.6 million. These projects and the capital to be invested increased and will continue to increase employment in our exporting industries and home office and other operations of the investing corporations. There is no offsetting loss of U.S. jobs in the case of mineral extraction, local service operations, and manufacturing to serve local or regional markets that cannot be reached competitively from a U.S.-production base. OPIC does not encourage projects that will cause a shutdown of U.S. employment.

The 1972–73 projects and the amounts to be invested in them include: 16 banking, finance, insurance, and leasing operations ($29 million); 10 wood, wood products, paper and paper products investments ($15 million); 4 mining projects ($45 million); 5 investments in oil refineries, tank farms, tanker ships, and helicopter rental operations ($56 million); 6 hotels, lodges, and shopping center development ($8 million); 8 cattle ranches, poultry farms, coconut processing facilities, grain elevators, and other agricultural operations ($4 million); 4 cement plants ($8 million); 4 contracts to construct major facilities such as hydroelectric dams ($8 million); 1 satellite receiving station ($6 million); 3 plants to make small dry cell batteries ($3 million); 3 razor blade manufacturing plants ($1 million); 7 facilities to produce simple yarns and textiles ($9 million); 3 plants to assemble automobiles and tractors or recondition buses ($4 million); 3 facilities to produce glass products ($8 million); 3 pharmaceutical plants ($6 million); 6 plants to produce chemicals, petrochemicals, inks, dyes, and pesticides ($13 million); and 2 plants producing telephone equipment, cables and wires ($2 million). Other generally smaller projects which could be included in this list include a sales/service operation for U.S.-made business machines, a block ice production facility, a plant producing hand tools, and animal feed supply operations.

Again, only a comparatively few of the projects which OPIC has assisted are even in general fields of operations which might be considered as possibly having some negative impact on U.S. employment. However, all these projects passed OPIC's screening processes and we are confident that their overall impact will be a substantial boost to our domestic employment or balance of payments.

SIZE OF INVESTMENTS INSURED

Mr. SHRIVER. I am interested in the "pie" that you show on page 4 of your statement—almost half of your investment insurance transactions in 1972 were for investments of less than $500,000. Eighty percent of these investments were for less than $2 million. You may be suffering unduly from the press accounts of the ITT and Kennecott transactions, which were insured before the present organization of OPIC, I believe. Provide for the record several examples of the 80 percent of your transactions below the $2 million level. You might want to comment further on this.

Mr. MILLS. Here is a 6-month sample of investments insured in 1972 in which the investment was les than $2 million. In 13 of these cases the investment was below $500,000.

[The information follows:]

EXAMPLES OF SMALL INVESTMENTS INSURED BY OPIC BETWEEN MAY-NOVEMBER 1972

Investor	Project description	Country	(Thousands) Insured investment	Contract date
Arbor Acres Farm, Inc	Construction/operation of a poultry farm.	Thailand	100	November 1972.
Fonville Enterprises, Inc	Operation of a cattle ranch	Kenya	248	Do.
Maren-San Hair Fashions Ltd., U.S.A.	Establishment of a plant in Korea's Masan Free Export Zone for the manufacture of human and synthetic hair products.	Korea	50	Do.
Courtland E. Parfet	Cattle ranching	Kenya	194	October 1972.
Bayorient Holding Corp	Expansion of a financing operation which makes loans and equity investments in manufacturing and other business.	Korea	300	Do.
Ro-Search, Inc	Technological assistance for expansion of a plant to manufacture/sell for local consumption injected molded welt footwear known as "Wellco Welt" or "Injection Process 82" footwear.	Dominican Republic.	470	Do.
Inmont Corp	Expansion of a plant to manufacture printing ink industrial finishes and textile color.	Indonesia	132	September 1972.
Rosemary Mortellaro	Establishment of a cattle ranch for the production/sale of cattle.	Panama	80	Do.
Tandy Corp	Establishment/operation of a plant to assemble/manufacture electronic and acoustic equipment not produced in the United States.	Korea	500	August 1972.
Halcon International, Inc	Construct a plant to produce ethylene oxide and derivatives.	Brazil	840	June 1972.
Gentrex, Inc	Construct/operate a desiccated coconut plant.	Indonesia	125	Do.
United Coconut Corp	do	do	150	Do.
Sao Paulo Hotel Ltd	Construct/operate a hotel and 2 restaurants.	Brazil	300	Do.
McNeil Corp	Manufacture of tire vulcanizing equipment and other rubber processing machinery for sale.	India	575	Do.
Morgan Guaranty International Finance Corp.	Commercial bank (expansion)	Gabon	41	Do.
Earl G. Thompson	Manufacture/distribute block cubed and crushed ice and ice chests and ice boxes.	Ghana	50	May 1972.

INFORMATION PROGRAMS

Mr. SHRIVER. What kind of information programs do you have to inform small- and medium-sized businessmen of your programs? How much do you spend on this?

Mr. MILLS. We revised the small business program in September of last year to improve our preinvestment survey assistance and to allocate direct loan funds for smaller firms. At that time we distributed widely the attached press release.

[The information follows:]

WASHINGTON, D.C., Sept. 14—The Overseas Private Investment Corporation has launched a new incentive program designed to provide U.S. small business with a practical means for funding and analyzing new investment or export opportunities in less developed countries.

Under the plan, OPIC will advance reconnaissance and feasibility survey funds to qualified companies for the financing of project or market development studies. A portion of the repayment of these funds can be applied to the cost of insuring or financing the investment once the decision to go ahead has been made.

To qualify for the program, a company must demonstrate its capability for successful operation in the country and field of activity selected. Its assets may not exceed $7.5 million, and its net worth cannot be more than $2.5 million. It must be independently owned and, if in manufacturing, have no more than 1,500 employees.

To a company making a reconnaissance survey, OPIC will advance 75 percent of the cost up to a maximum of $4,000. If the company then proceeds with investment in the opportunity under study, OPIC will credit one-half of the repayment against the cost of any OPIC insurance or long-term financing of the project.

For detailed feasibility or marketing studies, or the establishment of a pilot operation, OPIC will advance up to 75 percent of the cost, not to exceed $20,000. To participate in this phase of the program, investors must provide an approximate budget and study plan.

Reconnaissance and feasibility study advances can be consolidated and repaid to OPIC in one of two ways. Seventy-five percent of the total obligation can be repaid in one installment at five percent interest within two years after initiation of the project, or 100 percent of the advance can be assumed as an obligation of the foreign enterprise in which the U.S. company invested. In the latter case, the full amount is to be repaid at 5 percent interest within 2 years. However, if the project receives OPIC loan financing, 25 percent of the repayment obligation on the study advances will be waived.

Charles Clarke, OPIC's small business officer, said, "The new program will provide both greater incentive and more practical means for American small business to generate commerce and earnings in new markets in the developing countries which represent the great potential of the future. Already these countries, as a whole have greater markets than the United States."

Mr. MILLS. In January of this year, we revised our small business brochure and sent it to some 5,000 publicly held corporations deemed by the Small Business Administration to be involved in small business activities in this country. In addition, the brochure was sent to all Members of Congress with a letter suggesting that they forward the information contained therein to their constituents. The small business brochure, as well as other OPIC documents, has been made available to regional Commerce Department field offices. These small business documents continue to be most popular among the public.

Since August of 1971, approximately 25,000 copies of OPIC brochures and papers on small business services have been distributed. To date the cost for these brochures has run about $2,500. The cost of this distribution and the press release announcing the new program has been about $1,000.

OPIC's small business officer dedicates as much of his working time as necessary to assist small business applicants.

PRODUCTIVE CREDIT GUARANTY PROGRAM

Mr. SHRIVER. You administer an experimental program in Latin America called the productive credit guaranty program. You say on page 5 this program helps to determine the effect of Latin American government guaranties of private bank lending to poor people for farming and business development. This sounds very much like a foreign aid program. How does it differ from activities carried out for years by the Agency for International Development?

This program doesn't agree with your statement on the top of page 20.

Mr. MILLS. This program was lodged in OPIC by decision of its congressional sponsors. It is a foreign-aid type program. Congress has directed OPIC to carry out an experimental credit program in Latin America to determine if host country private lenders could be motivated to make loans to people marginal to their credit systems if OPIC provides a partial guaranty of collection. If successful, the governments of the pilot countries would be encouraged to make a loan guaranty program a regular feature of their own system of credit for low-income people, without further involvement by a U.S. Government agency.

RESERVES ON HAND

Mr. SHRIVER. On page 2 of the justifications you say you have issued guaranties of $125 million against your reserve of $126 million to companies expropriated in Chile and Bolivia. On page 7 of your statement you say there are claims of $113.7 million on which OPIC has not determined liability. Using those figures, this appropriation request is not enough, is it, to cover your potential liabilities on these claims? The figures on page 2 of the justifications do not agree with those on page 16 of your statement. Would you comment?

Mr. MILLS. The $125 million figure in the original justifications includes interest which would accumulate if all installments were defaulted. At this point I am putting the situation this way: of the $125 million, $96.1 million represent contingent liabilities that have a maturity schedule. If the host governments pay their obligations, then OPIC will not need to pay the investors. If they fail, then OPIC meets each payment as it falls due, not the lump sum amount. As to the $113.7 million of claims not yet determined, we cannot say at this time how much would be approved and fall due in the next year.

The appropriation request is not justified by OPIC's need to meet these immediate claims. Rather, it is to restore to the pool of premium payments the funds that should have been kept in this pool but which, instead, were transferred to the AID housing guaranty program when OPIC was created, plus interest on this income over the history of the program which was kept by the U.S. Treasury.

INVESTMENT IN SOUTH VIETNAM

Mr. SHRIVER. Has interest in your programs increased in regard to investment in South Vietnam since the cease-fire?

Mr. MILLS. Yes, interest in OPIC investment insurance in South Vietnam has increased since announcement of the cease-fire. Investors have expressed interest in such projects as refining, fertilizer production, medical laboratories, fishing and food processing, small manufacturing, resources development, and manpower training. The investors inquiring have made clear that the availability of political risk insurance will be a precondition for investment.

Mr. SHRIVER. You conclude by saying you are consulting with policymaking departments about OPIC's role in meeting our country's foreign trade and investment needs, including reliable, long-term sources of raw materials. I have read that this is the major purpose of the Common Market's efforts in this area. Would you tell us about these consultations and what you see as OPIC's role?

Mr. MILLS. OPIC programs have been a major factor in raw materials investments in the LDC's, particularly bauxite, nickel, and copper. It is true that the Japanese and French have announced special programs to encourage their investing companies to seek out and develop foreign sources of raw materials. For instance, the Japanese program includes preinvestment assistance and long-term, low-interest loans to help finance mining ventures. We are discussing with other departments and the National Materials Policy Commission the extent to which potential U.S. investors in both hard and soft minerals should be encouraged or guided by OPIC programs, given the future U.S. need for raw materials and sources of supply.

Mr. PASSMAN. Dr. Long.

COMMUNITY AND BUSINESS DEVELOPMENT

Mr. LONG. In your statement on page 5, you mention that this program will try to expand credit to poor people for farming and business development. Do you equate community development and business development?

Mr. MILLS. We interpret section 240 to include two objectives; i.e., to channel credit to productive business enterprises and to channel credit to community improvement projects. In either case a project would not be able to obtain capital on reasonable terms without our guaranty. Eligible community development projects might improve health, education, and welfare services and/or provide local infrastructure such as water, sewage disposal, feeder roads, bridges, and power. Business development is enhanced through these projects by maintaining and improving essential human resources and by providing local infrastructure basic to economic development. However, business development projects directly finance a private Latin American farmer or very small businessman to undertake a capital or operating improvement. We view community and business development as complementary.

Mr. LONG. In what five Latin American countries is this program going on and what is the progress to date overall and in each of the five countries?

Mr. MILLS. I have a statistical summary showing results of a general nature and country by country, which I would like to submit.

[The information follows:]

ATTACHMENT 2

PRODUCTIVE CREDIT GUARANTY PROGRAM QUARTERLY STATISTICAL SUMMARY AS OF DEC. 31, 1972

	Yearly cumulative		Quarterly		Percent change	
	Last year	This year	Last quarter	This quarter	Yearly	Quarter
1. Lenders authorized	8	14	2	0	75	−∞
2. Portfolio authorized	1,900,000	3,025,000	450,000	0	59	−∞
3. Number of loans made	73	799	399	98	994	−75
4. Number of persons benefitted [1]	1,168	12,784	6,384	1,568	11	−75
5. Dollar equivalent amount loaned	187,091	536,112	172,578	66,434	186	38
6. Dollar equivalent amount outstanding	167,298	387,698			132	
7. OPIC exposure in U.S. dollars	41,825	96,925			131	
8. Number of loans delinquent to 90 days plus	0	27	21	27	∞	28
9. Dollar equivalent amount	0	19,624	13,471	19,624	∞	45
10. Dollar equivalent potential claims	0	14,718	10,103	14,718	∞	45
11. Revenues in U.S. dollars [1]	935	2,680	862	230	186	−73
12. Amount loaned Brazil	0	53,505	10,171	0	∞	−∞
13. Amount loaned Colombia	0	0	0	0	0	0
14. Amount loaned Guatemala	74,499	210,600	92,086	19,672	182	−78
15. Amount loaned Honduras	112,092	263,707	67,321	40,962	135	−39
16. Amount loaned Panama	0	8,800	3,000	5,800	∞	93

[1] Unaudited figures.

Source: Lenders' quarterly reports.

Mr. MILLS. An analysis of progress to date shows results varying by country. This is to be expected in an experimental program without precedent, whose success depends on changes in the host country attitudes, legislation, institutions, and practices. Initial program research and pilot operations indicate encouraging possibilities. At this time we are working closely with the fiscal and monetary authorities and the private lenders in three countries to test the program's feasibility on a revised and expanded basis.

EVIDENCE REQUIRED

Mr. LONG. What types of evidence (quantitative and/or qualitative) do you require an investor to furnish of benefits to (a) the host country and (b) the U.S. economy?

Mr. MILLS. OPIC requires information from the investor on the project's anticipated effects on the host country and to the U.S. economy. For the host country we look at several factors: revenues (domestic taxes, and so forth) to be produced through operation of the investment project; amount of local private participation in the project and of project-related items to be procured locally; downstream effects of the project; that is, creation of ancillary or supportive businesses; effects of the project on local prices; foreign exchange effects, including host country exchange savings from any import substitution and/or earnings from any export sales; employment effects, including training, during construction and operational phases; efficiency or competitiveness of the project, including details on any tariff or other protection; ecological aspects and whether discussed with the host government.

As regards the U.S. economy we consider the amount of initial U.S. dollar flows to the project by U.S. and other investors; amount of U.S. and other procurement during construction and operation; anticipated volume of U.S. exports to the project; estimated financial returns to the United States from the investment, including dividends, royalties, or licensing fees, and interest on loans; U.S. trade effects, including any project displacement of U.S. exports or increase of host country exports to the United States; whether any part of the investor's U.S. production facilities will be closed down.

Mr. LONG. With regard to the host country, do you require feasibility studies with cost-benefit and/or internal rate of return calculations to show benefits to host countries?

Mr. MILLS. No. The rate of return or cost-benefit approach to an individual project in the private sector overseas would be a difficult undertaking without reliable results. Economists differ among each other on the method and result of such analysis. Data are not available in most developing countries on many of the variables or factors which would go into such analysis, including the degree of present utilization of capacity and skills, figures on under and unemployment, alternative sources of financing, et cetera.

PROGRAM EVALUATION

Mr. LONG. Have you done or do you plan to do any postevaluations of projects to determine whether projected benefits to the host country actually materialized?

Mr. MILLS. Yes. OPIC has initiated a project monitoring program to periodically review and evaluate the actual benefits or larger projects to the host country and the United States. In addition, we conduct more general project evaluations and research on projects which have been in operation for a while. As mentioned earlier, the Harbridge House research on 20 mature investments insured by AID in the past provide strong evidence of positive results in most cases.

In the past, information on insured projects has been received from a variety of sources, including reports required to be filed as a condition of our contracts. Embassy reports on projects and the local economy frequently are good sources of information, and OPIC insurance officers visit projects and review the local economic effects.

EFFECTS ON U.S. EMPLOYMENT

Mr. LONG. With regard to the U.S. economy, on page 17 of your statement you mention the study of Professor Stobaugh of Harvard which argues that a net increase of 120,000 jobs in the United States is attributable to private manufacturing investment in developing countries. What is the evidence for this finding?

Mr. MILLS. The Harvard University study, led by Prof Stobaugh, was based on extensive studies of world patterns of trade, production, and investment as well as analyses of actual foreign investment decisions of U.S. corporations.

The study showed that the great majority of foreign investment in manufacturing is defensive in nature, in that a U.S. exporter must invest in facilities overseas in order to protect and maintain his foreign market penetration, or to compete in foreign markets, rather than to

serve the U.S. markets. Without many of these defensive U.S. investments, the opportunities would be seized by European, Japanese and other non-U.S. investors, with the result that U.S. exports of intermediate and capital goods would be lost or reduced.

The study differentiated between the ways that defensive and nondefensive foreign investments would affect U.S. export and employment generation or displacement. Nondefensive investments were considered to have negative effects while defensive investments were calculated to have a positive impact on domestic employment, especially when compared to the alternative of not making the foreign investment and losing the export markets in question. These calculations were adjusted to take into account instances of prematurely displaced exports (that is, cases where the U.S. foreign investment is made before the time that foreign competition or governmental restrictions could reasonably be considered to force U.S. exports out of the marketplace).

In addition the study recognized that U.S. foreign affiliates have a higher propensity to purchase capital goods, components, and finished products from the United States than do non-U.S. affiliated companies which, in the absence of U.S. investment, might be established to serve a foreign market.

The study did not take credit in U.S. employment terms for the earnings, dividends, and fees which are remitted to the United States from foreign investments and which increase public and private resources to buy domestic products and services. This would have increased the positive impact. The figure of an increase of 120,000 jobs reflects only the gain resulting from increased exports and other business activity such as home office functions related to foreign investment in manufacturing as compared to what would have been the situation without those investments. This figure does not include any of the U.S. jobs created by U.S. foreign investments in mining or service industries.

I.T. & T. CASE

Mr. LONG. If a corporation insured through OPIC were to interfere with the internal political and economic affairs of a developing country and then were to file a claim for expropriation, would the corporation's improper activities affect OPIC's judgment on the validity of the claim?

Mr. MILLS. We have been advised by outside counsel that it would be inappropriate for OPIC to comment on the ITT claim in any way so long as the question of ITT's right to compensation is still undecided. Naturally, this injunction extends to hypothetical questions such as this one dealing with substantially the same facts are are involved in the ITT case. Subsequent to this hearing, OPIC denied the ITT claim on several grounds related to contract terms. The case is expected to go to arbitration.

Mr. LONG. If this is proven to be the case with ITT in Chile, will this knowledge affect your judgment on the validity of ITT's claim?

Mr. MILLS. I am sorry, but as I said before it would be inappropriate for me to comment on the ITT claim at this time.

Mr. LONG. Do you think it is reasonable to expect developing countries to negotiate on compensation for nationalization of American corporations if these corporations interfere in their internal affairs?

Mr. MILLS. If in fact they do interfere, it is a matter for the host country's courts. However, the issue of compensation for nationalized properties can be separated from a claim of interference by a foreign corporation in the internal affairs of a developing country. If a government nationalizes the property of a foreign corporation, there is a clear duty on the part of such country under general principles of international law to pay prompt, adequate, and effective consideration. OPIC's contracts provide that it will not compensate an insured investor who provokes his own expropriation.

Mr. LONG. Do you propose to take actions or sanctions against U.S. corporations participating on OPIC programs who interfere in the internal affairs of host countries? If so, what actions? If not, why not?

Mr. MILLS. OPIC's contract governs the relationship with its investors and specifies the actions which OPIC may take and the sanctions it may apply. OPIC cannot speculate on the final outcome of the application of the OPIC contract to the facts in the ITT case. Upon final resolution of this case. OPIC may wish to reconsider the language of its contract in light of this question.

Mr. PASSMAN. Mr. Miller.

NEW AREAS OF CONCENTRATION

Mr. MILLER. Mr. Mills, I have a couple of questions. OPIC has introduced many new dimensions to the insurance and financing programs, you state the you have adopted programs "to cover new modes of investments such as construction and other technological contracts". Could you elaborate on that?

Mr. MILLS. Mr. Price, the head of our insurance, has been responsible for many of these. Joe, would you answer that question?

Mr. PRICE. The U.S. contruction industry has been, I think, justifiably complaining for a number of years that they are missing out on a lot of international competive bids because their Japanese, German, or other competitors receive certain assistance from their governments which the U.S. consstruction people don't get.

There was a conference held in 1970, the Hershey Action Conference, in which these arguments were made and discussions followed. We took it upon ourselves to try to see to what extent, using the insurance as a mechanism, we could provide certain protections that would make them more competitive for internationally bid jobs. We designed a special construction policy whereby we cover the basic risk of expropriation, war, and inconvertibility of currency.

We provide the U.S. contractor a binder before he bids. Previously when he was bidding he had to include a certain self-insurance factor. He is operating in a number of countries. He has got to include in his bid a cost factor to take care of possible expropriation, war damage and this sort of thing. We thought by establishing the pool for these contractors, charging our premium of 1.5 percent, which is less in many instances than what they would factor in, they could reduce their bids and help them become more competitive on these jobs.

We worked very closely with the Associated General Contractors in developing this policy, and we have had quite a bit of interest in this program. Now we are working to try to get more of the contractors using it, more of the binders issued, in the hope that this is at least one

way whereby the Government can provide assistance to make U.S. contractors more competitive in their international jobs.

Mr. MILLER. You have covered the new modes of investment such as construction. How about the other technological contracts.

Mr. PRICE. The other basic area is service contracts. More and more we are seeing U.S. firms not taking equity, but going in and doing a turnkey job or a technological job, and then being paid overtime as the job produces.

An example of one we are working on right now is an application by a subsidiary of Union Oil Co. to develop geothermal energy in the Philippines. This is a very important new source of energy. Union Oil developed the geysers in California. They have a long term service contract with the Philippine Government whereby they go in and expend a lot of funds to drill the steam wells and develop a delivery system. Then they deliver the steam guaranteed to produce energy to a facility built by the National Power Commission of the Philippines. As this energy is sold domestically, Union sets a certain percentage of the kilowattage hour, the mileage that is sold.

We are providing them an insurance contract that says we will insure this contract against abrogation or repudiation by the Government. I might add it has a provision for international arbitration which at our instigation was put into the contract. We say if the Government abrogates the contract you go to arbitration before the International Chamber of Commerce, you win the arbitration; and then you are not able to recover your expenditures the insurance will pay you for what you have put in, in other words, your deficit.

As soon as you cross over the line into a profit position, then the insurance terminates, so we are only covering in fact 90 percent of your deficit expenditures. This is one kind of new investment mode—a 25-year contract renewable for another 25 years, but with no equity position. They can't be accused of owning the natural resources of the Philippines. They are strictly providing a service, a very important technological service.

Mr. MILLER. If the gentleman will yield at that point, it is a 25- or 50-year contract but your insurance or service contract with the country would be for 25 or 50 years.

Mr. PRICE. We estimate that our insurance contract will terminate about year 12 or year 13.

Mr. MILLER. You are going to be in business for a while. We normally write today——

Mr. MILLS. By law 20 years maximum.

Mr. PRICE. This is considerably shorter than say the normal equity contract that has been written in this program.

TYPE OF INDUSTRIES INSURED

Mr. MILLER. One other point. You speak of the foreign programs similar to your particular OPIC's. At least 15 other nations set up insurance programs. We covered that pretty well a few minutes ago but I have a question or two I would like to try to clear up. I can understand those countries subsidizing the investment in a third country if it happens to be for a mine or for raw material that they need in order to produce and ship that raw material into their own country, and therefore refine or produce some commodity from this.

Are we doing that same thing? Is that you main intent? As an example, to mine bauxite in Jamaica and ship it here to produce aluminum, or do you also insure corporations that will be building plants in other countries that will be producing a high technology commodity and shipping back to the United States.

Mr. MILLS. Specifically in answer to your last question have very strict policies on runaway industries. In fact, I would like to put in the record our letter which we require of all companies to state to us that they are not closing down a plant and they are not partially closing down a plant. We simply do not do that.

Mr. PASSMAN. Without objection, the letter will be placed in the record at this point.

[The information follows:]

LETTER WHICH OPIC REQUIRES FROM INVESTORS REGARDING RUNAWAY INDUSTRIES

Subject: Investment insurance application No.

VICE PRESIDENT FOR INSURANCE,
Overseas Private Investment Corp.,
Washington, D.C.

DEAR SIR: The purpose of this letter is to advise you that our company has not, partially or wholly, closed down a U.S. production facility producing the same goods as will be produced and sold to the U.S. market by the overseas facility in which our new investment will be made. Moreover, it is not our present intention that the investment will have such effect on U.S. production facilities operated by us in the foreseeable future.

We understand that the statements contained in this letter are material representations affecting the eligibility of our investment for insurance, and that OPIC will act upon them accordingly.

Very truly yours,

_____.

Mr. MILLS. In response to your first question, on raw materials, because of the Chile situation, when I took over, my first question was, should we be in raw materials? Since we have been here at OPIC, and looking at it, we have had a very cautious raw materials policy. We have only done two policies. One was the Marinduque nickel mining project in the Philippines which was 70 percent owned by the Philippines. It was nickel, where we had a deficiency. We have tried to limit our interest to where the United States will have a future domestic production shortfall. Bauxite nickel and copper are the primary commodities. We have not gone into the other minerals to any extent. Looking ahead in the future, I think that we face such a critical raw material supply deficit that we must again consider this policy and devise new ways of assisting this country to get raw materials and develop secure sources of supply.

FUEL SHORTAGE

Mr. MILLER. I understand your insurance on raw materials because this is a must for us to have raw materials if we have that deficiency of supply, but by the same token not on a finished product. Also it brings up a point that you had mentioned some time ago, an hour or two before, concerning oil energy.

Mr. MILLS. We don't do anything with that. We have never done anything.

Mr. MILLER. One of our great problems today is energy and the fossil fuel shortage.

Mr. MILLS. As I understand it, there is a whole survey being made in the U.S. Government about our energy programs and how it is all going to fit together. Where OPIC is going to fit in this I cannot say at this time. But it is something we have got to relook and say okay, we as a matter of national policy are going to insure or not insure. That is your decision. It is the wisdom of Congress that will decide what we have to do. As a matter of administrative policy we are not doing it now and have not for the last 25 years for obvious reasons.

They did not need us. Now, the question is, Will they need us in the future? I do not know the answer.

We are specifically not allowed to do any lending programs or anything like that with them, but on insurance there has been an administrative decision to refrain from insuring oil investments. So we will look to the report coming and to the wisdom of Congress in making this decision.

Mr. MILLER. Mr. Chairman, I feel that maybe we have been 10 years behind on that particular problem. We do have at the present time an energy shortage.

Mr. MILLS. Yes, we do.

Mr. MILLER. But you are being blocked from helping, as I understand it, because you are not making any insurance or selling insurance that would encourage our companies to go out to explore, develop and bring the energy back here.

Mr. MILLS. That is correct. The Japanese have enormous programs in this field, they subsidize the exploration and the development of both raw materials and petroleum. It is a very definite policy of the Japanese, with the full support of their government.

Mr. YATES. Mr. Miller, will you yield on that point?

Mr. MILLER. Yes.

PROHIBITION OF ENERGY AND RAW MATERIAL DEVELOPMENT

Mr. YATES. You use the word "blocked"—blocked by whom or by what from exploring in the field of oil?

As I understand Mr. Miller's previous point, and I think it is substantiated by your answer, you said you were not looking for exploration or helping companies to explore the possibility of finding oil in other countries. And he drew the conclusion from that that you were being blocked. From what?

Who is blocking you from that?

Mr. MILLS. In the past, you know, the petroleum industry has not needed assistance to find oil. They have been very successful. In recent years this has changed. We are looking at whether our policy should change. But it is a rather recent phenomenon.

Mr. YATES. The question was "being blocked." You are just blocking yourself, then.

Mr. MILLS. Well, in our——

Mr. MILLER. Administrative decision?

Mr. MILLS. It is an administrative decision, but also in our law there are specific provisions which say that we shall not lend or finance surveys for the exploration of any minerals or petroleum.

Mr. YATES. Why should that be in the law?

Mr. MILLS. It is in the law.

Mr. YATES. I say why? It does not make sense, does it?

Mr. MILLS. It is in the law. It is your wisdom, it is not our wisdom. We have interpreted this very broadly that this was the intent of Congress.

Mr. YATES. Can your counsel tell us the exact provision to which you refer? What does it say?

Mr. MILLS. Certainly.

Mr. MAYS. I do not have the statute in front of me.

Mr. PASSMAN. Furnish it for the record.

[The information follows:]

RESTRICTIONS IN OPIC LEGISLATION RELATING TO ENERGY AND RAW MATERIAL PROJECT DEVELOPMENT

Foreign Assistance Act of 1969 as amended:

"Sec. 234(c) Direct Investment—

"No loans shall be made under this section to finance operations for mining or other extraction of any deposit of ore, oil, gas, or other mineral.

"(d) Investment Encouragement— . . . the corporation shall not finance surveys to ascertain the existence, location, extent, or quality, or to determine the feasibility of undertaking operations for mining or other extractions of any deposit of ore, oil, gas, or other mineral."

Mr. MAYS. If I can elaborate on what I understood the reason for this was. This legislation was introduced back in 1969; the international oil companies had operated successfully without AID's guarantee program abroad for a number of years. It seemed to be a higher risk or a different character of risk than was appropriate for OPIC to insure.

Mr. YATES. What this does is keep anybody else out of the field, does it not?

Mr. MAYS No, sir, it does not.

The companies, of course, can go ahead with or without OPIC's assistance.

Mr. YATES. I mean an outside company, an outside independent, for example, who wanted to try to explore on his own in Indonesia, for example, he could not get any help from you for this, could he?

Mr. MILLS. That is correct.

Mr. MAYS. There is an exception to Mr. Mills' general statement about OPIC not insuring the exploratory costs which are intangible costs. OPIC and AID did insure the oil rigs, the tangible equipment that could be removed from the country. But when you got into the intangible part, the drilling costs and the concession costs that were paid to the host government, those parts were not insured.

Mr. PASSMAN. It could be that these oil companies carried their own insurance, maybe with private companies. Do you know whether or not they are insured?

Mr. MILLS. We have been approached by a number of independents and we have turned them down based on past policy.

Mr. PASSMAN. Let's get an answer to my question.

Do you know whether the oil companies carry their own insurance?

Mr. MAYS. There are no insurers that will insure this type of risk.

Mr. PASSMAN. There are other advantages that other companies would not have, such as the depletion allowance. Is it not true that they have certain advantages that you would not have with other types of companies investing abroad?

Mr. MAYS. That is true.

Mr. PASSMAN. Would it also follow that maybe the investment would be prohibitive and OPIC could not cover it? You may have a request for $1 billion coverage because it costs a lot of money to go out into some of these countries to explore and discover oil and build refineries.

Mr. MAYS. It does.

Mr. PASSMAN. I think you ought to give us information on whether actually they are covered because we do have an energy crisis in this country. We might as well face up to it and maybe encourage investments abroad.

[The information follows:]

BRIEF STATEMENT ON AVAILABILITY OF PRIVATE INSURANCE FOR OIL INVESTMENTS

Long-term investment insurance against political risks is not generally available in any of the private insurance markets of the world. For this reason oil companies are not able to obtain the kind of insurance protection for their exploration and development operations which OPIC offers to other types of investments. Some of the syndicates at Lloyds of London have offered political risk insurance policies to oil companies in the past, but such policies have generally been restricted to 1- to 2-year terms and frequently have been at higher premium rates than that charged by OPIC.

Mr. YATES. How did the copper companies get coverage in Chile then?

Mr. MILLS. That comes under our insurance. Our law says no loan shall be made under this section to finance operations for mining or other extraction of any deposit of ore, oil, gas, or other mineral.

Mr. YATES. "Or other mineral"?

Mr. MAYS. That relates to the loan program, not the insurance program.

Mr. YATES. I see.

Mr. MAYS. We have been talking about insurance policy with regard to petroleum.

Mr. MILLS. Our law also says the corporation shall not finance surveys to ascertain the existence, location, extent or quality, or to determine the feasibility of undertaking operations for mining or other extraction, of any deposit of ore, oil, gas, or other mineral.

Mr. YATES. OK. Would you put that in the record?

Mr. MILLS. Very well.

[The information follows:]

RESTRICTIONS IN OPIC LEGISLATION RELATING TO ENERGY AND RAW MATERIAL PROJECT DEVELOPMENT

Foreign Assistance Act of 1969 as amended:

"Sec. 234(c) Direct Investment—* * *

"No loans shall be made under this section to finance operations for mining or other extraction of any deposit of ore, oil, gas, or other mineral.

"(b) Investment Encouragement—* * * the corporation shall not finance surveys to ascertain the existence, location, extent, or quality, or to determine the feasibility of undertaking operations for mining or other extraction, of any deposit of ore, oil, gas, or other mineral."

Mr. YATES. Thank you.

Mr. MILLER. I think this is important on the basis of the fuel shortage we have today. The basic law could be changed in order to help us gain additional fuels and it should be changed. I am glad it came out in the hearing.

Thank you.

TERMS OF INSURANCE POLICIES

Mr. PASSMAN. Thank you, Mr. Miller.

When you write an insurance policy, is it for an indefinite period?

Mr. MILLS. No. Maximum 20 years on equity. One thing we have done where we have large and sensitive industries, to 10–15 years we have shortened this down from 20 to 15 to 12 to 10, so that our exposure does not continue for so long.

Mr. PASSMAN. But the maximum is 20 years?

Mr. MILLS. The maximum is 20 years, Mr. Chairman.

RIGHT OF CANCELLATION

Mr. PASSMAN. All right.

They have a right of cancellation, but you do not; is that correct?

Mr. MILLS. That is correct.

Mr. PASSMAN. Is there any penalty clause in the event the companies decide to cancel a policy?

Mr. PRICE. They pay their premiums in advance. There are no refunds.

Mr. PASSMAN. Not for 20 years?

Mr. PRICE. No, each year.

Mr. PASSMAN. I know. It is understood you would have a short-rate cancellation if it is in 1 year, they are not apt to do that. But they can cancel their policies at any time?

Mr. PRICE. That is right. But if they cancel during the year or sell during the year or become ineligible during the year, there is no refund of that year's premium.

Mr. PASSMAN. That is pretty generally understood even among insurance agencies.

Mr. PRICE. They get back nothing.

Mr. PASSMAN. I know. It is just general business practice. It all depends on, I guess, the condition of the contracts as to whether they get back nothing.

Mr. PRICE. That could be a penalty of sorts.

Mr. PASSMAN. But you are bound and they are not?

Mr. MILLS. That is correct.

Mr. PASSMAN. Mr. Roybal?

Mr. ROYBAL. No questions.

Mr. PASSMAN. Gentlemen any other questions?

CASE OF I.T. & T.

Mr. YATES. Yes.

Newspapers have been talking about the fact that I.T. & T. tried to get help from the CIA to prevent the taking power of the Chilean Government. Did I.T. & T. come to you and ask for help?

Mr. MILLS. May I make a statement on I.T. & T.?

Mr. Chairman, I have a statement as follows:

Mr. PASSMAN. Off the record.

[Discussion off the record.]

Mr. MILLS. ITT has an application for compensation pending before OPIC. For the past year or so, with the assistance of outside lawyers, CPA's and engineers, OPIC has been evaluating this claim. At this moment, OPIC is in the final process of analyzing the available evidence and legal issues, with a view toward acting on the claim in the near future. I have been advised by our counsel that it would be inappropriate for me to comment in any way on the ITT claim so long as the question of ITT's right to compensation is still undecided.

Mr. YATES. I did not ask you anything about the claim.

Mr. MILLS. I wanted to get that in the record. There was some misunderstanding. Somebody made the statement we were going to pay the claim. I think they were talking about Kennecott instead of——

Mr. PASSMAN. No. I was talking about ITT. You cannot talk about it because the claim is pending, but it is a bona fide claim; they bought the insurance.

Mr. YATES. You did not answer my question.

My question was—Mr. Reporter, would you read my question to the gentleman again? It was so far back. The question I asked was this: The newspapers have indicated that at the time the Chilean Government was going to have an election and was about to take power through the election, I. T. & T. sought the aid of the CIA in trying to prevent that Government from taking over, presumably under the fear that its properties would be expropriated. This, too, would affect you.

My question was: Did any I. T. & T. officials or agents contact you and seek your help to prevent the present Chilean Government from taking power?

Mr. MILLS. That is a very easy question to answer.

OPIC was not in existence and I was not present.

Mr. YATES. The answer is "No," then?

Mr. MILLS. The answer is "No."

Mr. YATES. OK. That is what I was trying to get.

Mr. ROYBAL. That is not true. He is just talking about 2 years ago.

Mr. MILLS. OPIC only took office—excuse me. OPIC was only created January 19, 1971; the elections took place in 1970.

Mr. PASSMAN. OPIC was born January 1, 1971.

Mr. MILLS. We were not in existence.

Mr. MAYS. My experience went just beyond OPIC. I came into AID in 1969 in anticipation of OPIC. ITT notified AID of the possible expropriation as it was required to under its contract. Our dealings with ITT concerning its claim from that point, of course, are an integral part of our claims determination and that is the reason, of course, we do not want to discuss the facts until OPIC has made a determination on that claim.

Mr. YATES. I was not asking any question about that. I was just asking whether there was any intervention requested of you or of AID, if that is the predecessor, by ITT to try to prevent the Government from taking power in Chile.

Is the answer "No"?

Mr. MAYS. I think that is a part of the claims case and I would rather not respond if the committee——

Mr. YATES. In what way is it a part of the claims case? You mean the effort to try to stop the Government from taking the power is a part of the claims case.

Mr. MAYS. No, but it is so related to the claims aspect of the case that it is hard to draw a line and say——

Mr. YATES. I must say that I will look forward to getting that information with keen interest, because apparently the answer to my question then is not "No." The answer to my question is that you cannot answer it because of the pending case; is that correct?

Mr. MAYS. That is correct.

Mr. YATES. OK.

Mr. PASSMAN. Will the gentleman yield?

Mr. YATES. Yes.

Mr. PASSMAN. Before you move away from that point, you have a lot of very fine officials in ITT. They have a tremendous amount of money invested in this country and they meet an awful lot of payrolls. Without companies like ITT you could not exist very long. It is only natural the bigger you get, the more bad publicity you get. I am not coming to their defense, but ITT is not all bad.

Mr. YATES. Is it asking about the facts in the case if I were to ask you when ITT received insurance from OPIC?

Mr. MAYS. The contracts were issued by AID back——

Mr. YATES. By AID?

Mr. MAYS. AID, as early as 1964.

Mr. YATES. Are you saying all OPIC's role is is a possible assumption of liability?

Mr. MILLS. That is correct. That is what we were talking about earlier when the Chairman said we assume these enormous liabilities.

EFFECT ON U.S. EMPLOYMENT

Mr. YATES. All right. Now I notice your conclusion on page 17, and I wonder whether or not the American Federation of Labor would agree with your conclusion when you say that the OPIC programs help the U.S. economy by creating jobs in the United States.

Now you are loaning money to companies to go outside the United States and set up those companies, are you not?

Mr. MILLS. We did cover this at considerable length.

Mr. PASSMAN. Off the record.

[Discussion off the record.]

Mr. YATES. Did you also, Mr. Chairman, cover the estimate by Prof. Stobaugh?

Mr. PASSMAN. Yes. We are going to find out how much the professor got for preparing that marvelous report.

Mr. YATES. All right. I want to ask you——

Mr. LONG. I might say to the gentleman that I expressed great skepticism as to whether this did create additional employment—that is, more employment than if the money had been invested here in the United States instead of going abroad.

Mr. PASSMAN. Will the gentleman yield?

Mr. YATES. Sure.

Mr. PASSMAN. Will you place in the record the fee that was paid to the professor for this favorable report?

Mr. MILLS. We agreed to do that, yes.

Mr. PASSMAN. Let's discuss the expenses involved coming to and from Washington, whether he brought other people in. We want the total of that cost, including the expenses, not just the fee.

Mr. MILLS. I am not sure whether he ever came to Washington.

Mr. PASSMAN. You do not think so. Look at the record.

[The information follows:]

FEES PAID BY OPIC FOR HARVARD STUDY BY PROF. ROBERT STOBAUGH

OPIC did not contract with or pay Professor Stobaugh for this study. OPIC contracted directly with the Harvard Graduate School of Business and will pay Harvard a fee of $20,000 when an acceptable final report is received. This fee will cover all costs incurred in making the study including salaries, materials, overhead, secretarial assistance, communications costs, and others. Professor Stodbaugh was assigned by Harvard to do the study, and during that time received his normal professor's salary and nothing additional.

Mr. YATES. When you offered your reinsurance, you indicated that you go to a broker. Does the broker get a fee from you or from the reinsuring company?

Mr. MILLS. The reinsuring company pays, we do not pay him anything.

EFFORTS OF THE JAPANESE

Mr. YATES. Do the Japanese loan money—strike that.

You have a statement on page 13.

Mr. MILLS. They do loan money to their corporations.

Mr. YATES. They do loan money to promote overseas exploration?

Mr. MILLS. Yes, sir, and they have an integrated program for encouraging mining and oil investments.

Mr. YATES. Do they also protect against expropriation?

Mr. MILLS. Yes. Theirs is the second biggest in the world and rapidly rising.

Mr. YATES. I would like to have a statement about what the Japanese are doing, put in the record.

Mr. MILLS. We would be pleased to supply it. I think it is a very important point.

[The information follows:]

JAPAN'S OVERSEAS MINERALS INVESTMENT PROGRAM

Japan's rapidly expanding program of overseas minerals development strikingly demonstrates the workings of the world's eighth wonder, "Japan, Inc." In this program are found all the elements that term implies—an intimate collaboration of sophisticated resource supply/demand analyses by government and industry, consensual planning targets, governmental financial and fiscal subsidies, special public corporations, private Japanese operating companies and banks, public banks, foreign joint ventures, trading company marketing-financing schemes, all liberally seasoned with nationalistic dedication and drive.

The driving force is necessity, emotionally felt and widely understood in an insular, resource-short nation. The need for minerals is determined by burgeoning industrial and consumer demand, projected on the world's fastest growth curves by public and private econometricians. Japan already is so dependent on imports of minerals (ranging from 75 percent in the case of copper to 99.7 percent for petroleum) that it has passed the United States as the largest minerals importer ($8.4 billion worth in 1970). By 1980, if the GNP growth rate of the 1960's were maintained, Japan would require 30 percent of all the mineral resources expected to be available for international trade.

This import dependence is dangerously concentrated on a few sources: 68 percent of Japan's copper ore imports come from the Philippines, 98 percent of bauxite from Australia, Indonesia, and Malaysia, and 86 percent of nickel from

New Caledonia. Most imports are commercial transactions with foreign suppliers, with consequent vulnerability to price and supply shifts more extreme than might be faced by a country whose importers also are involved in the ownership and/or management of foreign mineral sources.

Japan's response to this major economic problem has been systematic and big league. The Ministry of International Trade and Industry (MITI) makes the grand design and directs some of the key actors. MITI's October 1971 "White Paper on Mineral Resources" for the 1970's sets the indicative planning targets and policy line:

> Five billion dollars in combined public and private investment in exploration/development of minerals, largely overseas, in the first half of the decade, $10 billion in the second half, for a total of $15 billion—"the largest element in Japan's foreign investment" in the 1970's;
>
> A radical increase in Japanese direct equity investment in overseas minerals projects, with preference for joint ventures, as well as expanded use of the Japanese-pioneered loan-production sharing and long-term minerals-purchase contract forms of investment;
>
> Planning targets broken down by type of mineral, type of Japanese investment and geographic area for achievement by 1980;
>
> Policies featuring (a) increased linking of offical economic aid with overseas minerals development projects; (b) closer cooperation with minerals companies of both other advanced countries and host countries; (c) greater diversification of supplier countries; (b) transfer of some early stages of minerals processing from Japan to the source countries so as to deal with Japan's pollution problems and accede to demands of the less-developed countries for greater economic benefits from minerals exploitation.

The executing agencies of this policy are:

Thee Metallic Minerals Exploration Agency of Japan, which makes loans covering 60 percent and in some cases 70 percent of the cost of exploration by major Japanese mining companies (normally 5-year term but going up to 9-year with 1-year grace at 7.5 percent interest); guarantees loans for development and operation of mines outside Japan; subsidizes geological surveys with its own or other Government funds (including Japanese aid program funds); and collects and disseminates information on minerals surveys undertaken by others.

The Japan Petroleum Development Corporation, which provides risk capital to Japanese corporations or Japanese participants in joint exploration ventures, including both equity and quasi-equity (e.g., loans with up to 8 years grace which are written off if a profitable oil field is not discovered); JPDC also guarantees long-term investment loans by Japanese financial institutions for development and operation of oilfields; conducts geological surveys and collects and disseminates survey information obtained by others.

The Export-Import Bank of Japan, which joins with the major commercial banks in making tied loans to Japanese overseas investors (not to foreign enterprises) and to Japanese importers in support of their supply contracts with foreign producers; makes tied loans to foreign governments to finance their capital contributions to foreign firms in which Japanese investors have or intend to have substantial interests; and guarantees loans made by Japanese private lenders to finance both capital exports and services related to overseas investments and imports of important materials produced by overseas projects.

The overseas economic cooperation fund, which makes tied development loans on both concessional and near-commercial terms to foreign public agencies and governments and to Japanese enterprises investing in developing countries.

The Finance Ministry, which grants tax privileges to Japanese investors in overseas minerals development—principally a deduction of 50 percent of the investment in the first year for a reserve against political or commercial loss, and a depletion allowance of 15 percent of sales (subject to recapture if the amount of the deduction is not invested in further exploration). These tax concessions are in addition to export-incentive tax measures, such as accelerated depreciation, reserve for development of overseas markets, deductions for export-promotion and export income, and entertainment allowances.

The MITI investment insurance program, which provides the same 90 percent coverage of political risks of mineral investment as any other overseas investment, in both developed and less developed countries, at the standard 0.55 percent insurance fee. MITI expects minerals investment to pace a rapid expansion of its investment insurance portfolio in the 1970's, rising to 55 percent of total Japanese overseas investment by 1980.

The Japanese trading companies and affiliated city banks, which work with increasingly sophisticated Japanese equipment manufacturers and Japanese minerals-fabricating and petrochemical companies in packaging the capital and

marketing elements of an overseas investment project so as to meet competition and political requirements.

General and specialized industry associations, which provide a forum for reaching a Government-business consensus on investment policy and related Government support.

And, the private members of the mixed team, the Japanese mining and petroleum companies themselves.

The whole system operates in the highly debt-leveraged pattern of Japan's postwar economic expansionism. Faith in spectacular economic growth rates and rising productivity, so far largely confirmed by events, has become entrenched in Japanese business and Government decisions. This national confidence, coupled with the phenomenal personal savings habits of the Japanese and a keen sense of vulnerability to minerals-supply controls by foreigners, permeates the whole Japanese overseas minerals investment program.

Mr. PASSMAN. Would you also state for the record that many of their markets are former U.S. markets? We priced ourselves out of the world market, so they came in with their program and undersold us; is that not about right?

Mr. MILLS. Yes.

Mr. YATES. You make the point that the Japanese and the French are moving in the field of needed raw materials, mines and gas, oil fields.

Mr. MILLS. They have special programs for this.

Mr. YATES. I would hope we would too. But again, this is——

Mr. MILLS. We do not now.

Mr. YATES. Thank you, Mr. Chairman.

Mr. PASSMAN. Any other questions, gentlemen.

OTHER COUNTRYS' PROGRAMS

Mr. MILLER. If we could have for the record, Mr. Chairman, one other thing. Mr. Yates mentioned the Japanese and their program of insuring overseas investments.

Mr. MILLS. Correct.

Mr. MILLER. Also, you list the German and the European Economic Community.

Mr. MILLS. And the French, the English, the Belgians, the Dutch, and the Finns.

Mr. MILLER. Yes; but you do not list all of those. You list, as I see, three: Japanese, German, and European Economic Community, apparently as the main areas. They are the main insurers.

Mr. MILLS. Each European nation is a principal insurer, that is correct.

Mr. MILLER. They come under one heading?

Mr. MILLS. No. European Economic Community proposal is a new one, that is the Common Market. That is in addition to the other programs. They said we are also going to have a program.

Mr. MILLER. They are on top of each member country?

Mr. MILLS. It could be. This is a proposal they are making.

Mr. MILLER. I would like to see in the record additional information on the Germans and European Economic Community.

Mr. MILLS. And any other programs?

Mr. MILLER. Well, we do not want a report of 500 pages.

Mr. MILLS. No. There is a report put out by the OECD on the competitive programs which we would be glad to supply.

Mr. MILLER. If you could supply that for the record, I would appreciate it.

[The information follows:]

INFORMATION ON INVESTMENT INCENTIVE PROGRAMS SPONSORED BY OTHER GOVERNMENTS

SUMMARY OF GUARANTEE SCHEMES FOR OVERSEAS DIRECT INVESTMENT[1]

DAC countries,[2] name of executive agency or department	Types of risks insured: (a) expropriation risks, (b) war risks, (c) transfer risks (I)	Geographic coverage: (a) worldwide, (b) developing countries only, (c) countries having signed bilateral agreement only (II)	Type of investment covered:[3] (a) equity, (b) loans and advances, (c) licenses and royalties, (d) other (III)	Legal eligibility requirements: (a) development effect, (b) link with national export, (c) global ceiling (IV)	Coverage of principal and earnings:[4] (a) initial investment, (b) reinvested earnings, (c) remitted earnings (percent of original investment) (V)	Coverage in case of loss: basis for evaluation (VI)
Australia: Export Payments Insurance Corp. (EPIC).	(a), (b), (c)	(a)	(a), (b), (c)	(b), (c) $122,000,000	(a) 100 percent, (b) 100 percent, (c).	Financial statements.
Belgium: Office National du Ducroire	(a), (b), (c) and catastrophic risks in some cases.	(a), (c)	(a), (b)	(a), (b), (c) $18,800,000	(a), (b), (c)	Phasing out on a case-to-case basis.
Canada: Export Development Corp. (EDC).	(a), (b), (c)	(b)	(a), (b), (c)	(a) and (b), (c) $150,000,000.	(a) 100 percent, (b) 50 percent, (c) 150 percent (total cover limit: 200 percent).	Do.
Denmark: Danish International Development Agency (DANIDA).	(a), (b), (c)	(b)	(a), (b), (c)	(a), (b), (c) $70,000,000	(a) 100 percent, (b), (c) 8 percent per annum for up to 3 years.	Financial statements.
France: Caisse Centrale de Coopération Economique.	(a), (b), (c) for capital only.	(b) But presently applicable to 14 countries only, (c) for countries other than the above.	(a) Only, in principle, (b) exceptionally long-term loans from shareholders.	(a), (b)	(a) only	Schedule of amortization: 20 percent of the original nominal amount per year over the last 5 years of coverage.
Germany: Deutsche Revisions—und—Treuhand AG and Interministerial Board.	(a), (b), (c)	(b), (c) in principle (39 countries).	(a), (b), (c)	(a)	(a) 100 percent, (b) 50 percent, (c) 8 percent per annum for up to 3 years.	"Going concern" value not exceeding capital brought in.
Japan:[5] Ministry of International Trade and Industry (MITI).	(a), (b), (c) and credit risks in some cases	(a)	(a), (b), (c)	(a)	(a) 100 percent, (b) 100 percent, (c) 10 percent per annum and up to 100 percent over the contract life.	Financial statements.
Netherlands: Netherlands Credit Insurance Company.	(a), (b), (c)	(b), (c) in principle	(a), (b), (c)	(a), (b)	(a) 100 percent, (b) 50 percent, (c) 8 percent per annum.	Limited amortization during last 5 years of coverage.
Norway: Institute for Export Credits Guarantees.	(a), (b), (c)	(a)	(a) or (a) and (b) together.	(a), (c) $90,000,000 (covering both export credits and investments).	(a) 100 percent, (b), (c) 7 percent per annum up to 3 years.	Fixed schedule of amortization—starts normally after 3 years.

Sweden: Swedish Export Credits Guarantee Board (EKN).	(a), (b), (c)	(b) 11 countries only	(a), (b)	(a), (c) $80,000,000	(a) 100 percent, (b), (c) 8 percent per annum of maximum coverage not exceeding 24 percent of initial amount invested.	Phasing out on a case-by-case basis.
Switzerland	(a), (b), (c) in addition insolvability or refusal to pay by local public entities.	(b) in principle	(a), (b), (c)	(a), (b), in some cases, (c) $130,000,000.	(a) 100 percent, (b), (c) up to 24 percent of principal.	For equity, in principle regular amortization (around 5 percent per year).
United Kingdom: [3] Export Credit Guarantee Department (ECGD).	(a), (b), (c)	(a)	(a), (b), (c)	(c) $650,000,000	(a) 100 percent, (b) 100 percent, (c) 200 percent (total cover limit: 200 percent).	Financial statements.
United States: [6] Overseas Private Investment Corporation (OPIC).	(a), (b), (c)	(b), (c) (to date some 92 countries).	(a), (b), (c), (d)	(a), (c) 1970–74 authority for $7,500,000,000 new insurance.	(a) 100 percent, (b) 100 percent, (c) 200 percent (total cover limit: 200 percent).	Financial statements phasing out for large and sensitive projects.

See footnotes at end of table

SUMMARY OF GUARANTEE SCHEMES FOR OVERSEAS DIRECT INVESTMENT[1]—Continued

DAC countries,[2] name of executive agency or department	Coverage in case of loss payable (VII)	Annual premium rates, percent of current amounts except if otherwise shown (VIII)	Duration of coverage (IX)	Date of effective establishment (X)	Total guarantee outstanding (in U.S. dollar approximate equivalent) (XI)	Current volume of new guarantee extended (XII)
Australia: Export payments Insurance Corp. (EPIC).	Up to 90 percent	0.75 percent on current amount (0.25 percent per risk) plus half the above on standby amount.	Normally = minimum 5 years; maximum 15 years.	1966	Year-end 1971: $49,000,000	1971 = $25,800,000.
Belgium: Office National du Ducroire	do		Up to 15 years	February 1971	(3)	(3).
Canada: Export Development Corp. (EDC).	Up to 85 percent	0.30 percent for each of the 3 risks, plus ½ of 1 percent on standby amount.	do	1969	Year-end 1971: $3,600,000.	1971 = $3,600,000.
Denmark: Danish International Development Agency (DANIDA).	Up to 85 percent or 90 percent.	0.5 percent for the 3 risks together.	do	1966	Year-end 1971: $11,700,000.	1971: $4,500,000.
France: Caisse Centrale de Coopération Economique.	75 percent normally, up to 90 percent in some cases.	0.8 percent per year	do	January 1971	(3)	(3).
Germany: Deutsche Revisions—und—Treuhand AG and Interministerial Board.	Up to 95 percent	0.5 percent of current amount for the 3 risks together.	Normally = up to 15 years, exceptionally = up to 20 years.	1950	Year-end 1971: $341,000,000.	1971: $78,100,000.
Japan:[4]						
Ministry of International Trade and Industry.	Up to 90 percent, up to 80 percent for credit risks.	0.55 percent for the 3 risks together and 0.70 when credit risks are added.	Normally up to 15 years	Capital 1956, profits 1957, merger 1970.	Year-end 1971: $17,000,000.	1971: $103,000,000
Netherlands:						
Netherlands Credit Insurance Company.	Up to 90 percent	0.8 percent for the 3 risks together.	Up to 15 years following completion of the investment.	1959	Year-end 1971: $17,000,000.	1971: $13,000,000
Norway:						
Institute for Export Credits Guarantees	do	0.5 percent of maximum amount for the 3 risks together.	Up to 20 years	1964/5	Year-end 1971: $16,600,000.	(3).
Sweden:						
Swedish Export Credits Guarantee Board (EKN).	Up to 80 to 90 percent	0.7 percent for the 3 risks together.	Normally up to 15 years exceptionally up to 20 years.	1968	(3)	

Switzerland	Up to 70 percent	Normal rates: Principal: 1.25 percent, profits: 4 percent of expected profits.	15 years in principle	1970	Mar. 31, 1972: $11,000,000.	(7).
United Kingdom: [3] Export Credit Guarantee Department (ECGD).	Up to 90 percent	1 percent for the 3 risks together plus ½ percent on standby amount.	Up to 15 years	1972	(8)	(7).
United States: [6] Overseas Private Investment Corporation (OPIC).	Up to 100 percent, 50 percent for large and sensitive projects.	(a) 0.30 percent (convertibility), (b) 0.60 percent (expropriation), (c) 0.60 percent (war) plus 0.25 percent on standby amount.	Equity = maximum 20 years,[9] loan = duration of the loan up to 20 years.	1948	June 30, 1972, maximum liability $9,900,000,000 current liability $5,400,000,000.	12 months to June 30 1972, $635,000,000 (maximum liability).

[1] Direct investment here includes minority equity participation and also "portfolio participation" to the extent they reflect a substantial interest in the project (e.g. in the management or the profits of the company, through purchase of output, etc.). Provisions of individual schemes may in some cases not correspond exactly to the common classification adopted in the table. Details of the various schemes, however, are provided in individual country chapters below. Financial amounts are expressed in U.S. dollar equivalent, at the IMF exchange rates as of the end of 1971.

[2] To date (August 1972, 3 member countries have no comprehensive schemes (Austria, Italy, Portugal). Portugal has a guarantee scheme for loans to firms in the Provinces made by Portuguese or foreign investors. As regards Austria, there is a scheme which relate only to a limited category of investments connected with export operations.

[3] The coverage can apply to equity and loan participations, and to fees and royalties. The investment can be made in various forms: cash, machinery, goods, know-how and services, etc. (d) Above covers specific situations such as production-sharing agreements.

[4] This column shows the coverage of principal and earnings for equity investments only. As regards loan investments, schemes usually wholly cover outstanding principal and interest, or interest up to 100 percent of principal (United Kingdom).

[5] The table takes into account the revisions made on the Japanese scheme as of January 1972, and following the merger in April–May 1970 of the two existing schemes for capital and profits respectively.

[6] The table gives a presentation of the U.S. political risk investment insurance program only. The loan guaranty program has not been inserted in the table; data on this latter program are provided in the chapter on the United States.

[7] Nil or not applicable.

[8] Not available.

[9] Except expropriation for large or sensitive projects, for which the duration of coverage is limit d to 12 years.

OTHER U.S. AGENCIES INVOLVED IN INSURANCE

Mr. PASSMAN. I believe we have one other Government agency that writes insurance abroad and that is the Export-Import Bank, is that correct?

Mr. MILLS. Eximbank does insure against political risks associated with U.S. exports.

Mr. PASSMAN. Do they?

Mr. MILLS. Yes. "Requisition, expropriation, or confiscation of or intervention in the business of the buyer or guarantor by a governmental authority occurring on or before the date of default."

Absolutely correct.

Mr. PASSMAN. What other agencies have overseas insurance?

Mr. MILLS. The Federal Aviation Administration has overseas insurance for airplanes, the Maritime Administration for ships, the Export-Import Bank for exports.

Mr. PASSMAN, Thank you, gentlemen. I believe that will be all.

The Committee is adjourned.

TUESDAY, APRIL 3, 1973.

INTER-AMERICAN FOUNDATION

WITNESSES

WILLIAM M. DYAL, JR., PRESIDENT
LEON M. PARKER, EXECUTIVE OFFICER

PROGRAM AND FINANCING (IN THOUSANDS OF DOLLARS)

Mr. PASSMAN. The committee will come to order.

We shall consider this morning another one of the many programs covered under the foreign aid program. Today we will take up the Inter-American Foundation. You are operating under a limitation, are you not, rather than a direct appropriation line item?

FUNDING HISTORY

Mr. DYAL. The funds were transferred from an original AID appropriation, yes, sir. The funds were transferred, $50 million.

Mr. PASSMAN. But it has not been put in a spending category. The funds have been earmarked and you have been chipping away at that total ever since the foundation was set up, is that a statement of fact? All the funds have not been obligated?

Mr. DYAL. The funds have not been obligated in total, that is right.

Mr. PASSMAN. It is a question of establishing an annual limitation on what you can withdraw from the amount that has previously been transferred.

Mr. DYAL. Yes, sir, that has been the history.

Mr. PASSMAN. The funds have been reserved, but not obligated as such for expenditure.

Mr. DYAL. Right.

Mr. PASSMAN. Last year the committee and the Congress placed a limitation of $5 million on your obligations.

Mr. DYAL. In 1972, Mr. Chairman, it was $10 million.

Mr. PASSMAN. I didn't say anything about 1972. I said 1973. Is that right?

Mr. DYAL. Yes, sir.

Mr. PASSMAN. My apologies, I wanted to get an answer. This year you are asking for $15 million. You are familiar with the fact that the President has impounded a lot of funds for many, many projects in America, are you not?

Mr. DYAL. Yes, sir.

Mr. PASSMAN. And many of them with better justifications than this outfit. I want to admire you for being able to look me straight in the eyes when you only got $5 million last year and this year you are asking for $15 million while all projects in America are being cut substantially. Do you support Dr. Hannah in his statement that there is an asking price and a taking price? This is your asking price, is that right?

Mr. DYAL. Yes, sir; that is right.

Mr. PASSMAN. And you will accept the taking price when it comes along, is that correct?

Mr. DYAL. That is the history.

Mr. PASSMAN. That is the history. Of course, it has caused me a lot of concern when you inflate your request knowing you are not going to get this amount of money but that seems to be par for the course, so we won't single you out for criticism.

I would assume that you have a statement you would like to make for the record.

GENERAL STATEMENT

Mr. DYAL. Yes, Mr. Chairman, a brief statement.

Mr. Chairman, I am here today to support the President's budget request for your approval of a $15 million limitation on the Inter-American Foundation's obligations for fiscal year 1974.

The Inter-American Foundation was created by Congress as a public corporation in the Foreign Assistance Act of 1969. Multiyear funding was authorized and Public Law 91–175 made available up to $50 million of appropriated funds for the programs of the Foundation with said funds remaining available until expended.

FOUNDATION MANDATE

The original mandate to the Foundation from the Congress was that it find innovative and creative means for supporting social development in the hemisphere. The Foundation received a similar mandate from the President of the United States. President Nixon upon naming the Board of Directors expressed the hope that the Foundation would develop "a fresh approach to new and experimental efforts by private organizations to social and institutional development, particularly in the areas of education and agriculture."

Mr. Chairman and members of the subcommittee, the Board of Directors and the staff of the Foundation have earnestly sought to develop a program commensurate with the mandate which the Congress and the President entrusted to them.

BOARD OF DIRECTORS

The foundation's board of directors is a working board. It generally meets each month and carefully reviews each Foundation grant. The board is made up of four members from the private sector and three from the public sector. Included are three corporate executives, a professor of business administration, a former Governor, a former banker, and the Administrator of the Agency for International Development who was formerly the president of a great university.

OPERATING PHILOSOPHY

In establishing the operating procedures for the foundation, the board decided that the foundation should support small scale local efforts of people in Latin America and the Caribbean to solve their own "grass roots" economic and social development problems. It was the Board's decision that this support should be in the form of grants to private and semiautonomous groups in Latin America and the Caribbean and that these grants should be designed to leverage local resources by providing seed capital and matching funding. I cannot emphasize too strongly this concept of "leveraging" local resources. Our purpose is to support ongoing local efforts to solve problems without creating future dependence on the foundation for funds. A num-

ber of our grants provide that we match $1 for every $1 that the grantee raises locally up to a certain amount. This local contribution is doubly important since our financial commitment to the projects we fund is on a one-time basis. The foundation does not have the resources to continue to fund a project year after year. We believe that in the end people must solve their own development problems. What the foundation can do, however, is to increase the means of groups to solve their own problems by helping to stimulate local resources.

The board felt that the foundation must be quickly responsive in processing grant applications and that there should be no more than a 4-month period between the time a proposal was received and a final funding decision was made.

The board also decided that the foundation should attempt to learn from the projects it funded and to disseminate the knowledge throughout the hemisphere.

OPERATING STRUCTURE

Before the foundation began operations the board consulted with several hundred Latin specialists from this country, Latin America, and the Caribbean. The board then formulated the framework and structure of the institution, defined operational rules, selected the foundation president and set guidelines for staff appointments. In designing the operating structure the board decided that the foundation should remain small with a minimum of bureaucracy. They decided that it should be a staff of generalists with both living and working experience in Latin America and the Caribbean. The board also decided that there should be no resident overseas staff.

A 2-YEAR RECORD

The Foundation began operations in March of 1971. During the first year of operations a staff was recruited and a wide range of contacts was established throughout the hemisphere. In November of 1971, the Foundation made its first project grant. In the 16 months since that date, the Foundation has approved grants totaling $7,074,242 for 49 projects.

At this point I would like to place in the record a summary description of each of the Foundation's grants made during the 1973 fiscal year. I would be happy to discuss any of these grants with the subcommittee.

The staff of the Foundation has been kept small. Although the authorizing legislation allowed for a staff of "not to exceed 100 persons," the Foundation has found to date that it can function effectively with a staff of approximately half that size.

The Foundation has continued to try to respond to all proposals within a 3 to 4 month time frame. Attempts are being made constantly to tighten procedures in order to be able to consider proposals carefully and thoroughly but at the same time to make a final decision within the shortest possible period.

Although the Foundation has no public relations staff, we are pleased that the institution has received widespread favorable publicity, completely unsolicited, throughout Latin America and the

Caribbean. Writers from several publications in the United States, including the Reader's Digest, are also planning articles on the work of the Foundation.

The Foundation is realistic about the impact it can have with its limited resources. The chief concern is to reinforce Latin American and Caribbean self-help efforts to solve their own problems.

FISCAL YEAR 1974 BUDGET REQUEST

The Foundation's budget request for fiscal year 1974 is for a limitation on obligations of $15 million. The Foundation currently has 43 proposals totaling $6,310,207 under active review. The Foundation estimates that it will have in excess of $10 million in proposals in hand when the 1974 fiscal year begins.

The budget for next year calls for $13,285,000 in program funds for grants for Latin American and Caribbean projects, and $1,715,000 in program support funds.

BILATERAL ASSISTANCE

Mr. Chairman and members of the subcommittee, the Board of Directors and the Foundation staff recognize that this organization is only one small part of the total foreign assistance picture. We know that there are many at this time who are critical of bilateral assistance and say that all U.S. foreign assistance should be channeled through international organizations. We beg to disagree. We firmly believe, based on our 2 years of experience, that there is a role in U.S. foreign assistance for a small organization such as the Inter-American Foundation which is directly responsive to local Latin American initiatives on a people-to-people basis.

[Certain information follows:]

INTER-AMERICAN FOUNDATION

BOARD OF DIRECTORS

Augustin S. Hart, Jr., chairman, group vice president, Quaker Oats Co.
George C. Lodge, vice chairman, Graduate School of Business Administration, Harvard University.
Charles W. Robinson, president, Marcona Corp. of San Francisco.
Hon. Louis A. Ferre, former Governor of the Commonwealth of Puerto Rico.
Hon. Charles A. Meyer, vice prseident of Sears & Roebuck, and former Assistant Secretary of State for Inter-American Affairs, Department of State.
Hon. John Richardson, Jr., Assistant Secretary of State for Educational and Cultural Affairs, Department of State.
Hon. John A. Hannah, Administrator, Agency for International Development.

AUGUSTIN SNOW HART, JR., CHAIRMAN OF THE BOARD

Mr. Hart is group vice president for international operations and director of the Quaker Oats Co., where he has served as an executive since 1937. With an A.B. from Princeton University, he served as a lieutenant colonel in the U.S. Army during World War II. Mr. Hart is a trustee of the U.S. Trust Co. of New York; a director of Lake Forest College, Lake Forest, Ill.; a trustee of Presbyterian-St. Luke's Hospital of Chicago; a director of the Lyric Opera in Chicago; and a director of the Chicago Council on Foreign Relations.

GEORGE CABOT LODGE, JR., VICE CHAIRMAN OF THE BOARD

Mr. Lodge is an associate professor and director of the Division of International Activities of the Harvard School of Business. He served with the Naval Reserve during World War II and received his A.B. cum laude from Harvard in 1950. He was a reporter with the Lyon Daily Evening Item of Boston and the Boston Herald before becoming Director of Information for the U.S. Department of Labor and subsequently the Assistant Secretary of Labor for International Affairs. He has served as the U.S. representative to the governing body of the International Labor Organization (ILO) and was its chairman from 1930 to 1961. Mr. Lodge is a trustee of the Carnegie Endowment for International Peace, a member of the Council of Foreign Relations, and the author of numerous publications and books, including "Spearheads of Democracy" and "Engines of Change."

CHARLES W. ROBINSON

Mr. Robinson has been president and general manager of Marcona Corp. since 1961. After receiving his A.B. cum laude in international economics from the University of California, he served during World War II as a lieutenant in the U.S. Navy and then obtained his MBA from the Stanford Business School in 1947. In 1948, he joined the Golden State Dairy Product Co. as assistant to the product service manager and in 1950 McKinsey & Co. as a management consultant. He then rose through various executive positions with the Utah Construction Co. before becoming vice president and general manager of Marcona Mining Co. in 1959. Mr. Robinson is also president of Waverly Mining Co.; director and member of the executive committee, Crocker-Citizens International Corp of San Francisco; director of Homestake Mining Co.; trustee of Mills College; active in trade and tourism development of the Pacific Basin; and active in civic affairs in the San Francisco Bay area.

LUIS ALBERTO FERRE

Mr. Ferré is the former Governor of Puerto Rico. He served as a member of the Puerto Rican House of Representatives for 4 years. He was an organizer of the Puerto Rican Cement Corp. and served as cochairman of its board of directors. He was president and chairman of several industrial affiliates of Ferre Industries; chairman of the board and president of Ponce Hotel Corp.; treasurer of Igualdad, Inc., and director of the Bank of Ponce. Mr. Ferre holds a B.S. from Massachusetts Institute of Technology; an LL.D. from Springfield College, Massachusetts; DCL, University of Puerto Rico; and doctor of humanities from the Inter-American University of Puerto Rico. He has also been active in Puerto Rican civic affairs having served as general chairman of the Puerto Rican YMCA; president of the Federated YMCA's of Puerto Rico; and a member of the Citizens Advisory Commission for Government Security. He has received numerous distinctions, including the award as Puerto Rican of the year by the Knights of St. John of Chicago; the Order of Vasa from Sweden; and Knights of the Holy Sepulchre from Pope John XXIII.

CHARLES APPLETON MEYER

Mr. Meyer is presently vice president of Sears, Roebuck, and former Assistant Secretary of State for Inter-American Affairs. After receiving his B.A. from Harvard University in 1939, he became associated with Sears, Roebuck & Co. for 30 years. He was Sears' manager of foreign administration, president of the Bogota, Colombia subsidiary, and later a vice president and director of the company. He served as a captain in the U.S. Army during World War II. In addition, Mr. Meyer was actively involved in other business affairs, having served as a director of various corporations, including: Philadelphia National Bank, Dow Jones, Inc., Allstate Insurance Co., Gillette Co., and United Fruit Co. He has also been active in civic affairs, having been president and/or director of various institutions, including: Jarvis Christian College, Philadelphia Museum of Art and the United Fund for Philadelphia.

JOHN RICHARDSON, JR.

Mr. Richardson has been Assistant Secretary of State for Educational and Cultural Affairs since 1969. Currently, he is Acting Assistant Secretary of State

for Public Affairs. With an A.B. and L.L.B. from Harvard University, he served with the U.S. Army, European theater of operations during World War II, receiving the Bronze Star. After the war, he was admitted to the New York Bar Association, and was associated with the law firm of Sullivan & Cromwell of New York for 6 years. He subsequently joined Paine, Webber, Jackson & Curtis, investment bankers in New York City, where he was a partner for 11 years. He has been president of Free Europe, Inc. (Radio Free Europe), the International Rescue Commission, founder and member of the Polish medical aid project, chairman of the New York City Metropolitan Mission, member of the Council on Foreign Relations and member of the National Association for the Advancement of Colored People (NAACP).

JOHN ALFRED HANNAH

Dr. Hannah was sworn in as Administrator of the Agency for International Development on April 2, 1969, after having served as president of Michigan State University since 1941. Besides his B.S. from Michigan State, he has numerous honorary degrees from other universities in the United States and abroad. He has also held appointments as Assistant Secretary of Defense for Manpower and Personnel; Chairman, U.S. Section, Permanent Joint Board on Defense, Canada-United States; Chairman, Federal Commission on Civil Rights; member, International Development Advisory Board, point 4 program, and has held numerous other Government appointments. Dr. Hannah, among other distinctions, is a recipient of the Medal of Freedom Award; an honorary president of the Association of State Universities and Land-Grant Colleges; and former chairman of the American Council of Education.

PRESIDENT—WILLIAM M. DYAL, JR.

Born: May 13, 1928, Austin, Tex.

Education: AB, Baylor University, Waco, Tex., M. Th., Southern Theological Seminary, Louisville, Ky.

Special studies: School of Languages, San Jose, Costa Rica, 1953 (currently maintain oral and written fluency in Spanish); Group Relations Conference—Sponsored by Washington School of Psychiatry and Tavistock Institute of London at Amherst College, 1970.

Family: Married Edith Colvin, 1950 (native of El Dorado, Ark.). Daughters: Kathy 19; Deborah, 13; Lisa, 9.

Experience: March 1971 to present: President, The Inter-American Foundation, 1515 Wilson Blvd., Rosslyn, Va. Created by an act of the Congress, the foundation is a public corporation designed to support social development efforts of the Latin American and Caribbean peoples.

September 1969 to March 1971: Peace Corps Regional Director for North Africa, Near East, and South Asia (including India, Nepal, Ceylon, Maldive Islands, Iran, Afghanistan, Turkey, Malta, Tunisia, and Morocco); 1,500 volunteers, 300 Americans and host country national staff.

January 1967 to August 1969: Director of the Peace Corps in Colombia, South America. Directed a program and administrative staff of 40 Americans and Colombians, and a peak volunteer force of 800, through a central office and six regional offices, with an annual budget of $2 million. Developed new programs with the Government of Columbia in the fields of agriculture production and marketing, education specialists in math and science teaching methodology and curriculum, small and medium business consultants, urban sector development, educational television, and architectural consultants.

June 1963 to December 1966: Director of Organization, Christian Life Commission, Nashville, Tenn. (a small private and church-supported social issues emphasis agency); public speaker, writer, and organizational coordinator in areas of domestic and international social issues: civil rights, war and peace; poverty, citizenship. Served as a nongovernmental observer at the United Nations. Frequent speaker at university student conferences and seminars.

June 1954 to January 1962: Representatives, Foreign Mission Board, Guatemala, Costa Rica, Argentina.

Publications: Book, author "It's Worth Your Life," Association Press, 1967 (award winner, best seller); book contributor, "The Cutting Edge," World Books, 1969; book, author "Un Desafio al Discipulado," Mundo Hispano Publisher, Buenos Aires, 1970.

Honors: Awarded the Gold Medal of Santander of Colombia by President Carlos Lleras Restrepo, 1968, highest decoration of the Colombian Government for educational and cultural contribution to the nation.

99-614 O - 73 - pt. 1 - 13

EXECUTIVE OFFICER—LEON M. PARKER

Mr. Parker accepted his assignment as Director of Administration and Finance in March 1971.

Prior to his appointment to the Foundation he worked for the Peace Corps, where over a period of several years he was a budget analyst in Washington, an associate director for administration in Dar-es-Saleem, Tanzania, Deputy Director of the Office of Administration in Washington, then Deputy and Acting Director of the Office of Administration and Finance.

He received a B.A. degree from the University of New Hampshire in 1959, began his public service career that same year as a management intern with the Department of the Navy. Following his intern training and brief active duty with the U.S. Army Reserves, he worked in the Navy Comptroller's Office as a statistical analyst. He then spent 2 years in the special projects office as a budget analyst and programing officer in support of the Polaris fleet ballistic missile system.

JUSTIFICATION MATERIAL

Mr. PASSMAN. We will also insert in the record the justification at this point.

[The information follows:]

INTER-AMERICAN FOUNDATION

Supplemental Budget Data
in Support of
FY 1974 Budget

The attached tables and summaries reflect the utilization of Foundation resources released by the Congress thru FY 1973, and are offered in support of our request for the release of $15 Million of our resources for use during FY 1974.

Data as of February 28, 1973

FY 1974 Appropriation Language Request
Contained in the President's Budget
January 1973

Inter-American Foundation

The Inter-American Foundation is authorized to make such expenditures within the limits of funds available to it and in accordance with law, and to make such contracts and commitments without regard to fiscal year limitations as provided by section 104 of the Government Corporation Control Act, as amended (31 U.S.C. 849), as may be necessary in carrying out its authorized programs during the current fiscal year: Provided, That not to exceed $15,000,000 shall be available for such programs during the current fiscal year.

PROGRAM FUNDS

This package includes a summary listing of all projects utilizing Program Funds approved by the Foundation thru the 28th of February, 1973.

The summary sheet reflects the breakdown of FY 1972 and FY 1973 obligation activity as well as approved projects pending obligation. If we remain under the current continuing resolution limitation thru FY 1973 it will not be possible to obligate all approved projects, and at least $1,002,800 for Project Piaui will be carried into FY 1974 for obligation.

Following the summary by project there is a sheet summarizing our activity by country.

Also attached are summary descriptions of the projects obligated thru February in FY 1973.

INTER-AMERICAN FOUNDATION GRANT
COLOMBIA

GRANTEE: Organización Interamericana de Vivienda Cooperativa (INTERVICO)

TYPE OF ORGANIZATION: Non-profit Association of technical service organizations

FUNDING: FOUNDATION: $ 62,000

GRANTEE: $ 10,000

OTHER: $ ----

TOTAL: $ 72,000

DURATION OF GRANT: 12 months

DATE GRANT AGREEMENT SIGNED: 8/8/72

PROJECT DESCRIPTION: INTERVICO, a non-profit association of eight technical service organizations owned by cooperatives or federations of cooperatives in seven countries of Latin America, the Caribbean, and the United States, was established in the spring of 1970 in Colombia. Its objectives are to improve living conditions for low-income families by the promotion and construction of cooperative housing, and the development of integrated services through a two-phased program designed to encourage residents of "squatter settlement and tenements to improve their living conditions. Its program focuses on a concept which makes it possible for a family to change its housing as its improved life-style produces new requirements, without being "locked into" permanent housing. The Foundation grant will assist INTERVICO to carry out a feasibility study, the first phase of its program. The second phase will implement the results of this study which will seek to:

1) Determine an effective means for poor people to develop savings for housing; the social services most essential to upward mobility; and an appropriate investment program to enable the cooperative to achieve self-support;

2) Identify local financial sources interested in participating in implementing the program; and establish criteria for selection of families to join the cooperative;

3) Select two Latin American and/or Caribbean cities which can demonstrate sufficient differences in the composition of their urban poor to test the flexibility of the INTERVICO program.

RATIONALE FOR FUNDING: The concept of housing mobility for marginal families as they achieve social and economic improvement, coordinated with integrated social services, represents a new model for helping solve problems caused by inadequate or non-existent housing, social services, and job counselling. This experimental model could be particularly valuable in providing needed flexibility for the hemisphere's expanding urban populations.

INTER-AMERICAN FOUNDATION GRANT

VENEZUELA

GRANTEE: CENTRO DE ESTUDIOS SOCIALES (CES)

TYPE OF ORGANIZATION: Private, Non-profit

FUNDING: FOUNDATION: $ 61,700
GRANTEE: $160,300
OTHER: $ ---
TOTAL: $222,000

DURATION OF PROJECT : 2 years

DATE GRANT AGREEMENT SIGNED: 7/18/72

PROJECT DESCRIPTION : CES, started in 1970 as an outgrowth of ACCION, works on unemployment problems in Caracas barrios. It operates two centers for Vocational Orientation in separate barrios in which, through "learning by doing," it seeks (1) to prepare the job seekers to secure jobs and cope with the work environment, (2) to interest private companies in the problem and help them adapt their training and work practices to meet the realities of the barrio employment market, and (3) to influence government training and employment activities through feed-back on CES's methodology and experiences.

The Centers carefully select and test job seekers; keep listings of job openings; conduct seminars on basic education (including job skills, how to dress on the job, etc.), and given the lack of telephone and mail services in the barrios, operate a messenger service to advise selected clients of job openings. The Centers provide follow-up services for its placed clients for at least three months after employment.

RATIONALE FOR FOUNDATION FUNDING: The effective placement in productive employment of unskilled, unoriented residents of the mushrooming urban slums constitutes a major problem throughout Latin America. The CES program provides a possible model of how to place barrio dwellers in jobs and how to direct both public and private efforts to devise approaches to meeting this problem. In addition, the CES program presents a fresh and simple system for involving industry and barrio dwellers. The Foundation's contribution would permit CES to continue to test its methodology, to allow it the flexibility to make program changes as evaluation dictates, and to disseminate widely the results of its efforts.

INTER-AMERICAN FOUNDATION GRANT

BRAZIL

GRANTEE: Fundação dd Integração, Desenvolvimento e Educação do Noroeste do Estado (FIDENE)

TYPE OF ORGANIZATION: private, non-profit

FUNDING: FOUNDATION: $ 25,300

GRANTEE: $ 7,500

OTHER: $ —

TOTAL: $ 32,800

DURATION OF GRANT: 18 months

DATE GRANT AGREEMENT SIGNED: 8/15/72

PROJECT DESCRIPTION: FIDENE, a regional development foundation operating in northwestern Rio Grande do Sul state, was established in 1968 through the efforts of a small, private liberal arts college in the town of Ijuí. The concept of a regional development agency was the outgrowth of a highly successful community organization program in the municipality of Ijuí, sponsored by the college over a period of eight years. Inspired by this example, the various other municipalities in the region decided to pool their resources in a joint development effort, the result of which was FIDENE. With education as a vehicle, the foundation strives to achieve regional integration by means of social and economic development.

Employing its indigenous methodology for community organization, which it terms the "Movimento Comunitário de Base," FIDENE will now expand its developmental activities to rural municipalities throughout the region, an area that includes over one million people, approximately 70% of whom engage in agricultural pursuits. Initially, it will submit its methodology to detailed evaluation by means of a controlled experiment in one municipality. With the data from this evaluation it will move into other municipalities until the "grass-roots community organization movement" has spread throughout the region. The Inter-American Foundation grant will finance field aspects of both the experimental program and its evaluation; administrative support will be provided by FIDENE.

RATIONALE FOR FUNDING: The FIDENE pilot project and its evaluation will provide this unique regional development agency with the scientific data needed to perfect its community organization methodology, adapt it to rural areas that are populated largely by marginal farmers, and apply it extensively throughout the northwestern region of Rio Grande do Sul state. The evaluation will provide a basis for comparison of the "Movimento Comunitário de Base" methodology with other community action models, and the tested system will be replicable in similar areas throughout Brazil and Latin America. FIDENE has already demonstrated its competence in linking the academic elite and marginal populations. An analytical study of this process in the experimental project will provide useful information on the processes of social change and will make this aspect of the FIDENE methodology accessible to other groups.

INTER-AMERICAN FOUNDATION GRANT

COLOMBIA

GRANTEE: FUNDACION NACIONAL PARA EL DESARROLLO SOCIAL (FUNDES)

TYPE OF ORGANIZATION: Private, non-profit

FUNDING: FOUNDATION: $300,000

GRANTEE: $300,000

OTHER: $ Local inkind donations to cover all operation expenses (about $10,000 for first year)

TOTAL: $610,000

DURATION OF GRANT: one year

DATE GRANT AGREEMENT SIGNED: 8/9/72

PROJECT DESCRIPTION: FUNDES was founded in Cali in February 1972, by representatives of both the Colombian public and private sectors. Its primary objective is "the social and economic development of marginal groups" through the expansion or establishment of small, labor-intensive business enterprises. It provides credit and technical assistance to these small businesses which do not have access to capital through regular banking channels.

A Foundation grant of $300,000 will match local Colombian donations to FUNDES with which they will create a $600,000 rotating loan fund. This fund will provide the financial support required by FUNDES' program to create employment through loans to marginal labor-intensive enterprise.

FUNDES operates with a small permanent staff which analyzes and recommends projects for financial support. Several public and private organizations are represented on FUNDES' Board of Directors and provide feasibility studies, skill and managerial training, job orientation, market research, and aid in organizing small labor-intensive businesses. This technical assistance is coordinated by the permanent staff, and is furnished at no cost to FUNDES or the project served.

RATIONALE FOR FUNDING: In focusing the resources of several organizations on one serious problem -- the need for jobs among the marginal population -- this model seeks to demonstrate an inexpensive method of job creation through the utilization of existing specialized resources on an as-needed basis. It is anticipated that it should result in the development of small, labor-intensive industries with low capital investment requirements.

INTER-AMERICAN FOUNDATION GRANT
JAMAICA

GRANTEE: Mutual Housing Services, Ltd.

TYPE OF ORGANIZATION: Private, non-profit, technical services

FUNDING: FOUNDATION: $443,155

GRANTEE: $ 72,480

OTHER:

TOTAL: $515,635

DURATION OF GRANT: 2 years

DATE GRANT AGREEMENT SIGNED: 11/13/72

PROJECT DESCRIPTION: Mutual Housing Services, Ltd. (MHS) was initially sponsored and financed by the Jamaican government in 1968 under the guidance of its Cooperative Housing Advisory Committee with assistance from the Foundation for Cooperative Housing (FCH), Washington, D.C. It was established as a private, non-profit, technical service organization whose Board of Directors was selected for their experience in and dedication to the promotion of cooperative communities for low to moderate income groups. Partially funded by fees charged to clients for its services, and previously subsidized by the Ministry of Housing, MHS has recently completed a 159-unit housing cooperative in Kingston and a 90-unit urban renewal project; and has begun a 311-unit project at Montego Bay. MHS services include the complete organization and development of housing cooperatives, as well as project management and cooperative leadership training programs. It is now planning a community development project which includes a 100-unit cooperative housing development aimed at a lower income level than lending institutions have been reaching. This is the first phase of a program to assist the South Clarendon Cooperative Housing Society (SCCHS) to acquire home ownership for its members. SCCHS is a non-profit cooperative society of indigenous rural workers, whose incomes are very low and to whom mortgage credit is not available individually. A grant of $438,155 to MHS will cover development and construction costs of the housing for this demonstration community development project with subsequent creation of a revolving fund for additional projects. The community will be constructed on land purchased by SCCHS members with their savings ($10, 890). Additional social promotion and organizational efforts are being provided by the non-denominational Social Action Center, the Sugar Industry Labor Welfare Board and SCCHS. MHS will manage the construction and sale of the homes to SCCHS members, after which it will sell the mortgages to the Jamaica Mortgage Bank (JMB) which has agreed to cooperate. Moneys retrieved from sale of the mortgages are to be placed in a revolving fund to provide financing for additional cooperative communities. It is anticipated that this demonstration effort will result in the application of additional funds by the local financial community, making it possible to complete more than the approximately one community per 18 months financed by this fund.

RATIONALE: Mutual Housing Services is a unique organization in Jamaica and the Caribbean. This grant strengthens their capability to provide low-cost housing, develop cooperative communities, and train community leaders. The project represents a major effort to demonstrate to the local financial community that housing can be economically provided to lower income groups than those now supported. Moreover, it aims at an area of social development and need that has been listed as a priority by people throughout the Caribbean.

INTER-AMERICAN FOUNDATION GRANT
BRAZIL

GRANTEE: Fundação "Casa do Pequeno Trabalhador"

TYPE OF ORGANIZATION: Private, non-profit

FUNDING: FOUNDATION: $ 170,666

GRANTEE: $ 212,531

OTHER: $

TOTAL: $ 383,197

DURATION OF GRANT: 2 years

DATE GRANT AGREEMENT SIGNED: 8/15/72

PROJECT DESCRIPTION:

The "Casa do Pequeno Trabalhador" is a private, non-profit institution founded by a wealthy philanthropist in 1938 in São Paulo. Historically, it has been dedicated to schooling of and caring for indigent boys lacking a normal home environment. A marginal operation for many years, it now receives approximately 10 percent of its support from the state; the remainder comes from private sources and its own income.

Similar to most organizations of this type, the Casa's efforts in the past have been principally devoted to providing welfare and rudimentary classical education. It is presently in the process of changing from a school-welfare institution partially supported by its students who work as parking-lot attendants, to a work-study center aimed at vocational training, job placement, and financial self-sufficiency.

This program will give the 350 students enrolled in the Casa program the chance to learn a marketable skill and gain experience equivalent to that obtained in unsalaried industrial apprenticeships, while at the same time earning income for both themselves and the school from the sale of products made. The Foundation grant over a period of two years will be used to purchase a part of the machinery and equipment needed for skill training in printing, plastics molding, book binding, and radio and TV repair. Other expenses for the establishing and operating of this expanded training facility will be funded by local resources.

RATIONALE FOR FUNDING: The project will test a model for developing a neglected and unproductive segment of the population into a significant human resource on a partially self-financing basis. Expressed interest on the part of government entities promises a wide application of the lessons learned.

INTER-AMERICAN FOUNDATION GRANT

NICARAGUA

GRANTEE: Fundacion Nicaraguense de Desarrollo (FUNDE)

TYPE OF ORGANIZATION: Private, non-profit, credit

FUNDING: FOUNDATION: $ 502,500

GRANTEE: $ 31,700

OTHER: $ 428,284

TOTAL: $ 962,484

DURATION OF GRANT: 2 years

DATE GRANT AGREEMENT SIGNED: 9-12-72

PROJECT DESCRIPTION: FUNDE, a group of Nicaraguan businessmen, was founded in 1969 as a legally constituted, autonomous organization to provide non-guaranteed financing to organized low-income marginal groups without access to regular credit through normal banking channels. To date FUNDE has made loans totalling $72,000 at 9-12% annual interest for start-up costs and operating capital to small industries (80%), such as fishing and furniture production cooperatives and carpentry associations, and to community groups (20%). Local lending institutions have given $260,000 at 6-7% interest without requiring guarantees. FUNDE is headed by a young dynamic economist who because of his membership in Nicaragua's elite and his dedication to social development, is able to play a unique role as a change agent.

A Foundation grant of $500,000 will enable FUNDE to become self-sufficient in three years. $260,000 will be used to expand its loan portfolio. $240,000 will establish two centers:

(1) Training and Technical Assistance Center; to train community leaders and technicians, conduct evaluation and research and give technical assistance to programs which have received loans.

(2) Marketing Center; to identify local and national markets for FUNDE assisted productive enterprises.

FUNDE will utilize technical advisors and receive support from a wide range of both public and private indigenous and international institutions. It has cultivated working relationships with many disparate agencies in an effort to develop communication and support between social classes.

RATIONALE: A substantial majority of Nicaragua's population does not participate in the political and economic activities of the country and possess little opportunity to influence the decisions and events which affect their lives. Social and economic development of the marginal population is not a government priority. FUNDE's non-paternalistic, multi-faceted program focused on self-help is a unique approach to the political restructuring of the social system in Nicaragua by developing a social conscience among the elites and organization among the poor.

INTER-AMERICAN FOUNDATION GRANT

HONDURAS

GRANTEE: Fundacion Hondurena de Desarrollo (FUNHDESA)

TYPE OF ORGANIZATION: Private, non-profit, credit association

FUNDING: FOUNDATION: $ 524,113

GRANTEE : $

OTHER : $ 600,500

TOTAL : $1,124,613

DURATION OF GRANT: 2 years

DATE GRANT AGREEMENT SIGNED: Sept. 22, 1972

PROJECT DESCRIPTION: FUNHDESA is a non-profit organization founded in 1969 by a grou of Honduran businessmen to provide credit and stimulate low income groups and communities to take initiative in solving their own problems. Its loan portfolio totals approximately $255,000. FUNHDESA administers special funds for Caritas of Honduras and Accion Cultural Popular Hondurena which are being matched by equal credit from commercial banks and have subscribed to OPIC guarantees for a sum of $250,000. FUNHDESA is managed by Fernando Montes, a young energetic and capable Honduran.

The Foundation grant, matched by $600,500 FUNHDESA raised from the Honduran private sector, will assist FUNHDESA to initiate a nation-wide consumer cooperative program to restructure the Honduran rural market system. It proposes to establish four regional cooperatives by organizing approximately 400 existing small consumer stores over a 3-year period, utilizing FUNHDESA credit to cover start-up expenses. Loans would be granted at 8% annual interest for 10 years with a 3-year grace period. Interest earned will be placed in a revolving fund to pay administrative expenses of the program. It is anticipated that the program will become totally self-financing at the end of 3 years. The project will be implemented by two organizations:

1) The Department of Cooperative Services will provide the regional consumer cooperatives with (a) technical assistance; (b) economic feasibility studies; and (c) marketing assistance. Its functions will be carried out by FUNHDESA and Caritas of Honduras.

2) The Regional Consumer Cooperatives under whose auspices the affiliated consumer stores will function will: (a) serve as channels for agricultural, industrial and artesan products from the marginal producer directly to and for the consumer; (b) serve as channels for market information; (c) serve as centers for administrative training for managers of affiliates; and (d) monitor the activities of affiliates and provide them with technical assistance as needed.

RATIONALE FOR FUNDING: FUNHDESA's program of consumer cooperatives is a concept which if successful, could completely restructure rural marketing practices and revolutioniz national purchasing power in Honduras. Its proposed lending program would mark the first time the Honduran banking system will have cooperated in the development of the marginal worker. Therefore, while cooperatives in themselves are not new, this may be the first time for their use as a lever for social and economic change on a national level.

INTER-AMERICAN FOUNDATION GRANT
HAITI

GRANTEE: Service Chrétien d'Haiti (SCH)

TYPE OF ORGANIZATION: Private, non-profit, non-denominational

FUNDING: FOUNDATION: $ 5,000

GRANTEE: $

OTHER: $

TOTAL: $ 5,000

DURATION OF GRANT: one time

DATE GRANT AGREEMENT SIGNED: 11/28/7[illegible]

PROJECT DESCRIPTION: Initially established in 1964, Service Chrétien d'Haiti (SCH) represents Church World Services, a nonprofit, non-denominational agency financed by the National Council of Churches, U.S.A. Its original objectives of dispensing disaster relief and institutional assistance have been broadened to include the development of rural communities. Wishing to avoid paternalism, the SCH focuses its efforts on incorporating the community members with whom it works into the decision-making process and the assuming of responsibility for decisions made. Its community development program is administered and supervised by an indigenous team of nine technicians who have been working through and coordinating their efforts with 12 existing Community Councils representing approximately 30,000 persons in the rural area of Bellevue de la Montagne.

In July 1969, SCH established a revolving fund with $500.00, and began making cash loans to community members through the 12 Bellevue Councils. The fund was ultimately increased to $4,500 by donations from various international sources, but the entire amount had been utilized by May 1972. A $5,000 grant from the Foundation will enable SCH to augment the loan fund in order to assist the Bellevue communities to meet the urgent financial requirements of fall planting for 1972. Loans will be made at 3 percent interest for terms of 6 months to 1 year for the purchase of farm supplies and such projects as private rain-catching reservoirs and pig raising. Interest payments will be returned to the fund and reserved for the Councils to use at their discretion. All loans must be approved by full Council membership vote.

RATIONALE: Throughout Haiti, existing community councils although loosely organized, provide a vehicle for developing grassroots leadership and responsible citizen participation. In Bellevue de la Montagne, this rural endeavor could provide a model for the 90 percent of Haiti's 5 million population who live outside the urban areas. Finally, at this strategic time in Haiti's history, this project will encourage social development by its demonstration of the decision-making process.

INTER-AMERICAN FOUNDATION GRANT

G U A T E M A L A

GRANTEE: La Cooperativa Central de Mercado "El Quetzal" R.L.

TYPE OF ORGANIZATION: Private, non-profit federation of cooperatives

FUNDING: FOUNDATION: $67,975

GRANTEE: $ --

OTHER: $ 7,200

TOTAL: $75,175

DURATION OF GRANT: 1 year

DATE GRANT AGREEMENT SIGNED: 9-6-72

PROJECT DESCRIPTION: La Cooperative Central de Mercadeo "El Quetzal" R.L. was legally founded in 1965 as a cooperative association and comprises 12 agricultural cooperatives with a total membership of approximately 1200. "El Quetzal" provides its members with loans for agricultural supplies, as well as assistance in marketing and cooperative management.

With the help of USAID funds, "El Quetzal" established a cooperative training facility, the "Escuela de Adiestramiento para Cooperativas Agricolas (EACA)," located in the highland town of Chimaltenango. EACA provides educational courses incorporated with motivational training for the members of "El Quetzal," the majority of whom come to EACA with a literacy level of 3rd grade or less. Two-week courses in cooperative concepts, cooperative management, bookkeeping, administration, and record keeping, as well as classes for cooperative officers are taught by EACA's director and teaching staff.

The Foundation grant of $67,975 will cover the expenses of EACA's training program for the first of the four years it anticipates will be required to become self-sufficient. During this year, 11 courses will be held to educate and motivate approximately 330 agricultural leaders and workers. In addition EACA will provide follow-up services to the cooperatives through approximately 51 two- to three-day seminars to be conducted in the communities in which the cooperatives are located.

RATIONALE: EACA is the only educational institution in Guatemala providing cooperative and motivational training to the nation's illiterate and semi-literate highland population. It is anticipated that the techniques used in carrying out the project and the lessons learned from it may serve as models to assist other agricultural cooperatives in Guatemala and similar groups throughout the hemisphere to find new solutions to their problems.

INTER-AMERICAN FOUNDATION GRANT
GUATEMALA

GRANTEE: Fundacion del Centavo

TYPE OF ORGANIZATION: Private, non-profit

FUNDING: FOUNDATION: $10,000

GRANTEE: $ --

OTHER: exact amount not known

TOTAL: $10,000+

DURATION OF GRANT: one time only

DATE GRANT AGREEMENT SIGNED: 8/25/72

PROJECT DESCRIPTION: The Fundacion del Centavo was founded in June 1963 through the efforts of a retired American and about twenty Guatemalan businessmen. Its purpose was to incorporate the marginal rural sector into the socio-economic fabric of the country by providing loans to low income rural groups who had no other access to credit. In 1968, it became an affiliate of the Pan American Development Foundation (PADF), an autonomous organization dedicated to economic and social development, and linked to the Organization of American States by its charter. A total of 19 National Development Foundations are now in operation in Latin America and the Caribbean. All are affiliated with the PADF.

At the annual meeting of the PADF in Washington during the month of May 1972, a representative group from 7 National Development Foundations met to discuss their needs for closer cooperation, exchange of information, and assistance to the smaller Foundations. The group concluded that the best means of achieving their purpose would be to bring together representatives from all of the 19 Foundations in a seminar, with the Fundacion del Centavo as host.

An Inter-American Foundation grant of $10,000 will underwrite part of the expenses for this National Development Foundation Seminar. The directors will discuss important accumulated experiences, and study ways to coordinate efforts and increase communication in an effort to improve and broaden their respective programs.

RATIONALE: The National Development Foundations are indigenous organizations directly and actively engaged in finding solutions to problems of social and economic development unique to their countries The 4-day seminar in Guatemala from October 9-12, 1972 should establish a systematic method for the exchange of information between 21 organizations in 18 countries about their programs and experiences in solving development problems. In addition, it is anticipated that the seminar will result in the formation of a hemisphere-wide federation.

INTER-AMERICAN FOUNDATION GRANT

BRAZIL

GRANTEE: Ação Comunitária do Brasil-Guanabara (ACB/GB)

TYPE OF ORGANIZATION: Non-Profit Corporation

FUNDING: FOUNDATION: $11,730

PROJECT DESCRIPTION:

This grant covers the assessment of the socio-economic results of the first two operational years of the ACB-GB Labor Training Center, partially ($39,500 out of $109,500 total) funded by this Foundation. The study is to measure and record the impact of the Labor Training Center upon the general environment and community life of the inhabitants of the area served by the Center, changes in the individual circumstances of the trainees, and the effectiveness of the Center itself.

RATIONALE FOR FUNDING:

This is a part of the process of learning from and evaluating the effect of a project we are supporting.

INTER-AMERICAN FOUNDATION GRANT

GUYANA

GRANTEE: David Rose Center

TYPE OF ORGANIZATION: Private, non-profit, non-denominational social service organization

FUNDING: FOUNDATION: $70,400

GRANTEE: $10,000

OTHER: $ 9,500

TOTAL: $89,900

DURATION OF GRANT: 2 years

DATE GRANT AGREEMENT SIGNED: 12/6/72

PROJECT DESCRIPTION: The David Rose Center was legally established in 1972 by the Guyana Council of Churches which represents 14 Christian denominations. The purpose of its founders was to redirect church resources from charity to development. The Center, located in Ruimvelt one of lowest income areas of South Georgetown, carries out a broad program of youth development, public health, probation work, family counselling, and social welfare. This program enables the Center to ac as a channel through which the people can make their interests and nee known to other organizations and Government. In addition, it has initiated a pilot self-help/training project utilizing employment-oriente action programs as an instrument to awaken productive community partici pation among the 50,000 people of this area.

The pilot project is devoted to developing skills and talents, an to assisting the organization of home industries to produce income and employment where none presently exists. It gives 12-week courses in carpentry, masonry, plumbing, welding and candy-making throughout the year to a total of approximately 500 persons. Students completing courses are encouraged to set up home workshops which will be organized into cooperatives; those unable to work at home use Center facilities. Through retaining 20 percent of the sale of all products produced at, or marketed through the efforts of the Center, it is anticipated that the project will become self-sufficient in two years. A Business Advisory Board composed of local businessmen is committed to provide assistance in marketing, technical feasibility, and job placement.

The Foundation grant will: (1) supplement funds committed by local donors for new building facilities for training workshops and a marketing center; and (2) provide operating costs for 2 years. It is planned that an evaluation be integrated with the project from its inception to measure resulting attitudinal changes.

RATIONALE: The Center is an urban grassroots mechanism which stimulates community action and assists people to solve their own problems. It serves as a channel by which the community can make its needs and interests known, and through which needed services can be provided. The pilot project combines community participation, skill training and labor intensive employment and is aimed at strengthening grassroots channels for communication. It also attacks unemployment, one of Guyana's major problems. Through careful evaluation, this project could provide a prototype adaptable to similar problems in other areas of Guyana and elsewhere in the Caribbean.

INTER-AMERICAN FOUNDATION GRANT

BRAZIL

GRANTEE: Fundação Projeto Piauí

TYPE OF ORGANIZATION: Autonomous Governmental

FUNDING: FOUNDATION: $6,917

GRANTEE : -0-

OTHER : -0-

TOTAL : $6,917

DURATION: 1 month

DESCRIPTION:

The Inter-American Foundation provided funds for the Fundação Projeto Piauí to prepare detailed PERT type work plans for the conduct of Projeto Piauí. These funds were provided after we had decided we wanted to take part in the support of Projeto Piauí.

RATIONALE FOR FUNDING:

The final determination of the level of Inter-American Foundation funding was partly contingent upon the relationship of several sub-projects to the total. Therefore, it was appropriate to separately fund some of the detailed planning work required for the project prior to determining the substantive level of involvement. We subsequently approved a $1,504,000 level of support for Projeto Piauí.

INTER-AMERICAN FOUNDATION GRANT

BRAZIL

GRANTEE: Fundação Projeto Piauí

TYPE OF ORGANIZATION: autonomous, governmental

FUNDING: FOUNDATION: $ 1,504,000

GRANTEE: $

OTHER: $ 1,500,000

TOTAL: $ 3,004,000

DURATION OF GRANT: 18 months

DATE GRANT AGREEMENT SIGNED: 1/12/73

PROJECT DESCRIPTION:

SUMMARY

During an 18-month period, the Fundação Projeto Piauí (FPP) will test its development approach in six regions of Piauí. The project aims at changing the state's traditional society to a system of less-paternalistic structures, fewer hierarchical divisions, greater distribution of wealth and power, higher incomes for the masses, and a greater degree of self-determination on the part of the population.

450,000 people, 25% of the state's population, are being involved in this phase of the program. People at the grassroots level will be motivated to organize, identify problems, and act to solve them. The FPP will encourage upper-class people to accept, support, and participate in the community-initiated work.

OBJECTIVES

The overall objectives of the project are:

-- to provide for greater expression, choice, and influence of the people in the decisions that affect their lives;

-- to stimulate communication among all social groups and encourage their joint involvement in a change process formulated and directed by the people;

-- to raise the standard of living, particularly of the lowest income groups;

-- to channel public resources and private investment to respond to the needs identified by grassroots groups.

METHOD OF OPERATION

Community work. The FPP will work in six regions of the state to form community groups. The staff begins by doing a survey of a neighborhood in terms of its social structures, including the juridical, economic, religious, educational, and other systems. People are brought together to identify their problems and possible solutions in each of the social systems.

As suggestions evolve, the staff helps the community to prepare a comprehensive plan for its own development. It is discussed with other communities and with local leaders; together they arrive at a plan for the county. These plans will be aggregated at the regional and finally the state level.

Linkages Among Groups. To reinforce the cooperation and integration of 46 public and private development agencies involved in the area, a Deliberative Council made up of these groups was established. Special training seminars are held for this body and other leaders to convey the philosophy of the Project. FPP coordinates their participation in specific community projects.

Economic Aspects. FPP expects to raise living standards, especially among the poor, through:

-- community self-help projects;

-- the attraction of new investments relevant to community aspirations;

-- introduction of more productive agricultural techniques;

-- projects in rural settlement.

Educational Aspects. FPP plans to coordinate a reform of the school curricula to a practical orientation. The staff will also direct the creation of a TV education program.

Training. FPP will train local voluntary and salaried personnel for community work. They will prepare residents of Piauí to take over the Project, will give courses on development administration and planning, and will hold seminars about the Project, particularly for the existing local power structure.

COST

The Foundation is requested to provide $1.5 million of an estimated $3.0 million budget. The Piauí State Government and the Federal Ministries of Education and Planning will contribute the other $1.5 million. The grant is for 46% of the personnel and operating costs of the FPP for 18 months and for a seed capital fund for community projects.

RATIONALE FOR FUNDING.

The FPP is a singular attempt to induce major comprehensive change in the way society views man and operates in relation to him. The unique community action approach is aimed at all levels of society. The project provides a full laboratory for learning about change in individuals, neighborhood communities, local structures, the statewide system and about methodologies of community organization, social communication and motivation. With several Brazilian states already showing more interest in the project, the prospects for replication as a whole or in part are good within Brazil.

INTER-AMERICAN FOUNDATION GRANT

BRAZIL

GRANTEE: Centro de Protecão a Infância e Maternidade (CEPIM)

TYPE OF ORGANIZATION: private, non-profit

FUNDING: FOUNDATION: $13,300.00

GRANTEE: $12,600.00

OTHER: $

TOTAL: $25,900.00

DURATION OF GRANT: DATE GRANT AGREEMENT SIGNED:

PROJECT DESCRIPTION:

THE ORGANIZATION — Created in 1963, CEPIM is composed of seven women's clubs representing low-income communities on the periphery of São Paulo. It has been devoted primarily to stimulating self-help activities in health and education, training women in marketable handicrafts, and securing better public services. It forms part of a movement of 130 São Paulo community groups receiving technical assistance from the Movimento de Promoção Humana (MPH), a private social action organization.

THE PROJECT — CEPIM intends to involve the men of the community in its work by responding to their highest expressed priority: job training. Courses in masonry, plumbing, electrical wiring, carpentry, and painting will be given. The practical course experience will include the completion of the CEPIM community center. Discussions on community issues and the importance of group work will be part of the courses. The grant will provide for the purchase of supplies and equipment for the courses. Local resources will cover instructors' salaries and educational materials.

RATIONALE FOR FUNDING — The project is a demonstration attempt, of interest to other organizations linked to the MPH, as to how men might become involved in what has been primarily a women's movement. An unusual feature is that the courses will be established and directed by the community group itself rather than by an intermediate organization. It is expected that CEPIM and this project will be included in an evaluation study of MPH activities.

INTER-AMERICAN FOUNDATION GRANT
BRAZIL

GRANTEE: CENTRO DE ESTUDOS E AÇÃO SOCIAL (CEAS)

TYPE OF ORGANIZATION: private, non-profit

FUNDING: FOUNDATION: $ 8,540.00

GRANTEE: $

OTHER: $ 4,250.00

TOTAL: $12,790.00

DATE GRANT AGREEMENT SIGNED: 2/8/73

DURATION OF GRANT: 3 months

PROJECT DESCRIPTION: This grant will assist CEAS to conduct a seminar for 30 operators of social action programs in Northeast Brazil. The objectives of the seminar are:

-- to raise the participants awareness of social change needs and opportunities;

-- to enhance the participants' capabilities for effective action through study and assessment of global trends and specific case studies;

-- to stimulate the coordination, integration and joint planning of activities among organizations.

THE ORGANIZATION

CEAS was founded in the early 1960's by Jesuits concerned with social change. Its membership now includes lay professionals and university students. Its activities focus on applied social science research, dissemination of information on social change, training of social action operators, and the promotion of action projects.

CEAS's primary concern is to provide a serious and operational interchange of ideas and experiences among social scientists and practicioners. This is done through seminars, studies, and through the publication of Cadernos do CEAS a periodical on current social issues, thinking and activities.

RATIONALE FOR FUNDING

As a pivotal organization in training, learning and dissemination of information about social change in Northeast Brazil, CEAS is in itself worthy of support. The project facilitates CEAS attempts to integrate social development efforts among diverse groups in the region. In raising social development issues and in assessing program experiences, the seminar will be a significant learning experience.

INTER-AMERICAN FOUNDATION GRANT

COLOMBIA

GRANTEE: Accion en Colombia (AeC)

TYPE OF ORGANIZATION: Non-Profit Corporation

FUNDING: FOUNDATION: $4,100

DESCRIPTION:

This grant is to assist AeC in preparing a design for the evaluation of the socio-economic results of a small industries project. The project is being partially funded ($71,000 out of an estimated $90,000 cost) under a Foundation grant obligated in FY 1972.

RATIONALE FOR FUNDING:

This cost covers the planning phase in the process of assessing and evaluating the impact of the project we have funded.

INTER-AMERICAN FOUNDATION GRANT
NICARAGUA

GRANTEE: FUNDACION NICARAGUENSE DE DESARROLLO (FUNDE)

TYPE OF ORGANIZATION: Private, non-profit, credit

FUNDING: FOUNDATION: $ 10,000

GRANTEE:

OTHER:

TOTAL: $ 10,000

DURATION OF GRANT: 3 months

DATE GRANT AGREEMENT SIGNED: 1/4/73

PROJECT DESCRIPTION: This grant will permit the Fundación Nicaraguense de Desarrollo (FUNDE) to support and assist a recently organized private sector committee in Managua. This committee, called Organización Coordinadora de las Institutiones Privadas (OCIP), is composed of FUNDE, CARITAS/Nicaragua and private Nicaraguan individuals. The assistance provided by FUNDE will strengthen OCIP and facilitate its efforts to develop a coordinated private sector rehabilitation/development program for marginal groups left destitute by the 1972 earthquake. A complementary $5,000 grant was made to the Fundación Hondureña de Desarrollo, Honduras, to provide direct technical assistance in the development of this program.

THE ORGANIZATION: FUNDE is a group of Nicaraguan businessmen, founded in 1969 as a legally constituted, autonomous organization to provide non-guaranteed financing to organized low-income marginal groups without access to regular credit through normal banking channels.

RATIONALE FOR FUNDING: As a result of the 1972 earthquake disaster, funds from other sources were not available to support the organizational costs of OCIP. The circumstances provide an excellent opportunity to support FUNDE in its efforts to strengthen OCIP, a highly capable, indigenous non-profit Nicaraguan private sector organization working directly on a people to people basis.

INTER-AMERICAN FOUNDATION GRANT
HONDURAS

GRANTEE: FUNDACION HONDUREÑA DE DESARROLLO (FUNHDESA)

TYPE OF ORGANIZATION: Private, non-profit

FUNDING: FOUNDATION: $ 5,000

GRANTEE:

OTHER:

TOTAL: $ 5,000

DURATION OF GRANT: 3 months

DATE GRANT AGREEMENT SIGNED: 1/4/73

PROJECT DESCRIPTION: This grant will permit the Honduran Development Foundation to provide technical assistance to a recently organized private sector committee in Managua. This committee, called COVO, is composed of CARITAS/Nicaragua, the Nicaraguan Development Foundation (FUNDE) and private individuals. FUNHDESA will assist COVO in organizing a more broadly based private sector coordinating council and facilitate COVO's efforts to develop programs and re-structure services for marginal groups left destitute by the 1972 earthquake. A complementary $10,000 grant was provided to FUNDE to assist COVO to implement an immediate operational program.

THE ORGANIZATION: FUNHDESA is a non-profit organization founded in 1969 by Honduran businessmen to provide credit to low income groups. Fernando Montes, the Director of FUNHDESA, and his staff have considerable experience in promoting the coordination of private sector agencies in the field of development.

RATIONALE FOR FUNDING: Funds from other sources are not available to permit FUNHDESA to provide COVO with technical assistance on a timely basis. The circumstance provides an excellent opportunity to develop a coordinated, private sector approach to development problems in Nicaragua.

PROGRAM SUPPORT FUNDS

The attached chart reflects the Foundation's utilization of funds for Program Support purposes.

It provides a current plan for FY 1973 funds utilization slightly different than the President's Budget. The changes are basically a reflection of three factors:

A. The absorption of $26,800 worth of pay raise costs as a result of the 5.14% increase in January, 1973.

B. A reduced utilization, during the first half of the year, of reimbursable details and consultants, and an offsetting increase in the development of direct hire staff.

C. One time costs for building alterations and equipment requiring reprogramming of approximately $40,000 into office equipment (+23,000), building alterations (+12,000) and communications (+5,000) from other categories.

We do not expect any of these changes to have a substantive impact on, or require revision of, our FY 1974 plans at this time, as we plan to absorb the January 1973 pay raise costs within our current request of $1,715,000.

*$26,800 - Transferred from program funds to offset the 5.14% pay raise of January 1973.

PROGRAM SUMMARY

Mr. PASSMAN. Would you like to summarize briefly the purposes of the Inter-American Foundation and its operations?

Mr. DYAL. Yes, Mr. Chairman, I will be pleased to.

This is the beginning of the third year of Foundation operations. Although we were created by an act of Congress as a public corporation in 1969 under the Foreign Assistance Act, we actually began operations in March of 1971, so we are just beginning the third year of operations. Our funding program record in Latin America and the Caribbean actually incorporates only 16 months beginning in November of 1971. We have attempted to be a participant funder, by invitation, in response to indigenous groups and organizations in Latin America and the Caribbean formed as self-help programs primarily designed to increase and more equitably distribute goods, income, and services among people, to allow them to participate through communities in the decisions which affect their lives, and to enhance the communications flow between all the groups who oftentimes in many of the countries are in competition with each other when change occurs.

During this funding period we have approved grants for 49 projects in 19 countries. Generally these are projects conceived by local groups, not by the Foundation, since we are always a participant funder, and they are projects set in motion with local leadership and resources. We never are the total or the sole funder of any project. Our participation is on a one-time basis during a brief period of years, to date a 3-year maximum time.

We do not supply from our Foundation staff technical assistance nor participants within a project itself. There is always local leadership for these particular projects.

PROGRAM OPERATIONS

Mr. PASSMAN. Would you describe just one project?

Mr. DYAL. Yes, sir. Many of the projects we have funded, I think 17 of the 49, relate to job orientation, skill training, or job generation programs among marginal peoples, rural and urban.

Mr. PASSMAN. Some of the normal work is done under the bilateral technical aid program, is it not?

Mr. DYAL. No, sir; it is not because it is at a different level.

Mr. PASSMAN. Describe one project.

Mr. DYAL. One project in particular would be a program in Cali, Colombia, an organization called FUNDE, which is a development foundation headed by a local board of directors. It is concerned with organizing very small businesses out of which can flow job generation for people in the urban sectors of that area.

Mr. PASSMAN. Concerning the contributions the local people make, they are also the recipients of their own contributions as well as ours. Is that a statement of fact?

Mr. DYAL. Our grant, Mr. Chairman, is made to them on the basis for every dollar they raise locally we provide a dollar.

Mr. PASSMAN. That is good, but it doesn't answer my question. Those who contribute at the local level are the recipients not only of our contribution but their own.

Mr. DYAL. The contributions at the local level, Mr. Chairman, are from middle- and upper-class businessmen and others who contribute to the Foundation which has set in motion the project.

Mr. PASSMAN. But the communities are the recipients of their own contributions as well as what we put in, is that correct?

Mr. DYAL. Yes, sir.

Mr. PASSMAN. Why is it so hard to get an answer? You are not ashamed of this outfit, are you?

Mr. DYAL. Not at all, sir. I am very pleased to be a part of it.

AID TO LATIN AMERICA

Mr. PASSMAN. I believe we have over $1 billion a year in different types of aid for Latin America, do we not, including all programs?

Mr. DYAL. It is my understanding somewhere around there.

Mr. PASSMAN. You are in here for your little tidbit of $5 million. Isn't this just another one of these little agencies that was created on the Hill and not downtown, is that correct?

Mr. DYAL. That is correct, it was created by Congress.

Mr. PASSMAN. Everything is created by Congress, but I am talking about the idea for the Inter-American Foundation, was an idea that developed in the Congress, and not by the people downtown. Is that a fair statement?

Mr. DYAL. It was an idea developed within the Congress, that is true.

Mr. PASSMAN. All right, that is the question I asked. Is this related to a Fulbright proposal?

Mr. DYAL. As far as I know, Mr. Chairman, this has no relationship to the Fulbright proposal.

[Discussion off the record.]

Mr. PASSMAN. I yield to Mr. Shriver.

OFFICE OF MANAGEMENT AND BUDGET REVIEW

Mr. SHRIVER. Thank you, Mr. Chairman.

Does the Office of Management and Budget see your request and approve a certain amount?

Mr. DYAL. Yes, sir; they do.

Mr. SHRIVER. What was the amount of limitations on your spending that you requested from the Office of Management and Budget?

Mr. DYAL. For 1974?

Mr. SHRIVER. Yes.

Mr. DYAL. Our request was $22 million.

Mr. SHRIVER. And they cut it then?

Mr. DYAL. To $15 million.

HOST COUNTRY RELATIONS

Mr. SHRIVER. Mr. Dyal, do your projects have the approval of the host governments?

Mr. DYAL. The individual projects, sir, have the approval of host governments via the organization which is the sponsor, the grantee organization.

Mr. SHRIVER. How does that work?

Mr. DYAL. Each organization is responsible to its own host government for its legal position and authority to function and operate, and reportage of any funds which they receive are set in motion under the laws of each country, which vary, of course, among the 20-plus countries.

Mr. SHRIVER. And the local organization then gets the approval of the local government or the State government?

Mr. DYAL. Where that is required; yes, sir.

Mr. SHRIVER. Have any of the governments expressed opposition to projects which you support?

Mr. DYAL. To date there has been no such expression.

MATCHING FUNDING

Mr. SHRIVER. You say on page 3 that a number of your grants are on a one-to-one matching basis, and they are all on a one-shot basis. I notice in your supplemental material that many of your projects are not on a one-to-one basis. In fact, many of them are not matched. Would you provide additional data showing your overall programs in terms of how much you have put up and how much the recipients have put up.

Mr. DYAL. I can supply that for the record, Mr. Congressman.

[The information follows:]

INTER-AMERICAN FOUNDATION

[Analysis of matching and leveraged contributions for approved projects as of Feb. 28, 1973]

	Foundation funds	Grantee and other contributions	Total	Grantee and other contributions as percent of total	Grantee and other contributions as percent of foundation's
Fiscal year 1972 projects	2,847,239	2,435,003	5,282,242	46	86
Fiscal year 1973 projects obligated through February	2,813,461	2,201,314	5,014,775	44	78
Approved projects	1,416,542	1,780,393	3,196,935	56	126
Total	7,077,242	6,416,710	13,493,952	48	91

Mr. SHRIVER. That is a factual statement is it not? They are not all 1 to 1.

Mr. DYAL. They are not all. We attempt generally for some local resources to be involved.

Mr. SHRIVER. Concerning the one-shot basis, the Brazilian program shown in your data is not really a one-shot project, is it?

Mr. DYAL. The project of Piaui?

Mr. SHRIVER. Your pages aren't numbered, but it is at ACB–GB in your material. This is an assessment of a former project funded by the Foundation.

Mr. DYAL. This is an evaluation, Mr. Shriver, of the project.

Mr. SHRIVER. Do you fund a project three or four times, once for planning, once for operation, once for assessment and evaluation?

Mr. DYAL. Generally we don't.

Mr. SHRIVER. Do you at all?

Mr. DYAL. In two instances to help a local group set a project in focus for appropriate presentation, and to follow up evaluation. Generally

evaluations are made via other organizations which can look in a more objective fashion at that particular project.

Mr. SHRIVER. This is all U.S. Government money that you are using.

Mr. DYAL. Yes, sir.

LOCAL RECOGNITION

Mr. SHRIVER. How are these projects recognized at the local level as coming from the United States? What recognition is given, if any?

Mr. DYAL. Considerable local recognition has been given, practically none in the United States, but at the local level the grantee recipient of funds initiates whatever kind of public relation announcement is made of the participation, and I might say overall this has been unusually good, very honest and forthright, and has come from them rather than a public relations announcement from us, which we think is appropriate for our organization.

TYPES OF STAFF

Mr. SHRIVER. One further question and my time will be up under the 5-minute rule. You say that you are using a staff of "generalists." What does that mean?

Mr. DYAL. We have not attempted, Mr. Shriver, to employ a certain number of agronomists, education experts, etc., but rather people who have life and work background in Latin America and can respond to a broad range of projects without being programer specialists in a particular sense. They all have background in Latin America and the Caribbean.

Mr. SHRIVER. The direction I note that the President made, hoping that the Foundation would develop a fresh approach to new and experimental efforts, referred to education and agriculture specifically.

Mr. DYAL. The distinction, Mr. Shriver, is between identifying and programing. We attempt to identify where those innovative groups are functioning in problem solving techniques which they themselves organize rather than our deciding that certain projects should be set in motion in Latin America.

Mr. SHRIVER. So the money is more promotional than technical assistance.

Mr. DYAL. It is supportive of technical assistance locally, certainly, and it has germaneness to the project's substance, so in that sense I would not consider it promotional.

Mr. SHRIVER. My time is up. Thank you.

LATIN AMERICA AID PIPELINE

Mr. PASSMAN. I think we should state for the record at this point that presently there is in the pipeline undisbursed funds for Latin America of about $5 billion. Plus, we are providing about $1 billion a year to the same area that you are operating. We are just about to nickel and dime this Nation into bankruptcy. I think we all agree from little acorns big trees grow. When you get these little organizations started there is no way to stop them.

EVALUATION

Mr. LONG. Last year in these hearings I asked about evaluation of projects to be carried out by the Foundation. You replied that evaluations, "will be made in connection with each project which we fund." You describe it as a critical piece of what we call the learning process. How many project evaluations have been completed on projects in which you participate?

Mr. DYAL. No evaluation has been completed at this point. Since the funding began only in the latter part of the calendar year of 1971, most of the projects are still in motion, and consequently no single evaluation has been completed at this point. It will be a year from now before such would be true.

Mr. LONG. So you haven't had a chance to learn anything.

Mr. DYAL. Hopefully we are learning, Dr. Long, in the process, because awareness of what is taking place in these projects, our own staff——

Mr. LONG. When do you think we can get some project evaluations?

Mr. DYAL. I think during this coming calendar year it will be possible to get considerable insight into the funding process because of the number of projects which will have been funded and which will be moving toward the medium term.

Mr. LONG. Could you detail for us the preevaluation, the monitoring, and the postevaluation procedures which you require of the contractors that you hire for evaluation? Have you hired any contractors to do evaluations?

Mr. DYAL. We have done both by contract and by grant. These have been largely institutions or individuals in Latin Amreica, in some instances by contract, some by grant, because of the nature of both the evaluation and the organization.

Mr. LONG. Would you give us the procedures?

Mr. DYAL. Mr. Parker, would you explain this?

Mr. PARKER. The procedures vary depending on the project involved.

Mr. LONG. Do you have benefit/cost calculations, rate-of-return calculations?

Mr. PARKER. We haven't been able to apply either cost/benefit methods, or rate-of-return calculations to very many of our projects.

Mr. LONG. Do you plan to develop them?

Mr. PARKER. We will in some projects. One of the things that is involved basically at the point that we are at in the life of most of our projects is the collection of baseline data on what the situation is in an area where a project is going to be carried out, the working out with either the grantee or the contractor who is going to do the particular evaluation, the methods they are going to use, and the things they are going to look for.

Mr. LONG. These are going to be quantified?

Mr. PARKER. To the extent they can be.

Mr. DYAL. Some can be, some cannot be easily because of the nature of the project. They are not economic alone.

Mr. LONG. Next year, God willing, I will be here and you will be here, and the year after. When can we get an answer to some of these questions that we have been asking since last year?

Mr. DYAL. I think certainly by next year we will have insight into many of these evaluation techniques and approaches.

Mr. LONG. Do you plan to take income distribution, employment effects, into account in your evaluations?

Mr. DYAL. Where it pertains, yes, sir.

MEXICAN DEVELOPMENT FOUNDATION

Mr. LONG. You stated last year, in connection with the Mexican Development Foundation, that it would serve as a model to accelerate the social and economic integration of the lower strata of society. Are you monitoring the progress of this?

Mr. DYAL. Yes, sir. That one particularly is interesting because to date on the leveraging of funds alone, the local foundation in Mexico has raised the total of their first year's participation in a 9-month period, that is approximately $250,000 in local funding. The other fallout from that particular project, where the foundation is working with marginal farmers and small groups who have always been outside credit mechanisms in the country, is seen in that the Ministry of Agriculture in Mexico now has gone to that private foundation to say, "You have one of the few relevant experiences with small farmers in the country we believe can have impact."

Mr. LONG. If I were to take a trip to Mexico, would you be able to take me to specific areas and people?

Mr. DYAL. Yes, sir.

Mr. LONG. So I could talk to people who have gotten something out of this project?

Mr. DYAL. I could take you to at least 12 different regional offices in Mexico.

Mr. LONG. I don't want to go to the regional offices.

Mr. DYAL. These are scattered over the country.

Mr. LONG. I have had my fill of being put in a room and bombarded with statistics. I want to get out to see the projects—see the crops grow.

Mr. DYAL. I can see that. I did it myself some months ago.

Mr. LONG. Can you name me a place?

Mr. DYAL. Celaya.

Mr. LONG. Where is that located?

Mr. DYAL. Celaya is approximately 4 hours from Mexico City. It is in one of the provinces.

Mr. LONG. Is that in the Guadalajara region?

Mr. DYAL. No, I am not sure of the state in which it is located.

Mr. LONG. Is it north or south?

Mr. DYAL. It would be north. These are groups, Mr. Long, for example, of small dairy farmers, one- and two-cow kind of dairy farmers.

Mr. LONG. Are these real Mexicans?

Mr. DYAL. Yes, sir, they are Mexicans.

Mr. LONG. One project I saw when I was there that looked pretty good turned out to be Italian people who had settled in the southern part of Mexico.

Mr. DYAL. These are Mexican compesinos.

Mr. LONG. Do you have any figures at all on how these projects are reaching the lower strata of Mexican society?

Mr. DYAL. I can supply for the record, I think, a fairly detailed monitoring of that particular foundation in the numbers of people

it is reaching, the number of groups, the kind of money and credit which has been released from the private sector, from banks and so forth, which I think would be a very telling story.

AID TO MEXICO

Mr. LONG. You hear two stories on this Mexican thing: one that Mexico is a great success story, the other that there is really not very much achieved at all. I would like to get that settled, whether Mexico is, in fact, benefiting. Of course, we are not supposed to be putting any aid into Mexico, isn't that right?

Mr. DYAL. There is no aid program in Mexico, that is correct.

Mr. LONG. You don't regard this as an aid program?

Mr. DYAL. Not under the traditional aid sense in that this is a grant to a private group rather than to the Government of Mexico. The group has its juridical position before the Government, but it is a private group.

Mr. LONG. I would like to know, and I wish you would put in the record, just how much money is going into Mexico that is of the type you are talking about. You see I am increasingly baffled when I go around the world. I went to Mexico. They don't want aid, they don't take it, and yet now I find you have redefined the meaning of aid in your own mind when you answer the question. It takes a lot of questioning to bring this out. If it is U.S. money, I want to know how much is going into Mexico. Can we get some feeling how much is going in the back door, the side door, from the cellar, the roof, all kinds of ways.

Mr. DYAL. I can supply a very straight answer insofar as ourselves, Mr. Long. We have made one grant so far to one organization in Mexico of up to a half-million dollars, on the basis of their capacity to raise a half-million dollars.

Mr. LONG. What about private?

Mr. DYAL. I have no idea at this point.

Mr. LONG. Don't you think it is important that we coordinate our effort with private foundations?

Mr. DYAL. We do do that locally, Dr. Long, with groups in general areas, and there is no other money relating to that particular foundation that we have supplied money to that I am aware of at this point. In our assessment of the project ours was the only outside participation.

Mr. LONG. When we say Mexicans aren't taking any foreign aid, they are very proud of this and make a big fuss over it. Does that apply to multilateral aid too, multilateral institutions?

Mr. DYAL. I am not certain what multilateral institutions are doing with the Government of Mexico.

Mr. LONG. All the agencies ought to have some feeling of what they are doing in relation to all the others. When I was in Venezuela, a year or so ago, they kept hammering into me, "We are not getting any U.S. aid." Then I found within their own minds they had ruled out all multilateral aid which was running into hundreds of millions.

Mr. DYAL. The distinction here relates to the recipient which is not the Government of Mexico but a private development foundation.

Mr. PASSMAN. Would the gentleman yield for some clarification? The only difference is you have certain aid programs moving directly

to the people, some of them moving through governments. All of this aid, regardless of the nature of it, is supposed to help people down at the grassroots level, isn't that true?

Mr. DYAL. That is the supposition.

Mr. PASSMAN. Then what is the difference what brand of aid they are getting or how it is going in? When you put these disclaimers in, it makes me suspicious of the entire program.

LAND REFORM

Mr. LONG. A GAO audit—fiscal year 1971—of the Inter-American Foundation, then called the Inter-American Social Development Institute, states as one of the objectives of the Foundation "to stimulate * * * participation of the people in the development process." Do you agree with this statement?

Mr. DYAL. Yes.

Mr. LONG. Do you agree that for many Latin American countries, land reform is one essential policy "to stimulate participation of the people in the development process?"

Mr. DYAL. Yes.

Mr. LONG. To what degree and in what specific ways has the Foundation encouraged or aided land reform in Latin America?

Mr. DYAL. To date we signed one agreement with the Federacion Agraria Nacional (FANAL)—a campesino union—in Colombia, and we are about to sign an agreement with SERVOL, a service organization in Trinidad and Tobago, to carry out two experiments in agrarian reform. Both of the ventures are unique in each country as they provide alternative models for implementing such reforms.

In Colombia, FANAL has already purchased one hacienda in the department of Huila and is negotiating for others. Approximately 25 union families are settled on the land in Huila working it in an empresa comunitaria; a form of cooperative farming. Though similar cooperative farms have been attempted by the official agrarian reform agency, INCORA, those farms have been noted for their high costs and paternalism. The FANAL effort is an attempt by the local people themselves to organize into a highly productive farm unit without excessive degrees of outside political and official intervention. It is also expected that this experience will strengthen the campesino movement in Colombia, not only by implementing their own agrarian reform, but also to increase democratic rural pressures to stimulate further reform efforts on part of the official entities.

In Trinidad and Tobago our grant will enable a cooperative farm to be formed among east Indian youth. To our knowledge this will be the first attempt at cooperative farming in Trinidad and Tobago. This will be the first farm established by SERVOL, though they already have received other land donations to establish similar farms once their first project is underway. Numerous official agencies have expressed interest in this project—indeed the Government is donating the land—and will be closely watching this experiment to determine its potential to implement Trinidad and Tobago's rural settlement policy in order to increase employment alternatives and agricultural production through changes in the tenure structure.

Mr. PASSMAN. Mr. Coughlin.

FISCAL YEAR 1974 BUDGET REQUEST

Mr. COUGHLIN. Thank you very much, Mr. Chairman.

On page 6 of your testimony you indicate that the budget for next year is $13.2 million program funds and $1.7 million in program support funds. Is the $1.7 million the administrative costs?

Mr. DYAL. All administrative costs, salary, staff, rental, travel, everything.

Mr. COUGHLIN. That is the total administrative costs for the organization.

Mr. DYAL. That is right.

PROGRAM MANAGEMENT

Mr. COUGHLIN. And how do you actually operate when you make these grants? Do you have staff traveling overseas, looking for places to make grants?

Mr. DYAL. We elected not to have resident personnel based overseas, both because of the cost and the whole problem of setting up yet one more far-flung bureaucracy, so we have functioned with a small staff based here, who have language background and capability, and who can travel to the countries in an identifying process for assessment of individual projects and organizations. We function on this basis of relationship without establishing regional offices, since we are not a project operator or programmer ourselves.

Mr. PASSMAN. Would the gentleman yield there?

Mr. COUGHLIN. Yes, sir.

Mr. PASSMAN. I am confused. In other words, you are running this project from Washington. You have no personnel in the countries, and all your personnel are domiciled in Washington.

Mr. DYAL. Yes, sir. It is a foundation of personnel based here, who travel to the countries. We do not operate projects, Mr. Chairman.

Mr. PASSMAN. I know, but you may have zero number of personnel in a country or you may have four or five.

Mr. DYAL. We have no personnel based in any country in Latin America.

Mr. PASSMAN. Then you have a paper organization working out of Washington.

Mr. DYAL. It is a flesh and blood operation as far as it relates in the countries.

Mr. PASSMAN. Do you have consultants out there whom you pay?

Mr. DYAL. We have some consultants. I can supply for the record the exact number. During fiscal year 1973 the total number of consultants utilized is 14.

Mr. PASSMAN. I thank the gentleman for yielding. I certainly don't understand how you can actually run an organization of this type out of Washington unless you are dealing through consultants, and that is another question. Thank you.

STAFFING

Mr. COUGHLIN. Could I just follow up with one question. You have about 50 people full-time staff?

Mr. DYAL. Fifty-five staff members total.

Mr. COUGHLIN. Can you give me any breakdown of what they are, how many are full-time employed?

Mr. DYAL. They are all permanent with the exception of one part-time staff member. About half of these people relate to the project grantees and potential grantees in the various countries on a geographic basis. In other words, a staff member has particular relationship to a country—for example, Colombia—and travels exclusively to Colombia and relates to organizations in that one country. About half the staff provide specific program identification, support, analysis of projects. The other half would be financial, administrative, legal, et cetera, kinds of participation of staff.

Mr. COUGHLIN. Thank you very much, Mr. Chairman.

Mr. PASSMAN. Mr. Roybal.

SPANISH SURNAMED STAFF

Mr. ROYBAL. I would like to follow along the same lines that you have already discussed with regard to personnel. It is my understanding that you have 55 employees. What percentage of those employees are Mexican Americans?

Mr. DYAL. Mr. Parker has the exact figures which we can also supply for you.

Mr. PARKER. Three male Mexican Americans, two female Mexican Americans.

Mr. ROYBAL. That is five all together, making what percentage?

Mr. PARKER. Slightly less than 10 percent—9 percent.

Mr. DYAL. There is a total of 11 who have other country relationships besides Mexican American.

Mr. PARKER. Puerto Rico, Portuguese, Panamanian-American——

Mr. ROYBAL. How many Americans with Spanish surnames do you have?

Mr. PARKER. That would be the 11 Americans with Spanish surnames—[20 percent].

Mr. ROYBAL. All Americans with Spanish surnames. No one was hired from Latin America like most other agencies do?

Mr. DYAL. No, we do not hire from other countries. All of these people are either U.S. citizens or in the process of becoming U.S. citizens.

Mr. PARKER. In addition to that 11, there are 4 people who are resident aliens here, who are residing here and were hired by us.

Mr. ROYBAL. Resident aliens from where?

Mr. PARKER. Chile, Bolivia, Brazil. There are 15 total Spanish surnamed—[27 percent].

Mr. ROYBAL. There are 15 million Spanish surnamed Americans in the United States. Why do you have to get some from foreign countries to work for you? There are plenty to pick from in this country.

Mr. DYAL. Mr. Roybal, this is true, but one of the concerns is about life and work experience and background in Latin America.

Mr. ROYBAL. But you just told the committee you have consultants in Latin America and all your work is done here.

Mr. DYAL. No, I am sorry; that is a misunderstanding.

Mr. ROYBAL. That is what you told the committee.

Mr. DYAL. No; our staff is based here. They are not resident in any of the countries, to avoid the costs of setting up regional offices and overseas residence staff primarily, and also to avoid the tendency to become program operators when you have a staff overseas. They travel.

Mr. ROYBAL. Will you supply for the committee then the amount of money that you spent on travel?

Mr. DYAL. Yes, sir, we can.

[The information follows:]

TRAVEL COSTS—OBLIGATIONS AS OF FEB. 28, 1973

Fiscal year	Staff	Board of directors	Total
1971 actual	$34,226	$8,645	$42,871
1972 actual	89,882	5,375	95,275
1973 estimated total	122,105	7,500	129,605
1974 budget submission	202,500	10,000	212,500

Mr. ROYBAL. It might be better to have someone locally.

Mr. DYAL. We studied that, Mr. Roybal, very carefully. It costs considerably less, much less to have staff traveling than to have them based in the countries, on a cost/benefit basis.

BOARD OF DIRECTORS

Mr. ROYBAL. How or who selected the Board of Directors?

Mr. DYAL. The board was named by the President with advice and consent of the Senate. They have varying terms of 6, 4, and 2 years.

Mr. ROYBAL. Are they supposed to be generalists in the field as your staff is?

Mr. DYAL. In this sense, that the legislation called for four of them to be from the private sector, three to be public officials who relate to the international sector, and that was the basis on which they were chosen.

Mr. ROYBAL. In looking at their biographical sketches I wouldn't classify them as generalists, and I wouldn't think that they would be experts in Latin American affairs.

Mr. DYAL. I don't think any of us attempt to become or be considered experts in Latin American affairs, but the Board generally, with one or two exceptions, has background and relationships in Latin America, so that at least you have that kind of background.

Mr. ROYBAL. There are only two on the Board whom I would classify as having background in Latin America. One happens to have been the ex-Governor of Puerto Rico. The others I do not. However, that is a matter that was not determined by you or this committee.

Mr. DYAL. Yes.

Mr. ROYBAL. The determination was made by someone else, but the one question that keeps coming up in my mind is the wisdom of operating solely from Washington. You stated that studies had been made with regard to this question. Will you supply a summary of those studies?

Mr. DYAL. Yes, we can.

Mr. ROYBAL. So that we can ourselves be convinced that you are correct.

Mr. DYAL. This was a careful judgment made by the Board in the early days that we not establish another regional bureaucracy scattered through Latin America, and increase the costs of administration thereby. For this reason the decision was made to base the staff in the Washington area, and let the traveling relationship flesh out the project opportunities. We considered that to be a difficult problem in the beginning, but it has worked out not to be a problem. We find no difficulty in relating to grantees. In some senses of the word it is even better because we are less interventionists from this angle than we would be if we were locally resident.

[The information follows:]

The posting of U.S. citizens overseas as civil servants involves several financial considerations, in addition to major questions of policy.

If we posted coordinators overseas, we would presumably have as many as 11 of them, some with responsibility for one country, and some with regions of several countries.

The basic costs shown in the following table are alone signfiicantly higher than the average annual travel cost of $4.866 per coordinator that we are now experiencing, without considering any of the other add-ons.

REPRESENTATIVE BASIC COSTS OF POSTING STAFF OVERSEAS [1]

[Cities chosen as random examples only]

	Bogota, Colombia	Guatemala City, Guatemala	Rio de Janeiro, Brazil	Kingston, Jamaica	Quito, Ecuador
Post assignment and return travel and transportation of effects. Cost normally spread over 2-year period, therefore, only 1 way shown	$3,382	$2,577	$3,444	$2,484	$3,339
Annual housing allowances, post differential and post allowances	4,400	7,463	6,300	5,540	5,809
Total, annual cost	7,782	10,040	9,744	8,024	9,148

[1] These do not include: (1) Office expenses, (2) clerical support, (3) medical expenses, (4) in-country travel, (5) consultation travel to Washington.

EMPLOYMENT POLICY

Mr. ROYBAL. Again coming back to personnel, I would like to state that I serve on another committee and I am constantly asking what the employment policy is of the various groups that come before that committee. I am going to do the same thing with you, because I feel that the Spanish speaking of the United States should be used in Latin America. I don't look with favor on any organization that doesn't have a fair percentage of Spanish-speaking people on their staff.

I figure that you may have maybe 10 percent. I think you should increase it in order to bring it up to par. I do not consider someone from Mexico or any country in Latin America, part of this personnel that I am talking about.

Mr. DYAL. If you consider, Mr. Roybal, that 11 out of 55 are Spanish-surname U.S. citizens, then you get a little better figure, I think.

Mr. ROYBAL. If they are Spanish-surnamed citizens than I would agree that that is a fair figure, but I think that includes some from some Latin American country.

Mr. DYAL. Four resident aliens.

Mr. ROYBAL. Who are here on a visitors visa or whatever it happens to be, I don't consider that to be——

Mr. PARKER. These 4 are additive to the 11.

Mr. ROYBAL. The figure of 11 then I think is legitimate. The other four are not. That is all, Mr. Chairman.

Mr. LONG. In other words, when you give a guy a job he becomes a citizen in a hurry, is that right?

Mr. ROYBAL. This is what happens with most of the agencies that come before us. Some of them spend a great amount of money and they brag about the fact that they have Spanish-speaking employees, but an investigation could reveal that they are all from Latin America. We have 15 million right here in the United States and I think we ought to protect them first.

RETURN OF CONGRESSMAN CONTE

Mr. PASSMAN. Thank you, Mr. Roybal. I would like to take this opportunity to welcome back our very able member, Silvio Conte, who was a member of this committee for many, many long years and made a great contribution along the way. We are glad to have you back, Silvio. I believe the organization that we are examining on at this time may be something new since you were on the committee. That is the Inter-American Foundation. I would like to yield to you now for any questions you have.

Mr. CONTE. I have no questions, Mr. Chairman. It is a new organization. I was just reading these materials over. I will have to do a little more homework, but I want you to know how good it is to be back home. I was here for 12 years and left for 2 years. I am glad that I had the opportunity to come back. I know we will work together to try to bring this program into some semblance of good sense.

Mr. PASSMAN. We are glad to have you back. Mr. Bevill.

BENEFITS TO AMERICAN TAXPAYER

Mr. BEVILL. Thank you, Mr. Chairman. Mr. Dyal, what are the benefits that the American taxpayers are to derive from this Foundation's efforts and expenditure of the American taxpayer's money?

Mr. DYAL. I think for a small amount of money, Mr. Bevill, there is the opportunity of participating in projects conceived by people in other countries in which they themselves have interest and in which they place motivation, resources, and leadership, and for which they are ultimately responsible. For a small amount of money it is my hope, and it is certainly the desire and the mandate of the Foundation, both from its legislation and its whole purpose and approach, to try to leverage that kind of money at the local level in the various countries for efforts designed to solve their own problems as they see them. This is a very low key kind of approach. Obviously it is not the total answer to foreign assistance nor was it intended to be. It is a very small part, a discrete, limited perspective kind of approach to funding local

efforts to solve their own problems, if I could put in a fairly succinct fashion. That should benefit American taxpayers in terms of what happens to people in other countries as they raise their own standards, increase their own capacity to solve problems and are less problems within those countries politically, socially, and economically.

Many of these efforts we hope are keys to problem solving that will have impact far beyond the little bits of money that we are involving in them. We are being watched in many of the countries by a variety of people who are concerned about the kind of impact that they can have for resolving problems locally.

Mr. BEVILL. Is it your judgment that it is better to give these countries money than for the Inter-American Bank, which consists of 25 nations, to loan them money, make them loans on projects so that they can help themselves?

Mr. DYAL. My concern, Mr. Bevill, would be that there be responses at a variety of levels. What the Inter-American Development Bank does at one level may or may not be related to another level to microprojects. Most foreign assistance is done on the basis of macroresponses, very large responses, very large sector loans or grants. We are talking about smaller scale ones geared to the capacity of local people both to absorb, to utilize, to profit from, and to grow from that kind of funding approach at another level, a grassroots level, if you please.

Mr. BEVILL. I believe you have made 49 loans or 49 grants.

Mr. DYAL. Yes, sir; grants.

Mr. BEVILL. And you have set out here six or eight of them?

Mr. DYAL. All of those funded or obligated during 1973 you have a brief project description.

Mr. BEVILL. Taking the first one there, Colombia, the Foundation I gather gave $62,000, and the grantee $10,000. Am I interpreting that correctly?

Mr. DYAL. That is right.

MATCHING FORMULAS

Mr. BEVILL. So actually the matching basis, you use different formulas on different projects.

Mr. DYAL. It is very much on a formula per project. In this particular instance, Mr. Bevill, this is a first phase of a low-cost housing approach where the impact money comes in second and third phases from Inter-American Development Bank and local governments, and in which we would have no involvement at all. This is an attempt to problem solve concerning low-cost housing.

Mr. BEVILL. You do know that the Inter-American Bank has many housing projects all over South America.

Mr. DYAL. Yes, sir; I am aware of that.

Mr. BEVILL. They have financed housing projects all over South America. What is different about this housing project and the ones at the Inter-American Bank? What I am getting at, do we have agencies overlapping here?

Mr. DYAL. There is a great deal of overlapping at times. The hope of this one would be as a key to urban housing, which involves skill

training, involves the capacity of the people as they move through a transitional process to have credit, technical assistance, and so forth, rather than simply providing a house. It is to provide a new kind of approach to life, as they move from squatters housing into more permanent housing. The model of this is a first phase of a process for impact funding rather than simply providing a place to live, alone. I am sure there are other schemes and models extant in Latin America.

BRAZIL

Mr. BEVILL. Brazil I believe has probably received more grants than any other country.

Mr. DYAL. Yes; to date that is true.

Mr. BEVILL. Isn't Brazil really the most developed country in South America?

Mr. DYAL. No; that is questionable. It would be difficult to say what would be the most developed. The south of Brazil is far more developed than the north of Brazil. Most of the grants that we have made go to the north and northeast of Brazil, where underdevelopment is a way of life. All of these grants, also, Mr. Bevill, are to private and semi-autonomous groups once again.

Mr. BEVILL. Thank you, Mr. Chairman.

COST OF FOREIGN AID

Mr. PASSMAN. Thank you, Mr. Bevill. Let's make it abundantly clear that there is no intent to ever involve personalities in these examinations, but you are actually looking at a frightened Member of Congress. Some nights I actually don't sleep 3 hours, because I find myself unable to get through to some of the witnesses, and to get through to the American taxpayers just what are doing to them.

Let's take a moment and analyze just what kind of a mess we are in because of this foreign aid program. Do you realize that since we started this program, after the end of World War II, that we have now spent about $250 billion on foreign aid and assistance?

I think you agree with me we had to borrow this money, didn't we?

Mr. DYAL. Yes, sir.

Mr. PASSMAN. And we have to pay 6 percent on an average to borrow this money to give away. We find now that because of our extravagance and insistence on continually spending money we don't have, for things we don't need, trying to be everything, to everybody, everywhere on borrowed money, that foreign governments and foreign nationals have accumulated $80 billion excess U.S. dollars. In other words, these foreign nations and governments have over and above their needs to meet their commitments to commerce, $80 billion. Nations are running from our money. Individuals are running from our money. They laugh at us for not having the ability or the determination to get our fiscal house in order.

You pick up a paper and you see where tourists are having to discount American dollars to get hotels to accept them and you see in the paper where people who hold dollars, even Americans, are exchanging them for some other currency. You do see that in the paper, don't you? Do you agree with me?

Mr. DYAL. Yes, sir.

Mr. PASSMAN. So wouldn't you think that it is actually time to try to get our house in order? When Mr. Truman was in the White House, we had a public debt of $159 billion. We have been going through one of the most prosperous periods in the history of America, but we have spent all the revenue that we could possibly extract out of the economy plus we have run that public debt up to $455 billion. Also, this year, even after the President impounded certain funds, we are still going to drop the curtain in fiscal year 1973 with an administrative budget deficit of $28 billion.

TECHNICAL ASSISTANCE

You said your program was not a technical aid program. Certainly it is a technical aid program. The bilateral program, the multilateral program, and the program under the Department of Agriculture, all of these people do the same things you are doing. They are trying to impart knowledge to this little farmer about how to grow more corn per acre or how to increase beef production. I am not arguing with you. I am trying to see if we can't have a meeting of the minds as to the tremendous duplication we have here. When we look at your sheets here we see one worksheet after the other where you refer to technical assistance.

Mr. DYAL. No, sir, it is not technical assistance.

Mr. PASSMAN. I am reading your own statements. This is in your worksheets. You mention technical assistance in sheet after sheet, and if you deny your own worksheets, it certainly places me in a pretty bad way in trying to run these hearings. Look at some of your own justification sheets. Did I read correctly where you say this technical assistance is coordinated by a permanent staff? What are you teaching these people?

Mr. DYAL. The distinction, Mr. Chairman, to make——

Mr. PASSMAN. Get away from the distinction. What does this consultant do when you send him to Mexico?

Mr. DYAL. The permanent staff you are referring to is of the local organization in the country, not of the Inter-American——

Mr. PASSMAN. What does this consultant do after he arrives there?

Mr. DYAL. Our consultant from our staff does nothing more than identify an organization, its problems and approaches, analyzes what that project is attempting to do.

Mr. PASSMAN. What project?

Mr. DYAL. The project of that particular——

Mr. PASSMAN. Name a project. Do you teach them how to have better crops?

Mr. DYAL. We don't teach them anything.

Mr. PASSMAN. That is the case I am trying to make, that you don't teach them anything. You build up a little bureaucracy here with about 60 people on the staff, and most of your money is spent on payrolls; isn't it?

Mr. DYAL. No. Most of our money is not——

Mr. PASSMAN. What do you spend it for?

Mr. DYAL. The money is spent in a grant to that local organization to do its own job.

Mr. PASSMAN. What is your own payroll?

Mr. DYAL. It is its own local technical assistance——

Mr. PASSMAN. You have not told me what you do at the local level.

Mr. DYAL. The local group has access to, or has within its own organization its own technical assistance. We do not provide from our staff technical assistance. All we do is identify what that project is doing and attempt to analyze whether it is appropriate for the Foundation to make grants to the organization or add to what they are doing locally.

Mr. PASSMAN. Do you understand, yourself, what this is all about?

Mr. DYAL. Yes, sir; I do.

Mr. PASSMAN. I don't.

Mr. LONG. You asked a question and didn't get an answer.

Mr. PASSMAN. You never get answers from these people. I will get an answer before it is over with.

Mr. LONG. How much money do they spend on staff?

Mr. PASSMAN. I will make a record on this.

You people may think you have all the brains on that side, but we are here, elected, to protect the American taxpayer. As far as I am concerned, I am going to try to do my job a little better in the future.

Do you teach these people or does the technical consultant in the organization go out to tell the farmer's how to do their work better, or farm better?

Mr. DYAL. Technicians within that organization——

Mr. PASSMAN. I would assume they have to be technicians. Do they get into farming techniques and how to improve output?

Mr. DYAL. Where that is appropriate to that project.

Mr. PASSMAN. Isn't that the very same thing that the technical aid people are doing under AID?

Mr. DYAL. With a different group of people.

Mr. PASSMAN. I would imagine it would be a different group of people. I didn't think that you had gone so far where you all used the same people. You know this is technical aid. It is pretty hard to defend it and you have been given a difficult assignment. You will find that there are many separate and distinct technical aid groups working in the same area.

While you people are running wild with these expenditures, project after project in America has had funds impounded.

IMPOUNDMENT OF FUNDS

Let me cite one instance. I will move on down to a little town of Vidalia, La., and a project with a benefit-cost ratio of about eight to one. They approached the Economic Development Administration (EDA) who said it looked like a good project, and they immediately approved it. The local people voted a bond issue, sold $310,000 in bonds, deposited the money in the Concordia Bank and Trust Co. and were ready to proceed on this project. But the Office of Management and Budget (OMB) impounded the funds. They are paying interest on the $310,000 while this money is impounded. Yet concerning these foreign aid projects, as far as I know, there is not going to be one thin dime impounded. Not one single project on the face of the Earth will be cut back in the foreign aid program.

It is rather difficult for me to go home and explain that to the people. There is a similar instance in Lake Providence, La., involving

a port which is growing by leaps and bounds. They needed to expand the port. The project was approved, bonds sold, and the proceeds of $320,000 put in the bank. This project would provide employment for 72 people—but no, you have to cancel the whole thing, because we are trying to cut back on expenditures.

Some of you foreign aid employees ought to go home with us sometime, ride around with us and see some of these projects that have been discontinued.

PERSONNEL COSTS

How many people are on your Washington staff?

Mr. DYAL. Fifty-five.

Mr. PASSMAN. What is the annual payroll?

Mr. PARKER. The annual payroll projection for fiscal year 1974——

Mr. PASSMAN. I am talking about 1973. Tell us about the 55 on the payroll here now. What is the 1973 payroll?

Mr. PARKER. $1.1 million for personnel, salaries, and benefits.

Mr. PASSMAN. What is the amount for travel?

Mr. PARKER. $122,000.

Mr. PASSMAN. What is the cost of the consultants?

Mr. PARKER. You mean the consultants on the staff here or the consultants overseas?

Mr. PASSMAN. The consultants that you have hired and send out to these places.

Mr. PARKER. I don't have the total on that. Something less than $30,000 within fiscal year 1973. I can supply that for the record.

[The information follows:]

CONSULTANTS

As of February 28, 1973, 13 consultants had been contracted to assist us in project assessment and other activity overseas, for a total obligation of $32,892. Additional consultants may be used overseas during the remainder of fiscal year 1973. The maximum total fiscal year 1973 obligations for consultants overseas will not exceed $50,000.

We have also used eight U.S. consultants in Washington during fiscal year 1973 and continue to use one on a part-time basis.

Mr. PASSMAN. Who imparts all this knowledge if it is not your consultants? You have consultants within the organization?

Mr. DYAL. Mr. Chairman, this is the importance, I think, that we must somehow understand. We have had difficulty because we get hung up on what is the history and the approach of other organizations. I can fully empathize and sympathize with your concern about overlapping qualities. We are looking basically at the local groups who are problem-solving at a very low scale generally.

In their attempts in socioeconomic development, grassroots level, very often there is no technical consultant at all involved in that.

Mr. PASSMAN. That is why we are so confused. There has not been one iota of information yet established this morning in the record where you have done anything. I have talked and you have talked. We have talked about statistics and we have not yet pinned down what has been accomplished. Who imparts this information to the local groups?

Mr. DYAL. That is done by the group itself where it has staff to do so.

FOUNDATION ROLE

Mr. PASSMAN. That is a good answer. If the local people possess that knowledge already, where do you come in?

Mr. DYAL. We are a participant funder, seed funder or gap funder where we make the distinction in carrying out that project.

Mr. PASSMAN. The local people, with the expertise already, come up with a program and say, "Here is what we want to do"?

Mr. DYAL. Exactly.

Mr. PASSMAN. They have the knowledge to do this?

Mr. DYAL. Or access to it.

Mr. PASSMAN. But they come to you for funding?

Mr. DYAL. Or a part of the funding.

Mr. PASSMAN. We have agreed that the donor becomes the subsequent recipient, does he not? These people already possess all the knowledge that they are going to employ to carry out some particular project, but they come to you for part of the funding?

Mr. DYAL. That is right.

Mr. PASSMAN. If this is not the most farfetched thing I ever got into. Let us get into some more of the expense accounts.

What is your representation allowance?

Mr. PARKER. In 1973 the current plan is $2,100.

Mr. PASSMAN. Do you have a list of the total expenditures for 1973? Place that in the record at this point.

Mr. PARKER. Yes, sir.

[The information follows:]

FISCAL YEAR 1973 OBLIGATION AND EXPENDITURE DETAILS CURRENT PLAN

[In thousands of dollars]

	Item	Obligations	Expenditures
I.	Program activity	3,473	3,517
II.	Program support	1,527	1,423
	A. Salaries and benefits	1,078	1,028
	B. Overseas consultants	50	50
	C. Travel	130	111
	D. Representation	2	2
	E. Rent, communications, and utilities	134	116
	F. Supplies, materials, and equipment	74	63
	G. All other	59	53
III.	Total	5,000	4,940

FY 1973 OBLIGATIONS

Mr. PASSMAN. How much are you going to obligate out of the limitatiton of $5 million the committee placed on you last year?

Mr. PARKER. For fiscal year 1973 we plan to obligate the whole $5 million.

Mr. PASSMAN. After you cover all of the expenses of operating your shop, what amount remains?

Mr. PARKER. The figure is just under $3.5 million.

Mr. PASSMAN. I think you said three?

Mr. DYAL. That is approximate.

Mr. PASSMAN. You now say three and a half. Which is it?

Mr. PARKER. Three and a half.

Mr. DYAL. I concur.

Mr. PASSMAN. What are you going to do with the $3.5 million?

Mr. DYAL. You have the record of it, Mr. Chairman, before you in the projects——

Mr. PASSMAN. Never mind that. What are you going to do with the $3.5 million?

Mr. DYAL. Most of that is already obligated.

Mr. PASSMAN. For what?

Mr. DYAL. For projects in Latin America and Caribbean. Those have been submitted.

Mr. PASSMAN. On the basis of loans or grants?

Mr. DYAL. These are grants.

Mr. PASSMAN. Do you have a breakdown of grants made by country?

Mr. DYAL. Yes, sir, we can supply that.

Mr. PASSMAN. We are going to talk about that a little bit. In how many countries do you operate?

Mr. DYAL. We made grants in 19 countries.

LARGE GRANTS

Mr. PASSMAN. What is the largest grant that you made?

Mr. DYAL. The largest grant that has been obligated to date has been half a million dollars, $600,000.

Mr. PASSMAN. In what country?

Mr. DYAL. This was in Brazil and in El Salvador.

Mr. PASSMAN. Did you make it in two or one? I want to know the largest individual grant.

Mr. DYAL. There are two. One is Brazil and one is El Salvador.

Mr. PASSMAN. $600,000 each?

Mr. DYAL. Yes, sir.

PROJECT PIAUI

Mr. PASSMAN. Take the $600,000 grant in Brazil. Specifically what is it for?

Mr. DYAL. It is designed for this fiscal year, first phase of a project to Piaui, the most backward state in the northeast of Brazil.

Mr. PASSMAN. Let's skip the country description. Specifically what would it be spent for?

Mr. DYAL. This is germane to it because it is the most backward state. The project is a grassroots development, regional development approach attempting to pull the bulk of the marginal population of that state into the mainstream through earning capacity, jobs, participation, and community organization life. It is a public and private involvement which involves every sphere and sector of life in the state. The semiautonomous foundation set up in the state would be similar somewhat to our TVA in this country.

Mr. PASSMAN. You are going to pull them all in the mainstream?

Mr. DYAL. It is our hope to make their life a little easier in the process——

Mr. PASSMAN. How are you going to make it easier? We are dealing with mythical accomplishments. Get into some specifics.

Mr. DYAL. The main thing is that we are not going to do anything.

Mr. PASSMAN. Come on. You are a part of it. It is our money and you know when I am referring to it as "we," I am referring to the American taxpayers' dollars. We are putting up the money so that makes it "we."

Mr. DYAL. I agree.

Mr. PASSMAN. Let us go back to some specifics now. Pick one community or one group of people and indicate what is being done for them.

Mr. DYAL. The average per capita income in the state of Piaui is about $40 a year. The artisan-fishermen on the shores of that state range in that some category.

Mr. PASSMAN. Good statistics, but you got away from the question.

Mr. DYAL. Mr. Chairman, because they do not have access either to marketing opportunities to get their fish beyond local consumption, inadequate boats, inadequate understanding of market opportunities, lack of teaching facilities locally even to be able to read and write, no understanding of what public services are available to them, they have not the slightest notion of what the Federal Government or what the state government of Brazil provides them, where they do provide them opportunities and services.

Mr. PASSMAN. Before you told us that they had this knowledge.

Mr. DYAL. Within this particular project there is a technical consultant team of Brazilians providing help and insight on marketing, literacy programs, public service opportunities.

Mr. PASSMAN. See how overlapping these programs become. Let me say to you that you have not put your finger on one concrete accomplishment yet. I am trying to find out where something has been accomplished.

I go out over the world, and the first thing they do in one of these countries is to arrange for you to see the Ambassador. He gives you a luncheon, but if you start looking for worthwhile projects, you might as well look for them in your office in Washington. They are not to be found.

Mr. LONG. Would you yield?

I have had the same experience. In country after country, I asked, "Show me a project that you are proud of, that you think is really something that has done some good."

Mr. DYAL. I would be pleased to go with you.

Mr. LONG. It is always 2 or 3 days away. They always have some argument why they cannot show you. But they can rarely show you anything.

Mr. DYAL. I think there are projects here that could be shown that you would be proud of.

Mr. LONG. I think that you have not answered the chairman's question.

TOTAL AID TO BRAZIL

Mr. PASSMAN. Let us look at Brazil. We have given this country out of all spigots of aid about $2,900 million. That is a lot of money going in through all of these different parts of the aid program. Now you indicate that a $600,000 grant was provided to Brazil and I am just wondering how you are going to be able to show your accomplish-

ments when we have provided about $2,900 million and accomplishments are questionable.

We are just nickeling and diming America to death. We start these little programs and before you know it, they grow out of control.

Let me make this observation to show you how foolish we have been.

THAILAND FUNDING

A lot of nations are actually waxing fat in wealth. Let us look at Thailand. According to their standards, they are enjoying great prosperity. If you go out there, you see a lot of happy people. Our aid program was supposed to have been discontinued 11 years ago but they went back in with an even larger aid program.

When we found this country had built up a foreign exchange surplus of over $1 billion, we met with the leaders and said, "Listen, we are in bad shape in America with an increasing deficit. We have been very kind to you. We are going to keep giving you aid but you have got $1 billion in your foreign exchange account and we want to borrow one-quarter of a billion dollars."

The Thais said, "No, that is our money." They finally compromised and agreed to make America a loan of $100 million. We agreed to pay them 6 percent interest and repay the loan in 4½ years. That $100 million is coming due on July 2.

Isn't that kind of ridiculous to think that we have gotten on this spending spree and we just can't bring it under control? Did you people realize we were going around the world to so-called underdeveloped nations finding favorable foreign exchange balances and borrowing that money? That was under the previous administration and was discontinued under this administration.

ASSISTANCE TO FISHERMEN

Mr. LONG. Would the chairman yield?

Coming back to the gap that you were talking about—the chairman's question, these fishermen can't get their fish to the market because they are illiterate. I suspect a lot of fishermen nevertheless manage to get their fish to the market even though they are illiterate. What is it that you do to remedy all of these deficiencies that keep these fishermen from getting their fish to the market? What is it about your project that closes that gap?

Mr. DYAL. This particular project aims at getting those communities, whether they are fishermen or small farmers, in drought areas of that particular State, aware of the public services which already exist which could provide them help. They form cooperative groups to get those services or find cooperative means for marketing rather than individual approaches.

Literacy programs and the whole gamut of concerns about communities being able to organize and find remedies to problems.

Mr. LONG. You don't do anything to provide the transportation?

Mr. DYAL. We are not providing anything except a participant funding process.

Mr. LONG. You mean this is an educational program?

Mr. DYAL. No, the local foundation has technical assistance built into its local program, Brazilian technical consultants.

Mr. LONG. Do they need the money?

Mr. DYAL. In order to provide technical consultants, to be able to build community groups and organizations; for seed funding, for example, there are revolving loan funds set up as a part of the project.

Mr. LONG. You loan the money to the ordinary fisherman?

Mr. DYAL. It is a revolving loan fund to help them in this process.

Mr. LONG. Loans to the fishermen?

Mr. DYAL. In that process.

Mr. LONG. What does the fisherman do when he gets the money?

Mr. DYAL. He will buy boats, or better boats, or provide access to markets or set up the local organization for educational processes, what have you.

Mr. PASSMAN. Mr. Director, you just said these people were illiterate and backward but earlier you argued that they already had the knowledge and you just had to furnish some money for them to be able to use that knowledge. Didn't we discuss this earlier?

Mr. DYAL. Or access to knowledge.

Mr. PASSMAN. That is right.

You have taken an about-face and say these people are illiterate and poverty stricken. Let me tell you a story too, to show you how we give preferential treatment to many of our friends abroad. Down in the State of Louisiana we raise soybeans and we raise cotton. If we have an excess of cotton, these farmers didn't come to the government for funds. They are just like the people that you talked about that had the knowledge and decided to put it into effect. They would take maybe 100 acres of farmland that they had previously had in cotton, put a levee around it and flood it with about 18 to 26 inches of water. They stocked it with catfish and it is quite a profitable operation. They came to Uncle Sam to give them a little lift. They went before a committee of Congress and said, "Could we get a little money for research so we could broaden the market for the catfish that are being raised?" Many States now do this.

PEACE CORPS

If there was ever an agency in my opinion, other than the Peace Corps that should be abolished, this one here is one of them. Let us look at the Peace Corps. It is another technical aid program if I ever knew one. We have borrowed $1 billion and expended that on the so-called Peace Corps operation. There is only one thing that keeps the Peace Corps in business and that is the name. There is a lot of appeal to the name. Had it been given some other name, the organization would have been terminated 3 or 4 years ago. This is the sad part of it.

Do you know we are paying $60 million interest annually on that billion dollars we borrowed for them to spend?

PUBLIC DEBT

These are the things that few people think about. This may not add anything to the hearings but let me state for the record, we think of this public debt as being about $455 billion. You know what the real public debt is? It is $1,800 billion.

I like to see you frown. It shows you are concerned.

Let me explain it for you. Every man, woman, and child in America owes their Government $8,500 for their part of the public obligation.

either borrowed or by statute. You think of $455 billion as being the public debt. That represents one part of it.

Mr. LONG. Housing guarantees?

Mr. PASSMAN. I am not getting into that. I am getting into direct obligations.

We have 117 statutes on the books. We say we are going to give you this amount of money in subsequent years for some service you previously rendered in which neither the recipient nor the donor created any reserves. It is costing $12 billion a year to take care of our veterans. I voted for these bills but we created no reserves to pay them. You have to project this obligation out 128 years.

You take retired military personnel. Neither the recipient nor the donor created any reserve to pay these benefits. That is running around $5,100 million a year. You have to project that for 132 years before you draw your last check. The Civil War was concluded, I believe, 108 years ago, but we are still mailing out 755 checks a month to widows and children of Civil War veterans. If you take these statutes, purely statutes, where we are just obligated to pay these monthly payments, then you are going to find you have almost $1,800 billion in the total obligations.

Interest on the public debt is now running around $66 million a day. We are still passing statutes.

Mr. LONG. Could I comment on that? I am very interested in that.

Mr. PASSMAN. Since I have been in Congress our extravagance has reduced my savings by 63 percent. As a young businessman I worked awfully hard to build a little reserve for old age. I may not need it because I refuse to get old, but I built a reserve anyway. Those dollars I saved have been depreciated by 63 percent.

At least this type of discussion should cause you people to realize that you can nickel and dime Uncle Sam to death. We start these little programs and there are 4,408 projects going into 101 nations of the world. I don't know whether we actually have the courage, guts, and determination to bring it under control. Maybe my approach is different and that is why I plead with you to understand.

Personally, I confess I am frightened. Before the curtain drops on the examination this year for foreign aid and assistance, all spigots, the Congress will have looked at over $18 billion in requests. I don't believe the President understands this situation. I don't believe a lot of the Cabinet members understand it, but when we put these figures together it is over $18 billion in requests under the different types of programs—good, bad, and indifferent.

I am not criticizing all of them. I just don't know how in the world we will ever get you folks downtown to understand it and get it before the American people.

I yield.

Mr. LONG. Mr. Chairman, you made a very eloquent statement. Why don't we start as a first downpayment on this business of courage and vote to not fund this program? I have the courage not to do it.

Mr. PASSMAN. If that is a motion, maybe our friends will second it.

Mr. LONG. I don't think we need to berate the witness. Simply, when the time comes to mark up, that we cut the program out.

Mr. PASSMAN. I am not quarreling about technical aid. I am not quarreling about helping our friends. The overlapping is causing me

great concern because we do know of instances where your bilateral and multilateral people got into disputes over who was supposed to handle particular projects.

Yesterday we were considering the migration and refugee program and we had a very fine witness who wanted $8,800,000. That is what we were examining on but during the examination we found it necessary to get a recapitulation on all the refugee costs. We found out that the refugee program for fiscal 1971 was $305 million. That is why we were trying to make a case and to put your operation over into the right category, which is technical aid. The work that you hope to accomplish is actually dealing with these technical matters where the bilateral program, the multilateral program and the Agriculture Department's program are doing the same work.

Mr. ROYBAL. Mr. Chairman, I think we have the responsibility as a committee to look into, first of all, your program and then determine whether or not your request is justified. This committee I think can either approve your request or we can reduce it, make it the same as it was last year, or we can discontinue it altogether. Whatever the committee decides to do, I think should be done on a logical basis after close examination. That is what I would like to address myself to.

FOUNDATION BACKGROUND

I was in the discussions that the Committee on Foreign Affairs had when this organization was established. I remember very clearly that at that time the main discussion was regarding the differences that would exist between the proposed organization and the other types of aid that were being made available to Latin America. I remember that one of the differences was that it was not going to be a government-to-government operation. It was also not going to be a social-service organization. It was going to be an operation that was strictly going to operate within a community group, or groups established on a local grassroots community level.

I remember also that the main argument was that there was no other organization that was really supplying dollars for that purpose. There were other organizations, perhaps Peace Corps and others that have already been mentioned, that did provide teachers, technical aid, things of that kind. Here is where the difference came in; that is, that an organization in any country would use self-help methods. I happen to have seen one in Peru. A local campesino group wanted to bring water to their village from the mountains almost 2 miles away. They decided what they wanted to do and enlisted the help of the Peruvian Government. They told them, "We will need a certain amount of money for material. You provide one-half of it and then we will ask the American Government to match it." We will donate the labor.

I went to see that project. I remember quite clearly the amount that was spent in the project, 2,600 American dollars. I remember also seing the success of that project the day it was opened, when the water came into the village. This is what sold me on the idea of this particular program, thinking that this same type of a project was going to be duplicated in various other countries.

If this kind of a project has not been duplicated in Latin American

countries, then I think your agency should be abolished. On the other hand, if you have duplicated similar projects, in different areas all over Latin America, then I think that your project needs at least the careful study of this committee before a determination is made.

Am I describing more or less the real function of your group?

Mr. DYAL. Mr. Roybal, that is exactly the mandate we were given in the legislation and set in motion by the actions of the Board of Directors and what we have attempted to do.

Mr. ROYBAL. Isn't it true that before you go into a particular country that you go there first of all upon request and that you do not move until such time as that local community organization has requested your assistance and after they themselves have already enlisted the help of their own government?

Mr. DYAL. That is true. Or their local community.

Mr. ROYBAL. Isn't it also true that moneys are on a matching basis, that whenever a grant is made, that they, the local community campesinos, either have their money on hand or have been promised that they will get an equal amount of money to that appropriated by your group?

Mr. DYAL. It is not exactly always an equal amount of money because sometimes what they are providing is in-kind services. In other words, professional people who do not receive money in that process.

Mr. ROYBAL. I understand that.

Mr. DYAL. Or volunteer labor.

Mr. ROYBAL. The value dollarwise is the same?

Mr. DYAL. Exactly.

Mr. ROYBAL. Sometimes their government pays for the so-called experts. In the case of Brazil it was an irrigation and water expert that came into the project?

Mr. DYAL. Sometimes they are private technical help and sometimes public technical help.

Mr. ROYBAL. The truth of the matter is these technicians are, first of all, sought out by the local community group?

Mr. DYAL. That is true.

Mr. ROYBAL. Which makes that community group an activist group within the structure of their own society?

Mr. DYAL. That is true, and responsible for carrying through the project.

Mr. ROYBAL. Isn't it also true that it is quite possible that this may be the first joint project which this new group has entered into?

Mr. DYAL. Very true.

Mr. ROYBAL. This could be the beginning, then, of the community's involvement in further development projects that will ultimately be of great benefit to that local community as a whole and then to the further expansion of that group?

Mr. DYAL. Not only that, but also the project activity of some of those community groups is being observed by other community groups. [Replication or adaptation is carried out elsewhere.] That we have seen done, in projects in which we participated in no funding in the second or third kind of effort along the same lines.

Mr. ROYBAL. In view of the fact that there have been some cutbacks in local community projects, and in view of the fact that we are in a financial situation which in my opinion should not warrant a further increase in foreign aid as a whole, what kind of a job could you do if only $5 million were appropriated?

Mr. DYAL. This year we entered into the limitation process with a figure of $11 million. On the basis of that, we attempted to set up a staff and administrative group that would only use between 10 and 15 percent maximum of administrative expenses. The rest could go into grants then. On that basis, on the $5 million continuing resolution figure, our administrative overhead is higher than we expected it to be.

Mr. ROYBAL. You can reduce your administrative expenses and make possible larger grants?

Mr. DYAL. Yes, sir.

Mr. ROYBAL. Does that include the fee or the stipend that is made available to members of the Board of Directors?

Mr. DYAL. They receive no stipend.

Mr. ROYBAL. Do not?

Mr. DYAL. They get a per diem only once a month generally when they——

Mr. ROYBAL. How much per diem?

Mr. DYAL. Up to a maximum of $50.

Mr. ROYBAL. No more than $50 a day?

Mr. DYAL. That is true.

Mr. ROYBAL. It is possible that they may get $150 a month plus traveling expenses?

Mr. DYAL. Not usually, because we meet generally eight or nine times a year for 1 day, 1 evening.

Mr. ROYBAL. There is no saving that can be made there but there are some savings that you have at least started to look at in the event you have to work with a lesser amount?

Mr. DYAL. Very definitely.

Mr. PASSMAN. Let me get back on the record with this.

We have agreed in the beginning that you had to borrow this money. We are having to pay interest on it. We don't know how we will ever pay it back. We have had to cancel many, many projects in this country. I am not going to take the position that there is not some good in all of these projects, but in all probability under your multilateral and bilateral technical aid programs they may have 40 or 50 times the number of personnel involved in the same area you are.

We have in Latin America 3,958 participants, and there are 651 U.S. technicians. They are out doing the same things that you are doing, trying to impart knowledge or trying to teach them how to do these things better. They furnish the commodities which you do not. They go out on the farms and discuss different ways to put down better tube wells, how to have better fences, how to raise bigger chickens, have better eggs, better fish, and more sanitation. We are not going to argue in this case there is not some merit. I don't know of any organization that you couldn't find some merit, but it is a question of duplication.

As far as I am personally concerned, I don't think that you made a good case. If we had a big surplus and we were trying to find some

way to get rid of this money, I would say go ahead and spend it. From little acorns big trees grow. We find in 1974 you project your travel costs to almost double those in 1973. You propose to increase them from $122,000 to $202,000, do you not?

Mr. DYAL. That is with an increased staff and need to relate to more projects.

Mr. PASSMAN. I know that. Certainly you would have more projects if we didn't hold you down.

GUATEMALA CONFERENCE

Let us look at the grant of $10,000 for the Foundation in Guatemala. This is to be used to underwrite expenses of a 4-day seminar in Guatemala, is it not?

Mr. DYAL. That already occurred.

Mr. PASSMAN. That is what you spent the money for?

Mr. DYAL. That is true.

Mr. PASSMAN. Why does the Foundation provide funds to pay for a seminar in Guatemala?

Mr. DYAL. This was a representative group of all of the 14 development foundations in different countries to enable them to interchange ideas on what they are doing.

Mr. PASSMAN. All brought together in Guatemala from 14 countries for a clambake dealing with the intellectuals and not the poor people who are supposed to be beneficiaries?

Mr. DYAL. They were project operators——

Mr. PASSMAN. You didn't bring the poor people. These were the intellectuals, correct?

Mr. DYAL. These were the Foundation officials from those countries.

Mr. PASSMAN. It was the intellectuals and not the poor people?

Mr. DYAL. I consider intellectuals to exist among poor people, too.

PIAUI PLANNING ASSISTANCE

Mr. PASSMAN. You are not going to agree with me because you are a spender, and I am trying to be the saver. Why did the Foundation provide $6,917 for planning work for the project in Brazil?

Mr. DYAL. This was for the Piaui project I mentoined earlier, to help them in a first phase before they had access to larger funding.

Mr. PASSMAN. This was to the government of Brazil?

Mr. DYAL. This was to the Foundation in Piaui.

Mr. PASSMAN. A direct benefit to the government of Brazil?

Mr. DYAL. I hope directly benefiting the people of Piaui. Both public and private participation.

REPRESENTATION ALLOWANCE

Mr. PASSMAN. Do you plan to increase your representation allowance?

Mr. DYAL. I think that is no real increase. As I see it, it is about the same. It utilizes less than what we are allowed.

Mr. PARKER. We utilized much less this year than we had planned for this year. When the budget was submitted——

Mr. PASSMAN. We are looking at the record. You have $2,137 for

fiscal 1973 and you are asking for $7,500 for fiscal year 1974 for representation allowance?

Mr. PARKER. That is a maximum.

Mr. PASSMAN. I would assume it is the maximum. You always say this. I am so suspicious of your operation I don't know whether I will enjoy my lunch. You don't like to give a direct answer. You want to put a question mark in everything. All I asked you to do was verify whether or not I stated the figures correctly. I want more information on this little clambake that you had in Guatemala, bringing in people from 14 countries.

Who paid the expenses of there people?

Mr. DYAL. They paid their own travel expenses, for the most part. We can give you exact figures.

Mr. PASSMAN. Do you have any breakdown?

Mr. DYAL. I think half of the participants paid their own travel expenses.

Mr. PASSMAN. Who paid the expenses of the other half?

Mr. DYAL. We made a grant to make that possible.

Mr. PASSMAN. How did you spend the $10,000? That is a pretty sizable chunk of money. How many people did you bring in?

Mr. DYAL. I can submit it for the record. I don't know the exact number.

Mr. PASSMAN. Your assistant might happen to know.

Mr. PARKER. I will have to look it up.

Mr. PASSMAN. Furnish for the record a breakdown on this $10,000.

Mr. DYAL. Yes, sir.

[The information follows:]

EL CENTAVO CONFERENCE IN GUATEMALA

I. OBJECTIVES AND RESULTS OF SEMINARS

National Development Foundations (NDF) are indigeneous, private, nonprofit organizations actively engaged in designing and implementing programs to solve social and economic problems unique to their countries. There are 21 NDF's located in 18 countries. Many NDF's have devised effective programs for helping solve such problems of the poor as credit, housing, and employment. Because of the lack of communications there has been very little transfer between them of knowledge and experience. This has deprived them of the opportunity to mutually benefit from individual experiences in success and failure.

It was the purpose of this grant to enable the NDF's to establish a systematic method for the exchange of information about problems and solutions. It was also anticipated that the seminar would result in the formation of a hemisphere-wide federation.

The objectives of the seminar were fully accomplished. A federation was created. The board of directors of the federation was appointed. Several NDF's pledged financial support for the federation's activities. Objectives and operational procedures were established and approved. Through the newly formed federation, a system for communications and exchange of information was created. It was decided that the federation would start operating the communications system by exchanging information on programs to provide credit to the poor and methods for tapping local sources of credit funds.

II. SEMINAR EXPENSES

A. Total cost	$13,437.50
Inter-American Foundation	10,000.00
Penny Foundation	3,437.50
B. Inter-American Foundation grant utilization:	
Airfares (20 people from 18 countries)	6,850.00
Per diem, at $25 per day, for 20 people	1,500.00
General expenses: Materials, supplies, communications, secretarial services, reproduction and printing, local taxis, logistical support	1,650.00
Total grant	10,000.00

III. PARTICIPANTS

A total of 29 persons attended the seminar. Out of this group, 26 were either operational directors or other key decisionmaking staff of National Development Foundations. There was one representative from the Pan American Development Foundation and two representatives from the Inter-American Foundation.

Mr. DYAL. One of the concerns in that process is that knowledge is very vertical in Latin America. There is very little interchange between projects, between project groups, and operators. The concern was to see that that occurred.

GRANTS VERSUS LOANS

Mr. PASSMAN. I think that you will understand my position better when I put this in the record.

Do you realize that since we started this recent program in Latin America that our disbursements to Latin America have been over $12 billion? We would hope out of this tremendous expenditure that there could be some major improvement cited, and there may be. My whole complaint is, why do we have to start another small independent organization without a doubt duplicating some of the work that has been done or could be done by the hordes of technical aid people that we have there. You are making loans; aren't you?

Mr. DYAL. Making grants. No loans.

Mr. PASSMAN. Do you have any applications pending for loans?

Mr. DYAL. We do not.

Mr. PASSMAN. Under your authority you could make loans?

Mr. DYAL. We could; yes, sir. The legislation so states.

Mr. PASSMAN. Are you in a position to state to the committee that you will not get into the loan field?

Mr. DYAL. It has been our intent to date not to make loans because of the whole apparatus that is set in motion in the loan process. We prefer to make grants. My intent and understanding at this time, Mr. Chairman, is to stick with grants.

Mr. PASSMAN. Stick with grants. I am glad for your assurance that you don't plan to get into the money-lending business.

FOUNDATION OFFICIALS

Would you tell us how many top officials you have here in Washington? You are the Director?

Mr. DYAL. I am President of the Foundation.

Mr. PASSMAN. What are you?

Mr. PARKER. Executive officer.

Mr. PASSMAN. Mr. Dyal, what is your salary?

Mr. DYAL. Executive 4, which is $38,000.

Mr. PASSMAN. A man of your background and integrity is not overpaid.

Mr. DYAL. Thank you.

ORIGINAL AUTHORIZATION

Mr. PASSMAN. This original proposal was to transfer in $50 million, accomplish your mission and then terminate the program; is that correct?

Mr. DYAL. Then reassess what happened.

Mr. PASSMAN. Under the original plans?

Mr. DYAL. I think the original plan was—it was an understanding this was an experimental approach, a totally new thing in foreign assistance.

Mr. PASSMAN. It stays at this?

Mr. DYAL. Yes, sir.

Mr. PASSMAN. I am not going to go any further.

Mr. DYAL. I will stand on its experimental nature.

Mr. PASSMAN. Mr. Shriver?

Mr. SHRIVER. Thank you.

CHILE PROJECT

You have not approved at the time this material was prepared, February 28, any projects in Chile or Cuba?

Mr. DYAL. We approved one project in Chile for a private university at Valparaiso for artisan fishermen.

Mr. SHRIVER. In Chile?

Mr. DYAL. Chile.

Mr. SHRIVER. What was the project?

Mr. DYAL. The project was to provide for a project in artisan fishermen development at the University of Valparaiso, use of new equipment to increase their catch in the waters.

Mr. SHRIVER. Are any in the planning stage?

Mr. DYAL. That was approved. We have not obligated it as yet. None in the planning stage at this point.

COLOMBIA PROJECT—FUNDES

Mr. SHRIVER. The description of the Colombia project refers to a small labor-intensive business enterprise, but no examples are given. What kinds of businesses are you supporting?

Mr. DYAL. At this point I am not sure that I can give you an exact answer. I would like to study it and supply it for the record.

Mr. SHRIVER. When you do that, tell us more about the rotating loan fund which has been established under that project.

Mr. DYAL. Yes, sir.
[The information follows:]

Fundacion Nacional Para el Desarrollo Social (Fundes) (grants for small business assistance)

Total funding	$610,000
Foundation	380,000
Grantee and others	310,000

As of the end of January 1973, the Foundation disbursements to Fundes totaled $39,219, and Fundes has provided $63,082 worth of assistance to 150 small labor-intensive businesses. This assistance has been in the form of loans, with repayments to be reused for assistance to similar projects. Generally the loans are at 12 percent interest per year for terms of approximately 1 to 3 years.

The type of businesses assisted are described in the following table.

	Number assisted	Amount in United States dollars	Averages values of assistance, United States dollars
I. Production and manufacturing:			
Metal products	40	$19,097	$477
Furniture and household items	22	9,682	440
Arts and crafts	11	3,999	363
Caskets	7	2,269	324
Food products	6	2,224	370
Dental supplies	3	1,135	378
Construction materials	11	5,358	487
Clothing and shoes	32	13,327	416
Insecticides	1	180	180
	133	57,271	430
II. Services and repairs:			
Beauty parlor	1	318	318
Printing and photography	3	1,635	545
Small businesses training	1	363	363
Radio shop	1	454	454
Car upholstery	1	454	454
House repairs	2	1,272	636
Installation of store equipment	1	318	318
	10	4,814	481
III. Retail sales stores:			
Vegetables	1	136	136
Fruit juices	1	90	90
Food	2	181	90
Groceries	1	227	227
Magazine stand	1	136	136
Ice cream	1	227	227
	7	997	142
Total	150	63,082	420

JAMAICA HOUSING PROJECT

Mr. SHRIVER. The Jamaica project seems to demonstrate to the local financial community that housing can be economically provided to lower income groups than those now supported. We have that problem in this country, too. How are you doing that?

Mr. DYAL. That project is still in its first state. It must be about 3 months along, as I recall. It is probably too early to understand whether that is a breakthrough in that particular part of Jamaica. The hope is it will be, because it should trigger other kinds of funds, second and third stages.

EL QUETZAL PROJECT-GUATEMALA

Mr. SHRIVER. You say that you will fund the Guatemala project, El Quetzal, for the first of the 4 years, and anticipate it will be required to become self-sufficient.

Mr. DYAL. Yes, sir.

Mr. SHRIVER. Who will fund the remaining 3 years?

Mr. DYAL. Hopefully they will have by that time the kind of local support, needed and they should not need outside support. If they do, then there is some question about its validity. This is the only training center in the entire country of Guatemala for the Mayan Indian population that make up 85 percent of the country, to train them in the area of cooperative approaches. Since it is the only center, we felt it was important to give it support during this time to see if it could become self-supporting.

CHANGES IN PROGRAM SUPPORT

Mr. SHRIVER. You say that your program support funds will be used differently than you told us last year for 1973. This includes reduced use of reimbursable details and consultants and corresponding increase in the use of direct-hire staff. Have you done that?

Mr. DYAL. Yes, sir. That basically has occurred. I believe this is a correct answer.

Mr. PARKER. Something like four reimbursable details last year and one now.

Mr. SHRIVER. Another change is for building alterations and equipment. Explain that.

Mr. DYAL. This was due to an increase in the staff from 25, when we first were functioning a year and a half ago, and for additional furnishings and equipment.

Mr. SHRIVER. The major part of your program, $1.5 million, is allocated for a grant to the project in Brazil that you mentioned.

Mr. DYAL. That is in a process over a 3-year period. We have only obligated one-third.

Mr. SHRIVER. One-third of the $1.5 million?

Mr. DYAL. Yes, sir.

BRAZIL—COMPARISON WITH AID

Mr. SHRIVER. Since under this project you are participating with the Piaui state government and the Federal Ministries of Education and Planning, what is the difference between this grant and the programs in Brazil of the Agency for International Development?

Mr. DYAL. There are no aspects of AID programs that relate to this particular program, as I understand it. We very carefully counseled with the AID people to be sure that we were not either substitutionary nor competitive in that process. This is not an area they could be involved in.

Their money goes directly to the Federal Government. It does not relate to this kind of project. It would not.

Mr. SHRIVER. Do you think this project is in line with the discussion and colloquy that you had with Mr. Roybal?

Mr. DYAL. I do, in this sense: Even though the project is very large, it is a people-based and oriented project. So instead of touching one

community, you are attempting to touch approximately one-fourth to one-half of the communities of the whole state. These being communities anywhere from 100 to 3,000 or 4,000 people, in very isolated areas.

PROJECT RESULTS—COOPESCHI, PERU

Mr. SHRIVER. You have given us brief descriptions in the material before us of your 1973 obligated projects. Maybe it would be too early to tell, but could you tell us about the results of the earlier projects?

Mr. DYAL. Once again, Mr. Shriver, we can tell you about some of them. For example, the very first project grant we made was to a fishing cooperative in Chimbote, Peru, very similar to the kind of thing Mr. Roybal was speaking about. This was to enable them to build a boat that could be used cooperatively by the small fishermen in Chimbote to get beyond the waters where normally they would fish, where fish now are running. That boat has been completed. We have seen the boat and we have taken a ride on the boat to make sure it actually is a real object, and that project object has been closed out. It has enabled the fishermen in a cooperative effort to increase not only their catch but their access to markets beyond Chimbote.

NICARAGUAN ASSISTANCE

Mr. SHRIVER. On the Nicaraguan project funding, you say the social and economic development of the marginal population is not a Nicaraguan Government priority.

This is a U.S. Government agency funded entirely by taxpayers' money. Why should we get involved in that project?

Mr. DYAL. I think in this particular instance, Mr. Shriver, there is demonstrated a local initiative of the Foundation group with commitment to make both credit and assistance available to small businessmen and access to the banks. The banks generally in Nicaragua, as in many places, have never been historically oriented to small loans. Consequently the opening of lines of credit to make that possible on the basis of their track record of loan repayments is very important. Four or five of these local groups, where credit lines have been inspired with banking groups, have shown loan repayment records during the last few years of 90-plus percent among marginal rural and urban groups. It is a fact that before this time it had never been accepted or understood that the little man would pay back and would bring off such an impressive track record.

The reason we felt it was appropriate to be involved in this one is because, once again, it is a matching process. We trigger dollars only as local dollars are raised. It is a stimulation of local dollars basically. It is leverage, or stimulation of local resources.

It is a teaching process about social conscience and social concerns among middle and upper class on behalf and alongside lower class groups. We felt this particular group has that kind of background, record, and commitment and it was appropriate to be involved with the stimulation of funds thus raised. Our dollar as a taxpayer here becomes a dollar which stimulates other resources in these countries, the kind of thing I think we can all be happy about.

Mr. SHRIVER. Thank you, Mr. Chairman.

99-614 O - 73 - pt. 1 - 17

PRIOR YEARS FUNDING

Mr. PASSMAN. The Congress has provided so far $25 million in obligational limitations over the past 3 years, is that correct?

Mr. DYAL. Yes.

Mr. PASSMAN. What amounts have you obligated out of the $25 million?

Mr. DYAL. The total amount, grant and program support?

Mr. PASSMAN. Gentlemen, I am talking about the total amount that you have obligated out of the $25 million.

Mr. PARKER. $8,130,000.

Mr. PASSMAN. So in reality you have obligated actually less than one-third of the amount that the Congress provided under the limitation, is that correct?

Mr. DYAL. That is correct.

Mr. PASSMAN. Now the next question. What is the total amount unexpended? Let's just get one figure, the unexpended amount that you have available.

Mr. PARKER. We have disbursed $4 million.

Mr. PASSMAN. So out of the $25 million available for obligation you have disbursed only $4 million. Mr. Long, I think you have a question.

EXPENDITURE HISTORY

Mr. LONG. Of that $4 million, how much has been for salaries for the whole period?

Mr. PARKER. I would have to go back and get that.

Mr. LONG. You pointed out $1.2 million for 1 year.

Mr. PARKER. Right, but in order to answer your question over the span of years I have to get fiscal 1971 information.

Mr. LONG. For 3 years if you ran at the same rate, that would be $3.6 million out of the $4 million that represented just salaries. The amount that was free above salaries for program of the actual spending is very, very small.

Mr. DYAL. Those figures are very misleading, Dr. Long, because the average project has a 2- or 3-year lifespan, so the total disbursement does not occur in the first moment of obligation.

Mr. PARKER. Over the same 3-year period, sir, the salary cost was very small in the first year. We only obligated $376,000 in total out of the first $10 million limit. Out of the second $10 million limit we obligated for program support which is salaries and other administrative expenses, $1,124,000. Out of the $5 million limit this year, which makes the remainder of the $25 million, we will obligate $1.1 million for salaries out of $1.5 million for program support.

Mr. LONG. On the basis of your own figures you have actually spent $4 million. Now the salary money gets spent. That money goes out.

Mr. PASSMAN. And travel.

Mr. LONG. And travel, so if you add the salary money and the travel money, you come very close to the $4 million.

Mr. PARKER. No; because the $4 million expenditures is over the period 1971, 1972, and 1973.

Mr. LONG. That is what we are talking about.

Mr. PARKER. Over that period we have not been running salaries at a rate of $1.1 million.

Mr. LONG. Of course not, they are somewhat smaller.

Mr. PARKER. Much smaller.

Mr. LONG. But you still would have at least $2 million I would guess for salaries if not close to $3 million out of the $4 million total expenditures.

Mr. PASSMAN. If the gentleman will yield, this is extremely important. You have only expended $4 million out of the $25 million that we provided, is that correct?

Mr. DYAL. We have obligated $4 million.

Mr. PARKER. No; we have obligated $8 million but spent $4 million.

Mr. PASSMAN. Expenditures have been around $4 million.

Mr. DYAL. Yes.

Mr. PASSMAN. Will you cite for the record what that $4 million consists of. No. 1, salaries; No. 2, travel; No. 3, special consultants. Could you give us a breakdown on this?

Mr. LONG. Plus representation.

Mr. PASSMAN. Give us a breakdown.

[The information follows:]

OBLIGATION AND EXPENDITURE DETAILS

[In thousands of dollars]

Item	Fiscal year 1971		Fiscal year 1972		Fiscal year 1973		Fiscal year 1974		Total through fiscal year 1974		End fiscal year 1974 unliquidated obligations
	Obligations	Expenditures	Obligations	Expenditures	Obligations	Expenditures	Obligations	Expenditures	Obligations	Expenditures	
I. Program activity			2,847	345	3,473	3,517	13,285	6,265	19,605	10,127	9,478
II. Program support	376	193	1,125	1,234	1,527	1,423	1,715	1,694	4,743	4,544	199
A. Salaries and benefits	145	107	77	795	1,078	1,028	1,133	1,119	3,133	3,049	84

III. Total	376	193	3,972	1,579	5,000	4,940	15,000	7,959	24,348	14,671	9,677

Mr. LONG. I think, Mr. Chairman, if we don't get a good straightforward answer to this question, then we should call this group back before this committee.

Mr. PASSMAN. I think they will give it to us.

REVIEW OF SUPPORT COSTS

Mr. LONG. I want to get exactly how much of the actual expenditures you have made have gone out in salaries. It looks to me as if at least 50 percent has gone out in salaries of the actual expenditures and possibly 75 percent—and even conceivably more than that. Let's have the figure.

Mr. PASSMAN. If you have only expended $4 million and when you take out what you have spent for salaries, what you have spent for travel, what you have spent for consultants, it leaves very little for any of the projects we have been discussing, so give us a breakdown on that figure.

Mr. DYAL. We will.

Mr. ROYBAL. Let us quickly review the figures again. How much was it for salaries last year?

Mr. PARKER. Salaries for fiscal year 1972?

Mr. ROYBAL. Yes.

Mr. PASSMAN. 1973.

Mr. ROYBAL. Or 1973.

Mr. PARKER. The 1973 figure is the one I gave you previously. It will be for fiscal year 1973, $1,128,000.

Mr. ROYBAL. And how much was your budget?

Mr. PARKER. In total?

Mr. ROYBAL. How much did you have to spend in total?

Mr. PARKER. That is out of a total for program support of $1.5 million, and that is against a total limitation of $5 million on our activity.

Mr. ROYBAL. Then you actually spent on salary $1,125,000. Your full authorization was then $5 million.

Mr. PARKER. Right.

Mr. DYAL. Continuing resolution figure.

Mr. PARKER. $1.5 million level of activity was based on our anticipation of an $11 million level of activity.

Mr. ROYBAL. I understand. Does the $1,125,000 also include travel?

Mr. PARKER. No, sir.

Mr. ROYBAL. In addition then how much was travel?

Mr. PARKER. In addition to that there is $122,000 worth of travel expenses, and there are other expenses bringing us up to the total of $1.5 million program support.

Mr. ROYBAL. All together then for program support was $1.5 million. The rest of the money then was spent on direct program grants.

Mr. PARKER. For the obligation of program grants, yes.

Mr. ROYBAL. What percentage is that $1.5 million of the full amount authorized to be spent?

Mr. PARKER. Almost a third, about 30 percent.

Mr. LONG. That is not relating to my question. My question is what percentage of the amount actually spent is the amount spent on salaries and travel?

Mr. PARKER. Of the amount actually spent in the current fiscal year it would be a higher amount.

Mr. LONG. What is the amount actually spent in this fiscal year of 1973?

Mr. PARKER. To date or for the whole fiscal year?

Mr. LONG. I hope we will get the whole fiscal year.

Mr. ROYBAL. I hope we ask the same question of AID and of these others, because it would only be fair that you get the same amount.

Mr. LONG. I agree with you.

Mr. ROYBAL. From every agency coming before this committee, you will get the same answers proportionately.

Mr. LONG. This is startling.

Mr. PARKER. I only have available expenditure figures in total. I do not have the program support expenditure figures broken down to reflect salaries.

Mr. LONG. I should like the total amount spent by your agency, actually spent for fiscal 1973, assuming you can project the amount which will be spent.

Mr. DYAL. Mr. Long, we can provide this.

Mr. LONG. I would like it now if you can. Come close to it.

Mr. PARKER. Actually we will spend for the total program support, this includes salaries, travel, rent and everything else, actual expenditures, outlays of money regardless of obligations.

Mr. LONG. For this year.

Mr. PARKER. For this year approximately $1.4 million.

Mr. LONG. $1.4 million for everything?

Mr. PARKER. For program support.

Mr. LONG. For everything, but your salaries and your travel come to $1¼ million.

Mr. PARKER. The bulk of it, yes.

Mr. DYAL. That is all we have.

Mr. LONG. So that if after you subtract salaries, it is $1.4 million from $4.9 million. You have $3.5 million which actually goes to programs.

Mr. PASSMAN. If the doctor will yield, this is important. Let's not confuse the record, and none of us are attempting to. You have been in business for 3 years, and the committee has provided $25 million that you could obligate during that time.

Mr. DYAL. Two years, Mr. Chairman.

Mr. PASSMAN. 1971, 1972, and 1973.

Mr. DYAL. The beginning of the third year.

REVIEW OF FUNDING LIMITATIONS

Mr. PASSMAN. We have now provided $10 million in fiscal year 1971, $10 million in fiscal year 1972, and $5 million in fiscal year 1973, is that correct? We have provided $25 million in total, but out of that $25 million you have obligated $8 million, is that correct?

Mr. DYAL. That is true.

Mr. PASSMAN. And out of the $8 million that you have obligated, your expenditures have been $4 million.

Mr. PARKER. Right.

Mr. PASSMAN. We would have to consider consultants as part of your program, is that correct?

Mr. DYAL. Yes, sir.

Mr. PASSMAN. We want to give you the benefit of the doubt. Let's take just the bare expenditures, and list; No. 1, salaries No. 2 travel, No. 3 representation allowance. In addition to that you have to add conferences, office furniture and equipment, maintenance of equipment, building alterations, consumable supplies for offices, and publications, $3,000. Have I read those correctly?

Mr. PARKER. Those are correct, sir.

Mr. PASSMAN. When you add those up, then you would move over and subtract that from your $4 million. Then that would give the net amount you have actually spent on your program, is that correct?

Mr. PARKER. Almost. Those figures are obligation figures. The spend out rate is approximately 90 percent.

Mr. PASSMAN. Gentlemen, when you actually take all of that, subtract that from your $4 million you had very little left for your projects. Will you put it in the record accurately.

Mr. DYAL. Yes, sir.

Mr. LONG. I understand that salary expenses have to go partly to help obligate this money. That is perfectly understandable, but I do think it is tremendously illuminating to show that of the total amount of money actually spent in a particular year, about 30 percent of it actually went for salaries.

Mr. DYAL. Mr. Long, you are still, I think, misreading the situation, because you are reading program support out of a different figure. The $5 million continuing resolution figure for this year, out of that there will be an obligation of what?

Mr. PARKER. $1.5 million for program support.

Mr. DYAL. $1.5 million of administrative expenses out of $5 million, so $3.5 million is project grants.

Mr. PARKER. Which will be obligated, and of the $3.5 million obligation, there will be a good $2.5 million expended during fiscal year 1973.

Mr. LONG. Then you apparently misunderstood my previous statement. I was trying to find out of all your money how much was actually spent in fiscal year 1973, administrative, everything else.

Mr. PARKER. That is a different question.

Mr. LONG. What do you mean that is a different question? That is the question I asked.

Mr. PASSMAN. Dr. Long, I believe the gentlemen answered your questions. You are going to itemize right down to the last penny what you spent the $4 million for, aren't you?

Mr. DYAL. Yes.

Mr. PASSMAN. How could you make it any plainer than that.

Mr. PARKER. The eight and the four are to date figures.

Mr. LONG. But the actual salary payments to date have probably been a very large part of that $4 million actually spent, isn't that correct?

Mr. PASSMAN. Let's have the record speak for itself. These gentlemen are going to put it in the record.

Mr. LONG. They keep fudging.

Mr. DYAL. There is no intention to fudge.

Mr. LONG. I think the record is fudged and I feel you ought to come back and explain exactly everything.

Mr. PASSMAN. Let me take your side. Of course, you are going to have very little left for projects out in the field, but we must take into account that you had to get in business.

Mr. DYAL. Six months.

Mr. PASSMAN. It all had to go to salaries. You had to get organized before you could move.

Mr. DYAL. Thank you, Mr. Chairman. That is true.

Mr. PASSMAN. If you could just put the figures in I will be sympathetic and I am going to move on the basis of facts, you understand. I don't like your organization because I think it is a duplication but nevertheless I want to be fair with you and let the record show what the facts are.

COST ANALYSIS

Mr. ROYBAL. Mr. Chairman, what I would like to have is a cost analysis of your operation from the time it started until the present time. I would also like to have a projected cost analysis based on your request for this year. That would give us all the information that we need. Then we can make an evaluation on that information.

Mr. DYAL. That we can do.

Mr. ROYBAL. It is a very simple sheet that can be prepared and made available to every member of this committee.

Mr. PASSMAN. You should also have the same information I have requested in the aggregate. You should do it by year. It is perfectly obvious that your first year and your second year are not going to look very good so far as projects in the field. Any accomplishment that you can point out would have to come in year 3, and, of course, we are going to take into account that you had to get in business. I think the decision will be made based upon what you did in the third year.

Mr. LONG. This being the third year.

Mr. PASSMAN. This is the third year, with respect to providing the money.

Mr. LONG. It isn't very good on the basis of the third year.

Mr. PASSMAN. When you provide too much money people look for ways to spend it. You have actually obligated, since you have been in business, $8 million out of your $25 million limitation. It looks to me like we should just halt this program for a couple of years to see what you are going to accomplish with the funds provided.

Mr. SHRIVER. I think they should be commended for not moving too fast because they have only been in business a couple of years.

Mr. PASSMAN. I am never going to commend any witness for spending money. I take the other position because they are going to spend it any way. This is a full-time job for you, isn't it?

Mr. DYAL. Yes.

Mr. PASSMAN. I will come to their defense and say if they could have found some way to spend it they would. It would appear to me that possibly you have adequate funds to move along as you say on a supplemental basis and find out where you are going to wind up after 1 more year.

Mr. PARKER. One problem with that, Mr. Chairman, is that the $25

million does not remain available. At the end of this fiscal year when the $5 million limitation——

Mr. PASSMAN. You might also place in the record at this point what your anticipated unobligated balance will be as of June 30 out of the allowance provided. You could do that, could you not?

Mr. DYAL. Yes.

[The information follows:]

The Foundation anticipates the obligation of virtually all of the $5 million of its funds allowed under the fiscal year 1973 continuing resolution limitation.

Of the $50 million of appropriated funds originally transferred to the Foundation, approximately $40,652,000 will then remain available for obligation, subject to limitations established during the fiscal year 1974 appropriations process.

FUNDS REMAINING AVAILABLE

Mr. PASSMAN. How much will you have out of that amount unexpended as of June 30?

Mr. DYAL. Under a $5 million limitation.

Mr. PASSMAN. You had your prior obligations which we must respect.

Mr. DYAL. Those do not remain available under limitation.

Mr. PASSMAN. Not the unobligated, but the obligated part remains available for expenditure. Once you enter into an obligation, you don't write the check that same date. You have obligated funds that are carried over.

Mr. PARKER. But the $10 million in the first 2 years and the $5 million this year are not obligated.

Mr. PASSMAN. What you do not obligate lapses?

Mr. PARKER. Right.

Mr. PASSMAN. I understand that, but you do have accumulated obligations in which expenditures will be made at some subsequent date.

Mr. PARKER. Yes, sir.

Mr. PASSMAN. As long as you give us the amount that is obligated unexpended, then the amount unexpended in an unobligated category, I think it would clear the record.

Mr. PARKER. Those will be the amounts in the project.

Mr. ROYBAL. Just a cost analysis that you make.

Mr. PASSMAN. Mr. Miller.

SIZE OF GRANTS

Mr. MILLER. Mr. Dyal, I notice in your statement you say,

Our purpose is to support on-going local efforts to solve problems without creating further dependence on the Foundation for funds.

You say:

A number of our grants provided that we match $1 for $1 that the grantee raises locally up to a certain amount.

Do you have a statutory limit as to how much you can grant? You mentioned in two cases $600,000.

Mr. DYAL. There is no statutory limit.

Mr. MILLER. Then that certain amount is put in upon the decision of your board or your administration or yourself?

Mr. DYAL. That is right, on the basis of a request made to us.

TYPES OF MATCHING

Mr. MILLER. Is the matching fund that comes from the local people primarily in kind or is it actual money?

Mr. DYAL. The bulk of it would be actual money. It actually is both, but it is very hard to assess in kind. You can guess at dollar amounts, but that is not an easy kind of game to play.

LOCATION OF PROJECTS

Mr. MILLER. Let's go into the 2-year record if we may. In the 16 months since that date of 1971, the Foundation has approved grants totaling $7,074,242 for 49 projects. Then you state you propose 43 projects for the 1974 budget. That is rather a short time for all the project proposals you have, and you state the Foundation has no public relations staff.

We are pleased that the institution received widespread favorable publicity completely unsolicited throughout Latin America.

How do the people find out about your organization?

Mr. DYAL. It is really a network kind of thing that occurs over a time frame through relationships with enough organizations, their relationships with others, the word begins to spread, plus an aggressive attempt on our staff to move out in a country to a variety of organizations, not only in the capital cities, but certainly also in the more removed and isolated areas.

There is also a brokerage of information process from the whole area of both local and international organizations functioning in those countries who are aware of our existence, our purpose, our capacity to respond to local groups, and who point out to them and to us the existence of groups and organizations. So we watch what really amounts to a rather steady assent of both project proposals coming to us as well as awareness of us. I would expect that line to continue as time goes on.

Mr. MILLER. If there are dollars available it seems that those people who are after the dollars will find you because you are responsible for the programs.

It seems there would be no limit as to the amount of proposals that will eventually flow to you as the word continues to get around that you have money that it is possible to be put into their project. As I understand it, when your people go in, there is already a local organization that would like to accomplish this project, whether it may be a water system or a sewer system, but what you do thereafter is really pump money into the project. Is that what I understand?

Mr. DYAL. It would be seed funding to make that project a possibility. It may be an organization that has never attempted that kind of thing before. They have done other things. It may be that they have the capacity to carry the project just so far, which is usually the case with these small groups. They simply don't have the kind of funding or access to funding. This is the difference I think in terms of what we are attempting to do. They do not have access to bank money. They do not have access to international lending funds, because it is a local entity, a community organization generally. Quite often they don't

have access to government funds within their own country. The funding relationship for us would be a gap funding as I interpret it to enable that project to take place which ordinarily could not occur.

BRAZILIAN ORGANIZATIONS

Mr. MILLER. Take Brazil as an example. Do they not have some organization within their country that is sponsored locally that would do this same thing?

Mr. DYAL. Not necessarily. There are many organizations available for a variety of concerns. That is the reason we don't do things like roads, dams, bridges, and large-scale housing, because funds are available by both local and international organizations. The kind of involvement we have is more job generation, skill training at the marginal level, small scale agrarian credit programs for groups without access to credit moneys. It is a marginal gap kind of project approach also.

Mr. MILLER. We have a number of States in the Appalachia area, and they have an Appalachia Regional Commission. They furnish funds for many projects. It reminds me a little of the Foundation you are talking about. They are able to put funds on top of other Federal funds or local funds, in order to accomplish a project. How does your Foundation compare to them? Do you do practically the same thing that Appalachia Regional Commission would do in the Appalachia States.

Mr. DYAL. I don't know that I can answer that appropriately not knowing the exact content of many of those projects and programs, but I would think it would be a similar thing. We provide money aimed at priming the pump to make other moneys available, or add to local moneys to enable them to do a project.

Mr. MILLER. You have a project listed here for Brazil, and this particular project is composed of seven women's clubs representing low-income communities for teaching or planning. They will be taught and trained to produce marketable handicraft products. Then the other part of the project is that you intend to involve the men in the community in job training with courses in masonry, plumbing, electrical wiring, carpentry, and painting. There is no vocational educational programs at all in that area which these people could be shifted to?

Mr. DYAL. There is not. The skill training for the most part in that area in most of the countries is at another level, a level a step just above that. The artisans training programs generally are for industry skills at yet a more median level.

This particular project you mention was a woman's effort in its first stage. The second effort is to include the men and that is what this particular project is designed to do. You are still talking basically about marginal attempts at skill training where those can be related to a real job market, and wherein there are not large enough programs or existent to be able to include those individuals.

Mr. MILLER. When we speak of these low-income communities the people are receiving the very type of training today that is being cut

out right in this country. If we are going to furnish funds for this we should furnish it pretty close to home.

Mr. Chairman, I see the lights are on and we do have a quorum call.

Mr. PASSMAN. I want to apologize for the delay in concluding the hearings. The witnesses will certainly be back so that you can finish your interrogation, or you can place your questions in the record. You have the option because under the rules every member of committee can take all the time he needs to finish his examination.

Mr. MILLER. It is not necessary to return.

OBLIGATIONS

Mr. PASSMAN. If the gentleman will remain with me so we have a quorum under the rules for just a moment, at least this will indicate that the committee has recommended adequate funds in the past. In fiscal year 1971 how much did you actually obligate?

Mr. PARKER. $376,000.

Mr. PASSMAN. In 1972, again the committee recommended $10 million and the Congress followed that obligation limitations. What did you obligate?

Mr. PARKER. $3,971,000.

Mr. PASSMAN. Thank you very much, gentlemen. I wish there was some way that we could bring the angels down out of the skies, you understand, and get away from these mythical and imaginary accomplishments because actually when I go out I just can't find any. We get a lot of conversation but we are not able to put our finger on a single accomplishment in many of these countries because the money goes in and it is absorbed. In a great many instances when we take our technicians out the countries go back to the old system that they have been accustomed to. It is difficult to get people to change their ways after they have lived a good part of their lives. You don't discount that, do you?

Mr. DYAL. No, sir.

Mr. PASSMAN. The committee will recess until 2 o'clock.

TUESDAY, APRIL 3, 1973.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

ASSISTANCE TO REFUGEES IN THE UNITED STATES (CUBAN REFUGEE PROGRAM)

WITNESSES

HOWARD H. PALMATIER, DIRECTOR, CUBAN REFUGEE PROGRAM

Average GS salary	$15,580	$15,736	$15,883

Mr. PASSMAN. The committee will come to order.

We shall continue our examination of another request for funds for foreign aid. The agency examined this afternoon will be the Cuban refugee program administered by the Health, Education, and Welfare Department.

We have as the principal witness Mr. Howard H. Palmatier, director of the Cuban refugee program, and other supporting witnesses. The names will be spread upon the record.

I would assume, Mr. Palmatier, you have a statement you would like to make to the committee.

Mr. PALMATIER. Yes, sir.

GENERAL STATEMENT

Mr. Chairman and members of the committee, it is a pleasure to have the opportunity to present to you the appropriation request for the Cuban refugee program.

An appropriation of $90 million is requested for fiscal year 1974, $55 million less than the amount available for the current fiscal year. The major reason for the decrease in 1974 is the phasedown in reimbursements to the States for welfare and medical assistance provided to needy Cuban refugees scheduled to begin July 1, 1973. The timing and scope of this phasedown action in fiscal 1974 are essentially the same as the plan presented to the committee last year.

WELFARE PHASEOUT PLAN

The key points of the phaseout plan, which was communicated to State welfare agencies almost a year ago, are as follows:

1. Beginning July 1, 1973, this program will no longer reimburse States for refugee assistance cases in which the head-of-family has been in the United States 5 years or more. Their needs will be met from the regular Federal/State and State/local welfare programs. An exception to one aspect of this policy will enable the State of Florida to continue to be reimbursed 100 percent from the Cuban refugee program for financial and medical assistance required by those needy refugees not eligible for assistance under the federally aided categorical public assistance programs, regardless of their length of residency in this country. These would be the so-called general assistance type cases which—in Florida only—the Department plans to exempt from the 5-year policy during fiscal year 1974. This exemption is designed to offset the impact which would otherwise fall on locally financed assistance programs in Florida, where approximately half of the Nation's Cuban refugees are located. The possible continuation of the exemption during fiscal years 1975–77 will be reviewed annually by the Department.

2. When the new federalized program of supplemental security income for the aged, blind, and disabled, which was established by the Social Security Amendments of 1972, becomes effective January 1, 1974, no funds will be available from the Cuban refugee program for nonmedical assistance for refugees who are eligible for the new program. The Cuban program, however, would continue to reimburse the States 100 percent for medical care provided to needy refugees who are receiving their basic maintenance payment through the supplemental security income program if the refugee has been in the United States less than 5 years.

3. All reimbursements from the Cuban refugee program would terminate by June 30, 1977.

FACTORS IN WELFARE PHASEOUT

In evolving this phaseout plan we were influenced by a number of considerations. The Senate Appropriations Committee in its action on the 1972 appropriation indicated that beginning in February 1972 none of the funds available to the Cuban refugee program would be available to furnish medical and welfare payments to refugees who had resided in the United States 3 years or more; this provision was rejected by the full Senate. A few weeks later, the House-Senate conferees recommended that "the executive branch exert every effort in bringing about the termination of this program as soon as reasonably possible." Another major consideration in planning the phaseout has been the drastic curtailment in the airlift since January 1972. When the final flight, now expected on April 6, 1973, occurs, there will have been a total of 50 flights during fiscal year 1973, the first year of the 5-year period that had been projected for achieving a complete, orderly phaseout of the Cuban refugee program.

The 5-year residency policy and the overall phaseout period, in our judgment, provide an orderly way to fulfill the congressional recommendation and at the same time avoid a sudden or undue burden on the States. The plan recognizes the minimum length of time in which a refugee may attain citizenship and may be expected to have overcome

the most serious aspects of adjustment to a new life in this country. It asks the States to assume some of the financial burden in recognition of the fact that the vast majority of Cuban refugees have entered into the mainstream of American life in the communities and States in which they live and have established a creditable record as industrious, self-supporting, taxpaying members of our society.

WELFARE ESTIMATE

Mr. Chairman, I should like to briefly speak to our estimate of $70.3 million for reimbursements to the States under this program for their welfare and medical assistance payments for needy refugees in 1974. Many variables are found among the States in the administration of welfare programs, such as differing levels of assistance standards and payments. Another factor is the extent to which vulnerable groups, such as refugees, encounter economic crises, illness, or other problems with which they cannot cope without public aid, or on the other hand, the extent to which some may be able to recover from such problems. The need for, and the type and cost of, medical care that may be required is difficult to predict. To these complexities of estimating, we have now added the phaseout policies and establishment of the new Federal SSI program. The justification material submitted to the committee provides detailed information on the underlying assumptions, methods, and statistics used in arriving at the cost estimates. We have attempted to construct the estimates as accurately as possible under the changed welfare setting expected to prevail in 1974 for the Cuban refugee program.

In brief, the budget estimates anticipate that some 93,000 Cuban refugees are expected to be receiving welfare and medical aid, nationwide, in June 1973, and that, as a result of the phaseout actions during fiscal 1974, this number will decrease to about 46,000 by June 1974, of whom 19,000 will be eligible only for medical assistance under this program. It is estimated that as much as another $70 million in costs for welfare and medical requirements for the "phased-out" needy Cuban refugees will have to be funded by other programs during 1974. This would include an estimate of about $40 million in funds from other Federal programs and $30 million from State/local resources. During the subsequent year—1975—with the Federal program of supplemental security income in effect the entire year, it is expected there will be substantial additional reductions in the Cuban refugee program's budget as well as savings to the States for refugees transferred to the SSI program on an annual basis.

The phasedown in welfare costs which I have been discussing, Mr. Chairman, has by far the greatest impact on our funds request since these costs have comprised nearly 85 percent of the budget for the past several years. But all other activities of the program are also being curtailed and phased down in the 1974 budget in keeping with the congressional directive.

PHASEDOWN IN EDUCATION ACTIVITY

In the education activity, substantial phasedown plans are underway. Since 1961 the Dade County, Fla., public school system has re-

ceived impact assistance from this program in recognition of the large number of Cuban refugee children enrolled in that system. These funds have followed various formulas over the years based on the number of refugee children in the school system. The current formula limits the count of refugee children to those who entered the United States during the airlift period (that is, since late 1965) and who have been in a U.S. school system for less than 5 years; there are now some 22,000 such children in Dade County's school system.

In order to achieve the kind of orderly, progressive phaseout of funds under the Cuban refugee program that we believe is desirable, a planned annual reduction is contemplated in assistance to the Dade County public schools, beginning in fiscal 1974.

The budget projects total school impact aid from this program for Dade County for 1974 at 80 percent of the estimated amount derived by application of the formula in 1973. This means our plan for phasing out these costs sets the base at $13 million; 80 percent of this amount results in the requested amount of $10.4 million for this type of impact assistance in fiscal year 1974. The plan provides for 60 percent of the base amount in 1975, 40 percent in 1976, and 20 percent in 1977, the final year. Under this plan, a larger proportion of the reduced funds will be earmarked each year for specific supplementary services directly related to the special needs of the Cuban children—such as special staff and instructional materials—which will continue to be of crucial importance during the next few years.

School officials of Dade County have been advised of this phaseout plan which we believe provides a reasonable, orderly phaseout of the school assistance. It recognizes the substantial tax base which exists in the Cuban community of Dade County—thereby reducing the "impact" needs which accompanied the rapid influx of thousands of destitute refugees during the early years of the refugee situation. At the same time, it recognizes the continuing special educational needs and problems of recently arrived refugee children and avoids the impact upon the schools which would occur from a sudden cut-off of funds.

Student loans for Cuban refugees are also being phased out. Beginning with the Fall semester of 1973, new borrowers will not be accepted under this program.

RESETTLEMENT ACTIVITIES

With regard to the resettlement activity, the voluntary agencies assisting in the reception, relocation, and related resettlements activities have been required to phase-down their staff considerably. Most of the emphasis of these agencies is now on providing day-to-day counseling services and helping refugees with post-resettlement problems and in emergency situations. Experience indicates that refugees throughout the country turn to these agencies—which originally assisted them upon arrival in the United States—with such problems as housing, job finding, English training, citizenship questions, and a variety of other problems relating to adjusting to their new country. We have encouraged the voluntary agencies to provide these services, especially if they can reduce the number of applications for welfare assistance.

The total staff of these agencies to be financed by this program is expected to be down to about 15 persons by the beginning of fiscal year

1974. Most of the $1 million budgeted for the resettlement activity in 1974 will be utilized by the agencies in the form of direct assistance to the refugees for meeting emergency needs and for providing short term help to new refugee arrivals who are expected to continue to enter in some volume through third countries. Some emergency needs will inevitably surface during the phaseout as refugees are removed from the Cuban refugee welfare rolls and States proceed with conversion to other programs. It is likely some States will encounter difficulties in some instances for those "general assistance" cases dropped from the Cuban program as they apply county criteria which often prevail in these "general assistance" programs that are not federally matched and often are entirely locally financed without State funds. The extent and usefulness of these services will be carefully observed during 1974.

HEALTH SERVICES

The health services activity relates to certain medical services which the program has supported in Miami for needy refugees, since the early days of the program, as the least expensive way of providing these services and to prevent the refugees from becoming a burden on local resources and facilities. The major activity is the Cuban Refugee Clinic—which is located in the Cuban Refugee Center, is administered by the Dade County Health Department, and is funded by this program on an actual cost basis. For example, drugs are purchased from the Veterans' Administration at its cost. Until recently, the refugee welfare recipients in Miami have had no choice but to have most of their nonhospitalization medical needs met through this clinic rather than through the provisions of the State's medicaid program. These medicaid services are provided through the private sector without the cost advantages which this program has achieved through the clinic arrangement. In other areas of Florida, and in other States, the use of medicaid provisions for needy refugees has, of course, been the practice, with reimbursement from the Cuban refugee program.

Due to a recent lawsuit in a Federal court in Miami, refugees who qualify for Florida's medicaid program are now eligible to have their medical needs met through that program's provisions rather than receiving medical care through the refugee clinic. February 1973 was the first month the refugees began utilizing the medicaid provisions, on an optional basis during that month, and experience thus far is not sufficient to determine the full impact of this new development on the clinic's operations and program expenditures.

The necessity to convert to medicaid, although more expensive, coincides with the direction the Cuban refugee program has been ing to effect total phaseout of all elements of the program; substantial retrenchments in clinic operations are now under discussion with the U.S. Public Health Service and Florida and Dade County public health officials. A large number of refugee welfare recipients in Miami, however, are not eligible for the medicaid program, and the clinic will continue to meet the medical care needs of these recipients who remain eligible under the welfare phaseout policy.

A 25-percent reduction in funds, below the 1973 level, is reflected in the $3 million requested for 1974 for the Health Service activity.

PROGRAM ADMINISTRATION

Federal program administration costs have been considerably curtailed as the airlift has diminished; the resumption of flights in December 1972, however, did slow down some reductions that otherwise would have been possible had the airlift completely terminated earlier as once anticipated. Almost all these program administration costs of $1.6 million estimated for 1974 relate to staff salaries, benefits, and related expenses.

There has not been an attrition in staff, nor is it anticipated, to the extent necessary to achieve the reduction we now believe is indicated with final cessation of the airlift. There are currently 80 staff on duty. We intend to again invoke reduction-in-force procedures to eliminate 18 positions by July 1 and expect at least 2 additional voluntary separations to occur. If we achieve this, our staffing level will be below that anticipated when the budget was prepared, resulting in 60 employees instead of 75 by the end of June. This means in the 2-year period between July 1971 and July 1973, total Cuban refugee program staff will have been reduced by 108. Throughout 1974 we will continue to examine our workload to determine, and to effect, any additional cuts in staff that seem indicated. It should be noted that savings from these forced reductions are not expected to result in substantial savings in 1974 since these employees will be entitled to severance pay on a week-to-week basis which will be considerable since many are in the older age bracket with long years of service, but do not qualify for civil service retirement.

Mr. Chairman, I should like to make an observation about the Cuban refugees who have come to our country in the last 14 years. They have, in general, established an excellent record for themselves in the United States, particularly in view of the fact that the quarter million who have been airlifted arrived in a state of complete destitution, without any possessions or resources; they had usually suffered years of harassment and deprivation; many could not speak English. Approximately 8 out of 10 refugees registered with the program are today fully self-supporting, taxpaying, contributing members of the communities and States in which they live. As a group, the refugees, in my opinion, have demonstrated a willingness and desire to depend on their own initiative and to contribute to the fullest extent possible in their country of asylum.

Mr. Chairman, that concludes my prepared statement. If there are questions, I shall do my best to answer them.

Mr. PASSMAN. Thank you very much for a comprehensive statement. We will want the justifications in the record at this point.

[The justifications follow:]

4. Movement of refugees from Cuba	340,000	-290,000
5. Program administration due to fewer man-years of Federal employment and decreased services due to smaller refugee influx	2,060,000	-410,000
Total, decreases and net change	---	-55,000,000

Explanation of Changes

A. PROGRAM DECREASES:

1. Welfare assistance

Florida.--Beginning July 1, 1973, reimbursements for welfare assistance from this program will be limited to only those refugees who have been in the United States less than 5 years if they are eligible for any of the Federally-aided public assistance programs (Old-Age Assistance, Aid to the Blind, Aid to the Permanently and Totally Disabled, Aid to Families with Dependent Children, and the Medical Assistance Program). This is expected to result in transfer to those programs of almost 14,000 refugees from the 39,300 estimated to be receiving assistance in Florida in June. Of the remaining group of about 25,000, when the new Federal program of Supplemental Security Income for the Aged, Blind, and Disabled goes into effect January 1, 1974, it is expected to further reduce the number of refugees receiving cash assistance from this program by about 9,000. This would result in a caseload of about 15,000 persons whose non-medical needs will be met from the Cuban Refugee Program; these and the 9,000 transferred to the new Federal program who will continue to be eligible to have their medical needs met from this program results in a total eligible caseload of about 24,000 persons in January 1974 which will continue to show a net decline as a result of the 5-year policy and case closings, resulting in a total estimated caseload for medical and cash assistance of 23,200 persons by June 30, 1974 in Florida, of which 8,400 will be eligible for medical assistance only.

Other States.--All Cuban refugees in the United States over 5 years will become ineligible for assistance under this program on July 1, 1973, including those not eligible for the Federally-matched public assistance programs but who are presumed eligible for State/local General Assistance programs which receive no Federal matching. These transfers to other programs result in a decrease from 54,000 persons receiving assistance in June 1973 to 27,000 in July. A further decrease to 25,000 is estimated by January 1, 1974, when the new Federal program for the Aged, Blind, and Disabled becomes operative. Transfers to this new program are expected to remove another 12,000 persons for whom cash assistance had been paid from the Cuban Refugee budget; their eligibility for medical assistance continues to be the responsibility of the Cuban program until their 5 year anniversary in the U.S. The remaining cash assistance caseload of 13,000 persons in January is expected to decline to 11, 800 by June 30, 1974. Those 12,000 refugees eligible for medical assistance only are expected to drop to 10,800 by June 1974. Thus the combined cash assistance/medical group and the medical only group is expected to include 22,600 persons in "Other States" on June 30, 1974.

2. Costs for resettlement-related services is estimated to be reduced by $300,000, reflecting further cuts in activities of the voluntary agencies assisting in this area.

3. All educational services will be reduced as the phasedown of these activities begins in 1974; the largest cut is in the largest item: impact assistance to Dade County public schools. Student loans and professional, English, and vocational training will also be reduced.

4. All costs related to the airlift are eliminated in 1974 except $50,000 for closeout costs of Swiss Embassy staff in Cuba working on airlift matters.

5. The net decrease estimated in program administration includes the full-year effect of staff losses in 1973 and further retrenchment in service items related to the expected cessation of airlift arrivals.

Authorizing Legislation

Legislation	1974 Authorized	1974 Appropriation requested
Migration and Refugee Assistance Act of 1962, Public Law 87-510.....	Indefinite	$90,000,000

MIGRATION AND REFUGEE ASSISTANCE ACT OF 1962

Section 2. (b), (2), (3), (4), (5), and (6):

(b) There are hereby authorized to be appropriated such amounts as may be necessary from time to time—

(2) for assistance to or in behalf of refugees designated by the President (by class, group, or designation of their respective countries of origin or areas of residence) when the President determines that such assistance will contribute to the defense, or to the security, or to the foreign policy interests of the United States;

(3) for assistance to or in behalf of refugees in the United States whenever the President shall determine that such assistance would be in the interest of the United States: Provided, That the term "refugees" as herein used means aliens who (A) because of persecution or fear of persecution on account or race, religion, or political opinion, fled from a nation or area of the Western Hemisphere; (B) cannot return thereto because of fear of persecution on account of race, religion, or political opinion; and (C) are in urgent need of assistance for the essentials of life;

(4) for assistance to State or local public agencies providing services for substantial numbers of individuals who meet the requirements of subparagraph (3) (other than clause (C) thereof) for (A) health services and educational services to such individuals, and (B) special training for employment and services related thereto;

(5) for transportation to, and resettlement in, other areas of the United States of individuals who meet the requirements of subparagraph (3) (other than clause (C) thereof) and who, having regard for their income and other resources, need assistance in obtaining such services; and

(6) for establishment and maintenance of projects for employment or refresher professional training of individuals who meet the requirements of subparagraph (3) (other than clause (C) thereof) and, who, having regard for their income and resources, need such employment or need assistance in obtaining such retraining.

States other than Florida				
Financial and medical assistance to needy resettled refugees	73,650,260	77,000,000	38,900,000	-38,100,000
Subtotal	110,000,000	121,300,000	70,300,000	-51,000,000
2. Resettlement	2,907,989	1,300,000	1,000,000	-300,000
3. Education:				
a. Assistance to public schools in Dade County, Florida	13,678,909	12,000,000	10,400,000	-1,600,000
b. English and Vocational training	1,100,000	1,000,000	900,000	-100,000
c. Assistance to college students	2,887,508	2,800,000	2,600,000	-200,000
d. Professional training and placement	156,893	200,000	100,000	-100,000
Subtotal	17,823,310	16,000,000	14,000,000	-2,000,000
4. Health Services:				
a. Refugee health clinic	1,716,538	2,236,000		
b. Outpatient hospital services	752,231	1,058,000		
c. Maternal and child health, and school health services	189,777	285,000	3,000,000	-1,000,000
d. Hospitalization for long-term illness	369,736	421,000		
Subtotal	3,028,282	4,000,000	3,000,000	-1,000,000
5. Movement of Refugees from Cuba	513,420	340,000	50,000	-290,000
6. Program Administration	2,453,350	2,060,000	1,650,000	-410,000
Total	136,726,351	145,000,000	90,000,000	-55,000,000

Justification

Assistance to Refugees in the United States

General Statement

Assistance to Refugees in the United States, generally referred to as the Cuban Refugee Program, is authorized by the Migration and Refugee Assistance Act of 1962 (Public Law 87-510). The program is responsible for providing for health, educational, and welfare needs of the refugees. Provision for their needs encompasses financial and medical assistance as well as services geared to help employable refugees become self-supporting as rapidly as possible. The services provided include placement of refugees in areas all over the country to help as many as possible to become self-supporting and build meaningful lives in their country of asylum.

In Miami, where approximately one-half of the some 600,000 refugees in the United States are located, English and vocational training is provided and intensive counseling is carried on with the potentially employable refugees to fit them for job opportunities.

The port of entry into the United States for most persons assisted under this program is Miami, Florida, where the principal operational facility of the Cuban Refugee Program, the Cuban Refugee Center, is maintained. It is in Miami that the arriving refugees are medically screened, interviewed, and registered to record the family composition, age, educational background, skills, etc. It is also here that a variety of services to help the Cuban refugee become assimilated into daily living in the United States, including resettlement, are initiated through the auspices of several national voluntary agencies. Working through these agencies, literally thousands of individual citizens, civic organizations, firms, etc., have offered opportunities to Cuban refugees.

Refugees from Cuba were arriving in Miami at the rate of about 1,700 a week when the missile crisis occurred in October 1962 after which this number of arrivals decreased by about 90 percent. On October 3, 1965, the President of the United States announced that the United States would permit the orderly influx of refugees allowed to leave Cuba under a more liberal refugee policy adopted by the Cuban Government. In December 1965, a new influx of refugees started with the inauguration of freedom flights--the airlift operated by the U.S. as provided for in a United States-Cuban Memorandum of Understanding negotiated through the Swiss Government.

About 42 flights brought approximately 3,500 refugees to Miami each month between December 1965 and August 1971 when the Cuban Government began a series of interruptions in airlift operations. Only 26 flights had occurred during calendar year 1972 until December 11 when the airlift resumed; it is expected that at least 40 flights bringing 3,400 refugees into Miami will take place before another interruption occurs, and then "some additional number" will come according to information received by the State Department from Cuban authorities. It appears that there now remains only a small residual group of refugees who will be allowed to depart Cuba on future airlift flights; the budget assumes a total of 75 flights in 1973 and none in 1974.

At the end of December 1972, refugee registrations at the Cuban Refugee Emergency Center in Miami totaled 447,795; of these 296,806 had been resettled to some 3,000 communities throughout the United States. Almost 265,000 of these registrations and 202,000 of the resettlements have occurred since December 1, 1965, the date the refugee airlift started.

The anticipated cessation of airlift activities and other considerations led the Department of Health, Education, and Welfare to plan a phaseout of the Cuban Refugee Program to begin in July 1973, with complete termination of the program projected for June 30, 1977. The House-Senate conferees recommended that "the Executive Branch exert every effort in bringing about the termination of this program as soon as reasonably possible" in connection with the 1972 appropriation.

The major impact of the phaseout efforts in 1974 will be reductions in reimbursements to the States for welfare and medical assistance for needy Cuban refugees. Since inception of the program these costs have been reimbursable on a 100 percent basis, accounting for over 85 percent of the Cuban refugee budget in recent years. Beginning next July, reimbursement from the Cuban program will no longer be available for those refugees who have been in the U.S. 5 years or longer; their needs will be met from the regular Federal/State/local public assistance programs.

The 5-year policy recognizes the minimum time for the refugee to have become a U.S. citizen and to have overcome the most serious aspects of adjustment to this country; in most States the Cuban refugees transferred to regular welfare programs will constitute a very small portion of the State's total caseload. Some modification of this plan is contemplated for Florida due to the large concentration of refugees there. When the new Federal program of Supplemental Security Income for the Aged, Blind, and Disabled (provided for by the Social Security Amendments of 1972--Public Law 92-603) goes into effect January 1, 1974, a large number of refugees in the U.S. less than 5 years will have their non-medical needs met from that program.

Another area affected by the phaseout plans in 1974 is assistance to Dade County public schools that was started some years ago due to the heavy impact of large numbers of newly arrived refugee children enrolled in the schools and the very serious educational problems encountered by school officials in educating these children, most of whom were only Spanish speaking at time of enrollment. The budget provides for a 20 percent decrease compared to the 1973 amount called for in the formula for assistance to Dade County schools. Again, anticipated cessation of the airlift and the fact that so many Cubans are fully assimilated into the economic life of the county, sharing their part of the tax load, has been considered.

The reductions in the welfare area and school assistance discussed above are two examples of phaseout savings that this program will achieve in 1974; considerably more detail is provided on these and other areas affected by the phasedown in the justification material by activity which follows. It is the Department's judgment that these phaseout plans for 1974 provide an orderly start to fulfilling the Congressional recommendation and at the same time avoid a sudden or undue burden on the States.

In general, the refugees have established an excellent record for themselves in the United States, particularly in view of the fact that the quarter million who have been airlifted have arrived in a state of complete destitution, without any possesions or resources; they have usually suffered several years of harassment and deprivation by the authorities in Cuba; and many do not speak English. Over 8 out of 10 refugees registered with the program (a condition for assistance) are fully self-supporting, tax-paying, contributing members of the communities in which they live. The program will continue to be responsible for helping many thousands of these refugees, but many other thousands will lose their identity with the program as they meld into ongoing domestic programs and the scope of this program narrows each year.

For fiscal year 1974, $90,000,000 is requested for assistance to Cuban refugees. This is $55,000,000 less than the estimated requirements of $145,000,000 for 1973. The activities developed by the Federal Government in cooperation with State and local governments and private agencies, and the funding levels required for these activities in 1974 are discussed under each of the six budget activities, which follow.

Assistance to Refugees in the United States

Activity 1. Welfare Assistance and Services

	1972	1973	1974	Increase or Decrease
I. Florida.....	$36,349,740	$44,300,000	$31,400,000	-$12,900,000
II. Other States.....	73,650,260	77,000,000	38,900,000	-38,100,000
Total	110,000,000	121,300,000	70,300,000	-51,000,000

Under this activity State welfare and health agencies have been reimbursed on a 100 percent basis--so as not to place an additional financial strain on the already overburdened resources of these agencies--for financial assistance and essential medical care provided eligible needy Cuban refugees. This assistance is administered through Federal, State, and local channels and in general is based on need standards applicable in regular U.S. programs in the State where the refugee resides. Because of the large refugee population in Florida, there is a separate presentation of data for its welfare activity which includes several special elements.

The policy of reimbursing the States 100 percent from Federal funds for assistance granted to needy eligible Cuban refugees was initiated at the same time that the Cuban Refugee Program was established in February 1961. The furnishing of such assistance to refugees was included in the original directive from the President to the Secretary of Health, Education, and Welfare.

As time has passed, the vast majority of refugees have entered into the mainstream of American life as self-supporting, tax-paying members of the communities and States in which they live. This factor, coupled with several other recent developments, has resulted in a Department decision to begin an orderly phaseout as soon as practicable of the special welfare assistance provisions for Cuban refugees. The other factors contributing to this decision include (a) the very limited number of airlift flights since January 1972, with the anticipation that only a few more flights will operate before the Cuban Government completely terminates the airlift; and (b) a statement by the Senate-House conferees in connection with the 1972 appropriation that "the Executive Branch exert every effort in bringing about the termination of this program as soon as reasonably possible."

A major change is expected to be made in the policy of reimbursing States for welfare and medical assistance effective July 1, 1973. In general, the plan contemplates limiting reimbursements for assistance of this type under the Cuban Refugee Program to refugees who have been in the United States less than 5 years; the States' regular welfare programs would be utilized for refugees in the U.S. over 5 years. It is anticipated there will be some modification in this general policy to recognize unique situations such as in Florida where about one-half of the refugees in the United States reside. This special policy proposal, subject to annual review, provides that a State in which 3 percent or more of the total population of the State was born in Cuba, according to the 1970 Census of Population, would not be subject to the 5-year residency requirement if the refugees were ineligible for the Federally aided public assistance programs. Only Florida would benefit from this policy which the Department expects to adopt for at least fiscal year 1974. The general 5-year policy recognizes the minimum time it takes for a refugee to become a U.S. citizen and would appear to be sufficient time for him to have overcome the most serious aspects of adjustment to this country; and except in Florida, Cuban refugees will constitute a very small portion of the total welfare caseload of the various States.

It should be noted that following release of information last June to State welfare officials regarding the Department's commitment to Congress of its intention to begin a planned, orderly phasing out of the refugee program effective July 1, 1973, a number of States have raised objections to the withdrawal of any Federal funding as early as next July, citing the fact that the U.S.-sponsored airlift that began in 1965 has not yet finally ceased. The Department, however, is proceeding and proposed regulations are pending which would effect the commencement of the phaseout as planned.

Another major impact on this 1974 budget in the welfare area relates to enactment of HR-1--Public Law 92-603--in the last Congress. This Act established a new Federal program of "Supplemental Security Income for the Aged, Blind, and Disabled, "to become effective January 1, 1974. The law provides that this new program will specifically include "an alien lawfully admitted for permanent residence or otherwise permanently residing in the United States under color of Law (including any alien who is lawfully present in the United States as a result of the application of the provisions of section 203(a)(7) or section 212(d)(5) of the Immigration and Nationality Act)." Thus, a very sizable number of additional refugees who have been in the U.S. less than 5 years will be eligible to have their non-medical needs met from this new program beginning next January and the Cuban Refugee budget for 1974 excludes funds for reimbursements to the States for any maintenance payments after December 31, 1973, for the group of refugees expected to be transferred to the new program of Supplementary Security Income for the Aged, Blind, and Disabled which will be administered by the Social Security Administration.

A discussion of the welfare estimates, and the impact of the phaseout beginning July 1, 1973, and the new Federalized cash assistance program starting in January 1974, follows. A table at the end of this section presents statistical and cost data for each of the 3 years according to two major areas: (1) Florida and (2) Other States. Since the exodus of refugees from Cuba began in 1959 the principal port of entry into the United States has been Miami, Florida, and according to reports from that area about one-half of the some 600,000 Cubans who have sought asylum in the U.S. since Castro's takeover of Cuba reside today in South Florida. This is one of the reasons why such a large, identifiable part of this activity is required--and presented separately--for Florida. It also explains why it has been necessary to establish a number of special welfare-related program elements in the Miami area which are separately identified within the Florida data.

I. Florida

a. Financial Assistance (for Maintenance) in Florida.

A total of 39,300 persons are expected to be receiving financial assistance in Florida on June 30, 1973. For some 20,000 of those persons, a small part of their monthly financial assistance payments, totaling about $6,000,000 for the year, is being met through Florida's regular public assistance programs rather than this program. Of the 39,300 receiving assistance, just prior to invocation of the 5 year policy, almost 70 percent, or 26,800 are expected to have similar characteristics to persons eligible for the Federally matched categorical programs; one-half of these will have been in the U.S. for over 5 years on July 1, 1973, resulting in a caseload of 13,400 persons who, while meeting eligibility requirements for the categorical Public Assistance programs, have been in the U.S. less than 5 years and will continue to be eligible for assistance under the Cuban Refugee Program on July 1, 1973.

In addition, it is estimated that some 12,500 other needy refugees receiving assistance in Florida will continue as of July 1, 1973, to be the responsibility of the Cuban Refugee Program regardless of their length of time in the United States. These persons are not eligible for the regular categorical welfare programs because they are not 65 years old, or they are not completely disabled, or they are not part of a family where dependency is due to absence from the home, or disability, of a parent. These types are referred to as "General Assistance" cases. There has never been Federal matching for "General Assistance" programs wherever they exist throughout the United States; where there are such programs the funding can be all State, all local, or a combination of State/local funds, and their geographic coverage within the State and their need and eligibility standards vary considerably among the localities depending on funding sources. In Florida there is no Statewide General Assistance program; some of the counties, including Dade County, have these types of programs but their annual funding is very limited and if an exception were not possible so that the Cuban Refugee Program provides funding for the large Cuban "General Assistance" caseload in Florida (almost entirely in Dade County), the very limited local funds now utilized for the regular domestic program would simply have to be spread over such a large group that Dade's General Assistance program would become meaningless—Americans and Cubans would suffer since the funds would be exhausted so quickly. The needs of the Cuban Refugee General Assistance caseload arise from a variety of causes—for example, many are between 60 and 64 years of age and because of language barriers, lack of skills, and/or substantial physical impairments are not able to be fully self-supporting in a strange land where they have no resources; others will require assistance for varying periods of time because of illness, job lay offs, etc.

Based on the foregoing there would be a combined Florida caseload of 25,900 persons chargeable to the Cuban Refugee Program as of July 1, 1973. This is expected to decline to about 24,400 persons by December 31, 1973, a net monthly decrease of 250 on the average.

Although some new cases will inevitably be added, the decrease of 250 recipients monthly appears possible because persons meeting eligibility requirements for the categorical programs will no longer be eligible for Cuban Refugee assistance upon reaching their 5-year anniversary in the U.S. and some General Assistance type cases will become categorically eligible as they reach minimum age requirements for Old-Age Assistance. Also, the General Assistance type cases offer more potential for utilization of services that culminate in self-support and concerted effort will be directed toward an intensive service-oriented program to bring about reductions in this caseload.

When the new Federal program of Supplemental Security Income for the Aged, Blind, and Disabled goes into effect January 1, 1974, an estimated 9,000 of the 24,400 persons receiving aid under the Cuban Refugee Program in December in Florida are expected to have their non-medical needs met from this new program, resulting in a caseload of 15,300 persons in January for whom the program will finance maintenance payments--these would be those characterized as General Assistance cases and Aid to Families with Dependent Children cases--the latter would be in the U.S. less than 5 years.

With respect to medical assistance, those persons transferred to the Supplemental Security Income program would continue to have costs for their medical care needs met by the Cuban Refugee Program if they have been in the U.S. less than 5 years. It is estimated that by June 30, 1974, 14,800 persons will require financial assistance from the Cuban Refugee Program to help with their day-to-day maintenance needs and that these along with 8,400 aged and disabled persons in Florida not receiving maintenance assistance from this program and in the U.S. less than 5 years will be eligible to have their medical care financed by the program.

b. Medical care in Florida.— Due to Federal court action in fiscal year 1973, Florida has had to extend the provisions of its regular Medicaid program to those Aged, Blind, and Disabled Cuban refugees in the Miami area who would technically qualify for that program, similar to the practice being followed in all other areas of the United States except Miami where the clinic, which has been operated by the Dade County public health agency for this program since 1962, has met most of the non-institutional medical care needs of all needy Cuban refugees in the Miami area. The primary reason for the lawsuit and the resultant court decision was to enable the patients to have freedom of choice of physicians, druggists, therapists, X-ray technicians, etc. The costs under the Medicaid provisions are expected to be substantially higher than the clinic's, and some additional services may be available.

The conversion to enable the refugees to exercise their new right to Medicaid is to begin in February 1973. As many as 20,000 may be eligible for the medicaid type arrangements. The hospitalization costs have always been handled similar to Medicaid and these costs--the largest in medical care--are not affected. Other medical items, however, that have not been a substantial part of the welfare activity due to the Miami clinic now appear in this budget activity, as for other States. For fiscal year 1973 the total medical care estimate for Florida included in this welfare activity is $8,900,000. Almost 75 percent--$6,100,000--is for hospitalization; the other $2,800,000 includes physician visits, drugs, cost for nursing home patients, home health services, ambulances, etc. Implementation of the Medicaid provision will not be effective more than a few months of fiscal year 1973, and the total additional cost in fiscal year 1973 due to this development is expected to be relatively small.

In fiscal year 1974, the Medicaid services will be in effect the entire year but due to the 5-year residency policy that is applicable to medical care costs to be borne by the Cuban Refugee Program, the eligible caseload will drop sharply on July 1, 1973, and monthly thereafter as persons attain 5 years residency. The 20,000 made eligible for non-institutional care through Medicaid the latter part of 1973 is expected to average only about 9,000 persons monthly in 1974 for whom the Refugee Program will be responsible.

Hospitalization costs in 1974 are expected to drop to $3,850,000 compared with the $6,100,000 estimated for 1973, primarily due to the reduction in the number of eligible recipients. Other items of medical care are expected to cost $4,950,000 in 1974 compared with $2,800,000 in 1973, reflecting a combination of reductions due to a smaller eligible caseloads offset by 12 months of operations under medicaid provisions. The table that follows provides additional information.

The clinic discussed under Activity 4, "Health Services," will continue to meet most of the non-institutional medical care needs of those not eligible for Medicaid--that is primarily the "General Assistance" group of recipients.

c. Special items in Florida's welfare program.--Costs for the several miscellaneous welfare items in Florida--care of unaccompanied children, resettlement allowances, and administration of Cuban refugee welfare assistance--are estimated at $3,600,000 in 1974 compared to $5,100,000 in 1973. This reduction primarily relates to administrative costs because of the reduction in the caseload chargeable to the Cuban Refugee Program; the 1973 estimate of $4,100,000 for this purpose is reduced to $3,000,000 in 1974. The table at the end of the activity provides additional details.

II. Other States

It is estimated that 50 percent of the caseload of 54,000 persons estimated to be receiving assistance under the Cuban Refugee Program outside of Florida in June 1973 will no longer be eligible for assistance under this program as of July 1 because of the 5-year residency policy. Of the 27,000 remaining persons who will continue to be assisted under the program, a net decrease of 2,000 is projected in the 6-month period between July and December 1973 due largely to transfers to regular programs upon reaching 5-year residency as well as case closings due to continued emphasis on self-support activities to the maximum extent possible.

Of the 25,000 refugees estimated to be receiving assistance under this program in December 1973, about 12,000 persons are expected to be eligible for the new federalized program of Supplementary Security Income for the Aged, Blind, and Disabled that begins operating on January 1, 1974. The Cuban program will no longer be responsible for payments for the basic day-to-day maintenance needs of the group transferred to the new program. Just as in Florida, however, these persons will continue to be eligible to have their medical care needs met through this program until they have been in the United States 5 years. The group of 12,000 refugees losing their entitlement to non-medical assistance under this program in January is expected to decrease to 10,800 by June 30, 1974; the group of 13,000 persons (General Assistance and Aid to Families with Dependent Children types) who will not be affected by the new Federal program and will continue to have both maintenance and medical needs met from this program is expected to decline to 11,800 by June 30, 1974; thus, a combined caseload of 22,600 persons are expected to be eligible for maintenance and/or medical care in States other than Florida under the Cuban Refugee Program on June 30, 1974, as compared with 25,000 persons 6 months earlier--a drop of 400 per month.

The total amount estimated for non-medical cost (i.e. for maintenance) in "other States" in 1974 is $24,700,000; the average monthly payment (without medical) is estimated as $107. Comparable 1973 data would be $58,000,000 as total maintenance payments at an average monthly payment of $93 per recipient.

In recent years medical care has represented about 25 percent of the total welfare costs to the program in "Other States." These costs are handled by the States just as in the regular Medicaid program: through payments to suppliers (vendors) of medical care and/or fiscal agents set up by the States to handle their medical vendor payments; and, as in the regular programs, payments may be made for the deductibles and co-insurance features of Medicare, and through buy-in agreements between the States and the Social Security Administration for monthly premiums for Part B of Medicare (primarily physician costs) for those refugees eligible for Medicare.

Of the total welfare cost of $77,000,000 now estimated for welfare costs in other States in 1973, about $19,000,000 would be for medical care, based on 25 percent. Of the total welfare estimate of $38,900,000 for 1974 in these "other States," $14,200,000 is estimated for medical costs--almost 37 percent. About $10,100,000 would be for the group receiving maintenance assistance under this program and $4,100,000 for the some 11,000 who will be eligible for only medical assistance under the Cuban program after December 31, 1973. This latter group will be the aged and disabled and their medical needs and costs will tend to be higher. Since medical costs are reimbursed according to when medical vendors' bills are paid by the State (or local) agency (in all States except Florida) and the recipient count relates to the number of bills paid in most instances, including those for whom monthly premiums are paid, the actual number of different persons receiving medical care in a given period is not reported by the State; experience in Florida indicates that virtually every welfare recipient receives some items of medical assistance at least during a year; and, of course, many receive it monthly or oftener, including those in institutions other than general hospitals.

Under the phaseout, States will be permitted to charge the Cuban program for medical services actually received before June 30, 1973, regardless of when the vendor bill is paid and regardless of how long the refugee has been in the United States if the treatment were rendered before June 30, 1973. The $10,100,000 medical costs estimate for 1974 for the cash assistance group includes $1,300,000 for these "catch-up" costs.

The table summarizing the estimates for welfare assistance and services follows.

Selected Statistical and Cost Data
for Welfare Assistance and Services

FLORIDA:	1972	1973	1974	Change
Financial Assistance (Total costs)....	$25,616,391	$30,300,000	$19,000,000	-$11,300,000

Number of eligible recipients, June 30	55,140	54,000	22,600	-31,400
Total costs for Welfare Services and Assistance in States other than Florida.....	$73,650,260	$77,000,000	$38,900,000	-$38,100,000
TOTAL.....	$110,000,000	$121,300,000	$70,300,000	-$51,000,000

Assistance to Refugees in the United States

Activity 2. Resettlement

	1972	1973	1974	Increase or Decrease
Total	$2,907,989	$1,300,000	$1,000,000	-$300,000

Through contracts with several voluntary non-profit agencies, refugees are provided a variety of services to assist them into the mainstream of U.S. living, including reception services for new arrivals, relocation to homes and jobs in areas other than Miami and post-resettlement services relating to emergencies, job placement, etc. In fiscal 1972, the voluntary agencies assisted 12,513 refugees to relocate out of the Miami area to other parts of the country.

During 1974, as in 1973, assistance will be provided new arrivals and relocations out of Miami will be undertaken when in the best interest of the refugee, but the primary emphasis by the voluntary agencies will be on providing day-to-day counseling services to the refugees and on helping them with post-resettlement problems and in emergency situations. The voluntary agencies' organization, expertise, and day-to-day counseling and related activities for refugees already in the U.S., as well as new ones that continue to enter in some volume, continue to be an essential need of the Cuban Refugee Program.

In addition to reimbursing the voluntary agencies for a large portion of those administrative and operaticnal expenses directly associated with the Cuban refugee program, actual direct assistance provided the refugee, such as a month's rent and cash allowance for meals and incidentals such as those incurred while traveling from Miami to the relocation point is also reimbursed.

The voluntary agencies have reduced their staff very significantly in the past year and a further reduction of $300,000 for this budget activity is projected in 1974 to give account to the continued phasedown by these agencies.

Assistance to Refugees in the United States

Activity 3. Education

	1972	1973	1974	Increase or Decrease
a. Assistance to Dade County, Florida, public school system	$13,678,909	$12,000,000	$10,400,000	-$1,600,000
b. Vocational and English training for youths and adults	1,100,000	1,000,000	900,000	-100,000
c. Loans to students	2,887,508	2,800,000	2,600,000	-200,000
d. Professional training and placement	156,893	200,000	100,000	-100,000
TOTAL	17,823,310	16,000,000	14,000,000	-2,000,000

a. Assistance to Dade County Public Schools

In fiscal year 1961 when the Cuban Refugee Program started there was a large number of Cuban refugee children in Miami that had arrived in this country in a very short period of time, and their entry into the Dade County public school system was placing an extraordinary burden on it. This resulted in Federal recognition of the need to assist that County financially if it were to meet the educational needs of these children. Federal financial aid has been given to Dade County annually since 1961 under this program as the number of school children has continued to climb. The formula for the Federal aid has been changed several times over the years in an effort to continue to recognize the impact of large numbers of Cuban children while also attempting to bring about a reduction, or at least a leveling off, in annual Federal funds requirements for this purpose.

Beginning with fiscal year 1971, the Federal payment was limited to refugee children who entered the U.S. after October 3, 1965. The new influx of Cubans into the U.S. began following President Johnson's offer of asylum made at a ceremony at the Statue of Liberty on that date. And for this group of children, no payment is made if the child has been enrolled in any U.S. school system for 5 years or longer.

For those children determined eligible, as indicated above, the formula in effect in 1971 and continued for 1972-73 is as follows (a table at the end of this activity provides statistics based on the formula):

(1) The program has been paying 50 percent of the per-pupil operating cost, as determined for the entire public school system of Dade County, based on the average daily membership (ADM) of Cuban refugee children in grades 1 through 12 of the school year.1/ Until 1972 the program made a one-time payment for school facilities.

(2) An annual payment is also made for special training materials and supplementary personnel required to meet the special needs of the refugee children; this payment is equal to 14 percent of the total operating cost determined for computing the Federal share under item (a.) above.

(3) An amount each year (approximately $160,000) has been authorized for a summer English language program for refugee children; this is being discontinued in 1973 since Dade County has increased its school year to include summer months.

In 1974 this formula is expected to be discarded; the budget projects an overall decrease of 20 percent in assistance to Dade County Schools for 1974 compared with the 1973 amount estimated under the formula. This is being done in order to effect a more orderly phaseout of this cost than the formula would yield. The number of "formula" children is not decreasing as rapidly as expected and its continuation will not achieve a yearly phasedown that results in a progressive, orderly termination of all Federal assistance from the Cuban Refugee Program by the end of fiscal year 1977. It is contemplated a larger proportion of the funds each year will be earmarked for supplementary services directly related to the special needs of the Cuban children (Cuban teacher aides, special instructional materials, etc.) and a smaller portion for unearmarked general operating expenses of the school system.

b. English and Vocational Training

In the early 1960's the Dade County public school system at the request of the government organized classes in English and other subjects for Cuban refugee youths and adults in order to provide opportunities for employment in and outside of Florida. This training is now supplemented by classes in office-type skills such as typing, shorthand, operation of various types of office machines; hotel and restaurant operations; specialized hand-sewing; and courses in such fields as drafting, radio, television repair, air-conditioning, and automobile repair. There is a continuing examination of the financial assistance caseload to encourage refugees to take advantage of this training.

The decrease of $100,000 in 1974 relates to a smaller number of new refugees expected to be in Miami as a result of the airlift cessation. (The table at the end of this activity provides statistics.)

c. Assistance to College Students

Loans are made available to Cuban refugee students who are without sufficient resources to finance their attendance at colleges and universities in the United States. Criteria for granting loans follow the pattern established for U.S. students in the National Defense Education Act.

As depicted in the table at the end of the activity, the estimated number of students for whom loans will be available is being reduced in both 1973 and 1974. The 1973 estimate gives account to some declining trend evident in 1972 as well as the fact there should be fewer applicants due to airlift

1/ For 1973, at this writing, it is expected that funds available to the Cuban Refugee Program will permit it to pay about 45% of the per-pupil operating costs.

cessation. With respect to 1974, however, as part of the phaseout plan for student loans, schools have already been notified that for new borrowers loans will be limited beginning in the Fall of 1973 to only those students who are not eligible under the domestic loan programs because they do not have the immigration status of permanent residence. The small increase in the average amount of loans assumes graduate student borrowers, for whom larger loans are possible, will represent a larger proportion of the borrowers.

d. Professional Training and Placement

For many of the Cuban refugees with professional backgrounds some training or reorientation for them has been necessary before they acquire eligibility to follow their professions in the U.S.; for example, through retraining and refresher courses the program has been very successful in providing Spanish language teachers to meet demands in various parts of the country and in enabling Cuban physicians and dentists to qualify for practice of their profession in the U.S. A decline is anticipated in this area, however, reflecting the phasedown of this type of training since there are fewer new refugees entering the country for whom such training appears appropriate. The next page provides statistics.

Selected Statistical and Cost Data for Education

	1972	1973	1974	Change
1. Public school system of Dade County, Florida				
a. Number of eligible children in average daily membership (ADM)..	23,640	22,000		
b. Total operating cost per pupil.....	$853	$923		
c. Federal share of above based on 50% in 1972 and 1973.....	$427	$462	$10,400,000[3/]	-$2,600,000
d. Total Federal payment for operating cost (a.times c.)	$10,086,715	$10,156,000		
e. Auxiliary services and supplies (28% of item d.)	$2,824,280	$2,844,000		
f. Federal payment for special summer school.....	160,000	---		
Subtotal.....	13,070,995	13,000,000	10,400,000	-2,600,000
g. Adjustment.....	+607,914[1/]	-1,000,000[2/]	---	+1,000,000
Total Assistance to Dade County Public Schools.....	13,678,909	12,000,000	10,400,000	-1,600,000
2. English and Vocational Training--Total Amount	$1,100,000	$1,000,000	$900,000	-$100,000
No. of English Trainees....	3,000	2,700	2,400	-300
No. of Vocational Trainees.	500	450	400	-50
3. Assistance to College Students				
Total Amount.....	$2,887,508	$2,800,000	$2,600,000	-$200,000
Number of Borrowers.....	3,208	3,040	2,600	-440
Average loan per student...	$900	$921	$1,000	+$79
4. Professional Training and Placement--Total Amount....	$156,893	$200,000	$100,000	-$100,000
No. of Profess'l Trainees..	350	375	200	-175
Total for Education	$17,823,310	$16,000,000	$14,000,000	-$2,000,000

1/ Special Federal make-up payment authorized in 1972 due to shortage of funds in 1970, when full payment to Dade County called for under the formula was not made.

2/ This reduction is shown in order to reflect amount estimated to be available for Dade County schools in 1973 as contrasted with what the formula would yield; instead of 50% of the operating cost it is estimated about 45% will be paid by the Cuban Refugee Program in 1973.

3/ The data for 1972 and 1973 for Dade County are based on a formula negotiated with the school officials sometime ago. As explained in the narrative, for fiscal year 1974 it is planned to reduce the amount of assistance earned by the formula for 1973 by 20 percent which is estimated to be a larger reduction than would occur if the present formula were continued.

Assistance to Refugees in the United States

Activity 4. Health Services

	1972	1973	1974	Increase or Decrease
a. Refugee Health Clinic..	$1,716,538	$2,236,000		
b. Outpatient hospital services.....	752,231	1,058,000		
c. Maternal and Child Health, and school health services.....	189,777	285,000	$3,000,000	-$1,000,000
d. Hospitalization for long-term illness....	369,736	421,000		
Total.....	$3,028,282	$4,000,000	$3,000,000	-$1,000,000

Since 1962 health services have been provided to needy Cuban refugees in the Miami area through the cooperation of the Public Health Service, the Dade County Health Department, and local and State hospitals. These services are rendered through: (1) the refugee health clinic located at the refugee center (with staff servicing the reception center as necessary); (2) outpatient medical services provided at local hospitals; (3) community health services by Dade County health personnel; and (4) hospitalization for tuberculosis and mental patients at State/local hospitals.

The clinic services include medical screening, examinations, X-rays, treatment, and provision of prescribed drugs. Arrangements are made through the clinic for out-patient services when necessary at local hospitals and for care of patients with tuberculosis and mental illness. Clinic services have been available to all those receiving welfare assistance in the Miami area through the Cuban Refugee Program since the early 1960's. New arrivals are given medical examinations upon arrival.

Outpatient services at local hospitals have been required in emergency situations when the Health Clinic was not open or when services required were beyond the facilities and capabilities of the clinic and its staff. It is estimated, however, that 85 percent of the services required by refugees were provided by the clinic and the remaining 15 percent by local outpatient hospital facilities in the Miami area.

The program finances salaries and related costs for Dade County health personnel in providing maternal and child health and school health services to Cuban refugees--these costs relate to salaries and other expenses for approximately 28 positions. Some decrease in this item will occur in 1974 as part of program phaseout efforts.

The table above and the summary that follows this section provides detailed information on cost and statistical data for actual operations in 1972 and planned for 1973 based on a contractual agreement prepared by the Dade County public health agency as a result of negotiations with DHEW staff, including representatives of the Public Health Service responsible for execution of the Agreement on behalf of the Government.

A recent development in Florida is expected to have considerable impact on clinic operations in 1974, but the extent of change and the effect on the several medical components comprising clinic-related activities cannot be statistically quantified with realistic estimates for 1974 as in prior years. The reason for the pending changes affecting the Miami Refugee clinic operations results from a Federal court action in fiscal year 1973 in which Florida agreed to extend the provisions of its regular Medicaid program to those Aged, Blind, and Disabled Cuban refugees in the Miami area who would technically qualify for that program similar to the practice being followed in all other areas of the United States except Miami where the clinic, which has been operated by the Dade County public health agency for this program since 1962 has met most of the non-institutional medical care needs of all needy Cuban refugees in the Miami area. The primary reason for the lawsuit and the resultant court decision was to enable the patients to have freedom of choice of physicians, druggists, etc. The costs under the Medicaid provisions, which are expected to be substantially higher than the clinics, are discussed under the "Welfare Assistance and Services" activity of this budget, where costs for medical care have always appeared except those related to services provided through the Cuban Refugee Clinic in Miami.

The conversion to enable the refugees to exercise their new right to Medicaid is to begin in February 1973. As many as 20,000 refugees may be eligible for the Medicaid type arrangements, and it is certain the clinic caseload and operations will be diminished to some degree, but the extent is not known. There remain some 15,000 persons who would not currently qualify for the Medicaid program who must continue to utilize the clinic. To what extent the private medical manpower in Miami can, or will, in fact absorb this very large group of new patients is uncertain and it may be that many of the affected group will have to continue to seek help from the clinic for their health problems, at least for a while.

The budget for 1974 is reduced by 25 percent over the previous year's estimate for the clinic-related operations. Plans are now under discussion to effect a retrenchment in medical and other clinic staff to accommodate to the new situation as rapidly as circumstances permit.

Selected Statistical and Cost Data for Health Services

	1972	1973
a. Refugee Health Clinic		
Total Cost	$1,716,538	$2,236,000
Average monthly number of examinations or services rendered	34,229	36,000
b. Outpatient Hospital Services		
Total Cost	$ 752,231	$1,058,000
Number of outpatient visits to local Hospitals	38,186	42,300
Average cost per visit	$ 20	$ 25
c. Maternal and Child Health and School Health Services		
Total Cost	$ 189,777	$ 285,000
Number of Staff	27	28
d. Hospitalization for Long-term Illness: Tuberculosis and Mental Patients		
Total Costs	$ 369,736	$ 421,000
Tuberculosis Patients:		
Number of days of care	2,151	2,000
Average cost per day	$ 27	$ 30
Cost	57,832	60,000
Mental Patients:		
Number of days of care	28,686	27,200
Average cost per day	$ 11	$ 13
Cost	311,904	361,000
Total cost, Health Services	$3,028,282	$4,000,000

As explained in the preceding narrative, for fiscal year 1974 the cost for this activity is estimated to be 25 percent ($1,000,000) less than in 1973, but until some experience is available on the extent to which some patients shift to medicaid (covered under the Welfare activity) realistic projections on utilization of clinic-related services can not be determined.

Assistance to Refugees in the United States

Activity 5. Movement of Refugees from Cuba

	1972 Actual	1973 Estimate	1974 Estimate	Increase or Decrease
Air transportation.....	$325,775	$143,500	$ —	-$143,500
Swiss representation...	172,000	180,000	50,000	- 130,000
State Department costs.	15,645	16,500	—	- 16,500
Total	513,420	340,000	50,000	- 290,000

This activity has provided for the cost of airlifting the refugees from Cuba, including costs of the State Department staff and Swiss Embassy staff in Cuba working on airlift matters. The annual number airlifted approximated 42,000 until fiscal year 1972 when interruptions in the airlift from time to time occurred; 17,624 refugees arrived via the airlift during fiscal year 1972.

Until December 11, 1972, there had been no flights during fiscal year 1973; the airlift resumed on December 11 and it is expected that 40 flights will occur, before another interruption, bringing 3,400 refugees into Miami. This should be accomplished by February 9, 1973. Based on what the Cuban Government has advised the State Department, some additional persons beyond the 3,400 are expected to be ready for departure on the airlift at a later date. It appears that there now remains only a small residual group who will be allowed to depart Cuba on future airlift flights. The budget assumes there will be a total of 75 flights in fiscal year 1973 (averaging 85 persons each or a total of 6,400 persons) and none in 1974. The cost of the airflights in 1973 is $1,900 per flight compared with an average cost of $1,706 per flight for the 191 flights that occurred in fiscal year 1972. The $50,000 estimated for this activity for 1974 is based on an estimate provided by the State Department for close-out costs of Swiss Embassy staff in Havana who have been working on airlift matters.

Assistance to Refugees in the United States

Activity 6. Program Administration

	1972	1973	1974	Increase or Decrease
Personnel compensation and benefits.....	$1,420,741	$1,007,000	$ 915,000	-$ 92,000
Other expenses.....	1,032,609	1,053,000	735,000	- 318,000
Total cost.....	$2,453,350	$2,060,000	$1,650,000	-$410,000

This activity provides for Federal direction and day-to-day operation of the program, including a variety of services for newly arriving refugees as well as those already in the U.S. Provision is made for reception, registration, feeding, lodging, etc. for new arrivals. For Cuban refugees in the Miami area, continuing emphasis is placed on training and employment and assuring that barriers to achieving self-support are dealt with as effectively as possible.

In 1961, when the Cuban Refugee Program was started, a Cuban Refugee Emergency Center was established in downtown Miami, Florida, to serve as a focal point for Cuban refugee registration, resettlement, and out-of-State employment activities, and to coordinate the local aspects of the Department's general program of aid to the Cuban refugees. Additional facilities have been necessary in recent years at the Miami International Airport in order to facilitate reception and movement of those refugees destined to move on to join relatives in distant cities; most of the airport services, now considerably curtailed, are expected to be phased out by the end of the current fiscal year.

All incoming refugees are registered, interviewed, and classified as to job skills. Characteristics and make-up of the families are recorded as are the where-abouts of friends and relatives in the United States. Following registration, refugees are referred (1) for medical examination, and (2) to one of the voluntary agencies for resettlement assistance, which may be for help in reaching relatives in the vicinity or for resettlement out of Miami, in which case arrangements must be made for lodging, meals, etc., until transportation arrangements out of Miami are completed and the refugee's trip begins. There were 18,983 new registrations in fiscal year 1972; 12,513 refugees were resettled.

Refugees who remain in Miami are referred for appropriate educational and job counseling and for welfare assistance if they are in need. In addition, refugees in Miami turn to the downtown Center for guidance and assistance in many aspects of their daily lives; to seek outpatient medical care; to make inquiries about their status with respect to training, employment, or financial assistance; to report changes in family composition because of deaths, births, or marriage; to report changes of address and to replace lost identification cards; and to seek resettlement and other services from the voluntary resettlement agencies.

Curtailment of the airlift in fiscal year 1972 resulted in reductions in services, staff, and costs. The Federal staff of 168 at the beginning of the fiscal year was reduced by almost one-half -- to 85 by June 30, 1972. Most of these staff will be engaged in directing various program activities, developing policy guidance, and carrying out the day-to-day work of maintaining essential program operations in 1973 and 1974. Minimum staff capability must be available for such tasks as providing for registration, emergency assistance, and other processing services as necessary for newly arriving refugees; maintaining lists of refugees eligible for U.S. entry; tabulating and processing of various program and statistical data; and administering budget, fiscal, personnel and general services aspects of the program. Increasing attention is required for responding to inquiries from many sources, including the States on such matters as verification of registration, date of entry, etc. It is planned to make more thorough analyses and investigations of -- and to work toward resolvement of -- complaints and problems brought to the attention of program officials by individual refugees as well as groups representing refugee interests.

Simultaneous with the work undertaken by program staff to implement the welfare phaseout proposal will be the development of more definitive plans on phaseout policies in other elements of the program. Of particular concern will be the phaseout of school assistance to Dade County public schools and of the Miami refugee health clinic; considerable study and negotiation with other Federal offices as well as with State and County officials will be paramount to evolving the best possible plans in these all-important areas of education and health. The major thrust of staff effort in the welfare area will be intensified work with State/local welfare and employment agencies, and voluntary groups, to assure that suitable self-support opportunities are realized whenever possible for the refugees in the Miami area whose welfare assistance will be financed from this program in 1974 regardless of their length of time in the U.S. because there is no Statewide General Assistance Program in Florida and the local program cannot meet the needs of the large number of refugees in the General Assistance category.

Based on the assumption that no large influx of additional refugees into the U.S. will occur, some further decrease in staff, through attrition, should be possible in 1973. Thus, it is assumed that a net reduction of 10 more positions can be achieved, resulting in a complement of 75 positions by the end of 1973 and in 1974.

The resumption of the airlift in December 1972 increased the workload substantially and less than half of the goal of 10 positions to be eliminated in 1973 had been accomplished by February 1973. Considerable savings have been possible in items relating to care of the refugees (food, lodging, and related services) and additional savings will occur in 1974.

The elimination of additional positions in 1974 has not been planned because of staff requirements for directing various program activities, developing policy guidance, and carrying out the day-to-day work of maintaining essential program operations described above. The table below presents the pertinent position and man-year data for this activity for the three fiscal years. Since some turnover in positions in 1974 is projected, there are five fewer man-years (average employment) than positions.

	1972	1973	1974	Change
Positions (June 30).....	85	75	75	--
Average Employment.....	136	79	70	-9

Of the 75 positions for 1973 and 1974, 57 would be in Miami and 18 in Washington; this latter number includes 8 in central service staff offices of the Social and Rehabilitation Service providing such services as accounting, public information, general services (including contracting work) and personnel administration related to the Cuban Refugee Program.

Assistance to Refugees in the United States

Program Purpose and Accomplishments

Activity: Welfare assistance and services(Migration and Refugee Assistance Act of 1962, Public Law 87-510)

1973		1974		
			Budget Estimate	
Pos.	Amount	Authorization	Pos.	Amount
---	$121,300,000	Indefinite	---	$70,300,000

State and local welfare agencies have been reimbursed 100 percent by the Federal Government for providing needy refugees financial assistance, essential medical care, and certain other related welfare services since inception of the Cuban Refugee Program in 1961. By the end of 1972, about 35,600 persons were receiving assistance in Florida, and about 55,000 persons in other States were receiving financial and/or medical assistance. Comparable estimates for June 30, 1973, of persons requiring assistance are 39,300 in Florida and 54,000 in other States.

A major change is expected to be made in this policy effective July 1, 1973. In general, the plan contemplates limiting reimbursements for assistance of this type under the Cuban Refugee Program to refugees who have been in the United States less than 5 years; the State's regular welfare program would be utilized for refugees in the U.S. over 5 years. It is anticipated that there would be some modification in this general policy to recognize unique situations such as in Florida where about one-half of the refugees in the U.S. reside. The estimates for fiscal year 1974 reflect the change in funding policy mentioned above, as well as the Federalization of the categorical public assistance programs for the Aged, Blind, and Disabled effective January 1, 1974, further reducing the number of persons aided under this program. It is estimated that 23,200 persons will be receiving assistance under this program in Florida and 22,500 for all other States combined on June 30, 1974; about 40 percent of each of these groups are expected to be eligible for only medical assistance under this program.

The new reimbursement policy on welfare is part of a total phaseout of the Cuban Refugee Program projected for completion by June 30, 1977; the welfare activity has comprised almost 85 percent of the total budget in recent years. Several factors led the Department to initiate this change in the welfare area commencing next July 1. It is anticipated the airlift from Cuba, which has been drastically restricted by the Cuban Government in the past year, will soon end. The 5-year residency policy is related to the minimum time for the refugee to have been in the U.S. in order to attain citizenship; it is believed this amount of time also is sufficient for the refugee to have overcome the most serious aspects of adjustment to this country; and refugees eligible for regular State public assistance programs are entitled to receive assistance from these programs regardless of citizenship status under a Supreme Court ruling. Moreover, many of those transferred to regular State welfare programs because of the 5 year policy, as well as many of the others, regardless of length of time in the U.S., will be eligible for the new Federalized program of Supplemental Security Income for the Aged, Blind, and Disabled (all Federally funded) to become effective January 1, 1974. And, finally, the 5-year policy was a commitment made to the Congress by the Department in response to a Congressional recommendation that "the Executive Branch exert every effort in bringing about the termination of this program as soon as a reasonably possible."

Assistance to Refugees in the United States

Program Purpose and Accomplishments

Activity: Resettlement (Migration and Refugee Assistance Act of 1962, Public Law 87-510)

1973		1974		
				Budget Estimate
Pos.	Amount	Authorization	Pos.	Amount
---	$1,300,000	Indefinite	---	$1,000,000

Through contracts with several voluntary non-profit agencies, refugees are provided a variety of services to assist them into the mainstream of U.S. living, including reception services for new arrivals, relocation to homes and jobs in areas other than Miami and post-resettlement services relating to emergencies, job placement, etc. In fiscal 1972, the voluntary agencies assisted 12,513 refugees to relocate out of the Miami area to other parts of the country.

During 1974, as in 1973, assistance will be provided new arrivals and relocations out of Miami will be undertaken when in the best interest of the refugee, but the primary emphasis by the voluntary agencies will be on providing day-to-day counseling services to the refugees and on helping them with post-resettlement problems and in emergency situations.

Assistance to Refugees in the United States

Program Purpose and Accomplishments

Activity: Education (Migration and Refugee Assistance Act of 1962, Public Law 87-510)

1973		1974		
			Budget Estimate	
Pos.	Amount	Authorization	Pos.	Amount
---	$16,000,000	Indefinite	---	$14,000,000

Selected training is provided to equip the refugees for employment. Through English and vocational training opportunities provided refugees in Dade County, Florida, there was a monthly average of about 3,000 refugees enrolled in English and 500 in vocational classes in 1972. For fiscal 1973, a drop-off of 10 percent is estimated and in 1974 a further drop of about 10 percent is projected.

Each year several training projects are undertaken to help refugees with professional backgrounds to receive sufficient training or reorientation to qualify them to follow their professions in the United States. This training relates to areas where there is a scarcity of qualified personnel such as Spanish teachers, physicians, and dentists. Between 300 and 400 refugees receive such specialized training each year through three or four universities throughout the country. Continuation of this type of training is projected for 1973 and 1974, but on a reduced scale in 1974 as the program begins a phaseout of this type of training.

An annual Federal payment is made to help meet part of the added cost related to refugee children in the Dade County, Florida, public school system. These payments have been according to a formula based on the number of children in the school system who arrived in the U.S. since late 1965 when the airlift started and who have not been in a U.S. school system for more than 5 years; there were approximately 23,500 such children in average daily membership (ADM) in fiscal 1972 and the comparable estimate for 1973 is about 22,000 children.

In 1974 this formula is expected to be discarded; the budget projects an overall decrease of 20 percent in assistance to Dade County Schools for 1974 compared with the 1973 amount estimated under the formula. This is being done in order to effect a more orderly phaseout of this cost than the formula would yield. The number of "formula" children is not decreasing as rapidly as expected and its continuation will not achieve a yearly phasedown that results in a progressive, orderly termination of all Federal assistance from the Cuban Refugee Program by the end of fiscal year 1977. It is contemplated a larger proportion of the funds each year will be earmarked for supplementary services directly related to the special needs of the Cuban children (Cuban teacher aides, special instructional materials, etc.) and a smaller portion for unearmarked general operating expenses of the school system.

Loans are made under this activity to needy college students: about 3,200 students received loans in 1972; for 1973 the estimate is about 3,000 students to receive loans and for 1974, 2,600. As part of the phaseout plan for student loans, schools have already been notified that for new borrowers loans will be limited beginning in the Fall of 1973 to only those students who are not eligible under the domestic loan programs because they do not have the immigration status of permanent resident.

Assistance to Refugees in the United States

Program Purpose and Accomplishments

Activity: Health Services (Migration and Refugee Assistance Act of 1962, Public Law 87-510)

1973		1974		
			Budget Estimate	
Pos.	Amount	Authorization	Pos.	Amount
- -	$4,000,000	Indefinite	- - -	$3,000,000

Through a clinic operated for the program by the Dade County Public Health organization, certain health services are provided to new arrivals and to needy refugees in Miami. These services include medical screening, examinations, X-rays, treatment, and provision of prescribed drugs. Arrangements are made through the clinic for out-patient services when necessary at local hospitals and for care of patients with tuberculosis and mental illness. Clinic services have been available to all those receiving welfare assistance in the Miami area through the Cuban Refugee Program since the early 1960's. New arrivals are given medical examinations upon arrival.

During fiscal 1972, the clinic provided over 34,000 services monthly (examinations, treatment, etc.), authorized about 38,000 out-patient care visits to local hospitals during the year and about 31,000 days of care in long-term tuberculosis and mental hospitals, and filled some 300,000 drug prescriptions.

The 1973 statistics are similar. For 1974, a very substantial change is expected in demands for clinic services as a result of a lawsuit making about one-half of patients formerly serviced by the clinic eligible for Medicaid services outside the clinic by private physicians, druggists, therapists, X-ray technicians, etc.; no reliable projection is possible of these same statistical data of the clinic for 1974. Over 15,000 needy refugees continue to be eligible for medical services only through the clinic. The extent to which those now eligible for services through Florida's medicaid program will in fact have to seek clinic services is unknown. Over $2,000,000 of the 1973 cost for this budget activity is salary related for clinic associated personnel. The 1974 estimate assumes a 25 percent reduction from the 1973 estimate will be achieved as the clinic operations adjust to the changed medical situation for Miami's needy Cuban refugee population.

Assistance to Refugees in the United States

Program Purpose and Accomplishments

Activity: Movement of refugees from Cuba (Migration and Refugee Assistance Act of 1962, Public Law 87-510)

1973		1974		
			Budget Estimate	
Pos.	Amount	Authorization	Pos.	Amount
---	$340,000	Indefinite	---	$50,000

This activity has provided for the cost of airlifting the refugees from Cuba. The annual number airlifted approximated 42,000 until fiscal year 1972 when interruptions in the airlift from time to time occurred; 17,624 refugees arrived via the airlift during fiscal year 1972.

Until December 11, 1972, there had been no flights during fiscal year 1973; the airlift resumed on December 11 and it is expected that 40 flights will occur, before another interruption, bringing 3,400 refugees into Miami. This should be accomplished by February 9, 1973. Based on what the Cuban Government has advised the State Department, some additional persons beyond the 3,400 are expected to be ready for departure on the airlift at a later date. It appears that there now remains only a small residual group who will be allowed to depart Cuba on future airlift flights. The budget assumes there will be a total of 75 flights in fiscal year 1973 and none in 1974. The $50,000 estimated for this activity for 1974 is based on an estimate provided by the State Department for close-out costs of Swiss Embassy staff in Havana who have been working on airlift matters.

Assistance to Refugees in the United States

Program Purpose and Accomplishments

Activity: Program Administration (Migration and Refugee Assistance Act of 1962, Public Law 87-510)

1973		1974		
			Budget Estimate	
Pos.	Amount	Authorization	Pos.	Amount
75	$2,060,000	Indefinite	75	$1,650,000

This activity provides for Federal direction and day-to-day operation of the program, including a variety of services for incoming refugees such as reception, feeding, lodging, etc.; helping other Cuban refugees in the Miami area as necessary; and continuing work on training and employment and on resettlement opportunities out of Miami for the refugees.

Average program staff was decreased from 170 in 1971 to 136 in 1972, to 79 in 1973, and a further decrease to 70 is projected for 1974. The total number of permanent positions is expected to be down from 158 in June 1971 to 75 by the end of fiscal 1973, with some further decrease in man-years projected for 1974. The resumption of the airlift in December 1972 increased the work-load substantially and less than half of the goal of 10 positions to be eliminated in 1973 had been accomplished by February 1973. Considerable savings have been possible in items relating to care of the refugees (food, lodging, and related services) and additional savings will occur in 1974.

The elimination of additional positions in 1974 has not been planned because of staff requirements for directing various program activities, developing policy guidance, and carrying out the day-to-day work of maintaining essential program operations. Considerable work must be undertaken on implementing the welfare phaseout and on development of phaseout policies in other elements of the program, for example assistance to Dade County public schools and the future of the Miami Health Clinic. Minimum staff capability must be available for such tasks as providing registration services, providing statistical and other program data, utilizing records of the Cuban Refugee Center to help States establish entry dates and other information pertaining to the welfare phaseout. Increasing attention is required for responding to inquiries from the general public, the Congress, and the refugees themselves; these inquiries can be expected to accelerate as the phaseout of the program gains momentum.

Mr. PASSMAN. Before getting into the questions, I would like to insert at this point in the record a letter that I received from our colleague, the Hon. Dominick V. Daniels, dated April 13, 1970, and also a letter received from Mr. Daniels dated March 6, 1973. Both of these letters are self-explanatory. I would like to have them placed in the record at this point so that the members may have the benefit of some of the problems confronting some of the people in Mr. Daniels' district.

[The information follows:]

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 6, 1973.

Hon. OTTO E. PASSMAN,
Chairman, Subcommittee on Foreign Operations, Committee on Appropriations, U.S. Capitol, Washington, D.C.

DEAR MR. CHAIRMAN: As a result of the migration of Cuban refugees to west New York, Weehawken and Union City, N.J., the local school systems continue to feel the intense pressure of Spanish-speaking children of Cuban refugees in local public schools. You may recall that we discussed and I wrote to you concerning this problem 3 years ago. A copy of my letter to you of April 13, 1970, is attached.

In past years the west New York and Union City school systems were reimbursed by the Office of Education pursuant to section B of Public Law 89–874, the so-called impact aid provision, although they received funds in fiscal year 1971 from the Cuban refugee program over which your subcommittee has jurisdiction. Because of the impoundment of section B funds in fiscal year 1973 and the failure of the administration to budget such funds for fiscal year 1974, I am asking that the west New York and Union City, as well as the Weehawken school systems be provided with funds authorized by the Migration and Refugee Assistance Act of 1965, as part of the Cuban refugee program of the HEW Social and Rehabilitation Service.

As you know, Dade County, Fla., already receives funds from the Cuban refugee program. The educational problems faced by West New York, Weehawken, and Union City are no different than those faced by Dade County. Indeed, I have been advised that if the measure of impact is taken to be the percentage of Cuban children in the schools, the two New Jersey communities suffer from a far greater impact than those of Dade County.

I would appreciate the opportunity to meet with you to discuss this matter more fully.

Warmest personal regards.

Sincerely,

DOMINICK V. DANIELS,
MEMBER OF CONGRESS.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 13, 1970.

Hon. OTTO E. PASSMAN,
Chairman Subcommittee on Foreign Operations,
House Committee on Appropriations,
U.S. Capitol, Washington, D.C.

DEAR MR. CHAIRMAN: This is in regard to our conversation of about 2 weeks ago during which you requested additional background information concerning the urgent situation which exists in two communities in my district in New Jersey; Union City and West New York. Your counsel indicated to my legislative assistant that this would be the appropriate time to furnish the information you requested in order that you might consider the matter in connection with the 1971 appropriation request for the Cuban refugee program.

In the school systems of the two communities, more than 50 percent of the pupils are of Spanish origin and most of them are Cuban refugees. Some of the children are totally illiterate.

I understand, for example, that in the September 1969 enrollment alone, several hundred Cuban refugees were registered for school. One child, 11 years

of age, was illiterate not only in the English language, but the Spanish language as well.

Some classes, which are large—composed of about 35–40 students— have children who are mostly of Cuban origin. Moreover, in the past few months the enrollment of children of Cuban refugees has steadily increased rather than leveled off, and projections indicate a continued increase.

The mayors of these communities, the school boards, and the school superintendents are vitally interested in providing a decent education to all of the children of the community. They are having great difficulty. I was advised recently that plans are being drawn for possible school closings.

In 1962, when the United States first experienced the influx of Cuban refugees, most of these people settled in Dade County, Fla. At that time we granted relief to Dade County because of the implication of the Federal Government in the flight of large numbers of Cubans from the tyranny and persecution of Castro's Cuba.

Since 1962, the influx of Cuban refugees has not diminished. What has changed however, is the location of their initial settlement as well as their resettlement from Dade County.

While many cities across the country have received large numbers of Cuban settlers, only a few communities, such as Union City and West New York, have experienced as great a concentrated impact on their school district.

In September 1969, the assistant superintendent of schools in Union City furnished me with statistics which indicated the impact these refugees have had on the school system. It is my understanding that, instead of leveling off, the number of refugees is still increasing. To quote the assistant superintendent:

"In 1965–66, the total population in our public schools was 11,752. In 1969–70, it is already 14,757. And we estimate that there will be almost 15,000 children in the schools of Union City and West New York by the end of the school year.[1] This represents an increase of more than 3,000 for both communities in 5 years.

"During this same period, 6,363 Cuban refugee children came to our schools. In the first year they only represented 17.3 percent of the total school population. Now 45.4 percent of the children in our communities are from Cuba.

"For every American-born child in Union City and West New York public schools, there is a Cuban refugee child sitting next to him in the classrooms.

"Overcrowding is the order of the day throughout the school buildings in both of our communities.

"Last year in Union City, 92 elementary classrooms carried enrollments of 30 and over, in many instances up to 39 in a single room.

"Among the children who have come to us from Cuba, our survey shows that 6,712 are enrolled in the schools of Union City and West New York. Of this number, just 776 or 12 percent have parents who are U.S. citizens. The other 5,936 children, or 88 percent, 9 out of 10 of the Cuban children, have parents who are refugee noncitizens."

Welfare statistics provide some additional insight into the problem. We have found that most of the refugees go on welfare for anywhere from 6 months or longer until they can become established. The Cubans are hard working and industrious and although they are able to get off the welfare rolls with greater alacrity than other poor, their contribution to the community, especially the school system is nowhere near sufficient to offset the expenditures made by the community for their education, health, and welfare.

The two communities are more than fulfilling their responsibilty of caring for these people under the Migration and Refugee Assistance Act. The Federal Government must do the same.

In view of the above information, Mr. Chairman, I most respectfully urge that you give this appropriation request your careful and sympathetic consideration.

Warmest personal regards.

Sincerely,

DOMINICK V. DANIELS.

---

[1] This figure was reached in February 1969.

1973 ESTIMATE

Mr. PASSMAN. With respect to your program, Mr. Director, last year in a continuing resolution I think we provided $145 million.

Mr. PALMATIER. That is correct, sir.

Mr. PASSMAN. Could you give us an estimate at this time as to what portion will be obligated?

Mr. PALMATIER. Most of the $145 million, very close to all.

Mr. PASSMAN. Could you be a little more accurate? Are you going to obligate it all? Do you have any idea of what you will obligate?

Mr. PALMATIER. We feel on the basis of our expenditures so far and what we anticipate during the remainder of the year that we will obligate just about the entire amount.

Mr. PASSMAN. But it is undetermined at this time whether or not you will have any unobligated funds?

Mr. PALMATIER. Yes, sir.

Mr. PASSMAN. To be perfectly fair about the way we examine, we get all that the traffic will bear in some of these programs where we figure they should, in due time, be abolished. You are operating a little differently. Your expenses are pretty much fixed. We have a very positive agreement, and the cost is determined by the expenses that you had to incur based upon legislation.

Mr. PALMATIER. That's correct, and it's pretty well governed. Under the program as it operates now, as you well know, by the States spending the money first in behalf of Cuban refugees and our reimbursing the States for what they spent.

ESTIMATE FOR 1974

Mr. PASSMAN. This year your estimate is $90 million?

Mr. PALMATIER. Yes, sir.

AIRLIFT CESSATION

Mr. PASSMAN. You indicate the flights of the airlift are supposed to stop by the end of fiscal year 1973, with the complete termination of the entire program by June 30, 1977; is that correct?

Mr. PALMATIER. Yes, sir. As you know, the Cuban Government did begin to interrupt the airlift as early as August 1971. We feel, on the basis of information from the Department of State, Mr. Passman, which we understand in this instance has been based on information from the Government of Cuba, that we are in the last 10 flights now and the last flight to take place under the airlift will be this Friday, April 6.

Mr. PASSMAN. Then why are additional funds going to be requested when the airlift is supposed to stop at the end of fiscal 1973 with the complete termination of the entire program by June 30, 1977? You mean you are incurring expenses that will run for 4 years after the termination of the flights?

Mr. PALMATIER. Yes, sir, on a phased-down basis that we are starting, July 1, 1973, in recognition of congressional desires and our feelings too, that the program should be terminated. But we feel in order not to place too much of a burden on the States, who are going to have

to pick up a great deal of the costs, we should do this on a gradual basis, and 4 more years, frankly, is the number of years that we have chosen to do this in.

CUBAN ACHIEVEMENTS

Mr. PASSMAN. I wouldn't want to shock some of the witnesses and members of this committee by being complimentary of any aid program, but I don't necessarily think of this as an aid program. As I read the record, these Cuban refugees in many instances have made very good citizens. I know in the city of New Orleans they have a colony there of the Cuban refugees who refuse to accept any type of aid. They have built their own community, their own life. They are hard workers actually paying their own way and paying taxes. Are you familiar with that?

Mr. PALMATIER. Yes; I am.

Mr. PASSMAN. And some of our own citizens born and reared in Louisiana, who are perhaps a little bit too lazy to work, got angry at the Cubans, you understand, because they were making them look bad. You are also familiar with that, too, aren't you?

Mr. PALMATIER. I am.

Mr. PASSMAN. I want to be complimentary where I can. We are actually proud of some of them and what they are doing is a good example of taking people out of a country like Cuba and giving them an opportunity on their own. They are very appreciative of what they found here, they have taken full advantage of it, they are making good citizens, and there is very, very little crime among them.

Mr. PALMATIER. I think what you are saying, Mr. Passman, as has been my experience, is that the Cubans really believe in the American dream and they think this is a country where one can do what he wants to do and be what he wants to be, and they go out and do it.

Mr. PASSMAN. If they hadn't demonstrated that, I could have been just as ugly the other way. I want to commend them for really appreciating what we have offered them and in a great many instances taking full advantage of it.

FUNDS ADEQUACY AND AIRLIFT CONTINUATION

If the airlift continues past July 1, 1973, will you have to request additional funds?

Mr. PALMATIER. We might have to, Mr. Passman.

Mr. PASSMAN. But under the legislation you could operate out of whatever we provide, then come in for a supplemental later?

Mr. PALMATIER. That's right; but if I could just make one point clear, Mr. Passman. We feel that even should the airlift continue, and I think there is very, very little possibility of that happening, that we should still go into the phaseout; we may have to modify it a bit but we still think there are certain parts of this program that should be phased out, in recognition of the very fact you mentioned that so many of the Cubans at this point in time are taxpaying, contributing members of their community.

Mr. PASSMAN. I am trying to move along rapidly. The cost is fixed and we can't do anything about it. If we underfund, we have to give you a supplemental. If we overfund, it is just not spent.

NUMBER OF REFUGEES IN UNITED STATES

Could you tell the committee the number of refugees who have been brought into the country since the inception of the program?
tered a total of 450,485 Cuban refugees with the Cuban refugee program.

NUMBER OF ADULTS AND CHILDREN

Mr. PASSMAN. Could you break that down, the number of adults and the number of children?

Mr. PALMATIER. I can break it down, sir, on a percentage basis by age groups, not by men, women, and children. I could develop that for the record.

Mr. PASSMAN. I am just talking about adults and children. When does a person cease to be a child, at what age?

Mr. PALMATIER. We can use 18.

Mr. PASSMAN. All right, then how many adults would you say?

Mr. PALMATIER. Thirty-four percent have been between the ages of 0 and 18.

Mr. PASSMAN. The 66 percent is what?

Mr. PALMATIER. That would be the adults, age 19 and over.

NUMBER ON WELFARE AND NUMBER WORKING

Mr. PASSMAN. The question would be what percentage of the adults are employed?

Mr. PALMATIER. Of the some 450,000 we have registered, we currently have on welfare about 91,000, which would mean that 2 out of 10 are not self-supporting.

Mr. PASSMAN. Eighty percent are self-supporting?

Mr. PALMATIER. Yes, sir.

WELFARE GROUP MOSTLY UNEMPLOYABLE

Mr. PASSMAN. Of the 20 percent, are they senior citizens and sick people?

Mr. PALMATIER. About 50 percent of that number would be persons 65 years of age and above who are on welfare. Of the other 50 percent, about 25 percent would be in AFDC-type situations, women alone with children, and about 25 percent would be in what is known as the general assistance category of welfare.

Mr. PASSMAN. Not 25 percent of the grand total but 25 percent of the 20 percent which in reality is 5 percent?

Mr. PALMATIER. Yes. Some of them one makes employable all the time by doing remedial operations, giving them some vocational and language training, and the others, frankly, have physical conditions and the like which do make it difficult for them to work, or they would be working.

Mr. PASSMAN. Plainly stated, those are unemployed or unemployable on account of age or illness?

Mr. PALMATIER. For physical reasons.

Mr. PASSMAN. Those who are able to work, you would say possibly 95 percent or higher, actually go to work?

Mr. PALMATIER. Yes, sir.

Mr. PASSMAN. And they are contributing to the economy rather than extracting from the economy?

Mr. PALMATIER. They certainly are.

CRIME AMONG THE CUBANS

Mr. PASSMAN. With respect to crime among the Cuban refugees, what has your experience been?

Mr. PALMATIER. Of course the largest community of Cubans is in Miami, Fla., and while there are about 300,000 there, the local police officials and others still state that while Cubans are sometimes involved in crime, they still don't commit enough of the crime in the area to occur as a statistic.

Mr. PASSMAN. To disturb the statistics?

Mr. PALMATIER. They don't even appear as a statistic.

Mr. PASSMAN. Let's not understate or overstate it. Would you say as a whole there is less crime percentagewise among the Cuban refugees than a similar class of people in the community?

Mr. PALMATIER. Yes, sir; the records indicate that.

Mr. PASSMAN. Clearly?

Mr. PALMATIER. Yes, sir; they certainly do.

SHIFT OF "PHASED OUT" REFUGEES TO OTHER PROGRAMS

Mr. PASSMAN. Is it not true that while this particular program may terminate, the obligation to aid these Cuban refugees will remain but be handled by other agencies?

Mr. PALMATIER. That is correct, sir. Those needy Cuban refugees who must seek help with their daily living requirements, including medical care, are eligible for State programs on the same basis as U.S. citizens and other lawfully admitted aliens. When the new Federal Supplemental Security Income Program for the Aged, Blind, and Disabled starts in January 1974, Cuban refugees will be eligible for it.

ADDITIONAL FUNDS MAY BE NEEDED IF AIRLIFT RESUMED

Mr. PASSMAN. What do you estimate your appropriation request would be if the airlift were to continue after fiscal year 1973?

Mr. PALMATIER. It would depend, of course, Mr. Chairman, on a number of things, for example, the number transported, the age, medical condition, or other handicaps found among the new arrivals. Certainly we would have to reexamine the estimate in light of such a development, based on whatever information the Department of State could provide on some of the above-mentioned factors. The additional cost could range from several thousand to several million dollars if the airlift were to resume in fiscal 1974.

APPROPRIATION REQUESTS TO DECREASE ANNUALLY

Mr. PASSMAN. I assume you anticipate that the appropriation requests will decrease each year until the program is terminated on June 30, 1977, is that correct?

Mr. PALMATIER. Yes, sir; the end of the airlift, coupled with the phaseout plans we have outlined, means our budget requirements should decrease substantially each year until the final termination date of June 1977 projected for the program.

PERCENT OF APPROPRIATION FOR WELFARE AND MEDICAL ASSISTANCE

Mr. PASSMAN. Most of the request will be used to reimburse States for welfare and medical assistance to needy refugees. Please tell the Committee what percent of the fiscal year 1974 request is needed for this purpose?

Mr. PALMATIER. It would be about 81 percent.

REACTION BY STATES TO PHASEOUT PLANS

Mr. PASSMAN. In the justifications you state that "Beginning next July (July 1, 1973) reimbursement from the Cuban program will no longer be available for those refugees who have been in the United States 5 years or longer; their needs will be met from the regular Federal/State/local public assistance programs." Could you tell the committee what effect this has on the States and what has been their reaction to this policy?

Mr. PALMATIER. The States will have an opportunity to formally indicate their reaction in the near future when the regulation is published in the Federal Register. We previously advised States of the anticipated phaseout policy and several States in which there are substantial numbers of Cuban refugees indicated their opposition to the phaseout. Against the background of increasing costs of financial and medical assistance in recent years, they indicated concern about a shift from a fully federally funded program to Federal-State shared cost programs or the State/locally financed general assistance programs. Some State responses indicated, however, their understanding of the reasoning behind a gradual phaseout after 5 years' residence and thought that the policy was timely; some indicated that since the Federal Government was responsible for admitting the refugees, it should continue to be fully financially responsible for their welfare needs as long as they remain aliens. Much of the State share of the cost for those transferred to other programs will disappear in January 1974 when full Federal funding for basic maintenance assistance to the aged, blind, and disabled becomes effective.

Excluding the Cuban refugee program expenditures, our estimate is that the total amount to be assumed by the Federal Government in fiscal 1974 would be about $40 million, and the State and local share would be approximately $30 million, of which about $6 million is estimated for Florida and $24 million for other States combined.

Mr. PASSMAN. When the program terminates on June 30, 1977, and you still have some Cuban refugees on the rolls, who have not been in this country for 5 years, who will be responsible for paying their public assistance?

Mr. PALMATIER. Most of those receiving welfare from the Cuban Refugee program on June 1977 who would not yet have completed 5 years residence are expected to be those who arrived during fiscal year 1973; this number should be very small since only 50 airlifts are expected to occur during fiscal year 1973. Many of these recently airlifted persons are known to be 65 years old or older now and will be

eligible for the new SSI program next January; States would be responsible for the small residual caseload that might remain regardless of their length of time in the United States—just as for other aliens admitted through immigration procedures.

NUMBER OF CUBAN REFUGEES IN THE UNITED STATES, AND REGISTERED WITH THE PROGRAM AND PERCENT ON WELFARE

Mr. PASSMAN. How many Cuban refugees do we presently have in the United States?

Mr. PALMATIER. It is estimated that approximately 600,000 Cuban refugees have come to the United States since Castro's takeover of Cuba in 1959.

Mr. PASSMAN. How many of these refugees have you registered under your program?

Mr. PALMATIER. As of March 31, 1973, a total of 451,069 refugees had registered under this program since January 1961.

Mr. PASSMAN. How many refugees do you estimate will enter the United States in fiscal year 1973?

Mr. PALMATIER. Our budget assumes a total of 8,000 refugees will register with the program during fiscal year 1973. As of March 31, 1973, a total of 5,919 had registered during this fiscal year. The registration information is the only firm data we have on new arrivals; there are refugees who never reach Miami and therefore do not register with the program.

Mr. PASSMAN. What percentage of the total number of refugees registered are now on the assistance rolls?

Mr. PALMATIER. It would be 20 percent, sir.

NUMBER OF CUBANS WHO ARE SELF-SUPPORTING

Mr. PASSMAN. Please provide an updated comparison like that which appeared on page 470 of last year's hearings showing the number of refugees who are self-supporting.

Mr. PALMATIER. Yes, sir.

[The information follows:]

CUBAN REFUGEE PROGRAM

[Number of persons registered with the program, number welfare assistance and services, and the number and percentage self-supporting in relation to the number of registrations]

	Number of registrations	Number on welfare	Total number self-supporting	Percent of registrations self-supporting
June of:				
1961	29,628	13,756	15,872	53.6
1962	122,212	55,084	67,128	54.9
1963	165,596	53,170	112,353	67.9
1964	172,572	32,110	140,462	81.4
1965	177,599	21,588	156,011	87.8
1966	207,147	19,882	187,265	90.4
1967	250,519	29,346	221,173	88.3
1968	290,353	39,370	250,983	86.4
1969	332,692	52,740	279,952	84.1
1970	379,229	66,178	313,051	82.5
1971	426,167	77,700	348,467	81.8
1972	445,150	90,747	354,403	79.6
1973 estimate	453,150	93,300	359,850	79.4
1974 estimate	[1] 457,150			

[1] Due to the phaseout beginning July 1, 1973, comparable information beyond fiscal year 1973 can no longer be constructed since neither the States nor the Social Security Administration will report welfare caseloads separately for refugees.

CUBANS HELP EACH OTHER

Mr. PASSMAN. Do other Cuban refugees in the United States try to help their fellow Cubans when jobs or assistance are needed upon arrival?

Mr. PALMATIER. Yes, the Cuban families are closely knit and very loyal. The whole family feels a high sense of responsibility for every member. This is ordinarily expected within the immediate family but with the Cuban refugees it applies to cousins, uncles, aunts, and in-laws. They assist in providing housing; in sharing clothing and furniture; in sharing available transportation; in finding employment for the relative, and in other ways.

CUBANS ARE GOOD CITIZENS

Mr. PASSMAN. I have read many favorable articles about how Cuban refugees have made favorable contributions to the U.S. economy. Is it not true these people are hard working and an asset to the United States?

Mr. PALMATIER. You are certainly correct. The Cuban refugees have worked hard. As I indicated earlier, some 80 percent of them are fully self-supporting. Many of them immediately after arrival have taken jobs which are more menial than would be usual in terms of their training and experience in Cuba. This applies in particular to those who were doctors, lawyers, dentists, or other professionals in Cuba. They start from scratch with no resources other than their determination to make a go of it. They have gone to night school to improve their English or to improve their skills. Those in the professions, often with assistance from the program, have undergone the retraining necessary to pass State board examinations and become accredited or licensed to practice. Mr. Chairman, it has become outmoded to talk about the old American virtues of the work ethic and Horatio Alger and lifting one's self by his own bootstraps, but the Cuban refugees have given the United States a present-day demonstration that these virtues are still alive. The Cubans are an asset to the United States in many ways.

The economic stimulus of the enterprises initiated by Cubans in Dade County has been reported to this committee on prior occasions: the expansion of the garment industry in Miami; the shift of the locus of international trade with Latin America to Miami; the expanded role of Miami in international banking transactions with Latin America; the employment and taxes generated as a result of enterprises initiated by the Cubans. There are many reports out of Florida that attest to the hard work and initiative and stimulus of the Cuban refugees in that State. The same reputation for hard work and initiative exists in Los Angeles, New Orleans, Chicago, Portland, Takoma Park, Newark, New York City—wherever the Cuban refugees have resettled.

Mr. PASSMAN. Would you say that the Cuban refugees make good citizens and are generally law-abiding people?

Mr. PALMATIER. I certainly would. As I mentioned earlier, I believe the refugees have been law-abiding with few exceptions. They also participate in positive ways in the political and social life of their communities.

CUBANS COME TO THE UNITED STATES BY MEANS OTHER THAN AIRLIFT

Mr. PASSMAN. When the airlift stops, do you think some Cuban refugees will continue to enter the United States? If so, how will these refugees reach the United States?

Mr. PALMATIER. Throughout the course of the Cuban refugee situation, there have been refugees who entered the United States by means other than the airlift. Some have come by small boat; others, through third countries. There has, for example, been a continuing movement of Cuban refugees from Spain to the United States and from Mexico to this country.

CUBANS IN OTHER COUNTRIES

Mr. PASSMAN. Do other countries provide assistance to these Cuban refugees and allow them entry into their nation?

Mr. PALMATIER. Cuban refugees have gone to a number of other countries where they have been permitted entry and where many have settled—principally Latin American countries and Spain. Although the numbers who have gone to other countries are known to be in the thousands, no reliable figures exist as to the total. Nor do we have information as to what assistance the various countries have provided.

While many Cubans have gone to other countries, the refugee movement has been primarily to the United States, reflecting the close ties Cubans have felt historically with our Nation and also, during the airlift years, the fact that the newly arriving refugees have had close relatives here.

CUBANS RETURNING TO CUBA

Mr. PASSMAN. Have any Cuban refugees returned to Cuba after living in the United States?

Mr. PALMATIER. We understand that approximately 600 persons have requested permission to return to Cuba, and that they have been mostly aged persons with family members still in Cuba. Some additional Cubans are believed to have returned to Cuba through third countries, but the number is thought to be very small.

TOTAL PROGRAM COSTS

Mr. PASSMAN. What has been the total cost of this program since it started?

Mr. PALMATIER. With our request of $90 million for 1974, the total cost since 1961 is $955.7 million.

IMPACT OF NEW SSI PROGRAM

Mr. PASSMAN. On page 5 of the justification you indicate that the establishment of a new Federal welfare program for the aged and disabled which takes effect January 1, 1974, has resulted in decreased costs to the program. Would you please explain this program and indicate how it affects the costs?

Mr. PALMATIER. Yes, sir. Public Law 92-603, the Social Security Amendments of 1972—the bill we referred to as H.R. 1 last year—was

enacted October 30, 1972. It established a new Federal program of "supplemental security income for the aged, blind, and disabled" effective January 1, 1974. This program replaces the federally matched Federal/State programs of old-age assistance, aid to the blind, and aid to the permanently and totally disabled—programs which have existed for many years. Costs, including administration, will be entirely Federal and the Social Security Administration of the Department of Health, Education, and Welfare will administer the new program. It will pay a monthly maximum of $130 to an eligible individual and $195 to an eligible couple without other resources for basic maintenance needs. Some States may choose to supplement these amounts with their own funds. Federal matching for the discontinued programs has ranged from 50 to 83 percent among the States, depending on the State's per capita income. It is estimated at least $20 million in Federal funds in fiscal 1974 under the SSI program may be expended on behalf of the needy aged and disabled Cuban refugees found eligible for the new program. The new Federal program is applicable to all the States and the District of Columbia.

INCREASES IN AVERAGE MONTHLY COSTS

Mr. PASSMAN. On page 20 of the justifications, I note in a number of cases the average monthly costs per person has been on the rise for a number of activities. Is this the result of inflation?

Mr. PALMATIER. That is undoubtedly one of the factors, sir, particularly in the medical area. Also, some States have improved their programs in terms of coverage, including unmet needs. Another factor in our 1974 estimate is that those refugees remaining with the program—that is, those in the United States less than 5 years—are likely to have fewer resources than the older residents, which is a consideration that States must recognize in determining payment levels.

VOLUNTARY RESETTLEMENT AGENCIES

Mr. PASSMAN. Under the resettlement activity on page 21, would you please list the voluntary nonprofit agencies you have contracts with at this time?

Mr. PALMATIER. The four voluntary agencies are the United States Catholic Conference, Church World Service (Protestant), United HIAS Service (Jewish), and the International Rescue Committee (nonsectarian).

IMPACT AID FOR SEVERAL NEW JERSEY SCHOOL SYSTEMS

Mr. PASSMAN. I have a letter from one of my colleagues which expresses concern over the recent impoundment of impact aid funds. Apparently he has several school systems that have felt a large impact from the influx of Cuban refugees and now the administration is cutting back on the impact aid funds where these school systems should normally receive funds. The school systems involved are West New York, Union City, and Weehawken, N.J. If I am not mistaken two of these areas were under the Cuban refugee program at one time before they were included in the impact aid program. Since the impact aid funds have been cut back a suggestion was made to include

funds in this program to take care of the problem. Do you know offhand what sort of impact the Cuban refugees have had on these three communities?

Mr. PALMATIER. The Office of Education has provided information indicating that under the eligibility requirements of Public Law 874, as amended, an estimated 36 percent of the pupils in average daily attendance (ADA) in the West New York schools are Cubans, and that the comparable figures are 35 percent for the Union City schools and 17 percent for Weehawken.

Mr. PASSMAN. What is your thinking on this problem?

Mr. PALMATIER. The Union City and West New York schools were assisted only during 1 year through the Cuban refugee program; that was in fiscal year 1971. Other assistance to these schools in relation to refugee pupils was made under the Cuban refugee provisions included in Public Law 91-230 which was enacted April 13, 1970. The Weehawken school system had not reached the 20-percent refugee ADA required in order to be assisted under those provisions.

No funds are included in the refugee program budget request for fiscal 1974 for assistance to the New Jersey schools, and the Department's present thinking is that no additional responsibilities should be undertaken by the Cuban refugee program since we are entering a phaseout period.

Mr. PASSMAN. Are any funds at all budgeted in fiscal year 1974 for impact aid?

Mr. PALMATIER. The Office of Education has advised us that there is no direct funds request for school impact aid for fiscal year 1974 in their budget but that the special education revenue sharing proposal would include funds related to children who reside on Federal property.

Mr. PASSMAN. What will these communities do if these impact aid funds are cut off?

Mr. PALMATIER. I believe, Mr. Chairman, that these communities will have to seek additional State or local funds to meet educational needs if their presently anticipated State-local funding plus Federal revenue sharing is not sufficient.

REPAYMENTS OF COLLEGE LOANS AND AMOUNTS OUTSTANDING

Mr. PASSMAN. Are the college loans that were made to the Cuban refugees being paid back in a timely manner?

Mr. PALMATIER. Yes, sir; as I indicated earlier, we consider the delinquency rate low.

Mr. PASSMAN. How many loans are presently outstanding?

Mr. PALMATIER. The Office of Education, that administers this part of our program, reports that loans outstanding as of December 31, 1972, totaled about $28.3 million, that $2.9 million had been repaid, and that $0.4 million was delinquent.

STAFF REDUCTIONS

Mr. PASSMAN. Why have you not been able to reduce your staff in fiscal year 1974 when the program has been cut back rather substantially?

Mr. PALMATIER. Mr. Chairman, the budget did project 9 fewer man-years of employment in 1974 than the 1973 estimate. However, since preparation of the budget and with the announcement that the airlift appears to be definitely ended, we are now working to effect a cut that results in 15 fewer positions than estimated as of June 30, 1973, and this cut would, of course, carry over to 1974. If we achieve this, our staffing level will be down to 60 employees instead of the 75 shown in the budget for this year. This means in the 2-year period between July 1971 and July 1973, total Cuban refugee program staff will have been reduced by 108. Throughout 1974 we will continue to examine our workload to determine, and to effect, any additional cuts in staff that seem indicated.

Mr. PASSMAN. Mr. Shriver?

Mr. SHRIVER. Thank you, Mr. Chairman.

RELATIVELY LOW NUMBER ON WELFARE IS COMMENDABLE

Your figures show that of the nearly 450,000 Cuban refugees who have registered since the beginning of the program, more than 80 percent are fully self-supporting, taxpaying, contributing members of their adopted communities. I think this reflects considerable credit on the program, the Social and Rehabilitation Service, upon you and the States and communities which are involved, and the refugees themselves.

PHASEOUT PLANS

Under the proposed phaseout, when does your office intend to cease to exist?

Mr. PALMATIER. The end of 1977.

Mr. SHRIVER. That would be the end of the fiscal year 1977?

Mr. PALMATIER. Yes.

Mr. SHRIVER. The one possible exception to this termination would be in Florida, where the general assistance type cases might have to be continued. Is that correct?

Mr. PALMATIER. No, sir, that is not quite correct. We plan on totally phasing out the program in 1977 but we are starting the phaseout the beginning of fiscal 1974 by not providing any more assistance to the States for any Cuban refugee who has been in the United States 5 years or more. We are making an exception on the 5-year residency policy at the beginning date in Florida, for the following reason:

We have 12,000 or 13,000 Cuban refugees in Miami under the so-called general assistance caseload. That is a tremendous number of one particular category to be in one community. The reason for the entire phaseout is we are trying to find some orderly way to integrate them into regular ongoing programs without the impact being too great on the local communities and States involved because they are going to have to put some money into this thing.

Well, you have this situation in Miami today where you have this relatively large general assistance caseload. We feel it would be just too much of a sharp impact to implement the total 5-year policy there on July 1 of this year, so we are making the exception there. We have committed ourselves to working as closely as we can with the

Dade County authorities, too, during the 5-year period, to somehow get more training, get more employed, do anything we possibly can, so when we finally phase out in 1977 there will really be, we hope, very, very few who are on general assistance in Dade County.

The other side of the coin is that a lot of the refugees on the general assistance caseload in Miami are between 60 and 65 years of age, and a lot of them really can't work. By 1977 they will have reached the age where they can be integrated in the program for the aged.

DADE COUNTY SCHOOLS—REFUGEE IMPACT FUND

Mr. SHRIVER. On page 6 of your statement you talk about the phase down as it relates to the Dade County public school system which has been receiving impact assistance from this program. You are not talking about the general impact school aid?

Mr. PALMATIER. No, sir, we are not.

Mr. SHRIVER. You are talking about assistance directly from your program and this appropriation?

Mr. PALMATIER. That's correct.

Mr. SHRIVER. Because the impacted school aid is being proposed for phaseout this year all over the country as far as the B students are concerned, as I understand it.

WELFARE COSTS OTHER THAN IN CUBAN REFUGEE BUDGET

While this program is being phased out, you say $70 million in medical costs and welfare will be funded by other programs, $40 million from Federal programs, $30 million from State and local resources. Federal costs will go up in subsequent years as the supplementary security income provisions of H.R. 1 go into effect?

Mr. PALMATIER. That is correct.

Mr. SHRIVER. Would you detail then for the record the sources of these funds by program?

[The information follows:]

The $70 million mentioned as welfare costs, including medical care, that is expected to be required for needy Cuban refugees in fiscal year 1974 from programs other than the Cuban refugee program includes the following:

1. Federal funds—$40 million.—$20 million is estimated as the Federal share of the regular public assistance programs administered by the States under titles I, IV, X, XIV, XVI, and XIX, of the Social Security Act. Twenty million dollars was estimated for the new Federal program of supplemental security income for the aged, blind, and disabled (SSI) to become effective January 1, 1974, under a revised title XVI of the Social Security Act. The Federal/State programs of old-age assistance, aid to the blind, and aid to the permanently and totally disabled, formerly operated under titles I, X, and XIV (or XVI) of the act, are, in effect, repealed in the 50 States and the District of Columbia with commencement of the SSI program. The Federal/State matching programs of aid to families with dependent children and medicaid (titles IV and XIX of the Social Security Act, respectively) will continue.

2. State/local funds—$30 million.—This estimate includes the non-Federal share of the categorical public assistance programs operating under the several titles of the Social Security Act mentioned above and funds for those refugees in the so-called "general assistance" programs who are needy but do not meet the definitions of the federally aided programs; general assistance programs are funded entirely with State/local resources.

COMPARISON OF 1973 FUNDS REQUEST AND AMOUNT AVAILABLE

Mr. SHRIVER. You requested for fiscal 1973 $161 million.

Mr. PALMATIER. That is correct.

Mr. SHRIVER. And under the continuing resolution you received $145 million?

Mr. PALMATIER. Right.

Mr. SHRIVER. How did you absorb the cut of $16 million?

Mr. PALMATIER. No. 1, we anticipated, based on our estimates regarding the airlift, that we would receive about 100 more flights in fiscal 1972 than we actually received, so we didn't have the number of people in 1973 that we thought we were going to have.

Second, a small part of the monthly financial payments totaling about $6 million is being met through Florida's regular public assistance program. I will tell you how that happened.

You will recall, Mr. Shriver, the State of Florida had consistently paid Cubans a little less in the form of a cash assistance payment than they had to other people on welfare in Florida. They felt this was equitable, and so did we, because the Cubans, after all, were receiving surplus commodities and also they had use of our medical clinic.

Then as a result of the *Graham-Richardson* Supreme Court decision, which in effect said that States could no longer have a citizenship requirement as a bar to receipt of welfare for an alien, the State of Florida was sued and it had to put the Cubans—as well as other eligible aliens—on the regular welfare rolls, with an increase in payment.

The Court decision indicated, in effect, that any difference between funds made available from the Cuban refugee program and the cost that resulted from the increased payments to refugees that Florida had to make, should be made up by the regular programs. The legal people decided that eligible refugees could have part of their money payment made available from the regular Federal-State public assistance programs, and that is what happened.

The third thing is that we plan on providing the Dade County public school system in Florida $1 million less than had previously been anticipated.

ACCURACY OF FUNDS ESTIMATE

Mr. SHRIVER. You mention the difficulty in coming up with specific budget requests for this program due to the many variables involved in the phaseout and the unknown effects of court decisions and H.R. 1. Would you say it is probable that you might have to come back for more money for fiscal 1974? Would any excess funds automatically revert to the Treasury?

Mr. PALMATIER. Mr. Shriver, we were confronted with an unusual number of unknown elements this year. Our request for $90 million continues, however, to represent our best judgment as to the funding level we will require in 1974 if we are to carry out the program we have outlined and meet our commitments to the States. If there are excess funds, they do revert automatically to the Treasury.

REDUCTION OF STAFF IN 1973 AND 1974

Mr. SHRIVER. Your anticipated staffing level for fiscal 1974 is unclear. In your statement you mention a reduction to 60 employees by this July 1—the justifications on page 39 mention a reduction to 70 by the end of fiscal 1974. What is the situation?

Mr. PALMATIER. This comes about partly because of timing, Mr. Shriver. When we prepared the justification several months ago we did not have definite information on what date the airlift would end. When the April 6 termination date was made known, we immediately began a review of our total workload and staffing requirements. As I indicated in my statement, we have not been achieving the staff reductions we had anticipated through attrition, so a reduction in force has now been planned to take effect in June of this year which will result in reducing our onboard staff to 60 by this June 30—15 less staff than the budget anticipated when we thought the airlift might continue into June. This reduction will, of course, carry over into 1974, and it is now our best estimate of the approximate manpower level required for 1974. As we gain experience under our phasedown in welfare and other areas. however, we will be continually reviewing our needs to determine, and to effect, further reductions if they are indicated. Actual dollar savings in 1974 due to the forced staff reductions are expected to be relatively small. The average grade of staff working in this program is GS–6 and those separated in late June 1973 will be entitled to severance pay for various lengths of time in fiscal 1974 which will offset much of the budgetary salary costs.

AIRLIFT CLOSEOUT COSTS FOR SWISS EMBASSY

Mr. SHRIVER. You are requesting $50,000 for "closeout costs" of Swiss Embassy staff in Havana who have been working on airlift matters. Why does it take that much to stop doing something?

Mr. PALMATIER. This estimate was provided by the Department of State. As we understand it, these costs are similar to expenses incurred when our Government employees are no longer needed—for example, salaries continue until the affected employee can be transferred, terminated, or perhaps retire. There are always such tasks as records disposal, final reports, and such matters involved in closing down an operation. Also, there will be transportation costs back to Switzerland for some of the Swiss nationals who have been working on airlift matters.

MEDICAID COSTS VERSUS MIAMI HEALTH CLINIC COSTS

Mr. SHRIVER. Concerning your health services, you point out that under medicaid these services will cost considerably more than they have under your in-house clinic program. Compare those respective costs for us briefly now, and submit the details for the record.

You really have no choice in this switch because of the court decision, is that correct? Since you say on page 37 you have no data on which

to base your health services request, how did you arrive at the 25 percent reduction request?

Mr. PALMATIER. Mr. Shriver, the information we have is based on an analysis by welfare staff in Florida from which they made some rough estimates of the additional costs for providing those medical care services formerly performed by the clinic that will now be covered through medicaid provisions. These costs were projected for the 7-month period December 1972 through June 30, 1973, utilizing data from the regular domestic medicaid program in Florida with some modifications for clinic usage by those refugees considered eligible for medicaid. The additional cost for that 7-month period that the State would expect to incur under medicaid for an estimated average eligible caseload of 18,875 was $2.3 million. A simple annualization of this 7 months, estimate would yield almost $4 million. We have estimated that comparable cost in 1974 as about $5 million because of trends in the medical area. For example, there are over 20,000 refugees now eligible for medicaid provisions and the number is growing, so there is a larger eligible caseload than that used; some price increases will occur in 1974; and the unpredictability of medical requirements—we know, for instance, there was an unusual high percentage of recent airlift arrivals aged and infirm who will require continuing medical attention—call for some upward adjustment.

You understand, of course, that under the phaseout not all of these additional costs apply to this program, since Florida's regular medicaid program for eligible refugees in the United States over 5 years will have to be utilized. Also, two large items of medical care, hospitalization and nursing homes, are not affected by the changeover from the clinic to medicaid.

The major cost items due to medicaid usage that would expect to shift from the clinic, as developed by Florida for the 7-month estimate of almost $2.3 million, are: Drugs, $1,025,000; mental health, $155,000; physicians' costs, $500,000; outpatient facilities, $300,000; and other items (X-rays, lab work, administrative costs, etc.), $310,000.

We do not have a direct comparison of these itemized costs with those incurred by the clinic, but, in the drugs area alone, the clinic's total annual cost has been about $500,000 for the entire eligible caseload of some 35,000 refugees, compared to the 7-month medicaid cost of over $1 million for some 18,000 persons for drugs. The clinic, of course, purchases its drugs from the Veterans' Administration at its cost.

Mr. Shriver, not only has Florida committed itself to the court to place eligible refugees under the medicaid provisions, but HEW medicaid staff has also informed the State that Cuban refugees eligible under Florida's approved medicaid State plan under title XIX of the Social Security Act must be covered by provisions of that plan.

The 25-percent reduction in the 1974 estimate for clinic-related services represents our best judgment on these costs and reflects the following considerations: Although something over half of the clinic's eligible caseload may be shifted to medicaid, there cannot be a completely parallel cut in staff or funds since minimum services in the various units—dental, psychiatric, diagnosis, and treatment by general practitioners—must be maintained for the large caseload that will continue

to use the clinic. Moreover, there will be some increases in staff salaries and related costs that will offset savings. Our statement meant to indicate that we do not have precise estimates on the adjusted usage of various elements of the clinic. We are now engaged in developing plans in cooperation with State, county, and U.S. Public Health officials to adjust staff and services to accommodate to the new situation as soon as possible.

CUBAN REFUGEES ENTERING UNITED STATES THROUGH THIRD COUNTRY

Mr. SHRIVER. You say you expect new refugees from Cuba to enter the United States through third countries "in some volume." Tell us more about that.

Mr. PALMATIER. Ever since the Cuban refugee movement began, there have been refugees who reached the United States via third countries, although most have come here directly—by commercial flights prior to the missile crisis in 1962, by small boats, and by the refugee airlift after it began in December 1965.

As of December 1972, it was estimated that there were about 26,000 Cuban refugees in Spain who wish to come to the United States, and about 4,000 in Mexico who want to come to this country.

For planning purposes, we have estimated that we expect about 4,000 registrations during fiscal 1974. That would be less than half of the total number of Cuban refugees who can be expected to arrive from third countries; however, many of these refugees are not expected to reach Miami and therefore not to register with this program.

PHASEOUT OF STUDENT LOAN PROGRAM AND REFUGEE ELIGIBILITY FOR NEW BASIC OPPORTUNITY GRANT PROGRAM

Mr. SHRIVER. Student loans for Cuban refugees are to be phased out, and this fall, only those who are ineligible for domestic loan programs because of their immigration status will qualify for these special loans. You are proposing $2.6 million for this, which will allow 2,600 borrowers to obtain an average loan of $1,000. That still leaves a good deal of money to come up with. Do you know if these students are eligible for the new basic opportunity grants program?

Mr. PALMATIER. We have been informed by the Office of Education that Cuban refugees are eligible for that program since they are in the United States for "other than a temporary purpose." It should be noted, too, that the Cuban loan program will not accept any new borrowers beginning in September; only present borrowers will be continued in order not to interrupt their education.

CUBAN PROGRAM CANNOT BE CONSIDERED FOREIGN AID

Mr. PASSMAN. I think it would be quite appropriate to state for the record that even though the Cuban refugee program is handled under the Foreign Operations Subcommittee on Appropriations, that it should be divorced from foreign aid as such.

Do you concur? I don't want to overstate nor understate the case.

Mr. PALMATIER. The money is spent here in the United States.

Mr. PASSMAN. That doesn't make any difference whether it is spent

here or not. It is not actually foreign aid because no funds are sent abroad, no commodities go abroad, and the very fact is that we have established for the record that 80 percent of these people are self-supporting, they are integrated into the economy, they are hard workers, and some of them are substantial taxpayers; is that correct?

Mr. PALMATIER. It certainly is.

CONTRIBUTIONS OF CUBANS VERSUS WELFARE COSTS

Mr. PASSMAN. Again let's not overstate the case. Let's be perfectly fair to these people who look to this opportunity. They have found an opportunity and taken full advantage of it, and when you finally integrate all of these people into America, if still 80 percent of them are self-employed, contributing to the economy, are paying taxes, would not that contribution far offset 20 percent who may be supported by the States by welfare?

Mr. PALMATIER. I think that is stated very well.

Mr. PASSMAN. It can be established that these distressed people who are in our country are actually going to prove to be an asset rather than a liability.

The crime statistics certainly speak very favorably of these people. I make that statement because I want to divorce it from foreign aid. I am not a foreign-aid enthusiast. As far as I am concerned, foreign aid doesn't contribute a dime to this country. It is a one-way street, but this is actually a two-way street.

Mr. Bevill?

REFUGEE PROGRAM SHOULD REMAIN IN FOREIGN-AID BILL

Mr. BEVILL. Thank you, Mr. Chairman.

Mr. Chairman, may I ask on that point, can we as a subcommittee make a separate bill out of this?

Mr. PASSMAN. No. This is like a Louisiana mulligan; you put some chicken in, a raccoon in, a couple of possums, sweet potatoes, turnips, cook it for a couple of hours and it is all mixed up. That is the way of this bill. You don't write a separate bill. The good is in with the bad. I have elaborated too much; I should have just said "no."

1974 REQUEST; PHASEOUT REASONS AND PLANS

Mr. BEVILL. You are seeking an appropriation of $90 million; is that correct?

Mr. PALMATIER. That is correct.

Mr. BEVILL. And this program is to be phased out over 5 years. Is this the first year of this phaseout?

Mr. PALMATIER. Fiscal 1974 will be the first year that we begin reducing payments to States for welfare; the 5-year period actually started with fiscal 1973 when we put States on notice regarding the phaseout.

Mr. BEVILL. Because that is the year that the new welfare setup goes into effect.

Mr. PALMATIER. And the airlift is now ended.

Mr. BEVILL. Why?

Mr. PALMATIER. The reason given by the Cuban Government, Mr. Bevill, is that Mr. Castro doesn't want to let any more out. It is as simple as that.

Mr. PASSMAN. I am going to ask Mr. Yates to preside, if he will, the rest of the afternoon.

Mr. BEVILL. And this goes into effect, I believe, the beginning of the new fiscal year.

Mr. PALMATIER. July 1, 1973; that is correct.

Mr. BEVILL. This year.

Mr. PALMATIER. Yes, sir.

Mr. BEVILL. Is this a complete phaseout of this program, or is it just this particular operation?

Mr. PALMATIER. The phaseout of welfare funds begins July 1, 1973, and then we expect to be totally out by June 1977. The plan calls for a gradual withdrawal of Federal money in other areas also, but welfare costs that we formerly had been reimbursing the States for at 100 percent has by far the largest impact. With a total termination date of ficsal year 1977, our appropriation should be going down very rapidly over the next 4 years.

Mr. BEVILL. That is all I have.

Mr. YATES. Mr. Conte.

WELFARE PHASEOUT AND SHIFT TO OTHER PROGRAMS

Mr. CONTE. You state that Florida would be exempted from the head of the family welfare reimbursement phaseout for those who have been in the United States for over 5 years. You also state that approximately one-half of the refugees are in Florida. How many of the refugees are in New York, and what will the impact on the phaseout be in New York?

Mr. PALMATIER. I am not sure we have that with us.

Mr. BAKER. New York has almost 13,000 refugees now on welfare. Some 80,000 have been resettled there. New York itself says about 80 percent of its caseload has been in the United States over 5 years. This was a rough estimate and frankly we think it is on the high side.

Mr. CONTE. That would be 80 percent of 13,000.

Mr. BAKER. About that.

Mr. PALMATIER. But the majority of these people, Mr. Congressman, you understand, already qualify for one of the regular ongoing federally matched public assistance programs. The arrangement we have had in this program—and you were on the committee before and you probably recall—is that we have been reimbursing 100 percent rather than using the matching formula programs, and now we won't continue funding for those in the United States over 5 years under the phaseout.

Mr. CONTE. That doesn't mean they are going to get off the public dole.

Mr. PALMATIER. That is right, it certainly doesn't.

Mr. CONTE. This money is just going to come out of a different pocket.

TOTAL COST OF CUBAN REFUGEE PROGRAM

How much have we spent on this program since its inception?

Mr. PALMATIER. Almost $1 billion, including fiscal 1974 funds.

WAIVER OF 5-YEAR RESIDENCY POLICY FOR "GENERAL ASSISTANCE" TYPE CASE IN FLORIDA

Mr. CONTE. How many individuals will be assisted in Florida by the Federal Government during fiscal 1974 as a result of the exception of Florida from the cutoff?

Mr. PALMATIER. There will be about 12,500 to 13,000 persons who are in the so-called general assistance program; but less than half of these have been in the United States more than 5 years and they are the only ones covered by the exemption. I will tell you the reason we have the exception in Florida, Mr. Conte. As you know, half of the Cubans who come to the United States have remained there, and those who have remained in Florida have remained principally in Miami, Dade County. Of the some 91,000 refugees who are on welfare throughout the United States, over 40 percent are in Miami, Dade. The State of Florida has no statewide general assistance program, and the refugees on general assistance don't qualify for the matching programs. Since about 50 percent of the general assistance people in Miami have been in the United States 5 years or more, they would be immediately affected. We frankly don't think it is fair to dump that much of a burden from one day to the next on one county in the United States. It is for this reason we have the exception.

NUMBER OF REFUGEES ELIGIBLE FOR SSI PROGRAM

Mr. CONTE. How many of the refugees will be eligible for assistance under the new federalized program for supplementary security income for the aged, blind, and disabled under Social Security Amendments of 1972?

Mr. PALMATIER. About 50 percent, sir, or some 45,000 of the 91,000 now on welfare.

POSSIBILITY OF AIRLIFT RESUMPTION

Mr. CONTE. You said the airlift is being terminated. Is there any possibility this airlift will be started again?

Mr. PALMATIER. It could always happen. You will recall how it happened before. Mr. Castro started the sealift which led to an airlift by President Johnson in order to get some type of order in the thing to stop the loss of life which occurred in the Florida straits. We had conversations with the State Department on this and we really feel that the Cuban Government is ending it and has no plans to resume it. The last flight as a matter of fact will be this Friday, April 6.

Mr. CONTE. I imagine you will have a full load for that flight. I don't know how you handle this. They are a lot better off coming over here and receiving support under our program than they are staying in Cuba.

Mr. PALMATIER. I don't think there is any question about that; they are voting with their feet. They are getting out of there as rapidly as they can.

MOST REFUGEES ARE SELF-SUPPORTING

Mr. CONTE. You state, and I know the chairman asked you some questions along this line, the vast majority of the refugees become members of the mainstream of American life and that they are taxpaying citizens. How does the number of refugees who do not fit in this category compare with the general population in the United States on a percentage basis.

Mr. PALMATIER. I don't quite understand the question.

Mr. CONTE. I am referring to the ones who don't get into the mainstream of American life.

Mr. PALMATIER. We were just discussing that. If you take the entire universe that we have dealt with, only about two out of ten Cubans in the United States now require any help at all. This was a refugee movement. It was not screened for physical conditions, educational background and the like, so we feel that this statistic alone clearly points out that the overwhelming number are taxpaying, contributing members of their community in the United States. Two out of ten to us is a fantastic statistic.

SHIFT FROM MIAMI CLINIC TO MEDICAID FOR SOME REFUGEES

Mr. CONTE. Do you have any estimates or any indications as to what the expected fiscal impact of the shift of the refugees to medicaid will be?

Mr. PALMATIER. In Florida?

Mr. CONTE. Yes.

Mr. PALMATIER. We expect that it will cost for fiscal 1974 about $5 million more than it would have cost had we been able to continue to use the clinic for the group eligible for medicaid. But once again the State of Florida was required to put them on medicaid because of court action.

CUBAN PROFESSIONALS

Mr. CONTE. I used to ask a lot of questions about professionals. Do you have any statistics on how many Cubans came over and still maintain their profession?

Mr. PALMATIER. Not statistics. I would say this. A lot has changed since the time you were on the committee. You will recall at that time it was almost impossible, for instance, for a Cuban physician to practice in the United States. Then over a period of time with the assistance from the AMA and pressure from the American communities which didn't have enough doctors, a lot of things were relaxed. As a result of that, most of the doctors who came, some 2,500, are now practicing in the United States. Other areas—for instance, New Jersey, some of the New England States, Florida—have relaxed considerably on permitting former schoolteachers to teach again here, to be certified. Many of the lawyers have gone into like professions—they are teaching, working in law libraries, working for legal firms, particularly in the

Miami area, because so much has happened down there in the past few years with respect to trade with other Latin American countries; it has really become a gateway to Latin America.

I wouldn't want to say that all of them have been able to practice their professions. There are accountants here, for instance, who were CPA's there, that have had great difficulty. Optometrists, veterinarians, a lot of them have not been able to use their professions. You may recall also, that we had a large number of professional people coming here at a time when we had a great shortage of teachers, and we developed teacher training projects throughout the United States and retrained many of them as teachers, particularly teachers of Spanish in the elementary schools. A lot of the professional people are still in professions but not necessarily the ones they were in.

REASONS FOR REDUCING FUNDS FOR TRAINING

Mr. CONTE. Why are the student loans and professional, English, and vocational training being cut back.

Mr. PALMATIER. Professional training is the area I was just discussing—retraining programs for professional people. In the last couple of years we haven't had the large number of professional people coming out of Cuba. On the vocational training we won't have the welfare caseload or the influx of new refugees that we had. We are reducing student loans because, once again, we think this is an area where the time has come to begin phasing out.

We have taken care of the majority of the young Cubans who came, during a time when it was very difficult to get loans. They now qualify for the regular loan program, and we think new borrowers should use it rather than have a continuation of a special program solely for Cuban refugees.

INCREASED EMPHASIS ON SELF-SUPPORT

Mr. CONTE. You say that you have plans to intensify the staff effort to assure greater self-support opportunities for the refugees through the State, local and the voluntary organizations. How do you plan to do this?

Mr. PALMATIER. As we go into this phaseout, we recognize that there are going to be some people who will just be dropped unless we can do something for them, and we plan on continuing to use the voluntary agencies who assisted us in the resettlement program to do that. There are people who may get lost in this grand shuffle of a phaseout, and we want to retain the capacity to pick up the individual case, who might only need a remedial operation or might benefit from some additional vocatitonal training. This is what we are referring to.

Mr. CONTE. Thank you very much, Mr. Chairman.

Mr. YATES. Mr. Long.

HIJACK AGREEMENT

Mr. LONG. Will the anti-hijacking agreement concluded between the United States and Cuba affect Cuban refugees arriving in the United States by boat?

Mr. PALMATIER. Mr. Long, I am with HEW of course. I am not involved with foreign policy. I really don't know all the thinking on the hijacking agreement. I am of the opinion that it may not affect the person who steals a small boat or takes a small boat and uses it to escape to the United States. I think what they are referring to would be seizure by a would-be refugee of a commercial fishing boat or something of that type that would be more closely related to an airplane, something like that.

Mr. LONG. Where there would be violence or use of weapons?

Mr. PALMATIER. Yes, but this is a personal opinion. I want to make it clear that I am not an expert on the hijacking agreement.

Mr. LONG. The agreement wouldn't have the effect of our denying asylum to such people?

Mr. PALMATIER. I think not.

ABILITY, MOTIVATION, AND SELF-SUPPORT

Mr. LONG. You say that about 8 out of 10 refugees registered with the program are fully self-supporting today?

Mr. PALMATIER. That is correct.

Mr. LONG. Does that include all Cuban refugees or just those who are currently registered?

Mr. PALMATIER. The State Department figures that about 600,000 Cuban refugees have come to the United States since Fidel Castro took over. Of that number about 450,000 have registered with us. You may recall that during the very early days of the refugee influx to the United States, many of those who came had banking accounts here, had business associations here, and they never required any help at all. Thus they never registered with us, so when I speak of the 2 out of 10, my universe is only those who have registered with us.

To make it more positive, one would add the others too who have never asked us for any help at all.

Mr. LONG. Is there any evidence that these refugees are self-supporting because of your program, and not simply because they are very high quality people?

Mr. PALMATIER. I think it is a combination of both. We have people ask from time to time, "Supposing we gave an organization a bloc of money and attempted to use it with some of our own disadvantaged people here." I am not too sure that you would be as successful, because frankly, by and large, we have gotten the cream of the crop.

Mr. LONG. Highly motivated people.

Mr. PALMATIER. Yes, many with business backgrounds, professional backgrounds. I think where the United States was very astute was in picking these people up, working with the church groups, and helping them get resettled so that they had some type of sponsor, they had housing at the other end, they had a job at the other end.

NEED FOR THE CUBAN REFUGEE PROGRAM

Mr. LONG. Did the United States have to get into the act at all?

Mr. PALMATIER. Oh, yes, there is no question about it.

Mr. LONG. We have had so many waves of immigration to this

country who had it hard, it is true, but who nevertheless adjusted, and often did very well in many cases because of the hardships that they went through.

Mr. PALMATIER. Was it necessary? I don't know about that, but I do know you had this massive number of people coming to Miami, Fla., during a very, very short period of time, and at that time in Miami, 1960–61, it had the highest unemployment rate in the United States. It was almost 10 percent. There were just no jobs available, and you had the choice of attempting to help these people where you could to get out of Miami, to rebuild meaningful lives for themselves, or else just starve to death on the streets of Miami. I think it was positive, I really do.

PERCENT OF CUBANS THAT HAVE COME TO UNITED STATES

Mr. LONG. What percentage of the population of Cuba has come to the United States as refugees? You mentioned 450,000.

Mr. PALMATIER. That is the number this program registered. About 600,000 have come to the United States. They have about 8 million people in Cuba.

Mr. BAKER. It would be about 7 percent.

Mr. LONG. That is really something. It would be very difficult to find any other modern emigration it would seem to me that matched this.

Mr. PALMATIER. That is true, and it occurred, in a relatively short period of time.

Mr. CONTE. Would you please yield, Doctor?

Mr. LONG. Certainly.

POSSIBILITY OF REFUGEES RETURNING TO CUBA

Mr. CONTE. What percentage do you think would return if Cuba again became normal?

Mr. PALMATIER. If it were totally liberated?

Mr. CONTE. Totally liberated.

Mr. PALMATIER. I don't know. When I discuss this with my many Cuban acquaintances, I become more confused. A large number of them are, of course, becoming American citizens as rapidly as they can. They are so emotionally involved in this country. They have always looked north, I suppose, because we controlled Cuba at one time, and many Cubans have gone to school here, and so forth. I think you would probably have a large number who might go back immediately for emotional and other reasons.

Mr. LONG. Have any gone back at all?

Mr. PALMATIER. About 600 applied to go back. These are mostly aged people who might have a son or daughter in Cuba with children. They are old people.

Mr. CONTE. Of course, if they go back after becoming American citizens, as most of them will have done by that time, then they could have it both ways. They could live both here and in Cuba.

Mr. PALMATIER. I really think, even though it might be difficult for a Cuban himself to say this, particularly to another Cuban, I think many of them would go back right away to see it, their old home and so on.

Then I really think a large number would turn around and come back again because they have rebuilt their lives here.

IMMIGRATION PATTERNS

Mr. LONG. You know in the great days of our immigration before World War I, when people were coming here at the rate of 1 million or more a year, you always had a situation in which about one-third of them were going back. About one person was going back for about every two or three who were coming over. That is a reverse migration that has never been fully understood. Of course life was very hard here because we didn't have welfare programs. I am wondering to what extent we got a much bigger immigation from Cuba simply because of this program that we would not have gotten if we hadn't been so hospitable?

Mr. PALMATIER. I think there is no question that we got more people, but I believe we got most people principally because it became a Communist dominated country. After all, it did enjoy one of the highest standards of living in the Western Hemisphere. People traveled back and forth all the time between this country and Cuba.

AVERAGE INCOME OF CUBANS IN THE UNITED STATES

Mr. LONG. Has anybody gathered any data on what the average income level of the adult Cuban refugee is now, and how this compares with what it was when they were in Cuba?

Mr. PALMATIER. I am not sure one could make a valid comparison just on the basis of dollars, Mr. Long, because so much time has elapsed, and you know the dollar was different there, but the Census Bureau in its study which they completed last year showed the average family income of persons of Spanish language in Dade County—that would be mostly Cubans—was about $8,000 a year. Nationwide data for Cubans is not available.

Mr. LONG. This was the 1970 income census data?

Mr. PALMATIER. Right.

Mr. LONG. How did that compare with the non-Cuban population of Florida.

Mr. PALMATIER. If one is discussing minority groups, if one wants to use that term, I think it was about $1,000 more.

Mr. LONG. It sounds to me as if it would compare very favorably with the majority group.

Mr. PALMATIER. It was very close. About 62 percent of all the doctors who were practicing medicine in Cuba in 1959 are now in the United States. There are many highly paid in this group alone.

EXISTENCE OF PROGRAM HURT CASTRO

Mr. LONG. Wouldn't it be possible to argue that this is one of the most effective programs in sabotaging Castro that you could have come up with? You took some of the most highly motivated people away from him.

Mr. PALMATIER. No question about that.

Mr. LONG. At a time when he was trying to adjust to a new system.

Mr. PALMATIER. Some people speculate that this might be the very reason that he decided to stop the outward movement of people.

Mr. LONG. Did he ever try to put an emigration tax such as the Russians are putting on the Jews?

Mr. PALMATIER. Not to our knowledge; no. We have some statistics we can submit for the record, broken down by professional, semi-professional, clerical and sales, skilled persons, and so on, but I do remember some. For instance, only 2 percent of the refugees have come from the farming-fishing area of the Cuban economy, while 6 percent have been professionals.

PERCENT NATURALIZED

Mr. LONG. What percentage of these have become American citizens, or applied for citizenship?

Mr. PALMATIER. In excess of 100,000 are now American citizens.

Mr. LONG. Are now full-fledged American citizens?

Mr. PALMATIER. Yes.

Mr. LONG. Of course they have to file their first papers. Do you have any information on what percentage have done that?

ADJUSTING IMMIGRATION STATUS TO PERMANENT RESIDENT

Mr. PALMATIER. In recent years it has averaged about 20,000 a year. Here is the whole story. You know the Cubans are all paroled into the United States, and until 1966 they could not adjust their status from that of a parolee to a permanent resident without physically leaving the United States, and you could not start on your 5 years without being a permanent resident, so there was a long period when it was impossible for them to do anything.

Then in 1966, when Congress placed the numerical limitation on the Western Hemisphere for immigration, it recognized this problem, and made it possible for the Cubans to adjust their status without physically leaving the United States.

It also gave them up to 30 months retroactive credit for time spent in the United States. So it wasn't until 1966, really, that refugees could start applying for citizenship and become citizens in any volume. They have to be here 2 years, by the way, before they can apply to adjust their status from that of a parolee to a permanent resident, so the evidence is that they are becoming American citizens as fast as they have an opportunity to do so.

CHILDREN BORN IN UNITED STATES OF CUBAN PARENTS

Mr. LONG. Are you counting those who have been born in this country and are therefore native born?

Mr. PALMATIER. No.

Mr. LONG. How many have been born?

Mr. PALMATIER. We don't have any idea.

Mr. LONG. It must be a considerable number.

Mr. PALMATIER. It has to be.

Mr. LONG. Are they prolific?

Mr. PALMATIER. They are family oriented.

Mr. LONG. That is quite different.

Mr. PALMATIER. They have the normal number of children, I believe.

Mr. LONG. It is not greater or less?

Mr. PALMATIER. The average Cuban life style is very similar to the average American, with the exception that at this point in time perhaps they haven't lost this family focus to the extent that some of us have.

AGE DISTRIBUTION

Mr. LONG. What is the age distribution among them? They are much more heavily weighted toward the older people than the U.S. population, aren't they?

Mr. PALMATIER. No; on the airlift only 12.3 percent of all those who have come in have been 61 years of age and above. The rest have been below that.

Mr. YATES. Those statistics ought to be put in the record, and without objection, it is so ordered.

[The information follows:]

OCCUPATION AND AGE CATEGORIES OF AIRLIFT ARRIVALS (AS OF FEB. 28, 1972)

	Percent	Ages	Percent
Professional, semiprofessional, managerial	6.0	0–5	10.0
Clerical and sales	11.2	6–18	24.0
Skilled	9.0	19–29	8.5
Semiskilled	4.2	30–39	19.2
Service occupations	3.2	40–49	15.5
Farm-fishing	2.1	50–60	10.5
Children, student, housewives	64.3	61–65	4.3
		Over 65	8.0

CHILDREN THAT LEFT CUBA

Mr. LONG. It is quite possible that that would be true, but also there would be not too many children. Do many children come over?

Mr. PALMATIER. A lot of children came over. As a matter of fact, during the early days of the program when it was very difficult to get out of Cuba, and during the time when commercial transportation was still available but not to take everyone out who wanted to come—and I think this is a great tribute to the confidence the Cubans had in the American people—about 13,000 children were just put on airplanes and sent out by their parents. They were afraid that they would be shipped later to Czechoslovakia or Russia for their education.

Mr. LONG. I am sure you are familiar with our early immigration. Typically the person who came here was a young person in his late teens or twenties or so. They left their families and children home and sent for the women later, and so the population tree was very asymmetrical. This wasn't true of the Cubans.

Mr. PALMATIER. No.

STATUS OF TWO RECENT ARRIVALS

Mr. LONG. Recently I believe two men arrived in Florida by boat from Cuba to seek asylum. Are these two men still in the United States, and if so what would be the administration's policy?

Mr. PALMATIER. I didn't hear the first part of the question.

Mr. LONG. Recently I have been told that two men arrived in Florida by boat from Cuba to seek asylum. Are these two men still in the United States, and if so, what will be the U.S. policy toward them?

Mr. PALMATIER. I think, sir, in the past several weeks more than two have arrived. Some have arrived on small boats, rowboats and so forth, very small craft, and undoubtedly they will be granted permission to stay.

I think what you may be referring to—and once again I am not in the State Department and not really involved—is the case where several members of the crew of a Cuban fishing boat did use arms on a boat that ended up in Key West. This may be the case you are referring to. There has been great interest in this.

Mr. LONG. In that case we pretty near have to send them back under any kind of a reciprocal agreement with Castro.

Mr. PALMATIER. It is my understanding that the case is before the courts now. I believe the charge at this point is entering the United States without having gone through customs inspection.

Mr. LONG. What does that mean? Do they put them in jail or send them back to Cuba?

Mr. PALMATIER. I think they are on parole right now.

Mr. LONG. What is Castro's policy going to be? Is he going to take the view that if he sends our criminals back who grab U.S. planes and hijack them we have got to do pretty much the same thing.

HEW NOT INVOLVED UNTIL CUBANS GRANTED ASYLUM

Mr. PALMATIER. Sir, I can't really be responsive to questions of this type. In HEW we are not involved with the refugees until they are granted political asylum in the United States. All other aspects are handled by the Department of State.

Mr. LONG. I think that would be a very interesting question for us.

Mr. PALMATIER. It is, sir. I don't know the answer because I am not involved.

STUDENT LOANS

Mr. LONG. What about our loans to the Cubans? Have they been paid back? This question has probably been asked but if it was, I wasn't here.

Mr. PALMATIER. I think through this year we have made approximately 15,000 loans to college students under our loan program. Of that number, about 484 are delinquent.

Mr. LONG. What about past loans of various kinds?

Mr. PALMATIER. These are the only loans we have ever made.

Mr. LONG. Educational loans are the only ones you have made.

Mr. PALMATIER. Yes, sir.

Mr. LONG. And only this year?

Mr. PALMATIER. No, since the inception of the program.

Mr. LONG. Since the inception of the program you only have a few hundred delinquent currently.

Mr. PALMATIER. No, we have made 15,000 loans, and 484 are delinquent.

Mr. LONG. In the whole period?
Mr. PALMATIER. That is correct.
Mr. LONG. I thought you meant just this year.
Mr. PALMATIER. No, sir.
Mr. LONG. What does that mean as a practical matter? Do you have a long grace period?
Mr. PALMATIER. It is patterned exactly after the National Defense Education Act. They have to start paying back 1 year after they finish school.
Mr. LONG. How many of them are there whom you would expect to pay back the loans? What is that 484 compared to what you would expect?
Mr. PALMATIER. I think it is very, very low.
Mr. LONG. Out of the 15,000 loans that are due.
Mr. BAKER. 8,000 loans are still not in the collection process.
Mr. LONG. You have about 7,000 in the collection process?
Mr. BAKER. Correct.
Mr. LONG. Of that you have 484 delinquent?
Mr. BAKER. Yes.
Mr. LONG. That is about 1 out of 14. That would be somewhat higher, wouldn't it, than you would run into in the rest of the population?
Mr. PALMATIER. It is lower than the experience they find in the domestic loan program.
Mr. LONG. By delinquent you mean what? You can't get it from them or they have missed payments?
Mr. PALMATIER. They have missed payments; some of them we may not be able to get.
Mr. LONG. Are these secured loans?
Mr. PALMATIER. They are secured only in the sense that they sign an agreement.
Mr. LONG. There is no security?
Mr. PALMATIER. No.
Mr. LONG. Theoretically you catch up to them some day.
Mr. PALMATIER. They do. There is a monitoring process constantly.
Mr. LONG. Thank you very much.
Mr. YATES. Mr. Miller.

PHASES IN THE REFUGEE INFLUX INTO THE UNITED STATES

Mr. MILLER. How do we go about finding out who is a refugee from Cuba?
Mr. PALMATIER. One has to divide the entire Cuban refugee program into three parts to answer that question. First, between 1961 and the time of the missile crisis when commercial transportation was cut out, almost anyone could come to the United States and ask for political asylum after he arrived here.
Then between October 1962 and December 1, 1965, all of the arrivals from Cuba came via a small boat, raft, inner tubes, what have you. A few came through Mexico and Spain and then asked for political asylum here.
In late September 1965 Mr. Castro made a major foreign policy speech in which he said he was tired of being criticized for not letting people out of Cuba, and that anyone in the United States who had

relatives in Cuba who wanted to come down by small boat to get them could do so. Great chaos resulted from this. It was like Dunkirk in reverse. Thousands of boats took off from Miami for Cuba to pick someone up. The loss of life was so heavy that as an initial response President Johnson asked the Coast Guard to put up a picket line to intercept the small boats coming in. These people were granted political asylum.

To get order into the chaos, he directed the Department of State to negotiate an agreement, called a Memorandum of Understanding, with Cuba which made it possible for people who wanted to leave that country, and whom this country would accept after security screening and so on, to come. This is when the airlift started.

Since that time about 260,000 people have come on the airlift which is due to terminate April 6.

Mr. MILLER. That is what I understand.

AIRLIFT ELIGIBILITY

Let's assume an individual would like to move from Cuba to the United States. How would they go about applying to be a passenger on the airlift?

Mr. PALMATIER. First they had to apply to the Cuban Government for permission to leave Cuba. They had to have a relative in the United States. If Cuba agreed to release them, they sent the name to the United States via the Swiss Embassy which represents this country in Cuba. After the name was processed by appropriate U.S. Government agencies—and if they found no reason from a security point of view why the person should not enter—the name was sent back down to the Swiss Embassy and they turned it over to the Cuban Government and said the United States would accept this person.

SWISS REPRESENT UNITED STATES IN CUBA

Mr. MILLER. There is $50,000 in the budget, as I understand, to pay the employees of the Swiss Embassy.

Mr. PALMATIER. Who have been involved in the airlift operation. We transfer the money to the Department of State, and they in turn use it as part of the funding arrangement they have with the Swiss Embassy who represents U.S. interests in Cuba.

Mr. MILLER. I was wondering whether that Cuban need go to the Swiss Embassy to make application to be a passenger on the airlift?

Mr. PALMATIER. No. The Cuban Government turned the names over to the Swiss Embassy of the ones they were willing to let out and the Swiss forwarded the names to the United States through State Department channels.

MEDICAL ASSISTANCE FOR REFUGEES

Mr. MILLER. I understand the U.S. Government is responsible for medical assistance to these refugees for 5 years. Is that what I read?

Mr. PALMATIER. You read that in a sense, Mr. Congressman. To date, the way this program has operated is that the Cuban refugees have had an opportunity if they fall on hard times or can't make it to go to the

public welfare agency in the community in which they reside. If it is determined that they are needy within the definition of need in that State, they are put on the refugee assistance program, including medicaid if they qualify.

What you are talking about on the 5-year thing is this: Beginning July 1, 1973, we plan on phasing out this program by June 1977. It means that for a refugee who has been in the United States as of that date, for example, for 5 years or more, we will not reimburse the States 100 percent for the assistance they provide him. The State may receive funds under the regular matching formula programs. When we talk about providing medical assistance for a 5-year period, what we really mean is that we will also reimburse the States from this program for what they expend on a Cuban refugee who has been in the United States no more than 5 years.

CUBANS RETURNING TO CUBA

Mr. MILLER. Do you have any record of any refugees who have come from Cuba to the United States and then returned to Cuba?

Mr. PALMATIER. About 600 have applied through the Czech Embassy to return to Cuba. This is the statistic we have obtained. They have been, according to State and Justice, principally, old people who just want to go home. The Cubans do have large families since they consider cousins as "family," and in a lot of instances the families are split. They might have a son that came to the United States or a daughter who had children here, and they might have left someone like that behind in Cuba whom they want to see and might apply to go back.

NUMBER OF REFUGEES IN FLORIDA

Mr. MILLER. Are the bulk of the refugees still in Florida?

Mr. PALMATIER. About 50 percent of all of those who have come to the United States.

Mr. MILLER. Where else have they spread out? At one time we had some legislation on the floor as I recall attempting to appropriate money to encourage resettlement from Florida into other States.

Mr. PALMATIER. Right.

Mr. YATES. I have some in my district.

REFUGEES NOT IN FLORIDA CONCENTRATED IN FIVE AREAS

Mr. PALMATIER. About half of those who have gone out of Florida have gone in turn to about five areas. Although they are all over the United States including Alaska, they have mainly gone to New York, New Jersey, California, Illinois, Louisiana, and Massachusetts. They are States where there are heavy concentrations, but nothing compared with the some 250,000 or 300,000 who have remained in Florida.

Mr. YATES. Thank you.

SCREENING OF REFUGEES

Mr. LONG. Were there many who came over who were suspect for subversive reasons; that is, who were sort of hiding among the refugees to cause trouble?

Mr. PALMATIER. A screening takes place. Unless you are talking about people who come over by small boat or something like that, they were prescreened before they were ever given authority to get on the airplane by appropriate U.S. agencies.

Mr. LONG. Have we ever had any trouble with any of them being Communists?

Mr. PALMATIER. They have turned down people; yes.

Mr. LONG. Have you gotten anybody that actually came who turned out to be a problem?

Mr. PALMATIER. Not to my knowledge, but I wouldn't necessarily know.

Mr. LONG. If it was, it was a small number?

Mr. PALMATIER. Yes.

Mr. YATES. Thank you.

The committee stands adjourned until 1 p.m. tomorrow.

WEDNESDAY, APRIL 4, 1973.

Administrative expenses (share of agencywide administrative costs—see separate schedule)	12,973	13,058	12,656
Total obligations	72,567	80,942	77,101

PERSONNEL SUMMARY [1]

Total number of permanent positions	749	749	741
Full-time equivalent of other positions	2	2	2
Average paid employment	787	746	737
Average grade, grades established by the Foreign Service Act of 1946, as amended (22 U.S.C. 801–1158) (as amended Public Law 88–426):			
Foreign Service reserve	4.6	4.6	4.6
Foreign Service staff	6.9	6.9	7.0
Average salary, salary established by the Foreign Service Act of 1946, as amended (22 U.S.C. 801–1158) (as amended Public Law 88–426):			
Foreign Service reserve	$19,042	$19,204	$19,456
Foreign Service staff	$10,427	$10,531	$10,624
Average salary of unenumerated positions	$6,992	$7,186	$7,380
Average salary of ungraded positions	$3,857	$3,995	$4,241

[1] Excludes personnel for administrative support.

AFTERNOON SESSION

Mr. PASSMAN. The committee will come to order.

We shall continue our examination of the different aspects of foreign aid this afternoon. The request before the committee at this time is that of the Peace Corps. We have as the main witnesses, Walter C. Howe, Jr., Acting Director of ACTION; Donald K. Hess, Associate Director of ACTION for International Operations; Nicholas W. Craw, Associate Director of ACTION for Citizens Placement; and Emerson Markham, Director of Budget Division, ACTION.

I would assume, Mr. Hess, you are the main witness.

Mr. HESS. Yes.

Mr. PASSMAN. You have a statement you would like to make to the committee?

Mr. HESS. Yes. But first, with your permission Mr. Chairman, ACTION's Acting Director, Mr. Walter Howe, would like to offer a few brief remarks.

General Statement of Walter C. Howe

Mr. Howe. Mr. Chairman and members of the committee, we welcome the opportunity to appear before you today on behalf of the Peace Corps, the international operations part of ACTION's volunteer programs.

Accompanying me this morning are Donald Hess, Associate Director of ACTION and Director of the Peace Corps, who will be our principal witness; Nicholas Craw, Associate Director for Citizens Placement; and Emerson Markham, ACTION's Director of Budget.

Our appropriation request for fiscal year 1974, Mr. Chairman, amounts to $77 million, a reduction from our current operating level of $81 million. As you know, the House last Thursday manifested strong initial support for the Peace Corps program when our enabling legislation, which contains a $77 million authorization level, was passed on the floor by a 299-to-72 margin.

Before Mr. Hess begins his testimony in support of this appropriation request, I would like to make a few brief remarks on behalf of the agency.

Mr. Chairman, I am sure that you are already aware that the House Foreign Affairs Committee recently sent two of its staff members overseas to personally examine and assess the performance of Peace Corps programs and volunteers. They traveled extensively throughout Asia and the Far East looking in depth at Peace Corps operations, and interviewing volunteers and United States and host government officials. The committee report, entitled, "The Peace Corps in the 1970's," was very constructive, and we have already begun to implement many of its suggestions for improving the effectiveness of our programs.

One of the most timely points which the report stressed was the necessity of insuring high quality volunteers matched to well-designed and well-managed programs. I want to assure you, Mr. Chairman, that the Peace Corps has been placing emphasis on these goals, and that our new ACTION Director-designate, Dr. Michael Balzano, along with Mr. Hess and myself, will make every effort to see that the trend continues. We were particularly pleased with the conclusion of the committee staff, who stated in the report that the volunteers they met "were, by and large, practical, mature, and job oriented individuals, who were at pains to avoid involvement in local or international political controversy," and that "they were also representative of a variety of age groups and economic and social segments of American society."

Mr. Chairman, the emphasis on quality, rather than on quantity—on program effectiveness, rather than on numbers of volunteers—is the cornerstone of the Peace Corps of the seventies. It is the way in which we feel we can make the most substantial impacts and make them lasting, to the benefit of both the United States and the countries in which we are working.

As Mr. Hess will shortly testify, we feel that our budget request for fiscal year 1974 reflects this emphasis and our commitment to achieving more effective programs. It also reflects our resolve to cut or hold costs wherever possible.

As we all know, this is a time when there is great pressure on the fiscal resources of this country. That pressure is reflected in the $11 million reduction from last years' Peace Corps request, just as it is reflected in the budgets for other Federal agencies. Nevertheless, we believe this request for $77 million following intense budget scrutiny identifies the Peace Corps program as one which continues to have the firm support of the administration.

Mr. Chairman, with your permission, I would like at this point to have Mr. Hess continue our testimony on the Peace Corps with his prepared statement.

GENERAL STATEMENT OF MR. DONALD K. HESS

Mr. HESS. Mr. Chairman and members of the committee. I want to thank you for the opportunity to appear before you today to discuss the Peace Corps program and the specific budget requirements to sustain that program in the upcoming fiscal year.

In fiscal year 1974, we are asking for a total budget of $77 million—$4 million below the $81 million approved and reported out by your subcommittee and acted upon favorably by the House last year. The $77 million is the lowest dollar request made by Peace Corps since its first two formative years. The important point, however, is that, while we are asking for less, we will sustain essentially the same number of volunteers in the field. We are tightening our "financial belts" in order to do this, cutting costs wherever possible, even in the face of inflationary pressures, both in the United States and overseas.

Before going into a detailed explanation of the factors affecting our budget, I would like to briefly touch upon some of the major programmatic themes of the Peace Corps today. This may be especially useful, Mr. Chairman, since a number of the members are new to the Subcommittee on Foreign Operations and new to the Peace Corps.

The Peace Corps is unique among American programs overseas. It is a voluntary program which works at the mid- and lower-level of developing countries. In order to build a true partnership, Peace Corps volunteers live at the modest level of their host country counterparts, learn the local language, and immerse themselves in the cultural environment in which they live. It is this partnership that makes Peace Corps substantially more than just another form of technical assistance—both for the volunteers and the host country.

CHANGE IN PEACE CORPS TODAY

The Peace Corps today is substantially changed from the Peace Corps of the 1960's. There will be approximately 7,300 trainees and volunteers serving in 58 countries by the end of this fiscal year. This is considerably smaller than the number of people who served during the 1960's.

The volunteer today is much different from his 1960's predecessor. A profile of the average volunteer today shows that he or she is older, has had more experience, is more likely to have a specific skill or specialty, is more likely to be married, and, in some cases, has a family. The average age of the volunteer has increased since 1966 from 23½ to 27½. The main reason for this is that we have aggressively responded to the growing number of requests for volunteers

who have increased technical skills and experience. People with such skills and experience are generally older. We also have focused some of our recruiting on older Americans, many of whom are retired and present a valuable volunteer resource. These people have responded in encouraging numbers. Americans over 50 years of age now comprise 5 percent of all volunteers, as compared to less than 1 percent in 1966. We are also increasing our efforts to recruit veterans, because they have many of the skills needed by developing countries.

The design, development, and implementation of Peace Corps projects have improved markedly over the past. Today, the programs tend to have a narrower focus and to be more specialized. Volunteers are not sent overseas to do "their thing," but are sent in response to a specifically defined job identified in advance.

MANAGEMENT EMPHASIS ON QUALITY

In fiscal year 1974, Mr. Chairman, we have one overriding management objective: To attain greater quality and effectiveness in all aspects of our program. We expect to achieve this objective by pursuing a number of specific policies.

First, we require that Peace Corps programs fit within the priorities of the host countries themselves. Within these priorities, the emphasis of Peace Corps assistance will be on human resource development. Both the concept of partnership and our concentration in human resource development are important, because it is the only way we know to insure that the efforts of the volunteer will have a lasting effect and that they will move the country toward self-sufficiency rather than away from it.

Second, we are recruiting volunteers with the appropriate skills and qualifications to match the requirements of the programs. Many countries now have more specialized needs than they had in the 1960's. In most cases, this means recruiting volunteers with more specialized skills and experience.

Third, we are improving our selection criteria and placement procedures, which was one of the recommendations in the recent House Foreign Affairs Committee report. This will be accomplished by increasing the number of applicants who attend a preinvitational staging, where they are carefully interviewed and where we explain what their jobs will entail. We are committed to sending overseas only those volunteers who meet the requirements of the program, even though this means that we will not be able to meet all of the host country requests. We would rather turn down a request than fill it with a volunteer who is not qualified.

Fourth, we will continue to emphasize the necessity for host countries to provide greater support for the Peace Corps operations abroad. As I stated earlier, one of the main reasons for the success of Peace Corps has been our ability to establish a true partnership with the host country. We have taken a major step in that direction by increasing the percentage of overseas staff who are host country nationals from less than 20 percent in 1966 to 76 percent now. Although host country contributions have increased by one-third since 1971, we are working to increase these by another 5 percent in 1974.

Fifth, Mr. Chairman, we will continue our emphasis on in-country

training. We believe that the quality of training is significantly enhanced by training volunteers in the environment in which they will eventually serve, rather than in the United States. In-country training is more relevant and realistic. It allows total immersion in the language and culture of the country and hastens the learning of both. It enables host ministries to participate fully in the planning and implementation of training and to further the partnership. Moreover, in-country training is one-third less expensive than training in the United States.

ACCOMPLISHMENTS OF PEACE CORPS

Mr. Chairman, as you have stated in the past, for any program to justify the expenditures of hard-earned tax dollars, it must be able to demonstrate that it has accomplished tangible results. In response to this, we have recently compiled a survey on various achievements of Peace Corps volunteers in the field. These accomplishments are far too numerous to list. However, Mr. Chairman, I would like to cite a few examples:

In El Salvador, two-volunteers have doubled the catch of a fishing cooperative from 80,000 to 170,000 tons this past year by training 21 men in marine fisheries techniques.

In Malaysia, one volunteer is developing mathematics and science materials for Malaysia's educational television unit. This material will be used by 86,000 primary and 418,000 secondary school students.

In a joint World Health Organization/Peace Corps program started in 1970 in Ethiopia, 14 volunteers working in conjunction with Ethiopian coworkers have detected 44,000 cases of smallpox, innoculated more than 6 million Ethiopians, and eradicated smallpox from 7 of Ethiopia's 14 provinces.

If you would like, Mr. Chairman, I can provide the entire survey to you for placement in the record.

FISCAL YEAR 1974 BUDGET REQUEST

At this point, I would like to turn to the budget request in more detail. As I said earlier, we are requesting $77 million—a $4 million reduction from our present budget. But, in fact, we will be making reductions substantially greater than the $4 million indicated in order to absorb unavoidable cost increases. The countries in which Peace Corps operates are today experiencing an average inflation rate of 7 percent. The budget that we are requesting absorbs the entire impact of that 7 percent. In addition, we now intend to absorb the full effect of the devaluation of the dollar. I would like to briefly summarize for you the steps we have taken to effect these reductions.

TRAINING

For training, Mr. Chairman, we are requesting an increase of $1.7 million. This increase is primarily the result of our plan to increase the number of new trainees entering in fiscal year 1974 by 731. These trainees account for approximately $1.6 million of the cost increase. We are also requesting an increase to expand the number of applicants attending a preinvitational staging. The preinvitational staging is the device designed to help us strengthen our selection procedures

to insure that the volunteers sent overseas are of the caliber necessary to meet the requirements of the program. This step accounts for $243,000 of the increase in training costs, but is consistent with our continuing effort to improve the overall quality of Peace Corps programs.

While increasing the number of trainees, we also plan to hold the cost per trainee constant. We will be able to do that because of our continued shift to in-country training.

As I stated earlier, in-country training saves money. In fiscal year 1970, when most of the training was in the United States, the average cost per trainee was $3,200. Had we continued to train in the United States, the average cost would be approximately $3,500. Instead, the cost per trainee has steadily decreased since fiscal year 1970 to the point where we are now estimating that it will be $2,210 dollars in fiscal year 1974.

There will also be a decrease of $201,000 in our college intern program. We are reducing the emphasis in this area, because we now feel we can obtain most of the skilled volunteers needed through the normal recruiting process.

VOLUNTEER COSTS

Volunteer allowances, transportation, and related expenses will be reduced $4.4 million below the fiscal year 1973 level. This primarily reflects a projected decrease in the number of volunteer man-years. The decrease in volunteer man-years in fiscal year 1974 is a residual effect of the small number of new trainees who were permitted to enter into the Peace Corps in fiscal year 1972. Since volunteers serve a total of 2 years, the man-years in any one fiscal year are a function of the trainees entering that fiscal year and in the two previous fiscal years. The full impact of the fiscal year 1972 shortage will be felt in fiscal year 1974. The second reason for the cut in volunteer expenses is our intention to hold the volunteer cost factors constant. Holding these constant will be no easy task, because our commitment to absorb the 7 percent inflation rate means that we will, in effect, be taking a 7 percent reduction.

We intend to accomplish this, however, by encouraging further host country contributions, by reducing supplies and equipment wherever possible, and by holding volunteer living allowances constant.

PROGRAM SUPPORT

In the program support activity, Mr. Chairman, we plan to reduce our fiscal year 1974 expenditures approximately $1.2 million. We will accomplish this through a general belt tightening across the board. There will be a redutcion in staff. There will be a reduction in the average salaries we pay our staff. And there will be a general reduction in all other nonsalaried costs. Taken together, these total more than $1 million.

These reductions will be offset by increases in only three categories. One of these is shared administrative support. As you know, the State Department provides the Peace Corps with administrative services for which we are obliged to pay. In the last few years, our bill for these services has increased approximately $400,000 each year. For fiscal year 1974, we expect this increase to be only $183,000. This represents a determined effort on the Peace Corps' part to reduce the required serv-

ices and a similar effort on the part of the State Department to reduce the cost of those services. There are also minor increases in travel associated with preinvitational stagings and overseas office rents.

In addition to reducing direct Peace Corps program support costs, the Peace Corps' contribution to ACTION-wide support will also be reduced. The entire agency will be holding the costs of recruitment, selection, and placement at substantially the same level, even though the number of applications and trainees increases. Other reductions totaling $1,377,000 are also planned in overall agencywide support.

In summary, Mr. Chairman, the budget we have presented to you is one which allows us to maintain the Peace Corps program at approximately the same level of volunteers and trainees, but for less money. We believe this is consistent with your stated desire to improve the cost effectiveness of all foreign assistance programs.

Mr. Chairman, this concludes my prepared statement. I would be happy to answer any questions that you or the other members of the committee may have.

Mr. PASSMAN. Thank you for your statements. We will insert the justification material in the record at this point.

[The material follows:]

INTRODUCTION

The funds requested in this budget presentation are for the Peace Corps, one of the volunteer programs of ACTION. ACTION was established under the reorganization authority granted to the President (Reorganization Plan No. 1 and Executive Order 11603), and includes the Peace Corps and several domestic volunteer programs--VISTA, University Year for ACTION, developmental and part-time efforts, Foster Grandparents, the Retired Senior Volunteer Program, and SCORE/ACE. Each of these programs operates under specific legislative authority described in the appropriate budget justification.

The primary reason for establishing ACTION was to create in one place a system of volunteer service by bringing together diverse volunteer programs and initiating new programs. Existing programs have benefited from the resulting cross-fertilization of program planning, execution, and evaluation, while new programs, such as University Year for ACTION, have been formulated based on the well-documented strengths of VISTA, the Peace Corps, and other programs. In addition to these program benefits, ACTION's creation has minimized costs by combining administrative functions which are more economically accomplished on a consolidated basis.

Funds for these programs are requested in two appropriations: (1) the Peace Corps, and (2) ACTION Domestic Programs. As noted above, the funds requested in this justification material are for the Peace Corps. Each of these appropriations includes funding for a share of ACTION consolidated administrative functions, such as volunteer recruitment, legal services, budgeting, accounting, and others. The portion of these costs assigned to the Peace Corps or to domestic programs is indicated in the justification. As in FY 1973, each appropriation's share of these administrative costs is based on the ratio of full-time personnel assigned to the Peace Corps versus full-time personnel assigned to domestic programs. This ratio is explained fully in the justification material.

To administer these vital programs, the Director of ACTION utilizes as "program managers" the Associate Director for International Operations for the Peace Corps and the Associate Director for Domestic and Anti-Poverty Operations for domestic programs. Providing support for these Associate Directors are:

- the Associate Director for Citizens Placement who manages the recruitment of volunteers;
- the Associate Director for Policy and Program Development who is responsible for new voluntary concepts and for planning and evaluation;

- o the Associate Director for Administration and Finance who is responsible for administrative functions;

- o various Assistant Directors covering such services as Legal Counsel, Public Affairs, Minority Affairs, Volunteer Liaison and others.

The Peace Corps organization provides for three regional directors (Africa, Latin America, and all other areas--North Africa, Near East, Asia and Pacific) with a number of countries in each region. Peace Corps programs are administered on a country-by-country basis.

Domestic programs are administered by regional offices located in the ten standard federal regions. Programs are administered in local communities within this regional structure.

The accomplishments of ACTION thus far include:

- o strengthening of the Peace Corps and VISTA by emphasizing the continuation and expansion of successful programs and the elimination of unsuccessful programs;

- o the development and carrying-out of the University Year for ACTION Program;

- o the administration of greatly expanded Foster Grandparent and Retired Senior Volunteer Programs;

- o management of these programs at the minimum essential cost level.

The budget request for these programs in FY 1974 is $169.4 million, as follows (FY 1973 is shown for comparison purposes):

($ in millions)

	FY 1973	FY 1974
Total (appropriations)	$175.1	$169.4
Peace Corps	81.0	77.0
Domestic Programs	94.1	92.4

These funds are intended to maintain programs essentially at existing levels, with emphasis to be placed on improving the quality of programs now in being. Consolidated administrative costs will continue at the minimum essential level; our request for this purpose is $1.4 million below the current FY 1973 level.

Our proposed funding will result in the following volunteer levels:

	End FY 1973	End FY 1974
Total	71,726	130,420
Peace Corps	5,824	5,974
Domestic Programs	65,902	124,446
(full-time)	(7,802)	(7,356)
(part-time)	(58,100)	(117,090)

Peace Corps, VISTA, and other ACTION volunteers support many and diverse programs in this country and abroad. With the approval of the Congress, this important work can continue in FY 1974.

PEACE CORPS, ACTION INTERNATIONAL PROGRAMS

For expenses necessary for ACTION to carry out the Peace Corps Act (75 Stat. 612), as amended. $77,001,000. (Reorganization Plan No. 1 of 1971; Executive Order 11603; additional authorizing legislation to be proposed).

Note: The appropriation for this account for 1973 had not been enacted at the time this budget was prepared. A temporary continuing resolution is in effect for the period from July 1, 1972 to June 30, 1973.

99-614 O - 73 - pt. 1 - 23

PEACE CORPS

	FY 1972 Actual 1/	FY 1973 Estimate 2/	FY 1974 Estimate
Activity 1 Training	$11,130	$13,143	$14,860
Activity 2 Volunteers	30,927	34,416	30,026
Activity 3 Program Support	32,980	33,283	32,115
(Peace Corps Share of Agency-wide Support)	(12,973)	(13,058)	(12,656)
PEACE CORPS - Total	$75,037	$80,842	$77,001

1/ Includes $2,600,000 allocation from Agency for International Development.

2/ Does not include $158,000 GSA transfer.

General Statement

A. Introduction

The Peace Corps was established in 1961 by Executive Order; subsequently the Peace Corps Act (75 Stat. 612) made it an independent agency. On July 1, 1971, this program was transferred to ACTION in accordance with Reorganization Plan No. 1 of 1971 and Executive Order 11603. An International Operations organization was established as a part of the new agency, ACTION, and assumed responsibility for the Peace Corps.

The Peace Corps fosters international goodwill by providing development assistance to interested countries on a person-to-person basis. Unique among United States overseas programs, the hallmarks of high motivation, self-sacrifice, and a spirit of innovation continue to characterize the 7,000 Peace Corps Volunteers serving in fifty-eight countries around the world today.

Congress gave the Peace Corps direction by defining three broad goals that are as important for the 1970's as they were in 1961. The goals strike a balance between development assistance and mutual international awareness by making available to host countries Americans willing to:

1. Help developing countries meet their needs for trained manpower.

2. Help promote a better understanding of the American people on the part of people served; and

3. Promote a better understanding of other people on the part of the American people.

B. The Peace Corps Meets Three Critical Needs Inexpensively

The goals set for the Peace Corps by Congress address three critical needs that will persist through the 1970's, and the Peace Corps helps meet those needs with considerably less expense than other U.S. overseas programs. The approximately $10,000 average cost per year of providing a Peace Corps volunteer to work at the middle levels of development is less than 25 percent of the total annual cost for the professional technicians or experts provided by the larger international development agencies. Although usually working at different levels of development, volunteer activities often supplement the efforts of the larger organizations.

1. Urgent Need for Trained Manpower in Developing Nations

The need for trained manpower overseas grows steadily. The problems of developing countries in combating poverty, illiteracy, hunger, and disease continue and are compounded by the population explosion. Gains in employment, agricultural production, housing, and health facilities are either overtaken by expanding populations or followed by secondary problems which slow the escape from the vicious circles of poverty. For example, the "Green Revolution" led to increased food production in some countries which then had to confront serious new problems in food distribution. These problems are particularly acute at the middle and grassroots level of development where Peace Corps volunteers are assigned.

It is commonly agreed that the gap between rich and poor nations continues to widen despite two decades of concerted efforts by leading developed nations. Yet several important lessons were learned during the 1960's about social and economic development which have direct bearing on the service the Peace Corps provides.

The first lesson was that transferring capital and Western technology alone were not enough to affect significantly the well being of the 2.0 billion poor people in the developing world. The social aspects of development problems must be considered along with economic factors before either type of progress can be achieved. The World Bank estimates that one billion people are still hungry or malnourished and that there are 100 million more adult illiterates today than there were 20 years ago. Some studies indicate that in those few developing countries that did

experience significant growth of GNP per capita, the distribution of income often left major portions of the populations poorer at the end of the past decade than at the beginning.

Another lesson was that for development to be meaningful to the populations involved, much more consideration would have to be given to social and human resource development. Large development agencies are including research and development of useful social indicators in their plans for the 1970's and are planning more broadly gauged attacks on the intertwined problems of poverty, illiteracy, hunger, and disease.

It has also been learned that all development efforts must proceed on a genuine partnership basis between donors and recipients as developing countries play a larger role in defining their own needs and useful indicators of progress.

By its very nature, as it has evolved since 1961, the Peace Corps has contributed to creating these approaches to socio-economic development. From the outset Peace Corps volunteers have been predominantly involved in education, agriculture, and health, with the primary mission of developing the human resources in these fields through creative partnerships with host countries.

2. Need to Perpetuate Good U.S. Image Abroad

Equally important to providing trained manpower is the need for the United States to perpetuate goodwill and friendship abroad. America's national image is enhanced in the developing nations. around the world where Peace Corps volunteers serve today. Not only do volunteers roll up their sleeves and train people to help themselves, but they live at the modest level of their counterparts, speak the local languages, and develop mutual respect in the process.

The Peace Corps has never comprised more than a small per cent of total United States economic assistance, yet it provides visible, trained manpower throughout 58 developing nations. Thirty-one of these countries receive no other U. S. bilateral technical assistance and the presence and impact of the United States is measured substantially in people-to-people terms by host governments. Volunteers live and work directly with the people at their level and are primarily located outside of capital cities. Consequently, Peace Corps volunteers represent a more positive image than many other Americans working or traveling overseas. Host countries continue to express their appreciation of the Peace Corps by requesting more volunteers and by communicating their gratitude both officially and unofficially.

3. Need to Provide Constructive Opportunities for Americans to Serve Abroad and Increase Their International Understanding

Peace Corps volunteers overseas represent a cross-section of American society geographically and in types of skill, experience,

age and academic training. Volunteers gain sensitivity to other customs and an appreciation for other societies while serving abroad. By the time they return to the United States, volunteers have usually grown in personal maturity and developed a broader view of the world. Of direct benefit to the United States is the fact that more than 75 percent of the nearly 50,000 returned Peace Corps volunteers have chosen service-oriented careers after their tours, primarily in the fields of education, government, international organizations, and foundations.

C. The Peace Corps Mission in the 1970's

To carry out its proposed program in FY 1974 and beyond, the Peace Corps will continue to emphasize the following major policies which have characterized FY 1973. Derived from more than a decade of experience, they have been found to be the most effective means of implementing the Peace Corps' goals.

Binationalism - Partnership with Host Countries. The relevance and stability of Peace Corps' programs overseas are reinforced by the policy of binationalism, which integrates Peace Corps projects into the goals and plans of each country. To avoid the pitfalls of a "donor-receiver" relationship, the Peace Corps staff overseas forego genuine partnerships with host countries by sharing responsibility for the programming, training, selection, and supervision of volunteers. To facilitate this process, 56% of permanent overseas staff will be local citizens in FY 1974.

Peace Corps volunteers are invited into the classrooms and villages of countries which feel that it is important that volunteers work in concert with local institutions towards nationally established goals. The genuine partnerships that evolve between the Peace Corps and host countries foster goodwill for the United States and increase the stability of Peace Corps programs overseas. Binationalism also assures that volunteers are placed in positions of maximum benefit to the host governments' development plans.

A recent report of the Senate Study Mission to Central and East Africa sponsored by the Senate Appropriations Committee highlighted the benefits of binationalism:

> "Another aspect of the Peace Corps' new directions which these African leaders particularly noted was the emphasis on binationalism, a policy of increasingly staffing the Corps with host country nationals. This has given the host countries a sense of genuine participation, and many of the leaders are coming to feel that the Peace Corps is as much theirs as ours".

Balanced Programming. The Peace Corps balances its programs overseas in two key respects. First, potential jobs are evaluated both for their impact on important social and economic development problems and the opportunity for the volunteers to have significant cross-

cultural experience with the people of the host countries. High impact jobs that afford little opportunity to live and work with local people are strongly discouraged as are jobs with high cross-cultural interaction but little contribution to development.

Second, while being responsive to the needs of the host countries, an effort is made to balance the jobs requiring highly skilled volunteers such as agronomists, lawyers, nurses, and mechanics with those jobs that can be handled by Americans with broad general abilities. There continues to be a strong need for liberal arts graduates who are highly motivated, adaptable, and innovative problem-solvers.

Peace Corps Uniqueness. The Peace Corps is unique among U.S. Government and other developmental agencies overseas. As the goals established by Congress indicate, the Peace Corps' mandate is to provide development assistance and create mutual understanding with neither emphasis leading to the exclusion of the other. Consequently, the Peace Corps has emphasized contributions to social and human needs in addition to economic development.

The result of this unique mandate which calls upon a cross-section of the American people is a form of development assistance characterized by vitality and a spirit of innovation. Peace Corps volunteers have a relatively short period of two years in which to accomplish the defined objectives of their assignment. At the same time, they have no vested interest in a career with either their host government or the Peace Corps, which enables them to be as innovative as possible.

In training and throughout their service, volunteers are also encouraged to engage in constructive secondary activities according to the needs of their communities. The tradition that Peace Corps volunteers are volunteers 24 hours a day still applies.

The following specific policies will continue to preserve the uniqueness of Peace Corps programs around the world:

1. To increase job effectiveness and cross-cultural opportunities, volunteers are required to live on subsistence allowances at the level of their counterparts, generally sacrificing the standard of living they would normally enjoy in the United States.

2. To encourage respect for and adherence to local laws and customs, volunteers are not granted diplomatic immunity. Strong policies on dress and social behavior are set and applied in conjunction with host country standards.

3. All Peace Corps volunteers must complete at least 300 to 350 hours of local language instruction, a requirement which is unique among international development agencies.

The Peace Corps is a government-to-government organization in its official programming, yet the volunteers operate on a people-to-people basis. When volunteers complete their tours, they leave behind a legacy of technical skills and an analytical approach to problem-solving that have been taught to host country people. Such skills have a "multiplier effect" as they are passed along to fellow countrymen.

Management Emphasis on Quality. A major focus of the Peace Corps' management during the mid 1970's will be a concentration on the quality, stability, and effectiveness of its programs. The planning mechanism in each Peace Corps country is being strengthened with the implementation of improved program and budgeting systems while attention continues to be paid to the relevance, structure, supervision, and support of current volunteer projects.

The Peace Corps will soon be implementing improved management systems to establish more uniform and efficient accountability. Methods used in the past have been very useful, but there is still room for improvement. It takes an extra degree of effort to assure uniformly high quality operations, and the Peace Corps plans to make the effort. To this end, the Peace Corps also plans expanding its evaluation capability through the implementation of new internal evaluation systems in FY 1974.

All of these efforts are designed to improve the organization's ability to allocate its resources efficiently, to provide the most effective programs wherever they are needed, and to increase the Peace Corps' internal and external accountability.

D. The Peace Corps Program

The Programming Process and Criteria. Planning volunteer assignments is a continual process in which overseas Peace Corps staff members work jointly with host country officials. Together they identify and assess the feasibility of a wide variety of potential jobs. The jobs must complement the developmental goals and plans of the country, have an institutional base which will provide support within the country, and allow the prospective volunteer to have good cross-cultural opportunities. Before giving final approval to a request and raising a country's expectations, Peace Corps headquarters reviews the proposal and determines the probable availability of applicants qualified to do the job. General determinations of "supply and demand" are made, and requests are approved accordingly. It takes approximately 9-13 months from the time of the original host country request until the volunteer, fully-trained, arrives at his job site to start work.

Who Are the Volunteers. Peace Corps volunteers of all ages come from every state in the Union with a variety of educational backgrounds and a diversity of experience. States producing the most volunteers are California, New York, Illinois, Pennsylvania and Ohio. The average age of volunteers is gradually increasing, and 25% of the volunteers are married.

Currently the average age of volunteers is 27½ years, up from an average age of 24 three years ago. This reflects the increase of volunteers over the age of 50 from 100 in 1970 to 300 today.

Sixty-seven percent of all volunteers serving today can be classified as having some specific kind of skill in health, education, the skilled trades, or one of the professions. Only 3.5 percent of all volunteers have no college education while more than .4 percent have M.S. or M.A. degrees. Registered nurses make up .5 percent of the volunteer force and .7 percent of the volunteers have doctorate or law degrees.

Where the Volunteers Serve. Peace Corps volunteers currently serve in 58 countries around the world. By the end of FY 1974, it is anticipated that five more countries will have asked for Peace Corps volunteers. A complete list of countries with associated volunteer numbers is contained in Appendix D. (pg. 5-7)

As a general policy, the Peace Corps will provide volunteers to those countries that have the need and desire for them and where the programming of jobs can meet standard Peace Corps criteria. The Peace Corps responds to legitimate requests in order to maximize opportunities for Americans to serve abroad, contribute to development, generate mutual understanding, and gain personally from the whole experience. However, today the Peace Corps will only go into a new country if it can be accomplished within existing ceilings on staff and with a minimum of additional expense. This usually means that such a project will be small and supported by the Peace Corps staff in a neighboring country.

Peace Corps Projects. Peace Corps volunteers serve host countries in 955 different projects in activities diversified to be as responsive as possible to the specific needs of each country. Projects are defined as one or more Peace Corps volunteers requested by a country to work toward a set of objectives for a two-year period. Since 1968 the number of projects in effect each year has increased despite decreases in staff, indicating an increasing responsiveness to development needs overseas. At the same time the average size of each project has become smaller as projects have become increasingly targeted to host country development needs and each volunteer programmed for maximum impact.

Number of Programs in Effect

	FY 1968	FY 1969	FY 1970	FY 1971	FY 1972	FY 197
Projects	409 1/	462 1/	530 1/	589	787	955

The Peace Corps groups volunteer projects into five functional program categories to facilitate an overview of trends. A sixth category covers those few which do not easily fit into the others.

1/ Calendar year figures

Distribution of Volunteers by Program Categories
(See Appendix C: Maps of Distribution of Peace Corps Programs by Country on page .)

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate
1. Agriculture & Rural Development...	25%	26%	27%
2. Business & Public Management.....	5%	5%	5%
3. Education.....	46%	43%	41%
4. Health.....	11%	12%	13%
5. Public Works & Urban Development..	8%	8%	8%
6. Other.....	5%	6%	6%
Total	100%	100%	100%

Peace Corps exercises its management of countries through three administrative regions: Africa, Latin America, and NANEAP (North Africa, Near East, Southern Asia, East Asia and the Pacific). A brief discussion of each program category summarized above will illustrate the primary activities of Peace Corps volunteers in each region.

1. Agriculture and Rural Development

	Percent of Worldwide Volunteers		
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate
AFRICA.....	8%	8%	9%
NANEAP.....	6%	7%	8%
LATIN AMERICA.....	11%	11%	10%
Total	25%	26%	27%

Many Peace Corps host countries continue to identify agriculture as their area of most urgent need. More than two-thirds of the people in the developing world make their living off the land at subsistence levels. Most host countries count heavily on agricultural produce for their position in world trade and the financing of their own development plans.

Peace Corps volunteers are requested to help facilitate the transition from predominantly traditional agricultural practices to more modern methods of planting, cultivation, harvesting, marketing, and nutrition. Volunteers in this program category are both agricultural teachers and extension agents. They advise local farmers and provide assistance to agricultural cooperatives. A relatively small number of volunteers assist the work of research stations and help train host country government personnel. Volunteer activities range from fisheries and forestry development to vocational agricultural instruction and agricultural economics.

2. Business and Public Management

	Percent of Worldwide Volunteers		
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate
AFRICA	1%	1%	1%
NANEAP	1%	1%	1%
LATIN AMERICA	3%	3%	3%
Total	5%	5%	5%

Although comprising a small percentage of all volunteer activities, a number of host countries request high impact and innovative projects in the public and private sectors. In an attempt to augment overall economic growth by balancing development of both sectors, volunteers are asked to strengthen small business advisory services and marketing boards as well as consumer and credit cooperatives. Some countries even ask for limited assistance in developing their own planning capabilities.

3. Education

	Percent of Worldwide Volunteers		
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate
AFRICA	18%	16%	15%
NANEAP	23%	22%	21%
LATIN AMERICA	5%	5%	5%
Total	46%	43%	41%

During the early days of the Peace Corps in the 1960's, most volunteers were asked to fill manpower shortages in the primary and secondary school systems around the world. This was particularly true in Africa which was just emerging from a long period of colonial rule during which little effort had been made to train local teachers.

Even in the 1970's the pressures of population growth continue to overtake progress made by building new classrooms and training host country teachers. Nevertheless, the trend has been for host countries to provide most of their own needs for staffing elementary schools.

Peace Corps volunteers continue to serve critical needs but at higher levels of academic education, with a small number teaching at host country universities. They are also asked to assist in broadening the educational opportunities for host country people by working in vocational education, teacher training institutions, physical education, and those arts likely to help people earn a livelihood. The Peace Corps also finds a continuing need in developing countries for volunteers to teach English as a second, or foreign language.

4. Health

	Percent of Worldwide Volunteers		
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate
AFRICA.....	3%	4%	4%
NANEAP.....	3%	3%	3%
LATIN AMERICA.....	5%	5%	6%
Total	11%	12%	13%

In many countries where the Peace Corps serves, 70 to 80 percent of all reported diseases are preventable. Diseases that are rare or non-existent in the western world still take huge tolls in the rest of the world. As a partial solution to the problems of preventable disease, there is a critical need to promulgate modern sanitation and nutritional practices at the grassroots levels of society.

Health leaders of developing countries are handicapped primarily by severe shortages of professional and paramedical manpower available to deliver services and conduct public health education. A wide variety of Peace Corps volunteers help meet needs in rural clinics, nurse training centers, hospitals, and disease control projects. Peace Corps volunteers teach health and nutrition in schools and through national public health campaigns.

5. Public Works and Urban Development

	Percent of Worldwide Volunteers		
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate
AFRICA.....	2%	3%	3%
NANEAP.....	2%	2%	2%
LATIN AMERICA.....	4%	3%	3%
Total	8%	8%	8%

As developing nations confront problems of education, agriculture, and health, they must also contend with the rapid worldwide trend toward urbanization. Public utility services must keep pace with the expansion of urban areas as must the provision of adequate housing.

The Peace Corps provides volunteers to help train mechanics and other skilled tradesmen, and to assist road building, well-digging, and housing construction projects. A small number of architects and urban planners are periodically programmed into special, high-impact projects.

6. Other Projects

	Percent of Worldwide Volunteers		
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate
AFRICA	1%	1%	1%
NANEAP	3%	4%	4%
LATIN AMERICA	1%	1%	1%
Total	5%	6%	6%

Less than six percent of Peace Corps volunteer activities do not fall under the previous program categories. "Other" projects respond to unique requests in fields like library or museum science, and youth programs. When necessary, projects also are mounted in response to emergencies such as famines, typhoons, and earthquakes.

PEACE CORPS, ACTION INTERNATIONAL PROGRAMS

Summary of FY 1974 Budget Request

	($000)		
	FY 1972 Actual 1/	FY 1973 Estimate 2/	FY 1974 Estimate
Peace Corps			
Activity 1-Training			
A. Direct Training	$ 9,565	$11,114	$12,730
B. Trainee Travel	425	523	582
C. Intern Programs	676	517	316
D. PRIST	464	989	1,232
Subtotal, Activity 1	$11,130	$13,143	$14,860
Activity 2-Volunteers			
A. International Travel	$ 5,679	$ 6,370	$ 6,726
B. Allowances	11,863	14,427	12,643
C. Other Volunteer Support	4,633	5,274	3,468
D. Dependent Support	1,157	682	333
E. Readjustment Allowance	7,595	7,663	6,856
Subtotal, Activity 2	$30,927	$34,416	$30,026
Activity 3-Program Support			
A. Staff	$16,307	$15,858	$14,909
B. Shared Administrative Support	3,600	4,017	4,200
C. Multilateral Grants	100	350	350
D. Peace Corps Share of Agency-Wide Support	12,973	13,058	12,656
Subtotal, Activity 3	$32,980	$33,283	$32,115
Total Peace Corps	$75,037	$80,842	$77,001
Trainee Input	3,608	5,029	5,760
Volunteer Manyears	6,632	6,882	5,950
Staff	749	749	741

1/ Includes $2,600,000 allocation from Agency for International Development.

2/ Excludes $158,000 transferred to General Services Administration.

SUMMARY OF MAJOR CHANGES

For FY 1974 there is a net decrease of $3,841,000 from the FY 1973 funding level. The major changes from FY 1973 to FY 1974 are as follows:

		($000)
FY 1973 Estimate		$81,000
Less transfer to General Services Administration		-$ 158
Total		$80,842
Activity 1-Training	+$1,717	
The increase in training funds will support an increase in trainee-input and additional PRISTees above FY 1973 levels.		
Activity 2-Volunteers	-$4,390	
The decrease in volunteer funds is based on a reduction of volunteer man-years below the FY 1973 level and reduced supply, equipment, and vehicle costs.		
Activity 3-Program Support	-$1,168	
The decrease in program support funds is based on a reduction of eight positions, reduced program support operating expenses and Peace Corps share of agency-wide support.		
FY 1974 Estimate		$77,001

Budget Activity 1
TRAINING

	($000) FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate
A. Direct Training	$ 9,565	$11,114	$12,730
B. Trainee Travel	425	523	582
C. Intern Programs	676	517	316
D. Pre-Invitational Staging (PRIST)	464	989	1,232
Total	$11,130	$13,143	$14,860
Trainee Input	3,608	5,029	5,760

General Statement

All Peace Corps volunteers are given special training prior to their assignment abroad. In almost all instances this training includes language study, technical skills development, and cross-cultural orientation. Pre-service training in these areas is imperative to the volunteers' ability to make an early adjustment to, and become effective in, their volunteer roles.

Until the last two years, most Peace Corps training was in the United States. By the end of FY 1973 between 80-85 percent of all training will occur either in the country where the trainees will later serve as volunteers or in a nearby country overseas. In FY 1974 the total in-country training will continue to increase. The advantages of this approach justify its growing use.

(1) In-country training makes the training more relevant since the trainees can see firsthand the actual environment in which they will live and work.

(2) In-country training permits maximum participation by the requesting host country government and therefore gives them a realistic partnership in the preparation of trainees for future service.

(3) In-country training permits the Peace Corps field staff to participate more directly in the planning and implementation of training.

(4) In-country training is usually less expensive than training in the U.S. Many of the administrative and management costs that are contracted out in U.S. training are executed by the regular country Peace Corps staff for in-country training.

There are two distinct steps an applicant must follow to become a volunteer:

(1) He must attend a staging in the U.S. prior to beginning training. The staging may take different forms. Approximately 40 percent of the applicants will attend a medical/admin. staging to complete necessary routine matters before being accepted into training. The other 60 percent of the applicants will attend a pre-invitational staging (PRIST). A PRIST serves a more comprehensive function than the medical/admin. staging. Applicants go through an intense three-day screening to learn about Peace Corps and the project in which they are invited to work and to be evaluated with respect to their suitability for the particular project.

(2) Those applicants who have successfully completed the preliminary steps, must be trained in the host country or, in some cases, at a central third country location.

Volunteers are usually trained in groups. They prepare themselves under the supervision of a training staff which in most instances consists of a project director and language, technical, and cross-cultural instructors. Language instructors are usually host country nationals while former Peace Corps volunteers often comprise the technical and cross-cultural staffs. Maximum effort is made to make the training conform to what the trainees will actually need in order to do their jobs effectively and relate to their communities in a productive manner. Although the length of training varies from program to program, it averages twelve weeks in length. All programs are intensive and average 60 hours of structured training per week. This permits a training program of approximately 700 hours. Experience has demonstrated that this is the amount of training required to provide trainees with essential cultural skills, a capability in a technical area, and sufficiency in the local language. A typical training program of twelve weeks would be as follows:

High intensity language instruction	-	350 hours
Technical training/orientation	-	250 hours
Cross-cultural training	-	100 hours
Total		700 hours

Budget Activity 1A
DIRECT TRAINING

	($000)			
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Direct Training	$9,565	$11,114	$12,730	+1,616

Direct training expenses include the direct costs of the actual training and trainee support. Training expenses are the costs of providing instruction to trainees during their intensive twelve-week training period. This covers the cost of facilities, which include classrooms, language equipment, and other fixed overhead. It also covers the costs of instruction, including salaries and benefits of trainers, clerical support, and other variable expenses associated with actual training. The bulk of the training costs (70%) occurs in the instruction portion. Five percent is allotted to development of a specific curriculum to meet the objectives of the training; 25% is allotted to facilities and equipment.

In addition, direct training expenses cover all other costs of maintaining trainees during their training period. These include the cost of trainee materials (books, language tapes, manuals), food, housing, local transportation, medical services, and dependent support.

If training is to take place in the U.S. or at a central regional location, Peace Corps negotiates a comprehensive contract with a university or a private firm to direct all facets of the training. If training is to take place in the host country, training may be contracted or directed by Peace Corps personnel and host country nationals. In addition, personal service contracts are let to individuals with particular expertise in a relevant field.

Changes in Direct Training Costs

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Number of Trainees	3,608	5,029	5,760	+ 731
Average Direct Training Cost per Trainee 1/	X$2,651	X$ 2,210	X$ 2,210	--
Total ($000)	$9,565	$11,114	$12,730	+1,616

1/ To the nearest dollar

The estimated increase of $1,616 from FY 1973 to FY 1974 is due solely to the increase of 731 trainees. The average cost per trainee is expected to remain constant between FY 1973 and FY 1974.

Budget Activity 1B
TRAINEE TRAVEL

	($000)			
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Trainee Travel	$425	$523	$582	+$59

Trainee travel is the cost of transporting applicants who have been invited to a training program from their home of record to the staging site in the United States. At the staging site preliminary administrative matters, such as passport papers, and medical exams are handled as applicants officially become trainees. Staging takes place immediately prior to beginning training and trainees go directly from the staging site to the training program. For applicants who have not gone through a PRIST, the staging will be the first contact they have had with Peace Corps personnel. Staging sites normally are continental U.S. areas closest to the foreign region where training will take place.

Changes in Trainee Travel

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Number of Trainees	3,608	5,029	5,760	+ 731
Average Travel Cost per Trainee 1/	X$ 118	X$ 104	X$ 101	-$ 3
Total ($000)	$ 425	$ 523	$ 582	+$ 59

1/ To the nearest dollar

The estimated increase of $59,000 between FY 1973 and FY 1974 is caused by a 731 trainee increase, offset by a $3 per trip decrease. Proportionally, the 731 trainee increase generates a $74,000 increase in total, but is reduced because the per trip cost decreased a total of approximately $15,000. The $3 per trip decrease is planned because cost estimates based on the location of staging sites and applicant geographical mix indicate a lower per trip average in FY 1974.

Budget Activity 1C
INTERN PROGRAMS

	($000)			
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Intern Programs	$676	$517	$316	-$201

Intern programs are the means by which Peace Corps recruits and trains volunteers in those areas where the supply of qualified applicants does not meet the demand from host countries. The programs are designed primarily to attract and train qualified agriculturalists, nurses, certified teachers of math, science, and vocational arts. These programs continue to be extremely important to fulfilling the Peace Corps' mandate of responding to host country manpower needs while offering service opportunities to all Americans.

The Peace Corps enters into contractual agreements with universities producing the specific type of graduates needed in the developing countries requesting volunteers. The universities help recruit and train qualified Peace Corps applicants either during the senior year of undergraduate work or during the first year of graduate study. In addition to weekly seminars oriented to their prospective assignment, Peace Corps interns have the opportunity to adopt their own course schedules to better prepare themselves for service overseas. Most universities in turn allow academic credit for successful completion of Peace Corps tours in their students' chosen fields. In one particular type of intern program, the Peace Corps shares the cost of training those Teacher Corps volunteers who will serve overseas as Peace Corps volunteers upon graduating from the Teacher Corps.

The cost of intern programs includes on-campus recruiting, pre-invitational staging, training staff and materials, medical coverage, and overhead.

Changes in Intern Programs

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Number of interns	376	323	211	- 112
Average cost per intern	X$1,800	X$1,602	X$1,500	-$102
Total ($000)	$ 676	$ 517	$ 316	-$201

The estimated decrease of $201,000 between FY 1973 and FY 1974 is attributable both to the planned decrease in the number of interns from 323 to 211 and the decrease of $102 per intern in the average cost per intern. The decrease in the number of interns is planned because of a decision to place greater emphasis on normal recruitment and training channels to fill host-country requests for specialized volunteers. However, certain skilled volunteers remain accessable primarily through the intern program. The $102 per intern cost reduction from FY 1973 to FY 1974 is anticipated because of the effort currently underway to evaluate and identify for continuation only the most efficient, least expensive training organizations. Proportionally, 90% ($180,000) of the decrease is accounted for by the reduced number of interns and 10% ($21,000) is due to the per intern cost decrease.

Budget Activity 1D
PRE-INVITATIONAL STAGING (PRIST)

	($000)			
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
PRIST	$464	$989	$1,232	+$243

The Pre-Invitational Staging (PRIST) is an intensive three-day job interview program to which potential Peace Corps trainees are invited. At least one month prior to the beginning of a training program the PRIST takes place at a central point in the United States to provide a two-way suitability screening. The potential trainees are given detailed firsthand information on the Peace Corps, the country which is requesting their service, and the exact nature of the jobs to be performed. With this information, the applicants assess their own suitability and motivation to join the Peace Corps before severing their ties in the United States and entering a training program overseas. At the same time, the Peace Corps staff has an opportunity to assess the potential trainees' qualifications for Peace Corps service overseas in particular jobs. Individual interviews, group discussions, and consultation with experienced psychologists all contribute to the final decisions to serve formal invitations to suitable applicants.

The PRIST has two primary purposes. The thoroughness of the suitability screening helps to minimize early termination during training. With most training for FY 1974 scheduled to take place overseas, minimizing training attrition leads to cost savings directly related to trainee return airfares. The PRIST also has a strong qualitative impact on the efficiency of Peace Corps programming. In addition to enabling a quality control for the invitation of applicants, the lead-time before training provided by a PRIST allows for adjustments in training designs overseas to accommodate the exact levels of skill and experience that the trainees will possess at the start of training. Training programs, as a consequence are more efficient. The PRIST also re-enforces the Peace Corps policy of bi-nationalism by involving host country officials at the outset in the selection of volunteers who will be serving in their countries.

PRIST costs include roundtrip airfare for the potential trainee from their home of record to the PRIST site, room and board for three days, meeting facilities, and consultant psychologists.

Changes in PRIST Cost

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Number of PRISTees	1,600	3,410	4,320	+ 910
Average cost per PRISTee 1/	X$ 290	X$ 290	X$ 285	-$ 5
Total ($000)	$ 464	$ 989	$1,232	+$243

1/ To the nearest dollar

The estimated increase of $243,000 from FY 1973 to FY 1974 is caused by the large increase (910) in potential trainees who will attend a PRIST. This increase is offset by the $5 per PRISTee decrease in FY 1974. The increase in PRISTees results from a policy decision to PRIST approximately 60% of the 7,000 applicants in FY 1974 compared to approximately 50% of 6,550 applicants in FY 1973. This decision was made because of the preference shown by host country governments for PRISTed trainees. The savings of $5 per PRISTee is anticipated because the increased number of FY 1974 PRISTees permits savings with respect to fixed overhead cost items, such as facilities and staff. Proportionally, the $243,000 increase is due to a $265,000 increase in PRISTees, offset by a $22,000 decrease in the cost per PRISTee.

Budget Activity 2
VOLUNTEERS

	($000)		
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate
A. International Travel	$ 5,679	$ 6,370	$ 6,726
B. Allowances	11,863	14,427	12,643
C. Other Volunteer Support	4,633	5,274	3,468
D. Dependent Support	1,157	682	333
E. Readjustment Allowance	7,595	7,663	6,856
Total	$30,927	$34,416	$30,026
Volunteer Manyears	6,632	6,882	5,950

General Statement

After an applicant has been recruited and trained for a specific job request abroad, he is then sworn in as a volunteer and is assigned to the host country institution requesting his services. The volunteer works directly with that institution and coordinates his activities directly with the host country officials. The term of service of volunteers is normally two years.

There are a number of basic expenses which are required to support the volunteer in the field. These expenses can be separated into five general categories: travel to and from the host country of assignment, subsistence and leave allowances, other volunteer support costs, support of dependent children, and readjustment allowance. Included in "other volunteer support costs" are medical services, in-country travel, volunteer supplies, vehicles, and miscellaneous costs. Most of these expenses vary among volunteers depending on the host country cost of living and the requirements of the volunteer's work.

In determining what amounts are appropriate for each volunteer, the overriding consideration is that the volunteer live at a level equivalent to that of his host country co-workers. In almost all instances this represents a standard of living substantially below what the volunteer has been accustomed to in the United States.

Budget Activity 2A
INTERNATIONAL TRAVEL

($000)

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Travel to Host Country	$2,205	$3,073	$3,519	+$446
Travel from Host Country	2,813	2,386	2,483	+ 97
Extendee Travel	588	601	479	- 122
Emergency Leave Travel	73	310	245	- 65
Total	$5,679	$6,370	$6,726	+$356

International travel has four components: the transportation of trainees and volunteers to their country of assignment, the return travel of volunteers completing their service or terminating early, round-trip fare to the U.S. for volunteers who are extending their two-year tour of service by at least one year, and round-trip fare to the U.S. for volunteer emergencies.

Changes in Travel to Host Country

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Number of trips	3,608	5,029	5,760	+ 731
Average cost per trip 1/	X$ 611	X$ 611	X$ 611	--
Total ($000)	$2,205	$3,073	$3,519	+$446

1/ To the nearest dollar

The estimated increase of $446,000 between FY 1973 and FY 1974 is accounted for solely by the increase in number of trips, as the average cost per trip is anticipated to stay the same. Travel to host country is a function of the trainee input which has increased by 731 from FY 1973 to FY 1974.

Changes in Travel from Host Country

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Number of trips	4,341	3,848	4,005	+ 157
Average cost per trip 1/	X$ 648	X$ 620	X$ 620	--
Total ($000)	$2,813	$2,386	$2,483	+$ 97

1/ To the nearest dollar

The estimated increase of $97,000 between FY 1973 and FY 1974 is caused solely by the increase of 157 in the number of trips from host countries. The average cost per trip remains the same in FY 1974 as in FY 1973. Travel from host countries is related to the number of volunteers completing service or terminating early. Travel varies from year to year following primarily the training patterns of the prior two years. Based on historical patterns, early terminees are estimated at the rate of 1.5% of volunteers on board per month.

Changes in Extendee Travel

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Number of trips	454	467	372	- 95
Average cost per trip 1/	X$1,296	X$1,288	X$1,288	--
Total ($000)	$ 588	$ 601	$ 479	-$122

1/ To the nearest dollar

The estimated decrease of $122,000 between FY 1973 and FY 1974 is caused solely by the anticipated decrease of 95 in the number of extendees. The cost per trip is expected to remain the same between FY 1973 and FY 1974. The number of volunteers who are able to extend is a function of a specific host country request for his extension and a request to extend by the volunteer.

Changes in Emergency Leave Travel

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Number of trips	56	241	190	- 51
Average cost per trip 1/	X$1,296	X$1,288	X$1,288	--
Total ($000)	$ 73	$ 310	$ 245	-$ 65

1/ To the nearest dollar

The estimated decrease of $65,000 between FY 1973 and FY 1974 is caused by the anticipated decrease of 51 in the total number of emergency trips. The decrease is planned because the number of volunteer manyears are expected to decrease, while the rate of emergencies per manyear is assumed to remain approximately the same.

Budget Activity 2B
ALLOWANCES

	($000)			
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Living Allowance	$ 9,784	$12,211	$10,555	-$1,656
Settling-In Allowance	642	734	803	+ 69
Leave Allowance	1,437	1,482	1,285	- 197
Total	$11,863	$14,427	$12,643	-$1,784

Volunteers in service receive three payments classified as allowances. The living allowance is paid monthly to each volunteer for subsistence level support covering food, housing, clothing, and minor incidental expenses. The living allowance varies from country to country and within countries according to the minimal cost of living in the region where the volunteer lives and works.

The settling-in allowance is a one-time payment at the beginning of each volunteer's tour for the purpose of buying such items as dishes, cooking utensils, and bedding. The amount of each allowance reflects local cost variations for these items.

The leave allowance is paid to each volunteer at the rate of two days for each month of service. Volunteers receive $9 for each day of leave for a total of 24 days, or $216 per year. With this leave volunteers have the opportunity to travel within the country of assignment or to nearby countries in order to broaden their international awareness and understanding.

Changes in Living Allowance

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Volunteer manyears	6,632	6,882	5,950	- 932
Average cost per volunteer manyear 1/	X$1,475	X$ 1,774	X$ 1,774	--
Total ($000)	$9,784	$12,211	$10,555	-$1,656

1/ To the nearest dollar

Changes in Settling-In Allowance

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Volunteer arrivals	3,620	3,947	4,330	+ 383
Average cost of volunteer arrivals 1/	X$ 177	X$ 186	X$ 186	--
Total ($000	$ 642	$ 734	$ 803	+$ 69

1/ To the nearest dollar

Changes in Leave Allowance

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Volunteer manyears	6,632	6,882	5,950	- 932
Average cost per volunteer manyear 1/	X$ 217	X$ 216	X$ 216	--
Total ($000)	$1,437	$1,482	$1,285	-$197

1/ To the nearest dollar

The same average cost per volunteer manyear will be maintained for each of the allowances as in FY 1973. Both the living allowance and the leave allowance totals will decrease in FY 1974 primarily because of the 932 manyear decrease from FY 1973. These decreases are offset by an expected increase of $69,000 in settling-in allowance. This increase is the result of the planned increase of 383 volunteer arrivals during FY 1974.

Budget Activity 2C
OTHER VOLUNTEER SUPPORT

($000)

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Medical Supplies and Services	$1,557	$1,631	$1,434	-$ 197
In-Country Travel	501	551	488	- 63
Volunteer Supplies and Equipment	357	436	119	- 317
Vehicles (Purchased)	15	416	86	- 330
Vehicles (Shipped)	8	48	10	- 38
Bureau of Employment Compensation payments	693	962	997	+ 35
Miscellaneous Volunteer Costs	1,502	1,230	334	- 896
Total	$4,633	$5,274	$3,468	-$1,806

Other Volunteer Support covers most categories of expense in support of a volunteer in the field. These expenses are incurred by the volunteer in the course of his work, and are not paid routinely.

Medical Supplies and Services are provided to all volunteers. The cost of this medical care varies from country to country, but typically includes doctors' fees, hospital costs, medical supplies, dental care, and emergency evacuation travel to hospitals. Qualified host country doctors and facilities are utilized to the maximum extent possible in order to minimize costs.

Changes in Medical Supplies and Services

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Volunteer manyears	6,632	6,882	5,950	- 932
Average cost per volunteer manyear 1/	X$ 235	X$ 237	X$ 241	+ 4
Total ($000)	$1,557	$1,631	$1,434	-$197

1/ To the nearest dollar

The anticipated decrease of $197,000 between FY 1973 and FY 1974 is due to the 932 manyear decrease expected for FY 1974, offset by a $4 per manyear increase in the cost of medical services. The average cost per manyear is expected to increase primarily because of the rising medical costs being experienced in most Peace Corps countries.

In-Country Travel costs cover a volunteer's travel within country of assignment for purposes related to his work. Nearly all jobs performed by volunteers require travel at some time. The actual expenses are reimbursed to the volunteers as travel is performed.

Changes in In-Country Travel

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Volunteer manyears	6,632	6,882	5,950	- 932
Average cost per volunteer manyear 1/	X$ 76	X$ 80	X$ 82	+ 2
Total ($000)	$ 501	$ 551	$ 488	-$ 63

1/ To the nearest dollar

The anticipated decrease of $63,000 between FY 1973 and FY 1974 is due to the decrease in the number of manyears expected for FY 1974, offset by a $2 per manyear increase in the cost of in-country travel. The $2 increase is expected because of rising airfares in some Peace Corps countries.

Volunteer Supplies and Equipment costs cover the supplies and equipment required by volunteers in their job assignments. Peace Corps plans to fund only those supplies that cannot be procured from the host country government. These materials vary according to the country and job being performed, but typically include textbooks, teaching materials, and hand tools.

Changes in Volunteer Supplies and Equipment

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Volunteer manyears	6,632	6,882	5,950	- 932
Average cost per volunteer manyear 1/	X$ 54	X$ 63	X$ 20	- 43
Total ($000)	$ 357	$ 436	$ 119	-$317

1/ To the nearest dollar

The anticipated decrease of $317,000 between FY 1973 and FY 1974 is caused by both a $43 decrease in the average cost per volunteer manyear and a 932 manyear decrease.

The decrease in the average cost per manyear is the result of a policy decision by Peace Corps to encourage host countries to provide a greater proportion of job-related supplies and materials by reducing our share. Proportionally, the decrease in average cost per manyear accounts for $257,000 (81%) of the decrease and the decrease in manyears accounts for $60,000 (19%).

Vehicle Purchases and Shipment costs cover the procurement of vehicles for volunteer use. Approval for vehicle purchase occurs only when the host country is unable to provide the necessary transportation and the vehicle is vital to implementing a project. Approximately half of the vehicles are purchased in the United States and the cost of shipment must be borne by the Peace Corps.

Changes in Vehicle Purchases

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Number of purchases	5	130	27	- 103
Average cost per vehicle 1/	X$3,000	X$3,200	X$3,200	--
Total ($000)	$ 15	$ 416	$ 86	-$330

1/ To the nearest dollar

Changes in Vehicle Shipment

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Number of shipments	10	60	13	- 47
Average cost per shipment 1/	X$800	X$800	X$800	--
Total ($000)	$ 8	$ 48	$ 10	-$38

1/ To the nearest dollar

Following a very restrictive policy of procuring only emergency vehicles in FY 1972, it was necessary to replace a large number of vehicles in FY 1973. In FY 1974 a normal replacement policy will be resumed.

The anticipated decrease in vehicle purchases between FY 1973 and FY 1974 of $330,000 and the corresponding decrease in shipment costs of $38,000 is the result of these decisions.

The Bureau of Employment Compensation adjudicates all cases requiring compensation of Peace Corps volunteers under the Federal Employees Compensation Act. At the end of each fiscal year, ACTION is required to reimburse the Department of Labor for all compensation dispensed. The estimates of $962,000 for FY 1973 and $997,000 for FY 1974 are based on data received from the Department of Labor.

Miscellaneous Volunteer Costs fund a variety of small requirements for the support of the volunteers. These costs include volunteer household items, printing, vehicle maintenance and repair, and before FY 1974, rental of housing not funded in the living allowance.

Miscellaneous Volunteer Costs

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Volunteer manyears	6,632	6,882	5,950	- 932
Average cost per volunteer manyear 1/	X$ 226	X$ 179	X$ 56	- 123
Total ($000)	$1,502	$1,230	$ 334	-$896

1/ To the nearest dollar

The anticipated decrease of $896,000 between FY 1973 and FY 1974 is the result both of a 932 volunteer manyear decrease and a $123 per volunteer manyear decrease. The $123 per volunteer decrease results from the absorbing of the volunteer household items under the current settling-in allowance and volunteer rental housing under the current living allowance. Proportionally, the 932 manyear decrease accounts for 19% ($166,000) of the total and the $123 per volunteer cost decrease accounts for 81% ($730,000).

Budget Activity 2D

DEPENDENT SUPPORT

	($000)			
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Dependent Support	$1,157	$682	$333	-$349

To obtain volunteers to fill certain scarce-skill jobs, it is necessary to accept married volunteers with children. The cost of supporting these children is included in this category. For each child, funding is provided for international and in-country travel, food and lodging, clothing, medical care, education (if applicable), and other incidental expenses.

Changes in Dependent Support

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Number of children	612	361	175	- 186
Average cost per child 1/	X$1,890	X$1,890	X$1,900	+ 10
Total ($000)	$1,157	$ 682	$ 333	-$349

1/ To the nearest dollar

The anticipated decrease of $349,000 between FY 1973 and FY 1974 is the result of a reduction of 196 in the number of children, offset by a $10 per child increase in average cost. The 196 child decrease is planned because of a policy decision to accept only families with two or fewer children. The $10 per child increase in dependent costs is anticipated because of cost increases in medical care, education, and some travel costs.

99-614 O - 73 - pt. 1 - 25

Budget Activity 2E
READJUSTMENT ALLOWANCE

($000)

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Readjustment Allowance	$7,595	$7,663	$6,856	-$807

As provided in the Peace Corps Act, each regular volunteer receives $75 for each month of service while each leader volunteer receives $125 for each month. These amounts are deposited in a Treasury Account each month and accumulated for payment to the volunteer upon completion of service. In addition, the Peace Corps contributes payments as prescribed under the Federal Insurance Contribution Act (FICA). This allowance provides the returning volunteer with living costs until he secures a job or returns to school. This amount has not changed since the inception of the Peace Corps in 1961.

Changes in Readjustment Allowance

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Volunteer and trainee manyears	7,854	7,924	7,090	- 834
Average cost per volunteer and trainee manyear 1/	X$ 967	X$ 967	X$ 967	--
Total ($000)	$7,595	$7,663	$6,856	-$807

1/ To the nearest dollar

The anticipated decrease of $807,000 is due to the decrease of 932 volunteer man-years and an increase of 98 trainee man-years expected between FY 1973 and FY 1974.

Budget Activity 3
PROGRAM SUPPORT

	($000) FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
A. International Operations Staff Costs	$16,307	$15,858	$14,909	-$ 949
B. Shared Administrative Support	3,600	4,017	4,200	+ 183
C. Multilateral Grants	100	350	350	--
D. Peace Corps Share of Agency-wide Support 1/	12,973	13,058	12,656	- 402
Total	$32,980	$33,283	$32,115	-$1,168

1/ Justification for these amounts is included in the section entitled Agency-wide Support beginning on page 4-1.

General Statement

Peace Corps (International Operations) staff is needed to develop and maintain effective programs abroad. Overseas staff begin detailed planning for prospective volunteer jobs approximately one year before the volunteers complete training and begin work. Thorough discussions are held with appropriate host country officials to assess the need for the requested volunteers and the viability of the jobs. When agreement is reached between the host government and resident Peace Corps staff, necessary requests are prepared detailing the job requirements and establishing the required volunteers' qualifications.

In addition to a variety of other planning responsibilities, field staff must provide administrative and technical support to volunteers already on the job and supervise the increasing number of in-country training programs. All staff, including program, administrative, medical, and clerical personnel, must have diplomatic as well as technical abilities. Whether staff members are host country nationals or Americans, they are in daily contact with host country officials, volunteers, American Embassy staff, and host country citizens. Additional post support is provided through the State Department's Shared Administrative Support System (SAS).

Washington staff reviews and approves all program and administrative requests from the field. They also provide technical, programmatic, and administrative support to field staff and volunteers, work with host country embassies in Washington, develop policy, and provide general direction to overseas programming. Washington staff help plan training programs, develop training models, and conduct stagings prior to commencement of training. The additional supporting functions performed in Washington such as recruiting, accounting, public affairs, and general counsel are provided by ACTION support offices.

Budget Activity 3A
INTERNATIONAL OPERATIONS STAFF COSTS

($000)

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Washington Staff				
Salaries	$ 2,606	$ 2,716	$ 2,622	-$ 94
Benefits	212	221	213	- 8
Travel	412	396	338	- 58
Contracts	568	561	241	- 320
Other operating costs	80	42	40	- 2
Washington Staff, Subtotal	$ 3,878	$ 3,936	$ 3,454	-$482
Overseas Staff				
Salaries	$ 7,430	$ 6,829	$ 6,693	-$136
Benefits	372	341	334	- 7
Travel	1,375	1,421	1,459	+ 38
Education allowance	186	158	135	- 23
Staff housing	1,058	950	860	- 90
Office rents, utilities	634	830	860	+ 30
Maintenance, general services	474	516	426	- 90
Other operating costs	900	877	688	- 189
Overseas Staff, Subtotal	$12,429	$11,922	$11,455	-$467
Total Staff, Washington and Overseas	$16,307	$15,858	$14,909	-$949
Planned Positions				
U.S. Staff, Washington	164	164	162	- 2
U.S. Staff, Overseas	270	270	254	- 16
Foreign Service Locals	315	315	325	+ 10
Total Permanent Staff	749	749	741	- 8

Changes in Washington Staff - Salaries and Benefits

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Salaries and Benefits ($000)	$2,818	$2,937	$2,835	-$102
Planned Positions	164	164	162	- 2

Salaries and benefits for Washington Staff are expected to decrease between FY 1973 and FY 1974 by $102,000. $94,000 of the $102,000 decrease is a total salary decrease based on a reduction of two in the number of planned positions and on an average salary decrease of $376 per employee. The $376 per employee average salary decrease is the consequence of the effort by Peace Corps to reduce the average grade of its staff. An $8,000 decrease in benefits is directly related to the total salary decrease, as benefits are estimated to be 8.12% of salaries.

Changes in Washington Staff - Travel

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
International Travel				
Number of trips	250	217	170	- 47
Average cost per trip 1/	X$1,648	X$1,636	X$1,635	- 1
Subtotal ($000)	$ 412	$ 355	$ 278	-$ 77
Domestic Travel				
Number of trips	--	200	300	+ 100
Average cost per trip 1/	--	X$ 205	X$ 200	-$
Subtotal ($000)	--	$ 41	$ 60	+$ 19
Total, International and Domestic Travel ($000)	$ 412	$ 396	$ 338	-$ 58

1/ To the nearest dollar

International travel enables Washington staff to visit posts to gain a firsthand understanding of overseas problems, and to provide technical support. Domestic travel is for Washington staff attendance

at PRIST's. The decline in funds required for travel in FY 1974 reflects an increase of 100 in the number of domestic trips and a decrease of 47 in the number of international trips. Domestic trips are increasing in FY 1974 because of the planned 910 increase in the number of PRISTees. The average cost per trip, in the case of Washington staff, includes both airfare and per diem allowances.

Changes in Washington Staff - Contracts

	($000)			
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Contracts	$568	$561	$241	-$320

Contracts enable the Peace Corps to acquire expertise outside the regular staff for special temporary projects. Contractual costs are expected to decrease by $320,000 between FY 1973 and FY 1974 because of reduced special requirements.

Changes in Washington Staff - Other Operating Costs

	($000)			
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Washington staff - other operating costs	$80	$42	$40	-$2

Other operating expenses contains two components: transportation of things and staff supplies and equipment. Transportation costs are expected to remain at the $12,000 level in both FY 1973 and FY 1974. Supplies and equipment costs are expected to decrease from $30,000 in FY 1973 to $28,000 in FY 1974.

Changes in Overseas Staff - Salaries and Benefits

Salaries and Benefits

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
U.S. Citizens	$5,609	$5,200	$5,003	-$197
Foreign Nationals	1,342	1,314	1,421	+ 107
Personal Service Contracts	851	656	603	- 53
Total	$7,802	$7,170	$7,027	-$143

Planned Positions

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
U.S. Citizens	270	270	254	-16
Foreign Nationals	315	315	325	+10
Total, Permanent Positions Overseas	585	585	579	- 6
Personal Service Contracts	240	208	208	--

Salaries and benefits for staff overseas include compensation to U.S. Citizens, foreign nationals, and temporary employees under Personal Service Contracts (PSC).

Total salaries and benefits for overseas staff are expected to decrease by $143,000 between FY 1973 and FY 1974. This total salaries and benefits decrease includes a $197,000 decrease for U.S. Citizens overseas, a $107,000 increase for Foreign Nationals, and a $53,000 decrease for Personal Service Contracts. The $197,000 decrease for U.S. Citizens overseas reflects a planned reduction of 16 positions. This includes a reallocation of 10 positions presently filled with U.S. Citizens to be filled with foreign nationals. The transfer of positions from U.S. Citizens to foreign nationals furthers the Peace Corps policy of using host country nationals whenever possible. The increase of $107,000 in foreign national salaries and benefits reflects the 10 additional foreign national positions and an average salary increase of $246 per foreign national employee. The foreign national salary increase is based on wage surveys conducted by American embassies at post. Total salaries under Personal Service Contracts are expected to decrease by $53,000 reflecting an anticipated decrease in the average length of contracts.

Changes in Overseas Staff - Travel

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Staff Assignment-Return				
Number of trips	134	142	135	- 7
Average cost per trip	X$5,000	X$5,000	X$5,000	--
Subtotal ($000)	$ 670	$ 710	$ 675	-$34
International Travel (Operational, PRIST/Staging)				
Number of trips	337	340	383	+ 43
Average cost per trip 1/	X$1,646	X$1,638	X$1,638	--
Subtotal ($000)	$ 555	$ 557	$ 628	+$71
In-Country Travel				
Overseas professional staff	375	375	375	--
Average annual cost per professional staff 1/	X$ 400	X$ 411	X$ 416	+ 5
Subtotal ($000)	$ 150	$ 154	$ 156	+$ 2
Total, International and In-Country Travel ($000)	$1,375	$1,421	$1,459	+$38

1/ To the nearest dollar

Overseas international travel consists of staff assignment/return travel, operational travel, and PRIST's/staging travel. Assignment/return travel results from staff reaching their five-year limitation as well as normal turnover. Most operational travel is for regional or sub-regional conferences, consultation with Washington, and exploration of programming/training alternatives in new countries. PRIST/staging travel is travel of overseas staff to particpate in PRIST's or stagings. Overseas staff travel also includes the in-country travel of post staff to visit volunteer work sites.

Average cost per trip for staff assignment/return travel includes airfare for an average family of four, and shipment and storage of household goods. Average cost per trip for international operational and PRIST/staging travel includes round-trip airfare and per diem allowances.

Overseas travel is increasing in FY 1974 because of the increase of 910 PRISTees and the increased participation of overseas staff in PRIST's.

Changes in Overseas Staff - Education Allowance

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Number of dependents	510	510	435	- 75
Average cost per dependent 1/	X$365	X$310	X$310	--
Total ($000)	$186	$158	$135	-$23

1/ To the nearest dollar

The education allowance is given to American staff overseas with school-age children. The 254 Americans overseas in FY 1974 will have approximately 435 school-age children. The estimated decrease of $123,000 in education allowance between FY 1973 and FY 1974 reflects an anticipated decrease of 75 in the number of school-age dependents.

Changes in Overseas Staff - Housing

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Number of U.S. staff	270	270	254	- 16
Average cost per staff 1/	X$3,918	X$3,519	X$3,386	-$133
Total ($000)	$1,058	$ 950	$ 860	-$ 90

1/ To the nearest dollar

Overseas staff housing includes both quarter's allowance (a direct payment to the staff member) and residential rents and utilities (Peace Corps pays the landlord directly). The anticipated $90,000 decrease reflects a reduction of 16 in the number of staff and a $133 per U.S. employee decrease in housing costs. The average cost per employee reduction is a consequence of a continuing shift of payments to a standard quarters allowance from the variable residential rents and utilities.

Changes in Office Rents, Communications, and Utilities

	($000)			
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Office rents, communications, and utilities	$634	$830	$860	+$30

Office rents, communications, and utilities cover the expense of maintaining overseas staff offices. They are expected to increase by $30,000 in FY 1974 because of increases in number of countries.

Changes in Overseas Maintenance - General Services Costs

	($000)			
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Maintenance - General Service Costs	$474	$516	$426	-$90

Maintenance and general services costs include janitorial, watchman, maintenance, repair, and upkeep services for overseas facilities and equipment. Costs are expected to decrease by $90,000 based on current estimates of fixed contractual costs.

Changes in Overseas Staff - Other Operating Costs

	($000)			
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Overseas staff - other operating costs	$900	$877	$688	-$189

Other operating costs include supplies, equipment, and transportation of things. A decrease of $189,000 between FY 1973 and FY 1974 is anticipated based on efforts to encourage host country governments to meet supply and equipment needs and based on a reduction of 16 U.S. citizen positions and consequent transportation savings. Supplies and equipment are expected to cost $500,000 in FY 1974 and transportation of things $188,000.

Budget Activity 3B
SHARED ADMINISTRATIVE SUPPORT

	($000)			
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Shared Administrative Support (SAS)	$3,600	$4,017	$4,200	+$183

The Peace Corps and other federal agencies overseas have contracted with the U.S. Department of State to purchase various administrative services in support of their overseas staff. The State Department through Shared Administrative Support provides the Peace Corps with services such as budgeting and accounting, communications, security, purchasing, and a variety of other logistical services. The exact services provided vary among countries, and are negotiated by the overseas Peace Corps staff and the U.S. Embassy in each country.

SAS is only one means of providing this support in overseas locations. As with every other part of program support, SAS is being reviewed to ascertain whether it still provides the best and least costly method of procuring this support.

An increase of $183,000 in total SAS costs is anticipated in FY 1974 based on a determination by the Peace Corps to work with the State Department to hold cost increases to a minimum.

Budget Activity 3C
MULTILATERAL GRANTS

	($000)			
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Multilateral Grants	$100	$350	$350	--

Congress approved Title III of the Peace Corps Act in 1963 to encourage the development, and participation in, international voluntary service programs. In FY 1973, the Peace Corps was involved in four international programs. The amount dispersed to help support these programs was $350,000. In FY 1974, the Peace Corps is requesting the same level of funding.

The U. N. Volunteer Service Program commenced operations in January 1971 following authorization by the U. N. General Assembly. At present, volunteers serve in 8 countries. Nineteen additional countries have expressed interest in the program. UNV anticipates a total of 260 volunteers in the field by the end of FY 1973. Contributions to the fund are made by the member nations and by private organizations.

The International Secretariat for Volunteer Services provides support and assistance to national and international volunteer service programs. It serves as an information and experience clearinghouse and encourages the formation of new volunteer service programs. It recently has begun to mount multi-national volunteer teams. It estimates a minimum of 100 volunteers will be serving in FY 1974.

International Volunteer Services (IVS) is a private non-profit organization which provides volunteers to developing countries. Recruitment is worldwide. IVS currently has 15 volunteers in the field and plans additional projects in Africa and the Middle East during FY 1974.

The Joint Volunteer Committee of Ghana is composed of Canada, U.S., Germany, and Britain. It was formed in FY 1972 to develop multi-national projects in Ghana.

ACTION Agency-Wide Support Costs

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Funded by:				
1. Peace Corps, ACTION International Programs	$12,973	$13,058	$12,656	-$ 402
2. Operating Expenses, Domestic Programs	6,713	7,413	6,439	- 974
Total	$19,686	$20,471	$19,095	-$1,376

Introduction

ACTION is organized so that certain administrative functions which support the Peace Corps and domestic volunteer programs are conducted on a consolidated basis and financed jointly by the program appropriations. These administrative functions are referred to as ACTION agency-wide support. Examples of agency-wide support are volunteer recruitment and related costs, new program development and planning, and such staff efforts as legal counsel, personnel management, minority affairs, budget and accounting.

Because these are consolidated functions, there is no precise means of specifically dividing these costs between the Peace Corps and domestic programs. Therefore, the total of these costs is divided statistically, as was concurred in by the Congress in FY 1973. For FY 1974, the Peace Corps budget request includes $12.7 million for this purpose.

The formula for determining the contribution of each appropriation is based on workload as expressed by the ratio of full-time staff employed by the Peace Corps versus the full-time staff employed by the domestic programs. This is the same formula utilized in FY 1972 and FY 1973 and has the advantage of being readily understandable and, at the same time, administratively uncomplicated.

The method utilized to allocate costs by appropriation for FY 1974 is explained in the following table.

Allocation of Agency-Wide Support Costs
by Appropriation (FY 1974)
($000)

FY 1974 permanent positions	
Peace Corps appropriation	741
Domestic Programs appropriation	377
Total Peace Corps and Domestic positions	1,118
Peace Corps positions as percentage of 1,118	66.3%
Domestic positions as percentage of 1,118	33.7%
FY 1974 ACTION Agency-wide Support costs	$19,095
Peace Corps appropriation share ($19,095 X 66.3%)	12,656
Domestic appropriation share ($19,095 X 33.7%)	6,439

Agency-wide support funds are programmed in the following categories in FY 1974:

	($000)			
	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Recruitment, Selection and Placement (volunteers)	$ 7,080	$ 7,214	$ 7,197	-$ 17
Policy and Program Development	986	767	467	- 300
Management and Administration	11,620	12,490	11,431	- 1,059
Total	$19,686	$20,471	$19,095	-$1,376

A description of these activities and justification of the FY 1974 funding request are provided in the following pages.

RECRUITMENT, SELECTION, AND PLACEMENT

($000)

	FY 1972 Actual		FY 1973 Estimate		FY 1974 Estimate		Increase or Decrease	
	Pos.	Amount	Pos.	Amount	Pos.	Amount	Pos.	Amount
Personnel Compensation and benefits	226	$4,655	223	$4,624	223	$4,552	---	-$72
Other expenses	---	2,425	---	2,590	---	2,645	---	+ 55
Total	226	$7,080	223	$7,214	223	$7,197	---	-$17

General Statement

Recruitment, selection, and placement of volunteers is conducted by the Office of Citizens Placement to insure that a sufficient number of well-qualified volunteers is available for volunteer programs on a timely basis. This function includes the identification of potential volunteers, processing of applications, matching of volunteers skills with program requirement, and related tasks.

To accomplish this task, the Office of Citizens Placement is organized into a Washington headquarters office and regional recruitment offices in Boston, Atlanta, Chicago, and San Francisco. Supporting the regional offices are area offices to insure that recruitment efforts are centered nearest the sources of potential volunteers. Functions emphasized in headquarters are the overall direction of the recruiting effort, processing and recordkeeping of applications, and the placement of potential volunteers in specific Peace Corps, VISTA, and other programs for which they are qualified.

Prior to the creation of ACTION, these tasks were performed independently for each volunteer service activity by the then responsible federal agency. Thus, the merger of volunteer programs has allowed interchange of applicants among the various volunteer programs and has resulted in a single, more streamlined and economical structure for identifying, processing and placing volunteers.

Budget Justification

	FY 1972 Actual	FY 1973 Estimate	FY 1974 Estimate	Increase or Decrease
Volunteer applicants	51,000	73,000	83,000	+10,000
Trainees	7,992	11,448	12,172	+ 724

An effective recruitment effort is a mandatory element in the overall success of volunteer programs. This is especially true when highly skilled volunteers are being sought, as for the Peace Corps, VISTA, and Cooperative Programs. For FY 1974, the Office of Citizens Placement will continue to recruit well-qualified volunteers to meet the program needs detailed in the Peace Corps and Domestic appropriations requests.

Budget requirements for recruitment, selection, and placement are based primarily on anticipated levels of volunteer applicants and trainees as reflected above. In FY 1974, the Office of Citizens Placement will be assuming a larger role in (1) the recruitment of elderly volunteers for ACTION programs, (2) assisting membership drives for SCORE/ACE chapters, and (3) increased participation in locating volunteers for cooperative and developmental programs. In addition, the Office of Citizens Placement's responsibilities for the University Year for ACTION (UYA) program will increase as the number of UYA trainees increases in FY 1974.

Other workload factors supporting the FY 1974 request include increased minority recruitment activity to enable selection of volunteers from the broadest possible base, bringing more varied and potentially more pertinent backgrounds to Peace Corps, VISTA, and other programs. Also, six additional area recruiting offices will be established, thus providing for continuing recruitment efforts in the country's top metropolitan markets and intensifying recruitment of potential volunteers with agricultural skills currently in heavy demand by the Peace Corps. These recruitment efforts are mandatory if FY 1974 program goals are to be met.

Funds requested for recruitment, selection and placement activities in FY 1974 are $7,197,000, a decrease of $17 thousand compared to the FY 1973 level of $7,214,000. In terms of the economies realized from merging the various volunteer programs, it is estimated that these same recruitment efforts would have required funds in the amount of $13,068,200 had not ACTION been created to combine these programs. Thus, in FY 1974 alone, consolidated recruitment offers a savings of approximately $5.8 million compared with the resources required if each program conducted separate recruitment efforts.

Included in the FY 1974 estimate is a decrease of $72 thousand for personnel compensation and benefits due to efforts to reduce average grade and average salary. The increase of $55 thousand for other expenses provides for increased minority advertising as previously mentioned, for increased application printing and related recruitment materials, and for an increased amount of classified advertising which has proven to be successful as a means of recruiting hard-to-find skills at relatively modest costs.

POLICY AND PROGRAM DEVELOPMENT

($000)

	FY 1972 Actual		FY 1973 Estimate		FY 1974 Estimate		Increase or Decrease	
	Pos.	Amount	Pos.	Amount	Pos.	Amount	Pos.	Amount
Personnel Compensation and benefits	23	$585	7	$140	7	$140	--	$ --
Other expenses	--	401	--	627	--	327	--	- 300
Total	23a/	$986	7	$767	7	$467	--	-$300

a/ Includes 14 positions supporting domestic programs transferred to Operating Expenses, Domestic Programs in FY 1973 and FY 1974.

General Statement

New program initiatives are the responsibility of the Office of Policy and Program Development. This office is also responsible for agency planning and broad evaluation of new voluntary concepts. Once a new program has passed the development phase and has demonstrated its feasibility through sufficient operating experience, it is transferred to the Peace Corps or domestic programs area for subsequent management.

New concepts in voluntary action are necessary to solve anti-poverty and related problems and to utilize available resources in the person of willing volunteers of all ages. This office develops the means of applying these resources to help solve known problems in a cost-effective manner. Using in-house staff, consultation and research, plans for new programs are developed, and broad evaluations of voluntary concepts are conducted. Based on past success with the University Year for ACTION program developed by this office, resources programmed for these purposes represent a modest investment in terms of the results achieved. This office has developed the cooperative programs concept which has high potential to spur the growth of voluntary action.

Budget Justification

$467,000 is requested for FY 1974. Of this amount, an estimated $300,000 will be devoted to contracts for program research, development, planning, and evaluation. The remaining funds will be utilized for staff salaries and benefits and for travel. The funds requested represent the minimum amount necessary to conduct a meaningful program.

99-614 O - 73 - pt. 1 - 26

MANAGEMENT AND ADMINISTRATION

($000)

	FY 1972 Actual		FY 1973 Estimate		FY 1974 Estimate		Increase or Decrease	
	Pos.	Amount	Pos.	Amount	Pos.	Amount	Pos.	Amount
Personnel compensation and benefits	329	$ 6,402	331	$ 6,611	339	$ 6,158	+8	-$453
Other expenses	---	5,218	---	5,879	---	5,273	--	- 606
Total	329	$11,620	331	$12,490	339	$11,431	+8	-$1,059

General Statement

Management and Administration includes traditional staff and related administrative services which are mandatory to efficient execution of volunteer programs. Staff services provided include legal counsel, public, legislative and minority affairs, internal audit, staff recruitment, assistance for volunteers ending service, and the immediate office of the agency director. Other services provided for are management analysis, financial, procurement and personnel management, staff training, and accounting, computer and administrative services.

These funds are utilized to provide essential and necessary management and administrative services in two categories: staff offices and administration and finance.

A listing of staff offices and a brief description of their functions follow:

(1) Legal Counsel - provides legal services especially with respect to legislative and volunteer matters.

(2) Public Affairs - directs advertising programs for volunteer recruitment and provides liaison with all communications channels.

(3) Congressional Affairs - provides legislative liaison services with the Congress.

(4) Minority Affairs - is responsible for directing the agency's equal employment opportunity programs and also provides assistance in minority recruiting of staff and volunteers.

(5) Internal Audit - provides intra-agency audit services, especially emphasizing improved administrative procedures. The office reports to the agency director for maximum effectiveness.

(6) Staff Recruitment - provides recruitment services necessary for filling senior level positions in the agency.

(7) Voluntary Action Liaison - provides intercommunication with other public and private volunteer organizations and career counseling and information on job opportunities to volunteers ending their tours of service.

(8) Office of the Director - includes the agency director and deputy and immediate staff.

Administrative and Financial functions budgeted are:

(1) Management Analysis - provides comparative and other types of analyses on substantive matters of importance within the agency.

(2) Personnel - does the majority of the agency's staff recruiting administers the merit promotion program, and accomplishes other personnel functions.

(3) Employee Development and Training - provides orientation and other generalized and specialized training for the Washington and regional staffs.

(4) Procurement - accomplishes the contracting and granting of funds to private sources.

(5) Budget - provides the necessary services to formulate, present, and execute ACTION's financial program.

(6) Accounting - is responsible for domestic payroll functions and all fiscal record keeping, including staff and volunteers.

(7) Computer Services - are provided to assure accurate and timely volunteer, financial, and personnel records.

(8) Administrative Services - takes in a broad range of activities including printing, mailing, duplicating, property management, telephone services, and transportation.

All administrative and financial functions listed are accomplished under the direction of the Associate Director for Administration and Finance.

Budget Justification

$11.4 million is requested for Management and Administration in FY 1974. This amount is $1.1 million below the FY 1973 estimate and reflects a continuing effort to minimize resources programmed for other than direct volunteer costs.

The funding request provides for a decrease of $453 thousand for personnel compensation and benefits. This decrease is based on a lower level of intermittent and temporary employment, reduced overtime requirements and reduced costs due to a decreasing employee average grade. Lower costs in these areas are partially offset by an increase of eight positions resulting from assumption at ACTION headquarters of the VISTA volunteer payroll, formerly accomplished by the Army Finance Center, Indianapolis, Indiana.

"Other expenses" are requested at a level $606 thousand less than FY 1973. The major items included in this category are postal fees and mailing services, computer operations, telephone services, printing, and staff travel. The reduction in FY 1974 results primarily from the acquisition at ACTION headquarters of the VISTA volunteer payroll system. Amounts for this purpose were previously provided to the Army utilizing a contractual arrangement and were budgeted under "other expenses" in FY 1973. The remainder of the reduction results from decreased requirements for public affairs, background investigations, and training for ACTION staff.

APPENDIX A: Peace Corps Statement of Authorizations and Appropriations FY 1962 - FY 1974
($000)

Fiscal Year	Original Authority & Budget Request	Amended Budget	Authorized	Appropriated (Including Reappropriation)	Appropriation Transfers To GSA	Allocation from AID	Obligated as of June 30	Unobligated as of June 30	Reappropriated
1962	$40,000	$---	$ 40,000	$ 30,000	$ ---	$ ---	$ 29,496	$ 504	$ ---
1963	63,750	---	63,750	59,000	444	---	54,692	3,864	3,864

Peace Corps Share of ACTION Support	12,656
Total	$77,001

1/ Possible new countries in FY 1974 are Gabon, Seychelles in Africa and Cook Islands and Gilbert-Ellice Islands in the South Pacific.

2/ Administrative categories for internal use.

3/ Peace Corps terminated its program in Uganda in September of 1972.

4/ South Pacific Commission has its headquarters in New Caledonia.

Mr. PASSMAN. We would like to place in the record at this point some statistics on the request. I believe in the continuing resolution for 1973 $81 million was provided. Your estimate for fiscal year 1974 is $77,001,000; is that correct, sir?

Mr. HESS. Yes.

Mr. PASSMAN. Did you have any funds impounded or placed in budgetary reserve from the continuing resolution amount for fiscal year 1973?

Mr. HESS. No, sir; we did not.

Mr. PASSMAN. You are being allowed to obligate it all?

Mr. HESS. Yes.

BIOGRAPHIES

Mr. PASSMAN. We might insert in the record at this point the biographies of Mr. Hess and Mr. Howe.

[The information follows:]

WALTER C. HOWE, JR., DEPUTY DIRECTOR OF ACTION

Born March 2, 1934, in Portland, Oregon, Walter Charles Howe, Jr., most recently served as Director of the Office of Program Planning and Fiscal Management in the Office of Washington Governor Daniel J. Evans.

Appointed to this position in 1969, Mr. Howe was responsible for the central management of the government of the State of Washington, and his duties included direct supervision of the following governmental divisions: fiscal management; state planning; accounting; management services; data processing; planning and coordination; information systems. Additional responsibilities included the chairmanship of the Governor's Drug Abuse Task Force; Governor's Insurance Advisory Committee and the Washington Management Improvement Council.

From 1967 to 1969 Mr. Howe was Director of the Central Budget Agency of the State of Washington. This agency was later merged with several divisions of the State Planning and Community Affairs Agency to form the Office of Program Planning and Fiscal Management which Mr. Howe was later selected to administer.

As Legal Assistant to Governor Evans from 1965 to 1967, Mr. Howe advised the Governor on all legal matters relating to state government administration. Responsible for program development and legislative liaison and analysis, he served as executive staff liaison to all State of Washington human resource agencies.

Before entering public service, Mr. Howe from 1962 to 1965 engaged in the private practice of law with the Seattle firm of Holman, Mickelwait, Marion, Black & Perkins (now Perkins, Cole, Stone, Olsen & Williams).

Mr. Howe was graduated with honors from the University of Washington in 1956 with a BA degree in business administration. Winner of the Outstanding Law Graduate award, Mr. Howe received his LLB in 1962 from the University of Washington Law School. Prior to law school he had served for three years in the U.S. Air Force where he attained the rank of first lieutenant.

Mr. Howe is married to the former Theodora Brainschweiger, and they have two sons.

DONALD K. HESS, ASSOCIATE DIRECTOR OF ACTION FOR INTERNATIONAL OPERATIONS

Donald K. Hess was born in Lancaster County, Pa., in 1930. In 1952, he was graduated from Franklin and Marshall, Lancaster, Pa., and he completed his graduate work at the Maxwell School of Citizenship and Public Affairs, Syracuse University, in 1953.

He began his government career with the Atomic Energy Commission in 1953. With the launching of Sputnik in 1957, he was asked to assist in establishing and operating the Advance Research Projects Agency.

In 1966, Mr. Hess was appointed Associate Director of Community Action

Programs in the Office of Economic Opportunity, and was named a member of the Federal Government's Model Cities Steering Committee.

In April 1970, Mr. Hess was named Director of the Peace Corps in Korea where he lived with his family for two years until his appointment by the President as Associate Director for International Operations, ACTION. In this position, he is Director of the Peace Corps, which has about 7,000 Volunteers operating in 58 countries. He is also responsible for the U.S. volunteer operations with the United Nations Volunteer program and with other worldwide volunteer operations in which the United States is a participant.

Mr. PASSMAN. Let me yield to Mr. Roush at this time.

Mr. ROUSH. I have nothing, Mr. Chairman.

Mr. PASSMAN. Mr. Bevill, we are continuing our examination on the foreign aid budget requests. The spigot this afternoon is that of the Peace Corps. I will be happy to yield to you at this time.

Mr. BEVILL. Thank you, Mr. Chairman.

How much is it you are requesting at this time?

Mr. HESS. For fiscal year 1974 we are requesting $77 million.

Mr. BEVILL. And how does that compare with your request last year?

Mr. HESS. For fiscal year 1973 we requested $88 million; however we are under a continuing resolution of $81 million.

Mr. BEVILL. $4 million less this year?

Mr. HESS. That is correct.

Mr. BEVILL. How many personnel do you have on the payroll?

Mr. HESS. At this time, Mr. Congressman, we have 741 employees in the Peace Corps.

Mr. BEVILL. And what do you anticipate in the way of personnel reductions or increases for 1974?

Mr. HESS. For 1974, Mr. Congressman, we are anticipating a reduction of eight employees.

BENEFITS FROM PEACE CORPS

Mr. BEVILL. How would you describe the advantages and the benefits that the American taxpayers receive when we appropriate $77 million to the Peace Corps?

Mr. HESS. I think the benefits are many. For one thing, there are the benefits that accrue to those people in the countries where we serve, in terms of manpower training that we are providing to meet the needs in those countries.

A second benefit is that volunteers who serve in the Peace Corps become much better acquainted with the problems in foreign countries, familiar with the cultures of those countries, and are therefore, we feel, able to put America in a little bit better perspective in the world.

Third, Mr. Congressman, benefits accrue to the people in those countries, who associate on a daily basis with Peace Corps volunteers and gain a much better familiarity with Americans, who we are, how we think, and get to know us from perhaps a different perspective than from, say, some other Americans whom they might meet from time to time.

Mr. BEVILL. That is all I have. Thank you.

EXTENT OF AMERICA'S FINANCIAL PROBLEMS

Mr. PASSMAN. We are all American taxpayers. We know you are just as dedicated to your assignment as I am to mine, but I am of the opinion that in the future Members of Congress and personnel of the executive branch are going to have to work a little closer together to bring under control this wild spending spree that we have been on for about 25 years. I don't think you quarrel with that statement, do you?

Mr. HESS. No, sir.

Mr. PASSMAN. This is good for the record.

The U.S. trade deficit was the worst in its history in 1972. The actual trade deficit was $6,400 million. The 1971 trade deficit which was the first trade deficit that this country had had since 1888, was $2 billion. We have had some programs all over the world and all over the country labeled "Good" until we have spent so far in excess of our revenue that we have created inflation, which must be plowed back into the commodity, and has priced the United States out of the world market. Otherwise, I don't think we would have been running these trade deficits, so it is something that we all have to deal with.

We notice our balance-of-payments deficit in 1972 was $13,800 million, when measured on a net liquidity basis. This compares to a 1971 payment deficit of $22 billion. It has been estimated that dollar holdings abroad, that are due not today or tomorrow but were due several months ago, are $80 billion, not some bills, but actual dollars that foreign governments and foreign nationals are holding after they have met their commitments to commerce. They have accumulated an $80 billion surplus of American dollars.

A good many individuals are running from these dollars. In some places of the world now if you walk up with dollars the hotel clerk won't accept dollars in payment for your bill. You are familiar with this, I am sure. They are asking these people to discount the dollars. Many, many holders of these dollars are now exchanging them at a very substantial discount, for the German mark, the Swiss franc, the French franc, and the Japanese yen.

Gentlemen, it is rather embarrassing. We all share this embarrassment together, but it simply means that we can no longer continue trying to be everything to everybody, everywhere on borrowed money and at the expense of unborn generations. We are nickeling and diming the American people to death. You just can't take out of the economy as much money as some people want, to fund all these programs. So by working together maybe we can cut it down, because we are all responsible Americans.

When I came here over 26 years ago, we had a public debt of $159 billion. From that period, the subsequent 26 years happened to be the most prosperous period in the history of America, and the greatest income era in the history of America, but nevertheless we have pushed our public debt up from $159 billion to $455 billion. This is just the borrowed money part of it. The interest alone is now running at $66 million per day. At least this is something for us to look at.

I think you agree with me that basically an individual's first duty is to his own family, and as we think of ourselves as Americans, our

first duty is to the programs in our own country, whether it is the Post Office Department, the Department of the Interior or Defense. You agree, do you not, that our first responsibility is to our own country?

Mr. HESS. Yes, sir.

Mr. PASSMAN. I would hope so. It follows that on these aid programs that we started, we had to fund them on borrowed money, did we not? Isn't that a statement of fact?

Mr. HESS. Yes.

Mr. PASSMAN. I want you to know that I appreciate very much that very frank statement. When we work together like this, we can always accomplish much more. Of course we know that we have spent, since the end of World War II and since we started the foreign-aid program, all pieces of it, a net of about $250 billion. When we take the net expenditures plus the interest we paid on what we borrowed to give away, the amount is just about the difference between the $159 billion public debt we owed when I came here and the $455 billion public debt today.

I am not a lecturer. I would starve to death trying to lecture for a living, but I do know something about the foreign-aid program. You are responsible people. We must work together, even though it pinches in places. We have been so anxious to be Santa Claus to all nations of the world until it got so bad in 1968 we recruited some specialists to analyze the foreign exchange credits of all recipients of foreign aid. We found that many of these countries had created substantial surpluses in their foreign exchange account. When this was discovered, we called in the black satchel man, the strong arm man, and said, "Now you go out and see how much of this money you can borrow." Just one example. They arrived in Thailand, where we had a very substantial AID program still going on. We tried to borrow a quarter of a billion dollars from Thailand. They said, "No." They finally agreed to make us a $100 million loan at 6 percent, repayable in 4½ years. This is Thailand, a so-called underdeveloped country, which had a billion dollar credit surplus in the foreign exchange account. We borrowed $100 million. That is due on July 2 of this year. Then we are going to have to borrow it from somewhere else to pay them.

COST OF FOREIGN ASSISTANCE

For the Peace Corps, since its inception, the Congress has provided $1,064,614,000. From here on until the end of time our Government is going to have to raise $60 million every year to pay for the money we borrowed to spend on the Peace Corps. You see it through different eyes, when you consider these statistics. It is not just $1 billion. It is a question from here on to the end of time, as long as you have a public debt, we are going to have to borrow this $60 million every year to pay the interest on the $1 billion we have spent in the Peace Corps. These are some of the things this committee must deal with. We certainly hope in our examination you will take that into account. I don't believe any of you gentlemen would want us to represent you, if we didn't scrutinize all of these requests. I am sorry if I have imparted a wrong image at times, in trying to do a creditable job for the taxpayer. Some-

times people question my philosophy. First I am an American. It causes me no pain to support Mr. Nixon. I think he is a great President. I don't agree with him in every instance. He doesn't embrace all of my philosophy, I don't embrace all of his philosophy, but I have a lot of respect for the man. I am not criticizing the gentleman because he is trying to cut back on expenditures.

But I am a bit disappointed that in foreign aid this year, like all other years, they didn't impound a dime. It is a fantastic figure. When you look at the grand total it is over $18 billion. They have not impounded one dime. We certainly hope that before we finish our hearings we will find out why.

We will say nothing to embarrass you purposely, but we are trying to do a creditable job and to get spending programs under this committee under control, hoping that other committees will do likewise. We hope sooner or later, we will start operating this big and great Government of ours on what we take in rather than what we take in plus what we can borrow.

Finally this year, even after Mr. Nixon impounded over $8 billion, we are still going to have a budget deficit of $27.9 billion. It is rather fantastic, isn't it?

Mr. HOWE. Mr. Chairman, if I may, I would just like to observe that while neither Mr. Hess nor I have appeared before your committee before, we have a very great respect for the tremendously difficult job you have, and will do our level best to respond to the searching inquiries you make of us.

Mr. PASSMAN. I don't want you to just respond. I want you, if you will, to cooperate and help make reductions. I assume you know Dr. Hannah's formula, and I love him for it. He is a great gentleman. He said, "Mr. Chairman, there is an asking price and a taking price." So let's finish the hearings and look at the asking price and we will arrive at the taking price later. We hope you share Dr. Hannah's philosophy, and on that basis, we can proceed and possibly start off good friends and wind up good friends. Mr. Shriver.

REPORT OF HOUSE FOREIGN AFFAIRS COMMITTEE

Mr. SHRIVER. Thank you, Mr. Chairman.

I notice, Mr. Howe, in the statement that the Foreign Affairs Committee recently sent two of its staff members overseas to personally examine volunteer programs. The committee report, entitled "The Peace Corps in the 1970's," contains constructive suggestions for improving the effectiveness of your program. Would you put in the record some of the high points of that report.

[The information follows:]

The staff of the House Foreign Affairs Committee in their report entitled "The Peace Corps in the 1970's," concluded, after visits to Thailand, Korea, the Philippines, and Malaysia in November 1972, that the "Peace Corps has come of age in this decade" (p. 1.). Whereas 10 years ago, host nations were requesting any assistance available, today governments are more sophisticated in their requests and demand much greater control over all foreign aid.

"In all countries we visited, Peace Corps programs are now being integrated with the host government's overall development effort to a much greater degree than heretofore. This has resulted in direct involvement of host government officials in Peace Corps planning and has made such programs more relevant to the government's own developmental needs. It has also produced a higher

level of commitment by key host government officials in the program's overall success." (P. 3.)

For example: "The fisheries vocational education and training program in the Philippines is currently staffed by 37 volunteers who were in effect, handpicked by the Deputy Philippines Fisheries Commissioner."

To meet host country requests, a greater number of volunteers with high technical expertise is being recruited, although "an attempt has been made to establish a better balance between generalist and specialist-type programs, not to abolish generalist programs altogether." (P. 3.)

Thus, "the average age of the volunteers and trainees has shifted from 23.9 in fiscal year 1969 to 27.1 in fiscal year 1972. During the same period the number of volunteers over 50 has risen from 11 in fiscal year 1969 * * * to 178 in fiscal year 1972—or 5 percent of the total. In addition, 188 family units * * * has been placed in the field by the end of 1972." (P. 1.)

To prepare volunteers more adequately, volunteer training is now almost exclusively conducted in-country.

This is an improvement in the program for several reasons. First, in-country training is less costly than training in the United States * * * Second, the training can be made more relevant to the trainees' respective future assignments * * * Most importantly, the volunteers are subjected to direct exposure to the cultural environment in which they will be required to serve and can make a more realistic personal evaluation of whether they are up to the challenge." (P. 6.)

In addition to these comments on Peace Corps programing, the report dispelled a number of current myths about volunteers; for example, youths, alienated from their own society, "doing their own thing" abroad.

"Although our contact with volunteers was limited to the four countries visited, our impression is that the above characterization is entirely misleading, at least as far as current participants in the program are concerned. The volunteers we met were, by and large, practical, mature, and job-oriented individuals, who were at pains to avoid involvement in local or international political controversy. They were also representative of a variety of age groups and economic and social segments of American society. Moreover, as a group, they seemed to recognize and accept the necessity of conforming to local customs and traditions. Hair styles, for instance, were considerably shorter than the average within the United States." (P. 7.)

Another problem addressed of general concern is that of drug usage. The report included the following observations on drug usage in the Peace Corps:

"The drug problem is * * * one which permeates all aspects of our society * * * and inevitably the Peace Corps has had its share of incidents. (Yet) all of the Peace Corps directors with whom we discussed this matter expressed the belief that drug abuse constituted no serious problem. Incidents, they felt, had been isolated in nature * * *.

"The Peace Corps takes a hard line on the use of drugs by volunteers. Any such involvement which comes to the attention of members of the Peace Corps staff results in the immediate termination of the volunteer or volunteers concerned." [P. 8.]

The final recommendation of the report was that "the present or potential effectiveness of the Peace Corps should not be judged in quantitative terms." [P. 5.]

"If the Peace Corps is to survive in the 1970's, it must face the fact that quality is an absolute prerequisite to success and that if highly qualified personnel cannot be supplied in the numbers desired * * *, some retrenchment in the program will become unavoidable.

"The New Directions approach, we feel, has much intrinsic value which is not necessarily reflected in recruitment statistics. Where volunteers have been able to perform adequately (in areas of genuine need), their contribution has been disproportionate to their numerical strength. Where, however, these circumstances have not applied, the program has backfired.

"Although it is not our purpose to recommend a specific level of Peace Corps representation abroad, we do advocate a more careful matching of volunteer qualifications with program requirements. If this results in a smaller organization than was originally contemplated, it does not mean the Peace Corps is any less effective. On the contrary, we believe a more streamlined corps of qualified individuals, which develops a reputation for efficiency and professionalism is more likely to receive both the recognition and the candidates it seeks." [P. 5.]

Mr. SHRIVER. Would you now describe what actions you have taken or are planning to take in response to the report.

Mr. HOWE. Would you like me to put those in the record?

Mr. SHRIVER. Just give us a few things you are doing.

Mr. HOWE. Mr. Chairman, I will respond briefly, and ask Mr. Hess, who is responsible directly for the Peace Corps, to respond in more depth. We have, first of all, attempted to respond by increasing what we call our preinvitational staging. One of the points the committee made was that we need to improve our selection process. We are, therefore, increasing the number of trainees or the number of applicants with whom we will meet in these stagings here in this country, to talk about their subsequent assignments so that they have an opportunity to deselect themselves and we have an opportunity to decide whether they are appropriate to send prior to the time they go.

We are also providing countries with better information on the skills that are available, because our whole approach has been to provide fewer volunteers with higher skills. We are providing applicant profiles to our country directors so that in working with host country officials they can determine exactly what skills are available to them, and will be better able to program those volunteers in the skill areas that we can offer.

We are attempting, through meetings with our staff, to improve the programing, so that whenever somebody does arrive in a particular project, that project will have been worked out very carefully with the host country government, that it will be a high priority of that government, not a high priority of ours, and that the job will be well organized and well defined, so that the volunteer will be able to serve well, when he does arrive.

I know that Mr. Hess has other specific observations to make, and we will submit more for the record, if you so desire.

Mr. SHRIVER. Put into the record further things that are being done to implement the suggestions made in the report.

[The information follows:]

The House Foreign Affairs Committee staff, in its report, "The Peace Corps in the 1970's," was critical of Peace Corps operations in two areas, recruitment and selection.

Regarding recruitment, the report (page 4) indicates that Peace Corps has failed "to fill the gap caused by AID's retrenchment in the field of technical assistance. In this respect, the hopes which were initially raised by the introduction of the new directions program have proved illusory." Additionally, the report called for "a better system of estimating the availability of such skills well in advance of the trainees' scheduled arrival * * *"

Regarding selection procedures, the report stated (page 4) that "preliminary screening procedures have, in a number of instances, been grossly inadequate. * * * as attested to by the high fallout rates noted in a number of specific programs."

Both of these shortcomings are being met in a number of ways. When the new directions approach was first initiated, many host governments simply asked for the most highly skilled individuals in the needed skill area, without assessing whether such skills were actually necessary for the job at hand. Peace Corps now requires that requests for volunteers be more realistically appraised, and projected with greater accuracy by the Peace Corps field staff. Through these measures, the Peace Corps should be able to fill more of the requests, and, at the same time, reduce the attrition rate of dissatisfied volunteers. In the past, too many volunteers with high degrees of specialization have been disappointed with jobs that did not require their level of expertise.

Due to the success of incountry training, which was initially begun on a trial basis in one region, Peace Corps has made the decision to train nearly all of its volunteers in their prospective host countries. This action will not only affect

the general quality of Peace Corps training, but also recruitment, selection, and the matching of applicant skills to host country needs.

Incountry training not only permits the volunteer to be trained in conditions similar to what will be experienced while in volunteer service, but allows host country nationals to be involved in the project planning and administration, training design and administration, and in the actual assessment of the trainee's qualifications and aptitude for service in their country.

The trainee suitability assessment process included in incountry training is coupled with preliminary screening sessions in the United States, called pre-invitational stagings (or Prists).

Followup studies of those volunteers who were screened by the Prist method and those volunteers who were screened through less extensive methods have indicated, in terms of volunteer and host country supervisor satisfaction, that Prists are an improvement in Peace Corps' recruitment and selection procedures. The Prist allows Peace Corps staff to have an additional opportunity for in-depth assessment of the applicant, but more importantly, it gives the applicant a much better opportunity to assess the Peace Corps' mission, the demands of the potential job assignment, the idiosyncrasies of the prospective host country, and, generally, with this additional information, to decide if he still chooses to join the Peace Corps. We are increasing the number of trainees who will be involved in Prists, and, through this action, expect Peace Corps' screening and selection to be significantly improved.

BUDGET REQUEST TO OMB

We all know that many items in the fiscal 1974 Federal budget underwent close examination and scrutiny by the Office of Management and Budget, including, I assume, the Peace Corps. You are presenting a budget request of $77 million. What was your original request to OMB?

Mr. HOWE. Congressman Shriver, our original request was approximately $99 million. That was reduced by $22 million, as we joined with OMB in recognizing the difficult fiscal situation the country faces at this point in time, and strongly supported their decision and the President's decision to reduce our original request by $22 million.

Mr. SHRIVER. I think that is all I will ask at this time.

STATUS OF FUNDS

Mr. PASSMAN. Thank you. Could you give us the amount of the estimated unexpended funds for the Peace Corps on June 30?

Mr. HESS. For this particular year we expect to obligate the total amount authorized.

Mr. PASSMAN. That is not the question. The unexpended balance is what I want.

Mr. HESS. I would like to ask Mr. Markham to respond to that.

Mr. MARKHAM. I will have to furnish that for the record.

Mr. PASSMAN. You don't have any estimates?

Mr. MARKHAM. On the unexpended balance?

Mr. PASSMAN. That is right. We always get that estimate. I want to know what you will have on hand, obligated but unexpended, or we might say undisbursed.

Mr. MARKHAM. About $14 million.

Mr. PASSMAN. What would be the unobligated funds according to your present estimate?

Mr. MARKHAM. On June 30?

Mr. PASSMAN. Yes.

Mr. MARKHAM. We expect to obligate substantially all of our money by June 30.

Mr. PASSMAN. You use the word "substantially." We are going to deal with dimes and nickels. You are bound to have some estimate. What did you have unobligated last year?

Mr. MARKHAM. $63,000 last year. It was very close.

Mr. PASSMAN. Your record shows that over a period of years you usually had a very substantial unobligated balance, in some years going as high as $20 million, I believe. How were you able to work it down now to where it is almost right on the penny?

Mr. HESS. Last year, Mr. Chairman, the Congress appropriated $72 million, and there was another $2.6 million allocated.

Mr. PASSMAN. Allocated from where?

Mr. HESS. From AID. The $72 million was not adequate to carry out the program for which we had made commitments. As a result, we were in a very, very tight budget situation. For this particular fiscal year I expect again we are going to be operating with a very tight budget. So far as we can now project, all of our funds will be obligated by the end of the year.

Mr. PASSMAN. You know we have become so accustomed to carelessly handling these tens of millions of dollars as though you can go out and pick them off a tree somewhere. As far as I am concerned, even if all of your corpsmen were members of the clergy, out trying to convert people to do good rather than bad, I would have to look a long time at $77 million, because $77 million is still a lot of money, isn't it?

Mr. HESS. Yes, sir.

Mr. PASSMAN. It is especially a lot of money for something that is brand new in government, and there is a very serious question about whether there has actually been any real accomplishment. At this time, I want to yield to Dr. Long.

IMPOUNDMENTS OF APPROPRIATED FUNDS

Mr. LONG. We have had a great many impoundments this year in our domestic programs; as a matter of fact, one-third of all of the controllable budget of the United States has been impounded in fiscal 1973. The President just vetoed the vocational rehabilitation legislation, and the Senate failed to overthrow that veto. Has any money been impounded for the Peace Corps?

Mr. HESS. No, sir; no money has been impounded from the Peace Corps this year.

Mr. LONG. Has the Peace Corps indicated that any money could have been impounded?

Mr. HESS. No, we did not indicate that.

Mr. LONG. Can you tell us why our commitment to the Peace Corps, valuable as it may be, is of a higher order of importance to humanity than the needs of crippled people and mentally retarded people, who desperately need help here in this country?

Mr. HESS. There are obviously many great demands being made on the Federal Government, both domestically as well as worldwide. I think the Executive, the administration, the President, has a very difficult problem in allocating scarce resources.

Mr. LONG. Why couldn't the Peace Corps have taken its share of the reductions, in view of the budget stringency?

Mr. HESS. I think in trying to answer why the President did not, it

is because I feel foreign aid needs to be continued at some level. Part of the foreign aid program is the Peace Corps. The Peace Corps, I think, is providing very valuable assistance overseas in meeting foreign aid needs at a very inexpensive price.

Mr. LONG. Wouldn't you think vocational rehabilitation and conservation of our forests is terribly important? The President has impounded money to do forest planting on our national lands which are running down very badly. The President has impounded money for sewage treatment while we know our streams are being very badly polluted. We had a program to convert coal and lumber into oil. As a matter of fact, that program is very close to paying off, and the President impounded money on that or cut the budget back for fiscal 1974. I just want to know what the Peace Corps is doing that is of a higher order of priority over our domestic programs, so that it couldn't have taken at least its share of the cuts.

Mr. HESS. Mr. Congressman, we do develop our budget requests on the basis of needs that are represented to us from overseas. They are far in excess of what I think we could afford. What we thought we should afford for this country was tendered to the Office of Management and Budget, and it totaled $99 million. However——

Mr. LONG. Don't you suppose that that is going on in every department of this Government?

Mr. HESS. That is possible; yes.

Mr. LONG. They have very large requirements that are cut down.

Mr. HESS. We did receive an authorization to submit to the Congress a request for $77 million, which is a substantial reduction. That is $4 million less than this year's continuing resolution level. Moreover, we were asked, and we will have to absorb, an estimated 7 percent rise in the cost of living. Now, with the devaluation, which we had not anticipated, we are also going to have to absorb that. So, in effect, we must absorb a $9 million reduction from this year's budget level.

Mr. PASSMAN. Would you yield?

Mr. LONG. I will be glad to.

Mr. PASSMAN. The devaluation is brought about simply by our country's mismanagement of its fiscal affairs; isn't that correct?

Mr. HESS. I understand that is part of it; yes, sir.

Mr. PASSMAN. That is all of it, because had we managed our fiscal affairs as some of our former recipients in Europe, our dollars would have been in demand rather than people running from them.

Let me say this. Of the net $250 billion that we have given away through the foreign aid program, there has never been $1 of any funds of any foreign program ever impounded under this administration or any prior administration. They call it a sacred cow. There has never been a dime impounded. Do you realize in a great many instances worthy projects with high benefit/cost ratios are completely wiped out of the budget. They are not even permitted to put them in the budget. This year in your public works programs, rivers, harbors and revetments where people have had a lot of their property destroyed and people are drowned, they only permitted four new starts in the entire United States.

Mr. LONG. I didn't mean to imply that I didn't think the Peace Corps was a worthwhile program. I have seen very good things go on over the world. But if we gave money to every worthwhile pro-

gram in this country, including help to the elderly, the sick, the blind, to housing, education of all kinds, day care, guaranteed incomes, hospitalization, we could double the entire expenditure of the Federal Government; so all these have to be cut back. I am just wondering why the Peace Corps, as valuable as the program is, can't take its share of the reductions. That goes, of course, for our other foreign aid for which, as the Chairman has indicated, funds have not been impounded.

PERCENTAGE OF BUDGET FOR STAFF

What percentage of the total budget goes to staff costs as opposed to volunteer costs?

Mr. HESS. About 20 percent.

Mr. LONG. Of your entire proposed $77 million, 20 percent will be for staff?

Mr. HESS. Yes, sir, approximately 20 percent for salaries and benefits.

Mr. LONG. In other words, a little over $15 million will go for staff.

Mr. HESS. Yes.

EVALUATION OF PROGRAMS

Mr. LONG. I understand you are about to institute an evaluation procedure with mainly volunteer input. Could you describe this system, and will it provide the information you need to evaluate the program?

Mr. HESS. Yes, sir. The evaluation system that we are about to institute is one which would provide each individual volunteer an opportunity to assess his attempt at meeting——

REDUCTION FROM OMB REQUEST

Mr. ROUSH. I would like to follow up on the question Mr. Shriver asked concerning the reduction you received from the Office of Management and Budget, from $99 million to $77 million. What programs would be cut, and can you supply for the record—perhaps you could give us—the basic or the big cuts now, but supply for the record the proposed reductions in your plans for the Peace Corps for fiscal year 1974.

Mr. HESS. Yes, sir. The cut is primarily in the numbers of trainees who would enter the programs, and in the volunteers who would be in the field. In addition, we had proposed to the OMB an increase in the readjustment allowance for volunteers amounting to about $5 million. The readjustment allowance has not been increased since the beginning of the Peace Corps. Because of inflation it has shrunk. Those are the major items that would have been provided for with our original request.

Mr. ROUSH. Does it mean terminating programs in any country?

Mr. HESS. Yes; it does in terms of projects.

Mr. ROUSH. Other than those plans?

Mr. HESS. In terms of projects that have been requested we will not be able to meet all of those projects; yes, sir. I could provide that now for the record.

[The information follows:]

The reduction to $77 million from the $99 million requested of OMB necessitated reductions in three areas:

(1) Instead of filling the 7,000 host country requests expected, we will only be able to fill 5,760.

(2) The OMB request included money for raising the readjustment allowance from $75 to $125 per month.

(3) All cost factors—training, volunteer costs, and program support—have been reduced substantially.

These reductions are consistent with the President's desires to reduce Federal spending in all programs—foreign and domestic.

Mr. ROUSH. That is all I have at the present time.

Mr. PASSMAN. Thank you. Mr. Conte.

PEACE CORPS SERVICE A "JUNKET"?

Mr. CONTE. Mr. Howe, has the President's reference to a tour of duty in the Peace Corps as a "junket" caused you any harm?

Mr. HOWE. We have approximately 11 letters on that subject which suggests it has not caused us any harm. Our recruiting figures do not indicate it has been deleterious. I do regret very much that the clarification which the President made through Mr. Ziegler did not receive the same wide distribution that the President's original comments did and I would be happy to read that or perhaps provide that clarification for the record.

Mr. CONTE. Is it very long?

Mr. HOWE. About two paragraphs, not terribly long.

Mr. PASSMAN. Without objection, it will be inserted in the record at this point.

[The information follows:]

EXCERPTS FROM MR. ZIEGLER'S BRIEFING CONCERNING PEACE CORPS

Mr. ZIEGLER. "The reference that the President made the other day did not go specifically to the Peace Corps. Those of you who may have been in attendance at the press conference know that in the context of what he was saying he was obviously making a comparison of a situation where an individual, as he said, should pay a penalty if he was a deserter, and the reference he made to the Peace Corps was that the paying of that penalty should not be spending time in the Peace Corps. He was not in any way at all being derogatory toward the Peace Corps. He was drawing the comparison there.

"Many people, the President feels, as he has made clear before, have devoted very selfless and dedicated service to the objectives of the Peace Corps, and the President appreciates those efforts and the efforts of the Peace Corps in meeting the objectives which the Peace Corps works toward.

"He was not addressing himself to the work of the Peace Corps. He was saying it was his view that someone who violated the law should pay a penalty, and he made it clear that the paying of that penalty, in his view and under his policy, would not be the serving out of a period of time in the Peace Corps."

Mr. HOWE. It does indicate that the President was specifically differentiating that the opportunity for Peace Corps Service should not be construed as a penalty, which he felt was consistent with the fact that those who had chosen to leave the country rather than serve had violated the law. He did indicate his recognition of the dedicated service many Peace Corps volunteers had made. We will provide the detailed comments for the record.

Mr. CONTE. I was quite upset. I know there is a lot of criticism, and there probably will be many more regarding the Peace Corps. Having served on this committee for 12 years, and having been one of the initial backers of the Peace Corps, I have gone out to the boondocks

of Africa and Southeast Asia and have seen the Peace Corps in action. I have always said that it certainly isn't a boondoggle or a junket. I don't think there are many people in this country who would be willing to go out there in a swamp-infested area, with mosquitos, none of the luxuries of life, and live alone as they do.

Of course you have had some bad cases, and you are going to continue to have bad cases, as you do in all agencies of the Federal, State, and local governments. You are dealing with human frailties and you are bound to have some problems.

PEACE CORPS NOT FILLING ALL REQUESTS FOR VOLUNTEERS

Is it true that the Peace Corps is not filling all the requests which host countries are making for volunteers?

Mr. HESS. Mr. Congressman, that is correct. We have requests for approximately 7,000 volunteers.

Mr. CONTE. Why aren't you filling them?

Mr. HESS. We will not be able to fill them with the $77 million budget that we are requesting.

Mr. CONTE. Will you give us a breakdown of the 7,000 requests?

Mr. HESS. Yes, sir.

CRITERIA FOR APPROVING PROJECTS

Mr. CONTE. Which criteria do you use to determine which projects should be approved and which ones should not be approved?

Mr. HESS. We do it primarily on the basis of the quality of the program in a country. We want to be assured that each program is in accord with the priority needs of that particular country. We want to be assured that each program has a training component in it so that when a volunteer leaves, he will have passed on his skills to a host country individual.

We want to be assured that we are training people in human resources development. We want to complement other assistance programs in that country. Of course, we want to be sure that the program is one that is really helping the country. Rather than sending volunteers to do their thing, we want volunteers to be doing the thing that the country has requested of the volunteer.

SUCCESS OF "NEW DIRECTIONS"

Mr. CONTE. On page 6 of your prepared statement you state that design, development, and implementation of your projects have improved markedly over the past. Is this part of what the Peace Corps calls "New Directions"? How successful has it been in terms of what you are trying to do?

Mr. HESS. That is a part of the new directions. We have specifically sought to improve the quality of the program. We are asking host countries to describe more specifically what their needs are that they want the volunteers to fill.

Second, we want specific job descriptions available before we begin our recruitment.

Third, we are asking that there be a much better selection of volunteers against those jobs. Today we are getting persons with more experience, more skill, and somewhat older in the Peace Corps. We are also improving our training program, to make it more effective, so that volunteers are better prepared to serve the needs of that country.

We have also asked for increased host country contributions, so that they are sharing with the U.S. Government in this particular venture, so that it is not all borne by us.

IMPROVEMENT OF VOLUNTEER SELECTION

Mr. CONTE. Will you please describe the preinvitational staging you are using to improve your selection criteria and placement procedures?

Mr. HESS. We are trying to improve our selection procedures. Through the preinvitational staging we take a proposed applicant for the Peace Corps, invite him to a given place, where a panel of staff members will interview him to assure that, first of all, he has the skills and attitude that are going to be needed to do a particular job. We want to assure that he is a suitable, representative American to serve overseas. We want to be sure he can actually serve under the conditions of hardship which he is going to be asked to endure overseas.

EMPHASIS ON IN-COUNTRY TRAINING

Mr. CONTE. You state you are continuing your emphasis on in-country training. Is this an indication of a greater commitment on the part of the host country to the Peace Corps program?

Mr. HESS. Yes; I think it is. We are no longer training volunteers here in the United States because we have found that we cannot replicate a particular country's environment here in the United States. We feel that when he is trained in country, the volunteer is more effectively prepared to handle his job, the language, and the culture.

IMPACT OF FISCAL YEAR 1972 APPROPRIATION

Mr. CONTE. You state you plan to increase the number of trainees in fiscal 1974. Yet you also state that the end strength of the Peace Corps will be less at the end of 1974 than it will be at the end of 1973. Why is this so?

Mr. HESS. That came about, Mr. Congressman, as a result of the 1972 appropriation. The funds available were insufficient to provide the

number of trainees that we had anticipated. In that year we had only 3,600 trainees. We had expected to add about 5,500 trainees. Since they serve over a 2-year period, we actually had fewer volunteers in fiscal year 1973 and will feel the full effect in 1974.

Mr. CONTE. You mention there is going to be a 7-percent inflation in the host country, is that right?

Mr. HESS. Yes.

Mr. CONTE. What indication do you have that the host countries will be willing to increase their contributions to approximately offset the inflationary increases?

Mr. HESS. We are constantly attempting to have host countries also provide us with more of the support that is needed for the Peace Corps, including cash and inkind funding. We have entered into negotiations with each country to seek out additional funds. Our target this year is a 5- to 7-percent increase over what they provided in prior years.

"BARE BONES" BUDGET

Mr. CONTE. You are asking for $77 million. That is a reduction from $81 million, a reduction of $4 million.

Mr. HESS. Yes.

Mr. CONTE. In the past the Peace Corps came in here and asked for a little bit more than you needed so that you had a bargaining figure. Is there any bargaining figure here? Is this your bare bones figure?

Mr. HESS. It absolutely is, and I would reemphasize that the reduction we are making is really more than $4 million. We are absorbing the 7-percent cost for inflation. We are also going to have to absorb devaluation. In fact, we are absorbing about a $9 million reduction.

I want you to know that I am very, very concerned about the cost of the Peace Corps. I am going to do all in my power to keep trimming it while still attempting to meet the needs that we have overseas.

Mr. LONG. Mr. Chairman, I hadn't finished my questioning.

Mr. PASSMAN. Had you consumed 5 minutes? We are trying to finish under the 5-minute rule first.

Mr. LONG. I hadn't thought so.

Mr. PASSMAN. Continue then. We are going to have to operate in regular order here according to the rules or we will never get through with the hearings this year.

METHOD OF EVALUATING PROGRAMS

Mr. LONG. Do you have a systematic method of evaluating your programs; a method that shows evidence of benefits to host countries? I believe that was the question I was asking when the bell rang.

Mr. HESS. Yes, sir. We are in the process of installing a number of evaluation programs. Some evaluation programs will involve the volunteer himself. We are asking each volunteer to evaluate his effectiveness on the job, and what he is accomplishing on that job. He will periodically take a look at what he was asked to do and what he has actually accomplished with his host country supervisors.

Mr. LONG. Can you make this information available to Congress, the results?

Mr. HESS. The results, no. We are just embarking on this particular

evaluation program, but I will be happy to provide a description to you.

Mr. LONG. We would be very interested in having that.

Mr. HESS. We do have a survey of the evaluation activities the volunteers are involved in and I will be happy to provide that.

[The information follows:]

PROGRAM EVALUATION

Peace Corps is currently developing an internal program evaluation system, which might better be termed a field program control system. Its aim is to provide an overall system for objectively evaluating and monitoring Peace Corps programs. It provides Peace Corps with the capability of assessing programs on a regular basis in order to improve overall quality.

The approach, still in the formulative stages, is being developed jointly by the overseas and Washington staff. Because of the important nature and comprehensive scope of such a system, it will be a number of months before it is finalized. The basic components of the internal program evaluation system will include:

(1) Volunteer-onsite job reviews in order to more precisely (*a*) plan what the volunteer will do in relationship to project objectives and host country needs, and how best the job can be executed, and (*b*) assess and report on volunteer activities and accomplishments.

(2) Project reviews noting project status-related issues, alternative actions and programing requirements.

(3) Host country evaluations involve host country review of Peace Corps programs with the objective of obtaining an independent assessment in order to identify and resolve any problems or issues that affect overseas operations.

(4) Series of volunteer group reviews at various points in time of their service in order to assess such basic areas as general attitudes, placement and training, project support, and programing, so that changes, adjustments, or refinements can be made on the project while it is still underway or on its replacement should there be one.

(5) Program staff reviews, both overseas and in Washington, will assess program progress, identifying and taking replanning actions.

RESULTS OF EVALUATIONS

Mr. LONG. Don't the results of the evaluations show that there are some countries where the programs are less valuable, let's say, than in others; some in which you are marginal; and some in which we can get along without the programs in that particular country completely?

Mr. HESS. Yes. There have been those cases. When there are, we discontinue the program.

Mr. LONG. What programs have you discontinued, in what countries?

Mr. HESS. The largest group of programs which we discontinued is community development, rural development, particularly in Latin America. We discontinued programs where——

Mr. LONG. Rural development?

Mr. HESS. I'm sorry, community development. They were really organizational, community action type activities, where the governments did not provide adequate support to the volunteers. They have been discontinued.

Mr. LONG. I have seen rabbit cooperatives in Guatemala. I have seen homebuilding cooperatives in Panama and in Chile, Santo Domingo and so on. Is that what you mean?

Mr. HESS. No, sir. I do not refer to those. Those are in our cooperative business development activity. The community action programs

are largely those in which local people were organized to be advocates for one particular issue or another.

Mr. CONTE. Do you mean they are getting involved in politics?

Mr. HESS. They might have gotten into politics, but we have discontinued that altogether. That is not a role I feel Peace Corps volunteers should get involved in.

Mr. LONG. I am inclined to agree. It indicates interference. I have some other questions.

Mr. PASSMAN. I hope you will stay and ask them when we come around again. We want to respect the 5-minute rule in fairness to all members. Each member can then take a full day if he wants to after the 5-minute period is completed. I didn't make the rules but I think we should abide by them.

Mr. LONG. I have no objection, Mr. Chairman, you take 5 minutes between each one.

Mr. PASSMAN. I happen to be chairman of the committee.

Mr. LONG. It doesn't save a great deal of time.

Mr. PASSMAN. It is my responsibility.

Mr. LONG. I enjoy your remarks.

Mr. PASSMAN. We will be back to you at the proper time.

Before we get too far away from the question of a bare-bones budget, it is my understanding that the same Director of the Office of Management and Budget reviews all of the budget requests the same as he reviews your budget request, does he not?

Mr. HESS. That is right, sir.

Mr. PASSMAN. Wouldn't you assume that all the bureaucrats representing every agency of Government coming before these committees would say this is a bare bones budget?

Mr. HESS. I would assume they would.

Mr. PASSMAN. I am very thankful for that statement. Of course since you are going to say bare bones, we know none of these things are bare bones budgets just as you admitted in the beginning. There is an asking price and a taking price.

LOW UNOBLIGATED BALANCE FOR PEACE CORPS

Isn't it true that you have a very low unobligated balance because you transferred funds out of the Peace Corps over to the operating expenses of the domestic program of ACTION in 1973?

Mr. HESS. We have to share in some of those expenses, yes, sir.

Mr. PASSMAN. You did transfer funds out of the Peace Corps over to the domestic programs of ACTION. You did that in 1973?

Mr. HESS. Yes.

Mr. PASSMAN. No wonder you don't have any unobligated balance.

Mr. SHRIVER. Will you yield there? How much was it?

Mr. HESS. A $269,000 transfer.

Mr. PASSMAN. This is one item that we see on the surface.

Mr. HOWE. That is a proposal, Congressman, that the Office of Management and Budget has submitted as part of their salary supplemental request authorizing in accordance with general language the transfer from one portion of any agency budget to another rather than requesting a supplemental for Peace Corps funds to be transferred to domestic appropriations.

Mr. PASSMAN. Mr. Roybal.

Mr. ROYBAL. Mr. Howe, in your testimony you make reference to the fact that a committee of the Committee on Foreign Affairs visited various sites throughout Asia, and that they made a very favorable report with regard to Peace Corps volunteers.

Mr. HESS. That is correct.

LIVING STYLE OF PEACE CORPS STAFF

Mr. ROYBAL. I served on that committee for 6 years, and I don't remember anyone on that committee ever saying an unkind word about volunteers. I think we all hold the Peace Corps volunteers in high esteem. Most of the criticism was not the Peace Corps volunteer, but the Peace Corps professional who, in most countries that we visited while I was a member of that committee, were living in high style. This was the criticism that I heard many, many times on that committee. Has anything been done about correcting some of those conditions?

Mr. HESS. I don't know about those to which you refer in the past, but I want to assure you it is my policy that Peace Corps staff members, wherever they serve, live a modest style of life, and I am going to enforce that.

Mr. ROYBAL. Is this a new change then in the Peace Corps?

Mr. HESS. No, sir. It has always been our principle. Whether or not it was enforced in the past, I do not know.

Mr. ROYBAL. I can assure you it was not enforced. That was one of the criticisms that was made by the committee members, and I hope that now it is in force, because if it is not, I will no longer support the Peace Corps. I have supported the Peace Corps and still do to this moment only because of the Peace Corps volunteer. If you didn't have the Peace Corps volunteer you would have no Peace Corps, in my opinion.

Mr. HESS. I agree with you.

Mr. ROYBAL. As long as you agree you also then state that you will see to it that the original intent of all Peace Corps employees is definitely adhered to.

Mr. HESS. Yes, sir.

Mr. HOWE. Congressman, if I might just add, I think both Mr. Hess and I appreciate those comments, because we feel as strongly as you do, and I think we would propose to send those comments to all of our staff members overseas to impress upon them our commitment to the statement which you have just made.

Mr. ROYBAL. I thank you very much. I made a similar statement before, and apparently it never got to the source, because I went back again a third year to the same country that we were critical of, and a different staff member was living in the same mansion with the same servants. Don't think it was only one servant. It was two servants and a chauffeur. I don't think that was the purpose of the Peace Corps at all, but I am glad to know that there is some attempt now to correct it, because without that correction you lose the support of a person like myself, as an example, who believes that you are doing a good job.

There is complete disagreement perhaps in this committee, but I

have been out to see for myself what the Peace Corps has done, and because I have seen with my own eyes and have spoken to these people, I support the Peace Corps in its service concept, but do not support the other phase of it.

ARGUMENT AGAINST MERGER OF PEACE CORPS AND AID

I have just a few more minutes. Many people have been commenting about the possibility of merging the Peace Corps and AID together since they are providing technical assistance. It is my feeling that, if this were done, you wouldn't be able to get people to serve as volunteers, since in other programs people on a professional level are being paid high salaries. Am I correct in that assumption that you would not be able to get volunteers if there was a merger with AID?

Mr. HESS. I strongly share that opinion. First of all, I think we and AID have two different missions to perform. Second, I agree that it would be very difficult to find people who would be willing to volunteer for a subsistence allowance and work side by side in the same organization with those who are earning substantial salaries. Third, I think that there would have to be consideration of the way we expect volunteers to perform overseas and of the modest style of living we expect of them. I don't see that to be consistent in the two agencies. I am not criticizing AID. They have a separate and distinct role to play.

We do serve "out in the bush," usually under hardship conditions. All of our volunteers are expected to learn the language of the country. That is stated as a requirement in our legislation. I am very doubtful that we could recruit volunteers if we were a part of AID.

COSTS OF PEACE CORPS VERSUS OTHER TYPES OF AID

Mr. ROYBAL. Can you tell me how the Peace Corps program costs compare with other programs which offer technical aid; that is, any program that may serve with any international organization?

Mr. HESS. Yes. It is my understanding that the highly skilled technical assistance which is provided by AID, as an example, costs maybe four or five times that required to support a Peace Corps volunteer.

With regard to other international voluntary groups, our costs are in line with those of other countries. It is difficult to discern all of the costs but I did take a recent look. Some of the other volunteer program costs are higher than the Peace Corps and some are lower. But we are all within a very narrow range.

Mr. ROYBAL. Is there an overlapping between the Peace Corps program and other U.S. foreign assistance programs?

Mr. HESS. I do not think so. I think they are complementary rather than overlapping. To assure this in part, we are coordinating the development and actual operation of programs at the local level; that is, in the countries where we serve. All of our program development and our specific projects are coordinated with the embassy in that country. Then back in Washington coordination again takes place with the Department of State on every project.

Mr. ROYBAL. My 5 minutes I suppose are already up so I am just going to make this very quick observation. For your information I am

going to be asking questions later on with regard to your employment practices, particularly with the discrimination that may or may not exist with regard to the Spanish-surnamed employee.

Mr. PASSMAN. Why don't you take an extra minute or two? I know you want to get statistics on that.

Mr. ROYBAL. If I have unanimous consent.

Mr. PASSMAN. Why don't you proceed with your question?

MINORITY REPRESENTATION ON PEACE CORPS STAFF

Mr. ROYBAL. Mr. Howe, records for July 1971 show that 2.7 percent of the employees were Spanish speaking at the time the Peace Corps merger took place with ACTION, but now you seem to have dropped to 2.

I recall testimony before this committee to the effect that there was some kind of a recruiting program in Spanish-speaking communities throughout the United States, particularly at universities. Has that program completely failed?

Mr. HESS. I am very much concerned about our need to have all Americans participate in the Peace Corps, as volunteers and staff. I find that we are having particular difficulty in recruiting Spanish-speaking Americans. We do have a separate office within ACTION that is assisting us in recruiting minorities for the Peace Corps. I am not happy with our record either. We are making continued attempts to improve that record, especially with Spanish-speaking communities.

Mr. ROYBAL. I am sorry to hear that you haven't had much success. Your records again show that in your overseas staff you have made no improvement, and there is no improvement in your Washington staff between 1972 and 1973. You remain at the same level. Surely there must be someone in the United States who would like to come to Washington to participate in your activities?

Mr. HESS. I was very much concerned about this when I came into office, and we have made improvements since July of last year to now, in terms of minorities in general at all levels. With regard to the Spanish-speaking community, however, I do not think that we have made a sufficient improvement to be satisfied with that advance we have made.

Mr. ROYBAL. My figures show you haven't made any improvement.

Mr. HESS. In the Spanish-speaking?

Mr. ROYBAL. In the Spanish-speaking employment level. Your staff overseas as of November 1972, for example, was 4 out of 222, and your Washington staff has 172 people and 3 Spanish speaking. That is the same figure that I had 2 years ago, so I don't see any improvement in that level. What I am trying to do is not to be critical of the fact that you have not been able to bring this up to what I believe to be parity, but it seems to me that not enough effort has been applied.

Mr. HESS. I share with you the concern that we must make a stronger effort in this regard. We have asked our staff placement office to seek out with special effort Spanish-speaking Americans.

EMPLOYMENT PRACTICES IN PEACE CORPS

Mr. ROYBAL. One of the criticisms that I get from youngsters at the University of Los Angeles or one of the colleges, because there are

several universities around Los Angeles, is that the professional jobs in the Peace Corps are just traded between yourselves, that you may have a Peace Corps Director in one country, so you put him somewhere else, and the whole thing just rotates around so that they put in their full time into the Peace Corps with no opportunities being given to anybody else. Is there any validity to that charge?

Mr. HESS. No, sir, I would think not. First of all we do have a 5-year rule that is part of our legislation, and which we are enforcing strictly. A staff member can only serve 5 years and then he is no longer in the Peace Corps.

We are also attempting to bring in a number of former volunteers. More than one third of our staff members have served as volunteers overseas. I am trying to get quality staff applicants from a cross section of America.

Mr. ROYBAL. Then you do agree that while there has been no improvement, that you as the Director of the Peace Corps will lend your best effort toward that end.

Mr. HESS. I certainly shall.

Mr. PASSMAN. Thank you. Mr. Miller.

VOLUNTEERS FOR SOUTH VIETNAM

Mr. MILLER. I have a couple of questions.

Would volunteers be sent to South Vietnam if they were requested?

Mr. HESS. To date none has been requested, and we would have to consider that request very carefully. If such a request were made we would see whether they involved viable programs, whether or not the safety of the volunteer could be assured and whether conditions were such that the programs could be carried out. I am very much concerned, though, that we would be constrained by funds. In this particular budget, fiscal year 1974, we do not have funds programed for volunteers to go to Vietnam.

PEACE CORPS ACTIVITIES IN CHILE

Mr. MILLER. Could you tell us something about the Peace Corps activities in Chile under the present government?

Mr. HESS. Yes. We have about 35 volunteers who are serving in Chile. They have not been asked to leave, even though some other organizations were asked to leave. The group serving there now is a highly professional group of volunteers. They are working in many fields of research. They are working in areas where their skills are needed for training at all levels. It is a group that has been highly complimented for their activities to date.

Mr. MILLER. By the government?

Mr. HESS. By the government, yes. I might just add that, recently, as a result of the efforts of one volunteer, the Chilean Government flew the volunteer's mother to Chile where they wanted to honor her for her son's assistance to Chile. They feel very deeply about our assistance.

Mr. MILLER. Have your funds every been impounded?

Mr. HESS. No, sir; they have not during this year.

EFFECT OF DEVALUATION OF DOLLAR

Mr. MILLER. What effect has the devaluation of the dollar had on your program?

Mr. HESS. We don't have a full appraisal at this time, but I expect that it is probably going to increase our requirements by $1.5 million to $2 million in fiscal year 1974. That amount we are probably going to have to absorb within the $77 million which we had not planned on at the time of the budget submission.

Mr. MILLER. So that amount is not in the present 1974 budget?

Mr. HESS. It is not.

EFFECT OF FISCAL YEAR 1972 APPROPRIATION

Mr. MILLER. You have a cut from 1971 funds of $90 million or $91 million, and it went down to $72 million in 1972.

Mr. HESS. Yes, sir.

Mr. MILLER. How did this affect the total operations of your program?

Mr. HESS. It had a rather profound effect. We were not able to bring on about 1,300 trainees whom we had planned to bring on. That meant 1,300 commitments in schools, in health centers, with rural extension service organizations, and in other fields in a large number of countries throughout the world. At that time we had to dismiss over 100 employees. We had to ask volunteers not to return home because it would have cost more to return them home after their 2 years were up than to keep them there. We did not fund the commitment we had to the United Nations volunteer program and we deferred many of our procurements.

Mr. PASSMAN. Would the gentleman yield there for a moment?

Mr. MILLER. Yes.

Mr. PASSMAN. The figure that was provided for fiscal 1973 was a figure agreed upon by the head of the Peace Corps.

VOLUNTEERS IN INDIA

Mr. MILLER. The on-board strength now as far as trainees and volunteers in India was 264, as I understand it, in 1972, but it has dropped down quite a bit for 1974. Can you explain this?

Mr. HESS. Yes. The Government of India did not ask for any additional volunteers during the last calendar year. Today I think we have about 70 volunteers in India. It is our understanding that the Government of India is now going to maintain a ceiling of approximately 50 volunteers per year.

Mr. MILLER. You have, as I understand it, less women in the Corps now. Is that correct?

Mr. HESS. Mr. Congressman, it has fluctuated a little bit from about 27 to 33 percent. I think at the present time about one-third of our volunteers are women.

Mr. MILLER. Thank you.

Mr. PASSMAN. Thank you, Mr. Miller.

COST OF TRANSPORTING VOLUNTEERS HOME

What does it cost per volunteer to bring them home?

Mr. HESS. The cost of transportation?

Mr. PASSMAN. Yes.

Mr. HESS. It will vary.

Mr. PASSMAN. Average.

Mr. HESS. The average cost I think is about $620.

Mr. PASSMAN. Then you could have brought many of them home out of the unobligated balance in fiscal 1972, could you not?

Mr. HESS. The unobligated balance was $63,000.

Mr. PASSMAN. But at $620 that would have been space for over 100 Peace Corpsmen you could have brought home.

Mr. HESS. At that particular point in time—we are talking February–March—it was very difficult to project with that great precision.

Mr. PASSMAN. I know it gives you a good argument, you understand, that you couldn't do it because you didn't have the money. You certainly knew maybe a few weeks in advance you would have this money. You could have alerted people that you were going to bring a certain number of them home. I represent a rather broad piece of real estate down in Louisiana, about one-third of the State, 17,000 square miles. We have old people, young people, Peace Corpsmen, black people, white people. My people are no different than any other type of people. I am critical of the Peace Corps because of its cost, its $1 billion cost, and it is going to cost us $60 million a year right on to the end of time. It is financed on borrowed money as we had agreed earlier. Many Peace Corpsmen are in my district. You know that, don't you?

Mr. HESS. Yes, sir.

APPEAL OF PEACE CORPS NAME

Mr. PASSMAN. I am not sensitive about this name.

The name is what keeps the Peace Corps alive. So many people say if you changed the name there would be no Peace Corps. Of course there is a lot of appeal here, and sweet names will attract a lot of people. We know that.

I have still contended that inasmuch as Peace Corpsmen go abroad they do not have to take the same allegiance to their government as other foreign service personnel. They are independent agents, and I have checked too in these countries. I have always contended with a little persuasion I might support some parts of this outfit, if you would bring the corpsmen in and say, "We have amended the legislation where you take the same allegiance to our country as all other foreign personnel." I have been out in these countries where some Peace Corpsmen would just cuss our President with the most foul names you ever heard of, and they would have fellow Americans in the adjacent countries who maybe died that afternoon serving the United States. You know that they are free agents. I wouldn't know why you people wouldn't actually ask that the legislation be amended to where they would serve under the same basis as all other foreign personnel.

In order to keep the record straight and you can elaborate on it, these

people have been asked to leave 14 countries when there has never been one individual in your bilateral technical aid program who has been asked to leave a country. Some of them have been run out of the same country twice.

EXAMPLE OF VOLUNTEER PROJECT

I am not blaming this on you, but if you are not familiar with it, you ought to check into it. You might find that there is more under the crust than you see on the surface.

Could you describe a typical Peace Corpsmen and would you help me understand what he does? Let's get out on Uncle Jones' farm.

Do they help these people understand their community problems better? Teach them how to raise bigger chickens, produce better eggs, teach school, and instruct people how to do difficult things?

Mr. HESS. Yes, sir.

Mr. PASSMAN. Is that part of their work, to impart knowledge in this general area?

Mr. HESS. In many areas.

Mr. PASSMAN. I am trying to find out some of them.

Mr. HESS. I can give you a full illustration of what Peace Corps volunteers are asked to do. For example, Peace Corps volunteers in many countries are teaching future nurses, instructing them how to be nurses, how to take care of the sick and how to help in administering hospitals. There are doctors who are also helping to teach medicine in many of our countries.

Mr. PASSMAN. Let's broaden it. How about on the farms?

Mr. HESS. Let me take a specific country, Dahomey in Africa. We have volunteers who are working out in the bush, helping to train Dahomeans in animal traction, that is, having animals pull plows and other implements, and teaching them how to build those implements so that the production of the land can be increased threefold. Many of them had never seen a plow before, and yet they have animals there. They are in need of importing food from many countries throughout the world. The volunteers are also teaching them how to store that food during rainy seasons.

Mr. PASSMAN. Better seed?

Mr. HESS. They are also teaching farmers how to use better seed, not only in Dahomey, but in other countries as well. In education volunteers are helping introduce new curricula, helping to teach new math and science which we have developed here and which many countries are trying to learn.

Mr. PASSMAN. Let's get back on the farm. How about teaching them better how to care for their livestock and increasing production in raising chickens. Does it more or less cover the waterfront in imparting knowledge?

Mr. HESS. It depends on what the needs are for that country. Some of them are asking for volunteers in the field of animal husbandry, or for agronomists, or for volunteers who can help them improve feeds for their livestock.

DIFFERENCE FROM OTHER ASSISTANCE PROGRAMS

Mr. PASSMAN. That is good. You have described it as I have always described it, identical programs which are being conducted in the

bilateral and other technical programs. We had an agency in yesterday or the day before, a brandnew one, the Inter-American Foundation. It started as a little organization, whereby the personnel go out and teach these people how to do everything better. Then you have the bilateral technical aid program, the multilateral technical aid program, and the technical aid program under the Department of Agriculture. There are many programs and there is overlapping. The bilateral technical aid program also covers the waterfront, from your college professors right on down to the plowman. You are familiar with that, aren't you?

Mr. HESS. Yes, but I think that the Peace Corps is operating at a different level, at mid and lower manpower levels, and in remote areas of the country, Mr. Congressman.

Mr. PASSMAN. Not if it is how you just described it. I will have the technical aid people describe their program. Theirs is identical with yours. I have known it all along. It has been admitted time and time again in the record. I am sure that you know if you had some way of erasing this name "Peace Corps" this would be the most laughable thing before the American people. I am not criticizing all of these people. There are bad people and there are good people and there are people in between. Of course you have some wonderful people in the Peace Corps of all ages, but nevertheless the system by which they are permitted to operate has so interfered with many of the foreign countries' internal affairs that they have been asked to get out of the country. Some of the indictments I kind of resented myself. In one country they said, "You are corrupting the morals of our youth, get out." All of this is in the hearings.

ACTION SUPPORT FUNCTIONS

Could you state for the record at this point how much ACTION domestic programs and Peace Corps mingle their administrative work downtown?

Mr. HESS. Yes; there are a number of common supporting functions that are needed for any volunteer program, whether it is international or domestic. Recruitment is one of those. Accounting is another of those. Auditing is another of those. To the degree to which we can effect economies through scale of operations we will always be doing that.

COUNTRIES PEACE CORPS HAS LEFT

Mr. PASSMAN. I did read the correct number of countries from which Peace Corpsmen have been asked to leave; is that correct?

Mr. HESS. Peace Corpsmen have left 14 countries in the past.

Mr. PASSMAN. I am not trying to put words in your mouth. They have been asked to leave 14 countries for various reasons.

Mr. HESS. Peace Corpsmen have left 14 countries for various reasons.

Mr. PASSMAN. Now I am talking about for various reasons before their mission had been completed the countries had asked that the Peace Corpsmen be removed.

Mr. HESS. Yes.

Mr. PASSMAN. Is that a correct figure I have used?

Mr. HESS. Fourteen; yes.

Mr. PASSMAN. I won't pursue it. I cannot put my finger on anything but mythical accomplishments for the Peace Corps. If it hadn't cost anything it would be all right. I used to go out in the country and let the State Department and the AID people arrange my itinerary. Nothing good came from it from the time I left until I came back. They would get me in a room somewhere and I would see all the charts, listen to all the lectures and I would see many people. If they had anything good, they would take me to that and bring me back. Today when I travel, a telegram goes out saying "No parties, no entertainment, no lectures, and no tourist spots." I make up my own mind where I want to go, what I want to see and since I have started doing that I get some good information. Do you read me?

Mr. HESS. Yes, sir.

ANNUAL COST PER PEACE CORPS VOLUNTEER

Mr. PASSMAN. What is the annual cost per Peace Corpsman?

Mr. HESS. Approximately $9,700 a year.

Mr. PASSMAN. Does that include any benefits that he may receive after he leaves the Peace Corps, or is that all inclusive?

Mr. HESS. That includes the readjustment allowance.

Mr. PASSMAN. It is all inclusive?

Mr. HESS. It is all inclusive.

PERCENT OF BUDGET FOR ADMINISTRATION

Mr. PASSMAN. Of the total Peace Corps budget, what percent of it goes for administrative purposes?

Mr. HESS. It is approximately 33 percent for both the costs directly associated with the Peace Corps and for our share of the common administrative costs that I mentioned earlier, which include direct recruitment costs.

Mr. PASSMAN. Thirty-three percent would be for administrative purposes.

Mr. HESS. Thirty-three percent.

Mr. PASSMAN. Does that include advertising?

Mr. HESS. It includes all costs.

Mr. PASSMAN. I believe that you have a system, do you not, in ACTION and the Peace Corps where you get the news media to advertise without charge?

Mr. HESS. That is correct.

Mr. PASSMAN. What does it cost to arrange this on a gratis basis?

Mr. HESS. I believe our total costs in the past year were about $250,000. For that Peace Corps and ACTION received something like $9 million of free television time and space from the media.

Mr. PASSMAN. $9 million worth of advertising.

Mr. HESS. That was donated, yes.

Mr. PASSMAN. Regardless of how you get it, if it is donated it comes indirectly out of the pockets of the taxpayers, does it not?

Mr. HESS. Not necessarily, sir.

Mr. PASSMAN. How about the TV, the radio, and news? Aren't they in business for a profit? They are not in business for fun, are they? When they make a contribution and give you space in that newspaper or give you good commercial time on that radio, it is bound to reduce

their income, does it not? So the rates charged to the consumer go up.

Mr. HESS. We couldn't afford it if we had to buy it.

Mr. PASSMAN. I know you couldn't, but I say that then reduces their income, does it not?

Mr. HESS. Yes; but they are gracious enough——

Mr. PASSMAN. Let's just get the record straight, nothing comes free. Somebody has to pay for it, is that right?

Mr. HESS. That is right.

GAO REPORT ON PEACE CORPS TRAINING

Mr. PASSMAN. In the General Accounting Office report dated June 15, 1972, the following remarks were made concerning the Peace Corps: "Programing documents supporting individual projects were not in all cases adequately descriptive of the jobs that the volunteers would be performing which deterred the development of meaningful training programs."

Have you had an opportunity to check that?

Mr. HESS. Yes, I have.

Mr. PASSMAN. What is the response?

Mr. HESS. Our response to that?

Mr. PASSMAN. Yes; what about this statement. Is it accurate?

Mr. HESS. It was accurate at one point in time. But that report was published about a year and a half after the fact, and there were already changes made in these programs.

DIFFICULTIES IN RECRUITING SKILLED PERSONS

Mr. PASSMAN. It also says, "Peace Corps has experienced difficulty in recruiting a sufficient number of applicants having the qualifications, background or experience necessary for the program." Is that an accurate statement?

Mr. HESS. We have had increasing demands for higher skilled and more experienced volunteers. For example, in the field of agriculture, the demand has gone up by 240 percent. In the field of skilled trades it has gone up 270 percent. Nevertheless, Mr. Chairman, we have had an increase in the number of applications since 1971, and that is continuing to increase. We are hopeful of being able to fill these requests.

Mr. PASSMAN. With $9 million in advertising it is a wonder you wouldn't get so many applications it would take half your staff to open the letters. You are saying without the Peace Corps the world would surely come to an end within 30 days. You have heard some of that stuff; haven't you?

Mr. HESS. I have heard some of it; yes, sir.

Mr. PASSMAN. I think the report also said, "Applicants lacking the necessary qualifications, background, and experience terminated service more frequently, which increased the cost of training in relation to the benefits derived."

Mr. HESS. Yes. The GAO was very much concerned about our selection procedures. We are doing something about that through better selection and better application screening than we did in 1971 when the report was prepared.

EVALUATING TRAINING PROGRAMS

Mr. PASSMAN. I believe that the GAO said, "The Peace Corps does not have a system for the evaluation of the effectiveness of its training program on a continuing basis or for using these evaluations to improve subsequent programs."

Is that a statement of fact?

Mr. HESS. It was at that time; yes, sir. But we have embarked on evaluation programs for all of our training activities.

Mr. PASSMAN. This thing was not just born last night. It has been around a long time, long enough to spend $1 billion.

Mr. HESS. Yes.

Mr. PASSMAN. Since when did this cease to be a matter of fact?

Mr. HESS. Since when did what cease to be?

Mr. PASSMAN. Since when did the fact that the Peace Corps does not have a system for evaluation of the effectiveness of its training program on a continuous basis cease to exist?

Mr. HESS. We now have an evaluation system to do it on a systematic basis, that we are putting into effect this year.

Mr. PASSMAN. They also say, "The Peace Corps has not made full use of its training center in Puerto Rico. Fuller use of this center would lower the high per-person cost of training at in-house training centers."

Would you comment on that observation?

Mr. HESS. Yes, we agreed with them and are doing something about it.

ADDITIONAL FINDINGS OF HOUSE FOREIGN AFFAIRS COMMITTEE REPORT

Mr. PASSMAN. A New York Times article of February 11, 1973, quoted a staff survey made by the House Foreign Affairs Committee on the Peace Corps indicating that the Peace Corps sometimes substituted unqualified individuals which had adverse effects on the program. The survey also indicated some volunteers were very immature and whose level of expectation far exceeds their capabilities. Would you like to comment on that?

Mr. HESS. Yes. If that was true, and I do not know the source, we have changed that.

Mr. PASSMAN. I gave you the source of the information.

Mr. HESS. You said the New York Times.

Mr. PASSMAN. It came from the House Foreign Affairs Committee, one of their surveys.

Mr. HESS. You must be referring to the House Foreign Committee report.

Mr. PASSMAN. The Foreign Affairs Committee of the House.

Mr. HESS. We are correcting that through better selection, better recruitment, and better job descriptions.

Mr. PASSMAN. I am glad you are but I never knew before that there was anything wrong with the Peace Corps. You are the only man who ever admitted there was anything wrong with it and you are trying to correct these deficiencies. Heretofore, it has always been presented as something so holy that if you touched it it would fall apart. Another article in the Christian Science Monitor on June 30, 1972——

Mr. LONG. Are we through with the 5-minute rule?

Mr. PASSMAN. Yes.

ARTICLE ON VOLUNTEER ATTITUDES IN CHRISTIAN SCIENCE MONITOR

The article stated a survey of returned Peace Corps volunteers revealed that 74 percent felt the service had been of little value to the host country.

Mr. HESS. That was a survey that was made back in the 1960's, I believe.

Mr. PASSMAN. Let me read it again. An article appeared in the Christian Science Monitor on June 30, 1972, which stated: "that a survey of returned Peace Corps volunteers revealed that 74 percent felt the service had been of little value to the host country."

Mr. HESS. Yes. That survey, to which you are referring, was made in the 1960's, and partially as a result of that we instituted the policy of new directions which I think were described to you previously. We are hopeful that the attitude of volunteers has changed today.

EFFECT OF DEVALUATION OF THE DOLLAR

Mr. PASSMAN. Here is something that needs to be cleared up. I listened to questions earlier by some of our members relative to what effect the devaluation of the dollar had on the operations of the Peace Corps. Did it increase what you could do with the dollar or decrease what you could do with the dollars provided?

Mr. HESS. The recent devaluation?

Mr. PASSMAN. Yes.

Mr. HESS. It has decreased. You asked whether it has increased or decreased what we can do with the dollar.

Mr. PASSMAN. I thought we were told by the administration, by our economists, and other people who know something about our economy, that a dollar spent at home may buy more than dollars spent for imports. American dollars would buy more or at least an equal amount, and the devaluation would have no effect on the economy as such at home. Why would you have any serious devaluation of the dollar as it applies to the Peace Corps, because are not most of the dollars spent here?

Mr. HESS. About half of our dollars spent overseas as a result of our operations.

Mr. PASSMAN. Then you would be affected?

Mr. HESS. Yes.

Mr. PASSMAN. What are they spent for overseas?

Mr. HESS. They are spent to pay for the volunteers' subsistence allowance. They are spent for staff salaries. They are spent for our day-to-day operations.

Mr. PASSMAN. We would like the complete list.

[The information requested follows:]

Budget items affected by the winter, 1973 devaluation of the dollar

	Fiscal year 1974 budget estimate
Direct training (in-country training portion)	$11, 457, 000
Volunteer cost items	14, 152, 000
Living allowance	10, 555, 000
Settling-in allowance	803, 000
Medical supplies and services	1, 434, 000
In-country travel	488, 000
Volunteers supplies and equipment	119, 000
Vehicle purchases	86, 000
Miscellaneous volunteer costs	334, 000
Dependent support	333, 000
Overseas staff costs	5, 149, 000
Staff salaries for foreign national employees	1, 421, 000
Personal service contract costs	603, 000
Staff in-country travel	156, 000
Education allowance	135, 000
Staff housing	860, 000
Office rents, communications and utilities	860, 000
Staff—Other operating costs	688, 000
Staff maintenance, General Services	426, 000
Shared administrative support—State Department	3, 004, 000
Fiscal year 1974 budget impact due to devaluation	33, 762, 000

NOTE.—Present information based on our own analysis and a State Department review of effects on an overall basis indicate that the items affected will increase by about 6 percent or $2,000,000

INTERNATIONAL INSTITUTIONS

Mr. PASSMAN. So many times in these examinations we hear, as in the case of the International Development Association—if we put up 40 percent, another country will put up 10 percent, and another will put up 6 percent. If you go into these foreign parliaments and listen to debate on the floor as to why for example the United Kingdom should provide a contribution, they say "If we put up 12 we will get 40 percent from Uncle Sam." Then we find out that the former colonies of the United Kingdom are getting 60 percent of the total fund. Do you understand what I mean?

Mr. HESS. Yes.

Mr. PASSMAN. The donor becomes the recipient, but while they are doing that they also drain off our 40 percent. Do you understand?

Mr. HESS. Yes.

Mr. PASSMAN. Whatever the host country puts up, they are likewise the recipient of what they put up. Is that correct?

Mr. HESS. Yes, sir.

Mr. PASSMAN. The service is being rendered locally. We are making our contribution to the Peace Corpsmen, so whatever benefits may derive from this operation accrues to the benefit of the host country.

Mr. HESS. Yes, and that is the purpose of it.

Mr. PASSMAN. That is right, but they are then not only the recipients of whatever contribution they make but they are the full recipients of our contributions. Is that right?

Mr. HESS. Yes.

Mr. PASSMAN. I appreciate your frankness. It is a weak argument

when you say that if we put up a dollar they will put up a dollar. Actually they get both dollars. Is that right?

Mr. HESS. Yes, along that line of reasoning.

COORDINATION WITH AID

Mr. PASSMAN. Do you coordinate these technical assistance programs with AID?

Mr. HESS. Yes, both at the local level in the country and here in Washington.

COUNTRIES IN WHICH PEACE CORPS IS OPERATING

Mr. PASSMAN. In how many countries is the Peace Corps operating?

Mr. HESS. Fifty-eight.

Mr. PASSMAN. In how many countries did you operate in fiscal 1972?

Mr. HESS. Fifty-seven.

Mr. PASSMAN. In how many countries do you plan to have Peace Corpsmen in 1974?

Mr. HESS. We have requests outstanding for five new countries to serve during fiscal 1974.

Mr. PASSMAN. Do you have any Peace Corpsmen in Cuba?

Mr. HESS. No.

Mr. PASSMAN. You have them in Chile?

Mr. HESS. Yes.

Mr. PASSMAN. Do you have any in any Communist countries?

Mr. HESS. No.

Mr. PASSMAN. How many do you have in Chile?

Mr. HESS. At present, a total of about 35 volunteers plus dependents.

Mr. PASSMAN. When you begin a project do you usually try to estimate a termination date?

Mr. HESS. We do, yes.

Mr. PASSMAN. What is your current dropout rate for all trainees?

Mr. HESS. About 15 percent for all trainees. Training is also part of our selection period of time so we get the best qualified volunteers to serve.

Mr. PASSMAN. Is there any limit as to the length of time a staff member may serve in the Peace Corps?

Mr. HESS. Yes, there is, 5 years by legislation.

Mr. PASSMAN. I think it costs $9,700 to maintain a Peace Corpsman today?

Mr. HESS. Yes.

Mr. PASSMAN. How does that compare to the cost of 5 years ago?

Mr. HESS. Approximately $9,900 5 years ago.

STAFF OF PEACE CORPS AND ACTION

Mr. PASSMAN. How many individuals in your shop work both for the Peace Corps and ACTION?

Mr. HESS. Only Peace Corps staff are in my shop but Peace Corps is part of ACTION.

Mr. PASSMAN. I am speaking about your operation under ACTION.

Mr. HESS. ACTION has 569 employees working for both Peace Corps and domestic programs.

Mr. PASSMAN. Have you a breakdown as to how the division is made with respect to cost?

Mr. MARKHAM. Yes. The division is made based on the number of people working directly for Peace Corps and directly for domestic programs.

Mr. PASSMAN. I speak of those who work for both.

Mr. MARKHAM. Yes. We divided those based on the number——

Mr. PASSMAN. You divide the payroll?

Mr. MARKHAM. Yes.

Mr. PASSMAN. In the budgeting and accounting you charge the Peace Corps with half and ACTION with half?

Mr. MARKHAM. It is not half, sir. It is 66 percent for Peace Corps and 34 percent for domestic volunteer programs.

ENTERTAINMENT ALLOWANCE

Mr. PASSMAN. How much have you budgeted for 1974 for representation or entertainment allowance?

Mr. HESS. There is a provision of $5,000 for entertainment allowances in the legislation.

Mr. PASSMAN. I have never quarreled with adequate representation allowance for Federal agencies, but I wonder if you would tell the committee why the Peace Corps needs a representation allowance?

Mr. HESS. There are frequent occasions when we have distinguished visitors from other countries who come to consult with us. Some of them are entertained at modest dinners.

ACCOMPLISHMENTS OF FOREIGN AID

Mr. PASSMAN. On page 4 of your justifications you make several statements which are as follows:

"It is commonly agreed that the gap between rich and poor nations continues to widen despite two decades of concerted efforts by leading developed nations."

"The World Bank estimates 1 billion people are still hungry and malnourished and there are 100 million more adult illiterates today than 20 years ago."

That is pretty disappointing, is it not, after giving away $250 billion in 124 nations of the world? Isn't this program actually working in reverse?

You are familiar with what I am reading, are you not?

Mr. HESS. I am familiar with what you are reading. It could have been worse than that had there not been foreign assistance.

Mr. PASSMAN. Who knows but what it would not have been better if we had let people work out their own problems.

Mr. HESS. That might have been.

Mr. PASSMAN. I have known wealthy families who had children and they gave them bicycles, guitars, trumpets, saxophones, automobiles, and so on, who did not accomplish anything in life except perhaps a college degree. I have known poor families where the children stopped at high school, the child made good and became president of the local bank. Do you realize it would be better at times to let people work out their own problems?

Mr. HESS. Yes. In the Peace Corps countries where we work, these people are attempting to do that.

Mr. PASSMAN. You are getting away from the general statement. This appears to be worldwide. Remember, my dear friend, we are a new nation. We are really only 186 years away from the Constitution. While we were primitive and underdeveloped, many of these so-called underdeveloped nations were developed. While we were developing they were becoming undeveloped. It seems we are becoming underdeveloped trying to develop those who were previously developed. It is quite a puzzle, is it not?

Mr. COUGHLIN. I would like to observe that, at least in my opinion, the public criticisms of the Peace Corps which existed in years past have over the last few years very much subsided and I think that is a tribute to the change in direction which has been taken and it is a tribute to all of you who have been part of that.

Mr. HESS. Thank you, Mr. Congressman.

CATEGORIES OF VOLUNTEER JOBS

Mr. COUGHLIN. On page 6 of your testimony you indicate volunteers are sent overseas in response to specifically defined jobs identified in advance. These are requests from host countries?

Mr. HESS. Yes.

Mr. COUGHLIN. Can you supply for the record a list of the kinds of categories of work they do and the numbers of people you have in those job categories?

Mr. HESS. I would be delighted to do so.

[1] Projects categorized as "Other" are those often performed by a single volunteer (individual placement) who possesses a high level of skill and degree of specialization. These specialized and often singular projects do not fit under any of the general categories for projects.

HOST COUNTRY NATIONALS ON PEACE CORPS STAFF

Mr. COUGHLIN. The second question I have is on page 10. You indicate a major percentage of the overseas staff are host countries nationals now—some 76 percent.

Mr. HESS. Yes.

Mr. COUGHLIN. How many foreign nationals does the Peace Corps employ?

Mr. HESS. 315 are now employed overseas.

Mr. COUGHLIN. I thought the purpose of this was to get our people there. I am a little confused on this.

Mr. HESS. It is the concept of partnership. We believe we should share many of the responsibilities of running the Peace Corps. We feel many times that host country nationals can better assist us in developing the programs to be more responsive to their needs. Furthermore, it is less costly if we use a foreign national as a staff member than an American. We find there has been significant improvement in our operations and programing. Many also participate in our training programs.

Mr. COUGHLIN. My concern was that one of the purposes of the Peace Corps is to expose other nationals to Americans and not necessarily to employ other nationals in their own program.

Mr. HESS. These are staff members in contrast to volunteers.

TESTIMONIALS FROM HOST COUNTRIES

Mr. COUGHLIN. As a result of the program and recent changes in the program, do we have any testimonials from host nations in terms of their appreciation for our sending volunteers there?

Mr. HESS. We certainly do. I would like to provide for you a survey we recently made on accomplishments in accordance with the three goals specified in the legislation. Included there are some of the testimonials we received and which we continue to receive, including visitations from ministers and other high government executives who come here and make representations about the value of the Peace Corps.

[The information referred to follows:]

A SURVEY OF PEACE CORPS ACCOMPLISHMENTS

INTRODUCTION

As envisaged by its founders, the Peace Corps had one distinct purpose: to promote peace and goodwill throughout the world. In pursuit of this objective, nearly 50,000 Americans have served in numerous developing countries since the Peace Corps was created in 1961. The Peace Corps still follows the three goals set for it by Congress in that year: (1) To help developing nations meet their needs for trained manpower; (2) to promote better understanding of the American people among the people served; and (3) to promote a better understanding of other peoples among Americans.

The Peace Corps is unique among U.S. Government programs overseas in its strong emphasis on the people-to-people nature of its service to host countries. As volunteers help train local manpower, their success depends in large measure on how they relate to people. The volunteers' job effectiveness and credibility depend heavily on their ability to speak the local language, appreciate customs other than their own, and adapt to living and working conditions considerably less comfortable than those found at home. In most developing nations, Peace Corps volunteers are the only Americans living and working as part of local communities throughout the country. Therefore, the second and third goals of increasing mutual understanding between people are part and parcel of the primary objective of training manpower around the world.

Host countries generally appreciate the Peace Corps as an expression of American interest in them, and an opportunity to increase American awareness of this development problems. Similarly, they value the unique contributions volunteers make through their jobs. When volunteers successfully complete their assignment, they do not leave behind the results of a large financial contribu-

tion subject to the problems of maintenance and depreciation. Instead, they leave behind general and technical skills with which local people can help solve their own problems and which people can pass along to their fellow countrymen.

As the Peace Corps over the years has improved significantly its technical contributions, it has continued to excel in its cross-cultural achievements. The program permits Africans, Asians, and Latin Americans to gain new insights into the American culture through their close association with volunteers. Culturally, the volunteers often conclude that they gain as much from their overseas service as they contribute. Yet the experience does not end with the completion of the Peace Corps assignment. Volunteers return to the States with keener perceptions of world needs, a deeper appreciaiton of foreign cultures, and often a strong desire to work toward the social and economic betterment of American society.

PART I

Peace Corps technical accomplishments

The following project examples, taken from detailed country analyses, illustrate the wide range of volunteer activities and accomplishments. An overview of all volunteers working in each job sector during the last year begins on page 9.

Agriculture and rural development

Over the last 4 years, five volunteers in Ethiopia resettled 600 previously landless farmers on 1,000 hectares of land.

Since 1965, the fish catch of local fishermen in Micronesia has been increased 20 percent due to the work of 25 volunteers in fisheries research. Another volunteer, the first to be involved in fish marketing in Micronesia, was responsible for the construction of a large cold-storage facility which greatly increased the ability of fishermen to compete in local and export markets.

In Guatamala, three volunteers train 30 cooperative managers and 500 members in cooperative management at the government's training school every year.

Peace Corps volunteer Jim Diamond in Chad constructed 48 pit silos in the last 2 years so that farmers are now able to save most of their cattle during persistent drought periods.

Sixteen volunteers assist in the management of 100 local farmer's associations involving more than 150,000 Malaysian farmers. Ten other Malaysia volunteers have been responsible for the training of 50 student farm mechanics and the maintenance of 1,000 tractors over the last 3 years.

In El Salvador, 12 volunteers developed 46 pasture grass demonstration plots and put into silage 4,000 tons of fodder to sustain milk producing cows during the dry season.

Since 1970, 90 volunteers in Liberia trained 170 Liberians in crop and animal production skills and directly assisted 1,800 farmers.

During the last 2 years, 10 Thailand volunteers established 200 demonstration farms featuring cash crops and, as a result, helped 600 Thai farmers double their cash-crop income. In another project, 40 volunteers trained 120 community development workers through the construction of 600 small dams, spillways, and bridges.

Five volunteers in the Ivory Coast transformed 25 villages into full-functioning cooperative units.

In El Salvador, two volunteers doubled the catch of a fishing cooperative from 80,000 to 170,000 tons last year by training 21 men in improved marine fisheries techniques.

Since 1968, 30 volunteers in Dahomey have turned normally nonproductive cattle into 250 trained pairs of oxen which significantly increased food production in rural areas where tractors are unobtainable. In addition, over the last 4 years, 40 volunteers have constructed 100 corn dryers and 175 cement silos with a capacity of 70,000 tons of grain order to make corn a new cash crop for Dahomean farmers.

Within the last 2 years, two volunteers in Mali increased by 100 percent the total oil extraction rate of citrus fruits which comprise the only cash crop in many parts of the country. Eight other volunteers have field-tested 300 varieties of cash-crop vegetables and selected 25 varieties for future systematic production by local farmers.

Education

Since 1963, 475 volunteer English teachers have taught more than 190,000 Iranian students and 240 Iranian teachers who participated in inservice English language courses.

Nineteen volunteers in Thailand developed and produced a standard TEFL (Teaching English as a Second Language) curriculum syllabus for the Ministry of Education. In addition, three other volunteers prepared and conducted new math seminars for 250 Thai teachers and translated a new math workbook into Thai, now available in all schools.

In Swaziland, 9 volunteer skilled tradesmen teach 6 basic trade skills to 330 students each year at the Industrial Training Institute.

Published last year by five volunteers in Western Samoa were: Western Samoa General Science Work Cards and Teachers Notes; The Western Samoa Form One Social Studies Course; Students Workbook and Teachers Guide and Physical Education Notes for Samoan Schools.

Other the last 10 years, 800 volunteer teachers in Liberia taught mathematics, science and social studies to 150,000 students in 95 elementary schools and 98,000 students in 35 high schools.

One volunteer is developing mathematics and science materials for Malaysia's educational TV unit which will reach 86,000 primary and 418,000 secondary students.

In Ethiopia, three volunteer teachers produced an industrial arts curriculum and book on home economics teaching aids for the Ministry of Education.

Seven volunteers in Thailand taught 800 students in farm machinery repair; developed 10 laboratory manuals and trained 28 shop teachers in practical farm mechanization techniques.

In each year since 1969, 25 volunteer teachers have taught mathematics and science to 8,000 Botswana high school students.

One volunteer in Morocco is training 30 high school graduates as trilingual secretaries in a United Nations-sponsored project.

Since 1971, five Thailand volunteers produced twenty 25-minute educational TV programs while training six Thais in production techniques.

In Sierra Leone, 41 volunteer teachers upgraded 600 inservice primary school teachers affecting the quality of education of 60,000 primary students in 200 schools.

Ninety-four volunteers have served in preschool programs in Morocco since 1964 and trained 200 preschool teachers and supervisors.

In Afghanistan, 11 volunteers are currently involved in teaching vocational English to 1,500 students in 8 Government institutions ranging from the school of public administration to the telecommunications scchool.

Health

In a joint WHO/PC program started in 1970, 14 volunteers detected 44,300 cases of smallpox; inoculated 6,665,100 Ethiopians, and most importantly, eradicated smallpox from 7 of Ethiopia's 14 provinces.

Since 1967, 180 volunteers serving in Korean rural health centers in tuberculosis control, worked directly with more than 3,000 health center employees, cosupervised 1,800 TB workers, and participated in the treatment of 60,000 TB patients.

One volunteer X-ray technician in Honduras increased the number of functioning hours of 20 X-ray machines in 10 hospitals by 20 percent.

In Thailand, 6 volunteers have introduced new techniques in child nutrition centers, established 5 more and cared for 200 preschool children.

Over 135 volunteers, working over the last 10 years in Thailand, have helped reduce the incidence of malaria by 90 percent.

Two volunteer M.D.'s in Ethiopia established a pediatric training clinic and the country's first school for physiotherapists.

Last year, 3 volunteer nurses helped identify, train, and supervise 70 local community health Honduran volunteers in 50 rural communities. Five other nurses in Honduras are currently providing curative nursing care to 30,000 patients in 6 hospitals and training 100 hospital staff through inservice nursing programs.

Since July 1972, 4 Peace Corps teams have been working in tuberculosis control in Afghanistan and have trained 12 counterparts, established 4 Provincial clinics, introducer TB control to 8 general health clinics, and participated in the treatment of 1,000 patients and the innoculation of 10,000 people.

Urban development and public works

Since 1965 when Peace Corps' participation in Iran's public works/urban planning program began, 76 volunteer civil engineers, architects, city planners, urban designers, economists, and sociologists have designed and implemented

the following projects: forty-eight 5-year city growth guide plans, 45 city parks, 34 urban design projects, 52 architectural projects, and 25 research projects.

Three volunteer engineers in Ethiopia installed water systems in two towns, initiated the construction of two others, completed an electrification system in another town, and are presently working on similar systems for two other towns.

Thirty-nine volunteer architects and urbanists, serving in Morocco since 1969, have provided technical assistance to 110 Moroccan architects and draftsmen and established a school for draftsmen.

A volunteer architect in El Salvador designed a 500-unit housing project for low-income families.

Since 1966, over 100 volunteers have been involved in community planning and development in Micronesia, assisting in the design and construction of the Ponape and Truk airport terminal buildings; Palau, Yap, and Ponape dispensaries; the Ponape Harbor; hotels in Majuro and Ponape; "typhoon houses" in Saipan; and the permimeter road in Ponape.

A team of 10 volunteers and 30 Sierra Leonean counterparts built two 60-bed hospitals with operating rooms and staff quarters.

Four volunteers currently serving in Tunisia are supervising the reconstruction of 240 wells in a Province where polluted water and abandoned wells were a major problem, completing 180 of these wells to date.

In Sierra Leone, 8 volunteers surveyed, designed, and built 6 water systems and installed 65 wells for 6 large towns, trained 20 Sierra Leoneans to maintain them, and began construction on 20 more water systems.

Since 1969, 9 volunteer civil engineers and architects in Western Samoa have helped construct 50 miles of roads and bridges; designed and constructed the runway for the country's only airport; designed the air terminal building and the widely praised Samoan Parliament Building.

Over 1,000 wells have been constructed in rural villages in Upper Volta, Chad, and Niger by volunteers over the past 3 years, providing villagers with pure water for the first time in their history.

Business and public management

In Ethiopia, 4 volunteers put a marginally productive garment industry and a handicrafts business, employing 350 people, on a profitable management base.

During 1972, 5 volunteers in Micronesia assisted 10 businessmen in the Marshalls district to develop efficient bookkeeping systems and aided 6 other Marshallese to procure loans for commencing businesses.

Twenty-two Malaysia volunteers with accounting and public administration training installed comprehensive systems of program and performance budgeting and accounting in 90 government departments.

In El Salvador, volunteers supervised a $65,000 loan program for small cooperatives and put into operation a cooperative employing 24 previously unemployed weavers.

OVERVIEW: VOLUNTEER ACTIVITIES AND ACCOMPLISHMENTS

In order to reflect a world-wide picture of the technical output of 6,793 volunteers working in 58 developing countries last year, the following surveys the major volunteer activities and accomplishments within each of the five job sectors.

SECTOR: AGRICULTURE AND RURAL DEVELOPMENT

(Number of volunteers: 1,955—29 percent)

583 volunteers are directly assisting more than 2,500 local farmers to increase their crop production capabilities through extension services.

177 volunteers are working with more than 1,500 farmers to improve livestock quality and production through artificial insemination, improved stock feed, veterinary and marketing projects.

For the first time in their history, over 100,000 villagers and farmers are receiving adequate supplies of pure water because *96* volunteer engineers and building specialists constructed many town water systems and over 1,000 wells and boreholes.

20,000 farmers became members of 150 marketing cooperatives by working with *194* volunteers.

470 volunteers were responsible for training over 2,000 cooperative managers.

76 volunteers trained 1,000 fishermen and improved their catch returns in many fishing villages and cooperatives around the world.

359 other volunteers worked with host country people in forestry, home economics, 4-H clubs, farming equipment repair and maintenance, conservation and agricultural research and planning.

SECTOR: EDUCATION

(Number of volunteers: 3,117—46 percent)

All developing countries with which the Peace Corps works consider teaching as the most potentially valuable contribution volunteers can make. The future of these countries will depend heavily on the amount and quality of education that these governments can provide.

860 volunteer teachers are teaching English to 172,000 students in countries where English is taught as a second language. Another *604* volunteers are teaching English to 120,800 students in countries where English is an official language but the quality of spoken and written English is low. All of these teachers are meeting a critical need because the lack of English training prevents students from using an enormous amount of resource material written in English thereby making anything more than a limited education impossible.

Mathematics and science subjects are taught by *728* volunters to 145,600 students who will eventually use these skills to advance the technical development of their countries.

59,800 other students are receiving valuable job training in industrial arts and vocational subject through *299* technical education volunteers.

315 volunteer teacher trainers are instructing 63,000 host country teachers in improved teaching methodology and up-graded subject matter skills.

22,000 university students are being taught by *110* volunteers.

Another 36,400 students are receiving training by *201* volunteers in home economics, business education, educational TV, adult education, sports and physical education, and library science.

All told, 3,117 volunteer teachers taught 621,600 students last year.

SECTOR: HEALTH

(Number of volunteers: 814—12 percent)

The volunteers working in this area often bring health services to people who have never received any kind of health care before. On a worldwide basis only 1 percent of the developing world's population of 2.5 billion receives the services provided by these volunteers:

63 volunteers provided maternal and child health care to 7,500 mothers and 30,000 infants and children.

Approximately 10,000,000 people received innoculations against smallpox, were treated for tuberculosis or had malaria eradicated from their area through the services of *163* volunteers.

76 Peace Corps nurses treated 45,600 patients and assisted with the up-grading of skills for 1,200 local medical staff.

2,300 nurses aides, laboratory technicians and midwives were trained by *46* paramedical volunteers.

43,000 patients were treated by *43* volunteer doctors and medical professionals.

Another *358* volunteers provided needed skills in nutrition, school health education, various medical services and family planning.

SECTOR: URBAN DEVELOPMENT AND PUBLIC WORKS

(Number of volunteers: 491—7 percent)

The many services that the volunteers in this area bring to hundreds of towns and villages and local government bodies are vital to the plans of developing countries where strong physical and administrative infrastructures are needed in order to foster development on all economic levels.

122 civil, mechanical and industrial engineers and surveyors are building roads, bridges, and community buildings of all types used by thousands of host country citizens.

Hospitals, schools, feeder roads, rural and urban electrification systems, and water distribution systems have been constructed by *127* general construction and

building tradesmen as part of hundreds of major projects involving other host government agencies and personnel.

49 Peace Corps architects designed airports, public buildings, housing complexes and markets which affect the daily lives of thousands of people. These volunteers also trained several hundred draftsmen and provided project supervision.

In addition, another *198* volunteers provided expertise and advice through legal services, social work, urban community development and city and regional planning.

SECTOR: BUSINESS AND PUBLIC MANAGEMENT

(Number of volunteers: 416—6 percent)

These volunteers provide management services to a variety of private and government groups which lack the internal resources necessary to obtain full organizational potential.

109 volunteers provided business experience and knowledge to over 5,000 host country members of numerous credit, consumer, and marketing cooperatives.

Many government departments and agencies received assistance in bookkeeping and other management systems from *100* public administration volunteers.

176 volunteers work with small businessmen and industries to obtain loans and improve internal management and financial systems.

Another 31 volunteers train host country people in hotel management techniques and how to improve the management of cottage industries.

PART II

Peace Corps accomplishments beyond mid-level technical development

Every Peace Corps volunteer is recruited and trained to perform a particular job determined by the host country to be important for its own social or economic development. These jobs each have a specific set of objectives geared to training local people in technical, practical, or academic skills with which to help themselves. As discussed in the previous section, the accomplishments of volunteers in pursuing these primary activities are usually measurable in terms of how many people are taught in various training institutions, how many schools or hospitals are constructed, how many people are innoculated, or how many acres of land are introduced to modern methods of cultivation each year.

In addition to these contributions to mid-level technical development, however, the Peace Corps assesses its accomplishments in five other major areas as presented below. Benefits accrue to the volunteers and the local people they befriend and affect as mutual understanding improves between Americans and people of other countries and cultures. In the process, the Peace Corps helps to generate goodwill and a more personal image for the United States in the eyes of developing countries. By cooperating with other international development agencies, the Peace Corps often supplements the efforts of organizations like USAID, World Bank, and other international volunteer organizations. And upon completing their service overseas, volunteers return to American society as a constructive, experienced resource for addressing domestic problems in their chosen careers.

Volunteer innovations—New host country programs

Developing countries often find Peace Corps volunteers to be a source of innovative ideas for tackling critical problems with the limited resources available. The practical application of such innovative ideas has led to a number of new programs which have been adopted and developed by host countries themselves.

Separate studies developed by the Africa and NANEAP (North Africa, Near East, Asia, and Pacific) regions indicate that now fully 10 to 15 per cent of their formal requests for volunteers from host countries are for primarily innovative projects such as launching new audit departments, organizing new cooperatives, redesigning national school curricula, and introducing new methods of teaching, well construction, and crop cultivation.

Beyond these formally requested assignments, however, a recent survey of Peace Corps countries revealed the following examples of new host country programs which were originally stimulated or initiated by volunteers.

1. Peace Corps projects in Dahomey offer three specific examples:

Peace Corps began supplying volunteers for an experimental school gardens

program in February 1968 responsible for supervising the agricultural activities in 10 to 15 rural primary schools. There were no Dahomeans doing this job at that time. Today it is a recognized part of Dahomean education, and over 200 rural primary schools are involved in the program. There are now only two remaining PCV's assigned as roving advisers; there are 16 Dahomeans employed by the Ministry of Education to continue this work.

In June 1969, four PCV's were assigned to the poorest region of Dahomey. Their job was to introduce the use of oxen-drawn plows and ox-carts to farmers, help interested farmers locate and train suitable bulls, and arrange for credit for plows and oxcarts. During the first year, the four volunteers managed to convince four farmers to adopt this new technique. By 1972, 142 additional farmers had joined. For the coming season, 200 new farmers have already expressed their intention to participate in this project and the local Dahomean agriculture extension agents are taking over responsibility for the project.

Up until the present time, the Dahomean Government had no program for assisting local farmers to effectively dry and store their corn, over 30 percent of which is lost each season to rodents, insects, and moisture damage. Large scale metal storage units of 500 to 1,000 metric ton capacity have been built in regional centers, but these units do not assist the average farmers in preserving his own harvest. In February 1968, four PCV's were assigned to develop an efficient but low cost system of drying and storing corn which could benefit local farmers. Five generations of PCV's have worked in small villages to develop a feasible system which could be taken over by the government when proven to be sound. In March of this year, the Government will allocate approximately $100,000 which, for the first time, will include funds to extend the system of drying and storing developed, tested, and proven by PCV's.

2. In Ethiopia, the Gewani Agricultural Vocational School, a 2-year boarding school to teach unschooled Afar nomads modern agricultural techniques, was started by two Peace Corps volunteers. They initiated the idea, sold it to the Ministry of National Community Development, designed the buildings, and obtained a $5,000 school partnership grant. The grant was supplemented by $10,000 supplied by the Ministry and $4,000 contributed by the Afar people. Construction of the school has been completed and a subsequent Peace Corps volunteer was designated the first school director. Classes started February 5, 1973. Peace Corps will continue to supply a few volunteers for the school although most of the instructors and staff will be supplied by the Ethiopian Government.

3. In the Ivory Coast, during 1970–71, one voluntary couple was assigned to work with a village to assist in the development of a cooperative. As a result of their work, the village now has a variety of established businesses: gas station, shoe store, tailor shop, food store—employing 25 Ivorians at various labor and management levels.

4. In Micronesia:

Teaching English as a second language (TESL): The Peace Corps strongly sponsored the introduction of this program into the local curricula. TESL is now Micronesian staffed and operated.

A volunteer developed the design for a typhoon-resistant house, a model now being used for many new houses in Saipan.

5. In the Dominican Republic, a volunteer swine production specialist was primarily responsible for the organization of seven small swine producers associations in order to obtain credit available from the National Community Development Office. Since he completed his tour in June 1972, the associations have grown to include over 250 small swine producers who have been able to obtain more than $32,000 in production credit during the last year. As a result of these loans, the participating farmers have been able to increase their personal incomes through the use of the more efficient techniques learned from the volunteer.

Volunteer secondary activities

The secondary activities of volunteers produce the most unsung accomplishments of the Peace Corps. In the early days, volunteers were continually encouraged to seek out or initiate additional ways to contribute to their communities no matter how demanding or time consuming their primary assignments were. This has meant spending evenings, weekends, and school holidays working on projects not found in their job descriptions. Such extra effort has distinguished the Peace Corps from other development agencies and facilitated the acceptance of volunteers into their communities.

The primary indicator that the Peace Corps has succeeded in distinguishing itself for its secondary activities is that it has become a firm expectation on the part of local people wherever Peace Corps volunteers serve. Upon arriving in a village where a volunteer has served in the past, a new volunteer no longer has to worry about seeking out additional activities. Instead, the new volunteer generally has to sort through competing requests for his or her spare time as neighbors, colleagues, and community leaders seek advice and assistance.

A recent survey of the 58 Peace Corps countries indicated the following typical secondary activities of volunteers over the past year.

1. In Botswana, volunteers spend spare time:

Tutoring adults who are taking correspondence courses.

Coordinating the national softball team.

Organizing new local sports clubs.

Conducting midservice teacher upgrading conferences during school holidays.

Digging drainage ditches, laying classroom foundations, and preparing garden plots for a new farmers' brigade student settlement.

Preparing educational radio broadcasts.

Assisting understaffed cooperatives with bookkeeping.

2. In Cameroon:

Several TEFL teachers have set up evening English classes in their communities which are attended by Cameroonian teachers, parents of their regular students, and local civil servants.

One volunteer helped her students build a volleyball court as there were no physical education activities at her school.

One volunteer solved the overcrowding problem at his high school by finding self-help funds, designing, and building a new wing at his school.

One volunteer divided the hours of her summer months between directing a youth camp and teaching leprosy patients how to sew.

3. In Peru, the volunteers:

Have continued to assist communities in the construction of 187 schools through the school partnership program in their spare time since 1964.

Support basketball and water polo teams and competitions.

Form science clubs and hiking expeditions for schoolchildren.

4. In Ecuador, volunteers:

Work part time in the Quito orphanage, seek funds for more food and clothing, and stimulate local interest on adoption.

Provide recreational opportunities at a school for deaf and blind children.

Conduct evening English classes for local citizens.

5. In Mauritius, volunteers extend their activities beyond those assigned by:

Organizing and supporting two separate Mauritian youth service clubs.

Conducting weekly first aid classes for interested people in the community.

Contributing in one way or another to a major farm village pilot project by eradicating scabies, locating local water supplies, and introducing small-scale agricultural production.

Raising funds and teaching part time at a school for deaf children.

6. In Thailand, secondary activities entail:

Education volunteers averaging more than 5 hours a week in special English tutoring projects and expanding school libraries.

Rural public works volunteers teaching English to colleagues and host families, athletic coaching, and designing construction projects in their communities.

Health volunteers translating medical reports and technical books in addition to teaching English to colleagues and students.

Supplementing other development organizations

Peace Corps overseas staff coordinate their programs to the extent possible with other international or multinational development agencies operating in each host country. Volunteers are made available for suitable jobs in projects supported by loans or grants from the large organizations like the Agency for International Development, the World Bank, and various United Nations affiliates like the World Health Organization. Often such volunteer activities entail the application or extension of modern technology or methodology to remote rural areas where professional experts and advisers are seldom assigned.

Furthermore, the Peace Corps actively provides assistance upon request to some of the newer international volunteer organizations like the Canadian, British, German, Dutch, Swedish, Japanese, and United Nations volunteer agencies. The Peace Corps has become recognized in this community for its wealth of experience and expertise, particularly in methods of language and cross-cultural training for volunteers.

The following are current examples of the Peace Corps cooperating with and supplementing the efforts of other international development agencies toward the goal of benefiting the host country in the most effective way possible:

In Upper Volta an AID specialist on contract from the Communicable Disease Center in Atlanta supervises a program which has four Peace Corps volunteers working at the field level in an epidemiological project.

In the Dominican Republic, a dozen Peace Corps volunteers work in projects sponsored by the United Nations Food and Agricultural Organization, the Inter-American Development Bank, the Inter-American Foundation, the Pan American Foundation, and the Organization of American States.

In Paraguay, 11 Peace Corps volunteers work, at the middle levels of 3 AID-sponsored projects in education, credit cooperatives, and livestock improvement. An additional 23 volunteers work in several agricultural projects supported by the Inter-American Development Bank.

In Korea, Peace Corps volunteers work jointly with the World Health Organization (in tuberculosis detection and treatment) and an International Labor Organization supported vocational education program.

In Western Samoa, volunteers comprise 50 percent of the faculty of the new Technical Trades Institute, sponsored by the International Labor Organization, and work with the United Nations development program revising the science curriculum.

Domestic benefits at home from volunteer experience and growth overseas

Regardless of age, Peace Corps volunteers gain valuable experience by coping with difficult development problems, increasing their awareness and understanding of different cultural groups within countries, and often feel they have gained in personal maturity. When they return to the United States, approximately 73 percent move into service-oriented careers where they contribute directly to American society in educational, governmental, or nonprofit institutions. The remaining 27 percent make similar contributions while choosing careers in the private sector where their improved problem-solving abilities, patience, and understanding of different cultural groups are also vital assets.

A survey of returned Peace Corps volunteers employed as of June 30, 1972, revealed the following areas of employment based on 2,760 responses to a questionnaire (out of approximately 45,000 returned volunteers as of that date):

Employed with:	*Percent of total responding*
State agency	11
Federal agency	11
Local government	5
Private firm	27
Educational institution	35
Social services	6
Health services	5
	100

The following statements of volunteers who have been in the Ethiopia smallpox eradication programs between 6 months and almost 2 years as of February 1973 illustrate typically varied responses to the question: "What effect has working in the smallpox eradication program had on your life and future plans?"

"Effects on my personal life, philosophy, et cetera. Invaluable experience in public health, which is my career orientation. A real, honest-to-God knowledge of what poverty is. A deeper, and I think now more realistic, idea of what Third World countries could use; and how I could help. * * * Many friends who have taught me, usually without their knowledge, other ways of looking at things. The realization that one can live comfortably and decently without all the expectations that many Americans (and other Westerners) have. * * * Some satisfaction from seeing very tangible results from the work I am doing (such as clearing an endemic area of smallpox), tangible results which other Peace Corps volunteers may not see from their jobs (for example teaching). * * *"

"I have found the program to be challenging and at the same time rewarding. I was leaning toward pharmacy school when I joined Peace Corps but had never given much thought to the epidemiological side of public health, especially communicable disease control."

"My work has convinced me that field biology should be pursued upon completion of Peace Corps service. Also I have become greatly interested in all those little organisms causing the great variety of disease in Ethiopia. If only I have a microscope, stains, and culture media!"

"I plan on a medical career. This program enables me to see a variety of diseases that many doctors in the States never get to see except in a textbook."

"As for a career in health related field, * * * well * * * I would never rule it out, however I've been looking into schools of African studies and hope to be accepted there."

"The program has had a definite effect upon my future plans. I intend now to continue my education possibly in public health, but definitely with the goal of returning to one of the Third World nations and applying my skills and energies toward their development. My experience in Wollega has served to strengthen original plans and has allowed me to see more clearly how best to apply my energies."

Generating goodwill for the United States

Host country appreciation for contributions that Peace Corps volunteers make is expressed in a number of ways which indicate explicitly that goodwill for the United States continues to be an outstanding byproduct of the volunteers' other accomplishments:

One indicator that volunteers are succeeding is that preliminary requests from the current 58 host countries for more volunteers continue to outnumber those requests which are finally approved and filled by an average margin of 3 to 1. Thus for the projected fiscal year 1974 trainee input of 5,760 the Peace Corps estimates that at least 17,000 preliminary requests for volunteers will have been made by host country government officials. The gap is largely accounted for by requests that turn out to be unsuitable for Peace Corps programing.

In the past year five new countries have asked for the services of Peace Corps volunteers, and up to five additional countries are expected to extend official requests for small projects by the end of fiscal year 1974.

Host country media and high government officials around the world continue to praise the efforts of volunteers publicly, through official communications, by bestowing high honors on outstanding Peace Corps personnel in their countries.

Over the past several years the Peace Corps has made a major, if somewhat subtle accomplishment: Most host countries now treat and regard their Peace Corps volunteers as their own civil servants—expected to speak local languages, eat traditional food, and interact freely with all levels of local society.

The following are but a few samples selected from an average of more than 3,000 annual host country newspaper stories, official statements, and other communications which all speak to widespread goodwill generated by Peace Corps volunteers:

An example of a representative official statement about Peace Corps/Cameroon was recently made by the Honorable B.T. Sakah, Secretary of State for Rural Development, at the conclusion of an in-country volunteer training program for inland fisheries development. Below are some of the most significant parts of the statement:

"I welcome you to witness this ceremony marking the end of an in-country training course for U.S. Peace Corps volunteers, who will work mainly in the Inland Fisheries Section of the Department of Agriculture. Allow me to say a few things to the American Peace Corps volunteers who have come to replace their colleagues to work with Cameroon farmers. You are from today staff of the directorate until your contract ends. I am happy that you have lived with farm families in Nkwen village for the past 5 weeks understudying some of the problems you will solve in the stations to which you have been posted.

I appeal to you not to be very impatient because farmers are conservative all over the world. The first duty of agricultural agent is to educate farmers to do better in their business. I am confident that you will live up to this expectation.

Once more, my government deeply appreciates the good relationship existing between the United States of America and the Federal Republic of Cameroon in promoting the technical services of my country through the participation of human resources. Our wish is to welcome qualified technicians who are hard working and dedicated to serve other people in the developing nations. On the other hand, I hope that foreign personnel can also take back to their countries some aspects of our Cameroon culture, especially about peace and understanding which bring happiness to mankind.

In conclusion, therefore, I thank the U.S. Peace Corps, the Oxfam organization, other technical aid cooperators and the Cameroon Government as a whole for participating actively in the inland fisheries development of Cameroon."

Also in Cameroon:

One volunteer was crowned honorary chief on different occasions by two different villages for his work in fish pond construction. This included presentation of the red feather and porcupine quill as well as two sets of traditional clothing.

Two volunteers have been invited to join very selective, traditional societies for their well-respected status in their communities. A rare honor given to foreigners, this was due primarily to their effective work as well as their attitude.

One volunteer discovered five new species of fish in Cameroon. The Government so respected his work that one of the species was named after him in a Radio Buea announcement.

TRANSLATION OF LETTER FROM VILLAGE CHIEF TO PEACE CORPS DIRECTOR/IVORY COAST

JULY 27, 1972.

SIR: At the meeting held in Banguié the 9th of September under the patronage of . . . , a specially warm feeling filled the hearts of every inhabitant of Banguié. The purpose of the meeting was to celebrate the completion of 24 days of work dedicated completely to making a survey of the village.

It takes singular courage to undertake the work in this black forest of Banguié, especially when one realizes its inherent dangers. Only a rare person would agree not only to do this work, but to do it free of charge. The young American volunteer, Robert Joseph Burke, has once again proven to the Abbey (tribal) world the greatness of young Americans.

Thus, in accordance with our dynamic Sous-Prefet, the whole population of Banguié is assembled to express their thanks and gratitude not only to PCV Burke but to the whole American Peace Corps in the Ivory Coast. And to put our gratitude into tangible form, a monument will be erected to commemorate the Peace Corps of the United States when the new village of Banguié is built.

In the name of (all the notables), the whole population of Banguié extends to you their warmest thanks.

ABIE KACOU LEMBE,
The Village Chief.

JOHN F. KENNEDY MEDICAL CENTER,
Monrovia, Liberia, February 15, 1973.

PETER B. POLATIN, M.D.,
Medical Program Technical Representative,
Peace Corps, Monrovia, Liberia.

DEAR DR. POLATIN: I take the opportunity through this medium to inform you of the splendid and valuable services the Peace Corps assigned to the John F. Kennedy Memorial Hospital are rendering.

The Peace Corps here have been well received and have truly identified themselves with their Liberian coworkers and by so doing they have been able to achieve maximum cooperation and satisfactory results in the exercise of their various projects and assignments.

In evidence of their many rewarding contributions to the improvement of the hospital they have imparted both practical and technical know-how and an in-service training program for upgrading the standard of employees on all levels has been set up. In addition, employees have begun to respect the dignity of labor and are more willing to readily accept blue-collar jobs as a result of their contact with the Peace Corps.

On a whole, therefore, the Peace Corps have made a favorable impression and have helped considerably in improving the operation of the hospital, for this we are grateful and hope that all future services will be equally rewarding.

Sincerely yours,

CECILIA M. KENNEDY,
Hospital Administrator.

REPUBLIC OF LIBERIA,
DEPARTMENT OF INTERNAL AFFAIRS,
Monrovia, Liberia, February 15, 1973.

Mr. DANIEL GOE,
Director of Peace Corps,
Peace Corps/L. Monrovia, Liberia.

DEAR MR. DIRECTOR: For the past 3 years the Ministry of Local Government, Rural Development and Urban Reconstruction has had Peace Corps volunteers working in its rural development program. These volunteers throughout the 3 years have worked hard in the building of roads, schools, and markets in the rural areas of Liberia. These volunteers have been a constant inspiration to the less fortunate citizens of our country. Their untiring efforts in encouraging people to help themselves has been greatly appreciated not only by the people themselves but by the county administrators for whom they work directly as well as everyone in the Ministry in Monrovia. It is only through efforts similar to those shown by these volunteers that Liberia will be able to develop.

The volunteers we have in the field have helped the people of the small villages write requests for assistance to the Ministry, explained the policies of the Ministry with regard to these projects, and, once assistance has been found, have assisted in the construction of the projects. The volunteers in the Ministry in Monrovia have helped to develop the rural development program to maximize the amount of assistance we can give to the people in the rural areas. They have standardized building plans as well as office procedures to help the program run efficiently.

In return for this assistance the people in the rural areas have shown their appreciation of the untiring efforts of these volunteers by making the volunteers honorary paramount chiefs of the areas. Although it may seem only a token, to the volunteers working in the areas it is the highest honor that these people can bestow on someone. On one occasion, the people of Selegar, Lofa County, named a 112-foot bridge after the volunteer who was instrumental in getting the bridge constructed.

It is with great pleasure that I mention to you these ideas. Too often we think of things to say but never quite express them in the right time. Therefore I am taking this opportunity to express the Ministry's appreciation with the Peace Corps program that we have within this Ministry.

Sincerely yours,

EVERETT J. GOODRIDGE,
Minister of Local Government,
Rural Development and Urban Reconstruction.

DEPARTMENT OF THE PUBLIC SERVICE,
Suva, Fiji, February 1, 1973.

PEACE CORPS IN FIJI

Fiji, like many other developing countries, is short of trained personnel in many fields (agriculture, education, forestry, rural development to name some).

The training of local personnel is now well in hand but there is a time lag before sufficient numbers of trained young local men and women become available to fill all of Fiji's needs in the various professional, technical and social fields.

Since 1968–69 U.S. Peace Corps volunteers have given Fiji excellent services in filling the gap. This has been particularly so in the field of education where Peace Corps volunteers have capably manned the newly instituted junior secondary schools (about 26 in number) which are beginning to noticeably enhance the education of the rural Fijian children; the improvement of Fijian education is a top priority objective of the present Government of Fiji. It would be no exaggeration to state that the junior secondary school system could not have gotten under way without the Peace Corps volunteers. Until sufficient trained teachers are available (they are becoming available at about 70–90 a year now) Peace Corps volunteers are essential to maintain the junior secondary school system in Fiji.

Peace Corps volunteers have similarly contributed to our efforts in agriculture, fisheries, forestry, cooperatives, rural development (engineers) and in other spheres of education, e.g. the U.S.P.

All in all Peace Corps volunteers have made a real and substantial contribution in our development programs and in our efforts to develop our most valuable resources, our people.

The Government and peoples of Fiji are most grateful for all that Peace Corps volunteers have done and are doing to help our young country and its peoples.

Vinaka vaka levu.

C. WALKER,
Secretary for the Public Service.

THE EMBASSY OF FIJI,
Washington, D.C., February 15, 1973.

Mr. DONALD HESS,
Director of Peace Corps, International Operations, Washington, D.C.

DEAR MR. HESS: I have much pleasure in writing this brief note to you in order to express the appreciation of the Government and people of Fiji for the excellent work that has been done and is being done by the Peace Corps volunteers in Fiji. Since 1968, when the first Peace Corps volunteers arrived in Fiji, we have developed a very close and cordial relationship with your organization. This relationship flourishes and the Peace Corps continues to be held in high regard by the people of Fiji.

There is no need for me to give a sketch of Peace Corps activities in Fiji as I have no doubt that you will have this information from the Director of Peace Corps in Fiji. The contributions made to Fiji by the volunteers have been so great especially in the economic, social and administrative sectors, that the Government has counted on their support in carrying out the development programs set out in our development plan for 1971–75.

Ex-members of the Peace Corps still maintain a close contact with their many friends in Fiji and are ready to help in any way. Only recently we were deeply moved by the spontaneous assistance they provided following the aftermath of the disastrous hurricane "Bebe" which struck Fiji in October last year.

We sincerely hope that Peace Corps volunteers will continue to come to Fiji for many years.

I look forward to the pleasure of meeting you at some future date.

With very best wishes.

Yours sincerely,

VISHNU D. PRASAD,
Charge d'Affaires, a.i.

[From the Korea Herald, Jan. 21, 1973]

OUR FOREIGN HELPERS (4)—PEACE CORPS FEEL AT HOME IN KOREA

(Foreigners, individually or through organizations, are helping the Koreans through various ways, materially, monetarily and spiritually. Aside from the humanitarian viewpoint, their assistances, no doubt, help further promote understanding and friendship between them and the local people. What kinds of work they do and what are they planning for the new year? The following is the fourth in a series of interview articles with the heads of foreign social and religious groups as well as "benevolent" individual persons.—Ed.)

(By Roy H. Whang)

They may speak Korean with funny accents, but the work done by 234 U.S. Peace Corps volunteers affects the lives of hundreds of thousands of Koreans every day.

Aside from the adjustments required in their lifestyles from the affluence of America to a still developing Korea, the positive experiences gained by the mostly young volunteers can be summed up in a few words.

"Compared to the students I had in the United States, the ones here are much more attentive and polite," said Gary Zellner, 24, of Williamstown, N.J., a graduate of Lycoming College in Williamport, Pa., and a retiring middle school English teacher in Chinju, Kyonsang Namdo.

Bob Kurcz, 25, of suburban Chicago and Holy Cross College at Worcester, Mass., said he valued most of all the experience he has gained living and working

in a "completely different culture" for the past year. He's an English teacher in a middle school in Chumunjin, Kangwon-do.

"I like the people," said Neal Landreville, 26, a University of Massachusetts graduate from Boston who is a tuberculosis control worker assigned to a health center in Kimje-gun, Cholla Pukto.

"I'm in the rice bowl of Korea," said Landreville, in Seoul for a few days to pick up another passport to replace the one he lost a few weeks ago. "Luckily for me, I am the only English speaker in the community so I have learned more Korean that I would have otherwise. During the day I help out in case management, often visiting patients' homes. They really enjoy that because it's evidence someone's concerned about them."

In the evenings? "Well, I like makkoli (Korean rice wine) quite a bit . . . ," he said.

All three volunteers were in Seoul recently and shared their experiences, and likes and dislikes about Korea with the Herald.

CONTROL OF TUBERCULOSIS

Ranging in age from 21 to 69, Corps members are placed strategically within each of the Republic's nine provinces and two special cities primarily teaching English or assisting the government in the control of tuberculosis, by far the greatest single communicable disease problem reported annually by the Economic Planning Board's Bureau of Statistics.

In 1971 there were 158,771 TB patients registered with the 92 "myun" health offices of the Ministry of Health and Social Affairs throughout the country, and 6,566 deaths attributed to TB, more deaths than any other single disease. TB inpatients in all types of hospitals totaled 571.057 and fully 1,883,000 persons received therapeutic medicine in 1971, while 2,741,000 persons were vaccinated in a nationwide preventive campaign.

By comparison, there were 9,914 cases of malaria reported in 1971 with no deaths and 3,146 cases of typhoid fever with 33 deaths.

"It's an enormous problem," said Edward P. Scott, 35, director of Korean operations since the spring of last year. "The volunteers help to attract attention to the local health center merely by their presence. Generally they're trying to help make the system work since it's not yet working with maximum efficiency," he explained.

There are 192 myun health centers in Korea, and one volunteer is assigned to each of 59 of them for TB control.

The bulk of the volunteers however, are English language teachers, 56 at the college level and 81 in the middle schools. According to Scott a given volunteer might have upwards of 200 students depending on the institution. In addition he or she more than likely would conduct workshops for high school English teachers as well as special classes for advanced students, Scott said.

"This year it's largely going to be a continuation of our basic programs," Scott said with just a few days of the new year behind him. "Normally we work in an institution the host government requests assistance for such as the teaching of English conversation or health work."

EXPANDED PHYSICAL EDUCATION

Additional volunteers have been requested from the Peace Corps to assist in the development of expanded physical education and athletic programs in the nation's schools.

As of last month there were 59 persons undergoing training in Taegu and Chooncheun, slated to replace volunteers whose 2 years of duty will be completed soon.

What, if anything, bothers volunteers during their experiences here?

On his way to the United States after a little more than 2 years of teaching capped by work in training new volunteers, Zellner said, "Things I found out later I didn't understand at first. For example, after I told my principal I was getting married (he married another volunteer in 1971), he urged me to change the date. Even after my mother and mother-in-law to-be had sent me their dates of arrival from the states, he kept telling me to set a later date. Finally, a group of my colleagues at the school got him to agree to my date.

"It was only after about 18 months that I really understood how to handle such situations. Anyone in authority here feels he must be in control at all

times. After I understood this, I made sure I gave my principal the chance to approve something I had already decided to do and everything was cool from then on," Zellner said.

FIRST YEAR OF DUTY

Kurcz, leaving for a month's vacation in the United States after his first year of duty, said he reacted differently because the authorities at this school allowed him more leeway.

"There's great deal of importance placed on appearances here," said Kurcz, who added he was supposed to stay at his school after classes were over until 6 p.m., but sometimes left the building for a couple of hours, only to return just to say he was going home.

"The only time the building was ever cleaned was when some big shot was about to visit," a mild criticism he uttered with a wry smile. "Paperwork and lots of it" was his strongest dislike. "At least one-third of a teacher's time during the day is spent doing paperwork," Kurcz estimated.

Bureaucracy was also prevalent in the work of the health centers, one of the lowest rungs of the government's highly remified structure, but according to Landreville it was the "unresponsiveness of the bureaucracy" that bothered him the most.

"Many people have to take two buses just to get to our center from a remote village, only to find the person responsible for their problem out of the office unnecessarily, or the whole place shut down due to some event far removed from their lives. After all, we're supposed to be helping people who are sick," he said.

"When I think about it though, the things that bother me the most are the same things I dislike about the United States, like the bureaucracy," he added.

CULTURAL EXPECTATION

In general, the problem of cultural expectations that differed from the assumptions about human behavior they had acquired from their upbringing in American was the greatest challenge faced by the volunteers.

"It's like being a baby all over again. You have to learn an entirely different world," Landreville said.

One of 62 countries that have asked for assistance from the Peace Corps, Korea had the third largest number of volunteers last year in all of Asia, behind India's 302 and Malaysia's 345.

"No host country receives any material or financial assistance from the Peace Corps," said Scott, a former Washington, D.C., attorney from Somers Point, N.J. in his fifth and final year with the corps.

"Our overall philosophy is nonpolitical and so we never express criticisms in a public or official way," Scott said, underscoring his 2 years of administrative duty in Korea, first as deputy, then as director last spring.

Scott, known to his fellow staff members as a fancier of Korean foods, said he was struck by the "persistence and uniqueness" of Korean culture, particularly in the area of personal relationships.

"My wife and I have very few Korean friends," he said, "but the ones we do have are very close. In the United States, you tend to have a lot more friends and do a lot more socializing, but it seems more superficial."

Seconding Scott, Program Officer Tim O'Brien, 27, of New York City said, "Actually I find myself enjoying the company of Koreans more often than I do that of Americans. I've been here nearly 5 years now and my wife is Korean, so I guess I feel more comfortable with Koreans. After all, I practically grew up here," said the Yale University graduate.

STATEMENTS MADE BY HOST COUNTRY NATIONALS ON THE PEACE CORPS IN TONGA

October 1972.

(1) "Without the Peace Corps, we would have no science department at Tonga High School."

NA'A FIEFIA,
Director of Education.
January 1972.

(2) "The Peace Corps Volunteers are so different from other *Palangis* (Europeans, Americans, and so forth). They give up their good life back home and come here to live in fales, raise chickens, and teach in our poor schools."

HONOURABLE VE'EHALA,
Governor of Ha'apai and Member of Parliament.
January 1972.

(3) "Whenever a Tongan worker tries to charge me too much for a little work, I tell him he should do it the Peace Corps way * * * FREE!"

HONOURABLE VE'EHALA,
Governor of Ha'apai and Member of Parliament.
January 1972.

(4) "No doubt, without the Peace Corps, our schools would be half staffed, our automobiles half running, and medical service would be half as effective."

SIONE KITE,
Assistant Secretary to Government.
January 1973.

(5) "Before the volunters came to Tonga, we thought you Americans cared only for money and cars."

MAILE TALAKAI, *Fisherman.*
October 12, 1972.

(6) "The Queen was asked if she considered the volunteers had made a worthwhile contribution to her kingdom. 'We need them,' she said, and went on to explain they had been very helpful."

QUEEN MATA'AHO.

RECIBE ESCUDO DEL PAIS.- El señor Joseph H. Therrien, ex-Director de Cuerpos de Paz, recibió un escudo de El Salvador, por su colaboración prestada al Ministerio de Agricultura en las actividades agropecuarias. En la foto, el señor Therrier, el Ministro de Agricultura, don Enrique Alvarez Córdova y al fondo el Ing. Francisco Lino Osegueda.

RECEIVES THE NATIONAL EMBLEM OF THE COUNTRY - Mr. Joseph H. Therrien, Peace Corps ex-Director, received the National Emblem of El Salvador for his collaboration with the Ministry of Agriculture in the agricultural and livestock activities. In the picture, Mr. Therrien, the Minister of Agriculture, don Enrique Alvares Córdova and at the back Engineer Francisco Lino Osegueda.

"EL MUNDO", January 13, 1973

San Salvador, El Salvador, C.A.

FAREWELL WORDS GIVEN BY THE MINISTER OF AGRICULTURE TO JOSEPH H. THERRIEN UPON DEPARTURE FROM POST

The purpose of this conference was to inform the agricultural sector and the public in general about the work that the Ministry (the Government of El Salvador through the MAG) is attempting to develop in the agricultural sector, but we have also wanted to take advantage of the fact that all the directors of the Ministry and of the autonomous institutions of these sectors are gathered together to express our gratitude—not only in the name of the Ministry but we believe we can also speak in the name of all the farmers and campesinos who have been directly assisted by this program—to the Peace Corps director in El Salvador, Mr. Joseph H. Therrien, who is leaving our country this week. With him is now the new Peace Corps director, Mr. Woods, and I thought this was a good opportunity to express our gratitude for the work the Peace Corps has developed in our country, assisting and cooperating with the Ministry of Agriculture and its agencies in our daily work. I repeat, Mr. Therrien, not only in our name but in that of the people who have directly received your assistance, we want to present you with a gift which we trust you will take with you to your country or to your next work post by which you will remember this piece of land, El Salvador, that will always remember you with esteem because of the way in which the Peace Corps, under your direction these past years, has worked with us. We would like to present you with this souvenir, our national emblem, on which is engraved: "To Joseph Therrien with all our gratitude—Ministry of Agriculture and Livestock, El Salvador, January 1973."

OFFICE OF THE DEPUTY PRIME MINISTER,
AND MINISTER OF FINANCE,
Kingston, Jamaica, December 12, 1972.

His Excellency Mr. VINCENT DE ROULET,
American Embassy,
Kingston.

MY DEAR AMBASSADOR: I would like to take this opportunity on behalf of the Government of Jamaica to express my appreciation to the members of the Peace Corps for the service they have given to Jamaica over the past years.

Before my appointment as Minister of Finance, I was aware of the activities of the Peace Corps in the Island and I recall, in particular, the work done by members of your organization in my constituency. In the 9 months since my government's election to office I have, as Minister responsible for the volunteer programme, been able to observe more closely the work of these volunteers throughout the Island. I note that there are Peace Corps volunteers employed on such disparate projects as Early Childhood Education and Industrial Arts.

Please convey to your Government, the thanks of the Government of Jamaica for the services rendered by the Peace Corps, and our hope that there will be many more years of continued cooperation.

May I extend to you best wishes for a happy Christmas.

Yours sincerely,

DAVID H. COORE,
Deputy Prime Minister and Minister of Finance.

TREND IN NUMBER OF APPLICANTS

Mr. COUGHLIN. How about applicants for the Peace Corps program? Are you getting more?

Mr. HESS. Our applicant population has been increasing since 1970. We are estimating that 28,000 to 30,000 applications will be received during this fiscal year—in contrast to a low in 1970 of about 19,000.

Mr. COUGHLIN. Your backlog is around 28,000 at the present time?

Mr. HESS. 28,000 applications which will be received during this year in response to the requests we have.

Mr. COUGHLIN. How about your backlog of projects which have been requested but not filled?

Mr. HESS. Mr. Craw can comment on this.

Mr. CRAW. I did not get the question.

Mr. COUGHLIN. Unfilled requests you have from foreign nations.

Mr. CRAW. In the current fiscal year we are attempting to put in a total of 5,029 trainees. That figure will be met on or before June 30. We expect to substantially meet our trainee goal, that is, the goal we set out to fulfill in the current fiscal year, but that will not necessarily mean we will have met all the requests. The probable number of requests which will remain unfilled will be slightly more than 1,000.

Mr. COUGHLIN. About 1,000 unfilled requests from foreign countries, from host nations, for volunteers?

Mr. CRAW. That is correct. We expect as a normal consequence of our operation that we will never fill 100 percent of all our requests but there is a backlog of requests we have not yet filled.

Mr. COUGHLIN. Can you give me an idea of what the major categories of job requests are?

Mr. HESS. Agriculture, professional services——

Mr. COUGHLIN. Such as what?

Mr. HESS. Doctors, nurses, architects, lawyers, skilled tradesmen, educators and science teachers. Then we have categories such as rural and urban development and business and public management. These categories are much smaller.

Mr. COUGHLIN. Thank you, Mr. Chairman. That is all I have.

Mr. PASSMAN. I should say there is a lot of misunderstanding about many programs. In the minds of many there is a serious doubt as to whether or not we were unwise for ever starting a foreign-aid program. As you know, when it started Greece and Turkey were involved in the first foreign-aid program. The real foreign-aid program started with the Marshall plan. We gave the European nations about $32 billion. They were so low on the totem pole, our leaders thought, that it would be much better to give them a grant than to make them a loan.

Now as we look back we find it would have been much better had it been a loan, even a concessional type loan. Instead of making Mickey Mouse currency out of our money, they would have been paying us back on the loan. So there is serious doubt as to whether we are on the plus side rather than the minus side of foreign-aid expenditures when we take all of this into account, such as the depreciated dollar. Since I came to Congress the dollar lost 63 percent of its purchasing power. We look at our public debt skyrocketing to $455 billion.

It distresses me when we read in the justification book on page 6 that—

> It is commonly agreed that the gap between rich and poor nations continues to widen despite two decades of concerted efforts by leading developed nations.
>
> The World Bank estimates that 1 billion people are still hungry and malnourished and that there are 100 million more adult illiterates today than there were 20 years ago.
>
> Some studies indicate that in those few developing countries which did experience significant growth of GNP per capita, the distribution of income often left a major portion of the population poorer at the end of the decade than at the beginning.

This would be justification actually for abolishing the entire foreign-aid grant-program and perhaps putting it on a loan basis.

I read this description of foreign aid, and this fits it very well—it is taking money from the poor people in a rich country and giving it to the rich people in a poor country. I don't think you can describe it any better. This statement pretty well backs that up.

99-614 O - 73 - pt. 1 - 30

EFFECT OF PEACE CORPS SERVICE ON RETURNED VOLUNTEER

On page 8 of your justifications you state, "By the time they return to the United States, volunteers have usually grown in personal maturity and developed a broader view of the world."

I would think they should be mature before they leave.

Mr. HESS. They are, sir, but they have grown further in maturity by the time they return as a result of being exposed to the environment in which they lived.

AGE OF VOLUNTEERS TODAY

Mr. PASSMAN. What is the average age of your people?

Mr. HESS. Twenty-seven and a half years.

Mr. PASSMAN. Do you recruit older people now for Peace Corps?

Mr. HESS. We aggressively seek out those skills and experiences which are needed in countries to meet their requests.

Mr. PASSMAN. I would assume so.

Mr. HESS. We have a large number of older volunteers.

Mr. PASSMAN. My question is whether you are recruiting older people.

Mr. HESS. Yes, we are.

Mr. PASSMAN. What is the oldest Peace Corpsman you have?

Mr. HESS. The oldest Peace Corpsman today is 76 years old. More than 5 percent of the total number of volunteers are over 50 years of age.

IN-COUNTRY TRAINING

Mr. PASSMAN. On page 1–1 of the justifications you indicate that by the end of fiscal 1973 between 80 and 85 percent of all training will occur either in the country where the trainees will later serve or in a nearby country. Is that true?

Mr. HESS. That is true, yes.

Mr. PASSMAN. If you are going to send one to Vietnam you take him to Laos and train him?

Mr. HESS. I do not know the situation there in order to answer that question—as to where we would train if we were invited to Vietnam and should we accept. We might possibly train them in another Peace Corps country, such as Thailand.

Mr. PASSMAN. I am not too sure that makes sense. It occurred to me you would want to train this man in the United States. It seems he could better be trained here for the job. If you send him to Laos and say "Train him in that country" and send him to Vietnam, what advantage is it in handling it that way?

Mr. HESS. The advantages are several. One is that we will be training that person in the general environment in which he will be living over the next 2 years. That is a much different environment than here. It is different in language, culture, and different in the physical environment in which he will have to serve.

Another advantage is that we will be saving about $6½ million by training overseas rather than training here in the United States.

Mr. PASSMAN. If that is good for the Peace Corps why not carry that on into the State Department? If they are going to send their people abroad let us send them there, perhaps train them in Laos

for service in Vietnam. Perhaps we should handle our Ambassadors that way rather than bringing them before the committees to be quizzed as to what they know about the country they are going to. They do an in-depth study before they go before the committee.

This is a new concept, is it not?

Mr. HESS. Yes, sir, it is a new concept. We have tried it on a pilot basis in our Asia-Pacific Region and it has proven to be successful.

Mr. PASSMAN. Who said it proved to be successful?

Mr. HESS. The volunteers themselves, the host country nationals who felt the volunteers were better prepared to serve, and the Peace Corps staff members who have looked into this.

METHOD OF EVALUATING PROGRAMS

Mr. PASSMAN. What sort of evaluation system do you have in operation in the Peace Corps which would help determine whether the efforts of the Peace Corps are actually beneficial?

Mr. HESS. We have a number of programs. One is a survey program in which we are determining the results derived from a Peace Corps volunteer's service over a period of time. We are asking host countries to help us in making that evaluation because, after all, it is them the volunteers are serving, meeting their needs as they request volunteers. We are also doing some independent, third party evaluations, and will do some evaluations in-house.

HOST COUNTRY NATIONALS IN TRAINING

Mr. PASSMAN. Do we pay host country nationals to train Peace Corps volunteers?

Mr. HESS. When we employ them we pay their salaries.

Mr. PASSMAN. I would assume you would. The question is—do you pay host country nationals to train the Peace Corps volunteers?

Mr. HESS. Yes, and sometimes host country nationals are donated or placed on loan to the Peace Corps to help prepare the volunteer for his service in that country.

Mr. PASSMAN. How many nationals in host countries do you presently have training Peace Corpsmen on the payrolls?

Mr. HESS. 315 host country nationals are permanent employees of the Peace Corps at present.

Mr. PASSMAN. Where are they stationed?

Mr. HESS. In the 58 countries we serve. I would have to give you a breakdown.

Mr. PASSMAN. Rather than sending Joe Doakes to Puerto Rico to be trained you may send him down to, let us say, Thailand to be trained by a Thai national?

Mr. HESS. Yes; if he is going to serve in Thailand.

Mr. PASSMAN. I thought we were going to go there and teach the Thais how to do things. Now we are going to have the Thais teach him what to do after he gets there.

Mr. HESS. If I may explain that, Mr. Chairman.

Mr. PASSMAN. I wish you would.

Mr. HESS. We are teaching the volunteers the language of the country in which they are serving. We are also giving them a familiarity

with the customs of the country in which they are serving. And we are introducing them to the job they will be asked to do during the training period.

Mr. PASSMAN. They are supposed to go abroad and impart knowledge and not have knowledge imparted to them.

Mr. HESS. We are not training the skills; we are recruiting the skills. We are training volunteers in the tools they need to impart those skills, tools such as language.

BENEFIT FROM A PEACE CORPS PROJECT

Mr. PASSMAN. If you were asked to define an actual benefit—not mythical or imaginary—if you were asked to put your finger on real accomplishments of the Peace Corps, how could you do it?

Mr. HESS. We have attempted by making a survey recently. I would like to give you some illustrations.

Mr. PASSMAN. Give me just one.

Mr. HESS. During the last 2 years there were 10 volunteers in Thailand who established demonstration farms featuring the raising of cash crops and, as a result, helped numerous Thai farmers in developing a cash crop income, farmers who did not have an income before. That is one example.

Mr. PASSMAN. Where is that project in Thailand? How far out from Bangkok is that?

Mr. HESS. I would have to provide that for the record. It is in a remote area of Thailand.

Mr. PASSMAN. Did he have an income of $35 a year, $3.85, or what? You have not done anything yet but made a nice statement. What I want to know is where this place is. I want to know what they had before this man started this farm.

Mr. HESS. I will provide that for the record. I do not have the details with me.

Mr. PASSMAN. That will be fine.

[The information requested follows:]

Two statistically documented examples of Peace Corps accomplishments follow:

1. THAILAND

Volunteer Patrick Klein stationed in Bon Pai working with Khun Preechai introduced maize (corn). The farmer grew maize during the season that his land was normally fallow and producing no income—even though irrigation facilities were available year-round. The farmer produced 4 acres of maize with the following costs and returns:

Input costs per acre:	
Seed (6 kg at $1 per kg)	$6.00
Fertilizer:	
Nitrogen (60 kg at 22 cents per kg)	13.20
Phosphorous (40 kg at 26 cents per kg)	10.40
Potash (40 kg at 15 cents per kg)	6.00
Pesticides/Herbicies	13.00
Water costs	12.00
Labor costs (including; cultivation, seeding, weeding, spraying, irrigation and harvesting:	
(1) Contracted (30 days at $1 per day)	30.00
(2) Family (30 days at $1 per day)	30.00
Miscellaneous (transport, etc.)	5.00
Total	125.00

Income:

Shelled maize (2,200 kg at 8.9 cents kg)	$195.80
Fodder (18,000 kg at 4 cent per 100 kg)	7.20
Total	203.00
Profit per acre	$78.00
Profit for four acres	312.00

Three hundred-twelve dollars is equivalent to approximately Thai Bhat 6,240 which represents a substantial increase in the farmer's income and purchasing power. The farmers normal income is based on rice production. In a good year he is able to sell only a few hundred kilograms above his family's needs. This income would at best come to $200–$300.

2. INDIA

In 1971 volunteers stationed in Raichur district, Mysore State, introduced a new variety of hybrid cotton to the areas of the Tungabhadra project in the district. This variety was the first hybrid cotton developed in India and not only offered a potential increase in yield of 4 to 6 times the local varieties, but was a long staple variety commanding a higher price than the local short and medium staple varieties. The figures below provide a financial comparison of production costs and income per acre between the old varieties (Hampi and Laxmi) and Hybrid-4:

COST OF INPUTS

	Hampi/Laxmi	Hybrid-4
1. Seed:		
(a) 4 kg at 40 cents per kilogram	$1.60	
(b) 1 kg at $14.60 per kilogram		$14.60
2. Fertilizer:		
Nitrogen—100 kg at $24.90 per 100 kilograms	[1] 24.90	24.90
Phosphorous—60 kg at $27.66 per 100 kilograms	[1] 16.60	16.60
Potash—40 kg at $25 per 100 kilograms	[1] 10.00	10.00
3. Pesticides/herbicides	40.95	40.95
4. Water	1.00	1.00
5. Labor (cultivation, seeding, weeding, irrigation, harvesting):		
(a) Contracted	26.00	26.00
(b) Family	13.00	13.00
6. Miscellaneous (transport, interest on loans, etc.)	8.00	8.00
Total	142.05	155.05

[1] Local practices often involve halving fertilizer requirements reducing this cost by approximately $25.

Income from sale of cotton

Laxmi/Hampi:

Minimum yield 400 kg at $35.75/100 kg	$143.00
Average yield 700 kg at $35.75/100 kg	248.25
Maximum yield 1,200 kg at $35.75/100 kg	429.00

Profits range from $16 to $287 per acre.

Hybrid–4:

Minimum yield 800 kg at $45.50/100 kg	364.00
Average yield 1,200 kg at $45.50/100 kg	546.00
Maximum yield 2,000 kg at $45.50/100 kg	910.00

Profits range from $209 to $755 per acre.

Average profits were increased on a per acre basis from $106 using local varieties to $390 using the Hybrid-4 introduced by the volunteers, a differential of $284 per acre. During the first cotton season approximately 90 acres were planted resulting in an approximately increase of income for district farmers of $25,560. Largely due to the work done by the volunteers approximately 4,000 acres were planted in the district. From this an increased income of close to $1 million accrued to farmers in Raichur. All indications are that acreage and income will continue to increase substantially in the years to come.

Mr. PASSMAN. My experience has been that these people can teach us how to do some things. I went to Japan once to attend a Rotary Club meeting. Dr. Ochsner was the principal speaker, but I was also on

the program. I knew the Japanese liked rice. I just thought I would make a big hit with them to tell them what we knew about rice in Louisiana and what a bumper crop we got.

It came out that we get only one crop in Louisiana and they get three crops from the same land every year, so I found out they knew much more about raising rice in Japan than we knew in Louisiana. The same thing would be true in Taiwan. Those farmers there can teach the American farmer an awful lot of things. They are exporting to the United States pineapples, asparagus, sweetpotatoes, and they are able to get more yield per acre, at least two crops per year, and undersell the American farmers. That is why I would like to know the name of the farmer and where he is located. I want to see that project.

You are familiar with the fact that these people in Southeast Asia are tremendous truck farmers, are you not?

Mr. HESS. I understand that many of them are; yes, sir.

Mr. PASSMAN. I never did try to tell the Japanese any more that I knew more about raising rice than they did.

LIFESTYLE OF THE VOLUNTEER

On page 2–1 of the justifications you make the following statement: "In determining what amounts are appropriate for each volunteer, the overriding consideration is that the volunteer live at a level equivalent to that of his host country coworkers."

That is a nice statement, but an article in the Christian Science Monitor of August 26, 1972, which was written by a former Peace Corps volunteer, states the volunteers are by income alone set apart from the people they are trying to train. Are you familiar with that statement?

Mr. HESS. I am not familiar with that statement.

Mr. PASSMAN. Well, here it is. You might want to look that over, Mr. Director.

COST OF VOLUNTEER TRANSPORTATION

You indicate the average cost per trip has remained the same in fiscal 1973 and 1974. How are you able to keep these costs constant when air fares have increased?

Mr. HESS. We have been attempting to economize in a number of ways. We had found that through charters we can gain a considerable economy on air fares to take the volunteers from the United States to the countries where they will serve.

Mr. PASSMAN. Could it be if you had in mind sending 15 to Cambodia, for example, and by increasing the number to 30 you can charter a plane and carry them over cheaper? Would that be appropriate or am I exaggerating it?

Mr. HESS. I think you are exaggerating it. We would not do that.

Mr. PASSMAN. We would hope not but it would be rather tempting.

Mr. HESS. I would not be doing that.

Mr. PASSMAN. I would hope not, Mr. Director. In chartering planes you require a planeload, do you not?

Mr. HESS. But not necessarily for one country. We might send a planeload to a number of different countries. One plane might be stopping to drop volunteers off in the Philippines, Thailand, and Malaysia.

Mr. PASSMAN. Who pays the travel while the volunteers are on leave?

Mr. HESS. They must pay for that out of their allowances.

POLICY ON PURCHASE OF VEHICLES

Mr. PASSMAN. On page 29 you indicate approximately half of the vehicles of volunteers are purchased in the United States. Can you tell us where the other half of the vehicles are purchased?

Mr. HESS. There are a number of countries in which we serve where there are no American vehicles, where there are no mechanics available to service American vehicles, and where there are no spare parts for American vehicles. It is primarily in those countries that we are not using American vehicles.

Mr. PASSMAN. What countries are they?

Mr. HESS. There are a number in Africa, particularly——

Mr. PASSMAN. They are not manufacturing automobiles in Africa, are they?

Mr. HESS. No, they are not manufacturing any.

Mr. PASSMAN. Certainly the Peace Corpsmen will have to be using some imported automobiles?

Mr. HESS. Yes, sir.

Mr. PASSMAN. I would not know why you would not import American automobiles inasmuch as you will need spare parts. Whether manufactured in the United Kingdom or Japan it is still an imported automobile. I wish you would check into that. It causes me alarm to think that half of your vehicles are purchased from some country other than this country.

Mr. HESS. To keep a spare parts inventory and to import a mechanic who knows something about American vehicles is much more costly than to buy——

Mr. PASSMAN. Who maintains the automobiles they use? If you are in Africa and you buy them from Japan who keeps the automobiles up? Don't you have to have a mechanic or are they so foolproof they don't need mechanical service?

Mr. HESS. We use local mechanics trained for that particular vehicle.

Mr. PASSMAN. If he is trained to maintain a Japanese-manufactured vehicle couldn't he be trained to maintain an American-manufactured vehicle?

Mr. HESS. He could be but usually he is not. If there are no American vehicles in that country he would not be so trained.

Mr. PASSMAN. They are all imported. All the vehicles are imported: are they not?

Mr. HESS. Yes.

Mr. PASSMAN. If you can take a local man and train him to maintain a vehicle manufactured in Japan I don't know why you could not train him to maintain a vehicle manufactured in America. If you have to maintain spare parts for American vehicles you have to maintain spare parts for Japanese vehicles.

Mr. HESS. There would be the cost of training that man. We do not employ mechanics on our staff.

Mr. PASSMAN. Who trains him to maintain other vehicles, say from Japan, the United Kingdom, or France?

Mr. HESS. I don't know. We do not employ mechanics on our staff.

Mr. PASSMAN. Don't you think you should find out?

Mr. HESS. I can.

Mr. PASSMAN. After all, we are in trouble with our balance of payments. We are certainly in serious trouble with our trade balance.

I wonder whether you would get us some information showing how many foreign automobiles are involved and how many American automobiles are involved as well as the countries the automobiles are purchased from?

Mr. HESS. All right, sir.

[1] These are American-make automobiles, though due to overseas subsidiaries of American multinational corporations, may not have been actually produced in the United States.

Note: Average cost of American vs. foreign vehicles: A. Average cost of American vehicles (purchased in-country)—$3,955; Average cost of American vehicles (Purchased in the United States and transported to overseas destination) $5,400 (Delivery usually takes 12 to 14 months). B. Average cost of foreign vehicles—$3,160.

Mr. PASSMAN. We might require legislation to preclude this. Perhaps with your cooperation a worthy amendment would be to limit it to U.S. vehicles. We are in very serious trouble, not only with our gold balance but our public debt, our balance of payments, our balance of trade, and so on. You know, every little bit helps.

You may also wish to have some comparison, even though it was not mentioned with regard to cost. That would also be a consideration.

Mr. HESS. I did mention cost, Mr. Chairman. That is a prime consideration of ours.

Mr. SHRIVER. You might put in the record what that cost differential is.

Mr. HESS. We certainly shall do that.

Mr. PASSMAN. Put in the cost of the American vehicle and that of the other make. Even if it is higher, though, it should be American. We cannot all just retire on pensions and depend entirely on what other countries manufacture. Certainly we are higher in just about everything because of our extravagance. We are just about out of the markets in many important areas.

POLICY ON VOLUNTEER FAMILIES

On page 212 you indicate that a policy decision has been made to accept families with only two or fewer children. Does this affect your ability to recruit experienced people?

Mr. HESS. It might. I do not really know. This policy is rather recent and is in the interest of economy.

ALLOWANCES PAID TO VOLUNTEER FAMILIES

Mr. PASSMAN. If you take a man, his wife, and two children abroad, do they get an additional subsidy for the children?

Mr. HESS. For dependent support, yes.

Mr. PASSMAN. How about the wife?

Mr. HESS. The wife is required to be a volunteer while she is serving overseas.

Mr. PASSMAN. That means in that particular family the dependent support per child is what?

Mr. HESS. It averages about $1,900 per year, as I recall.

Mr. PASSMAN. That would add to this, then?

Mr. HESS. Yes.

Mr. PASSMAN. Added to the average cost.

Mr. HESS. That is already added into the average cost.

Mr. LONG. I am not quite clear on what a volunteer family gets. The husband gets a certain sum, the wife gets a certain sum, and there is an allowance for the children?

Mr. HESS. Yes.

Mr. LONG. Can you tell me what it would be for a 4-person family?

Mr. HESS. Yes. I think it is about $3,000 per year.

Mr. LONG. This is in countries where family incomes run about $200?

Mr. HESS. It might be.

Mr. LONG. This is not exactly living with the natives, is it?

Mr. HESS. No, but what brings up the cost primarily is the cost of the children.

Mr. LONG. Does the wife get the same amount as the husband if she is a volunteer?

Mr. HESS. She gets $75-a-month readjustment allowance. The husband gets $125 a month. As far as the allowance for living——

Mr. LONG. That is $200 a month?

Mr. HESS. Yes. As far as allowance for living, it averages about $148 per month per volunteer.

Mr. LONG [continuing]. For living—in addition to that?

Mr. HESS. Yes, in addition to the readjustment allowance I noted before.

Mr. LONG. Now you are way over $3,000 a year. You are up to $2,400 with just the husband and wife together without counting the children and without the living allowance.

Mr. HESS. If I may provide that information for the record, sir. It is about three times as much as a single volunteer. That is what a husband, wife, and two children costs us.

Mr. LONG. How much does a single volunteer cost?

Mr. HESS. About $3,000.

Mr. LONG. A single one?

Mr. HESS. Yes, for direct support. That would include his living, leave and readjustment allowances.

Mr. LONG. So if they have a wife and two children that is $9,000?

Mr. HESS. In terms of the living allowance, leave allowance, and the readjustment allowance, yes, sir.

Mr. LONG. $9,000 a year?

Mr. HESS. Yes.

Mr. HOWE. A substantial portion of that is received after they return to this country. The readjustment allowance comes after they return.

Mr. LONG. You call that volunteering?

Mr. HESS. Well, in order——

Mr. SHRIVER. That is two volunteers.

Mr. LONG. That is right, but they bring this back to the United States with them, $9,000 a year after they get home. How many people in this country, a wife and husband, can come out with that kind of money all free and clear of their living expenses at the end of a certain period of time? It seems to me this is profitable for a family.

Mr. HESS. None of the families are making sufficient money to put away any savings. In addition——

Mr. LONG. They get this after they get back home?

Mr. HESS. The readjustment allowance is to tide them over until they find a job, until they find a home. They generally come out of the Peace Corps penniless. We therefore have a postservice readjustment allowance for every volunteer.

Mr. LONG. I wish you would tell us what the average sum of money is that these people get after they have gotten back to this country.

Mr. HESS. Yes; sir.

[The information requested follows:]

A family of four, after 2 full years of service, would receive the following readjustment allowance:

Head of household—$125 per month	$3,000
Spouse—$75 per month	1,800
Total	4,800

Notes: (1) Both allowances are subject to U.S. Federal income tax and insurance deductions. (2) To meet certain emergency needs, some volunteers are authorized to take funds from their readjustment allowance during their term of service.

Mr. PASSMAN. Let us think in terms of individuals in the service who get separation pay. This family would get $9,000 after they return to America.

Mr. HESS. No, sir. They would not get that amount.

Mr. PASSMAN. That is what we want to find out. How much do they get after their term is up and they are back in Washington? What do you give them?

Mr. HESS. About $4,800 before taxes for readjustment allowance per family for 2 year's worth of service.

Mr. PASSMAN. They could almost just take a year's leave on that, could they not? How does that compare to Private Jones, for example, who served in Vietnam or in Thailand and then comes home? What is his separation allowance?

Mr. HESS. I do not have that information with me, sir.

Mr. PASSMAN. Is it not just a very few hundred dollars?

Mr. HESS. I don't know what it is today, sir.

Mr. PASSMAN. I am talking only about this item. It costs $9,000 to maintain him. We are dealing now specifically with the amount they get after they return home.

Do you have any age limitation on these families when they go abroad?

Mr. HESS. We do not have an age limitation.

Mr. PASSMAN. So if they happen to have a little girl 2 years old and a 3-year-old boy, they are privileged to take them with them?

Mr. HESS. Yes.

Mr. PASSMAN. Is it not perfectly natural that this woman, who is a Peace Corps volunteer and receives pay for her service, will spend most of her time looking after those two babies?

Mr. HESS. She spends some of her time looking after the children, but also does some volunteer work in her off hours.

Mr. PASSMAN. Where would she get off hours with two babies?

Mr. HESS. During weekends, sir.

Mr. PASSMAN. Weekends?

Mr. HESS. Yes.

Mr. ROYBAL. Mr. Chairman, this colloquy is confusing.

Mr. PASSMAN. I yield to the gentleman.

Mr. ROYBAL. Let us just take case in point. I am a Peace Corps volunteer. You are sending me to the wilds of Peru. I have decided that I am going to be in the Peace Corps 2 years. You and I enter into such an agreement. I am ready to go to Peru. I get my training. Everything is in order and then I leave. I start getting paid for my time the moment my training starts, is that not correct?

Mr. HESS. That is correct.

Mr. ROYBAL. I also get paid for my time until the moment I arrive back in the United States; is that not correct?

Mr. HESS. Yes.

Mr. ROYBAL. From the time that I am first employed when I start my training to the time I come back, how much am I paid?

Mr. HESS. May I give this to you on a monthly basis?

Mr. ROYBAL. On any basis you want.

Mr. HESS. You would receive on the average $148 for subsistence, or living allowance.

Mr. ROYBAL. What does subsistence allowance mean?

Mr. HESS. Food, lodging, transportation, clothing, and incidentals.

In addition to a subsistence, or living allowance, you would accrue $18 a month for leave allowance.

Mr. ROYBAL. But that is not paid to me during the months that I spent overseas?

Mr. HESS. Yes. That $18 is paid overseas.

Mr. ROYBAL. Then I get $148 plus $18?

Mr. HESS. Yes. In addition, as a single volunteer you would accrue $75 a month here in the United States for readjustment allowance.

Mr. ROYBAL. Then I get $166 which includes your subsistence allowance plus $18. That is $166?

Mr. HESS. Yes.

Mr. ROYBAL. Then $75 for each month is set aside for me, which will be paid to me upon separation?

Mr. HESS. That's correct.

Mr. ROYBAL. That means, then, that in effect that individual gets $241 a month net?

Mr. HESS. Yes, except $75 of that is held here.

Mr. ROYBAL. I understand, but it is still dollars.

Mr. HESS. That is correct.

Mr. ROYBAL. So that it would cost you to send me to my particular destination for 2 years an average of $241 a month, including my transportation?

Mr. HESS. No, sir. The $241 is exclusive of international and in-country travel, but those would not be fixed, monthly direct costs.

Mr. ROYBAL. Then the $241 a month is direct payment that you would have for my services.

Mr. HESS. That is correct.

Mr. ROYBAL. The rest of the money then is applied to the overall cost of the Peace Corps volunteer?

Mr. HESS. Correct.

Mr. ROYBAL. In contrast, supposing that my wife and my two children would go with me for those 2 years. What would be the difference in the pay that I would get and the pay that my entire family would get?

Mr. HESS. You would get another $148 a month for subsistence, another $18 for leave allowance, and, if there are two children, there probably would be about another $158 per month added.

Mr. PASSMAN. Per child?

Mr. HESS. Yes, per child.

Mr. LONG. That is $158?

Mr. ROYBAL. That is another $316?

Mr. HESS. Yes.

Mr. ROYBAL. And what else?

Mr. HESS. If the children are of school age and attend school, part of this dependent support is educational allowance. But this is not in addition to the $316.

Mr. ROYBAL. Is that an amount that is paid to the volunteer or is it a transaction that takes place between the Peace Corps and the school?

Mr. HESS. It's the latter, between the Peace Corps and the school.

Mr. ROYBAL. Then the young man does not get that money. I want to know just the amount of money that I as a Peace Corps volunteer would get. Let us summarize, then.

Mr. SHRIVER. Wouldn't there be anything for the woman as a volunteer besides the subsistence?

Mr. HESS. In addition she would get a readjustment allowance.

Mr. LONG. Which is how much?

Mr. HESS. $75.

Mr. ROYBAL. A readjustment allowance similar to the one he would be getting?

Mr. HESS. No. The husband, as a head of household, would receive $125 a month.

Mr. ROYBAL. That means then, in recapitulating, that I as an individual would get $291 a month plus $241 a month for my wife; is that correct?

Mr. HESS. Yes.

Mr. ROYBAL. Plus an additional $75 a month for 24 months, which is the amount that is set aside for my wife's services to be paid to her upon separation?

Mr. HESS. No, I think that you have the $75 for the wife included in her $241.

Mr. ROYBAL. If I have it included in the $241——

Mr. LONG. I get $532 a month.

Mr. HESS. That is correct, but to get the full picture for a family of four, we have to go back and add about $316 a month for dependent support as we discussed before.

Mr. ROYBAL. Then it is in fact $848 a month?

Mr. HESS. Yes.

Mr. ROYBAL. Let us use, then, the figure of $848 a month. That is the full amount that is paid the individual and his wife, two children, but does not include the cost of transportation?

Mr. HESS. That is right.

Mr. ROYBAL. That is $848 a month. What is the average cost of transporting a family of four?

Mr. HESS. We used an average cost earlier this afternoon of about $620 for international travel.

Mr. ROYBAL. Per person?

Mr. HESS. Yes, I think that was it, one way.

Mr. ROYBAL. That is about $2,400 one way, $4,800 both ways?

Mr. HESS. Yes, approximately.

Mr. PASSMAN. About $5,000, though, for the round trip for the four?

Mr. HESS. $1,240 round trip.

Mr. PASSMAN. Per person?

Mr. HESS. Mr. Chairman, that would be per adult. The children's transportation is already included in our estimate of dependent support.

Mr. ROYBAL. I think I have a pretty good understanding now of the amounts of money that the Peace Corps will have to pay per family. Will you supply then for the record, take an example of a Peace Corps volunteer, his wife and two children, and tell just exactly what it is costing for 2 years. Break it down into salary, subsistence allowance, and transportation, so that we will have in a capsule just how much it is costing the Peace Corps for a family of four for 2 years.

[The information follows:]

VOLUNTEER COSTS PER 2-YEAR TOUR

	Single volunteer	Rate	Married, 2 volunteers, 2 dependents	Rate
I. Direct monthly payments:				
Living allowance	$3,545	$148 per volunteer per month.	$7,096	$296 per 2 volunteers per month.
Leave allowance	432	$18 per volunteer per month.	864	$32 per 2 volunteers per month.
Readjustment allowance[1]	1,800	$75 per volunteer per month.	4,800	$125 per head of household, $75 per spouse per month.
Direct monthly payments, subtotal.	5,780	$241 per volunteer per month.	12,760	$241 per spouse; $291 per head of household; $532 per 2 volunteers per month.
Dependent support[2]	(3)	Not available	7,600	$316 per 2 dependents per month.
Direct monthly payments, total.	5,780	$241 per volunteer per month.	20,360	$848 per 2 volunteers, 2 dependents per month.
II. Other costs:				
Settling-in allowance[4]	186	$186 per volunteer per tour.	372	$372 per 2 volunteers per tour.
In-country travel	164	$6.83 per volunteer per month.	328	$328 per 2 volunteers per month.
International travel	1,231	$611 over $620 back per volunteer per tour.	2,462	$2,462 per volunteer per tour.
III. Grand Total	7,361		23,522	

[1] Allowance held in U.S. payable upon termination. Volunteer heads of households receive $125 monthly. Single volunteers or volunteer spouses receive $75 monthly.
[2] Dependent support includes international and in-country travel, living expenses, and educational expenses (if applicable).
[3] Not available.
[4] Allowance paid once per 2-year tour.

Mr. PASSMAN. To have a complete record, you are dealing with only what the individual gets, but so far as the cost to the American taxpayer it is greater than that, because the average Peace Corps cost is higher, I believe. As it would apply to this individual, he receives certain benefits, does he not, from the host country while he is living there?

Mr. HESS. No, that is usually the total cost.

Mr. PASSMAN. You figure out what it is going to cost to maintain this Peace Corps family and those children there. The remainder of this goes into reserve. These people are just good, average Americans, aren't they, not the common laborers, not the airplane pilots. They are just average Americans?

Mr. HESS. Yes.

Mr. PASSMAN. A Peace Corps tour overseas is 2 years, is that correct?

Mr. HESS. Yes.

Mr. PASSMAN. Wouldn't you say it is quite commendable that Mr. and Mrs. Sam Jones, who have two children, in 24 months could have had this experience and could have built up a savings account of $4,800. It would be rather commendable, wouldn't it?

Mr. HESS. Yes.

Mr. PASSMAN. You have also to look at that part of it.

Mr. HESS. Yes.

Mr. PASSMAN. They come back here and they may get a job the following day or they may not, but in all probability if these people are as smart as you say they are, people will be grabbing them. There is a job for every person in America. Jobs are now going begging. So with this vast experience they have acquired, you said they become more

mature, so it looks to me like industry would be waiting with open arms.

It follows, nevertheless, when they do come back and this is all over, they have saved $4,800. It's theirs to put in the bank to look at, to check out, to spend; is that right?

Mr. HESS. It is for their use.

Mr. PASSMAN. That is right, for their use.

Mr. LONG. Would the Chairman yield?

Mr. PASSMAN. That is what they have saved in 2 years. I doubt if you would find very many American families under the same circumstances, you understand, that actually build up and have $4,800 saved.

I yield to the gentleman.

TAXATION ON VOLUNTEER ALLOWANCES

Mr. LONG. Is any of this income taxable?

Mr. HESS. All of it.

Mr. LONG. They pay income tax on all of it?

Mr. HESS. They certainly do, yes.

Mr. SHRIVER. Would you yield?

Mr. PASSMAN. I yield to you.

NO CHANGE IN READJUSTMENT ALLOWANCE SINCE 1961

Mr. SHRIVER. Has there been any change in the remuneration for subsistence in the period of time they have had the Peace Corps?

Mr. HESS. No, sir.

Mr. SHRIVER. It has been the same?

Mr. HESS. $75 since 1961. That has shrunk to $53 on today's dollar value.

Mr. SHRIVER. That was a point I wanted to bring out, because we have had inflation. It has affected the value of the dollar, as has been brought out by the Chairman several times.

Mr. LONG. Will the Chairman yield?

Mr. PASSMAN. Yes, when I make this point.

INSURANCE FOR VOLUNTEERS

Do you carry insurance on them when they are abroad?

Mr. HESS. No, we do not. They take out their own life insurance.

Mr. PASSMAN. They are privileged to buy insurance. They are under the regular Blue Cross-Blue Shield program?

Mr. HESS. Whatever insurance company they wish to use.

Mr. PASSMAN. They can use this Blue Cross-Blue Shield program covering Government employees as a special policy. Are they eligible for that coverage?

Mr. HESS. They are not eligible for this coverage. Peace Corps provides medical support for the volunteers.

Mr. PASSMAN. Mr. Long.

INCOME TAX ON VOLUNTEER ALLOWANCES

Mr. LONG. I just wanted to make sure that the income tax is paid on the entire amount. Is it paid on the subsistence amount?

Mr. HESS. Yes, it is. It is paid on the subsistence amount.

Mr. LONG. So the entire $532 a month they would pay an income tax on.

Mr. PASSMAN. I think you are mistaken. I happen to know tax laws too well for that. I wish you would check into that.

Mr. HESS. I know the volunteers are required to pay an income tax.

Mr. PASSMAN. A regular income tax?

Mr. HESS. I would like to provide for the record those items on which they have to pay.

Mr. LONG. Tell us what a typical income tax would be on that family. Is the social security tax deductible?

Mr. HESS. Yes, I think it is.

Mr. LONG. Let's make sure.

[The information follows:]

Volunteers must file a tax return while serving overseas. The amount of their tax for the year is based on their total taxable income for the year. Those elements of Peace Corps support which contribute to this total taxable income are: (1) readjustment allowance, (2) leave allowance, and (3) a portion of the living allowance—usually 35–45 percent—attributable to clothing, entertainment, transportation, domestic help, and incidental expenses.

Mr. PASSMAN. Let's make sure you don't leave the record open. This family of four gets a $3,000 exemption plus other deductions that any other American gets, if they are justified under the law. I don't care whether I am in Africa, New York, or Washington. If I am an American, whether I make $5,000 a year or $200,000, I am entitled to a flat $750 deduction, and that goes for each member of the family.

Is that correct? You ought to know that.

Mr. HESS. Yes, certainly.

Mr. PASSMAN. I am going to be very brief. On pages 3 and 4 you indicate the total number of domestic trips will increase by 100 in 1974. Would you please tell the committee the need for such a large increase.

Mr. HESS. Yes. It has to do with our attempt to do better screening of the volunteer before we invest in his going overseas to serve in the Peace Corps.

Mr. PASSMAN. Mr. Shriver.

Mr. SHRIVER. Thank you.

As you know, the first of three goals given the Peace Corps by Congress in 1961 was to help developing countries meet their needs for trained manpower.

ADDITIONAL EVALUATION OF PEACE CORPS ACCOMPLISHMENTS

You have furnished us with a brief survey of the Peace Corps accomplishments dated March 20, 1973. This contains some examples, good but isolated ones. I think we need more and better information on a country-to-country basis, with statistics, showing what the Peace Corps has or has not accomplished in places where they have been over a number of years. This could be in the form of a before-and-after report.

Could you supply that for the record?

Mr. HESS. Mr. Congressman, we are in the process of compiling a report. I will not be able to provide it to you within the next week but I will be happy to provide it at a future date. It is in the process of being compiled.

Mr. SHRIVER. When do you anticipate it will be completed?

Mr. HESS. Within this next month.

Mr. SHRIVER. Would you call that an evaluation?

Mr. HESS. It is a survey of accomplishments of Peace Corps volunteers in each of the countries throughout the world. It will not be, however, a before-and-after analysis.

Mr. SHRIVER. How long is that going to be?

Mr. HESS. How long will it take us to do? I think we will have it completed within this month.

MULTILATERAL VOLUNTEER PROJECTS

Mr. SHRIVER. There is a page that might be inserted, page 22, which describes several instances in which the Peace Corps has worked with other U.S. international development agencies on common projects. You might put in the record more about those projects and how the budgetary questions are resolved in these cases, if you would.

Mr. HESS. We will be happy to.

[The information follows:]

EXCERPTS FROM PAGES 21 AND 22 OF "A SURVEY OF PEACE CORPS ACCOMPLISHMENTS"

Peace Corps overseas staff coordinate their programs to the extent possible with other international or multinational development agencies operating in each host country. Volunteers are made available for sutiable jobs in projects supported by loans or grants from the large organizations like the Agency for International Development (AID), the World Bank and various United Nations affiliates like the World Health Organization.

There are no budgetary or accounting problems for the Peace Corps because the Peace Corps only makes some or all of the volunteers' time available to work on the joint project, all project expenses are borne by the sponsoring agencies.

The following are current examples of the Peace Corps cooperating with and supplementing the efforts of other international development agencies, United States and foreign. In addition to those projects mentioned, Peace Corps is also coordinating with Oxfam (Oxford Famine Relief Program), New Zealand's Volunteers in Service Abroad (VSA), and the International Secretariate for Volunteer Service (ISVS).

In Upper Volta and AID specialist on contract from the Communicable Disease Center in Atlanta supervises a program that has four Peace Corps volunteers working at the field level in an epidemiological project.

In the Dominican Republic, a dozen Peace Corps volunteers work in projects sponsored by the United Nations Food and Agricultural Organization, the Inter-American Development Bank, the Inter-American Foundation, the Pan American Foundation and the Organization of American States.

In Paraguay, 11 Peace Corps volunteers work at the middle levels of three AID-sponsored projects in education, credit cooperatives and livestock improvement. An additional 23 volunteers work in several agricultural projects supported by the Inter-American Development Bank.

In Korea, Peace Corps volunteers work jointly with the World Health Organization (in tuberculosis detection and treatment) and an International Labor Organization supported vocational education program.

In Western Samoa, volunteers comprise 50 percent of the faculty of the new Technical Trades Institute sponsored by the International Labor Organization, and work with the United Nations development program revising the science curriculum.

Mr. SHRIVER. I also serve on another subcommittee, the Labor—Health, Education, and Welfare Appropriations Subcommittee. We have been holding hearings for nearly 2 months on the hundreds of programs here at home which are administered by these departments. In many cases large cutbacks have been proposed. These have been proposed by the administration to avoid inflation or an increase in taxes. Many of them affect worthwhile and popular programs.

EFFECTS OF CUTBACKS IN FISCAL YEAR 1974 BUDGET

I am interested in what the effects would be if this subcommittee recommended cutbacks such as have been recommended by the Office of Management and Budget or by the departments in some of these domestic programs. If Congress makes further cuts of, say, $1 million, or $2 million, or $3 million in your budget, show for the record what the effects would be in each instance, and at what cutback point you would have to bring volunteers home. Would you put something in the record in this regard?

Mr. HESS. I will be happy to. It will be trainees and volunteers at certain levels.

Mr. SHRIVER. Put that in the record.

[The information follows:]

EFFECT OF REDUCTION BELOW $77 MILLION

$1 million—Reduce the approximate number of programs starting in June by 69. This will reduce the number of trainees starting in June by 483.

$2 million—Reduce the approximate number of programs starting in June by 108. This will reduce the number of trainees starting in June by 966.

$3 million—Reduce the approximate number of programs starting in June by 207. This will eliminate virtually all the programs and trainees starting in June.

$4 million—Eliminate all the programs starting in June and reduce the number of programs starting from January–May by 29. This will eliminate all June trainees and reduce the trainees starting from January–May by 188.

$7 million—Eliminate all the programs starting from January–June. This will eliminate approximately 2,200 trainees.

$8 million—Disinvite trainees starting training from September–December and/or bring trainees and volunteers home.

LEADTIME IN PROGRAMING PROCESS

Mr. SHRIVER. Will you explain the timing of your operations? There is, I know, a considerable amount of time between when you receive a request from a host country for a specific type of project and when you actually send volunteers into the field.

Mr. HESS. Yes.

Mr. SHRIVER. Will you tell us about that and how it affects your budget?

Mr. HESS. Yes. Usually projects are developed about 13 months in advance of the volunteers actually giving their service.

Mr. SHRIVER. Thirteen months?

Mr. HESS. Thirteen months in advance. We sit down with the country officials and attempt to develop the program, determine the job description, check out the worksite.

Then we have the documents sent here so we can take another look at them to assure that the program meets all of our quality standards.

Until we develop our recruiting program, actually do the recruiting, select the volunteer, train the volunteer, up to the day that he is ready to serve, it is about 13 months in total.

CHANGE IN SKILLS BEING RECRUITED

Mr. SHRIVER. You mentioned on page 8 the recruitment of volunteers with more specialized skills and experience. Would you, for the record, if necessary, show us the skill categories which you use in your recruitment, and how these categories have changed as your program direction has changed? I know it has changed considerably.

[The information follows:]

Since 1961, Peace Corps has recruited and placed volunteers that have been skilled in one of the following classifications: agriculture, skilled trades, professional service, education, and general.

Although the overall classifications have remained constant, the distribution for each has not changed over the years.

AS OF DEC. 31, BY PERCENT ONBOARD

	Agriculture	Skilled trades	Professional service	Education	General
1962 (4,350)	11	4	14	14	57
1963 (6,988)	6	3	15	17	59
1964 (9,391)	4	2	15	15	61
1965 (11,826)	4	3	20	33	40
1966 (13,999)	3	2	15	24	56
1967 (13,243)	2	1	12	26	59
1968 (12,164)	5	1	14	30	50
1969 (9,139)	6	1	14	32	47
1970 (8,381)	9	3	19	30	39
1971 (7,597)	11	5	18	28	39
1972 (6,809)	11	5	21	29	34

Mr. HESS. In agriculture, Mr. Congressman, there has been an increased demand of about 241 percent over 1969. In the area of skilled trades there has been an increase of about 270 percent. Professional skills demand for volunteers has increased about 65 percent, and the requests for a category that once was termed generalists, has decreased. So we have some significant challenges that we must meet through our recruitment by reason of requests for higher skilled and more experienced people in the Peace Corps.

Mr. SHRIVER. In answer to a previous question relative to these skills, you mentioned doctors.

Mr. HESS. Yes.

Mr. SHRIVER. How many doctors do you have?

Mr. HESS. I recall about 20 doctors, sir.

Mr. SHRIVER. Are they experienced doctors or just out of medical school?

Mr. HESS. I have not met all of them, but those whom I have met are experienced doctors who have given up private practice.

Mr. SHRIVER. Are they retired?

Mr. HESS. About half of these physicians are over 50 years of age.

Mr. SHRIVER. I know we have a shortage of doctors in this country. I hear about it in the other committee, where we are attempting to supply funds for medical education to fill the gap.

Mr. HESS. Yes. We are serving in some countries where there are no doctors, and where doctors are training health technicians, manpower

a little more senior than a nurse in terms of medical experience but less than a full-fledged doctor.

Mr. SHRIVER. Maybe we could use them here.

Mr. HESS. Yes.

Mr. SHRIVER. Lawyers. What do they do?

Mr. HESS. We have some lawyers who are helping to develop the cooperatives that are beginning to be formed in Latin America, as an example.

Mr. SHRIVER. How many lawyers do you have in the Peace Corps?

Mr. HESS. I will have to provide that for the record. There are very few lawyers in the Peace Corps.

[The information follows:]

LAWYERS

As of December 31, 1972, Peace Corps had 15 lawyers serving overseas as volunteers. None were over 35 years of age, indicating that none had been retired before joining the Peace Corps.

Mr. SHRIVER. Would they be retired?

Mr. HESS. They might be. I can check.

IN-COUNTRY TRAINING

Mr. SHRIVER. In your statement you talk about the great advantages of in-country training. You say it is more relevant, realistic, and also costs a third less than training in this country. This is something new that you just found out?

Mr. HESS. We have been testing this change over the past 3 years and, as of 2 years ago, our North Africa-Near East-and Pacific region has done its training completely in-country. This year we have begun to move into Africa and Latin America. We hope to have complete in-country training by the end of the next fiscal year.

COUNTRIES PEACE CORPS HAS LEFT

Mr. SHRIVER. I understand your record has improved regarding countries asking volunteers to leave. Maybe you covered this earlier. Which countries have asked our volunteers to leave during the past 3 or 4 years?

Mr. HESS. For the past 2 years, there has been no country that has asked us to leave. As a matter of fact, some countries that had once asked us to leave have now invited us back—Nigeria being one and Gabon another.

Mr. SHRIVER. Would you put in the record, over the history of the Peace Corps, the countries that have asked the agency to remove its people?

Mr. HESS. Yes.

Mr. ROYBAL. Would the gentleman yield?

Would you also provide for the record the reason that the Peace Corps was requested to leave?

Mr. HESS. Yes, I shall, Congressman.

Mr. ROYBAL. Because I know in many instances where the reason was quite valid, but not because of any failure of the Peace Corps.

Mr. HESS. My understanding is that in no case was it because of Peace Corps volunteer behavior.

Mr. ROYBAL. That is also my understanding.

Mr. LONG. I am sure the gentleman from Kansas would also like to know why they were invited back.

Mr. SHRIVER. To complete the table you might add that.

Mr. HESS. We will provide that, too.

Mr. LONG. It would be very interesting to know why they changed their minds.

Mr. ROUSH. Mr. Chairman, in this connection could we also know how many countries the Peace Corps has served?

Mr. LONG. At one time or another?

Mr. ROUSH. At one time or the other.

Mr. HESS. All right, sir.

Mr. SHRIVER. And what countries you are anticipating in the coming year to be serving. That may already be in the record.

Mr. HESS. Those that we are anticipating include——

Mr. SHRIVER. Put it in the record.

[1] Possible new countries in fiscal year 1974 are Gabon, Seychelles in Africa, and Cook Islands and Gilbert-Ellice Islands in the South Pacific.

[2] Barbados and St. Lucia were consolidated under the Peace Corps administrative unit of eastern Caribbean, which Peace Corps entered in fiscal year 1967. Also administered as a part of that same unit are Antiqua, Grenada, Montserrat, St. Kitts-Nevis, and St. Vincent.

[3] In late fiscal year 1973, Peace Corps will enter 3 countries, Bahrain, Oman, and Yemen, which for Peace Corps administrative purposes are considered Arabian Peninsula states.

Gabon

In December 1967, the Government of Gabon, while expressing its appreciation for the work of Peace Corps volunteers, requested that the program be terminated by January 1968.

Gabon officials explained the action was necessary due to budgetary deficiencies that made it impossible to continue its local cost contribution to the AID–peace Corps rural school construction project.

It was widely reported in the U.S. press that Gabon's decision was also influenced by French President Charles DeGaulle's policy to minimize U.S. influence and prestige in the former French colonies in Africa.

Since that time, however, new volunteers have been requested; and, the Peace Corps plans to reenter that country in fiscal year 1974.

GUINEA

On November 8, 1966, President Sekou Toure of Guinea ordered the expulsion of volunteers by November 15, 1966. At the same time, he complimented the Peace Corps for its contribution and sacrifice.

The President's action came as a culmination of a series of incidents that strained relations between Ghana and Guinea, one in which the United States was accused of complicity. That incident involved a Pan American Airways plane en route to Addis Ababa that was making a routing stopover in Accra. Ghanians boarded the plane in Accra and ordered the Guinean delegation to deplane and held some Guineans as hostages. The United States was blamed for the incident because Pan Am is an American company.

As a result, the U.S. Embassy residence was ransacked, Pan Am personnel were expelled, and eventually, private U.S. business interests, official U.S. personnel, and Peace Corps volunteers were expelled.

In June 1969, a highly trained group of Peace Corps volunteer mechanics was invited to Guinea. Those volunteers, however, were all withdrawn following the November 1970 invasion, which resulted in Guinea's retrenchment of all foreign technical assistance programs.

MAURITANIA

During the Arab-Israeli conflict, the Government of the Islamic Republic of Mauritania, in order to show solidarity with other Arab states, on June 7, 1967, broke diplomatic relations with the United States. The Peace Corps, and official U.S. personnel, were given 48 hours to leave the country.

Four years later, Mauritania requested a small volunteer poultry project. In September 1971, Peace Corps sent one volunteer who was followed by a second.

The country has requested more volunteers and Peace Corps officials expect more will be sent, but that the program there will remain small.

NIGERIA

In February 1969, it became clear that the Nigerian Government did not intend to request additional volunteers; and, by December 1970, all projects were phased out. Nigeria's decision reflected a policy of encouraging the replacement of foreign volunteer teachers by Nigerians. Underlying the decision were political considerations. Although official U.S. policy supported the Nigerian Government during their civil war with Biafra, the Nigerian Government reacted unfavorably to the widely publicized private efforts in the United States on the behalf of secessionist Biafra. Both the extended duration of the war and the fact that volunteers had been assigned to the Biafran region made the continuing existence of the Peace Corps in Nigeria difficult.

Two years later, however, in a calmer political environment, the Nigerian Government requested new volunteers. Presently, a small group of volunteers serve in Nigeria.

SOMALIA

On December 19, 1969, Foreign Secretary Omar Arteh announced the termination of volunteers in Somalia. The announcement came only 6 days after the Ministry of Education confirmed a request for 60 new volunteers.

In his official announcement, the Foreign Secretary said:

> While we are grateful to the U.S. Government for having sent us the Peace Corps to assist us in the education field, the Supreme Revolutionary Council has on the other hand decided that the Somalia Democratic Republic should dispense with the services. * * *

Peace Corps volunteers were replaced by Egyptian personnel, an action indicating that political considerations probably played a major role in the termination.

TANZANIA

Tanzanian President Nyerere often expressed to U.S. officials his appreciation for the contributions made by volunteers of ongoing Peace Corps projects. Following his public plea for "self-reliance" and "Africanization" however a, slow phaseout of the Peace Corps program was allowed to occur. The last volunteer completed his service there in October 1969.

Tanzanian officials did not request the Peace Corps program to leave that country, but simply did not request replacement groups. The Government was careful not to state any official reason for allowing the program to phaseout.

Uganda

By December 1972 all volunteers had been evacuated from Uganda due to Peace Corps' concern for the volunteers' safety.

Earlier, volunteers had been able to function despite political unrest; but the outbreak of hostilities between Uganda and Tanzania made it virtually impossible to continue.

Bolivia

In June 1971, Bolivian President Juan Torres asked that volunteers be withdrawn. The action came following a Leftist propaganda campaign to discredit the Peace Corps as a form of "American imperialism." Widely-circulated unsubstantiated press reports, such as an accusation that volunteers were CIA agents, brought great pressure on the Bolivian Government to take action against the Peace Corps. The Government's official announcement of the program's termination, however, acknowledged the contributions made by volunteers and thanked Peace Corps for its work there.

In August 1971, the government of Juan Torres was deposed by a coup d'etat. The new President, Hugo Baneer, has stated his interest in reestablishing a program in Bolivia, but to date, no official action has been taken.

Guyana

Peace Corps programs in Guyana were phased out in June 1971, as a result of an October 1970 decision by the increasingly nationalist government to terminate all foreign volunteer programs. This action was consistent with the Government's policies on foreign aid, national self-sufficiency and nonalinement; and, it was not seen as an unfavorable reflection upon Peace Corps' activity there. In fact, a number of Peace Corps Volunteers were requested to remain there on Guyana Government contracts in order to continue the work they had been doing as volunteers.

Panama

On February 12, 1971, Foreign Minister Juan Antonio Tack announced that all Peace Corps Volunteers would be terminated from Panamanian service in 90 days. Following that announcement Tack stated:

"Panama has decided to end the Peace Corps agreement with the United States because we can enlist Panamanian and international volunteers to do the same things as the Peace Corps is doing."

In Panama, Peace Corps had encouraged development of a national volunteer program and utilization of international volunteer groups. Therefore, Peace Corps viewed the new directions in volunteer service, announced on February 12, 1971, as an indication that the Peace Corps had been successful in its developmental efforts in Panama.

The Foreign Minister and other government officials made it clear that the request to withdraw Peace Corps Volunteers from Panama was in no way related to any existing anti-American feelings. Peace Corps has continued to cooperate with the Government of Panama by supplying volunteers for international volunteer team efforts that have been working there since February 1971.

Ceylon

The Peace Corps suspended operations in Ceylon in June 1964, when the only group of volunteers to serve there completed its 2 years of service. AID assistance to Ceylon was suspended a year earlier, pursuant to the terms of section 620(e) of the Foreign Assistance Act of 1961, as amended.

The volunteers had served as science, home economics and physical education teachers. The Government of Ceylon, under the Prime Ministership of Mrs. Bandaranaike, did not ask for replacements for these Volunteers nor for additional groups. The Ceylon-Peace Corps agreement, however, was not canceled, allowing Ceylon to invite the Peace Corps to reopen its program at a future date without the necessity of negotiating a new agreement.

In early 1967, under the Prime Ministership of Dudley Senanayake, the Government of Ceylon, under this original agreement, requested new Peace Corps Volunteers to work in food production and rural community development. These Volunteers arrived in Ceylon on December 12, 1967.

In 1970, Mrs. Bandaranaike again became Prime Minister, and the Peace Corps'

role in Ceylon was terminated under circumstances similar to those of 1964. The services of other volunteer and developmental groups, such as the Asia Foundation, were terminated by Mrs. Bandaranaike's Government at the same time.

Cyprus

When hostilities broke out in Cyprus, it became impossible for volunteers to continue their work. Accordingly, Peace Corps withdrew all volunteers in February 1964, a few months before their normal termination. By the time hostilities stopped, their tour was up, and they were not reassigned.

The Peace Corps has considered the possibility of assigning new volunteer contingents to Cyprus, but in view of the unstable political situation has taken no new initiative in this area.

Indonesia

The Indonesian program was terminated in May 1965, as a result of a mutual decision by Peace Corps and Indonesian authorities. Peace Corps initiated the action when it became impossible for volunteers to operate effectively in the face of the Indonesian Communist Party's campaign to harass and embarrass the Peace Corps and, if possible, force its withdrawal.

By April 1965, it had become apparent that the Indonesian Government could no longer guarantee the volunteers' safety. In the subsequent May withdrawal, there was mutual agreement that both Peace Corps and the Government of Indonesia would look forward to the time when volunteers could resume their service. The withdrawal was conducted on a friendly basis and was without incident.

Libya

In September 1969, a coup d'etat overthrew the monarchy of Libya; and, in October 1969, the Peace Corps program was terminated.

The volunteers, in the areas of education and health, had been a vital part of that country's development plans. As late as August 1969, Peace Corps officials and the Ministries of Health and Industries had planned to discuss new programs.

After the coup d'etat, however, the new Prime Minister criticized the instruction of foreign languages in primary schools; and, after dismissal of the first new Minister of Education, the elementary English program was abolished. A surplus of English teachers resulted.

With neither condemnation nor thanks, the Government of Libya terminated the Peace Corps program. Teachers for the French Voluntary Service, who had taught in junior high schools, were similarly affected, as were numbers of Jordanian and Palestinian English teachers.

Pakistan

Peace Corps closed out its operations in Pakistan in June 1967, when the last group of volunteers completed its tour of service. The first volunteer group arrived in Pakistan in 1961. That group and subsequent ones served in rural public works, agriculture, and education programs.

By September 1966, it was apparent that the Government of Pakistan did not intend to request additional volunteers. Pakistan said the reason for the phaseout was related to its then rising needs for highly skilled technicians and specialists, as opposed to the more generally skilled manpower Peace Corps was providing at that time. The deterioration of U.S.-Pakistan relations, following the 1965 India-Pakistan war and a reduction in U.S. economic and military assistance to Pakistan, might have been a major factor in the phaseout.

Turkey

In the spring of 1970, Peace Corps began to close down its program in Turkey. The last volunteer terminated his service in August 1971.

This action was taken following the civil unrest and student strikes of 1970. Although unrelated to Peace Corps projects, these activities so disrupted the volunteers' working environment that fulfillment of project goals became impossible.

The Turkish Government, however, never requested withdrawal of volunteers, nor was the Peace Corps-Turkey agreement ever cancelled. In fact, the Turkish Government has requested volunteers for a forestry recreation project

to be directed by the Ministry of Forestry. Peace Corps and Turkish officials have decided, however, to postpone assigning volunteers until the existing Peace Corps-Turkey agreement is amended to reflect a program that is under host country rather than Peace Corps staff supervision. The proposed amendment has been reviewed by the Turkish Foreign Ministry and is currently pending review by the Turkish Council of Ministers.

ACTIVITIES OF RETURNED VOLUNTEERS

Mr. LONG. I understand your statement says that the Peace Corps program benefits the United States because about three-quarters of the returning volunteers go to work in social programs. Can you give us some data on the various categories of social programs in which they are working, the ones who have come back?

Mr. HESS. The social program definition is quite broad. About 10 percent go into State government, 10 percent into the Federal Government, 5 percent are serving in local government, about 35 percent are serving as teachers. Then there are about 6 percent who are serving in the field of health and 5 percent in other general social services.

Mr. LONG. If the gentleman will bear with me a little while longer, why is this particularly a great advantage? Do we have great problems getting people to get into social programs in this country? I understand there is a plethora of teachers and all sorts of people want to work for the Government. Is this a cut above people who want to work?

Mr. HESS. Yes, I think the Peace Corps volunteer is a very elite American.

Mr. LONG. You think people who work in social programs are elite Americans?

Mr. HESS. Mr. Congressmn, I think, that by virtue of 2 years' experience in a different culture, living under hardship conditions in an environment where they do not have the materialistic trappings that we have here, such a person is probably a much more valuable person as a result of his Peace Corps experience, and he is sought after usually more often than others.

Mr. LONG. Do you have any empirical evidence that this is so, aside from your assumption that he must be quite a good fellow or he wouldn't have gone into the Peace Corps?

Mr. HESS. Only what I read in surveys that have been taken and what I have heard from others who have been talking to me about the value of a returned Peace Corps volunteer in their employ.

REDUCTION IN STAFF SALARIES

Mr. SHRIVER. You say there will be a reduction in your average staff salaries.

Mr. HESS. Yes.

Mr. SHRIVER. Will you tell us more about those reductions?

Mr. HESS. As a result of the 5-year rule, we have quite a bit of turnover in our staff. As people leave, it is my desire to bring in staff members who are going to be willing to serve at a lesser salary than their predecessors, and try to do that wherever possible. I hope that as a result there will be a lower average salary than what we have had in the past. Again, this is another one of the many ways we are attempting to economize.

PROGRAMS IN NEW COUNTRIES

Mr. SHRIVER. I see you are considering new programs in four or five countries or territories, including the Seychelles in the Indian Ocean.

Mr. HESS. Yes.

Mr. SHRIVER. This is a former British colony, I believe?

Mr. HESS. That is right.

Mr. SHRIVER. Tell us what you would do there.

Mr. HESS. At the present time we are entertaining a very small request for volunteers, two or three, who would go over in an educational program to help train teachers. I don't have the specifics of that because we haven't received the request from the country. It is under negotiation at the present time in the field.

Mr. SHRIVER. So you don't know who is going to go?

Mr. HESS. No. I know it is in the field of education but I don't know the specifics.

Mr. SHRIVER. What can you accomplish with the expenditure of $3,000 for the South Pacific Commission in New Caledonia?

Mr. HESS. We have a volunteer, I think one volunteer, established out there. I understand he is working in the field of marine life, fisheries, food for people.

Mr. SHRIVER. That will be in addition to the money we were talking about a little while ago?

Mr. HESS. Yes. He is a volunteer. That is the cost of one volunteer.

Mr. SHRIVER. Is this over the figure discussed a little while ago?

Mr. MARKHAM. $3,000 was the cost of the volunteer, but we were talking about the family before, which ran up that cost; $3,000 is the average.

Mr. SHRIVER. He is going to be working in marine life and fisheries?

Mr. HESS. Yes, I think he is.

SIZE OF PROGRAM IN BRAZIL

Mr. SHRIVER. I notice that your program in Brazil is getting rather large, with 462 volunteers scheduled for that country in fiscal 1974.

Mr. HESS. That is the request, Mr. Congressman. Right now there are about 350 volunteers there.

Mr. SHRIVER. Is there a point at which the program would have too high a profile, even in countries as large as Brazil?

Mr. HESS. I think that is true in some small countries but for Brazil the request for 462, if they are good, viable programs, is not too high a profile, because they are going to be working in the out regions of Brazil where there are few or no foreigners, as I understand it.

MULTILATERAL VOLUNTEER PROGRAMS

Mr. SHRIVER. I want to ask some questions about the multilateral grants. In 1972 it amounted to $100,000, and you are asking for $350,000.

Mr. HESS. Mr. Congressman, there was a planned expenditure for about $250,000 in that year, but because of the reduction in the Peace Corps program that was made we had to back out of our full commitment to that program, so only a $100,000 expenditure was made.

Mr. SHRIVER. I am just looking at the material which you supplied.

Mr. HESS. Yes. For 1974 we are contemplating a cost of about $350,000.

Mr. SHRIVER. That was the estimate you had for 1973?

Mr. HESS. That is correct.

Mr. SHRIVER. Would you tell us what that is?

Mr. HESS. About $100,000 is for the international secretariat for volunteer services. This is to help them in the development of other multinational volunteer programs. About $200,000 will be allocated to the United Nations volunteer program, helping to foster it. The remaining $50,000 will go to several smaller multilateral projects.

Mr. SHRIVER. We are already contributing through this committee and other committees a considerable amount to the United Nations. This is just another spigot of contributions to the United Nations and multilateral organizations where we have no control.

Mr. HESS. This particular fund, Mr. Congressman, for the United Nations will supply moneys to those developing countries that would like to participate in an international volunteer program. It is set aside specifically for them. The U.S. share is 12 percent of that cost.

Mr. SHRIVER. How was the 12-percent figure determined?

Mr. HESS. It is an allocation that is made among the contributing nations to the United Nations Volunteer Fund. They wanted, as you can probably imagine, much more from the United States, but I believe this is a fair contribution.

Mr. SHRIVER. When did we start this program?

Mr. HESS. The United Nations volunteer program was begun in 1971, and I think our first contribution may have been in that fiscal year. I will have to check.

Mr. SHRIVER. That was $100,000 for 1972?

Mr. HESS. In 1972 we did not contribute because of the financial problem.

Mr. SHRIVER. Why do you put it in your book where it says fiscal year 1972 actual, $100,000 on page 312?

Mr. HESS. That was for the International Secretariat for Volunteer Services, which is distinct entity from the United Nations program.

Mr. SHRIVER. It isn't very clear. What is this organization you are talking about now?

Mr. HESS. The ISVS is a private organization headquartered in Geneva. Its purpose is to help develop volunteer programs throughout the world, provide technical assistance, provide a clearinghouse to help them design recruiting programs, and help provide program development for volunteers.

Mr. SHRIVER. And we became involved in that by virtue of an agreement with the other countries, or was there congressional action? How did we arrive at that?

Mr. HESS. I think it is title III of our legislation which authorizes and encourages us to help in the formation of other volunteer programs throughout the world. The figure of $350,000 is a relatively small one, but an important amount to help foster volunteers. I might add that, as a result of the Peace Corps, there are more than 20 countries today that now have international volunteer programs, with something like 28,000 volunteers serving throughout the world.

Mr. SHRIVER. Would you put a table into the record showing those

other countries and their contributions to these two multilateral organizations?

Mr. HESS. I will be happy to.

[The information follows:]

UNITED NATIONS VOLUNTEERS—FISCAL YEAR 1973

Administrative costs	$409,600
Volunteer in-country costs: 150 volunteers × $3,600	540,000
Out-of-country cost	250,000
Total budget	1,199,600

Items 1 and 2 above are funded by the UNDP. One hundred twenty-six countries contributed (in 1971) and the United States pays approximately 34 percent of the total.

Item 3 is the special voluntary fund to which the Peace Corps contributes under the authority of title III of the Peace Corps Act. The purpose of this fund is to finance "external" costs (all volunteer costs that are not incurred in the host country) for the developing countries and thereby make their participation in the program possible.

	1972 proposed	1973 proposed

[2] Peace Corps contribution has been in the form of 1 Foreign Service officer secunded to ISVS and a special contribution made under the authority granted in title III of the Peace Corps Act.

Mr. SHRIVER. That is all I have.

Mr. LONG. Mr. Yates will proceed under the 5-minute rule, which usually ranges anywhere from 5 to 25 minutes.

Mr. YATES. It is usually the 5 with Mr. Yates.

Let me say that I am very much interested in the Peace Corps. I was one of those who filed its bill originally. I was one of the cosponsors setting up the Peace Corps and, by and large, to one who has been on the outside, I find that their record is a very good one. I don't know whether members of the committee who have supervised your budget and followed your activities more closely share that opinion, but they have given you the money you wanted.

PEACE CORPS RELATIONSHIP WITH WHITE HOUSE

Tell me what your relationship is with the White House. I notice that Mr. Nixon, in commenting on amnesty, indicated that he thought that some volunteers shouldn't be allowed to have a junket for 2 years in the Peace Corps.

Mr. HOWE. Congressman Conte already covered that and we are submitting for the record a clarification which the White House put out 2 days later indicating, sir, that he was referring to his feeling that service in the Peace Corps was not a penalty which was consistent with his idea to that which should be paid for breaking the law, and indicating that he did realize the dedicated service that Peace Corps volunteers provided. We obviously wish that that clarification has as wide a distribution as the initial comment did.

Mr. YATES. It would have been nice if the clarification had been issued the day before the statement.

Mr. LONG. It was the friends of the Peace Corps, wasn't it, that equated service in the Peace Corps with the penintentiary?

Mr. HOWE. I am not familiar with that, sir.

Mr. LONG. You know, instead of putting them in jail when they come back, put them in the Peace Corps. I think it was your friends.

There is an old saying you have to watch out for your friends. Your enemies are easy to deal with.

ADEQUACY OF PRESENT BUDGET REQUESTS

Mr. YATES. Have you already gone into the question as to whether the funds you have requested are adequate for you to carry out your purposes.

Mr. HESS. $77 million is going to be adequate to carry on the purposes of the Peace Corps.

Mr. YATES. Is it a restricted program?

Mr. HESS. It is a restricted program. We will not be able to meet all of the requests that we have been asked to meet by host countries. I might say I am delighted that the vote on the House floor the other day on our authorization, which was, I think, 299 to 72, also indicated that $77 million is a worthy amount.

NUMBER OF VOLUNTEERS

Mr. YATES. What will be the number of your authorized Peace Corps members, the volunteers so-called?

Mr. HESS. Volunteers and trainees, about 7,300.

Mr. YATES. And what was the maximum at any time?

Mr. HESS. About 15,000 volunteers and trainees.

Mr. YATES. You are down to about half that number now.

Mr. HESS. That is correct, but a higher quality program, I might add.

Mr. YATES. In what sense?

Mr. HESS. Higher quality in that we have, I think, a better selection program. We are getting more experienced, more skilled volunteers. We have much better programing, much more definite jobs, and better training.

Mr. YATES. Are the volunteers usually older today?

Mr. HESS. Yes, they are. Today they average 27½ years old, in comparison to 1966 when they averaged about 23½ years old.

Mr. YATES. Is the number of countries in which your volunteers will serve restricted as well?

Mr. HESS. We are in 58 countries. We have requests from five countries that are outstanding, and there are a few other countries that are talking to us in terms of their desire for Peace Corps. Of course, we are going to be limited in terms of the numbers we can serve.

Mr. YATES. Have you put into the record testimonials from countries in which the Peace Corps serves?

Mr. HESS. Yes, we have.

Mr. YATES. That is all, Mr. Chairman.

Mr. LONG. I think you are one of the rare phenomena. I don't think you have even taken 5 minutes. I have always felt you were one of the most valuable members of any of the appropriations committees.

Mr. YATES. I hope he gets that in the record.

RETURNED VOLUNTEERS IN SOCIAL PROGRAMS

Mr. LONG. Are you arguing that these volunteers who work in social programs in the United States got their commitment from the Peace Corps experience, and if so, what evidence do you have of this, that they wouldn't have gone into these things anyway?

Mr. HESS. Mr. Congressman, at the conclusion of the Peace Corps volunteer's service after 2 years, we ask him to complete a questionnaire. We want to know a little bit about what the volunteer felt about his Peace Corps service. One of the questions is whether or not as a result of this service he has had any changes regarding his career plans. We are finding, as a result of that, that many volunteers have changed their minds and want to continue working in social programs. They thought they only wanted to for a period of time, but many of them now feel that it is of great value to be serving mankind.

Mr. LONG. I am just wondering whether you are arguing that or not, and I appreciate the value of social programs like education and so on. After all, I was a university professor for about 25 years, but I wonder if you can really argue that this is of a higher order of service than working in agriculture or a factory?

Mr. HESS. No, I wouldn't suggest that it was necessarily. I think it is a very important sector that Americans have not really accorded enough high prestige to, in terms of its importance to development of the human being.

Mr. LONG. You may be right.

Mr. HESS. I include education and health in that, sir.

Mr. LONG. How about politics?

Mr. HESS. That is a necessary ingredient.

ACTION OFFICE OF POLICY AND PROGRAM DEVELOPMENT

Mr. LONG. What is the total staff of the Office of Policy and Program Development in ACTION?

Mr. HOWE. The number of authorized slots is 21. I believe the total staff actually on board is 18.

Mr. LONG. What portion of the staff works on Peace Corps related matters?

Mr. HESS. I understand about seven devote some of their time to Peace Corps matters.

Mr. LONG. It has been argued that much of the Washington ACTION staff that deals with policy and programs in Peace Corps spends a good deal of its time second-guessing decisions which should logically be made only in the field. What is your response to this? Have you heard that claim made before?

Mr. HESS. No, I have not heard that claim, but as one who has served in the Peace Corps overseas, I am very much concerned that Washington doesn't do too much second-guessing about what goes on in the field.

Mr. LONG. I think second guessing is something that is pretty hard to stop anywhere. The cost of sending a Peace Corpsman and his family is a pretty expensive thing, as I can see, at least compared with incomes and earnings in the poor or underdeveloped or developing countries. Aren't there an awful lot of unemployed intellectuals, educated, trained people in those countries who need jobs desperately? Isn't this a great problem in developing countries. People get awfully good educations and then can't get employment. I wonder why it wouldn't be cheaper to get this work done hiring the people in the underdeveloped countries?

GOOD EXAMPLE SET BY VOLUNTEERS

Mr. HESS. I am increasingly finding that answers to this question, which I often pose in my travels, take the following course: that many people are educated, but that they have theoretical knowledge and don't know how to apply that knowledge to the task at hand; working side by side with a volunteer he begins to acquire a capability to make that practical application.

Also, many people who do become educated immediately want to put on the white shirt and move into the Caapital City to do a desk job, because they feel that they should be accorded a greater prestige in their social standing as a result of their education.

Mr. LONG. You mean they would turn down a good job out in the field?

Mr. HESS. Many wish to be in the Capital City, I understand.

Mr. LONG. That is a different statement. Would they turn down one of these jobs that paid anything like this? They don't pay much in those countries?

Mr. HESS. That is correct, I don't think they are getting adequate compensation. That is a very large factor, but also I think you must understand that the conditions in the bush, as it were, are rather grave. Seeing a Peace Corps volunteer, an American, who is willing to take off his tie, roll up his shirt sleeves, and go out in the bush to live 2 years under conditions of hardship to apply his skill and his knowledge often goes a long way to changing some of the attitudes on the part of the people in that country. This is a great concern of their governments, and one of the many reasons why Peace Corps volunteers are desired.

Mr. LONG. I appreciate that. You are really trying to show them the American way of life and of thinking, and you feel that it does exist in those countries. We have to send it over there to those countries at considerable cost so they can see it, but I am wondering how valuable a lesson this is to them when they see Americans living over there vastly better than they are living. I think you will have to admit, we all have to admit, we give them incomes that are many, many times what well educated people get in those countries. I am wondering just how valuable a lesson that is. Don't they always say, "If I were a rich American I could do these things too. Why should I assume that this is such a valuable lesson to me, in view of the fact that I am never going to get paid what he is getting paid? I am never going to live as well as he is going to live." Do you follow me?

Mr. HESS. I do follow you, but I don't want to mislead you into thinking that the volunteers are living largely better than their hosts. They are living at the level of their peers with whom they work. They are living under conditions of hardship. They are having to buy their food, which most host country people are able to raise.

Mr. LONG. Their incomes are vastly above those in the host country. They are supposed to be out working with humble campesinos. In fact I have seen them in the hills outside of Lima, if I recall correctly, helping them build houses and so on. You know darn well their incomes are way above those people. They have got to be.

Mr. HESS. Yes, but, Mr. Long, I think you must also consider that the volunteer must acquire lodging. He is not given lodging free, and

lodging is very expensive, and comes out of the volunteer's subsistence allowance.

Second, the volunteer usually does not raise his own food which many of the host country people do. He must buy it. Food is very expensive.

Mr. LONG. What kind of a valuable lesson is it for these people for a volunteer to go out there and show them how to do things and then he (the volunteer) doesn't even do what they are doing, namely raising his own food?

Mr. HESS. Because I think if he were to spend his time raising food rather than imparting his skill or knowledge, then we would be wasting everybody's time.

Mr. LONG. You are really assuming he is quite an elite guy but I would think a large part of this moral lesson you are trying to get over to them would be lost. If I were one of these campesinos, one of these poor urban dwellers, and I saw this Peace Corps type who didn't have his own little garden and had all this free time, I am not sure I would get a great moral lesson out of it.

Mr. HESS. I don't wish at all to imply there is any free time on the part of the volunteer. The volunteer's time is spent not only on the job but also doing secondary activities off the job.

Mr. LONG. Don't those people feel pretty envious of somebody who doesn't have to have a garden? I would. I want to tell you any garden I have ever raised was backbreaking work. I hated every minute of it and I envied anybody who had enough income that he didn't have to do that backbreaking labor.

Mr. HESS. That is exactly why the Peace Corps volunteer is invited, to impart a knowledge, a skill, so they will not have to be raising a garden.

Mr. LONG. I thought before you were telling us that it was more than that. It was the idea of the American taking off his coat, working in his shirt sleeves among them, showing that Americans are not snobs and that they have a lot of knowledge, that you don't have to have a desk job and all that. Yet we are not doing quite that. We are setting him apart. He does live quite specially, maybe not as well as the local AID director, who frequently sometimes lives as well as a maharajah. As a matter of fact I can remember the AID director in India living in maharajah row in New Delhi right with the princes. I don't think you can deny that your average Peace Corps person is far better off economically than the average member of the developing host country. He gets all kinds of medical care. He gets an allowance for education for his children.

Mr. HOWE. Mr. Congressman, that certainly has to be true, but the Peace Corps volunteers I have visited in particular countries, with $148 to survive on in a month are often living in places with dirt floors, with no indoor plumbing, at a level substantially comparable to a vast number of people in that village. They are looked upon as being amazing

individuals who come from this fantastically rich country across the sea to come live in that sort of surrounding, and it does serve as an example.

Mr. LONG. I have seen them, and in a way you are right but in a way you are not right. I have seen them living in quite humble circumstances. It is true in a way they are living like the people but in other ways they are not and everybody knows it. They know it and all the people around them know it. They have all kinds of privileges and things that are not available to the people among whom they are living.

Mr. HOWE. But the difference between where the people there realize the volunteers came from and the style in which they are now living I think accomplishes or gives the feeling that Mr. Hess has tried to describe. When they go out in the bush where, by and large, people from developed countries have been reluctant to go, and all of a sudden they see an American living out there, it becomes much more difficult for their own civil servants, if you will, to say, "No, I really don't want that remote assignment." An American Peace Corps volunteer is living out there and doing that sort of work in a much different style of living than they know he is used to.

Mr. LONG. Of course, I have no way of knowing how many people in those countries who have some education, turn down jobs that are reasonably well paid out in the bush. If you can show me some figures on that, my guess is that the average guy who has gotten a college education in Nigeria or some place like that is not offered anything that would even come close to what a Peace Corps volunteer gets paid to go out and do work far from Nairobi.

Mr. HOWE. We would probably have great difficulty in providing figures of that sort but constantly as officials from the foreign governments come in, this is one of the things they emphasize to us, one of the good effects that Peace Corps volunteers have on people in their country and that they want to have stimulated among their people.

Mr. HESS. I think also it might help if I would draw on an illustration from Korea, as an example. Each volunteer has a coworker, and those that were teaching in Korea were getting no more and sometimes less than their counterpart, their teacher. In the health centers where we were working in Korea, they were attempting to attract doctors to work in those health centers out in the remote areas, and in those few cases where they succeeded, our volunteers were receiving considerably less than the doctors who were serving in those health centers.

HOST COUNTRY CONTRIBUTIONS

Mr. LONG. Can you give us some data for the record on the size of host contributions, by country in absolute amount and percentage.

[The information follows:]

HOST COUNTRY CONTRIBUTIONS BY COUNTRY

[Fiscal years]

	1971	1972	1973 estimate	1974 estimate	Percent of 1973 Peace Corps direct budget [1]
Africa:

[1] This column indicates the ratio of the fiscal year 1973 host country contribution to the fiscal year 1973 Peace Corps direct budget in each country.
[2] New country in fiscal year 1973.
[3] Peace Corps returned to Nigeria in fiscal year 1973.
[4] Peace Corps program withdrawn in September of fiscal year 1973.
[5] Peace Corps discontinued program in fiscal year 1972.
[6] Peace Corps program in the Arabian Peninsula (Oman, Yemen, Bahrain) began in fiscal year 1973.

Mr. LONG. And those countries where the Peace Corps has English-language teaching programs, could you provide host country contributions for the English programs compared to host country contributions for all other Peace Corps programs.

[The information follows:]

The following table lists those countries in which the percent of Peace Corps volunteers teaching English is greater than 40 percent and applies that percent to the respective host country contributions for fiscal year 1973 to arrive at a comparison of contributions for English programs versus contributions for all other programs.

Country	Percent volunteers teaching English	Estimated contribution English program	Estimated contribution other programs	Total contributions
Korea	77	$62,524	$18,676	$81,200
Ivory Coast	69	311,880	140,120	452,000
Thailand	63	67,662	39,738	107,400
Senegal	62	15,500	9,500	25,000
Chad	58	15,080	10,920	26,000
Tunisia	50	40,000	40,000	80,000
Afghanistan	48	87,024	94,276	181,300
Morocco	41	39,770	57,230	97,000

Mr. LONG. That is all I have. Mr. Roush.

Mr. ROUSH. Mr. Chairman, I am very new on this subcommittee and I made up my mind I had better sit and listen this year. I must confess it has been a rather frustrating afternoon to sit here and listen. I wasn't sure whether the practices of the committee would permit interruption, so I have remained rather silent but I think I should let the record reflect my advocacy of the Peace Corps. I think it has fulfilled its purpose and intent, and I congratulate these men, Mr. Howe and Mr. Hess, on their presentation and on the work they are doing to improve the Peace Corps.

I am sorry to say that this is included in a general appropriations bill, and my vote on the general appropriations bill will certainly not reflect my feeling toward the Peace Corps, but as with all agencies of the Government, I think it is the responsibility of the committe to inquire very diligently into the conduct of its affairs and the effectiveness of its program. I think perhaps this subcommittee has done that to a limited extent. I would hope that next year I might be more active.

CLARIFICATION OF VEHICLE PURCHASE POLICY

There are a couple of things that I felt were not clarified. I would like to go back to a point which has bothered me, and that concerns the automobiles and their purchase. I understand, Mr. Hess, that what you were telling the committee was that there are certain countries of the world where a certain automobile is used. They don't happen to be American, and it is easier for you to use that same automobile in that country than it is for you to take an American automobile in and provide trained mechanics, replacement parts and what have you. I am thinking perhaps of the Congo where I think the British vehicle is called the Land Rover which is used, and used quite extensively. Perhaps there are no automobiles of American make there. Is that the reason that this is happening?

Mr. HESS. That is correct.

THE PEACE CORPS NAME

Mr. ROUSH. I also would take exception to my chairman's criticism of the use of the name "Peace Corps."

Mr. LONG. By the chairman, you don't mean the acting chairman?

Mr. ROUSH. I don't mean the acting chairman.

Certainly the name seems very appropriate to me. You are engaged in only peaceful endeavors, are you not?

Mr. HESS. Yes, sir.

Mr. ROUSH. And the purpose is to promote peace and understanding among the people of the world, is it not?

Mr. HESS Yes.

Mr. ROUSH. Have you had any suggestion on the part of anyone that this name should be changed, other than that you have heard here this afternoon?

Mr. HESS. No; I have not had any suggestion and I would resist changing a good name that has been established, I think, with great credibility to do America a great deal of honor. Peace Corps, as a result of its good work to date, I guess you might know, is now given credit in Webster's dictionary of last year as a term, and I think, that we owe a great credit to Peace Corps volunteers for making that name a very honored one.

CONTRIBUTION OF PEACE CORPS TO AMERICA'S RELATIONS OVERSEAS

Mr. ROUSH. Would you care to comment on the contributions that the Peace Corps has made to our relations with foreign nations in general?

Mr. HESS. Yes. It is very difficult to give any precise definition, but I can say that wherever I travel, whether I meet a humble man on the street or a prime minister or a principal of a school, that the Peace Corps is a name that is held in a very, very cherished way. I think it is not, necessarily, that they are giving credit only to that volunteer, but I think that they are giving credit to Americans, Americans who are still willing to support an organization whereby people are giving 2 years of their life to serve under hardship conditions. It is a recognition that in America we are still willing to share and help others who are in great need, people who really want to become self-sufficient in this world, self-reliant.

I have heard the general theme echoed time after time, and I think it is representative of the fact that we are continuing to get a large number of requests for Peace Corps volunteers. I know that during the period when we had to cut back on the Peace Corps in 1972, we lost significant credibility. Around the world ambassadors reported to the Secretary of State, "Please, Peace Corps counts. Peace Corps is of great value in terms of American relationships with that country." I think that the other reason why perhaps we are held in even greater esteem than most foreign assistance programs, it is not only because we are a country-to-country program, but because we are a person-to-person program.

I think it is through the Peace Corps that we are giving still another image of America, and an important one, of who we Americans are, people who care.

Mr. ROUSH. Thank you.

There is one other comment, Mr. Chairman, that I wanted to toss in. As I recall on the first day of our hearings this year before the

full committee, either Mr. Shultz or Mr. Ash testified that it costs on the average of $10,000 in pay and allowances alone to maintain one soldier, just in pay and allowances, without all of the supporting costs that are involved, and it does seem to me that the $2,844 figure for pay and allowances for a Peace Corpsman is well spent compared to this.

Now a rather mundane question. Do you have any people assigned to or working on the White House staff?

Mr. HESS. Not in the Peace Corps.

ACTION PERSONNEL ON WHITE HOUSE STAFF

Mr. ROUSH. Does ACTION have any person or persons assigned to and working on the White House staff?

Mr. HOWE. Not directly. We have one person on a detail to the Cost of Living Council. We have one person detailed to the Office of Economic Opportunity, both of which are involved in the Executive Office, but we do not have anybody detailed or on an assignment to the White House.

Mr. ROUSH. Have you had any in the past year?

Mr. HOWE. Not that I am aware of, sir.

Mr. ROUSH. You would know?

Mr. HOWE. I would certainly hope I would know, but I must admit some things happen that I don't know about, but I do not believe we have, no.

Mr. ROUSH. That is all.

Mr. SHRIVER. Would the gentleman yield? I want to add a word of commendation to you, Mr. Hess, and those who have testified here today. This is the ninth annual presentation of the Peace Corps I have heard, and this presentation has been the best or among the best. I think you are to be commended and congratulated for the presentation and the sincerity that the people here apparently have, and for the changes you have brought about.

Mr. LONG. I want to thank you, Mr. Hess, for coming here. I don't think we gain anything, of course, by telling you what a great bunch of people you are. You already know that. We do try to investigate, and I have never known a program in which there wasn't something wrong that couldn't be improved. That is the spirit in which I offered my questions.

I will say this. I have been to many countries and I have seen a great many programs going, and it always seemed to me that the Peace Corps was at least doing something that you could find, put your finger on, and see with your eyes. That is more than I can say for a lot of AID. In country after country you couldn't find anything that AID employees were doing except living in beautiful homes with three or four servants and that kind of thing.

They fill you full of board room statistics, but they couldn't really show you anything. The things that I was able to get out and see with my own eyes and which remain most vividly in my recollection were projects in which Peace Corps people were involved. They always seemed to me to be very fine dedicated people, and I was very proud they were Americans.

Mr. HESS. Thank you, for the volunteers.

Mr. LONG. I think that is all we have. This meeting stands adjourned until tomorrow at 1 o'clock.

THURSDAY, APRIL 5, 1973.

INTER-AMERICAN DEVELOPMENT BANK

WITNESSES

JOHN M. HENNESSY, ASSISTANT SECRETARY FOR INTERNATIONAL AFFAIRS, TREASURY DEPARTMENT
REUBEN STERNFELD, ALTERNATE U.S. EXECUTIVE DIRECTOR, INTER-AMERICAN DEVELOPMENT BANK

Outlays	275,694	420,300	539,314

Mr. PASSMAN. The committee will come to order.

We shall continue our examination on the budget requests for foreign aid. This afternoon we shall consider the request for funds for the Inter-American Development Bank. We have as witnesses the Honorable John M. Hennessy, Assistant Secretary for International Af-

fairs, Treasury, and the Honorable Reuben Sternfeld, Alternate U.S. Executive Director, Inter-American Development Bank.

I assume, gentlemen, that each of you would have a statement to make to the committee.

Mr. HENNESSY. That is correct, sir.

GENERAL STATEMENT OF JOHN M. HENNESSY

Mr. HENNESSEY. Mr. Chairman, I am here to testify in favor of President Nixon's fiscal year 1974 appropriations requests totaling $1.2 billion for the international lending institutions. I strongly urge that you and the Congress act promptly and appropriate the full amounts which are being requested.

My statement addresses itself to the broader issues of U.S. Government participation in the three institutions since the Secretary of the Treasury has overall responsibility. The U.S. representative in each of the institutions will accompany me and provide you with a statement on the details of operations in his respective Bank.

Before providing information on the specific requests and on the operations of the institutions, I would like to raise two questions which I consider important. The first question is: Why should you appropriate this amount of money for foreign economic assistance at a time of extreme budgetary stringency and serious balance of payments and trade problems? This year, the entire budget has been subject to extremely close scrutiny in terms of our national interests. The President has assigned a high priority to the international lending institutions and for very practical reasons.

It is clear, Mr. Chairman, that our first concern must be for the welfare of the American people. It is also clear that as a nation, we have important interests in the developing areas of the world. Their economic growth and stability are in actual fact important to us for economic as well as general foreign policy reasons. Our economic interdependence with all nations, and particularly these, has grown. Today, they provide raw materials, as well as manufactured and semimanufactured products, which are vital to the continued vitality and noninflationary expansion of our economy. A little known fact is that year after year the United States has had a positive trade balance with the less developed countries; including a modest surplus last year, when we ran a large deficit with the rest of the world. The truth is that they are good customers and it is in our interest to provide them with capital to expand their economies and their ability to repay us.

A second little known fact is that we get one-third of our raw materials imports from them now and this figure is almost certain to rise in the future. A third little known fact is the importance of how our investment earnings in these countries contribute to our balance of payments and to the welfare of our people. The United States has close to $25 billion in private direct investments in less developed countries. Multilateral bank loans help provide the infrastructure to

complement the activity of private capital. In 1972, the gross inflow of repatriated earnings, dividends, interest, royalties, and fees to this country from LDC's amounted to $4.2 billion. Even after allowing for investment outflows, there was still a net inflow of $2.6 billion.

Aside from the economic reasons I have just outlined, there is a second reason why the foreign assistance that we provide through the international lending institutions has been included in this year's budget. Such assistance fits in with the President's overall foreign policy. Moreover, we are now engaged in negotiations on important matters of international trade and international finance. The question of development assistance is closely related to and even interdependent with these other two questions. All three are legs of the same stool. We cannot, in my view, expect to achieve our objectives in trade and finance unless we are willing to provide our fair share for economic development.

After why, the second major question, Mr. Chairman, is how to provide foreign economic assistance. Why use multilateral institutions? The answer is that the international institutions are efficient and effective. They have been organized and operated as responsible financial institutions. They sell their bonds in the marketplace and they are disciplined by the demands of the marketplace. This discipline is reflected in good organization, management, and staffing and high quality of analysis. In my judgment, there is a place for them just as there is an important place for bilateral aid programs. The multilateral and bilateral programs complement each other.

There is also the financial advantage of burden sharing. U.S. Government paid-in contributions—an important element of what we are asking you to appropriate today—are greatly increased by paid-in contributions of other developed countries. Since the inception of the institutions, these other developed countries have provided a total of $4.8 billion. Their share is steadily increasing and smaller industrial countries who could not mount their own bilateral programs can contribute through the banks. Thus, we get a greater degree of burden sharing than we would otherwise get.

The paid-in capital contributions of the U.S. Government are also leveraged to a great extent by the banks' borrowings in the world's private capital markets. Since the establishment of the banks, 77 percent of capital funds, or a total of $14 billion has come from private markets and has been re-lent at market or near market rates. This represents an enormous mobilization of private capital for economic development purposes at no cost to the U.S. taxpayer. Furthermore, in recent years a large and growing percentage of these borrowings have been made in Western Europe and Japan. In fact, during the past 2 years borrowings by the international institutions have taken place almost exclusively outside the United States. As a Treasury official, I consider these budgetary and foreign exchange factors important ones to keep in mind.

Against this background, let me turn now to the specific proposals before you which are summarized in this table by institution.

FISCAL YEAR 1974 BUDGETARY REQUESTS FOR THE INTERNATIONAL FINANCIAL INSTITUTIONS

[Dollars in millions]

International Development Association		$320
Inter-American Development Bank:		
Callable ordinary capital	($168.0)	
Paid-in ordinary capital	(25.0)	193
Fund for special operations		500
Asian Development Bank:		
Special funds		100
Callable ordinary capital	(96.8)	
Paid-in ordinary capital	(24.2)	121
Total		1,234

New budget authority sought this year amounts to $1.2 billion: $320 million for the International Development Association; $500 million for the Fund for Special Operations of the Inter-American Development Bank and $193 million to its ordinary capital resources; $100 million to the Special Funds of the Asian Development Bank, and $121 million to its ordinary capital.

A large portion of this total relates to programs for which funding was sought but not received in fiscal 1973. The amounts not funded under the fiscal 1973 continuing resolution are: $193 million for the Ordinary Capital of the Inter-American Development Bank, $225 million for the Fund for Special Operations, and $100 million for the Special Funds of the Asian Development Bank. Projected budgetary outlays for fiscal 1974 amount to $548 million practically all of which stems from prior year appropriation.

The IDA contribution of $320 million is the second tranche of the third replenishment. The third replenishment formally came into effect in September 1972 when the United States agreed to make available its share of $960 million. Shortly thereafter the United States paid its first tranche of $320 million under the Continuing Resolution of October 26, 1972. Under terms of the original agreement, the second tranche was due on November 15, 1972.

As members of the committee know, IDA is the concessional lending affiliate of the International Bank for Reconstruction and Development. Its funds are used to finance development projects and programs on concessional terms—in the poorest of the developing countries, that is, those countries with annual per capita incomes of $300 or below. Its terms are 50 years maturity, including 10 years grace, and a service charge of three-fourths of 1 percent per annum. As of December 31, 1972, it had made total cumulative commitments of $4,608 million mainy in agriculture and transportation. In recent years, it has placed an increasing emphasis on education, housing, and related areas.

In its report of May 11, 1972, the committee of conference on supplemental appropriations said:

> The managers agree that there is no intention of denying each of the three annual installments of $320 million in the next three fiscal years and that the first installment will be provided in the fiscal year beginning July 1, 1972. I urge this subcommittee to act promptly in the spirit of that joint explanatory statement.

The $193 million for the Inter-American Development Bank's ordinary capital is part of the third and final tranche of the current in-

crease in those resources. One hundred sixty eight million dollars of this amount represents callable guarantee capital and does not constitute a budgetary outlay. Twenty five million dollars is to the paid-in. It will, however, be paid in the form of non-interest-bearing letters of credit and not constitute a budgetary outlay in fiscal 1974. These two amounts, as well as the $193 million appropriated by the Congress in fiscal 1973's continuing resolution, will be due under terms of the original agreement on June 30, 1973.

The $500 million for FSO resources represents further funding toward our $1 billion contribution to the concessional lending resources of the IDB. All of these funds will also be provided in letter of credit form to be drawn down later. As a result, there will be no budgetary impact in fiscal year 1974. Under the original understanding between the United States and Latin countries, the United States would have completed the final installment of the $1 billion contribution by the end of fiscal 1973. Assuming full appropriation of this year's request, $775 million will have been provided before the end of fiscal 1974. Provision of the requested $500 million will thus still represent a considerable stretchout of the U.S. contribution to the FSO replenishment.

On January 1, of this year, uncommitted hard currency resources available to the FSO were $353 million. This included $20 million from the Canadian contribution, $275 million which we made available on December 21, 1972, under the continuing resolution and prior appropriation, and $56 million in residual resources. These funds, however, are now expected to be exhausted in the final quarter of this year. Action on your part, is needed if IDB concessional lending activity is to continue through this calendar year.

The first Asian Development Bank request is for $100 million for Special Funds for concessional lending. It was deleted entirely for fiscal year 1973 under the terms of the continuing resolution. Thus far, the United States has not been able to make any funds available to the Bank for this program, although proposals to do so have been before the Congress for several years. Other developed nations—the United Kingdom, Canada, Australia, New Zealand, Netherlands, Norway, Germany, Italy, Belgium, Finland, and Japan—have gone ahead to make more than $240 million available to the Bank on an ad hoc bilateral basis. As of December 31, 1972, $201.5 million had been committed on Special Funds loans, and the balance of the Bank's Special Funds resources is expected to be fully committed by September of this year.

Under the terms of authorizing legislation, passed by the Congress in February 1972, the funds in this request are to be tied to the purchase of goods and services and priority is to be given to projects and programs in Southeast Asia. Until we contribute, U.S. suppliers will remain ineligible for procurement from the contributed Special Fund resources of the Bank. This item has been long delayed. I urge its prompt passage.

The other portion of our ADB request relates to the increase in the ordinary capital resources of the Bank. The Governors of the Bank, with the U.S. Governor abstaining, passed a resolution in November 1971 authorizing a 150-percent increase in the capital stock. This was done in order to permit an orderly 10-percent per annum increase in the ordinary capital lending of the Bank over the years 1973–75. By November 1972, enough members had taken up their shares to permit the increase in resources formally to come into effect. When this hap-

pened, the voting power of the United States was automatically reduced from 16 percent to 8 percent while that of other countries rose proportionally in the absence of U.S. participation.

Authorizing legislation for U.S. participation will be submitted to the Congress shortly. We are thus testifying today on an appropriation request that will be for later transmittal. Assuming approval of the proposed legislation on change of par value, the total authorization would be for $362 million. Of this amount, 80 percent or $289 million would be callable guarantee capital and not constitute an actual budgetary outlay. The remaining 20 percent, $72.4 million, would be paid-in over a 3-year period, 40 percent in cash and 60 percent in noninterest-bearing letters of credit to be drawn down later as needed for disbursement. New budget authority being requested for fiscal 1974 would be $121 million. Fiscal year 1974 budgetary impact is limited to $9.6 million. This appropriation should go forward in order to permit the United States to regain its original equity position in the Bank.

That completes my review of the specific amounts being requested. I would like to turn now to some matters that may result in future appropriations requests. Over the past year, Treasury has sought to find better ways of consulting with the Congress in advance of formal appropriations requests so that, as specifically requested by this committee, no new international commitments are entered into without your full prior knowledge. It is in this spirit that we have kept the Congress and your committee, Mr. Chairman, informed by letter and by informal briefings. Now I want to summarize, formally and for the record, where we stand on two important issues—a fourth replenishment of IDA and the restructuring and replenishment of ADB Special Funds.

First, with regard to IDA IV, as I indicated in my letter to you of March 6, a meeting of part I countries was held on March 13, in London. Other developed nations are now clearly ready to go ahead with a new round of contributions to permit IDA lending to continue in fiscal year 1975 and beyond. Thus far, the United States has played a passive role, informing others that until consultations were held with our Congress, we would not be in a position to discuss amounts. Nonetheless, a broad consensus has developed among the other developed nations on a 3-year pay-in program at an annual rate of $1.5 billion. On the basis of our existing percentage rate, this would mean an annual U.S. contribution of $600 million for 3 years beginning in fiscal year 1976. However, we have also made it clear that a very large reduction in our percentage share is necessary for our participation in view of our serious balance-of-payments situation.

Mr. Chairman, you yourself have pointed out the necessity for consultations on these matters with the Appropriations Committees. The Treasury Department wants to have the benefit of your committee's general views on amounts before continuing further with the negotiations.

The next meeting on this matter will be held in Tokyo in May. We would welcome, Mr. Chairman, the participation of members of this subcommittee as members of the U.S. delegation to that meeting.

As we have explained in the past, because of the number of nations involved, we need quite a long leadtime. We would hope that negotiations could go forward in time for submission to legislatures by the end of the year.

A meeting was also held in March on a proposal to restructure and replenish the special funds resources of the Asian Development Bank. As I indicated in my letter, this was a follow-on to a preliminary meeting of ADB developed member countries held on this subject in September 1972, at the time of the IMF/IBRD annual meetings. The proposal would create a pool of funds, on the IDA model but smaller, to replace the present system of bilateral contributions made on an unscheduled basis. At both meetings, the U.S. position was the same. We could not now move beyond acceptance in principle of the concept of the fund; that is, that ideally funds should be made available on a multilaterally negotiated basis and be available for use under common terms and conditions. In taking this position, it was emphasized that the United States was experiencing serious trade and balance-of-payments problems which would affect our ability to provide funds on an untied basis.

In order to accommodate to the fact that we have not yet made our initial contribution of $100 million to special funds, other developed members are now considering the possibility of launching and contributing to this new fund structure in two stages, representing two-thirds and one-third of the total, respectively. Under this approach, the $100 million contribution, presently authorized but not appropriated, could serve as our share of the first stage and could be tied to procurement of U.S. goods and services. This approach would also imply, in the second stage, a further U.S. contribution of $50 million. Since the overall amount being discussed is $525 million, our share under the two-stage arrangement would be approximately 28 percent of the total. As you recall, others have already paid in more than $240 million, which would not count as part of the new proposal although our initial contribution would. I also need an expression of your views before we can proceed further along this line.

The final part of my statement, Mr. Chairman, deals with two reports released by the General Accounting Office: the first on Treasury's management of U.S. participation in the Inter-American Development Bank, dated August 22, 1972; the second on our participation in the World Bank and IDA, dated February 14, 1973.

As indicated, both in the annex of the report, itself, and in my testimony before Mr. Fascell last fall, Treasury has accepted and implemented the recommendations of the IDB report. However, we very strongly disagreed with its overall highly critical tone. We think that Treasury has a good and improving system for managing U.S. participation in the Bank. In my judgment, the GAO report did not take adequate account of progress achieved by Treasury and the Bank itself. The details of our implementation of the recommendations are contained in a separate report I am now submitting for the record.

The GAO report on our participation in the World Bank and IDA has a number of recommendations which are identical to those in the IDB report. We are now completing our formal response to the Government Operations Committees of the House and the Senate. We will also report to this committee on our progress in implementing these recommendations as well.

[The summary follows:]

SUMMARY OF TREASURY DEPARTMENT ACTIONS TO IMPLEMENT GAO RECOMMENDATIONS

U.S. SYSTEM FOR APPRAISING AND EVALUATING INTER-AMERICAN DEVELOPMENT BANK PROJECTS AND ACTIVITIES

The Treasury Department's complete response to the report is contained in an annex of the report, itself, and in Assistant Secretary Hennessy's testimony before a subcommittee of the House Foreign Affairs Committee on September 22, 1972. Although the Department has accepted all of the recommendations which were made, we very strongly disagree with the over-all highly critical tone of the report. We continue to think that we have developed a good and improving system for managing U.S. participation in the Bank. In our judgment, the GAO report has not taken adequate account of progress achieved by the Treasury Department and the Bank, itself.

The GAO's major recommendations were:

1. *Recommendation.*—The United States should sort out the recommendations of the Group of Controllers it wishes to support and vigorously pursue their acceptance and recommendation.

Action.—The U.S. Government has adopted and supported firm positions on all the recommendations in the three controller group reports acted upon by the IDB Board of Executive Directors. The Board, with the support of the United States, has taken action on all the recommendations in those reports. Implementation of the Board's decisions is being pressed. At the initiative of the United States, a deadline has been established for receipt of the Bank management's comments on reports submitted by the group, and a system of semiannual reports on progress made toward implementation of recommendations has been set up. The first of these reports is due on June 30, 1973.

Two other Controller Group Reports have been released very recently and are under study and review within the U.S. Government. These two reports are: Reporting Systems (December 1972) and Preinvestment Studies (January 1973).

2. *Recommendation.*—The United States should arrange for the development of instructions that stipulate the desired depth and parameters of the U.S. process for appraising proposed projects to guide U.S. officials and technicians in making their appraisals. These instructions should include a clear statement of policy regarding the appraisal of the economic and technical aspects of the projects.

Action.—Instructions and guidelines for appraisal of loan proposals have always existed within the U.S. Government. What has not heretofore existed is their formal codification. A preliminary edition of this formal codification has, however, been issued this month. It is available to officials and technicians in the five NAC agencies. It now contains nearly 50 pages of detailed information relating to loan proposal documentation, project criteria, special policy criteria, and country performance criteria. It can be expanded and modified to accommodate additional requirements or changes in policy.

3. *Recommendation.*—The United States should arrange for followup on the U.S. positions with respect to specific loan proposals to determine the extent to

which they have been accepted in the implementation of the project. Provision also should be made for the feedback of results to those officials and technicians participating in the appraisal process for use in subsequent appraisals.

Action.—Followup action has always been taken on U.S. positions on specific loan proposals. It is now being done on a formalized basis. The U.S. Executive Director's Office at the IDB reports regularly both verbally and in writing to members of the NAC Staff Committee on points they have raised. These reports are now incorporated into the minutes of meetings. In addition, a new reporting requirement has been added to the combined economic reporting program (CERP). It requires reports from U.S. personnel in the field on IFI-financed projects and on project proposals which may be submitted to the IFI's in the future. Revision of this requirement will be made as necessary to assure an adequate flow of information back to Washington.

4. *Recommendation.*—The United States should take the necessary steps to develop, and get agreement among member countries on firm and sustainable criteria for eligibility for IDB lending. Such criteria, although based predominantly on the economic performance of recipient countries, should also provide for such things as guidelines on access to resources of FSO by more developed countries and recognize the need for value judgments in certain individual cases.

Action.—Economic performance of recipient countries has always been considered by the Bank. This is done through annual economic reviews conducted under aegis of the CIAP. Reviews are attended by representatives from the IMF, IBRD, IDB, and USAID. In two instances, the IDB has halted lending activity for extended periods of time because of inadequate economic performance.

In July 1972, the Board of Directors of the IDB received a management plan to phase down access to FSO resources by relatively more advanced recipient countries. This phasedown will take place over a 3-year period in 1972–75 and reduce the share of the four largest countries from 40 percent to 20 percent. This was a course of action earlier urged by the U.S. Government.

General Statement of Reuben Sternfeld

Mr. Sternfeld. Mr. Chairman, I would like to present to the committee a summary of the record of the Inter-American Development Bank since my appearance last year. This summary includes the lending activities of the Bank as well as what has been done to strengthen and improve its operations. It also details action taken in response to suggestions and recommendations on increasing the effectiveness of U.S. participation in the Bank.

For calendar year 1972, the Inter-American Development Bank committed a total of US$807 million for loans in various currencies. This represented 52 loans to foster Latin America's development and is a record figure for the Bank's lending in any 1 year. It has pushed the Bank's cumulative lending level to US$5.4 billion (719 loans). I am sure, however, that you recognize the Bank's loans are only one part of the story. The projects financed with these loans have a total value of US$16 billion. As one can appreciate from these figures, the Bank's role as a catalyst for other development investment financed from both private and public sources is important in our hemisphere.

In specific terms, concrete results from lending to this point can be summarized as follows:

(1) 6.0 million acres have been brought into new or accelerated production;

(2) 20,000 miles of main highways and farmer-to-market roads have built or improved;

(3) 2.7 million kilowatts of new electric generating capacity has been installed.

(4) 628 universities and schools have been helped by IDB loans.

(5) Nearly 320,000 housing units with community facilities have been constructed.

(6) 3,945 water supply and sewerage systems have been put in operation.

(7) 5,097 small entrepreneurs have been helped through the Bank's intermediate credit program.

Of the US$807 million total 1972 lending, US$344 million was authorized from the resources of the Fund for Special Operations and US$443 million was authorized from Ordinary Capital. In addition, US$20 million was committed from special funds entrusted to the Bank by certain nonmember countries.

Several additional statistics will be of interest: during 1972, disbursements against outstanding Bank loans increased to a level of US$479 million, repayments of principal reached US$147 million—again the highest level in the Bank's history—and were all current with two exceptions of private borrowers in Brazil and Chile, who were delinquent in amortization and interest payments. The Bank continues to pursue its interest in these cases and is confident that there will be recovery.

Borrowings on the capital markets in Japan and Europe were US$141 million in new funds. Thus, for the second consecutive year the Bank was able to obtain needed funds without recourse to the U.S. capital market. In total, 58 percent of IDB borrowings have been placed in markets outside the United States. I am attaching a table which shows the distribution of the Bank loans by sector for the year 1972, and for the 11 years of the Bank's life, as well as a table on the undisbursed balances of approved loans.

It is heartening to be able to report the above progress in lending activity and mobilization of resources for development. It is also gratifying to be able to report improvements and new departures in the Bank's approach to the allocation of its resources to the development problems of Latin America in the context of the 1970's.

From time of its establishment, the Bank has exercised leadership in making loans for projects and programs designed to reach the economic and social problems of the low income people of Latin America. Progressively, the Bank has evolved new techniques and approaches to meet the circumstances as they exist. The heavy emphasis on agriculture in the Bank portfolio is one measure of this; the number of projects in potable water and education is another expression of this concern. During 1972, we continued along these lines with additional loans for small farmer credit, rural potable water and small irrigation systems. The Bank has also been able to evolve new approaches to the serious problems of urban development in the region and to promote further regional economic integration, as reflected in a 1972 loan

from Ordinary Capital for US$80 million to finance a $432 million integrated hydroelectric powerplant being built jointly by Argentina and Uruguay—the most important economic integration project ever undertaken by the Bank.

During the past year, the Bank has made significant progress in reevaluating and realining its organization policies and procedures to adjust them to the realities of current needs and circumstances. In July of 1972, the Bank put into effect a significant new policy designed to allocate a progressively increasing share of its soft resources to relatively less developed member countries. Correspondingly, the Bank is phasing down its soft loan support to the larger and relatively advanced member countries. As part of this policy, the Bank established a category of relatively less developed countries which includes nine of its 24 members. Forty-nine percent of FSO loans were allocated to these nine countries in 1972, compared with an average of 23 percent in the years 1966–67. The goal for 1973 and future years is to continue to assign higher proportions of the Bank's soft resources to these relatively less developed countries. This has the effect of using scarce soft loan resources where they are most needed, and allocating the more costly resources to those countries in relatively better economic condition.

Another major change in FSO policy will have its effect beginning this year when loans made from the new FSO resources will be required to be repaid in the currencies lent. This replaces the former policy of allowing most borrowers the option of repaying either in local currencies or in dollars.

Significant actions are underway to implement the organizational changes recommended by a major U.S. management consulting firm. Fundamental procedural changes are also being made to further improve the control and quality of Bank operations. Some of the reforms include: (1) Removing the technical project preparation and appraisal function from supervision by officers making loans. This independence enhances the importance of technical and engineering judgments in project development and execution, particularly in the analysis of the feasibility and efficiency of a project. (2) Combining in one office and on a geographic basis, the overall responsibility for loan preparation and administration until completion of a project. This change will clearly pinpoint responsibility for operations. (3) Establishing a special group of top management to function as a loan and technical assistance review and evaluation committee. The committee now regularly screens out loan requests when initial applications are submitted. It also reviews all projects before they are considered by the Board and rejects those not ready for Board action.

In the area of management control, there have been also some important changes. A controller (a Canadian citizen) has been named with broad responsibility to assure that the Bank's activities are consistent with policies, programs, procedures, and directives. As noted by the GAO, the Board of Executive Directors' Group of Controllers is now presenting greatly improved reports with specific actions recommended for the Board and management. A followup system has been established to see that recommendations accepted are carried out. In addition, the Bank is combining all procedures in an organized manual system and setting up a master plan for computer use. In this connection, I also want to note that with a major increase in level and com-

plexity of operations, the 1972 administrative expenses were only 2.9 percent above those for 1971, and no increase is authorized staff positions has been approved by the Board for 1973.

I don't mean to say that the entire job of management improvement has been accomplished. There continues to be a need for further organizational tightening, for improvement in the operations of the field offices, and for strengthening of the management and information systems. However, I am satisfied that the Bank will pursue these and additional areas of economy and efficiency in the coming year.

The GAO has issued two reports relating to the Inter-American Development Bank. The first, an evaluation of the early work of the group of controllers and the second on the effectiveness of U.S. participation in the IDB. As I just indicated, the work of the group of controllers has benefited from the views of the GAO and there have been major improvements. The GAO is currently making an assessment of their most recent reports.

With regard to GAO views on U.S. participation in the Bank in general, we have accepted their recommendations. The GAO recommended that the United States should support the work of the group of controllers. This is being done. To date, five reports have been prepared by the group. Of these, three have been studied by the United States and action has been taken by the Board of Directors. The remaining two reports were only recently completed, and they are presently undergoing detailed study by U.S. agencies, and will shortly go to the Board for formal action. In addition, at U.S. initiative, the Board has requested Bank management to report twice a year on the steps taken to implement the Board decisions on controller group recommendations on all reports. The first implementation report is due June 30, 1973.

In closing, I would like to refer to the list of project proposals as of December 31, 1972 totaling $1.4 billion, which has been made available to the subcommittee and which the Bank staff is reviewing. It is from this list and additional applications which may come in during the year that loans will be approved by the Board of Executive Directors. Some will be rejected. A good number will be altered in the process of review and evaluation, but this list provides the bulk of the work of the Bank in this year, depending on the availability of funds including the sums we are requesting today.

[The tables follow:]

INTER-AMERICAN DEVELOPMENT BANK, DISTRIBUTION OF LOANS BY SECTOR

[In millions of dollars]

Sector	1972	1961–72
Agriculture	$130	$1,283
Electric power	233	973

Fund for special operations	500, 000

INTER-AMERICAN DEVELOPMENT BANK

ORDINARY CAPITAL JUSTIFICATION FOR FISCAL YEAR 1974 APPROPRIATIONS

The Inter-American Development Bank (IDB) is an intergovernmental organization, which is corporate in form and whose capital stock is owned by its member governments. It was established in 1959 to promote economic development in its member countries through loans, technical assistance, and guarantees of private investment in specific projects. It makes conventional loans with paid-in capital subscriptions of members and with proceeds from borrow-

ings in private capital markets which are based on members' callable guarantee capital subscriptions.

As of December 31, 1972, it had 24 Western Hemisphere member countries including the United States and Canada. Cuba is not a member. As of the same date, the Bank had authorized capital stock of $5,150 million. Of this amount $4,373 million had been subscribed, $3,641 million in callable guarantee capital form. As of the same date, cumulative ordinary capital loans were $2.169.8 million and net funded debt was $1,130.8 million.

The United States became a member of the Bank in 1959, following approval of authorizing legislation (Public Law 86–147) on August 7, 1959, and of appropriation legislation (Public Law 86–213) on September 1, 1959 for paid-in capital of $30 million and callable guarantee capital of $200 million. The remaining paid-in portion of the original U.S. subscription amounted to $120 million and was appropriated in two equal annual installments in 1961 (Public Law 87–329) and 1962 (Public Law 87–872).

In the 1960's, two increases in authorized callable guarantee capital totaling $2,300 million were approved. The United States participated in both the increases by subscribing to an additional $823.6 million in callable guarantee capital. This permitted an expansion of conventional lending activity based entirely on private capital market borrowings.

In 1971, the members of the Bank further expanded the authorized capital stock by $2,000 million. This increase also included a paid-in portion of 20 percent. The U.S. equity share of the increase amounted to $823.5 million, of which $150 million was to be paid-in and $673.5 million was to be in the form of callable guarantee capital. Both paid-in and callable capital were to be made available over a 3-year period. Congress authorized full U.S. participation on December 30, 1970 (Public Law 91–599) and appropriated $225 million in the Second Supplemental Appropriations Act of 1971 (Public Law 92–18) and $211.8 million in the Foreign Assistance Act of 1972 (Public Law 92–242). In fiscal year 1973, an additional partial appropriation of $193 million was approved under terms of the continuing resolution on foreign assistance of October 15, 1972.

The request now being made is for that portion of the last appropriation request which was not included in the continuing resolution of October 15, 1972. It amounts to $193 million of which is callable guarantee capital. It is needed to complete U.S. participation in the ordinary capital increase of the Inter-American Development Bank. Both paid-in and callable capital are due in terms of the original understanding, on June 30, 1972. Funding action by the Congress is needed to permit an orderly expansion of IDB conventional lending activity. The $25 million will be made available to the Bank in the form of non-interest-bearing letters of credit to be drawn down later for disbursement needs. No budgetary outlay will result in fiscal year 1974 from this appropriation request. The callable guarantee capital portion of the request would constitute a budgetary outlay only in the unlikely event it had to be drawn down to help service the Bank's obligations to bondholders.

FUND FOR SPECIAL OPERATIONS FISCAL YEAR 1974 APPROPRIATIONS

In addition to its ordinary capital operations, the Bank lends from the Fund for Special Operations (FSO) in circumstances where ordinary capital financing is not appropriate. Loans are made on concessional terms and extended entirely from resources provided by the United States and other members of the Bank. Initial FSO resources totaled $146.3 million; after successive increases, they stood at $2,328 million prior to the current replenishment exercise.

Public Law 86–147, approved August 7, 1959, authorized payment of the initial U.S. quota of $100 million; Public Law 88–259, approved January 22, 1964, authorized the payment of $50 million for the first increase in the U.S. quota. U.S. payments totaling $750 million for the second increase in the U.S. quota were authorized in Public Law 86–6, March 24, 1965. A third increase in the U.S. quota, by $900 million, was authorized by Public Law 90–88, September 22, 1967. Payments under that increase were completed in 1970. The U.S. share of these successive increases vis-a-vis the Latin American share has gradually been declining.

In 1970, the United States undertook to seek congressional approval for a further $1,000 million, 3-year contribution. On December 30, of that year, Congress authorized (Public Law 91–599) the first $100 million toward this contribution and the remaining balance of $900 million was authorized on March 10,

1972 (Public Law 92-246). To date, $275 million of the authorization has been appropriated, $50 million in the Second Supplemental Appropriations Act of 1971 (Public Law 92-18) and $225 million under the continuing resolution on October 15, 1972, on foreign assistance and related items.

On December 21, 1972, the United States agreed to the replenishment and deposited $275 million by amending its letter of credit to the Inter-American Development Bank. It was indicated at the time that the remaining portion would be provided subject to appropriation by the Congress. This action formally brought the replenishment agreement into effect.

The present request is for $500 million. It is needed to permit the continuation of concessional lending by the Bank. As of December 31, 1972, the Fund for Special Operations had $352 million in uncommitted funds. This amount included $21 million from the Canadian contribution, the $275 million provided by the United States on December 21, 1972, and $56 million in residual uncommitted resources. If presently planned loans are made, these funds will be exhausted during the final quarter of this calendar year. Funds being requested will be provided in non-interest-bearing letter of credit form. This procedure will insure the deferral of budgetary impact and the spread over several years of disbursements against this letter of credit. No expenditures will result from this request in fiscal year 1974.

INTER-AMERICAN DEVELOPMENT BANK—ORDINARY CAPITAL, DEC. 31, 1972 AND 1971

BALANCE SHEETS

[Expressed in thousands of U.S. dollars—see notes to financial statements—appendix I-7]

	1972	1971
ASSETS		
Due from banks:		
Unrestricted:		
Member currencies	$60,391	$53,075
Nonmember currencies	956	17,167
Restricted: Member currencies (note C)	16,306	11,755
Subtotal	77,653	81,997
Investments:		
Obligations of governments at cost or amortized cost (face amount 1972—$18,106; 1971—$28,441)	18,009	28,102
Time deposits:		
United States and Canadian dollars	461,226	404,470
Nonmember currencies	271,046	224,475
Subtotal	750,281	657,047
Loans outstanding held by Bank (appendix I-5) (notes D and E):		
Total loans approved by Bank since inception, less cancellations	2,161,829	1,763,452
Less principal repayments to Bank and loans sold or agreed to be sold	407,781	321,183
Less undisbursed balance of approved loans held by Bank	872,019	661,545
Subtotal	882,029	780,724
Accrued investest and other charges:		
Investments	17,741	19,161
Loans (notes D and E)	17,897	15,266
Subtotal	35,638	34,427
Due from members in member currencies:		
Capital subscriptions receivable (appendix I-6)	29,402	7,618
Nonnegotiable, noninterest-bearing demand obligations (appendix I-6)	214,840	47,973
Amounts required to maintain value of currency holdings (note B)	12,465	-------
Subtotal	256,707	55,591
Other assets:		
Land and building at cost—less accumulated depreciation, 1972—$1,261; 1971—$1,113	8,866	8,960
Unamortized funded debt issue costs (amortized over the life of the issues)	11,514	9,727

Mr. PASSMAN. At this time I would like to yield 5 minutes to Mr. Long under the rules of the committee so that he may interrogate before we start the more detailed questioning on some of the specifics of the bill. Dr. Long.

Mr. LONG. I yield to the chairman at the present time.

Mr. PASSMAN. I would prefer that you use your 5 minutes at this time.

Mr. LONG. I yield to the chairman. I always find his questions penetrating and analytical.

Mr. PASSMAN. Beneficial?

Mr. LONG. I learn much more from listening to my chairman than I do from questioning the witnesses.

Mr. PASSMAN. I now yield to Mr. Shriver, the required 5 minutes.

Mr. SHRIVER. Will you expand on your observation that our participation in these institutions is important because of current international trade and finance negotiations.

Mr. HENNESSEY. Yes, I will be glad to, Mr. Shriver.

We look at it this way. Starting on August 15, 1971, the President embarked on what we call a new economic program internationally, in which he started a determined effort to improve the balance-of-payments and balance-of-trade situation of the United States. He recognized and said very explicitly, I think maybe for the first time in 25 years, that the system as it was set up was unfavorable, unbalanced against the U.S. interests, and that he wanted to do two things in particular. To reform the international monetary system, that is to say, the rules of that system, the way it worked, so that the United States would have the same rights and privileges that other nations had.

In the trading area there were barriers that had been erected after the war, which were still up and which were keeping our goods out of foreign countries. On the other side of the coin their goods are coming freely into our country. This situation had to change. We have embarked on and are now in the middle of the monetary negotiations. The trade negotiations will formally begin this September.

The United States, and the President in particular, who is in charge of the overall question of reforming the international economic situation, is going to fight very hard to get a fair shake for the United States in both money and trade. In my judgment, trade, monetary affairs, and development are three legs of the same stool. There are developing countries who are involved in this and there are other developed countries. If we have a fair share, if we are asking other nations to engage in a fair share in monetary trade we have to pick up our fair share of the world's aid effort. We think it is an important benefit.

It benefits also our economy. As I mentioned in my prepared statement submitted for the record there is a lot of economic self-interest in the aid. Our best customers are the developing nations. We don't think we can have it both ways. We can't back away from our obligations in the aid field to provide long-term capital to these countries so they can buy from us if we are also asking other countries to join with us to correct the system and protect the United States' interests. We see three legs of the stool and they all hang together. The question is fixing the correct and fair share for the United States. The budget was scrutinized, each item, quite closely, by both our Secretary and the President. Certain amounts which had previously been requested in the aid field, particularly the international institutions, were not included in the 1974 budget, because of the need for stringency, et cetera, and we feel this is our fair share. We think it is the right amount, sir.

Mr. SHRIVER. I think my time is up.

Mr. PASSMAN. One of the finest 10-second questions and 6-minute answers I have ever listened to since I have been chairman of this committee. We were discussing that at lunch, that these witnesses are scientifically trained. They are familiar with the system by which the

committees operate. Members are given 5 minutes so they very carefully prepare themselves so they can use all the member's time and let him ask one question. But it was really a beautiful answer. Now we will recess and go answer the rollcall and come back.

[Brief recess.]

INTERNATIONAL FINANCIAL SITUATION

Mr. PASSMAN. The committee will come to order.

Mr. Secretary, this isn't the first time in my 27 years in the Congress that I find myself simply frustrated. It is almost unbelievable that the people in the Treasury Department or in the executive branch would actually have the audacity to come before this committee or any other committee of Congress and ask for the amount that you are asking for these international organizations.

Your response to Mr. Shriver's question sounded very good on the face of it. All the budget requests are submitted in the name of the President, but according to actual statistics, if you take all the statements and documents issued by the President, and when they are properly analyzed, they are created by some third, fourth, or fifth level bureaucrat downtown.

According to the computer it would take 1,293 individuals to do all the things and say all the things that are issued in the name of the President. The President can only look at these things on the surface. Time would not permit him to go into the details on all subjects.

Mr. Secretary, we are elected to represent the people. It is our responsibility to determine the amount of money that should be available for the executive branch to spend. The Constitution provides that.

As we analyze the budget request submitted by the Executive this year, the total request for foreign aid and assistance, all facets, exceeds $18 billion, at a time when we are faced with a budget deficit in fiscal year 1973 of $27.9 billion. Just since I have been a Member of Congress we have pushed the public debt from $159 billion up to $455 billion. The difference between the two has been what we have spent for foreign aid. We have dissipated about $250 billion of the American taxpayers' wealth on the foreign aid program, and it was stated before this committee yesterday that there are more poor people, more underprivileged people, more illiterate people by, I believe, 1 billion now than you had 20 years ago. Therefore, it is rather difficult to put your finger on what has actually been accomplished.

I think that you people are attempting to make fools out of this committee and the Congress by coming up and asking for an unbelievably high figure for fiscal 1974 for the international banks, plus asking us to reinstate for the Inter-American Development Bank one item alone, the $418 million that we cut out last year.

This is not the way to run the show.

As I understand the situation as it would apply to international financial institutions, you are requesting for fiscal 1974 $1,113,380,000; is that correct, sir?

Mr. HENNESSY. Yes, sir.

Mr. PASSMAN. In addition sometime during the fiscal year you are going to be requesting $2,250,000,000 just to maintain the value of our past contributions to these institutions due to the recent dollar devaluation; isn't that correct?

Mr. HENNESSY. For these particular institutions the figure is $477 million of new paid-in amounts requested.

Mr. PASSMAN. I am talking about the total amount that you are going to be requesting, which includes all the international financial institutions.

Mr. HENNESSY. $2.2 billion, I think, is the exact figure, sir.

Mr. PASSMAN. Well, what is $50 million to people who don't have anything to do but give the money away? If you read the record correctly, and you should have more knowledge of it than the average individual, Mr. Secretary, as we sit here and discuss your request this afternoon we have to recognize that there are 80 billion United States dollars floating around all over the world which people want to get rid of; isn't that a statement of fact?

Mr. HENNESSY. I think at this time, sir, after the latest exchange rate realinement, there has been a dollar reflow. Fortunately the dollar is firmer and people are getting back into dollars.

Mr. PASSMAN. Let's talk then about the last few days. Am I correct that there is $80 billion?

Mr. HENNESSY. Yes, sir, you are correct.

Mr. PASSMAN. That people have?

Mr. HENNESSY. Yes.

Mr. PASSMAN. Thank you very much. These dollars were accumulated through our extravagance. People met their commitments to commerce, and we owe $80 billion that is due now. We don't have anything to pay for these dollars. We all know that some of our own American tourists abroad have to discount their dollars 10 to 15 percent to get hotels to accept them, and in other instances hotels don't want the dollars and in many other instances they are exchanging dollars for some other currency, such as the German mark.

The point is that if we don't come down out of these dream clouds about what these programs cost, we are actually going to destroy the economy of America. We have priced ourselves out of the world market through our extravagance. I think in 1971 we had our first trade deficit of $2 billion, the first since 1888; isn't that correct?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. Then while everybody was talking about the great improvement we anticipated we had the largest trade deficit in the history of our country, $6.4 billion for, I believe, calendar year 1972; is that true?

Mr. HENNESSY. That is correct, sir.

AMOUNTS REQUESTED

Mr. PASSMAN. This committee wants to be responsible, but we don't want the executive to figure that the wisdom, not of the committee, but the Congress in making adjustments last year is going to be completely ignored. If that be true then the committee should be abolished, and we should take some other assignments.

It is my understanding that the way we operate in the Congress we first get an authorization bill, and subsequently there is an appropriation bill to carry out the authorization or some part of it; isn't that correct?

Mr. HENNESSY. Yes, sir.

Mr. PASSMAN. And hasn't it always been the policy of the Congress to have the right of examination, and to make the determination as to what we could afford to appropriate? Isn't that one of the prerogatives of the Congress?

Mr. HENNESSY. We have never questioned that, sir.

Mr. PASSMAN. Thank you very much, sir. But you are attempting to repudiate the action of last year by asking us to reinstate every dime that we removed from these bills in this institution; are you not?

Mr. HENNESSY. No, sir, we are not.

Mr. PASSMAN. Let me point directly to the Inter-American Development Bank where you asked last year in round figures for $836 million. I believe we cut that in half; did we not?

Mr. HENNESSY. The continuing resolution cut that in half, that is right. The Senate voted, I think, the full amount, and the House voted for half.

Mr. PASSMAN. I am talking about what is on the statute books in the continuing resolution.

Mr. HENNESSY. That is correct, sir.

Mr. PASSMAN. Which is the only thing you have to go by. We gave you $418 million. The Congress, the House, this committee, the full committee and the House of Representatives in a continuing resolution provided $418 million.

Mr. HENNESSY. That is correct.

Mr. PASSMAN. You are asking for $693 million for the Inter-American Development Bank, are you not, which includes an additional $418 million to offset the cut we made last year?

Mr. HENNESSY. No, sir; we are not. If I could explain the figures.

Mr. PASSMAN. I think I understand the figures just as well as you do. You have got them lumped together here. Let's deal specifically with the Inter-American Development Bank. You are asking the Congress to reinstate the reductions of $418 million. You are asking for reinstatement of the paid in and the callable capital.

Mr. HENNESSY. Just the capital portion, that is correct, nothing in the fund for special operations. That is our capital contribution which keeps our share in the Bank. If we lose that, we lose our control over the Bank, sir.

Mr. PASSMAN. We don't have any control over the Bank anyway. Let me tell you something about that, Mr. Hennessy. You have a lot to learn. You are a young man, a smart man with a lot of diplomacy, but you have a lot of record reading to do. Look at the Asian Development Bank. That is one of the international institutions, isn't it?

Mr. HENNESSY. It is, sir.

Mr. PASSMAN. We have a member on that bank.

Mr. HENNESSY. About 9 percent.

Mr. PASSMAN. I am talking about an individual, one man on the bank.

Mr. HENNESSY. A director and an alternate director.

Mr. PASSMAN. The alternate doesn't function?

Mr. HENNESSY. That is correct—except when the director is absent.

Mr. PASSMAN. We will always pin it down if you want to. We have a functioning member of that Bank.

Mr. HENNESSY. Yes, sir.

ADB STAFF LOAN PROGRAM

Mr. PASSMAN. Either 2 or 3 years ago you know that the President of that Bank was so arrogant he started making loans to the personnel of the Bank, and when the U.S. member on that Bank wanted to know, "Who are you making loans to, how much and at what rate of interest?" He said, that information happens to be confidential." Are you familiar with that?

Mr. HENNESSY. I believe that information was provided us and for the record subsequently. I think there was some communication there.

Mr. PASSMAN. Why not? Simply because this committee is straightening these things out but you would call that arrogance, would you not?

Mr. HENNESSY. I don't believe there was any arrogance involved.

Mr. PASSMAN. He just said you were not entitled to know. Let me read the testimony which appeared on page 209 of the fiscal year 1971 hearings.

Mr. PASSMAN. You do not know how many loans were made, to how many employees, and in what amount? That is secret information of the President only, is that correct?

Mr. ZAGORIN. The specifics.

Mr. PASSMAN. It is secret information specifically for the President of the Bank, is that right?

Mr. ZAGORIN. Yes, sir.

Mr. PASSMAN. That gives you an idea how arrogant these people can get when you don't have other individuals checking on them. Sure they made some correction because it is the responsibility of the committee to point this out. I believe that any paid in capital to this Bank would have to be borrowed, would it not?

Mr. HENNESSY. By the U.S. Government?

Mr. PASSMAN. Yes.

Mr. HENNESSY. I can recall this debate from last year. The U.S. Goverment has a budgetary deficit and whether we are borrowing for this or some other expenditure it is quite clear we do have to go to the market to borrow.

U.S. ECONOMIC SITUATION

Mr. PASSMAN. Let's bring it down to an individual family. I assume you are a married man with a wife and children.

Mr. HENNESSY. Yes, sir.

Mr. PASSMAN. Your responsibility is first to your own family, isn't it?

Mr. HENNESSY. Yes, sir.

Mr. PASSMAN. If you want to get a little extravagant and give a few parties that would be what you would call a plus item, something which you could do without. It has nothing to do with running your own family. If you have to borrow money to give these parties, you wouldn't call that a necessary expense for running your own family affairs, would you?

Mr. HENNESSY. I wouldn't think so; no, sir.

Mr. PASSMAN. Of course the same thing is true here. Our first responsibility is to our own country.

Mr. HENNESSY. Absolutely.

Mr. PASSMAN. And its institutions. You realize the difference between the public debt in the 1940's and the public debt in 1973 is within just a few billion dollars of the amount that we have given away in foreign aid. We have gotten ourselves into a deplorable condition and I don't know whether we can bring it under control or not.

In the light of the current dollar crisis, our low gold reserves, the $80 billion held overseas, the worst trade deficit in history in 1972 of $6.4 billion, the balance-of-payments deficit of $13.8 billion, the U.S. budget deficit estimated for fiscal 1974 of $18.8 billion and with our growing public debt, do you think we should be appropriating increased funds for these international institutions, Mr. Hennessy?

Mr. HENNESSY. Yes; I do, sir.

Mr. PASSMAN. Thank you very much. Why don't they operate on a regular business basis where they would use loan repayments, interest fees, and their borrowing authorities to provide increased funds for loans instead of asking for an appropriation each year?

Mr. HENNESSY. Quite a large percentage of the money that they do lend comes from borrowings in the private banking market and they relend them at market rates.

Mr. PASSMAN. Not the part that we are examining on today though.

Mr. HENNESSY. That is correct, sir.

Mr. PASSMAN. That is exactly what we are examining on. All these abstract things make good reading but it doesn't say anything. We want to deal with the specifics. You know that we are in serious trouble in this country. Mr. Hennessy, very serious trouble, when we have to suspend worthy projects here in America, and at the same time funding full steam ahead on all foreign aid projects. We haven't found yet where there has been one dime of the funds impounded on any foreign aid program regardless of how weak the justifications are or how weak the programs.

This isn't pleasant, Mr. Hennessy. I came out of the free enterprise sector. When we go through these sessions, I don't sleep at night, because I don't know whether I have the capacity to ever penetrate the minds of some of the people downtown who have gotten us into this mess. I just don't know how we are ever going to bring it under control, unless we just defeat the entire foreign aid package, and maybe that would be a lesson to those downtown who feel that they can come back before the Congress and say:

Not only do we want a lot of new money, we want you to give us back every dime you cut out a year ago.

I don't know how other members of the committee feel. It is quite an affront. You people have a lot of nerve to do that.

INTER-AMERICAN DEVELOPMENT BANK

Let's look at the Inter-American Development Bank if we may, Mr. Hennessy. I believe it is domiciled here in Washington, D.C., is it not?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. How many board members do you have?

Mr. HENNESSY. We have one U.S. board member.

Mr. PASSMAN. Total board members?

Mr. HENNESSY. Board members, right, but of course we have a large percentage of the staff. We have an alternate also.

Mr. PASSMAN. The alternates only function in the absence of the regular board member.

Mr. HENNESSY. That is correct.

Mr. PASSMAN. Forget about the alternates. How many countries are represented?

Mr. STERNFELD. Nine board members.

Mr. HENNESSY. Representing the 24 countries.

Mr. PASSMAN. Aren't they all domiciled here in Washington?

Mr. HENNESSY. All the nine board members? Yes; they are all domiciled here in Washington.

Mr. PASSMAN. If you come up before this committee at 10 o'clock in the morning and you want, let's say, $1 billion and the committee decides we are only going to give you $500 million, I would assume that the board members then would take that matter up with the other countries, and say we are going to have to adjust our contribution to fit the U.S. appropriation, would they not?

Mr. HENNESSY. We would have to go back to the host governments.

Mr. PASSMAN. But you would go back through these people domiciled right downtown, wouldn't you?

Mr. HENNESSY. They are not empowered to do that. Under the charter, Mr. Chairman, they are not empowered to negotiate amounts.

Mr. PASSMAN. They are empowered to notify the other nations as to the action, are they not?

Mr. HENNESSY. They are certainly empowered to do that.

Mr. PASSMAN. If the United States would say, "All right, gentlemen, it is not as big a melon this year as we have had in the past so we are going to have to go back to these other nations and tell them we are not going to have $1 billion this year. It is only going to be a half billion." That would be the normal procedure, would it not, to go back out to the countries?

REINSTATEMENT OF REDUCTIONS

Mr. HENNESSY. They would go back out to the countries, but let me point out for the record, Mr. Chairman, that we have not come back. We have not affronted the committee because of the final amount which was appropriated last year. We asked for $450 million of soft funds. We got exactly one-half of that. There was another $500 million for this year. We did not, however, add on top of that the $225 that was cut last year. As you recall, in April of 1970 the United States agreed to put in $1 billion over the next 3 years when the Latins were going to put in $500 million.

Mr. PASSMAN. Mr. Hennessy, if you will pardon me, they are the donors and also the recipients, are they not?

Mr. HENNESSY. You are correct.

Mr. PASSMAN. Let's keep the record straight on that. Any time you start some kind of a skin game where I can put in $1 and draw out $3 please let me in on it.

Mr. HENNESSY. The $1 billion that we were putting in and the $500 million they were putting in were to be paid over 3 years, $100 million, $450 million, and $450 million. As it is now, this would be done, instead of over a 3-year period, because of the action of your committee, this would be done over a 5-year period which would reduce the total

from a $333 million average per year to $200 million. So you have cut. You have cut quite deeply I would say, and it has gone to a $133 million average saving. I see this, we think, as a large cut. We recognize what the Congress in its wisdom has done, and we have discussed this with our Latin fellow members. We feel the amounts for which are here today which we are justified and not being pyramided as you seem to imply.

Mr. PASSMAN. You are asking for the full $418 million to be reinstated, are you not? Just subtract $418 million from $693 million, and you get the difference. You are asking for the reinstatement of every dime we cut out plus almost $275 million more, at least the aggregate is $693 million for this one item, is it not?

Mr. HENNESSY. For this one item.

Mr. PASSMAN. What did we give you the year before, $211.7 million, didn't we?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. Wait now. We gave you $211.7 million in fiscal year 1972. Two years ago you had $211.7 million. You recognized then that we were going to bring these international giveaway programs under control, so what did you do? You came out here and you asked for $836 million for the Inter-American Development Bank in fiscal year 1973, and even after this committee cut it in half, you still have in the continuing resolution almost twice what you had the previous year, didn't you?

Mr. HENNESSY. You are comparing it to 1972.

Mr. PASSMAN. That is right.

Mr. HENNESSY. That is correct.

OTHER LATIN AMERICAN AID PROGRAMS

Mr. PASSMAN. Thank you very much. Let me ask you this question. This is just one of the many programs for Latin America, is it not?

Mr. HENNESSY. It is the single greatest channel of assistance to Latin America.

Mr. PASSMAN. I say this is just one of the many programs.

Mr. HENNESSY. That is correct.

Mr. PASSMAN. Latin America, I believe, receives aid under all of the other programs that we have under the bilateral sector, do they not?

Mr. HENNESSY. Under bilateral?

Mr. PASSMAN. Yes.

Mr. HENNESSY. Many of the countries no longer qualify.

Mr. PASSMAN. I am talking about Latin America generally.

Mr. HENNESSY. Yes.

Mr. PASSMAN. What countries have been disqualified, other than Cuba?

Mr. HENNESSY. For bilateral loans?

Mr. PASSMAN. Yes.

Mr. HENNESSY. Argentina, Chile, Mexico, Venezuela——

Mr. PASSMAN. They switch over to the Export-Import Bank, do they not? You know Chile is a Communist country and so is Cuba.

Mr. HENNESSY. Fine.

Mr. PASSMAN. Let's not mix it up.

Mr. HENNESSY. I don't think the Export-Import Bank is charity. That is promoting our exports.

Mr. PASSMAN. I believe as we sit here and talk this afternoon if the Congress in its wisdom should decide there would be no foreign aid appropriated this year, I believe just for Latin America there is over $5 billion in the pipeline to be disbursed, isn't there?

Mr. HENNESSY. I don't have that figure, sir. I don't know how much is in the pipeline.

Mr. PASSMAN. Let's give it to you. It is a good figure to have in mind, because we just pyramid these accounts.

Mr. LONG. I would think you would know that, because I would think that you couldn't run your operation without knowing what the general picture is.

Mr. HENNESSY. On undisbursed loans, I have it for the institutions but not for the Export-Import Bank or the bilateral aid program.

Mr. PASSMAN. The total amount in the pipeline according to the last record, December 31, 1971, was $5,339,212,180. That is the total amount. What is causing us concern is that most of the countries in Latin America are eligible to draw out of all these different accounts. What we want to do, Mr. Hennessy, is to bring it under control.

We have a lot of respect for you people, but I think you ought to have the same respect for the Congress, in the sense that we have the right to decide how much money the American taxpayer can afford to borrow for you people to give away.

Mr. HENNESSY. No quarrel with that whatsoever.

Mr. PASSMAN. That is good as long as you leave that decision with this committee, which you have not done in the past. That makes us very happy. You said you are going to get more money but you indicated you are going to allocate it over a longer period of time, therefore the average funds provided each year have been cut down.

Mr. HENNESSY. That has been the effect of what has actually happened, sir. That is history and that is fact.

HISTORY OF IDA APPROPRIATION

Mr. PASSMAN. Is this the history of IDA? Let's take the International Development Association. Just a few years ago they came in, possibly with hat in hand, and said, "We would like to have $61 million per year for 3 years for IDA." We looked at it with a suspicious eye, but being an international organization we said OK, we would go along with it, because you have previously made certain commitments. You remember it started at $61 million.

They became a little bit more brazen. They followed up then and came in saying, "Now we want $104 million per year for 3 years."

I believe that is the history of it, so the committee reluctantly went along with the IDA request of 104 million for 3 years. Then you got more brazen and came in saying we want $160 million for 3 years and we went along with that. I believe a year ago you doubled that and came in and asked for $320 million a year, did you not, for 3 years?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. Wouldn't you think that is why we are in such a terrible mess with our trade deficit and our balance-of-payments deficit?

Mr. HENNESSY. I think most of the aid, particularly in the IDB, is tied so when we give them a dollar on a loan they buy U.S. goods with it so that doesn't affect our balance of payments.

Mr. PASSMAN. Aren't you asking for the $225 million again for the fund for special operations that applies to the Inter-American Development Bank?

Mr. HENNESSY. No; we are not asking. The only thing that is back there as I explained at the beginning is the capital. In other words, our share in the Bank, how much we own—like you own shares in General Motors. The U.S. share is a function of how much of the capital we own. Last year, we asked for $336 million, which would keep our share at 39 percent, which gives us a veto over the soft loans. The Congress cut that in half through the continuing resolution, and we are coming in this year's request for the 1974 budget, there is the other $118 million which would allow us to maintain our share. If we don't put up our share, the Latins and Canadian portion goes up, and consequently, we may lose the veto. I think we can't have it both ways. I don't think we can be reducing our share of the capital at least and losing our control and our veto.

Mr. PASSMAN. Mr. Hennessy, it follows nevertheless that the other donors are the full recipients of these funds, what they put up plus what we put up, isn't that true?

Mr. HENNESSY. The Canadians are now members and the other 12 or 14 Europeans are now——

Mr. PASSMAN. That is not the question. I say, aren't the donors in the Latin American countries also the recipients?

Mr. HENNESSY In the Latin American countries, that is true; yes.

Mr. PASSMAN. Canada comes in for a little tidbit. That is something brand new, isn't it?

Mr. HENNESSY. A year ago; that is correct.

Mr. PASSMAN. I don't like to mix these up because you will be testifying for IDA also, will you not?

Mr. HENNESSY. Yes; I will, sir. At some point, Mr. Chairman, I would like to read into the record or submit for the record on the question of the bilateral and multilateral which is something that has been of concern to you and how we balance those—a letter to you which Dr. Hannah has given us.

[Discussion off the record.]

Mr. HENNESSY. I think he makes quite a strong case for the complementarity of the two programs.

Mr. PASSMAN. Would he have any alternative?

Mr. HENNESSY. I believe philosophically. There is no gun at John Hannah's head. Believe me, he is an individual who stands up for what he thinks is right. I don't think he would put his John-Henry on it if he didn't believe it.

Mr. PASSMAN. I wouldn't say a thing to offend this great man. He is my personal friend but he has one vote on the board. He is one of the finest men I ever knew and I have never questioned his integrity, I will mark certain pages in the hearings which show how little attention they pay to Dr. Hannah if he says categorically it will be this way, and he happens to take a trip, goes over Rome on some business and while he is gone then they go in and make substantial obligations on the very account that he said wouldn't be made. You people work together very

nicely down there. I give you credit for that. This is a full time job for you, isn't it?

Mr. HENNESSY. It is not a full time job for me.

Mr. PASSMAN. Your job with the Treasury Department is full time, isn't it?

Mr. HENNESSY. Yes, 12 hours a day.

Mr. PASSMAN. I put in just about that 7 days a week. I have to do a lot of things other than foreign aid. Possibly I have 5 percent of my time and you have 100 percent of your time to spend on foreign aid so you are ahead of us to start with.

I think possibly we had better just go around the table to allow other members to question it this time. Then we will return to the regular questioning. I yield to Mr. Shriver.

Mr. SHRIVER. You mention that the United States has a positive trade balance with the less developed countries. I agree this is a little known fact, and perhaps it might help if you would provide details on that for the record.

Does this include all elements of resource exchange between the United States and the less developed countries?

Mr. HENNESSY. The positive trade balance of the United States with the less developed countries includes all elements of resource exchange. U.S. exports to these countries have grown from $6.5 billion in 1961, to more than $15 billion in 1972 and the trade surplus has averaged more than $1.0 billion each year and has been as high as $2.4 billion. In 1972, at a time when the United States was running an overall trade deficit with the rest of the world taken as a whole, we still achieved a trade surplus with the developing countries of $500 million.

BUDGET IMPACT

Mr. SHRIVER. Your total request for fiscal 1974 is $1,243 million. Is that correct? Your discussion of the real budgetary impact of such an appropriation is confusing, and I am sure it will be to the general public when these hearings are printed. Perhaps you could provide something for the record in layman's language which takes each of these items apart and tells what its effect would be. Do a good job on this—define the terms.

Mr. HENNESSY. Our total request for international financial institution appropriations in fiscal year 1974 is $1,234,380,000. Although the money would be appropriated in this fiscal year and—in fact, committed to the institutions—it would not all be spent immediately in the sense of being disbursed in cash right away from the U.S. Treasury, and a substantial portion of it is not expected to be spent at all.

Our request is for two types of resources: Paid-in and callable. Paid-in capital is intended to provide on a definite schedule cash resources for operations. It is for the most part provided to the institutions in the form of non-interest-bearing letters of credit to be drawn only as needed by them to meet their loan disbursements. In this way, the real budgetary or cash outlay impact for the United States for this part of the appropriation is delayed for several years. A small part, $14.6 million in fiscal year 1974, is to be made available in the form of cash.

In addition, another important part of the appropriations request is for callable capital contributions instead of paid-in capital contri-

butions. Callable capital may be regarded as a guarantee provided by the subscribing country which permits the institution to borrow in private markets. Callable capital subscriptions are likely never to be drawn down and would have no real budgetary or cash outlay impact because they would only be needed if the institutions could not cover the interest or principal payments on their funded debt.

For the entire appropriation request, $14.6 million would be disbursed in fiscal year 1974, $954.6 million would be disbursed in subsequent years, and $264.8 million would not be disbursed at all unless called to cover funded debt obligations of the institutions.

These amounts are broken down by institution as follows:

[In millions of dollars]

	Fiscal year 1974 budgetary impact	Subsequent year budgetary impact	No budgetary impact unless called
ADB	14.6	109.6	96.8
IDB	(1)	525.0	168.0
IDA	(1)	320.0	(1)
Total	14.6	954.6	264.8

[1] None.

ASIAN DEVELOPMENT BANK

Mr. SHRIVER. You mention that because the United States has not contributed $100 million to the special funds of the Asian Development Bank, U.S. firms cannot bid on projects financed by that Bank. The chairman and I received hand-delivered letters yesterday from a large American firm about this problem. Would you comment on that further, especially on the balance-of-payments effect?

Mr. HENNESSY. It should be noted that the special fund request currently before the House Appropriations Subcommittee on Foreign Operations is a tied request, that is, the appropriate special funds shall be used only for purchases of goods and services from the United States. Thus there will be no adverse balance-of-payments impact from appropriation of the funds in question. The problem raised in the letter you received—that is, the ineligibility of U.S. firms to bid on certain projects—will be solved if the pending special fund appropriation request is approved and we contribute to the special fund. Thus, the appropriation of these funds should have a longer run positive impact on our balance of payments, since U.S. firms would then be able to compete on ADB projects and establish themselves and their products in several Southeast Asian countries. If the United States is successful in bidding on phase 1 of a multiphase power project in Indonesia, for example, it has a far better chance of having U.S. equipment selected for the other phases of the project. Replacement parts alone would enhance the U.S. trade balance over time.

Mr. SHRIVER. You say the voting power of the United States was automatically reduced from 16 to 8 percent in the Asian Bank due to our lack of participation. What are the practical effects of this reduction? How does this really affect our national interests in that area?

Mr. HENNESSY. The practical effect of this reduction is reduced U.S. voting power on issues brought before the Board, a matter of no small

consequence since ADB loans have been going predominantly to major U.S. friends and allies in Asia. For example, from total ordinary capital loans of $723 million, the ADB has loaned $198 million to Korea, $105 million to the Philippines, $100 million to the Republic of China, $75 million to Thailand—a total of $478 million or 66 percent of all ADB ordinary capital loans. If we include loans to Singapore, which is becoming increasingly important to the United States in Southeast Asia, the lending figure rises to $582 million or 80 percent of total ADB hard term lending.

More important than the actual percentage reduction, however, is the lessening of U.S. influence in the Bank far beyond its 8-percent drop in voting power. Even though the United States had maintained parity with Japan in the Bank of 16 percent of the vote, its influence has been far greater than that figure would imply. The Europeans look to us for leadership; the lesser developed countries do so as well—especially our friends such as Korea, the Philippines, et cetera; and the Japanese are looking to us increasingly for a reassertion of our interest in the Bank. Given these considerations, unless we reestablish our voting power, we can well expect our influence in the Bank to decrease drastically beyond that implied by a voting share of 8 percent.

IDA CONTRIBUTION

Mr. SHRIVER. I am glad to hear your comment that you are insisting the U.S. contribution rate to the International Development Association should be reduced. I believe our contribution rate was 40.2 percent through fiscal 1972. Is that correct? What do you foresee in this regard?

Mr. HENNESSY. Our initial share when IDA was established was 43.1 percent. More recently prior to the third replenishment, the proportionate share of U.S. contributions to the International Development Association was 40.2 percent. When the third replenishment is taken into account, this figure is reduced marginally to 39.7 percent. In our discussions with other part I (industrial) countries on a fourth replenishment of IDA's resources, we have clearly indicated that a substantial reduction must be made in the U.S. proportionate share of contributed resources. Our thinking in this regard is that a "fair share" for us now lies between 30 and 35 percent, perhaps one-third. This reduction would reflect not only our present balance-of-payments difficulties but also the greatly strengthened economies of other part I countries since the period immediately after World War II.

ADB SPECIAL FUNDS

Mr. SHRIVER. You ask for our views on the proposed contribution of $150 million in two installments for the new special funds resources for the Asian Bank. This is to be tied to U.S. procurement, is it not?

You say this would make our contribution approximately 28 percent of the total. This compares with about 20 percent for the paid-in and callable capital funds of this bank, is that correct? Why should we put up a higher percentage for the fund for special operations?

Mr. HENNESSY. It is correct that the first $100 million, the voluntary contribution around which an Asian Development Fund would be built, would be tied. The additional $50 million contribution would, according to the package proposal, be open to procurement among all

the contributors to the Fund. The $150 million U.S. contribution to the Bank's special funds would represent approximately 28 percent of the new contributions which others are now prepared to make available, and thus would be less than our initial ordinary capital contribution relative to other donor countries. When all previous special funds contributions by other donor countries are taken into account, the U.S. share is 20 percent of the cumulative total.

Mr. SHRIVER. In your response to the GAO study, you refer to the "five NAC agencies" and "IFI-financed projects." Those abbreviations don't mean much in our record. What are they?

Mr. HENNESSY. The "five NAC agencies" are the Treasury Department, State Department (including AID), Commerce Department, Export-Import Bank and the Federal Reserve Board. Staff officials of these agencies meet weekly to appraise project proposals put forward by the multilateral lending institutions and to advise, through the heads of their agencies, the Secretary of the Treasury on what position the U.S. Government should take on each proposal. The National Advisory Council is, therefore, an interagency coordinating mechanism within the U.S. Government in which the views of various departments are brought to bear on the resolution of a given issue or problem. In addition to the five regular member agencies listed above, other agencies participate when matters of interest to them are being discussed including the Office of Management and Budget, the Department of Agriculture, the Council of Economic Advisers, et cetera.

"IFI-financed project" is a shorthand method of referring to projects financed wholly or in part by an international financial institution (that is, International Bank for Reconstruction and Management, Inter-American Development Bank, Asian Development Bank).

BURKE-HARTKE BILL

Mr. SHRIVER. You say these international lending institutions have been instrumental in mobilizing private investment in less-developed countries, and that private investment is vital to their development. I am sure you are familiar with the so-called Burke-Hartke bill, which would make the enterprises operating in these countries pay the full tax due both in the country where they operate and in the United States, even before any earnings are remitted. What effect would this have in these less-developed countries? What effect would it have on our own trade balance?

Mr. HENNESSY. Implementation of the Burke-Hartke proposal to eliminate the tax referrel and credit provisions for foreign source income would have extremely serious effects on both the United States and less-developed countries (LDC's).

The United States has almost $25 billion in private direct investments in the LDC's of which about one-half is in mining and petroleum. Direct investment in these countries contributes to the U.S. balance of payments by way of repatriated earnings, dividends, interests, royalties, and fees. In 1972, the gross inflow from these sources was $4.2 billion. After allowing for investment outflows, there was a net inflow of $2.6 billion. Direct investment outflows from the United States are also an important source of capital to the LDC's as evidenced by the fact that in 1970 approximately one-half of the $3.5

billion net direct investments by the industrialized donor countries came from the United States.

As a developed country, the United States bears a responsibility for exporting real sources to the LDC's. It accomplishes this by maintaining a net export position of goods and services with these countries. In 1972 this surplus was almost $4 billion. If the Burke-Hartke tax proposals were adopted this would probably lead to a virtual cessation of new foreign direct investment and may even lead to the liquidation of existing investments. Such a result would upset the existing economic relationship between the United States and the LDC's and would quickly lead to increased pressure to offset the decrease in private capital flows by increased government aid.

Foreign direct investment tends to generate exports from the U.S. parent to its foreign affiliates. Several studies show that in recent years the net export trade position of U.S. parents has been rising with their overseas foreign affiliates, at a time when the overall U.S. trade position has deteriorated. Major impediments to foreign direct investment—such as the Burke-Hartke tax proposals—would place this favorable trading relationship in jeopardy.

While relatively free flows of investment capital benefit both the host and source country, there are instances where the flow of investment may be distorted by artificial incentives such as extended "holidays" from local taxes. There are also certain cases where U.S. companies taking advantage of U.S. foreign tax deferral undertake foreign investments specifically for the purpose of exporting products to the United States—for example, the "runaway plant" situation. And there are other situations in which U.S. companies design their foreign operations so that the U.S. Treasury bears the burden when they lose money, while foreign treasuries receive the benefit of taxes when they make money. The President has recognized these abuses in his message accompanying the Trade Reform Act of 1973, and indicated his plans to submit proposals to deal with them.

INTER-AMERICAN DEVELOPMENT BANK

Mr. SHRIVER. Turning to the Inter-American Development Bank, Mr. Sternfeld, you say the Bank has initiated a program to channel more of the soft loans to the nine countries in your region which have been determined "least developed." What are these countries?

Mr. STERNFELD. These countries are: Bolivia, Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Nicaragua, and Paraguay.

Mr. SHRIVER. You are aiming at a higher proportion of the soft loans for these countries. What is your goal in terms of percentage?

Mr. STERNFELD. The goal for 1972, the first year of the new policy, was a minimum of 30 percent. In succeeding years, it is expected that these countries will continue to increase their utilization of FSO. The 1972 goal was sharply exceeded, with the final figure reaching 49.6 percent.

Mr. SHRIVER. Why should the relatively developed countries continue to receive any of this soft loan money?

Mr. STERNFELD. Continued use of the fund for special operations is justified in order to encourage highly important but slow-yielding

activities in the expectation that Bank financing will augment country development efforts in these fields. The relatively developed countries will continue to be eligible for FSO funds, but their proportion will progressively decrease over a 3-year period, and the terms harden. Also, the types of projects eligible for FSO in the more developed countries will be limited.

FSO REPAYMENT CONDITIONS

Mr. SHRIVER. Starting this year, new soft loans will have to be repaid in the currencies lent. This means dollars for the most part, does it not? What effect will this have on the ability of the nine least developed countries to participate in the program?

Mr. STERNFELD. That is right, sir. While FSO loans are made in both dollars and local currency, the dollar portion is the larger, and therefore the new policy will result in greater dollar repayments. With regard to the effect of this new policy on the nine lesser developed countries, we believe that in the long run it will be in their own interest. This is because, even though the countries will have to pay back in dollars, thereby adding to their foreign external debt service requirements, nevertheless these are very long-term loans—up to 40 years for the poorer countries. Thus, the burden is spread out over a long period. Meanwhile, because other countries will be paying in dollars, the Bank will not be receiving unconvertible resources, rather such repayments will be used on a revolving basis to fund projects in other countries. Since the more developed countries' portion of the FSO will be reduced to 20 percent by 1974, and because their amortization periods are shorter (only up to 25 years), the benefits to lesser developed countries substantially outweigh the disadvantages.

ORGANIZATIONAL CHANGES

Mr. SHRIVER. On page 7 you note the need for further organizational tightening in the Bank. Expand on that and what actions you foresee to eliminate these problem areas.

Mr. STERNFELD. Any organization is in need of review. The major changes primarily affected the operations, project analysis, and financial departments. I foresee further reforms affecting the processing of technical assistance, the Office of the Controller, the administrative department, and the Program Adviser's Office. The changes will be aimed at clarifying responsibilities and maximizing the productivity of the staff.

PROJECT SELECTION

Mr. SHRIVER. In conclusion you refer to the black notebooks which were furnished the committee listing project proposals you will be considering this year. You say new loans will come from "this list and additional applications which may come during this year." In other words, there is no way we can know how you will use the appropriations requested in this budget, is there? We have an outline of projects you might consider, but then again, you might not.

Mr. STERNFELD. The committee can be sure that, based on last year's experience, there will be very few changes made from the list of projects under Bank consideration, which we have submitted. To illustrate

this, let me tell you about what has happened to the list of 96 projects which was submitted to the committee on March 1, 1972, at the time of the last hearing. Of those 96 projects, 39 were subsequently approved by the Board, 37 continue to be listed because the Bank has not yet concluded the necessary evaluation and analysis, and 20 have been dropped from further consideration at this time because they were either not consistent with appropriate Bank or country priorities, or due to the conclusion that they were not feasible from technical, financial, economic, or administrative points of view. There were only 6 new projects that were approved subsequent to the submission of last year's list which were not included on that list. These six loans were:

Mexico—Small and medium industries for $10 million.

Costa Rica—Preinvestment studies for $2.3 million.

Bolivia—Roads for $10 million.

El Salvador—Hydroelectricity for $38.1 million.

Dominician Republic—Rural electricity for $7.4 million.

The foregoing projects when submitted to the Bank, had already been extensively studied, thus permitting Bank staff to process and submit them to the Board during the same year.

CHILE

Mr. SHRIVER. Your notebook shows four loans under consideration for Chile at a total cost of $200 million. This will be very hard to sell if we recommend these funds to the House of Representatives. What would you offer in support of these loans?

Mr. STERNFELD. There has been no loan to Chile approved in over 2 years. Given Chile's current position on its international debt and its other actions, there are serious questions on Chile's creditworthiness. At the minimum, Chile would have to meet the creditworthy test before its loan applications could be supported.

Mr. SHRIVER. The Gonzalez amendment requires the U.S. Executive Director of the Bank to vote against any loan or utilization of funds for a country that has nationalized, repudiated, or nullified existing contracts, or imposed discriminatory taxes or other exactions and U.S.-owned property. Have you exercised this authority this year? Would you exercise it in the case of loans to Chile?

Mr. STERNFELD. There has been no loan presented to the Board to this time where the Gonzalez amendment would apply. The amendment provides that under the conditions you cited a negative vote would be required unless the President determind that (1) an arrangement for prompt, adequate, and effective compensation had been made, or (2) the parties have submitted the dispute to arbitration, or (3) good faith negotiations are in progress. In relation to Chile, the determination would have to be made at the time a loan was before the Board whether any of the above provisions were present or not before determining that the United States should not vote no on loans to Chile.

CANADA MEMBERSHIP

Mr. SHRIVER. Canada recently entered into full membership in the Bank, I understand. They will not be eligible for loans, will they?

What does this mean in terms of additional resources for the Bank?

Mr. STERNFELD. Canada doesn't intend to borrow from the Bank. In joining the Bank, Canada agreed to subscribe, in terms of U.S. dollars of the weight and fineness in effect on January 1, 1959, a total of $242,680,000 to the Bank's ordinary capital ($40 million to the paid-in capital and $202,680,000 to the callable capital) and to contribute $60 million, in terms of dollars of the same weight and fineness, to the Fund for Special Operations. Payments to the paid-in capital and the Fund for Special Operations are being made in Canadian currency in three equal installments, the first of which was paid at the time the instrument of ratification was deposited.

The Canadian Government also agreed to contribute to the Fund for Special Operations all repayments made on loans which the Bank has made with the resources which it administers for the Canadian Government under an agreement entered into December 4, 1964. The total contributions made by Canada under the agreement amount to $74 million Canadian.

MEXICO-UNITED STATES RELATIONSHIP

Mr. SHRIVER. Mexico received loans totaling $58 million from the soft loan window in 1972, and that country is being considered for new loans of $87 million. I am concerned about recent reports that Mexico attempted to get Canada to join in an anti-U.S. economic agreement. While Canada reportedly refused at this time, this is not a healthy development for the United States. Would you comment?

Mr. HENNESSY. I do not know of any specific anti-U.S. economic agreement which Mexico has urged Canada to join. However, as you know, President Echeverria recently completed a 29-day world tour, the two principal objectives of which were: (1) the enhancement of Mexico's image as a leader of the third world, including the gaining of acceptance for a charter of the economic rights and duties of states proposed by President Echeverria in his address at UNCTAD III, and (2) the expansion and diversification of Mexico's foreign trade and investment. The proposed charter of economic rights and duties contains some broadly stated principles, but, in any event, it would be incorrect to interpret it as an "anti-U.S. economic agreement."

We have no record of any efforts made by President Echeverria to get Canada to join in an anti-U.S. economic agreement during his state visit to Canada. In his address to the Canadian Parliament, he drew several parallels between Canadian and Mexican experience in economic, political, and social growth, but made no specific referral to the United States. In discussions with Prime Minister Trudeau and senior Canadian officials, we understand that President Echeverria did not advocate any animosity against the United States, but stressed Mexico's desire to reduce its dependence on, and trade with, the United States by increasing and diversifying its exchanges.

DOLLAR DEVALUATION

Mr. SHRIVER. The appendix of your black book mentions the effect of the two recent devaluations of the U.S. dollar and other currencies. Would you tell us more about this—what the actual cost is to the

United States, and so forth? Perhaps it's too early to tell about the second devaluation.

Mr. STERNFELD. The 1972 devaluation will cost the United States $41 million in paid-in capital in the ordinary capital resources of the Bank and $110 million in the fund for special operations. This will be disbursed over a long period. In addition there is a contingent liability with no cost anticipated of $187 million.

Mr. SHRIVER. What have been the effects of the adoption of the precommitment policy under which the Bank is gradually reducing the amount of cumulative liquid resources from 100 to 50 percent of the value of commitments contracted? In your view, does this endanger the stability of the Bank?

Mr. STERNFELD. This policy has only been in effect 1½ years and therefore it has had only a slight impact. For the ordinary capital where funds are raised at varying costs in the world market, I don't believe it endangers the stability of the Bank. In fact, I believe this is sound financial policy not to stockpile cash which comes at high cost for expenditures which may not take place for 4–7 years.

Mr. SHRIVER. Last year, I was informed the multiplier effect of multilateral financing results in U.S. funds channeled through the Bank accounting for 26 cents of each $1 worth of project costs. Is that figure correct? Place a breakdown in the record of where the other 74 cents comes from.

Mr. HENNESSY. On a cumulative basis, for every dollar of total IDB project costs, U.S. contributions through the IDB have accounted for 26 cents. The remaining 74 cents is broken down as follows:

(a) Latin American counterpart funds	$0.64
(b) Latin American contributions to IDB	.06
(c) Nonmember contribution to IDB	.04
Total	.74

BUDGET REPORT

Mr. SHRIVER. Your justifications state that no budgetary outlay will result in fiscal 1974 from this appropriation request. Even so, this commits U.S. Treasury funds so that they could not be used for domestic programs, does it not?

Mr. HENNESSY. The fiscal year 1974 budgetary outlay expected from the $1.2 billion appropriations request for international institutions amounts to $14.6 million. This amount includes $9.6 million for the Asian Development Bank's ordinary capital and $5 for its special funds. The remaining amounts ($955 million for disbursement in subsequent years and $265 million for contingent disbursement if needed by the institutions to meet bond-holder obligations), are either letter of credit obligations or contingent obligations in the form of guarantees by the U.S. Treasury. This deferred or contingent character of the obligations is in marked contrast with much of the rest of the budget for fiscal year 1974. For illustration of this point, of $288 billion in new appropriations being sought, $265 billion are expected to be disbursed by the Treasury in the same year. Since the vast majority of IFI disbursements are not made in fiscal year 1974, they cannot be construed as displacing domestic disbursement in fiscal year 1974.

U.S. SHARE OF CONTRIBUTIONS

Mr. SHRIVER. Would you show for the record the U.S. percentage of these individual funds since their inception?

I understand the U.S. share of the fund for special operations will be two-thirds; is that correct? This is a reduction, is it not?

Mr. HENNESSY. I will place that in the record.

[The information follows:]

Table of United States cumulative subscriptions to multilateral lending institutions expressed as percentage of total contributions

U.S. subscription (Rounded to nearest whole number)

Institution:	*Percent*
IBRD	26
IDA	40
IDB (ordinary capital)	40
IDB (FSO)	74
ADB (ordinary capital)	9
ADB (special funds)	None

In the current replenishment of the Fund for Special Operations of the Inter-American Development Bank, the proportionate U.S. share was two-thirds. This particular share is reflected in the cumulative subscription share of 74 percent.

FSO FUND SHORTAGE

Mr. SHRIVER. The Fund for Special Operations had, as of December 31, 1972, $852 million in uncommitted funds. The justifications state that if presently planned loans are made, these funds will be exhausted during the fiscal quarter of this calendar year. They could hold up on these new loans, couldn't they, just as many domestic plans are being delayed because of our budgetary problems? We may have a commitment, but it can be stretched out, can it not?

Mr. STERNFELD. We have already stretched out our contributions. The 1970 plan was to seek $1.5 billion over 3 years—$1 billion U.S., $500 million others. The United States has only supplied one-half of its share to date, $275 million. The $500 million requested will leave a shortfall of $225 million. The result has been inability of the Bank to work with potential borrowers on their projects with some basis of financing assurance. The level of lending for worthwhile activities has dropped in comparison with 2 years ago.

Mr. SHRIVER. I just received a copy of the Bank's 1971 annual report—it is dated March 1972. Why can't the members of this subcommittee receive these reports well before these hearings? We should have the 1972 report now.

Mr. STERNFELD. I am sorry that you received a copy of the 1971 report so late. The report is released to the public the week of the annual meeting of the board of governors after they have approved it. The 1972 report will be released during the week of May 7, 1973.

EXTERNAL INDEBTEDNESS

Mr. SHRIVER. Do you consider the current external indebtedness and its service excessive for these Latin American countries? That answer might be different for each individual country.

Mr. HENNESSY. Latin America's total external public debt outstanding, including undisbursed portions, amounted to approximately $21.3 billion at the end of 1971, an increase of 9.3 percent over 1970. Debt service on interest and amortization rose by 2.1 percent in 1971, reaching $2.7 billion—or 13.8 percent of Latin America's current account receipts—equivalent to the average for 1960–70 period.

Whether these levels of Latin American external indebtedness and debt servicing are "excessive" depends on each individual country's capacity to reconcile competing claims on its resources in favor of debt servicing and high rates of economic growth, while the shape and pattern of economic development varies widely among Latin American countries, each country's capacity to meet its external debt obligations is dependent on many factors, such as its planned rate of economic growth, the international market for its exports, its internal economic policies, its balance of payments and debt management policies, its ability to mobilize local savings and investment, its international "creditworthiness," and so forth. Because of the multiplicity of factors involved in determining a country's capacity to service its external debt, and because these factors vary substantially among Latin American countries, it is difficult to generalize about the "burden" or "excessiveness" of Latin America's external public indebtedness.

There are, however, several conventional indicators which are widely used—with the above caveats—to assess a country's external debt position and its vulnerability to a potential external debt crisis. For example, in assessing debt prospects of the 80 developing countries whose external debts are monitored by the World Bank, the Bank draws a distinction among three categories of debtor countries. The first is composed of those countries whose overall volume of debt is low and whose debt-service obligations present no major difficulties. The second is that of countries whose debt and debt-service is large, and capacity to service the debt fundamentally limited. The third group consists of countries whose debt and debt-service is large, but whose prospects for servicing their debt are fundamentally sound, apart from the possibility or likelihood of temporary difficulties occasioned by the "bunching" of short-term liabilities or by transitory declines in exports.

Very few, if any, of the Latin American countries fall into the second category, despite the high levels of debt and debt-service in the region. The more typical situation is that of the third category, representing perhaps one-half of the total outstanding debt of Latin America—excluding Chile. In other words, most Latin American countries do not face any long term or "structural" debt servicing problems. Continued high levels of debt service payments may lead to temporary debt servicing difficulties, if there are significant declines in export earnings, shortfalls in domestic resource mobilization and policy actions resulting in higher levels of imports. But there is no structural characteristic of the Latin American economies which would indicate the inevitability of a chronic debt servicing problem. Most of these countries should be able to avoid debt renegotiations or payments crises as long as they pursue sound economic policy and satisfactory debt management. But others may require debt relief from their creditors, and more active over-all credit monitoring in the future on the

part of lending governments. It may be useful to point out that the U.S. Government has participated in 23 multilateral debt reschedulings since 1956. Of these, nine involved four Latin American countries: Argentina, Brazil, Chile, and Peru.

Probably the most conventional measure used to evaluate the strain imposed on a country's balance of payments by external debt servicing in the shortrun is the debt service ratio. This ratio measures the proportion of export receipts absorbed by contractual debt service payments in any year.

The higher the ratio, the greater is considered to be the pressure of debt service on the debtor's economy, particularly in the event of a downward movement of the country's foreign exchange earnings. However, because the debt service ratio combines only two factors out of the multiplicity of those involved in determining a country external debt servicing capacity, it has proven impossible to identify a "critical" level of the ratio by which one could say the debt service is "excessive."

In the table submitted, it can be seen that about half of the Latin American countries had debt service payments equivalent to more than 10 percent of their exports.

[The table follows:]

Ratio of external public debt service to exports	*Percent*
Chile (above)	25
Argentina, Mexico, and Uruguay	20–25
Brazil	15–20
Bolivia, Colombia, Nicaragua, Paraguay, and Peru	10–15
Dominican Republic, Ecuador, El Salvador, Guatemala, Honduras, Jamaica, Panama, and Venezuela (below)	10

Mr. HENNESSY. The limitations of the debt service ratio as an indicator of debt servicing difficulties are readily apparent insofar as among those countries with ratios above 15 percent, only Chile and Uruguay are presently experiencing serious strains from their debt service obligations, while Argentina, Mexico, and Brazil are not. With responsible and effective fiscal and monetary management and continued availability of long term financing, Latin American countries should be able to avoid serious debt service problems which might jeopardize their longrun growth and development.

Mr. SHRIVER. In looking through this annual report, I note the wide differences in the rates of economic progress for individual countries. This comes as no surprise, but what do these figures over the years teach the administrators of the Bank? How are your policies changed to reflect past successes and failures?

In a related question, the Bank has always emphasized agricultural projects, yet this is still the most disappointing area as far as real per capita progress is concerned. What changes has the Bank made when figures such as these have become available?

Mr. STERNFELD. The rates of economic progress of the member countries are directly reflected in changes in policies and in the type of projects financed. For example the specific targets established for FSO funds for the poor countries is a reflection that these funds should go

where the need is greatest and where the country has been taking appropriate measures of its own. Where countries have had rapid rates of growth, sizable increase in their reserves, they can and are relying on the hard-loan window, the ordinary capital, for their financing needs of major development projects.

The Bank in the agricultural area has had to make shifts to meet the realities in the member countries. It has been working with the FAO and others to get at the bottlenecks, poor marketing, weak credit services, better research.

Mr. PASSMAN. I yield to Mr. Long.

CUTS IN DOMESTIC PROGRAMS

Mr. LONG. I notice that in 1974 you want $693 million, and it was $418 million last year. We have had all these impoundments, all these cutbacks in all our domestic programs. Can you explain why your International Development Association should be asking for a big increase when we are actually cutting back on so many important domestic programs, conservation, reforestation, research into turning coal and wood into oil, vocational development, pollution? I could just go on and on, child care. Why can't you take your share of the cuts?

Mr. HENNESSY. Congressman Long, I realize it is a difficult question. Believe me, in approaching the figure this year, I think we should look at the overall program. Cuts were made. We did not put back the $225 million, for instance, in the IDB FSO which was cut out last year. Also, there was a new bank, a new commitment that was being considered. Actually prior Presidents and our present one had told the Africans that we would be trying to do something for them. It was felt, however, that that could not be the case this year.

Mr. LONG. I think a lot of domestic——

Mr. HENNESSY. There have been cuts upward of $300 million.

Mr. LONG. I see $418 million for fiscal 1973, and $693 million for fiscal 1974. That is in plain print. That is an increase of more than 50 percent.

Mr. HENNESSY. That is correct.

Mr. LONG. But we are cutting back on all kinds of domestic programs.

Mr. HENNESSY. Right. It depends on what base you use for the cut. For instance, as I mentioned, the United States had agreed publicly—of course subject to congressional approval—to put in $100 million the first year, $450 million the second, and $450 million the third.

Mr. LONG. That is an interesting question you raise. How does the United States agree to something without consulting Congress?

Mr. HENNESSY. We do have the authorization for $1 billion in this particular case, but there is no legal commitment.

Mr. LONG. The appropriation committee——

Mr. HENNESSY. I think we have clarified this.

Mr. LONG. You should make that clear and not go around talking about our pledging.

Mr. HENNESSY. It should be clear in the record, yes.

Mr. LONG. You state that multilateral institutions have "good organization, management and staffing, and high quality of analysis."

A GAO report of August 22, last year, on the Inter-American Development Bank speaks of "a number of deficiencies reportedly existing in the international banks' organization, administration, and operating procedures, including inadequate project planning and execution."

I am wondering what your answer is to this, and what evidence you have to support your claim that so far as you are concerned, you have good organization, management, and staffing. The view of the General Accounting Office, which is the watchdog agency of Congress, feels they have come up with some pretty serious——

Mr. HENNESSY. We went into this before the House Foreign Affairs Committee in some detail. Let me summarize what our position is on this. Any GAO report, of course, looks for deficiencies, and any organization, whether it is the U.S. Treasury Department or General Motors, can always improve. We are not saying we are perfect. What we are saying is that the market imposes a discipline on these institutions. These banks go out and borrow on the market. They have triple A rated bonds. The market opinion is that they are well run, they are financially prudent organizations.

Mr. LONG. You are speaking in very general terms.

Mr. HENNESSY. Right.

Mr. LONG. We have here from the GAO very specific statements. I would think in answer to specific criticisms we should have specific answers.

Mr. HENNESSY. Let me say on the specific point which you mentioned there, Mr. Long, on the organization they had an outside management study by Booz Allen. The consultants came in and looked at the Bank and their report has now been implemented. There are deficiencies in any organization. They have improved that. They made four specific recommendations on the Bank and those four have now been implemented.

Mr. LONG. Will you put in the record what those recommendations were?

Mr. HENNESSY. Yes; I will be glad to.

Mr. LONG. And what the implementation was. Not in general, but very specific language. And would you put in what Booz Allen's fee was for doing this?

Mr. HENNESSY. If that is available, of course.

[The information follows:]

The GAO's major recommendations were:

A. RECOMMENDATION

The United States should sort out the recommendations of the group of controllers it wishes to support and vigorously pursue their acceptance and recommendation.

Action.—The U.S. Government has adopted and supported firm positions on all the recommendations in the three controller group reports acted upon by the IDB board of executive directors. The board, with the support of the United States, has taken action on all the recommendations in those reports. Implementation of the board's decisions is being pressed. At the initiative of the United States, a deadline has been established for receipt of the Bank management's comments on reports submitted by the group, and a system of semiannual reports

on progress made toward implementation of recommendations has been set up. The first of these reports is due on June 30, 1973.

Two other controller group reports have been released very recently and are under study and review within the U.S. Government. These two reports are: "Reporting Systems" (December 1972) and "Preinvestment Studies" (January 1973). A U.S. working group on reporting systems made recommendations to the NAC which were subsequently transmitted to the U.S. Executive Director for his use in Board meetings. On April 24, 1973, the IDB Board of Directors began its consideration of the reporting systems report, having received comments from management. Thus far three recommendations of five have been acted on in the sense of being accepted. Consideration of the other two recommendations is continuing. We are still awaiting management comments on the preinvestment studies report, and it is currently being studied within the U.S. Government.

B. RECOMMENDATION

The United States should arrange for the development of instructions that stipulate the desired depth and parameters of the U.S. process for appraising proposed projects to guide U.S. officials and technicians in making their appraisal. These instructions should include a clear statement of policy regarding the appraisal of the economic and technical aspects of the projects.

Action.—Instructions and guidelines for appraisal of loan proposals have always existed within the U.S. Government. What had not heretofore existed is their formal codification. This formal codification was, however, issued last month. It is available to officials and technicians in the five NAC agencies. It now contains nearly 50 pages of detailed information relating to loan proposal documentation, project criteria, special policy criteria, and country performance criteria. It can be expanded and modified to accommodate additional requirements or changes in policy.

C. RECOMMENDATION

The United States should arrange for followup on the U.S. positions with respect to specific loan proposals to determine the extent to which they have been accepted in the implementation of the project. Provision also should be made for the feedback of results to those officials and technicians participating in the appraisal process for use in subsequent appraisals.

Action.—Followup action has always been taken on U.S. positions on specific loan proposals. It is now being done on a formalized basis. The U.S. Executive Director's Office at the IDB reports regularly both verbally and in writing to members of the NAC staff Committee on points they have raised. These reports are now incorporated into the minutes of meetings. In addition, a new reporting requirement has been added to the combined economic reporting program (CERP). It requires reports from U.S. personnel in the field on IFI-financed projects and on project proposals which may be submitted to the IFI's in the future. Revision of this requirement will be made as necessary to assure an adequate flow of information back to Washington.

D. RECOMMENDATION

The United States should take the necessary steps to develop, and get agreement among member countries on firm and sustainable criteria for eligibility for IDB lending. Such criteria, although based predominantly on the economic performance of recipient countries, should also provide for such things as guidelines on access to resources of FSO by more developed countries and recognize the need for value judgments in certain individual cases.

Action.—Economic performance of recipient countries has always been considered by the Bank. This is done through annual economic reviews conducted under aegis of the CIAP. Reviews are attended by representatives from the IMF, IBRD, IDB, and USAID. In two instances, the IDB has halted lending activity for extended periods of time because of inadequate economic performance.

In July 1972, the Board of Directors of the IDB received a management plan to phase down access to FSO resources by relatively more advanced recipient countries. This phasedown will take place over a 3-year period in 1972–75 and reduce the share of the four largest countries from 40 to 20 percent. This was a course of action earlier urged by the U.S. Government.

The cost of the Booz, Allen & Hamilton study was $87,879.

Mr. LONG. I understand that GAO has requested the Treasury Department to advise the GAO and the Congress of the recommendations

of the group of controllers in their reports whether these recommendations are accepted or rejected by the Inter-American Development Bank's board of executive directors. Have you agreed to this request?

Mr. HENNESSEY. Yes, we have; and those have been implemented. That is part of what I was referring to previously, sir.

ECONOMIC PERFORMANCE OF RECIPIENT COUNTRIES

Mr. LONG. On page 4 you stated: "In two instances the Inter-American Development Bank has halted lending activity because of inadequate economic performance." When did these instances occur, and how many loans were affected in these two instances?

Mr. HENNESSY. I will turn to Mr. Sternfeld. From the time that determination was made there were no new loans until they improved performance. In one case I think they had to reform the tax system and they kept delaying it and there was a long hiatus.

Mr. LONG. Can you tell us when these instances were and what they were?

Mr. HENNESSY. I think we prefer not to mention the names of the country. That is politically sensitive.

Mr. LONG. I don't know why not. I am very much interested in the countries and why they aren't living up to this.

Mr. HENNESSY. They had poor economic performances.

Mr. LONG. Let's know them. Let's get the poor performance out in the open.

Mr. HENNESSY. Those have since been corrected.

Mr. LONG. I am not interested in keeping it quiet.

Mr. HENNESSY. Those have since been corrected, but let me present these arguments to you.

Mr. LONG. If we know the names of the countries we can make some sort of investigation and come to some judgment on whether or not it has been corrected.

Mr. HENNESSY. I would see that as politically sensitive. We would be glad to provide that to you. The GAO knows who they are.

Mr. LONG. I want the names, I am putting on record right now, of the two countries. I want the names of the two countries on the record.

Mr. PASSMAN. I think it is a reasonable request and I think those names should be furnished to the committee. I think we should have the specifics so if the committee decides it wishes to investigate we can make an on-the-spot check. Can that request be met?

Mr. HENNESSY. Yes, sir.

Mr. PASSMAN. Thank you. If the gentleman will yield I think it should be made available to all of the committee.

Mr. HENNESSY. Yes, sir; it will be.

Mr. LONG. Have there been other instances besides these two?

Mr. HENNESSY. Where loans have been cut off because of poor economic performance? No. Plenty of loans have been thrown out because the projects themselves were no good, but for overall bad country performance, they weren't getting inflation under control and things like that, no, there have only been two instances.

Mr. LONG. You name those two countries.

Mr. HENNESSY. I will provide that.

Mr. LONG. And you tell us in a categorical statement these were the only two.

Mr. HENNESSY. Yes.

[The information was provided to the committee.]

Mr. PASSMAN. One question before yielding to Mr. Conte. I kind of admire you people the way you do business. In a great many instances you succeed in your procedures, but last year you asked for $450 million for your special operation account for Inter-American Development Bank, did you not?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. And the Congress, in a continuing resolution, gave you $225 million, but now this year you are back again asking for $500 million for the special operation account, aren't you?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. So what you would actually be doing under this request, you would be getting the $225 million deleted last year, you would be getting an additional $275 million, and charging the committee $50 million for the trouble of having to resubmit the request. That is the way this thing reads in the record and that is just the way it is here. Last year you requested $450 million and now you have jumped the request up to $500 million which means a reinstatement of what we cut out last year plus an additional $225 million plus the $50 million penalty. That is the way it reads in the record. Mr. Conte.

GROWTH IN GNP IN LATIN AMERICA

Mr. CONTE. I take this opportunity to welcome you before this committee, Mr. Hennessy. It is good to be back here after a couple of years of sabbatical leave.

How much has the gross national product of the Latin American countries grown in the last 10 years?

Mr. HENNESSY. I would have to submit that for the record.

Mr. CONTE. All right.

[The information follows:]

Gross domestic product annual growth rates, 1960–71

[In percent]

Country:	*1960–69 (average) total*
Argentina	4.3
Barbados	4.8
Bolivia	5.5
Brazil	5.7
Chile	4.5
Colombia	5.1
Costa Rica	6.0
Dominican Republic	3.9
Ecuador	4.7
El Salvador	6.0
Guatemala	5.5
Haiti	0.9
Honduras	5.1
Jamaica	4.6
Mexico	7.0
Nicaragua	7.6
Panama	8.1
Paraguay	4.6
Peru	4.9
Trinidad and Tobago	4.3
Uruguay	1.1
Venezuela	5.7
Latin America	5.4

Mr. CONTE. How many of the countries are put into the category of being less developed? Will you supply that for the record?

[The information follows:]

The least developed countries in Latin America are:

Guatemala	St. Vincent
Haiti	Dominica
Dominican Republic	Antigua
El Salvador	St. Kitts-Nevis-Anguilla
Honduras	Bolivia
St. Lucia	Ecuador
Grenada	Paraguay

Mr. CONTE. What is the balance of trade situation in the Latin American countries now?

Mr. HENNESSY. As the chairman has alluded to, we had a trade deficit last year of some $6.9 billion but we had a small surplus that we have had traditionally with the Latins. That is our best market and it has been one of the most important markets. Of course they do need long-term capital to be able to purchase goods and services from us.

Mr. CONTE. How much has the capital market in Latin American countries grown over the last 10 years and could you provide the subcommittee with a breakdown of this growth on a country-by-country basis?

[The information follows:]

CAPITAL MARKETS IN LATIN AMERICA

A lack of adequate data makes the description of capital markets in Latin America difficult. For example, not until recently have a significant number of countries in the area begun to prepare investment flow-of-funds information. Thus far, only Chile (which has discontinued the series) and Colombia have prepared such accounts. This lack of data is one of the evidences of the limited development of capital markets in Latin America. The OAS Capital Markets program under the supervision of CIAP, is beginning to produce a number of studies, technical assistance programs, and other activities that will contribute substantially toward increasing our knowledge about the development of capital markets in Latin America.

An approximate measure of the development of capital markets is the ratio between financial liabilities and national income. For example, in 1966, Switzerland had an index of 161, Japan 134, the United States 85; whereas in Latin America, Panama had an index of 46, Mexico 41, El Salvador 36, Costa Rica 32, Ecuador 31, Venezuela 29, Guatemala 26, Bolvia 22, and Paraguay 21.

Another measure is the limited development of capital markets in Latin America is the small amount of savings channeled to financial institutions. In 1965, for example, Argentina and Colombia channeled into these institutions less than 1 percent of gross national product, Brazil, Venezuela, and Mexico channeled approximately 1.5 percent, and Peru, which had the highest rate of the countries studied then, channeled 2.5 percent. In Latin America, with the single exception of Mexico, commercial and central banks are the predominant institutions of the capital markets. Such a market in equity and bond holdings is, perforce, narrow and, consequently, provides slight liquidity. As a result, one of the major weaknesses of Latin American capital markets is the small supply of equity funds to finance companies. Indeed, even medium and long-term loan or bonded indebtedness is scarce.

In most Latin American countries, some banks and development institutions (private and public) have been established largely to provide a portion of long-term financing. Other agencies such as mortgage institutions, savings and loan associations, mutual funds, insurance companies, and trade exchanges have developed even less in most Latin American countries, although considerable "institution building" efforts in these areas have occurred in recent years as the beneficial effects of capital market development become more widely appreciated.

Mr. CONTE. What is the level of unemployment in the Latin American countries at the present time?

Mr. HENNESSY. This is one area that does not have good statistics. Because the statistics were not very good it is very hard to say how much it has grown but 20 percent unemployment or underemployment is not too high a figure. I think that is the figure in many countries, not in all of them, of course.

Mr. CONTE. Who are the debtors in the private loans in Brazil and Chile that are behind in repayment of principal, and how far are they behind?

Mr. HENNESSY. I will let Mr. Sternfeld answer that who is closer to the individual operations. I believe one is in Brazil and the other is in Chile.

Mr. STERNFELD. Mr. Congressman, as is indicated in the balance sheets of the two loans, one is to a paper company in Brazil known as the Lutcher S.A. What they currently owe the Bank is $12,664,000. It is in liquidation and the Bank is getting close to auctioning off the property. We have in prospect a buyer for some of the property, and it is expected that the Bank will recover all of its funds.

The second loan in Chile is also to a private borrower, also a paper company. The unpaid principal is $8.9 million and the accrued interest is $6.4 million. They are behind payments for the last two or three payments. We got word last week that they have started to make some payments, so the Bank is somewhat optimistic on recovering its funds on that loan.

URBAN DEVELOPMENT PROGRAMS

Mr. CONTE. Will you please describe the new approaches to the serious problems of urban development, that the Bank has developed, and how successful have these approaches been.

Mr. HENNESSY. Could Mr. Sternfeld answer that? He has followed the program more closely on a day-to-day basis than I do.

Mr. STERNFELD. The approach the Bank has been trying to take is learning from experience, the good and the bad. Many of the advisers to the Bank in this field are U.S. citizens. The Bank just recently made a loan to Colombia, the city of Bogotá, where it has worked with the Colombian authorities to look at the total urban problem, not just at the housing needs but also at the need for streets and the need for police and fire protection and the need for social and health services. The Colombian authorities developed such a program, such a plan, and the Bank made a loan this year to Colombia for that project. That is an example.

Mr. HENNESSY. It is a systems approach.

PROMOTION OF REGIONALISM

Mr. CONTE. Will you describe the Bank's efforts to promote regional organizations? Would you please provide examples as indicators of the success?

Mr. STERNFELD. The Bank has been very active in Central America. The principal instrument that we have been assisting to promote integration in Central America is the Central American Bank for Economic Integration.

As you know, that effort in Central America was going along exceptionally well until the soccer war between Honduras and El Salvador. We think that political-psychological problem has now been taken care of and they are back on the track.

The Bank put in about $70 million into the Central American Bank for all kinds of activities and the proof is that economic growth has been taking place in Central America.

Mr. CONTE. What will the effect be of requiring that loans be repaid in the currency lent. Was the Bank losing money in the past because of the policy allowing repayment in either local currency or in dollars?

Mr. STERNFELD. In the past when the Bank required countries to repay in local currency the country was required to maintain the value of those currencies.

It was the view of the United States and the other members of the Bank that Latin America had reached the state of maturity where they ought to be able to repay in dollars over a long period so that this fund could be more of a revolving nature and those dollars could be used for new loans.

MANAGEMENT STRUCTURE OF IDB

Mr. CONTE. Which American management consultant firm does the bank retain to study its management structure and how much does it cost you?

Mr. STERNFELD. Booz-Allen & Hamilton was the firm. I think the cost—I would have to check that for the record.

[The information follows:]

The cost of the Booz, Allen & Hamilton study was $87,879.

Mr. CONTE. Yes.

And were its recommendations different from those which were made by the General Accounting Office?

Mr. STERNFELD. The General Accounting Office did not make any specific organizational recommendations. Their view was that changes should be made and the Bank ought to look into it. The Board of Directors took the Booz-Allen report and instructed the management to carry out the report 100 percent.

Mr. CONTE. Do you have any figures or estimates on how much the Bank will save as a result of the planned belt-tightening at the management level?

Mr. STERNFELD. No, sir, I don't have any estimates. The only thing I do know is that the Bank has cut back on its requested administrative expenses. There is an increase in for 1973, because of an increase in costs. However, the Board of Directors instructed that there be no increase in staff positions for the year 1973, I don't have a dollar figure as to what that tightening of activities will result in.

U.S. SHARE

Mr. CONTE. You state that the U.S. share of the increase is decreasing vis-a-vis the Latin American share. Would you please detail this decrease?

What would the effect of our making a lesser appropriation than you are requesting for special operations be?

Mr. STERNFELD. When you take into account the Social Progress Trust Fund of $525 million provided by the United States, we have moved from an 11 : 1 ratio in 1961 to a 3 : 1 ratio to a 2 : 1 ratio accepted by the member governments in the current $1.5 billion replenishment.

The impact of a lesser appropriation would result in further stretch-out of an agreed plan, a lower level of lending for the poorer countries who are meeting their side of the agreement, and a feeling that the United States is not as reliable as in the past in doing their fair share.

Mr. CONTE. You indicate that the budgetary impact of the appropriation you request will be spread out in the future. What is the budgetary impact of the disbursement of prior appropriations expected to be in fiscal year 1974?

Have the other participating countries already made their commitments to the Bank's special operations fund?

Mr. STERNFELD. Yes; the other countries already have made their commitments.

The budgetary impact of the disbursement of prior appropriations in 1974 is expected to be $246 million for the fund for special operation.

BANK LOANS

Mr. CONTE. What is the projected amount of loans that the Bank will be making during calendar 1973?

Mr. STERNFELD. It is anticipated if funds are available that the Bank could lend approximately $900 million during calendar year 1973.

Mr. CONTE. When will the $25 million that will go into the letters of credit be drawn down for disbursement needs?

Mr. STERNFIELD. The $25 million, paid in as non-interest-bearing letters of credit, will be drawn down as the Bank actually needs the funds for disbursements against new loan commitments. In accordance with the present schedule, the $25 million will be due July 1, 1973, and it will be drawn down over a 7-year period, beginning July 1, 1974.

USE OF CALLABLE CAPITAL

Mr. CONTE. What would precipitate the drawing down of the callable capital portion of your appropriations request?

Mr. STERNFELD. A drawing down of the callable capital portion of our appropriation request would only be precipitated if the proceeds of principal and interest repayments by borrowers on their loans were insufficient to permit the Bank to meet its contractual obligations under its bond issues. However, in the event of such inability to meet obligations out of borrower's loan repayments, the Bank would have prior recourse to several other sources of funds. Specifically, these other sources are first, a special reserve account—amounting to $43.3 million, as of December 31, 1972—derived from a 1 percent commission charge on all ordinary capital loans, and second, if the special reserve were insufficient, then, to the extent necessary against the general reserve—amounting to $142 million—and if that proves insufficient, the Bank would call upon all its members to pay a pro rata appropriate amount of their callable capital subscriptions (which

totaled $3.6 billion as of December 31, 1972) corresponding to their respective percentage of callable capital, the members are jointly and severally liable to meet the call, the U.S. percentage being 39.9 percent.

Mr. CONTE. What will happen if we do not make an appropriation for the amount that you are requesting?

Mr. STERNFELD. If the ordinary capital funds we are requesting are not provided, our share in the institution will be reduced from the current 39 percent. It will also involve our not meeting a commitment the United States made to other members of the Bank. The $168 million requested doesn't involve budgetary expenditures, it is only a contingent liability against bonds issued in the capital markets of the world. And, of course to the extent we do not provide callable capital, the Bank will be unable to borrow an equal amount.

Mr. PASSMAN. Thank you, Mr. Conte.

Mr. PASSMAN. Mr. Bevill.

EXPANSION OF IDB MEMBERSHIP

Mr. BEVILL. Thank you, Mr. Chairman.

Mr. Secretary, I believe you state now that there are 24 countries participating in this Bank?

Mr. HENNESSY. That is correct.

Mr. BEVILL. Inter-American Bank?

Mr. HENNESSY. Twenty-two Latin American countries, United States and Canada.

Mr. BEVILL. Canada has come in within the past year?

Mr. HENNESSY. Yes.

Mr. BEVILL. Is your Bank still open for other countries to come in and participate?

Mr. HENNESSY. Yes; it is and at the present time there is an exercise going on which is very close, I would predict, to completion in which some 10 to 14 other developed countries, including Japan, Germany, the United Kingdom, will join the Bank and put in an additional amount up to $750 million. We have thought this exercise important and we have supported it.

We would maintain our share so we wouldn't lose our veto. We thought it was important so they didn't have all their eggs in our basket and the Canadian basket. This has been part of an effort which the Latin Americans initially resisted. I think they now realize it makes some financial sense to have this balance so you don't have one big donor country and all the rest are borrowing countries.

I think this has been a concern of this committee and we think that is a very positive and healthy step forward, that the United States can maintain a sufficient degree of influence but at the same time others are going to share importantly, probably starting in the next 2 years by the time they negotiate the amounts and importantly in providing future resources at the Bank.

Mr. BEVILL. And these developed countries coming into this Bank in your judgment do strengthen the Bank, do they not?

Mr. HENNESSY. Yes. None of the ones coming in would be eligible for the loans.

Mr. BEVILL. I understand. It would strengthen your Bank, though, wouldn't it?

Mr. HENNESSY. It certainly would. There would be people coming in. There would be new people on the Board. It would certainly be strengthening the Bank administratively as well as financially.

Mr. BEVILL. And they would not qualify for loans themselves?

Mr. HENNESSY. Not unless they returned to an undeveloped state, they would not.

Mr. BEVILL. They wouldn't be coming in to participate?

Mr. PASSMAN. The process we are in here in this country now.

FUND FOR SPECIAL OPERATIONS

Mr. BEVILL. Would you advise a little more here about what this special operations, $500 million request, is for?

Mr. HENNESSY. The Bank has two windows. One is called a hard loan window and the other is called a soft loan window. The special operations is a soft loan window. For hard loan window resources, the Bank goes out and borrows in the private capital market. They float the Bank's bonds and U.S. insurance companies, German insurance companies, and others buy the bonds and hold them to maturity as an investment.

They take those funds, borrow at 7 or 8 percent and turn around and loan for example in Mexico and Argentina. Those are the most developed countries. The poorer countries which have a per capita income of $300 or below—Haiti, Bolivia, et cetera—their economies are not at a stage of development that they can afford to pay that rate of interest so the fund for special operations makes longer loans and at lower interest rates.

FSO loans are not at market rates. They are softer. The Bank charges 2 or 3 percent interest and lends it out for 20, 30 or 40 years. They are all loans. There are no grants involved here. But recipients do have a longer period of time to pay the loans back.

Mr. BEVILL. Of this $500 million, do you have any percentage as to what would be classed as hard loans and what would be classed as soft loans?

Mr. HENNESSY. All of the $500 million is soft.

Mr. STERNFELD. But it has become a little bit harder, Mr. Bevill. As Mr. Conte asked, this $500 million is now going to be repayable in dollars. Under the old fund for special operations they would repay at the option of the borrower in their own local currencies so there is a change here which is making it harder than it was. It is still soft but it is of a harder nature because when they borrow a dollar they now have to repay a dollar.

Mr. HENNESSY. You sort of bring them along, wean them.

Mr. BEVILL. I had another question or two here, Mr. Chairman.

Mr. PASSMAN. You go right ahead.

AUDIT OF INTERNATIONAL INSTITUTIONS

Mr. BEVILL. There has been some question about how much checking and auditing we in the United States can do since we are, of course, only 1 country out of the 24. I wish you would give us a little information there. Does the General Accounting Office here, the arm of the Congress, have the authority to go in and audit the books of this Bank?

Mr. HENNESSY. No; they cannot. Because of the multilateral character of the Bank they have not been able to, nor have they sought that. I think on the record on several different occasions the Comptroller General has said that he understands the multilateral nature of the Banks. But what the GAO has done is come in and audited the U.S. participation in the organization and through us they have access to the documents, loan documents and different studies, which the Bank makes, as every member government has.

As a result of this committee's interest in an action on the question of audits, they have a Price-Waterhouse type of audit, financial audit, and they have their own internal audit system, but they set up what is called a group of controllers, the head of which is American with longtime experience in evaluations and auditing. The group reports directly to the Board of Directors, not to the management of the Bank, and they have carried out over the past couple of years some six studies on different aspects of the Bank's operations of which the GAO has received copies and they in turn study those and make recommendations, so that we think there has been significant improvement in that but they do not have direct access.

It is one of the functions of these organizations, and if all 24 members wanted to come in and audit the Bank it would be pretty much impossible.

Mr. PASSMAN. Would the gentleman yield?

Mr. BEVILL. Yes.

Mr. PASSMAN. We had an amendment that had the support of the committee and the House for GAO to have the right of audit.

Are you familiar with that amendment?

Mr. HENNESSY. I am aware of it.

Mr. PASSMAN. If the gentleman will yield further, just what would be the objection to the GAO making an audit and let other countries make an audit? You could give them the same privilege. Could that be worked out to where if the country wanted to make an audit, let them do so. There is nothing to hide. There really should be no objection; should there?

Mr. HENNESSY. I think because of the multilateral nature it isn't operational. I think the GAO, first in 1970 and again last year when they testified together with us before the Fascell subcommittee, took the position that they didn't seek that type of authority. Through the methods that are now set up we think there is sufficient light being shown into the operations of the Bank.

Mr. PASSMAN. Could that same claim be made by every organization, whether it is international or domestic? In an international organization is where we should have the right of an audit.

Why wouldn't you people give some thought to legislation whereby we would have that right and if other nations, every one of them, desired to make an audit, let them do so. I wouldn't see anything wrong with it. Recently I think you agreed that the other donors likewise became the recipients of this fund; isn't that right?

Mr. HENNESSY. That is correct, with the exception of Canada.

Mr. PASSMAN. Thank you. Except one little tidbit that Canada puts in, the donor become a recipient; that is right, isn't it?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. Thank you, Mr. Bevill.

Mr. BEVILL. Yes, sir. In your testimony then the GAO seemed to feel that their audit of the U.S. participation in this was adequate? Is that what you are saying?

Mr. HENNESSY. They have not sought at any point in time to have direct access. They understand the international nature. What they have tried to do, and I think this committee and other committees have made sure, is see that the audit procedures of the bank and the insight into the operations of the bank through this group of comptrollers, for example, are such that full information is provided and so that in no way is the control system diminished.

Mr. PASSMAN. Would the gentleman yield again?

Mr. BEVILL. Yes, sir.

Mr. PASSMAN. If that be true in this instance, then why shouldn't we abolish the GAO? Why go in and audit the Department of Defense or audit any department of Government if these auditors and audit procedures within the organization are so foolproof and so good?

You are not saying, are you, that the internal auditors of the Inter-American Development Bank are better than the internal auditors of the Defense Department?

Mr. HENNESSY. No; I am not.

Mr. PASSMAN. I think you are really standing on poor ground there. I think that we are going to pursue this later and I hope the committee will consider later putting back the amendment they approved about 2 years ago and let us just see if they can't make it stick.

Mr. BEVILL. I believe my time is up.

Mr. PASSMAN. Mr. Miller, we are on the Inter-American Development Bank.

ENERGY SUPPLIES

Mr. MILLER. Thank you, Mr. Chairman. I have just one question, Mr. Hennessy.

I notice that money has been loaned to develop 2.7 million kilowatts of new electric generating capacity. I am concerned about our own energy problem. Even though this is in another country, what type of fuel would they use there? Would they be in competition with us through a third nation for fuel for their energy with this particular new electric generating plant?

Mr. HENNESSY. I think we have to break down the data but a large portion of what the Bank has done has been hydroelectric projects in Paraguay, Brazil, so it would not be in direct competition. But I am sure there they have thermal plants which depend on petroleum as a base and, of course, Venezuela is the largest supplier of U.S. energy sources. They supply some of the other Latin American countries so there would be a certain degree of competition in there. But to get you a precise amount I would have to break it down between thermal and hydroelectric plants that they had generating.

[The information follows:]

IDB LOANS FOR ELECTRICAL ENERGY

The Bank has made loans for electrical energy totaling $982 million, to finance projects costing a total of $3.8 billion. These projects will provide a generation capacity of 10.4 kilowatts, of which 2.7 million is now in service. As shown in the following table, 95 percent will be generated by hydroelectric plants and 5

percent by thermal units. The breakdown by type of fuel used in the thermal plants is: 60 percent oil, 37 percent natural gas, and 3 percent coal.

IDB ELECTRICAL ENERGY PROJECTS (BY TYPE OF PLANT AND FUEL)

	Generating capacity	Percent
Hydroelectric plants	9,828,000	95
Thermal plants (of which)	547,000	5
Oil	327,000	(60)
Natural gas	202,000	(37)
Coal	18,000	(3)
Total	10,375,000	100

Mr. MILLER. If they are hydroelectric there is no problem because they are not going to use the fossil fuel. But it would be good for the record if we could indicate what type of fuel is used in the various plants.

Now, apparently there may be more than one electrical generating plant.

Mr. HENNESSY. Oh, yes, there are many.

Mr. MILLER. With the amount of kilowatts, and that would be an extremely high amount.

Mr. HENNESSY. There are many, many plants involved.

Mr. MILLER. Very good.

Thank you, Mr. Chairman.

GROUP OF COMPTROLLER RECOMMENDATIONS

Mr. LONG. Mr. Hennessy, a little while ago you told us that the GAO had requested the Treasury Department to advise GAO and the Congress of the recommendations of the group of comptrollers and their reports and whether these recommendations are accepted or rejected by the IDB's Board of Directors, and I asked you if you had agreed to this request and you said yes.

Mr. HENNESSY. Yes, right; that is correct. We said we would give to the Congress the recommendations. We provided the individual reports to the GAO; yes.

Mr. LONG. According to Mr. Eugene Wohlhorn, Assistant Director of GAO's International Division, the Treasury Department has not yet agreed to GAO's request to be advised of recommendations made by the group of Comptrollers of the Inter-American Development Bank in their reports, and Mr. Wohlhorn talked with a member of my staff this morning on this matter.

How do you explain this?

Mr. HENNESSY. Mr. Sternfeld is more up to date on this. I don't understand the contradiction.

Mr. STERNFELD. Mr. Congressman, the GAO receives copies of these auditors reports. They know all of the recommendations. Specifically in the case of the two recent reports, in the case of the Paraguay report, there were 20 recommendations. Seventeen were accepted by the Board and three were rejected.

In the case of the education report, the most recent one, also 20 recommendations were made. Fifteen were accepted and five were re-

jected, and we have the document from this group that shows as of November 1972 the status of each of the recommendations which the Board called upon the management to carry out, where it stands, how many have been implemented, how many have been partially implemented, and what the status of action is.

Mr. HENNESSY. I think I understand the question now. The GAO has asked us to submit answers to what has been done on the recommendations directly to them. We said we will submit them directly to the committee, the Congress, because we are not under GAO jurisdiction directly. We thought the proper procedure was to prepare and submit the answers directly to congressional committees, which is what we have told the GAO, and that may be the misunderstanding or misinterpretation here.

Mr. LONG. Any particular reason why you made the GAO get it the hard way rather than giving to them directly?

Mr. HENNESSY. It may be a formality. They get copies.

Mr. LONG. They are the watchdog of Congress. We rely on them for help.

Mr. HENNESSY. That is correct. We report directly and this is why we are here before the committee. We provide them with copies of things but we see the authority flowing from the Congress directly over to us in this particular field.

Mr. LONG. Do I detect a certain amount of tension then between you and the GAO—unwillingness to give them the information they want?

Mr. HENNESSY. I don't think there is a problem. As I say, it is a question of the procedure and the process.

Mr. LONG. Have you told them where they could go to get it?

Mr. HENNESSY. Yes, I believe we have. Yes, it is in the report.

FSO RESOURCES

Mr. LONG. On page 8 of your statement you discuss the request of $500 million for the Inter-American Development Bank's Fund for Special Operations at the soft-loan window. You state the action is needed if IDB concessional lending is to continue through the calendar year.

Are you saying that the fund for special operations cannot continue without the appropriation of the full $500 million?

Mr. HENNESSY. They would run out of available funds by the end of this calendar year which means they could not then continue beyond that point if they didn't get any new funds. This in the past has been a great question of concern. They have undisbursed loans but we clearly don't think in the Treasury the bank should make a loan before the Congress has appropriated the funds because the funds may never be appropriated and then they would have undertaken legal commitments.

Mr. LONG. What is the unobligated money that isn't in any way indicated as being loaned?

Mr. STERNFELD. On December 31, 1972, there was $352.5 million in dollars unobligated.

Mr. LONG. In that one fund?

Mr. STERNFELD. Yes.

Mr. LONG. How much do you calculate is going to be available at the end of this fiscal year, 1973?

Mr. STERNFELD. It is our estimate that all of that money will be committed, obligated before the end of the calendar year.

Mr. LONG. Will be committed?

Mr. STERNFELD. Committed, obligated; committed in our terminology.

Mr. HENNESSY. If you look backwards, because of the cuts they have had to cut down the amount of soft lending they have done. I think 2 years ago they were up to $450 or $460 million a year. Last year that came down because of lack of availability, and even projecting at the lower level of last year they are going to run out about three-quarters of the way through the year.

CONCESSIONAL TERMS

Mr. LONG. These are juicy loans. You say 2 percent interest with terms of 30 years?

Mr. STERNFELD. Yes, sir; some of those loans. Some of the countries get them for 30 years, depending upon the economic state of the country. The more developed they are, the shorter the term.

Mr. LONG. This is in countries where the market rate of interest is usually anywhere from 8 up to 20 percent; isn't that right?

Mr. STERNFELD. That is correct.

They have high rates of inflation in those countries.

Mr. LONG. I am just wondering why the soft loans have to be so soft.

In a country where hard loans are about as hard as marble why do soft loans have to be so extremely soft?

Mr. STERNFELD. I would agree with you in countries where they have a very good debt repayment capacity. You get down to some of these countries like Mr. Hennessy earlier mentioned like Haiti, or Ecuador, Bolivia, their capacity to repay these loans is on the increase but it is limited and that is the reason for the softness.

Mr. LONG. That is what I don't quite understand. These are countries in which rates of interest are very high because in the esoteric language of economists—the marginal productivity of capital is very high because there is very little capital in relation to anything else; so capital on the private market has very high rates of return.

In a setting like that you would think that another $100 million or so would have a very high yield if it were put to the best use and consequently I am puzzled as to why with capital so scarce, so precious, where people really pay usurious rates—I have seen in Mexico and other countries, where people are paying up to 50 percent, 100 percent of interest every year, so that even hard loans would be of enormous value in those countries—that we practically give money away.

Isn't it true when you loan money for 30 or 40 years at 2 percent you are not giving it away completely but you are half giving it away? This is half a gift?

Mr. HENNESSY. I think part of the policy is the difference between the private rate and social rate of return. This interest structure has to go along with the business and the rest where they can pay the hard

rate because the marginal productivity of capital is high, but the marginal productivity of capital for education has a long leadtime so the longer term is needed for education, and for housing, and that type of thing.

The rate of return can't pay off a 20 percent loan or even an 8 percent loan.

Mr. LONG. You educate these people. You put people through school. It only takes about 6 or 8 years to get a kid through grammar school. They don't really go much beyond that, most of them.

Mr. HENNESSY. The bank has a lot of secondary and higher education.

Mr. LONG. There is some assumption that this does have a yield, not 30 years, but 8 or 10 years.

Mr. HENNESSY. It has to have a yield of 10 percent. It is strung out and there is no foreign exchange component to it. It is not generating any new exchange and in fact you may increase the demand for exchange.

So there is a transition period and then they can generate their repayment.

Mr. LONG. I went through a housing project in Venezuela where there were some vacancies, because the people were being charged pretty good rents. Actually they weren't very poor people. They were middle class people who were being rented this housing.

Now, the money that we were lending to the Venezuelan Government under your IDB or whatever it was, was at these very low rates, but the housing authority was charging not hard loan rates as we would think of for those countries but much harder than these, so that the people weren't getting the advantage of this.

It was somehow going to the government and nobody really knew exactly where it was ending up, maybe in the hands of the builders and so on. Doesn't that bother you?

Mr. HENNESSY. If it ended in the hands of the builders it certainly would.

Mr. LONG. Doesn't it bother you when you make money cheap and easily available that maybe they don't make the best use of it and a lot of it is being just put into very low-grade investments because it is such cheap money?

Mr. HENNESSY. I think that is an inherent danger in any of these things but the bank does a project analysis of each individual loan. They look at the cost-benefit and they say unless they have at least a 10-percent economic return on that investment, they won't undertake it. A 10-percent return, that is the cutoff rate.

They normally want higher rates of return. These cost-benefit ratios aren't perfect, but that is a de minimis return.

AUDIT OF INTER-AMERICAN BANK

Mr. LONG. I understand that. Of course, we have to take your word that the bank does these things and looks into these things as capably as our watchdog, the General Accounting Office, might.

What is the objection to having the General Accounting Office find out whether, in fact, your judgment is the judgment of a prudent

person who is investing his own money, his own hard money, in these areas?

You were arguing a little while ago that, if we opened this up for audit, all the 22 countries would want to audit. This is extremely unlikely because most of them don't have a General Accounting Office and an audit would be very expensive. My guess is most of them wouldn't be bothered with it, and you might get two or three countries auditing, but you wouldn't get all of them.

Mr. PASSMAN. What would be wrong with it if they did?

Mr. LONG. That is right. Of course, you don't want to have people coming in on you every day and looking at your books. I can understand that. But how do you expect Congressmen, who are, after all, taxing and appropriating money of their constituents, to turn it over to an international organization that says to Congress "We aren't going to let you look at the cards in our hand. You are going to have to take our word for it that this is done intelligently and wisely. You just be assured that we are sensible, intelligent people and we used good judgment."

How can you expect Congressmen to want to give multilateral loans and put our aid over on a multilateral basis if that is the attitude you folks and those institutions are going to continue to take?

Mr. HENNESSY. I think I would make a real distinction here. What I am saying is GAO can look at the cards. They can look at the books, but they can't go into the bank's organization and go over the books. We provide them with the information. For each loan that the bank made last year we turn over the loan documents they can look at. And we provide them with each and every in-depth loan document, so it is not a lack of information. It is just they cannot go directly to the bank and go in and audit the books and the rest. There are outside auditors—it is Price, Waterhouse for the bank—and they do an outside audit, but the GAO physically can't go into the bank and do that.

They have to work through the executive branch which provides them with the loan documents, the economic analysis, the technical studies, the engineering studies, whatever they want, and GAO itself has gone out into the field and looked at some of the projects. It has seen what the AID mission, which helps us supervise these, is doing and what the embassies are doing out there.

I think it is the same as General Motors which has a subsidiary. They want to make sure the control system is there and they have access to the information but it may not be the head office official of General Motors who goes out and looks at the books of their subsidiary.

Mr. LONG. According to your own figures here, 55 percent of all of the Inter-American Bank total to date through fiscal 1972 was U.S. money and 76 percent of all of the money for the Fund for Special Operations, the soft loan fund, which is, of course, the one that is most in danger of being used unwisely because of the very soft terms. Don't you think that puts us in a little special category, if we are putting up between 55 and 75 percent of the money, that our General Accounting Office shouldn't have some little special right to see how the money is being used?

Mr. PASSMAN. Give a very brief answer, if you will.

Mr. HENNESSY. I think we do have a special position but I still think the existing control system is operational and correct and gives the assurances we both need.

Mr. LONG. You are entitled to feel that way but if you were in my shoes and the shoes of the chairman you would pardon us for not feeling that way.

Mr. HENNESSY. I understand your feelings but I think if I were the head of General Motors and thought my subsidiary's control system wasn't correct, I would correct the system.

Mr. LONG. Of course, we are not General Motors. We are the Congress. But is GAO satisfied with this system?

Mr. STERNFELD. Mr. Long, if I can give you some history, it was the Congress that asked the Secretary of the Treasury by statute in the Inter-American Bank Act, instructing the U.S. Executive Director to get an audit system set up in the bank, this group of controllers. There is also a specific provision in the law which calls for the Comptroller General to view these audits and findings and report to the Congress and the Treasury on how the whole system, including the auditing system, reporting standards and what these independent audit systems are doing or what anybody else in the bank is doing.

We have been providing all this information to the GAO. It was the United States that got this group established. We did exercise our influence in the bank. There was strong resistance to it, tremendous resistance. As it happens, it is 5 years later now and the other members of the board appreciate the work of this group. This group reports directly to the board.

Mr. LONG. If they like to have them, I would hope they would like to have GAO. Let me serve notice that, as a member of this committee, I am not going to vote for any extension of our multilateral loan procedure and the turning over of our aid funds to multilateral institutions, until we get the kind of audit that I think we are entitled to. I think the GAO needs to do its job of being the watchdog for the U.S. Congress.

Mr. PASSMAN. Thank you, Dr. Long.

If I may elaborate on that before yielding to my very patient colleague from California, the GAO audits the books of every Government organization upon request, such as the Defense Department, Interior Department, Treasury, Post Office, and so forth. They have the right when a request is made and they uncover a lot of abuses. Reams and reams and reams of information has been developed by GAO and has been extremely valuable to Members of Congress in making corrections.

If it is good for the GAO to audit our Federal agencies, it would appear that an international organization would also benefit from their audits.

Let us just be realistic. Would there be any defense? If everything is in order, they have nothing to fear. I don't know why we shouldn't have that right of audit. You made the statement a moment ago that it was the Congress who passed this legislation. Everything that you do downtown is according to an act of Congress, is it not?

Mr. STERNFELD. Yes, sir.

Mr. PASSMAN. And, of course, a large percentage of all the bills that are passed by the Congress are drafted downtown by the downtown bureaucrats; is that not so?

Mr. STERNFELD. This particular provision——

Mr. PASSMAN. Let us get an answer.

Mr. STERNFELD. This particular provision was drafted in the Congress.

Mr. PASSMAN. Sure it was drafted. The suggestion comes down but a very large percentage of all bills enacted by the Congress actually are drafted downtown by the Department heads and sent up here; is that not correct?

Mr. STERNFELD. A large percentage are drafted downtown.

Mr. PASSMAN. That is exactly what I said: "A very large percentage are drafted downtown."

Mr. Roybal.

EMPLOYMENT OF MEXICAN-AMERICANS

Mr. ROYBAL. Mr. Director, during the last year, your office and mine have been in almost constant communication with regard to the employment of Mexican-Americans by the Bank. I have been submitted a long list of Spanish-surnamed individuals who work for the Bank but I have not been able to get the information I want.

I want to know how many of these individuals are Mexican-Americans. In your particular department as well as in other Federal agencies we find that they include people that they bring from Latin America. Most of those they bring from Latin America are here as permanent residents, but they are individuals who were solicited from Latin America and became permanent residents in order to take the job.

I don't think that this committee or this Congress should be financing that kind of a situation.

However, I still don't know how many of your employees are Mexican-Americans. Can you supply that for the record if you don't have it at the present time?

Mr. STERNFELD. I don't have it, Mr. Roybal, but I don't know how one can tell as to whether the individual is a Mexican-American——

Mr. ROYBAL. Very easily. The only thing you have to do is go back to their biographical sketch and find out where they were born. If they were born in the United States and have a Spanish surname it is assumed that they are Mexican-American.

Mr. STERNFELD. If that is the criteria, I think I can do that. If they were born in the United States——

Mr. ROYBAL. If they were born in Peru they are not Mexican-Americans. You cannot make a final determination of course but that is about as accurate as we can get it under the circumstances.

Mr. STERNFELD. They may have been born in Puerto Rico and listed as born in the United States.

Mr. ROYBAL. I, of course, would include Puerto Rico in that category.

Mr. STERNFELD. I don't have that but I can find out of the list of names which we supplied your office how many of these were born in the United States.

[The information follows:]

Of the 81 employees listed, 27 were born in the United States.

Mr. ROYBAL. Also in your communication to my office you say that you are submitting a report on the current picture of our efforts to have the Bank fill one of two top positions and one of those is a director of information and the other is auditor general.

You also state that there are two individuals under consideration, one for the position of director of information and the other is, I suppose, director of the small business activities department.

Mr. STERNFELD. Yes, sir.

Mr. ROYBAL. Where does the auditor general come into this particular picture?

Mr. STERNFELD. I am sorry. I was trying to give a report not only on the actions taken both on the director of information and the auditor general but other positions that we are looking at in the Bank.

Let me correct the report you have to say that as of last night the individual who was offered the position of chief of information has accepted and he will be on board on May 1. He is a Mexican American.

Mr. ROYBAL. What does the chief of information do?

Mr. STERNFELD. He is in charge of the total information activities of the Bank. He sits in with the top level of management. He reports directly to the President of the Bank and he has the press relations, radio-TV, trying to get the people in all the member countries from Canada to Argentina informed about what the Bank is doing.

Mr. ROYBAL. In other words, he is the public relations head of the Bank?

Mr. STERNFELD. Yes, that is what he would be.

Mr. ROYBAL. And he is not really involved in the day-to-day operations of the Bank, is he?

Mr. STERNFELD. Well, he can't do his job unless he knows what the day-to-day operations are.

Mr. ROYBAL. I understand, but he is not in a decisionmaking position with regard to that operation.

Mr. STERNFELD. No; I would think he would be advising the President on the public affairs aspects of the activities of the Bank.

Mr. ROYBAL. He is then the publicist, the writer, the public relations man; is that correct?

Mr. STERNFELD. That is a good description.

Mr. ROYBAL. Which, of course, is not in any way connected with the daily fiscal operations of the Bank as an auditor general would?

Mr. STERNFELD. He is not the auditor general.

Mr. ROYBAL. What has happened then to that position of auditor general?

Mr. STERNFELD. The auditor general position is currently filled by an American.

Mr. ROYBAL. My understanding was that it was open.

Mr. STERNFELD. There was some feeling that there may be a vacancy but it is filled by a man who formally works for Price Waterhouse. The man is still on the job.

Mr. ROYBAL. It was my understanding in the colloquy we had last year that that position was open and that you were out seeking someone for that position.

Mr. STERNFELD. There was a controller's job open.

Mr. ROYBAL. Is that still open?

Mr. STERNFELD. No, sir; it has been filled by a Canadian.

Mr. ROYBAL. By a Canadian?

Mr. STERNFELD. Yes.

Mr. ROYBAL. Well, here I have another country to complain about. I thought it was just the Latin American countries that were taking all the juicy jobs. Now we find the Canadians are also. I agree, of course, that they should have their proportional share of the jobs, but my observation based on what I saw last year and the year before clearly indicated that this was not the case at all, that Latin Americans and others were taking the lion's share of the jobs and that people here from the United States were not being given an opportunity to participate.

I realize that you did send out someone to California to interview people. I know exactly whom he interviewed. I know exactly what happened, and I don't think that we can kid ourselves with regard to the excuses given in your report for not hiring these people. One was that with the exception of two or three candidates their command of Spanish and knowledge of Latin America was poor, although both would be expected to improve with time.

How fluently does this Canadian speak Spanish?

Mr. STERNFELD. He understands Spanish. I don't know how fluent.

Mr. ROYBAL. Would you say he is more fluent than some of the people he interviewed?

Mr. STERNFELD. I have no knowledge of the people that were interviewed. I will check with the man who did the interviewing and see whether there is a——

Mr. ROYBAL. My contention is that this is a poor excuse.

Mr. STERNFELD. I am sorry, Mr. Roybal. I don't think I wanted to make the observation that these were excuses. This was just a report that was given to me on the results of interviewing these 23 people. These are the findings.

Mr. ROYBAL. Isn't it true that the jobs that you offered to certified public accountants in Los Angeles were not that of controller, or auditor general——

Mr. STERNFELD. Yes, sir.

Mr. ROYBAL. To whom did you offer the job of auditor general?

Mr. STERNFELD. The director of personnel went out to California and looked around for other people. He was interviewing people for both jobs, director of information or the auditor general. He was not interviewing people for the controller position.

Mr. ROYBAL. My understanding is that they were not offered a specific job.

Mr. STERNFELD. They were being looked at in terms of their qualifications for the job of Auditor General.

Mr. ROYBAL. In talking to some of the people who were interviewed, not a single one of them indicated to me that it was the job of controller or Auditor General that was discussed. What was discussed was a position of some kind. That they would have to come to Washington for an interview and it would be at that time a determination would be made as to what slot those individuals would be placed in.

Isn't that correct?

Mr. STERNFELD. I don't know what the man did. If that is what your people are telling you I am sure that is true, but what he was instructed to do was to go out and start a process of recruiting people,

bringing those people who passed through the screen to Washington for interviews on the Auditor General position, those people who had CPA's and were qualified.

His report, as I indicated, is that the people that he offered to bring to Washington for the Auditor General job, most of them were making more money than what this job would pay.

Mr. ROYBAL. What does the Auditor General job pay?

Mr. STERNFELD. Unfortunately I don't have it in gross terms. In net terms, it is $25,000–$26,000. In gross terms it is somewhere between $30,000 and $40,000.

Mr. LONG. Is that free of income tax?

Mr. STERNFELD. No; that is gross.

Mr. ROYBAL. I am not going to go into the income tax matter. But at $40,000 I can assure you they wouldn't refuse because I know every one of the individuals interviewed.

Of those who were interviewed I don't think a single one of them would have refused to come to Washington for $40,000 a year. My contention is that you went out there, conducted a survey to find out who was available and in effect said to them, "You will have to go to Washington. We don't know exactly what position we are going to place you in but we are going to place you in some position," and then you went ahead and said, "Compensation is in the neighborhood of $25,000 to $26,000 a year."

Each one of those individuals that you interviewed is now earning a great deal more than $25,000 or $26,000 a year.

Mr. STERNFELD. $25,000 or $26,000 is without the tax and that will come up to $30,000 to $40,000.

Mr. ROYBAL. That is not what you told them. There are ways of selling a product. You can present the subject matter in a way that will be attractive or not attractive at all. You remind me very much of the individual my grandfather used to describe, as the self proclaimed expert who would look for work every morning, but would kneel down before doing so and ask God not to find a person that would hire him.

I think you went out to California to make these offers hoping that no one would accept them and the way they were presented clearly indicates that this is the case.

Mr. STERNFELD. I didn't do it, sir. The only thing I know is that the Bank had the best man they could possibly get to do the recruiting, the director of personnel. The president of the bank assured me he gave him strong instructions to go out and recruit candidates. I didn't go out myself.

Mr. ROYBAL. It is my contention that whoever was sent out was not seeking someone to fill the position of Auditor General at a rate of $30,000 to $40,000 a year.

Mr. STERNFELD. Well, it was $25,000 or $26,000 net. I don't know what that comes up to.

Mr. ROYBAL. I say that no one was offered a job at $35,000 to $40,000 a year.

Mr. STERNFELD. Sir, I will go back to the president of the bank and have him call in the director of personnel, and I want to do it with not the director of personnel and myself only, and see what he tells the president of the bank and me.

Mr. ROYBAL. And I also contend that a good selling job was not done in getting these people to apply for these jobs. The reason I say that is because I talked to each one that you interviewed, not you personally but whoever did the interviewing, and I was told by these same people the same thing.

"Why should I take a $25,000 to $26,000 job when I earn more than that now?"

No one told them that it was between $35,000 and $40,000. They all mentioned the same $25,000 to $26,000.

Mr. STERNFELD. OK, I told this man you were going to be after me. I knew that.

Mr. ROYBAL. Right.

Mr. STERNFELD. And if he didn't come through he would have to justify it. I am sure every U.S. citizen that the Bank interviewed had to be told that the salary being quoted was net salary and there was a tax on top of it. But I will report back to you as to what his answer to me is.

Mr. ROYBAL. You mean there is a net salary and there is a tax on top of it? I don't understand what you mean.

Mr. STERNFELD. The Bank reimburses the individual for the tax on that salary.

Mr. ROYBAL. This is another point, incidentally, that was not put across to these prospective employees. That the salary is $25,000 to $26,000 per year net after taxes.

I still feel that this was not properly done and that a good selling job was not the main objective of the offer that was made. Now, this is not really a criticism of you personally.

Mr. STERNFELD. I know what you mean. It depends on how somebody approaches it. If a man is going out on a recruiting job he should be going out to sell.

Mr. ROYBAL. That is correct. A job specification stating the duties and pay were not given the individual. I think it should be done while presenting a job offer to an individual, particularly a certified public accountant already well established in his area who might be induced to come to Washington, if, of course, it is beneficial to him financially. There is nothing more beneficial than the tax advantage you fellows are getting with regard to your income taxes, and if you can't sell that you can't sell anything.

That is all, Mr. Chairman.

PURPOSES OF FOREIGN AID

Mr. PASSMAN. Thank you, Mr. Roybal.

Mr. Hennessy, according to audited figures the foreign aid and assistance programs net cost to the U.S. taxpayers since its inception after World War II when we include the interest on what we have borrowed to give away is now about $250 billion.

Is that in the neighborhood of the information that you have?

Mr. HENNESSY. I don't believe we make the interest adjustment but that sounds not out of the ballpark.

Mr. PASSMAN. I think the purpose of foreign aid as espoused by the sponsors in 1947 was to help our neighbors, primarily at that time in

Europe, and later it went around the world until finally U.S. aid reached 127 nations of the world. Does that sound correct?

Mr. HENNESSY. Yes, sir.

Mr. PASSMAN. Which is just about all the nations of the world. I think the purpose was to help mainly underprivileged people, to give them a better standard of living, and a better education so that they, too, could share in the resources of the country.

Is that the general purpose of it?

Mr. HENNESSY. Help people help themselves, yes, sir.

Mr. PASSMAN. Would you at this time based upon your evaluation of the program feel that it has succeeded?

Mr. HENNESSY. It certainly has succeeded with a large majority of the countries but certainly not all.

Mr. PASSMAN. I am not saying that all of them reach perfection but do you think that we have lessened poverty, increased education, and by and large helped the people around the world with this program?

Mr. HENNESSY. Yes, sir.

Mr. PASSMAN. It would be an act of complete dishonesty to lead you any further. Every witness before this committee makes the same statements that you make and I know that they are dedicated public servants. They feel that way.

But when we go to the justifications of the very witnesses who come before the committee, and this particular testimony is from the Peace Corps, here is what they say on page VI:

> It is commonly agreed that the gap between rich and poor nations continues to widen despite two decades of concerted efforts by leading developed nations.

They go on to say:

> The first lesson was that transferring capital and Western technology alone were not enough to affect the significant well-being of the 2 billion poor people in the developing world.
>
> The World Bank estimates that 1 billion people are still hungry or malnourished and that there are 100 million more adult illiterates today than there were 20 years ago.

So if you have 100 million more illiterates today and the spread between the rich and poor is continuing to widen, then it could be said that we rendered a disservice and prompted these people to become complacent and not work for themselves.

It is pretty hard in the face of this direct testimony for members of this committee to rationalize some of the justification presented before the committee. A lot of people believe that when you do for people what they could and should do for themselves they become too dependent on others.

One of the poorest nations of the world, India, you may recall, said, "Actually your aid is doing more harm than good. We wish you would discontinue it."

Some of the Indian public officials made that statement, and I don't think we should continue discounting some of these statements made by these people.

Mr. HENNESSY. I believe most of them are telling us to double our amount and triple and quadruple the amount of our aid because the needs of these countries are so great. I think by and large in the developing countries we, that is the industrial nations, put up I guess

10 percent of the investment and they, the developing countries, have to put in 90 percent.

I think we want to encourage a system which puts the major burden on them to save more and to put up their own funds.

Mr. PASSMAN. I know it, but people who appeared before this committee 20 years ago painted a very rosy picture that they were making great progress and every year now they would see improvement, by creating better family living, better education, and more schools. You ought to read some of the old hearings, and read the very rosy reports about what they had accomplished, but it would appear now at this late day after $250 billion of our resources have gone down the drain we have people now actually saying that poor people are poorer and we have 100 million more adult illiterate people today than 20 years ago.

Mr. HENNESSY. I think one of the major problems is population growth, and that is one of the things the banks had not gotten into until very recently, because the population growth has outstripped the ability of anyone to provide resources.

They have now, including India, developed a number of programs. I think that is a very key issue which I think with some of the rose-colored glasses in the early years people overlooked.

Mr. PASSMAN. The facts are, and we agreed earlier, that all this was done on borrowed money and that former recipients of this aid program are making Mickey Mouse currency out of our money, laughing at us and running from the dollar. Regardless of how desirable, if it is good at all, we have gone far too fast and the American economy can no longer support programs of the magnitude you people advance.

I read this article which I think is from the U.S. News & World Report and it impressed me. It said:

> U.S. citizens, the overburdened taxpayers, are of the firm opinion that too many foreign nations are now living beyond our means.

I think that is pretty true.

Mr. HENNESSY. I think we would be in pretty tough shape, and take the case of Latin America, Mr. Chairman, if they stopped purchasing our products and if we lost our favorable trade balance with Latin America that would not be very favorable to us right now.

Mr. PASSMAN. I think this quote would apply to what you are doing with foreign aid:

> It has taken money from the poor people in rich countries and given it to rich people in poor countries.

It is pretty hard to discount the real accuracy of that statement.

Now, if we must deal with dollars, I know a little something about the free enterprise system. I am a product of it. I know a little bit about banking, more about borrowing than anything else, but usually business corporations set up their capital account in banks and they expand out of the earnings, do they not?

You are a banker.

Mr. HENNESSY. Yes, sir.

Mr. PASSMAN. Capital stock and paid in surplus. You begin then to expand out of your profits. Why don't you people operate that way? You always have to come back for more. You have an appetite that can't be satisfied.

Every year in every foreign aid program, whether it is multilateral or whether it is bilateral, the amount, Mr. Hennessy, keeps growing.

You are from the Treasury Department. You know that all the requests when you put them together in the fiscal year 1974 budget exceeds $18 billion for foreign aid. We have a lot of sympathy for poor people because quite obviously you know my background. I came from very, very poor people, sharecroppers. I never had to apologize for it, they were good Christians and hardworking people. They never went to their government for subsistence. We carved it out the real old hard way.

Mr. HENNESSY. I come from the same type of background, Mr. Chairman.

Mr. PASSMAN. All right. I think actually that not only in foreign countries but right here in our own country we are just training a lot of people to stop working for a living. We keep saying: "The Government will take care of you." It has just gone too far, but you do have a lot of people in America in certain areas that maybe are poverty stricken just as some of the people that you are speaking about in other countries. It would appear to me in a great many instances we are neglecting America to take care of people abroad and unless I miss my guess, unless you people scale down greatly your requests for foreign aid this year, you may wind up with no foreign aid at all.

You remember when everything was OK in this country, moving along fine, you could only pass this bill by about seven votes in the House. Didn't it get down to about seven votes?

Mr. HENNESSY. I can't remember, but it was quite close.

RESERVING OF FUNDS

Mr. PASSMAN. That was when everything was going along lovely. Every American was getting his projects financed. You realize that in the interests of economy, cutting back on expenditures, keeping the budget deficit down to $28 billion this year, that the President impounded funds on many, many public works projects similar to what you are doing in Latin America, isn't that true?

Mr. HENNESSY. There is some reserving of funds; yes.

Mr. PASSMAN. I wouldn't try to put words in your mouth. What I mean, they have canceled projects, ongoing projects, where there is a need to keep them going, they suspended the operation and just said, "Sorry, we are going to have to stop this project." You have other projects where they were placed in budgetary reserve, and they will never be put back into effect.

I don't quarrel with the President for impounding $8.7 billion to keep the expenditures down but even in light of that, you foreign aid people are going to help build a deficit of $28 billion. I wish you would take this message back to OMB, that they had better scale these requests down. If they don't, you will wind up without any bill at all.

REQUEST FOR IDB

If I may reemphasize just one thing, last year you requested for the fund for special operations, $450 million. We gave you $225 million; is that correct, in a continuing resolution?

Mr. HENNESSY. Yes; that is correct.

Mr. PASSMAN. Now you are back in requesting $500 million. The only way I can see it, and it is quite characteristic of many of the bureaucrats downtown, when we cut their request, they come in with a supplemental, get it all back plus a little penalty for being annoyed.

In this case we gave you $225 million and you come in this year asking for $500 million, which is getting back not only what we cut out last year, but you are getting million more for annoying you.

Mr. HENNESSY. If that was correct, sir, we would be asking for $725 million.

Mr. PASSMAN. If you would have gotten what you asked for, you would have received $725 million for this one account; wouldn't you?

Mr. HENNESSY. $500 million plus $225 million would be $725 million; that is correct.

Mr. PASSMAN. Where we gave you $225 million last year?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. Then when you add that to what you are requesting, if you should get it, you would have $725 million.

Mr. HENNESSY. Yes. What I am saying is if we added on what we lost last year to our original request, we would have come in with a request of $725 million and not with $500 million.

Mr. PASSMAN. You can't satisfy your appetites down there, but let's just deal with the facts of life. You are actually not only doubling what we gave you last year, you are adding a little penalty in there.

Mr. HENNESSY. We start from a different basis, you know.

Mr. PASSMAN. Oh, no, you people go out and make these commitments. Heretofore you have been behind a smoke screen, not you, but the aid programs. In the past we heard: "This is an international organization, a sacred cow. Our people made these commitments, and you have no alternative other than to appropriate the money." We looked into the law and I am glad today that you admit we have the right to make these reductions.

Mr. HENNESSY. On this particular point, Mr. Chairman, I think you asked us last year not to go out, not to make any new commitments, but to keep you informed of any international discussions which might commit the United States, and I think I can come back and say I think we have been responsive to the committee in that sense. There are a number of international discussions on new replenishments starting 2 and 3 years from now which I have mentioned in my testimony. At some point I would like, if the committee's time so permits, to discuss them. For instance, in the IDA, which isn't the subject of today's discussion, we are in the process of trying to reduce. You may not believe your ears, sir, but we are actually trying to reduce the U.S. share from the 40 percent which has caused you some concern to 30–35 percent.

Mr. PASSMAN. Wait now. You are using statistics that you people use in creating these formulas. You are not using the committee's statistics. I am using what the committee feels should be adequate, and that was $225 million for the fund for special operation last year, and this year you are asking for $500 million. You say, "Well, if we had gotten what we wanted it would be $725 million". No doubt that is true. I think that is an accurate statement if you got what you want but the facts are we have to go out and borrow this money. If you people don't scale down these requests, I don't actually believe that you can get a bill through Congress. It is going to be rather difficult for me to take this bill out on the floor of the House. Congress is going to think about those projects back in their own districts that have been closed down, they can't get a dime, and they know that you people

are funding the identical projects all over the world. You see my point, don't you?

BURDEN-SHARING

Mr. HENNESSY. I understand your point. The one difference if I might say here is that in all of these institutions the idea is to get others to put in more dough. In the Latin Bank you are right at this time, it is just Canada and us. We are trying to get others in. In IDA we are trying to reduce our share from 40 to somewhere between 30 and 35. We keep going down to our needs. I don't think you are saying at the same time that we should get out of these institutions that they are not useful, they are not useful to the President's purposes. It is a question of what is the relevant amount and I think here there may be a difference.

Mr. PASSMAN. Mr. Secretary, this reminds me, I used to go deer hunting, and just on impulse I would shoot the first rabbit I would run into. I have never killed a deer yet, you understand. I just couldn't hold back. I am about to waste some of my ammunition. You talk about IDA. We will repeat this 50 times before we finish with IDA. You talk about cutting the percentage back. I am not interested in the percentage. I am interested in what you are giving IDA. You started with a request for $61 million. You jump it after 3 years to $104 million, then to $160 million, then $320 million.

Mr. HENNESSY. That is correct.

Mr. PASSMAN. Let's look at the record. Why don't you fly to London or possibly France and go into the Parliaments and listen to those people arguing to put up their 12 percent against our 40. You know what their argument is? "If we put up 12 percent we get 40 percent from the United States". Do you know who gets most of that money? The former colonies of the United Kingdom, where they have very strong and profitable trade ties. Remember that the United Kingdom indirectly becomes the recipient of not only their 12 percent, but our 40 percent. You and I know that two of their former colonies get 60 percent of every dime that is expended out of IDA, isn't that true?

Mr. HENNESSY. I think they would resent being called colonies.

Mr. PASSMAN. I said former colonies. Aren't they former colonies?

Mr. HENNESSY. They certainly are.

Mr. PASSMAN. What is to be resented about referring to them as former colonies? I guess the ties are much closer to the United Kingdom than they would be to the United States, wouldn't they?

Mr. HENNESSY. I am sorry, sir.

Mr. PASSMAN. The ties of the former colonies would be closer to the United Kingdom than to the United States.

Mr. HENNESSY. I think they purchase from whoever sells them the cheapest goods.

Mr. PASSMAN. Look at the statistics and don't guess. Pakistan and India get 60 percent of all the money disbursed out of IDA.

Mr. HENNESSY. 52 percent right now.

Mr. PASSMAN. 60 percent was the figure you gave us last time.

Mr. HENNESSY. A couple of years ago.

Mr. PASSMAN. It could go to 80; 60 percent was the last figure you gave me. Isn't that correct, until this year?

Mr. HENNESSY. I think it was 2 years ago. Last year it was down to about 52 percent but you are right.

Mr. PASSMAN. I believe that Pakistan is a noncontributing member to IDA aren't they?

Mr. HENNESSY. Why?

Mr. PASSMAN. They put in $1 and draw out $52, don't they?

Mr. HENNESSY. Obviously that is the purpose of the Bank; that is, to have them make a contribution; but while they are in an eligible role as a borrower they can borrow funds from the Bank.

Mr. PASSMAN. We turned around and gave Pakistan the money, made them a grant to buy their share into IDA, so they could become a recipient, and for every $1 they put in they drew out $52. If you move over to India we did the same thing. We gave them the money so they could pay in their dues as a grant. Now for every $1 they put in they draw out $44. I would love to belong to a club like that, wouldn't you.

Mr. HENNESSY. If I had to pay the $40 back I think I would make sure I was using it well but I think the $40 to $1 is not the percentages, at least in our analysis.

Mr. PASSMAN. How are we going to reconcile this difference, whether it is a bank in your hometown or in my hometown? They go in with a capital structure. They pretty much limit their operations to their profits. What you people are trying to do is go too far too fast, instead of setting up an account on the basis by which you can operate with the capital and not keep asking for new funds. Why wouldn't you give some thought to that? Why every year must we come in for additional large contributions to the same international organizations?

Mr. HENNESSY. I think part of it is in the items you read to us, that the needs are there. We obviously can't plug all the needs. I think one analysis shows needs of $15 billion a year.

Mr. PASSMAN. In the past it has been said that you made great improvements, whereas the record shows just the opposite. Do you realize if we had some way of turning all the wealth of America into money, every bit of it, and started dividing it with all the other nations of the world you could only increase their standard of living by a small percentage. Why must we bankrupt ourselves and destroy this Nation that we have built for all the other many nations around the world? I wish you would handle this bill for me this year.

SOUCES OF IDB FUNDS

What is the total capital structure of the Inter-American Development Bank for paid-in capital, from all sources? What has been paid in?

Mr. STERNFELD. Mr. Chairman, paid-in capital has been $3,697 million, of which the United States has put in——

Mr. PASSMAN. Let's get it all together and then go back and get the divsion. That is both windows.

Mr. STERNFELD. Those are both windows.

Mr. PASSMAN. And how much?

Mr. STERNFELD. Both windows it is $3,697 million.

Mr. PASSMAN. What percentage have we paid in?

Mr. STERNFELD 66.4 percent.

Mr. PASSMAN. Of the total?

Mr. STERNFELD. Of that total, both windows.

Mr. PASSMAN. As we had agreed earlier until Canada came in, by solicitation I am sure, the United States was the only nonrecipient of these funds. You may have given them the money, how do I know, but the other donors are actually the full recipients; is that correct?

Mr. STERNFELD. Until Canada arrived; that is correct.

Mr. PASSMAN. We have made the record. You know why they are in there.

Mr. STERNFELD. We are trying to get 17 others as Mr. Hennessy said.

Mr. PASSMAN. How much do you have undisbursed?

Mr. STERNFELD. The undisbursed amounts from both windows were $2,280 million of which dollars is $1,842 million and the Latin American currencies, $438.

Mr. PASSMAN. Let's get the grand total. You add to it the local currency; do you not?

Mr. STERNFELD. Yes; I included that. That is $2,280 million.

Mr. PASSMAN. How long has the Inter-American Development Bank been in operation?

Mr. STERNFELD. Since 1959, when it was established.

Mr. PASSMAN. So over 14 years of the $3,697 million, you have only disbursed about 40 percent of the capital paid in; is that correct? Use your own figures.

Mr. STERNFELD. There have been repayments, sir.

Mr. PASSMAN. I am looking at the net disbursement, put in on that basis. Let's first get this percentage.

Mr. STERNFELD. You asked for paid in, and perhaps I was taking your words very literally. There is callable capital, which we have subscribed to, which we haven't actually paid.

Mr. PASSMAN. I am talking about the amount that has been paid into the Bank and the amount that has been disbursed against that amount.

Mr. STERNFELD. The loan disbursement in this Bank have been out of the two windows and have totaled $2,551 million.

Mr. PASSMAN. When did you go in business; 1959?

Mr. STERNFELD. 1960 you could say.

Mr. PASSMAN. In 14 years you still have undisbursed one-third of the accumulation for a 14-year period, is that correct? It is simple mathematics I should think.

Mr. STERNFELD. Roughly that is correct.

Mr. PASSMAN. Aren't you pyramiding these funds?

Mr. STERNFELD. No, sir.

Mr. PASSMAN. I don't see how you can say no, if you have one-third of all the capital that has been paid over 14 years and still they are undisbursed.

Mr. HENNESSY. It is the unobligated amount that is important.

Mr. PASSMAN. I am familiar with what you mean. Yes; you get these things obligated. Sometimes you are obligating projects 10 or 15 years in advance of completion; aren't you?

Mr. HENNESSY. Seven years I believe is about the maximum in the Bank, but some of the river basin projects here in the States take a lot longer.

Mr. PASSMAN. Let me tell you, my friend, you had better get your statistics right. Here in the States you get just one slice of money at

a time. You don't get all that money. If you have a $100 million project, you are darn lucky to get $6 million cash 1 year. Next year you may get $2 million. The way you people operate, you want all the money paid in for a project when it is started.

We are very, very lucky to get one little slice each year. Do you know how long it takes to complete a public works project in America, where we have the greatest engineering force in the world, the Corps of Engineers? On a flood control project, it takes an average of 17 years, 11 months. You ought to realize how hard it is to get a project in America. It takes 17 years, 11 months to get a flood control project started and completed, and here you people are having projects funded, cash on hand 7 years in advance. What a contrast.

Mr. HENNESSY. I think they are letters of credit. They are not really cash. They draw on them like the highway trust funds.

Mr. PASSMAN. It is still full funding. The money is paid in.

Mr. HENNESSY. That is correct. We wouldn't want them to start a project if they didn't have full funding in this sense.

INVESTMENT IN U.S. GOVERNMENT SECURITIES

Mr. PASSMAN. Let's look at one of your international organizations, the Asian Development Bank. They came in here with one of these stories about the great good they were going to do. We gave them a grant. We went out and borrowed $20 million from the American taxpayers and gave it to the Asian Development Bank. About 3 months later we borrowed the same $20 million back from them at 6 percent. Are you familiar with that?

Mr. HENNESSY. We made a capital subscription.

Mr. PASSMAN. I know, you can jazz it up any way you want to but it follows, nevertheless, that we gave them a $20 million grant.

Mr. HENNESSY. When they first started they needed capital.

Mr. PASSMAN. Am I making a statement of fact? In just a few months we borrowed the same money, $20 million, back from them. Now, chapter 2, Thailand is a member and a recipient of the Asian Bank. They built up $1 billion foreign exchange reserves which they had no need for. They met all their commitments to commerce. Didn't we go out there and borrow $100 million from Thailand at 6 percent due in 4½ years, and that $100 million note will come due July 2.

Mr. HENNESSY. The U.S. Government?

Mr. PASSMAN. I will bet you $100 to 30 cents. Have you got any money on you? Is that right?

Mr. HENNESSY. Yes; apparently they invested part of their reserves.

Mr. PASSMAN. I want to put that in so people will know really how stupid we are. My apologies, if I have been a little harsh, but somewhere along the way something has to be done. It has to be done, and we have to state these factual statistics.

[Discussion off the record.]

UTILIZATION OF IDB FUNDS

Mr. PASSMAN. Last year we provided the Inter-American Development Bank with $193,380,000 for the callable capital and $225 million for the funds for special operations. Could you tell the committee if all these funds will be fully utilized before the end of fiscal 1973?

Mr. HENNESSY. I defer to Mr. Sternfeld.

Mr. STERNFELD. No, sir. The fund for special operations funds will be fully utilized before the end of calendar year 1973. I would expect that will be also true about the ordinary capital.

Mr. PASSMAN. I didn't get that first statement. It would be what?

Mr. STERNFELD. The first statement was that the $225 million you asked me about, the fund for special operations, that would be committed before the end of calendar year 1973.

Mr. PASSMAN. Before calendar year 1973?

Mr. STERNFELD. Yes, before December.

Mr. PASSMAN. We operate on a fiscal basis. I understand how you fund. Over half will be left as we close our fiscal year. You are going to go 6 months beyond the end of the fiscal year.

Mr. STERNFELD. We probably will go 4 to 5 months beyond the end of the fiscal year, beyond fiscal year 1973. We will go beyond that. Mr. Chairman, the situation is such that the United States cannot inform the Bank as to what funds it has available. The Congress does not appropriate the funds generally until the month of October and sometimes it has been later, and the Bank has had to plan on the basis of going beyond our fiscal years.

Mr. PASSMAN. We go out around the world and say to these nations, considering only the international financial institutions, "We are going to give you billions of dollars." There are no provisions to ever bring one dime of it back to the U.S. Treasury. That within itself is bad enough, but because of our wild spending abroad and at home we have destroyed a good part of the value of the dollar. Then these people come and say, "Well, now, that money you gave us won't buy as much as it would when you gave it to us. We want you to provide additional funds."

Then you come up here and ask the Congress to put up $2,250 million so as to bring the purchasing power of the dollar up to the same level it was when we gave it to them. Isn't it just about that way?

Mr. HENNESSY. Yes.

Mr. PASSMAN. You know I would vote for you tomorrow for Secretary of the Treasury. You are just as forthright as can be. Why don't you help us bring this confounded thing under control before it destroys all of us? I apologize again if it appears harsh, but I can't sleep at night worrying about these things. I don't have the capacity to actually get it before a sufficient number of people and it is worrisome. You have been so completely forthright I am going to stop my interrogation at this point and hope that we can, with your help, bring these programs under control.

Mr. LONG. Mr. Chairman, before we adjourn——

Mr. PASSMAN. I am not going to adjourn. I am going back around the table. I want you to then yield to Mr. Roybal.

[Discussion off the record.]

Mr. PASSMAN. Of course neither this committee nor this Congress can commit future Congresses.

Mr. HENNESSY. I understand.

Mr. PASSMAN. I am afraid we are in trouble today by people believing that we could. We had better cross that bridge when we get to it. We will discuss it all right. There may not even be a foreign aid program but we will discuss it.

Mr. HENNESSY. That is all we are asking. Thank you very much.

Mr. LONG. Thank you very much, Mr. Chairman.

We were talking a little while ago about the need for an audit, and your feeling that such an audit was not necessary because the Inter-American Development Bank can be depended upon to deal in a prudent bankable way with its loans and its financial affairs generally. I have here a statement by the Comptroller General to the Congress made on August 22, 1972. The title of this is, "The U.S. Systems for Appraising and Evaluating the Inter-American Development Bank Projects and Activities, Findings and Conclusions." I think you probably have it. I am sure your man has just given it to you, is that correct?

Mr. HENNESSY. No. I have a copy. You have the entire report there.

Mr. LONG. "U.S. officials," says the report, "have pursued a soft line"—I guess by "U.S. officials" they mean the Treasury—

or low profile approach in their dealings with the IDB and its members. For the most part the United States has not done much more than agree to International Development Bank proposals put before it, or merely advise International Bank of a contrary or different U.S. view on a proposed project or transaction. Though U.S. officials privately have opposed loans behind the scenes, the United States has never voted against any loan proposed by IDB's President. On other issues the United States has not fared well. U.S. officials have been aware of persistent problem areas attending IDB's operations. There lack of forcefulness in handling these issues has let them go unattended or only partially corrected.

As a consequence, IDB has acquired a reputation as a borrower's bank, that is the 22 Latin American members generally shape policies and dictate terms and conditions under which they borrow. A number of significant deficiencies reportedly existing in IDB's organization, administration and operating practices, including inadequate project planning and execution remain uncorrected. U.S. officials have long known that IDB has not adhered to any stringent criteria based on economic performance of borrowing countries. Lending practices have been somewhat flexible and permissive, with reference to fair share allocations of resources, which allows political pressures from the borrowing countries to influence the process of development lending.

Such practices do not necessarily result in the best use of IDB's resources. The executive branch does not have an adequately functioning system for appraising proposed activities, following through on their implementation, and evaluating the results.

I want you to listen to this:

GAO's efforts in making this review were considerably hampered by the Treasury Department's long delaying tactics and refusal to make certain records available for examination.

Then at the end, two short sentences.

The Congress may wish to consider whether the executive branch's low profile approach in dealing with IDB and its members is compatible with the magnitude of financial support the Congress is asked to approve for contributions to IDB.

That is No. 1.

No. 2:

Whether the executive agency's decision to withhold certain information from GAO and the Congress concerning the IDB activities is compatible with such level of support.

Mr. ROYBAL. What is the date of that report?

Mr. LONG. That is August 22, 1972.

To me that is a devastating commentary on the way you run your operations and it is hardly likely to make a Congressman want to

accept your idea that we can take your word for it that you are running your shop well and you don't need to have our GAO, the one agency we can depend on in Congress, come in and look your books over.

Mr. HENNESSY. We certainly don't say, "At any time come in and look our books over."

Mr. LONG. Looking over the books of IDB.

Mr. HENNESSY. On this particular one we did, although I am not sure it is of interest to this committee but we did have joint testimony with the GAO which went at quite some depth into all these allegations before the House Foreign Affairs Committee Subcommittee on Inter-American Affairs on September 21, with some 100-odd pages here and I think what you notice is a lot of general inuendo but there is nothing specific.

There are a lot of general statements. We asked for specific cases. I think what we did find was that these are very few and far between and where there were specific recommendations made by the GAO they were adopted and they have been implemented and that it was what I would say is a very general and a rather negative approach which completely overlooked the main thrust of the Bank's operations.

In reading it you get, I will readily admit, quite a distinct impression and I think that in terms of GAO's own appraisal of the post-evaluation and control system and the general organizational tightening up that has occurred since the August date of that report, I think you will find there has been sufficient improvement but I would object very strenuously to the general tone of that report.

Out of, I think, some 150-odd pages of the GAO report they had three specific recommendations and those three specific recommendations we adopted and put into effect.

Mr. LONG. I wouldn't expect you to like the report very much. I wouldn't anyway. If this were the kind of report put out by some agency when I was coming up for election I would feel pretty unhappy about it.

I just want to say that I don't think it provides very strong support for your idea that we don't need the GAO, our watchdog agency, making very careful continual scrutiny and review of what goes on in the Inter-American Development Bank.

Mr. HENNESSY. We are all for it. It is the method of doing it I think we are discussing. If I could read into the record two quotes from Mr. Stovall of the General Accounting Office, Director of their International Division, it might be appropriate here.

On July 1 he stated before the Banking and Currency Committee, and I quote:

> It would be contrary to the concept of participation in an international organization for the many participating nations individually to seek direct access or audit authority which would inject them into the internal administration and operations of the international organization.

In response to a specific inquiry from Congressman Brown he also added:

> I think that our position is clear and we do not think it is appropriate for each participating country to make audits.

Again in these hearings to which I have just alluded in September 1972, in hearings before the Subcommittee on Inter-American Affairs, Mr. Stovall said, and I quote again:

> We have in prior testimony taken the position, and we would continue that position, that our authority and interest lies only in relation to examination of U.S. agencies and we do not seek, nor would be support, any legislation seeking to place GAO in the position of trying to audit an international organization.

But I would agree with you, Dr. Long, in that the audit through the Treasury—this was a first, it was the first audit of an international organization by the GAO—there were areas of difference on how to provide them with documents and the flow of information and I think this year we have provided more information than we ever have in the past.

I think you can always improve that but it is a question of how you approach it, the mechanism, the process in which you do the audit, and I think that is what we are discussing not that the full information that the Bank has is not available to the Congress or to the GAO. That is the fundamental issue as we see it.

CONFIDENTIALITY OF INFORMATION

Mr. LONG. Well, of course, the GAO says here quite clearly:

> GAO's efforts in making this review were considerably hampered by the Treasury Department's delaying tactics and refusal to make certain records available for examination.

You yourself got through saying a little while ago that you were unwilling to make the information available to GAO, but only to Congress. That means of course that when Congress asks the GAO to make a report they can't get the information that is going to help us through our interrogations and so on until after you have come before us and given information, and, of course, it is very hard for us to know what to ask if we hadn't the prior help of GAO, unless they had gotten it beforehand.

Why are you so unwilling to give GAO the information that it asks for when we have instructed them to make studies of effectiveness of your operation?

Mr. HENNESSY. As we said in these other hearings, we strenuously rejected that claim by the GAO in terms of information, the Bank information. We presented them with a mountain of information that went up to the ceiling. Quite obviously the delaying tactics to which they referred there are that the people working on these problems could not give full time to the GAO.

The distinction I make is, and to which you were referring earlier, when they ask us to implement a recommendation, it is that information we are providing directly back to the Congress. We are not saying we don't give any information to the GAO. They got a room full of information.

They didn't get it as fast as they would like but everyone down there is working on 25 other projects and it was a new area.

I will admit for the record very clearly that there are internal memorandums, some of which we were discussing concerning different operations, that we thought perhaps didn't apply.

They had to do the exchange stabilization fund and some other operations. We have had a period of trying to define what the role and nature of an audit of this type was. It was the first of its kind. I am sure on successive ones there will be better understanding on both sides.

But the substance of the issue is they get all the information they need. The concrete recommendations they made have been adopted, implemented, and will be continually reported back directly to the Congress.

Mr. LONG. That is what you are saying now. That is not what the GAO is telling us at this point. These are hearings before the Subcommittee on Inter-American Affairs of the Committee on Foreign Affairs, House of Representatives:

Mr. FASCELL. You did not get the minutes of the National Advisory Council meetings and you did not get some of the consultant reports of the IDB; is that correct?

Mr. BROGAN. We did not get the minutes of the U.S. Executive Director's meetings and we did not get a consultant study that was performed in 1971 which we felt would have been valuable assistance and there were some progress reports that were prepared.

Mr. FASCELL. There were IDB materials available to the U.S. Executive Director but not available to the GAO?

Mr. BROGAN. That is right; progress reports which disclosed what was being done on some specific project in the field.

Mr. HENNESSY. Could I quote from that same report, sir. This question was asked by Mr. Fascell, the precise one you are getting after:

Mr. FASCELL. Mr. Stovall, getting back to the question of accessibility by GAO, you did get reports from the Treasury without any difficulty; is that correct?

Mr. STOVALL. I would like to say for the record, Mr. Chairman, that these are the exceptional things. These are the minority items, the relatively few things we could not get. We got a lot of information from Treasury and I would like to express my appreciation for that that was made available.

Mr. LONG. You can hand a person a mountain of information and withhold from him some of the key things that he needs.

Mr. HENNESSY. They discussed three things as I heard the quote. One was a consultant's report. As you know, a consultant's report involves a situation like that between a patient and his doctor. I think Booz, Allen considers, and we would certainly support that view, that if it becomes a public document their ability to function properly as a consultant is diminshed. However, we did provide complete excerpts and recommendations but not the report itself to the GAO.

We thought that was entirely proper in keeping with the client-consultant relationship and to be able to have the benefit of that type of management consultant. They have to maintain that client-consultant relationship.

Mr. LONG. In these days when Government is being asked increasingly to do its business in the open—these hearings never used to be held in the open; they are now and I think it is a great step—how can you ask that taxpayers' money that is going to hire consultants, to provide information to GAO and to Congress, should be held in some level of confidentiality?

Just what right do you have to say that the information on the taxpayers' money should not be available to everybody?

Mr. HENNESSY. I am not saying that, Mr. Chairman. What I am saying is that the recommendations of the report were fully made. The

report itself was not provided, the conclusions of the report were provided, and that is kind of a fine line of distinction, but I think it maintains the client-consultant relationship that is necessary so that this process can continue in the future.

There is, I guess, a difference between the views of the GAO and ourselves in the area of the executive directors. Discussions at the Board and discussions of——

Mr. LONG. I will be through in a minute, Mr. Roybal. I can read one sentence that shows one thing and you can read another sentence that shows something else, but I do think it is very significant that here is a summary, finding and conclusion, which wraps up the study by the Comptroller General of the IDB and the system for evaluating its projects. They are very simple.

> Congress may wish to consider whether the executive agency's decision to withhold certain information from the GAO and Congress concerning IDB activities is compatible with such level of support.

Now, this is "taking one consideration with another." This is a general, balancing, conclusion. I would hope that you would get the message here today and that is that you folks are just not going to prosper in this multilateral lending institution level unless Congress can get the same kind of information that we are expected to give to the people on our own activities.

Everything the American Government does is pretty much out in the open. It is getting increasingly so. I think this is the only way you can run a country. I don't think that you can ask that the multilateral institutions be allowed something less than that level of full disclosure and still continue to grow and grow and grow; and that is to say you are asking more and more that a whole aid program be turned over to multilateral institutions. Of course to the Congressmen, including me, this means that this is one more end run around the Congress. This is one more attempt to get away the oversight and the appropriations process.

You might get something through this year but you never can tell what will happen in a given year.

Mr. HENNESSY. Let me say we understand your concern and I think we have tried to be responsive while at the same time taking into account the multilateral nature of the banks and providing information with some editing in the case of this consultant's report.

There may be ways in which we can improve it. I think we have improved it in the past.

Mr. LONG. I think it would be a good idea. Of course, nobody in politics can ever admit he is wrong. I understand that a good politician never gives a clear target to anybody, and I don't blame you for not wanting to come out and admit that perhaps you have been less than fully forthright to the GAO but it might be a good idea to think these things over for the future.

Mr. Hennessy, on page 2 of your statement you say, "Today they—the developing countries—provide raw materials, as well as manufactured and semimanufactured products, which are vital to the continued vitality and noninflationary expansion of our economy."

With what manufactured and semimanufactured products do LDC's supply the United States which are vital to our economy?

Mr. HENNESSY. I had raw material mainly in mind when I spoke of imports from LDC's which are vital to the continued vitality and noninflationary expansion of our domestic economy. However, there are specific examples of semiprocessed and processed products which are important to us. Taiwan, for example, imports lumber from Indonesia and exports plywood to the United States. Canned or processed meat is another example. At this particular time, we are, of course, very much interested in increasing the available supplies of a wide range of materials and products, many of which are from the developing countries.

Mr. LONG. Mr. Hennessy, by your arguments on the topic of "Why have foreign assistance?"—page 1–3 of statement—you imply that the United States aids developing countries for essentially three reasons: (*a*) to obtain raw materials—page 2—(*b*) to obtain the votes of developing—page 3—countries on international trade and monetary matters; and (*c*) to provide social infrastructure so that our private investment can rush in and develop these countries—page 3.

Are these the best self-interest rationales you can develop for foreign assistance?

On pages 2–3 of your statement, you use the concept of "interdependence" several times. Cannot stronger rationales for foreign aid be worked out through a systematic development of this concept?

Mr. HENNESSY. It is in our own national interest to promote economic growth and stability in the developing countries. This interest takes the form partly of access to raw materials and other products important to our own economic well-being, the expansion of markets for products made in the United States, and the development of economic infrastructure which is helpful to overseas direct investment by U.S. companies. These factors help to point up the fact that there has been an increasing economic interdependence between the United States and other countries including the LDC's. There is every indication that this process of interdependence will continue into the future and the rationale of self-interest will become very strongly linked to this concept of independence.

Mr. LONG. Are there agreed-upon categories among IDB recipients for relatively less developed and relatively more developed countries who are recipients of IDB loans from the soft loan fund?

Mr. STERNFELD. The Bank has analyzed economic and social indicators of the member countries and has established four categories based on each country's level of economic and social development and its potential for accelerating the development process. The following indicators are used to establish the categories: GNP, per capita GNP, population growth, investment coefficient, growth of per capita GNP, life expectancy, infant mortality, literacy, debt service requirements, and national reserves. The four categories are: relatively more developed countries—Argentina, Brazil, Mexico, Venezuela; intermediate countries—Chile, Colombia, Peru; insufficient market countries—Barbados, Costa Rica, Jamaica, Panama, Trinidad and Tobago, Uruguay; relatively less developed countries—Bolivia, Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Nicaragua, Paraguay.

Mr. LONG. What are the criteria for allocation of soft loan funds?

Mr. STERNFELD. In general, fund for special operations loans are made for highly important but slow-yielding projects, for example, education, agriculture, urban development. The expectation is that such financing will stimulate the country's own efforts in these fields. However, in accordance with the Bank's recently adopted policy of preferential treatment for lesser developed countries, in such countries FSO funds may also be provided for projects with higher economic returns and shorter pay-off periods. FSO may also be used for projects in relatively less developed regions in member countries for programs and for projects directly benefiting low-income sectors. Financing of projects which serve two or more member countries may be eligible for FSO in order to induce investment for integration in those cases in which identifiable benefits accrue to other countries which bear little or part of the costs.

With regard to the allocation of the FSO resources, the management, as part of the preferential treatment, established progressively decreasing targets on the FSO proportion going to the relatively more developed countries. These limits are: relatively developed countries—40 percent in 1972, 30 percent in 1973, 20 percent in 1974. At the same time, the Board set a floor for the proportion which must go to the lesser developed countries. Relatively less developed countries must receive at least 30 percent of the FSO lending, beginning 1972, and it is expected that this proportion will gradually increase. The first year under this new policy was successful and the targets were surpassed. A reversal from the past took place and the larger countries received 30 percent of FSO lending and the lesser developed countries received 49.6 percent.

Mr. LONG. In what specific instances has the IDB had success in bringing about land reform?

Mr. STERNFELD. It is the borrowing country, not the Bank, that bears primary responsibility for bringing about land reform. However, to complement and accelerate national efforts, the Bank provides technical assistance and loans for various aspects of agrarian reform. Specific examples are: technical assistance to El Salvador for the preparation of new agrarian reform legislation; a series of studies of land tenure conditions carried out by the CIDA (Comité Interamericano de Desarrollo Agrîcola) in seven countries—Argentina, Brazil, Colombia, Chile, Ecuador, Guatemala, and Peru; loans to Mexico for irrigation expansion and control aimed at the small beneficiaries of the agrarian reform (ejidatarios); loans to the Colombian Institute of Agrarian Reform (INCORA) for colonization and infrastructure; a loan for the Venezuelan comprehensive agricultural development program (PRIDA) to consolidate the National Agrarian Institute's settlements by providing complementary credit, research, and extension.

Mr. LONG. Mr. Sternfeld, on page 6 of your statement, you mention that administrative expenses were "only 2.9 percent above those for 1971." What were total administrative expenses?

Mr. STERNFELD. For 1972 they were $30,093,938.

Mr. LONG. What were total administrative expenses as a percentage of total obligations? Of total disbursements?

Mr. STERNFELD. For 1972 the total administrative expenses represented 3.7 percent of the level of obligations and 6.3 percent of the disbursements.

Mr. LONG. Would you provide for the record the following figures for the past 10 years? Total administrative expenses, total obligations, total disbursements.

Mr. STERNFELD. Yes, sir.

[The information follows:]

IDB ADMINISTRATIVE EXPENSES, TOTAL OBLIGATIONS, TOTAL DISBURSEMENTS, 1962–72

[In thousands of dollars]

	Administrative expenses	Obligations	Disbursement
1962	7,397	329,393	65,282
1963	8,660	258,853	141,008
1964	9,949	299,333	198,062
1965	11,692	373,473	182,161
1966	14,167	396,122	211,829
1967	16,748	496,428	242,527
1968	19,195	430,829	290,926
1969	21,859	631,505	392,189
1970	25,349	644,135	427,638
1971	29,336	651,765	459,389
1972	30,094	807,173	478,654

OPERATIONS OF THE IDB

Mr. ROYBAL. Mr. Chairman, I made reference to the GAO report you mentioned earlier last year and I was told then that the recommendations made had already been put into effect and that everything was going to be all right.

However, I remember that I did serve on the Committee on Foreign Affairs at the time that this agency was discussed. I remember also that there was great criticism of the way the agency was run.

I have been a friend of your operation since the very beginning. I consider myself a friend today and I don't agree that all the criticism is valid, including some criticism that I may have to make. On the other hand, there is some criticism that is definitely valid and somethings that can and should be corrected and a great deal of that is in that report even though it might have been made in August of 1972.

So many things have not been done. It seems to me that if funds are going to be made available through this committee every effort should be made to correct some of these things.

I can understand the GAO's report and understand their reluctance to name names and to state definite situations. I know the situation with regard to the bank at the time that a previous president was in complete control. I know what happened then and I hope the same thing it not happening again.

In other words, what I am saying is that I hope that the Latin American member nations don't completely dictate policy as they did in the past. Control was not one of the functions of the U.S. representative but of someone else. I hope those corrections have been made.

One other criticism was with regard to the auditing procedures of

the bank. No one really knew what was happening and while the congressional committee was asking for cost analysis and everything else, we never really got them.

One of the other recommendations that was made, before 1972 was that there was a great need for policy review. I don't know whether that has ever been made or not.

Another recommendation was with regard to lending practices. We know for a fact that in the past your lending practices were not as kosher as they appeared to be on the surface. I think you know exactly what I mean. These are criticisms that you find in the report. If you read between the lines you know exactly what they mean, and it seems that some of these changes should be made if they have not already been made.

Now, how do we stand with regard to the lending practices of the institution? Is it still controlled by one man?

Mr. STERNFELD. No.

Mr. HENNESSY. I would say quite to the contrary and I would like to submit for the record a list of all the recommendations and innovations that have taken place in the last 2 years under Dr. Antonio Ortiz Mena, who was a distinguished finance minister for 12 years in Mexico and took over the bank 2 years ago.

[The information follows:]

MANAGEMENT IMPROVEMENTS AND POLICY CHANGES IN THE INTER-AMERICAN DEVELOPMENT BANK SINCE MID-1971

In March 1971, Antonio Ortiz Mena, then Finance Minister of Mexico, was elected President of the Inter-American Development Bank. Beginning at that time, President Ortiz Mena set in motion a program of various measures, some to have immediate effect, and others to have a longer range impact, but in total all looking toward the eventual reorganization of the Bank and of its policies to adjust it to the realities both of Latin America and the United States in the 1970's.

I. IMMEDIATE ACTION

1. Control of administrative expenditures

From its inception in 1961 to the present, the Bank succeeded in establishing itself as the regional development institution. During that time, it had been growing rapidly in accordance with the increase in its portfolio of projects. In 1961 the Bank began with a subscribed capitalization of 959 million U.S. dollars. In March 1971, the Bank's subscribed capital had increased to 5,091 million U.S. dollars, and the value of its loans, including those made with the resources of various trust funds, had reached a level of 4,156 million U.S. dollars. During this 10-year period of growth, the Bank's administrative expenditures had been increasing approximately on the average of 15 percent per year. On assuming the presidency, Mr. Ortiz Mena determined to restrict the growth of administrative personnel and expenditures, and increase the productivity of the Bank staff. Thus it was that the Bank's 1972 administrative budget was held to within 2.9 percent of that of the preceding year even though the costs had risen by a higher percentage. This policy of stringency and increased productivity will continue during 1973, primarily through the maintenance of personnel ceilings.

The significance of these measures to increase productivity becomes clear when one realizes that during 1972 the Bank was able to achieve a lending level of 807 million U.S. dollars—the highest of any year in its history and cumulatively, the Bank's portfolio rose to 5.5 billion U.S. dollars.

2. Mobilization of resources on capital markets

Beginning in mid-1971, a policy was adopted to make maximum use of the capital markets of the world to obtain resources for the Bank while at the

same time minimizing the impact on the strained balance of payments of the United States. Thus, during the 2 years 1971 and 1972 the Bank was able to obtain loans or place new issues in the capital markets of Japan and Europe amounting to 243 million U.S. dollars without any recourse at all to the U.S. capital market. At the end of 1972, fully 58 percent of accumulated borrowings have been placed in markets outside the United States. The program of new borrowings for 1973, in combination with efforts to add new members to the capital structure of the IDB, continues this policy of seeking to minimize the impact of the Bank's financial operations on the credit market and balance-of-payments situation of the United States.

These accomplishments have been realized by a combination of several measures. First, the Bank has adopted new policies, in accordance with accepted banking practice, to reduce the amount of its cash holdings in relation to its long-term commitments. This permits the Bank a broader flexibility in determining when, in light of the most favorable interest rate developments, the Bank should place its new borrowings on the market. Coupled with this, has been an intensive effort by the President of the Bank, personally, to promote the Bank's issues throughout the capital markets of Europe and Japan. In consequence, the Bank's issues have met with great receptivity in these markets. Moreover, the intensive promotion of the Bank in the financial circles of the industrialized world generally has led to several unique opportunities to obtain resources for the Bank's programs at terms more favorable than those that prevail on the market. Outstanding among these are the 20 separate financial arrangements under which the Bank has been able to obtain funds from contributing governments outside the United States for its development programs.

Increasing access to Latin American financial markets has also become an objective of the Bank's financial program. During the 2-year period 1971 and 1972, the Bank has been able to obtain directly from the central banks of Latin America, resources amounting to 77 million U.S. dollars which have been put into the service of development in the same region.

II. POLICY CHANGES

On entering the presidency of the Bank, Mr. Ortiz Mena also set in motion a review of the lending policies of the Bank in order to assure the maximum efficiency in the use of the Bank's "hard," or Ordinary Capital Funds (OC), and its "soft," or Fund for Special Operations (FSO) resources. The result has been a series of recommendations to the Board of Governors described below which have been put into practice for the program year 1972.

1. The criteria adopted provide for the member countries of the Bank be grouped according to their level of development, viz:

More developed (4 countries)
Intermediate level of development (3 countries)
Countries of limited market (6 countries)
Less developed (9 countries)

2. At least 30 percent of "soft" funds of the FSO committed in 1972 were to be allocated to the less developed group of countries, and this proportion was to reach 40 percent in 1974. These goals represent a significant improvement over the average of 23 percent of the Bank's FSO resources which these countries received in the period 1966–1971. The accomplishments of this policy are reflected in the lending program of the Bank for 1972, when the group of nine relatively less developed countries actually received almost 50 percent of the total allocation of the Bank's "soft" resources. On the other hand, the percentage of FSO lending to the larger and more advanced countries dropped from a level of 45 percent to 30 percent for 1972. It should be noted that "soft" lending for the larger countries is restricted. There is no doubt that this new policy on the part of the Bank is proving effective in increasing the flow of development resources to those countries who, in the past, for various reasons have been at a disadvantage in obtaining such resources.

3. While this new policy accorded longer grace periods and repayment terms to the relatively less developed countries, it also established the requirement that all repayments of FSO dollar loans be in dollars and not in local currencies. Previously, this requirement applied only to two countries: Mexico and Venezuela.

4. From the time of its establishment, the Bank has exercised leadership in evolving new techniques and approaches to meet the complex circumstances and obstacles to treating the economical and social problems of the lowest income groups in Latin America. During the past 2 years, the Bank has been able not

only to continue its loans for small farmer credit, rural potable water, and small irrigation systems, but has also been able to devise new approaches to the serious problems of urban development in the region as well as find concrete projects to promote regional economic integration in the hemisphere.

A. Urban Development

In the area of urban development, it has been recognized that traditional techniques have failed to reach the problems of the urban areas of the region where population is growing yearly at nearly 6 percent and where the great masses of the unemployed and underemployed are concentrated. A truly integrated, interdisciplinary approach is needed; and there is a great need of people trained in these approaches. During the past year, the Bank has made two loans totaling U.S. $44 million to finance a major urban development program in the eastern section of the city of Bogotá, Colombia, one of the neediest parts of that city. This provides not only for the physical but also for the human needs of the city; not only for the streets and water supply, schools and hospitals, but also for integrating into the planning of these facilities the needs of the poorest citizens for social services and, above all, employment and means of transportation between the low income sections of the city and places of employment.

B. Economic Integration

In pursuit of its long-standing policy to promote the economic integration of Latin America, the Bank has recently approved a U.S. $80 million loan to finance an integrated hydroelectric plant being built jointly by Argentina and Uruguay. This represents the most important economic integration project ever undertaken by the Bank. Moreover, the Bank has been taking steps to intensify its cooperation with the various subregional integration institutions such as the General American Bank for Economic Integration, the Andean Development Corporation, and the Caribbean Development Bank.

III. REFORM AND REORGANIZATION OF THE BANK

The third major area in the President's program for improvement was the internal administrative structure of the Bank. A management study by a U.S. management consulting firm was completed in 1972. This was followed by an intensive analysis of the recommendations and formulation of concrete measures.

1. One of the fundamental objectives of this reorganization has been to establish a more rigorous process for the selection of projects to be financed and their technical evaluation, as well as the expediting of these projects and programs in the borrowing countries. This has been accomplished through such measures as:

(*a*) The establishment of a special group of top management to function as a Loan and Technical Assistance Review and Evaluation Committee. This committee now regularly screens out loan requests when initial applications are submitted to insure they comply with country strategies and Bank policies.

(*b*) The creation of an independent Department of Project Analysis. The effect of this new department is to remove the technical and financial analysis of projects from supervision by those with day to day responsibilities for the negotiation of loans. This independence will enhance the importance of economic and engineering judgments in project development and execution, and in the analysis of the feasibility of a project.

(*c*) In a parallel fashion, the offices with responsibility for the preparation and negotiation of loans as well as the supervision of loans during the process of execution, have been merged and organized on a geographic basis with the Department of Operations.

(*d*) Complementary to the above, the Bank's field offices in the borrowing countries are being strengthened in order to permit a gradual decentralization of activities from the headquarters level, consistent with principles of sound management. By increasing the number of operations regularly performed at the field level, the Bank expects to enhance overall efficiency and expedite project execution.

2. A second major objective of the Bank's reorganization has been to do a better job in helping the member countries plan their economic and social development programs, program their investments, and prepare priority projects. The principal measure in this respect has been the reorganization of the Economic and Social Development Department to provide for improved economic studies of the countries, and a strengthened technical assistance program. These measures in

the headquarters will be matched by the steps taken to strengthen the field offices' capacity to perform in the analysis of country development needs, and in the appraisal and execution of technical assistance programs. Moreover, improvements have been made in the process of coordination with other international agencies which participate in the field of technical cooperation, such as the World Bank, AID, the U.N. development program, the Food and Agriculture Organization, and others.

3. The increasing scale and complexity of Bank operations have brought about need for improved systems of management control. A new Office of Controller has been established within the Office of the President with broad responsibility to assure that the Bank's activities are consistent with established policies, programs, procedures and directives.

IV. ONGOING MANAGEMENT IMPROVEMENT EFFORTS

The adoption of new policies and improvements in the organization and procedures of the Bank represent important advances in the efficiency and effectiveness of Bank operations to promote development in Latin America. These are the foundations upon which further advances and improvements which are now under intensive study and preparation can be built.

1. Master plan for an automated management information and control system

A format study looking toward the development of a comprehensive 5-year plan for information and control systems was approved by the management in 1972 and is now underway. This project, which will be completed in the summer of 1973, will define the requirements of the Bank for management and project information, as well as the most effective and efficient means of obtaining, storing, and retrieving that information. As the various systems within this master plan become implemented, not only will the normal efficiencies of data processing and telecommunications be achieved by the Bank, but by virtue of their integrated design, these efficiencies will be multiplied significantly.

2. Uniform application of policies and procedures

In late 1972, after an initial study, a plan was undertaken to standardize and communicate the Bank's operational and administrative policies and procedures in a comprehensive system of manuals. The plan proposes a consolidated effort on the part of all Bank units for the production of 21 manuals to be maintained thereafter on a permanent basis.

3. Unused project balances

In order to overcome a longstanding problem of residual, undisbursed loan and technical assistance balances, the Bank adopted a specific procedure providing for timely, automatic and unequivocal cancellation of a project's unused balance by an appropriate terminal date.

4. Project cost overruns

Over the years the Bank has become increasingly aware of recurring problems of cost overruns in loan projects. In order to identify the specific causes of such problems, and in turn to establish necessary safeguards, the Board of Executive Directors requested the management to undertake a detailed analysis based on actual experience. This study resulted in the identification of three weaknesses as the principal contributors to unforeseen cost increases: the timing of loan approvals, technical analysis of projects, and unrealistic budgetary provisions. In accordance with the study's conclusions, management has adopted the modifications in loan processing procedures to reduce the likelihood of overruns in future loan projects.

Mr. HENNESSY. I think there has been great improvement internally through a whole series of different changes. One is in the whole loan review process, where when a loan comes in the door instead of going up to the Board it has to go through a policy review committee chaired by the Vice President of the Bank, Mr. Henry Costanzo, and with other top policy people who at that time see if the loan gets over the first hurdle—that is to say does it qualify?

Then it goes through a whole series——

Mr. ROYBAL. Are those loans?

Mr. HENNESSY. Loans for all countries have to go through this process before they even get in the door now.

Mr. ROYBAL. And all regardless of the amounts?

Mr. HENNESSY. Regardless of the amounts.

Mr. ROYBAL. Because it was a policy in the past that only loans of over—what was it, $50,000?

Mr. STERNFELD. That was technical assistance, $50,000.

Mr. ROYBAL. $50,000, for technical assistance. It was still under the control of one individual at that time. It is no longer the case now, is that correct?

Mr. HENNESSY. I think some technical assistance is still under the control of the President and with subsequent review by the Board.

Mr. ROYBAL. Which the Board never reviews?

Mr. HENNESSY. Sir.

Mr. STERNFELD. Sir, the Board has a quarterly report and we review the action taken by the President. In response to that hearing before the other committee the United States proposed to the Board to take away this authority to approve technical assistance under $50,000 except in very limited circumstances. This was agreed to by the Board. There are about a half a dozen operations a year approved under authority of the President.

Mr. ROYBAL. I wonder if you wouldn't make available to each member of this committee and for the record changes that have taken place in the last 2 years under the new president.

Mr. STERNFELD. Yes, sir.

Mr. HENNESSY. They are very significant.

Mr. ROYBAL. That way we can compare what the situation was at that time and what it is today.

Mr. HENNESSY. Be glad to do that, sir.

Mr. ROYBAL. The way things are at the present moment the only thing we can quote is the GAO report which is most unfavorable.

Mr. HENNESSY. Be glad to do that.

Mr. ROYBAL. One other thing that I had in mind to ask is this: Will you supply for the record the loans in the last 2 years that have been made over and above the $50,000 category?

Mr. HENNESSY. Yes, sir.

Mr. STERNFELD. Yes, sir.

Mr. ROYBAL. Again to try to make a determination as to what the real purpose of these loans has been compared to your record of loans made prior to the 2 years.

Mr. HENNESSY. By country and by sector?

Mr. ROYBAL. I understand that you have such a report and it is very simple.

Mr. HENNESSY. Right; compared to the first 10 years versus the last 2.

Mr. ROYBAL. I would appreciate it.

Mr. STERNFELD. You mean the actions which the President has taken on his own?

Mr. ROYBAL. I am talking about all loans.

Mr. HENNESSY. The last 2 years compared to the first 10.

Mr. ROYBAL. Any action that the President has taken on his own would be separate and apart from the type of report I am trying to get before the committee.

Mr. STERNFELD. And we can report on that latter part, too.

Mr. ROYBAL. I would appreciate if you did both then.

That is all, Mr. Chairman.

[1] Loan 217/SF to Guatemala for $9,500,000 was canceled in 1971.

Mr. LONG. Mr. Coughlin.

SPECIFICS OF REQUEST

Mr. COUGHLIN. Thank you very much.

I am new at this and I must confess I am having a very difficult time making heads or tails out of the whole thing.

As I understood in earlier testimony the bank is funded now at about $3.69 billion; is that right?

Mr. HENNESSY. Mr. Sternfeld has all the figures. They have two sources. They really have, I guess, three.

Mr. COUGHLIN. The capitalization is $3.6 billion?

Mr. STERNFELD. That is the paid-in capital.

Mr. HENNESSY. There are two types. One is paid-in. We actually put in the money. The other is full faith and credit, where the Government guarantees the borrowings in private markets.

Mr. COUGHLIN. Both windows?

Mr. HENNESSY. Just the hard window comes from paid-in capital plus borrowing. Then you have the soft fund. This is the FSO and it is separate. The hard window is the same as a bank. They might issue

their own notes. Take General Motors. They have some paid-in capital. They go out and they borrow some more in the market.

Mr. COUGHLIN. The $3.6 billion is hard or soft?

Mr. HENNESSY. It is both hard and soft.

Mr. COUGHLIN. What is the total?

Mr. STERNFELD. That is paid in. In addition to that the bank has authority to borrow which is based on callable capital. It is a guarantee which we hope not to use and which to this day has never been used. From the United States as of this date, it has $1.7 billion worth of authority to borrow.

Mr. COUGHLIN. Of the $3.7 billion there is $2.2 billion which has not been used?

Mr. STERNFELD. Yes. There is $2.2 billion which has not been disbursed.

Mr. HENNESSY. To approve a loan today it takes 7 years to disburse it. But they are not going to approve a loan because they still have some undisbursed funds from that last loan.

Mr. COUGHLIN. Is that $2 billion just sitting there?

Mr. HENNESSY. It is a letter of credit. They can draw down as they need it, the member governments issue an open letter of credit, and they draw down on letters of credit as they need funds for whatever it is that they bought with the funds.

Mr. STERNFELD. Most of this money is still in the U.S. Treasury in fact. It has not been drawn down.

Mr. COUGHLIN. It is an obligation?

Mr. HENNESSY. Yes, it is an obligation. They made a loan against it, contractual obligation. They have drawn up a loan document, signed it, one signed by the bank and the other by the borrower.

Mr. COUGHLIN. The outstanding loan against $2.2 billion is undisbursed?

Mr. HENNESSY. That is correct but totally and completely obligated.

Mr. COUGHLIN. What you are asking for this trip is another $193 million in capital?

Mr. HENNESSY. Of which $25 million is going to be paid and the rest will be callable to increase their guarantee for borrowings in New York or Zurich, wherever it is.

Mr. COUGHLIN. What you added to the $3.6 billion and paid in capital now is just the $25 million?

Mr. HENNESSY. That is correct.

Mr. COUGHLIN. And the $168 million corresponds to what figure in toto over the 14 years?

Mr. STERNFELD. That is the $1.7 billion figure that I mentioned of callable capital we have subscribed to.

Mr. COUGHLIN. And the $500 million you are asking for in FSO compares to what kind of a figure over the 14 years?

Mr. STERNFELD. That $500 million compares to $2.2 billion which we have provided to date.

Mr. HENNESSY. Special funds that we provided.

Mr. STERNFELD. That we provided and the Latin——

Mr. HENNESSY. There is another $500 million on top of that, that is, the social progress trust fund. It should be $2.7 billion at the end.

Mr. COUGHLIN. So we have over 14 years provided $2.2 billion and this year you are asking for $500 million alone.

Mr. HENNESSY. That is right. It is a big jump. This grew out of the 1970 Punta del Este conference where the United States said they were going to put a billion over 3 years and Latins said they were going to put in half a billion. That was supposed to be $100, $450, and $450 million over 3 years. That was a large increase in these soft funds.

What has happened in actual fact has been instead of that schedule, because of cuts, the whole thing has been stretched out. Instead of the $100, $450, and $450 million by 1973 to which we agreed in April of 1970, the idea now is that with $500 million this next fiscal year and another $275 million the following fiscal year, over a 5-year period the United States would put in $1 billion, so it would go $50, $225, $500, $275 instead of $100, $450 and $450.

Mr. COUGHLIN. The $500 million that you are asking for this year which you say will have no budgetary impact in 1974——

Mr. HENNESSY. They don't draw that down.

Mr. COUGHLIN. Over a period of time will that be drawn down?

Mr. HENNESSY. Over a period of 10 years or something like that. It depends on how fast the project is disbursed. They build a dam or road or build a school and they approve the loan today and then they have to design the project—although the project is pretty much designed before they make the loan—then they have to import the materials and start building the road and that takes up to 7 years sometimes, the same as a highway project in the States or a subway project or something like that.

During that time there is a letter of credit open. As they need the funds they draw it down. Obviously from our point of view, we want them to make new loan commitments having funds available to them.

Mr. COUGHLIN. Thank you very much, Mr. Chairman.

Mr. LONG. Thank you, Mr. Coughlin.

Do you have any more questions?

Mr. ROYBAL. No more, thank you.

Mr. LONG. Very well, Monday at 1 will be the next meeting of this committee. The committee stands adjourned.

Thank you very much, Mr. Hennessy, for being so patient with us.

Mr. HENNESSY. Thank you.

MONDAY, MAY 7, 1973.

THE EXPORT-IMPORT BANK OF THE UNITED STATES

WITNESSES

HENRY KEARNS, PRESIDENT AND CHAIRMAN OF THE BOARD OF DIRECTORS
WALTER C. SAUER, FIRST VICE PRESIDENT AND VICE CHAIRMAN
DON BOSTWICK, EXECUTIVE VICE PRESIDENT
JOHN E. CORETTE III, GENERAL COUNSEL
J. PATRICK DUGAN, SENIOR VICE PRESIDENT AND TREASURER-CONTROLLER
JAMES K. HESS, DEPUTY TREASURER
NANCY S. PIGMAN, ASSISTANT TO THE GENERAL COUNSEL

PROGRAM AND FINANCING (IN THOUSANDS OF DOLLARS)

Mr. PASSMAN. The committee will come to order.

We shall continue our examination this afternoon with another facet of the Foreign Operations Subcommittee appropriations budget requests.

We have before us the Honorable Henry Kearns, President and Chairman of the Board of Directors of the Export-Import Bank of the United States, Mr. Walter C. Sauer, First Vice President and Vice Chairman, and certain supporting witnesses.

Mr. Kearns, we will be very happy to hear from you at this time if you have a statement you would like to make to the committee.

GENERAL STATEMENT

Mr. KEARNS. Mr. Chairman, members of the committee, it is again a pleasure for us to appear before you to discuss the activities and operations of the Export-Import Bank.

I am particularly pleased to be able to be here at this time because I have recently returned from a trip abroad of more than 6 weeks during which I visited 10 countries plus Hong Kong, starting in Australia, going through the Western Pacific and returning via Eastern Europe through the Soviet Union and Poland. From several hundred conferences and meetings it has been possible to achieve first-hand knowledge of today's international trade situation, its challenges, opportunities, and problems. Discussions were held with heads of state, government officials, private bankers, and businessmen, and the composite reveals the opportunities for the United States in today's and tomorrow's world.

Since I appeared before this committee last year, we have observed a seemingly persistent U.S. trade deficit and the United States twice adjusted the value of its currency as related to other developed industrial countries. To some this forecasts only gloom and provokes dire predictions on the economic health of this nation. I dissent strongly from this view, and I do so based on the experience we have had at Eximbank over the last year and from my intensive discussions with buyers and sellers in the United States and abroad and with government and industrial leaders everywhere I went.

Certainly the U.S. trade deficit must be reversed—and as soon as possible. I am convinced that with the measures and efforts already

taken by the President to induce the major trading nations to develop a new world monetary system—one that will be realistic and fair to all—and to eliminate trade barriers and unfair trade practices which affect all trading nations, we will see in the immediate future an unprecedented period of trade expansion in which the United States can and must be a major participant.

In my considered view the United States stands on the threshold of its greatest trade opportunity of the century.

These factors provide the basis for my statement: (1) the volume of world trade is destined to accelerate significantly as industrial countries must import more primary products, including energy, and as developing countries improve the quality of life and emerge into the current productive era; (2) more private and public buyers will have the ability to purchase as a result of greater liquidity availability and vastly expanded credit facilities; (3) transportation and communications offer the means to market and deliver to a degree unknown before; (4) thorough inquiry reveals a very high respect for U.S. products, their quality and standardization, packaging, and service, and the full range of items produced by a multiplicity of companies is unmatched; (5) U.S. products are now price-competitive in nearly all categories and the inflation rates of competing countries tend to increase this advantage; and (6) services to buyers and suppliers were never better, giving the U.S. merchandisers a clear advantage.

All of these advantages converging at one time do indeed provide a golden opportunity and challenge. If we fail to fully exploit this unique combination of circumstances it may well determine the economic future of our country.

FISCAL YEAR 1972

Fiscal year 1972 showed a continuation in the growth of Eximbank's business, following the pattern of the 2 previous fiscal years.

The total value of export sales supported by Eximbank's fiscal 1972 authorizations rose to $9.5 billion, an increase of 38 percent over fiscal 1971 and more than triple that of just 4 years ago in fiscal 1969. Of the total $53 billion in export sales supported by the Bank since its inception in 1934, 41 percent has occurred in the past 3 fiscal years.

During fiscal year 1972 Eximbank's operations contributed an estimated $3 billion to the credit side of the U.S. balance of payments, as compared with $2.3 billion in the previous fiscal year. Thirty-one percent of the Bank's total lifetime contribution of $23 billion to the nation's balance of payments has come in the past 3 fiscal years.

Total new authorizations of loans, guarantees, and insurance during the year reached $7.2 billion, a 34 percent increase over fiscal year 1971.

Gross loan authorizations were $3.3 billion, an increase of 39 percent over the $2.4 billion in fiscal year 1971. This figure includes $2.2 billion in equipment and services authorizations, $85 million in commodity credits, and $989 million in medium-term discount loans. Although discount loan authorizations accounted for the largest single loan activity increase during the year, indicating an increasing use of this program by the private commercial banking sector in order to provide export financing for their customers, actual disbursements under this program during the year remained at a low level due to the relative ease of liquidity in the credit markets.

Guarantee and insurance authorizations totaled $3.9 billion in fiscal year 1972, consisting of $1.7 billion in guarantees and $2.2 billion in insurance. Insurance authorizations increased 36 percent over the $1.6 billion in fiscal year 1971, and supported a total of over $3.4 billion of U.S. exports. The significant gains in export credit insurance issued during the year reflect in part the significant progress made in this program as a result of the revisions in FCIA's operations and the restructured, simplified reinsurance arrangement between FCIA and Eximbank. Total guarantee authorizations increased 23 percent over fiscal year 1971, but the greatest increase came under the commercial bank exporter guarantees program, which rose an unprecedented 63 percent from the previous year. This is one of Eximbank's programs which has done the most to help small- and medium-size exporters, with the median transaction size being only about $142,000. The increase reflects a sizable increase in the actual number of transactions handled, participation in the program for the first time by 23 additional banks (for a total of 185 at June 30, 1972), plus numerous technical improvements in the program to make it increasingly flexible and responsive to the needs of the exporting community.

Eximbank's gross revenues in fiscal 1972 amounted to $346.1 million, a 6-percent increase over the comparable figure in the previous year. Net income for the year was $147.9 million, a 24-percent increase over fiscal 1971, from which the Bank again paid a $50 million dividend to the U.S. Treasury on its capital stock and added the remaining $97.9 million to its retained income reserve. From inception through the last fiscal year, Eximbank has paid a total of $806 million in dividends to the U.S. Treasury.

Repayment experience under all of the Bank's programs continues to be excellent. No loans were written off during fiscal year 1972, and claims paid under the guarantee and insurance programs, net of recovery, amounted to only $4.4 million for the year. There are some problems on the horizon, however, notably failure of Chile to honor any of its obligations in which Eximbank is involved. Efforts are underway to achieve an understanding and rescheduling that will minimize potential loss.

Eximbank continued throughout the year to review and revise its programs and operations to insure that the Bank could provide effective support, when proven necessary, for any kind of potential U.S. export sale and could do so in a timely manner.

The preliminary commitment procedure initiated in fiscal year 1970 is now in general use. Under this procedure, Eximbank will, upon request, outline in a preliminary commitment letter the terms and conditions of the financial support it will extend to a purchaser of U.S. goods and services. The applicant must provide information sufficient to enable Eximbank to appraise the technical, economic, and financial aspects of the proposed project.

In fiscal year 1972, 591 preliminary commitments were authorized representing potential exports of over $7.2 billion. Sales of $2.67 billion were actually supported by conversion of preliminary commitments to actual credits.

One of the most exciting developments at Eximbank has been the cooperative financing facility program which supports small- and medium-sized producers and buyers for transactions ranging from a

few thousand up to $1 million. Although this program was initiated less than 3 years ago, as of June 30, 1972, 171 CFF lines had been established in 42 countries. Virtually every significant market in the Free World now has one or more financial institutions willing and able to provide financing to purchasers of U.S. goods and services.

It is clear that these and other initiatives undertaken by the Bank have resulted in increased use of its facilities to support the growing volume of U.S. exports. Yet, we are ever mindful that we must keep our ear to the ground, both here in the United States and, most particularly, in the areas where our U.S. exporters encounter their stiffest foreign competition. We believe that Eximbank now provides to our exporters the best and widest range of credit support for their overseas sales of any country seriously competing with us; however, the international marketplace is constantly changing and we must be continually ready, with both responsive programs and adequate resources, to insure that the U.S. exporter can offer competitive financing in his sales package. In my opinion, competing industrial countries that have accumulated very large foreign exchange reserves, such as the Federal Republic of Germany, and Japan, will now use their newfound affluence to more vigorously use financing as a competitive tool.

FISCAL YEAR 1973

As the committee, of course, is aware, Eximbank is presently operating under a Continuing Resolution for the current fiscal year. However, that Resolution permits the Bank to authorize at the levels proposed in our regular fiscal year 1973 budget, which had been approved by both Houses of Congress.

For the first 9 months of fiscal year 1973, the Bank's gross authorizations amount to $5.5 billion, a 15.3 percent increase over the same period in fiscal year 1972. The actual number of transactions handled in the period, however, increased by about 1,200, or 36 percent, over the same time period in the previous year. Export sales supported by these authorizations total $7 billion, up 7 percent from last year's period, while the Bank's contribution to the credit side of the U.S. balance of payments, direct and indirect, is up 9 percent so far this year.

FISCAL YEAR 1974

Turning now to the budget proposal pending before you, Eximbank's fiscal year 1974 budget provides for a continuing high level of support of U.S. exports as follows:

$3.950 billion in net regular loan authorizations;

$2.8 billion in net medium-term and short-term discount loan authorizations;

$6.2 billion in gross guarantee and insurance authorizations; and

$8.655 million in administrative expenses.

The $3.950 billion of regular loan authorizations include $3.8 billion for equipment and services loans, $100 million for commodity loans, and a $50 million contingency for special foreign trade loans. The 1974 budget provides for up to $1.5 billion net medium-term and up to $1.3 billion net short-term discount loan authorizations.

The budgeted amount of new and renewed guarantee and insurance authorizations includes $3.2 billion for guarantees, $2.35 billion for short-term insurance, and $650 million for medium-term insurance. The increases budgeted for these programs over fiscal year 1972 and the current year's projected amounts again reflect the Bank's continuing emphasis on assuring maximum private sector financing of U.S. exports.

These activity levels result in a total limitation on new program activity of $7.650 billion for fiscal year 1974.

Although the $8.655 million requested for administrative expenses is a slight increase over the amount for the current year, the total authorized personnel ceiling remains the same.

You will note, Mr. Chairman, that the estimated authorizations for the current fiscal year and the amounts budgeted for fiscal year 1974 would result in charges against the Bank's present $20 billion statutory ceiling for outstanding loans, guarantees, and insurance of $16.5 billion at June 30, 1973, and $20.4 billion at June 30, 1974. We therefore intend to request from Congress an increase in the statutory ceiling to $30 billion. We believe that this increase in commitment authority, in conjunction with an extention of the Bank's life from the present expiry date of June 30, 1974, is essential at this time for the Bank to exercise its responsibilities under its mandate from Congress and to plan in an orderly manner for the increasing support to U.S. exporters which we believe it will be called upon to provide within the next few years. This is especially important if U.S. producers are to participate fully in the many very large primary product projects that are now in a formulative stage, especially in the field of energy production.

COMMUNIST COUNTRIES ACTIVITIES

As the committee is aware, in August 1971 the Congress amended Eximbank's enabling legislation, the Export-Import Bank Act of 1945, as amended, to permit the Bank to support U.S. exports to all Communist countries if the President of the United States determines that such support is in the U.S. national interest and so reports such determinations to the Congress. Yugoslavia, as you know, was eligible for and did receive such a Presidential determination of national interest in 1968 and thus U.S. exports to that country have benefited from Eximbank support since that time. However, since the congressional action in 1971, the President has made national interest determinations for Eximbank support of U.S. exports to three other Communist countries; namely, on November 22, 1971 for Romania, on October 18, 1972 for the U.S.S.R., and on November 8, 1972 for Poland.

In fiscal year 1972, Eximbank authorized $153 million in support of U.S. exports to Yugoslavia, and $11 million for exports to Romania. Through March 31 of the current fiscal year, total authorizations for exports to the four eligible countries have amounted to $229.4 million. This consists of approximately $91.7 million for Yugoslavia, $14.5 million for Romania, $22 million for Poland, and $101.2 million for the U.S.S.R. These fiscal year 1973 authorization will support approximately $364.8 million in U.S. sales.

I wish to emphasize that all transactions with these countries that are assisted by the Bank must meet Eximbank's standard worldwide lending criteria. They must be viable transactions, offer reasonable assurance of repayment, require Eximbank participation for consummation of the U.S. sale, and are repayable, with interest, in dollars in the United States.

Mr. Chairman, we believe that Eximbank's proposed budget for the next fiscal year represents the minimum which will be needed if the Bank is to really provide the U.S. exporter with competitive financing for his overseas sales to meet and beat the foreign Government-supported financing available to his principal foreign competitors, as the Congress mandated the Bank in the 1971 amendments to the Export-Import Bank Act. I do not mean to imply by this that Eximbank should be the primary source of financing for the U.S. export trade. Quite to the contrary; and let me reiterate, once again, that Eximbank, by law, is a backstop for the bulk of export financing which is, and should continue to be, provided from the private commercial sector. Every Eximbank program undertaken in the past 4 years has emphasized cooperation with private financing sources.

However, if the United States is to take advantage of the almost limitless opportunities now available to U.S. suppliers in the growing world markets resulting from the intelligent and forthright initiatives taken by the President recently to stimulate U.S. exports and reverse the U.S. balance-of-payments decline, the Government and the private business sector must take bold, outward-looking action. We should "make no little plans."

JUSTIFICATIONS

Mr. PASSMAN. Thank you for your statement. We will insert the justifications in the record at this point.

[The justifications follow:]

EXPORT-IMPORT BANK OF THE UNITED STATES

BOARD OF DIRECTORS

Henry Kearns, Chairman of the Board.
Walter C. Sauer, Vice Chairman.

Joseph H. Regan, Secretary.

MEMBERS OF THE ADVISORY COMMITTEE

Hon. Allan Shivers (chairman), chairman of the board, the Austin National Bank, Austin, Tex. 78701 (term expires Sept. 1, 1973).

Ernest C. Arbuckle, chairman of the board, Wells Fargo Bank, 464 California Street, San Francisco, Calif. 94120 (term expires Sept. 1, 1973).

Stephen D. Bechtel, Sr., senior director, Bechtel Corp., 155 Sansome Street, San Francisco, Calif. 94104 (term expires Sept. 1, 1973).

William Blackie, chairman of the board (retired), Caterpillar Tractor Co., 100 N.E. Adams Street, Peoria, Ill. 61602 (term expires Sept. 1, 1974).

Walker L. Cisler, chairman of the board, the Detroit Edison Co., 2000 Second Avenue, Detroit, Mich. 48226 (term expires Sept. 1, 1973).

Paul L. Davies, senior director, FMC Corp., P.O. Box 760, San Jose, Calif. 95106 (term expires Sept. 1, 1973).

James R. Greene, senior vice president, Manufacturers Hanover Trust Co., 350 Park Avenue, New York, N.Y. 10022 (president, Bankers Association for Foreign Trade) (term expires Sept. 1, 1973).

Murray W. Miller, general secretary-treasurer, International Brotherhood of Teamsters, 25 Louisiana Avenue, NW., Washington, D.C. 20001 (term expires Sept. 1, 1974).

Allen P. Stults, chairman of the board, American National Bank & Trust Co. of Chicago, LaSalle at Washington, Chicago, Ill. 60690 (term expires Sept. 1, 1973).

FISCAL YEAR 1974 BUDGET

Eximbank's fiscal year 1974 budget provides for a continuing expansion to provide higher levels of support of U.S. exports.

Eximbank assists U.S. exports in four basic ways:

1. Making direct loans to foreign purchasers of U.S. goods and services;
2. Guaranteeing private sector U.S. export loans;
3. Insuring U.S. exporters against certain risks of nonpayment; and
4. Discounting, on an advance commitment basis, export loans made by U.S. commercial banks.

These four types of assistance, combined in different ways, have resulted in more than 20 export expansion programs, each addressed to a demonstrated need in the U.S. exporting community.

In order to adequately meet those needs in fiscal year 1974, Eximbank's budget requests: $3.950 billion for regular loan authorization; $6.2 billion in gross guarantee and insurance authorizations; $2.815 billion in net medium-term and short-term discount loan authorizations; and $8.7 million in administrative expenses.

The Bank's operations have resulted in an increasingly large positive impact on the U.S. balance of payments. During fiscal year 1971, repayments of principal and interest on the Bank's loans and guarantees, cash payments on export shipments supported by Eximbank's various programs, and overseas sales of loans resulted in a contribution of more than $2.3 billion to the nation's balance of payments. In fiscal year 1972, such amount increased to $3 billion. In fiscal year 1974, this positive contribution is expected to be $3.6 billion.

CONTRIBUTION TO BALANCE OF PAYMENTS

REGULAR LOAN PROGRAM

Under the Bank's regular loan program exports of "big ticket" items such as nuclear power facilities, liquified natural gas projects, electric power equipment, communication facilities, and commercial jet aircraft are assisted.

In all cases, Eximbank's loan is a supplement to available private credit.

The purposes of this program are to supplement private sources of financing when the private source is unwilling or unable to assume the political and commercial risks under current conditions, to extend credit on terms longer than those private lenders can provide when such terms are warranted by the facts of the transaction, and to enable U.S. suppliers to provide terms on major projects competitive with those offered by government-sponsored export financing

institutions in other exporting countries. An Eximbank loan is authorized only when the Bank's Board of Directors has determined that Eximbank support is essential to finalizing the export sale.

In addition to equipment and services loans, the regular loan program for fiscal year 1974 includes $100 million for commodity loans and as in the past, a $50 million contingency for emergency credit authorizations.

Preliminary commitments

Under the Bank's preliminary commitment procedure Eximbank will, upon request, outline in a preliminary commitment letter the terms and conditions of the financial assistance it will extend to a purchaser of U.S. goods and services. The applicant must provide information sufficient to enable Eximbank to appraise the technical, economic, and financial aspects of the proposed project.

This program not only has been of great value to U.S. exporters in their export marketing efforts, but it also provides Eximbank with a good indication of the magnitude of potential authorizations in support of U.S. exports. At December 31, 1972, the Bank had 192 preliminary commitments outstanding for $2 billion in loans and $2.4 billion in guarantees representing potential U.S. exports of $5 billion.

Cooperative financing facilities

Eximbank's cooperative financing facilities have been made available in practically every significant country in the free world. Therefore, a U.S. company can offer its goods with confidence that any credit-worthy buyer can buy his products and arrange payment.

As of December 31, 1972, a total of $1.3 billion of facilities with 248 banks around the world was outstanding. During fiscal year 1972, $57.1 million in CFF loans were authorized; for the first half of fiscal year 1972 and fiscal year 1973, a total of $22.9 million and $35.8 million, respectively, were authorized, showing an increase of 56 percent.

Bad debt experience

The repayment experience under the loan program has been excellent. Since the inception of the Bank through fiscal year 1972, only $6.4 million in loans has been written off and, with subsequent recoveries on some of these writeoffs, a net of only $3.7 million has been charged to the Bank's retained earnings. This is only two one-hundredths of 1 percent of total loan disbursements over the same time span. Moreover, there have been very few loans written off in recent years. During the period July 1, 1958, to June 30, 1972, only eight loans totaling a net of $712,000 were written off as uncollectable. In fiscal years 1969 through 1972, no loans were written off.

GUARANTEE AND INSURANCE PROGRAMS

Through guarantees and insurance, Eximbank increases the participation of commercial banks and other financial institutions in financing U.S. exports, and enables U.S. exporters to consummate sales and penetrate markets which they might otherwise lose.

By guaranteeing commercial bank export loans and insuring U.S. exporters' overseas sales, Eximbank removes those risks which are generally inherent in and peculiar to, international transactions. This encourages greater levels of export sales and commercial bank export financing than would otherwise be possible.

During fiscal year 1972, authorizations for guarantees and insurance increased by 30 percent over fiscal year 1971. The first 6 months of fiscal year 1973 show a year-to-date increase of $274 million.

Further increases are certain, as the U.S. exporting community continues its excellent acceptance of such new developments as the master insurance policy, the combined medium-term and short-term insurance policy, the revised lease guarantee program, and recent revisions to the commercial bank medium-term guarantee program.

DISCOUNT PROGRAMS

Eximbank's discount programs are designed to assist U.S. exports moving on short and medium-term financing by providing liquidity backup to U.S. commercial banks for their export loans.

These programs assure commercial banks that if their liquidity situation tightens, their short- and medium-term export financing commitments can be met through loans from Eximbank against their eligible export financing paper. The interest rate differential between the Eximbank loan and the underlying export paper is deemed sufficient to cover the commercial bank's cost associated with their loan, but does not provide a profit incentive to use Eximbank's funds.

Discount loans are only made on an advance commitment basis. The U.S. exporter must certify that financing is needed to complete the export sale, and the commercial bank must certify that it is not prepared to make the export loan unless Eximbank will authorize an advance commitment to make a discount loan. This procedure assures that Eximbank assists only those exports where its support is essential to complete the sale; thus, the Bank is not supplanting private capital.

Eximbank's short-term program was inaugurated on January 1, 1972. The Export Expansion Finance Act of 1971, signed by President Nixon on August 17, 1971, gave the Bank the necessary flexibility and increased lending authority necessary to properly implement this facility.

The Bank's medium-term discount program is, and has been since 1969, meeting a critical need of the U.S. commercial banking community. After Public Law 92–126 was signed into law, Eximbank proceeded to again modify the medium-term discount program in several important respects to make it more useful to U.S. exporters and commercial bankers.

The length of time the Bank's commitment is in effect was extended to cover the entire life of the underlying export debt obligation. The interest rate on Eximbank's loan was made a uniform 1 percent less than the yield to the commercial bank if Exim's loan is made within 90 days of the commercial bank's disbursement against the eligible debt obligation. Commercial banks were permitted to repay an Eximbank loan at any time and then reoffer the same obligation for another loan.

The effect of these December 1971 changes was to make the medium-term program even more useful and responsive to the needs of the U.S. exporting community. This is evidenced by the fact that authorizations for advance commitments during the first 6 months of fiscal year 1972 averaged $57.6 million per month, but over the last 6 months of the fiscal year this average increased to $107.1 million per month. Total authorizations under the facility increased from $522.4 million in fiscal year 1971 to $988.6 million in fiscal year 1972—an 89-percent increase. The first 6 months of fiscal year 1973 have shown an 81-percent increase over the same period last year.

ADMINISTRATIVE EXPENSE

The Bank is requesting $8,655,000 for administrative expenses for fiscal year 1974. This slight increase over the $8,438,000 for fiscal year 1973 provides for an increase in average paid employment and small increases in costs of travel, communications, supplies, and materials, and other services.

EXPORT EXPANSION FACILITY

Public Law 90–390, enacted by Congress on July 7, 1968, established the policy of Congress "that the Export-Import Bank of the United States should facilitate through loans, guarantees, and insurance (including coinsurance and reinsurance) those export transactions which, in the judgment of the Board of Directors of the Bank, offer sufficient likelihood of repayment to justify Bank's support in order to actively foster the foreign trade and long-term commercial interest for the United States."

The law states: "The aggregate amount of loans plus 25 per centum of the contractual liability of guarantees and insurance outstanding at any one time under this Act shall not exceed $500 million."

Loans and guarantees are authorized under the EEF for U.S. exports to obligors and countries which would not qualify under the Bank's normal criteria of reasonable assurance of repayment, but which offer sufficient likelihood of repayment and meet the criteria established by the Bank's management for the facility. Loans and guarantees authorized under the EEF are not made on concessionary terms; they carry the same interest rate and repayment terms as are standard for the particular type of goods or services financed or guaranteed under

Eximbank's regular operations. At the end of fiscal year 1972, the total charges against the $500 million limitation were $373.6 million. At December 31, 1972, such charges totaled $496.6 million.

AUTHORIZATIONS FOR DEFENSE ARTICLES

In fiscal year 1972, $190 million in military credits were authorized in conjunction with the Department of Defense. This total consists of three credits: two to Iran for a total of $100 million, and one to Australia for $90 million. One of the credits to Iran is for $70 million; the other is for $30 million.

During the first half of fiscal year 1973, a direct credit and financial guarantee each for $100 million were authorized for exports of defense articles and services to Iran.

EXPORTS TO COMMUNIST COUNTRIES

The Export-Import Bank Act of 1945, as amended, contains a provision which prohibits Eximbank from guaranteeing, insuring, or extending credit, or participating in any extension of credit, in connection with the purchase or lease of any products by a Communist country, or the purchase or lease of a product to be principally used in or resold to or leased to a Communist country, unless the President determines such assistance to be in the national interest. In addition, the Export-Import Bank is prohibited from supporting any exports to any country the Government of which is engaged in armed conflict with the United States.

Accordingly, at this time, Yugoslavia, Romania, Poland, and the U.S.S.R. are the only Communist countries eligible to come under Eximbank's programs. Yugoslavia has been eligible since May 7, 1968, under a Presidential Determination of President Johnson. Romania has been eligible since November 22, 1971, when President Nixon determined that Eximbank assistance to Romania was also in the national interest. The U.S.S.R. has been eligible since October 18, 1972, and Poland since November 8, 1972, when President Nixon determined that Eximbank assistance to these countries was also in the national interest.

Export-Import Bank of the United States—Estimated activity, fiscal year 1974

	Thousands
Loan program:	
Equipment and services authorizations	$3,850,000
Commodity authorizations	100,000
Medium-term discount authorizations	1,900,000
Short-term discount authorizations	1,600,000
Special foreign trade authorizations	50,000
Subtotal—Gross loan authorizations	7,500,000
Less: Participations in and cancellations of loans authorized during fiscal year 1974	735,000

WORLD TRADE SITUATION

Mr. KEARNS. Mr. Chairman and gentlemen, I would like to make a few comments. The situation with respect to world trade is in a state of change. Changes are always taking place in the world of trade, but I think they have been faster and there is more variety this last year than ever before. Certain new elements have entered into the situation that I think are worth noting.

One thing, I am sure we are all aware of, is that the agricultural needs of the world have exceeded the supply in nearly all markets. This presents an entirely different picture than we had a year ago.

We have finally awakened to the needs of energy and minerals that this country will of necessity import over the coming years, as will other countries.

The pace of development of various countries is accelerating. As countries learn of the better life they can have and as they develop their minerals and other resources, they are able to buy things that they couldn't before.

There are some very dramatic changes taking place in the competitiveness of U.S. products since a year ago due to the revaluation of the currencies, and competition generally is pretty brisk.

EXIMBANK RESPONSE TO CHANGING CONDITIONS

These are some of the factors that tend to make for change. One of the principal things that we at the Export-Import Bank of the United States feel we must do is to be prepared for these changes; that taking an action today for today's market usually isn't good enough because in most cases marketing efforts or sales are for a long time in advance.

In other words, if you have a product which you intend to sell in the world market, you have to start in today to make yourself known in the market long before the sale takes place. It may be 1, 2, 3, 4, 5 years, but it is always a long time in advance. So all the things we are doing are intended to extend the usefulness of this institution in order to increase the marketing effort of the United States and to try to obtain the exports that are needed.

We have tried in all of our activities to respond to what we consider a demonstrated need. In other words, in this market you have short-term transactions, long-term transactions, big ones, small ones, all nature of them, and we try to use the authority that is granted to us by the Congress to meet these needs.

IMPROVED PROGRAMS

Within the last year we have quite significantly improved the operation of our bank guarantee program to make it more attractive and more interesting for banks to serve their customers who are the exporters.

Through the FCIA, an association of insurance institutions, we have improved the operation of the insurance program so that it is more responsive to the needs.

The discount program, which backs up the banks in their export financing activities, has been improved. We have this new rather spectacular program, really spectacular from the standpoint of success, which is designed to make credit available for small transactions, particularly small business in this country that wants to sell or small business abroad that wants to buy, and this has moved along fairly well.

In my prepared statement you will note some of the highlights.

FISCAL YEAR 1974 PROGRAM ACTIVITIES LIMITATION REQUEST

For the next fiscal year we are asking for a total program activity limitation of $7,658 million. This compares with $6,466 million in 1973, or an increase of $1.2 billion—approximately 18 percent.

Now, that 18 percent would be somewhat equivalent to the current increase of U.S. exports over last year. It was considerably more than that in February and in March, but it looks like we might sustain an 18 percent increase for the year, and so it would mean that the Export-Import Bank would just be keeping up with the trend.

ADMINISTRATIVE EXPENSES REQUEST

For administrative expense, we have a request of $8.7 million compared with $8.4 million last year, or an increase of $300,000, or only about 3 percent. From a business standpoint, it would appear that maybe we are getting a little more for the country's money than we would otherwise.

Our personnel level remains at 400, which is an exceedingly low level, I think, for the amount of business we are doing. And you might note that the grade level has been reduced from 9.2 in fiscal year 1972 to 9 in fiscal year 1974. In other words, we have been trying to hold the line on personnel and expenditures while still doing the job.

SCOPE OF AREA IN WHICH BANK IS DOING BUSINESS

One of the things I think is quite important that we might keep in mind is that we do business now in 124 countries, or 175 markets as of the last fiscal year. You have Hong Kong, Bermuda, and so forth, which are really markets in themselves, but as part of another country.

The impact in some of these countries is rather small, as little as a few thousand dollars, but we do have some exposure today in that many countries.

ENCOURAGEMENT TO PRIVATE BANKS TO FINANCE EXPORTS

One of the measures, I think, of our operation is to look at what we have been trying to do to encourage private banks to be more ac-

tive in offering their services to a business that will try to sell its goods abroad. One of the ways we have done that is through our discount program which provides assurance of liquidity to a bank that will provide financing to its customers. We do that by making available a loan against the export paper at roughly 1 percent below what the bank charges the customer.

I checked just before I came here and we now have 161 banks that are working with us on the discount program, up from 27 banks in 1969. When you realize that those banks are scattered all over the country, that we now have in almost every area of the country one or more banks that will tell a buyer or a seller, "We are prepared to provide you with financing if you have a transaction," it is very encouraging.

We think this is all to the good, and it works out especially well from a leverage standpoint. We have been able to get this activity by making an advance committee to the bank to provide such financing if they need it, but the draw has been exceedingly low, a very small percentage of the commitment. In other words, the transaction goes forward, the bank makes a loan, but they don't draw on us unless it is necessary and so far they haven't done that.

FUNDING OF BANK

Our funding, which we use for operations, also, I think, presents a rather interesting picture.

The net cash needs projected for 1974 for the Bank's operations—that is, in addition to receipts from loans, interest and fees—are estimated to be $1,865 million, which includes paying off $327 million of PC's—participation certificates. It also includes paying a dividend to the Treasury of $50 million.

We intend to get that money by borrowing from the public $1,706 million and from the Treasury $159 million.

You may note that we have reduced our Treasury borrowings down from what they used to be.

DELINQUENCIES AT MARCH 31, 1973

There is another area in which I know you are interested and that is delinquencies. As of March 31, total delinquencies of 30 days or more were about $196,327,000, of which Chile accounted for about $90,684,000; Cuba, $57,956,000; and Mainland China, $42,058,000.

This is both private and public. And $59 million of that has been private, largely in Chile.

LOSSES SINCE INCEPTION OF BANK

We have charged off only $20 million since inception of the Bank, of which $16,585,000 was insurance and guarantee settlements, on which incidentally we had collected premiums.

We have a very excellent collection and administration program, and I think when you relate these very minimal losses, even including $91 million in Chile, to the total amount of business, it would be considered fairly good.

Those are just some of the highlights pointing up the way we see it today. I hope you will see that this little institution, which is not big in terms of Government jobs, is making some significant contributions.

We feel we are getting a maximum of leverage from the amount of costs to the money system. We don't actually cost the taxpayer anything, fortunately; we are able to raise our funds through the money system.

RELATIONSHIP OF BANK LOANS TO EXPORTS

I want to point out one little chart here. I don't have it in final form, but I can make it available to you. This shows the difference in the relationship between Export-Import Bank's loans to the amount of exports that relate directly to those loans. This is outside of the insurance and bank guarantee programs, the discount program, and so forth.

In 1966 the Export-Import Bank made direct loans of $1,149 million against exports of $1,226 million. That compares with fiscal 1972 of loans of $2,296 million against exports of $4,714 million.

We are getting $2 of exports for every dollar of loans that we make. This is due to the changes in the program that we have been following in the last 4 years and to improving our operations. So we get a tremendous amount of leverage and anyone interested in financing knows that leverage is the name of the game. That is the thing you are always trying to do—achieve leverage for your money, so you get more effect for the impact you make.

COMMITTEE PROCEDURE FOR QUESTIONING WITNESSES

Mr. PASSMAN. Thank you, Mr. Kearns.

Under the rules of the committee each member of the subcommittee may consume 5 minutes in questions and answers and I usually defer asking any questions until the other members have had an opportunity to consume 5 minutes.

Now, in fairness, we want the questions to be complete; we want them to be as brief as possible because a good witness can always take a 15-second question and spend 7 minutes answering it. So if you will remember each member operating under the rules will consume 5 minutes, after which we will return to the chairman and I will consume as much time as I need to conduct my examination and subsequently each member of the committee may consume all the time required to be able to ask the questions that they have in mind.

At this time I yield 5 minutes to Mr. Roybal of California.

ADMINISTRATIVE EXPENSES REQUEST

Mr. ROYBAL. Thank you, Mr. Chairman.

It is my understanding the Bank is requesting $8,655,000 for administrative expenses. Can you tell us what that means?

Mr. KEARNS. I will ask Mr. Dugan to speak to that.

Mr. DUGAN. Included in the $8,655,000 is about $6.5 million for personnel compensation, another $523,000 for personnel benefits, $300,000

for travel, $845,000 for rent, communications and utilities, and $507,000 for other administrative expenses.

Mr. ROYBAL. What is the amount directly charged to salaries?

Mr. DUGAN. $6.48 million.

TRAVEL EXPENSES

Mr. ROYBAL. Is there a breakdown or can you provide a breakdown of your travel expenses? $300,000 for travel, is that the norm?

Mr. DUGAN. We incurred actual expenses in 1972 of about $238,000, and we estimate 1973 to be about $270,000. It is a moderate increase.

Mr. ROYBAL. You are asking for an increase, are you not, in travel?

Mr. DUGAN. About a 10-percent increase.

Mr. KEARNS. Could I supplement that? In international business where it is incumbent upon us to maintain surveillance over 124 countries, their economic and political potentials and problems, and also to try to understand the potentials for U.S. exports and to be able to respond to this demonstrated need, there is really no substitute for having someone in the Bank personally visit these countries.

Over the past 4 years we have encouraged more and more of our staff to travel. We find that it makes them better loan officers, they make better judgments, they have more interest in what they are doing, and we are better able to respond to the needs when they come up, that is, the applications when they come up. Actually I probably have accounted for more of that travel than anybody else. I know I have because I think there is no way that I could answer the problems that occur to me as head of the institution unless I have a fairly good personal picture of what is happening around the world. So our travel expense is higher than it has been. There were many years when the bank's personnel traveled a minimum.

Mr. ROYBAL. You would agree with my contention that this committee should also travel to find out how you people spend the money?

Mr. KEARNS. I think that if you are interested in international business, you cannot understand the dimensions unless you travel.

NEED FOR CONGRESSIONAL TRAVEL

Mr. ROYBAL. One of the complaints I usually get is that the Committee on Appropriations does very little traveling.

I think they should have a very good idea of how money is spent not only by our group but by every other agency that comes under this committee.

I am glad to have your statement on record. I think you made a better case for traveling than I have ever been able to make, and I am glad to have your help on it.

Mr. KEARNS. I feel very strongly about it. The more I see of it, the more I am convinced.

Mr. ROYBAL. Thank you, Mr. Chairman.

Later I would like to go into the matter of employment practices and so forth. It will take more than 5 minutes for me to proceed in that area.

Mr. PASSMAN. Thank you, Mr. Roybal.

If I may comment briefly, in all probability while we are sitting here there are a thousand bureaucrats in the air somewhere traveling over the many nations of the world, and you never see one sentence of criticism by the press or any of the national commentators, or these people who always find wrong with Congress about this travel. But you let a member of this subcommittee go out on an examination, no matter how serious it is, it is immediately labeled "junket" and it makes some of the members somewhat hesitant to go on these trips.

I just went to Saigon and a good part of the cost of that trip came out of my own pocket because I did not want to be subjected to criticism by some writers.

It is really good that you make the case. I see where you have been out probably for 6 weeks traveling constantly.

You have had no criticism in the press, but I am being chastised already for my trip to Southeast Asia, which I thought was very, very important. I am being just a little critical and rightly so, because they tear us apart and call it a junket.

We shall recess briefly.

[Recess.]

Mr. PASSMAN. The committee will come to order.

Mr. Roush, you may proceed.

NEW MEMBER OF COMMITTEE

Mr. ROUSH. Thank you, Mr. Chairman.

I want the witness to understand this is my first occasion to participate in the deliberations of this subcommittee. I am not going to pursue my questioning too extensively this year and I am going to sit and listen for the most part. However, next year I would anticipate participating very actively, Mr. Chairman.

Mr. PASSMAN. We are very happy to have this distinguished member as a member of this committee and I know he will be a very valuable member of this committee.

Mr. ROUSH. Thank you, Mr. Chairman.

Referring to your statement beginning at the bottom of page 2, you provide the various bases for your statement and, among other things. you are referring to the fact that you anticipated a great year here and you refer to more private and public buyers as having ability to purchase as a result of greater liquidity, availability, and vastly expanded credit facilities.

I wonder if you could elaborate just a little on that for my own edification?

Do you find my references? It is at the top of page 3.

REASONS FOR INCREASED WORLD TRADE

Mr. KEARNS. Yes, sir.

As the world is developing, with discoveries of minerals and the need for minerals in many countries, certain countries now are finding themselves with potential income that they didn't know they had 1 year or 5 years or 10 years before. So now they are able, by the use of credit, to speed up their economic development by buying equipment, materials,

and developing infrastructure, whatever it may be, with industries developing in those countries, which speeds up business.

SOURCES OF CREDIT FOR TRADE

Mr. ROUSH. What is the source of that credit?

Mr. KEARNS. The exporting countries in nearly 100 percent of the cases.

You have on one side improved credit worthiness in developing countries, and then you have in the developing countries increasing needs for products and a great diversification of their production, which means that they are looking elsewhere to buy something.

They look, too, to export financing institutions to finance those transactions. It isn't very often that you find a transaction in a developing or a developed country where the buyer has the money in the bank before he makes the transaction. He may have part of it—10, 15, 20 percent—but he uses it. If it is any kind of transaction of any consequence, he must buy on time. It might be a short-term transaction where you pay off in 180 days or a year, or it may take as much as 20 years, but he looks to somebody to provide him with credit.

At the same time, the export credit institutions of all of the industrial countries have improved their techniques. Export-Import Bank is the oldest of those. I think we are still a little bit in the lead, but we have a lot of competition because others are observing what we are doing and improving their techniques.

Also, the international banks are able to provide more financing and usually in cooperation with the government export financing institution, if there is an export involved.

So these are all breaks in the total fabric of the larger house of trade that you are building. It is those and many other things. If we sat down and worked at it, we could probably find a dozen specific things that have led to this constantly increasing trade.

CHANGES IN THE LESS DEVELOPED COUNTRIES

Mr. ROUSH. Would the fact that some of the underdeveloped countries have developed a degree of sophistication in the business world also contribute to this?

Mr. KEARNS. Yes.

Mr. ROUSH. And increase confidence on the part of lenders?

Mr. KEARNS. Yes; there is that and also increased communications. There is a lot better knowledge, one to the other, than there has ever been before.

FOREIGN BUYERS RESPECT FOR U.S. PRODUCTS

Mr. ROUSH. Let's go to your point 4 here, where you say thorough inquiry reveals a very high respect for U.S. products. Who made the thorough inquiry?

Mr. KEARNS. I did.

Mr. ROUSH. Is this a formal inquiry you made or is this just a conclusion you have reached?

Mr. KEARNS. It is a conclusion I have reached after very extensive travel and consultation with people in 50 countries all the way from heads of state down through to the bankers, and the business people—extensive questioning in such things as "What do you intend to buy next year? What are your plans for development?" And from that my colleagues and I have accumulated a lot of firsthand information.

In addition, we have a constant flow of inquiries to us by either suppliers or by buyers on transactions. We have them in all elements of our operation which gives us a constant picture of what is happening in the world, and I can say without any fear of any successful challenge that this is the case. I can't prove it statistically except that our exports are increasing at a very substantial rate.

QUESTION OF QUALITY OF AMERICAN PRODUCTS

Mr. ROUSH. I don't know that I would want you to statistically prove it, but I should think I would like to see more hard evidence than just your own personal conclusion.

I, of course, read where the comparative quality of American goods has somewhat deteriorated over the past few years. I am speaking of the comparative quality and this is bothersome to me and I am wondering what the future holds for us, if this is the case, and if that trend should continue.

Mr. KEARNS. I think the term "comparative quality" can mean many things. You can say compared with tradition in this country. You can say compared with products from other countries, where I would question it.

If it is compared with the sophistication of a product compared with what it was 5, 10 or 20 years ago, I would say that it could mean anything.

In other words, comparative can be many things, but the fact is that U.S. products are really desired and admired by most people in the world today. I say that after very intensive discussion.

UNIFORM INDUSTRIAL STANDARDS

Mr. ROUSH. One other thing indirectly related. What are we doing to bring ourselves into a position of being more competitive because of the adoption of uniform industrial standards? I am sure that must affect your work.

Mr. KEARNS. This is a factor, and I don't think we are doing or have done enough. I think we should have started 20 years ago to move to the metric system.

Mr. ROUSH. My first reference was to industrial standards. I was going to speak to the metric system but in the area of industrial standards, so many screws per inch, so many lines per inch on the TV screen, this has deprived us of a lot of markets simply because we haven't been able to compete with countries in attaining uniform standards.

Mr. PASSMAN. The gentleman has consumed his 5 minutes but we will return to the gentleman later, if that is OK?

Mr. Conte.

NEED FOR U.S. BUSINESS TO GO INTO FOREIGN MARKETS

Mr. CONTE. I have no questions. I have read the statement. It is an excellent statement. I imagine a lot of other agencies in the government look at you with envy.

I just came back from the Asian Development Bank and met with the president of the bank there. He was quite concerned that American manufacturers were not competing enough in the foreign markets; especially now with the devaluation of the dollar. It has made us very, very competitive, and I agree with you a lot of the consumers throughout the world look with an eye toward American products because they like them, especially in the appliance fields, where we really haven't done enough to try to go out and sell.

What are we trying to do to stimulate trade in these areas?

Mr. KEARNS. I can't tell you what everyone is trying to do, but I can tell you what we are trying to do. We believe that using the resources of the Export-Import Bank which can be transmitted to potential suppliers as a means of assuring them that if they sell something they will be paid—they can get their money—is a strong tool.

So we have set about to make it work. We have done that primarily by working with private banks all over the country, to encourage bankers to know how to use Export-Import Bank facilities in cooperation with their own, so they can provide financing when it is necessary. So then if an exporter goes in, or a producer goes in, and says, "I have a prospect. Should I look at it?", the banker will say, "Yes, do it. There is a way to finance it."

When there were very few banks throughout the country telling them that, the average American company would find very few banks who would encourage him in the export field. Today we have banks all over the country participating with us—161 in the discount program, about an equal number in the guarantee and insurance program—so in any market there are banks that will work with an exporter to help him sell his products.

Now, this is incentive to encourage additional marketing efforts.

Again, in my market analysis, which I think is sincere and conscientious, and I think somewhat effective, the No. 1 thing we find is a minimal U.S. marketing effort. So the more we can encourage U.S. companies to go out and sell their products, the more we can take steps to solve our trade problem and I think we are doing it.

PERSIAN GULF AREA ACTIVITY

Mr. CONTE. Do we have any specific program in the Persian Gulf area where we have such a bad balance of payments problem, because of the large purchase of energy in that particular area? Is there any concentrated program to try to offset that?

Mr. KEARNS. Yes, we have two or three. Now, the Persian Gulf, you know, is made up of several countries. If I can speak of Iran, then I can say absolutely we have some programs that are effective. If I have to speak of Kuwait or Saudi Arabia, Iraq and so forth, then we are not doing very much. But in Iran there is every probability that the United States will supply Iran with 50 percent or more of its imports, which could total around $5 billion a year from the United States by 1975.

We are doing that by working with the Iranian buyers government

and private, by setting up our cooperative finance program in the Iranian bank, so the buyer in that country, regardless of his size, can find financing if he needs it.

So we are working specifically in that country.

Now, it is more difficult in the other Persian Gulf countries because, in the first place, they don't have a comprehensive development program of their own. They really are sort of moving along on a hit or miss basis. It is difficult to do.

EXPORTS TO IRAN

Mr. CONTE. What are we selling to Iran?

Mr. KEARNS. All kinds of equipment—transportation equipment, manufacturing, power, agricultural equipment, food processing, liquefied natural gas projects, everything you can think of. It is an economy that is moving ahead on a very broad basis. It offers a tremendous market.

Mr. CONTE. I guess my 5 minutes are up.

COOPERATIVE FINANCING FACILITY

Mr. COUGHLIN. At page 7 of your statement you talk about the cooperative financing facility program as being one of your exciting developments. How does that work?

Mr. KEARNS. This is a program we devised or actually started in operation 2 years ago after a year's experiment. We found that around the world there are financial institutions with which we could cooperate in financing purchases from the United States. So what we do, once we have determined that the bank or other financial institution is creditworthy in itself, is to make a line of credit available to cover 50 percent of the financed portion of a transaction.

In other words, if they are buying a million-dollar piece of equipment, material or whatever it may be, we expect a 10-percent downpayment, which would leave $900,000.

We will provide $450,000 of Export-Import Bank money at 6 percent interest on a 5-year loan. The cooperating bank in the market provides the other 50 percent. They combine the two and loan the money to the buyer at a rate that is usually lower than the market rate would be in that country.

Mr. COUGHLIN. The difference between this and the other programs is the insertion of a cooperative bank in another country.

Mr. KEARNS. That is right. They make the judgment as to whether or not the transaction is creditworthy and take the credit risk.

That is the real key to the thing. In smaller transactions, the big expense and delay is trying to determine whether or not you are going to be repaid. When we put that in the hands of a local bank, then we have really made the thing work.

This program is approaching $250 million of sales, averaging about $200,000 apiece. We are just getting the program started. It opens an entirely new dimension to U.S. exporters because it gives them a chance to go into any market. We now have branches of banks in every significant market in the free world. Any exporter who has a product to sell can go into those banks and can make arrangements to finance his sale if he has a good product. All he has to do is make an effort to market to creditworthy buyers.

Mr. COUGHLIN. At page 11 of your statement in the third paragraph at the top of the page you talk about U.S. producers participating in the many large pilot projects now in a formulative stage. Could you illustrate?

LIQUEFIED NATURAL GAS

Mr. KEARNS. LNG is the biggest one. We started 2 years ago by hiring a man to spend full time getting all the facts on the future of liquefied natural gas as an energy source. We have been able to accumulate probably as much information as any organization in the world. These transactions require such tremendous capital that any potential participant, either the country that has the gas or the company who puts it together, or the buyer, knows that financing is a key issue. So they come to us and ask us what we can do.

The result is we have been able to accumulate information from all of them, and we have a good picture of what is happening.

Those are very, very large transactions. We have some 22 or 23 transactions in liquefied natural gas in some part of the world in some state of development.

Now, that is the biggest one.

Mr. CONTE. Do you have a study on that?

Mr. KEARNS. We don't have a complete written report on it because we have to move so fast.

Mr. CONTE. I would like to see it if you have it.

Mr. KEARNS. The thing moves so fast that it is hard for us to put together a complete study because what is true today will be obsolete tomorrow. I will be glad to have our expert come up and go over it with you because he can give you a picture of it that is really exciting.

Mr. PASSMAN. Why don't you commit it to writing where all members of the committee will have an opportunity to see the information?

Mr. KEARNS. Very well. It really needs to be done.

Mr. PASSMAN. If it is going to be done, don't you think we should have it in the hearings so all members would be able to see it?

Mr. CONTE. We would be happy to see it.

Mr. COUGHLIN. Would it be possible to get a list of the primary products under consideration?

Mr. KEARNS. That is a little difficult. What we do here is looked upon with interest by our competitors in foreign countries.

We will give you a report of the principles, and then if you want the details, we will give them to you, but I don't think we should have it in a report that will go to the Germans, the French, the Japanese, and others, to give them the benefit of all the information we have.

Mr. PASSMAN. Give us a memorandum on it and we will put it in the file, so all members may look at it.

Mr. KEARNS. We will be happy to do that. We had one difficulty with a report on competitiveness. We did a first-class job, and the first thing we knew all our competitors had a copy of it, and it gave us fits because they used it against us.

Mr. PASSMAN. Give us what you can.

[The information follows:]

EXPORT-IMPORT BANK OF THE UNITED STATES

PLANNED LIQUEFIED NATURAL GAS (LNG) EXPORT-IMPORT SYSTEMS, WHERE THEY STAND TODAY

(A Brief Review—May 1973)

Introduction

Actual and reliably forecasted demand for and shortages of natural gas in the United States, Japan, and Western Europe have prompted an intense interest in the possibilities of importing baseload quantities of liquefied natural gas (LNG) into these gas-deficient areas.

In order to bring into focus the numerous potential LNG import projects now being planned or actively discussed, the following brief review is offered as an indication as to where they stand today. Purposely omitted are those projects in Alaska, Algeria, Brunei, and Libya which are in fact operating today. The purpose here is to review those projects which are being planned or actively discussed and which appear to have merit. For this reason, the review does not encompass the full spectrum of such discussions, nor is its purpose to forecast the eventual realization of the projects reviewed herein.

In addition, during the past year or so, methanol has received increasing attention as a possible alternative to LNG. It should be recognized that potential sources of methanol are the same as LNG, and should methanol prove competitive, it could displace some projects presently forecast for LNG.

In any event, here's where they stand today.

Abu Dhabi

Das Island Project.—An international joint venture group recently announced the signing of a 20-year contract to transport approximately 400 million cubic feet per day equivalent of LNG to Japan. The total foreign costs for the Das Island plant facilities are estimated to be approximately $200 million. Eximbank has issued a preliminary commitment indicating its willingness to support the proposed U.S. costs of $50 million. A Norwegian shipyard has been awarded the contract to construct four ships, three 125,000 cubic meter and one 87,000 cubic meter. The first deliveries of LNG are scheduled for the final quarter of 1976.

Algeria

Arzew Projects.—The Sonatrach/El Paso project, which proposes to deliver 1 billion cubic feet of natural gas per day to the east coast of the United States, is now moving ahead. Eximbank's financial commitment in the Algerian liquefaction plant and related field facilities could reach $367 million. Sonatrach will construct and operate all of the facilities required in Algeria, from the gas wells at Hassi R'Mel to the plantsite at Arzew. El Paso will own and operate nine 125,000 cubic meter ships which will carry the LNG, under a 25-year contract, to two receiving terminals, one at Cove Point, Md., where deliveries of LNG equivalent to 650 million cubic feet of gas per day will be made; and the other terminal at Elba Island, near Savannah, Ga., will receive the remaining 350 million cubic feet per day. First deliveries of LNG are scheduled to commence in 1976. El Paso has agreed to build six ships in the United States and three in France. The U.S.-constructed vessels will be supported under MARAD programs.

In addition to the above project which, when implemented, will be the world's largest LNG system, El Paso has a second agreement with Sonatrach covering the purchase of additional LNG equivalent to 1 billion cubic feet of gas per day over a similar 25-year period. This proposal envisions a second liquefaction plant and related facilities at Arzew. Tentative agreements have been reached for sale of the LNG to U.S. buyers on the east coast. Initial deliveries are planned to commence in 1978.

Skikda Project.—In addition to the three-train Skikda plant which commenced operation this year and which will ultimately deliver 450 million cubic feet of gas per day to French buyers, Sonatrach intends to greatly enlarge the capacity of the plant to process approximately 1 billion cubic feet per day. Preliminary agreements have been reached for sale of the additional LNG to U.S. buyers on the east coast. MARAD has agreed to support the construction and financing of three 125,000 cubic meter ships for the potential LNG deliveries.

Dellys Project.—A consortium of French, Dutch, Belgian, West German, and other European gas distributors have signed a 20-year agreement with Sonatrach for approximately 1 billion cubic feet of gas per day. The contract calls for the Europeans to arrange the financing for Sonatrach to cover investment costs for producing and liquefying the gas.

Australia

Magellan Project.—In July 1972, a group headed by Magellan Petroleum Corp. announced plans to sell approximately 500 million cubic feet per day equivalent of LNG for 25 years to a U.S. west coast utility company. Estimated costs of the capital facilities to carry out the project are approximately $1.2 billion. This amount would include about $500 million for a pipeline to the coast from the Palm Valley field in Australia's central desert, and a plant to liquefy the gas. The balance of the investment cost would be used for LNG ships and for regasification facilities in California. Among other things, the project is subject to approval of the Australian government which has indicated some reluctance to do so at this time.

Woodside-Burmah project.—In December 1972 a group headed by Woodside-Burmah Oil N.L. announced that it had proved and probable reserves in excess of 10 trillion cubic feet of natural gas in its North Rankin field on the northwest shelf of Australia. The group has also discovered three other gas fields in the same area and estimates that the recoverable reserves from the four fields could total 20 trillion cubic feet of gas. The group plans to produce 1 billion cubic feet per day from the offshore wells, and to pipe the gas ashore near Dampier where it will be liquefied and stored for shipping to Japan and the U.S. west coast. As with the Magellan proposal, this project is subject to approval by the Australian Government.

Indonesia

Pertamina project.—Pertamina, Indonesia's state-owned oil company, contemplates construction of a liquefaction plant and ancillary facilities to deliver 1 billion cubic feet per day equivalent of LNG for shipment from the Arun field in North Sumatra to the U.S. west coast. An international oil company would provide technical and management assistance for the Indonesian land-based facilities, and the proposed buyer would be a west coast utility company. Initial cost estimates for the liquefaction plant are approximately $500 million, with potential U.S. costs of up to $370 million. Eximbank has preliminarily agreed to support the U.S. costs for the plant.

In addition to the above Pertamina hopes to develop similar large gas export projects in Kalimantan, Borneo, and in West Irian, New Guinea.

Iran

Kharg Island project.—The National Iranian Gas Co. (NIGC) is planning the formation of an international joint venture group to develop a gas gathering system and plant on Kharg Island to liquefy approximately 500 million cubic feet per day of gas, for delivery to Japan via five 160,000 cubic meter ships. Total capital costs for the overall project are estimated to be approximately $1.3 billion including $700 million for ships. Eximbank has preliminarily agreed to support up to $750 million U.S. costs in the plant and ships.

Qeshm Island project.—Because of higher LNG processing costs due to the quality of the gas at Qeshm, NIGC is now considering a joint venture project for the development of a large methyl fuel facility. The relative economics of methanol production have so improved that the methyl fuel route today offers a viable and attractive alternative to LNG schemes. Recent evaluations by major United States and Japanese firms have prompted predictions of bulk methanol importation into both the United States and Japan during the next decade. The methanol would be used both directly as a primary fuel and as feedstock to SNG plants for production of pipeline gas. Also, bulk methanol can be shipped in conventional type crude oil tankers which are far less capital intensive than LNG tankers.

Initial cost estimates for the Qeshm Island facilities only, including the plant, gathering system and gas field development, are approximately $500 million.

Kangan project.—Some months ago, NIGC announced plans to develop a project at Kangan to liquefy up to 1.2 billion cubic feet per day of gas for markets in Japan, the United States and South America. This undertaking calls for a $700 million international joint venture investment in the Iranian land based facilities, plus an undetermined amount for 13 to 19 tankers.

Malaysia

Sarawak project.—An international oil company together with Japanese interests and the Government of Sarawak plan to develop a joint venture project to export LNG to Japan. The quantity of gas involved is estimated to be approximately 800 million cubic feet per day and require seven ships. Indications are that negotiations with the government and the Japanese interests are progressing slowly; however, the participants believe that the project will go forward in the not too distant future. Total project costs are estimated to be approximately $1.5 billion.

Nigeria

There are three potential LNG projects in Nigeria, each of which would process 500 to 700 million cubic feet per day of associated and nonassociated gas. The three separately planned projects are in conjunction with the oil production of various international oil companies. The U.S. east coast is the primary market being sought, and each project will require an investment of approximately $1 billion or more, including the ships and the land-based facilities on each end of the systems. There has been much delay in moving any of the projects forward; however, the major oil interests are presently in earnest negotiations with the government in an effort to develop their own areas of production.

Saudi Arabia

Petromin project.—Saudi Arabia's General Petroleum & Mineral Organization (Petromin) proposes to develop a joint venture methyl fuel project. The plan calls for the conversion of associated natural gas in Saudi Arabia to fuel-grade methanol for export to end users in the United States. The plant would be designed to produce 10,000 tons of methanol per day for sale to U.S. buyers under long-term purchase contracts. The offtake would be shipped in conventional VLCC's, unloaded at a deepwater port outside the United States, and then transshipped in smaller crude carriers to ports on the east coast United States. The methanol would then be converted into fuel gas of pipeline quality.

Trinidad and Tobago

Trinidad project.—Eximbank has preliminarily agreed to support up to $189.5 million for the gas pipeline and liquefaction facilities in Trinidad. The project calls for a joint venture between the Government of Trinidad and U.S. interests to liquefy approximately 300 million cubic feet per day of natural gas from offshore Trindad reserves for shipment via two 125,000 cubic meter vessels to the gulf coast of the United States. The LNG will be received there and regasified and injected into an existing pipeline system. First deliveries, subject to necessary approvals, are scheduled for 1977. MARAD has preliminarily agreed to support the construction and financing of the two ships.

U.S.S.R.

Potential project sponsors from the United States have held preliminary talks with Soviet officials in Moscow about importing into the United States, and possibly Japan, LNG from the U.S.S.R. Two projects are envisioned * * * one would liquefy some 2 billion cubic feet per day of gas from western Siberia for export to the east coast United States, and the other would liquefy a similar volume of gas per day for export to the west coast United States, and possibly a given quantity of this to Japan. The total capital requirements for these two projects, including the U.S.S.R. facilities, ships, and U.S.-receiving facilities are estimated to be approximately $10 billion.

Venezuela

Lake Maracaibo project.—Corporacion Venezolano del Petroleo (CVP) and the Venezuelan Government are currently planning for the export of approximately 600 million cubic feet per day of gas as LNG from Venezuela to the United States. The project calls for gathering associated gas and construction of liquefaction facilities in the Lake Maracaibo region, and three tankers to transport the LNG.

Other Projects

On the U.S. west coast, gas companies are pursuing the possibilities of LNG imports from Ecuador and the Canadian Arctic, as well as intercoastal movement of LNG from Alaska to California. A west coast utility company is actively pursuing a project to move LNG from Alaska to its planned receiving facilities in California.

Conclusion

The volumes of LNG discussed herein total approximately 20 billion cubic feet of natural gas per day equivalent. On the assumption that the total capital requirements of a complete LNG export-import system (under existing technology) will approach an average of approximately $2 per cubic foot of daily capacity installed, the total capital requirements could well reach $40 billion. These costs would of course include the foreign land-based production and liquefaction facilities, the shipping, and the receiving and regasification facilities in the consuming countries. It is interesting to note here that the potential number of vessels required to carry these volumes of LNG could well reach 200.

As indicated in the introduction, this review does not encompass the full spectrum of LNG systems presently under discussion, nor is it the purpose here to forecast the eventual realization of the project. However, the fact is that a substantial portion will come to fruition, and it is Eximbank's desire to maximize its support for the potentially tremendous export market for U.S. equipment and services.

[NOTE: After further review, the Eximbank determined that printing the entire report would not be detrimental to U.S. interests. Thus, the above is the complete report given to the Committee.]

Mr. KEARNS. The same thing is true on copper and other minerals. I mentioned LNG as one, but there are several others in the primary products. It would apply in a somewhat lesser degree.

Mr. PASSMAN. You are really in grand form today.

Mr. KEARNS. You are talking about something I happen to know something about.

PROFITABILITY OF BANK OPERATIONS TO U.S. ECONOMY

Mr. PASSMAN. Mr. Kearns, on balance, I think you are doing a superb job. I think the Export-Import Bank is one of the U.S. agencies that we can point to with pride and one that has earned a tremendous profit, not only for the American producers, but for the Treasury. I am interested in the profit picture.

We think of organizations, a bilateral organization because your loans are made to finance American commodities and it is always paid back into the Export-Import Bank and it would be bilateral in nature, would it not?

Mr. KEARNS. Yes.

Mr. PASSMAN. Could you tell the committee when the Export-Import Bank was organized, when the charter was first isued?

Mr. KEARNS. Its stock was originally held by the Reconstruction Finance Corporation.

Mr. PASSMAN. What was the date?

Mr. SAUER. February 12, 1934, Mr. Chairman.

EXPORT SALES SUPPORTED BY THE BANK SINCE ITS INCEPTION

Mr. PASSMAN. Do you have any idea of the volume since that time?

Mr. KEARNS. About $61 billion in export sales supported.

Mr. PASSMAN. That is all for American-produced commodities?

Mr. KEARNS. Yes, sir.

Mr. PASSMAN. Under the charter it is entirely to finance American commodities?

Mr. KEARNS. Yes, sir.

Mr. PASSMAN. Do you have any idea what the profit has been for the producer, processor, or manufacturer?

TAX REVENUES AND U.S. JOBS RESULTING FROM BANK-SUPPORTED TRANSACTIONS

Mr. KEARNS. We did some studies on this, using the best information we have and I think there would be approximately $15.2 billion in corporate and personal taxes that were paid to the Federal Government as a result of the volume of business we did.

Mr. PASSMAN. $15 billion?

Mr. KEARNS. That is right.

Mr. PASSMAN. Paid into the U.S. Treasury. How many jobs did it provide annually?

Mr. KEARNS. We estimate it has created or will create about 4.2 million full-time jobs. We would have to divide that by the number of years to set an annual average, but the annual average wouldn't be very accurate because the total covers a long period when there wasn't much business.

BANK'S CURRENT LOAN EXPOSURE

Mr. PASSMAN. What do you have outstanding at the present time?

Mr. KEARNS. $6.5 billion in loans and about $18 billion in total obligations.

Mr. PASSMAN. Let's take loans. $6.5 billion is owed to the United States at this time?

Mr. KEARNS. That would be in direct loans.

LOAN TERMS

Mr. PASSMAN. What are the average terms? What would the payout be on the average?

Mr. DUGAN. About 7.5 years.

Mr. PASSMAN. That is taking the minimum and maximum?

Mr. KEARNS. Yes, sir.

Mr. PASSMAN. What is the minimum term of credit you will extend?

Mr. KEARNS. On direct loans, the minimum would be a year.

Mr. PASSMAN. And the maximum?

Mr. KEARNS. The maximum would be 20 years on nuclear powerplants.

Mr. PASSMAN. The average would be 7.5 years?

Mr. DUGAN. Yes.

Mr. PASSMAN. On balance if you started off with $6.5 billion for losses, the Government would still be some $9 billion ahead into the U.S. Treasury?

Mr. DUGAN. Something like that.

Mr. PASSMAN. I think it is a marvelous record and one that you should be proud of. It is one that I am proud of. If we are going to have a program, I think the Export-Import Bank is one we should tie heavily to because without exception it is to finance U.S. commodities, it is on reasonable terms and your record is excellent.

I want to say to you, Mr. Kearns, you have done a superb job. I am not prone to be complimentary of bureaucrats because I am certainly

not a foreign aid enthusiast, but if this is tied into the bill this committee handles, we want to point out the good things as we go along. You have an operation of which you should be proud.

What are your estimates of profits for fiscal year 1973?

Mr. KEARNS. I would like to correct the record. I didn't do it. The team did it. The Export-Import Bank team did it.

Mr. PASSMAN. You are very modest and, of course, you have a great team. You take the old veteran over here, Mr. Sauer, he will sit here 2 days and smile, but he will never say anything.

Let's give the team credit.

BANK'S PROFIT IN FISCAL YEAR 1972 AND ESTIMATED PROFIT FOR FISCAL YEAR 1973

Mr. KEARNS. Our profit last year was $148 million. This year it will be slightly less.

Mr. PASSMAN. What is it for 1973?

Mr. DUGAN. About $145 million before payment of claims.

Mr. PASSMAN. What are your expenditures out of that?

What is the total administrative expense for operating this business to earn this profit?

Mr. KEARNS. $8.4 million.

PERCENTAGE OF ADMINISTRATIVE COSTS TO PROFITS

Mr. PASSMAN. So, or a percentage of earnings, your overhead is what?

Mr. KEARNS. It is about 5 percent.

Mr. PASSMAN. That is a commendable record also. I have had a little experience in banking, mostly borrowing and extending notes.

Mr. CONTE. I might say, Mr. Chairman, that compliment to Mr. Kearns from you is really something. I have been on this committee something like 14 years, and a compliment coming from the chairman is quite unusual.

Mr. PASSMAN. I have been complimentary of Mr. Kearns before because he is running a good shop.

We have this arranged so the money comes back to the U.S. Treasury. You have too good an operation for me to personally recommend any reductions.

Mr. ROYBAL. There is a call of the House, Mr. Chairman.

Mr. PASSMAN. $7,650 million is the program activity limitation requested?

Mr. KEARNS. Yes.

ESTIMATE OF EXPORTS TO BE SUPPORTED FROM BANK'S FISCAL YEAR 1974 BUDGET REQUESTS

Mr. PASSMAN. How much volume will this generate?

Mr. KEARNS. We should be able to generate about $12 billion.

Mr. PASSMAN. That is tremendous because actually you generate almost twice the volume from the amount of money that you want to use to finance these commodities.

Mr. KEARNS. The $7.6 billion isn't money we loan; that includes insurance and guarantees. The money we loan is even less than that.

Mr. PASSMAN. What is the amount that you loan?

FISCAL YEAR 1974 LOAN ESTIMATE

Mr. DUGAN. Regular loans are about $4 billion.

Mr. PASSMAN. If you compare the volume to the lending function, it generates about $3 in volume for each dollar that you lend; is that correct?

Mr. KEARNS. Yes.

INCREASE IN ADMINISTRATIVE EXPENSE REQUEST

Mr. PASSMAN. Are you asking for an increase in administrative expense?

Mr. KEARNS. A 3-percent increase, Mr. Chairman.

Mr. PASSMAN. Three percent over the previous year?

Mr. KEARNS. Yes.

Mr PASSMAN. How much are you increasing your volume?

Mr. KEARNS. We are increasing our volume about 12 percent.

Mr. PASSMAN. We will take a brief recess.

[Recess.]

Mr. PASSMAN. The committee will come to order.

Mr. Kearns, would you explain in layman's words the part of your operation that deals with reserves on finances that move through banks?

DISCOUNT LOAN PROGRAM

Mr. KEARNS. Yes. It was our belief, as it has been for sometime in the exporting community, that most transactions should be handled by private banks. But, as you well know, the money supply, that is, the supply and demand, changes constantly. Usually the low man on the totem pole, the one who gets the last break, is the exporter because the banker will nearly alawys take care of his domestic customers first.

It has been the contention of the exporting community, long before we were in the Bank, that there needs to be some program to assure financing for exports regardless of the money supply. Before we came into Eximbank there was a bank discount program which was designed to provide a means by which banks could go to the Export-Import Bank and borrow against their export paper if they needed to.

We analyzed this operation and came to the conclusion it wasn't functioning properly. There were only 27 banks using it and most of them were confined to the money centers of New York, Chicago, and San Francisco.

We revised it, after much discussion with the banks and exporters, to simplify the operation and make it more readily usable. We told every bank that if they will come to us whenever they have a potential export transaction, we will study the transaction and if it meets our criteria, we will give them a commitment to discount if they need the money during the life of that contract.

Once they get that advance commitment, then they go ahead and make their loan. If they find themselves in a liquidity shortage, they can come to the Export-Import Bank and we will loan against that transaction, either 1 percent below what they have charged the customer, or our Treasury rate of money at that time, whichever is the higher.

It has put these banks into a confident position in going out and telling exporters that if they will sell their products, the banks will be prepared to finance them regardless of what happens in the money market.

It is really working out well.

We are now receiving requests for advance commitments to discount at the rate of about $40 million a week, which would total out at about $2 billion for the year.

The main thing it has done is give confidence to the banks and the exporting community so that we are getting this marketing effort we discussed earlier.

ACTUAL AND ESTIMATED AUTHORIZATIONS BY COUNTRY—FISCAL YEAR 1973

Mr. PASSMAN. Mr. Kearns, it will be rather voluminous, but I think it is important because we are dealing with a limitation on program activity of $7,650 million. Could you place in the record the number of nations that you have had business with indicating the name of the country and the amount?

Mr. KEARNS. Yes, sir. Would you like the exposure or the total amount we have made credits available to?

Mr. PASSMAN. I would like the exposure. We would like to know the nation—as I say, it is going to be a long list, but I think it will be worth something to the committee, and the Congress, and the people, to know the countries you are making loans to.

Mr. KEARNS. Two figures. All the credits that have gone to a country and the exposure that we have at this moment.

Mr. PASSMAN. What do you mean by exposure?

Mr. KEARNS. That means the total exposure we have on loans, guarantees and insurance.

Mr. PASSMAN. That is good, but I would like it to be all inclusive. I think it should be there so members reading the record will understand that you are doing business with 137 markets.

Mr. KEARNS. Yes. If we may do it that way because that is the way our computers are set up, by markets, rather than nations.

Mr. PASSMAN. Do it in the simplest way so we can determine what nations you are financing commodities to. That would be the present fiscal year. I don't think it is necessary to have what you project for 1974, if you can give it to us for fiscal 1973.

Mr. KEARNS. March 31 of 1973?

Mr. PASSMAN. You operate on a fiscal year basis. You might as well give us a projection because you know the loans that have presently been approved and so forth.

[The information follows:]

EXPORT-IMPORT BANK OF THE UNITED STATES

AUTHORIZATONS BY COUNTRY JULY 1, 1972, THROUGH APRIL 30, 1973, WITH ESTIMATE FOR MAY AND JUNE 1973

The following schedule lists authorizations by country for the period July 1, 1972, through April 30, 1973. Although estimates can be made of activity for the remainder of fiscal year 1973, it is extremely difficult to accurately estimate by country. Therefore, the estimates of activity for May and June 1973 are shown as a line item at the end of the schedule together with an estimated total for the entire fiscal year.

LIMITATION ON PROGRAM ACTIVITY—FISCAL YEAR 1974

Mr. PASSMAN. Now again, there may be those who do not deal with this matter daily. Let's look at your limits on program activity. You are asking for a limitation of $7,650 million for fiscal year 1974, is that correct?

Mr. KEARNS. That is correct.

Mr. PASSMAN. What will be the direct loans for fiscal 1974?

Mr. KEARNS. Around $4 billion.

Mr. PASSMAN. Now, the difference of $3,650 million, why do you need that?

Mr. KEARNS. That is accounted for by discount loans and the auxiliary programs, the insurance and guarantee programs.

Mr. PASSMAN. In other words, you have to maintain a reserve?

Mr. KEARNS. In the combination of things, we do. You have to have the resources to do all of the things and not just the loans. The loans are only one part.

Mr. PASSMAN. I know that is true, but you are dealing yet with $7,650 million. Direct loans will be only $4 billion so then you have $3,650 million that you spread out in other activities?

Mr. KEARNS. Yes.

Mr. PASSMAN. How do you utilize it?

Mr. KEARNS. Approximately $2.8 billion would be for the discount program.

Mr. PASSMAN. What do you mean, "discount program"?

Mr. KEARNS. That is the one I just described of the programs to back up the private banks.

Mr. PASSMAN. That is a reserve that you maintain then?

Mr. KEARNS. That is true. We expect that we will commit it. We may not disburse it, but we will commit it during the year.

Mr. PASSMAN. It sounds a little complicated, to be frank with you.

Mr. KEARNS. It is that.

Mr. PASSMAN. And I don't think it should be. There should be some way of clarifying it to where it would be easily understood because you are actually only going to disburse $4 billion. Yet you want $7,650 million. There should be some simplified way of stating it.

Mr. KEARNS. I think in our schedule——

Mr. PASSMAN. Can you come up with a simplified formula and put it in the hearings at this point?

Mr. KEARNS. We can break down how we arrived at the $7,650 million.

[The information follows:]

Export-Import Bank of the United States, estimated activity, fiscal year 1974

Loan program:	*Thousands*
Equipment and services authorizations	$3,850,000
Commodity authorizations	100,000
Medium-term discount authorizations	1,900,000
Short-term discount authorizations	1,600,000
Special foreign trade authorizations	50,000
Subtotal, gross loan authorizations	7,500,000
Less: Participations in and cancellations of loans authorized during fiscal year 1974	735,000
Net loan authorizations	6,765,000

Export-Import Bank of the United States, estimated activity, fiscal year 1974—Continued

Guarantee and insurance program:	
Authorization of new and renewed policies	6,200,000
Less: Repayment and cancellations on guarantees and insurance	3,936,880
Subtotal	2,263,120
Less: Reduction from use of fractional reserve and adjustments	1,704,840
Charge to new program activity for guarantees and insurance	558,280
Other charges:	
Interest and nonadministrative expenses [1]	326,620
Equipment [1]	100
Total other than for administrative expenses, that is, "New program activity"	7,650,000

[1] On the accrual basis.

LOAN AUTHORIZATIONS

Mr. PASSMAN. You are really only going to disburse $4 billion?

Mr. KEARNS. That is commitment authority under the loan program. We will commit about $2.8 billion for the discount program, which we may or may not disburse, and we will insure——

Mr. PASSMAN. What if the committee just gave you $4 billion? How would it hamper your operations?

Mr. KEARNS. If that is all we had it would cut out the discount program and our insurance and guarantees.

Mr. PASSMAN. What do you mean by the "discount program"?

Mr. KEARNS. We can give it another name, but it is the program that I described where we back up banks by offering to loan against a priavte bank's loans for export.

Mr. PASSMAN. That is additional exports?

Mr. KEARNS. That is additional exports, yes.

Mr. PASSMAN. So you are making the loans to the banks or are you making a deposit to guarantee payment?

Mr. KEARNS. We make the loan to the bank if they need it against their export paper.

Mr. PASSMAN. If they don't need it, what?

Mr. KEARNS. It is just authority. All we are asking from you is authority—not money. All we are asking for here is program authority. Authority to do things—not money.

INSURANCE AND GUARANTEES OUTSTANDING

Mr. PASSMAN. I know that. How about your insurance? How much insurance do you have outstanding at this time?

Mr. DUGAN. It is about $7 billion for insurance and guarantees.

Mr. PASSMAN. By exposure you mean insurance outstanding, and if everything failed, you would have to pay?

Mr. KEARNS. That is right.

RECEIPTS FROM INSURANCE PREMIUMS COMPARED TO CLAIMS PAID

Mr. PASSMAN. Explosure doesn't make it clear enough for me. That is $7 billion outstanding. What has been your experience with the insurance, premiums versus payouts?

Mr. DUGAN. The insurance program by itself pays out slightly more than the premiums received.

Mr. PASSMAN. Place in the record at this point premiums collected and the claims that you have paid.

[The information follows:]

EXPORT-IMPORT BANK OF THE UNITED STATES—SUMMARY OF INCOME, EXPENSES, AND NET CLAIMS PAID FROM INCEPTION TO DEC. 31, 1972, INSURANCE PROGRAM

	Claims paid	Claims recovered	Cumulative totals
Gross income [1]			$9,712,169
Less administrative and other expenses			7,838,900
Operating income			1,873,269
Less claims paid, net of recoveries	$14,365,985	$8,187,307	6,178,678
Net income			(4,305,409)
Less allocable portion of dividends			123,447
Addition to Retained Income Reserve			(4,428,856)
Add deferred income			1,521,584
Total contribution of program available to cover future losses and expenses			(2,907,272)

[1] Represents EIB share of FCIA net earnings (gross premiums less commissions and expenses) on the accrual basis.

DELINQUENCIES

Mr. PASSMAN. You said earlier you lost $122 million?

Mr. KEARNS. Total delinquencies are currently $196 million. This isn't necessarily lost. We have charged off only $20 million since the Bank began.

Mr. PASSMAN. Place in the record at this point the accounts delinquent by nation.

[The information follows:]

SCHEDULE OF DELINQUENT INSTALLMENTS OF 30 DAYS OR OVER AS OF MAR. 31, 1973

[Dollars in thousands]

Country	Number of loans	Oldest past due installment	Total O/S balance	Delinquent installments		
				Principal	Interest	Total
Antigua	1	1972	$5,337.1	$87.1	0	$87.1
Argentina	3	1966	1,484.6	1,484.6	$134.3	1,618.9
Chile	27	1971	310,195.3	64,967.5	25,714.5	90,682.0
Guinea	1	1973	224.5	45.0	7.1	52.1
Mexico	1	1970	1,082.2	1,082.2	129.5	1,211.7
Nicaragua	1	1973	391.7	66.7	11.3	78.0
Sierra Leone	1	1971	10,200.0	0	1,724.4	1,724.4
Togo	1	1973	600.0	0	17.9	17.9
United Arab Republic	1	1973	1,482.0	781.3	51.3	832.6
Zaire	1	1973	353.4	0	7.6	7.6
Cuba	6	1958	38,559.8	31,025.3	26,931.2	57,956.5
China (Mainland)	4	1949	26,386.0	22,935.0	19,123.4	42,058.4
Total	48		396,296.6	122,474.7	73,852.5	196,327.2

RESCHEDULED LOANS

Mr. PASSMAN. You have a system you refer to as the "roll-over" of these accounts.

Mr. KEARNS. Rescheduling, we call it.

Mr. PASSMAN. You have changed the name of it because your predecessor used to say "roll-over." If you will, could you tell us the volume that you have rolled over, or rescheduled?

Mr. KEARNS. With your permission, we will submit it for the record.
Mr. PASSMAN. Do you have any idea at this time of the amount?
Mr. KEARNS. It isn't a great deal, I don't think.
Mr. DUGAN. Slightly over a billion dollars since inception.
Mr. PASSMAN. The new expression is rescheduled.
Mr. KEARNS. We will call it rolled-over.
[The information follows:]

LOANS RESCHEDULED DURING FISCAL YEAR 1973 (THROUGH MAR. 31, 1973)

[Dollars in thousands]

Country	Number of loans	Amount rescheduled		
		Principal	Interest	Total
Ethiopia	1	$1,720.0	0	$1,720.0
Pakistan	12	6,175.3	$2,812.1	8,987.4
Philippines	1	1,675.0	0	1,675.0

Mr. PASSMAN. How many times have you rescheduled or rolled over the same account?
Mr. DUGAN. That varies.
Mr. SAUER. My recollection is it is not more than one or two cases where we have had to reschedule, or roll-over, more than once. Generally when we have a rescheduling of repayment, it is lived up to.
Mr. KEARNS. If they come in for a roll-over with us, we are hesitant to give new credit until they dispose of the old credit. We won't loan anyone any money if they are completely delinquent.

INSURANCE PROGRAM EXPENSES

Mr. PASSMAN. Going back to the insurance, what have been your receipts and what have been your payouts?
Mr. DUGAN. I am not sure of the figures, Mr. Chairman, but the payouts are slightly higher than the premiums.
Mr. PASSMAN. What kind of payouts would you have against insurance premiums?
Mr. DUGAN. The administrative expenses to run the program plus any claims we have paid and not yet recovered.
Mr. PASSMAN. You have had so few losses how could you have so many claims, or is that a different phase of the operation?
Mr. DUGAN. We haven't had many of them. You have to recognize that the insurance premiums are not that high and the payout figure I refer to includes the administrative expenses attributable to the insurance program.
Mr. PASSMAN. You insure only the commodities you sell. You don't insure some other operation other than Export-Import Bank.
Mr. KEARNS. We only insure repayment of an obligation. We are not involved in physical insurance at all.
Mr. PASSMAN. If you say that your payouts slightly exceed your receipts and premiums, most of that would be administrative expense, would it not?
Mr. KEARNS. Actually on insurance and guarantees, my figures are——
Mr. PASSMAN. Would you place something in the record on that?
[The information follows:]

SUMMARY OF INCOME, EXPENSES, AND NET CLAIMS PAID FROM INCEPTION TO DEC. 31, 1972—GUARANTEE PROGRAM AND INSURANCE PROGRAM

[In thousands of dollars]

	Commercial bank guarantee program			Insurance program		
	Claims paid	Claims recovered	Cumulative total	Claims paid	Claims recovered	Cumulative total
Gross income			[1] $26,244			[2] $9,712
Less administrative and other expenses			9,226			7,839
Operating income			17,018			1,873
Less claims paid—net of recoveries	$12,648	$2,241	10,407	$14,366	$8,187	6,179
Net income			6,611			(4,306)
Less allocable portion of dividends			4,499			123
Addition to retained income reserve			2,112			(4,429)
Add deferred income			3,015			1,522
Total contribution of program available to cover future losses and expenses			5,127			(2,907)

[1] Represents fees collected, less amounts deferred to future periods, plus prior deferrals earned in current period.
[2] Represents EIB share of FCIA net nearnings (gross premiums less commissions and expenses), less amounts deferred to future periods, plus prior deferrals earned in current periods.

Mr. PASSMAN. Mr. Miller.

WORLDWIDE ENERGY REQUIREMENT

Mr. MILLER. Mr. Kearns, you state at the bottom of page 2 that the volume of world trade accelerates significantly as industrial countries must import more primary products including energy. That fascinates me a little bit when you speak of energy. How would you be able to help in that area?

Mr. KEARNS. It would be in liquefied natural gas, which is rapidly developing into one of the massive new industries. Export-Import Bank will undoubtedly, with the concurrence of this committee, be a major factor in making these projects possible. It takes so much money that there is no other way that a developer could marshal that amount. We are not involved at this time in any liquid petroleum transactions for direct export. However, we do finance some exploration and development where American equipment is used—the equipment for exploration and oil production in various parts of the world. That part of the energy program does use large sums of money.

OTHER EXPORTS RELATED TO FUELS DISTRIBUTION

Mr. MILLER. You would be involved in shipbuilding in order to transport?

Mr. KEARNS. We could be, if the ships are sold to a buyer outside the United States.

Mr. MILLER. You are speaking of superports in several cases?

Mr. KEARNS. Yes, we are financing some of the equipment that goes into ports in various countries.

Mr. MILLER. The commodity itself is rather expensive when you ship it on a supertanker. Would you be involved where you have money invested in that commodity itself?

Mr. KEARNS. I think not because for us to participate it would have to be an export and I don't think there is much chance of our exporting many of the commodities, although there is one transaction now—but it is not energy—involving an arrangement to sell super phosphoric acid, a liquid, where there would be an export from the United States. But you see we only finance exports. If there is an import involved, we can finance the ships which carry that import if they are owned outside the United States, but we would not finance the commodity unless it is an export itself.

PRICE COMPETITIVENESS OF U.S. PRODUCTS

Mr. MILLER. You also say the U.S. products are now priced competitive in nearly all categories. Could you elaborate a little on that?

Mr. KEARNS. Yes, sir. I have just completed 6½ weeks in 12 countries of very extensive discussions with buyers of all types, private and public. I have tabulated the information from those discussions for my own and my colleagues' benefit, and I could give the information to the committee if you would like it—that is, the comments of a very wide range of potential buyers. It leaves absolutely no question that U.S. products today are price competitive in almost every category.

Mr. MILLER. Where are we not competitive? Can you somehow inform us as to where we are out of line the most?

Mr. KEARNS. Well, yes. Things that require a high degree of hand labor. For example, handicrafts; these small electronic gadgets where you have to have a lot of people working with hand labor; in those we are not. Or in things like a commodity that is unique to a locality, such as coffee or cocoa, or such as that, we would not be price competitive, of course.

In some countries the government gives a subsidy to a producer. We may not be price competitive in that case. That would only be a relatively small percentage of total trade or of the total products that move.

I think that in all manner of equipment, in most consumer goods products, and certainly in all agricultural products, we are price competitive today.

FAVORABLE U.S. BALANCE OF PAYMENTS IMPACT FROM EXIMBANK-SUPPORTED EXPORT SALES

Mr. MILLER. In the year 1972 you indicated that the Export-Import Bank contributed an estimated $3 billion to the credit side of the U.S. balance of payments. What products were most profitable as far as we were concerned or what was the high volume product?

Mr. KEARNS. Well, the high volume product for a period of 4 or 5 years was jet aircraft, but this changes. You see, we have a time lag from the time a credit is authorized until it becomes an export. In last year's authorization nuclear powerplants exceeded jet aircraft.

This year I would suppose that liquefied natural gas projects would exceed either one. This changes from time to time. As the mix of world trade changes, or the U.S. suppliers sell different products—particularly when you get to the very big items that run into many millions of dollars each—the pattern changes. But you have a trade base composed of all kinds of things.

I maintain that anything that can be sold in the United States can be sold in some country in the world if we have a business that will try to sell it.

So you have tens of thousands of small transactions made up of everything. Then you have a few of the very big ones and the big ones can change the totals, but they don't change the total pattern.

ENVIRONMENTAL IMPACT FROM NUCLEAR POWER EXPORTS

Mr. MILLER. It is interesting here to see that nuclear powerplants moved out ahead of jet aircraft.

Since you have been to the other nations, are they as interested in the environment as we are. Are they buildings nuclear powerplants, forgetting environment?

Mr. KEARNS. Some nations are. Japan is most interested in the environment, but the Japanese have concluded that the nuclear powerplants provide less pollution than do any others, and so this is one of the reasons why they are switching to nuclear powerplants.

There are other countries who don't pay quite as much attention to it, but we pay attention to it. We take it into consideration in all of our case examinations.

Mr. MILLER. What I really had in mind with respect to the environment, is the thermal pollution. I wasn't sure whether they did pay attention to that.

Mr. Chairman, we will not go into this. It is good information but not directly related to banking. Perhaps some time we can chat about this.

Mr. KEARNS. With regard to pollution in Japan, before the first nuclear powerplants were built there, there was a lot of fuss that fishing would be harmed by the discharge of the hot water into the waters surrounding Japan.

They went in and installed the first nuclear plant, anyhow. But the funny thing that happened was that with the discharge of water, instead of disturbing the fish, it became the best fishing ground in Japan because the fish all congregated around there.

Now the fishing villages would rather have a nuclear power plant than not.

Mr. MILLER. That is very interesting.

Thank you, Mr. Chairman.

COMPETITIVENESS OF U.S. STEEL PRODUCTS

Mr. PASSMAN. Mr. Kearns, I am impressed with your knowledge of a lot of things. I believe I could quarrel with you and maybe win the argument if we got into coldblooded statistics on some of the things we have discussed and, no doubt before the year is over, will discuss.

I think we all know that it is predicted that within a matter of years, unless we change our system, the big steel plants in this country will be agents for the steel plants of Japan. Let's look at practically every steel commodity that you can think of, whether it is stainless steel or whether it is other types of steel, you can buy them and Japan can pay the duty, pay the freight, and deliver them dock-

side about $295 a ton cheaper than you can buy them out of Philadelphia.

Can you refute the accuracy of that statement?

Mr. KEARNS. I can't refute it, but I disagree with it.

COMPETITIVENESS OF AGRICULTURAL COMMODITIES

Mr. PASSMAN. As a matter of fact, the steel companies will tell you themselves, because it is available to you.

Let's look at agriculture commodities. You are talking about it being competitive. You know we are not competitive in agriculture commodities. We were not until just a few weeks ago. For many, many years, we were selling rice at a tremendous subsidy and we dropped the subsidy only because we ran out of rice. Isn't that true?

Mr. KEARNS. That is true.

Mr. PASSMAN. Let's look at cotton and everything else. We are either paying a subsidy to the exporter or we are paying a subsidy to the mills. I think we switched it from the exporters to the mills and from the mills now back to the producers.

Where do you get the idea we are competitive when the record is just the opposite?

Mr. KEARNS. The record is, but it is like the gooney bird flying backward to see where he has been instead of where he is going. We have to look forward instead of backward.

ACCUMULATION OF U.S. DOLLARS ABROAD

Mr. PASSMAN. You and I know there are $80 billion, United States, floating around the world that people don't want. They have met their commitment to commerce and they have $80 billion, you understand. They want to get rid of them so bad they don't know what to do. We haven't the gold to pay for them; they don't need any more of our commodities.

I just returned from a trip abroad where I had been accustomed to having watches quoted at a price much cheaper than American watches. I can actually buy a watch in America $275 cheaper right downtown at Galts than I can buy it in Hong Kong. They don't want these dollars. There are 80 billion of them floating around the world in excess and we don't have a thing in the world to pay for them with. Some of the hotels are actually making you discount these dollars before they will take them.

Now, let's go on, if we may. I am not lecturing you, but let's put this on the record.

Twenty-seven of these agencies will come before us and they will say, "Don't blame us. We are innocent. It is the other fellow that hurts the balance of payments situation."

Somebody is responsible for this mess we have gotten ourselves into.

TRADE DEFICITS OF 1971 AND 1972

Let's go, if we may, to 1971. We had a trade deficit of $2 billion. An actual trade deficit—the first one we had had since 1888, isn't that true?

Mr. KEARNS. That is right.

Mr. PASSMAN. In 1972, we had a trade deficit of $6.4 billion. Now, that is true, isn't it?

Mr. KEARNS. That is true.

Mr. PASSMAN. You are a fine witness and a fine man but let's look at the record.

BALANCE OF PAYMENTS DEFICIT

Let's look at our budget deficit for fiscal 1973. It is $28 billion, isn't it?

Mr. KEARNS. That is correct.

Mr. PASSMAN. Now, something causes this. You don't have trade deficits and balance of payments deficits unless you send more dollars abroad than you are bringing home. It is that simple, isn't it?

Mr. KEARNS. That is right.

Mr. PASSMAN. You have a good shop but not everything is virtuous about it, you understand. You and I know the claim has been made—I hope that you have refuted it to some extent—that if the Export-Import Bank didn't provide this money, people would take money they already had and buy commodities. How much of that do you discount?

Mr. KEARNS. One hundred percent.

Mr. PASSMAN. You are rather optimistic if you discount it 100 percent.

Let us not make this picture too rosy because we are selling with a subsidy and we are not competitive in many fields.

EXTENT OF BANK SUPPORT FOR AN EXPORT SALE

Now, let's get back to the insurance question. Let's say that the Ouachita National Bank in Monroe wanted to finance $1 million in U.S. commodities to, we will say, Nation A. Will you cover them for the entire amount?

Mr. KEARNS. No.

Mr. PASSMAN. What is the maximum you would make against that?

Mr. KEARNS. The maximum under the bank guarantee program would be 90 percent cover, and then we vary it depending upon the risk and type of transaction.

Mr. PASSMAN. On an average, what would it be across the board?

Mr. BOSTWICK. Under the medium-term discount loan program we would finance 100 percent of the financed portion. It would be at 1 percent below the yield to the bank.

INTEREST RATES CHARGED AND SUPPORTED UNDER VARIOUS BANK PROGRAMS

Mr. PASSMAN. What is the maximum that you can charge?

Mr. KEARNS. We have no maximum. We charge 6 percent on our direct loans. We maintain the standard.

Mr. PASSMAN. That is a maximum?

Mr. KEARNS. That is on direct loans. That shouldn't be confused with the discount program.

Mr. PASSMAN. Now, on the insured part, what is the maximum?

Mr. KEARNS. It would depend on what was negotiated between the borrower and the bank.

Mr. PASSMAN. You couldn't go to 20 percent. Somewhere along the way you have had a maximum. Is it 8 percent? Can the banks charge up to 8 percent?

Mr. KEARNS. We have not placed any limit because the market does that.

Mr. PASSMAN. I am trying to determine how high they can go.

Mr. KEARNS. On one related program, the Cooperative Financing Facility Program where we make the loans to the overseas bank and the bank reloans our money, we allow them 2.5 percent markup to compensate for the risk they take. They can mark up our 6 percent to 8.5 percent.

Mr. PASSMAN. That is my question.

Mr. KEARNS. That is on one program.

Under the other programs where we insure or guarantee a transaction where the money is loaned by the commercial bank, we depend upon the market forces, the competition, to determine what the borrower will pay and what the bank will loan for.

Mr. PASSMAN. Are you getting into marginal credit when you have a borrower willing to pay 8.5 percent?

Mr. KEARNS. No.

Mr. PASSMAN. Why would he want to pay 8.5 percent when he can come to you and make a direct loan at 6 percent?

Mr. KEARNS. He might not know about our bank if he was a small, unsophisticated buyer, or if it came in as a direct loan request where we have to investigate the credit worthiness possibly we couldn't make a decision within his time requirement.

GUARANTEES VERSUS DIRECT LOANS

Mr. PASSMAN. If he knew about the Bank's operation and if he was good enough for you to guarantee, he would be able to do it directly, would he not?

Mr. KEARNS. Yes, sir.

Mr. PASSMAN. Any loan good enough for you to guarantee would be good enough for you to make a direct loan to, would it not?

Mr. KEARNS. It would be, but we wouldn't do it that way.

Mr. PASSMAN. Why wouldn't you do it? If the man came to you and said, "I want $5 million to finance this fertilizer sale to country A," you would say, "No, I prefer you to go to the Bank and they will make it available."

Mr. KEARNS. We will say, "We will loan 50 percent of it and you go to a bank for the other 50 percent."

Mr. PASSMAN. He would pay you 6 percent on one-half and the bank perhaps 8.5 percent on one-half?

Mr. KEARNS. On our direct credit program that is right. We would do that because it reduces the amount of cash we have to put out. Second, it encourages the banks to get into the business and stay in, and we think the future of this business is dependent upon how many banks are actually participating.

Mr. PASSMAN. You have had a tremendous increase in the discount program.

Let's look at the short-term discount program. I think you have gone from zero in 1972 to $1.6 billion in 1974.

Mr. KEARNS. Those are the gross authorizations we are requesting.

Mr. PASSMAN. As I say, I have a lot of respect for you but you don't think you are letting this thing get out of control?

Mr. KEARNS. No, sir, we are not.

U.S. COMPETITIVE SITUATION

Mr. ROYBAL. Why do you think you are competitive?

Mr. KEARNS. It is a very dangerous thing for me to differ with the chairman, but I just think what the chairman said was true before we had the currency adjustments.

Mr. PASSMAN. I am talking about last week.

Mr. KEARNS. There is a time lag.

Mr. PASSMAN. Look what we have done to the prestige of the dollar. Let's face up to it. We can't charge this all to you but you have found it the same way in a lot of places.

Mr. KEARNS. All I can tell you is that from our experience in the markets where we are talking to buyers and when we are talking to potential buyers—who are absolutely impartial because they have nothing to gain or nothing to lose—we are told that the U.S. products are competitive.

We also know of situations where a U.S. company is making a proposal in competition with the Japanese, the Germans, the French, where the U.S. producer is price competitive more often than not today. He wasn't a year ago. He wasn't 6 months ago, but he is today.

EFFECT OF CURRENCIES ADJUSTMENTS ON COMPETITIVENESS OF U.S. EXPORTS

Mr. ROYBAL. What makes the difference?

Mr. KEARNS. The currency adjustment. The currency adjustment removed the false value on the leading currencies, the yen and the deutsche mark vis-a-vis the dollar. The dollar was overpriced and they were underpriced. We have just switched that now so that we are now on a relatively——

Mr. PASSMAN. Would you say we have partially switched it? Would you compromise on it?

REVERSAL OF TRADE DEFICIT PREDICTED

Mr. KEARNS. I think in most cases we now have a realistic value on the dollar.

In addition to that, the rate of inflation in this country is so much less than it is in the other countries today, this will continue to stretch the difference further, thus solving the problem.

As the chairman mentioned, we did have this terrible trade deficit in 1971 and in 1972. But I am sure that you all noticed the reports of March 1973 when our trade deficit was down to $52 million.

Now, I maintain that we will cross the line in the next month, maybe this month, where we will have a trade surplus for the first time in 3 years.

I am just saying to you that this is the proof of what I contend.

Mr. PASSMAN. I would also like to show that we had our first trade deficit since 1888, in 1971, and we had some reason to believe that this would be the last year. Yet in 1972 it jumped up to $6.4 billion.

Mr. KEARNS. That is correct.

Mr. PASSMAN. Let's hope our optimism will be sustained with facts subsequently. It won't be your fault if they are not, but so many times optimism is not backed up by facts.

Mr. KEARNS. The facts are our trade deficit was only $52 million in March. From $476 million in the month before.

Mr. PASSMAN. That is nothing to brag about, since we haven't had but two since 1888. Perhaps it should have been on the plus side rather than the minus side.

We are still on the minus side, even after devaluing the dollar.

IMPORTANCE OF TIME-LAG BETWEEN CURRENCY REVALUATION AND ITS EFFECT ON TRADE BALANCE

Mr. KEARNS. There is a time-lag. It doesn't just turn overnight. I maintain that the price situation has changed, and I just invite you to watch the change that takes place.

Mr. PASSMAN. Let's hope it takes place because you and I know we are still in trouble with the dollar. There are still $80 billion floating around the world that people don't want. We don't have the gold to exchange for them. They have met their payments in commerce, and these are just excess. These are the short-term dollars due yesterday. We haven't anything to pay for them with, and they are trying to dump them.

Of course, devaluing the dollar has made some substantial improvements, but you will remember not too long ago—and thank God, President Nixon stopped it—we were going around the world finding every nation who had a foreign exchange surplus; and we tried to borrow from them.

We borrowed $20 million from the Republic of China. We went to Thailand and tried to borrow a quarter of a billion dollars. We compromised and borrowed only $100 million from Thailand, didn't we? At 6 percent to be repaid in 4½ years, and that money is due on July 2.

How many people would believe we were borrowing $100 million from Thailand and giving them just about that much aid through the back door? Some strange things have happened in trying to manipulate the balance-of-payments situation to make it look good.

GAO REPORT ON BANK'S CAPITAL LENDING PROGRAM

In a General Accounting Office report, dated February 12, 1973, it was concluded by GAO that the Export-Import Bank needed an improved management information system for its capital loan program. Some of the remarks were as follows:

(*a*) Although Export-Import Bank participation in financing export transactions may have been necessary to consummate a sale, GAO could not establish that the Bank had made a concerted effort to maximize private financing in these transactions.

(*b*) Information obtained from Japanese borrowers and government officials, and examination of records at the Embassy in Tokyo, showed that the need for Export-Import Bank participation in some export transactions was questionable.

(*c*) Export-Import Bank financing on four loans seemed unnecessary because it was felt that the borrowers would have purchased the goods from the United States without the Bank's financing. Would you please comment on this report?

Mr. KEARNS. This is the "stop beating your wife" question. I know how the GAO reports have a sort of holy atmosphere. If they say something, it is supposed to be right.

We have had discussions with the GAO, and we differ with their opinion. We maintain that the study they made, particularly with respect to Japan, was not well done. It was done by people who didn't understand the international field, and their base of inquiry was so woefully small that it really proved nothing.

We just had a meeting with them last week, in which we went over the procedures that we follow in making a decision, with which they weren't familiar. I just maintain that any transaction that we approve has been given full and complete examination as to whether or not it is necessary to make the transaction possible.

Now, to say that any one transaction could have taken place without Export-Import Bank may be true. "A" transaction. But in a year's time we will do 5,000 or 6,000 transactions, and I don't think we would want to kill the calf because it happened to have a sore ear, or something like that.

That is what it would amount to if we said that because you can find a transaction, or a dozen transactions, or 1 percent of the transactions where that happened we necessarily are wrong.

FINANCING OF JAPANESE AIRCRAFT PURCHASES

For example, this same report says that we should not extend financing to Japanese airlines for aircraft because the Japanese Government has so much money.

Well, it is true that the Bank of Japan had about $19 billion of U.S. reserves, but the privately owned airlines don't have those billions of dollars, that $19 billion, and they haven't access to it. If they can't finance their transactions, they don't buy. Or they can go to Europe to buy airplanes.

If we want our country to sell the product, we must consult with the buyer and seller and do it conscientiously and carefully.

NEED TO LISTEN TO BUYER AND SELLER

Mr. Chairman, you have been in business, and the rest of us have. The way you find out whether you make a sale is whether or not the buyer and seller can get together. Not by some theoretical bit of information.

Anyhow, the GAO says we shouldn't talk to the buyer or the seller because they are interested parties. Well, who in the world do you talk to? You can't get it from a ouija board. So we make a very conscientious effort, and we would invite your staff to come down and see what we do, and learn how we make these decisions.

I absolutely would stand up against anybody on any transaction that we have done with respect to the conscientious effort we made to determine that the financing was necessary. If we find that it isn't we won't do it.

Mr. PASSMAN. Some Embassy officials in Tokyo consider that Japan was capable of and should be encouraged to finance more of its imports

and that such financing would achieve more positive effects on the U.S. balance of payments. Would you like to comment on that, Mr. Kearns?

ARRANGEMENTS WITH BANK OF JAPAN

Mr. KEARNS. I just think it is a mistake in understanding the facts of life. We are encouraging the Japanese to spend their own money and they are doing it.

As a matter of fact, let me tell you what we are doing. I can do this now, I couldn't have done it last year.

I made an arrangement with the Bank of Japan 2 years ago to assist in balancing the flow of trade. Under the agreement we would finance large transactions and, in return, the Bank of Japan would buy back the loans from us for full value at the same interest rate that they were paying.

In other words, in all the big transactions that we have financed in Japan in the last 2 years—the aircraft and the nuclear powerplants—the Bank of Japan has bought those credits right back from us, so they have actually been financing them themselves.

GAO says this is bad because they don't understand it. I don't know how you can do any better than to support the U.S. supplier and keep the market for the United States which is a very big market, and a good market, and still get the money back from them. That is what we are doing today.

ADVANTAGES TO U.S. ECONOMY FROM SALES TO JAPAN

Mr. PASSMAN. Mr. Kearns, we can't isolate ourselves and live. We have to do business with other nations. We have to sell our commodities, regardless of what the Japanese may have thought the advantage would be to buying on credit. I still think you are wise to sell them. When you sold them the aircraft on a loan, it furnished employment to Americans; it made a profit for the manufactures; it made the manufacturer pay money into the U.S. Treasury and any way you slice it, it was an advantage to the United States.

I used to go around the world. I would look out over the airports and see possibly in Europe 75 percent of the planes were American-made planes. Out in the Far East, 90 percent. Today they still buy American planes, but now they could be moving away from them.

May I ask you this question: What have been the total loans, guarantees, and insurance used to finance commodities to Japan, let's say for 1971, 1972, and 1973?

Mr. KEARNS. May I submit it for the record, please?

Mr. PASSMAN. Yes.

Mr. KEARNS. Japan has been a big user of Export-Import Bank credits, but we should show the offset.

Mr. PASSMAN. How about other commodities?

Mr. KEARNS. In the last 2 or 3 years our credits to Japan have been limited almost entirely to these transactions.

Regular loan authorizations, net of offset sales	50.2	37.6	(113.5)	(25.7)

BANK SUPPORT OF EXPORTS TO KOREA

Mr. PASSMAN. Do you have a program in Korea?

Mr. KEARNS. Yes, we do.

Mr. PASSMAN. They have a very sound economy. What has been your experience with them?

Mr. KEARNS. Good. We have $293 million of exposure in Korea now.

Mr. PASSMAN. What does that represent in manufactured goods?

Mr. KEARNS. Practically everything. We did finance one nuclear power plant, but the rest of it has been all kinds of things.

Mr. PASSMAN. Any aircraft?

Mr. KEARNS. Yes, we have a few aircraft with Korean Airlines, yes.

Mr. PASSMAN. Are they up to date with their loans?

Mr. KEARNS. Yes. I don't think we have any delinquencies there at all.

Mr. PASSMAN. It has been outstanding for years.

Mr. KEARNS. We have been doing business there a relatively short time, but our record has been good so far.

GAO REPORT ON BANK'S RELENDING PROGRAM

Mr. PASSMAN. In another GAO report dated January 23, 1973, it was concluded by GAO that the Bank's relending programs could be made more effective in promoting U.S. exports. Some of the observations with regard to the Brazil program follow:

(*a*) Few sales of U.S. products which would not otherwise have been made have occurred under the program.

(*b*) It was felt some of the program objectives were not met, such as assisting small- and medium-sized foreign firms to purchase U.S.

products, introducing U.S. companies and products to the Brazilian market, and so forth.

(c) Many subloan repayment periods exceeded those customary in international trade, thus delaying favorable impact on the U.S. balance of payments and putting off new opportunities to finance U.S. exports.

I note in the report, the Bank felt GAO's recommendations were without merit, but that GAO disagreed. Would you tell the committee why you felt GAO's recommendations were without merit and please also comment on the issues raised in the report.

Mr. KEARNS. Basically, we believed that the GAO recommendations were without merit because the report was so wide of the mark in its analysis of Eximbank's relending program for several reasons. First, the report concerned a program that had been discontinued and was being phased out at the time when the GAO started its study, which they were advised. Second, their effort was predicated on an erroneous assumption that the paramount objective of the phased-out relending program was to bring assistance to small- and medium-sized businesses which, while an important objective in all the Bank's programs including this one, was actually secondary to the prime objective of maximizing U.S. exports and achieving payment for them. And third, the report placed considerable emphasis on the presumption that in evaluating the program Eximbank had developed no absolute formula to measure the additionality of exports which resulted from use of the program, which, as I mentioned earlier today, cannot be proven mathematically in any program. But to draw a general conclusion, as this report seems to have done, that credit does not stimulate purchases is contrary to all business experience.

With respect to the specific issues raised, with your permission, Mr. Chairman, I would like to submit for the record the response to this report which we furnished to the Congress, as required by law.

[The information follows:]

EXPORT-IMPORT BANK OF THE UNITED STATES

RESPONSE TO GAO REPORT ON RELENDING PROGRAMS

The report concerns a study by the General Accounting Office of an Eximbank program which was being phased out when the study was commenced and the General Accounting Office was so advised at the time it commenced the study.

Basically, the report totally misses the primary objective of the phased-out program. The primary objective was to maximize U.S. exports and to achieve payment for those exports. It was designed to bring necessary financing effectively into the foreign marketplace so that purchasers could more easily buy U.S. equipment and services. It is true that one of the objectives, although a secondary one, of the program was to encourage more purchases by small and medium-sized businesses in a particular country.

It has become apparent to the directors, officers, and senior staff members of Eximbank, as they have traveled throughout the world, that many buyers abroad are inexperienced in financing their purchases in the international financial circles and are unaware that credit for the purchase of U.S. goods and services could be available to them. This is particularly true among the small and medium-sized firms. As a result, the Bank has instituted two new programs called the Cooperative Financing Facility and the Relending Facility.

The letter from Chairman Kearns to Mr. Oye V. Stovall dated August 24, 1972, explains Eximbank's view of the subject report—Appendix II. The GAO response to that letter set forth in Appendix II of the report is not concrete.

It was, of course, with full knowledge of the ineffectiveness of the earlier relending program that the program was phased-out and the new facilities devised in order to allow maximum flexibility in accomplishing our export

objectives. In applying for individual loans for the new facilities, there are several detailed questions which must be answered by the bank with whom Eximbank is dealing. For your information, I am attaching, as Exhibit A and B, copies of those application forms.

Under each of these facilities Eximbank uses indigenous banks in the country of the purchasers as its agents to assist in concluding the sale of U.S. goods and services. It is assured of repayment since it is relying principally on the creditworthiness of the bank with whom it is dealing. Eximbank allows the bank to charge sufficient interest to the buyers abroad in order to allow the bank to make a small profit after covering its operating expenses related to this type of transaction. By extending a line of credit to the foreign bank, transactions can be concluded in an efficient manner. The foreign bank is familiar with the credit standing of buyers in its own locality and is in a position to determine the buyers ability to repay. Also, the buyer often is more comfortable in dealing with its own bank than an entity totally unknown to him.

The primary differences between the Relending Facility and the Cooperative Financing Facility, aside from the fact Eximbank provides no more than half the financed portion under the CFF, is that under the relending facility, as it is presently constituted, individual loans normally are limited to $200,000 or less, the type of products which can be purchased with credit extended under the facility are specifically limited, and the markets served are limited to those in developing countries. Eximbank determines eligibility for products after consultation with the American Embassy in the particular country and the Department of Commerce.

Eximbank believes that precedent established for the new facilities achieves the effectiveness intended for the two programs, realizing that the primary objective of each program is to increase U.S. exports and to achieve payment thereon. When the Relending Facility was first instituted, Eximbank required the relending banks to submit substantial information on the proposed purchaser as indicated in Exhibit C to this letter. However, this requirement was subsequently deleted since it seems superfluous and not directly related to the primary objective of the program.

The Comptroller General recommends that Eximbank consider establishing a relending credit line administered by the Small Business Administration. Over the past 2 years, this Bank has met on several occasions with representatives of the Small Business Administration in an effort to encourage more small businesses in the United States to enter the export field. We intend to continue meeting with the Small Business Administration in order to explore all possibilities of increasing exports.

POSSIBLE EFFECT ON BANK-FINANCED TRANSACTIONS ON U.S. INDUSTRY

Mr. PASSMAN. In an article in the Journal of Commerce on January 8, 1973, it was stated that the National Advisory Council was reviewing whether Eximbank assistance should be provided for multinational projects, which, actually or potentially, compete with U.S. production. It went on to say that NAC had already ruled against Eximbank credits on the sale of U.S. components for the European wide-bodied airbus. The decision was based on the fact that the Government should do nothing to help foreign nations compete against U.S. aircraft manufacturers. Please tell the committee if the Bank is now considering whether a loan being made could result in possible competition with U.S. firms.

Mr. KEARNS. We always take this factor into consideration. Our law requires that we must take into account any possible adverse impact on the U.S. economy. However, we must make this judgment on a case-by-case basis, taking into consideration the effect that the transaction would have on the overall domestic economy, because we must take into consideration the possibility of discrimination against one U.S. industry, the one seeking to export, in favor of another.

EXIMBANK FINANCING OF EXPORTS TO COUNTRIES WITH LARGE FOREIGN EXCHANGE RESERVES

Mr. PASSMAN. In the same article it stated that the National Advisory Council was studying whether Ex-Im should extend export financing on sales to industrial nations with large foreign reserve holdings, such as Japan and Germany. Has the NAC concluded what course of action the Bank should pursue in this matter?

Mr. KEARNS. The NAC has concluded that the Bank should do whatever is necessary to facilitate U.S. export sales and that we should provide the financing where the Bank's support is critical to the consummation of the sale. This, again, must be viewed on a case-by-case basis.

Mr. PASSMAN. In the last year, what sort and in what amounts of export financing has been extended by the Bank to Japan and Germany?

Mr. KEARNS. In fiscal year 1972 Eximbank's direct credit authorizations for Japan totaled $272,378,774 to support export sales of 18 commercial jet aircraft, 2 nuclear powerplants, cotton, and a variety of smaller items under the CFF program. We had only one credit for $3 million to support tobacco exports to Germany.

Mr. PASSMAN. Don't you think these countries should be able to spend their surplus foreign reserve holdings instead of receiving assisted financing?

Mr. KEARNS. First, let me point out again that although some of these governments have surplus foreign exchange holdings, the funds are not necessarily available for use by private buyers in those countries, and this point is frequently overlooked. On those transactions which we believe should be supported by Eximbank we do, of course, always try to get the maximum amount of off-shore financing. In cases where the United States today has virtually no foreign competition, such as the 747 aircraft, a refusal by Eximbank to provide financing to the extent requested may very well effect the ultimate size or timing of the order. With adequate financing available, the foreign buyer may buy more, sooner; without the financing, he may decide to cut back or defer his purchases, or not buy at all.

EXPLANATION OF "AUTHORITY TO SPEND AGENCY DEBT RECEIPTS"

Mr. PASSMAN. Would you please explain the $3,262,550,000 item appearing in the budget for fiscal year 1974 under the title "Budget authority, authority to spend agency debt receipts"?

Mr. KEARNS. "Authority to spend debt receipts" refers to the Bank's ability to fund its programs by borrowing money for this purpose. "Budget authority" for any year represents the authority, becoming available during that year, to incur obligations, and is classified as either definite or indefinite, permanent or current. Eximbank's budget authority is indefinite and permanent. Indefinite authority is not stated as a specific sum when the authority is granted, but is determinable only at some future date. Permanent authority will become available without further action by Congress. Therefore, the figure of $3,262,550,000 represents the Bank's estimate of additional budget authority which would be needed to cover fiscal year 1974 obligations. However,

the exact amount, if any, will not be determinable until the end of fiscal year 1974. When the amount actually needed is determined, it will become available to the Bank without further action by Congress because of the nature and content of Eximbank's legislation.

"Authority to spend agency debt receipts" means that the Bank may need to issue to the public its own debt instruments and spend the proceeds of this debt to liquidate its obligations.

If at the end of fiscal year 1974 Eximbank should have to: First, pay guarantee and insurance claims equal to its 25 percent reserve; second, disburse all of the undisbursed balances of its loan agreements, and third, repurchase all of its loans sold with recourse, the Bank would then need $3,262,550,000 additional funds above the amount it would be able to acquire from authorized Treasury borrowings plus the obligated balances of its authority to spend agency debt receipts.

BANK SUPPORT OF EXPORTS TO COMMUNIST COUNTRIES

Mr. PASSMAN. What Communist countries are presently eligible to utilized Eximbank programs?

Mr. KEARNS. Yugoslavia, Romania, Poland and the U.S.S.R.

Mr. PASSMAN. Please tell the committee the amount of participation in the Bank's programs these countries will engage in in fiscal years 1973 and 1974.

Mr. KEARNS. I can't give you any information on future activities because the Bank, of course, does not program its funds; we respond to applications for support of exports as they are received. However, through March 31 of the current year we have authorized approximately $91.7 million in support of exports to Yugoslavia; $14.5 million for Romania; $22 million for Poland; and $101.2 million for U.S. exports to the Soviet Union. These authorizations will support about $364.8 million in U.S. sales to those four countries.

SUPPORT OF EXPORTS TO THE SOVIET UNION

Mr. PASSMAN. There has been some unfavorable reaction about the Bank extending to Russia export financing. Please tell the committee what export financing has been extended to Russia presently and what would be your argument favoring this assistance?

Mr. KEARNS. To date Eximbank has authorized three credits to support Soviet purchases of U.S. goods. The first, in the amount of $11,671,650, will finance 500 submersible electric pumping units; the second, in the amount of $3,102,912, is for equipment and services for the construction of a cupronickle and stainless steel tableware manufacturing plant; and the third transaction, in the amount of $86,450,000, is for equipment to be used in the construction of the Kama River truck plant.

We believe that there is justification for Eximbank to support these U.S. sales for the same reasons that we support export sales elsewhere. The Soviets have indicated that they want to purchase certain types of industrialized equipment from abroad, and we believe certainly that the U.S. business man should have the opportunity to supply these items on a basis which is competitive with other foreign suppliers. I should point out, further, that like all other export sales, sales to the

Soviet Union provide employment in U.S. industries and benefits for the entire U.S. economy, including increased tax revenues to all levels of the government.

Mr. PASSMAN. What type of export financing is planned for Russia in the future?

Mr. KEARNS. Well, we can't give you any definite figures for future Soviet transactions any more than elsewhere in the world. However, we have had discussions with the Soviets concerning other types of equipment which they may purchase, and, in addition to the three credits which the Bank has already authorized, we also have outstanding preliminary commitments to the Soviets totaling approximately $36 million for potential future sales. Whether or not these PC's will become actual loan applications at all, or to that extent, we don't know.

EXPORTS TO THE PEOPLE'S REPUBLIC OF CHINA

Mr. PASSMAN. Has the Bank had any negotiations with the People's Republic of China concerning export financing?

Mr. KEARNS. No. At the present time we are prohibited by law from assisting any transaction with Communist China.

EFFECT OF BANK ACTIVITIES ON FISCAL YEAR 1972 BALANCE OF TRADE AND BALANCE OF PAYMENTS ACCOUNTS

Mr. PASSMAN. As you know, in 1972 the United States had a large balance-of-trade deficit, and balance-of-payments deficit. Could you tell the committee what effect Eximbank has had on these two measures for the last year?

Mr. KEARNS. Eximbank's fiscal year 1972 operations have supported $9.5 billion of potential U.S. export sales. There is a time lag between authorizations of export assistance and the export itself, as measured by disbursements and shipment. Actual U.S. exports supported during fiscal year 1972, as measured by disbursements and shipments, totaled $3.4 billion. Thus, Eximbank's operations increased U.S. exports and helped to reduce the magnitude of the United States overall trade deficit. Eximbank's operations also contributed an estimated $2.6 billion to the credit side of the U.S. balance of payments during fiscal year 1972, helping to reduce the overall US. balance of payments deficit.

PARTICIPATION FINANCING

Mr. PASSMAN. Is it still the general policy of the Bank to require 50 percent of the money on a loan to come from sources outside the Bank?

Mr. KEARNS. Yes.

Mr. PASSMAN. Has there been any exception to this general policy during the last year?

Mr. KEARNS. Only in a few cases involving engineering and feasibility study loans in which Eximbank lends 85 percent of the contract price, and a cotton credit. The same value of these engineering transactions—normally they are under $500,000—makes it administratively impractical to split the financing between Eximbank and a commercial bank.

PROFIT OF BANK SINCE INCEPTION AND ESTIMATED PROFIT IN FISCAL YEAR 1974

Mr. PASSMAN. What has been the total profit of the Bank since its inception?

Mr. KEARNS. The total profit of Eximbank since its inception has been $2,334.8 million.

Mr. PASSMAN. What will be its profit in fiscal year 1974?

Mr. KEARNS. We estimate that the Bank will have a net income of $144 million in fiscal year 1974 before payment of any claims.

DIVIDENDS PAID TO U.S. TREASURY

Mr. PASSMAN. How much in dividends has the Bank paid into the Treasury since it began operation?

Mr. KEARNS. The Bank has paid $805.9 million in dividends to the U.S. Treasury since 1934.

Mr. PASSMAN. How much do you pay into the Treasury each year?

Mr. KEARNS. Each year for the past several years the Bank has paid a $50 million dividend to the Treasury.

TOTAL EXPORT SALES SUPPORTED BY BANK SINCE INCEPTION

Mr. PASSMAN. Please estimate the total exports made possible by Eximbank since operations begun.

Mr. KEARNS. It is difficult to give precise figures on this, since this data has only been incorporated into the Bank's data management system since 1970. However, we estimate that the Bank's authorizations have supported $61 billion of potential U.S. export sales, since its inception.

U.S. JOBS CREATED BY EXPORTS SUPPORTED BY BANK

Mr. PASSMAN. How many jobs do you estimate have been created by the operations of the Bank?

Mr. KEARNS. Based on the Department of Labor estimates that each billion dollars of American exports creates the equivalent of about 70,000 full-time jobs for American workers, Eximbank's activities have created or will create over 4.2 million jobs in the U.S. economy.

PROFITS TO U.S. BUSINESS FROM BANK-SUPPORTED EXPORT SALES

Mr. PASSMAN. Could you estimate the total amount of profits earned by private enterprise as a result of the Bank's operations?

Mr. KEARNS. Based on Treasury Department estimates of before-tax profits on export sales, we estimate that Exim-assisted export sales have or will generate about $4.5 billion of profits for U.S. businesses, both large and small.

FEDERAL TAX REVENUES FROM BANK-SUPPORTED EXPORT SALES

Mr. PASSMAN. How much in tax and other revenue do you estimate the U.S. Government has received as a result of these profits?

Mr. KEARNS. We estimate, and this, as you know, can only be a rough estimate, that these export sales produced about $15.2 billion of corporate and personal income taxes for the Federal Government.

ESTIMATED EXPORT SALES FROM FISCAL YEAR 1974 BANK AUTHORIZATIONS

Mr. PASSMAN. What volume of exports do you estimate will result in fiscal year 1974 from the programs provided by the Bank?

Mr. KEARNS. We estimate that Eximbank authorizations in fiscal year 1974 will support $12 billion of U.S. export sales.

BIOGRAPHIES OF NEW ADVISORY COMMITTEE MEMBERS

Mr. PASSMAN. You have had some changes in the membership of the Advisory Committee since last year. Would you identify the new members and include their biographies in the record.

Mr. KEARNS. Yes, sir.

[The information follows:]

EXPORT-IMPORT BANK ADVISORY COMMITTEE MEMBERS APPOINTED SEPTEMBER 1, 1972

ERNEST C. ARBUCKLE

Ernest C. Arbuckle has been chairman of Wells Fargo Bank since June 1968. Born September 5, 1912, in Lee, N.H., he received an A.B. from Stanford University in 1933, attended Stanford Law School in 1934, and received an M.B.A. from Stanford University Graduate School of Business in 1936. From 1937 to 1941 and from 1945 to 1946, Mr. Arbuckle was industry relations and organization analyst with Standard Oil Co. of California. He served in the U.S. Navy during World War II and was awarded the Silver Star for gallantry in action in 1945. He was with Golden State Co., Ltd., from 1946 to 1950, as director of purchasing, traffic, and marketing, among other general management assignments. From 1950 to 1958, he was with W .R. Grace & Co., serving as executive vice president of Pacific Coast Division; executive vice president of Foster & Kleiser Division; and vice president of Grace & Co.-Central America. Mr. Arbuckle was dean of the Graduate School of Business, Stanford University, from 1958 until becoming chairman of Wells Fargo Bank in 1968. He is a Director of Castle & Cooke, Inc., Honolulu; Hewlett-Packard Co., Palo Alto; Owens-Illinois, Inc., Toledo; Safeway Stores, Inc., Oakland; and Utah International, Inc., San Francisco. He is active in the fields of education, government, and civic affairs. He is a trustee of Stanford University; director, National Center for Voluntary Action; and director, San Francisco Chamber of Commerce.

JAMES R. GREENE

James R. Greene is a senior vice president in the International Division of Manufactures Hanover Trust. He is in charge of the bank's business in Latin America, Spain, and Portugal. He wa snamed an assistant manager in 1955, an assistant vice president in 1956, a vice president in 1957, and a senior vice president in 1963. Before joining the then Hanover Bank in May 1955, Mr. Greene had been second secretary in the Foreign Service of the United States. Prior to that, he taught economics at Stanford University for 2 years. During World War II, he served as a lieutenant (j.g.) with the U.S. Naval Reserve in the Pacific Theater. He is a director of Corporacion Financiera Columbiana, Bogota, Colombia; Inversiones Abancay S.A., Lima, Peru; and the Adela Investment Company, S.A. He has been decorated with the Gran Cruz de Bogota by the Government of Colombia. Mr. Greene served until April 1973 as president of the Bankers' Association for Foreign Trade. He also is a member of the board of trustees of Brookdale Community College (New Jersey) and president of the Rumson-Fair Haven Regional High School Board of Education (Rumson, N.J.). Mr. Greene was born in Chicago in 1921. He received his A.B. degree from Occidental Col-

lege, Los Angeles, where he was elected to Phi Beta Kappa, and his M.B.A. degree from Stanford where he completed residence and academic requirements for his Ph. D. in economics.

MURRAY W. MILLER

Murray W. Miller was appointed general secretary-treasurer of the 2-million-member International Brotherhood of Teamsters in March of 1972, having previously served as director of the Southern Conference of Teamsters in Dallas, Tex., since 1951. Mr. Miller, a native of Columbus, Ind., has been prominent in Teamster affairs for the past 27 years. His union career began in 1934 when he organized a machinists' union in Columbus. He then became an organizer for the Carpenters' Union in Mobile, Ala. Mr. Miller joined the merchant marine in 1941, and attended St. Petersburg Merchant Marine Academy. On returning to Indiana, he organized the bakery industry, and was successful in bringing a substantial number of bakery drivers into the Teamsters Union, while driving a bakery truck himself. He then served as an officer for Teamster local unions in Muncie, Ind., and Houston, Tex., and in 1946, became a general organizer for the International Brotherhood of Teamsters, moving to Dallas, where he became the principal officer of Teamsters local 745. He was elected a vice president of the Teamsters General Executive Board at the organization's 1957 convention.

ALLEN P. STULTS

Allen P. Stults is chairman and chief executive officer of American National Bank & Trust Co. of Chicago and also chairman of its parent holding company, American National Corp. He was elected to the bank post in 1968 and the holding company position in 1969. He is a native Chicagoan, born June 13, 1913. Mr. Stults launched his banking career at what may have been history's most inauspicious time—the banking moratorium of 1933. Forced to leave college at age 19 because of financial straits, he found a job as messenger for the Federal Reserve Bank of Chicago. In December of that same year American National Bank opened for business and Mr. Stults was one of the original employees. He worked at virtually every beginner's job the first few years and resumed his college career at nights. Some 10 years later he received his bachelor's degree from Northwestern University's School of Commerce. In 1945, he was awarded a certificate from the Stonier Graduate School of Banking, Rutgers University. He advanced at American National Bank from an officer in the commercial lending division to Assistant Vice President, to Vice President, to Executive Vice President, election to the board of directors, to the presidency, and finally to the position of chairman in 1968. Mr. Stults' numerous business and civic organization responsibilities include: president of the American Bankers Association (to October 1972); appointment by the Nixon administration to the Citizens Committee for Government Reorganization and the National Export Expansion Council; trustee of the Foundation for Full Service Banks; trustee of Alice Lloyd College, Kentucky; past treasurer and current director of the Association of Reserve City Bankers; past president of the Illinois Bankers Association; head of the Committee on Urban Progress which conducted a major study of Chicago; and was treasurer of the Illinois Commission on Urban Area Government.

DEFAULTS AND DELINQUENCIES

Mr. PASSMAN. Have you had any defaults or delinquencies this past year?

Mr. KEARNS. No loans have been written off in fiscal year 1973. Currently, we have $196 million of loans which have installments delinquent 30 days or more. Most of these are in Chile, Cuba, and mainland China.

Mr. PASSMAN. What has been your bad debt experience since inception?

Mr. KEARNS. As I mentioned earlier, since inception the bank has written off only a net of $3.7 million of loans and about $16.6 million

from guarantees and insurance. The loans written off are only about 2 one-hundredths of 1 percent of total disbursements over this period.

RESCHEDULED LOANS

Mr. PASSMAN. Has it been necessary to roll over or reschedule any loans this past year?

Mr. KEARNS. Yes, a few. Through March 31 of fiscal year 1973, Exim has rescheduled $1.2 million involving 14 loans.

EXPORT EXPANSION PROGRAMS

Mr. PASSMAN. Would you list for the record the 20 export expansion programs with a brief description of each?

Mr. KEARNS. We will be happy to provide a brief summary of our major programs for the record.

[The information follows:]

EXIMBANK EXPORT EXPANSION PROGRAMS

COOPERATIVE FINANCING FACILITY

With this Cooperative Financing Facility (CFF) the Export-Import Bank of the United States helps make credit available to small- and medium-size purchasers of U.S. equipment and related services through banks in their own countries.

The CFF concept is simple: Eximbank arranges the cooperation of financial institutions (CI's) abroad to extend loans at their own risk to purchasers of U.S. exports. Eximbank in turn lends these CI's half the funds at a low rate of interest (currently 6 percent per annum). The CI's provide the other half from their own resources.

If a CI wishes to borrow its half of the financing Eximbank can assist by guaranteeing repayment to another lender of these funds.

The CFF accomplishes the following:

(1) It brings Eximbank financing to the doorsteps of small- and medium-size enterprises that might not otherwise be able to purchase U.S. goods and services. All a buyer need do is call on a CI in his own area. The CI's familiarity with the customer's credit standing and local market conditions enables it to reach a decision quickly on the loan request.

(2) The CFF enables a CI to broaden its lending capacity, increase its resources, develop new relations with existing customers, and attract new ones.

(3) It helps U.S. suppliers expand their exports and services to enterprises which lack experience in financing overseas purchases.

DIRECT LOANS

Direct Loans are dollar credits extended by Eximbank directly to borrowers outside of the United States for purchases of U.S. goods and services. Proceeds of the loans are used to pay U.S. suppliers of the goods and services. These loans plus interest must be repaid in dollars by the borrowers.

The purposes of the direct lending program are:

(1) To supplement private sources of financing where the private financial source is unwilling or unable to assume the political and commercial risks under current conditions;

(2) To extend credit on terms longer than those private lenders can provide; and

(3) To enable U.S. suppliers to provide terms on major projects equal or better than those offered by government-sponsored export financing institutions in other exporting countries.

Currently, the rate of interest charged by Eximbank on its direct loans to purchasers of exports of U.S. goods and services is 6 percent per annum. Normally, repayment is made in semiannual installments beginning 6 months after delivery of the equipment purchased or after completion of the project financed. Because Eximbank must commit the allocation of funds authorized for each

transaction, the Bank charges each borrower a commitment fee equal to one-half of 1 percent per annum of the undisbursed balance of the authorized loan.

Applications for direct loans must be made by the prospective borrower. The application, in the form of a letter, must include or be supplemented by information sufficient to enable Eximbank to appraise fully the technical, economic, and financial aspects of the transaction.

PARTICIPATION FINANCING

Eximbank has adopted a policy of requiring private financial participation in any transaction seeking Eximbank direct lending.

This policy has the threefold purpose of:

(1) Assuring that Eximbank's financial resources supplement, rather than compete with, private sources of export financing;

(2) Extending the usefulness of Eximbank's cash resources to the largest possible number of purchases and projects; and

(3) Assurance that private financial institutions will continue to provide export credits in the international trade arena.

Participation financing, therefore, is the combining of Eximbank's direct lending with loans provided by private sources of funds. If required by the private lender, Eximbank may extend its financial guarantee to assure repayment of that portion of the total financing.

FINANCIAL GUARANTEES

Eximbank has two financial guarantee programs under which it can assure the repayment of credits extended by private lenders to purchasers outside of the United States of U.S. goods and services. This guarantee is backed by the full faith and credit of the United States of America.

One program is available to U.S. financial institutions. The other is available to non-U.S. financial institutions.

The objective of both programs is to encourage wider, more frequent, and larger scale participation by private sources of funds in the financing of U.S. exports.

The financial guarantee programs can serve importantly as a substitute for direct lending by Eximbank. These programs also may be combined effectively with Eximbank direct lending, when Eximbank direct credit participation is necessary to supplement the private sources of funds in a particular transaction. Eximbank charges a guarantee fee of one-half percent per annum on the outstanding balance of the guaranteed loan.

An Eximbank financial guarantee not only assures availability of private funds but usually substantially reduces interest cost.

PRELIMINARY COMMITMENTS

The Export-Import Bank of the United States is prepared to provide preliminary commitments outlining the amount, terms, and conditions of the financial assistance it will extend to purchasers of U.S. exports of goods and services.

Buyers, suppliers, and financial institutions are entitled to use the Eximbank preliminary commitment procedure:

(1) If it is useful or necessary to know the amount, terms, and conditions of financing that will be available if goods and services are supplied from the United States;

(2) If the general description of the project or purchase is known;

(3) If the general estimates of cost, financing, and time requirements are known.

There is no cost or obligation to the applicant.

The commitment may be used in full, in part, or terminated and where appropriate changes may be negotiated by the applicant and Eximbank. It is assurance of financing backed up fully by the reputation and resources of Eximbank.

The program can be used advantageously by U.S. exporters in their marketing efforts.

LOCAL COST FINANCING

Eximbank is prepared to assist exporters in obtaining local cost financing when it has been clearly demonstrated as necessary to complete sales abroad of U.S. goods and services.

Increasingly, U.S. suppliers are being required to meet foreign competition by providing financing for a portion of the local costs as well as the dollar costs associated with major projects outside the United States.

Local costs are those expenses incurred by the buyer for the purchase in his own country of goods and services associated with the U.S. transaction. They may include expenses for engineering services, public utility connections, locally available construction materials, labor, equipment installation, employee housing, and similar items of host country origin.

MEDIUM-TERM DISCOUNT PROGRAM

Eximbank will make advance commitments to make discount loans for up to 100 percent of the eligible export debt obligations arising from current U.S. exports. Eximbank will also give advance commitments to purchase on a case-by-case basis eligible export debt obligations, satisfactory to Eximbank, with full and unconditional recourse on the commercial bank. Eximbank will consider applications from commercial banks as well as Edge Act and "Agreement" corporations operating under sections 25 and 25(a) of the Federal Reserve Act (hereinafter called bank(s)) for loans to assist the banks in financing current exports of U.S. products and services from the United States.

SHORT-TERM DISCOUNT PROGRAM

Eximbank's short-term discount program was established to assist in financing those export sales which require repayment terms of less than 1 year. As with all other programs of Eximbank, this program must supplement and not compete with private sources of financing. Eximbank urges exporters and private banks to continue to use all normal sources of funding of these export sales and urges the private banks to use this program only when other sources of funding are not satisfactorily available. Eximbank will make advance commitments for discount loans of up to 100 percent of the principal amount or discounted value of eligible export debt obligations arising from the financing of current U.S. exports of goods and services. Eximbank will consider applications from commercial banks, as well as Edge Act and "Agreement" corporations operating under sections 25 and 25(a) of the Federal Reserve Act (hereinafter called bank(s)).

THE RELENDING FACILITY

The Export-Import Bank of the United States has designed a relending facility to encourage additional export sales of U.S. goods and services in selected countries. A relending facility is extended by Eximbank directly to a non-U.S. financial institution to use for export loans to small and medium sized private buyers of U.S. goods and services. Through the extension of relending facilities, Eximbank endeavors:

(1) To establish a program that will assist medium and smaller size private businesses and industries to purchase U.S. products, services, and technology at reasonable credit costs, thereby helping these enterprises acquire efficient equipment and services of U.S. origin;

(2) To support the introduction or expansion of sales of certain categories of U.S. products selected on the basis of economic studies which identify potential markets not now satisfactorily served from the United States;

(3) To provide a flexible, responsive facility to assist in concluding smaller transactions that are not normally appropriate in other Eximbank operations, and not available through U.S. commercial banks; and

(4) To expand close working relationships with financial institutions outside the United States, on the basis of cooperation and mutual benefit.

ENGINEERING, PLANNING, AND FEASIBILITY STUDY

The Export-Import Bank of the United States will finance the costs involved in the preparation by U.S. firms of engineering, planning, and feasibility studies for their non-U.S. clients on large capital projects.

Eximbank recognizes that historically, the export sale of goods and services generally follows the nationality of the feasibility study contractor. By assisting U.S. engineering firms to obtain studies sponsored by clients outside the United States, it is anticipated that an increased number of design and construction contracts for large projects will be signed with U.S. firms.

The financial assistance which the Bank offers can be directed to either the contractor or the client.

If the contractor funds his study, Eximbank will provide a commercial bank exporter guarantee enabling the contractor to sell without recourse his debt obligation to a commercial bank. If Eximbank's assistance is to be given the client, it would be in the form of a financial guarantee of a loan extended by either a U.S. or non-U.S. commercial bank, most often in connection with a direct loan participated in by Eximbank.

COMMERCIAL BANK EXPORTER GUARANTEES

The Export-Import Bank of the United States will guarantee repayment of medium-term (181 days to 5 years) export debt obligations acquired by U.S. banking institutions from U.S. exporters.

Any U.S. commercial bank or Edge Act corporation is eligible for guarantees under the commercial bank exporter guarantee program.

The purpose of this program is to encourage and assist greater participation by banks in supporting U.S. exporters who must provide deferred credit terms on their sales.

EXPORT FINANCE COUNSELING SERVICE

Export-Import Bank of the United States provides a counseling service for exporters, banks, and financial institutions to help solve some of their problems in obtaining financing for transactions involving the sale of U.S. goods and services in other countries. The service, among other things, will provide:

(1) Information on the availability of financing services and resources, whether within the United States or elsewhere; and

(2) Information on each of the pertinent Eximbank programs which could be of assistance to exporters who find it necessary to offer deferred payment terms on their export sales to finance such sales.

ORIENTATION PROGRAM FOR BUSINESS AND INDUSTRY

Export-Import Bank of the United States has designed a program to familiarize representatives of various U.S. businesses and industries engaged in export trade with Eximbank's facilities and methods of operation.

A 1-day seminar, tailored for the company's needs, can be arranged for them on any Tuesday or Friday with advance notice of 2 weeks.

Those programs most appropriate to the specific needs of the individual companies will be featured in the discussions arranged for the trainees.

EQUIPMENT POLITICAL RISK GUARANTEE

The Export-Import Bank of the United States will provide political risk guarantee coverage on U.S. equipment used by U.S. contractors in their performance on contracts abroad.

U.S. contractors, in the course of their work outside of the United States, must frequently use their own or leased equipment. In many cases, the value of the equipment runs into the hundreds of thousands of U.S. dollars. In order to promote the export of U.S. goods and services, and to minimize the risk of equipment loss to the U.S. contractors while performing in connection with foreign projects that are economically and financially sound, the Eximbank has introduced a guarantee program for political risk of equipment.

GUARANTEE OF LEASE PAYMENTS

The Export-Import Bank of the United States is prepared to extend to either a U.S. or a non-U.S. lessor a guarantee of payment by a leasee for the lease of U.S. equipment outside of the United States on either a nonpayment or full payout basis. The lease transaction must result in an export of the U.S. equipment.

EXIMBANK EXPERIENCE SHARING AND ORIENTATION PROGRAM

Export-Import Bank of the United States has designed a program to familiarize represenatives of Government departments, financial institutions, businesses, and industries engaged in export trade with Eximbank's facilities and methods of operation.

An invitation to nominate trainees for this orientation program is extended from time to time by officers of Eximbank. A minimum of 4 and a maximum of 10 trainees is accepted for 2- or 3-week saturation sessions in all phases of the Eximbank programs.

FOREIGN CREDIT INSURANCE ASSOCIATION (FCIA)

FCIA, a group of some 50 of the principal U.S. maritime, casualty, and property insurance companies, in cooperation with Eximbank, has offered export credit insurance to U.S. exporters since 1962. To facilitate the sale of U.S. goods and services to other countries, FCIA insurance provides a broad-based protection against both commercial and political risks, which could result in the default of payment from a foreign buyer.

To meet the needs of all exporters, large and small, several types of policies are now being offered by FCIA:

(1) The master policy provides blanket coverage (normally 90 percent both for political and commercial credit risks for all the exporter's eligible short term credit sales, as well as medium-term credit sales;

(2) A special policy has also been developed for small businesses which are either new to export trade or which have had a very modest sales volume in the past;

(3) The short-term policy provides the exporter with blanket coverage for all of its foreign buyers who purchase consumer items, parts, and accessories; financing under this program are grains (such as wheat and feed grains), cotton, tobacco, vegetable oils, and breeding cattle. Commodities eligible for financing are announced each month by the CCC; additions and/or deletions to the list of commodities are determined administratively.

COMMERCIAL BANK EXPORT SYMPOSIA

Officials of the Export-Import Bank of the United States will participate in export symposia designed to assist commercial banks in explaining export financing techniques to their business customers.

Export symposia are meetings arranged by commercial banks in their own communities. A commercial bank sponsoring an export symposium extends invitations to its business account customers to send representatives to the meeting. A commercial bank official chairs the meeting, in which Eximbank officials explain the various ways in which financing of U.S. exports can be arranged, with emphasis upon the part that private financial institutions will play, as well as the types and extent of Eximbank export financing programs.

These meetings have proved to be of considerable benefit to the commercial bankers and their business customers by providing full, up-to-date information on Eximbank activities.

CREDIT INFORMATION SERVICE FOR U.S. COMMERCIAL BANKERS

The Export-Import Bank of the United States will make available to commercial bankers credit information or financial information on a specific country or individual company abroad.

As a result of its long experience in lending in countries outside the United States and its operation of guarantee and insurance programs covering supplier credits in those countries, Eximbank has accumulated extensive records of payment experience on countries and buyers, as well as credit and financial information on a large number of purchasers of U.S. products and services. Commercial banks may have the benefit of this information and experience by making inquiry of Eximbank on transactions proposed to them for financing.

In keeping with the banker-client relationship, Eximbank will not divulge confidential financial data on buyers in other countries, nor will it disclose classified information, or information received in confidence regarding particular credits or conditions in other countries. However, the experience as to repayment records of buyers, and other governments in providing dollar exchange for debt servicing, can have a definite bearing on a U.S. bank's decision to finance certain export transactions.

PROFESSIONAL TRAINING IN INTERNATIONAL FINANCE FOR U.S. COMMERCIAL BANKERS

The Export-Import Bank of the United States, to assist commercial banks in the United States in the training of their personnel in international finance,

offers a 9-month program of professional training for representatives of commercial banks, in export trade financing.

Trainees work at Eximbank in Washington as employees of the Federal Government for a minimum of 9 months. Therefore, the selection of the candidate by the commercial bank is tantamount to the release of the employee for that period of time.

The benefits to be gained by U.S. banks and their personnel from such on-the-job education are numerous. In addition to such excellent experience as the program will provide for them, their observations as to how Eximbank might supplement their own bank's pursuit of export financing opportunities would be considered and applied where possible with mutually beneficial results.

"EMERGENCY CREDIT AUTHORIZATIONS" REQUEST

Mr. PASSMAN. On page "e" of the justifications under the regular loan program you indicate a $50 million contingency will be maintained for emergency credit authorizations. Would you please tell the committee what sort of emergency authorizations you have in mind?

Mr. KEARNS. The category "emergency credit authorizations" refers to loans which are authorized to assist a country which is encountering temporary balance-of-payments difficulties in order to insure an uninterrupted flow of trade between the United States and that country. Since it is impossible to predict whether or not international economic conditions will require an emergency credit authorization for some country, this item is a contingency item. No "emergency" credits have been authorized since fiscal year 1969, even though each year's budget has provided a contingency for this purpose.

NEW PROGRAMS

Mr. PASSMAN. Would you please tell the committee if any new programs have been started by the Bank this past year?

Mr. KEARNS. We have not adopted any new programs since we appeared here last year, but we, of course, are continually reviewing and possibly revising our existing programs to insure that they remain responsive to U.S. exporters needs. For example, within the last year we have revised our commercial bank guarantee program and, as I mentioned earlier, have made some changes in our cooperative financing and relending programs.

CRITERIA UNDER DISCOUNT LOAN PROGRAM

Mr. PASSMAN. Under the discount program you state that it does not provide a profit incentive for the commercial banks to use Eximbank funds. How are you assured this profit incentive is not provided?

Mr. KEARNS. The maximum differential between the interest yield to a bank on an export debt obligation and the interest on a loan from Eximbank is 1 percent per annum. It may even be less than 1 percent if the bank requests a loan more than 90 days after it purchases the export debt obligation. In that case the interest rate on Eximbank's discount loan is the higher of (a) 1 percent less than the interest yield on the export debt obligation, or (b) Eximbank's borrowing rate in the private market for comparable maturities rounded to the next higher ¼ percent. We believe a 1 percent spread is about the minimum which will encourage banks to seek export business actively.

Mr. PASSMAN. You indicate on page "g" that the commercial bank must certify that it is not prepared to make the export loan unless

Eximbank will authorize an advance commitment to make a discount loan. How is Eximbank assured that this certification made by the commercial bank is proper and thereby avoids supplanting private capital?

Mr. KEARNS. The commercial bank's certification to Eximbank that it will not commit to finance a particular export transaction without Eximbank's discount loan commitment is subject to 18 U.S.C. 1001 which provides for a $10,000 fine and/or 5 years imprisonment for anyone who makes false or fraudulent statements to an agency of the United States. We know from our daily dealings with the commercial banks that such certifications are taken seriously. We also believe that the banks normally prefer doing business at a spread greater than 1 percent and would not use the discount program unless they needed assurance of liquidity.

BANK'S TREASURY BORROWINGS

Mr. PASSMAN. How much is the Bank authorized to borrow from the U.S. Treasury?

Mr. KEARNS. The Bank's basic enabling legislation authorizes it to have up to $6 billion outstanding at any one time in borrowings from the Treasury.

Mr. PASSMAN. How much has the Bank borrowed from the U.S. Treasury as of the present time?

Mr. KEARNS. As of April 30, 1973, the Bank's outstanding borrowings from the U.S. Treasury were $1,881.1 million.

Mr. PASSMAN. Isn't Treasury borrowing cheaper than other borrowing.

Mr. KEARNS. It depends on market conditions. Current borrowings carry the market rate of interest which Treasury pays on its own bills, which this week is 6.74 percent.

OTHER SOURCES OF FUNDS

Mr. PASSMAN. Besides Treasury borrowings, what are the other sources of funds available to the Bank?

Mr. KEARNS. The Bank has the authority, and the demonstrated ability, to borrow in the private money markets. And, of course, the Bank has funds generated from its operations, such as repayments of principal on loans, interest, commitment fees, and guarantee and insurance fees.

SOURCES OF BANK'S PROFITS

Mr. PASSMAN. What are the main sources of profit to the Bank?

Mr. KEARNS. The major sources of profit are the Bank's $1.4 billion of retained earnings, and the $1 billion of capital stock. Small amounts are made from the Bank's borrowings due to outstanding amounts borrowed in the past at rates lower than today's interest rates, but as rates increase, new borrowings will raise the Bank's average interest expense rate and the profit from this source will decrease.

LOAN TERMS

Mr. PASSMAN. What are the terms of the loans handled under the regular loan program?

Mr. KEARNS. The terms vary depending on the nature of the product or project to be financed, the amount, and whether there is publicly supported foreign competition. The term is set to allow enough time for the product or the project to generate sufficient cash flow to repay the indebtedness. As I said earlier, our shortest term under this program would be 1 year, while the longest, for nuclear power credits, is 20 years, including a 15-year repayment term following a grace period of approximately 5 years to allow for completion of construction of the facility.

EXPORT EXPANSION FACILITY

Mr. PASSMAN. Under the export expansion facility where the criteria for eligibility are not as strict as they are for the normal operations, what has been your repayment experience thus far?

Mr. KEARNS. Excellent. No loans have been written off to date, and through April of this year net claims paid for guarantees and insurance have amounted to just over $3 million.

Mr. PASSMAN. What is the limitation for this program and how much do you presently have allocated to the program?

Mr. KEARNS. By law we may utilize up to $500 million of our total commitment authority for this program. At March 31, 1973, charges against this limitation amounted to $435.8 million.

MILITARY CREDITS

Mr. PASSMAN. What countries have you extended military credits to this past year and in what amounts?

Mr. KEARNS. To date in fiscal year 1973 the Bank has made only one military loan. That was a $100 million credit to Iran.

Mr. PASSMAN. What was this military credit to be used for?

Mr. KEARNS. This credit is to be used mainly to procure aircraft, missiles, vehicles, and spare parts.

Mr. PASSMAN. Eximbank is not allowed to extend credits for military purposes to underdeveloped countries, is that correct?

Mr. KEARNS. That is correct.

Mr. PASSMAN. Are all military credit arrangements approved and coordinated through the Defense Department?

Mr. KEARNS. Yes, they are.

CHILE

Mr. PASSMAN. Has Eximbank entered into any agreements with Chile this past year?

Mr. KEARNS. No.

Mr. PASSMAN. Does the Bank have any negotiations with Chile underway?

Mr. KEARNS. The Bank has negotiated with Chilean Government representatives as part of the overall renegotiation of the debt owed by Chile to the United States Government under the April 1972 Paris agreement. Some technical issues remain unresolved between the Bank and the Government of Chile and a rescheduling agreement in principal has yet to be concluded. Further talks await the outcome of overall bilateral negotiations between the United States and the Chilean Governments.

EFFECT OF DOLLAR DEVALUATION ON BANK OPERATIONS

Mr. PASSMAN. Has the recent dollar devaluation had any effect on your operations?

Mr. KEARNS. The purpose of the recent dollar devaluation is to stimulate U.S. exports. Since we are witnessing the positive results of this stimulation, there will be a feedback effect upon Eximbank as increased exports will lead to increased demands for financing.

INCREASE REQUESTED FOR EQUIPMENT AND SERVICES AUTHORIZATIONS IN FISCAL YEAR 1974

Mr. PASSMAN. You reflect a large increase in your "equipment and services" authorizations for fiscal year 1974. Would you tell the committee the reason for this large increase?

Mr. KEARNS. The increase occurs for several reasons. As U.S. exporters become more competitive it will result in an increased level of Eximbank authorizations as more opportunities become available to capture export sales with Eximbank assistance. Also, natural resource development projects, such as LNG, for which Eximbank's assistance is needed, will require large amounts of financing. These authorizations are part of the "equipment and services" category.

PROPOSED INCREASE IN BANK'S COMMITMENT AUTHORITY

Mr. PASSMAN. I note that you plan to ask for an increase in your statutory limit of $10 billion in fiscal 1974. Do you think that the Eximbank will continue to expand its operations or will a maximum be reached at some point?

Mr. KEARNS. One cannot pinpoint an authorization maximum. Eximbank responds to financing requests, as U.S. exports grow so should Eximbank authorizations. If exports cease to grow, Eximbank authorizations likely would fall off some.

PAY INCREASE COSTS

Mr. PASSMAN. On page 6, you indicate the fiscal year 1973 and fiscal year 1974 administrative expenses do not include the recent pay increase. Will you need an increase in your limitation for these 2 years to handle the increase?

Mr. KEARNS. Due in part to the freeze in hiring for several months this year, we believe that we will be able to handle the pay increase in fiscal year 1973 without an increase in our administrative expense limitation. However, we may have to request an increase in the fiscal year 1974 administrative expense limitation for the January 1973 pay increase.

ENTERTAINMENT ALLOWANCE REQUEST

Mr. PASSMAN. Could you please tell the committee what you are requesting for entertainment allowance?

Mr. KEARNS. We are requesting $18,000 in fiscal year 1974, the same amount as in fiscal year 1973.

EXPLANATION OF REIMBURSABLE COSTS

Mr. PASSMAN. Would you please explain the "reimbursable detail" item you list on page 6?

Mr. KEARNS. This item represents costs paid by other agencies on behalf of Eximbank for which the Bank reimburses those agencies. The main items are certain costs in connection with Exim's Far East and European representatives for which we reimburse the State Department.

EMPLOYMENT LEVELS FOR FISCAL YEARS 1973 AND 1974

Mr. PASSMAN. What is the total employee level estimated for fiscal year 1974, and how does this compare to fiscal year 1973?

Mr. KEARNS. The Bank is currently limited by the OMB to 400 on board at June 30, 1974, which is the same level as we are authorized for June 30, 1973. The average number of employees on board during fiscal year 1974 is expected to increase from 393 in fiscal year 1973 to 398 in fiscal year 1974. This increase in the average results from the fact that the Bank began fiscal year 1973 with 380 on board, which was our limit for fiscal year 1972, and will build up to 400 by the end of fiscal year 1973, thus beginning fiscal year 1974 with a greater number of people.

Mr. PASSMAN. Mr. Long was unable to be here today, but he asked me to submit the following questions to you for reply.

[The questions and answers follow:]

SUPPORT TO U.S. BALANCE OF PAYMENTS FROM BANK OPERATIONS

Mr. LONG. Mr. Kearns, on page 4 of your statement, you say that in fiscal year 1972, the Eximbank's "operations contributed $3 billion to the credit side of the U.S. balance of payments." What evidence do you have that the export sales making up this $3 billion total would not have been made without Eximbank financing?

Mr. KEARNS. First, our basic law, the Export-Import Bank Act, sets forth the purpose of the Bank as "to aid in financing and to facilitate" U.S. export sales. It also establishes as U.S. Government policy an expansion of U.S. exports in order to increase U.S. employment, income, and development of this country's productive resources, and, further, directs Eximbank in this connection to provide export financing support to U.S. exporters which is competitive with government-supported export financing available to their principal foreign competitors.

Now that same Act, however, also requires that in accomplishing this purpose, the Bank should supplement and encourage and not compete with private capital. Therefore, every transaction which comes into Eximbank is carefully scrutinized, first by our staff, and then by the Board of Directors in an effort to determine whether Eximbank support is necessary for the transaction to go forward. In those cases where it is clear to us that the sale has already been made without acceptable financing as a condition, we, of course, won't participate. However, in most cases, this decision becomes a matter of judgment, because there is no absolute way, or mathematical formula to use, to know if we don't participate, the whole sale or perhaps only part of it—or possibly none of it—will or will not be consummated without us. Although we always try to get maximum private source financing, either from the United States or abroad, in all transactions in which we participate, our main objective is to help the U.S. seller get the business. You only get a positive impact on the U.S. trade balance, and ultimately on this country's balance-of-payments account, if the export sale is actually made. And the larger the sale—including the potential it might create for follow-on orders—the greater the benefit to all sectors of our country's economy and to our international accounts.

BANK RESPONSE TO GAO CRITICISM OF CERTAIN JAPANESE CREDITS

Mr. LONG. A GAO report of February 12, 1973, discusses a number of Eximbank loans to Japan and concluded that "Eximbank financing seemed unnecessary for four loans totaling $10.1 million." [GAO report, p. 18.] What is your response to this conclusion?

Mr. KEARNS. We reviewed very carefully, again, the four specific loans cited by the GAO and we continue to believe that Eximbank participation in the transactions was appropriate.

In this connection, I would like to point out, as we did to the GAO, that their review of Eximbank's export loans to Japan, which was restricted to the 3 fiscal years 1969–71, completely ignored the fact that most of this period was characterized by credit scarcity, as evidenced by the movement of U.S. prime rates of interest which rose steadily, and occasionally sharply, during the period. During periods of credit scarcity, commercial banks tend not to finance exports while being faced with what they consider to be more pressing domestic capital needs. So to argue, as the GAO did in this instance, that commercial bank financing is available for exports and at the same time to ignore the impact of tight money on such availability is neither logical nor helpful.

Moreover, on the basis of a case study in only one country—Japan—the GAO has generalized its criticism to include Eximbank's entire capital loan program, which is certainly disconcerting, to say the least. To evidence the narrowness of GAO's analysis, GAO reviewed a total of $387 million in Eximbank loans to Japan in that period, which not so incidentally supported $893 million in U.S. export sales. During this same period, however, Eximbank authorized a total of $4.574 billion in loans to as many as 64 different countries. Thus, the financing of the four loans which GAO concluded "seemed unnecessary" constituted but 2.6 percent of the $387 million loaned to Japanese purchasers and only .0022 percent of all Eximbank loans during the period.

BANK'S BORROWING AND LENDING RATES

Mr. LONG. In instances in which Eximbank financing—including private funds at market rates of interest—of export transactions offers interest rates lower than the market rate of interest, does the Eximbank calculate the grant element in its loans?

If not, why not? If so, for what loans have you calculated the grant element and what was the total transfer of real income in each case?

Mr. KEARNS. First, let me say again that we do not believe that there is a "grant element" in any of Eximbank's operations. We operate as a bank, and as such we must take into account the total mix of financing, both borrowing and lending, in responding to established need for our participation in export financing transactions.

Since the Bank was reincorporated as a U.S. Government corporation in 1945, in only a very few instances has the Bank's lending rate fallen below the Treasury borrowing rate for equivalent, or even longer, maturities. In fact, in 25 out of the 28 years since 1945, Eximbank's lending rate has been significantly above the Treasury borrowing rate.

Similarly, at only a very few times since the Bank began to borrow directly in the private market in 1962 has its borrowing rate in that market exceeded its lending rate. However, the Bank's average borrowing rate on its private borrowing has never exceeded its lending rate.

In the few instances to date when current borrowings were higher than the current lending rate, they were more than offset by the profits of the Bank on operations during the cumulative period from 1945. Moreover, even in those instances, the costs incurred on some current loan disbursements were more than offset by profits accrued on outstanding balances and on other current borrowings at rates lower than the Bank's lending rate, with the result that on an overall basis the Bank's operations showed a profit for the years in which those instances occurred also.

Thus, on a cumulative basis, the Bank's operations have never entailed a so-called subsidy cost. And, let me point out again, the Bank makes a substantial profit on its operations every year, from which it pays an annual dividend to the U.S. Treasury, as well as assisting export sales of U.S. goods and services which, in themselves, generate substantial tax revenues to the Government through increased U.S. employment and corporate income.

GAO Report on Bank's Capital Lending Program

Mr. Long. To what extent do you agree or disagree with the four recommendations of the GAO report, dated February 12, 1973, on the Eximbank? The four recommendations were that Eximbank should develop a system to "(1) provide management with information necessary to determine essentiality of its financing, (2) determine countries and products in greatest need of Eximbank financing, (3) document the basis of management's actions, and (4) provide evaluation of the results of Eximbank financing" (GAO report, February 12, 1973, p. 4).

Please discuss each recommendation separately. For those recommendations with which you agree, what action have you taken to carry out the recommended actions?

Mr. Kearns. We believe that there is merit in all four recommendations in the GAO report, although, as we noted in our comments, several of the suggestions were either already the practice of the Bank or already had been undertaken.

With respect to the first recommendation that the Bank develop a system to provide management with information necessary to determine essentiality of its financing, we believe that we have an effective system for providing relevant information. It is a matter of judgment, of course, as to how good this information is and how well it is used. We believe that it is essentially well used.

On the second point, the GAO recommended that the Bank undertake analyses to discover those markets and products most in need of Eximbank assistance. Although we, of course, are looking at these factors in our general analyses of world trade situations and with respect to specific transactions, we believe that the GAO approach suggests that the Bank should duplicate the efforts of the Commerce Department, which is properly staffed and experienced to perform the recommended analyses. We expect to continue our longstanding cooperation with the Commerce Department in the area of product and country export identification.

With respect to the third recommendation, Eximbank has already taken action to implement the suggestions made by GAO in this connection. Under guidelines recently adopted with the National Advisory Council on International Monetary and Financial Policies, all direct loan memorandums considered by Eximbank's Board of Directors now include discussion of an elaborate series of topics relevant to the case which are taken into consideration by the Board in their decisions.

Concerning the fourth recommendation, in June of last year Eximbank established a planning staff whose major purpose is to provide the Bank's management with evaluative data on the effectiveness of various Eximbank programs in achieving Bank objectives. Over time, the planning staff should be able to provide the Bank's management with useful comparative evaluation of its financial services.

Mr. Long. The GAO report of February 12, 1973, states on page 33 that the "Eximbank did not accept responsibility to prove that its assistance resulted in additional U.S. exports."

Is this statement correct? If so, why is your argument that "in fiscal year 1972 Eximbank contributed $3 billion to the credit side of the U.S. balance of payments" on page 4 of your statement any more than an unsupported assertion?

Mr. Kearns. First, let me say that nobody yet has really defined what "additionality" means. As I said before, as far as we know, no precise formula has been developed as an accurate measurement for this concept. It is our understanding that AID once attempted this, but that their effort did not prove satisfactory and was therefore dropped. We believe that it is a somewhat spurious concept lacking any precise definition. However, if the GAO believes that they can develop an effective formula, we would be glad to look at it. In the meantime, we must use all of the sources available to us, including our government agencies, U.S. embassy staffs, and responsible people in the trade including buyers and sellers, to obtain the information we need to evaluate whether our participation in the financing of an export sale is necessary to actually consummate the sale, so that the U.S. businessman does not lose out to his foreign competition.

Financing of Exports to the Soviet Union

Mr. Long. Mr. Kearns, a Baltimore Sun report of April 5, 1973, page A4, on your trip to Russia states that the Eximbank "approved three loans to the Soviet Union totaling $108.1 million without requiring the basic information it normally gets from western countries."

What information did you not receive from the Soviet Union that you usually receive from western countries? Have you received additional information to date?

Does an Eximbank policy exist that will require less information on loans to the Soviet Union than on loans to other western countries?

Mr. KEARNS. What I said, which incidentally was reported in various ways in several different newspapers, was that before Eximbank could justify extending the large amounts of credit to the Soviet Union which may be required for some of the sizable transactions being discussed, we would have to have balance of payments and reserve figures for that country the same as we have for other countries. We do have trade figures now, that is, export and import breakouts by country for both hard currency and COMECON countries trade, but at the present time we don't have the other figures, such as those published routinely by the western countries. Our policy for making credit judgments on transaction involving the Soviet Union is the same as that applied to all of our transactions worldwide.

Mr. LONG. Mr. Kearns, the same Baltimore Sun article, April 5, 1973, page A4, reports that American businessmen and Soviet officials are talking about $2 billion to $3 billion in Eximbank credits by 1975. The article states that you said that such mammoth loans would be difficult without "more information and congressional clearance."

At what stage is consideration of these loans? When will you obtain more information on these loans and when will you ask for congressional clearance?

Mr. KEARNS. We have received no applications to date for amounts in that magnitude. At such time as we might, we of course would have to take them into account in relation to our total commitment authority, which is set by the Congress in our enabling legislation, and in our fiscal year program activity estimates, which are reviewed annually by this committee and approved by the Congress. So we would expect to keep Congress fully informed through both of these channels at such time as we are looking at potential financing of anywhere near that magnitude.

BANK'S EMPLOYMENT LEVEL

Mr. ROYBAL. I would like to inquire further along the lines that I started to earlier during today and that is to go back to your administrative costs, particularly as they relate to employment.

How many employees does that include?

Mr. KEARNS. An average of 398 for fiscal year 1974.

Mr. ROYBAL. Are all those employees American citizens?

Mr. KEARNS. Yes; with the single exception of one secretary in Hong Kong.

Mr. ROYBAL. You are not classified as an international organization?

Mr. KEARNS. We are a U.S. Government corporation.

Mr. ROYBAL. How many do you have now?

Mr. KEARNS. In our report to you 398; 386 right now.

Mr. ROYBAL. 398 employees. What is the composition of them?

ETHNIC COMPOSITION OF BANK EMPLOYEES

Mr. KEARNS. About 16 percent, or 62 persons, are black. We have two with oriental background, one with American Indian background, and one Spanish-American.

Mr. ROYBAL. There are 62 black, which is 16 percent. Two oriental, and one Spanish-speaking?

Mr. KEARNS. That is right.

Mr. BOSTWICK. We have four Spanish, two oriental and one Indian at this time.

EMPLOYEES OF MEXICAN AMERICAN BACKGROUND

Mr. ROYBAL. I knew you had increased your Spanish-speaking personnel, but I didn't know by how many.

In other words, you increased it by two then? Or by three actually, from last year?

Mr. BOSTWICK. This is Spanish surname, not Spanish-speaking. We have probably 25 people who speak Spanish.

Mr. ROYBAL. I am referring primarily to Mexican Americans. How many do you have in your employ?

Mr. BOSTWICK. Four.

Mr. ROYBAL. When I say Spanish-speaking, I use the term very broadly. I know some of you also speak Spanish after a fashion, but that doesn't make you Spanish-speaking.

You have then four Mexican Americans in your employ. What percentage is that of your overall employment?

Mr. KEARNS. About 1 percent.

Mr. ROYBAL. You do have the President's 16 point program. Why has that not been implemented with regard to the Mexican Americans?

LACK OF QUALIFIED MEXICAN AMERICAN APPLICANTS

Mr. KEARNS. Presumably because we haven't been able to find the people to employ. You see, we have to handle all of this through our regular civil service referrals. We would like to broaden the base because we have people from all over the world coming into the Bank.

OFFER OF RECRUITMENT ASSISTANCE FOR MEXICAN AMERICAN APPLICANTS

Mr. ROYBAL. I get the same excuse from other agencies, that they can't seem to find qualified Spanish-speaking or Mexican Americans. I will make you the same offer I made another organization. That is, I will make available my office in Los Angeles for you to interview qualified Mexican Americans for any position in any category with regard to banking, particularly in the higher accountancy level. I hope, however, that you can do better than some other agencies.

Mr. KEARNS. Will they live in Washington?

Mr. ROYBAL. They will live in Washington.

Mr. KEARNS. We will be very happy to consider any of them.

Mr. ROYBAL. They will be happy to live in Washington.

Let me tell you about another agency I made that offer to. They interviewed 18 people in my office all preselected to meet every requirement for the job being offered, and not a single one was hired.

Mr. KEARNS. Mr. Roybal, we would be delighted to interview them, and we will be pleased to consider them and hire them if they are qualified to do what we have for them to do. We have absolutely no reason for not doing it.

Mr. ROYBAL. It is only the qualified people that I am referring to. I do not ask you to hire someone simply because he happens to be a Mexican American. He has to be a well-qualified individual who can do the job that you would be requiring him to do.

The point that I am making is that most of the time we can prove by these statistics that a real effort has not been made. The extent of the effort of most agencies tell me, including civil service, is the posting of a bulletin in the college dorms or on a bulletin board somewhere. I don't think that is a genuine effort of recruitment. A real effort has to be made, perhaps patterned after that used by the U.S. Army, or some private firms that go into the community, schools, colleges, and even that go to other firms to recruit young men and women for these jobs. It is that kind of an effort that I would like to see the Federal Government engage in.

LIMITED VACANCIES AT BANK

Mr. KEARNS. Mr. Roybal, our problem is that we have such a small base and so little turnover. You see, we can't increase it beyond 400, and so about the only thing we can do is fill vacancies.

We don't have people going around recruiting now. We have to depend on someone coming in to us or being referred to us.

If there is any way that you can refer these people to us, we would be delighted to have them. We would like to broaden our base.

Mr. ROYBAL. If you would tell me what it is that you need, either now or in the future, I will be happy to cooperate. I don't like this quite obvious discrimination which may not be intentional, but it is still reflected in the percentage rates. When one particular ethnic group has an employment rate that is much higher than parity and the second largest minority in the United States much lower, then something is wrong.

Mr. KEARNS. Would it be helpful if we give you a schedule of the openings we have on a regular basis? Would that be helpful to you?

Mr. ROYBAL. Yes, sir, and I would be happy to cooperate.

I don't guarantee that I am going to find the most qualified person every time, but I will make every effort and be as helpful as I can, and perhaps we can improve the situation.

Mr. KEARNS. We would be delighted. We have so many people from the Spanish-speaking countries coming into the Bank that it would be a great help to us to have employees of that heritage.

Mr. ROYBAL. This is why I am surprised that you only have four. I thought you really only had one, and then I was told this morning that you had increased it, but I didn't know by how many. I hope that next year we can say that we have increased it by many more than we have at the present time.

I realize that you cannot hire over so many, and that you are not going to fire someone just to hire another person of another ethnic group, I don't expect you to do that, but let's let attrition handle it and concentrate a little bit on the President's 16-point program. I think it is most important we do that.

Mr. KEARNS. We will do that.

FOREIGN SUBSIDIZATION OF EXPORT SALES

Mr. MILLER. I was interested in the cost of production. We talked about the balance of payments. Then we get into cost of production. I am not sure just where we stand, but at the present time you have stated we are competitive. I am wondering how far other countries go in subsidizing. Do you have any information you can shed on that?

Mr. KEARNS. It varies. There is nothing static in this business. For example, we had a bad situation in Brazil recently where the U.S. suppliers were trying to sell some steel mill equipment. The Japanese decided they wanted that business, so they went in and made proposals at 50 percent of the price of the United States and the European proposals. They got the business, but everyone we talked to said they bought it at considerably less than actual costs of production.

Now, whenever a situation like that occurs, it is difficult to say that we will be competitive, but at the same time we have the same kind of equipment considered in Korea, Taiwan, Iran, Spain and we are selling it. So you come to the conclusion that in the markets that are not of special interest, that is, where you do not have this Government subsidy, our products are price competitive.

COST OF PRODUCTION FACTOR

Mr. MILLER. Let's look at the other side of the coin. We have had problems in this country for some time in our leather industry. It is not a high technology product; we are aware of that. We have quite a few imports from Spain and Italy. Now there we seem to be going on cost of production. The fact that their cost of production is so much lower than ours they seem to be able to ship in and sell their commodities at a profit, which apparently is pretty close to our cost of production or maybe even a little under.

I am trying to unravel this a little. When we talk about balance of payments, that seems to be one thing, because a subsidy is involved, but cost of production is a little different story. Do you have any information on leather products?

SHOE AND LEATHER GOODS MARKETING

Mr. KEARNS. Yes. In the case of shoes, particularly high style shoes which people are buying now, especially the women—they like things that are high style—in those cases where there is a lot of hand labor, we would be at a price disadvantage.

I think, however, that the big thing that has happened is that in the volume shoes the Italians and Spanish, especially, have developed a styling that the buyers in this country like. I think this has been one of the major reasons why they have sold so many shoes here.

Mr. MILLER. It isn't necessarily that they like the styling so much as it is the price. It seems to be so much lower than what we can afford to sell these for.

We have had problems—and I speak of this because in my own congressional district we have had a lot of problems over the last several years in the leather industry. It is because we have imports coming into the country and they are underselling us. It is just that simple.

It must be the cost of production in that country that is shipping in that would allow this to happen.

Mr. KEARNS. That is certainly true in the matter of high style shoes where you have a lot of hand labor. Hand labor in this country has become too expensive.

POTENTIAL EXPORTS FOR SHIPBUILDING INDUSTRY—LNG TANKERS

Mr. MILLER. Can you elaborate a little on the shipbuilding industry? The chairman spoke about the steel industry as such, but with regard to shipbuilding it appears we are going to be moving down the road to where we will need those super tankers you spoke of in order to haul the liquid natural gas, liquid methane. It is coming by all indications, but what share of that market will the United States be able to furnish?

Mr. KEARNS. It is too early to tell at this moment, but all of our preliminary discussions—and we have had very thorough discussions—would indicate that U.S. shipyards will be able to compete with these large specialized tankers.

It is a matter of technology and the ability to produce the cryogenic unit, which is more expensive than the ship hull itself by four or five times.

We have become, I think, dependent upon ship subsidies to the point where our shipyards don't like to consider bidding on a ship unless there is a subsidy attached to it.

Mr. MILLER. Are you saying we will be competitive without that subsidy?

Mr. KEARNS. I am saying we will sell some of the ships. Now, whether we are competitive in price, quality, technology, or whatever it may be, in all cases remains to be seen.

We are in discussion with several of the potential buyers of these ships who are talking to us because they need financing. Each ship runs a hundred million dollars or more, and no buyer can supply that kind of money except through a financing package. In my opinion, our shipyards will be able to capture a good bit of that business, and I think this is the trend we are moving toward.

COMPETITION IN LNG TANKERS

Mr. MILLER. Who besides Japan will we be in competition with?

Mr. KEARNS. The French, the Norwegians, the Swedes, the Spanish, and other shipbuilding countries.

Mr. MILLER. In about that priority?

Mr. KEARNS. Yes. The French are the most active so far. I think, however, that they have some limit to their production, and they have a terrible inflation problem. When you look at one of those $100 mil-

lion ships, it will take 3 to 4 years to build and with 8 to 10 percent inflation that gives the buyer some problems.

With people still looking at our inflation rate of 3 to 4 percent total, it puts us in a better position in that forward planning. I don't say everything is 100 percent our way, but I think we are really in a position to get a good bit of that business.

Mr. MILLER. Without the subsidy? You say we will be able to sell some ships?

Mr. KEARNS. Without the subsidy, yes.

The subsidy would only apply if it was American flag. We couldn't finance it if it was American flag.

Mr. MILLER. I understand. I was just trying to get it straight as to where we stand today. I am interested also in the fact that we would like to build the ships, but also the fact that we need the ships. For example, are you aware of orders that have been placed for the cryogenic hulls?

ORDERS PLACED WITH U.S. SHIPYARDS FOR LNG TANKERS

Mr. KEARNS. Yes.

Mr. MILLER. This is a slow operation. It takes time to construct. Are we really moving so that we will have some supply of energy as we need it?

Mr. KEARNS. I don't know exactly how many orders have been placed, but we do know some orders have been placed. I know of at least three and possibly more. We could get the names of the shipyards who actually have orders. There are a great many more in negotiation.

Mr. MILLER. Mr. Chairman, if we could get that for the record, I would appreciate it.

Mr. KEARNS. We can give you the names for those that have been placed. We can also give you the number we know are under negotiation.

Mr. MILLER. That is very good.

[The information follows:]

ORDERS PLACED WITH U.S. SHIPYARDS FOR LNG TANKERS, MAY 23, 1973

Shipyard	Size (cubic meters)	Number
1. General Dynamics, Quincy Shipbuilding Division	125,000	3
2. Newport News Shipbuilding & Dry Dock Co	125,000	3
3. Avondale Shipyards Inc.[1]	125,000	3

[1] Contract is presently under negotiation and not yet firm.

Note: Al lof the above vessels are being supported under Maritime Administration programs, not Eximbank.

PRODUCTS FINANCED BY BANK

Mr. MILLER. I am not sure, being a new member here on the committee, just what products you have financed, in priority and volume. I am wondering if you could furnish that for the record to show what products you have helped move abroad, and the volume of that commodity?

Mr. DUGAN. We can do that.

[The information follows:]

Export-Import Bank of the United States—Authorizations for loans, guarantees and insurance, fiscal years 1971, 1972, and 1973 through Mar. 31

Mr. MILLER. Now, with respect to the insurance on that product, would you actually insure the product itself?

Mr. KEARNS. No, we only insure repayment. We don't provide physical insurance. Just repayment.

Mr. MILLER. That is all, Mr. Chairman. Thank you.

EXIM FINANCING SUPPORT FOR EXPORTS TO YUGOSLAVIA, ROMANIA, POLAND, AND U.S.S.R.

Mr. ROYBAL (presiding). Before we adjourn, Mr. Kearns, I would like to ask you to provide for the record the amounts made available to

Yugoslavia, to Romania, Poland, and the U.S.S.R., together with their interest rates and the time in which the payments will be due.

It would be interesting to look at this years from now to see whether they fall under the same category as other nations who have made prompt payments.

[The information follows:]

EXPORT-IMPORT BANK OF THE UNITED STATES—DETAILS OF AUTHORIZATIONS TO POLAND, ROMANIA, U.S.S.R., AND YUGOSLAVIA DURING FISCAL YEAR 1973 THROUGH MAR. 31, 1973

BANK REPAYMENT EXPERIENCE

Mr. ROYBAL. I was very interested in reading that you have an excellent bad-debt experience. Not that you have had many bad debts. I mean it is the other way around. It sounds as though your record involved very bad debts.

To what do you attribute that? It seems to me to be a very excellent record.

Mr. KEARNS. That is very easy. The Export-Import Bank is such a major influence in the extension of credit to most countries, particularly countries that might have a little problem getting credit otherwise, that if a country defaults on a credit to Export-Import Bank, or threatens to default, we simply cut them off from any further loans or guarantees.

If we cut them off, the chances are they can't get any credit from any other financial institution in the United States or outside the United States. All financial institutions, domestic or foreign, take cognizance of Eximbank's actions. We use that as a means of making collections. We say, "You don't really want to go out of business, do you?"

And if it is a country that is serious and intends to use credit, they will see that obligations to Eximbank are paid. If it is a private buyer and he intends to say in business, he will pay because he can't afford not to. That is the reason the credit is so good.

We do try, and I think do a good conscientious job, probably as good as any private business, in determining reasonable assurance of repayment when we go into a transaction. In other words, we don't feel we are doing the buyer any favor if we put him into a default position, that is, if we encourage him to go into a transaction he can't pay for.

So, in every transaction in which we are involved, we look down the line and say, "How are you going to pay for it? What is your cash flow? What have you in the way of resources?" And if they can't show this to us, we don't make credit available.

This is not an absolutely sure thing because conditions change and a good solid business today may be broke tomorrow; but we do know, and they know, that if they default, they are surely out of business. This is the biggest collection tool we have.

Mr. ROYBAL. Yes, but you must also take credit for the fact that you know what loans to grant.

Mr. KEARNS. We do a good job of that. I think the bank does an excellent job of credit judgment.

Mr. ROYBAL. If you didn't, then your experience would be the other way around, in my opinion at least.

Mr. KEARNS. It wouldn't be as bad as a private lender because they can default on one and go to another, but with us they can't.

PROCEDURE IN EVALUATING CREDIT APPLICATION

Mr. ROYBAL. How is a loan approved?

Mr. KEARNS. We receive an application for a loan from a borrower, after some initial negotiation and then our staff examines it. We have project and product divisions which receive the initial application and coordinate it through the whole process; a financial analysis division; a research division that looks into the country's ability to service the debt; engineers to look into the technical aspects of project credits; and a legal department to look into that aspect. They all do this simultaneously and then the staff prepares a memorandum to the Board in which they outline all of these aspects, and the Board of Directors examines it and makes a decision as to whether or not the transaction is worthy of support.

It may mean that we go back to the borrower and say, "We don't believe that you're credit-worthy to this extent. We insist that you get a guarantor."

We have found in Export-Import Bank transactions that even though people usually take mortgages or liens as a security—this is normal business—it would be almost impossible to conceive of the Export-Import Bank going to a Nigerian, for example, and repossessing a factory. So if that is the way they, achieve security, we say, "Why don't you get a local bank to take the mortgage," and then the local bank guarantees us.

We have a very capable staff that can work with these potential borrowers.

REQUIREMENT TO FIND "REASONABLE ASSURANCE OF REPAYMENT"

The legislation that you gentlemen enacted as a basis for our operation, says that we must have "reasonable assurance of repayment." That is one of the requirements and we have that emblazoned on our mind. Every time we have a transaction, we must have reasonable assurance. We look into it.

Mr. ROYBAL The real reason for that excellent record is that you have an excellent system.

Mr. KEARNS. It is hard for borrowers to default.

Mr. ROYBAL. The other is just a little frosting on the cake. I think it is the simple fact that you have such a fine system of approving these loans.

PERCENTAGE OF APPLICATIONS APPROVED

Mr. MILLER. What percentage of the loans are you able to approve?

Mr. KEARNS. A very high percentage.

Mr. MILLER. What percentage of the applications?

Mr. KEARNS. A high percentage that comes to the Board. The percentage before the Board is probably 98 percent. Our staff is trained to try to work out a transaction before it comes to the Board, and if they find that it doesn't have this criteria or that criteria, then they tell the borrower, "Well, we can't do it on that basis." Then the borrower will either find a basis where we can or the transaction doesn't come to us in the end.

Mr. MILLER. That is coming to the Board now. Those applications coming to the staff, what percentage of those would you say could be approved eventually by the Board?

Mr. BOSTWICK. Over 95 percent—less than 5 percent are rejected for policy reasons.

PRELIMINARY COMMITMENT PROCEDURE

Mr. KEARNS. I should explain the procedure we follow and then you will understand why this percentage is so low.

For the last 4 years we have followed a preliminary commitment procedure. In other words, we encourage an exporter or a buyer at the early stages of consideration of a transaction, before a decision has been made to buy, to come to us and give us the facts, and if the facts warrant it we will issue to him a preliminary commitment to finance. We will say, "If this, this, this and this are so—"—in other words, if the transaction is economically sound—"If you have the cash flow to service it, if you can assure us of reasonable assurance repayment, and if certain other criteria are met, then we will provide you with the financing, and you can depend on it."

We receive applications for this kind of a commitment at the rate of about $1,200 million a month average now. Of those, about 40 percent convert into business. In other words, we give the supplier or the buyer this indication of financing which will be available for the transaction. Then he sees if he can meet these criteria. If he can, then that preliminary commitment converts into business.

I think if you are thinking of the number we actually turn down, it is very small but if you take the other, then you have a greater attrition because the transaction itself is not sound. So we weed it out with this two-step procedure. We determine that it is sound before it actually becomes an application for credit.

Mr. MILLER. Thank you.

Mr. ROYBAL. Mr. Kearns, we thank you very much for your testimony, and thank also those who are with you. The meeting is now adjourned.

TUESDAY, MAY 22, 1973.

ASIAN DEVELOPMENT BANK

WITNESSES

JOHN M. HENNESSY, ASSISTANT SECRETARY FOR INTERNATIONAL AFFAIRS, TREASURY DEPARTMENT
REX BEACH, U.S. DIRECTOR-DESIGNATE OF THE ASIAN DEVELOPMENT BANK

Outlays	275,694	420,300	539,314

Mr. PASSMAN. The committee will come to order. We shall continue the examination on the requests for funds for the foreign assistance program this afternoon. The item that we will take up will be the Asian Development Bank.

We have as witnesses the Honorable John M. Hennessy, Assistant Secretary for International Affairs, Treasury Department, and Mr. Rex Beach, U.S. Director-designate of the Asian Development Bank.

You are requesting for fiscal 1974, $100 million for the Special Fund, is that correct?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. I would assume, Mr. Secretary, you have a statement for the committee.

Mr. HENNESSY. I covered the general aspects in the overall statement I gave on April 5. So I have no new statement. Mr. Beach has one on the details of the operations of the Bank.

Mr. PASSMAN. Mr. Beach, please proceed.

GENERAL STATEMENT

Mr. BEACH. Mr. Chairman, I appreciate the opportunity to appear before you and the other members of this distinguished committee today in support of the administration's requests for (1) a fiscal year 1974 $100 million appropriation for the Special Funds of the Asian Development Bank, and (2) a fiscal year 1974 $121 million appropriation as the first of three equal, annual installments for the U.S. share of the increase in the ordinary capital resources of the ADB.

At the outset, Mr. Chairman, I want to stress that the Asian Development Bank is effectively serving U.S. interests in Asia. It is contributing significantly to the economic growth and development of many U.S. friends and allies in Asia, such as South Korea, the Republic of China, the Philippines, Thailand, Pakistan, and Indonesia. It has been active in South Vietnam since 1969, and it will continue to serve U.S. interests so long as it has adequate resources at its disposal.

The resource position of the Bank is now critical, especially regarding its soft loan, or special funds operations. As of March 15, 1973, the Bank has received contributions of $247 million of special funds from the following 12 countries:

Contributions to ABD Special Funds

	Millions
Austrialia	$10.59
Canada	27.44
Denmark	2.17
Germany	20.73
Japan	156.00
Netherlands	2.46
New Zealand	1.00
United Kingdom	14.84
Belgium	2.00
Finland	1.50
Norway	2.00
Switzerland	6.00
Total	246.73

As you can see, Japan is the largest contributor having provided $156 million or 63 percent of the total. Against these resources, the ADB has made $206 million of Special Funds loans and has an additional $167 million of Special Funds projects under study and analysis in the pipeline which would in the normal course of events be presented to the Board of Directors for approval during the next 12 months. Thus, as is evident from these figures and taking into account the $51.6 million it has transferred to Special Funds from its own ordinary capital, the Bank will run out of unobligated special funds by the fall of this year unless additional resources are provided.

The requested U.S. contribution of $100 million would obviously close the resource gap for this year. The contribution itself would place the U.S. share of Special Funds country contributions at 29

percent of the total, $56 million below the Japanese figure of $156 million or 45 percent of the total.

For the committee's information, I would like to comment briefly on the $167 million pipeline. Indonesia, for example, has approximately $37 million of soft loans under study for power, water, and fishery projects. For South Vietnam, where the Bank has already loaned $11 million of soft money over the last 3 years, the bank has $22 million of projects in the pipeline, again primarily for power and water, as well as telecommunications. In Pakistan, there are $28 million in projects, primarily in power. The remaining $80 million of 1973 pipeline projects are located in Bangladesh, Nepal, Sri Lanka, Afghanistan and Papua, New Guinea. Full information on these future loans and past ones has been provided to the committee.

In addition to supporting U.S. economic development and foreign policy objectives in Asia, a U.S. contribution to the Special Funds will expand U.S. exports to numerous Asia countries in a like amount. The requested $100 million appropriation contains a tying provision whereby the funds can be spent only on procurement of U.S. goods and services. At present the United States is ineligible to bid on Special Funds provided by other countries. Asia is an area where Japanese traders have had an advantage in the past particularly before the two realinements of foreign exchange. It is especially important that U.S. firms be given the opportunity to bid on Special Funds projects—it will give us a larger foot in the door in countries such as Indonesia where they are currently excluded. Let's discuss Indonesia because of the tremendous economic potential of that nation of 115 million people. While our bilateral aid is also given to Indonesia, it is declining and the more U.S. equipment can be introduced and used in Indonesia at this stage of its development, the greater will be future U.S. sales of replacement parts and new capital equipment as that economy expands.

In this connection, I also want to seek the counsel of this committee on a proposal now being discussed to restructure and replenish the soft loan resources of the Asian Development Bank with agreed shares and standardized operating terms. Success in this effort will require U.S. participation.

It appears possible that other contributor countries might regard our original $100 million contribution (which would remain tied) as a major part of our share of such future replenishment, while the other industrial members would make substantial new contributions. This would result—in practical effect—in double duty dollars and would bring about a substantial reduction of our share in the financing of the institution. In contrast, the Japanese share would sharply increase. This strikes me as a promising and indeed, unique opportunity to maximize the leverage—in terms of development impact and burden sharing—of our long-delayed contribution. I believe this approach needs to be further explored. We have made no commitments in this regard and I solicit and welcome the reaction of this committee to what seems to me a highly promising development.

In addition to the $100 million request for ADB Special Funds, Mr. Chairman, the administration's request also includes $121 million as the first of three equal, annual installments for the U.S. share of the increase in the ordinary capital resources of the Asian Development

Bank. At present our ownership share in the Bank has dropped to 9 percent from its original share of 19 percent. This is too low to maintain a sufficient degree of U.S. influence and control over the Bank and its operations. The United States has an important stake in Asia and must maintain both an adequate bilateral and multilateral presence.

Only 20 percent—or $24.2 million—out of the $121 million represents a U.S. budget expense. Eighty percent or $96.8 million is callable, used as guarantees against Bank borrowing in the private markets, $9.68 million represents an actual cash payment to the Bank and the remaining $14.52 million will be held by the Bank in the form of non-interest-bearing promissory notes, which will be encashed over several years.

The Bank has established itself as a sound finance institution in world capital markets and can, therefore, borrow funds more readily in these markets for its lending operations. As you recall, it was necessary in the startup phase of the Bank to have a much larger proportion of paid-in capital on the original subscription. The Bank has now raised $230 million from bond sales in private capital markets for market rate loans to borrowers.

I have already referred to the pattern of the Bank's Special Funds lending, and I would like to comment as well on its lending pattern from ordinary capital resources. The Bank has loaned a total of $743 million. Of this, $197 million has been to South Korea, $100 million to the Republic of China (Taiwan), $105 million to the Philippines, and $75 million to Thailand, all strong friends and allies of the United States in Asia. Together this amounts to $477 million—or 64 percent of the Bank's cumulative ordinary capital lending. I believe the leverage the United States has received in this case has been very high. Countries whose progress will contribute importantly to stability in Asia and to U.S. interests there have received a large amount of resources from the Bank, with a minimum burden on the United States.

We can expect similar returns in the future from the Bank's lending activities. But we can anticipate such returns only so long as we maintain our level of influence in the Bank, and this means participating in the Bank's capital increase.

At this point, Mr. Chairman, I would like to make a few general remarks about the Bank's management and operations. As you know, Shiro Inoue succeeded Takeshi Watanabe as president of the ADB last November. Mr. Inoue has demonstrated great candor, frankness, and an open mind regarding all matters of Bank policy and operations. His past experience working in the United States and our most recent contacts with him at the annual meeting in Manila have convinced us that we have a first-rate president, one who will be responsive to our and the Bank's interests.

Furthermore, Mr. Chairman, I would like to point out several changes in Bank policies and procedures resulting directly from concerns we have expressed.

First, the Bank has increased its recruiting efforts in the United States. We now have 20 U.S. professionals on the staff, second only to Japan's 29. Moreover, a major Bank recruiting trip to the United States is scheduled for early summer in an attempt to further increase the number of Americans at the Bank.

I might add that U.S. nationals are occupying policy positions within the Bank. The general counsel is American, which is especially important since members of his staff take part in every loan mission and all loan negotiations. The chief economist is American; two of the six division chiefs in the operations department are Americans; and one of the four in the projects department is from the United States.

Second, the Bank now provides 3 weeks between the submission of an issue to the board of directors and actual discussion of that issue by the board. This provides sufficient time for us in Manila to send the document to Washington, have it reviewed there by the National Advisory Council, and receive back guidance on the U.S. position prior to board discussion.

Now that projects are being completed, the Bank has also started work toward establishing an evaluation mechanism to independently review Bank projects. In my judgment, this is a very important matter and we are pressing hard for early establishment of an effective mechanism.

Even though the Bank has adjusted many of its operating procedures, we still are faced with problems of considerable concern, most notably with the U.S. procurement share of Bank financed projects. Currently, U.S. firms get 8 percent of the business, while Japanese firms receive 56 percent. I have been concerned, as you have, about this situation. The operative factor in my view has been our declining competitiveness in recent years. The two exchange rate realinements have been designed to restore that competitiveness. For example, the realinement against Japan has been 35 percent, while that against Germany has been 29 percent. This should be a very significant help.

In the selection of consultants, where selection is based on technical proposals and competence, U.S. firms get over 50 percent of the business. Yet when price enters into the picture with the supply of equipment, the United States has tended to do very poorly. Of the 86 contracts above $500,000 awarded so far by Bank borrowers, U.S. firms have bid on only 29 and where U.S. firms have bid and lost, they lost to the Japanese only 40 percent of the time and to the United Kingdom, France, West Germany, et cetera, the other 60 percent of the time. In other words, the problem is a broad one relating to lack of competitiveness of U.S. goods and low sales performance by U.S. firms.

We have taken steps to assure that much more information is given—and goes promptly—to our firms on procurement opportunities arising from Asian Development Bank financing. From my own conversation with American businessmen in the region, I can report that they also are encouraged by the increased opportunities brought about by the realinement of currencies.

Let me emphasize that on the basis of independent examination we see no evidence of deliberate discrimination against U.S. firms in the Bank's policies or procedures. Several months ago, we assigned one of our staff men in Manila the task of reviewing all the Bank's proceurement guidelines in detail. More recently, the Treasury Department employed an outside consultant, familiar with IBRD and IDB procurement practices and problems, to examine the ADB guidelines. Both reviews definitely concluded that Bank guidelines on procurement are objective and unbiased and that the Bank administers its procurement

review process fairly. However, we shall continue to work to assure the procedures of the Bank and its borrowers provide an ample and fair competitive opportunity for U.S. business.

After 6 years of operational experience, the management of the Asian Development Bank is now initiating a timely review of its organization and procedures. As I mentioned, the new President of the Bank has shown himself to be especially responsive to concerns the United States may have with the Bank. He fully appreciates criticisms which we have voiced and has every intention of rapidly improving the Bank's operations and image, especially as the Bank is viewed from a U.S. standpoint.

In summary, Mr. Chairman, I strongly support the administration's request for special funds and a further ordinary capital contribution to the Asian Development Bank. The ADB is effectively serving U.S. friends and allies in Asia, and they contribute significantly to the economic growth so necessary to stabilize that region.

For these reasons, Mr. Chairman, I urge you and the members of your committee to view the requests favorably. I would also like to introduce several items into the record including letters from Secretary of State Rogers and AID Administrator Hannah in support of this appropriation, a copy of Under Secretary Volcker's statement at the recent annual meeting of the Asian Development Bank in Manila and a special report on Asian Development Bank procurement practices and procedures.

JUSTIFICATION

Mr. PASSMAN. Thank you for your statement. We will insert the justifications in the record at this point.

[The justifications follow:]

ASIAN DEVELOPMENT BANK

ORDINARY CAPITAL

JUSTIFICATION FOR FY 1974
APPROPRIATION

(Later Transmittal)

The Asian Development Bank finances economic development projects and programs in the developing countries of Asia and the Pacific Region. Like the Inter-American Development Bank, it is an intergovernmental organization, which is corporate in form and whose capital stock is owned by its member governments.

It was established in 1966 and began Ordinary Capital lending operations in 1968. These operations are carried out with the paid-in capital contributions of members and proceeds from borrowings in private capital markets which are based on members' callable guarantee capital subscriptions.

As of December 31, 1972, the Asian Development Bank had 37 member countries -- 23 regional countries, three of which are classified as developed (Japan, Australia and New Zealand) and 14 developed non-regional countries including the United States, Canada, and 12 European countries. As of the same date, the Bank had an authorized capital stock of $2,986 million (current dollars). Of this amount, $2,204 million had been subscribed. As of the same date, cumulative Ordinary Capital commitments were $767 million and net funded debt was $230.5 million.

The Asian Development Bank Act (P.L. 89-369) of March 16, 1966 authorized U.S. membership in the Bank and the appropriation of an original U.S. subscription of $200 million. Of this total subscription amount, $100 million was paid-in cash and letters of credit in annual installments over a five-year period and $100 million was callable. The last installment on the paid-in portion was paid on August 22, 1970.

In November, 1971, the Board of Governors of the Bank approved a 150 percent increase of authorized capital stock and requested all member countries to subscribe their appropriate share. The U.S. Governor did not vote on this Resolution. By November, 1972, however, enough members had subscribed to bring the increase into effect without U.S. participation. Since no authorization proposal has yet been submitted to the Congress, this appropriation request is being made for later transmittal.

Provision has been made for it in the President's 1974 Budget: that is, a total authorization of $325.7 million and a 1974 appropriation of $108.6 million.

Assuming approval of the proposed legislation on change of par value, however, the total authorization would be for $362 million. Of this amount, 80 percent or $289 million would be in callable guarantee capital form and not constitute an actual budgetary outlay. The remaining 20 percent, $72.4 million, would be paid-in over a three-year period, 40 percent in cash and 60 percent in non-interest-bearing letters of credit to be drawn down later as needed for disbursement. New budget authority being requested for fiscal 1974 would be $121 million. FY 1974 budgetary impact is limited to $9.6 million.

An increase in the ordinary capital stock was necessary to permit an orderly expansion of conventional lending activity. U.S. participation, as outlined in the preceding paragraph, will maintain our original equity position and voting strength within the Bank.

ASIAN DEVELOPMENT BANK

SPECIAL FUNDS

FY 1974 APPROPRIATIONS

In addition to its Ordinary Capital operations, the Bank has established and accepted contributions to its agricultural and consolidated Special Funds. These funds are used to finance high priority economic development projects and programs on concessional lending terms. As of December 31, 1972, loan commitments of $201.5 million had been made for this type of financing.

Thus far, a total of over $240 million has been contributed or pledged to these concessional resources by the following countries: Australia, Canada, Denmark, Germany, Japan, the Netherlands, New Zealand, the United Kingdom, Belgium, Finland, Italy, Norway, and Switzerland. In contrast to the International Development Association and the Fund for Special Operations of the Inter-American Development Bank, these funds have been contributed on an unscheduled basis and through bilateral arrangements made between the Bank and each contributor with varying terms and conditions of use.

Legislation authorizing $100 million for a U.S. contribution to Special Funds was approved on March 10, 1972. However, an Administration request for full appropriation of this amount in FY 1973 was not included under the terms of the Continuing Resolution on Foreign Assistance and Related Items passed by The Congress on October 15, 1972 and then extended in February to the end of the fiscal year.

The appropriation request being made for $100 million in FY 1974 has, therefore, already been deferred for one year. It would constitute a U.S. contribution to the Special Funds resources of the Asian Development Bank smaller than that of the Japanese and accounting for less than 30 percent of total funds made available. No expenditures on the amount contributed would be made until needed to meet actual disbursement requirements. Actual budgetary impact in FY 1974 is not expected to be more than $5 million.

CONFIDENTIAL
APPENDIX I

ASIAN DEVELOPMENT BANK - ORDINARY CAPITAL RESOURCES
BALANCE SHEET

Treasury Department

Mr. PASSMAN. Under the rules of the committee each member is allotted 5 minutes for questions and answers and after we have gone around the table then we return to the members so they may consume as much time as necessary to ask all their questions and get the answers. At this time I yield to the distinguished gentleman from Kansas, Mr. Shriver, under the 5-minute rule.

MR. BEACH'S BIOGRAPHICAL RÉSUMÉ

Mr. SHRIVER. Thank you, Mr. Chairman.

Mr. Beach, I want to welcome you as a native Kansan to these hearings.

Mr. BEACH. Thank you.

Mr. SHRIVER. I offer my best wishes on your nomination as U.S. Director of the Asian Development Bank.

Mr. BEACH. Thank you.

Mr. SHRIVER. Do you have a résumé of your background?

Mr. BEACH. I will submit that for the record.

Mr. PASSMAN. We will have it inserted in the record at this point.

[The biographical résumé follows:]

BIOGRAPHICAL SKETCH

Name: Paul Rex Beach.

Title: U.S. Director, Asian Development Bank.

Personal data: Born: Kansas City, Mo., January 31, 1939; married, three children; permanent home address: 1103 Sharon Court, McLean, Va. 22101.

Education: B.A., Kansas State University, 1962 (economics); M.A.; Johns Hopkins University, 1964 (international relations); Ph. D., Brown University, 1970 (economics).

Career summary: Legislative assistant to Senator James B. Pearson, 1963–65; assistant professor of economics, Arizona State University, 1968–69; Deputy Assistant to the Secretary of the Treasury, July 1969 to February 1970; Acting Assistant to the Secretary, February 1970 to July 1970; Assistant to the Secretary, July 1970 to February 1971; Special Assistant to Ambassador at Large David M. Kennedy, February 1971 to September 1972; alternate U.S. Director, Asian Development Bank, September 1972 to May 1973; Nominated to be U.S. Director, Asian Development Bank, May 1973.

Professional and civic activities: American Economic Association.

1973 ANNUAL MEETING OF ADB

Mr. SHRIVER. I understand that you recently attended the Asian Development Bank annual meeting. I think the committee would be interested in your, or Mr. Hennessy's, impression of the meetings, especially in light of certain concerns like procurement, staffing, and Bank leadership which the committee has raised in the past. So will one or both of you comment on those things for us?

Mr. HENNESSY. I might make one general comment on that, Mr. Shriver.

I think we went out to that meeting having very much in mind some of the things that we have discussed in this committee, and particularly some of the shortcomings of the Bank as we and the committee saw them.

They have a new president. He lived and worked in the United States for some 6 years. I think we have a gentleman who understands our system and how it works very much. We had a five-man congres-

sional delegation with us and Mr. Inoue took the time to explain what he hoped to do with the Bank.

We addressed in a frank session some of the problems. We went over procurement, the question of independent audit type mechanisms, the staffing question, the organization of the Bank, the level of influence of the United States. I think we have made progress, the results of which will be showing up over time.

First of all, in procurement I think he heard what we said. I would like to submit for the record our official governor's statement at that meeting.

UNDER SECRETARY VOLCKER'S STATEMENT

Mr. PASSMAN. Without objection, it will be inserted in the record at this point.

[The information follows:]

STATEMENT BY THE HONORABLE PAUL A. VOLCKER BEFORE THE SIXTH ANNUAL MEETING OF THE BOARD OF GOVERNORS, THE ASIAN DEVELOPMENT BANK, MANILA, THE PHILIPPINES, THURSDAY, APRIL 26, 1973

Mr. President, fellow Governors, and distinguished guests:

I want to speak with you today primarily about some of the opportunities and problems we face together as we approach the future of this Bank, of this region, and of the millions of people who inhabit this vast and important area of the globe. Before doing so, however, I first take special pleasure in officially greeting our new President, Shiro Inoue. I know all of us who have worked with him in other areas in the past share confidence in his leadership—a leadership essential to the success of our joint effort.

I also want to welcome the Solomon Islands as the 39th member of the Asian Development Bank and the prospective entry of Burma. In a real sense, their entry both marks the forward progress of our institution, and represents the continuing challenge of economic development.

I would add the thanks of my Government to the people of the Philippines for their hospitality, and especially for the faith and confidence in the Bank they have demonstrated so tangibly. In a striking way, this impressive building symbolizes the coming of age of the Asian Development Bank, and the important responsibility it has assumed as a permanent catalyst for Asian development.

I am also pleased that five Members of the American Congress have accompanied me to Manila as advisers. The participation of the United States in this institution is, and must be, a joint enterprise in which the Congress and the Executive work together as partners. For that reason, I am glad that we also had the opportunity to pause in Korea together to view firsthand some of the early results of the Bank's efforts to finance development.

The Governor for the United States, Secretary of the Treasury George Shultz, regrets that he cannot be with you this week. On his behalf, I extend the best wishes of President Nixon, as well as his own, to the members and to the management of the Bank.

We meet at a critical time, not just for this Bank and for the development of Asia, but for the economic system of the world as a whole. We have seen repeated and widespread monetary disturbances in recent years. Points of strain and tension have arisen in trading relationships among nations. New questions have arisen about the development process and means of financing it.

Problems of this sort are never welcome. But let us recognize that they are a part—perhaps an inevitable part—of the process of vast change in the world economy since our basic trading and monetary institutions were shaped at the end of World War II, almost 30 years ago.

Certainly, most of these changes—viewed in a world perspective—have been for the better. Economic strength and power is more widely distributed among the industrialized countries. Individually, more of the developing countries have made particularly rapid strides in improving their standard of living. As a group, they are more conscious of their needs and their opportunities, and better prepared to play an effective role in the decisionmaking process.

The challenge is not to resist this process of change. Rather, we want to re-

examine our practices and reconstruct our institutions in a manner that will insure that change serves our common interest in economic prosperity and political harmony.

In this process, it is vital that the developed and developing nations work together. For that reason, we in the United States have welcomed the participation of the developing countries of Asia, as well as other continents, in the work of the Committee of 20. Similarly, we also recognize that constructive revision of our trading practices and rules must strike a fair balance between the legitimate interests of individual nations—including the developing nations—and the need for a common and cooperative approach.

It is in that spirit that President Nixon has proposed to the Congress broad new authority for trade negotiations. The fundamental premise of that legislation is that every nation can and should benefit from expanding trade and open trading practices within the basic framework of a competitive market system. But that "openness" must also be combined with fairness for all nations.

The President has requested authority of unprecedented scope to engage in multilateral trade negotiations. This authority would include—and look toward—reductions in both tariff and nontariff barriers.

At the same time, the legislation would recognize that open markets and free trade can, in some instances, bring change with disruptive speed. The United States, like other countries, needs effective safeguards when surges in imports bring excessive hardship to domestic workers and businesses. We believe such safeguards—designed not to avoid adjustment but to ease adjustment for a transitional period—can most effectively be worked out on a consistent multilateral basis.

Our proposed legislation also recognizes that progress in reducing trade barriers for the United States can be sustainable only in a context of a perception that our own products receive fair and nondiscriminatory treatment by others. For that reason, our proposed legislation would provide improved authority to respond effectively to restrictive and discriminatory practices of others—if necessary, by restricting their access to our markets.

Another significant provision of the bill would permit the United States to join with other industrialized countries to improve the access of developing countries to our markets. Duty-free treatment would be provided for a broad range of manufactured products now regulated by tariffs in instances where countries in the early stages of industrializaton are beginning to seek out foreign markets.

As we start this sixth annual meeting and plan for the new year, a challenge for our devlopment efforts—and particularly for the Asian Development Bank—is evident. The hopeful prospects for peace in Indochina should open the way to improvement in the lot of millions who have not known peace for decades. Here is constructive work, not only for the nations represented here, but for all countries and peoples ready to cooperate.

But the effort will not organize itself. We believe the Bank—founded by Asians, with a mandate to help Asia—can and should play a key role in the needed international effort. We look to the Bank to work with other institutions and to involve diverse donor nations in the process of rebuilding the economies of those countries of Indochina who seek an end to hostilities.

The Bank, in fact, has already identified specific projects in Laos, the Khmer Republic and the Republic of Vietnam, and committed funds for them. Other projects are in the pipeline and should be ready for consideration later this year.

The study of Southeast Asian economies and the regional transportation survey sponsored by the Bank show the breadth of its field of activities. Its expertise should aid all who may become involved in the effort to build for peace.

Historically, the United States has long been involved in efforts to bring stability and economic progress to Asia. We have important political and economic relationships which tie us closely to this part of the globe and its energetic and proud people. We intend to maintain those ties, not least by cooperating in the efforts, symbolized by the Asian Development Bank, to build strong economies.

Having said that much, it is obvious that, if the Bank is to play its part in furthering the development process, it must be adequately funded. In that respect, pointed and legitimate questions can be directed at the United States. I owe you a full and frank exposition of our position.

Obviously, as with all nations, the ability of the United States to support development finance institutions at any point in time depends on our total

economic and financial situation. Budgetary priorities and balance-of-payments considerations apply to my country as well as to yours. And, unlike many other countries, this question of priorities is subject to independent executive and congressional review—essentially, funding requests must pass a double hurdle.

At home, the total budget has been under rigorous restraint because of inflationary problems. We have made substantial cutbacks in budgetary allocations from earlier projections for a number of domestic programs. We are not able to meet all the vast demands for added expenditures for such purposes as controlling pollution, rebuilding decaying cities, or assisting the poorer American citizen—of whom there are still far too many.

At the same time, when the dollar has been under recurrent attack in world markets, the urgency of restraining overseas spending to help deal with our balance-of-payments problem is obvious.

Faced with this situation, I sometimes hear persons in less developed countries say that the United States is a big and strong country; it has had a balance-of-payments deficit for years; it should not worry about its balance of payments now. But we are concerned—and we must be. Weakness of the dollar and monetary instability is not in our interest or yours. The time has long since come to end the deficits that underlie that weakness. We have moved to do so primarily by achieving exchange rate and trading relationships that permit us to compete effectively. But, as part of the process, no foreign expenditure can expect to escape searching review.

I would emphasize that the President, in assessing these budgetary and balance-of-payments constraints, feels strongly that our past pledges of funds to the Asian Development Bank deserve priority. The appropriation from the Congress for the long-delayed $100 million contribution to the special funds remains high on our agenda. We are also requesting from the Congress authority to provide $362 million of ordinary capital over a 3-year period—an amount that would restore our previous relationship among the Bank's members.

We will continue to press for those funds. Nevertheless, I must tell you bluntly that the congressional prospects—as Congress independently examines the priorities—remain uncertain. We can be optimistic only by demonstrating effectively this Bank's crucial role in building stronger economies in Asia—and thus in contributing to a peaceful world.

In this connection, I am gratified by the evidence that, in the past year, the Bank has further increased its effectiveness—working with more member countries, providing more needed expert technical assistance and, not least, financing more projects.

At the same time, I must be equally candid in saying that, as part of the process of defending budgetary priority for the Bank and assuring future support, we must look toward improvement in certain operational matters. In that connection, we have upon a number of occasions cited our concern about the low procurement share U.S. firms have received from ADB-financed projects—low in terms of absolute volume, low in terms of relative share, and low in trend.

Whatever the reason, this is a situation incompatible with strong legislative support. I do not say that the situation reflects either deliberate or inadvertent Bank policy—the evidence I have seen is to the contrary. Rather, it was partly a symptom of exchange rates that were out of line. Moreover, in many instances, U.S. business may not have been sufficiently aggressive in seeking out the opportunities across the broad Pacific. Perhaps, we, in Government, have not been active enough in assuring that information about projects and contracts is widely disseminated.

We have now taken steps to repair those deficiencies within our control. We hope and expect to see improved results. We must do so to end what has become a very difficult situation in obtaining legislative and public support.

In this same spirit of candor, allow me to urge that the time has come for the Bank to establish a capacity for independent evaluation of the efficiency and effectiveness with which its funds have been utilized. With eight projects finished—and others nearly so—we are in a position for the first time to raise—and to answer—legitimate questions about the fruits of the Bank's efforts.

After some hesitation, the World Bank and the Inter-American Development Bank have each adopted such "postaudit" mechanisms and procedures. This approach can go a long way toward maintaining the full confidence of donor governments. With experience, management, itself, has come to see the benefits from objective evaluation of their work. In the long run, I believe, recipient countries can only gain as well.

Finally, after 6 years of operations, a review of the Bank's organization and its procedures is timely. We hope the management and the executive board will initiate such an effort in the next year.

None of these comments in any sense call into question the excellent job the Bank management has done. It simply means that enough time has passed, and enough experience has been gained, to permit constructive review. Our procedures and methods should be changed to meet current needs in the most effective way.

The world economy has changed in many ways. Over the years since World War II, other industrialized nations have grown into economic strength and stability, able to carry a larger share of the responsibility for advancing the development of others. Some poorer countries have made enormous strides toward self-confidence—while others plainly require a lift from abroad to help break a vicious cycle of poverty, inefficiency, and dependence. Not least are the fresh opportunities and challenge provided by the prospect of peace in Indochina.

All these external changes find their reflection in the internal work of the Asian Development Bank. We press for change within the Bank in a constructive spirit, as we press at home to provide an appropriate share of the resources the Bank requires. Let there be no doubt—we remain committed to the Bank and to the purposes for which it stands.

Thank you.

U.S. PROCUREMENT SHARE

Mr. HENNESSY. We discussed the fact that the United States could not support an institution where our procurement share was so low and we had done research of our own and had not found any bias or discrimination but we did hope that the Bank would take another look at their procedures and go back over this entire matter to insure that our suppliers were getting a fair shake.

I think by and large we are pretty well satisfied that changes in exchange rates have changed the competitive position of our suppliers out there and after talking with businessmen on this trip I think we have the idea that American business feels that they can now compete with the Japanese and others.

Mr. Inoue promised to look into the question of an independent audit system that GAO has suggested. They agreed to look at the reorganization of the Bank, questions of staffing, questions of the budget, representation allowance, and so forth.

I think we will find a very positive response from this particular gentleman.

I think in broad terms we have a responsive person to the particular concerns of this committee.

I do not know if Mr. Beach has any additional comments he wishes to make on this point.

Mr. BEACH. I might underline the importance we attach to the procurement issue.

We have spent a considerable period of time looking at procurement itself. We are convinced to our own satisfaction that there is nothing in the Bank's regulations or provisions that necessarily biases Bank procurement against U.S. business interests.

We looked into this very, very carefully. I think the point to be made there is that the Japanese have been extremely effective in beating us on price competition.

We have had two devaluations of the dollar, and they amounted to a 35-percent realinement against the Japanese yen, and that should make a considerable difference.

We are very, very effective in the field of consultants. In more than 50 percent of the cases where a bank borrower selects a consultant, he

selects American consultants. This is done on the basis of the technical proposal, and then afterward the price is negotiated.

In short, the lack of price competition on our part has been a big factor.

Mr. SHRIVER. My 5 minutes is up. I will come back a little later.

Mr. PASSMAN. Thank you, Mr. Shriver.

I will yield 5 minutes to Mr. Bevill.

Mr. BEVILL. Mr. Chairman, I have no questions at this time.

Mr. PASSMAN. Mr. Conte.

QUALITY OF ADB PROJECTS

Mr. CONTE. Yes, Mr. Chairman.

Mr. Secretary, in Korea I had an opportunity to look at several ADB-financed projects. I saw the Seoul-Inchon Expressway, the Korean Development Bank, a project for a sugar processing plant, and a frozen food storage facility. In general, I was impressed with the quality of the projects. I wonder if there are other ADB projects that are of similar high quality as the ones I saw in Korea.

Mr. HENNESSY. I think Rex, who has been in the area, can probably answer in more specific detail than I can. In general from knowledge of the projects I myself visited and those that the Inspector General from the Treasury Department has visited, we have been impressed with the quality of the projects.

Korea has been particularly good as a country and received a high proportion of the bank loans because they are able to implement the projects well.

This Bank started slowly. In fact, people were worried that it might have started too slowly. Part of the reason was that they gave a good deal of attention at the beginning to doing things right. I would say, yes, I think the Korean projects are typical of the types of things they are doing in the area.

Mr. CONTE. Where are the bulk of the ADB projects located?

Mr. BEACH. In the field of ordinary caiptal; that is, hard loans, we have something like $725 million in cumulative loans; $197 million is in Korea, which is the Bank's largest borrower. We have had $100 million in Taiwan, $135 million in the Philippines, $75 million in Thailand and another $75 million in Pakistan. I think it is very important to point to this geographical distribution because it is the end product of the bank that counts.

Something like 63 percent of all of our hard window loans have gone to countries of considerable importance to the United States. I think the money has gone to the right place and right groups.

Mr. CONTE. I was tremendously impressed by what the Koreans were doing with these loans and the methods of building that we saw and the machinery.

Incidentally, Mr. Chairman, in the sugar processing plant that I visited, the big vats came from Louisiana. I asked them if you had anything to do with it, and they said no, you had not been there yet.

Mr. PASSMAN. Thank you, Mr. Conte.

We will take a brief recess to vote and then return.

[Recess.]

Mr. PASSMAN. The committe will come to order.

I yield 5 minutes to the distinguished gentleman from Maryland, Mr. Long.

Mr. LONG. Thank you, my distinguished Chairman.

If the Congress required the GAO to audit and evaluate directly the Asian Development Bank and other international financial institutions, what problems would this cause in your view?

Mr. HENNESSY. It would cause, Mr. Congressman, some very grave problems.

The GAO themselves have not asked for that authority. What they have asked is that independent evaluation units be set up in each bank which would serve as an independent evaluation group or unit within the organization. They realize the complications which would exist if each one of the member countries, and in the case of the Asian Bank there are 40 members, sent in their own GAO's, and that the best solution they have in their wisdom seen to propose is these independent audit organizations.

It is one of the things we have been pushing on. And I think with the new president, Mr. Inoue, there is a mechanism there that will provide an independent flow of information to the Congress and the GAO and us.

Mr. LONG. Isn't this a strawman, really?

In the first place we give a large part of the funds to the ADB. The second point is that very few of these countries would, as a practical matter, ask for their own audit, have their own GAO's and would be unlikely therefore to put that kind of burden on the Asian Development Bank.

Mr. HENNESSY. On that particular point, I think most of the other developed countries would be forced to follow suit.

The United Kingdom has a similar audit type of provision on the use of their own funds.

So I am not sure that what you say is true. In this particular case we do not put in the lion's share. We put in zero percent of the soft funds and 8 percent of the hard funds. We have dropped our contribution to below the floor level. The design of the independent IDB group was carried out with the full knowledge and help of the GAO. The members of the IDB group are hired by the Board and not the Bank management.

They report to the Board which pays their salaries and chooses them. That gives you an independence you do not get if you are part of the staff.

Mr. LONG. Would such an audit requirement violate any international treaties which the United States has signed?

Mr. HENNESSY. I am not sure it would violate any treaty but it would need the agreement of the other signatories of the charter.

Mr. LONG. In 1967 the Selden amendment to the Inter-American Development Bank directed the U.S. Executive Director of the IDB to propose an independent review. The GAO was directed to review the reports issued.

What did the review reveal? Was the report sufficiently informative for an adequate review?

Mr. HENNESSY. In the IDB case?

Mr. LONG. Yes.

Mr. HENNESSY. I think the first GAO report said the review was

very slow in getting started. When it did get started the GAO report said it showed a lack of expertise, but the last GAO report said the group is now producing high quality work and it is fulfilling the function for which it was set up.

Mr. LONG. Did this initiative taken by Congress cause any problems with our relations with the other countries?

Mr. HENNESSY. In the Selden amendment?

Mr. LONG. Yes.

Mr. HENNESSEY. At the beginning there was an initial reaction against it. Eventually it was set up and it has since proved, in my own view, to be a successful way of dealing with it.

In the IDB we do put in the lion's share of the resources and we have a much bigger club, if you want to call it that, than we do in the ADB, where we put in relatively little.

We find an increasing appreciation in all of the countries of the need for an independent appraisal. The Congressmen who were out in Asia with us told their points of view very clearly to Bank management people in the other member countries.

Mr. LONG. Are you satisfied that, without an independent GAO audit, that they are cooperating with GAO and giving them all the information they are giving you folks.

Mr. HENNESSY. I think there is a distinction in having an independent unit which provides us information which we in turn provide it to the GAO.

There have been, in the past, some differences of opinion between us and the GAO. It goes to the question of confidentiality of minutes of Board meetings and Bank meetings. We have been working these out over time.

Mr. LONG. Do you think there will be any lasting objection to having the information go to GAO at about the same time it goes to you folks, but nevertheless that it goes directly?

Mr. HENNESSY. I think as long as it is clear we are the implementers of the policy and the supervision of the use of the funds is in the Congress and we do not get our roles mixed up we will be able to work this out.

Mr. PASSMAN. It is always painful to have to interrupt Dr. Long because he is such a terrific interrogator and his questions are interesting but the 5 minutes have expired.

Mr. LONG. Mr. Chairman, I will have a lot of questions later on.

Mr. ROUSH. I have no questions.

Mr. PASSMAN. Mr. Yates, I yield to you 5 minutes to examine on the Asian Development Bank.

COMPOSITION OF ADB STAFF

Mr. YATES. Thank you very much, Mr. Chairman.

I note from the statement of Mr. Beach that the following appears: One, that Mr. Inoue has succeeded as President of the ADB, and it is said that the U.S. nationals are occupying policy positions within the Bank. The General Counsel is American, which is especially important since members of this staff take part in every loan mission and negotiation. The chief economist is American, and so forth. How many of the Board of Directors are American?

Mr. BEACH. We have 12 members of the Board of Directors, and 1 of those members is an American.

Mr. YATES. How many are Japanese?

Mr. BEACH. One.

Mr. YATES. Do any of the countries have more than one member?

Mr. BEACH. No. There are currently four countries which control both the director position and the alternate director position. We are one of the four. We name the director and the alternate.

Japan does the same. India does the same. Australia also names both a director and alternate.

Mr. HENNESSY. The difference between these banks and the U.N. and some other agencies is that we have a weighted voting system. So when Mr. Beach votes, he casts the accumulated share of the United States. In this bank we have 8 percent of the votes, which represents 9 percent of the hard capital.

One of the proposals before you is to return our equity share to the 19 percent that it was previously. We have not picked up our share of the last replenishment which other member countries have.

If you approve the appropriation for our share of the ordinary capital increase he will be voting with 16 percent of the total as opposed to the percent 8 percent.

Mr. PASSMAN. If the gentleman will yield, this is not an international commitment where you have to abide by any previous authorization.

Mr. HENNESSY. You are right. Because of what you asked last year we made no new international commitments.

SUBSCRIPTION SHARES

Mr. YATES. We have an 8 percent share. What's the Japanese share?

Mr. BEACH. The Japanese share of contributions is somewhat over 20 at this stage. We started out at parity with Japan with ordinary capital at about 19 percent of the actual capital contribuion and 16.54 of the vote. Both countries had that. There was a capital increase which became effective November 1972.

Japan subscribed to that increase and their voting share has increased to the point now where they have an actual voting share of slightly under 20 percent. Ours is down I think at this time to 7.8 percent.

Mr. YATES. What is the advantage in the operation of the Bank in having a greater or less voting share?

Mr. BEACH. Earlier I said in responding to a question, pointing out the end product of the Bank and where the loans have gone, in my judgment you can make a very strong case that the Bank is serving U.S. interests very well because of the geographical spread of the loans, because they have gone to Korea, Vietnam, Thailand, and so on.

To the extent you do have a sufficient voting strength, you can certainly influence the direction of those loans.

Mr. YATES. Who determines where the loans go?

Mr. BEACH. There is an internal committee in the Bank called the programing committee comprised of the Vice President who chairs it, who is an Indian, the General Counsel (American), the Director of Projects (Taiwanese), the Director of Operations (Australian).

This is more or less the daily guiding committee which looks at all of the various requests that have come into the Bank, and decides who goes to Singapore or Korea to look at a loan project.

If it appears feasible that something may come of an initial inquiry they go ahead with a review mission and appraisal mission and so on.

Mr. HENNESSY. The short answer is the geographic distribution of the loans depends pretty much on the major contributors. They do have their individual loans which are looked at and reviewed one by one as they come along.

Mr. YATES. His answer is not correct then, is it? As it understand his answer to my question, which was who determines where the loans go, he talked about an internal committee being comprised of four countries without a Japanese member on it.

I was under the impression that the Japanese had some influence in this bank.

Mr. HENNESSY. They have a lot of influence.

Mr. PASSMAN. I want to thank the gentleman, he is a good interrogator but his 5 minutes are up.

Mr. YATES. Are you deducting the time I yielded to you?

Mr. PASSMAN. Yes, I deducted a minute and I only consumed 25 seconds.

Mr. Miller.

Mr. MILLER. Thank you, Mr. Chairman.

I want to thank the gentleman for his testimony and I will be going over it in detail.

Mr. YATES. Will the gentleman yield?

Mr. MILLER. I will yield.

Mr. YATES. Had you completed your questioning?

Mr. MILLER. Yes.

Mr. PASSMAN. You finished your questioning and want to return later?

Mr. MILLER. That is correct.

Mr. PASSMAN. Thank you very much.

Mr. Coughlin?

Mr. YATES. Mr. Chairman, may I ask a question?

Mr. PASSMAN. Mr. Coughlin, do you yield to Mr. Yates for a question?

Mr. YATES. Mr. Chairman, I was under the impression——

Mr. PASSMAN. The gentleman said he had no questions, he would return later.

Mr. YATES. Before he did I asked him to yield.

Mr. PASSMAN. Let us operate on an orderly basis.

Mr. Coughlin, I yield to you.

Mr. COUGHLIN. Thank you, Mr. Chairman.

I have just two short questions.

Mr. YATES. Mr. Coughlin, will you yield for a question?

Mr. COUGHLIN. A brief question.

Mr. YATES. At such time as you finish your two questions, will you yield further to me before you finish your time?

Mr. COUGHLIN. Yes.

Mr. YATES. Thank you.

99-614 O - 73 - pt. 1 - 45

PROCUREMENT ELIGIBILITY

Mr. COUGHLIN. On page 3 of the testimony, you indicated the funds of $100 million will be spent for procurement of U.S. goods and services. Has this been the case in the past of all money that has gone to the Bank?

Mr. HENNESSY. We have not put anything into the soft window and this is one of the problems of not getting procurement, because you are not eligible to bid. There are two windows, one is the soft and the other the hard. We have not put any soft funds in. So we are not eligible.

Mr. COUGHLIN. You say that we have been ineligible to bid on special funds. What does that mean?

Mr. HENNESSY. That means that, when the Bank awards a special funds project for a dam or a road, they put it up for international bidding. But U.S. suppliers would not be eligible to bid on that project to supply the tractors, for instance, because the United States has never made a contribution. The Bank has two funds. When they call for bids, they specify the loan at the outset and say, "This is going to be a soft loan," or "This is going to be a hard loan." If it is a soft loan, the U.S. suppliers would not be eligible. They would only be eligible for the market rate loans. There our procurement has been very low.

U.S. INFLUENCE IN ADB

Mr. COUGHLIN. Thank you.

My second question: On page 6 of your testimony you say the leverage the United States has had in these cases has been very high. How do you measure that kind of leverage?

Mr. HENNESSY. I will let Mr. Beach answer part of that but let me say in general terms, you cannot have your cake and eat it, too. The level of influence you have in the institutions is a function of how much money you put in. We try to get maximum influence at minimum cost. If you look at where U.S. foreign economic and policy interests lie, you find that the distribution of ADB loans is very close. We had, for example, a great interest in Korea's recovery and in keeping Taiwan strong. Even in South Vietnam some loans have been made by the Asian Development Bank.

The distribution of the loans is very much in keeping with what we think are key countries that we want to see develop for reasons of economic stability and peace in the world.

You lose leverage to the extent that you withdraw from your international commitments or if you fall below some minimum level of subscription.

We think in the case of this Bank if you go from 16 percent to 8 percent that you have gone below the floor. The Bank is in a critical situation. We are arguing that the United States does have a leadership role. In the past we picked up too much of the buck. Now we are trying to reduce our share and provide a more appropriate proportionate amount. But there is a minimum level which we must provide.

Mr. COUGHLIN. Thank you.

I yield to Mr. Yates.

Mr. YATES. Thank you.

I want to follow up Mr. Coughlin's question and refer to your statement where you say that "currently U.S. firms get 8 percent of the business while Japanese firms receive 56 percent." How can it be said that we are occupying an important place in the operations of the Bank?

Mr. BEACH. If I could, let me break that down into two parts. On the one hand we want to look at what the end product of the Bank is and where the money goes that is to say what projects and what countries.

From this viewpoint, I think here we have a very favorable record. The money goes to the right countries and for the right purposes. The countries are those in which we have a considerable foreign policy interest.

The second aspect of this situation involves who ends up with the business of the bank financed projects. This has been a tremendous concern of ours. The majority of the business has gone to the Japanese for several reasons, the major one being the fact that they have enjoyed a vastly undervalued currency in the past. They have been far more competitive than the United States and most Western European suppliers on a price basis. However, we have gone through a currency realinement which has increased the price of Japanese goods vis-a-vis those of the United States by 35 percent over the past 18 months. This factor alone should make a considerable difference in our ability to compete for the business of the various projects.

U.S. ABILITY TO COMPETE FOR PROCUREMENT

Mr. YATES. Is there an indication of that presently?

Mr. BEACH. I have had in the past 2 months several conversations with business people in Manila and Singapore and the general feeling is that although we have no statistics to prove anything at this stage U.S. business will become far more competitive in the future. They feel they can sense it.

I think this is a very important factor. It means U.S. firms are more aggressive at this stage. In the past they had the feeling that if I am going to get beat by the Japanese, why should I even bid on the project. In their minds, it was a foregone conclusion that the business would go to the Japanese firms. The mentality has been changed now and turned around.

Mr. YATES. You have had several months elapse since the devaluation and shouldn't there be some evidence of that occurring at the present time?

Mr. BEACH. It depends on the various stages of the projects in the pipeline and whether or not we are at the stage of calling for bids on some of these projects. Since we have had the second devaluation, one, I think we have had roughly five projects come before the Board for approval. Three were special funds projects on which we are ineligible to bid because of our lack of contribution to special funds. Two have been from the hard window. The point is that there is a first step even before we get to the bidding process. That is the engaging of a consultant to set up the terms of reference of the project and to design the project appropriately. Once we have completed that stage we then get to the point of calling for bids.

ADB LOAN RECIPIENTS

Mr. YATES. When you said that the loans have gone to the right countries, what did you mean by that?

Mr. BEACH. I would like to run briefly through where the loans have gone and then indicate——

Mr. YATES. What indicates that right country?

Mr. BEACH. I think Korea is a great friend of ours. Roughly 20 percent of the loans have gone to Korea. We also have an interest in Taiwan, and $100 million has gone there. The Philippines has received $105 million; Thailand, $75 million.

Mr. YATES. What countries are not the right countries?

Mr. BEACH. I don't want to get into that.

Mr. YATES. You used the term "right."

Mr. BEACH. Let me leave it at that. These countries that I have singled out are countries in which we have special interest.

Mr. YATES. What countries do we not have a special interest?

Mr. BEACH. In terms of our traditional interest, I should think Burma is one.

Mr. HENNESSY. I would say the smaller bank members that are in the developing category.

Mr. BEACH. New Guinea, Tonga.

Mr. YATES. I would like to know what they are. I would like to know the operations of the Bank and where you believe our interests are and are not directed.

Mr. BEACH. We have loans of $94 million to Singapore. We have $83 million to Malaysia, which traditionally has been of more interest to Great Britain than the United States. We have a loan program in Nepal.

Mr. YATES. These are the countries in which we have no special interest.

Mr. BEACH. I think we have more interest in Korea.

Mr. HENNESSY. It is a relative concept. The point is that if we put in a buck of our money in this particular case and other people put in $4, because of foreign policy reasons if we would just as soon have supported them ourselves, we would have saved money.

Mr. YATES. May I ask one last question?

If Communist China wanted to become a member of the Bank; could it?

Mr. HENNESSY. It became eligible when it joined the U.N. It would also have to agree to the charter of the Bank. If they could do this, yes—having joined the U.N. organization and if they agree to live up to the obligations of the charter of the Bank—they could become members.

Mr. YATES. Thank you, Mr. Chairman.

INDEPENDENT AUDIT AND REVIEW

Mr. LONG. I would like to continue with questions in the vein that I was pursuing.

The GAO report of May 8, 1973 on the Asian Development Bank states that regular, independent evaluative reporting to the Bank's member governments on: one, efficiency of its operations; two, success or failure of projects; and three, results achieved, is nonexistent. That

statement was made on May 8, just a short time ago. Moreover, the GAO report argues the need for an independent review of the Asian Bank's development activities. Are the U.S. Executive Director and the Treasury Department working to establish a program of independent review?

Mr. HENNESSY. Yes. That is particularly the point we brought out and which will show up in the record from our speech there and the talks we had with the congressional delegation and President of the Bank, of the need for this type of independent evaluative group. Yes, we are working to it.

Also, we will be successful in the course of the year.

Mr. LONG. Will this be truly independent? Remember, there is a big argument going on right now about the special prosecutor for the Watergate trial and whether he will be independent or not. Apparently, independence is a very difficult concept to pin down.

Mr. HENNESSY. If it is set up on the same lines as the Inter-American Bank group of controllers with which the GAO agrees in terms of independence, it would be. It is in the process of being discussed. Not only the United States is involved, however, there are 39 other countries involved.

ACCESS TO INFORMATION

Mr. LONG. It is the GAO view that to report effectively on U.S. participation in international financial institutions the GAO should have access to all information available to the Treasury Department and to the U.S. Executive Director-Governor, including minutes of the Board of Governors and loan progress reports.

Does the Treasury agree with this?

Mr. HENNESSY. I think these are areas which we have been trying to work out with GAO. There has been some difference of opinion. It is the same question that the chairman was bringing up earlier which goes to the heart of executive sessions.

If you distribute copies of minutes in which representatives of sovereign governments are talking about loans to other sovereign governments, they become sensitive documents. We have said that the control system is that you look at the decision and you look at the results and you do not necessarily have to know all the remarks that the director for France or Korea or Germany made on a particular loan and identify it as such.

Whatever the U.S. representative has said on a particular proposal and what the final decision is on the loan, we can fully submit. This is an area in which we have ongoing discussions with GAO. We are trying to work out a satisfactory solution. We certainly understand their need to get a full view of all the different aspects of the Bank's operation.

Mr. LONG. Is the Treasury Department willing to furnish all the information available to the U.S. Executive Director-Governor of the various banks to GAO on its request?

Mr. HENNESSY. With the exception of minutes, which involves representatives of sovereign governments sitting around the table criticizing loans and other difficult areas and the question of consultant reports, we have in the past provided copies of the recommendations of consultants but not the entire report. We think the client-consultant

relationship is a unique one which may be damaged or destroyed if the report is provided and we have been reluctant to do that.

MANAGEMENT OF U.S. PARTICIPATION IN ADB

Mr. LONG. The GAO report of May 8 lists a number of conclusions regarding weaknesses in the U.S. system of managing its participation in the Asian Bank. The weaknesses include insufficient information and late information on proposed projects and the absence of a requirement that U.S. missions provide information on bank projects. What is being done to meet these criticisms?

Mr. HENNESSY. We have put a reporting requirement on people in the field so they do report and report on a timely basis. We have a longer period of time to look at proposals between the time the proposal comes up and the time we have to respond. We are relying to a greater extent on cables rather than airmail.

We have worked out and have now circulated throughout the U.S. Government, as well as to our Executive Director, formal and standardized guidelines for appraising loans. We agree with the recommendations of the GAO. There was no dispute at all on those points.

TYPES OF PROJECTS FINANCED BY ADB

Mr. LONG. How strong is the commitment of the Asian Development Bank toward improving the lives of ordinary people in member countries?

Mr. HENNESSY. I think that is what they are all about. Rex has been on the ground and can provide a fuller answer.

Mr. BEACH. I think the nature of the projects is fairly indicative of the commitment. We have been very much involved in projects such as transportation, road construction, power projects, and irrigation.

For example, I was looking at some of the figures on the number of irrigation development schemes. We currently have 11 such schemes that will provide irrigation to about 400,000 acres of land. This affects 2 to 3 million people.

Mr. LONG. These classifications are very blunt instruments for finding out what is going on. My observation is that in most of the underdeveloped countries, these infrastructure loans have gone to improve the lives of people in the urban sectors and do not affect the people in the poor areas.

I understand that 13½ percent of the total ADB loans through the end of last year have been made in sectors of agriculture and education.

Mr. BEACH. I think that is certainly true.

In terms of number of loans, however, the figures are different. When we get into agriculture and irrigation, the projects have a smaller dollar volume vis-a-vis the larger power and hydroelectric projects. In terms of numbers of loans we have emphasized agriculture loans.

Mr. LONG. Only 132 out of 969 million. My feeling is that if this program has any meaning at all, it ought to go to the poor people. You do not seem to reach them anywhere you go.

Mr. HENNESSY. I think you have to get to the people. There is a

tradeoff. If you do too much in education then you get a lot of people being creative with no jobs.

Mr. LONG. That depends on the kind of education they get.

Mr. HENNESSY. That is right. If the health services are particularly good, you have a population surge.

Mr. LONG. It has to be well balanced. I understand that.

Mr. CONTE. If the chairman will yield there, really this is not a function of the Asian Development Bank, as I understand it. There are other programs that we have in the foreign aid bill which take care of the grants to Taiwan—not necessarily Taiwan and Philippines but some of the poorer countries—through the grant aid program rather than this type of program. As I understand it, this is mainly for business and industry.

Mr. LONG. Is that true?

Mr. BEACH. I can pick up on that and cite the Philippines as an example of the coordination of programs. In the Philippines, a great deal of the AID money goes for such things as health services and family planning. There have also been some projects for the transmission and distribution of electrical power.

Mr. LONG. Are you talking about bilateral aid?

Mr. BEACH. Yes.

We have coordinated our efforts with what AID is doing.

Mr. LONG. Do you accept the point which Congressman Conte has just made, that AID is to help the poor people and all this, but that the Asian Bank is for business? Do you accept that?

Mr. BEACH. I would say it is just one aspect of the ADB's lending operations to assist business. This is primarily——

Mr. LONG. I understood that. Of course it does. Would you accept the statement that the ADB is primarily for business? And if you want to try to help the poor people, that is for AID to do?

Mr. BEACH. I think we should go back to the charter of the Bank which specifies an attempt to promote economic development. I think that is the basic intent of the Bank.

Mr. LONG. Economic development with what aim?

Mr. BEACH. I think the aim is one of increasing the living standards.

Mr. LONG. Take Brazil. That nation is undergoing tremendous economic development, but practically nothing is going to the poor.

That is obvious to anybody who goes down there. It is helping the top 10 percent. The poor people are getting poorer, if anything.

Mr. HENNESSY. I don't think they have gotten any richer according to most of the income distribution figures we have seen on Brazil.

I think they themselves recognize it is a problem and are working on it. I think the distinction Congressman Conte was making is that $700 million out of the $900 million they have loaned has been for market rate loans.

You cannot make a market rate loan to the very poor countries at 7 or 8 percent and make it for education and the longer term payoff; that you have to do through the bilateral aid program or the soft window. You do need some balance and mix between the two programs.

Mr. LONG. What percentage of the soft loans has gone toward education and agriculture?

Mr. HENNESSY. We could submit that for the record. Maybe you know from your own memory.

Mr. BEACH. No, I do not.

Mr. LONG. If your hard loan money is going into the market sector then the soft loan money should be basically for the areas which will help the poor people.

Mr. BEACH. Again I think we do not have that at our fingertips.

Mr. LONG. Will you supply that for the record?

[The information follows:]

Thirty-four percent of the ADB special funds resources have been used for educational and agricultural purposes.

Mr. BEACH. In Indonesia where they have the largest programs we have heavily emphasized both water supply and agricultural projects in this whole area. We have gone out into the extremely poor regions and attempted to set up an electrical power grid and power generating facility and transmission and distribution facilities.

This gets back to the homes and allows people to enjoy a better standard of living. The attempt has been, as much as we possibly can, of getting to the people who actually need the aid.

I think we are all frustrated by this. I think we would all like to be able to do a better job.

EMPLOYMENT AND INCOME EFFECTS

Mr. LONG. I would like to say there are a lot of things that poor need before they get electricity. I do think education, better food, I do think health, a better feeling for what life is all about.

Does the Asian Development Bank consider the employment and income effects of the projects which it is considering?

Mr. BEACH. To my knowledge, we don't and I have been there about 7 months reviewing these various loan projects. We do not do so consistently. I think it varies with the project itself. We do not always attempt to identify the employment impact. In some cases, however, there will be general comments made depending on the mandate of the consultant.

There will be projections of the employment impact. As a standing rule, however, which is consistent in every case we do not have such a procedure to my knowledge.

Mr. HENNESSY. We do report in our National Advisory Council Annual Report to the Congress where there is information for the record. I think part of the problem is trying because of the state of the art, to reach any definitive conclusion on a micro-project to see what impact it has on income distribution. You can identify some of the employment effects and even this is difficult. You have to depend more on macro-policy than on micro-policy.

Mr. LONG. I understand you will not get precise measures. If you do they are probably phony. There is a general feeling among all the people who have been studying economic development over a number of decades, who have gradually changed their whole philosophy and attitude on this, that we ought to be trying to keep the people in the agricultural areas. We ought to be trying to make them more productive on their little plots.

Life can be far better up in the hills or out where these people live if they are kept there and they are able to produce more.

Greater GNP per capita, loading great quantities of high-powered capital, is not only not a very good standard but it can be counter-productive. Do you see what I mean?

Mr. HENNESSY. I agree.

Mr. LONG. I am wondering if the ADB is recognizing this and trying to find out.

Mr. HENNESSY. I think you have to make it part of the overall loan criteria. Because it is a newer bank the ADB has been less concerned with this matter than some of the other aspects. At the outset in the Inter-American Bank they had a trust fund and they broke some new ground in the agriculture and housing area. This is a new bank and it is getting into this area but it is feeling its way along. I would like to quote one project which has been carried out in Indonesia in the farming sector where they did identify that the farming income of the project area, which was a depressed area, would increase by 34 percent. It is spotty. Not in every loan, but clearly when they can identify it and provide attention to it, they are doing it. I think it is one of the things that our executive director can be giving more attention to.

RELENDING PROJECTS

Mr. LONG. It seems you need a whole new concept and breakthrough. When I was in Jamaica, you were very good about having me see some projects. These were projects which did not fulfill what I had hoped they would—raising the standard of life of the poor people who live in little shacks on the hills.

I looked at the three loan projects that I was taken out to see. They were all for people who were fairly well off. One was to the second largest bakery in Jamaica and the other was to a very substantial chicken farmer, obviously a very intelligent woman, who was so far above the people up in the hills whom we were supposedly trying to help, that it was a different order of magnitude. The third was one of the most intelligent people I had seen in a long while. He had a home as good as anything in the working area of my district and had built up the business and farm, before he got the loan. He did what anybody with a lot of sense does. There was a loan on favorable terms, and he went after it. This type of help is not going to accomplish the kind of thing we are talking about.

Mr. HENNESSY. That came out of the Bank's relending program, as you know. That is an area which I think the Asian Bank deals with as well as the Inter-American Bank, which tries to develop the private sector. It is the small private sector. However, they are not the poorest people.

Mr. LONG. Those are the people you have to reach, the people I was taken out to see. While they might be poor by American standards, they must have been in the top 5 percent of the people in Jamaica—maybe the lower part of the top 5 percent but in that group. I do not know how you reach the average Jamaican.

Mr. HENNESSY. The hospital project is one that this clearly helps the poorest people. I do not know whether you saw that. Also one should consider the creation of jobs. If you build a road, it involves construction work and creates new employment. I don't think we should cut out the relending programs which get out to a reasonable level of middle and lower income people to increase their business.

Mr. LONG. I am saying that everywhere in the world you have not reached the poor people.

Mr. SHRIVER. If you will yield, you mentioned the citrus grower and the farmer that you saw.

Mr. LONG. Yes.

Mr. SHRIVER. Of course, he had 15 or 20 people working for him. You did not see them.

Mr. LONG. But he had those before he got the loan.

Mr. SHRIVER. No, he did not. Because he added to this and the farm. That was the result of expanding his operation.

I do not think this is counterhumanitarian.

Mr. LONG. Won't you agree that he was in pretty good shape before he got the loan? He was an extremely intelligent man and not a typical Jamaican.

Mr. SHRIVER. He was developing the country and creating jobs.

REACHING POORER PEOPLE

Mr. LONG. Whether he was creating jobs, I do not know. I hope he was.

What I am trying to get at is that you have Jamaica crawling with 1¾ million people who are living up in the hills under the most wretched circumstances. We have to figure out a way to reach them.

Mr. HENNESSY. I think the population program of the World Bank is one way.

Mr. BEACH. I might indicate one program that might be of some interest to you in this respect. It is the Chitwan Valley integrated economic development project in Nepal that the Bank has been involved with during the last 3 years. Actually we have several projects that have focused on this one geographical area. We have an irrigation project, a road project, a power project, also a rural development bank project where we loan funds to the rural bank to relend to provide credit for farmers. Along with this we have provided for various consultants to help set up and implement the project in conjunction with the Nepalese Government.

It is an attempt to get at one valley, which is quite a poor one, in an attempt to provide all the inputs necessary to increase the standard of living in a rather broad across-the-board fashion. I say we have been involved in this for 2 years and I would be hopeful we would learn a great deal from the exercise.

Mr. YATES. Mr. Chairman, it is interesting that this kind of good project should take place in one of the countries that was not listed among the right countries.

Mr. BEACH. Again if I can come back to that point, it is simply a matter of degree.

LEAST DEVELOPED RECIPIENTS

Mr. LONG. The GAO report states that under the Bank's articles of agreement, special attention should be given to the needs of the least developed member countries. Is that true?

Mr. BEACH. Excuse me?

Mr. LONG. The Bank's articles of agreement say that specific attention should be given to the needs of the least developed countries. Is that right?

Mr. HENNESSY. Yes.

The Asian Bank because of its strong regional character, thought that Asians would be better at doing this and that Asians would be more successful than just a U.S. bilateral effort.

Mr. LONG. That is true, is it not? The Bank's articles of agreement say that specific attention should be given to the least developed member countries?

Mr. HENNESSY. Yes.

Mr. LONG. How do you account for the fact that, according to the GAO report, the five member countries with the highest GNP per capita out of the 20 members have gotten 62 percent of all Asian Bank loans as of December of this last year?

Those are Singapore, Taiwan, Malaysia, Korea and the Philippines.

Mr. HENNESSY. There are two answers. One is that the poorer countries cannot handle market rate loans. The soft loan window is the one that is constrained because there have only been a couple of hundred million dollars in there.

We have not put our part in there, for example.

Mr. LONG. What proportion of the soft loans have they received?

Mr. BEACH. In terms of soft loans the five countries would have no more than 3 or 4 percent. One third of the soft lending to——

Mr. LONG. I have 7 percent. Is that about right?

Mr. HENNESSY. Yes. That is point one. Point two, the poorer the country the more difficult it is to find a good project. It takes longer to generate a good project there.

You have to take them hand by hand.

ECONOMIC PERFORMANCE CRITERIA

Mr. LONG. I understand.

Does the Asian Development Bank require that member countries meet economic performance criteria to continue to receive the loans?

Mr. HENNESSY. General economic criteria. At the present state of the art no one has been able to reduce that to a formula.

Mr. LONG. Can't you discourage them from getting more money if they are not doing very well? Remember how badly Indonesia was doing some years ago?

They threw it away. It was shocking.

Mr. HENNESSY. Absolutely. Indonesia didn't get multilateral money then. But Indonesia's good performance since has been rewarded by getting substantial multilateral money. So has Korea's.

Mr. LONG. Has land reform for tenants and landless agricultural laborers been one of those criteria?

Mr. BEACH. We have not really focused on that at the operational level in the Bank. I think it is interesting in this respect that USAID in the Philippines has been quite a pioneer in land reform. Several members of the Bank have been in close contact with USAID to find what their experience has been. I would say at the Board level there is a great interest in what the Bank may be able to do in this area.

Mr. LONG. That would be a good case to take up because I understand from what everybody says, the social and political and economic conditions in the Philippines have reached a crisis state and there is some question whether you can keep the country going and avert a bloody revolt.

Mr. CONTE. That is not what I saw 2 weeks ago. Where did you get all this?

Mr. LONG. Reading the papers.

You didn't get all over the Philippines, of course. You are aware there is a bad situation.

Mr. CONTE. I did not stay in the capital. I went out in the country. I saw some projects which resulted from the money this committee and the Senate committee appropriated, such as $50 million for flood disaster.

Mr. LONG. The gentleman is pleased with the performance in the Philippines.

Mr. CONTE. I am not saying everything is great in the Philippines. I talked to some senators and representatives who are out of a job right now. They felt that things were fairly well under control. It is going to be a delicate period.

Mr. LONG. I am glad to hear your report on that. Perhaps I have been reading the wrong reports.

Mr. CONTE. You can ask the Secretary. He was there.

Mr. LONG. What is your feeling about the Philippines?

Mr. HENNESSY. It is a delicate situation. I think everybody recognizes they are in a period of transition. I think the Marcos government has charted a course of trying to bring about social revolution peacefully and some people raised questions whether that is a real intent. Everything we have seen has convinced us it is a real honest effort.

Mr. LONG. Honesty is not a word that is usually used to describe the political setup in the Philippines; is it?

Mr. HENNESSY. I have certainly not been in a position to use any other word.

There is a dedication from all the reports we have, and from my own personal experience, to bring about social change but without a bloody revolution.

Mr. LONG. Have they had much land reform there?

Mr. HENNESSY. I think they are in the process.

They brought in people from the outlying districts and some of the guerrillas and insurgents and tried to bring them into the process of decisionmaking. It is anybody's guess how successful it will be.

Mr. LONG. Do you have any quantitative figures on land reform in these various countries because that is the big problem we have in many Asian countries.

Mr. HENNESSY. I think land reform is a tricky issue. It was very successful in Taiwan. It resulted in a great decrease in production in Bolivia and Chile. I am not sure of the Mexicans. It is a very tricky area.

I think when you have excess land it is easy to open up new areas. When you do not and you try to redistribute you get into touchy areas. We will provide you for the record the information we have on the particular countries in question.

Mr. LONG. Do you have anything on what is being done in these countries to get the poor people out from under the grip of the money lenders?

Mr. HENNESSY. I think one of the ways of doing it is by providing through the intermediate lending institutions which the banks work with rates of interest which are not at usury level.

Mr. LONG. When I was in Mexico some years ago, the great complaint I heard from people whom I went out to see was that they were paying fabulous rates of interest, frequently the local people, and this was wrapped up with the political situation and marketing situation for their goods. They were really prisoners of their loans. The nature of the captivity went way beyond the fact they had a loan and were paying a fabulous rate of interest. They had to sell their product to a certain person and so on.

Mr. HENNESSY. It is a company store type of thing.

Mr. LONG. It would be one of the things that you would consider even in giving hard loans.

Hard loans are 8 percent. For people who are paying 100 to 200 percent a year, that would be a wonderful thing. If you could get that out to these poor peasants in the various countries that would be a wonderful thing to do.

What are we doing?

Mr. HENNESSY. Through the cooperative movement in financing them, that normally gives them credit and helps them to market the goods.

I think more of that has been done in Latin America because of the cooperative movement than in Asia.

Mr. LONG Are we doing anything?

Mr. HENNESSY. Through the banks and in our bilateral program.

Mr. LONG. I wish you would put in the record, if you can, what is being done to encourage land reform, as I mentioned—and I would like it quantitatively and not just "They are trying." What is being done to encourage the cooperative movement in these countries, what is being done to encourage getting these people out from under the grip of money lenders. If you can give us some quantitative data that would be worthwhile.

I think words like "trying" or "the situation is encouraging" really mean very little, at least to me.

[The information follows:]

The Asian Development Bank has not engaged itself in any direct land reform efforts to date. Under current lending guidelines, it does not provide local cost financing and the most obvious means of assistance would be provision of local currency for purchase of land holdings for redistribution.

Cooperatives, on the other hand, have played a key role in numerous ADB loans. Cases in point are recent fishery loans to Korea—$13.3 million; Sri Lanka—$3.1 million; and Bangladesh—$6.73 million. In Korea, cooperatives benefited from proceeds of Bank loans to purchase marine engines and equipment for their members. The same practice was followed in the Sri Lanka loan. In the Bangladesh fisheries loan, cooperatives will be used to operate and maintain icemaking plants to be constructed under the terms of the loan.

With regard to relending rates, in no instance has the rate to the final borrower exceeded 12 percent. In practice the spread on an ordinary capital loan is between 2½ and 3 percentage points. This covers administrative and operating costs associated with the relending activity. With regard to special funds, however, the spread is usually wider with the benefit accruing to the Government. In no instance has the rate to the final borrower exceeded 12 percent; $152 million has thus far been used by the Bank in providing funds through intermediate credit institutions.

PROCUREMENT POLICIES AND PROCEDURES

Mr. YATES. Mr. Chairman, if I may ask a question, in the statement on page 9, it is stated that:

Let me emphasize on the basis of independent examination we see no evidence of deliberate discrimination against U.S. firms in the Bank's policies or procedures.

Why would you put a sentence like that in your statement?

Mr. HENNESSY. There was some question raised about whether or not we knew enough about the policies and procedures, and because of the distribution of procurement where most of it went on the hard loans to Japanese bidders whether or not there was some bias in the procedures or actual decisionmaking. We got a private U.S. consultant from an engineering firm and asked him to make a study and come up with some results.

His conclusions were there were no biases in the system.

He did make a number of recommendations how we could improve the flow of information back to U.S. business ourselves so they would know about these opportunities and could bid on the project in advance.

There have been some changes brought about as a result of that.

Mr. YATES. What is the percentage of loan procurement going to Japan as opposed to the United States, which gave rise to the inquiry?

Mr. HENNESSY. Over 50 percent of the hardware that is sold by the Bank has gone to Japanese firms. In the consulting, 50 percent has gone to the United States. We happen to have an advantage there.

Mr. YATES. How much of the hard loan business has gone to the United States?

Mr. HENNESSY. Eight percent.

USE OF CONSULTANTS

Mr. YATES. You mentioned consultants. I notice that Mr. Shriver last year asked you to put in the hearings the number of consultants that you had retained. That list appears on page 337 of part I, and it indicates that you had 224 consultants. How much did you pay them? How much does a consultant receive?

Mr. BEACH. I think the budget we had for consultants in 1972 ran about $254,000. This is something I would have to check. I can submit that for the record.

Mr. YATES. Will you put that in the record?

[The information follows:]

The number of consultants employed by the Asian Development Bank in calendar year 1972 was 54. Their average daily remuneration was $65.62. The amount spent for calendar year 1972 was $301,977.

The following are the consultants employed by ADB in calendar year 1972, listed by nationality.

Australia—K. I. Whatson; L. J. Cairns; J. A. Callow; G. Johns; and D. J. L. Rogers

Canada—H Gourdeau

Republic of China—T. C. Chiang.

Finland—M. Pasanen.

Hong Kong—Y. K. Ching.

India—T. S. Gill; R. K. Jana; and A. A. Krishman; K. Krishnaswamy; B. S. Mal; G. N. Mitra; S. P. Nair; S. Y. Rao; M. Shetty; and K. N. Singh.

Italy—A. Piccinini; G. Sacco; and B. Trezza.

Japan—Y. Izawa; S. Shishido; and H. Hoki.

Korea—H. B. Kim and Y. K. Shin.

Malaysia—E. Lee.

Netherlands—F. J. E. Vandierendonck.

New Zealand—J. R. Claydon; R. Fenton; E. R. Ireland; and R. Wakefield.
Pakistan—F. H. Abbasi.
Philippines—R. I. Cruz; M. C. Esguerra; J. Eusebio; C. F. Hachero; R. M. Lantin; J. Madamba; V. Quintana; P. Reyes; and R. Valmayor.
Sri Lanka—H. M. A. B. Fernando.
United Kingdom—C. Y. Akhurst; W. H. W. Coultas; B. Grimwood, I. F. Ogilvie; N. Smith; and J. Chadwick.
United States—J. L. Enos; L. G. Matthews; R. Schulze; and K. I. Turk.
It should be noted that the above list is of consultants retained by the Bank itself. A much larger volume of consultant services is utilized by borrowers in connection with loans made by the Bank, and U.S. consultants provide the largest proportion of these services.

Mr. YATES. Will it be convenient to put in the record the list of who your consultants were?

Mr. BEACH. Yes, by nationality.

Mr. YATES. With their names?

Mr. BEACH. Yes.

ADMINISTRATION EXPENSES

Mr. LONG. What are the total estimated administrative expenses in fiscal 1973?

Mr. BEACH. The projected amount is about $10.6 million.

Mr. LONG. What percentage is that of total obligations?

Mr. BEACH. By the end of 1973 total lending will be way over $1 billion. That is about 1 percent.

Mr. HENNESSY. That is a cumulative figure. On an annual basis you are running about what?

Mr. BEACH. On an annual basis it is about 3 percent.

Mr. HENNESSY. The billion figure is a cumulative one. You are looking on an annual basis.

Mr. BEACH. We should be up to $350 million this year.

Mr. LONG. That is about 3 percent. How does this compare with other institutions similar to it? Is this about right, is it out of line, or low?

Mr. BEACH. We have the figures to figure it out.

[The information follows:]

The following are administrative costs of loans in the most recent fiscal year of each of the institutions, expressed as a percentage of loans:

	Percent
IBRD/IDA (fiscal year 1973)	3.2
IDB (calendar year 1972)	3.7
ADB (calendar year 1972)	3.1

BILATERAL AND MULTILATERAL AID COORDINATION

Mr. LONG. The Nixon administration is requesting appropriations for the Asian Bank of $221 million in fiscal year 1974 and the U.S. Bank provides significant amounts of development aid to Asian countries. As the Asian Bank increased its lending, should the United States decrease its bilateral development aid?

Mr. HENNESSY. I think we will not decrease it. It is about at the level we think is necessary with the exception of South Indochina. It is clear that any major reconstruction effort will require a special bilateral approach.

Mr. LONG. You see this as an increase in the total foreign aid rather than a substitution?

Mr. HENNESSY. That is correct.

Mr. LONG. How does the ADB coordinate its lending with U.S. development aid and with other donors so that the best use is made of scarce funds?

Is there a real program of systematic coordination?

Mr. BEACH. We do it in several ways, Mr. Long. The ADB belongs to numerous consultative groups that are chaired by the IBRD in which annual meetings are held depending on the need. At that meeting all of the donors attend, and in effect decide in consultation with each other and with the country in question what the needs of the specific country might be. In addition we have emphasized to a very great extent that the Bank, whenever missions go into the field, coordinates, its efforts with the local AID mission, be it Korea, Nepal, Afghanistan, Thailand, et cetera. In this way there is a continuous interchange of information regarding what the United States and the Bank are doing.

Mr. LONG. Have there been any instances in which two things have gotten fouled up, like putting a road which you are going to subsequently flood with a dam, to use a very crude illustration?

Mr. BEACH. Not to my knowledge, but I could give you a couple of instances of cooperation which have been fairly helpful.

For example, the Bank has been interested in the Helmand Valley in Afghanistan and AID has been active in the same valley. We have had good coordination between the Bank and USAID. We are building a road that must wait on an AID project and I think the progress is going on well.

Currently in Korea there is a port development project in which private financing has come from the United States for part of the port facilities and the ADB is in the process of negotiating a loan to finish off the rest of the project. So there are many instances of this type of coordination and cooperation.

Mr. LONG. Through the end of the last year, the Asian Bank has approved about $926 million of loans, is that right?

Mr. BEACH. That is right. Both windows.

DISBURSEMENTS

Mr. LONG. But disbursements have totaled only $136 million, is that correct?

Mr. BEACH. That is correct.

Mr. LONG. Why have disbursements been so low?

Mr. BEACH. If I could I would like to explain that a little bit. First of all the Bank went through a startup stage in which there was a long gestation period before even approving the first loan. There was a very important next step which the Bank was very careful to monitor closely and that was the selection of the consultant to set out the framework of the project to the implemented. In all instances, the Bank

has been careful to see that all the proper guidelines have been followed and they have obtained the best expertise possible for the job.

In many cases this is because the borowing countries have been unfamiliar with bank procedures. We have in effect gone through a learning process.

Mr. LONG. How long have some of these loans been hanging fire?

Mr. BEACH. When we set up a loan there may be a period of 4 to 5 years during which it is being implemented.

Mr. LONG. You have seen some that have been hanging fire for that long?

Mr. BEACH. Not hanging fire.

Mr. HENNESSY. It is like the domestic projects on river basins, which may take up to 7 years. It may take 7 years to build the dam or road. They draw down over time.

Mr. LONG. How does this slow rate of disbursements, if you can call it that, compare with other similar situations? You do not feel there is any greater lag here than there has been in others?

Mr. BEACH. We check on this very carefully and have been very concerned about it. I think our experience with ADB is pretty much the same as the World Bank in its startup phase.

If I could make a comment about this disbursement rate, of all loans which became effective in 1968, 82 percent are fully disbursed today.

For 1969 the rate is up to 84 percent. For 1970 it is 53 percent. For 1971, 21 percent.

We have run into this problem in the last 2 or 3 years because of a tremendous increase in the volume of loans. This has put the 926 figure up to quite a high level.

Since these loans have been approved in the most recent past the disbursement rate is necessarily slow.

Mr. LONG. Who holds the money in the meanwhile?

Mr. HENNESSY. It depends on which fund it is from. They may not have drawn down from a soft fund. It may be a credit window that is open.

Mr. LONG. The countries have not paid it in?

Mr. HENNESSY. That is right.

In other cases they have paid in the money and the Bank is holding it. But we use non-interest-bearing letters of credit to avoid giving idle funds.

Mr. LONG. It would be very useful to provide for the record the obligations and disbursements by sector in 1972 and 1973, and I will give you the sectors that I would like to see it done in, and also who has put up the money and where it is being held.

In other words, have large parts of U.S. money been collecting dust somewhere and not working? Those are all the questions I have, Mr. Chairman.

[The information follows:]

99-614 O - 73 - pt. 1 - 46

SECTORAL BREAKDOWN OF ADB LOANS

	Amount (millions of U.S. dollars)	Percent
1. As of Dec. 31, 1971:		
Agriculture	91.893	14.40
Electric power	151.690	23.70
Industry and development banks	204.170	32.00
Transport and communications	136.410	21.40

Transport and communications	234.760	23.57
Water supply	110.200	11.07
Education	6.700	.67
Total	996.053	100.00

COMPETITIVE POSITION OF JAPAN

Mr. PASSMAN. Thank you, Dr. Long.

I shall proceed to ask some questions.

If I could get the facts on the record and we could eliminate personalities and pressure, I am sure that we would all reach an agreement that the type of request we are considering this afternoon is why we are in such a deplorable situation with our fiscal policy in this country. It is to be regretted that we have become so addicted to yielding to budget requests on unjustifiable matters. If there was ever a request before this committee and before the Congress in my considered judgment that should be turned down flat, it is this one for the Asian Development Bank.

Now let us see if we can make a record which supports that statement.

I believe that you said earlier that the dollar had been depreciated, as we check it with the yen by 35 percent; is that correct?

Mr. BEACH. That is right, sir.

Mr. PASSMAN. If I understand correctly, the Japanese are accepted as possibly the greatest business people and bankers on the face of the Earth, European bankers notwithstanding. Isn't that pretty much understood now in banking and business circles?

Mr. HENNESSY. I would not give way to the United States.

Mr. PASSMAN. I always reserve my country. Otherwise.

Mr. HENNESSY. Otherwise. I think they are seen not as No. 1, but at least as an equal with other European countries.

Mr. PASSMAN. They are so far ahead that you could not see them except with binoculars. Let us take the Japanese airlines which is government-owned, is it not?

Mr. HENNESSY. Yes, it is.

Mr. PASSMAN. The Japanese have $20 billion unused and unneeded that they are holding in reserve to beat us into any position they want us in. I think the amount they are holding is $20 billion; is that correct?

Mr. HENNESSY. I think it has gone down the last month.

Mr. PASSMAN. This is as of February 28, 1973, and has been certified by the Treasury Department.

Mr. HENNESSY. I think a good portion of those are invested in U.S. Treasury bills.

Mr. PASSMAN. Certainly they are because we have to borrow money from any nation that will let us have it.

You know it as well as I do. We borrowed $100 million from Thailand.

Mr. HENNESSY. A number of years ago, that is correct.

Mr. PASSMAN. We still owe them the money and it is due July 2. You accept that as a fact.

Mr. HENNESSY. I am sure you researched it.

Mr. PASSMAN. Let us look at the Japanese airlines case. When these people wanted to buy airplanes, recognizing that they had the power and persuasion through the cooperation of others to devalue the dollar, they bought those airplanes on credit; did they not?

Mr. HENNESSY. They bought them on credit.

Mr. PASSMAN. They bought them on credit. What happened? They expect to repay that loan with the 35 percent discounted dollars. That is how clever they are. Let us go back to this organization. You have had two presidents of the Asian Development Bank and both have been Japanese; have they not?

Mr. BEACH. That is right.

Mr. PASSMAN. The first President was so arrogant that he would not even permit the U.S. board member to know who was receiving personnel loans.

[Discussion off the record.]

SPECIFICS OF REQUEST

Mr. PASSMAN. We are wrecking this country and its future by continuing to give our money away all over the world. Your total foreign aid request this year is over $18 billion. The requests are spread out through the budget under many different headings. If I read the record correctly, last year the Asian Development Bank requested $100 million. This committee denied that $100 million; isn't that true?

Mr. HENNESSY. Yes.

Mr. PASSMAN. Do you have legal authorzation to move on?

Mr. HENNESSY. We have a legal authorization according to the opinion of our General Counsel.

Mr. PASSMAN. How about other counsel? I don't think your counsel would hold a job if he did not agree with you.

Mr. HENNESSY. We have a legislative history, yes.

Mr. PASSMAN. Legislative history? But you do not have any authorization by bill and by number, do you?

Mr. HENNESSY. The authorization itself. Might I make a distinction, Mr. Chairman? There are two amounts before you. One we have not sent the authorization up.

Mr. PASSMAN. That is what I am talking about. You are testifying on the $100 million which this committee denied last year.

Mr. HENNESSY. And $120 million in hard funds.

Mr. PASSMAN. Let us keep the record straight now. You actually only have one item on which you are testifying today.

Mr. HENNESSY. We are testifying on two items today, sir.

Mr. PASSMAN. Actually what you are asking this committee to do is to reinstate the $100 million it cut out last year and give you an additional $20 million. Is it that simple?

Mr. HENNESSY. We are asking for $100 million of soft funds and $120 of hard capital.

A total of $220 million.

Mr. PASSMAN. You are asking in effect for the reinstatement that we cut out last year and then another $120 million. I am of the opinion that the committee itself, Passman notwithstanding, is not going to look on that very favorably because it would make a complete mockery of this committee, to say we want the $100 million you cut out last year. Let me assure you, there is nothing personal about this. I am frightened over what we are doing to unborn Americans, because we both know that this money is being borrowed. Isn't that so?

Mr. HENNESSY. We get into a question of fungibility.

U.S. BUDGET DEFICIT

Mr. PASSMAN. Your first obligation is to your own family. Our first obligation is to our own American institutions such as the Post Office Department, Interior, Defense. Isn't that the first obligation?

Mr. HENNESSY. It certainly is.

Mr. PASSMAN. When you go beyond that we are dabbling with a deficit maybe approaching $30 billion this year.

Mr. HENNESSY. Here again it is a question of mathematics. I think the budget deficit can be much smaller than first projected.

Mr. PASSMAN. I am talking about the administrative budget. You know the trick of taking all the trust accounts and showing that as something the Government has. Dealing entirely with the administrative budget, we are going to run a deficit of around $30 billion; are we not?

Mr. HENNESSY. I am not aware of the total amount. I know the budget gap has been closed considerably on the NIA accounts to somewhere around $19 billion.

Mr. PASSMAN. While the Secretary of the Treasury was before the full committee, I asked this question, "When we appropriate funds for multilateral organizations we move in complete darkness as to firm justifications. The committee in most instances has been denied the right to examine those who administer the multilateral funds. The weak justifications are presented by some Assistant Secretary who attempts to speak for those who subsequently administer the funds appropriated. When the funds are finally appropriated they are commingled with smaller donors who in some instances indirectly become the recipients of the funds. We do not know the recipients of the funds nor does a recipient know the donor. Under these multilateral organizations we have no idea when the funds are allocated, in what amount, to what country or for what purpose. Furthermore there are

no provisions for any repayments to flow back into the U.S. Treasury. How can this be corrected, Mr. Secretary?"

He did not argue whether this was correct. I will ask this question: In all these multilateral organizations, the money is paid back into the organization and not back into the U.S. Treasury. Isn't that true?

Mr. HENNESSY. That is correct.

ADB LOAN RECIPIENTS

Mr. PASSMAN. Let us look at the nations who are members of the organization. We are a donor but not a recipient.

Mr. HENNESSY. Not at the present time.

Mr. PASSMAN. Who are the recipients?

Mr. HENNESSY. There are some.

Mr. PASSMAN. Let us name them for the record.

Mr. HENNESSY. Do you have the list there?

Afghanistan, the Republic of China, Taiwan.

Mr. PASSMAN. We likewise borrowed money from Taiwan. Didn't we find they had a very small foreign exchange surplus and they said, "We can let you have $20 million," and we borrowed $20 million from them?

Mr. HENNESSY. I am not aware of the transaction.

Mr. PASSMAN. I am aware of it and I will state that for the record.

Proceed.

Mr. HENNESSY. Fiji Islands, Hong Kong, Indonesia.

Mr. PASSMAN. Hong Kong is one of the most prosperous spots on the entire face of the Earth. They have one of the strongest economies and lowest tax of any nation on the face of the Earth. They are waxing fat with a tremendous surplus in the Treasury. Why would they be making loans to Hong Kong? That is a possession of the United Kingdom, is it not, or as we say, sometimes, Great Britain.

Mr. HENNESSY. I believe there has been one loan made to Hong Kong of $21,500,000.

Mr. PASSMAN. That is not small in my book.

Mr. HENNESSY. At the market rate of interest. They do not have the ability to go out themselves and float bonds on the market.

Mr. PASSMAN. Hong Kong has tremendous cash surpluses in their treasury, Mr. Secretary.

Have you been there recently?

Mr. HENNESSY. I have not been there recently.

Mr. PASSMAN. You can hardly walk on the streets or get in a hotel or get served. It is one of the most prosperous places, if not the most prosperous on the face of the earth.

What kind of loan did they make?

Mr. BEACH. It went to a desalinization plant, Mr. Chairman.

Mr. PASSMAN. For the Government of Hong Kong?

Mr. BEACH. They guaranteed it.

Mr. PASSMAN. Let us move along.

What other nations?

Mr. HENNESSY. Indonesia, Cambodia, Korea, which has gotten the lion's share, Laos, Malaysia, Pakistan, New Guinea.

Mr. PASSMAN. You can place the others in the record.

[The information follows:]

Recipient countries Asian Development Bank special funds resources

Country:	*Millions*
Afghanistan	$20.050
Indonesia	77.540
Khmer Republic	1.670
Republic of Korea	3.700
Laos	4.343
Malaysia	3.300
Nepal	35.710
Pakistan	18.200
Papua New Guinea	14.300
Philippines	3.500
Singapore	3.000
Sri Lanka	25.205
Republic of Vietnam	11.300
Western Samoa	5.330
Total	227.148

Mr. PASSMAN. Let me ask you specifically about Thailand. Is Thailand a recipient?

Mr. HENNESSY. Yes.

Mr. PASSMAN. I want you to verify for the record that we were so short of dollars that we went out and first tried to borrow $250 million from Thailand. They turned us down but we finally compromised and said we will borrow $100 million from you, and that money is now due on July 2 and we really do not have it to pay them back.

Will you search the record on that?

Mr. HENNESSY. We have it to pay back but this was part of an arrangement which was at that time prior to the August 15, 1971, measures. There were a series of them with developed and undeveloped countries.

Mr. PASSMAN. It was purely because of our serious difficulty with our balance-of-payments situation; isn't that correct?

Mr. HENNESSY. It certainly derived from our balance-of-payments situation.

Mr. PASSMAN. Mr. Johnson was trying to make the balance-of-payments situation look better and he borrowed dollars to do it. Isn't that correct?

Don't be afraid to put the facts on the record.

Mr. HENNESSY. The purpose was to provide facilities for handling the balance-of-payments problem at that time.

Mr. PASSMAN. You can use any words you want to. But the purpose of the Johnson administration to borrow this money was to make the balance-of-payments situation look better.

Mr. HENNESSY. I think it was to deal with the problem at that time.

Mr. PASSMAN. Certainly.

We still owe that $100 million to Thailand.

Mr. HENNESSY. That is correct.

Mr. PASSMAN. We have to pay it back at 6 percent interest and it comes due on July 2.

Mr. HENNESSY. I am not sure of the interest rate.

Mr. PASSMAN. I can tell you it is 6 percent. During that period, we were pouring foreign aid in the backdoor on a grant basis.

Mr. HENNESSY. On the bilateral program.

Mr. PASSMAN. Bilateral or any other kind of lateral you want to establish for the record. We had many different types of programs that were furnishing grant aid to Thailand.

Mr. HENNESSY. The Asian Bank has made $70 million in loans——

Mr. PASSMAN. I am talking about bilateral U.S. aid.

Mr. HENNESSY. I do not have the figures. I am sure you know them better than I because you know them better than any man in the U.S. Government.

Mr. PASSMAN. I wish I had some persuasive power. I am not angry, but I am frightened. This is actually wrecking our country, this foreign-aid program.

While we are making loans to Thailand, we are also borrowing money from Thailand. By the same token we are pouring money into the Asian Development Bank and they are in turn making loans to Thailand; is that right?

Mr. HENNESSY. The Asian Bank has made $70 million worth of loans to Thailand at a market rate of interest.

GAO RECOMMENDATIONS

Mr. PASSMAN. Do you have any comment on the GAO report? Have you had an opportunity to read it?

Mr. HENNESSY. Yes; I read it.

It is similar to the three reports. It grew out of work done a year ago. In terms of recommendations, we have not disagreed with the specific recommendations. The report is comprised of many pages of general assertions and then some very few particular recommendations. Two of the recommendations, for example, were to improve the guidelines, for evaluation of projects, and to improve the flow of information. In answer to Dr. Long's question, we do agree with him; we are implementing those particular specifications.

Mr. PASSMAN. In GAO's opinion, the Treasury does not yet have a fully functioning system for managing U.S. participation in the Bank. As a result, Treasury is not in a position to assure the Congress that funds contributed are being used. Did you read that?

Mr. HENNESSY. Yes.

Mr. SHRIVER. Is this the report of May of this year?

Mr. HENNESSY. That is right. Most of that work was done approximately 1 year ago. Since that time, we have implemented several changes.

I think part of the difference came because we did not codify a lot of things. To illustrate this point, the Appropriations Committee does not have a black book telling you whether or not you should approve this request. The GAO feels that when we look at a loan, we should have a code before us and every other U.S. Government agency so we can look at the same standards. I think it is useful to do it. The final element, however, is judgment, and you cannot put that in a black book. We have gone to a standard codification and more systemization of the system that existed heretofore.

Mr. PASSMAN. We do not have the right of direct audit.

Mr. HENNESSY. We do not. Nor has the GAO sought it.

Mr. PASSMAN. I know.

Even in our own system where we have close scrutiny over the military and all the other departments, we are running into irregularities even under the best supervised agencies. Yet here we are pouring money into an international organization which has no provision for ever getting a dime back, and we do not have the right of direct audit. What is wrong with direct audit?

Mr. SHRIVER. Before you leave that, I will ask another question.

One of the major points raised in the recent report of the GAO is the lack of adequate time for evaluation of a formal loan documentation.

The report states that you and the U.S. Mission get the loan documents late, so your comments on the proposed loans are not received by the Advisory Council in time for effective review.

In turn, the Council's instructions are not received by you and the U.S. Mission in time for effective action before the Bank Board votes on the loan. What is your comment on that?

Mr. HENNESSY. I think the GAO deleted the major portion of our answer to the report which I would like to submit to the record. I would briefly summarize to the effect that much of the communications were done and are done regularly over the phone so there is a flow back and forth.

[The information follows:]

The full text of the Treasury Department's response to the GAO Report, "U.S. System for Appraising and Evaluating Asian Development Bank Projects," is as follows:

[See pages 1137–B through 1137–R.]

THE DEPARTMENT OF THE TREASURY,
Washington, D.C., December 5, 1972.

To: Mr. Oye Stovall, Director, International Division General Accounting Office.
From: John M. Hennessy
Subject: Treasury Comments on GAO Draft Report on Asian Development Bank (ADB).

I am supplying herewith Treasury Department comments on the GAO draft report entitled "U.S. System for Appraising and Evaluating Asian Development Bank Projects."

In contrast with the recent GAO draft reports on the Inter-American Development Bank and the World Bank, the present draft concerns itself to a much greater extent with management aspects of U.S. participation in the Asian Development Bank (ADB). It generally avoids implicit or explicit substantive judgments on the operations of the ADB itself, judgments of a kind GAO witnesses have assured congressional committees they neither wish to make nor are equipped to make. This GAO approach to reviewing U.S. participation in international financial institutions is more in keeping with the intended scope of such reviews, although some inappropriate elements remain in the report.

While the report thus moves away from areas we found objectionable in earlier reports, we nevertheless find it necessary to disagree strongly with many of the assumptions and findings in the material legitimately relating to our management procedures. For convenience, my comments follow the order of presentation in the digest section of the draft report; comments on the digest, of course, refer equally to the underlying sections in the main text. An annex provides additional comment on specific portions of the draft report.

1. *Inaccurate statement on provision of information.*—The Digest statement at the top of page 2 about the absence of a system to provide meaningful information to contributing governments is at best misleading and should be deleted. At the present stage of Bank activity, there is a very adequate flow of information both to our full time staff at Bank headquarters and to Washington on loans, loan analysis and Bank operations specifically and in general. Annex 2 shows schematically the types of information available and the way in which it flows during the lending process. In view of the existence of this system, we think it erroneous to suggest either that there is no mechanism by which contributing governments receive information from the Bank regarding its loan proposals, policies, and operations, or that what is received is not meaningful.

If the Digest statement was intended to refer narrowly to the question of a system for postevaluation of completed projects, the comments in point 7 below indicating that it would be premature to attempt to measure project results when projects are not yet completed—should be taken into account.

2. *Report overlooks U.S. policy inputs.*—The digest (page 2) and related portions of the text of the draft report describe the U.S. role in relation to the Bank's

lending activities almost exclusively in terms of appraisal of specific projects. In taking this narrow view, the draft report overlooks the fact that we also affect ADB lending policy directly and without reference to any pending loan.

For example, the U.S. Director has actively participated in Bank policy discussions on the appropriate interest rate and commitment fee to be charged on loans; on the use of the Bank's local currency resources in its operations; on Bank financing of local rather than foreign costs of projects; on guidelines for country allocation of special funds lending; on whether or not the Bank should engage in financing of exports; and on guarantees or other forms of security to be required on its loans.

All of these topics were dealt with as general policy matters, with the outcome of the discussions constituting guidance to management in the formulation of subsequent individual loan proposals. They therefore represent a significant mechanism for the United States to affect Bank lending at a much earlier stage than the presentation of a project to the Board. We would like to see this important element in our management system appropriately acknowledged in your report.

3. *Challenge to effectiveness of present system not supported.*—Our considered view is that an effective management system exists for insuring that sufficient information on proposed ADB activities is acquired and is adequately appraised. This system is, moreover, being continuously improved, a fact notably underplayed in the draft report. Even if given the most critical interpretation, the sum total of the evidence put forward in the draft report demonstrates no more than very occasional underperformance that any system is liable to. Accordingly, we reject the suggestion that we have "not yet developed an effective system" to yield reasonable assurances regarding the utilization of funds we have contributed. If GAO feels that a postevaluation of projects through some audit mechanism is a needed management tool to meet the emerging demands of the future, it should state this view without characterizing the current situation as deficient. This is particularly true since we are, as noted in our other comments, pursuing this very objective as a timely evolution of our management system.

4. *"Insufficient information" charge unfounded.*—I strongly recommend deletion of the references on pages 2–3 to "insufficient information" and "dearth of information" as unfounded. Each Asian Bank project presented for Board consideration is supported by a comprehensive and detailed loan document averaging in excess of 100 pages. The scope of information provided is approximately the same as that for World Bank and Inter-American Bank projects, and neither of your reports on our participation in those institutions made a point about the adequacy of the information provided to governments as a basis for project approval.

5. *Judgment factor regarding "significant unresolved questions"; GAO technical analysis defective.*—The digest (page 3) contends that loans were approved while there were significant unresolved questions, with the implication that there were important aspects of which U.S. officials or the Bank were unaware. I wish to note that GAO has advanced few, if any, cases of technical considerations which the Asian Bank or the U.S. Government or both were not fully cognizant of at the time. The questions cited about individual projects in the draft report are questions drawn from the Bank's own analyses of the projects, and were the subject of full discussion by the management with the board of directors, including active participation by the U.S. Director.

It is clearly a matter of collective judgment for the National Advisory Council within the U.S. Government and the board of directors within the Asian Bank to decide whether any questions are significant enough to require postponement of board approval. It is, similarly, a matter of judgment to decide whether more overall progress can be made, on the one hand, by lending where improvements still to be made and simultaneously continuing to work on the borrower's problem, or, on the other hand, by refusing to lend until the borrower's problem is resolved.

The GAO technical analysis and field work in this portion of the report appears to be defective. The GAO argument as to two of the four examples of unresolved problems errs by analyzing the adequacy of road design criteria in terms of truck gross weight rather than the design loan per axle or per wheel. (See pages 7–8 of annex for detailed comment.) Moreover, the draft report's statement as to the surface condition of an ADB financed highway and its speculation as to the underlying roadbed conditions appear to be based on nothing more than casual visual observation, by GAO personnel who were not highway en-

gineers, of an unstated portion of the expressway on a single occasion before normal spring maintenace. In the absence of an engineering survey of the overall condition of the expressway—and in view of our knowledge that the highway has been satisfactorily functioning and is rapidly approaching peak traffic volume—we cannot regard GAO's field work as adequately done. Similarly, the GAO judgment appears to be hasty with respect to another of its examples, in which Asian Bank efforts set in motion in connection with a first loan to a relending institution bore fruit in a major way after a follow-up loan.

These deficiencies in the quality of GAO analysis give us little confidence that the GAO's view of what is a significant unresolved problem and what course of action is appropriate in the face of such a problem is necessarily sounder than that of the Asian Bank Board, the Asian Bank Board management, and the NAC review mechanism.

6. *Follow-up on implementation of projects.*—The comment on page 3 of the Digest as to the absence of follow-up on the implementation of projects gives inadequate weight to the internal mechanisms of the Bank and its board of directors for monitoring project progress. In addition, there has been a vigorous program in the past year and a half by the Office of the U.S. Director to make field visits to the majority of the Bank's project sites, which is described in pp. 40–41 of the draft report. The draft report's findings on this point do not appear to reflect either the board process or the action program undertaken by the U.S. Director. They therefore seem to be, at a minimum, out of date, and should be reconsidered.

7. *Absence of independent evaluative reporting.*—We do not believe that the absence to date of a formalized system for post-evaluation of projects has impaired the effectiveness of our current operations. In regard to the absence of such a system, the draft report should recognize, by more than a passing mention of the relative infancy of the Bank, that it would have been premature to attempt to measure the actual results of projects financed by the Bank when the projects themselves have not yet been completed. The majority of ADB projects were only authorized in the last two years, and at the time of GAO's review only two of ABD's 85 approved loans had yet had time to be fully disbursed, let alone exert an economic impact over a long enough time to permit appraisal.

It is important that some system for post-appraisal of project—along the lines established in the Inter-American Development Bank or an alternative of comparable effectiveness—be developed by the time such appraisals can usefully be carried out, and we are working on ensuring this. It is not a shortcoming of our management system, however, that the particular system favored by GAO had not been created in ADB as of the time of the GAO review. Your Digest statement (p. 3) would, therefore, be more objective if it said "while it is too early for a post evaluation system to be operative, the time is approaching when a mechanism along this line would be approprite."

The recommendations and suggestions contained in the digest (pp. 3–4) are generally constructive in nature. Although they are in certain respects lacking in specificity, in their broad thrust they reflect trends already underway for some time in Treasury's management of U.S. participation in the Asian Bank. I would like to offer the following observations on individual recommendations:

Earlier receipt of project information.—We agree that maximum use should be made of the project information provided by the Bank at earlier points in the loan preparation process, and have taken a number of steps in that regard in the last year or two. It should be understood, however, that at these earlier stages there does not yet exist a body of documentation to permit adequate appraisal of the loan. Accordingly, the recommendation would have to make clear that it aims only at supplementing our present appraisals based on formal loan documents before we could regard it acceptable in your final report.

Loan appraisal instructions.—This recommendation is identical to one we have already accepted in connection with your IDB report. We are prepared to accept it on the same basis if it appears in the final version of your report, that is we do not feel the absence of codified instructions has a significant effect on loan appraisals, but are nevertheless prepared to codify the various existing written and unwritten guidelines. I would, however, like to emphasize again that the present system in which trained and experienced senior officials from the concerned agencies have latitude to exercise judgment, has worked well. Codified guidelines will become self-defeating if they become rigid rules or are mechanically applied.

Role of U.S. posts overseas.—With the phasedown of U.S. AID missions overseas already in progress, it would be unwise to plan on a major reporting role for such missions with respect to ADB activities in their countries. Your recommendation would, therefore, be more acceptable if it suggested that embassies and AID missions report on ADB activities "to the extent feasible."

All our overseas missions have since late 1970 been provided with "early warning" notice of upcoming projects to be financed by international institutions, and have been providing available information since that time, particularly with respect to commercial opportunities such projects might afford to U.S. suppliers. Your recommendation can therefore have meaning only with respect to the implementation phase of Bank-financed projects. In that regard, I wish to state, first, that there is more adequate followup by U.S. field missions than the draft report gives credit for (and, incidentally, more adequate feedback to technicians in Washington of Bank action responsive to U.S. inputs than is acknowledged in the draft report.) Second, I wish to reiterate our view—previously expressed in connection with your IDB and World Bank reports—that such a recommendation is acceptable only if it is clear that our missions are not expected to carry out in-depth audits or uneconomically duplicate the on-site project supervision activities of the Bank or build up and maintain special staffs for these purposes.

Followup on project implementation and results.—This recommendation appears to cover no major area that is not also covered either by the immediately preceding or immediately succeeding recommendations. I recommend its deletion from the final report.

Establishment of independent review body.—As indicated in our comment on your World Bank draft report, we are sympathetic to your recommendation regarding an independent audit mechanism of the IDB group of controllers type. However it must be recognized that the IDB model is not an exclusive one, that alternatives differing in major respects—including the pattern now being evolved and tested in the World Bank—may better suit the Asian Bank context, and that a phased approach aimed at introducing a full system over several years might be a more realistic and therefore more fruitful approach. It would be desirable for your recommendation to be modified to recognize these possibilities.

ANNEX 1

COMMENTS ON SPECIFIC PORTIONS OF THE DRAFT REPORT

(1) *Role of Directors.* On page 11, the report says "the Board of Governors concerns itself largely with policy and overall ADB performance; the authority covering routine operations has been delegated to the Board of Directors and the President." It is not correct to imply, as this statement does, that the Board of Directors handles only routine operational matters. As a matter of fact, in addition of approval of loan proposals, the Board of Directors considers and makes decisions on broad policy questions. Policy matters are normally considered by the Board of Governors on the basis of recommendations prepared by the Directors. It is through the U.S. member of the Board of Directors that the United States exerts a substantial policy influence in the Bank, in addition to our role in relation to individual loans.

(2) *Special funds.* On page 13, in a discussion of special fund resources, the United States is listed as a contributor. This is correct only in the very limited sense that the United States has contributed $1.25 million to the technical assistance special fund. The distinction should be drawn , however, between the very modest fund intended to finance, on a loan basis, the capital costs of development projects. Only the agricultural special fund and the multipurpose special funds are for capital lending on a concessional basis and the United States has not contributed to either of these funds, while other countries have thus far contributed about $200 million.

(3) *Disbursement ratio.*—On page 17, it is stated that the Asian Development Bank is carrying a "very low ratio of disbursements to loan commitments." The sentence has no real meaning because no comparison is made. At a comparable stage of its development, the Inter-American Bank had a similar ratio of disbursements to loan commitments. When a lending institution has a sharply accelerating rate of loan commitments, as the ADB has had

since 1970, a relative lag in the ratio of disbursement to commitments is entirely normal.

(4) *Assurances on use of funds.*—On page 20, the draft report states "we believe that, as a minimum, the U.S. executive branch should have enough working knowledge and data to give firm assurances to the Congress that the funds contributed to the international organizations are or are not being used efficiently and effectively and accomplish intended objectives. In our opinion, the executive branch has not been in a position to give such assurances with regard to funds contributed by the United States to the ADB." The Treasury Department considers this expression of opinion wholly without merit.

Presumably, the GAO is referring principally to the fact that the Bank has not yet established an independent evaluation unit of the type that exists in the Inter-American Bank. The Asian Development Bank is a relatively young institution; its disbursements are low compared to disbursement of the Inter-American Bank and the International Bank for Reconstruction and Development. The number of projects it has completed is also correspondingly low. The time has only recently become appropriate to set up procedures and establish staff to cary out reviews of completed projects. The Treasury Department is moving to see that these things are done.

(5) *Post-evaluation of projects.* On page 21, it is stated that "regular independent, evaluative reporting to member governments relative to efficiency of operations, success or failure of ADB projects results achieved is virtually nonexistent." This statement is again factually correct but only because at this point very few ADB projects have been completed and been in operation long enough that they can usefully be appraised by an evaluation mechanism. The situation in many of its borrowing countries is such that the Asian Bank has often had to precede its loans with extensive technical assistance focused on project identification. Only then was it possible to carry out feasibility studies, engineering design is ready for presentation to the Board. It should not be surprising, therefore, that the bulk of the Bank's loans were only approved in the last 2 years, and these projects will still require several years before completion and being placed in operation.

(6) *Early Project Information.*—On page 28, it is stated that the U.S. Director must learn or be informed of problem areas in forthcoming ADB loan proposals early enough in the project formulation stage for him to have time to convince the ADB staff and management of the desirability of his changes. We agree with this proposition as a general matter, and have made important progress in the past year. The Bank's monthly operational information document now contains an expanded summary statement, showing country, amount and technical description for each proposed project from the time a loan application has been taken under study. In addition, a monthly updating is provided on the processing status of each loan in the appraisal pipeline. The NAC staff committee reviews this document monthly to identify problems relating to expropriation, suitability of financing, compliance with performance criteria, use of funds, etc. This monthly operations information document also provide the basis for our system of "early warning" to U.S. field mission about forthcoming loans.

The fundamental difficulty in raising technical issues early in loan processing is that only some problem areas can be isolated much before the final, formal loan documents are prepared, while others cannot because they depend on the specific outcome of final negotiations with the borrower. It would be useful if the report made this distinction.

(7) *Appraisal Time.*—We do not agree with the opinion expressed on page 29 that time pressure results in hasty analyses of a dubious quality by the National Advisory Council or that it cramps effective intervention by the U.S. Director when problem proposals are identified. In fact, we do not agree that the date-comparison evidence laboriously assembled by GAO even supports its own contention. Analysis of the tabular data on pages 31–33 shows that the mean number of working days was 3.2. We believe this is ample time for an experienced technician to identify problems in a loan document. In the majority of cases in which less time was available, the summary cable from USADB was available—sometimes as much as 11 days in advance—to provide technicians a basis on which to draw tentative conclusions.

The GAO analysis neglects numerous other factors: the availability of advance airmail copies of loan documents prior to regular NAC distribution; the additional time available to NAC agencies between staff committee discussion and council vote; the right of agencies to reopen consideration if late documents

reveal issues not identified in cable information; and the use of telephonic communication with USADB to clear up questions prior to NAC staff discussion.

As far as the timeliness of instructions to the U.S. Director is concerned, the date-comparison material tabulated by GAO also tells very little. First, the draft report makes no attempt to distinguish between cases where Washington had no objections and cases where Washington wished points raised. There is obviously no need for long leadtimes in the majority of cases where no issues are to be raised. Second, it notes but does not give due weight to the fact that the cabled instructions are only the formal recording of the NAC result, or that telephonic instructions are provided prior to the cable instruction when a problem exists.

The entry for the Cotabato-General Santos Road project in the Philippines provides a useful example. Although the bare record shows that the U.S. Director had 2 days between receipt of a formal instructions telegram and board discussions, he had in fact been consulting extensively, on the basis of interim telegraphed and telephoned instructions from Washington, with bank management and other directors over a 3-week period—and was ultimately successful in changing a key procurement provision. We consider this project to be both a good example of effective U.S. intervention within the framework of our management system and a good demonstration of the weakness of GAO's methodology.

In general, therefore, our view is that this aspect of the draft report involves unwarranted or overdrawn conclusions as a result of the mechanistic application of the date comparisons. We can agree that more time is generally better than less time, but not that our procedures are seriously defective in practice.

(8) *Timeliness of field comments.*—On page 35, the draft report states that country team comments generally arrive in Washington after NAC meeting dates and occasionally after votes are taken. This statement is in error because a systematic error was introduced by GAO in performing the tabulation on which it is based. GAO personnel were apparently unaware that field telegrams are distributed directly to technicians in various agencies through normal channels. In recording the availability of cables, they therefore added an extra day to the receipt dates in Washington as furnished by Treasury, possibly under the mistaken impression that it was necessary to allow for distribution through the NAC Secretariat. The base dates for all of GAO's subsequent analysis are therefore in error.

[It should also be noted that the information we supplied for the tabulation on page 37 regarding the Malacca water supply project in Malaysia, which indicates that the Embassy cable arrived 45 days after the NAC staff committee meeting and 42 days after the NAC vote, was in error. In fact, the Embassy cable arrived in ample time 4 days before the staff committee meeting and 7 days before the NAC vote. The cable on which the tabular entry was based referred to another loan, and itself arrived prior to the relevant NAC staff meeting.]

When the arbitrary introduction by GAO of an extra day is eliminated, the tabulation will show that a majority of the 33 responses surveyed arrived on or before the date of the NAC staff meeting and were available for the meeting. Further, none of the six responses that arrived after the date of the NAC vote raised any objections to the loans. Perhaps more importantly, every one of the 33 responses arrived prior to ADB board action, so that it would still have been possible to reconsider the U.S. Director's instructions if the field comment had raised serious objections. Nevertheless, we are now considering having initial country team comments forwarded at an earlier stage keyed to NAC consideration of the monthly operations information document, to supplement the present system.

(9) *Feedback of loan information.*—On page 42, it is stated "several agency officials said they never hear of a loan again after it has been approved in the NAC meeting, yet they felt that feedback on these loans could be very helpful in considering proposals for similar loans in the future." Such comments are, of course, affected by the varying degrees of utilization of available feedback information as among individual officials. As a factual matter, the draft report should at least note that the U.S. Director does communicate to Washington the outcome of issues he is instructed to raise in the Board and that all ADB loan documents routinely include a status report on loan projects currently underway in the particular country. In cases where a second loan is proposed to a specific entity, the loan document provides Washington officials with very detailed information concerning the first loan. The draft report itself gives an excellent example of this on page 57, although the reference at that point is in another context.

(10) *Individual project comments.*—With respect to the statement on page 50 that favorable U.S. decisions on loans were made while there were still significant unresolved problems. GAO personnel may well have been misled by the broad freedom of discussion in the NAC staff committee. While proposal, not all questions raised at NAC staff committee meetings are sufficiently important to warrant delay in approval procedures. Frequently, they are requests for clarification or method or material presented in loan documents or expressions of concern about relative emphasis placed on various points. In many instances, it suffices to bring these questions to the attention of Bank management or other Directors.

In short, the mere fact that an issue was raised in the NAC staff committee, or that an issue raised in an ADB loan document was discussed in the committee, does not make that issue ipso facto a "significant unresolved question" requiring postponement of the loan.

The comment on the same page that "U.S. decisions on matters that would appear to involve purely technical and economic issues may have been overshadowed by foreign policy considerations" is purely speculative and should be dropped.

The more serious question in this part of the report is GAO's use of the details of specific project situations, ostensibly to illustrate how the U.S. management system works, but in fact to make a back-door evaluation of the projects themselves. In order to remain within GAO's own guidelines on the appropriate scope of its examination, there should be eliminated from pages 50–60 of the draft report (*a*) references to the substantive aspects of the project involved, (*b*) GAO's impressionistic observations of the present condition of one of the projects and (*c*) the unsubstantial predictions about the results of proceedings with the projects cited. This would still permit GAO to abstract and put forward whatever management-relevant lessons it believes can be learned from the examples it selects.

(11) *Defective GAO technical analysis.*—The GAO argument in pages 50–56, involving two of the four projects used as examples, employs a rudimentary approach and entails a fundamental error in analytical technique. The assertion is that the United States did not effectively object to two loans in one country that financed, respectively, "oversize trucks and underdesigned highways". The entire argument presented in the draft report, however, is in terms of possible excessive overall gross weights of trucks in relation to highway weight-bearing capacity. It should be self-evident that gross weight analysis is erroneous, and that the relevant engineering consideration is the per-axle or per-wheel load of trucks in relation to the design load of the highway. Theoretically, extremely large gross weights can be accommodated if sufficient axles and wheels are provided to spread the loan to acceptable unit values. The fact in the particular cases cited are as follows:

(*a*) The country's motor vehicle regulations allow maximum single-axle loads to 10 metric tons.

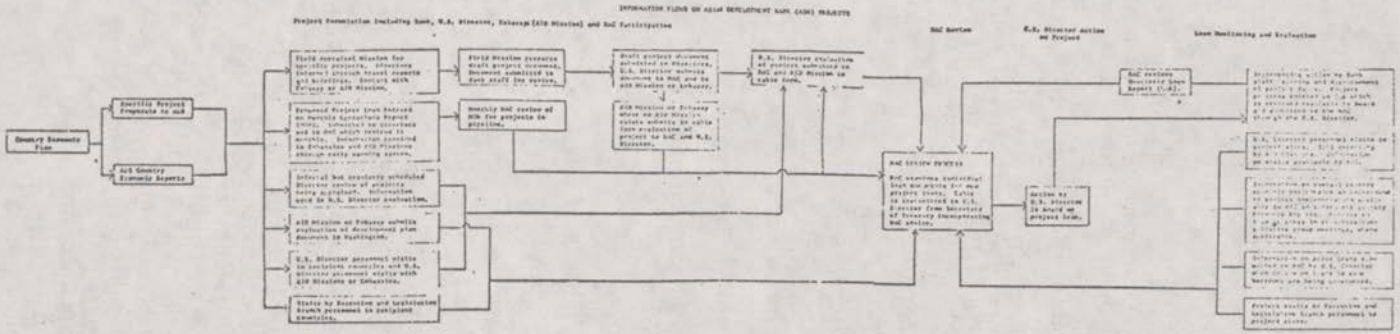
(*b*) The design specifications for the highway were 18 tons for tandem axles and 14.4 tons for a single axle, and the highway was built to these standards.

(*c*) All trucks imported under ADB financing have axle loads less than 10 tons, in compliance with national regulations.

(*d*) Actual truck axle loads in current traffic on the highway average 7 tons.

It is clear that both the ABD-financed trucks and the current mix of other trucks using the highway comply with national axle load standards, and these standards are well within the design parameters of the highway. These design parameters, while varying from international design standards, conform to national standards, were endorsed by a respected international consultant firm, and were accepted by the Bank as an adequate and economical basis for implementation of the project. Average daily traffic on the highway is about 10,000 vehicles per day, approximately 50 percent of which are trucks. The highway is thus performing very satisfactorily, and is approaching maximum capacity use, so that the Government is now considering how best to install additional highway capacity in the area.

With respect to the replending credit in Thailand cited as an example, the draft report merely notes as "uncorrected weaknesses" as of late 1969, those factors presented by the management to the Bank's board of directors. The



fact is, however, that since the Bank first established a relationship with this borrower, it has engaged in an ongoing program to help the latter improve its operations, The Bank has monitored this loan very closely and the results of its efforts began to be felt about 2 years ago. Since then, under a new general manager, the borrower's technical services have been improved, an internal reorganization has clarified lines of authority, consultants and other technical assistance were obtained, followup procedures were strengthened, and substantial progress has been realized in eliminating arrears of sub-borrowers.

Judged in the light of events, the draft report's concern seems to be a hasty judgment. This loan appears to be a rather good example, not of the wisdom of not lending whenever a borrower is found to have "unresolved problems" but of the correctness of the Bank's policy of lending and working at the same time constructively on resolving the borrower's problems. We believe it appropriate that our management system includes sufficient flexibility to support the Bank's approach to such situations as the one just cited.

* * * * * * * *

The main text mentions on page 8 that certain documents were not made available to GAO. We feel we have cooperated fully with your representatives and provided very extensive documentation. In our view, the extremely limited materials not made available to GAO were by no means critical to the preparation of the draft report. We believe your statement should acknowledge the almost complete freedom of access to materials rather than emphasize the rare exception based on legitimate grounds of protection of confidentiality of views expressed by other governments.

ANNEX 2

Mr. HENNESSY. I think we have changed the procedures enough so we have 3 weeks between the time when the loan document comes out and the time we have to vote on it.

I think there was a misunderstanding on their part. There is also an early warning system when we see a project coming down the pipeline and we ask for information about it. We ask about it when it first comes on the operational summary which may be 2 years in advance. I think we submitted to the committee copies of the early warning systems documentation and the information we get.

So we know before it comes up and we can query the bank and have an input from the aid mission. There is a time constraint which does not exist in other banks. Instead of the normal 10 days we have asked for 3 weeks in this bank.

Mr. SHRIVER. Is that enough?

Mr. HENNESSY. If we did not have the prior look it would not be enough. We track it for a 1- or 2-year period as it comes through the pipeline. I think in this context the 3-week period is enough.

Mr. PASSMAN. Do you consider this auditing system adequate?

Mr. HENNESSY. I do.

Mr. PASSMAN. Why should we not abolish all of these internal audit systems we have in America? Every agency we have has a very large internal auditing system. If you can operate funds of this magnitude without any auditing system, I do not know why we couldn't save billions of dollars by abolishing all of the auditing systems we have in every agency of Government.

U.S. PUBLIC DEBT

Let us look at the large public debt we now have.

It is going to keep increasing if we do not keep foreign aid under control. It is no reflection on you because you do not administer this program. You are just one of the secretaries who does his best to justify it.

When you are through, you take another job and another gentleman takes over.

As you stated earlier, we had to borrow this money before we could give it away. We actually have a true public debt of $1,800 billion. The public only hears that $455 billion is the public debt.

Don't be too sure of getting this aid money, because there are a lot of hurdles before you get this money. The true public debt, and you should know this better than I, is $1,800 billion.

In addition to the borrowed money which people believe is the only public debt, you must consider another 117 statutes on the books which say we will give you certain sums of money in future years for service you previously rendered and in which we created no reserves. It comes out of current revenue.

The interest on the public debt is running $26 billion annually.

Mr. HENNESSY. Somewhere around there; yes.

Mr. PASSMAN. Veteran benefits, and I supported them, are running in the neighborhood of $12 billion annually. The retired military personnel program is about $4,700 million annually. You go on and on with these statutory obligations, which are just as much obligations as borrowed money, and all we do is pass the laws making promises and borrow money to give away.

Mr. HENNESSY. If I could make a point in this regard, I think the size of the debt is a question of concern to us in the Treasury as well as everyone else.

Mr. PASSMAN. Why don't we cut it down then?

Mr. HENNESSY. One factor tends to be overlooked, and that is that as a percentage of our total production or GNP it has gone from 70 percent way down to 40 percent.

In terms of our ability to repay, it is less.

Mr. PASSMAN. The wealthier you get, the freer of debt you are supposed to get. You have no right to compare it to GNP. What if you got into a recession and the GNP dropped by 30 percent, then what argument would you use in trying to service the public debt?

Mr. HENNESSY. We would be in a very difficult situation.

Mr. PASSMAN. That is right. You argue as if you had some guarantee that things will never change.

You do have these peaks and valleys, ups and downs. We have not devised a plan to stop them. It is just a question of very, very poor management in our fiscal policy.

ADB ORDINARY CAPITAL INCREASE

Now may I ask you this question: The budget indicates that an additional authorization will be requested in fiscal 1974 for an additional U.S. contribution to the ordinary capital of the Asian Development Bank.

Could you tell the committee what will be the amount of the total authorization request and what will be the amount of the fiscal 1974 appropriation request?

Mr. HENNESSY. The 1974 request is $121 million. The authorization request is three times that because it goes over a 3-year period, or $362 million.

I am rounding it off.

Mr. SHRIVER. Has that come up yet?

Mr. HENNESSY. The authorization has not been sent up by OMB. We expect it to come up shortly.

Mr. PASSMAN. Have you familiarized yourself with any of the projects that have been financed under this program yet?

Mr. BEACH. I have had one occasion in the Philippines to have a look at an integrated project that we will be considering in the next couple of months.

Mr. PASSMAN. You have literally hundreds of projects, do you not?

Mr. BEACH. In the last year we approved 44.

Mr. PASSMAN. I mean the applications number in the hundreds?

Mr. BEACH. I don't have the specific information.

Mr. PASSMAN. A lot of these are capital investment projects and public works projects?

Mr. BEACH. Yes.

Mr. PASSMAN. Would you say you approve projects like flood control, rivers and harbors, revetments and roads?

Mr. BEACH. Yes. Certainly transportation projects.

Mr. PASSMAN. In other words, it pretty much covers the waterfront.

Mr. BEACH. Heavy infrastructure, yes.

Mr. PASSMAN. Do you have any record of how many projects have been turned down for lack of funds?

Let me put the question this way: You have ample funds on hand to fund all applications approved?

Mr. BEACH. All applications so far approved.

Mr. PASSMAN. Do you have sufficient funds on hand to fund all applications presently approved?

Mr. BEACH. I think the answer is no to that.

Mr. PASSMAN. What ones do you have pending that you don't have funds to cover?

Mr. BEACH. That have been approved, yes.

Mr. PASSMAN. Do you know of any projects that have been started which you have had to freeze the funds for lack of money?

Mr. BEACH. None that have been started.

Mr. PASSMAN. All right, you have answered the question. You do not have to elaborate. Let me say we have literally hundreds of projects in the United States almost bordering on an emergency that we have had to stop completely because of lack of funds and other instances where they put the money in budgetary reserves. I can tell you and look you in the eyes when I do it that there has never been a foreign aid project held up for lack of funds. That is one thing that is frightening. These international organizations get this money and proceed full steam ahead and members will vote for it, and yet the same projects in their respective districts are being discontinued or slowed down for lack of funds.

Has the United States entered into a formal agreement with the ADB concerning this proposed ordinary capital contribution?

Mr. HENNESSY. No, we have not. For that reason our capital share has dropped from 19 to 8 percent.

Mr. PASSMAN. We do not have any share unless we want to be gullible and give our money away.

We hope these programs can be abolished and bring some of you people home. I assume you have made it perfectly clear that any agreement is subject to subsequent examination by Congress and subsequent actions on the appropriation requests?

Mr. HENNESSY. That is correct.

After discussing this with you we made that adequately clear in this case.

U.S. SPECIAL FUNDS CONTRIBUTION

Mr. PASSMAN. You are asking for the $100 million for the special funds we cut out last year notwithstanding?

Mr. HENNESSY. I think the $100 million the Congress never voted upon.

Mr. PASSMAN. It was cut out, Mr. Secretary, and you know we cut it out.

The committee cut it out and the House backed the committee.

Mr. HENNESSY. A final bill never came to the House. It is a continuing resolution.

Mr. PASSMAN. Certainly it passed the House. Why don't you do your homework. I will bet you my job against yours that it passed the House.

Mr. HENNESSY. It passed the House but there was no conference.

Mr. PASSMAN. Certainly not, because the subcommittee, the Full Committee and the House said, thumbs down, no money. Isn't that right?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. You better start living with some of these decisions.

Why is it necessary for our country to become further involved when we take into account the said plight of our fiscal affairs? Why do you have to come in and ask for an increase?

Mr. HENNESSY. I think that is a very good question. I think in this particular case in Southeast Asia we are trying to disengage from a very large physical presence. This Bank allows us to operate there with a minimum cost with a minimum U.S. presence. I do not think you or others would suggest that the United States completely get out of business in Southeast Asia.

Mr. PASSMAN. We should bring your people back home and let you get involved in America so you will contribute to the economy rather than taking away from it. It is all right to have the Export-Import Bank because these people furnish money to finance U.S. commodities. They have a very good record in making a profit for the Government and the manufacturers. But there is no profit in this. This is outright giveaway. There is no provision for any return.

In addition to these little tidbits, and we are nickeling and diming ourselves to death, all of these nations that you have mentioned are getting aid out of other spigots, are they not?

Mr. HENNESSY. Most of the ones we mentioned are getting bilateral aid from us and other countries.

Mr. PASSMAN. And also aid that we contributed.

Mr. HENNESSY. In some cases yes, and in other cases, no. In all cases the bilateral amounts have gone down. This Bank has picked up more in Korea and we diminished our own contribution.

Mr. PASSMAN. Korea is waxing fat with wealth, they have a very favorable foreign exchange balance, they have a very strong economy, and they are a very good customer of ours. I know this year when we had a rice sale to Korea they bought 150,000 tons of rice for spot cash. It gives you an idea when the chips are down that a lot of these people have adequate reserves.

Mr. HENNESSY. I think Korea is a case that has been successful.

Mr. PASSMAN. Let us go into Vietnam where we have a very high program.

Mr. HENNESSY. Up to now very little has been, if any, for economic development.

Mr. PASSMAN. What do you mean economic development? Would you call building water sewers, tanks, railroad lines, brick buildings, new courthouses, and acquiring land for people economic development? That is what you are doing in Vietnam. I am embarrassed to have to ask you to state factually for the record that is true.

Mr. HENNESSY. It has happened in economic development, yes.

Mr. PASSMAN. You just indicated it was otherwise. You have these AID programs pouring in by the hundreds of millions. Incidentally, I am going to support the administration as far as I can on these items. Do you realize that both Korea and Vietnam have said categorically that they are willing to accept future aid on a loan basis and not a grant basis?

Mr. HENNESSY. I would hope so.

Mr. PASSMAN. Have you recommended to our President and the rest of the executives to amend the budget request and come in and ask money for loans rather than grants? They are ready right now to switch to loans from grants for the major programs.

Mr. HENNESSY. In the Asian Bank all they get is loans. I think their ability to pay back loans is increased. I am not sure of Vietnam.

Mr. PASSMAN. I think in all spigots of foreign aid we have some $18 billion in requests this year.

Mr. HENNESSY. Your accounting method and ours traditionally differ.

Mr. PASSMAN. I am talking about aid and assistance, where we advance our money either on long term, short term or possibly medium term basis for U.S. aid.

Am I in the ballpark with that figure?

Mr. HENNESSY. Not unless you add authorizations and appropriations.

Mr. PASSMAN. I am talking about the requests contained in the budget.

Mr. HENNESSY. Both authorizations and appropriations.

Mr. PASSMAN. You do not know whether you are going to get an authorization.

I am talking about the amount requested, proposed in the budget itself.

Mr. HENNESSY. Both for authorization and appropriation.

Mr. PASSMAN. As we rewrite the record now we find that the foreign aid program has cost us net about one-quarter of a trillion dollars, about $250 billion and still going strong. You noticed in the paper yesterday where the large nations of the world are getting ready to beat the devil out of the dollar again. Devaluation is right around the corner, isn't it?

Mr. HENNESSY. It certainly is not.

Mr. PASSMAN. How do you know it is not when the dollar took a good beating yesterday on the European markets?

He shakes his head one way, and how are you going to answer? You answered in the affirmative, did you not?

Did you read it?

Mr. BEACH. I read the dollar was under pressure.

Mr. PASSMAN. We had great reductions in many instances. It is a frightening deterioration.

Mr. BEACH. The headlines.

Mr. PASSMAN. They say categorically we have lost the ability to manage our fiscal affairs. It is being freely advocated that right around the corner we are going to again have to devalue the dollar.

Mr. HENNESSY. I would not want to give any substance to that.

Mr. PASSMAN. I don't want it to happen. You people said the same thing last year but a few weeks later it happened just the same. We can speak the facts because these kinds of programs are causing the dollar deterioration. You people are nickeling and diming us to death.

You scattered the foreign aid requests all over the budget and built these multilateral organizations up. You have been able to hoodwink the Congress in the past under the premise that the requests for the international financial institutions were authorized and you went out

and made commitments and then you said we have no alternative but to provide the money.

If I remember correctly, we were told last year that the $100 million for the U.S. contribution to the Special Fund of the Bank was strictly voluntary and was entirely a U.S. decision and did not involve any negotiations with other nations. Is that still correct?

Mr. HENNESSY. There has never been any legal commitment.

Mr. PASSMAN. There is no negotiation involved and we can either provide the funds or not provide them.

Mr. HENNESSY. There is no legal commitment. That is all I am saying.

Mr. PASSMAN. There certainly would not be any moral commitment.

Mr. HENNESSY. I touched on this in my opening statement on page 12.

ASIAN DEVELOPMENT FUND

Mr. PASSMAN. That is good. I notice from a letter from the Treasury Department that there have been discussions by the Bank to replace the voluntary special fund contribution system with a formal agreement special fund contribution system which would require each country to agree to a specific contribution the way other institutions operate, is that correct?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. Then that is leading us into some of these heavy involvements we have with the International Development Association and the Inter-American Development Bank and some of the others.

Isn't that really what we would be getting into?

Mr. HENNESSY. Or it could lead us into a situation where it is advantageous to the United States.

Mr. PASSMAN. That is your opinion and not mine. I said would that lead us into that type of situation where we would get involved where you would argue we could not cut it because there has been an agreement with other nations? Wouldn't that be the situation that you would be leading us into, regardless of your opinion or mine?

Mr. HENNESSY. What we would get into is a situation where we would know how much others are putting up and others would know how much we are putting up.

Mr. PASSMAN. That is a good statement.

Did I make a statement of fact? That would lead us into the same category that we have in the IDA, and the Inter-American Development Bank?

Mr. HENNESSY. If you are referring to the aspect that everyone agrees to a certain amount, it is a question of when would we involve Congress. I think you made it pretty clear before we take up any new commitments, no matter what they are, that we have to have full consultation and it has to be clear it is subject to congressional appropriation.

ORIGINAL U.S. ORDINARY CAPITAL SUBSCRIPTION

Mr. PASSMAN. Is it not true that the United States borrowed from the American people $140 million in fiscal year 1966 and gave it to the Asian Development Bank as part of our contribution?

Mr. HENNESSY. Our original capital subscription.

Mr. PASSMAN. Let me ask the question again.

We want a direct answer. Is it not true that the United States borrowed from the American people $140 million in fiscal year 1966 and gave it to the Asian Development Bank as part of the U.S. contribution?

Mr. HENNESSY. No. We paid in a small percentage of that and the rest was a U.S. Government guarantee which allowed them to borrow from private bankers.

Mr. PASSMAN. We appropriated $140 million.

Mr. HENNESSY. Most of which was guarantee capital for which the U.S. Government did not have to borrow.

Mr. PASSMAN. I say we appropriated $140 million.

Mr. HENNESSY. That is correct.

Mr. ROYBAL. It is not clear to me whether or not the money was appropriated.

Mr. HENNESSY. $40 million was paid in and the balance of $100 million was callable capital which allowed the Bank to float bonds on the world capital market.

Mr. PASSMAN. Then the full amount of $140 million was appropriated.

Mr. HENNESSY. It was appropriated but it had no budgetary impact. Unlike OPIC where only a small percentage of what they actually go out and contract is appropriated, in this institution 100 percent of what the United States could ultimately be responsible for if they defaulted on all their bonds and every other country defaulted on their obligation, there would be the amount the United States would have to pay.

Mr. PASSMAN. Let us put it in the proper perspective because it has been testified to in previous years. You asked for an appropriation of $140 million and the Congress did appropriate $140 million.

Mr. HENNESSY. That is correct.

Mr. PASSMAN. It was stated at the time that the other nations would not feel safe if we just gave the credit of the United States so they wanted the money appropriated in case of any defaults and they could immediately draw the money down. I want to ask you this question: I believe that the United States had to pay about 6-percent interest on funds borrowed at that time to give to the Asian Development Bank, is that correct?

Mr. HENNESSY. You are looking at the average cost of borrowing for the U.S. Government at that time. I am not sure whether it was 6 percent or not.

If you are suggesting——

Mr. PASSMAN. I am asking questions. I am not suggesting anything. I am making a record so as to establish our stupidity. I think you know what I am doing.

Don't get off the subject because we will return to it. I believe that is in the general neighborhood, the 6 percent that we were paying to borrow money in 1966?

Mr. HENNESSY. I do not have the figures at hand. It does not seem out of line. For the general cost of United States borrowing to finance the budget that figure sounds in line.

Mr. PASSMAN. Is it not also true that shortly after the United States provided her paid-in contribution to the Asian Development Bank, the Bank turned around and invested this in U.S. Government securities

which our Government had to pay an additional interest rate of 6 percent?

Mr. HENNESSY. While they were waiting disbursement the Banks did leave the funds in deposit.

Mr. PASSMAN. If you people had been on the ball you would have said we need this money but we will pay it in 18 or 20 months hence rather than borrow this money at 6 percent, turn it over to the Asian Development Bank and borrow it back from them for 6 percent.

Isn't that the equivalent of 12 percent with no return?

Mr. HENNESSY. At the outset the decision was made that the Bank did not have any income because the loans did not go out yet.

Mr. PASSMAN. They made a terrific profit that year. They borrowed the money in the general area of 6 percent.

We turned it over to them and borrowed it back and paid them another 6 percent, which made 12 percent. Isn't that the way it comes out?

Mr. HENNESSY. I am not sure of your figures.

Mr. PASSMAN. Let us check it.

Mr. HENNESSY. You can check the figures but your method of accounting, you can claim we borrowed to pay it in. I can say that it came out of general budgetary receipts.

Mr. PASSMAN. We had to pay 6 percent to borrow it.

You said for the record we had to borrow the money. Assuming we borrowed it because we had a tremendous deficit that year and paid 6 percent, we turned it over to them and borrowed it back at another 6 percent. We are paying 12 percent and not getting any of the money back.

Mr. SHRIVER. Mr. Chairman, I presume that year we had a lot of money coming in to the Treasury from my taxes and your taxes and everybody's taxes. Which dollars are you talking about?

Mr. PASSMAN. We had a tremendous deficit that year.

Mr. SHRIVER. We have it every year.

Mr. PASSMAN. Two wrongs don't add up to make a right. My dear friend, in the same year, you had projects you wanted funded you did not get funded and I had some I did not get funded.

Mr. SHRIVER. In fact, recently many cities, some in my own district, used their revenue-sharing money to buy U.S. Government bonds.

Mr. PASSMAN. If I may say humorously there is no such thing as revenue sharing. It is sharing the borrowing. That is about right, is it not?

Mr. HENNESSY. No comment.

Mr. PASSMAN. That is a yes. That is good enough. I do not believe the United States would be eligible to receive loans from the Asian Bank under the present charter.

Mr. HENNESSY No.

STAFF LOAN PROGRAM

Mr. PASSMAN. It is a one-way street. We do not like to do this but I think it is good for the record. Possibly by making the record we certainly hope you go out with a strong determination that the present Japanese President who succeeded the other Japanese President of ADB won't get into this. I would like to read from page 209 of the fiscal year 1971 hearings concerning the loans the Asian Development Bank made to their employees:

Mr. PASSMAN. Do you know how many loans were made, to how many employees and in what amount?

That is secret information of the President only, is that correct?

Mr. ZAGORIN. The specifics.

Mr. PASSMAN. It is secret information specifically for the President of the Bank, is that right?

Mr. ZAGORIN. Yes, sir.

We have to admit as fellow Americans and taxpayers this is quite an arrogant attitude, is it not?

Mr. HENNESSY. That information was supplied for the record, Mr. Chairman.

Mr. PASSMAN. I asked if you agree with me. I am not trying to put words in your mouth.

Wouldn't this appear to be a rather arrogant attitude on the part of the Bank when our own Director was denied that information?

I am reading the direct questions and the direct answers from the record. Did you read that part of the record?

Mr. HENNESSY. I certainly did.

Mr. PASSMAN. I am asking the question for this reason. What would be your position if you found that the present President of the Asian Development Bank had the same attitude? Would you challenge him?

Mr. BEACH. I think we certainly would and we did in this case.

Mr. PASSMAN. Nevertheless, I did quote this information correctly, and if the situation was corrected, I believe you would have to give this committee credit for it. Things like this are somewhat frightening. There is no use for us to run from the facts. I would be in hopes if that attitude should prevail that you will try to disagree and in some way straighten it out.

Mr. BEACH. We have had a very pleasant and very cooperative 5 months with the new president, sir.

Mr. PASSMAN. I wish you well. However, I don't wish you well in giving away the American taxpayers' dollars.

The United States has not contributed to the special fund of the Bank, is that right?

Mr. BEACH. That is correct.

Mr. PASSMAN. When was the first request made for U.S. contributions to the special fund of ADB?

Mr. BEACH. If I remember correctly, that was first raised in 1967.

TYPES OF PROJECTS FINANCED

Mr. PASSMAN. I think we mentioned earlier that funds out of this Bank covered pretty much any type of capital investment or public works project such as flood control, river or harbors, or revetments.

Mr. BEACH. Heavy infrastructure.

Mr. PASSMAN. Define heavy infrastructure.

Mr. BEACH. The Bank has emphasized electric power generation and distribution, transportation, which means highways. We have gotten into construction of dams, irrigation projects.

Mr. PASSMAN. Some of those already underway.

Mr. BEACH. Yes.

Mr. PASSMAN. Some of them brought to completion.

Mr. BEACH. Yes.

Mr. PASSMAN. How old is the Bank?

Mr. BEACH. The Bank began business at the end of 1966. It is almost 7 years old.

Mr. PASSMAN. Here is why I asked that question. We have a double standard. We have no control over these international organizations. We never know what project in what country, what amount, or for what purpose the funds will be spent until after the fact. As we come here to America under the Corps of Engineers, we deal with the same projects that you just mentioned for the record being financed by the Bank. Do you know for projects in the United States it takes 17 years, 11 months from the time this project is started until it is completed?

A chart appears on page 204 of the Public Works hearings for fiscal year 1973, indicating this time lapse. This is how long it takes, and we have not found any way to shorten it. Before you get any money for these projects in the United States, you go all the way from the bottom to the top. Unless you have a favorable proven benefit cost ratio, you do not get the project authorized. Would you have a look at this chart so you know we do have a double standard, one for well-supervised, well-engineered projects, and one for foreign projects, where if there is any supervision at all, it is probably limited. Read this chart.

Mr. BEACH. May I make this comment?

Mr. PASSMAN. Certainly.

Mr. BEACH. The Bank has a professional staff of qualified engineers and so forth that are very much involved in the initial stages of projects.

Mr. PASSMAN. I did not say they were not involved. Don't try to refute what I said. In America, the same projects that you do in foreign countries in 4 or 5 years, require 17 years, 11 months to do in the United States. What kind of a system do they have that is so superior to ours?

Mr. BEACH. I am not totally familiar with our system.

Mr. PASSMAN. I want to be helpful. Don't you think it would be good to study the system that we use in this country before you get involved in others?

This is a respectful suggestion. You ought to read how we get the projects in this country. These are not my figures. These are the Corps of Engineers. That is the average time required for finishing the projects.

That is for all projects in all 50 States. I don't know how you people with a different type of engineering staff could do it in a third of the time. If you can, then we need the engineers.

Mr. HENNESSY. They are different types of projects.

Mr. PASSMAN. Flood control, rivers and harbors, and dams. That is what we are building all the time.

Mr. HENNESSY. We will submit for the record the distinction between the types of projects.

Mr. PASSMAN. I do not know whether you will or not. Let us see what you are going to insert for the record. I asked you categorically if this was the same type of project, and you said yes.

I said, does it cover flood control, rivers and harbors, and dams, and you said yes. If you have a different type of a project, why don't you give us the information now.

Mr. HENNESSY. I think we have to analyze the two types of projects The construction of the Grand Coulee Dam takes one time period, and

the construction of a dam on a small river takes a different time period.

Mr. PASSMAN. You always have to have an answer, but you don't erase facts.

Mr. SHRIVER. You do not have to get the approval of any elected group of people.

Mr. HENNESSY. Once the funds are approved, they disburse it as fast as the engineering goes through.

Mr. SHRIVER. That takes time, but it gives some cushion for the people putting up the money.

Mr. PASSMAN. If it is good for America to use this type of process to get these projects started and completed, and it has been in effect since we have had this type of project, then I am going to have to endorse the Corps of Engineers as being a good outfit, because I work with them all the time. I don't find many mistakes they made. I believe 1971 was the first year since 1888 that we had a trade deficit. I think it was in the neighborhood of $2 billion. We thought this would be a one-time proposition. But in 1972 this trade deficit reached $6,400,000,000. I believe it is frighteningly high at this time, is it not?

Mr. BEACH. I do not know what the current figures are.

U.S. BALANCE-OF-PAYMENTS PROBLEMS

Mr. PASSMAN. I am talking about the trade deficit in the first two instances and the balance-of-payment deficit in the third. It is one of the highest.

Mr. BEACH. The trade deficit in 1972 was the highest.

Mr. PASSMAN. You only had two since 1888 and that is 1971 and 1972. With respect to your balance of payments, didn't it reach an alltime high last year?

Mr. HENNESSY. It was higher in 1971. The basic balance improved $20 billion. It went from $30 billion deficit to $10 billion deficit.

Mr. PASSMAN. The first quarter of this year, what is the rate?

Mr. HENNESSY. The first quarter this year ran I think close to $10 billion because of the speculative capital outflow that took place in February.

Mr. PASSMAN. That means you send many more dollars abroad than you bring home. That is in simplified terms.

Mr. HENNESSY. In simplified terms, yes.

Mr. PASSMAN. Most of us when we go abroad see in many places they are actually running from the American dollars. They do not care whether you spend dollars with them or not. There are some places you have to discount the dollar to pay the hotel bill. In other places they will not take the dollar and you have to exchange it for other currency to check out of the hotel.

Mr. HENNESSY. I think the dollar is convertible in every country.

Mr. PASSMAN. I am talking about hotels. The ones that will take them want them at a discount.

You do not mean to tell me you are not familiar with what has been going on in the past 6 or 7 months?

Mr. HENNESSY. I am very much involved and aware of what is going on the past 7 months.

Mr. PASSMAN. You didn't answer as though you knew. I just came back from a trip and I found that prices were about 20 percent higher than in America.

[Discussion off the record.]

OBJECTIVES OF FOREIGN AID

Mr. PASSMAN. We refer to these Southeast Asian nations as developing nations, do we not?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. We would assume if they are developing nations that sooner or later they will become self-sufficient and have substantial foreign exchange credits or reserve surpluses.

Mr. HENNESSY. Yes. That is certainly the objective, yes.

Mr. PASSMAN. If that objective cannot be reached, then it is money down the drain, is it not?

Mr. HENNESSY. If you do not achieve the objective which you set out to achieve.

Mr. PASSMAN. Our objectives are to help these people build strong economies and become self-supporting.

Mr. HENNESSY. That is correct.

Mr. PASSMAN. If those objectives cannot be met then it is water down the drain. If those objectives are not obtained in the future?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. Let us look at the record. I believe after World War II that the Congress in its wisdom decided that all aid would be on a grant basis rather than a loan basis. I think we disbursed in the European nations $32 billion on a grant aid basis.

Does that fit the figure you have in mind?

Mr. HENNESSY. Roughly. Here again you are the greater expert than I will ever be.

Mr. PASSMAN. I would like for you and I to reach an agreement. You must be a good lawyer. You try the case by the answers and not by the questions. If we had used the IDA formula for those $32 billion which would have been a loan with a 10-year-grace period and pay 1 percent for 10 years and 3 percent for 30 years, we would have been in the second payback period and getting 3 percent a year, would we not?

Mr. HENNESSY. We would be in the third phase.

Mr. PASSMAN. Do you think the European nations with their great wealth and their very strong economies could pay back 3 percent a year on $32 billion had it been on that basis?

Mr. HENNESSY. I think they certainly could have.

Mr. PASSMAN. I appreciate that.

Now let us get to the point.

I happen to know that Korea, Vietnam, Laos and Cambodia are willing to accept the aid for the major programs on a loan basis. On your military and economic aid they are willing to accept it on a loan basis on a long-term payout. If the leaders of those countries are agreeable to that, don't you think we should be?

Mr. HENNESSY. I would certainly think so.

Mr. PASSMAN. Thank you.

[Discussion off the record.]

NUMBER OF BANK EMPLOYEES

Mr. PASSMAN. I mention this to you because you are in the Treasury Department. If we use Europe as an example and had made the aid on concessionary loans, rather than grants, we would have been

drawing on some of those loans. How many people does the Asian Bank have on board at the present time?

Mr. BEACH. Currently 600 in all; 200 professional staff.

Mr. PASSMAN. What percentage of these employees are U.S. citizens?

Mr. BEACH. 20 U.S. professional staff out of 200. Ten percent.

PROCUREMENT SHARES

Mr. PASSMAN. If we look at the total amount of disbursements for commodities by the Bank, 8 percent comes to the United States and 56 percent goes to Japan for a total of 64 percent.

Mr. BEACH. The figures I have are 8 percent to United States and 56 percent to Japan.

Mr. PASSMAN. That accounts for 64 percent. Where does the other go?

Mr. BEACH. United Kingdom, Germany, Netherlands, France, Italy, some Korea, some Taiwan, Canada.

TERMS OF LENDING

Mr. PASSMAN. What are the average terms of the Asian Development Bank?

Mr. BEACH. For hard money, the average rate has been running about 7.2 percent, with a 19-year term, which includes a 4-year grace period. For the soft loans, we have a 2½ percent average rate, and a 23-year term with a 6-year grace period.

MAINTENANCE OF VALUE

Mr. PASSMAN. I would assume this extra $8,571 thousand authorization request for callable capital is for the maintenance of value adjustment.

Mr. HENNESSY. The eight, yes.

Mr. PASSMAN. Let me ask you calmly as fellow Americans and taxpayers: Does that not frighten you? We look at these commitments we made to these nations and the tremendous amount of money that has been built up in reserves. It is a gift, come and get it, it is free. When they come to get it, they say this $100 million you gave us has lost 10 percent of its purchasing power since you gave it to us. You have to give us another $10 million so it will have the same value as when you made the gift. Isn't it about that simple?

Mr. HENNESSY. I think the maintenance of value provisions over a period of time have protected the United States.

As a matter of fact, maintenance of value obligations of other countries relating to paid-in capital of the lending institutions and to the IMF amount to $10 billion in all institutions.

Mr. PASSMAN. You always have an answer. The devaluation of the dollar is why you are asking for the maintenance of value payment, is it not?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. This goes across the board, does it not?

Mr. HENNESSY. To every country who is a member of these institutions.

Mr. PASSMAN. For the commitments we made and the commitments you are asking for now you have to increase it simply because the dollar will buy less. Isn't it that simple?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. What kind of mess are we getting this country into? Do you happen to know, since you are with the Treasury, the total amount of money requested for fiscal year 1974 for the maintenance of value payment?

Mr. HENNESSY. $2 billion, roughly.

Mr. PASSMAN. Let me ask you this: How many other nations have increased their contributions because of the loss of purchasing power of their currency?

Mr. HENNESSY. Sixty countries over time.

Mr. PASSMAN. I am not talking over time. I am talking this year. That is when we kicked this over.

Mr. HENNESSY. All those who devalued which was most of the world, except the European countries.

Mr. PASSMAN. I am talking about the contributors to this fund.

Mr. HENNESSY. We can get the figures. I don't have them at hand.

Mr. PASSMAN. It is part of the hearings. We are going to have to fatten the kitty by over $2 billion to make up for the loss of purchasing power on the dollars we committed, is that correct?

Mr. HENNESSY. Most of that is not in any budgetary form. That is pretty much balanced by an increase in our assets such as our gold and holdings.

Mr. PASSMAN. You have to increase it do you not, by the $2 billion?

Mr. HENNESSY. A great deal will never be disbursed. It is an increase in guarantee capital.

Mr. PASSMAN. If it is discharged. Your World Bank is disbursing the money, are they not?

Mr. HENNESSY. Yes.

Mr. PASSMAN. The International Development Association, the Asian Development Bank, the Inter-American Development Bank are all disbursing money all the time?

Mr. HENNESSY. Yes. But the International Monetary Fund——

Mr. PASSMAN. I didn't mention the International Monetary Fund. You people go on the defense and I don't blame you.

Mr. HENNESSY. We have to get the facts for the record.

Mr. PASSMAN. You give them $100 million but when they come to get it, they say that $100 million will not buy as much as it did when you gave it to us, so we want you to give us another $10 million. But we increase our public debt by the total and not just $100 million, isn't that right?

Mr. HENNESSY. Yes, sir.

Mr. PASSMAN. We pay interest if it is borrowed on the total.

In your justifications you indicate that the proposed request for $108.6 million would have to be increased when the legislation on the maintenance of value has passed the Congress; is that true?

Mr. HENNESSY. Could you repeat that?

Mr. PASSMAN. In your justifications you indicate that the proposed request for $108 million for callable capital would have to be increased when legislation on the maintenance of value has passed the Congress?

Mr. HENNESSY. Yes from $108 to $120 million.

Mr. PASSMAN. But you said a while ago the $100 million request for callable capital becomes $108 million because of the loss of purchasing power at the time you made the commitment.

Mr. HENNESSY. It includes both the Smithsonian devaluation and the one of February 12 and that is correct.

It is not the purchasing power. It is when the par value of the dollar in terms of gold is actually changed by the Congress.

INCREASE OF ORDINARY CAPITAL

Mr. PASSMAN. You have to come back and ask for additional money. You increase the public debt not only with the original commitment but the maintenance of value addition. In your justification you indicate that the Board of Directors of the Bank increased the authorized capital stock and requesed all member countries to subscribe to their appropriate share. The justifications go on to say that the U.S. Government did not vote on this resolution. However, enough members had subscribed to bring the increase into effect without U.S. participation. Is that correct?

Mr. HENNESSY. That is correct. That concerns us greatly.

Mr. PASSMAN. Even though the United State did not vote for this increase in capital stock, is it bound by the decision of the other members? Not legally, of course. You know it is not legal.

Mr. HENNESSY. Not legally.

Mr. PASSMAN. But morally.

Mr. HENNESSY. If we want to leave our share at 8 percent which is at a level of influence which is undesirable.

Mr. PASSMAN. If it was 1 percent, you could still maintain your Director, could you not?

Mr. HENNESSY. I do not think it would be acceptable to others at that level. It would be almost ridiculous for the United States to do that.

Mr. PASSMAN. It looks to me like that is our decision. I hate to think that other nations are making those decisions but it is quite evident they are. On the balance sheet as of December 31, 1972, you indicate that the Bank has an ordinary reserve of $31 million. Could you please tell the committee what this reserve is?

ORDINARY RESERVES

Mr. BEACH. The reserve has come from net income accumulated through past operations.

Mr. PASSMAN. Why isn't the reserve plowed back into the capital accounts?

Mr. BEACH. It is plowed back through technical assistance grants and loans.

Mr. PASSMAN. Are you telling me it is plowed back into the capital account?

Mr. BEACH. Yes.

Mr. PASSMAN. Why is it set up separate if no disbursements are made out of it?

Mr. HENNESSY. That is the ordinary reserve out of the Bank out of which they make new technical loans and assistance grants.

Mr. PASSMAN. This is not obligated. This $31 million reserve is unencumbered?

Mr. HENNESSY. If you add up all the liabilities and assets you see that the Bank does have some unobligated funds.

Mr. PASSMAN. I am asking you about this particular fund.

Mr. HENNESSY. If you consider that unobligated funds come out of capital.

UNOBLIGATED FUNDS

Mr. PASSMAN. What are the unobligated funds as of the last statement?

Mr. BEACH. The last statement, we had on hand resources amounting to about $679 million and we had obligated or we had loans of $724 million. We had at the same time unused borrowing authority of $137 million.

TRAVEL EXPENSES

Mr. PASSMAN. Let me ask you this: The nations are pretty much clustered in the particular area where the Asian Development Bank operates.

Mr. BEACH. We go from Indonesia to Korea from Afghanistan to the Philippines. That is a considerable distance.

Mr. PASSMAN. With the exception of one or two, you would refer to them being clustered in that general area.

Mr. BEACH. In the geographical area, yes.

Mr. PASSMAN. Do the people, both business and governments, know pretty well the purpose of the Asian Development Bank? Are nations and businesses and bankers in the nations who are recipients of the Asian Development Bank familiar with its operation, where it is and the type of loans they make?

Mr. BEACH. I would say generally they are familiar with it.

Mr. PASSMAN. I would assume so. I would like to ask this question: On a comparative statement of income and expenses, you indicate that $140,424 was spent for travel for the Board of Directors and $1,177,460 was spent on travel for the staff in 1972.

Would you tell the committee why these staggering amounts were spent?

Mr. BEACH. Yes, I could, Mr. Chairman. Let me take the Board of Directors, first. That figure is broken down into three specific categories. One is called appointment travel. That is simply moving the individual from his home to Manila. The second is termination travel; if the individual leaves the Bank, that is. Third is any type of business travel that occurs there.

In 1972 we had a meeting in Vienna and Board members attended that. If I could then talk about the staff travel, we follow the policy of having all of our people domiciled in Manila. We do not have on location a regional office of the ADB in Korea or in Indonesia or something of this sort. Consequently there is a great deal of travel as a result.

REPRESENTATIONAL EXPENSES

Mr. PASSMAN. Have fun, I don't blame you. It is easy to get and you are way out there unsupervised, so have fun. You might as well

spend it just as some of the others. On the same statement you indicate $41,772 was spent in 1972 on representation expense only.

Mr. BEACH. Yes.

Mr. PASSMAN. You must have had some good representation.

Mr. BEACH. If I can make a comment or two on that. We spent of that $41,000, Mr. Chairman, $27,000 in Manila, and that is used——

Mr. PASSMAN. Representation allowance we are taking about.

Mr. BEACH. Yes.

Mr. PASSMAN. That is for booze, and I am sure they must buy good brands.

Mr. BEACH. I would think so.

Mr. PASSMAN. I would think so.

Mr. BEACH. That includes catering services and food.

Mr. PASSMAN. That is a lot of representation allowance for this type of operation. As I say, it comes easy and goes easy. All I can do is make the record.

Mr. BEACH. If I may make a point.

Mr. PASSMAN. Sure.

Mr. BEACH. We have certainly taken your concern to heart and we have been after the Bank repeatedly in terms of holding down the representation allowance. I think in terms of holding at a level, Mr. Chairman, even though we might not be happy with the level. We have been effective in that respect. The Bank has grown considerably over the past 5 years and we have kept the figure at that level.

Mr. PASSMAN. Yes, sir. You really had some high-fallutin things going on out there until we got on top of it.

You are familiar with that. You read the hearings of 5 years ago.

Mr. BEACH. I read the past hearings.

Mr. PASSMAN. I wonder if they straightened up. I cannot imagine they changed their ways.

Mr. BEACH. I don't believe there are any hidden funds.

Mr. PASSMAN. Are you familiar with the type of information they submitted to the committee several years ago with respect to expenditures.

Mr. BEACH. I cannot say I am.

Mr. PASSMAN. You had representation allowance for every category. It was frighteningly high. They said we will straighten it out. The percentage of your total earnings doesn't indicate it has been straightened up. I would say it is a pretty good indication that for the amount of volume you are doing, you are absorbing an awful lot of profits in representation allowance and travel and the expense of the Board. You know we have to borrow this money, and we do not know how we are going to pay it back. It would appear to me that there should be some way to disburse these approved loans without bringing these people in, fatten them up, and spend all that money on good booze. What is the representation allowance of the Export-Import Bank? They are worldwide. Let us give you an idea how extravagant this little operation is. I think it is a good outfit. The Export-Import Bank is a much larger operation than yours, is it not?

Mr. BEACH. We do a different type of business, sir.

Mr. PASSMAN. I know you do. They make people justify the need for funds, and you give it to everybody who comes in.

Mr. BEACH. I disagree with that.

Mr. PASSMAN. It follows, nevertheless, that the weaker the credit, the easier it is to get them to come in and ask for it. That is obvious. The Export-Import people operate a bigger business than you do in about four times as many nations. Do you know what their representation allowance is, $18,000 annually? You and I know this is excessive for the ADB. Come easy, go easy. Could you tell the committee how much the Bank spent for consultants in 1972?

CONSULTANT EXPENDITURES

Mr. BEACH. I think we have that figure here.
Mr. PASSMAN. I hope you do. That is part of the examination.
Mr. BEACH. $264,000 in 1972.
Mr. PASSMAN. You really had some consultants aboard, didn't you?
Mr. BEACH. We employ a great many American consultants.
Mr. PASSMAN. 264,000 consultants.
Mr. HENNESSY. $264,000 worth of consulting fees.
Mr. PASSMAN. I asked you how many consultants did you have?
Mr. BEACH. I will have to get those figures for you.
Mr. PASSMAN. What is the highest price consultant you have?
Mr. BEACH. That is another question I will have to do a little digging on.
[The information follows:]

The maximum daily remuneration for consultants of the Asia Development Bank is $125 per working day. The total number of consultants employed during calendar year 1972 was 54.

Mr. PASSMAN. Gentlemen, we will recess until 10 o'clock tomorrow morning. The committee is adjourned.

WEDNESDAY, MAY 23, 1973.

GENERAL FINANCIAL SITUATION

Mr. PASSMAN. The committee will come to order.
We shall continue our examination of the budget request for the Asian Development Bank.
Mr. Secretary, holding a responsible position with the Treasury, observing as I do the deplorable and frightening situation that we have gotten ourselves into with our fiscal policy, recognizing that there are $80 billion floating around the world in excess of other nations needs to meet their payments in industry, and knowing that we have become addicted to spending money we don't have for things we don't need, trying to be everything to everybody everywhere, do you have any knowledge that you could impart to a distressed, frightened Member of Congress on how this thing could be brought under control?
Mr. HENNESSY. We are not unaware of your concerns. I think we share many of the same concerns. We are in a very difficult period in U.S. economic history and I think you recognize it and have brought your attention to bear on it.
On the other hand, I do not believe that the United States can totally walk away from a certain level of international commitment. I think what we are talking——

Mr. PASMAN. Who has even suggested that?

Mr. HENNESSY. No one has suggested that.

Mr. PASSMAN. Don't imply it has been suggested. I do want to get an answer which would help me to reconcile some of these frightening facts.

Mr. HENNESSY. I would say beginning with the hearing some 2 years ago when more than ever you emphasized your concern on these points, we have been in the posture of trying to reduce the U.S. percentage share in these institutions. I understand that alone is not your concern. Your concern is also the absolute level of how much money we have put in.

Mr. PASSMAN. We have not reduced our share. Foreign aid is getting bigger every year. If you look at the requests for multilateral international organizations today compared with 5 years ago, it is 2½ times larger.

Mr. HENNESSY. As against 5 years ago, I think you are correct.

Mr. PASSMAN. What I want to know, what can we do to bring this thing under control other than just stop appropriating money?

You certainly agree with me that there are $80 billion floating around over the world, short-term credit now due. We don't have anything to redeem the $80 billion with, and that is why foreign nations and people are running from the dollar.

Am I using that correctly, $80 billion?

Mr. HENNESSY. Of reserves held by foreign governments.

Mr. PASSMAN. Wait a minute. Foreign governments and foreign nationals.

Mr. HENNESSY. Yes.

Mr. PASSMAN. Of this amount, and in your area, Japan alone as of February 28 holds $20 billion U.S. dollars.

Mr. HENNESSY. Yes.

Mr. PASSMAN. As we brought out yesterday, those people are so clever and recognize so completely that we have lost control of our fiscal affairs, that with all the tremendous surplus they have they turn around and buy our commodities, like airplanes, on their own terms so as to be able to repay it with cheap dollars.

As your associate said yesterday, in recent years the dollar has been devalued, as we compare it to Japanse yen, by 35 percent. Is that correct?

Mr. HENNESSY. That is correct.

BENEFITS TO UNITED STATES

Mr. PASSMAN. That is a frightening situation.

What real tangible results would benefit the United States by financing what is pretty much a Japanese outfit, the Asian Development Bank? Especially when we recognize that this money is going into nations where we already have a fantastically high aid program.

In Vietnam you have hundreds of millions of dollars annually going in under the bilateral programs. What can we accomplish?

What good for America are we going to get out of continuing to put money into the Asian Development Bank? Give me a brief answer.

Mr. HENNESSY. On the soft funds of $100 million, that will finance $100 million of U.S. exports.

Mr. PASSMAN. Eight percent of the total is going out.

Mr. HENNESSY. In that $100 million that we have before you——

Mr. PASSMAN. Following up that question. If any of this money is repaid, it goes to the Asian Development Bank and not to the U.S. Treasury; is that a statement of fact?

Mr. HENNESSY. That is a statement of fact.

Mr. PASSMAN. That is what worries me. It is a one-way street.

Mr. HENNESSY. We only get it back when the Bank is dissolved.

Mr. PASSMAN. No plans to dissolve it?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. It is a one-way street. The money goes out. If we compare that to our bilateral programs like the Export-Import Bank, the AID Development Loan Fund, that money is paid back to the United States, isn't it?

Mr. HENNESSY. The money flows back to the Export-Import Bank the same way it flows back to the Asian Development Bank.

Mr. PASSMAN. You know very well the Asian Development Bank is not an American program. The Export-Import Bank is an American bank?

Mr. HENNESSY. Yes, it is.

Mr. PASSMAN. Isn't that true with the Development Loan Fund?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. We cannot continue to take this bill out and vote for it, knowing the facts that you have verified this morning.

On the Development Loan Fund, that is a bilateral program and the payments are paid back to the United States?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. That is true with the Export-Import Bank?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. You also testified on the Inter-American Development Bank?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. You testified on the Asian Development Bank?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. You are going to testify for the International Development Association?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. Yet you don't have anything whatsoever to do with administering these funds; you merely come up and justify the funds. In the International Development Association do the people that actually administer those funds ever come before this committee, do they?

Mr. HENNESSY. We have to approve each and every loan, Mr. Beach and myself.

Mr. PASSMAN. You didn't answer my question. I said those who administer the program. You are one of the assistant secretaries that cover the waterfront. When it gets down to actually administering these programs, they are administered by international organizations, aren't they?

Mr. HENNESSY. Those are the people that implement it; yes.

CONSULTANT SERVICES

Mr. PASSMAN. Could you tell the committee how much the Bank spent for consultants in 1972? How many consultants were on board for the full year?

Mr. BEACH. I have those figures. In 1972 the Bank spent $264,000 on consultants. There were 50 consultants employed by the Bank at one time or another, during 1972, and I have a breakdown by expertise and function which I will submit, if you would like.

Mr. PASSMAN. Could you tell us the number of consultants that you had onboard December 31, 1972?

Mr. BEACH. I don't have that specific information.

Mr. PASSMAN. Take the highest paid consultant. What is your top consultant? What is his pay daily?

Mr. BEACH. We have two arrangements. On the one hand the Bank brings in a consultant who provides some type of expertise or has some type of function; his salary will be generally comparable to what the Bank pays for an engineer.

Mr. PASSMAN. That does not answer my question. I asked you what you pay him. I am not interested in the ramifications. Let me ask you, if I may: What is the top consultant's pay?

Mr. BEACH. The top pay on a more or less regular basis is $100 a day plus their per diem.

Mr. PASSMAN. Plus per diem?

Mr. BEACH. Yes, sir.

Mr. PASSMAN. Every day or 5 days a week?

Mr. BEACH. That is every day he is on the job.

Mr. PASSMAN. If he is sent out to Manila, that means he would be paid 31 days? In a month he is paid 31 days; is that correct?

Mr. BEACH. Yes; I believe that is correct.

NUMBER OF EMPLOYEES

Mr. PASSMAN. Yesterday you told us how many you have aboard in Asian Development Bank. How many employees was that?

Mr. BEACH. We have 200, professional staff.

Mr. PASSMAN. I am talking about the total.

Mr. BEACH. 400 nonprofessional, giving a total of 600.

Mr. PASSMAN. The Export-Import Bank has 423; yours is how many?

Mr. BEACH. We have 600 professional and nonprofessional. Two hundred professional of that total figure.

Mr. PASSMAN. Pin this down. Of the 423 in the Export-Import Bank, would they be considered professionals?

Mr. BEACH. I don't have that information.

Mr. PASSMAN. The reason I ask that question, I am worried. It is not your fault, because these international organizations get way off somewhere and they are not watched closely.

Where the Export-Import Bank had $18,000 for representation allowance and makes the United States possibly several hundred million dollars a year, the Asian Development Bank does not make America anything and your representation allowance is some $42,000.

It shows the difference in the administration of some of these organizations.

I hope that you can do something to tigten this up if we are going to continue making contributions for it.

Mr. HENNESSY. I think that you can not compare completely the Export-Import Bank, Mr. Chairman, with the Asian Development Bank. As you know, in our multilateral program we have a lot more people who are employed because it is a different type program. We have to go out and, as you mentioned yesterday, on highway and river basin development projects it takes a longer time to implement.

You need a larger staff of engineers, more than the Export-Import Bank does.

Mr. PASSMAN. I wouldn't know why 10 people in the Asian Development Bank could drink more than the 10 people in the Export-Import Bank. I don't think your appetites for these luxuries dropped down because it is a different organization.

Mr. HENNESSY. I was referring to the overall professional——

U.S. PUBLIC DEBT

Mr. PASSMAN. I am referring to specifics. If their capacity is greater, then it is different. I am looking at the amount spent.

Do you worry about the ever increasing public debt?

Mr. HENNESSY. I do, indeed. I am glad to see it is a declining percentage of our gross national product.

Mr. PASSMAN. What does that have to do with GNP? If you have a public debt of $453 billion and your GNP should drop off 20 percent, you still have that public debt; don't you?

Mr. HENNESSY. You still have a public debt.

Mr. PASSMAN. You don't reduce the public debt we are building up through our extravagance because we have a strong GNP. Is that a statement of fact?

Mr. HENNESSY. The GNP does vary.

Mr. PASSMAN. What you are doing is using GNP. It varies. From time immemorial we have had peaks and valleys, depressions and recessions and upsets in our economy. When that comes along, you still have that terribly high public debt we built up, and we have to service that; don't we?

Mr. HENNESSY. Yes, we do have to service it.

Mr. PASSMAN. Am I making a statement of fact when I say that the past 25 years was the most prosperous period in the history of America, the greatest intake of the U.S. Treasury?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. You realize in the past 25 years we built the public debt from $159 billion to $455 billion?

Mr. HENNESSY. That is only 40 percent of our gross national product.

Mr. PASSMAN. It does not make any difference. Stick with the public debt. You people don't have the right to draw off a person's profits any greater than the tax laws call for. We have nevertheless spent all that. Our revenues have been the highest, have they not?

Mr. HENNESSY. They have indeed.

Mr. PASSMAN. We spent all the revenue and increased the public debt, which is borrowed money, from $159 billion to $463 billion. You couldn't be proud of that record any more than I am proud of it.

Mr. HENNESSY. I am not proud. There is a measure of ability to carry debt. As your income and my income goes up, our ability to carry debt increases. If we have a $1.263 trillion economy, our ability goes up as the economy goes up.

Mr. PASSMAN. When the economy goes down or if you get a recession, you don't reduce that public debt because you had a recession and a loss of income to the Treasury?

Mr. HENNESSY. No.

Mr. PASSMAN. You still have to service it?

Mr. HENNESSY. Yes.

Mr. PASSMAN. You and I know there is no justification for this country in this day of great prosperity to continue spending tens of billions of dollars annually more than we collect. You and I know it creates inflation and reduces the purchasing power of the dollar.

By contrast, I came here 27 years ago. The dollars that I saved the hard way, by the sweat of the brow, building up for a rainy day, our extravagance has reduced the purchasing power of those dollars by 63 percent. These dollars that I saved by working hard in my businesses are only worth 37 cents on the dollar. I believe inflation now is climbing back up.

Mr. LONG. Think how many more dollars you have.

Mr. PASSMAN. How can we put some sense into this crazy thing? We have become addicted to giving away money. You and I know the trend is to get away from bilateral programs where we can hold your feet to the fire for strict accounting and move over to multilateral programs where we have no right of detailed examination until after the fact, even if then.

What are the terms of the loans provided from the callable capital?

TERMS OF LOANS

Mr. BEACH. From the hard-loan window, Mr. Chairman, the terms have been about a 7.2 percent interest rate and a term period of 19 years, which includes a 4-year grace period.

With respect to special funds, soft loans, we have an interest rate average of 2½ percent and a term of 25 years, which includes a 6-year grace period.

Mr. PASSMAN. Give us the average.

Mr. BEACH. Those are the averages.

Mr. PASSMAN. You have some at 2½ percent?

Mr. BEACH. Yes, sir.

Mr. PASSMAN. What percentage of those loans are 2½ percent?

Mr. BEACH. Of all of the loans we have in the special funds, I would assume the average is 2½ percent.

Mr. PASSMAN. I believe we pay 6 percent to borrow that money. Is that correct? That is almost as ridiculous as the case we made yesterday where we borrowed $40 million at 6 percent, put it in the Asian Development Bank and borrowed the money back from the Asian Development Bank at 6 percent, which means we were paying 12 percent on our own money. That is ridiculous.

I believe the prevailing interest rate in that part of the world is in the neighborhood of 12 percent.

Mr. BEACH. Certainly higher than 2½ percent.

Mr. PASSMAN. I am trying to make an accurate record. Isn't it true that many of the nations are just begging for money at 12 percent? You said yes?

Mr. HENNESSEY. The interest rate in those countries is often in the neighborhood of 12 percent.
