Mr. PASSMAN. Their entire economy has been built around this kind of interest rate. This is something that they have lived with and they have adjusted their economy built around this high interest rate, have they not?

Mr. BEACH. It has been one of the problems—the scarcity of capital.

Mr. PASSMAN. Take the United States. In 1960 the banks were only paying 2½ percent interest on money. Today it is up to 7 percent.

Mr. BEACH. Yes, sir.

Mr. PASSMAN. Why should the Asian Development Bank move in the area and provide capital at 2½ percent for these nations? We have to borrow that money at 6 percent to make it available to those people at 2½ percent, where they have been accustomed to getting money at around 12 percent.

How about your repayment? We referred to soft loans and we referred to hard loans. I would assume that you have the same arrangements in both categories?

Mr. BEACH. In terms of repayment. On the hard loans we have an interest rate of 7.2 percent on the average. On soft loans, 2½ percent.

Mr. PASSMAN. What is the percentage, hard loans and soft loans?

Mr. BEACH. Seventy-five percent.

Mr. PASSMAN. Which way?

Mr. BEACH. Hard at market rates.

ADB LOANS TO SOUTH VIETNAM

Mr. PASSMAN. I believe we have a U.S. bilateral program in South Vietnam presently under supporting assistance and military assistance running about $2 billion or more a year?

Mr. HENNESSY. Yes, sir.

Mr. PASSMAN. How much are these people getting out of the Asian Development Bank?

Mr. HESSESSY. There is a total for Indochina, which includes one loan to Laos, of $11 million. There are soft funds.

Mr. PASSMAN. Here is $2 billion we are pouring in.

Do you think $11 million is going to make any significant difference when you compare that to the $2 billion of bilateral aid?

Mr. HENNESSY. No; but I am glad to see that it came entirely from other nations. Burden-sharing is one of the benefits of mulitlateralism.

Mr. PASSERMAN. How much of it would be U.S. dollars?

Mr. HENNESSY. In that we have never contributed 1 red cent to the soft loans; all the loans to Vietnam have been from that pool of non-U.S. funds. None comes from the United States.

In the future if we contribute to soft funds, a proportionate share would be the United States—in other words, if we contribute 20

percent of the total soft funds and they make a loan of $10 million, you can figure 20 percent of that could come from the United States.

Mr. PASSMAN. You are talking about less than $1 million, aren't you?

Mr. HENNESSY. For the purposes of this particular examples, yes.

FOREIGN HOLDINGS OF DOLLARS

Mr. PASSMAN. What you are doing is getting so many programs started you confuse yourself. I cannot go to sleep worrying about the mess we are in.

I read again last night about the dollar. It is just on the verge of taking another drop. You read the same article I did. Yet we are contributing to it. Unless we can bring this situation under control we are going to be completely isolated. We are going to be one Nation standing alone. You are going to drive these people into the arms of nations that know something about managing their fiscal affairs.

This extremenly wealthy country of Japan, with 20 billion U.S. dollars on hand, purchased airplanes from the United States on credit.

The Japanese Government owns the Japanese Air Lines but they know how gullible we are. These people didn't take any of the $20 billion to buy these airplanes. They bought them on terms. As you said yesterday, there has been a loss of value of 35 percent of the U.S. dollar compared to the yen during that period. Is that right?

Mr. BEACH. That is correct.

Mr. PASSMAN. What these people said, "We will buy these planes on credit and then when we succeed in devaluing the dollar; we will pay the indebtedness off with cheap dollars.

How stupid can we be?

Mr. HENNESSY. May I clarify a point on the sale of the airplanes. When the Export-Import Bank finances as it has a great portion of our sales of airplanes to Japan under long-term credit, the Bank of Japan turns around and buys an equal amount of Export-Import Bank paper. There is an offset.

Mr. PASSMAN. There is only an offset to a percentage of it?

Mr. HENNESSY. It is 100 percent offset.

Mr. PASSMAN. It does not make any difference, they still repay those loans with depreciated dollars.

The one answer that I wish you could give me: What disposition do you think Japan is going to make of the 20 billion U.S. surplus dollars they have?

Mr. HENNESSY. We have been meeting with them bilaterally and they are buying many more U.S. goods. In April, for instance, they cut down by one-half the deficit we had a year ago. They have lowered a lot of the restrictions but have not gone far enough. They still have too many dollars. The trend is better but we are not yet satisfied.

Mr. PASSMAN. Eighty billion dollars floating around the world and we don't have a thing to pay them off with?

Mr. HENNESSY. We have a lot of goods and services but unfortunately they prefer the dollars to buy others.

Mr. PASSMAN. Don't you think it is time to get our house in order and try to maintain a surplus in our trade account and a surplus in our balance-of-payments account?

Mr. HENNESSY. We have to reach that point in the next couple of years.

U.S. BUDGETARY OBJECTIVES

Mr. PASSMAN. I had a friend who was almost an alcoholic. He was a bourbon drinker. I went home and I said, "You know, Abe stopped drinking whiskey."

I said, "That is a great thing. He is a brilliant fellow and can make something out of himself."

The heck of it is, he switched over to vodka!

That is the same difference.

That is what we do. We always say, "Yes, we are going to stop this, but we don't stop it. It gets worse every year. I don't seem to be making much headway convincing people of the facts of life, because there are too many polite and influential young people downtown who seem to have more influence in the Congress than I do but I am going to do my very best.

Do you know whether or not the Treasury has any long-term plans to try to get back to a balanced budget? Until a few years ago we were always thinking about a balanced budget. I remember President Eisenhower throwing that dollar up to the ceiling and catching it, saying that it was a hard dollar, balanced budget, and we will return integrity to the dollar.

Mr. HENNESSY. I certainly do.

Mr. PASSMAN. It seems they disappeared.

Do you have any new plans to bring integrity back to the dollar?

Mr. HENNESSY. I believe the President in his budget message has foreseen that the budget deficit would drop to somewhere around $5 billion in fiscal year 1975 and the year after that would be in balance. That is the target in the schedule he is on.

Mr. PASSMAN. Isn't that based upon his full-employment formula?

Mr. HENNESSY. He assumes we will be at full employment.

Mr. PASSMAN. I am a great admirer of the President but I think that is as phony as a $3 bill, to come along and say if we have full employment this would be the amount of money that would be coming into the Treasury.

So we are now going to appropriate on the basis that we have full employment. We are going to move on the basis that all U.S. people are employed, yet they are not employed. That is like me saying, "If they raise my salary to $50,000 a year, then I could put $4,000 into the bank." Even though they are not going to raise it, I pretend that I am getting it.

Mr. HENNESSY. Basically, it is not inflationary, because it stimulates employment as the economy grows. The deficit spending——

Mr. PASSMAN. We are basing our expenditures on the fact that we had full employment. We say this is the amount of money we would take in: therefore, we feel safer in spending on that basis?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. Isn't that something.

Much as I like this President, whoever gave him that formula sure must have had a problem.

Mr. HENNESSY. In the longer term outlook which the President refers to in the budget documents which went forward this year, and even without adjusting for full employment, by calendar year 1976,

there would be a balanced budget. That is what his program and goal is.

Mr. PASSMAN. I think that is just about the same basis as our deficit. You have two types of deficit, Mr. Secretary. One would be the administrative deficit, and the other would be the unified budget deficit. The facts are the true deficit is the administrative deficit, is it not?

Mr. HENNESSY. There is a lot of dispute on which is the true figure, administrative, cash, or national income account.

Mr. PASSMAN. Another one of those deceptions that we practice. It didn't start under this administration, but we have trust accounts. The main trust accounts are the railroad retirement, social security unemployment, and Federal retirement. That money belongs to the American people, and in no sense does it belong to the Treasury. Is that correct?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. What we actually do, if we have an administrative deficit of $38 billion, then we collect $10 billion more in trust accounts than we pay out. We transfer that $10 billion over and reduce the administrative deficit by $10 billion and show that the deficit is $28 billion rather than $38 billion.

Mr. HENNESSY. Under that particular formulation; yes, sir.

Mr. PASSMAN. We slip in the back door and issue bonds for the amount of that $10 billion, don't we?

Mr. HENNESSY. Yes, sir. I believe that is correct.

INCOME TAX EXEMPTIONS

Mr. PASSMAN. What we do, we are hoodwinking the people like we do on other things. It takes one of these hifalutin, sweet-smelling names, and people come along and vote for it. I don't think it's right. The American employees of the Asian Development Bank, do they pay U.S. income tax?

Mr. BEACH. They pay U.S. income taxes on any amount of salary above $20,000 a year, assuming that they have been out of the country 17 out of 18 consecutive months.

Mr. PASSMAN. They usually are out of the country 17 months. Don't confuse us. Put that on the record. You are a good American taxpayer. In effect, the first $20,000 when they are employed aboard is tax free?

Mr. BEACH. If they are out of the country.

Mr. HENNESSY. The same as any American.

Mr. PASSMAN. What is the average pay?

Mr. LONG. Who would ever want to come home when he could get that kind of tax break by working overseas?

Mr. PASSMAN. How many American employees do you have?

Mr. BEACH. We have 20 American employees at the Bank.

Mr. PASSMAN. Out of the country?

Mr. BEACH. Out of the country?

Mr. PASSMAN. What is the average salary?

Mr. BEACH. I think the range would be between $17,000 and $20,000.

Mr. PASSMAN. I understand downtown all other international organizations operate that way. I don't blame these employees if they get that salary tax free because that is the way it is. That is the way it is. Even the secretaries in these international organizations downtown,

like the Inter-American Development Bank, I believe they get theirs tax free?

Mr. HENNESSY. They do. There is a distinction made between them and this Bank, because it is located outside the United States. ADB's American employees don't pay income tax, just as an American working abroad for the First National City Bank does not pay taxes. The people who work in the Inter-American and World Bank actually have to pay taxes, and it is reimbursed.

Mr. PASSMAN. The same difference?

Mr. HENNESSY. Yes. What I am saying is there——

Mr. PASSMAN. Reimbursed out of the American taxpayers. If they put that money in the bank, it is reimbursed. What is the difference? If I get a salary of $52,500 and they take out the income tax, then the following day they give me a check reimbursing me for it, it certainly is tax free. All we want to do is make a record. You didn't write the legislation.

Mr. HENNESSY. That is correct.

Mr. PASSMAN. I think the record should show how sweet this kitty is and why so many people like it and defend it, not just this outfit but all these multilateral organizations. They get out from control of the Congress. It is a sweet proposition.

Mr. BEACH. Could I comment?

Mr. PASSMAN. Sure.

Mr. BEACH. I have had a look at the salary structure of the Bank, and 72 percent of all of the professional employees, which includes the Americans, are in a salary range that runs from a GS–11 to 14 in terms of something that might be comparable here. If you talk to several of these people, they certainly acknowledge the fact that if they meet the provisions they will benefit from the tax exemption provision. However, I think what is controlling in terms of whether they go to Manila or attempt to find employment here is the general level of comparability, because no one can really rely on the fact he is going to meet the provision of being out of the country 17 out of 18 consecutive months.

Mr. PASSMAN. That might be a very weak argument. I don't blame you for making it. You still don't alter the fact they don't pay any income tax.

Mr. LONG. Could we get in the record how many of these people in the past has escaped taxes by staying there 18 months?

Mr. BEACH. I can attempt that.

Mr. LONG. What the usual stay overseas has been?

Mr. BEACH. I can contact these individuals on my return to see what information I can get for you. I will provide that information directly to you when it is available.

Mr. LONG. It would be interesting.

Mr. SHRIVER. In this connection, if you would yield, living expenses are not as great in the Philippines as they are in this country, are they? Most of them have a servant or two.

Mr. BEACH. On this point, beginning with living expenses per se, housing is about the same. It costs as much to rent a house there as it does to rent a house in Washington. Food is cheaper, clothing is cheaper, servants are extremely inexpensive, there is no question about that point.

Mr. SHRIVER. Would most of these employees in the range you mentioned a while ago have a servant?

Mr. BEACH. I think they would have a servant. I think on the other side is the fact that even though conditions are less in Manila, Manila is not a garden spot by any means. There is a psychic loss of income.

Mr. PASSMAN. You might apply it to the Asian Development Bank but not these other international organizations domiciled downtown. If you have two sisters, one working for the State Department and one working for International Development Association, maybe within a block of each other, one gets her salary tax-free and the other pays income tax—is that it?

Mr. LONG. If the chairman would yield—I want to make sure that we get an adequate response on this business of escaping U.S. income taxes. This is just one more loophole, and the public is getting increasingly resentful about these loopholes. I would like to just have a breakdown of all the U.S. citizens that have worked for the Asian Development Bank, either abroad or here, who have paid taxes; those who have not paid taxes; what their exemptions have been; and what the tax break is relative to the situation in which they would find themselves if they were working in some alternative employment.

Mr. HENNESSY. There is a point here in this particular Bank. The problem has been the reverse. We cannot get enough Americans to go out there. We would rather have many more Americans living out there and influencing operations and working out there. It is a difficult place to get people to go to. I think the proof of the pudding is in the eating. It may look on the surface like it is very attractive, but it is hard to get people to go out there and to keep them out there. I will provide that information directly to you when it is available.

Mr. LONG. I would like to pursue that. That is a matter that should be settled by compensation?

Mr. HENNESSY. Yes, sir.

Mr. LONG. This is back-door compensation?

Mr. HENNESSY. It applies to all Americans abroad, not just this Bank.

Mr. LONG. Exactly. This back-door compensation is something that we must try to get away from.

Mr. HENNESSY. I think the theory of the tax exemption is that someone living out of the United States is being penalized. An American living in Manila may not be as happy. He would rather be home with his family and in his own culture.

EMPLOYMENT OF AMERICAN NATIONALS

Mr. PASSMAN. You get away from it. Most of them are employed here in Washington, D.C.; they get the same exemption even if living within two blocks of where I live. How many unfilled positions do you have now for Americans?

Mr. BEACH. We have currently in the coming budget——

Mr. PASSMAN. I say specifically now, what jobs do you have open in the Asian Development Bank in Manila you are looking for personnel today?

Mr. BEACH. We have 15 jobs open for which we are looking for personnel. We have scheduled in the early part of the summer a recruit-

ment trip to the States to increase the number of Americans in the Bank.

Mr. PASSMAN. I take whatever you say at face value. I might say that you get mixed up on your figures and what is accomplished, but I never question the integrity of any witnesses. If you have any trouble getting personnel, I would like to submit a list of a hundred people from my district, some of them outstanding lawyers and professors with doctor's degrees, begging to go abroad.

I know a young lady now who has her master's degree and she was a private secretary to Governor Edwards. She wants to go abroad on one of these jobs so——

Mr. BEACH. I would welcome the list.

Mr. PASSMAN. I gave them to Dr. Hannah. He is one of the great administrators, and he said we don't have any openings. It is strange Dr. Hannah has no openings and has to bring some home, while you people want to go abroad. If you could give me a list of the type of people that you are looking for.

Mr. BEACH. Happy to.

Mr. PASSMAN. I wish Mr. Roybal were here. I think he could give you a rather long list of qualified people too.

Mr. BEACH. Good.

Mr. PASSMAN. I imagine these jobs would be filled. Open the door and let them in. You cannot tell me these people don't want these jobs. You got your mail mixed up. I can give you a list, as all the members of this committee can, of outstanding constituents in many different categories that are looking for jobs. I know a man who is 38 years old, has a doctor's degree, a very outstanding engineer, and he is available. I think that I will send you the name this afternoon.

Mr. BEACH. If I might make a point, Mr. Chairman. I know this committee is very much concerned about staffing at the Bank. We are, too. One thing we would like to do is offer the Bank an increased number of applicants——

Mr. PASSMAN. I would be just as well off not to get any constituents in this Bank. If I have my way, we are not going to have anything to do with it in a little while.

It will fall of its own weight in due time. I am making a lot of fuss, but the statistics and the facts of life will support it. Give it a little time. The American people, first thing you know, will start moving in and using that direct way they have of cutting these things down. We have serious problems, very serious problems, all over the United States and many of them because we didn't have the funds to do these public works projects. We had to yield in favor of foreign aid. They don't lose any money, not a dime. Many of my projects actually had to be postponed. The money had to be impounded. I think the polite way of saying it is budgetary reserve. You know what I am talking about.

Mr. LONG. If you would yield.

INCOME TAX EXEMPTIONS

I am a little confused on this tax situation. I got the impression you said a while ago you got the tax break only if you were there 17 months and——

Mr. BEACH. Eighteen months.

Mr. LONG. You got the first $20,000 tax free. Yet the chairman got through saying a person working in Washington gets this tax break if he works for the Asian Development Bank.

Mr. HENNESSY. Other banks.

Mr. LONG. What is the situation?

Mr. BEACH. Let me make a few general comments and perhaps my remarks can be supplemented. I think first a conditioning factor is the type of headquarters agreement worked out between the international institution and the country in which it is located, in this case the IDB and IBRD would have some type of arrangement with the U.S. Government. In the case of the Asian Development Bank, we worked out an agreement between the Asian Development Bank and the Philippines, in which foreign nationals employed at the bank in Manila are exempt from Philippine taxes including income taxes. Then what applies to American citizens working is the general provisions that apply to all Americans earning income outside the United States, those in the bank being in that category.

Mr. HENNESSY. There are no Asian Development Bank people working here in Washington. As the chairman says, there is a large——

Mr. PASSMAN. You have hundreds of these employees in Washington working for these other multilateral organizations and they pay no income tax. Put it where it is.

Mr. LONG. American nationals and foreign nationals?

Mr. PASSMAN. Yes.

Mr. LONG. Why should anybody get out of paying income tax?

Mr. SHRIVER. It is in the law.

Mr. PASSMAN. Let me make the record for what it is.

Mr. LONG. Why don't we get a recommendation for changing the law? This is absolutely preposterous.

Mr. SHRIVER. Put a bill in.

Mr. PASSMAN. I don't blame you people. I want to keep the record straight. This is par for the course whether you are domiciled in Washington, Manila, or elsewhere; if you work for a multilateral organization you pay no income tax. Let us pin it down so we know what it is all about. I don't blame you people if you are in Manila. I salute you; you are doing it legally. Some of these foreign nationals work for governments where they only pay 2 or 3 percent income tax.

They meet and they reach an agreement that this is applicable to all personnel. This man here that may be paid 65 percent, he gets his free. This man from some other nation where the country only collects 2 percent, he gets his free. I don't blame you for working that thing out.

Mr. LONG. The chairman has a good point. I always learn by listening to him.

How much of this exemption from income tax is by reason of the law and how much of it is by reason of Treasury regulations?

Mr. HENNESSY. In the case of the IBRD and IDB, the Articles of Agreement, which are part of American law, provide for tax exemptions for salaries of employees aside from those of local nationals. Consequently, the United States does not tax salaries paid by either Bank to foreign nationals. In order to put American employees on the same basis with their foreign national colleagues, the Banks have also agreed, as a matter of policy, to reimburse American employees for their taxes.

Mr. LONG. These are regulations worked out by the Treasury, by agreement?

Mr. HENNESSY. Worked out between these institutions and our Government. In other words, if the World Bank moves their headquarters tomorrow to Geneva——

Mr. LONG. The point I am trying to get at is whether Congress is responsible for some of this. A lot of it is just administrative law, is it?

Mr. HENNESSY. The chairman is right. That it was part of the regulations and rules under which the banks were set up.

Mr. PASSMAN. Subject to revision within the Department without legislation, if he wants to make it. Is that correct?

Mr. LONG. I would like——

Mr. PASSMAN. I didn't get an answer. This is an important question.

Mr. HENNESSY. Would you repeat the question?

Mr. PASSMAN. Subject to revision within the organization itself, without legislation, if they want to make the proposal?

Mr. HENNESSY. We told them they were no longer getting it, for just Americans or anyone in an institution——

Mr. PASSMAN. The Department can make the decision? You don't need legislation if you should decide it should be done; is that right?

Mr. HENNESSY. I am not certain. I believe you are right.

Mr. LONG. We are entitled to an answer on that. I am very much concerned with the extent to which income taxes are determined by bureaucracy, by legislation.

The extent to which the Treasury should be allowed to make up law on income taxes should be definitely limited and delineated. I would like to bring out to what extent these people working for multilateral institutions are getting out of income taxes because of Treasury regulations and Treasury law that is being written—above and beyond what Congress has done.

Mr. PASSMAN. Let me offer a little defense of the policy.

If all the nations are doing this, notwithstanding the fact some of them may be paying 2 or 3 percent income tax and in America 60 percent income tax in the high brackets; if it is the policy, I say it is a pretty poor policy and ought to be corrected.

Until it is corrected, and I certainly have to recognize that you are not violating any law, but you ought to look at it. If too much of this gets out, people are going to be unhappy.

MI. LONG. Would you yield?

I don't agree we should let what other countries do determine our own income tax regulations. If we wait until all the countries in the world come to agreement on this, we will wait a long time. We have among the highest income tax rates in the world and I feel that if American citizens are going to have to pay them, and if people working in the United States are going to have to pay them, then everybody should pay them.

I am talking about our own people working for multilateral institutions, and I am talking about foreigners working for multilateral institutions. They should all pay U.S. income taxes and they should pay them at the same rate as anybody else. I don't give a doggone personally what other countries do. I feel this should be the American law and we are not——

Mr. HENNESSY. It is a matter of law as far as foreigners working here in the United States are concerned.

Mr. PASSMAN. I believe the regulation would have to be amended.

Mr. HENNESSY. It would have to be.

Mr. PASSMAN. The nations themselves should say, "All right, you are from the Philippines and you are working in the United States and you are going to have to pay the income tax in the Philippines." Let the Americans pay theirs. I don't see why they should be exempt from income tax simply because they are working for an international organization.

Mr. LONG. Nobody able to pay income taxes should be exempted from income taxes. Nobody.

Mr. HENNESSY. Legally you have to run back to the original law and change the law.

Mr. PASSMAN. Only on the ABD. That would not be necessary for the World Bank and the International Development Association?

Mr. LONG. While it is perfectly true that Congress determines these laws, it is also true that we do it to a very large degree as a result of Treasury recommendations, is it not?

Mr. HENNESSY. That is correct. I think the practical results, if you took away this exemption, if Americans had to pay taxes while working for international institutions and their foreign colleagues, Britishers, for example, didn't, you would fill up the institution with Britishers. We couldn't compete in the sense of providing staff members.

There is another aspect. If you applied U.S. tax law to the Britisher and the Frenchman as well as the U.S. citizen working here in the United States, then the institution would move their headquarters to Geneva or Britain. They inject upward of $100 million from the World Bank and about $50 million from the IDB here into the Washington economy.

I agree with the chairman, this is a difficult problem.

Mr. PASSMAN. Let's have a look at this. Drop the curtain on the subject.

I think you ought to have a look at this. It just does not look right.

Mr. LONG. I would like more than a look. I would like the Treasury to come in with recommendations to put an end to it unilaterally.

Mr. CONTE. If you would yield.

We will have a tax reform bill coming to the floor of the House in the near future. That would be the place for your amendment.

Mr. LONG. The gentleman surely must have his tongue in his cheek.

Mr. CONTE. The man is such a powerful——

Mr. LONG. Don't you know all tax legislation comes down to the floor under a closed rule having no amendments.

Mr. CONTE. You are telling me you are incompetent to get an amendment across? I cannot believe that, Doctor—not you.

Mr. PASSMAN. Gentlemen, you are dealing with an international agreement.

Mr. LONG. The gentleman takes my breath away.

Mr. PASSMAN. May I ask you——

Mr. LONG. Only the gentleman from Massachusetts could make a suggestion like that.

Mr. CONTE. You and I know that we have been successful on many amendments on the floor.

Mr. LONG. Only where you have an open rule, not a closed rule where you cannot offer an amendment.

STAFF LOANS

Mr. PASSMAN. Mr. Secretary, under the policy of the Asian Development Bank are the employees of the Bank eligible for loans from the Bank?

Mr. HENNESSY. They have a staff loan program which Mr. Beach can describe in detail.

Mr. PASSMAN. The answer is "Yes?"

Mr. HENNESSY. The answer is: "Yes, they do."

Mr. PASSMAN. Let me ask you this. Do you have any limitation on what an employee can borrow?

Mr. BEACH. Yes, we do.

Mr. PASSMAN. What is the limitation?

Mr. BEACH. A new employee may have an advance against his salary equivalent to 3 months of his salary. He repays that over 18 months at 5 percent interest.

Mr. PASSMAN. What happens if this man comes in, as you stated earlier, they may return to the States, so here is Joe Doaks and he comes in and he borrows $4,000. He is out there 60 days and decides that he does not like the climate and the job and he is going home? Then what disposition do you make of the outstanding loan?

Mr. BEACH. The man is liable for the repayment of the outstanding sum, as he would be in any case.

Mr. PASMAN. If he had no money, wouldn't he borrow the money to start with?

Mr. BEACH. He still owes the money.

Mr. HENNESSY. In 7 years, those bad debts——

Mr. PASSMAN. It means these people don't come home then?

Mr. HENNESSY. Those that come home——

Mr. PASSMAN. This money has to be paid over 18 months. You had no deficits, which means there have been no people come home.

Mr. HENNESSY. In 18 months.

Mr. PASSMAN. That is right. So he gets his income tax——

Mr. HENNESSY. There may be some that come back and repay the loan in the States.

Mr. PASSMAN. You are on thin ice and you are going to fall through. Rest your case while you are ahead. You will get behind. You and I know the score. We discussed this yesterday, where the arrogant President of the Bank would not let our Board member know what loans he was making, and said that is secret only for the President.

Mr. YATES. Is that true?

Mr. PASSMAN. That is true. That is one of the virtues of the organization. You ought to go in some of these other things. My friend says he is not going to let that happen in the future.

Mr. CONTE. That was straightened out a long time ago.

Mr. PASSMAN. I don't know.

The fact it was practiced, the mistake is made when it is done the first time, and that applies to almost any subject you discuss.

Mr. LONG. Would you yield?

We are lending money to our own employees at 5 percent, which is below what the U.S. Government has to pay when it borrows money; is that right?

Mr. BEACH. That is correct. Under certain circumstances.

Mr. LONG. Would you regard this as a hard or soft loan?

Mr. BEACH. I would say that is a blended loan.

Mr. LONG. That is a pretty good answer.

Mr. HENNESSY. It is a mushy one, neither hard nor soft.

Mr. LONG. Soft blend, in other words.

Do we have the names of those individuals?

Mr. BEACH. Yes, sir.

Mr. LONG. What about foreigners; are they allowed to borrow money?

Mr. BEACH. Yes, sir. All employees of the Bank.

Mr. LONG. Employees of the Bank from all over the world are allowed to borrow up to 3 months' salary?

Mr. BEACH. Yes, sir.

Mr. LONG. Also at 5 percent?

Mr. BEACH. At 5 percent.

Mr. LONG. Subject to the same regulations?

Mr. BEACH. Very same.

Mr. LONG. Could we get the names?

Mr. BEACH. We can provide it on a confidential basis.

Mr. PASSMAN. Why confidential?

Mr. BEACH. There may be some embarrassment to the individuals involved. We would ask for it on a confidential basis.

Mr. LONG. I don't know——

Mr. PASSMAN. The American public is not entitled to know? I just asked the question. Why would it be classified?

Mr. HENNESSY. If you asked the First National City Bank to publish a list of borrowers, they would get upset.

Mr. LONG. It is the U.S. Government's money. We are a Government institution.

Mr. PASSMAN. How many employees presently owe the Bank?

Mr. BEACH. We currently have 215 employees that have used this.

Mr. LONG. All countries?

Mr. BEACH. All countries.

Mr. PASSMAN. Make this record clear. We want to be fair. This is one-third of the total personnel?

Mr. BEACH. That is right.

Mr. PASSMAN. One-third of the total personnel of the Bank are eligible to borrow money and pay 5 percent?

Mr. LONG. Of all eligible, one-third have done it?

Mr. PASSMAN. All are eligible, but one-third have availed themselves of the opportunity?

Mr. BEACH. That is right.

Mr. PASSMAN. If you are recruiting the type of personnel that I think you would need, you are talking about outstanding consultants, lawyers, you are talking about people with backgrounds who understand finances. What kind of people are you hiring that they are so poor they cannot get there to take the job unless they can borrow money to get out there?

Mr. BEACH. May I make some comments?

Mr. PASSMAN. They must not be too successful in their own community or they wouldn't ever have to borrow money to move out there.

Mr. BEACH. I would like to comment.

Mr. PASSMAN. I wish you would.

Mr. BEACH. Of the 215 who have borrowed funds from the Bank, 172 have been nonprofessionals, which means primarily Filipino citizens. I have said that the Bank can lend for adjustment assistance, in effect, when a person comes on board. It can also lend on compassionate grounds. For example, the Philippines underwent tremendous flood damage in the past year and many of these loans have stemmed, have as their reason, hardship that the local staff was undergoing. Manila was practically underwater.

Mr. PASSMAN. Going to the policy. You started off with the policy and they were making loans from the very month they opened the Bank. You may have other conditions, but it is the policy to make loans at 5 percent?

Mr. BEACH. Yes, sir.

Mr. PASSMAN. It is a subsidized interest rate?

Mr. BEACH. I have to admit it is.

Mr. PASSMAN. How much is outstanding at this time?

Mr. BEACH. We have $90,000 approximately outstanding—$97,000. The average loan is about $455 per person.

I would like to get back to this point about the type of people that we bring in and why they have to borrow money. In the Philippines very frequently when you rent a house, the landlord will demand 1 year's deposit in advance. There are an awful lot of people that come in who simply are not able out of their ready cash to come up with that amount. That is a considerable sum of money.

Mr. HENNESSY. We can provide for the record additional information. We have given some in the past and we can update that.

[The information follows:]

The total salary advances to cover arrival expenses outstanding as of June 18, 1973 amounted to $100,909.92. Special salary advances on compassionate grounds amounted to $13,788.74. The total for both categories was $114,698.66.

Mr. PASSMAN. Let me pursue this a moment. I am a little worried about the policy because this certainly is an exception. Our Government may have certain employee organizations that they create themselves, but we don't have any department in our Government where they make loans to employees like State and Treasury.

Do you have a policy where you bring new personnel in and make them loans?

Mr. HENNESSY. We have a separate credit union. We have nothing comparable to what you are saying.

Mr. LONG. The employees are lending themselves money. Why don't multilateral institutions adopt that form of financial service?

Mr. HENNESSY. It is a problem with the banking system. The local banks don't make consumer loans in these countries, in Asia particularly. It would be difficult.

Mr. LONG. I don't think the sum of money that you mentioned is a very large one, in fairness to you. I do think the fact that banks are lending to their own employees is unsound. This is not exactly an arms-length situation. It is the old case of an institution being run

for the benefit of the insiders rather than for the benefit of the people it serves.

Mr. HENNESSY. That is always a danger in this kind of situation.

Mr. LONG. I wish you would get away from it.

Mr. PASSMAN. Finally, you made the decision within the Bank as to the limit. There is nothing to keep this from getting out of bounds. I think the policy may not be good and you should have a look at it.

Mr. HENNESSY. Yes.

TECHNICAL ASSISTANCE SPECIAL FUND

Mr. PASSMAN. I notice in your justifications you indicate there is a technical assistance special fund. Do they perform the same type of services as performed by the bilateral technical aid program and the U.N. expanded technical aid program?

Mr. BEACH. We have a technical assistance special fund. That has been comprised of contributions from roughly 20 member nations.

Mr. PASSMAN. That is all I am asking. I don't care who provides it. I am asking if you have a technical assistance special fund whereby you do this same service that you do out of other U.S. technical aid funds.

Mr. HENNESSY. We have a technical aid special fund and we use that for feasibility studies and other types of activities that we cannot fund from other sources.

Mr. PASSMAN. Isn't that the same thing that is handled under our bilateral technical aid program and by the U.N. expanded technical aid program? I think there are about seven of these programs doing the same type of work.

Mr. HENNESSY. If I may make a point there, I agree with your comment that there are many people doing it. There are tremendous needs in Asia for this type of service.

ASIAN VEGETABLE RESEARCH AND DEVELOPMENT CENTER

Mr. PASSMAN. You have another organization recently put together out there. I doubt the committee is familiar with it. You call it the vegetable research center. They cooked up a little organization out there with about 15 nations, all of them put in, and I think it is known as the the vegetable research center, is that correct?

Mr. BEACH. The Asian Vegetable Research and Development Center?

Mr. PASSMAN. I think they may call it that.

Mr. BEACH. Yes, the Asian Vegetable Research and Development Center.

Mr. PASSMAN. Are you familiar with that?

Mr. BEACH. In Taiwan?

Mr. PASSMAN. I think it is headquartered in Taiwan or Manila?

Mr. BEACH. Yes, sir.

Mr. PASSMAN. I bet few members of the committee know that this was cooked up almost overnight, and a separate organization operating completely independent of all of the others was created. Again, from little acorns big trees grow.

They want more money now. Are you familiar with the organization?

Mr. BEACH. Yes.

Mr. PASSMAN. Do you contribute to the organization?

Mr. BEACH. The Asian Development Bank does contribute. It has contributed in the past year to that organization.

Mr. PASSMAN. It has?

Mr. BEACH. Yes, it has.

Mr. YATES. What is the name of the organization?

Mr. BEACH. The Asian Vegetable Research and Development Center.

Mr. PASSMAN. This is a new one and is fast growing. I doubt the members know about it.

Mr. BEACH. May I make a point about this?

Mr. PASSMAN. Yes.

Mr. BEACH. It was set up in Taiwan to do research on production of vegetables, and it has been an important part, I think, of the overall effort on the part of agricultural development in Southeast Asia.

Mr. HENNESSY. And to keep people on the farms.

Mr. PASSMAN. Let me make this observation. It is a bit embarrassing. We think we have all the answers.

I was out in Japan a few years ago. They have their professional meetings of business people. Dr. Ochsner was arriving there, and he said, "We want you to address this meeting."

I knew we had one thing in common in Japan—they produce rice and we produce rice. So I thought I would talk about rice.

We are lucky to get one crop a year with the rich soil we have, and I found out they get three crops a year.

Let's go to Taiwan. I forget who was with me, but the Secretary of Agriculture gave us a luncheon. We had sweet potatoes. I said they were delicious.

He said, "Yes, they are fancy yams. We brought them from Louisiana and improved on them."

I said, "Is this one of your main exports?"

He said, "Yes. We export now something like 25,000 cases a year of sweet potatoes back to the United States."

I said, "I thought we had a good yam and you picked it up and brought it out here and made it better. And now you are shipping it back to the United States and getting part of our market."

Mr. LONG. At least we are getting something back from foreign aid.

Mr. PASSMAN. When you are talking about vegetables, these people know what it is all about because they get at least three or four yields per year off the same land. Is that right?

Mr. BEACH. They certainly do.

Mr. PASSMAN. What contribution are we making to this outfit with our technicians and money?

Mr. HENNESSY. I think there are certain things we know and they don't know, and there are certain things they know and we don't know. They have developed new grains and new——

Mr. PASSMAN. They had a complete rice failure there last year. They came up with a new strand, and it was a failure. They thought it was going to revolutionize the rice market. We said it wouldn't work. They insisted on going through with it, and it wound up a failure.

Mr. LONG. In connection with the tax-exemption business, what I would like to get would be an estimate of the amount of money which the Treasury loses as a result of the fact that these multilateral Banks

do give the tax exemption to U.S. and foreign employees working for the Bank. It would be helpful if we could get it broken down by each one of the Banks.

Mr. HENNESSY. It will be a rough estimate, but we can provide it. We will have a definitional problem in the sense the people who work in the institutions in the United States pay the taxes and are reimbursed by the institutions. It comes out of the Bank income in that sense. We will define that and how much that is.

Mr. LONG. And give us to what extent it is paid for out of Bank income. My guess is we ultimately make up for that, and we are entitled to know what it is.

[The information follows:]

U.S. nationals employed by the World Bank and IDB pay Federal and State income taxes. They are subsequently reimbursed for taxpayments on the salary portions of their income by the institutions, which treat these reimbursements as administrative expenditures to be charged against gross income.

Nonsalary income of U.S. nationals is fully taxable. The institutions do not reimburse their U.S. employees for taxpayments on nonsalary income.

It should be pointed out that World Bank and IDB salary scales are on a net-of-tax basis, and thus fully take into account the facts that non-U.S. nationals' salaries are not subject to tax, and that U.S. nationals' income tax payments (on salaries only) are reimbursable.

Total reimbursements to U.S. nationals by the World Bank were budgeted at $4,232,000 for this year ending June 1973, and for the IDB at $1,443,500 for the year ending December 1973.

If foreign nationals were subject to Federal and State income taxes as well as U.S. nationals based in Washington, total tax payments included in the World Bank and IDB budgets for their respective 1973 fiscal years would have been approximately $15 million for the World Bank and $7 million for the IDB. Such additional costs would be met through corresponding increases in the administrative budgets.

U.S. nationals employed by the Asian Development Bank are subject to the same Federal income tax provisions as are other U.S. citizens residing abroad. It is estimated that if U.S. national ADB employees had worked in the United States at the same salaries they are paid by ADB, their additional Federal tax payments would have totaled approximately $56,000.

Mr. PASSMAN. The Asian Vegetable Research and Development Center has really grown. They are coming in for $600,000 under AID for fiscal year 1974. We already spent $1,300,000. How much funds have you provided?

Mr. HENNESSY. $300,000 from the Asian bank last year.

Mr. PASSMAN. You are familiar with the fact 12 nations went together?

Mr. HENNESSY. Yes.

Mr. PASSMAN. Each of them made a pledge and said this is sufficient to fund and operate the organization. Are you familiar with that?

Mr. HENNESSY. It started running——

Mr. PASSMAN. This went into business in 1971, Mr. Secretary. So each nation pledged a certain amount of money. I just wonder now why the Asian Development Bank has to get into it, because they said this is it, this is all they need. We have created the fund and will ask for no more money. Now we find out the Asian Development Bank is sweetening the kitty.

Thank you very much.

Mr. Shriver.

MEKONG PROJECTS

Mr. SHRIVER. Thank you, Mr. Chairman.

Your 1972 annual report for the bank notes that the bank has agreed to function as an executing authority for agricultural projects in the Mekong area, and that this was an agreement reached by the world Bank, the U.N. Development Program, and the Mekong Committee. Can you tell us more about this and any other activity by the bank in the Mekong area?

Mr. BEACH. Mr. Shriver, we have this arrangement worked out with both the World Bank and UNDP, in which the bank would act as the executing authority as you mentioned. The attempt there was to look at the whole question of providing an irrigation system and increasing the amount of acreage under irrigation, regulating the water flow, and increasing the number of crops of rice that could be produced in the Mekong Delta area.

Since going from a technical assistance project, which we initially administered under this arrangement, we now have developed that project to the point where some time during this year the Bank itself may make a loan to the South Vietnamese Government for the full implementation of the project.

We have another similar situation in Laos where the Bank has acted as an executing agency or authority and a similar project is under study, and that has reached fruition as well where the bank will provide funds for an irrigation system.

Mr. SHRIVER. Does the Bank have plans to become involved in postwar reconstruction in Indochina?

Mr. BEACH. The Bank feels very strongly it certainly must become involved, and involved in a big way, in postwar reconstruction. I think, as we pointed out in previous comments we have made, the Bank has been active in Indochina, not to a large extent, but it has made $11 million of soft loans. It has had in the very recent past large missions that have been into Saigon for discussion of projects and possibilities by the South Vietnamese Government. We are operating more or less as a partner with IBRD in setting up an arrangement to attempt to mobilize resources for South Vietnam.

I might add on its own initiative the Bank has in the pipeline $22 million of soft loans for Vietnam in this coming year.

U.S. VOTING SHARE

Mr. SHRIVER. In your statement you mention the U.S. voting share in the Asian Development Bank has dropped from the original 19 percent down to only 9 percent. Would this ordinary capital increase that you are requesting bring our vote up to the original level?

Mr. BEACH. Yes, it would. The request we have before you would do precisely that. Our old voting share was 16.5 percent. The voting share itself has now fallen to roughly 7.6 percent. If the request is acted upon favorably, this would return our voting share to what we think is certainly a necessary level.

If I may make a further point about the end product of ADB activity and where loan money was used and who benefited from it, we certainly need to be able to influence them in the future as we have in the

past regarding the end product of the Bank. I think it is, therefore, extremely important that we reestablish our original voting share.

CASH PART OF U.S. SUBSCRIPTION

Mr. SHRIVER. How much of this increase by the United States would be direct cash payment to the Bank?

Mr. BEACH. The request that we have before you for fiscal 1974 is for $121 million. Of that amount actually 8 percent would be cash on the barrel head which is about $9.7 million. An additional $14.5 million would be held by the Bank in the form of nonnegotiable, non-interest-bearing notes. The rest is callable or guarantee capital. So the actual cash outlay this year would be $9.7 million.

Mr. HENNESSY. In other words, the total cash payment of 120 will be 24. They get the $9.7 million right away and get the other $14 million over a 2- or 3-year period.

Mr. BEACH. I might make an additional point. When the Bank was set up we had an arrangement whereby 50 percent of everyone's contribution was paid in and 50 percent was held in callable capital. What we tried to do in the hard loan area is move away from relying so much on direct contributions and go into the capital market to borrow money and relend the funds. This means a lesser direct demand as we move along on the contributing countries and a greater demand on the private capital markets using our callable capital as a guarantee for the borrowings we execute in the private markets. I think this is a very healthy arrangement and certainly moves in the right direction.

PROCUREMENT

Mr. SHRIVER. Are our contributions to the Bank's ordinary capital tied in anyway to U.S. procurement?

Mr. BEACH. No, they aren't at all. Our ordinary capital contribution is contributed on an untied basis among members of the Bank. I might mention that the special fund contribution you have before you is totally on a tied basis, however.

U.S. INTERESTS IN ASIA

Mr. SHRIVER. We talked to both of you about the American interest in having a participating role in the operation of the Bank, whether it is 8 percent or 15 or 19 or whatever percent we are talking about. Would you tell us what that American interest is?

Mr. HENNESSY. I think there are different sets of interests. One relates to commercial interests in the region that we are going to get $100 million in exports out of the $100 million we put into the soft funds. That is one very concrete and tangible thing. A second reason is, if you agree that the Bank is doing the job well, and we think it is from everything we have seen, that we are expanding the market for our products abroad.

As the chairman pointed out, we have had a trade deficit for the last couple years, but the only countries with whom we have a trade surplus are the developing countries. They buy more goods from us than they sell to us. It is in our interest to keep these markets expanding and that is what the Bank, through its loans, is trying to do.

It also goes hand in hand, if you accept the fact the banks are doing a good job that their help in building the infrastructure so private investment can go into the developing countries. U.S. corporations aren't going to build roads and if there are no roads in a certain area of a developing country they are not going to put a plant in there. In that sense it helps U.S. investment in the area.

It also helps our foreign economic policy. I think the President has been very clear on this point. President Suharto of Indonesia and President Marcos of the Philippines have written and told the President of the great importance they attach to the Asian Development Bank. As a regional institution it helps them politically and it helps us achieve our aim of political stability in the area.

One of the real dangers we see is the possibility of the institution becoming dominated by the Japanese and our no longer having the level of influence that it is important for us to have in that part of the world. There is a vacuum developing with the U.S. withdrawal and the Japanese coming in and many countries are afraid of post-World War Japanese domination. We are much better off with the multilateral institutions in comparison with the Japanese use of $20 billion they have in bilateral mechanisms to get more investment or to penetrate other markets. The rules of this institution benefit us and allow us to compete more favorably.

So I would say there are political interests and commercial interests and economic development interests in our participation in the Asian Development Bank at an appropriate level.

We think if we put in the amounts we ask here we are going to get a good return in that sense from our money, and it is not an overwhelming burden on the U.S. budget in the form in which it is being put in.

Mr. SHRIVER. Speaking of the burden, you are really asking for a little over $9 million in cash outlay, is that right?

Mr. HENNESSY. In hard funds. We are also asking for $100 million in soft funds. That will be expended over a 7- to 8-year period. You can figure an average $6 to $10 million a year in actual cash outlay by the United States, and you add to that the $9 million. So we are talking about maybe $15 million outlay.

Mr. SHRIVER. In the coming fiscal year?

Mr. HENNESSY. In the coming fiscal year, and the next fiscal year will be about the same amount, and the year after that will be about the same amount. So it will flow back in balance-of-payment terms. The soft funds will have financed the U.S. export of machinery or consulting service or something like that.

Mr. SHRIVER. Is there anyone in the room representing the State Department?

Mr. HENNESSY. They did not come up. Secretary Rogers has submitted a letter for the record, and they would be pleased to testify at any time the committee would like to hear from them.

Mr. SHRIVER. Ordinarily they are here in the room during the testimony if there is a foreign policy question as to the American national interest in a program. I was wondering why they are not here.

Mr. HENNESSY. In the past we have done it more by letters and Secretary Rogers——

Mr. SHRIVER. For instance, another multilateral institution we hear from is the United Nations, and they are here at that time.

Mr. HENNESSY. We will be pleased to have them up here.

Mr. LONG. If you have them up here, that means bringing the committee back. I think Mr. Shriver is correct. Why should we have to come back here? We have plenty of things to cover. Why should we have to come back to suit the State Department's convenience. Why can't they be here at the time you are to answer questions that come up?

TRANSFERS OF ORDINARY CAPITAL TO SPECIAL FUNDS RESOURCES

Mr. SHRIVER. You say the Bank has transferred $51.6 million from its ordinary capital to the special fund. What part of the Bank charter allows this?

Mr. BEACH. There is provision in the charter which allows the Bank to spend 10 percent of its unimpaired ordinary capital for special funds operations. And on the basis of that they have, as you indicated, transferred to date $51.6 million.

I might mention too, that they have been compelled to do this because of the exceedingly tight situation in which they find themselves regarding special funds. In my testimony I point out that the Bank has in the pipeline something like $167 million of soft loan projects over the next 12 months and at this stage they have, including the set-aside, roughly $70 million of available funds against which they can make commitments. So the Bank is up against it in a very crucial sense.

U.S. SHARE OF SPECIAL FUNDS

Mr. SHRIVER. If we contribute the $100 million for the special funds that you have asked, our share of the funds would be 29 percent.

Mr. BEACH. That is right. It would go to that figure.

Mr. SHRIVER. What is the reason for the U.S. contribution of 29 percent while our voting strength in the ordinary capital account is set at 19 percent?

Mr. BEACH. I will make one comment about that. If we did make the initial contribution of $100 million, our share would go to 29 percent, which is almost identical to our original contribution share as a percentage of contributions coming from all donor countries to the ordinary capital of the Bank. In other words, under the initial agreement and circumstances that prevailed at that time our contribution of $200 million was precisely 29 percent of the contribution from all donor countries. In special funds we are talking only about donor countries which contribute to this fund. I think as things currently stand the Japanese have over 50 percent of the special fund contributions and their voting share currently is also about 19 percent.

Mr. SHRIVER. In your justifications you point out the arrangements regarding member countries' contributions to the special fund vary in terms or conditions with each contributor. Would you give us some examples of these varying terms.

Mr. BEACH. Initially most of the countries did contribute on a tied basis. Contributions from Japan, Germany, Great Britain, Canada, and so forth were made on a tied basis, meaning in effect that they

can only be drawn down for purchase of goods and services in Canada.

Interestingly enough, in the last year when we have been so much concerned about our procurement share and the Japanese, I think, have become awfully concerned about the high percentage of their procurement share, Japan has placed its last contribution of $39 million to special funds on an untied basis. By the same token Canada has converted its original contribution to the special fund from a tied to an untied basis. So there is some movement away from contributions on a tied basis.

I think in view of this it is quite interesting that the Bank is certainly willing to accept any contribution we wish to make at this time on a tied basis.

A further point with respect to this is that I think the U.S. contribution and participation in both special funds and ordinary capital is absolutely crucial to the future of the bank. We have a situation which Mr. Hennessy mentioned in which the Japanese are out front. They find themselves in a very exposed position. The Europeans and Canadians are also concerned about the Japanese dominance in terms of contribution and would like the United States to come in and balance it somewhat.

Mr. HENNESSY. I think many of the developing countries in the region have a similar feeling. They very much want the U.S. presence and welcome increased contributions to the Bank of both special and ordinary capital.

Mr. BEACH. In all of the three institutions, I think in terms of the criticalness of institutional survival, this Bank is at the point where you fish or cut bait. Do you go the route without the United States, with the United States at a very low level, or is the United States going to go along at an appropriate level. I think when each institution gets to be more or less self-sustaining we can do without or postpone as in IDA. This Bank was set up in 1966 and the United States has never put in soft funds. I think the Bank has not yet reached the stage where it is a self-sustaining institution, where it has enough flexibility to stand alone. I think the clear decision here is, does the United States really have a role to play in that part of the world and is this institution a part of it.

Mr. SHRIVER. But we have put up a great amount of soft funds, not through this Bank but through bilateral programs, and also enormous expenditures in South Vietnam and the whole Indochina area.

Mr. BEACH. That is correct. But the policy we are pursuing is to try to reduce our physical presence and our bilateral presence particularly in that part of the world as much as possible. It is a heavy drain. I think we have 4,000 or 5,000 people in A.I.D. in the area.

ADB LENDING CRITERIA

Mr. SHRIVER. We have discussed in the past the lack of criteria for determining eligibility of individual countries for loans from special funds. I note on page 6 of your annual report the board of directors has considered and addressed that problem.

Mr. BEACH. Mr. Shriver, in the past year the board has specifically looked at its strategy and criteria for lending to the lesser developed member countries. As a result we have more or less drawn a list of 12

regional borrowing countries from the Bank, which are those that overwhelmingly qualify for special funds assistance. We have used as criteria the per capita incomes of these countries, their balance of payments, their trade situation, and their debt service burden. Based on these various criteria we have been able to come up with a list of 12 countries. This doesn't necessarily mean that the other member countries would be ineligible to borrow from the Bank on soft loans. But each such loan would have to be justified on its merits on a case by case basis.

Mr. SHRIVER. I notice in the report of July 1972 the board decided it was "unrealistic" to attempt to group the developing countries into high, low and intermediate priority countries. So what good is new criteria of they are not going to be used?

Mr. BEACH. I think the new criteria set is broad enough and loose enough to indicate the relative needs and relative ability of these countries to repay loans which the Bank has made so we can focus on the group itself and even within the group, Afghanistan, for example, I think almost everyone would admit, is less well off than Papua, New Guinea which has benefited very much from Australia's guidance and leadership. We have a rough guide only.

One of the problems we run into is certainly one of adequate data in these various countries. It is very difficult to determine what the per capita income of a country might be. So the guidelines as I say are rather rough and ready. Nonetheless I think the grouping itself is fairly correct.

Mr. SHRIVER. Thank you. I think you have presented a very good hearing for the Asian Development Bank so far.

Mr. BEACH. Thank you.

FIVE-YEAR PROJECTIONS

Mr. LONG. Mr. Hennessy, looking into this 5-year growth schedule up to 1978, I observe that there is proposed a growth in the total U.S. contribution to the Asian Development Bank of five times the total contributions to date.

Mr. HENNESSY. I don't have that table in front of me, Dr. Long. I think those are figures we provided to the committee on a projections basis. This is really only indicative planning. They are really extrapolations. We haven't actually programed out that far.

Mr. LONG. "The Department of Treasury, straight line projections."

Mr. HENNESSY. Yes.

Mr. LONG. Don't you think we should consider this as a possible future appropriation request.

Mr. HENNESSY. This is to discuss and to talk about. This is one of the reasons I think it is useful. The first footnote is:

> The projections for certain international financial institutions are made in the absence of either: (*a*) international discussions or negotiations on the future level of multilateral funding for such institutions, or (*b*) budgetary decisions by the executive branch. Accordingly, the figures shown represent only a continuation forward of present levels and timing of U.S. inputs to the respective institutions and do not necessarily reflect the intentions of any participating government.

They are indicative figures.

Mr. LONG. This is quite a dismal picture you present to Americans. We are all concerned about foreign aid. Everywhere I go people are

wondering how we can justify what we are doing with all of this foreign aid which is not being reduced. Most other programs are being cut back. In this case, far from cutting back, you seem to be planning to increase the U.S. contribution by 1978 by over five times what it has been to date.

Mr. HENNESSY. You are looking at an authorization figure of $1.15 billion?

Mr. LONG. I am looking at the estimate increase.

Mr. HENNESSY. Of 614.

Mr. LONG. I am looking at a cumulative total of $1,103 million through fiscal year 1978 to the Asian Development Bank as compared to a cumulative total of $200 million to date.

Mr. HENNESSY. The billion is a cumulative figure there.

Mr. LONG. Of course it is. We contributed $200 million so far. How long has the Bank been in existence?

Mr. HENNESSY. Since 1966.

Mr. LONG. So that is 7 years. So in the last 7 years we have contributed $200 million and in the next 5 years it is proposed we contribute an additional $900 million.

Mr. HENNESSY. A little under 900.

Mr. LONG. It goes from $200 million up to $1,103 million.

Mr. HENNESSY. That includes the $200 million in it.

Mr. LONG. Of course it does. That is an additional $900 million.

Mr. HENNESSY. That is correct.

Mr. LONG. By 1978, the total then will be nearly five and a half times what it is now. This is a tremendous increase that you are projecting and a much more rapid increase than we have had in the last 7 years of the Bank.

Mr. HENNESSY. First of all, the Bank didn't get organized and operative until 1967. It was opened for business in 1967, 1968, 1969 when we paid in the first three amounts.

Mr. LONG. This is a tremendous increase.

Mr. HENNESSY. If you assume that the $100 million for soft funds which was never voted on, at least the conference was not held last year and did not resolve the issue, would have come up with either that figure or some other total, of course you would have had a different base figure. You are right in the sense we have not yet given soft funds and we are now asking that we do contribute and it runs out to an average of $50 million a year.

Mr. LONG. For all institutions the World Bank, the International Finance Corporation, the IDA, the Inter-American Development Bank, the Asian Development Bank, the African Development Bank you are proposing to raise the total U.S. contributions from $12 billion so far since the Bank was founded up to $17 billion, or an additional $5 billion.

Mr. HENNESSY. Over that period of time, a good portion of which is just in the U.S. guarantee form. But you are correct.

Mr. LONG. Don't you think we have to assume that guarantees have got to be made good?

Mr. HENNESSY. These just back up the bonds which the World Bank issues.

Mr. LONG. You are hoping they won't be called on.

Mr. HENNESSY. Right. Even if you assume the Bank went broke and the United States had to pick up the bonds, we would only have to pick up a proportionate share.

Mr. LONG. I am talking about the U.S. contribution, not the total holdings of all institutions.

Mr. HENNESSY. But the callable capital, if it ever had to be called upon, would be called upon on a pro rata basis.

Mr. LONG. You have callable capital of $582 million but the total for all of the callable capital for all of the banks is nearly $3 billion. I am just talking about the U.S. share.

Mr. YATES. What is the pro rata contribution that would be made under this response?

Mr. LONG. That is another thing, of course. The pro rata share so far is 12 percent for the Asian Development Bank. It is proposed that that share would increase to 22 percent by 1978. So you are almost doubling the U.S. share of the contributions toward the Asian Development Bank in the next 5 years. Isn't that true?

Mr. HENNESSY. Here again we have the phenomenon of where we were at 19 and subsequently we have dropped, and the figure we show here is the reduced figure, and you get back to where we were in the beginning under the projection of the Asian Development Bank.

Mr. LONG. Where we were was a percentage of a very small amount. Now you are getting into a doubling of the percentage of a much larger amount.

Mr. HENNESSY. They are ongoing programs. You can't get away from it.

Mr. LONG. Mr. Secretary, won't you agree that you are proposing a tremendous expansion in the Asian Development Bank and in fact all of these multilateral instiutions and that you are——

Mr. HENNESSY. It is a continuation.

Mr. LONG. You are proposing that the U.S. share be expanded.

Mr. HENNESSY. Actually reduced. For instance, these were made before we had conversations on the next round of IDA, and I think it is pretty clear our share is 40 percent of that. We have been talking about getting down to 30 or 33 percent.

Mr. LONG. But on Asian Development Bank, isn't it true you are proposing to almost double the U.S. share, from 12.1 to 21.8?

Mr. HENNESSY. We were 19 percent in ordinary capital; we are down to 9 and we are saying, "Yes, we should go back to 19 percent." That is a doubling from where we are right today.

Mr. LONG. That is what I am talking about. But the 19 percent you are taking is 19 percent of a very small operation. Now we are moving up to 22 percent of a very large operation. The operation so far as we are concerned is five times as great as it is now.

Mr. HENNESSY. I think you can't get away from the fact the banks have ongoing programs.

Mr. LONG. You are proposing to greatly expand the World Bank, these other multilateral institutions, and greatly expand the U.S. share. Isn't that true?

Mr. HENNESSY. No. Overall our share would drop as a percentage of the overall.

Mr. LONG. For all institutions?

Mr. HENNESSY. Not all institutions. In other words, our share will drop in IDA, it will stay the same in the World Bank, get back to where it was——

Mr. LONG. Let's take all institutions. You are proposing the share go up from 31.9 to 33.6?

Mr. HENNESSY. This table was put together before we had the benefit of the last round of discussions.

Mr. LONG. You mean this table is no longer operative, to use the term that has come up lately. Are you repudiating this table?

Mr. HENNESSY. I think we put enough footnotes under (1) so we would never have to accept it to begin with.

Mr. LONG. You would rather not stand by this table then?

Mr. HENNESSY. I am saying that you have to accept it with a lot of caveats.

Mr. LONG. It is your table. I didn't put it up.

Mr. HENNESSY. At the Senate Appropriations Committee's request we did put it up and provided a copy to your committee so that we would have a basis to discuss what the longer term outlook is. I think you can't get away from the fact that yes, the institutions will continue to go on year after year, we will be coming back year after year——

Mr. LONG. For more money?

Mr. HENNESSY. This says for the same amounts of money. The U.S. share of total percentage in the major programs, both in the Inter-American Bank and in the IDA are going to come down. Those are not reflected because this table was a straight-line projection and done in early April.

Mr. LONG. You have baffled me. When somebody comes with a carefully prepared table and in a sense tells me the table doesn't really mean anything, I get confused. Regarding your Asian Development Bank, let's stick to that for a moment—the percentage goes up from 12 to 22 percent. You do say that at one time it was 17 percent. So that you would rather compare the 22 percent with the 17 percent, but that is not in your table. Even if it were, there is still a substantial increase in the U.S. share.

Mr. HENNESSY. If we had done this table as we did I think last year, that 12 percent was 19 percent and you look in the far right and you get back to that 19 percent. That is all I am syaing.

Mr. LONG. I didn't make your table. You had a good chance to make your table look better than it is. I am talking about estimates, not authorizations.

Mr. HENNESSY. These are the estimates. What I am saying is we made the table up in accordance with the request of the Senate Appropriations Committee. They didn't want us to doctor it. The point is right. In the Asian Development Bank——

Mr. LONG. I like your term "doctoring" the figures.

Mr. HENNESSY. We are asking, and that is the issue before you—in the Asian Development Bank our ordinary capital share has dropped down—is the committee willing, is the Congress in its wisdom willing to maintain what we think is a floor level in that institution? That is the issue.

Mr. LONG. If we just take this next fiscal year, you are asking us to come up with $220 million compared with the $200 million for the

whole previous 7 years. So just for this coming year you are asking for a very large expansion.

Mr. HENNESSY. Most of that is for the special funds and then again we have a large proportion of callable——

Mr. LONG. To me the special funds are worse than the others because that is very largely a giveaway. Please don't give us that as an extenuation.

Mr. HENNESSY. I am just explaining.

Mr. LONG. You talk about Japanese domination. Is this a sort of new cold war we are working on? We had to fight the Japanese and defeat them in military war. Now I get the impression we are sort of in an economic conflict with them. You are terribly worried about a country which we spent so much money to build up.

Mr. HENNESSY. I think it is a concern on everyone's part. We want to cooperate with the Japanese and how better to cooperate than be full partners in the institution with them. I think the danger is if we don't cooperate, they are going to go their own sweet way, which would be the natural effect. If they are the only ones putting dough in the bank, they are going to dominate the bank.

Mr. LONG. Wouldn't it be nice if we could get the Asians to take over Asian institutions and not worry about them ourselves. Why do we have to be in everything, dominating everything?

Mr. HENNESSY. I don't think we do dominate. The point is if you made 100 percent of the appropriations request we ask today, the Japanese would have a higher percentage here again than we do. Their economy is one-quarter ours. Relatively speaking they are putting up a lot more.

Mr. LONG. But this is purely for Asia.

What about all multilateral institutions? Are they dominating there?

Mr. HENNESSY. No, they are not.

Mr. LONG. What is their percentage contribution to all multilateral institutions?

Mr. HENNESSY. In the Inter-American Bank——

Mr. LONG. Of all of them?

Mr. HENNESSY. I think it is maybe more misleading than enlightening to group them altogether. Let me go one by one.

In the Inter-American Bank we don't have any extra regional countries. We are inviting others to take the burden off us.

Mr. LONG. Put it in the record. It will take a long time Bank by Bank.

[The information follows:]

Japanese participation in IFI's

	Percent
International Bank for Reconstruction and Development	4.17
International Development Association	6.00
Asian Development Bank ordinary capital	24.6
Asian Development Special funds	63.1

Mr. LONG. The point is we feel we should dominate or come close to dominating.

Mr. HENNESSY. We are talking about parity or slightly below parity in this institution.

Mr. LONG. The Japanese don't feel that urge to move in and dominate all the others.

Mr. HENNESSY. We have no such urge either. We are trying to disengage at a reasonable level.

Mr. LONG. Do you feel we are disengaging when you propose to increase by 5½ times our contributions in the next 5 years and more than double it just this next year?

Mr. HENNESSY. That only parallels what others are doing, and slightly less than the Japanese are doing. That is a different situation than 4 or 5 years ago when we put in everything.

Mr. LONG. It is more of the politics of fear. Usually this argument is used by the military. We are always being asked to do things which are not perhaps in the best interests of the taxpayer and cost the taxpayers money for fear—for fear of the Russians or for fear of the Chinese. They might bomb us and they might dominate various parts of the world militarily.

Now we are being asked to do these things out of economic fear of the Japanese. Isn't that right?

Mr. HENNESSY. I would turn that around and make it positive. I say what we are trying to do is develop a cooperative world system in trade through a better monetary system, and in development through using institutions that don't have each country running out to try to get one leg up on the other.

Mr. LONG. This looks like what we are trying to do.

Mr. HENNESSY. We are trying to sustain what is a pretty good working organization where all of the nations have to come together and agree.

ASIAN DEVELOPMENT FUND

Mr. LONG. No matter what I do I am not going to get you to admit that we are planning to tremendously increase the U.S. contributions to the Asian Development Bank and to all multilateral institutions, even though your table indicates it. Let's pass it by.

Tell me, what is the Asian Development Fund?

Mr. HENNESSY. Until now there has been no mechanism for soft loan contributions whereby every country sits around the table and says, "All right, we are going to contribute 'X' percent ourselves. How much are you going to put in, Japan how much are you going to put in, Germany, how much are you going to put in France?" There is now before Governors a proposal which was approved in principle at the annual meeting, at which there were several Members of the Congress and one from this committee, to set up a special fund.

The United States at that time because of the request of this committee made no commitments in that regard, but the proposal is to convert this different set of special funds into one composite fund in which each contributor would know how much the others are putting up.

Let me tell you one of the reasons why. When the special funds were first put up everyone more or less had a rough idea how much they expected other countries to put up. There was no legal or moral commitment or perhaps to a certain degree there was a moral commitment. For instance, the Canadians put up $27 million with the understanding the United States would probably provide $200 million. The Japanese put up I believe $170 million with the idea the United States would put up if not $200 then $150 million. However, we were not able to convince the Congress and have not, in fact, put up anything.

To put it bluntly, the Canadians and other countries felt sandbagged and we would like to find a mechanism whereby each country can count on the other to pick up its own pail of water.

Mr. LONG. Doesn't anybody ever come to Congress?

Mr. HENNESSY. It is in my statement.

Mr. LONG. How can you say Congress hasn't done its job when they are not asked?

Mr. HENNESSY. In our previous testimony on the $100 million we did say that in our discussions with other countries they were counting on the United States coming up with a similar amount, and we haven't come through with that.

Mr. LONG. So what it amounts to is that you are going to combine the special funds and the Asian Development Fund all in one item by 1978?

Mr. HENNESSY. Right. The proposition which other countries have offered us is that the United States would, in effect, get double duty dollars. The $100 million which we said we would endeavor to get, and on which the $240 million now paid in by others was based on the idea of our effort to get $100 million, they would let bygones be bygones and say, "Now we want over the next 3 years to put in $525 million. We will let you take your whole $100 million and that will represent two-thirds"——

Mr. LONG. They are both soft loan windows?

Mr. HENNESSY. Absolutely. This changes the mechanism.

Mr. LONG. It is not just a change of name for special funds to Asian Development Fund, but also a change of mechanism.

Mr. HENNESSY. It is precisely. The only change would be in the way in which you contribute. It would go to an IDA type fund where everybody sits around the table and you finally get to an international agreement where everyone knows how much everyone else is going to put in.

Mr. LONG. The special funds now, as I understand it, are strictly voluntary but, this will put us in a binding situation. Right?

Mr. HENNESSY. When we get to the point of signing an international agreement it would make a commitment.

Mr. LONG. Once we have moved from special funds to the Asian Development Funds we will lose a lot of freedom of action. Isn't that true?

Mr. HENNESSY. If we were going to do it without congressional assent, that would be true.

Mr. LONG. Even if Congress did agree, that still means the United States will have given up some freedom of action.

Mr. HENNESSY. There will be a certain degree of that.

What has happened with the voluntary system in the past, as a practical matter, is since no country wants to put dough up unless everyone else puts up something and the voluntary system has in fact resulted in a major country not putting something up, the other countries feel that the mechanism doesn't seem to work terribly well because now they have to go back to their parliaments and say, "Hell, we put——

Mr. LONG. I get the picture now. This is a special fund. It hasn't succeeded very well because it has been voluntary. A lot of countries

are not anxious to participate, and this puts them in a binding situation.

Mr. HENNESSY. Anxious to participate but not without knowing how much other countries are going to put up. The Congress has in the past voiced concern with us——

Mr. LONG. If we go into this, we should go in with our eyes open. Once we have agreed to it, we have lost our freedom of action.

Mr. HENNESSY. I would qualify that. You have less freedom once you have agreed internationally and with the Congress coming along. Then you sign up as we did with IDA over a 3-year period putting in "X" amount of dollars.

Mr. LONG. It is like the situation where a fellow volunteers for the armed services. He is perfectly free not to volunteer, but once he gets his name on that enlistment line he has lost a certain amount of freedom of action. In fact if he does not serve, he goes to jail.

Mr. HENNESSY. I think in this sense, even if we sign internationally as we said, we are not going to jail. In the last analysis, if we signed up internationally, it is still subject to congressional appropriation.

Mr. YATES. Would you say we have tentative commitments with other countries subject to congressional approval and their parliaments?

Mr. HENNESSY. Correct. The existing $100 million in the minds of others, and in our own mind, is a tentative commitment. That commitment was I would say less binding than one would normally think because it was not after full consultations with this particular committee. It was done primarily at that time with the assent of the authorizing committees.

Mr. LONG. How on earth did anyone have the nerve to say that they have got some sort of a tentative commitment without getting money from Congress? I don't think this committee has any power tentatively to commit the United States.

Mr. YATES. I put my question to him: Was it a tentative commitment subject to the approval of Congress and other parliaments?

Mr. LONG. Then it is not a commitment at all.

Mr. HENNESSY. It is a chicken and egg story.

Mr. LONG. You can't call anything a commitment when we are not committed. We are not committed in any way by what some Treasury officials say in meeting with some group even if you consulted the chairman of the committee.

Mr. YATES. I would assume if a group of officials meet, as apparently this group met to decide on what the future operations of the Bank would be and their various funding, they would look at each other and say, "We need so much money. In order to get this money we have to get the approval of Congress. If we do, we will be able to put forward this much money." I would assume that is a tentative commitment.

Mr. LONG. It is plenty tentative. The word "commitment," I wouldn't want to use.

Mr. HENNESSY. Tentative agreement or understanding.

Mr. LONG. "Understanding" or "proposal" or something like this. I would wish we would get away from the word "commitment" because again and again you come back to us and tell us we have somehow been committed by some group meeting.

Mr. YATES. As I understand the word "understanding" that carries a certain amount of commitment with it.

Mr. LONG. Then I wouldn't want to use that word.

Mr. YATES. What word would you use then?

Mr. LONG. "Discussion" or "plan."

Mr. HENNESSY. May I introduce Mr. Weintraub, Deputy Secretary of the State Department. I think he can answer many of these questions.

NUMBER OF AID EMPLOYEES IN ASIA

Mr. LONG. One more question. How many AID employees are in the Asian area?

Mr. HENNESSY. I don't know the exact number. We do have a large number.

Mr. LONG. Give us the number in Asia, and how much payroll costs are, both direct and indirect, and then how much you feel those costs can be reduced.

Mr. HENNESSY. They have a reduction plan. AID has a tailored plan we can provide for the record.

[The information follows:]

AID STAFFING IN ASIA REGION

The President's FY 1974 budget sets a limit of 4,800 A.I.D. direct-hire employees in the Asia region as of June 30, 1974. The table below shows the number of direct-hire A.I.D. employees assigned within the Asia region as of May 31, 1973; the estimated levels as of June 30, 1974; and the direct and indirect costs associated with those personnel levels.

By June 30, 1974 the number of employees will be reduced by 685 with an estimated reduction of $6.3 million in total payroll costs.

	Personnel assigned			Total payroll costs (thousands)
	U.S. nationals	Foreign nationals	Total	
As of May 31, 1973	1,586	3,817	5,403	$54,369
As of June 30, 1974 (estimated)	1,414	3,304	4,718	48,020

Mr. LONG. Thank you. These are all the questions I have.

Mr. Bevill?

JAPANESE ROLE IN ASIA

Mr. BEVILL. Thank you, Mr. Chairman.

I would like to ask Mr. Weintraub a question here I believe Mr. Shriver started on a moment ago. We seem to be real concerned here about the fact that Japan may dominate the Asian Development Bank. Is this something that the United States should continue pouring money into to try to keep up with Japan or to try to keep its influence ahead of Japan?

I notice we contribute 9 percent now and Japan contributes 25 percent. I am leading up to this question: Wouldn't it be to our interest to let Japan take this bank over? Isn't that in line with our policy in Asia and the Pacific?

Mr. WEINTRAUB. Let me if I may, alter the assumption. I don't think it is a question of competing with Japan, but rather a question of what kind of cooperative relationship exists in the Asia sphere involving ourselves, Japan, and countries that receive the aid.

At the moment the U.S. share of capital stock is 9 percent compared to Japan's 25 percent. It is at the moment I think that is true—a bank which is dominated by Japan because of the fact that they have made the contribution and we haven't. The countries and the region itself are terribly concerned about Japanese domination. It comes about through a whole history and feeling that they don't really want to depend only on one country. The Japanese themselves in political relationship in the area don't want to be outstandingly dominant in that particular institution.

What we are saying in terms of political relationships in Asia, we find it in our interest to play a substantial role. The developing countries in the area would hope it is that way and say it strongly to us, and the Japanese have said this to us.

Mr. BEVILL. It hasn't been long ago since I was informed that our overall policy over there is to build Japan, make Japan strong and give them all the help we could so they would be the leader in Asia and the Pacific area.

Then when these questions come up about concern about Japan taking too big a role in this development bank, it seems that we spend money to build these countries up and then we have to turn around and spend money to keep them from being too strong. It gets us in a rather awkward position, I think, and that is why I was anxious to get it clear.

As I understand we are defending Japan, we furnish a military umbrella to Japan; is that right?

Mr. WEINTRAUB. To a great extent we do; that is right.

Mr. BEVILL. They have no standing army or navy. They have a police force.

Mr. WEINTRAUB. It is called the self-defense force, and it is within their constitution they are not to have.

Mr. BEVILL. Here is a nation we are using our tax dollars to defend and it is costing the American taxpayers a great deal of money. Then we say we want to build them up, and then we say we don't want them to go too far, and we have to spend money to do that. It seems any direction we turn in its costs us money. That is the point I am making here. It looks like there would be some way we could in our foreign affairs have a policy that we wouldn't have to pay both sides to survive.

U.S. ROLE IN ADB

Mr. WEINTRAUB. I think the position we are taking is not to seek dominance in that institution by any means, but to seek some type of balance, and balance results from a long history. The coprosperity sphere that existed before World War II is perhaps dead, but people still remember this. The Japanese themselves feel that the institution really will not last and be viable fully if it becomes predominantly a Japanese institution. It is not just ourselves. The Europeans are members of that bank. I don't know the number of members. It must be about 38 or so at the moment.

Mr. BEVILL. Thirty-seven.

Mr. WEINTRAUB. We are suggesting that the United States play a role, by no means a dominant role and by no means a leadership role. In other words, I think that particular era probably has passed. But to play a balanced role in the institution. This is the point really.

Mr. BEVILL. It is the State Department's position then that these requests of the Asian Development Bank as recommended by the Treasury Department should be approved. Is that right?

Mr. WEINTRAUB. Yes, sir.

Mr. BEVILL. And the State Department has examined this and is familiar with the amount of money they are asking for?

Mr. WEINTRAUB. Yes. The Secretary of State has submitted a letter to the chairman of this committee along those lines.

INCOME TAX EXEMPTIONS

Mr. BEVILL. Mr. Secretary, I don't want to belabor this point but I share the concern of the committee about the employees not paying income tax. I think that I see what has happened. Of course, Congress did not pass any legislation giving these employees tax exemption, so the approach was made by the Bank. You go ahead and pay your tax to the United States and then we will reimburse you.

Mr. HENNESSY. Yes, sir.

Mr. BEVILL. We are saying that they are paid, in effect, up to $20,000 when their salary would be $25,000 to $27,000 in effect?

Mr. HENNESSY. Yes. when we make comparisons between the secretary in the World Bank and a secretary who works in AID, we make the after-tax comparison or concurrently we gross it up. What we set is a standard in the institution because of a tax quirk they should not be able to pay any premium over the local market for secretaries.

Mr. BEVILL. Under the tax laws of the United States as passed by the Congress when they reimburse for their income tax that is added as taxable income?

Mr. HENNESSY. I don't know the answer to that question, quite frankly. It would be income on income, so to speak.

Mr. YATES. It is or not?

Mr. BEVILL. It is counted as income?

Mr. HIRSCHTRITT. There is a system by which it is calculated by the tax people.

Mr. BEVILL. In other words, you run the amount of tax Mr. John Doe has paid there on a computer and figure out on the average what his tax would be and that is it?

Mr. HIRSCHTRITT. Yes, sir.

Mr. BEVILL. This may be a precedent all over the world, and it strikes me as not a good system but it may be, I am uninformed on that.

The United Nations does this thing?

Mr. HENNESSY. Precisely. The idea is that diplomats and people in international institutions working away from home don't pay the local tax. The paradox arises here that U.S. citizens would be at a disadvantage because the institution is in Washington, if they had to pay income tax. That would create incentive to move the institution away or it would mean U.S. citizens would no longer find it attractive to work in the organization.

Mr. YATES. American employees of the U.N. pay income taxes; do they not?

Mr. HENNESSY. I believe that they do on the same tax reimburseable basis.

Mr. BEVILL. Is this true of the Inter-American Bank?

Mr. HENNESSY. Yes, sir.

Mr. BEVILL. We have six international financial institutions?

Mr. HENNESSY. They are all the same. The only distinction is that the Asian Bank, which is outside the United States, falls under the general provisions of the U.S. tax laws, whereby if you are outside the country 17 out of 18 consecutive months working for any employer you are no longer liable to pay U.S. income tax.

Mr. BEVILL. Mr. Beach, are there any other——

Mr. LONG. Do you have many more questions? We could resume at 2 o'clock.

Mr. BEVILL. Mr. Chairman, we can stop at this point if that is what you wish.

Mr. LONG. Very well. We will resume at 2 o'clock.

AFTERNOON SESSION

Mr. PASSMAN. The committee will come to order.

I yield to the gentleman from Massachusetts, Mr. Conte.

MANAGEMENT OF U.S. PARTICIPATION IN ADB

Mr. CONTE. Recently, the GAO made a report to the Congress entitled "Improvements Needed in System for Managing U.S. Participation in the Asian Development Bank." One of the recommendations of that report called for the establishment of an independent evaluation system on the effectiveness of the Bank's programs. As the head of our delegation to the Bank's Manila meetings, Under Secretary of the Treasury Paul Volcker urged the Bank management to adopt such an evaluation system in order to insure the continued effectiveness of the Bank's programs.

Has the Bank's management responded to this suggestion in any way?

Mr. BEACH. Mr. Conte, I can give you a little background in answering your question here. Back in December Mr. Weatherbee who was the Director at that time, made a similar request to President Inoue shortly after he came to the Bank as the new president. He had a long discussion with him, in which he emphasized again how important we think this type of mechanism is. At the same time, Mr. Weatherbee chaired a couple of meetings among other board directors to get some work done outside the Bank management per se. Then in March and again in April I myself had conversations with the vice president of the Bank about moving on toward this type of mechanism, and he assured me that the Bank had begun work on this very concept that we had raised.

Since that meeting itself, I have talked further to the vice president and he assures me that they have taken the message to heart and they are working toward this. I don't know how long it is going to take, but all I can say is, from my standpoint it seems like movement toward this objective is being made.

GUIDELINES FOR LOAN APPRAISALS

Mr. CONTE. That same GAO report called for the establishment of guidelines which would stipulate the desired depth and parameters

of the U.S. appraisal process of proposed projects. The report also said that these guidelines should contain a clear statement of policy regarding the appraisal of the economic and technical aspects of the projects. Treasury Department has accepted this recommendation. Could you provide for the committee a status report on the drafting of the guidelines and what directions these guidelines are taking?

Mr. BEACH. I think one of the real problems there, Mr. Conte, has been the fact that once a project came to the Board for consideration in the past there may not have been enough of a lag time between the actual submission of the project to the Board and the point at which the Board would consider it. In addition, we had difficulties initially in circulating information about projects in the pipeline. Over the past couple of years however, we have had two changes in the Bank's operations, which I think largely get at the problem that you described here.

One, we now publish on a monthly basis all of the projects which are in the pipeline and which the Bank is actively considering. This information goes to all of our missions (AID missions or Economic Commercial Offices) of the countries in question, and they in turn, should they have any question about these various projects, at this early stage can make their views known.

I might mention a case in Korea, in which there is an Inchon Port Development Project. An employee of the Department of Agriculture, in looking over this project, wondered whether what the Asian Development Bank had in mind overlapped or dovetailed with work that the Department of Agriculture had been involved in in Korea. As a result, we touched base with Bank management and raised this question.

They assured us there would be no overlap, and we were able at an early stage in this whole process to iron out difficulties that may have conceivably occurred.

Second, we have a 3-week period from the time of submission of a document to the Bank board and the point of consideration. We send all this information to our mission in the country in question, be it Indonesia, Thailand, or Korea, and ask for their comments. Should there be a situation in which we have not received comments directly to Washington through the mechanism and back to us, we in turn can ask the Bank to postpone consideration of this project and they have been very willing to do this in the past.

Since I myself have been out there, this has occurred on two or three occasions. The Bank has been very willing to postpone consideration until we have had our instructions. We have been able to work these matters out quite well. In addition, there is telephonic communication that goes on back and forth between Manila and Washington regarding these projects.

TECHNICAL ASSISTANCE

Mr. CONTE. The ADB has given considerable emphasis to technical assistance in past years. How much of this technical assistance is for project preparation? How much of the technical assistance is rendered on a nonreimbursable basis?

Mr. BEACH. Again this is a rough estimate. I would have to look at the facts closely and submit those. I believe it breaks down on a half-

and-half basis. Half of the technical assistance we provide goes for project preparation, in effect, and the other half roughly again goes for advisory services of some sort which may affect an ongoing project.

With regard to the nonreimbursable aspect of this, we have a provision in the Bank that if we should extend technical assistance on a grant basis and for project preparation and the project reaches fruition stage where the Bank is about to finance it, then only $100,000 of that technical assistance grant remains a grant and the other is charged against the loan that in effect will go to the country in question.

To date through 1972 we have had 16 such technical assistance projects turn into full-blown development projects. This is something I think we have to emphasize to a very great extent because the needs are so real in these lesser developed countries in terms of being able to prepare projects and bring them along to fruition.

CONCESSIONAL LOAN TERMS

Mr. CONTE. There was a lot of discussion with regard to soft loans and concessional loans. There has also been testimony to the effect that there is concern on the part of other countries that we are not coming forth with our share of the contribution of soft-loan window. Could you elaborate on that, and on what a soft loan or concessional loan is? You have it in your justifications, and the explanation is very skimpy. We ought to have a little more in the record.

Mr. BEACH. To begin with the second part of your question about what is a soft loan. These are loans which are at less than market interest rates and usually with a longer repayment period than would normally be the case, usually with a bit more extensive grace period. These are loans that go to countries which are the lesser developed of the Bank's member countries.

Mr. CONTE. Repayable in local currency?

Mr. BEACH. Repayable in the currency in which the loan was extended, hard currency but on easier financial terms. I might followup on that point. The Bank only provides the foreign exchange costs of any project and all of the foreign exchange provided is hard currency. The recipient country repays in hard currency.

As I mentioned this morning, the average terms of concessionary lending are an interest rate of 2½ percent, term of 25 years and grace period of 6 years. The Bank has been perhaps a bit more conservative than other institutions but quite concerned about becoming involved in projects which will reach fruition, be successful, and I think it has been quite frugal in the type of project it has funded.

With respect to the need for this type of financing in Southeast Asia, part of the Bank's borrowing countries, recently we have had information concerning letters which both President Marcos and President Suharto have sent to President Nixon, underlining the importance they attach to Special Fund resources of the Asian Development Bank and the extent to which the ADB has been actively helpful in their development efforts.

REPLENISHMENT OF SPECIAL FUNDS

Mr. CONTE. Will the original contribution of $100 million be treated as a major source of future replenishment of the soft-loan funds?

What will be the effect of this on the contributions of the other industrial members?

Mr. HENNESSY. In the original soft fund contributions contemplated back in 1967, there were understandings, agreements, whatever you want to call them, which were made among the developed members that is the donor members of the Asian Development Bank, to contribute somewhere between $300 million and $340 million over a 2- to 3-year period.

The United States at that time said that $200 million seemed to be a reasonable share on our part. Later, it was scaled down to $100 million, which would have worked out to about exactly one third of the amount programed.

Mr. SHRIVER. Who made that agreement?

Mr. HENNESSY. It was a large U.S. delegation in which there were some 10 Congressmen, I believe, from the authorizing committee—not from the appropriating committees. I think this was a failure in this connection and we have recognized it since the appropriating committees were not up to date. Although it was on a voluntary basis, everyone was doing it with the understanding we were going to kick in a reasonable or proportionate share. That has not come about.

The Bank is now looking at a new replenishment of soft-fund resources and what they have found is that other people are not willing to put in voluntary contributions unless they know what comes from other people, because of their experience in the first round of contributions. The double-duty dollar aspect comes from the fact that so far as the original $100 million is concerned other countries will say now, "Let bygones be bygones. Assume that you throw in that $100 million toward the future replenishment of $525 million that will count toward your contribution."

The cumulative percentage at the end of that second replenishment for the United States would then be 20 percent including a final $50 million installment. Just in terms of the new replenishment, $150 million from the United States would be 29 percent but in cumulative terms. The total amount would be only 20 percent. It is a double-duty dollar in the sense that our contribution serves for two rounds. It is a good deal for the United States and it meets some of the concerns that have been expressed by this committee.

Mr. CONTE. You mentioned this morning this would restructure the Bank in some way.

Mr. HENNESSY. That is correct. They are going to take another look at several aspects. One is the independent audit mechanism and another is the organization of the Bank, personnel policies, budget, et cetera. They have a new president. He has had long administrative experience as well as financial experience and he is very receptive to this idea.

I might say this Bank has been one of the most efficient of the international institutions, but I think there is room for improvement, particularly in the representation and other areas, which are a sore point to us, as well as to the committee.

Mr. SHRIVER. Representation?

Mr. HENNESSY. Yes, sir.

LEVERAGE OF ORDINARY CAPITAL

Mr. CONTE. How much is the Bank able to leverage capital contributions in the private money market?

Mr. HENNESSY. In this proposal we have before us, the United States would put in, in cash, $24 million out of $120 million, that is the same proportion other countries are putting in. They are able to lever by 4 to 1. Out of every $5, the subscribing government puts up $1 of cash and $4 worth of guarantee. They go to the private bond markets and borrow $4 for every $1 they get from the subscribing governments. That is the leverage. That is at market rates.

The recipient countries themselves could not go into the borrowing markets as the New York capital market, for example; so they need this way of being able to go through the Bank.

COMPETITIVE POSITION OF THE UNITED STATES

Mr. CONTE. The president of the Bank had us in for a meeting because, he said, of the devaluation, which put the United States in a much better competitive position with respect to Japan. He said he came from Tokyo and paid $8 for a meal and that he couldn't afford to buy many more meals in Tokyo.

Have you done any pricing studies to determine how much the competitive position of the U.S. businesses improved in the area as a result of devaluation?

Mr. HENNESSY. We have gotten an analysis underway. However, we don't have anything final. It takes awhile for the impact of devaluation to be felt. We do see in the April trade figures of the Japanese where their exports surplus was cut in half. It is beginning to bite.

I think we will have some rough ideas of the price impact on competition in the area in due course. We will be able to submit that to you. I don't think it will be in time for the record.

FISCAL YEAR 1973 CONTINUING RESOLUTION

Mr. CONTE. If I remember correctly, didn't the Senate put the $100 million in the foreign-aid bill last year?

Mr. HENNESSY. Yes.

Mr. CONTE. The bill got locked up.

Mr. HENNESSY. What happened was that the appropriations conference never occurred, because the military authorization was never settled by the authorizing conference. The continuing resolution was passed and in that there was no previous special fund funding level, the result was zero.

Mr. PASSMAN. Would the gentleman yield?

This subcommittee, the full committee and the House of Representatives said no funds for ADB, even though the Senate may have put it in, I think that the integrity of this committee holds firm in conference, does it not?

Mr. HENNESSY. I would certainly not want to prejudge the results.

Mr. PASSMAN. I am talking about the record of the past.

Mr. HENNESSY. The experience I think is normally a compromise somewhere between the two.

Mr. PASSMAN. Usually the House brings back more than it leaves over. Is that the record?

Mr. HENNESSY. I would say 50–50.

Mr. PASSMAN. Thank you, Mr. Conte. I got an evasive answer and that is what I expected.

DRAWDOWN OF LETTERS OF CREDIT

Mr. CONTE. You state that, under your present plans, 60 percent of the capital contribution would be in the form of non-interest-bearing letters of credit which would be drawn down as needed for disbursement. Over how long a period would this drawing down take place?

Mr. BEACH. The arrangement is that the replenishment would take place over a 3-year period. The actual drawing down of funds would certainly depend on the rate of disbursements, and that might run over a 5-, 6-, 7-year period. The conditioning phenomenon there is the rate of disbursement.

Mr. CONTE. You asked for $100 million here. This morning you said it would be drawn down $5 million in 1974 and maybe $7 and $8 million per year thereafter?

Mr. HENNESSY. It might take 10 years.

Mr. CONTE. What if the committee just appropriated one-tenth of that?

Mr. HENNESSY. The Bank can't obligate funds it doesn't have. We would have to come back to the committee. Say the Bank made 10 loans without any appropriation; they made loans of $200 million during the year, of which $100 million was to come from the United States even though they didn't have to disburse it right away. They made that commitment. Then you would have to come up with the dough.

It is a question of obligated versus unobligated. Banks can't obligate funds unless they can count on the funds. It is different in the soft-loan window. For the hard loans, they can go into the market and float their bonds. For soft loans they have to depend on contributions, appropriation from us, and other conutries. The strict rule is they cannot make one soft loan until they have that money committed, legally committed. Go through the appropriations process in our country and other countries. Even though it won't be drawn down because of the disbursement lag, maybe for 5 or 6 years or more. They sign a legal contract between the Bank and recipient country. It may be 5 or 6 years or more to build the dam or what have you. The day they sign that loan they have to have the full amount appropriated. Otherwise they might come to the point not being able to meet that commitment.

Mr. CONTE. Is there any other country that has the same type provision that we will have in the soft loan?

Mr. HENNESSY. They, of course, will draw down on a pro rata basis. We have the tying provision which, in this new round, would apply to us and there is a double-duty dollar aspect to it.

Mr. CONTE. We are going to be in a unique position?

Mr. HENNESSY. The period or drawdown, when it comes, would be the same for all countries. That depends on the disbursement rates, and everybody puts in a pro rata share.

ADMINISTRATIVE EXPENSES

Mr. CONTE. This question might have been asked.

Appendix II—the Bank's administrative expenses have shown a rather substantial increase over the past year. Could you explain the reason for this increase?

Mr. BEACH. I think the administrative expenses over the past year have gone up about 10 or 11 percent and the primary cause would be

additional staff. We have in mind bringing on 15 additional professional staff members to help us handle the projected increased load of processed loans.

Mr. CONTE. The administration charge to special operations also showed a decrease. Could you please explain how this deduction works and why it was less in 1972 than it was in 1971.

Mr. BEACH. If my information is correct, Mr. Conte—and I have to check my budget figures—I think that it may be fairly level over the past 2 years. As our charter provides, we more or less pro rate the administrative expenditures for special funds operations which are charged off to special funds. I think we have been holding a fairly level amount there over the last couple of years in special fund operations.

U.S. GOVERNMENT SUPPORT FOR ADB

Mr. CONTE. I might say that it was my first experience going to one of these meetings, and certainly you couldn't term that a junket in the true sense of the word, especially flying out there with that C–135. That was a brutal 17-hour trip to Korea. Then we worked the projects in Korea. From there we went to the Bank meeting, which was a very good meeting. I was impressed with the sincerity of the President of the Bank and with his feelings that you have expressed here today.

The Bank certainly would not succeed unless the United States participates in this. We are creating a tremendous void in Southeast Asia by our pullout from there. I happen to be one, together with Congressman Long, who fought the other Long, over giving and selling sophisticated weapons of war to underdeveloped nations of the world. We have succeeded and gotten an amendment into the bill which became law. I have always been a real stickler on this in the committee. However, I think for every dollar we spend in Southeast Asia for economic programs, if they are sound economic programs, is worth $100 in armaments. I think that the Bank and projects such as this certainly deserve encouragement. I wish we all could get out in the field and look at these projects and see what they are doing.

If I find that you are going to be wasting your funds, I will be one of the first to take the floor against you.

A lot has been said here about the higher-ups in the Government not being behind the Bank. I have a letter of November 28, 1972, written by Henry Kissinger to the President of the Bank.

[The letter follows:]

THE WHITE HOUSE,
Washington, D.C., November 28, 1972.

Hon. TAKESHI WATANABE,
President and Chairman of the Board of Directors, Asian Development Bank, Manila

DEAR MR. PRESIDENT: The President has asked me to thank you for your letter of October 23 concerning the U.S. contribution to the special funds of the Asian Development Bank.

As you know, the President is a strong supporter of the work of the Asian Development Bank. It has played a most important role in the development of the nations of Asia. At a time when development funds are so important to this area, the administration is determined that the United States should provide its share to the Bank's special funds. You can be certain that we will make strong efforts to secure the necessary appropriations in the coming year. I can also assure you that the United States will continue to take a profound interest in the future development of Asia.

The President wanted me to take this opportunity to express his deep appreciation for your outstanding contributions to the Asian Development Bank and to the cause of development in Asia. Your leadership has significantly strengthened the Bank and contributed greatly to a brighter future for many nations. As you leave the Bank, you have the President's warmest good wishes.

Sincerely,

HENRY A. KISSINGER.

I would like to get two letters that you mentioned, the one Marcos wrote and one from Suharto of Indonesia.

I think that it is a very small investment in return for what we might get out of this program in Southeast Asia.

Thank you.

OBLIGATING BANK FUNDS

Mr. PASSMAN. I have a few questions at this point. With your permission, I will ask my questions and recognize Mr. Shriver to ask the Secretary questions.

Did I understand you to say earlier that you have a policy of forward funding? If you have a flood control project and you come up with what you consider a firm estimate as to the cost of it, you estimate it will take 7 years to complete it, you fund it for the entire 7 years?

Mr. HENNESSY. For the special funds, we ask for appropriation for the entire amount. That is correct.

Mr. PASSMAN. Isn't that the same thing? I am not trying to put words in your mouth. I never get an answer, you understand. What you do is allocate funds for the full amount of the project even though it requires 7 years to complete it?

Mr. HENNESSY. We get the appropriation. The funds are not disbursed by the Treasury.

Mr. PASSMAN. Certainly not, but you do have the money on hand before you ever approve the contract?

Mr. HENNESSY. We have the 100 percent appropriation beforehand.

Mr. PASSMAN. Without exception, in every project that we have in America, if it is a flood control project and if it is a 7-to-12-year project, we get a little slice per year and sometimes it takes from 12 to 18 years to finally get the money to complete a project. Isn't that the way we allocate in America?

Mr. HENNESSY. This is the way the majority does.

Mr. PASSMAN. That is all I want, an answer. Thank you very much.

I have a lot of respect for the astute American businessman. Take the young executive who becomes president of a corporation. If we increase certain local taxes, when this young executive arrives at that board of directors meeting on January 5, we will say, unless he has put in the cost of the commodity all of these expenses applying thereto with a profit of some 6 to 8 percent for the stockholders he is usually replaced; isn't he?

Mr. HENNESSY. Yes, sir.

U.S. PRICE COMPETITIVENESS

Mr. PASSMAN. You answered the question. Thank you very much.

We have priced ourselves out of the world market in many fields; haven't we?

Mr. HENNESSY. I think we are reestablished now so——

Mr. PASSMAN. You have. Don't talk about the future now. We have priced ourselves off the world market in many fields?

Mr. HENNESSY. We were out. I think we are now back in the ball game.

Mr. PASSMAN. See if we are. Take stainless steel and many types of iron and many types of sheet metal and barbed wire. The Japanese can go out on foreign markets, buy their ore and take it to Japan, process it, pay the freight and duty and deliver it dockside back in the United States usually about $285 a ton cheaper than an American businessman can buy it in Philadelphia. Is that correct?

Mr. HENNESSY. I am not sure if that is any longer the case. I know ore and steel——

Mr. PASSMAN. I stand on the statement I made. I do a lot of research and I stand on the statement I made. I think it has come nearer being $300 a ton.

Move to the agriculture field. The biggest customer in America is the agricultural industry. They consume more steel than the entire automoible industry. It is the biggest business in America. We are having to sell all of our agriculture commodities with a very large subsidy to meet world prices?

Mr. HENNESSY. I don't think there are any subsidies on U.S. agricultural exports at the present time.

Mr. PASSMAN. You have it on cotton. You moved the subsidy from the exporter and back to the farmer. Of course there is a subsidy going on out. Take rice. You have $22 a ton subsidy on rice; do you not?

Mr. HENNESSY. At the present time?

Mr. PASSMAN. There is on rice. At the present time, yes.

Mr. HENNESSY. Your information may be more current than mine.

Mr. PASSMAN. You ought to know these things. We all have a right to our own views. If I want to go barefoot there is no law against it. You can dress this thing with the clothes of innocence but when you get down to the actual facts what you are asking of this committee is to provide an appropriation of $221 million to be paid out with no provisions for any of it to be returned to the U.S. Treasury. Is that just that simple?

Mr. HENNESSY. That is correct—unless the Bank is dissolved.

Mr. PASSMAN. Thank you very much.

This final question: Are all of your contracts awarded on a competitive basis?

Mr. HENNESSY. Except for the consulting contracts.

Mr. PASSMAN. I am speaking of your production contracts.

Mr. HENNESSY. The project, yes, Hardware.

Mr. PASSMAN. Isn't it also true that we have lost many of these lucrative contracts, if I may apply that term, because we were not competitive?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. Thank you very much.

Mr. Miller.

Mr. CONTE. Would you yield?

Mr. Chairman, I don't want to get into a debate with the chairman, but the devaluation that is going into effect defeats his own argument. He wouldn't buy a President's watch in Hong Kong for $1,700

when it costs $1,100 in the United States. It really points up what the devaluation has done.

Mr. PASSMAN. Let me make the record abundantly clear again. The clever Japanese they managed to outmaneuver us to where the purchasing power of the dollar in a brief period lost 35 percent as compared to the value of the yen. I think you said that. Nevertheless, we are still not competitive and we are losing contracts to Switzerland, Germany, Italy, and Japan.

Mr. BEACH. We are now competitive.

Mr. PASSMAN. We are losing contracts, according to your own testimony. You better read your statement here.

Let us go to what you said in your statement:

"Currently the U.S. firm gets 8 percent of the business while Japanese firms receive 56 percent."

I would imagine this is a current statement. It is dated May 22, 1973.

Mr. CONTE. Before devaluation.

Mr. PASSMAN. Have you devalued since May 22?

Mr. BEACH. The data which that comment was based on was data that we had compiled prior to the last devaluation of the dollar.

Mr. PASSMAN. Why didn't you say it in there? You give it as a current fact. You know as well as I do that we are in serious trouble again with the dollar. You read it in the paper 2 days ago and 1 day ago. You read it in the paper this morning. The dollar again is in very serious trouble, and being with the Treasury you ought to know that better than I do.

Mr. HENNESSY. I object to that statement.

Mr. PASSMAN. I don't care what you object to. If some of you people downtown would give some thought to the prestige we have lost abroad by disbursing money that your grandchildren are going to have to either pay back or service, we would be a lot better off.

Mr. LONG. Would you yield?

U.S. PROCUREMENT SHARE

Mr. MILLER. Mr. Chairman, thank you.

My question is along that line. Even though the Bank has adjusted many of its operating procedures, I say we still are faced with problems of considerable concern, most notably the U.S. procurement share of Bank-financed projects.

Right along the line, the chairman mentioned that about 8 percent of the business was returned to the United States, as I recall. Also, of the 86 contracts above $500,000 awarded so far by the Bank borrowers, U.S. firms had bid on only 29 of these. You stated that they lost in many instances to the Japanse, to West Germany, and United Kingdom. My question is this: In how many of the 29 that you listed, 29 bid offers, were U.S. firms actually awarded contracts?

Mr. BEACH. They were awarded contracts in three of those instances.

Mr. MILLER. In other words, there has been a total of 86 contracts awarded and the United States has actually received 3?

Mr. HENNESSY. Above $500,000.

Mr. MILLER. You also stated that the U.S. procurement problem is a broad one relating to lack of competitiveness of the U.S. goods and low sales performance by U.S. firms. This is along the same line of questioning that the chairman pursued. Are you stating that the cost of production within the United States is so high for the items bid upon that we are not able to compete with the other countries?

Mr. BEACH. I think the point we want to make there is that the exchange rates have been out of balance to such a degree that the Japanese have benefited from a highly undervalued exchange rate which has made Japanese products extremely competitive and has allowed the Japanese to underprice us when it comes to competitive bidding. We have now had two revaluations of the yen and two devaluations of the dollar, which have resulted in a 35-percent appreciation of the yen vis-a-vis the dollar. Our feeling is that this——

Mr. LONG. Plus the fact that Japanese prices have been rising more rapidly than ours, right?

Mr. BEACH. Right.

Mr. LONG. What about other countries?

Mr. BEACH. Right. I think the combination of these factors then has certainly reestablished competitiveness in terms of U.S. products vis-a-vis Japanese products.

Mr. HENNESSY. There is a second point there. That is on the firms themselves. I think it is a little of the chicken and the egg. The fact you couldn't compete in the 86 projects, U.S. firms didn't bother to bid on 50 of those. Why? Because it cost a lot of money to bid. If you knew you are beat before you started, you didn't bother to bid. I think at the same time they have lost a lot of the fight to compete because of the fact that they said, "We are not competitive so we will sell at home."

Two things have to happen. We have to have the right exchange rates so the price is right and U.S. firms can compete. And we have to learn how to compete in Asia because the Japanese have dominated that area. Our people have not been out there working at it. If we have $100 million worth of tied funds with the soft funds, which means only our firms can get them, there is an incentive to go back in the area and start bidding. It has to be a U.S. firm that wins.

Mr. MILLER. It is interesting to see that over the 86 projects, and 86 awards, we only received 3. I believe we talked about this before. You would follow not only loaning the money but you follow some of the contracts. Do you have an idea of who does actually receive the contracts and what the amount of the bid would be?

Mr. BEACH. Yes, sir.

Mr. MILLER. I wonder if you can prepare for the record—I don't know if you have right now the information that I am going to ask for—our sales price on such items as large electrical generating equipment, turbines and stream boilers, railroad diesel engines, transformers, and construction cranes. How would this compare with the sales price of other major industrial countries? If we could have that for the record.

Mr. BEACH. We have some of that. As much information as we have been able to obtain we will certainly provide. We have in all instances the main bid price and attempted, I think, with success to determine what the U.S. bid was in all cases.

[The information follows:]

ASIAN DEVELOPMENT BANK PROCUREMENT BIDS OF U.S. FIRMS COMPARED WITH WINNING BIDS

	Winning bid	U.S. firm bid
Power circuit breakers	$1,951,000	$2,299,00
Do	938,000	965,00
Carding machines, spinning frames, etc	637,900	711,78
Oil circuit breakers	702,000	1,042,00
Flyer frames, ring spinning frames, etc	870,000	927,92

Mr. MILLER. I think it would be very good information. If there is one other point I could follow up right there. Are these items in any way subsidized by the governments of other major industrial countries? In other words, to allow this item to be sold on the market for the lowest price? Could you furnish that for the record? I know we are talking about a lot of items and countries. If we could get that for the record I would appreciate it very much. It will help us evaluate where we stand in the world market today.

[The information follows:]

The outstanding case of subsidies being granted by an industrialized country for the products listed by Representative Miller is that of Italian law 639, which provides subsidies for eletcric transmission towers, compressors and part, certain steel products, and many other products. The United States has instituted complaints against these practices in the GATT, and has applied countervailing duties against the subsidized Italian products on six occasions since 1967.

However, in terms of what other industrialized countries are doing for their suppliers in an effort to increase exports to LDC's, certain forms of financing can be an important factor. All industrialized countries, including the United States, provide financial assistance in the form of direct loans and guarantees to assist their suppliers in overseas transactions. We are very competitive in commercial financing (Eximbank); as for concessional financing, we believe that the United States is not put at a competitive disadvantage due to other countries providing such financing.

Mr. PASSMAN. Would you yield?

I think this could be placed in the record. If I am not mistaken, when the dollar was devalued the first time in 1971 we were told this was supposed to correct the situation. Now, we are going to straighten up and fly right is what was said.

Well, we didn't straighten up and fly right. We continued our wild spending at home and abroad. So we came along in February 1973 and devalued again. We said this time we really are going to straighten up and fly right. Instead of straightening up and flying right, we are turning right around and getting the dollar back in the same condition we had it in when we had to devalue in 1971 and 1973.

I am not afraid to place in the record the fact that as hard as Mr. Nixon is working to control inflation, it is about to get out from under control again. I cannot blame this administration. I blame all Americans for the demands they make on the Treasury for deficit financing and continuation of this unbelievably high foreign-aid program.

Thank you for yielding.

Mr. MILLER. If I could, I would add to that just a little.

As I recall the diagram that we have in the budget, as of fiscal year 1974, 5 cents or 5 percent of every dollar will be borrowed. That is anticipated in the budget?

Mr. PASSMAN. That is right. In this great prosperity with peace.

Mr. MILLER. I wanted that to show in the record too.

Thank you.

Mr. HENNESSY. May I address one aspect of procurement which is a statistical problem? I was reminded of this factor by your question on the generator. If a U.S. firm's subsidiary in Taiwan sells a generator for an ADB project or Mitsubishi under license with Westinghouse sells one, it comes out as a Chinese or Japanse export even though we get the repatriated profits or property and royalty back. In the statistics, the way the books are setup, it is the country it is shipped from. The fact is we are about the only country in the world with foreign sources. Our corporations are all around. The procurement figures are deceiving in that sense. What is hidden there is how much of these exports, sales are being made by U.S. subsidiaries abroad. That figure we have not been able to get at. It is something which interests us.

Mr. MILLER. The profit on the manufacturer may be hidden there but the jobs that were not created in this country to develop and manufacture that particular piece of equipment is nevertheless apparent. Most of it is fairly high technology equipment and it requires a lot of skill and a lot of man-hours. That particular area shows that we are not working in this country if another country is doing the manufacturing, no matter who owns that factory in that foreign country.

Thank you.

U.S. TRADE FIGURES

Mr. PASSMAN. Mr. Director, it would appear to me that we should have a careful analysis of this proposition because we do know that in 1972 we had a $6,400 million actual trade deficit, the second one we have had since 1888. Is that correct?

Mr. BEACH. That is correct.

Mr. PASSMAN. I believe that is the first quarter of 1973 we are again experiencing a trade deficit; are we not?

Mr. BEACH. I believe that is correct.

Mr. PASSMAN. It would be far worse than the record indicates if we should remove from the export category foreign aid, would it not? If we removed that as an export our deficit would be far greater because all of the foreign aid we give we still list as an export. We have kept this thing looking somewhat favorable by including all foreign aid disbursements for commodities or exports except military. It is like your unified and administrative budgets. You are covering up something.

Mr. HENNESSY. I don't think we are covering anything up.

Mr. PASSMAN. You don't. You know very well the average American does not understand the unified and administrative budget and why in reality if the public debt goes up, why the budget shows a lower figure. We are in that same field here. The people that put this money up for us to give away, they don't understand all the ramifications of this thing. It is a statement of fact, isn't it, that foreign aid, even though grant, when commodities go out we list that as an export?

Mr. HENNESSY. There are deductions made for Government. You have in the balance-of-payments figures which are produced there as a deduction made for the grant military portion, so it is not included in the figures separately from it.

Mr. PASSMAN. You are repeating what I said. You are not answering my question. Is it not true? You might get Dr. Hannah's testimony. You are not going to give the direct answer. I don't believe you are. When we look at the $6.400 million trade deficit for 1972 to get the true deficit would we not have to add the foreign aid commodities that we have given away and shipped abroad which of necessity we include as an export and yet there is nothing coming back in return; is that correct?

Mr. HENNESSY. On the grant portion there is no credit. No loan.

Mr. PASSMAN. There is nothing coming back?

Mr. HENNESSY. That is right.

Mr. PASSMAN. As it goes out we include that export?

Mr. HENNESSY. Yes. In other words, that has been already adjusted for the military grant portion.

Mr. PASSMAN. The military, I said long ago, that was not included. I am talking about the economic aid.

Mr. HENNESSY. Right.

Mr. PASSMAN. Testimony in the past listed it as an export. If we were——

Mr. HENNESSY. It is not part of that $6.4 billion.

Mr. PASSMAN. Certainly not. If you would take that out it would be even larger. We know that and we have established that over the years that your actual surplus that we have claimed in the past would have switched over to a minus had we subtracted the commodities shipped out without any return under foreign aid. We neglected to say it is a one-way street. It is given away.

Mr. SHRIVER. Wouldn't the same thing be true, Mr. Chairman, of food for peace?

Mr. PASSMAN. Certainly. I am talking about anything we give away. It is listed as an export. It is like I made a donation from my food store a basket of groceries. I ring it up on the cash register for a sale but nothing in the drawer.

Mr. HENNESSY. The same is true in the Export-Import Bank.

Mr. PASSMAN. No, you know very well that we are making and selling commodities and we do get that money back.

Mr. HENNESSY. It is money back. The same with this bank.

Mr. PASSMAN. You are getting completely away from my statement. I said grant aid. You never listen to what I am saying. Grant aid goes out. I am talking about the overall. You are down at the Treasury Department and make these disbursements. I think you might pass by the offices even if you don't have anything to do with it. These payments are made out of the Treasury?

Mr. HENNESSY. They are, indeed.

Mr. PASSMAN. Good. When we finish with ADB do you come back in as a representative of IDA? Is that right?

Mr. HENNESSY. That is correct.

ADB AND U.S. FOREIGN POLICY

Mr. SHRIVER. In Asia. This morning, I inquired as to whether the State Department was going to be here. There is now somebody here from the State Department. I wondered what the official position of the Government was, from foreign policy standpoint, of the importance of this program in terms of American interests.

Mr. WEINTRAUB. Mr. Shriver, there is continuing and regular dis-

cussion, consultation, deliberations among and between the State Department and Treasury before the Treasury comes here, even though we may not be here physically present. We are aware of what is being done, and in point of fact we see some of the statements before they were made. What I am saying is we endorse fully the viewpoint of foreign policy, what Secretary Hennessy stated here.

Mr. CONTE. Why weren't you here?

Mr. WEINTRAUB. This was not deliberate. It was not at all clear whether or not the committee wished the State Department to be here. If the committee wishes that, we will be here in the future.

Mr. HENNESSY. That is as much our fault as anybody's. In the past the questions were handled by letter and indirectly. I think it is better to have direct participation.

Mr. CONTE. We don't get to see the State Department people very often. I wondered if they are still down there.

Mr. SHRIVER. They come in connection with the other programs. Some questions I had this morning I asked of Mr. Hennessy.

Mr. HENNESSY. How they fit in with U.S. interests.

Mr. SHRIVER. Yes.

Mr. WEINTRAUB. We have gone into this deeply in the letter the Secretary of State sent to the committee, in which it was done with some deliberation and some care. It represents a very considered opinion in terms of the foreign policy interests of these operations.

Mr. SHRIVER. Is that in the record?

Mr. WEINTRAUB. Yes, sir. I hope it is.

Mr. SHRIVER. That is all.

Mr. PASSMAN. I believe that the powers in being went out and solicited a letter from all former Secretaries of State and former Secretaries of the Treasury and these letters started rolling in. I believe that was part of your system to get all former secretaries to write key Members of Congress a letter about the importance of these programs?

Mr. HENNESSY. Over the years there has been——

Mr. PASSMAN. I am talking about recently, not over the years. I am talking about very recently, last year.

Mr. HENNESSY. The only letters that I know of that have been written have been from John Hannah, the head of AID, and from the Secretary of State. In past years Secretaries of the Treasury and Secretaries of State who were no longer in office have written in. There has been bipartisan support of this program.

Mr. PASSMAN. You are admitting that I am making a statement of fact that by solicitation or otherwise——

Mr. HENNESSY. Not by solicitation.

Mr. PASSMAN [continuing]. You asked them to write letters. If you don't have them in your file, if you can find the time in your busy life, come by and I will give you a copy of that and other members can come get them.

Mr. HENNESSY. There may have been letters written on this issue. I have not seen them nor solicited——

Mr. PASSMAN. The pressure is on the people. Please don't take this committee for granted. You may think that you count noses and you are going to write this bill, but you may not do it. If you will, give a little thought to some of the more down-to-earth statements that have been made. You clothed it with innocence but admittedly it is still $221 million you are asking in appropriations for, which there is absolutely no return, nothing coming back. It is not pleasant at all to take the

position that I do. But you do spend all of your life thinking up some way to spend this money. Members of the committee may have just a very few days to go into all these ramifications.

Naturally there is nothing personal about it, but some of us must point out in the record that if we don't get our fiscal house in order we are in trouble. You don't deny that?

We gave our President a vote of confidence today. I don't know how the other Members voted, and I don't care. But I was glad to give him a vote of confidence. I am not going to blame the President for these programs, because he requests them only in his name. His knowledge of detail is limited.

Any other questions? The committee stands adjourned.

TUESDAY, MAY 29, 1973.

Mr. PASSMAN. The committee will come to order.

We shall continue our examination this afternoon of another facet of the foreign aid and assistance program. The item we shall consider today is the request of the International Development Association.

We have as witnesses Hon. John M. Hennessy, Assistant Secretary for International Affairs, Treasury Department, and Hon. Hal F. Reynolds, U.S. Representative at the International Bank for Reconstruction and Development, and International Development Association.

I would assume, Mr. Reynolds, that you have a statement that you would like to make to the committee.

Mr. REYNOLDS. I do.

Mr. PASSMAN. You may proceed and we will let you read your statement into the record.

GENERAL STATEMENT

Mr. REYNOLDS. Mr. Chairman, I am pleased to appear before the subcommittee today in support of the administration's appropriations request for $320 million to cover the second installment of the U.S. 3-year subscription to the third replenishment of the International Development Association. This appropriation is necessary for the continuation of IDA's lending program in fiscal year 1974. As members of the subcommittee know, IDA is the affiliate of the World Bank which makes loans on concessional terms to the poorest and least developed countries of the world.

Following the enactment of authorizing legislation by the last Congress, and following appropriation covering the first installment of $320 million, and then only after consulting specially with the Congress, the United States formally agreed to participate in the third replenishment in September of last year. Under that agreement, 22 nations agreed to provide IDA with $2.44 billion over a 3-year period. The U.S. share of this amount is $960 million—39.3 percent of the total.

When U.S. participation in the agreement was announced last September, it was indicated that the annual installments of the U.S. contribution would be paid in fiscal years 1973, 1974, and 1975. This schedule represented a slippage of 1 year in the pay-in schedule contemplated under the original agreement and was in line with the report of May 11, 1972, of the Committee of Conference on Supplemental Appropriations which said—"The managers agree that there is no intention of denying each of the three annual installments of $320 million in the next 3 fiscal years and that the first installment will be provided in the fiscal year beginning July 1, 1972."

Payment of the U.S. first installment was made in November of last year from funds provided under the terms of the fiscal year 1973 continuing resolution for foreign assistance and related items. The other contributing governments have already paid their second installments in accordance with the original time schedule. The request being made today for fiscal 1974 appropriation will enable the United States to pay its second installment as these other nations have already done.

This installment will be made in letter of credit form—to be drawn upon only as IDA requires funds to meet disbursements on its credit commitments to borrowers in the developing countries, and then only

on a pro rata basis with the funds from other countries. No budgetary outlay or balance-of-payments outflow will result in fiscal 1974 from the present request. It is estimated that in fiscal 1974 U.S. suppliers will receive contracts of roughly $130 million to provide goods and services for IDA financed projects, from past authorized loans, on which bidding is now taking place. In addition, about $35 million of the association's administrative expenses will be incurred in the United States.

The overall impact of World Bank operations on the U.S. balance of payments is heavily favorable. During the past 15 months, not a penny has been borrowed in U.S. capital markets, while well over $2 billion has been raised in the markets of other countries. In the present fiscal year the combined impact of IBRD/IDA operations on the U.S. balance of payments is expected to be favorable to the extent of almost $400 million. One of the important factors in achieving this favorable effect has been the IBRD's increased reliance on private capital markets in other countries.

Mr. Chairman, the case for continued U.S. support of IDA is compelling. The association provides assistance exactly where the need for concessionary lending is most acute; that is in the poorest recipient countries. All IDA recipients have a per capita income of less than $375 and most of them are much poorer than that. Many of them would find it very difficult or even impossible to find capital elsewhere to fund development projects.

IDA, like the IMF and the IBRD, operates within the context of the world's market economies. It seeks to advance interdependent interests in a liberal world trading system. Its economic development objectives fit closely with U.S. objectives in the related areas of international trade and international finance. In this connection, we should not ignore the growing dependence by the United States on overseas sources for its raw materials and other essential products. In many cases, IDA financing enables developing countries to export higher quality goods on a more reliable and economic basis. It also encourages private investment in their countries by its support for the development of necessary infrastructure. This factor certainly needs to be included in any assessment of U.S. interest now and in the future.

Let me enumerate, for a moment, Mr. Chairman, some of IDA's specific accomplishments. In fiscal year 1972, it extended credits of $1 billion for 68 projects in 38 countries. At the same time, it also moved into several new areas of lending activity, launching projects in agricultural development, education, and family planning.

To illustrate this last point, more than $300 million was allocated for agricultural projects in 1972, $50 million for education, and $35 million for family planning. The family planning projects, in particular, represent a major effort on IDA's part to combat the population problem in countries where pressures of overcrowding are extremely severe: such as India and Indonesia. An important IBRD population project was also recently approved for Malaysia.

In line with its current 5-year plan, IDA has also greatly increased its activities in regions somewhat overlooked in the past. For example, lending to Africa tripled within the last few years, amounting to nearly $250 million in 1972. IDA has also focused greater attention on the special problems of the "least developed countries," and is now

working to improve efforts in the fields of technical assistance and project preparation.

It also has an important role in planning for programs for reconstruction and development in one of its poorest and newest members, Bangladesh.

Of course, the role IDA plays goes far beyond the figures that I have just mentioned to you. Perhaps the best way to look upon IDA's role is as a catalyst. By its lending activities, it helps to mobilize domestic financial resources within the borrowing countries. It encourages other lenders, both public and private, to participate in projects. The total amount, therefore, of IDA projects is much larger than the funds IDA itself puts into them. The World Bank group plays an important role in coordinating the flow of resources to developing countries through its chairmanship of consortia and consultative groups.

From a managerial viewpoint, Mr. Chairman, the organization and procedures of IDA and the World Bank are under continuous review. This helps to insure that the institutions are efficient and responsive to the needs and desires of both contributing and borrowing member governments. In the last year, the Bank undertook an important reorganization, which unified functional and area responsibilities and established a more coordinated approach to lending operations.

The World Bank Group, including IDA, has a reputation throughout the world as a serious and responsible financial institution, deeply concerned with the problems of development, but at the same time rigorous, demanding, and professional in its operations. Bank and IDA operations are managed responsibly and efficiently. The repayment record is excellent.

IDA money is never a handout. Projects are meticulously prepared and appraised. Except in fields such as education—where short-term benefits are almost impossible to quantify—IDA projects must demonstrate a rate of return of above 10 percent a year. This is exactly the same standard applied to IBRD loans, which bear nearly commercial rates of interest. In my judgment, the record of achievement has been remarkable, notwithstanding the early stages has been remarkable, notwithstanding the early stages of development of the borrowing countries and the staggering problems they face.

After credits are approved, no funds can be released without explicit authorization by IDA management. All projects are closely supervised at every stage, with onsite inspections by IDA staff and regular reports to senior management and to the board of directors. The procurement of goods and services also is closely supervised. Borrowers must conform to Bank guidelines, which are based on international competitive bidding. In most cases, all contract awards must be approved by the Bank, after a review of the procedures used by the borrowing country.

At the urging of member governments—and particularly the United States—the World Bank has established an operations evaluation unit. This unit is completely separate from the operating departments of the Bank. It has presented to the board of directors a series of frank and objective evaluations of Bank operations, ranging from comprehensive assessments of the Bank's role in a given country or sector, to postaudits of individual projects after disbursements have

been completed. The work of this unit promises to be extremely useful to the board of directors and to management for the purpose of strengthening future operations.

The recent GAO report on U.S. participation in the World Bank and IDA offered a number of suggestions for strengthening the role of the United States in these institutions. I believe that considerable progress has already been made in implementing the constructive proposals made by the GAO, notably in the areas of information on projects in preparation, reporting on project supervision, and evaluation activities. We should remember, though, that the role of the board of directors is not to involve itself in technical decisions, but rather to decide policy issues, and to see that approved policies are adhered to and effectively implemented. Since the earliest years of the Bank's history, the United States has played a crucial role in guiding the evolution of the institution, and the dynamic, forward-looking role of the Bank and IDA today reflects in large measure the leadership of the United States.

By supporting this request for funds, you will enable the United States to join with the industrialized countries of the world which have already made their second installment payments under the Replenishment Agreement. And you will affirm the willingness of the American people to continue their support of the IDA development program.

Thank you very much.

JUSTIFICATIONS

Mr. PASSMAN. Thank you for your statement. We will insert the justifications in the record at this point.

INTERNATIONAL DEVELOPMENT ASSOCIATION

JUSTIFICATION FOR

FY 1974 APPROPRIATION

The International Development Association (IDA) is the concessional lending affiliate of the International Bank for Reconstruction and Development. It was established in 1960 to finance high priority economic development projects in its less developed member countries. It does this by providing long term credits at a nominal service charge. As of December 31, 1972, IDA had 111 member countries and had made cumulative credit commitments of $4,608 million.

U.S. membership in the International Development Association was authorized by Public Law 86-565, approved June 30, 1960. The United States joined the Association in August 1960 and, following appropriation of initial funds (PL 86-651), paid the first tranche of its original subscription in November 1960. The remaining portions of the original U.S. subscription were paid in over a four year period ending in fiscal year 1965. This original subscription of the United States amounted to $320,290,000.

Agreements have also been made among advanced member countries to replenish the resources of IDA on three occasions. The United States has participated in all of the replenishments. The most recent of them was negotiated during 1970 and provided for an increase of $2.4 billion. The U.S. share was $960 million and was to be provided in equal annual installments of $320 million over a three year period beginning in fiscal year 1972. Authorization of these amounts was approved on March 10, 1972 (Public Law 92-247). Appropriations of the first installment was not, however, approved in FY 1972. In deferring action on the Administration's request for a FY 1972 supplemental appropriation, the Conference Committee noted:

> "The Managers agree there is no intention of denying each of the three annual installments of $320,000,000 in the next three fiscal years and that the first installment will be provided in the fiscal year beginning July 1, 1972."

This first installment was provided in FY 1973 under the terms of a Continuing Resolution on Foreign Assistance passed by the Congress on October 15, 1972.

What is now being requested is the second installment of $320 million. The original payment date of November 8, 1972 has been extended for the United States, although other Part I countries have adhered to the agreed schedule and are, in effect, one year ahead of the United States in making their payments.

The U.S. contribution will be made available in the form of non-interest-bearing letters of credit drawn down as needed to meet disbursements on committed credits. No budgetary expenditures will result from this appropriation request in FY 1974. Prompt action is needed, however, so the Association can continue to commit funds for its high priority projects.

INTERNATIONAL DEVELOPMENT ASSOCIATION

Memorandum Relating to the Financial Statements

DECEMBER 31, 1972

Attached hereto are the following statements of the Association:

Statement of Condition	Appendix A
Statement of Income and Expenses	Appendix B
Statement of Changes in Resources Available for Commitment	Appendix C

Yemen, People's Democratic Republic of	477	1,157	1,634	560
Zaire	8,397	45,561	53,958	-
Totals December 31, 1972	$2,594,523	$1,559,785	$4,154,308	$462,735
Totals December 31, 1971	*$2,350,348*	*$1,805,728*	*$4,156,076*	*$184,000*

(1) All development credits have been made to member governments or to the government of a territory of a member.

(2) The disbursed portions at December 31, 1972 include adjustments to reflect the devaluation of the United States dollar on May 8, 1972.

(3) Of the undisbursed balance at December 31, 1972 the Association has entered into irrevocable commitments to disburse $3,087,000 *($23,240,000 - 1971)*.

(4) As at December 31, 1972, agreements in the amount of $52,800,000 providing for these development credits have been approved but not signed. In addition, agreements for development credits in the amount of $406,935,000 have been signed, but the development credits do not become effective and disbursements thereunder do not start until the borrower takes certain action and furnishes certain documents to the Association.

APPENDIX E

INTERNATIONAL DEVELOPMENT ASSOCIATION
Notes to Financial Statements

DECEMBER 31, 1972 AND DECEMBER 31, 1971

NOTE A - Translation of Currencies

The Association's accounts are expressed in current United States dollar equivalents translated as described below:

At December 31, 1972, currencies were expressed in United States dollars: (i) As to 64 members, at the par values announced by the International Monetary Fund (IMF); these include Canada, the United Kingdom and a number of other members which have advised the IMF that the market rates for their currencies temporarily will not be confined within announced limits, (ii) as to 16 members, at the central rates communicated to the IMF; these include India which has also advised the IMF that the market rate of its currency temporarily will not be confined within announced limits, and (iii) as to the remaining 31 members, at the rates used by such members in making payments of subscriptions to the Association adjusted to reflect the devaluation of the United States dollar. Swiss francs were translated into United States dollars at the rate of SwF 3.76172 to 1 United States dollar.

At December 31, 1971, currencies were expressed in United States dollars: (i) As to 76 members, at the par values as specified in the "Schedule of Par Values" published by the IMF, and (ii) as to the remaining 31 members, at the rates used by such members in making payments of subscriptions to the Association. Swiss francs were translated into United States dollars at the rate of SwF 4.08415 to 1 United States dollar.

The effect of the United States dollar devaluation of May 1972 and other exchange rate changes since December 1971 has been to increase in terms of United States dollars the Association's assets, liabilities, subscriptions, supplementary resources and accumulated net income as at December 31, 1972 as compared to December 31, 1971.

No representation is made that any currency held by the Association is convertible into any other currency at any rate or rates.

NOTE B - Restricted Currencies

Article IV, Section 1(a) of the Articles of Agreement of the Association provides that the currency of any Part II member, whether or not freely convertible, received by the Association in payment of the ninety percent portion of its initial subscription may be used by the Association for administrative expenses incurred by the Association in the territories of such members and, insofar as consistent with sound monetary policies, in payment for goods and services produced in the territories of such member and required for projects financed by the Association and located in such territories; and in addition when and to the extent justified by the economic and financial situation of the member concerned as determined by agreement between the member and the Association, such currency shall be freely convertible or otherwise usable for projects financed by the Association and located outside the territories of the member. The amounts of $52,468,000 *($56,299,000 - 1971)* under the heading "Due from Banks and Other Depositories" and $186,394,000 *($186,212,000 - 1971)* included under the heading "Receivable on Account of Subscriptions and Supplementary Resources" are subject to such restrictions.

NOTE C - Maintenance of Value

Article IV, Section 2 provides for the maintenance as of the time of subscription of the value of the Association's holdings of the currency (or substituted notes) representing ninety percent of each member's initial subscription, to the extent that such currency has not been initially disbursed or exchanged for the currency of another member. This Section requires the member to make additional payments to the Association in the event of a reduction in the par value of its currency or if the foreign exchange value of its currency has, in the opinion of the Association, depreciated to a significant degree and requires the Association to reimburse the member in the event of an increase in the par value of its currency or a significant appreciation of its currency in its territories.

The total amounts of supplementary resources of the Association and additional subscriptions under the third replenishment have, by agreement, the same respective rights and obligations as to maintenance of value as are set forth in Article IV, Section 2.

Certain members have communicated central rates to the International Monetary Fund (IMF). By action of the Executive Directors of the Association it has been determined that such central rates represent the *de facto* value of such currencies for maintenance of value purposes. The equivalent of $7,268,000 is due from 31 members *(nil - 1971)* and the equivalent of $2,586,000 is payable to one member *(nil - 1971)* in order to maintain the value of the Association's currency holdings (or substituted Notes) as required under Article IV, Section 2. Certain members have notified the IMF of their intention to maintain the parity of their currencies in terms of the United States dollar but have not officially notified the IMF of a change in par values and other members have notified it that for the time being the market rates for their currencies will not necessarily be confined within announced limits. In these cases provisional amounts receivable by the Association ($723,000) have been included in "Other Assets." If and when new par values are established and when the applicable members notify the IMF they will maintain their currencies within announced limits, the maintenance of value obligations will become effective as described above.

APPENDIX E

Continued

INTERNATIONAL DEVELOPMENT ASSOCIATION

Notes to Financial Statements (continued)

DECEMBER 31, 1972 AND DECEMBER 31, 1971

NOTE D - Transfers from International Bank for Reconstruction and Development

The International Bank for Reconstruction and Development has authorized transfers by way of grants to the Association totaling $705,000,000 *($595,000,000 - 1971)* from the net income of the Bank for the fiscal years ended June 30, 1964 through 1972. Of this amount, $315,762,000 had been received as of December 31, 1972 *($274,723,000 - 1971)*. The resolution of the Board of Governors regarding the transfer of $110,000,000 by way of grant out of fiscal year 1972 net income provides that up to the equivalent of $3,000,000 may be used by the Association for grants for agricultural research.

NOTE E - Contribution from Non-Member

New Zealand, which is not a member of the Association, has made a voluntary contribution of $NZ 5 million (US equivalent $6,080,000) to the Association, to be paid in five equal instalments. The first two instalments have been received and the remaining three will be paid in each of the years 1973 through 1975.

NOTE F - Loans from Swiss Confederation

The Association has entered into agreements to borrow a total of SwF 182 million (approximately US equivalent $48,382,000) from the Swiss Confederation. The first loan for SwF 52 million, which was made in fiscal year 1967, has been received in full. The second loan for SwF 130 million was signed in November 1972, and SwF 86.7 million has been received; the balance will be received in November 1973. The loans carry no interest and are each repayable in forty annual instalments commencing July 1, 1979 in the case of the first loan and November 8, 1983 in the case of the second loan. The first ten instalments in each instance will be at 1% of the respective principal amounts and the remaining thirty instalments will be at 3% of such principal amounts.

NOTE G - Development Credits

The principal amounts disbursed and outstanding on development credits and the accrued service charges are expressed in terms of United States dollars of the weight and fineness in effect on January 1, 1960 adjusted to reflect the devaluation of the United States dollar on May 8, 1972 and the equivalent is payable by the borrowers in currencies which the Association determines to be freely convertible or freely exchangeable by the Association for currencies of other members of the Association, except that such amount would be reduced if (a) there is a uniform proportionate reduction in the par values of the currencies of all members of the International Monetary Fund or (b) the Association so decides because of a substantial reduction in the value of one or more major currencies of members. The foregoing does not apply to a credit of $9,000,000 which is expressed and is repayable in legal tender dollars.

NOTE H - Subscriptions and Supplementary Resources

The Association's Articles of Agreement and subsequent replenishment resolutions define subscriptions and supplementary resources in terms of United States dollars of the weight and fineness in effect on January 1, 1960. In these financial statements all subscriptions and supplementary resources are expressed in current United States dollars unless otherwise indicated.

GENERAL - Third Replenishment of Resources

The third replenishment of the resources of the Association became effective on September 22, 1972. As at December 31,1972, 18 Part I countries and three Part II countries with contributions and subscriptions aggregating $2,510,541,519 equivalent had notified the Association that they would participate in the replenishment. In addition, 57 Part II countries had notified the Association that they would take up additional subscriptions under the third replenishment aggregating $8,729,716 equivalent. As at December 31, 1972, an amount of $1,271,918,000 equivalent was receivable, of which $349,633,000, equivalent was past due and the balance, $922,285,000 equivalent, which was not yet due, is receivable as follows: $57,334,000 equivalent in January and February 1973 and $864,951,000 equivalent in November 8, 1973.

Mr. PASSMAN. We will have certain questions, of course, to ask about this appropriation. I understand you are requesting $320 million for fiscal 1974.

Mr. REYNOLDS. Yes, sir.

Mr. PASSMAN. If I understand the terms of the IDA, they are 50 years, no interest, three-quarters of 1 percent service charge with a 10-year grace period.

Mr. REYNOLDS. Those are the lending terms on the credits; yes, sir.

Mr. PASSMAN. When they start repaying they only pay 1 percent a year for 10 years?

Mr. REYNOLDS. For the first 10 years, that is right.

Mr. PASSMAN. After this $320 million has been out for a total of 20 years, if they pay according to contract they will only pay 1 percent on principal and no interest, just the service charge; is that correct?

Mr. REYNOLDS. Well, the first 10 years they would have paid 10 percent, 1 percent a year.

Mr. PASSMAN. The first 10 year is free. By the end of 20 years there has only been paid back 10 percent.

Mr. REYNOLDS. That is right.

Mr. PASSMAN. And then there is 3 percent the remaining 30 but no interest and three-quarters of 1 per cent service charge. Under this agreement there is nothing in the charter that would direct any of this money back into the U.S. Treasury?

Mr. REYNOLDS. The repayments are returned to IDA, that is correct.

Mr. PASSMAN. That is not the U.S. Treasury, so my question I may ask over to make a good record. There is no provision whereby this money can be returned to the U.S. Treasury under the present charter?

Mr. REYNOLDS. Only upon dissolution of the institution.

Mr. PASSMAN. Under the present charter there is no plan proposed to dissolve the institution?

Mr. REYNOLDS. No plans, but the charter contemplates the possibility of ultimate dissolution.

Mr. PASSMAN. But there is nothing in the foreseeable future that could bring a dollar of this money back into the U.S. Treasury?

Mr. REYNOLDS. That is right.

Mr. PASSMAN. I think that is also true, as we established earlier, with all the following institutions; the Inter-American Development Bank, the Asian Development Bank, and the International Development Association.

Is that correct?

Mr. HENNESSY. That is correct. These would only flow back if they were dissolved.

Mr. PASSMAN. And you said there is no present plan to dissolve the institutions.

It would appear this is a one-way street, whereas the money goes out and there is no provision for any of it to be returned to the United States. The funds go into an international organization and the committee never knows to what country, for what purpose, in what amount, and on what date the funds are disbursed until after the fact, if then, certainly not before it.

As I look at the request under these three organizations, the budget has requested $1,234,380,000; is that correct? That is the amount of the one-street fund requests?

INFORMATION ON PROJECTS IN PIPELINE

Mr. HENNESSY. Might I correct something for the record, sir.

Mr. PASSMAN. Certainly.

Mr. HENNESSY. With regard to the prior notice of project proposals we are now submitting to your committee and to committee members some seven volumes of information on the banks and their activities, and in particular these lay out before you the projects which will be coming up for approval before they are actually approved.

Mr. PASSMAN. This is the first year that any such information has been submitted to the committee.

Mr. HENNESSY. Detailed information.

Mr. PASSMAN. I guess that is because this committee has raised so much fuss over a period of years about it that you people decided that you would start giving this advance information. But with respect to these several volumes, you have sent down, you know very well no committee member could possibly wade through all those things in any 2 or 3 weeks.

They weigh several pounds and I guess there are millions of words in there. But in addition to that may I add that you don't know that these will be the projects that will be financed out of IDA, do you?

Mr. HENNESSY. Not until they are actually approved at the Board.

Mr. PASSMAN. That is what I know and you know that I know that.

Mr. HENNESSY. There is an important distinction.

Mr. PASSMAN. So that is a way to try to satisfy the committee. You haven't satisfied me because these projects are not individually considered. You don't establish a benefit-cost ratio, then subsequently fund them accordingly. It could be years before these projects actually are funded. Isn't that correct?

Mr. HENNESSY. They would normally be in the next 2 years. In every case there are benefit-cost ratios calculated in that process.

Mr. PASSMAN. Neither could this committee select the projects that are going to be financed and put them in the record and say that these will be the specific projects, could it?

Mr. HENNESSY. No; that is correct.

Mr. PASSMAN. You have answered the question, and I know this is as phony as a $3 bill because we will only know it after the fact and not before it.

Mr. HENNESSY. Might I introduce Assistant Secretary Armstrong from the State Department, and Director Benedick from the State Department. Some questions have come up which they might wish to answer.

Mr. PASSMAN. Glad to see you, gentlemen. Glad you could be here.

I yield to Mr. Shriver.

U.S. SHARE OF TOTAL CONTRIBUTIONS

Mr. SHRIVER. Thank you, Mr. Chairman.

You quoted in your statement a while ago the commitment made by this subcommittee as House conferees on the supplemental appropriations bill last May that Congress would honor this 3-year supplement in three consecutive installments beginning in fiscal 1973.

Have all of the other part I countries already paid in or committed their second installment?

Mr. REYNOLDS. All but one.

Mr. SHRIVER. Which one?

Mr. REYNOLDS. Italy has not yet formally committed its participation.

Mr. SHRIVER. You say no budgetary expenditures will result from this appropriation request in fiscal year 1974. What is the timetable for the budget expenditures of these funds?

Mr. REYNOLDS. This particular installment wouldn't be drawn upon until well into fiscal 1975 and it would then be 2 years at least, maybe 3, before it would be fully drawn upon.

Mr. SHRIVER. The U.S. share of the current replenishment is, I believe, 39.3 percent.

Mr. REYNOLDS. That is correct.

Mr. SHRIVER. What is our voting strength in the World Bank Group?

Mr. REYNOLDS. Our voting strength in IDA is approximately 26 percent. It is based on the subscriptions made to the institution by all of the member countries, both the part I countries, that is the developed countries, and the part II or developing countries.

The 39.3 percent contribution share is our share in the replenishment contributions made simply by the part I countries.

Mr. SHRIVER. Is ours such a large percentage of that, 39.3 percent of the total?

Mr. REYNOLDS Well, this represents some reduction from the initial share; I think we started out at about 43 percent. As I say, we are talking here just of the contributions of the developed member countries. I don't think this is in any sense disproportionate to the contributions of others.

If you look at the economic capacities of the countries, I think you can only judge the contributions in relation to the economic strength, the income, and productivity of the economies involved. The U.S. share of national income of the developed countries is higher than 40 percent.

Mr. HENNESSY. If I could add a point on that, although the U.S. share is 39.3 percent our share of GNP of the same group of countries even after the second devaluation is 43 percent. We have gone on record as saying that we think that is too high, that if we had to negotiate IDA today we would have a smaller share because of our balance of payments and other difficulties which concern this committee.

We are in the process of international discussions and negotiations on the next round of IDA replenishment which would start being paid 2 years from now, and in my original statement I did refer to that. I said we have made it quite clear that the United States is going to have to have a major reduction in that 39 percent share to somewhere between 30 and 33 percent. Although there is a lag from the time you originally negotiate until the time you can renegotiate, we have gone on record before this committee and others in saying that in the future we will negotiate a major reduction in the current share.

Other countries now have come to realize that is a necessity.

Mr. SHRIVER. Is that determined by negotiation between countries?

Mr. HENNESSY. Yes, because for us to go down someone has to come up and no one wants to, but with regard to the Japanese whose share has been around 6 percent, it is quite clear now that their share should

go up and I think they have reconciled themselves and made some public statement to that effect.

The United Kingdom share may be a little too high and has to come down. Part of the problem in international negotiations is for us to come down the others have to go up. As the economies strengthen in different countries, the shares they put in should reflect that increased strength. We think the Germans are stronger and the Japanese are stronger and now is the time for them to pick up a larger share.

PROCUREMENT

Mr. SHRIVER. You mention that U.S. suppliers will receive contracts of roughly $130 million for IDA financed projects in fiscal 1974. This does not compare too well with the requested appropriations of $320 million.

Roughly what percent of IDA contracts are received by U.S. suppliers?

Mr. REYNOLDS. I think at the moment, Mr. Shriver, it is about 20 percent, perhaps a little less, 18, 19 percent. I would have to say the $130 million figure is not out of the $320 million. It ought to be compared, I think, with the actual cash drawn against the United States in fiscal 1974 which would be considerably less than $320 million.

I think the difference between the expected cash drawing on the United States by IDA and the procurement by IDA and the United States is something in the order of $30 million.

Mr. SHRIVER. Mr. Chairman, I have used my 5 minutes.

HISTORY OF CONTRIBUTIONS

Mr. PASSMAN. Before yielding to Mr. Long and with his tolerance, I think we should insert for the record at this point information that I requested earlier but I cut myself off by changing the rules to recognize other members before getting back into it.

A lot of us believe that your multilateral organizations were created mainly to bypass the Committee on Appropriations because we have established many, many times before that we know after the fact and not before the fact the specific projects that you are going to fund.

We don't know the amount, the country, or what project will be funded beforehand and there is no repayment back to the U.S. Treasury. But we notice when IDA came into being that you were very cautious only to ask for $61 million a year and I believe that was for 4 years, is that correct?

Mr. REYNOLDS. Five years, I believe.

Mr. PASSMAN. The record shows 4. If it is 5, you better correct your justifications.

Mr. HENNESSY. They asked for 5. There were 4 at $61 million, after an initial $3 million.

Mr. REYNOLDS. It is a 5-year period. We paid in in four equal installments following a slightly larger one.

Mr. PASSMAN. Well, your record shows four. It is $61 million. Then in the next request you moved it up. The bilateral program was still remaining high at the same time you were bringing into being new multilateral organizations but then you moved the requests for IDA

up to $104 million for 3 years, subsequently you moved it to $160 million for 3 years, and now you are up to $320 million for 3 years.

Is that correct?

Mr. HENNESSY. Yes.

Mr. PASSMAN. So it is over five times the amount annually that you started off with originally, is that correct?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. Now, finally, as I mentioned earlier, in these multilateral organizations where there are no present plans for any U.S. funds to be returned to the U.S. Treasury, you are asking for $1,234,380,000.

Then if you compare that with the Development Loan Fund—you are familiar with that, aren't you?

Mr. HENNESSY. Yes.

Mr. PASSMAN. That is where we make a nation a loan and the money is paid back to the U.S. Treasury, and I believe that repayment record shows that less than 1 percent of these loans are past due. If you compare the developent loan request where the money is paid back directly to the United States to the requests for the international financial institutions where the United States receives no repayment, the international requests are about four times the bilateral request.

Now I yield to Dr. Long.

Mr. LONG. Treasury and so many academics are always bringing up the point of what a low percentage of our gross national product goes into foreign aid and into help for international institutions, compared with other countries.

Why don't those comparisons take into account our expenditures on national defense as a percentage of gross national product? Do you, when you present your aid requests to Congress, make it clear that we are already putting out pretty close to 10 percent of our GNP, and that these other countries are paying very, very small sums in relation to that?

Why shouldn't our defense budget and related budgets be considered along with our contributions to AID and the multilateral institutions?

Mr. HENNESSY. That is precisely the point we use in international discussions because we don't think that the GNP figure alone faithfully reflects the burdens that we are carrying and others are sharing, which is why the United States has never officially accepted that percentage formula. Nevertheless, there is a distinction made by other countries that they separate the economic development aid from military support activities, and they try and keep them distinct.

Mr. LONG. It is to their advantage to do so in presenting the propaganda. But why should our State Department and our Treasury acquiesce in making this very unfavorable picture for the United States, compared with other countries?

Mr. HENNESSY. It leads to an endless debate of how much of our defense budget goes to protect them and how much in the absence of that they would be willing to put up themselves.

I think in terms of some measure of effort, of what it costs us, you have to relate what we are putting in to something—so GNP is what people most normally use.

Mr. LONG. I have no objection to using the GNP as a standard, but let us——

Mr. HENNESSY. You have to correct for these other factors.

Mr. LONG. As a matter of fact, we are putting a very large proportion into national defense and to defend countries which are putting up a much smaller percentage. Is it true that Germany is putting up a substantially smaller percentage of its GNP for its national defense than we are putting up?

Mr. HENNESSY. I am sure they are. I don't know the specific figures.

Mr. LONG. Somewhere around 4 or 6 percent?

Mr. HENNESSY. Countries like Canada, considerably less.

Mr. LONG. I want to see this in the record, and I would wish you people, in justifying your AID request, would keep that in view.

I also would like to point out that the GNP is a very imperfect measure of welfare, and we are beginning to see that more and more because we have tremendous social and economic problems in this country, and no matter how high the GNP goes, it doesn't seem to solve those problems.

I think it is a phony indicator to a very large extent of welfare and of sacrifice. I think we ought to hear less and less of this.

Mr. PASSMAN. Would the gentleman yield at that point?

Mr. LONG. Yes.

Mr. PASSMAN. I wonder if you would place in the record at this point the GNP, let us say, of Japan, West Germany, and Canada, and possibly other developed countries. Thank you.

[The information follows:]

Gross national product industrial countries 1971

Greece	10.70		

AID TO LOWER INCOME GROUPS

Mr. LONG. How strong is the commitment of the World Bank to lower income groups in the member countries?

Mr. REYNOLDS. An increasing effort has been made in recent years.

Mr. LONG. That could be. It has perhaps in the past been very, very feeble. Now it is only very feeble. How strong is it?

Mr. REYNOLDS. No, it is strong. The purpose of the Bank, of course, is to aid development and the projects——

Mr. LONG. And not to help redistribution of income?

Mr. REYNOLDS. To do that, too, if it possibly can, but not in substitution for development. It could do it within the context of an expanding national product, if you will, as opposed to simply redistributing what they have at the moment.

Mr. LONG. I note that in a World Bank press release, the World Bank approved a $26 million loan to 700 individual ranchers in Brazil, at 7.25-percent interest. Were these ranchers low-income ranchers?

Mr. REYNOLDS. They weren't. I think their income varied. It covered quite a spectrum but some of them were clearly not low-income ranchers.

Mr. LONG. They were high-income ranchers?

Mr. REYNOLDS. Some of them were quite large. I don't think we had data on their incomes but they had large operations.

Mr. LONG. When small business people come to me and try to get money for loans, we are told that the funds are exhausted. Why should we be taking U.S. money and giving it to the World Bank so that they can give loans to very sizable ranching operations?

Mr. REYNOLDS. I should make clear for the record this was a World Bank loan, not an IDA credit.

Mr. LONG. We are being asked now to contribute to these international institutions because they are supposed to be doing some good. But then they are doing things that you find it very difficult to defend.

Mr. REYNOLDS. This particular loan was one which was made to an intermediate credit institution which relent the funds at something much closer to a commercial rate of interest.

Mr. LONG. I am not saying you did it personally but I am just saying this is what happens when you get multilateral institutions. The rate was 7.25 percent. What is the rate of interest in those countries?

Mr. REYNOLDS. That, Mr. Long, was the rate on the bank loan to Brazil. This was a loan to Brazil. The relending by the Brazilian institution who received the money in the first instance to the ranchers in question was at a considerably higher rate of interest.

Mr. LONG. What was it?

Mr. REYNOLDS. I don't have the precise figure at hand, but it was at what would be considered a market rate of interest in Brazil. There was, I think, a rate which had an indexing feature rising from the inflationary condition in Brazil but I think it was something like 10, 11 percent. I would have to check.

Mr. LONG. Is that in fact the market rate of interest in Brazil?

Mr. REYNOLDS. I forget the exact——

Mr. LONG. Remember, that country has had inflation going on for a long, long time. I might be a little surprised to hear the market rate of interest was as low as 11 percent.

Mr. REYNOLDS. As I say, there was an indexing feature built into the repayment requirement on that particular loan but I think it worked out at a rate of interest of something like 10 percent.

Mr. HENNESSY. One thing they have done in Brazil is put a monetary correction factor in, so that inflation gets taken care of automatically, so that he may not be adding that in because the real cost——

Mr. LONG. I would like to know what the real rate of interest is that these ranchers are being charged and what profit the bank is getting on it. This was the Bank of Brazil, right?

[The information follows:]

BRAZILIAN LIVESTOCK PROJECT—INTEREST RATES

The nominal rate of interest charged to subborrowers (ranchers) by the participating banks is 7¼ percent. Three percent is retained by the participating banks to cover loan processing expenses and 4¼ percent is passed back to

the Brazilian Central Bank. In addition to the nominal rate of interest, the principal amount of outstanding subloans is adjusted upward annually in proportion to the devaluation of the Brazilian cruzeiro relative to the U.S. dollar. Since the dollar value of the cruzeiro fell approximately 12 percent over the past year, the effective rate of interest in money terms for that period was 19¼ percent. With domestic prices in Brazil having risen around 15 percent, the real rate of interest was roughly 4¼ percent.

The upward adjustment of principal in response to cruzeiro devaluation was worked out in agreement with the World Bank as a means of protecting principal and interest from erosion by inflation. It is not fully effective in this regard, and more needs to be done to raise real rates of interest to levels which more accurately reflect the scarcity value of capital in the Brazilian economy. Nevertheless, the system represents a substantial improvement over the negative real rates of interest typical of Brazilian agricultural lending programs in the past.

Mr. REYNOLDS. I forget the exact amount. It was a Brazilian relending institution.

Mr. LONG. Why should we be giving money below the market rate of interest in Brazil to a Brazilian banking institution? Why should we be helping out Brazilian banks? I thought our job was to help low-income people.

Mr. REYNOLDS. This was not a private bank. It was a government relending institution in the agricultural field.

Mr. LONG. You know you are shadowboxing. It is just like punching a mattress.

Mr. HENNESSY. The purpose is not just to help low income people. It is to build an institutional framework so that the country can be self-sustaining. As a part of this building process you have development banks.

Mr. LONG. Government banks.

Mr. HENNESSY. Government banks. The difference in interest rate goes into covering——

Mr. LONG. Wealthy ranchers and that kind of thing.

Mr. HENNESSY. We have gone into this in some detail and would be glad to submit something for the record if you are interested. The GAO has looked into this and so has the Senate Appropriations Committee, and this is a particular aspect of the relending program which is one of the ways again of getting money out to the private sector which we think is important.

Mr. LONG. This is the only way you can think of doing it, or that the World Bank could think of doing it?

Mr. HENNESSY. It is the most efficient way, not the only way.

Mr. LONG. This is the kind of thing you propose to keep on doing, building up the World Bank so that they can turn around and build up banking institutions in these countries and make loans then to well-to-do ranchers?

Mr. HENNESSY. I don't think we are trying to make wealthy ranchers wealthier. Of the 700 ranchers, I think you can find there were higher income people included in there, moderate income, at least by our own standards.

Mr. LONG. I thought Brazil had people who are poorer than almost anywhere you can go on the earth. The problem I saw when I went to Brazil, Mr. Hennessy, was that about 10 percent of the population are living well. They have all the cars. They have all the homes. And the rest of the people are living in indescribable wretchedness and show practically no improvement.

Is that true?

Mr. HENNESSY. If their real income is going up 10 percent a year I think you have to argue everyone is better off.

Mr. LONG. You mean you hope that is true?

Mr. HENNESSY. No; I don't think it is mathematically impossible. The point is that income distribution is a question which Brazil has looked at and which the World Bank has gone on record in favor of. In this particular loan to the ranchers we, ourselves, raised some questions, for the same reason.

The Bank should have focused their activities on the lower end of the spectrum, in something like agriculture.

Mr. LONG. The Chairman in a very diplomatic way reminded me that I have used 12 of my 5 minutes.

MAINTENANCE OF VALUE

Mr. PASSMAN. Thank you, Dr. Long.

Before I yield to Mr. Miller I wonder if we may put in the record something at this point with respect to the maintenance of value request for funds. Many of the international organizations where we had previously made commitments came in and said:

> When you gave us this money it would buy this much. Now for various reasons it buys less, so we want sufficient funds to buy as much goods and services as we could have purchased at the time you gave it to us.

Mr. Hennessy, as a member of the U.S. Treasury, do you know the total amount that is being requested for all the international organizations for the maintenance of value payments?

Mr. HENNESSY. Including the International Monetary Fund?

Mr. PASSMAN. Everything.

Mr. HENNESSY. $2 billion.

Mr. PASSMAN. In other words, we are being called upon to appropriate an additional $2 billion to offset the loss in purchasing power of the dollar since we previously made the commitment.

Is that stated correctly?

Mr. HENNESSY. There is an offsetting increase in our assets. A good portion of the $2 billion of the increase in the liabilities will not involve any budgetary expenditure by the United States.

Mr. PASSMAN. But you are asking that that much money be authorized and/or appropriated, $2 billion, and the sole purpose is because the dollar has lost that much purchasing power whether it is on a borrowed basis or whether it is something like callable capital.

It adds up to the fact we still have to appropriate over $2 billion; doesn't it?

Mr. HENNESSY. As long as there is no misunderstanding that there is going to be a budgetary outflow.

Mr. PASSMAN. Now, some of it is for expenditure. For other portions, of course, you are asking for an appropriation, so as to have it available in the event it has to be called upon.

Mr. HENNESSY. That is correct.

Mr. PASSMAN. And purely and simply because of the——

Mr. HENNESSY. Devaluation of the dollar.

Mr. PASSMAN. Thank you.

Mr. Miller.

Mr. MILLER. Thank you, Mr. Chairman.

Mr. Reynolds, in your testimony you note that 22 nations agreed to provide IDA with $2.44 billion over a 3-year period and the U.S. share is $960 million, or 39.3 percent of the total. Do we have a listing of the other natons and what percentage they are contributing?

Mr. REYNOLDS. Yes, sir.

Mr. MILLER. Is it possible to furnish that for the record?

Mr. REYNOLDS. Yes, sir, very easily.

Mr. MILLER. I would ask unanimous consent that be included in the record, Mr. Chairman.

Mr. PASSMAN. Without objection, it will be inserted in the record at this point.

[The information follows:]

TABLE I.—IDA THIRD REPLENISHMENT

	Total	
	Amount (7)	Pt. I (percent) (8)
Australia	48,000	2.00
Austria	16,320	.68
Belgium	40,800	1.70
Canada	150,000	6.26
Denmark	26,400	1.10
Finland	12.240	.51
France	150,000	6.26
Germany	234,000	9.76
Italy [1]	96,720	4.03
Japan	144,000	6.00
Kuwait	10,800	.45
Luxembourg	1,200	.05

Norway	24,000	1.00
South Africa	3,000	.13
Sweden	102,000	4.25
United Kingdom	311,040	12.97
United States	960,000	40.68
Total, Pt. I members	2,398,080	100

DISBURSEMENT RATES

Mr. MILLER. Another area of your testimony indicates that the installment will be paid in letter-of-credit form. Apparently that is the installment that you are asking for now, the appropriation of some $320 million?

Mr. REYNOLDS. Yes, sir.

Mr. MILLER. And it is to be drawn only as IDA requires funds to meet the disbursements on its credit commitments to borrowers in the developing countries.

Do you have an idea as to when this might take place? I ask this question because we had some information that indicated that some of the Banks were not moving very fast, and they had money in the pipeline, and is that possible, that money would be in the pipeline, and it may be several years before the $320 million would be drawn?

Mr. REYNOLDS. It would be several years before it would be drawn upon, yes, sir; but IDA can only make commitments as the money is committed to it, so there is a much earlier requirement for the actual provision of the appropriation in letter-of-credit form.

Mr. HENNESSY. If they obligate the funds and they sign a loan contract on day 1, it may take them up to 7, 8 years to actually disburse

it, but the day that they sign the loan commitment, they make a legal commitment between IDA and, for instance, Bolivia or some other country. They have to count on those resources, and the reason they can count on them is because we and other member countries have opened non-interest-bearing letters of credit for the full amounts. So you can consider they have funds on hand which they haven't drawn down to cover their obligation.

But there aren't any unobligated funds.

Mr. MILLER. Now, I have to assume if that money would be appropriated, then you would be in a position to invest that money somewhere. Is that what we are saying? What would you do with that money if you drew the money but yet only gave a letter of credit to the bank?

Mr. REYNOLDS. The money remains in the U.S. Treasury. There is no transfer of funds to IDA until such time as they draw on the letter of credit.

Mr. HENNESSY. The Treasury opens up a letter of credit in favor of the bank. As they need to make disbursements, they draw under that letter of credit until it is exhausted. It takes up to an 8- or 9-year period to exhaust that amount of funds.

Mr. REYNOLDS. I should emphasize that is a non-interest-bearing letter of credit.

Mr. PASSMAN. Would this help the record? Of course, it is a full-time job for you people. You work 365 days a year with your project. We have only a few hours a week. We have other things to do, but I think you had one instance in one of these multilateral organizations, the Asian Development Bank, where we borrowed $40 million from the U.S. taxpayers. We turned it over to the Asian Development Bank, and a short time thereafter we borrowed the same amount of money back from the Asian Development Bank at 6 percent, which means we were paying 12 percent on undisbursed money. Isn't that a statement of fact?

Mr. HENNESSY. That was a cash pay-in on the first capital——

Mr. PASSMAN. I thought I made it as clear as I could that we paid in $40 million. We had to borrow the $40 million and at a subsequent date we borrowed the same $40 million back from the Asian Development Bank, so the American taxpayers were paying another 6 percent for the money. Then we were paying the Asian Development Bank 6 percent for the same money we gave them.

Thank you, Mr. Miller.

Mr. MILLER. Thank you, Mr. Chairman.

Mr. YATES. Is that true?

Mr. PASSMAN. Certainly it is true. I don't make a record that is not backed up.

Mr. YATES. I didn't hear a response from the witness.

Mr. LONG. I would like to know who is responsible for that ingenious policy.

Mr. PASSMAN. That is a correct statement, isn't it?

Mr. HENNESSY. Let me explain it in full.

Mr. PASSMAN. Why don't you answer the question. I asked one separate question. Is it not so that we paid into the Asian Development Bank $40 million and at a subsequent date we borrowed the money back from them and we were paying interest on the money we

borrowed and we were also paying the Asian Development Bank interest, and I think the rate was 6 percent.

Is that correct?

Mr. HENNESSY. If I could explain it, a portion of the original capital subscription to that bank when it was starting up was put in in cash by all member countries and to get the cash you can either say that we get it out of the general operating revenues of the Treasury or we went out and borrowed. We can have a different point of view on that.

That was made not in a letter of credit but totally in cash.

Mr. PASSMAN. That is exactly what I said for the record. Did we borrow that money back?

Mr. HENNESSY. During the period of time in which the funds were on deposit in the bank and they didn't need them in its initial starting out phase, they bought U.S. Treasury bills so they were earning interest for that period of time.

Mr. PASSMAN. You give a filibuster. You didn't answer the question.

Mr. LONG. That is what I want to get. Was what the chairman said substantially true?

Mr. HENNESSY. I just want to make sure——

Mr. LONG. I understand. You can give all your caveats and put footnotes later. Is what the chairman said substantially true?

Mr. HENNESSY. Substantially true, yes.

Mr. PASSMAN. Thank you very much.

This is what you get up against when they have 365 days a year cooking up all these answers. We have a matter of hours, and I know that I made a statement for the record and your own testimony previously answered it was true.

Thank you, Mr. Miller.

Mr. HENNESSY. I thought some of the background might be interesting to Mr. Yates.

Mr. PASSMAN. You give too much background on this stuff.

Mr. MILLER. The purpose of my question was to find out in the letter of credit form whether the moneys would be drawn from the Treasury and invested.

Mr. HENNESSY. The answer is "No."

Mr. MILLER. It has happened in the past but it will not happen with this particular amount. That is what I understand now. You have estimated that in 1974 U.S. suppliers will receive contracts of roughly $130 million to provide goods and services for IDA-financed projects. What are these goods and services?

Mr. REYNOLDS. All the goods and services that are utilitzed on the development projects that are financed—capital equipment, consultant services, the construction services, the construction companies, the whole range of equipment of various kinds, tractors for agricultural projects, industrial equipment.

TYPES OF PROJECTS FINANCED

Mr. MILLER. What are the primary IDA-financed projects, what type of project?

Mr. REYNOLDS. I think, Congressman, the record shows that the two major fields in which IDA has lent has been transportation, a whole range of transportation projects, roads, railways, ports. That is the first. I think roughly 28 percent of the lending has been in that field.

Mr. MILLER. Agriculture?

Mr. REYNOLDS. The second one is agriculture.

Mr. MILLER. Aircraft?

Mr. REYNOLDS. No aircraft. The World Bank itself has done a few aviation projects but by and large airport infrastructure projects. They do not include aircraft. The other major lending field of IDA is agriculture, a whole range of agricultural projects, irrigation, agricultural credit, crop development projects of various kinds.

Mr. MILLER. When you say agricultural credit, about the same that we would have in this country? Are you speaking of supplying funds for purchase of fertilizers, seed?

Mr. REYNOLDS. That is right.

Mr. MILLER. This would be to individual——

Mr. REYNOLDS. Farm development of various kinds.

Mr. MILLER. Individuals, though, people who have small farms?

Mr. REYNOLDS. Agricultural credit projects by and large do go to the individual farmers through intermediate credit institutions.

Mr. MILLER. Do you have any idea of what size farms we are talking about?

Mr. REYNOLDS. It ranges but by and large I think in the overwhelming number of projects of this type funds would go to relatively small and medium-sized farmers, not to the large rancher type of operation mentioned a moment ago.

Mr. MILLER. Thank you very much.

Thank you, Mr. Chairman.

USE OF CALLABLE CAPITAL

Mr. PASSMAN. So that we can set the record straight, on the money we appropriate for callable capital under certain circumstances they could call upon that capital, could they not? That is the purpose of having it, in the event that conditions should warrant it that they could call for that capital; isn't that correct?

Mr. REYNOLDS. We subscribe callable capital to the World Bank, Mr. Chairman, not to IDA.

Mr. PASSMAN. I am talking about all of the callable capital in these different organizations. Under certain conditions they could call for this capital, couldn't they?

Mr. REYNOLDS. If necessary to meet their own debt obligation.

Mr. PASSMAN. I try to be as fair as I can be. It is most difficult to get a direct answer to a direct question. If I may ask it over, under certain circumstances and conditions they could call upon this callable capital in cash, couldn't they?

Mr. REYNOLDS. Yes.

Mr. PASSMAN. Thank you very much.

Mr. Roush.

IBRD/IDA RELATIONSHIP

Mr. ROUSH. Thank you, Mr. Chairman.

Mr. Reynolds, I am very new on this committee and I have just elementary questions.

Would you please explain the relationship between IDA and the World Bank?

Mr. REYNOLDS. IDA is an affiliate of the World Bank.

Mr. ROUSH. Does it have other affiliates?

Mr. REYNOLDS. The World Bank has two affiliates, IDA and the IFC, the International Finance Corporation. IDA is an integral part of the World Bank. It has virtually the same membership, same board of directors, the same staff. All that really differentiates the two is the source of funding. IDA lends from appropriated moneys on very soft or concessional terms. The World Bank lends on much closer to commercial terms on funds that are obtained primarily these days from its own borrowings in private capital markets.

Except for this distinction it is basically two separate operations of one institution. The other affiliate is the International Finance Corporation which is more of a separate organization. It has a separate slate of officers, a separate staff.

Mr. ROUSH. And how many nations make contributions to IDA or do they make them to IDA and to the World Bank?

Mr. REYNOLDS. IDA has, I believe, 112 members at the moment and 18 or 19 of these are developed country members who have made contributions every 3 or 4 years, the so-called replenishment contributions that we are here for today.

The part II countries, the developing countries, put in lesser amounts of money but they do make contributions also.

Mr. ROUSH. Is only a participating country then entitled to borrow?

Mr. REYNOLDS. Yes, in IDA only the poorest of the developing countries are entitled to borrow. All of the countries which borrow from IDA with rare exceptions have incomes of less than $375 per year per capita.

Mr. ROUSH. And how many of these developing countries are involved?

Mr. REYNOLDS. As I say there are 112 member countries all together and I think 18 or 19 of them are developed, so all of the rest are developing countries, part II members, but only those who have per capita incomes of less than $375 from that group are eligible to borrow from IDA.

Mr. ROUSH. And is there an overlapping of the authority of these developing countries to borrow from, say, the Asian Development Bank?

In other words, may they be members of both and are they in certain instances?

Mr. REYNOLDS. Yes.

Mr. ROUSH. And do they borrow from both?

Mr. REYNOLDS. The borrowing countries of the Asian Development Bank by and large are limited to Asian countries but most, if not all, of them are also members of IDA and are eligible to borrow from it, too, provided they meet the poverty criteria of IDA.

Mr. ROUSH. Thank you, Mr. Chairman.

PURPOSES OF DEVELOPMENT ASSISTANCE

Mr. PASSMAN. Thank you very much.

Before yielding to Mr. Conte, would this make a contribution to the record? With respect to part II countries, I believe India for each $2 they put in they draw out $44 and for Pakistan each $1 they contribute they draw out $52. These are the part II developing countries. I think that is correct, isn't it?

Mr. YATES. Mr. Chairman, are these loans?

Mr. PASSMAN. Fifty years, no interest, 10-year grace period, three-quarters of 1 percent service charge. Is that correct?

Mr. REYNOLDS. That is correct.

Mr. LONG. That is as close as you can get to a grant because they are never going to pay it back. We all know that. We are realistic enough to know it.

Mr. ROUSH. I don't know that. That is just a supposition on your part. It may be valid or it may be invalid.

Mr. LONG. Would you put your money into it?

Mr. ROUSH. No; I wouldn't but that is beside the point. There is a purpose here to be fulfilled by these people and they are attempting to achieve that purpose and part of that if it is fulfilled will mean these countries will pay back their loans.

If we fail in bringing them to a point of economic stability they won't, but if they succeed I think they will.

Mr. LONG. Does the gentleman know the history of our lending to countries all over the world? The history of any country ever paying back its loans to another country is extremely dim.

Mr. PASSMAN. Let us hope they pay it back.

Mr. LONG. In part, most of our railroads were financed on loans, later repaid.

Mr. ROUSH. Has anyone been in default on their loans?

Mr. HENNESSY. The World Bank in 25 years of operation has never had a default and has only had to reschedule its loans to a country once and that is why they are able to finance their bonds in the private market.

Mr. REYNOLDS. The loan repayments to the World Bank at the moment exceed $5 billion during the life of the World Bank.

Mr. PASSMAN. Of course they are developed through weaker organizations, the International Finance Corporation and the International Development Association, take these doubtful loans, isn't that true? The World Bank would not get into that type of a loan?

Mr. REYNOLDS. Not doubtful loans; loans to poorer countries.

Mr. PASSMAN. That was my label, not yours.

Mr. LONG. If the Chairman would yield for a——

Mr. PASSMAN. I have yielded to Mr. Conte and we will come back later.

Mr. CONTE. With regard to these questions about putting capital into the Asian Development Bank and then the Asian Development Bank lending money to the United States, I want to make sure I understand this. What you are saying is that you put in this cash for the Asian Development Bank. They in turn bought some bonds.

Mr. HENNESSY. Temporarily bought some Treasury bills.

Mr. CONTE. There was no outright loan to the United States?

Mr. HENNESSY. No; while they were disbursing the funds.

Mr. CONTE. They did exactly what the District of Columbia did on revenue sharing. We gave them some money under the revenue sharing program, and they went out and bought some Treasury notes.

Mr. HENNESSY. Right. Since we only borrow 5 percent of the total budget, you can't say that we went out and borrowed 100 percent on what we gave them.

Mr. CONTE. I think it is a lot cleaner deal than giving $4 billion to the farmers in the United States not to plant crops, mostly cotton. Then we turn around and gave them $10 million last year to promote the sale of cotton which they were supposed to plant.

IDA IV REPLENISHMENT

To me this makes a much cleaner deal, and I don't see anything wrong with it. I understand that IDA wants to start talks in the near future to discuss the question of replenishment of the IDA funds in the coming year. I also understand the U.S. Representative to IDA wanted to develop a system of coordination with the Congress and congressional participation.

Would you explain when these talks will be coming? How do you expect to work with the Congress to coordinate the commitments made by our Government to IDA?

Mr. HENNESSY. As a result of particularly this committee's concern at not being involved early on in the process we have tried to keep this committee and the rest of the Congress informed of where we are in our international negotiations. For IDA IV, which is due to actually begin a year from this June, we have had two meetings already, international meetings, and we did request participation of the Congress. No one was available to come, but we have kept the committees and members informed by letter.

Mr. CONTE. When you say participation by the Congress——

Mr. HENNESSY. Actually be part of the U.S. delegation. We would welcome members of the U.S. Congress to act either as observers or full members of the U.S. delegation at these international negotiations in which the United States is trying to bargain for its share and in this particular case a lower share of the total piece of pie that is being contributed in the next round.

The next meetings will be here in Washington in July. On this next round of IDA most other governments are ready to go forward with a much larger amount and with larger shares on the part of some countries. However, we are reluctant to go forward until we have finished our own consultation process with the Congress and get some sense of what you think would be a reasonable amount before we are willing to commit the United States in any way, either morally or in any sense. So that it would be helpful in the July meetings if members of this committee or other members would be willing to participate and we could have the benefit of your thinking.

Mr. CONTE. That will be held in Washington?

Mr. HENNESSY. Yes.

MEMBERSHIP OF IBRD/IDA

Mr. CONTE. In a recent publication by the Overseas Development Council entitled, "The United States and the Developing World: Agenda for Action," James Grant, the president of ODC, stated the World Bank has taken over the global leadership of the development field. However, some criticism was leveled at the Bank because of its lack of universality.

Specifically he mentioned nonrepresentation of most Socialist coun-

tries and the underrepresentation of developing countries and some developed countries, notably Japan in the Bank's management.

Would you care to comment on this statement?

Mr. HENNESSY. Let me take the question in parts. They are different parts; one is that it does not have Socialist members.

Mr. CONTE. Lacking universality.

Mr. HENNESSY. Let me take the universality point. The Bank lends only to its members and its membership is open to any country that is a member in good standing of the IMF, and if they join the IMF they can in turn join the World Bank and there are certain rules and conditions governing that IMF membership, many of which have to do with disclosure of economic information. In the past the Socialist bloc countries, the Communist countries, have not seen fit to join, much of which I think is due to their unwillingness to provide economic data or allow international technicians to go in and examine their economy.

One exception to that is Yugoslavia which has been a member of the World Bank since its inception in 1945 and is a member in good standing. It has received loans so the onus is on the other countries.

If they wanted to join and were willing to live by the rules, which we think are good rules, then they would be eligible if they are willing to live up to that.

Therefore, on the loaning side we only lend to members. If they are not members they clearly can't borrow. There were a couple of other points.

Mr. CONTE. Japan.

Mr. HENNESSY. Japan is a member in good standing.

Mr. CONTE. Not part of the Bank management.

Mr. HENNESSY. I don't know what percentage of the Bank's management is Japanese at this time. There are staff technicians. I don't think you find as a cultural thing the Japanese emigrate very much and work that much abroad in international institutions in general, so that I am not sure what the reason is.

It is quite clear the World Bank, being in Washington and having as its first language English, has a predominance of Americans and English-speaking people in it, but there is certainly no discrimination in the policies one way or the other in terms of nationalities.

Mr. Reynolds may have specific figures here.

Mr. CONTE. Why don't you put those in the record and save time because I have gone 4½ minutes.

Mr. PASSMAN. Take the remainder of your time, Mr. Conte.

Mr. CONTE. He can put it in the record.

Mr. REYNOLDS. There are 29 Japanese on the professional staff.

Mr. CONTE. Thank you very much.

PURCHASE OF U.S. GOVERNMENT SECURITIES

Mr. PASSMAN. I would like to refer, Mr. Hennessy and any other members of the committee interested in the facts, to the money that we borrowed from the Asian Development Bank and the testimony that appeared on page 274 of the hearings of 1969.

You may recall it was during that period that we were out borrowing money. I think we borrowed $20 million from Taiwan. We borrowed $100 million from Thailand. I believe that is correct, isn't it?

Mr. HENNESSY. There were swap arrangements set up with those countries that allowed us to do both.

Mr. PASSMAN. I never expected a direct answer.

Let me ask you this question. Let us keep the record straight. Of course we were struggling then as we are now to bring some fiscal soundness out of our chaotic condition and we were out, under Mr. Johnson, finding nations with surplus funds and were borrowing them. We borrowed $100 million from Thailand at 6 percent, due in 4½ years. That money is due on July 2. Am I making a correct record, Mr. Hennessy?

Mr. HENNESSY. Yes, sir.

Mr. PASSMAN. We also borrowed $20 million from Taiwan.

Let me drop the curtain before I yield to Mr. Roybal. On the callable capital we appropriate the money. The account remains dormant until there is some default; then they could come back and call on us to put up that money. Is that correct?

Mr. HENNESSY. On the callable capital.

Mr. PASSMAN. Let me make my point on the callable capital. There is no interest paid because we haven't borrowed the money.

Mr. HENNESSY. Yes.

Mr. PASSMAN. On this $40 million that we gave to the Asian Development Bank——

Mr. HENNESSY. That was not callable.

Mr. PASSMAN. No, that was cash. Had we withheld that cash until they actually needed it, then whatever amount of money and interest we paid on the bonds or the loans or whatever you want to call it, that much money would have remained in the Treasury, would it not?

Mr. HENNESSY. That is one way of looking at it, yes.

Mr. PASSMAN. Would remain in the Treasury——

Mr. HENNESSY. If we had opened a letter of credit——

Mr. PASSMAN. You are not answering my question. I am talking about the $40 million we gave them. Had we kept that $40 million until they actually needed it for disbursement, whatever amount of interest we paid them would have remained in the Treasury, wouldn't it?

Mr. HENNESSY. If we had opened up a letter of credit so they only drew it down as they needed it we would have lowered our borrowing requirements on the other side and you can argue, as you have, that therefore our interest cost could have gone down. We haven't had to borrow——

Mr. PASSMAN. You don't recognize facts as you see them so I respectfully urge you to do your homework a little better or else get hold of your predecessors to straighten the record out.

They answered the question directly in previous years because they were so badly in need of money to lower our balance-of-payments situation. They would have borrowed money anywhere they could.

APPROPRIATION OF CALLABLE CAPITAL

Mr. YATES. Would someone define the term "callable capital."

Mr. PASSMAN. Let Mr. Hennessy define it.

Mr. HENNESSY. It is guarantee capital. That is probably the best way to describe it. The World Bank for example, has a certain amount of capital like any bank. Let us say there is 10 percent paid in which

each member government either pays in cash or opens a letter of credit. The rest is in guarantee capital. Under the umbrella of the guarantee capital of the United States and all the other members the bank then goes out into the world private capital markets, in Europe, the United States, and Japan, and then floats World Bank bonds.

You can look in today's paper and see a quote for World Bank bonds. They borrow that money at market rates and turn around and lend it at market rates. As the country pays back the loans the bank is able to retire its bonds.

If the Bank was not able to retire a bond when it came due either out of its own resources or out of the repayment from the country, if it was in default, in other words, if the World Bank defaulted on a bond, then ultimately that responsibility would run to all the members governments including the United States.

However, it has never been called in, in 25 years.

Mr. YATES. And the proportion to which they subscribe is guaranteed?

Mr. HENNESSY. That is correct. So the only way we would have to put up all our callable capital would be if the World Bank were to go broke and the other countries would have to renege on their commitments.

Mr. PASSMAN. Let me see if I stated this correctly for the record. We have a similar arrangement in our own country, I believe, for veterans and for many of the small business people, or large business people, through the Small Business Administration.

They go down, we will say, to Quachita National Bank in Monroe, La., and they borrow $1 million, and Quachita puts up the money, but the Small Business Administration guarantees the repayment up to, I believe, 90 percent. Isn't that one way?

Mr. HENNESSY. I am not familiar with those programs. I know in general.

Mr. PASSMAN. Are you familiar with it?

Mr. REYNOLDS. I am not.

Mr. PASSMAN. Let me say this respectfully and I would rather not quarrel with you, but these are things you people should know because SBA loans are being turned down every day. Less than 10 percent of them are being approved, simply because they say we don't have the money. But you do have instances where the SBA will tell the bank, "If you will make the loan to Merchant Brown, we will guarantee 90 percent of it."

You are familiar with that, are you?

Mr. HENNESSY. Yes.

Mr. PASSMAN. On these international organizations, they are not satisfied with Uncle Sam guaranteeing this account. They say, "No, we want you to appropriate the money so it will be readily available, no questions asked."

Why wouldn't it be just as good that our Government guarantee the liquidations of these defaults, if they should ever come, rather than to have the money appropriated?

Mr. HENNESSY. I think we could do that. I think originally we started out because there was some sense in Congress it would be better to have 100-percent appropriation, but we could do 50 percent or zero percent. This is something which we have discussed, the question of

having less than 100-percent appropriation of guaranteed funds, and we are quite flexible in our current thinking. There may have been different thoughts at different times in the past, but quite clearly in the OPIC case you don't appropriate 100 percent of their reserves, so it would cause more difficulty——

Mr. PASSMAN. OPIC is not an international organization, is it?

Mr. HENNESSY. No, it is not.

Mr. PASSMAN. We don't do it for the U.S. Treasury, for flood control projects or for the Post Office, so let us not commingle the international organizations with domestic ones, but, anyway, your predecessor had a different understanding of a lot of this than you have. Maybe they were wrong.

Mr. ROUSH. I think it is refreshing to have this candid opinion expressed not dependent on what someone else said.

Mr. PASSMAN. To be frank with you, these people were testifying in the same capacity he is testifying. When you get two different types of testimony from two people doing the same work in 2 different years, which one are you going to accept at face value? That is my only worry.

Mr. Roybal.

Mr. LONG. Could I ask a question for the record before I leave.

Mr. PASSMAN. Yes.

Mr. LONG. I wonder in connection with these soft loans, the IDA loans, whether you can put in country by country, historically, the amount of money that has been loaned to these various countries by IDA and how much has been paid back, the amount and the percentage?

Mr. HENNESSY. Certainly.

[1] Transactions relating to loans to pt. II countries guaranteed by pt. I countries are included. Loans to countries which are pt. I members of IDA and to New Zealand are excluded.

[2] Net transfer indicates disbursements net of repayments and loan charges paid to the Bank and third parties (the latter as a result of loan sales).

[4] Commitments for Burundi, Egypt, and Haiti through fiscal year 1961 were IBRD loans.

[3] Amounts shown against Burundi and Ivory Coast include loans made to former Ruanda-Urundi and former French West Africa, respectively.

JULY 12, 1973

Mr. PASSMAN. Could you put this in the record at this point?

When we refer to soft loans, we are actually talking about concessionary loans that could be paid back in dollars, but they could be repayable in dollars and still be soft loans on account of the concessionary terms, is that correct?

Mr. HENNESSY. Yes, sir.

Mr. PASSMAN. When I talk about soft loans, we are not talking about foreign country counterpart funds.

Mr. Roybal.

Mr. ROYBAL. I would also like to have clarified the matter of callable capital. Is callable capital not a liability on the Treasury of the United States?

Mr. HENNESSY. It certainly is.

Mr. ROYBAL. Do we have any indication of what our proportional liability would be in the event it was necessary?

Mr. HENNESSY. Yes. If you figure that all the other members would pick up their proportionate share it would come out to 26 percent. If everyone else picked up their proportionate share then ours would be only 26 percent of the total which is shown in our books.

Mr. ROYBAL. Should they not pick up——

Mr. HENNESSY. Then it would run to 100 percent of that as each country defaulted on their part of the obligation, up to a limit of the amount of callable capital we had subscribed. What we are saying is if World Bank bonds defaulted tomorrow and all the member governments should pick up their share our share would be 26 percent.

If country one says no, then I suppose that would run through the remaining countries and if we were the only one left we would have to pick up 100 percent of the part we appropriated.

Mr. ROYBAL. What would happen if this country refused to put in their share?

Mr. HENNESSY. We would be in default just as the other governments would, and the bond holders would end up with a piece of paper.

Mr. ROYBAL. There isn't anything contractualized that would indicate that if the other countries would not assume the responsibility that we would have to put it in?

Mr. HENNESSY. No; it is a joint and several responsibility of all the member governments and we don't have a senior position or a junior position. We are all on an equal legal basis. There is very little basis in actual fact to think either that there would be a default or if the bonds were in default that these other countries, Japan, Germany, and the rest, would default, and not kick in their share.

Mr. ROYBAL. The callable capital has not at the present time been used in your——

Mr. HENNESSY. No; never been a default in the bonds, so they have never had to come back to us and say, "The World Bank hasn't paid this bond. You member governments have guaranteed it. Now you have to pay it."

The purpose of this was that it was seen that countries like Korea, or Nigeria, cannot go directly to the bond market, so they need to go through a funnel—the World Bank. They use the World Bank umbrella which in turn has the umbrella of the member governments. When they borrow the money there are conditions on it and the World Bank with our help and that of other governments sets conditions, the terms of loans, and types of project, and the rest, so it is a more

controlled type of borrowing than if they just floated a bond themselves in the market, which helps put controls on the use of the funds.

So there is a double purpose.

Mr. ROYBAL. That is all, Mr. Chairman.

Mr. YATES. Mr. Chairman.

Mr. PASSMAN. Mr. Yates.

MEMBERSHIP OF IDA

Mr. YATES. Thank you.

How long has IDA been in existence?

Mr. HENNESSY. 1960.

Mr. REYNOLDS. Since 1960.

Mr. YATES. Twelve years, coming into its 13th year. What did the developing nations do about getting their money before IDA came into the picture?

Mr. REYNOLDS. Well, the World Bank, of course, is considerably older. Many of them were borrowing from the World Bank prior to IDA coming into existence.

Mr. YATES. They were borrowing without concessional loans?

Mr. REYNOLDS. Well, there were also, of course, bilateral programs in existence prior to 1960.

Mr. HENNESSY. I think the short answer is most of them did without.

Mr. YATES. In other words, they couldn't borrow from the World Bank.

Mr. HENNESSY. Most of them couldn't borrow and afford to pay back.

The original IDA countries, some of those have graduated. They have gotten into the hard loan category. I think most of the smaller countries in Africa and Asia had no recourse. They did contract some World Bank loans but it was difficult for them to contract many because the repayment terms were so high and the interest rate was quite high.

Mr. YATES. Are all the nations that are members of the U.N. members of the World Bank?

Mr. REYNOLDS. No.

Mr. YATES. Why not?

Mr. HENNESSY. They haven't chosen to join, the Communist countries en bloc. The only members of the Communist bloc now are Rumania and Yugoslavia. Czechoslovakia was a member and withdrew in 1953 because they refused to supply information which the International Monetary Fund wanted and they withdrew from the Fund and the Bank at the same time.

Mr. YATES. Are all other nations members other than the so-called Communist nations?

Mr. HENNESSY. Are any others? Just Rumania and Yugoslavia.

Mr. YATES. My question was, are all other nations other than the Communist nations, excluding Rumania and Yugoslavia, members?

Mr. HENNESSY. I would say virtually all or there may be a couple of small ones, Micronesia or some of those.

Mr. YATES. Is that true of IDA as well?

Mr. REYNOLDS. No, because there are 10 member countries that are members of the World Bank who are not members of IDA.

Mr. YATES. Can you tell me which they are?

Mr. REYNOLDS. Right offhand I can't but I can certainly furnish it for the record.

[The information follows:]

IBRD MEMBERS WHO ARE NOT MEMBERS OF IDA

Bahrain, Jamaica, New Zealand, Portugal, Qatar, Rumania, Singapore, United Arab Emirates, Uruguay, and Venezuela.

Mr. YATES. Is Israel a member of IDA?

Mr. HENNESSY. They are a member but they are not a borrowing country because their income is too high. Apparently not.

Mr. PASSMAN. You use the word "apparently."

Mr. HENNESSY. Israel will not contribute to this one but is participating in the next round.

Mr. PASSMAN. But they are not eligible for loans out of IDA?

Mr. HENNESSY. They are not.

U.S. COMMITMENT TO IDA 3

Mr. YATES. What happens if the Congress does not appropriate $320 million?

Mr. HENNESSY. In this particular case the United States would be in default, I guess you would have to say, in its international obligation. In this institution unlike the other two institutions we have discussed, the United States actually signed up last September for this 3-year replenishment. We signed up 1 year late but nevertheless we did sign up after having the full authorization, the first appropriation, and after full communication and contact by the Secretary of the Treasury with the different subcommittee and committee chairmen.

Mr. PASSMAN. Would the gentleman yield?

Mr. YATES. Yes.

Mr. PASSMAN. Do you do so with the full understanding of these people that this is dependent entirely on the subsequent appropriation?

Mr. HENNESSY. They understand that in spite of that the Congress——

Mr. PASSMAN. I know they understand, but do you understand it?

Mr. HENNESSY. Yes.

Mr. PASSMAN. They have that understanding with you, that this is being approved conditionally.

Mr. HENNESSY. Obviously, yes. They understand that.

Mr. PASSMAN. It would be up to the Congress as to what amount and whether you get anything.

Mr. HENNESSY. They understand that.

Mr. PASSMAN. So we would not be violating any legal commitment over any understanding with you if we didn't make the appropriation or if we cut the appropriation, is that correct?

Mr. HENNESSY. In this particular case, unlike the others, there is a different situation. They understand no matter what we say the appropriating committee and the Congress can always say no, but in this case we have made a formal international commitment.

Mr. PASSMAN. Would we be violating any legal commitment if we didn't appropriate the money?

Mr. HENNESSY. I believe we would but I am not a lawyer and I don't know if we would be under international law. Clearly under domestic law we wouldn't.

Mr. PASSMAN. Off the record.

[Discussion off the record.]

Mr. PASSMAN. Mr. Yates.

Mr. YATES. When you committed the U.S. Government to the payment of the three installments was congressional approval of that commitment sought, or is there no requirement for that?

Mr. HENNESSY. Yes; it was in several forms. It was I think quite clearly discussed and that is why the conference report stated it was not the intention of conference managers or chairmen to deny the 3-year appropriation.

They did push it off a year and subsequently direct consultations were carried out by the Secretary before he signed up because obviously he didn't want to sign up without people understanding what that involved in this particular case, so that I would say briefly, yes.

PROCUREMENT SHARES

Mr. YATES. The answer is yes. On page 3 of Mr. Reynolds' statement the following appears:

> It is estimated that in fiscal 1974 U.S. suppliers will receive contracts of roughly $130 million to provide goods and services for IDA financed projects, from past authorized loans, on which bidding is now taking place.

What is the equivalent amount that Japan receives?

Mr. REYNOLDS. The procurement share of Japan I think at the present time is roughly the same as the United States.

Mr. YATES. Are there others who are in that same category?

Mr. REYNOLDS. Germany I think is somewhat less. The British I think are roughly the same, yes. They are the four major supplying countries.

GENERAL ACCOUNTING OFFICE RECOMMENDATIONS

Mr. YATES. You make reference on page 8 that the recent GAO report on U.S. participation in the World Bank and IDA offered a number of suggestions.

Was the GAO report critical of the operation at all?

Mr. REYNOLDS. The GAO report, of course, looked primarily at U.S. participation in the World Bank rather than at the World Bank itself.

Mr. YATES. I am not talking about criticism of the World Bank. I am wondering about GAO criticism of your operation.

Mr. REYNOLDS. It did make several critical observations of the U.S. participation; yes.

Mr. YATES. Have those been corrected?

Mr. REYNOLDS. We are working on them. I think a great number have already been corrected.

Mr. YATES. Can you put into the record what the criticisms were and how you corrected them?

Mr. REYNOLDS. Yes.

[The information follows:]

Recommendation 1

More substantive information on proposed projects should be received earlier in the project preparation process in order to resolve questions at an early stage

As a result of Treasury Department efforts already under way at the time of the GAO review, there has been a significant increase in the timeliness and substantive nature of the information provided to the HAC member and participating agencies for use in the U.S. project appraisal process. Currently the HAC member and participating agencies receive the World Bank/IBA Monthly Operational Summary. This document is a compilation of basic information on all proposed projects. It contains information on the amount of the loan, whether it is expected to be from IBRD or IDA resources, the purpose of the loan, the stage of the Bank's processing of the loan, and any actions taken on procurement. Since the document contains considerable "substantive" information on a proposal and since a proposal is usually entered in the document at least 1 year before it is submitted to the Board of Directors for their approval, it is a basic source of information used in the United States appraisal process.

A new notification process has also been instituted. When a project makes its way through the Bank's evaluation process and is at a stage where negotiations between the Bank or the Association are warranted, the U.S. Executive Director's Office at the World Bank now formally advises the NAC member and participating agencies that such negotiations are about to begin. When the negotiations are substantially completed the Office of the U.S. Executive Director then transmits to the NAC a brief report prepared by the Bank on the status of the negotiations.

On the specific issue of procurement, a subject of increasing concern to the United States, a new early warning system was established over a year and a half ago whereby new projects listed in the Monthly Operational Summary are referred to our overseas posts. U.S. officials at these posts are instructed to follow up with the local borrowing agencies in order to obtain and furnish information to U.S. suppliers on potential export opportunities. This new information system has widened the access of U.S. business to international lending institution-generated procurement opportunities and, thus, improved their ability to compete aggressively for these export contracts. [See attached sample summary.]

Recommendation 2

Instructions to guide U.S. officials in appraising loan proposals should be developed

This recommendation was also contained in the Controller-General's report on U.S. participation in the Inter-American Development Bank [Report B–161470 dated August 22, 1972].

A formal codification of the procedures and policy criteria employed by the United States in the appraisal of the financial commitments, largely long-term development loans and credits, of the international lending institutions was recently completed by a special National Advisory Council (NAC) working group and approved by the members of the NAC.

The codification, which contains detailed information relating to documentation, personnel, procedures, and policy criteria employed by the various U.S. Government agencies, is available to officials in each of the NAC member and participating agencies who are involved in the loan appraisal process. The codification will be revised periodically to accommodate changes made in the appraisal process. A copy of the codification is attached.

Recommendation 3

Instructions requiring U.S. missions to obtain and furnish information on bank and association projects both proposed and being implemented should be developed

This recommendation was also contained in the Comptroller-General's report on U.S. participation in the Inter-American Development Bank [Report B–161470 dated August 22, 1972].

In response to the recommendation, an explicit reporting requirement has been added to recently issued economic reporting guidelines for U.S. missions

overseas and will be incorporated in several additional such guidelines expected to be disseminated shortly. This step will require periodic reporting from AID missions, or the Embassy's economic section if no AID mission exists, on both projects to be financed by international lending institutions and on the progress of implementation of projects already financed by these institutions.

This new reporting requirement will formalize one part of an established and very useful information system. AID, a NAC participating member in the loan appraisal process, has incorporated reports from AID missions on loans financed by the international lending institutions in its analysis of proposed projects and in its presentations at NAC meetings for many years. Another important component of the AID missions input in the U.S. appraisal process is its direct contacts with the appraisal missions sent by the international lending institutions to the recipient countries. These contacts have often resulted in marked improvement in the coordination of such projects with those supported by AID.

We do not interpret this recommendation calling for a formal reporting requirement nor the actions being taken to implement it as a desire for AID mission or Embassy economic section personnel to undertake indepth audits of existing or proposed projects or to otherwise duplicate the work of the professional staffs of the World Bank and the International Development Association. Nor do we understand it to propose any increase in U.S. staffs overseas. The objectives of these reports and direct contacts are to insure the most effective use of World Bank and IDA resources in the context of the other economic development programs in the recipient country, and to provide ongoing knowledge to the interested U.S. agencies in Washington of the field aspects of lending by the international lending institutions.

RECOMMENDATION 4

THE ESTABLISHMENT OF A REVIEW BODY OF SIZE AND COMPETENCE APPROPRIATE TO MEET THE NEED FOR EFFECTIVELY INDEPENDENTLY EVALUATING BANK AND ASSOCIATION ACTIVITIES SHOULD BE SOUGHT

The Bank and the Association established in September 1970 a joint evaluation group responsible to management which may satisfy the clear need outlined in this recommendation. We may say since the short time in which the group has operated makes an evaluation of the group's utility premature. So far, the two major studies prepared by the group have been excellent. We intend, however, to press for the adoption of an independent audit mechanism consistent with the GAO recommendation. Adoption will require approval of other member countries.

REPAYMENTS

Mr. YATES. Have there been any defaults at all in the IDA loans?

Mr. REYNOLDS. There have been no defaults, no.

Mr. HENNESSY. It is well to point out most of those loans are beginning to come due now, as you realize. It started 10 years ago.

Mr. YATES. Are those 10 years running out?

Mr. HENNESSY. Yes. And now——

Mr. REYNOLDS. Something like $5 million of repayments have come in now. They have just started.

HISTORY OF FOREIGN ASSISTANCE

Mr. PASSMAN. Thank you, Mr. Yates.

Mr. Hennessy, you wonder why I get so worked up over these hearings. At one time I had a rather pleasing personality.

Mr. YATES. How long ago?

Mr. PASSMAN. Not too long ago.

But a man who would sit here in this seat for 19 years and chair this committee and still be able to smile ought to be able to retire with three

times the average pension. Let me give you some indication as to why I take the position I do.

When this foreign aid program started in 1947 it was with an understanding that it would go into about 17 nations of the world, the total cost would not exceed $15 billion and it would take 5 years to complete the program. It took the older members who were well fortified with seniority to dare get up and say, after we finished this expensive World War, that we were embarking upon a foreign aid program. You could hear a pin drop, it was so fantastic that we would go out and borrow money to do this.

Contrast, if you will, 5 years with 26 years. Contrast, a total cost of $15 billion with about $250 billion. Contrast, if you will, 17 nations with 129 nations. We have gone into about every nation on the face of the earth with the U.S. foreign aid program. We have moved this program, past and present, into 129 nations of the world, and the cost is now about one quarter of a trillion dollars. The program has become so fragmentized and so complicated until it is very difficult to put your finger on the grand total requested for foreign aid each year.

I am sure you would agree that your first responsibility is to your own family, not your neighbor, and our first responsibility is to our own Government and not foreign governments. Following this line of thought, the foreign aid program is operating on borrowed money because you take care of your own household first before providing aid to some other nation.

The aid program has gotten so wild and so unruly, it is going to be up to the American people to step in and bring this thing back under control.

If you people would come in and endorse the bilateral program to selected nations so that some degree of control would be exercised, it would not be as bad but you request funds for the international organizations where control is limited and the funds are not paid back to the Treasury. You are asking this year for $1,234,380,000 for the international organizations, but if we go through the budget we find the request for the bilateral Development Loan Fund, which funds are paid back to the U.S. Treasury on shorter terms, is only $351 million.

In many instances you find the international financial institutions, the bilateral Development Loan Fund, and in some instances the outright grant program involved in the same type of program and maybe splitting up a project. Is that correct or not?

Mr. HENNESSY. You do get all three working in the same country.

Mr. PASSMAN. Can you, without drawing very heavily upon your imagination, pinpoint one iota of direct good that the International Development Association is doing for the United States?

Mr. HENNESSY. I think it's a loaded question.

Mr. PASSMAN. Loaded? It is as direct as I know how to ask it. It should be asked and there should be an answer given.

Mr. HENNESSY. Financing a lot of U.S. exports which wouldn't otherwise go out. I think Mr. Reynolds alluded to that in his statement.

Mr. PASSMAN. How do you know they wouldn't go out? That calls for another question. Let's look at the Asian Development Bank. According to the statement the other day the United States handles 8

percent of the commodity sales, and I believe the Japanese are getting 56 percent of the sales.

Mr. HENNESSY. That's correct. What I am saying is, in the Asian Development Bank we know we are going to get $100 million worth of sales we wouldn't otherwise get because these go to poor countries that don't have the capacity to import.

Mr. PASSMAN. All these countries do. We have a bilateral program going in all of them don't we?

Mr. HENNESSY. No, not in all.

Mr. PASSMAN. What countries other than the Communist countries?

Mr. HENNESSY. A number particularly in Asia and Africa.

Mr. PASSMAN. We are talking about IDA right now. What countries do not receive funds from the U.S. bilateral aid program but do receive funds from IDA?

Mr. HENNESSY. In Africa particularly. I don't have all of the list here. We do not operate bilaterally in all of the African countries and IDA does. I will be glad to submit that for the record. I do not believe we operate in Burma, do we, in the bilateral program?

Mr. PASSMAN. What funds you people can't provide will be provided through the U.N. aid programs. I am sure you know we are providing aid to Communist countries right out of U.S. dollars through the U.N. Even Cuba is getting money from the U.N. Development Fund and the United States provides money to this outfit. There is a budget request for over $2 billion for the maintenance of value payments to the international financial institutions.

This request is based on the fact that these institutions said:

> When the United States committed this money, it would buy a certain amount, but on account of the mismanagement of your own financial affairs, these dollars will no longer buy what they would buy when you committed them, and therefore we want you to sweeten the kitty by a subsequent appropriation of $2,250 million.

We must somewhere along the way try, if we can, to put some sense back into this foreign aid program. I could be persuaded to look long and hard at a request for a substantial increase in the bilateral Development Loan Fund, because we are able to control that fund.

As you said earlier, it does the same projects as are done under the multilateral organizations, and they have a remarkable repayment record.

I am told by Dr. Hannah that less than 1 percent of these funds are delinquent.

LOANS VERSUS GRANTS

If some recipient nations feel they have developed rapidly enough to start repaying what we had given as grant aid in the past, and move the program to a loan basis, would that sound acceptable to you?

Mr. HENNESSY. Yes, sir.

Mr. PASSMAN. Mr. Secretary, we are all concerned about the future.

I do know some of these nations are now willing to accept aid on a loan basis rather than on a grant-aid basis.

We refer to these nations as developing nations. Is it not true that 10, 15, 20, or 25 years from now these nations are actually going to be developed to where they have a self-sustaining economy and they are able to pay this U.S. aid back, or they will never be developed?

Is that a fair assessment of the situation?

Mr. ARMSTRONG. We certainly ought to know in 20 or 25 years.

Mr. PASSMAN. We want to make a record, because the American taxpayers some day may become a little more interested in what we are doing to them. Let's take the European nations just after World War II. I think when we started the economic aid plan, it was thought those nations were in such bad shape economically that it would be very foolish to think in terms of loans, so the aid was provided as outright grants. I believe we disbursed $32 billion to those nations. Does that sound about right to you, sir?

Mr. ARMSTRONG. It does, but I have forgotten the figures.

Mr. PASSMAN. In grant aid.

Mr. ARMSTRONG. We had both loans and grants.

Mr. PASSMAN. Very little loans. The loans made up about 6 percent of the $32 billion. Had we made these nations loans on the same basis as the IDA credit, where there is no interest with a 10-year grace period and in the second 10 years you pay 1 percent a year, then you start paying 3 percent a year for 30 years, we would now have been in the third phase where the European nations would be paying us 3 percent a year on that indebtedness.

Since all these nations now have a strong economy, don't you think they could now be paying 3 percent a year on the $32 billion provided by the United States?

Mr. ARMSTRONG. Sure.

Mr. PASSMAN. But what has happened? The United States provided most of the aid on a grant basis and they are waxing fat in wealth. They are making Mickey Mouse currency out of the dollar. We all know that these so-called developing nations could conceivably discover certain rich mineral deposits. If we are helping them to develop, and that is what we are supposed to be doing, I don't know why we shouldn't give serious thought to switching aid over to a loan basis rather than on a grant basis, other than certain programs such as family planning maybe and the bilateral technical aid.

WHY KEEP INCREASING CAPITAL TO IFI'S

I understand you have had some banking experience. I have had a little. I wonder how long stockholders would be interested in a bank if they never paid a dividend and every year they wanted to increase the capital by 50 or 100 percent. It would look like a pretty foolish bank, wouldn't it?

Mr. HENNESSY. It wouldn't be a commercial enterprise and we are not selling this one on that basis either.

Mr. PASSMAN. You couldn't do it with a clear conscience. Even you couldn't carry it that far, but you wouldn't have much confidence in a bank that never paid a dividend and constantly wanted to increase their stock. Why is it that we pour in billions of dollars into these organizations? It looks like they would finally have sufficient capital until they could carry on a normal operation without increasing the capital.

Where is the end coming? You mentioned earlier that when you ran out of this $960 million contract for IDA you were getting ready to negotiate another replenishment. Where is the stopping place?

Mr. HENNESSY. You are right in identifying these are ongoing programs, and in the soft window particularly you have to keep coming

back for appropriations and that is part and parcel of this. It is seen that the needs of the developing countries for low-cost, long-term loans will continue at least through this decade, and I think that is foreseen by everyone. We are not trying to deceive anyone on that point.

Mr. PASSMAN. I hope not. I hope you are wrong, because I don't think by the facts you could justify a dollar of this request. It is giving away our wealth to secure friends and it is a new concept in foreign policy. Foreign aid started after World War II.

NUMBER OF NATIONS TO RECEIVE IDA FUNDS

How many nations is the International Development Association going to disburse funds to in fiscal 1974?

Mr. HENNESSY. With all institutions combined, or just IDA?

Mr. PASSMAN. IDA.

Mr. REYNOLDS. I imagine 60 or 65, something like that, will receive credits from IDA. I could check on that.

DONOR IDENTIFICATION

Mr. PASSMAN. You have a very innocent face. I bet you are a church member, yes.

Mr. REYNOLDS. I belong to a church, yes.

Mr. PASSMAN. You contribute to your church?

Mr. REYNOLDS. Occasionally.

Mr. PASSMAN. Do you contribute anonymously or do you put your name on a slip?

Mr. REYNOLDS. When I contribute I don't do it anonymously.

Mr. PASSMAN. That is right, but that is what we are doing in IDA. The recipient knows not the donor. The donor knows not the recipient because when these funds go into that pot they are all commingled, and when the funds are disbursed, the recipient does not actually know what countries the money is coming from, do they?

Mr. REYNOLDS. Not which particular country. They know it's coming from IDA.

Mr. PASSMAN. You gave a good answer. Of course they don't.

Let's go back and refresh our memories when people would justify U.S. foreign aid expenditures by saying, "What we are trying to do is to win the minds of men so that they may know our system of Government." Do you remember those days in aid when we were trying to win the minds of men? How in the world are they going to win the minds of men if you have these funds so commingled that the recipient does not know the donor?

Mr. HENNESSY. They know the United States makes a major contribution to these institutions.

Mr. PASSMAN. But they don't know how much?

Mr. REYNOLDS. They know how much.

Mr. HENNESSY. We get just the opposite criticism that it's a tool of American imperialism. A couple of books have been written on that.

I have the international law people. I don't want to mislead you on the international question. I don't know if it is and I have asked the lawyer to come up and answer it so I won't mislead you.

REPLENISHMENT NEGOTIATIONS

Mr. PASSMAN. Who negotiates these contracts?

Mr. REYNOLDS. Representatives of the contributing governments.

Mr. PASSMAN. I am talking as far as the United States is concerned, who are the actual negotiators.

Mr. REYNOLDS. You are talking about the replenishment agreements to the institution?

Mr. PASSMAN. You are asking this committee for $320 million. Who previously negotiated the Replenishment Agreement we are now financing?

Mr. REYNOLDS. Representatives of the donor governments.

Mr. PASSMAN. I am only talking about the United States now.

Mr. REYNOLDS. On the agreement we are talking about here it was Mr. Hennessy's predecessor, the Assistant Secretary of the Treasury.

Mr. HENNESSY. He did the actual negotiation, and it was approved by the Secretary of the Treasury at that time, I guess it was David Kennedy.

Mr. PASSMAN. I am talking about this last contract. Was it Mr. Connally?

Mr. HENNESSY. These three here, the initial negotiations started back in 1970, as I recall, or in 1969. The international negotiations ended in 1971. It was then submitted to the Congress and it was authorized in 1972, so you had several people, but Mr. Kennedy was in at the initiation. Mr. Connally was in at the middle period, and the final signing was done by Mr. Shultz.

Mr. PASSMAN. We keep hearing the argument that we should provide the funds now and in the future we may not enter into further agreements but you are right on the verge of starting new negotiations, aren't you?

Mr. HENNESSY. We are in the process of international negotiations.

AFRICAN DEVELOPMENT BANK

Mr. PASSMAN. There is some thought now to creating one of these banks out in Africa, I believe it is called the African Development Bank. Is this a dream?

Mr. CONTE. It has been in the works for 15 years.

Mr. PASSMAN. I want to know whether it was a dream or whether it has been discussed.

Mr. HENNESSY. It is a reality. It is not a dream. It has been created. It was originally created by the Africans with only African donors. They then started discussions back in 1967 on the possibility of establishing a concessional lending fund. At the time President Johnson thought the United States should have a larger role in Africa. The United States participated in discussions with other Europeans and the Japanese to see whether we would participate in setting up an IDA-type fund in the African Bank. I personally participated through 2 years of negotiations.

We ended up with a formula which looked like it was reasonable from the U.S. point of view along with I think it was 14 other developed industrialized countries, and then in November of last year that fund came into being. After consulting with the Congress, and in view of the difficulty we have in funding current commitments, we backed away from that commitment. We said we are not going to sign up now.

We are going to have to wait and see where the whole thrust of our international economic policy is going. The 13 other developed countries went ahead, have made their contributions and are now members. The United States has not. We do have on the docket for discussions and consultations this year with the Congress whether in the Congress, wisdom it would make sense for the United States to make a $15 million contribution over a 3-year period, $5 million a year.

Mr. PASSMAN. I believe they came over here last year.

Mr. HENNESSY. That is right. The President spoke with you.

Mr. PASSMAN. The reason we didn't go into it was because they said, "You will either come in under these conditions or you won't come." Is that right?

Mr. HENNESSY. No, sir.

Mr. PASSMAN. They didn't discuss conditions altogether different than we have in IDA and the others?

Mr. HENNESSY. No, it's essentially the same agreement. I think we used IDA as a model. In fact they agreed to our request for 2 additional years to go into the fund with original membership status.

Mr. PASSMAN. That is what I thought they gave us, 2 years. They told us upon what basis we would get in.

Mr. HENNESSY. We helped negotiate those terms and conditions essentially the same as all of the other international institutions.

Mr. PASSMAN. It was such you didn't want to go in anyway?

Mr. HENNESSY. We thought the timing wasn't right. We couldn't meet our past commitments, understandings, agreements, whatever you want to call them. The timing wasn't right to go forward with this one. After consulting with various committees of the Congress and knowing your particular concerns about taking on added responsibilities in this period of economic difficulties we didn't do it.

Mr. PASSMAN. You have made me feel good.

Mr. HENNESSY. We are responsive. You may not think so but you do have an impact on us over time.

COMMERCIAL RELATIONSHIPS OF IDA RECIPIENTS

Mr. PASSMAN. Mr. Hennessy, many of these developing countries are former colonies, I believe, of some large European nation, are they not?

Mr. HENNESSY. A great majority of them are ex-colonies of a number of major powers.

Mr. PASSMAN. And I believe most of them do have very strong trade ties, do they not, with their mother nation, trade ties?

Mr. HENNESSY. Some more than others. Some have repudiated totally the ties and decided to do it on their own.

Mr. PASSMAN. Some of the larger ones do have close ties with the old mother country, don't they?

Mr. HENNESSY. Yes, they do.

Mr. PASSMAN. It's my understanding that the way the United Kingdom, France and some of the others got their funds for the International Development Association through the parliaments, was that they would say, "If we put up 12 percent, Uncle Sam will put up 40 percent." It was on that basis that they usually got these requests approved because they knew they would get a good deal of trade from their former colonies who were the recipients of these funds.

If I read the record correctly, the borrowing countries from IDA total 65.

Mr. HENNESSY. I think the borrowing countries were 60 to 65.

Mr. REYNOLD. Sixty-three is the total.

Mr. PASSMAN. I believe two nations get about 60 percent of the total. Do they not?

Mr. HENNESSY. That was before Pakistan was divided, so it has gone down somewhat now.

Mr. PASSMAN. The last record we have is what I am referring to. You haven't sent anything to Bangladesh yet, have you?

Mr. HENNESSY. Yes, last year.

Mr. PASSMAN. What is the total?

Mr. REYNOLDS. About 53 between India and Pakistan.

Mr. PASSMAN. These two nations, out of 63, got 52 percent of the total IDA credits. I believe for each $1 that India put in IDA, they draw out $44 and for each $1 contributed by Pakistan they draw out $52. The two countries were former colonies of the United Kingdom.

Mr. REYNOLDS. I believe, according to the 1972 annual report, Indian and Pakistan have received IDA credits of $2.3 billion out of a total of $3.8 billion.

I would like to see what these two nations have gotten out of Uncle Sam's bilateral aid program. Through fiscal year 1972, I believe our disbursements to India totaled $7,772,800,000. It certainly would appear that that is a pretty healthy helping out of our bilateral aid program. Then if we look at Pakistan, U.S. disbursements have totaled $4,434,900,000 through fiscal year 1972.

INTERNATIONAL FINANCE CORPORATION

Where does the International Finance Corporation get their capital?

Mr. HENNESSY. They also got it from member governments. I think they got an original contribution——

Mr. PASSMAN. Did they get it out of the World Bank the same as IDA?

Mr. HENNESSY. The original contribution to the IFC was made by member governments, the same as it was to the World Bank. The United States put in $35 million.

Mr. PASSMAN. How much did we contribute to the International Finance Corporation?

Mr. REYNOLDS. $35 million.

Mr. PASSMAN. How long ago?

Mr. REYNOLDS. When it was founded in 1957 or 1958, something like that.

Mr. PASSMAN. Are they operating successfully now, on a business-like basis, making sound loans, collecting interest, and living on the original contribution?

Mr. HENNESSY. They have a borrowing line of, I think, an additional $400 million from the Bank.

Mr. PASSMAN. But they have never come back to the Congress for replenishment, have they?

Mr. HENNESSY. They have not.

Mr. PASSMAN. What are their terms?

Mr. HENNESSY. They are primarily operating in the private sector. They make equity as well as loan investments. In other words, if international bankers want to do a project in Brazil, they may take 10 per-

cent of that, and so they are taking long-term equity participations which are of a different nature. They do make some loans, of course, but they are operating strictly with the private sector and private sector terms.

Mr. PASSMAN. What are the terms of their loans?

Mr. HENNESSY. They charge 9 or 9½ percent.

Mr. PASSMAN. How long?

Mr. HENNESSY. For 10 or 15 years.

Mr. REYNOLDS. Their loans go up to 10 years, more like 7 generally.

Mr. PASSMAN. But they can go up to 20, can they not?

Mr. REYNOLDS. No, not the IFC.

Mr. PASSMAN. What is the maximum?

Mr. REYNOLDS. The maximum I have seen is 12, somewhere in there. They lend at about 9 or 9½ percent at the moment.

INCOME TAX EXEMPTIONS

Mr. PASSMAN. It is my understanding that the employees of IDA and the World Bank are like the other international organizations, exempt from income tax?

Mr. REYNOLDS. Americans pay taxes. Most of the other nationalities are exempt from income tax.

Mr. PASSMAN. Is the income tax amount reimbursed to the Americans who pay income tax?

Mr. REYNOLDS. Americans receive a gross salary, just as they do in any other institution, out of which they pay taxes.

Mr. PASSMAN. Do they actually have their taxes withheld and paid to the U.S. Treasury?

Mr. REYNOLDS. No. It is paid to the individual who, in turn, pays the U.S. Treasury.

Mr. PASSMAN. They are compensated for any taxes they pay the U.S. Treasury, are they not?

Mr. REYNOLDS. If I may, Mr. Chairman, people who work for the World Bank, whether they are Americans or not Americans, receive a salary, which is stated on a net of taxes basis and is set at a level which reflects the fact that the taxes do not have to be paid out of them. In other words, they are considerably lower than they would have to be.

Mr. PASSMAN. In other words, they get a lower salary but they pay no taxes?

Mr. REYNOLDS. That is right.

Mr. PASSMAN. Don't you have a pretty weak case when you say on account of the peculiarities of this institution U.S. employees don't pay any taxes but they get a lower salary?

Let's just see what your predecessor said. You don't mind that, do you?

Mr. REYNOLDS. No.

Mr. PASSMAN. Let's take the time, because every year you get different answers from different witnesses. While this is being looked up, doesn't IDA operate with regard to employees like the other international organizations?

Mr. REYNOLDS. I can't answer as to them.

Mr. PASSMAN. Let me get at it this way.

Mr. REYNOLDS. They are basically the same, yes.

Mr. PASSMAN. Actually what you are saying is they don't pay any income tax but they get lower salaries. How could we run this Government if we would cut everybody's salary and nobody paid income taxes? Could we get along? Just say, "No, we are not going to pay any more income tax. We will just reduce the salaries."

Mr. REYNOLDS. There is quite a difference in this respect.

Mr. PASSMAN. Let's see what they actually said.

Mr. REYNOLDS. Americans do pay taxes.

Mr. YATES. I don't understand the answer to that question. I thought a few seconds ago you told the chairman that they received a net salary in lieu of taxes?

Mr. PASSMAN. I am not going to argue with you. Here is what was said last year on this subject. This is on page 265 of part I of the hearings for fiscal year 1973:

> Mr. PASSMAN. Are you reimbursed for the tax that you pay?
> Mr. WIECZOROWSKI. Yes, sir.

I don't know how you could make it any plainer. You square your case with him. I get tired coming in every year and asking the same question but getting a different answer.

Mr. ROYBAL. Mr. Chairman, let's get his answer on the record.

Mr. PASSMAN. He just gave me nine different answers and none of them added up to what the man said last year.

Mr. ROYBAL. A moment ago he said Americans do pay taxes. Now the testimony of last year clearly indicates that while they do pay taxes they get reimbursed for their taxes, which in effect means that they don't pay taxes.

Give us your answer. Do you pay taxes or don't you pay taxes?

Mr. REYNOLDS. If I may, Mr. Congressman, the salaries for employees of the World Bank, regardless of their nationality——

Mr. ROYBAL. May I interrupt.

Do you pay an income tax?

Mr. REYNOLDS. Do I?

Mr. ROYBAL. Yes.

Mr. REYNOLDS. I most definitely do, yes.

Mr. ROYBAL. You are an American?

Mr. REYNOLDS. Yes.

Mr. ROYBAL. And you pay an annual income tax?

Mr. REYNOLDS. I do.

Mr. ROYBAL. Do you get reimbursed for that?

Mr. REYNOLDS. I personally don't because I am an employee of the U.S. Government.

Mr. ROYBAL. But does someone who is an American who works with the Bank, get reimbursed for the income tax that he pays the Government?

Mr. REYNOLDS. Let's just take an American. Yes, in effect.

Mr. HENNESSEY. In effect he does.

Mr. PASSMAN. In effect is all we are interested in. You have answered the question and we couldn't ask any more.

Thank you.

Mr. YATES. What possible justification is there for this kind of a practice?

Mr. PASSMAN. Because other nations follow this practice and we feel we want to be on the same level.

Isn't that correct?

Mr. HENNESSY. That is correct. Two points.

Mr. PASSMAN. Put it on the line, gentlemen. Don't confuse us.

Mr. HENNESSY. The original charter, which is the document to which the United States subscribes and so it is like a treaty, says these institutions will be tax-free, and the foreigners operating under it will be tax-free. If you tax the U.S. citizens working there it would put them at a competitive disadvantage so that everyone is placed on the same basis. It doesn't matter whether the institution is in Paris, in Washington, in Bangkok, or in Manila; the net result is that they get taxes reimbursed. In other words, whether it is in the U.N. in New York, if you are working for an international institution, in effect, you don't pay taxes to the U.S. Government. You do but they are reimbursed. You don't pay it to the French or some other government.

Mr. PASSMAN. Gentlemen, there is an important vote on the floor so let's take a brief recess and come right back.

Mr. ROYBAL. There seems to be a difference of opinion. I think we ought to ask every member of the Bank who is here whether or not he pays taxes and whether or not he gets reimbursed. Some believe they do and some believe they don't.

Mr. PASSMAN. If you work for an international organization, you get reimbursed for the taxes that are paid, isn't that right?

Mr. HENNESSY. In effect, yes, is what I am saying. The other people make the argument that, no, they don't, because they are quoted a net salary.

Mr. PASSMAN. Are you going to back up what your predecessor said or are you going to refute it? You had better read the hearings before you answer. Will you read it?

Mr. REYNOLDS. I understand exactly what he had in mind and I back off.

Mr. PASMAN. You don't in effect pay income tax?

Mr. REYNOLDS. No; that is not what he asked.

Mr. PASSMAN. I asked if he was reimbursed for the taxes he paid. What is the difference if you pay $2,000 a year in income tax and the organization reimburses you out of the till for the entire $2,000 then of course you are not paying income tax.

[Short recess taken.]

HIGH FOOD COSTS

Mr. PASSMAN. The committee will come to order. It is not my purpose to challenge or quarrel with any member of this subcommittee. They can stand on their heads if that is what they want to do, and I will applaud them.

Mr. YATES. At our age you should.

Mr. PASSMAN. I want to say this in defense of the farmer. Subsidy notwithstanding, he is the lowest-paid individual in our American free enterprise system. He gets the lowest return of any segment of the American system. The average farmer must have about $93,000 in machinery to be able to farm, and if you will check the record you will agree that he is the most underpaid individual in America.

When this farmer takes out of cultivation a crop, like cotton, to get a subsidy, remember that he gives something for something. Do you understand the program? He takes a crop out of cultivation, it is nonproductive, and he is not permitted, in many instances, to plant

anything on that land, so he loses more than he receives. At one time the subsidy went to the mills, with no criticism, but when they switched it to where it was charged to the farmer, then the criticism started.

Do you know, the average U.S. housewife spends 16 percent of her disposable income for food. The closest nation to that is France, when 28 percent of disposable income is spent for food. The highest nation is Indonesia, with 62 percent. If you will compare today's cost of food to 5 years ago, you will find that the housewife is paying less when you compare it as a percentage of disposable income. A great many of the farmers would much prefer to plant crops and to put his land in cultivation, but then you would throw supply and demand out of kilter, and of course you would be in serious trouble.

When I came here 27 years ago the farmer represented 23 percent of the population of America, while today he is down to 5 percent. There has never been a case in American history where if you let the farming segment go into recession that the remainder of America didn't fall in on top of him. He is the greatest consumer we have. The farmer consumes more steel than the entire automobile industry. It is too bad that a lot of people don't check into the actual problems of farming.

Mr. YATES. Do you want this on the record?

Mr. PASSMAN. I hope it is on the record.

Remember, my constituency is no different than yours. I could take the side of the consumer just as easily but I know too much about the former's problems.

Mr. YATES. May I suggest the consumers who live in my district don't like to have four raises in the price of milk in 5 months.

Mr. PASSMAN. I don't like the raise in the price of anything. But are you saying, "I don't care what you pay, but I want mine at a bargain"?

Mr. YATES. No; I am not saying that at all. I just think it is exorbitant.

Mr. PASSMAN. Let me point out for the record that I have one county where 98 percent of the farms are inundated. The water is from 6 inches to 20 feet deep. The water will not recede in time for them to plant a crop. We have another county that is 56 percent inundated, so these two counties are in bad shape. There is not a dime available to help these farmers from any source other than SBA loans for their homes and their contents, provided that the damage is as a direct result of the flood. So how in the world are they going to be able to eat for a full year? I don't know.

The only money that we have available under the Farmers Home Administration is a 5-percent production loan, but beyond that nothing?

FUNDS AVAILABLE FOR FOREIGN AID PROJECTS

Why have these floods taken such a toll? Because we have not been able to get sufficient funds to finish levees that were started many, many, many years ago in that area. They just don't have the money, yet the benefit-cost ratio on these projects is very high. We have to come in humbly, on bended knees to receive these funds and just beg for maybe 8 or 9 percent of the total cost of the project, and many times we are turned down flat but we come back begging again an-

other year. We have to look at that miserable record on domestic projects and know you people have never canceled or curtailed one project for lack of money for foreign aid projects.

AID has never had one dollar put into the so-called budgetary reserve.

When I look at these things, it causes me great concern.

Here is one foreign aid project that would cause any person grave concern. The International Development Association made an announcement in March that a $42 million credit was made to the Sudan for the Rahad irrigation project. In addition to the IDA credit, I note that the Agency for International Development was also going to provide an $11 million loan for the same project. Under the project description for this loan, it says they were going to develop irrigated agriculture on about 300,000 acres of land, construct an electrically powered pumping station, build a 52-mile supply canal, and construct an irrigation and drainage system covering the project area, just to mention a few.

This project sounds about like any other public works project here in the United States that presently has had the funds completely cut off. I would assume that this IDA credit of $42 million, would be over a 50-year period.

Mr. HENNESSEY. The loan terms; yes, sir.

Mr. PASSMAN. A 10-year grace period?

Mr. HENNESSEY. That is correct.

Mr. PASSMAN. How about the AID part?

Mr. HENNESSEY. Normal AID terms run out to 40 years, I believe.

Mr. PASSMAN. It is the same project doing the same work as projects in America, but they get this money for 50 years with no interest on $42 million; and on the $11 million, they get it at whatever terms they negotiate with AID?

Mr. HENNESSEY. That is a joint project, yes.

GENERAL ACCOUNTING OFFICE RECOMMENDATIONS

Mr. PASSMAN. That is a nice can of worms. In a General Accounting Office report dated February 24, 1973, many criticisms were directed to the World Bank and the International Development Association, of which a few are as follows: In GAO's opinion, the Treasury does not yet have a fully functioning system for managing U.S. participation in the Bank and the Association, and is not in a position to assure the Congress that funds contributed by the United States are being used effectively and efficiently by the Bank and Association to accomplish their objectives.

Do you have any comment on that?

Mr. HENNESSY. I believe we commented on that in the context previously.

Mr. PASSMAN. I may ask you the same question again tomorrow. It won't hurt to do it again.

Mr. HENNESSY. We agree with the specific recommendations which the GAO made to codify the system which we were using for loan analysis, and we are implementing all of the specific recommendations which they have made. In terms of whether we had a fully effective system, I think it is a question of beauty; it is in the eye of the beholder. Much of it is not standardized or written down. How do you

make a loan? We now have operational black books, if you will, codifications of a loan appraisal sysem or policy which we have submitted to the Congress for the record and to the GAO.

Mr. PASSMAN. But projects in these black books may not be funded this year. You don't know whether they will ever be funded. You are funding projects this year that possibly the funds, as you said this morning, were 3 or 4 years old. You couldn't tell this committee specifically what projects would be funded out of this appropriation this year.

Mr. HENNESSY. Not with 100-percent certainty. With a high degree of certainty, yes.

Mr. PASSMAN. What projects? Name 25 of them.

Mr. HENNESSY. We will be glad to submit that for the record.

Mr. PASSMAN. Submitting this stuff for the record is a lot of hot air. Tell me specifically, if you will, what projects, as far as possible, that you are actually going to allocate this money for in fiscal year 1974.

Mr. REYNOLDS. We can do that. There is quite a long list.

Mr. PASSMAN. You said this morning you couldn't do it, and I just wanted to see if you would give the same answer.

Mr. REYNOLDS. With 100-percent accuracy you can't.

Mr. PASSMAN. You didn't say that this morning. The GAO report went on to say the review by the National Advisory Council, which was the principal means for determining the U.S. position concerning proposed loans, appeared to be uneven and without formal guidelines or criteria for assessing the soundness of proposed projects.

Do you have any comment on that?

Mr. HENNESSY. This again goes to the question of how standardized do you have rules and regulations which were written down and which are applied by all the five agencies. We now have that.

Mr. PASSMAN. It goes on to say the information available during the informal review stage, the point at which questions on loans should be resolved, appeared to be insufficient for assessing a loan's soundness.

Any comment on that one?

Mr. REYNOLDS. Certainly when the loan is submitted for approval to the Board and within the U.S. Government to the NAC, we have an abundance of information.

Mr. PASSMAN. You have to give some kind of answer, but these charges have been made by GAO. It is to be regretted we have a program of this type. If I may ask you this question, Mr. Hennessy, what part, if any, do you have in actually administering this program?

Mr. HENNESSY. Well, I have overall responsibility but I guess that doesn't answer what you are asking. Do I look at each and every loan application and agree with it myself? No; that is more my deputy.

Mr. PASSMAN. Who actually then——

Mr. HENNESSY. Looks at each and every loan.

Mr. PASSMAN. All right, your deputy. You are his deputy?

Mr. HENNESSY. No, he is in the Bank.

Mr. PASSMAN. All right. We have that pinned down. So actually people who administer this program could be in Moscow this afternoon. I don't know and you don't know.

Mr. HENNESSY. Maybe I could explain the whole process.

Mr. PASSMAN. No, I know exactly what it is. You just answer ques-

tions and you do your job. The man who actually administers this program is not privileged to come before this committee because it is an international organization; is that correct?

Mr. REYNOLDS. The program of the institution is administered by the staff under the direction of the President of the Bank; yes, sir.

Mr. PASSMAN. But the man who administers this program is not permitted to come before this committee and justify these projects like Dr. John Hannah does to justify AID projects, is he?

Mr. HENNESSY. The staff of the bank don't come here, that is correct.

Mr. PASSMAN. I am not talking about the staff of the bank. I am talking about as we would say in Louisiana, the top dog, the man who administers this program. Where is he domiciled?

Mr. REYNOLDS. Washington.

Mr. PASSMAN. And he is not permitted to come before this committee because he is in an international organization.

Mr. HENNESSY. He does not come before this committee.

Mr. PASSMAN. But he is not permitted to.

Mr. HENNESSY. That is right.

Mr. PASSMAN. Why don't you answer me. You are such a nice fellow. I am going to get the answer, anyway, even at the expense of irritating you people. The people who administer this program could be in Moscow sipping cognac or some other drink this afternoon. He certainly is not here justifying this request. He has to depend on his subordinates or some man in the Treasury Department.

The GAO report goes on to say, although questions raised by the National Advisory Council in its review of proposed bank and association projects appeared not to have been fully resolved, the Council recommended approval of the loans.

This is saying that the projects can't be justified, yet they seem to want to approve it. Would you please tell the committee what additional amounts will be requested by IDA to maintain the value of the U.S. contribution in this particular institution?

MAINTENANCE OF VALUE

Mr. REYNOLDS. If I may, Mr. Chairman, I think $55 million will still be due for maintenance of value as a result of the first devaluation.

Mr. PASSMAN. Putting it this way then, you are not actually resting your case on $320 million for IDA. Your total request before you get this thing really going down the track is going to be $375 million, isn't it?

Mr. HENNESSY. That is, as you know, a separate procedure.

Mr. PASSMAN. I know, but you have to sweeten it up to that amount, do you not?

Mr. HENNESSY. When every country puts in, they put in at a certain weight and fineness of dollar. As it changes they have to maintain the value. In this case it falls on us. In the past it has fallen on other countries.

Mr. PASSMAN. Your knowledge is so great on this that you confuse some people.

In reality, before these funds actually are disbursed this $320 million so far as the U.S. contribution is concerned becomes $375 million, is that right?

Mr. HENNESSY. That is correct.

Mr. PASSMAN. Gentlemen, I want to thank you for that answer. I tell you the truth if I had the power I would strike a medal for you. That was really a direct answer.

By the time all of these international organizations receive a maintenance of value increase, if I may use this terminology, the kitty will be sweetened, I believe, by about $2 billion. Is that the right figure that I have used, about $2 billion?

Mr. HENNESSY. About $2 billion.

Mr. PASSMAN. Thank you.

Thank you very much, sir.

Off the record.

[Discussion off the record.]

Mr. PASSMAN. Mr. Roybal, would you take over for me for a while?

Mr. ROYBAL. Are there any further questions?

Mr. Shriver.

BENEFITS FOR IBRD/IDA EMPLOYEES

Mr. SHRIVER. I just have a few questions.

Did we get into the record the other fringe benefits of working for IDA or the World Bank?

Mr. HENNESSY. We will get that into the record because I gave one off the record and one off the top of my head but we will be glad to supply that for the record.

[The information follows:]

STAFF BENEFITS

Staff benefits, including special provisions for those whose service with the Bank requires living outside their home countries, are summarized below.

ORIENTATION IN WASHINGTON

A lump sum installation allowance is paid on arrival in Washington. Assistance is provided in finding permanent living accommodation, appropriate schooling for children, language instruction if needed, driving licenses, and related matters.

ALLOWANCE FOR DEPENDENTS

A staff member is entitled to a dependency allowance of $500 a year for his or her spouse if the spouse's annual income does not exceed $8,000, and of $300 per year for each dependent child. Amounts paid are net of taxes.

EDUCATION ALLOWANCES

Staff members stationed outside their home countries may be granted education benefits for dependent children who are attending primary or secondary schools. The Bank group reimburses 75 percent of tuition and other eligible costs up to a maximum grant of $1,000 per annum per child. If a child attends school outside the duty station country, one round-trip transportation may be provided yearly. Similar benefits are available in certain instances with respect to education at a university or other recognized institution of higher education.

TRAVEL

Resettlement.—The cost of transportation for the staff member, his family, and household effects is paid by the Bank when the staff member moves to Washington, and normally when he returns to his home country on completion of service with the Bank.

Mission travel.—The actual cost of subsistence is paid for by the Bank when a staff member travels on official business. On long journeys, stopovers

Bank's expense are authorized so that the staff member may arrive fit and fresh to carry out his assignment.

Spouse travel.—Married staff members accrue points for days of official travel outside the country of their duty station. After the required number of points have been accumulated, the Bank will pay the transportation cost for the spouse to accompany the staff member on an official trip.

LEAVE

Sick leave accumulates at the rate of 15 working days per year.

Annual leave accrues at the rate of 25 working days per year.

Home leave, during which the staff member uses his annual leave to visit his home country, with the Bank paying travel expenses for the staff member and dependent spouse and children, may be taken every 2 years with economy air passage or every 3 years with first-class air passage.

INSURANCE

Life insurance is available for staff members under a low-premium group policy. The Bank shares in the cost. Coverage is approximately one and a half times annual net salary. A double indemnity provision applies in event of accidental death.

Comprehensive medical insurance available for the staff member, spouse and dependent children. The cost is shared by the Bank. The medical insurance plan pays the full cost of semi-private accommodations in a hospital for up to 180 days per illness. After a $40 calendar year deductable, the plan reimburses 80 percent of other allowable medical expenses up to a lifetime maximum of $50,000. The plan also reimburses 50 percent of allowable dental expenses after a separate $40 deductible, up to a maximum of $500 per year.

Travel accident insurance in the amount of three times net annual salary is provided by the Bank for staff members traveling on official Bank business. In addition, coverage of $100,000 is provided for official air travel.

Workmen's compensation insurance covers injury or death arising out of performance of official duties. The premium is paid by the Bank. In general, medical expenses resulting from work-connected illnesses and injuries are fully reimbursed.

Mr. SHRIVER. I noticed that last year during the hearings you put in as one of those advantages advances against salary, with a considerable explanation of that. Also, loans may be made to assist staff members for certain purposes.

BALANCE OF PAYMENTS IMPACT

You say the overall impact of World Bank operations on the U.S. balance of payments is heavily favorable. Would you tell us more about that?

Mr. HENNESSY. Yes. Mr. Reynolds can give the figures. That derives from the fact that the World Bank gets most of its money, not from the IDA window, the IDA contribution, but from the fact that they go out and borrow on the world capital markets and what they have been doing in recent years is borrowing outside the United States.

In fact, I think they have practically not borrowed here in the last 2 years, to the best of my recollection, maybe once, and they take the money they borrow and they then deposit that in the United States, so we have an inflow of funds which stay here until they turn around and disburse them, which may take 10 years.

From that point of view, accumulative from the beginning, it has had a positive balance of payments effect and even during the last year it has had a positive balance of payments effect.

Mr. REYNOLDS. The last borrowing in the United States by the World Bank was in January of last year and since then they borrowed

over $2 million in overseas markets, principally Germany and Japan.

In the meantime there has been heavy procurement, administrative expenses in the United States and repayment of past borrowings in the United States and interest payments on past borrowing.

SOURCES OF RAW MATERIALS AND OTHER PRODUCTS

Mr. SHRIVER. You referred to our growing dependence on overseas sources for raw materials and other essential products. Would you tell us more about how IDA helps in this regard?

Mr. REYNOLDS. I think by contributing to the kind of world trading system by which we can rely on foreign sources for raw materials, supplies, as well as making direct contributions to expanded production of raw materials in developing countries.

Mr. HENNESSY. I think some 20 percent now of our raw materials come from the developing countries and I have seen projections which go as high as 30, 35 percent, in the next 7, 8 years—this excludes oil. What the banks do is to provide capital to build the roads and the power and the rest that allow you to go in and exploit the natural resources that are there. And in the last year, which is our worst trade balance in history, we had a favorable balance with the developing countries.

In other words, as the banks help the developing economies grow they demand more and more U.S. products so that has been a favorable impact also as a result of their operations. But we are having a growing dependence on all sorts of minerals, copper, bauxite, et cetera, and the bank's activities in helping to promote sound local government and sound local economies help us in the sense that it provides a secure source of supply to us and a cheaper source of supply than we would otherwise have.

IBRD REORGANIZATION

Mr. SHRIVER. You say the reorganization undertaken by the Bank last year served to unify functional and area responsibilities and established a more coordinated approach to lending operations. Would you elaborate on that?

Mr. HENNESSY. Yes. I will give the general picture and Mr. Reynolds can give some of the particulars, but because of concerns on our part and in part as a reflection of the concerns of some of the communities in Congress of how efficient the banks were internally and how well they are being run, we asked that they have some outside consultants come in and take a look at the bank after 25 years.

They had internal studies and small piecemeal studies and they hired a major U.S. consulting firm which came in and did a study over the course of a year and which came up with recommendations. They had a projects department and then a regional department and there was some competition and fighting—I won't say a lot—but let us say there was lack of coordination, that is probably a positive way of putting it. They thought operations would be made more efficient by this more unified regional approach and the result of the study was such a reorganization.

It was carried out, I believe, in August and it was approved in August and it has been carried out since then and I think it will allow

them to carry out with greater efficiency more loans per professional than they have in the past.

Also there has been some problem with speed in disbursing and this should help all of these problems which have been of concern to this committee as well as to the Treasury.

Hal, you may have some particulars.

Mr. REYNOLDS. I don't think there is much to add, Mr. Shriver. As Mr. Hennessy said, previously there were really two quite separate chains of command in the bank. You had the people who worked on projects and the people who worked on country economic problems of one kind or another, and oftentimes differences of view between the two could only be resolved at the most senior level of management.

Now there is integration within regional departments of the bank. You have both country people and project people, and we hope it will expedite decisions and also advance the concept of viewing each individual project within a total view of the development plan of the country.

PERSONNEL

Mr. SHRIVER. You have around 3,000 people?

Mr. REYNOLDS. The total staff at the moment, professional and nonprofessional, I believe is about 3,400.

Mr. SHRIVER. Has that increased in the last year?

Mr. REYNOLDS. In the last year it has increased, yes, something like 8, 9 percent, I believe.

Mr. SHRIVER. What accounts for the increase?

Mr. REYNOLDS. Expanding level of operations. Not only has the level of new lending gone up very substantially over the last 4 or 5 years but as the level of new lending goes up each year, then you have more and more projects that are ongoing and under supervision at a given time.

Mr. SHRIVER. What percent of them are here in Washington?

Mr. REYNOLDS. Oh, most of them. There are a few field offices but they are not very big and they are not very many, so well over 90, 95 percent would be here in Washington.

EVALUATION OF IDA PROJECTS

Mr. SHRIVER. Would you tell us or give us some examples of the project inspections and evaluations which are conducted on ongoing IDA financed projects?

Mr. REYNOLDS. Yes. Project supervision has been declared by Mr. McNamara to be the No. 1 priority of the operational staff of the Bank. The projects are supervised very closely from the moment they are approved right through to the time they go into operation.

There are periodic visits by supervision teams from Washington. There is a requirement for regular receipt of progress reports. It is a very close process of watching the project, helping to resolve problems as they develop right from the time of loan approval through completion of the project.

Now, in the last couple of years the bank has also put into operation a new system for evaluating the results of World Bank projects, asking in effect how successful have they been, have the original objectives been met, has the contribution to development of the coun-

try been as great as was expected, in effect trying to assess past operations with a view to improving future operations. There is a unit in the Bank that does that. It has, I think, about 10 professionals at the moment. It reports directly to the President who in turn has committed himself to passing on these reports in unchanged form to the Board of Directors for their review.

Mr. SHRIVER. Mention has been made here during the hearing of a GAO report on our U.S. participation in the World Bank and IDA. I don't know whether anyone requested a summary of that to be put in the record or not, but I think it would be well. Include any policy changes made in response to the report.

Mr. HENNESSY. We will do that. There has been some question but we will put the overall answer in.

Mr. MILLER. Final review and what you have done to solve the problem?

Mr. SHRIVER. OK, but you don't need to duplicate anything.

[The information follows:]

RECOMMENDATION 1

MORE SUBSTANTIVE INFORMATION ON PROPOSED PROJECTS SHOULD BE RECEIVED EARLIER IN THE PROJECT PREPARATION PROCESS IN ORDER TO RESOLVE QUESTIONS AT AN EARLY STAGE

As a result of Treasury Department efforts already under way at the time of the GAO review, there has been a significant increase in the timeliness and substantive nature of the information provided to the NAC member and participating agencies for use in the U.S. project appraisal process. Currently the NAC member and participating agencies receive the World Bank/IDA monthly operational summary. This document is a compilation of basic information on all proposed projects. It contains information on the amount of the loan, whether it is expected to be from IBRD or IDA resources, the purpose of the loan, the stage of the Bank's processing of the loan, and any actions taken on procurement. Since the document contains considerable "substantive" information on a proposal and since a proposal is usually entered in the document at least 1 year before it is submitted to the Board of Directors for their approval, it is a basic source of information used in the U.S. appraisal process.

A new notification process has also been instituted. When a project makes its way through the Bank's evaluation process and is at a stage where negotiations between the Bank or the Association are warranted, the U.S. Executive Director's Office at the World Bank now formally advises the NAC member and participating agencies that such negotiations are about to begin. When the negotiations are substantially completed the Office of the U.S. Executive Director then transmits to the NAC a brief report prepared by the Bank on the status of the negotiations.

On the specific issue of procurement, a subject of increasing concern to the United States, a new early warning system was established over a year and a half ago whereby new projects listed in the monthly operational summary are referred to our overseas posts. U.S. officials at these posts are instructed to follow up with the local borrowing agencies in order to obtain and furnish information to U.S. suppliers on potential export opportunities. This new information system has widened the access of U.S. business to international lending institution-generated procurement opportunities and, thus, improved their ability to compete aggressively for those export contracts. (See attached sample summary.)

RECOMMENDATION 2

INSTRUCTIONS TO GUIDE U.S. OFFICIALS IN APPRAISING LOAN PROPOSALS SHOULD BE DEVELOPED

This recommendation was also contained in the Controller-General's report on U.S. participation in the Inter-American Development Bank (report B–161470 dated August 22, 1972).

A formal codification of the procedures and policy criteria employed by the United States in the appraisal of the financial commitments, largely long-term development loans and credits, of the international lending institutions was recently completed by a special National Advisory Council (NAC) working group and approved by the members of the NAC.

The codification, which contains detailed information relating to documentation, personnel, procedures, and policy criteria employed by the various U.S. Government agencies, is available to officials in each of the NAC member and participating agencies who are involved in the loan appraisal process. The codification will be revised periodically to accommodate changes made in the appraisal process. A copy of the codification is attached.

RECOMMENDATION 3

INSTRUCTIONS REQUIRING U.S. MISSIONS TO OBTAIN AND FURNISH INFORMATION ON BANK AND ASSOCIATION PROJECTS BOTH PROPOSED AND BEING IMPLEMENTED SHOULD BE DEVELOPED

This recommendation was also contained in the Controller General's report on U.S. participation in the Inter-American Development Bank (Report 3–161470 dated Aug. 22, 1972).

In response to the recommendation, an explicit reporting requirement has been added to recently issued economic reporting guidelines for U.S. missions overseas, and will be incorporated in several additional such guidelines expected to be disseminated shortly. This step will require periodic reporting from AID missions, or the Embassy's economic section if no AID mission exists, on both projects to be financed by international lending institutions and on the progress of implementation of projects already financed by these institutions.

This new reporting requirement will formalize one part of an established and very useful information system. AID, an NAC participating member in the loan appraisal process, has incorporated reports from AID missions on loans financed by the international lending institutions in its analysis of proposed projects and in its presentations at NAC meetings for many years. Another important component of the AID missions input in the U.S. appraisal process is its direct contacts with the appraisal missions sent by the international lending institutions to the recipient countries. These contacts have often resulted in marked improvement in the coordination of such projects with those supported by AID.

We do not interpret this recommendation calling for a formal reporting requirement nor the actions being taken to implement it as a desire for AID mission or Embassy economic section personnel to undertake indepth audits of existing or proposed projects or to otherwise duplicate the work of the professional staffs of the World Bank and the International Development Association. Nor do we understand it to propose any increase in U.S. staffs overseas. The objectives of these reports and direct contacts are to insure the most effective use of World Bank and IDA resources in the context of the other economic development programs in the recipient country, and to provide on-going knowledge to the interested U.S. agencies in Washington of the field aspects of lending by the international lending institutions.

RECOMMENDATIONS 4

THE ESTABLISHMENT OF A REVIEW BODY OF SIZE AND COMPETENCE APPROPRIATE TO MEET THE NEED EFFECTIVELY INDEPENDENTLY EVALUATING BANK AND ASSOCIATION ACTIVITIES SHOULD BE SOUGHT

The Bank and the Association established in September 1970 a joint evaluation group responsible to management which may satisfy the clear need outlined in this recommendation. We say may since the short time in which the group has operated makes an evaluation of the group's utility premature. So far, the two major studies prepared by the group have been excellent. We intend, however, to press for the adoption of an independent audit mechanism consistent with the GAO recommendation. Adoption will require approval of other member countries.

JUSTIFICATION FOR IDA

Mr. SHRIVER. As members of the Appropriations Committee we have the responsibility to our taxpaying constituents to justify the expendi-

ture of Federal funds. What would you tell these constituents of ours regarding our 40 percent contribution to IDA and IDA's no interest, 50 year, 10-year grace period loans of, say, $4.5 million to Nepal for tourist hotels?

Mr. HENNESSY. I think there are different parts to the question.

Mr. SHRIVER. No; I just asked one question. What would you tell them?

Mr. HENNESSY. Tell them in terms of that loan? I think the per capita income in Nepal is slightly under $100. They don't have any natural resources to speak of that have been discovered thus far. One way of increasing the same, one way of helping to promote exchange and other services and employing people is to promote tourism, and I think the bank does this in selective cases, particularly where there aren't a lot of minerals or other resources around. This may be the only way they can make the economy self-sustaining in certain cases and I think Nepal is one of them.

Mr. SHRIVER. Well, we are being asked to cut back Federal support for projects such as water and sewer improvements, this kind of thing. It gets a little sticky when we are asked questions like that.

Mr. HENNESSY. I understand and I think the problem from the point of view of, say, lending to Nepal is they probably couldn't even afford to pay back a loan for a sewer unless they have some way of generating some exchange, and right now, in that they don't have much manufactured exports or have any copper or tin or something in the ground, they can do it by earning exchange from tourism, but obviously they have to develop other sources of exchange over time and other bases and other industries. But at the present time even a water project wouldn't be viable perhaps.

EFFECTS OF CURRENCY REALINEMENT

Mr. SHRIVER. The 1972 annual report discusses the difficulties involved in determining the exact effects of recent currency realinement. We may have some neeed of that information in connection with this bill if we ever get it to the floor.

I think we ought to have a summary put into the record.

Mr. HENNESSY. I think we can put something in. In my previous discussion with the chairman on this particular point and the problems of the United States in particular, I think that we saw in the April trade figures, that we had a $200 million surplus, which was the first surplus on a monthly basis in some 8 months, and represented a $700 million turnaround from 2 months before. While monthly figures vary considerably, there are indications of solid improvement. The exchange rate change is making us more competitive and should make us more able to handle international commitments than in the past and I think we are seeing some of that.

The impact of devaluation on U.S. prices doesn't look now like it will be very great. The benefits far outweigh the cost, but I would be willling to put in the record a longer summary statement of the effects.

Mr. SHRIVER. Why don't you do that then.

[The information follows:]

IMPACT OF THE 1973 DEVALUATION (TREASURY DEPARTMENT MEMORANDUM)

1. The February 12 devaluation of the dollar and associated actions, coming in addition to the earlier Smithsonian realinement, provide a realistic base for restoration of a satisfactory equilibrium in the U.S. payments position. Combined with fair access for our exports to foreign markets and the continuation of sound domestic policies to spur productivity and hold prices in check in the United States, these exchange rate realinements offer the prospect of a viable, sustainable international payments equilibrium.

2. There appears to be rather widespread agreement among economic experts that these exchange rate changes should have a substantial favorable impact on the U.S. trade balance. There is, of course, a considerable range of estimates concerning the precise quantitative impact of these exchange rate adjustments and the length of time necessary for the full beneficial impact to make itself felt. This is not surprising given our limited experience with major exchange rate adjustments and the various approaches and methodologies applied.

3. In addition, a major change in the competitive position of the United States relative to other countries will have an impact on other items in the current account balance of payments. Some of the impact will be negative—for example, a given level of overseas military expenditures will cost more in terms of dollars after the realinement. Other items will be affected positively—for example, foreign currency earnings of U.S. overseas subsidiaries remitted to the United States will show a higher dollar value. Also, investment flows should be affected in a way which strengthens the balance of payments. With a U.S. economy which is much more competitive internationally, the incentives for U.S. individuals and firms to invest abroad rather than in the United States will be substantially reduced, and the profitability and attractiveness of U.S. investment to foreigners increased. Given the complexities of assessing these flows and our lack of experience with major realinements, it is difficult to estimate the total impact on investment flows. But the effect could be to reinforce in a significant way the improvement in the trade balance resulting from the realinement.

4. One recently published study concerning effects on the trade balance prepared for the Brookings Institution by Professor William Branson of Princeton University summarizes much of the analysis. Surveying the implications of models developed by the Organization for Economic Cooperation and Development (OECD), the International Monetary Fund (IMF), and Stephen Magee of the University of Chicago, Branson found that they provided a range of estimates of from $3 billion to $8 billion for the favorable effects of the Smithsonian realinement. The lower estimate was derived by Branson from a model developed several years ago by the OECD staff, which incorporated very low estimates of price elasticities for internationally traded goods. Nevertheless, this range appears to cover the general spread of econometric estimates, including those undertaken by the staff at the Treasury and at other Government agencies.

5. Branson's view was that the evidence supported most strongly the upper end of this range of the elasticity estimates, yielding a prediction of approximately $1 billion improvement in the U.S. trade balance for each percent reduction in our exchange rate. Reaction by other economists to Branson's figures of $7 billion to $8 billion for the effects of the Smithsonian realinement was mixed, with some "elasticity pessimists" feeling that they were too high and others feeling that they were quite reasonable.

6. Branson's formula would suggest an improvement resulting from the Smithsonian and February 12 realinements combined on the order of $15 billion. This corresponds to the upper end of an estimate recently reported by C. Fred Bergsten of the Brookings Institution that the combined impact of the two devaluations would be a $10 billion to $15 billion improvement in the U.S. trade balance.

7. There is some evidence that foreign producers and U.S. importers initially reacted to the Smithsonian realinement in 1972 by reducing profits and costs of production. There is also evidence of an intensification of marketing efforts, of shifts in sources of supply to countries whose dollar exchange rates did not change, and of shifts in product composition of imports. Thus in the first year after the Smithsonian realinement the exchange rate changes were by no means fully passed through in higher prices to the final purchaser. Over a longer period, however, foreign producers may be compelled to increase their prices to reflect the exchange rate changes more fully. Logic suggests, furthermore, that the recent exchange rate adjustments should be passed through more fully than the 1971 charge. Foreign producers will not have as much leeway to absorb

the impact—Volkswagen, for example, has already announced a 7½ percent increase in its U.S. prices. The new alinement will greatly increase the pressure on distributors and marketing organizations in the United States to shift from imports to domestically produced goods. There may be something of a "threshold effect"—in other words, the total impact of the two realinements, adding up to an approximately 15 percent appreciation of OECD currencies against the dollar, may have more than 15 times the effect of a 1 percent change.

8. It would be a mistake to conclude that because our trade balance deteriorated in 1972, devaluation will not work. In looking for evidence of realinement effects on the U.S. trade balance, it must be kept in mind that actual trade in any particular period is affected by many diverse factors. Strikes at the ports, for example, have seriously distorted trade data on several occasions. Relative cyclical conditions in the United States and abroad probably had a favorable effect on the U.S. trade balance in 1971, but changes in these conditions may have been responsible for a substantial portion of the deterioration in the balance between 1971 and 1972. Roughly one-third of our total imports are consumer goods, and demand for such goods tends to rise rapidly as consumer incomes rise. United States competitiveness—and the U.S. trade balance—have been deteriorating since at least the mid-60's, and long-term movements of this type are not easily or rapidly reversed. Fuel imports are also increasing substantially. The effects of realinement have to be measured against the balance which could have been expected in the absence of exchange rate change. In this connection, it is worthy of note that the trade balance ceased worsening after mid-year despite strong growth of the American economy.

9. Furthermore, there is a short-run perverse impact from devaluation because the shifts in flows of goods and services come only in response to changes in relative prices and thus lag by some considerable period of time the increase in the dollar price. Indeed, recent work confirms that timelags may run well beyond 2 years or so before the *full* effects are achieved.

10. Taking these factors into account, it is not surprising that the United States did not experience a dramatic turnaround in the trade account in the first year following the Smithsonian realinement. Actually, the fact that the deterioration in the trade position came to a halt during 1972 may indicate that the Smithsonian realinement was already having a greater beneficial impact than appeared on the surface.

11. Most of the studies made both within the U.S. Government and in academic circles suggest that U.S. imports of manufactured products have a price elasticity of demand of more than 2; estimates as high as 5 have been made.[1] These studies thus offer a basis for the expectation that the United States should improve its trade balance substantially, to the extent that the exchange rate changes are passed through in the final price. They also suggest that better price performance by the United States than by its major trading partners will be effective in strengthening the U.S. trade position.

12. In summary, both common sense and extensive econometric work undertaken by economic experts at the Treasury, other U.S. Government agencies, international institutions and academic and private research institutions clearly suggest that although a considerable period of time will be required, the recent exchange rate adjustments will bring about a major improvement in the U.S. trade position.

URBANIZATION PROJECTS

Mr. SHRIVER. What are these IDA-financed urbanization projects in Senegal and in Turkey?

Mr. REYNOLDS. Yes. This is a field in which the World Bank has recently entered really for the first time. It is sort of very tentatively feeling its way. I think the Senegal project was really the first urbanization project that was done. It was approved back several months ago.

It is a project which is aimed primarily at developing the site for a rather large scale do-it-yourself housing program.

[1] Stephen Magee, "A Theoretical and Empirical Examination of Supply and Demand Relationships in U.S. International Trade," a study for the Council of Economic Advisers (October 1970).

The World Bank itself is not getting involved in financing housing but it is financing the preparation of the site of the housing project and financing the basic infrastructure, water, sewerage, for the general area as well as financing I think some basic industrial facilities to be related to the housing area.

Mr. SHRIVER. What is the one in Turkey?

Mr. REYNOLDS. Turkey, I think, was more of a strictly water supply and sewerage project. I don't have the details of that. I could furnish something for the record. I think that was more of a strict public utility type of project in the water and sewerage area.

[The information follows:]

ISTANBUL URBAN PROJECT

In July 1972, the World Bank and IDA approved a project to assist the development of Istanbul, Turkey. A $2.3 million credit is intended to prepare an integrated development program for Istanbul, and thus to lay some of the basic groundwork for properly planned, comprehensive and coordinated metropolitan growth. In conjunction with this credit, a $37 million loan will expand and improve the water supply system of Istanbul, which has lagged behind rapidly increasing demand. It will involve expansion of the water treatment, transmission, pumping and distribution systems for the entire metropolitan area, together with technical assistance.

The Bank loan is for a 25-year term, including five years of grace, at 7½ percent interest per annum. The IDA credit is for 50 years, including a 10-year grace period and is interest free except for a three-quarters of 1 percent service charge.

JULY 5, 1972.

TECHNICAL DATA

Project: Istanbul urban development.
Country: Republic of Turkey.
Total cost: $3.3 million equivalent.
IDA financing: $2.3 million, 50 years, 10 years of grace, interest free except for three-quarters of 1 percent service charge to cover IDA's administrative expenses.
Other financing: Turkish Government.
Implementing organization: Ministry of Reconstruction and Resettlement, Ankara, Turkey.
Project description: Preparation, in a form suitable for the Government's approval and implementation, of an integrated program of action to meet the long-term urban needs of the Istanbul metropolitan area, an urban transport/land use model, and the high-priority projects designed to alleviate existing problems in such areas.
Procurement: Consultant advisory services; training, fellowships, and seminars; equipment and vehicles. Consultants' contracts to be agreed upon by the Turkish Government and IDA.
Consultants: To be selected.
Estimated completion date: Late 1975.

JULY 5, 1972.

TECHNICAL DATA

Project: Istanbul water supply.
Country: Republic of Turkey.
Total cost: $5.1 million.
Bank financing: $37 million, 25 years, 5 years of grace, 7¼-percent interest per annum.
Other financing: Turkish Government, internal cash generation, capital contributions by consumers.
Implementing organizations: Istanbul Water Administration (ISI), (Istiklal Caddesi, Beyoglu, Istanbul, Telephone: 45-05-30)—construction of distribution system; State Hydraulic Works (DSI), (Yucetepe Mahallesi, DSI Ankara, Telephone: 18-34-15)—all other project construction.
Project description: Expansion of Istanbul's water treatment, transmission, pumping and distribution systems; technical assistance.

Procurement: Pumping stations, treatment plants, reservoirs, transmission and distribution pipelines, Bosporus underwater pipeline, telemetering systems, water meters, operation and maintenance equipment, technical assistance. Bank-financed contracts to be awarded on basis of international competitive bidding with 15 percent preference for Turkish suppliers.
Consultants: Management, accounting, engineering consultants for ISI to be selected. Engineering consultants for DSI for treatment plants—Tahal (Israel); transmission pipelines—Bergeron (France); Bosporus pipeline crossing—to be selected.
Estimated completion date: 1976.

RURAL DEVELOPMENT PROJECTS

Mr. SHRIVER. What is the new aproach to rural development which is being considered now in regard to the Bank's activities in Africa?

Mr. REYNOLDS. Well, just generally much more of an effort to finance activities that reach out into the rural areas and help expand the productivity of the small peasant farmer through provision of credit, better provision of basic irrigation facilities, things of that nature.

Mr. SHRIVER. Same thing that they are doing in AID?

Mr. REYNOLDS. I think much the same approach, yes, except, it is not a volunteer program in the nature of the Peace Corps. It is a financing program. It is designed like other World Bank projects to finance equipment, to provide consultants, to provide necessary technical assistance, expertise.

Mr. HENNESSY. I think one of the things that has grown over time is a specialization in organization. For instance, in the educational field in Brazil you get the World Bank concentrating on one level, say, vocational, and AID may be looking at high school education. The same thing is true, I think, in the urban area and in the rural area.

The World Bank, as I recall, in the African program has been looking at the nutrition aspect and health aspect of these rural programs, trying to get higher protein consumption, et cetera, which will increase the productivity of the people involved, trying to deliver health services as well as get some projects out to the farmers which will employ them.

Mr. SHRIVER. That is all.

Thank you.

IDA THIRD REPLENISHMENT AGREEMENT

Mr. ROYBAL. I would like to make inquiries with regard to the $320 million. What you are asking now is for $320 million. Is that not correct?

Mr. HENNESSY. That is correct.

Mr. ROYBAL. And this is due to an agreement that was reached among the advanced member countries to replenish the resources of IDA on three different occasions.

Now, the United States participated in those agreements.

Mr. HENNESSY. Yes.

Mr. ROYBAL. And it was agreed then that $960 million would be made available by the United States. Is that not correct?

Mr. HENNESSY. That is correct.

Mr. ROYBAL. The first installment, however, was provided by the Congress under the terms of a continuing resolution?

Mr. HENNESSY. Yes.

Mr. ROYBAL. So in effect this committee has not really appropriated the moneys as an individual item. Is that correct or is that incorrect?

Mr. SHRIVER. We had it in the House bill, but the House and Senate never did get together last year.

Mr. ROYBAL. That is what I want to know. What was the reason that we had to go to a continuing resolution?

Mr. HENNESSY. There was never a conference held, I think because the military authorization bill never took place, and because that never took place, the AID appropriation conference never took place.

Mr. ROYBAL. So there was no conference of any kind, and then it was necessary to have to do it under a continuing resolution.

Mr. HENNESSY. Yes.

Mr. ROYBAL. This is then the second installment that we are talking about?

Mr. HENNESSY. Being asked to appropriate, that is correct.

Mr. ROYBAL. And the second installment then is now overdue, is it not?

Mr. HENNESSY. We are a year behind schedule, but when we paid in, we made it clear to everyone, because that was the decision of the Congress when we signed up at that time, that we could not make the original payment schedule, although other countries had subscribed to that, and because of our own particular situation we were going to do it but on a 1-year lag basis. They are aware of that.

Mr. ROYBAL. At the time that the agreement was reached, was there any consultation made or was the Congress in any way consulted with regard to an agreement for $960 million?

Mr. HENNESSY. When the original negotiations took place, the authorizing committees in both Houses were fully apprised of it. I think where we fell down, and that is only indirectly I believe, is with respect to the appropriating committees—this is back in 1969 when the international negotiations were going forward. But before the legal commitment, before the United States signed up for this, which took place only last September, full consultations before we signed on the dotted line were held with both committees in both Houses, and with committee members and subcommittee chairmen.

Mr. ROYBAL. Was there at least acquiescence on the part of the chairman of this committee to go along with the $920 million at the time?

Mr. HENNESSY. That was our interpretation and I believe the interpretation of the wording in the conference report where it said that it was not the intention of the managers to deny the 3 years' appropriations which would total $960 million.

Mr. ROYBAL. Then there is a commitment, is there not, on the part of this committee that the $960 million will be provided over a period of 3 years?

Mr. HENNESSY. That would be our interpretation, yes.

Mr. ROYBAL. Because the way the thing finally turned out, consultation with the Appropriations Committee, has committed the committee to meet that agreement.

Is that your interpretation?

Mr. HENNESSY. That is my interpretation, but there is always a fine line that in a particular year in a particular set of circumstances the Appropriations Committee has to make that final appropriation.

Mr. ROYBAL. That is correct. In the future, whenever IDA enters into any agreement, will it be the policy to consult the Congress on it and to get the Congress agreement before any agreement is reached with any of the other nations.

Mr. HENNESSY. It most certainly will be, and I would hope to come around and be able to talk to you all individually because we are now talking about the next round, and there is a question.

We have gone on the record with all the other countries that the United States needs a sharp reduction in its share from 40 percent to down somewhere between 33 and 30 percent, and that we must look at the absolute amount because you are appropriating dollars and therefore we have been carrying out consultations.

We have sent letters, but I would like to come around myself and other members of the administration to talk about where we are and to get guidance from the committee, but the brief answer is we will not enter, and promise this committee we will not enter, into any international commitments without first consulting and having the benefit of these consultations before we move forward.

Mr. SHRIVER. Would you yield?

Mr. ROYBAL. Yes.

COMMITMENTS BY CONGRESS

Mr. SHRIVER. We are elected in the House of Representatives every 2 years. That is about the length of time that we could individually be committed, I would think, because we can't bind future Congresses.

Mr. ROYBAL. The truth of the matter is that we do bind future Congresses at the time that such an agreement is entered into, whether we are serving on a 2-year basis or not. When this agreement was reached to provide $960 million, we in effect said that the Congress for the next 3 years is committed to provide $320 million. Isn't that correct?

Mr. HENNESSY. That is correct. It is a practical problem in dealing with these institutions. We have to program their funds on a 2- or 3-year basis and have to sit around a table to do so. It sometimes takes a year to 2 years to get 20 member governments to sit down and agree how much they are going to give.

Mr. YATES. Mr. Chairman, why does that necessarily follow? If he had conversations with members of committees and there was no action by the Congress, why is the whole Congress bound? Why cannot the Congress vote $200 million instead of $320 million?

Mr. ROYBAL. Do you want to answer that?

Mr. HENNESSY. Well, the Congress did act, but I think quite clearly you can vote less than the $320 million. At the same time that would put us in violation, according to our legal counsel, of this international agreement which we have entered into. The practical problem is that the banks don't live on a year-to-year basis. It is impractical to try to sit down with 20 other countries and every year come to agreement how much are we going to put in this year. They work on a 3-year basis and get a 3-year total, which in this case was $960 million, 40 percent is the U.S. share of the total amount, so that at some point in time every government wants to know how much every government is going to put in.

At that point you draw up an agreement and everyone signs up for that amount. The first step is to negotiate, with the benefit of con-

gressional consultations, reach a U.S. share and the U.S. amount, then an authorization bill goes through, and before we sign up in every case we have come around in the past and asked the appropriate committees, "Here is what the 3-year program is. We want the first year." After the first year has actually been appropriated and the Congress is aware of the next 2 years, then we go ahead and sign up with the international agreement, which means other countries can pay in, knowing that the United States is "committed." Everyone understands that in the last analysis the Congress is the one that appropriates for the United States, and even after the consultation process and having one appropriation, if you took the $320 million and lowered it to $200 or $280, or whatever it was, no one can say you are not operating in full——

Mr. YATES. Don't you have that situation here, that there has not been by action of the Congress an approval of your first year's appropriation, in view of the fact that you are getting your funds under a continuing resolution?

Mr. HENNESSY. Both houses approved the full amount, but there never was a final agreement, as I understand it. Was there?

Mr. SHRIVER. It passed both the House and the Senate, the continuing resolution did.

Mr. HENNESSY. Both had $320 million.

Mr. YATES. So it was not in dispute?

Mr. SHRIVER. No.

Mr. YATES. But the bill was never signed by the President, was it? Therefore can it be called a congressional commitment if you don't have a final bill but only have the funds being distributed under a continuing resolution?

Mr. SHRIVER. It was passed by both Houses of the Congress. It has congressional consent.

Mr. YATES. It doesn't become law until the President signs it.

Mr. SHRIVER. The continuing resolution?

Mr. YATES. I was talking about the original bill, the foreign aid bill.

Mr. SHRIVER. By approving the continuing resolution, you had approval of the House bill because we had $320 million in it, and the Senate bill had $320 million in it.

Reference was made in the continuing resolution to those two bills.

Mr. YATES. Perhaps you are right. I was thinking more of the foreign aid bill and not of the continuing resolution.

May I continue my questioning on this very point?

Mr. ROYAL. Go right ahead.

Mr. YATES. Congressman Rooney, chairman of the State Department Appropriations Committee, brought in a bill which in a sense shocked the members of the committee because he had reduced the amount of contribution, his subcommittee had, to the United Nations, and the U.N. constituent agencies abruptly. Suppose the committee were to help you in your negotiations by doing the same at this time?

Mr. HENNESSY. Let me say I think our position would be negative on that. We want to negotiate it, and we are negotiating for the new round, but this is a past commitment, as we see it. It does not entirely take into account our present economic situation, which is why we are strongly arguing, and will be successful in obtaining, a major reduction in our share in the next round. But at this point in time, after

other countries have signed up and are paying in, based on an agreement that the U.S. share will be 39 percent, to then reduce that I think would be unnecessarily disruptive. I think we have an agreement that starting from today this would apply. If our situation turned around very drastically we would still be 2 or 3 years from now with a reduced share, so you do have a lag before you catch up.

Mr. MILLER. Will the gentleman yield at that point?

Mr. YATES. Yes.

Mr. MILLER. I hardly see that this is a commitment from Congress, because a group has made an agreement. If it was a commitment as such, the Secretary, Mr. Reynolds, would hardly be here now attempting to justify the appropriation of $320 million. I can see the possibility of Congress marking it off completely. That isn't impossible, so would we be backing down on our commitment, would Congress be backing down if they did not appropriate the money?

Mr. YATES. If I may supplement what you have said, from previous answers, as I understand what the witnesses stated to the committee, they indicated their commitment to their colleagues, to the negotiators, was subject to congressional approval. Did you not?

Mr. HENNESSY. In the first instance, and subsequently we did consult with the Congress. We do have the committee's first appropriation through a continuing resolution. We have a conference report which talks about the total amount and we have personal consultations with the individual subcommittee and full committee chairmen. The Congress works with the committee system and great emphasis was placed on that as the basis for signing up.

I can't drive that to its logical conclusion saying the Congress, come hell or high water, cannot exercise its individual judgment and refuse to appropriate the $320 million. The Congress did not legally commit itself for those next two levels. It didn't write it in a document. What it said in the report was it was not their intention to deny it. We signed up with the full knowledge and intention at the time. It would seem to me that that was the time, if we thought it was too much, we should have raised the question. I think it would have grave impact and it might have foreign policy impacts, which Mr. Armstrong might care to comment on.

I wouldn't think this would be the time to do it, when people think the United States is walking away from what might otherwise be termed an appropriate level of commitment

Mr. ROYBAL. We have a vote on the floor. Suppose we take a 5-minute recess and come back.

[Short recess taken.]

Mr. ROYBAL. The meeting will come to order.

We will recognize Mr. Yates.

AMERICAN EMPLOYEES OF IRBD/IDA

Mr. YATES. I would like to ask about the American employees at the World Bank. The President is former Secretary of Defense McNamara; is that correct?

Mr. HENNESSY. That is correct.

Mr. YATES. What is the salary of the President of the Bank?

Mr. HENNESSY. $50,000 tax free, I believe. That is the tax-free equivalent.

Mr. YATES. Are there Americans in the lesser offices?

Mr. HENNESSY. Yes. I would say a majority of the key spots in the Bank are Americans. The Vice President, Mr. Burke Knapp, is an American.

Mr. YATES. What is his salary?

Mr. REYNOLDS. $40,000. I think it was perhaps just raised to $41,000.

Mr. YATES. He is Foreign Service?

Mr. REYNOLDS. He is an employee of the Bank.

Mr. YATES. Does he come from Foreign Service?

Mr. HENNESSY. No, he has been in the Bank I think since its inception in 1945. Before that he may have.

Mr. REYNOLDS. He was an employee of the U.S. Government.

Mr. ARMSTRONG. He was in the State Department as a civil servant in the latter part of World War II and then moved over to the World Bank.

Mr. YATES. Are there other American Vice Presidents?

Mr. REYNOLDS. Yes.

Mr. YATES. Will you name them?

Mr. REYNOLDS. The Senior Vice President, the chief operational officer under Mr. McNamara, is Mr. Knapp, and there are others. Mr. Chenery.

Mr. YATES. Is it Mr. Knapp who makes $40,000 a year?

Mr. REYNOLDS. Yes.

Mr. YATES. And then Mr. Chenery?

Mr. REYNOLDS. Yes.

Mr. YATES. What is his salary?

Mr. REYNOLDS. The Vice President's salaries range from $35,000 to $40,000.

Mr. YATES. Tax free?

Mr. REYNOLDS. Yes. They pay taxes, for which they are reimbursed, but they do pay taxes to the U.S. Treasury.

Mr. YATES. In effect it is tax free?

Mr. REYNOLDS. After payment of taxes they are left with a net of tax salary ranging from $35,000 to $40,000. You asked me to name them all. Mr. Chenery, Mr. Bell, Mr. Alter, Mr. Baum. I think there are five altogether.

Mr. YATES. Of the 3,400 employees of the Bank, how many are Americans?

Mr. REYNOLDS. The percentage of Americans is 27 percent of the professional staff, and there are about 1,600 professionals, so that would be——

Mr. YATES. Roughly 400?

Mr. REYNOLDS. I think about 450 professionals. There are also about 1,800 nonprofessionals employed by the Bank, and the percentage of Americans there is something less, I think, than 25 percent. This shows 420 professionals and 349 nonprofessionals.

Mr. YATES. What were those figures?

Mr. REYNOLDS. 420 professional, 349 nonprofessional American employees of the Bank.

Mr. YATES. Those would be roughly clerks and stenographers?

Mr. REYNOLDS. Right, messengers, chauffeurs, secretaries.

Mr. YATES. And the professional salaries, I suppose, vary, don't they, or are they all the same?

Mr. REYNOLDS. Professional salaries vary. They will start at about $9,000 or $10,000 and range on up to, as I say, $40,000 for the Senior Vice President and $50,000 for the President.

Mr. YATES. What sort of a position is a professional position other than an officer's position?

Mr. REYNOLDS. Anyone doing professional work, all of the economists, engineers, lawyers.

Mr. HENNESSY. Statisticians, computer technicians.

Mr. YATES. Do you have a breakdown of the salaries of the professionals that could be put in the record?

Mr. REYNOLDS. Yes; the number of employees, different salary ranges and that kind of thing.

Mr. YATES. That is right.

Mr. REYNOLDS. Yes, sure.

Mr. YATES. May that be put in the record?

Mr. HENNESSY. As long as we don't have to put in the people's names.

Mr. YATES. I would like the officers' names. They are published.

Mr. REYNOLDS. Yes.

Mr. HENNESSY. Yes; the top management.

Mr. REYNOLDS. I don't know that their salaries are published.

Mr. ROYBAL. It is so ordered.

[The information follows:]

SENIOR OFFICERS OF THE BANK

J. B. Knapp, Senior Vice President
S. Aldewereld, Vice President, Finance
A. Broches, Vice President and General Counsel
H. B. Chenery, Vice President, Development Policy
B. Chadenet, Vice President, Organization Planning and Personnel Management
W. C. Baum, Vice President, Project Staff
B. R. Bell, Regional Vice President, Eastern Africa
R. Chaufournier, Regional Vice President, Western Africa
I. P. M. Cargill, Regional Vice President, Asia
M. P. Benjenk, Regional Vice President, EMENA
G. Alter, Regional Vice President, Latin America and Caribbean
Sir Denis Rickett, Vice President
M. Shoaib, Vice President
W. Clark, Director, External Relations
P. N. Damry, Secretary

BANK GROUP SALARY RANGES—AS OF JUNE 1, 1973

Bank grade	Number of staff	Percent	Minimum	Maximum
Vice presidents	14	0.8	$35,000	$41,000
Department directors and deputy directors	52	3.0	25,239	37,560
Chief economists, assistant directors, and other senior staff	63	3.7	25,230	33,880
A	109	6.4	23,000	30,850
B	332	19.4	20,000	27,320
C	637	37.2	17,250	23,900
D	322	18.8	14,010	20,180
E	184	10.7	11,120	16,660
Total	1,173	100.0		

Mr. YATES. You are going to put the Vice Presidents.

Mr. REYNOLDS. We could certainly show the $35,000 to $40,000, and we can show how many fall into that range. Where each individual falls within that bracket I am not sure.

Mr. YATES. Is there a comparison to be made between your professional salaries and a comparable civil service salary, a professional salary in the civil service or in the Foreign Service?

Mr. HENNESSEY. We have carried out a number of comparisons ourselves to make sure there is an equivalency basis. We think the standard by which the people in the World Bank should be paid is the civil service, the U.S. Government, or the other major member governments. There is not entire agreement among all bank members on that, but we have carried out studies.

For instance, they say if we have to get a computer technician we may have to go out in the private market and hire one and may have to pay more than you pay in the U.S. Government. We don't accept that, but we do understand there may be exceptions. If a private sector salary is higher on an exceptional basis, they may make that type of a distinction. But in general the standard should be the U.S. Civil Service, the AID salaries, the State or Treasury Departments. We have made comparisons between the bank jobs and ours, and I think in general in most categories ours is competitive. We did recently have some differences, quite frankly, on the lower end of what we have to pay, for instance, in the Treasury to get a Ph. D. from a university, and what the bank does. Here I think the final resolution of that was that they are paying what I would consider is maybe $500 or $1,000 more than would be needed to really attract them, but the problem comes in matching. Is this guy's responsibility exactly the same as the other?

Mr. YATES. You have a lawyer of so many years in the State Department and he gets a certain salary.

Mr. HENNESSY. That is right.

Mr. YATES. You get a lawyer of so many years in the bank and he gets a certain salary.

Mr. HENNESSY. That is right.

Mr. YATES. I think the possibilities for comparison are apt.

Mr. HENNESSY. Yes.

Mr. YATES. I must say that when one speaks to my congressional colleagues about the fact that no taxes are paid, they are aghast. They have the impression Americans everywhere pay and should pay taxes. At any rate, I appreciate your supplying that for the record. I thank you, Mr. Chairman.

Mr. ROYBAL. Mr. Miller, would you like to continue now?

Mr. MILLER. I only have a couple of questions and I would like to continue now, if I may, Mr. Chairman.

Mr. ROYBAL. Will you proceed.

SUCCESS OF IDA PROJECTS

Mr. MILLER. Mr. Secretary, you spoke about aid being given by the World Bank to those nations that had less than $375 per capita income, as I recall.

Mr. HENNESSY. Yes.

Mr. MILLER. Have you seen any results that would indicate that the per capita income has gone up? I ask this question because of the various types of projects which you spoke of. You have agriculture programs. I would assume electrical generating stations are installed, utilities such as sewer and water. I cannot see that this type of thing

would necessarily bring the per capita income up. It may make a better life, but will it bring the per capita income up?

Mr. HENNESSY. By itself it wouldn't if it wasn't part of a global sort of development plan where they were putting some industries in and they needed some roads and a dam with electricity and the rest. The Bank does try to take an overall organized approach and see what impact that will have on the national income as part of a whole. There have been a number of countries where IDA originally started out with $200 per capita. Over time that has gone up because of inflation. There have been a number of counties such as Korea, which have been able through funds from the World Bank and IDA have been able to raise their per capita whereby they no longer qualify for that but only for hard market rate loans.

There is some empirical evidence they have been successful. Each individual loan—Mr. Reynolds deals more closely on a day-to-day basis than I do—but with each individual loan they do try and see what contribution overall national income on a particular project will have. That in some sense increases the ability of the Government to tax and in turn to increase the per capita income of the people.

Mr. MILLER. Is there a possibility of the program defeating itself on the basis of countries that would attempt to hold the per capita income down so they could qualify for loans?

Mr. HENNESSY. I don't think so. That would be self-defeating, in a sense. I think every government is now elected in the developing country on the promise of growth. They are going to get their per capita income up at a higher rate than the last government. On the other hand, if they were arguing they still qualified for IDA funds because they kept their per capita funds down, I think they would be kept out of office.

U.S. DEPENDENCE ON OVERSEAS SOURCES OF RAW MATERIALS AND ESSENTIAL PRODUCTS

Mr. MILLER. There is one other point I had. In your testimony on page 4 you mention economic development objectives fit closely with U.S. objectives in related areas of international trade and international finance:

> In this conection you should not ignore the growing dependence by the United States on overseas sources for its raw materials and other essential products.

Yes, I can see where we do rely on overseas sources for some raw materials. What are the other essential products? Are we speaking of manufactured products that we would import?

Mr. HENNESSY. I think primarily the raw materials that we are thinking of. Ultimately we could produce our own even at a higher cost manufactured or semimanufactured, but primarily that part of the statement dealt with raw materials and processed raw materials at a very low level of processing.

Mr. MILLER. You go on to state that——

"In many cases, IDA financing enables developing countries to export higher quality goods on a more reliable and economic basis."

Does that mean exporting higher quality goods to us in the United States?

Mr. HENNESSY. I think what was meant in that part of the statement—again this was Mr. Reynolds' statement; you may let him

answer, but the question I think is of getting the economy to a point where it is more effective and more efficient and so overall that they have better roads and better transportation facilities, lower cost credit, and then they can begin to compete domestically and regionally and ultimately internationally in world trade.

That is one of the objectives of the Bank.

Mr. MILLER. Do you care to respond, Mr. Reynolds?

Mr. REYNOLDS. I think in the strict sense of the word "essentially," it really applies only to raw materials but certainly in a broad sense it also applies to a number of food items and other commodities, which while perhaps not strictly essential, nonetheless play an important part in the scale of living of this country and we are dependent upon trade to obtain them. Not only do we obtain these materials in trade but, of course, the reverse side of the coin is that we expand markets in these countries for our own products.

BORROW FUNDS INSTEAD OF APPROPRIATING FUNDS

Mr. MILLER. The one point that I would like to reiterate if I may and make sure that I understood your answer correctly is when you were asked about whether you could operate under a guaranteed loan program instead of by appropriation, did I understand you to say that you could operate under that guaranteed loan program?

Mr. HENNESSY. That would not be the case in IDA because in IDA we are making budgetary contributions. I think the Chairman was asking that question in relation to the ordinary capital payments whereby you put in, say, 10 percent in cash, letters of credit, and you put in the other 90 percent in the form of callable or guaranteed capital. In the past we have always come in for that 90 percent and asked for an appropriation of it, even though in the longest stretch of imagination we never think we are going to call upon it.

He was asking the question why do you continue to appropriate if you don't think you are ever going to call upon it. One of the reasons is that in one institution, the IDB, when they float their bond, it is pretty dependent on the U.S. guarantee, unlike the World Bank that has a number of other donors who also guarantee. So if we didn't appropriate 100 percent of that, of the guaranteed capital, that might affect their capability to raise funds.

But that is a whole different pool of funds than the IDA. IDA doesn't go out and borrow those in the market. Those are just budget contributions from Government and there is no way that we could under a guarantee allow them to come up with those funds. But what we would be willing to study was whether on the guaranteed portion of the capital whether it makes sense to continue appropriating that every year when we really don't think we are ever going to have to call on that.

Mr. MILLER. Thank you, Mr. Secretary.

That is all, Mr. Chairman.

REVIEW AND EVALUATION OF PROJECTS

Mr. LONG. Mr. Secretary, I understand that the World Bank currently has a review system responsible to the management of the Bank. Do you feel that this existing review and evaluation system is suffi-

ciently independent to be a constructive critic within the World Bank?

Mr. HENNESSY. Our state of view is that we think it should evolve to an important independent form over time and I think the indications are that other member governments are agreeing with us and the management itself, but we would be hopeful in the next year or so to be able to bring that about.

I think it is desirable to have a greater degree of independence than now exists.

Mr. LONG. GAO has recommended a completely independent review and evaluation unit. Do you disagree with the GAO recommendation?

Mr. HENNESSY. No, sir, I don't agree at all.

Mr. LONG. Does that mean you agree with it?

Mr. HENNESSY. That means I agree with it and I think we have been negotiating, talking, discussing, with other member governments who had some reservations at the beginning about this. I think they have learned from the IDB experience.

In this case of course where there are many, many other governments involved we do need a somewhat greater consensus than we do in some other institutions but I am very optimistic that at the same time next year we will have either a much higher degree of independence or a complete independence which you suggest and which I think makes sense.

Mr. LONG. The World Bank evaluation unit has issued a number of reports including one on bank activity in Colombia. When the GAO was doing its report on the World Bank did it ask to see these reports of the evaluation unit?

Mr. HENNESSY. Yes; it did. I believe we gave them all of those.

Mr. LONG. That was my next question. Did the Treasury provide these reports to the GAO?

Mr. HENNESSY. We have on a confidential basis and continue to provide it on a confidential basis.

Mr. LONG. What does that mean, confidential?

Mr. HENNESSY. They don't get published.

Mr. LONG. Does that mean Congress can't look at them?

Mr. HENNESSY. No.

Mr. LONG. You mean a Congressman can look at them or committees can look at them?

Mr. HENNESSY. Yes.

Mr. LONG. Can you control our use of them?

Mr. HENNESSY. I think here again the utility of the exercise of having an independent organization which looks at it would be subverted—it would be counter productive—if we published, let us say, a highly sensitive report in certain cases, because it normally involves another country.

In other words, they have gone and looked into Colombia, for instance, and if that was published in the newspapers that they didn't implement loan A as well as loan B, that could be used for political purposes back in the host country.

I think you have to recognize they are very sensitive political documents, and we do ask when GAO looks and/or Congress looks, they do it on a confidential basis.

If there was any wrongdoing, of course, we would not ask the Congress or anyone else to keep that confidential. It is more the political sensitivity part of the equation.

Mr. LONG. The report on the World Bank's loans to Colombia issued by the Bank's own evaluation unit is said to be very good. Is this report available at the Treasury Department?

Mr. HENNESSY. Yes. That is the one we were discussing that is part of the group of reports which the World Bank Group has done and which is available to us and to the Congress on a confidential basis.

Mr. LONG. Could you provide for the record the recommendations of the report and the action taken on them by the Board of Directors?

Mr. HENNESSY. Yes.

[The information follows:]

INTERIM REPORT ON ACTIONS RELATING TO RECOMMENDATIONS OF THE COLOMBIA EVALUATION STUDY

The following pages present an interim review of the actions taken and planned by the Bank to date in response to the recommendations which emerged from the evaluation study of Bank operations in Colombia that was completed by the Operations Evaluation Division of the Programing and Budgeting Department 12 months ago.

Upon completion of its basic work on the study, the Operations Evaluation Unit gave high priority to pursuing the recommendations, which resulted from systematic application of hindsight to history, with the relevant operating departments of the Bank. The first stage in the followup procedure was to secure from all affected operating departments a written response to each recommendation, stating what was being done or was intended to be done in implementation or, in the event of rejection of the recommendation, the reasons therefor; this has been done. The second stage, which is envisaged for about 6 to 12 months from now, is to carry out a review of interim work by the operating departments to see how much progress has been made in implementing the agreed recommendations. At that stage, another report will be prepared by the Evaluation Unit, systematically dealing with all the original recommendations, analyzing what has been done about them, and recommending any further steps deemed necessary.

The recommendations can usefully be divided into three parts: (1) General policy matters; (2) Problems and procedures, usually relating to Bank operations in particular sectors; and (3) Operations in Colombia.

The following paragraphs present each major recommendation in one sentence and then comment briefly on what the relevant part of the Bank is doing, or has undertaken to do, about it.

GENERAL POLICY MATTERS

1. Land reform.—The Bank should reassess the problems of maldistribution of land in Colombia and in some other countries, and earnestly support land redistribution wherever it finds that such reform could contribute substantially to a better pattern of development.

The Bank's attitude on this subject has been evolving rapidly and a revised policy is being developed. A key policy paper on the matter is being prepared for discussion by the Executive Directors in March 1974.

2. Credit for small farmers.—The Bank should seek to develop projects and institutions which could promote more employment-generating agriculture and assist small farmers.

Projects of this nature have been under preparation in an increasing number of countries, and a few have already been approved for financial support. Some project preparation efforts are also now underway in Colombia. A policy paper on the matter is under preparation for discussion by the Executive Directors in April 1974.

3. Housing.—Despite the poor experience of other aid agencies in this field, the Bank should reconsider its refusal to support the housing sector because of its lagging development, its potential for mobilizing local resources, the need for new organizational and physical techniques, and the intimate relationship between this sector and the financial sector.

The Bank Group has made two recent forays into this field, with a sites and services project in Senegal and support for a savings and loan institution in Colombia. Opinions have been divided on the extent of the role that the Bank should play in housing, and so policy papers to elucidate the issues more clearly

are under preparation for presentation to the Executive Directors in March 1974.

4. Smalltown and rural electrification.—The Bank should help develop approaches for serious economic analysis of the priority of electrification programs outside major urbanized areas, and it should help finance schemes which demonstrate economic viability.

The Bank has moved increasingly into financing power distribution (as opposed to generation and transmission), and some rural schemes have been included in projects financed. Further research, including case studies, is underway; and preliminary guidelines have been prepared for the treatment of this subject in the Bank's operations. Broader review at the policy level, of the problems and potentials involved, will be undertaken in a paper planned for presentation to the Executive Directors in the second half of 1974, when the crucial research will have proceeded further.

5. Capital markets development.—The Bank should develop a better coordinated strategy and panoply for helping to strengthen developing countries' domestic capital markets (in the broadest sense), the weakness of which is a serious constraint to effective mobilization and allocation of resources and has a negative effect on the development contribution of Bank projects in various ways.

The Capital Markets Department which was set up in IFC about 2 years ago, has carried out comprehensive reviews and provided advice to nearly a dozen countries (now including Colombia) and is preparing an important paper on the Bank's policy with regard to the financial sector as a whole.

6. Economic reporting.—The Bank should concentrate its scarce economic expertise to a greater extent on highly focused problem-solving studies, draw on a greater variety of outside sources (including local ones in a country) for preparing such reports, and distribute them more widely.

The last years have seen a substantial increase in the number of more highly focused studies (for instance, for Colombia, in the last 12 months, on the agriculture sector and on capital markets), and a greater variety of sources of expertise are being tapped, although there is probably still scope for increasing the use of local talent. Policy with regard to distribution of reports has just been changed to favor much wider circulation wherever possible.

7. Project spread effect.—The Bank should actively seek means for maximizing the spread to other projects and institutions of the technological and managerial innovations introduced in connection with its projects, since the evidence suggests that this spread does not occur automatically.

While the Bank is giving attention to this subject in a number of projects, it appears to need more systematic study in order to identify its potentials and any appropriate general lines of policy. Hence, a special study of the matter, on the basis of selected past projects, is planned by the Evaluation Unit for the forthcoming fiscal year.

8. Public health.—The Bank should consider further broadening its involvement in public health, beyond family planning, insofar as this is an area of need, with important potential contribution to economic efficiency, in which the Bank could make significant institutional contributions.

Some loans for education have included components for training of nurses and paramedical personnel, and some loans for urban and rural development have included small provisions for establishment of clinics. Opinion has been divided on fuller involvement in the field of public health, and research is continuing. A paper proposing appropriate Bank action in the field of nutrition is under preparation for discussion by the Executive Directors toward the end of 1973, and another dealing with the role the Bank could play in the field of public health more broadly is under preparation for presentation to the Directors in the second half of 1974.

PRACTICES AND PROCEDURES

1. Project Monitoring.—More performance targets should be agreed in connection with loans, benefit projections better specified, and systems developed for generating periodic information flows for comparison of actual achievements with these targets and projections.

The need for this is very widely agreed, special efforts have been made in connection with recent projects of more experimental nature (for example, Senegal sites and services and Malawi agriculture development), and the Central Projects Departments are all devoting attention to means of applying monitoring systems for projects in their sectors.

2. Evaluation of consultants.—Even though consultant firms working on Bank projects are normally responsible directly to the borrower, the Bank should, with assistance from the borrower, prepare regular and comprehensive performance evaluations on such teams and, to the extent possible, on individual team members, so as to enable better control and systematic use of past experience in selecting consultants for subsequent jobs and in advising borrowers in their selection.

An appropriate system, covering consultants employed on all types of Bank projects, has been given a pilot test earlier in this year and will now be introduced generally.

3. Transportation—comprehensive planning approach.—The Bank should put greater emphasis on comprehensive transport planning, taking account of interactions with other sectors, especially in cases of countries where it is heavily involved in investment in the transport sector.

The Transportation Department states that it is giving special attention to this matter in operational work and is also deevloping some research work on appropriate analytical methods and approaches.

4. Transportation—regional developmental impact of projects.—More attention should be given to trying to maximize the developmental impact of transport projects on the regions they traverse (as opposed to concern merely with the growth of traffic between the urban areas linked.)

This is a very difficult area in which the evaluation unit has been carrying out further studies covering additional countries and in which the Transportation Department plans a preliminary position paper before the end of this year, to be followed by further experiments and research. Findings of research and studies are being taken into account, as they become available, in operations.

5. Transportation—market structure of transport services.—Standard tests should be applied in analysis of proposed transportation projects to see whether market structure is such that the benefit of transport cost reductions will actually be passed on to users and final consumers/producers.

The Transportation Department is producing guidelines on this matter for use by the operating departments and plans followup.

6. Transportation—vehicle fleet composition.—In consideration of highway design standards, more explicit and detailed consideration should be given to the types of vehicles to be used on the highway.

This subject is now standard as a matter for consideration in connection with highway projects, and the depth of the Bank's understanding of the problem is being increased by a major research project that is underway on the whole matter of highway design standards.

7. Transportation—highway sector lending—When transport institutions are reasonably developed, lending for regional or national programs of highway building is an alternative to lending for individual highway projects which warrants serious study for its greater flexibility in terms of getting the most important roads built to reasonable standards at the right time.

The Transportation Department is preparing a paper for management on this subject.

8. Electric power—central power institutions.—Wherever there are many small power companies, even if a national grid is not immediately economic, it seems useful for the Bank to make a special effort to try to develop a central institution which can take responsibility for appraising and supervising projects, so as to get better planning, plan implementation, and use of other foreign finance.

The Public Utilities Department agrees with this recommendation and has undertaken to watch for opportunities for fostering such development.

9. Electric power—tariff structure.—The Bank should increase its attention to the borrowers' power tariff structures, systematically examining the relationship between charges to different consumer groups and the incremental costs of supply to them and it should consider mechanisms for mobilizing self-help efforts in distribution expansion.

The Public Utilities Department accepts this point and is undertaking appropriate research but it emphasizes the difficulties that can arise in convincing the authorities in some countries to make appropriate rationalizations.

10. Electric power—distribution standards.—The Bank should encourage borrowing power companies to carry on systematic review to define the most appropriate distribution standards under local conditions, economic, financial, social, and technical.

General guidelines on this subject have been issued by the Public Utilities Department and a related research project has been approved.

11. Electric power—financial recording and planning.—Despite the effort that the Bank has devoted to this field further improvements are still needed in accounting systems of some companies particularly in regard to recording and classification of assets and of financial obligations.

The Public Utilities Department is strengthening project appraisal instructions in this connection and preparing more standardized formats for financial tables which should help to get the required emphasis on this matter.

12. Industry—long-term national framework for analysis of major industrial projects.—Industrial projects, especially basic industries, must be analyzed from a national point of view and in a long-term framework if mistakes are to be avoided.

The Industrial Projects Department aprees fully with this recommendation and states that it has been applying the recommended approach in recent years.

13. Industry—disaggregated economic analysis.—The principal components of major industrial projects, not only the project as a whole, should be subjected to detailed cost-benefit analysis.

The Industrial Projects Department points out that his technique is sometimes difficult to apply, but it emphasizes that the attention now given to long-term balance among component parts of projects should avoid repetition of the problem which led to this recommendation; analysis of projects' components has for instance led to substantial restructuring of several recently financed industrial projects.

14. Agriculture—consistency between project objectives and farmers' incentives.—Greater care must be taken to insure that the incentives and the opportunities open to individual farmers are consistent with the objectives of agricultural projects.

The Agriculture Department states that it is giving continuous attention to this in its review of agricultural projects and that it has work underway to improve the analysis of farm budgets and farm plans in the Bank's project work.

15. Education—school operating costs.—The Bank should give more attention to accurate definition in concept and in practice of school operating costs and to the level of such costs for schools financed under such projects as compared with other schools.

The Education Department agreed with the need for improving analysis of school operation costs and it has instructed appraisal missions to pay more attention to the matter; part of the problem lies with poor budgetary procedures in borrowing countries, which it is also trying to improve.

16. Management training for utility services.—The Bank's Economic Development Institute should consider providing courses in utility management in addition to its general courses on improving project preparation and analysis.

The Deveolpment Institute is planning a number of new courses concerned with the utilities field and has one on water supply utilities underway at the present time.

OPERATING IN COLOMBIA

1. Perspective.—To help in the selection of projects and in the provision of other appropriate assistance and advice, the Bank should have a longer run view than it has had in the past of how Colombia's human and physical resources can best be mobilized and combined for development; and it should maintain a periodically updated picture of the key variables such as population, its geographical distribution, employment, savings, and natural resources.

The Bank expects to initiate an appropriate framework for this in the course of its forthcoming eocnomic mission to Colombia.

2. Institution building as the prime project selection criterion.—Institutional and structural constraints to development are so important in Colombia that the Bank should try even more than it has done in the past to select for its project assistance areas where institutional strengthening is vital, such as rural education, labor-intensive agriculture, and housing.

The Bank would not give as much primacy to this criterion as the evaluation report, but it is selecting some projects mainly for their institution-building potential for example, medium cities water supply) and it is including institution-building efforts in some other projects (for example, improvement of the central agency concerned with the development finance companies and preparation of sector plan for power with German technical assistance).

3. Agricultural statistics.—To help in the formulation of better sector policies and effective implementation, the Bank should encourage design of a system for collection of comprehensive and reliable agricultural statistics and, if necessary, finance appropriate technical assistance.

In view of the institutional obstacles, the Bank is doubtful about what can be accomplished in this field, but it will emphasize its dissatisfaction with the present situation to the Colombian authorities and it feels that it may be able to provide some related technical assistance.

4. Promotion of multiple-purpose rural development centers.—The Bank should consider assisting in development and construction of rural centers to serve multiple purposes such as primary education, adult education, public health, agricultural extension, and mobilization for rural works.

The Bank generally agrees with this suggestion, on the basis of recent further investigations, and is considering with the Colombian authorities alternative possible programs; a small contribution has already been started as part of the new education project that is being presented to the executive directors.

5. Capital market development.—The Bank should encourage unification and better regulation of credit markets, particularly by removal of interest rate ceilings, reduction of forced investments by commercial banks, and encouragement for listing of stock.

The Bank largely agrees with the recommendations, recognizing that they are difficult steps with considerable implications which will take time to implement, and it is discussing them with the Colombian authorities in connection with the economic report on Colombia recently done and the new loan to the Colombian DFC's. A separate report on capital market questions is under preparation. IFC has recently helped to get underway, and to provide equity for, a new institution to improve the operation of the short-term money market.

6. Improving allocation and distribution of DFC funds.—If broader measures to improve capital markets prove impossible of achievement in the near future, then the Bank should take steps in connection with further lending to the Colombian Development Finance Companies to improve the allocation of funds, by measures such as lending to the DFC that is concerned with medium- and small-scale industries, raising the interest rate on DFC subloans to a rate which would clear the domestic market, and tying IBRD loans to the DFC's effort to raise funds domestically.

The Bank agrees with these suggestions and is programing a loan for the DFC concerned with provision of financing and technical assistance to medium and small industries. In the meantime it has included provisions in the new DFC loan recently approved for making loan disbursements partly conditional on DFC achievement in raising local currency funds by domestic bond issues, for increasing somewhat the number of DFC's eligible to participate in the loan, and for limiting the amount of Bank funds which may be on-lent to any one borrower. With respect to interest rates it has not yet proved possible, despite considerable Bank efforts, to do more than agree upon a formula to prevent them from becoming negative in real terms.

7. Information flows on DFC subprojects.—The Bank should require better information flows from the DFC's on subprojects during and after their execution, mainly to generate case data which would help the Bank in its advice to government on policies affecting the industrial sector.

The Bank fully agreed with this recommendation and, in connection with projects financed under the new loan, expects to receive much fuller information than it has in the past.

8. DFC promotional activity.—The Bank should pursue with the DFC's their undertaking of promotions in fields with unrealized potentials such as lumber/furniture and coal/chemicals.

The Bank agreed that more emphasis was needed on the DFC's promotional activities and, in connection with the recent loan, encouraged them to engage in such work.

9. Detailed programs of institutional improvements.—For projects selected largely because of institution-building potentials, appraisal reports should contain a clear delineation of the difficulties and, in so far as possible, a precise and phased program for overcoming these difficulties, with periodic performance targets.

The Bank is in accord with the sense of this recommendation and intends to apply it as widely as possible; one case where it is being given particular attention is the fifth railway project now being prepared for financing by the Bank.

10. Priorities in institution building.—In its institution-building efforts, the Bank should emphasize four areas: personnel policies (including training), organizational structure, planning capability, and management information systems.

The Bank has indicated its agreement with this recommendation and intends to give these matters attention in all projects with a major institution-building component such as the one for the medium cities water supply.

11. Government and borrower salary structures.—The Bank should give more attention to adequacy of salaries, salary structures, incentives for training and actual payment of special premia since these seem to be important deficiencies limiting the effectiveness of Colombian Government agencies.

The Bank agrees with this point and has given it special attention in connection with the fifth railway project, but it believes that a more general reform may be required in Colombia for which an indepth study may be the crucial first step; however, it does not believe that such a study has enough priority to warrant Bank effort at the present time, given staff constraints and other areas needing attention.

12. Transportation information system.—The Bank should encourage, and if necessary finance, technical assistance to set up an information system for transportation (reliable traffic counts, detailed costs and tariffs, capacity utilization, fleet composition, etc.) which would enable more adequate appraisal of highway and railway projects and better sector studies and policymaking.

The Bank agrees that transportation statistics in Colombia need improvement and is considering appropriate steps to help, possibly through inclusion of a special provision in the next highway loan.

13. Feeder roads.—After 20 years of lending for trunk highways, the Bank should carefully consider provision of assistance to Colombia for construction of feeder roads, which seem to be a serious transportation bottleneck now, and for strengthening of the agency responsible.

The Bank has undertaken to give special attention to this matter in determining its overall strategy for rural development, although it does not expect to be able to take active steps on the matter in the near future because of deterioration in the administrative capability of the Ministry of Public Works, which has involved postponement of a loan envisaged.

AVAILABILITY OF INFORMATION

Mr. LONG. Very good.

Is the following information available to the Treasury from the World Bank: Loan progress reports, minutes of the Board of Executive Directors, and reports of the Bank's evaluation unit mentioned above?

Mr. HENNESSY. Starting at the end, the loan evaluations are available to us, yes, and the other two are also, the minutes in which we participate, the minutes of the meetings, and the progress reports, I believe, are supplied to Mr. Reynolds on a regular basis or not?

Mr. REYNOLDS. Well, it depends exactly on what you are talking about.

Mr. LONG. The question that I want to raise is which of this information, which is available to the Treasury, would you be willing to furnish to the GAO on request?

Mr. HENNESSY. Which would we not be willing perhaps is the question.

Mr. LONG. State it either way.

Mr. HENNESSY. Minutes here again are politically sensitive documents because they have member governments sitting around a table representing 116 nations commenting on different loan and loan proposals, so that what we have said to the GAO in that particular case is that we are willing to provide the comments and discussions of the U.S. Executive Director, but under the rules and regulations of the organizations themselves, the minutes themselves of other director comments be kept confidential.

EMPLOYMENT AND INCOME EFFECTS

Mr. LONG. Does the World Bank take into account employment and income effects in design of projects?

Mr. REYNOLDS. Very definitely.

Mr. LONG. Well, what weight do they give them in deciding between different projects? The minor factor, marginal, very important?

Mr. REYNOLDS. I would say it is an important factor. As I said before the major factor is the economic return on the project to the development, the productivity of the economy, and it is within that context that these other aspects are looked at but they are very definitely looked at. These economies are economies in which there is great abundance of underemployed labor and the most productive use of capital in these economies is in forms in which it can combine with a maximum amount of that labor and it is these kinds of projects that the institution seeks to promote.

Mr. LONG. I am not quite sure I am more enlightened after I listen to you. I gather that you do take into account income distribution and employment but you feel that productivity is even more important.

Yet anybody who has been around the developing world is greeted by the standard complaint everywhere, the biggest problem is surplus people dumped on the big cities, and productivity as some sort of a national aggregate doesn't have very much meaning if its productivity results in some big pile of goods in some part of the country where there is already a big pile and at the same time dumps huge quantities of people without homes, without livelihoods, and even without family stability onto the cities where you just have a big crime problem, and political unrest, and so on.

It would seem to me that you have to make some kind of a choice here, and wouldn't you agree with that?

Mr. REYNOLDS. I certainly agree these are serious problems. As I say, a major effort in Bank programs at the moment is to boost agricultural production, to increase the opportunities for earning a livelihood in rural areas, to slow up this excessive migration to cities.

Mr. HENNESSY. To work on population programs.

Mr. REYNOLDS. That is right, to curtail excessive population growth.

Mr. HENNESSY. I think Mr. McNamara, every year at the annual meeting of the bank, does give a policy direction speech in addition to what comes out in the annual report.

I think you will see the emphasis has changed. There has been an increased emphasis not only on economic development but social development. There is always, I think, an argument how far to which end of the spectrum you want to go and I think there has to be a balance.

If you just end up providing direct grants to people that may not create any new jobs and they may be poorer in the long run rather than richer. So I think the correct balance has to be struck between education, and the more socially oriented projects which don't have an immediate return, and then the capital intensive ones which do produce more jobs and more income.

I think the Bank has moved more into this area. There is a question how much further they might go without some effect in the longer run viewpoint; that affects the overall view of the individuals also.

It is a concern of ours and I think Mr. McNamara's speeches do lay it out and I think the annual report does try to quantify that more.

We might submit a somewhat more rigorous analysis to you rather than this somewhat wordy discussion we are having.

[The information follows:]

ADDRESS TO THE BOARD OF GOVERNORS

(By Robert S. McNamara, President, World Bank Group, Washington, D.C., September 25, 1972)

I. INTRODUCTION

Last year, in this forum, I discussed a number of problems which were of serious concern as the second development decade got underway. Now that the trend of the decade is becoming more clearly predictable, I want to explore with you today an issue that is central not only to its success, but to the efficacy of the entire development process.

That issue is the critical relationship of social equity to economic growth.

But before turning to that, I should like to:

Report on the Bank group's operations in fiscal 1972.

Review the progress of our 5-year program for the fiscal years 1969–73.

Assess the current state of development throughout our development member countries.

And, based on that assessment, sketch the outline of a program for the Bank for the 5 years 1974–78.

II. THE BANK GROUP'S OPERATIONS IN FISCAL YEAR 1972

Let me begin by touching upon our operations during the past fiscal year. For that period, new loans, credits, and investments totaled $3.1 billion. This compares with $2.6 billion in 1971, $2.3 billion in 1970, $1.9 billion in 1969, and $1 billion in 1968.

To finance growing disbursements, and to increase the level of liquidity, the Bank borrowed, net of retirements, $1.1 billion during the year. This brought our liquid reserves to $3.2 billion—up $700 million from June 30, 1971. Net income for the year was $183 million, excluding a gain on revaluation of $51 million.

The year, then, was a productive one operationally. But as I have indicated to you before, the development task before us requires that we plan on a broader scale than year-to-year operations make possible. That is why in the fall of 1968, when I first met with you, I proposed a 5-year program. That program will be completed next June 30, and I want to report to you now on its progress.

III. THE BANK GROUP'S 5-YEAR PROGRAM

You will recall what we set out to accomplish. Our analysis of the overall requirements for economic progress in our developing member countries convinced us that we should greatly broaden and expand the Bank group's operations both in scope and in size.

We proposed as our overall lending objective that we should double the Bank group's operations in the period 1969–73, as compared with the period 1964–68. Were we to achieve this goal, it would mean that during the 5 years the volume of lending would approach the total amount lent during the previous 23 years of the Bank's operations.

I can report to you today that we will not only meet that goal, but will surpass it.

But it was not principally the size of our operations which concerned us when we launched the 5-year program. We did not merely want to do more. We wanted to do more of what would contribute most to development.

Thus, within the overall lending program, we were resolved to shift our emphasis both into different sectors and into different geographical areas.

What does that mean in practice?

In a developing world in which hunger is chronic, it means intensifying our efforts in agriculture. We have quadrupled our operations in that sector.

In a developing world darkened by functional illiteracy, it means expanding our efforts in education. We have tripled our operations in that sector.

In a developing world caught up in the threat of unmanageable population pressures, it means facing up to that complex and controversial problem. We have established a population projects department, and we have launched important initiatives in that sector.

In our previous meetings, I have stressed the damaging effect of runaway population growth on a developing economy. I have pointed out the strains this creates both at the family and the national level for any country struggling to improve the quality of life for its people.

Overly rapid population growth simply erodes and dissipates development gains in every sector: Savings evaporate, scarcities multiply, resources are stretched so thin that in the end they cannot cover the most essential needs.

While the population problem is clearly one which cannot be solved within the confines of a 5-year plan, or a development decade, or indeed even during what is left of our century, it is by its very nature a problem that can grow only worse with procrastination and delay. That is why we believe the entire international community must assign it the highest priority.

The Bank's initial work in the population field consisted of sector missions to a dozen different countries and projects deliberately initiated in smaller member countries in order to provide us with working experience on a scale commensurate with our new capabilities.

But in the early summer of this year we approved far-reaching projects in two of our largest member nations: India and Indonesia.

The project in India—a joint effort with the government of Sweden—will develop what promises to be the most advanced systems approach to the population problem in any developing country. It will provide the essential information and analysis required to shape the overall massive effort India is making to reduce its current population growth.

Both the size of India's problem, and the magnitude of its effort to solve it, can be grasped in the statistics. The nation's total population now stands at over half a billion. It is growing by an additional million each month. The government has set up an organization of 80,000 persons to administer a family planning program to serve 100 million couples. The Bank project is designed to help support that program with the experimentation and the systems analyses required to make it effective.

Like India, Indonesia is serious in its determination to provide its people with effective family planning assistance. With a population of more than 120 million, currently growing at an annual rate of 2.5 percent, it ranks fifth among the world's most heavily populated countries. Some two-thirds of its people live in Java and Bali, where the average density is nearly 1,600 persons per square mile.

With the participation of the U.N. Fund for Population Activies, WHO, UNESCO and UNICEF, the Bank project provides $13 million for a greatly expanded family planning program. In addition to the construction of 300 health centers and the provision of the required vehicles and equipment, the project will help finance the training of several thousand field workers, the preparation of public school curricula, and a program of research and evaluation.

Should the overall objectives of the project be reached—and both the Government and we are confident that they can—Indonesia's population by the end of the century, even though it will be twice as large as it is today, will be 50 million less than it would otherwise be.

What all this demonstrates is that our 5-year program has shifted the Bank's emphasis toward those sectors which is today's conditions require intensified effort: agriculture, education, and population, among a number of others.

But as I have indicated, our shifts in emphasis have been geographical as well as sectoral. In Africa, we expect to more than treble our lending over the previous 5-year period.

And for the group of our poorest member countries—those whose per capita incomes average less than $100—we will quadruple our lending.

To achieve these goals has, of course, required a substantial strengthening of the Bank Group, both organizationally and financially. The professional staff, for example, by the end of the 5-year period will have increased by 125 percent.

Recruitment of highly qualified staff, representing the broadest possible geographical experience, has been facilitated by a worldwide interest in the work of the Bank. In the past year, more than 2,400 candidates, from 98 countries, applied for 52 available openings in our Young Professionals program.

Doubling the volume of our lending operations has meant, of course, that we had greatly to expand our borrowing capacity. This, in turn, depends on governments granting us access to their countries' capital markets. Despite recurrent and unsettling readjustments in the international monetary system. They have continued to do so.

Not only have we continued to borrow in our more traditional markets, but we have entered new markets as well, and have utilized new borrowing instruments, and new channels of distribution. Net borrowing for the 5-year period will approximate 3¾ times that of the earlier period and liquid reserves will increase by about 125 percent.

Neither the expansion of operations nor the shift into less traditional sectors of lending has adversely affected net income. On the contrary, total net income during the 5-year period will be approximately 30 percent higher than that of the previous period, and this despite a significant increase in the subsidy to the developing countries implicit in the Bank's lending rate.

Organizationally, then, and financially, the Bank Group will complete the first 5-year program in a position of strength.

But while encouragement over the Bank's operations is one thing, complacency with the state of development is quite another. And there is little danger of confusing the two if we take an objective look at the current prospects of the developing nations.

IV. THE STATE OF THE DEVELOPING WORLD AND THE BANK'S PROGRAM FOR FISCAL YEAR 1974–78

In its strategy for the second development decade, the United Nations set as a target that the average annual rate of growth in gross national product for the developing countries should be at least 6 percent. To make that possible, the developed countries were to increase their concessionary aid—known as official development assistance—to 0.7 percent of their GNP's by 1975.

As I pointed out earlier this year at the U.N. Conference on Trade and Development in Santiago, it is now clear that the objective of 0.7 percent will not be reached. There seems little likelihood that, during the first half of the decade, official development assistance will exceed 0.37 percent of GNP—only half of the second development decade target (see attached table).

That is regretable in the extreme, but we must be realistic. And realism dictates that we try to assess the effects of this massive shortfall in concessionary aid.

The first, and least tolerable, of the effects is that the poorer of our member countries—those with per capita GNP's of less than $200—will be penalized the most. Their needs for official development assistance are the greatest, and their chances for finding feasible alternatives are the least.

What is more, these countries collectively contain 1.1 billion people, 64 percent of the aggragate population of our entire developing country membership. They are the very countries which have suffered the greatest burdens of poverty during the past decade. Their GNP's grew annually at an average rate of only 4.1 percent and their per capita incomes at a minisicule 1.7 percent.

With the ODA objective only half achieved, these poorer nations have almost no hope of attaining the 6-percent growth target. That will condemn them to so slow an economic advance over the decade that hundreds of millions of individuals within these countries will be able to detect virually no improvement whatever in their desperately low standards of living. Their per capita incomes will rise by no more than $2 a year.

Projected to the end of the century—only a generation away—that means the people of the developed countries will be enjoying per capita incomes, in 1972 prices, of over $8,000 a year, while these masses of the poor (who by that time will total over 2¼ billion) will, on average, receive less than $200 per capita, and some 800 million of these will receive less than $100.

The deficit in development assistance will penalize the poorest countries the most. But even for those developing countries which are somewhat better off, a deficiency in ODA will cause serious economic and financial problems.

Publicly guaranteed debt in the developing world currently stands at about $75 billion, with annual debt service of approximately $7 billion. Debt service payments rose by 18 percent in 1970, and by 20 percent in 1971, representing twice the average rate of increase over the 1960's, and reflecting a hardening of the terms of debt as the proportion of concessionary aid in the total flow of external assistance to developing countries declined.

Given the shortfall in ODA, and the growing debt problem, it seems clear that the World Bank group should try to continue to expand its operations. If we were to fail to make this effort, our developing member countries would be driven to an even greater dependence on higher-cost, shorter-maturity sources of external capital with the inevitable exacerbation of their debt-servicing burdens. They would have little choice, for without a reasonable flow of external finance, they simply cannot meet even minimal development requirements.

For the Bank group to relax in its resolve to do everything it feasibly can to assist in this situation would be to shirk our central responsibility: to recommend those policies, provide that technical assistance, and help finance those projects which will most effectively support our developing member countries' own struggle to advance the welfare of their people.

With careful planning and your support, we are convinced that the Bank group can obtain the necessary funds to continue to expand its operations during a second 5-year program. And that is what we propose to do.

As an overall goal, for the period fiscal year 1974–78, we propose to increase our financial commitments to our developing member countries by an average of 11 percent a year, and to shift an increasing percentage of these commitments to International Development Association credits.

If we can achieve this expanded level of operations—and I am confident that it is possible—it would mean that the World Bank group would help finance, and provide technical assistance, for some $50 billion of capital improvements in our developing member countries during the second 5-year program period. This would be in contrast to $30 billion of such projects from 1969 to 1973, and $13 billion from 1964 to 1968.

V. SOCIAL EQUITY AND ECONOMIC GROWTH

Given the unfortunate shortfall in ODA, the consequent aggravation of the debt problem, and the procrastination of the developed countries in dismantling discriminatory barriers to trade from the developing countries, the second development decade's 6 percent growth target is not going to be met by many nations and is going to be an exceptionally arduous task for many others.

But let us suppose that it were, in fact, to be accomplished by 1980.

Would that achievement, in itself, guarantee a significant advance in the quality of life for the majority of the 2 billion people who live in our developing member countries?

The frank answer is no.

The answer is no because increases in national income—as essential as they are—will not benefit the poor unless they reach the poor.

They have not reached the poor to any significant degree in most developing countries in the past, and this in spite of historically unprecedented average rates of growth throughout the sixties.

To understand this, it is useful to distinguish between three broad categories of poverty in the developing world.

First, there is great poverty in those countries, generally rather small, which simply have very few resources—natural, financial, or skilled—with to promote growth. There is so little wealth in these nations that even if it were more equitably distributed, virtually everyone would still be very poor. These are the countries (there are 25, with populations totaling 140 million) which the United Nations has designated as the least developed and for which special measures of assistance have been approved.

Second, there are particularly impoverished regions in most of the larger developing countries—for example, the southern republics of Yugoslavia, the northeast of Brazil, or the northeast of Thailand. The integration of these regions into the more rapidly growing parts of the economy often poses difficult cultural as well as economic problems. These areas are, however, readily identifiable geographically, and it is possible to devise and implement programs specifically aimed at increasing the productive capacities and incomes of their populations.

But it is the third category that is the largest, the most pervasive, and the most persistent poverty of all. It is the poverty of the low-income strata—roughly the poorest 40 percent—of the total population in all developing countries. It is they who—despite their country's gross economic growth—remain entrapped in conditions of deprivation which fall below any rational definition of human decency.

This is not simply the poverty of a highly disadvantaged country, nor of a particularly backward geographical region in an otherwise rapidly advancing coun-

try. Rather, it is the poverty of those people widely dispersed throughout every developing country who, for whatever reason, lie beyond the reach of traditional market forces and present public services. It is the poverty of those masses of the population which current government policies do not adequately encompass, and which external assistance cannot directly reach.

This poverty of the poorest 40 percent of the citizenry is of immense urgency since their condition is, in fact, far worse than national averages suggest. Our studies, for example, indicate that:

In 10 countries, with per capita incomes averaging $145, the poorest 40 percent of the population receive a per capita income of only $50.

In another 10 countries with per capita incomes averaging $275, the poorest 40 percent of the population receive a per capita income of only $80.

What we are dealing with here are problems that are difficult to grasp in their concrete, day-to-day realities.

When we reflect that of the more than half a billion persons living on the Indian subcontinent, some 200 million subsist on incomes that average less than $40 a year, how are we to comprehend what that really implies? The estimate is that if India were to depend exclusively on the growth of national income to solve its massive nutrition problems, it would require more than 30 years before the poorest third of the country could afford an adequate diet.

When we reflect that of the 2 billion persons living in our developing member countries, nearly two-thirds—some 1.3 billion—are members of farm families, and that of these there are some 900 million whose annual incomes average less than $100, what frame of reference are we to call on to make that fact meaningful?

To many in the affluent world, to be a farmer suggests a life of dignity and decency, free of the irritation and pollution of modern existence; a life close to nature and rich in satisfactions.

That may be what life on the land ought to be. But for hundreds of millions of these subsistence farmers, life is neither satisfying nor decent. Hunger and malnutrition menace their families. Illiteracy forecloses their futures. Disease and death visit their villages too often, stay too long, and return too soon.

Their nation may be developing, but their lives are not. The miracle of the Green Revolution may have arrived, but for the most part, the poor farmer has not been able to participate in it. He simply cannot afford to pay for the irrigation, the pesticide, the fertilizer—or perhaps even for the land itself on which his title may be vulnerable and his tenancy uncertain.

His nation may have doubled or tripled its educational budget, and in the capital city there may be an impressive university. But for 300 million children of poor farmers like himself there are still no schools—and for hundreds of millions of others if a school, no qualified teacher—and if a qualified teacher, no adequate books.

His nation may be improving its communications, and jet aircraft may be landing at its international airport in increasing numbers. But for the poor farmer who has seldom seen an airplane, and never an airport, what communications really means—and what he all too often does not have—is a simple all-weather road that would allow him to get his meager harvest to market when the time is right and the prices are good.

Let us be candid.

What these men want are jobs for their survival, food for their families, and a future for their children. They want the simple satisfaction of working toward something better; toward an end to misery, and a beginning of hope.

We are not talking here about a few maladjusted discontents.

We are talking about hundreds of millions of desperately poor people throughout the whole of the developing world. We are talking about 40 percent of entire populations. Development is simply not reaching them in any decisive degree. Their countries are growing in gross economic terms. But their individual lives are stagnating in human terms.

What can be done?

That is the question I want to explore with you now.

VI. A PLAN OF ACTION

One must begin by analyzing the policy options which are generally proposed. They present clearly conflicting schools of thought.

One view is that governments in developing countries should make rapid economic growth the first objective, and that income redistribution and increased employment can be achieved later through fiscal and institutional changes.

Others argue that the growing pressures of poverty are so overwhelming that their widespread relief should be the central objective of development strategy, even if that entails major sacrifices in the pace of overall growth.

Of course it would be comforting to continue to believe that there is no conflict between rapid overall growth and comparable improvement in the incomes of the poor. But, unfortunately, in the real world in which we live, the evidence suggests that there is.

There is a natural tendency for growth to be concentrated in the modern sectors of the economy with little current benefit to the lowest income groups. What data there are—while admittedly incomplete—indicate that this pattern of growth has developed in many countries.

But if few dispute the fact that there exists some conflict between maximization of growth and the rapid reduction of poverty, many argue that in the long term the conflict is irrelevant since it can—given sufficient time— be resolved. In the long term, rapid growth will increase productivity, and furnish the resources which can be redistributed to those who cannot yet be accommodated in the high-productivity, high-wage, modern sector.

The same view holds that even in the shorter term—in a decade, say—it is possible at least to reduce the conflict between rapid growth and more equitable income for the poor by shaping an economy which provides the proper incentives, which prices labor and capital correctly, which strengthens the fiscal system, and which emphasizes the right adaptive technologies.

But although this argument is correct as far as it goes, it doesn't go far enough. A decade may be the short term for a development planner. But a decade is the long term for a subsistence tenant farmer whose children are most likely to die before the age of five, whose diet is already so inadequate that he cannot stave off chronic ill health, whose illiteracy limits his future ability to learn new skills, and whose perpetual indebtedness to the money lender and dependence on the landowner leave him neither options nor hope.

On the other hand, one must recognize that if a government were to initiate policies to increase the income growth of the lowest 40 percent of the population—with a view to assuring that, at a minimum, their share of the nation's overall economic growth does not decline as it has in the past—there are legitimate questions as to what the impact of such policies would be on the rate of overall national growth. Would it seriously hamper it? Would it prevent it altogether? What precisely would happen?

There are at least three possible consequences of economic policies directed to more equitable income distribution which are thought to hamper growth. They are: reduced entrepreneurial incentives; lower savings rates; and the choice of obsolete technology.

Let us consider these for a moment.

It is often suggested that wide disparities in income are necessary in order to provide entrepreneurial incentives. Without arguing whether such incentives are important stimuli to productivity, one can question the amount of incentive that is required to motivate the desired degree of effort.

In a study of the income disparities of 39 developing countries, in which the income of the wealthiest 5 percent is measured as a multiple of the bottom 40 percent, there is a wide range of differences among countries. There are 8 countries in which the per capita income of the top 5 percent is more than 30 times greater than that of the lowest 40 percent. There are 16 countries in which the ratio is less than 15 to 1.[1]

But the significant point is that when one compares these two sets of countries on their per capita growth performance during the 1960's, there is no discernible relationship between the size of the incentives and the rapidity of the growth. The average rate of growth of the group of countries with the greatest disparities was not significantly different from the group with the least. This indicates that there may well be substantial scope in the developing countries for moderating the highly skewed disparities in income without crippling the incentives to greater productivity.

Similarly, flexibility in the relationship between income distribution and the volume of savings available for socially productive investment may, in fact, be far greater than is generally assumed. While it is true that higher incomes permit a higher rate of savings, the real question is what becomes of those savings. If they are used for production of luxury goods to meet a demand pattern dis-

[1] In the United States, the ratio is 5 to 1.

torted by a skewed income distribution, it is questionable whether the high savings rate is, in fact, promoting any crucial national interest. If, on the other hand, a more equitable distribution of income results in a somewhat lower gross rate of savings, but more investment in the production of essential commodities, the lower rate of growth in national income may be accompanied by an increase in the incomes of the bulk of the population.

Finally, there is the question of the choice of technology. It is often asserted that rapid economic growth demands adoption of technologies which, by their very nature, penalize employment and perpetuate poverty. The argument is that unless the modern sector is so equipped, its inefficiencies will restrict the country's capacity to export and perpetuate a costly dependence on imports for even the most basic requirements.

But here again, the argument is oversimplified. The issue is not so much modern technology versus traditional technology. The real issue is efficient technology versus inefficient technology, and the essential question is how ought one to measure that efficiency. Efficiency as such is a relative term. A technology is efficient or inefficient relative to the resources one has available. In a labor-scarce, affluent, developed economy, the most efficient technology is capital—intensive and highly automated—it produces at the lowest cost per unit in terms of the scarce resource: labor.

But in a developing economy, where labor is abundant, and sophisticated skills are scarce, it is clearly inefficient to emulate technologies which lead to high costs per unit measured in terms of the scarce resource: capital. And yet that is the result when, in the rush to industrialize, developing countries subsidize capital by creating a structure in which foreign exchange is undervalued, credit is underpriced, and tax incentives misdirected.

If government policy were directed toward promoting a price structure which reflected the scarcity values of labor and capital more realistically, the technological choice would be different. The result would be greater employment, broader income distribution, and more competitive patterns of production of precisely those labor-intensive goods which labor-scarce affluent countries need, but cannot themselves produce inexpensively.

What, then, are we to conclude from this analysis?

The answer is that while we obviously do not know as much as we want to know about the relationship of more equitable income distribution to overall economic growth, we know enough to conclude that:

> It is possible to design policies with the explicit goal of improving the conditions of life of the poorest 40 percent of the populations in the developing countries—and that this can be done without unacceptable penalties to the concomitant goal of national growth.
>
> Without specific emphasis on such programs, there will not be significant progress in reducing poverty within acceptable time periods.

We know, in effect, that there is no rational alternative to moving toward policies of greater social equity.

When the highly privileged are few and the desperately poor are many—and when the gap between them is worsening rather than improving—it is only a question of time before a decisive choice must be made between the political costs of reform and the political risks of rebellion.

That is why policies specifically designed to reduce the deprivation among the poorest 40 percent in developing countries are prescriptions not only of principle but of prudence. Social justice is not merely a moral imperative. It is a political imperative as well.

What then, can be done to attack the problem of massive poverty within the developing world?

The first and obvious step is the political resolve to make the effort.

It is clear that in the end each country must make its own decison as to how and when to deal with its internal inequities. The problems of poverty are rooted deeply in the institutional frameworks, particularly in the distribution of economic and political power within the system. Outside agencies can assist but cannot solve such problems. It is governments that have the responsibility of essential domestic reform, and there is no way they can escape that responsibility. To postpone reform on the grounds of political expediency is to invite political extremism. To remain indifferent to social frustration is to foster its growth.

Political will, then, is the first requisite.

Public understanding is the second. The fact is that all of us need a clearer perception of the problem. We need both more and better quantitative data on past and current trends in employment and in income distribution. And we need them urgently. I propose that the developing countries address this task of gathering income data, and that as a practical matter they set a target date of 1975 for a greatly expanded program of censuses, sample surveys, and specific studies. The international agencies—our own included—can assist technically and financially, and provide a multilateral forum for this effort.

Third, all of us need to identify concrete policies and actions which can reduce the skewness of the income distribution. Admittedly, we are on the frontier of a new field of knowledge here, and we have far more questions than we have answers. But the urgency of the situation is such that we simply cannot wait until all the answers are in. We must begin now with what we know now. And we clearly know enough to at least make a beginning. If we make mistakes we will simply have to learn from them. But the greatest mistake of all would be for the international development community to sit back and continue to do in the future what it has done in the past: to ignore the problem. It is the time for new approaches.

What ought they to be?

The first step should be to establish specific targets, within the development plans of individual countries, for income growth among the poorest 40 percent of the population. I suggest that our goal should be to increase the income of the poorest sections of society in the short run—in 5 years—at least as fast as the national average. In the longer run—10 years—the goal should be to increase this growth significantly faster than the national average.

Given the intimate link between poverty and massive unemployment, unemployment and underemployment must be attacked head-on. With 20 percent or more of entire populations already jobless or virtually idle—and with the population explosion pouring a growing stream of new entrants into the labor pool each year—unless policies and programs are devised to absorb surplus labor into productive jobs, little can be done to improve the lot of the desperately poor. Job creation must therefore become a direct objective in itself. It will be necessary to organize rural and urban public works—the building of market roads; construction of low-cost simple housing; reforestation programs; expansion of irrigation and drainage facilities; highway maintenance, and similar low-skill, labor-intensive, and economically useful projects. The Bank will assist in financing such projects.

Institutional reforms to redistribute economic power are critically required in many developing countries: land reform, corporate reform, tax reform, credit and banking reform, and many others. Continuation of the existing land tenure patterns, tax laws, and banking regulations will simply assure that the present distribution of assets and income will be perpetuated. The Bank will support reforms in these areas with technical and financial assistance.

Shifts in the patterns of public expenditure represent one of the most effective techniques a government possesses to improve the conditions of the poor. Too often these expenditures—on health, on transport, on water supply, on education, and on many other sectors—end by benefiting the already privileged far more than the mass of the disadvantaged.[2] This, in part, is because these services are more concentrated in the urban areas and better neighborhoods. But it is also a function of the greater participation of the highly privileged in the political process. Governments can best begin to shift public expenditure towards those who need it the most by initiating surveys on the effects of their current patterns of disbursement: where do the funds really go, and who benefits the most? The Bank will assist in such surveys and, based on them, will help design programs, to be financed by it and others, which will improve the distribution of public services.

Finally, policies should be undertaken to eliminaate distortions in the prices of land, labor, and capital. To underprice capital for the wealthy and make credit expensive for the poor; to allow liberal access to scarce resources for the privileged, and price them out of reach of the deprived; to provide subsidies for the powerful, and deny them to the powerless—these are wholly self-defeating approaches to development. Such policies lead a nation inevitably toward economic imbalance and social instability.

---

[2] This is strikingly illustrated in the access to public services. School enrollment ratios and the quality of education, for instance, are almost uniformly higher in the higher income groups. And, in a sample of 20 developing countries, the allocation of scarce foreign exchange was 10 times greater for the importation of private cars than for public buses.

These, then, are the general measures which all of us in the internal development community should move toward with all the urgency that we can command. We in the World Bank Group can assist our developing member countries in this effort, and we fully intend to do so.

VII. SUMMARY AND CONCLUSIONS

Let me summarize and conclude the argument I have put before you this morning.

Current development programs are seriously inadequate. They are inadequate because they are failing to achieve development's most fundamental goal: ending the inhuman deprivation in hundreds of millions of individual lives throughout the developing world.

Why are these programs failing?

There are two overriding reasons: the affluent nations are not moving effectively enough to assist the indigent nations; and the indigent nations are not moving effectively enough to assist the poorest 40% of their own populations.

The affluent nations have, of course, their own domestic priorities. But their growing incremental income is so immense, their technological capacity so powerful, and their whole range of advantages so disproportionately gigantic, that no rational argument can be made for their refusal to do more to assist the disadvantaged nations.

Collectively, the affluent nations are currently providing only half the targeted 0.7% of their GNP's in the official development assistance which will make so decisive a difference to the development efforts of the poor countries. These amounts of money are miniscule in light of the left that the collective gross national products of the developed nations, which totaled $2,000 billion in 1970, are expected to grow to more than $3,000 billion in 1980.

The rich nations are not being asked to diminish their riches in order to help the poor nations. They are only being asked to share a tiny percentage of their continually increasing wealth.

Further, the rich nations are failing the poor nations—and themselves—in another critical respect. They are refusing to give the poor nations a more reasonable opportunity to trade fairly with them. Discriminatory trade restrictions on the part of wealthy countries are indefensible on two counts: they penalize the people of the poor countries, and they penalize their own domestic consumers. The trade problem is admittedly complex, but the essence of it is simple enough. The political pressure of special-interest groups in affluent nations are prevailing over the interests of the majority of ordinary citizens in rich and poor countries alike.

If the rich nations do not act—through both aid and trade—to diminish the widening imbalance between their own collective wealth and the aggregate poverty of the poor nations, developments simply cannot succeed within any acceptable time frame. The community of nations will only become more dangerously fragmented into the privileged and the deprived, the self-satisfied and the frustrated, the complacent and the bitter. It will not be an international atmosphere conducive to tranquility.

The developed nations, then must do more to promote at least minimal equity in the distribution of wealth among nations.

But the developing nations must do more as well.

Their internal equity problems are no less important than those of the international community at large. In the developing nations' pursuit of rapid economic growth, the poorest 40 percent of their populations are being largely left behind.

It is becoming increasingly clear that the critical issue within developing economies is not simply the pace of growth, but the nature of growth. The developing nations achieved an overall average annual GNP growth rate of more than the targeted 5 percent by the end of the sixties. But the social impact of that growth was so severely skewed, and the number of individuals all but passed by so absolutely immense, that the simple statistical achievement of that target was misleading.

Governments exist to promote the welfare of all of their citizens—not just that of a privileged few. Absolute egalitarianism is as chimerical as absolute laizzez-faire, but what is certain is that absolute human degradation—when it reaches the proportions of 30 to 40 percent of an entire citizenry—cannot be ignored, cannot be suppressed, and cannot be tolerated for too long a time by any government hoping to preserve civil order.

It would be naive not to recognize that that time in many quarters of the world is running out.

The task, then, for the governments of the developing countries is to reorient their development policies in order to attack directly the personal poverty of the most deprived 40 percent of their populations. This the governments can do without abandoning their goals of vigorous overall economic growth. But they must be prepared to give greater priority to establishing growth targets in terms of essential human needs: in terms of nutrition, housing, health, literacy, and employment—even if it be at the cost of some reduction in the pace of advance in certain narrow and highly privileged sectors whose benefits accrue to the few.

Such a reorientation of social and economic policy is primarily a political task, and the developing countries must decide for themselves if they wish to undertake it. It will manifestly require immense resolve and courage.

The task of political leadership in the wealthy world is to match that resolve and courage with a greater commitment to equity between their own affluent nations and the grossly disadvantaged developing nations.

I believe that no one within this forum would deny that the time for significantly greater social and economic equity both among nations and within nations has indeed come.

Given more than a million years of man's life on earth, it has been long in arriving.

Now that it is here we cannot escape asking ourselves where our responsibilities lie.

It seems to me that the character of our entire era will be defined by the shape of our response.

PROJECTED FLOW OF OFFICIAL DEVELOPMENT ASSISTANCE MEASURED AS A PERCENT OF GROSS NATIONAL PRODUCT[1]

	1970	1971	1972	1973	1974	1975
Australia	0.59	0.52	0.59	0.59	0.59	0.60
Austria	.13	.06	.17	.19	.22	.25
Belgium	.48	.49	.54	.58	.62	.66
Canada	.42	.37	.48	.51	.55	.59
Denmark	.38	.43	.48	.53	.58	.64
France	.68	.68	.65	.65	.65	.65
Germany	.32	.34	.33	.36	.36	.38
Italy	.16	.17	.16	.16	.16	.16
Japan	.23	.23	.28	.32	.36	.40
Netherlands	.63	.60	.70	.74	.76	.78

Portugal	.61	.75	.45	.45	.45	.45
Sweden	.36	.45	.50	.56	.65	.71
Switzerland	.15	.12	.22	.26	.30	.32
United Kingdom	.37	.41	.41	.41	.45	.46
United States	.31	.32	.30	.28	.26	.24
Total	.34	.35	.36	.36	.36	.37

[1] Countries included are members of OECD Development Assistance Committee, accounting for more than 95 percent of total Official Development Assistance. Figures for 1970 and 1971 are actual data. The projections for later years are based on World Bank estimates of growth of GNP, on information on budget appropriations for aid, and on aid policy statements made by governments. Because of the relatively long period of time required to translate legislative authorizations first into commitments and later into disbursements, it is possible to project today, with reasonable accuracy, ODA flows (which by definition represent disbursements) for 1975.

BASIC PROBLEMS IN DEVELOPING COUNTRIES

Mr. LONG. It doesn't seem to me that either of the two things you are talking about is the answer; you know, hospital, health, lunch programs. I was looking at Jamaica and the thought occurred to me while I was there these are probably very successful programs.

They were. You do see the hospitals. They function. You do see the school lunch programs. They do work. They are feeding people. And yet it may very well be that in a larger sense far from helping, they hurt, because the biggest problem, I think you would agree, in Jamaica, as in other of the underdeveloped countries, is make the heads of families feel a real sense of responsibility, a real sense of motivation.

In Jamaica, after a good deal of questioning, I find it is the women who have the motivation, not the men. They know who their children are. They know who the babies are and really go out and work. They will walk miles to get a job and the men won't. They just sit there and couldn't care less.

On the other hand, just piling up a lot of goods, like giving a loan to a big bakery, or producing a lot more chickens; that does produce more food for the country as a whole but whether it ever reaches down to the people who are living on these mountainsides and barely surviving now or who are dumped into the cities as an underemployed or unemployed proletariat is something that nobody has been able to really to put his finger on anywhere in the world.

Mr. HENNESSY. It is not very amenable to precise analysis but the Bank in each loan does make some comment on the employment effects.

Mr. LONG. It is easy to make comments. I am just wondering whether they really grapple with it. I was trained as an economist and most of my life I thought economics was the most important subject there was: that you could solve everything if you produced enough goods.

I no longer feel that way. I feel that our problems are more social and political. Unless you can find some way of dealing with them, you are not tackling the problem of the poor countries.

Mr. HENNESSY. I think that goes to the heart of the problem. It is hard though because the size of the pie is so small to begin with. Even if you just distributed one equal piece to each person, I think you would still find everyone was pretty bad off, so somehow they have to grow and still take care of the income distribution and employment problem.

There has to be some balance there, and I think how to strike the balance, not going too far to one extreme, is the real problem. I think the World Bank feels it has to do much more in the income distribution and employment fields.

Mr. LONG. Take a country like Brazil. You are assuming that if you can keep on increasing the national product of Brazil by 10 percent a year, the poor people are going to get their share of that, and that sooner or later they are going to benefit by all this. I think people are becoming more and more skeptical about this. Certainly there are reasons for reservations when you see them dumped into these awful slums that you see, hanging on all the hills in all these underdeveloped countries.

They are not better off. When you see the crime problem, it is increasing. That is not an improvement. And in the end, so far as politics are concerned, you may very well be simply providing these people with a picture window right on to the prosperity of others, so that all they get out of all this is to see how magnificently the 10 to 15 percent live. And they get more and more unhappy, more discontented, and more enraged.

I am studying this from the standpoint of what you do to try to keep the people on their little family plots and help them produce more food and stay there and keep their families around them and bring up their kids and so on.

It doesn't seem to me the World Bank, in the types of projects you are talking about, is thinking about that in those terms at all.

Mr. HENNESSY. I think they are giving attention.

Mr. LONG. I don't know whether it can be done, you understand. It may be an impossible job.

Mr. HENNESSY. I think in terms of the quality of the people at the World Bank, we should note that they have brought in Hollis Chenry, a foremost economist, who was at Harvard before. So in terms of inputing from universities their most recent thoughts, I think they are very sensitive to that, and they are carrying out some pilot projects.

There is a question of what you can do. They have had some projects in the farming areas which have looked at communities, and I think there again the returns aren't in from all of those. But it is a difficult area and an area in which the bank is pioneering. I think our own AID has pioneered in certain other aspects, and out of this will come some more knowledge and experience, I think.

Mr. REYNOLDS. To compare what the Bank is doing today with 5 or 6 years ago, I think you will see very considerable movement in the direction of coping with the kinds of problems you talk about.

Mr. LONG. Can you quantify that, not on the small farms, but the small business community cooperatives?

Mr. HENNESSY. Oh, yes.

Mr. LONG. The word "small" business is a very badly abused term. Small business in the United States takes in every kind of butter-and-egg business I had as a kid, or selling newspapers, on up to firms with a hundred or a thousand employees. Their firms are all lumped as small businesses because they are smaller than General Motors, so I ask you to tell us about small business. I hope you will keep it small.

Mr. HENNESSY. That includes Chrysler.

Mr. LONG. Or that bakery I saw in Jamaica, which is second largest bakery in Jamaica, they told us, and run by a Chinese, incidentally, and not a Jamaican, so it wasn't really the kind of typical type of industry that you are trying to help along.

Mr. ARMSTRONG. Mr. Long, may I just make a comment?

I think from the general sort of political standpoint of relations to developing countries that this social problem is tremendously important just on the terms in which you have described it.

I do think that there has been an enormous change, qualitative change, in the attitude of the World Bank and its cluster of institutions since Mr. McNamara went there, because I know how personally motivated he is.

Mr. LONG. How long has he been there? About 5 years?

Mr. ARMSTRONG. About 5 years. He is very strongly motivated exactly on these points and concerned very much with how do you get a reasonable atmosphere for social growth at the same time you get economic growth and avoid stagnation, especially in view of this overwhelming population problem, but nobody has any answer. Also I would say within the Development Assistance Committee in the OECD a great deal of attention has been given to this also.

That is where all the donor countries meet together to talk about their attitudes. I know Ed Martin, who is the American chairman of that committee, is also profoundly concerned with precisely this same kind of question and it is the most important question that is to be asked in regard to development, but I do think the Bank has made an enormous change.

Mr. LONG. What is your philosophy of development or what do you feel is the Bank's philosophy of development? I used to think it was great if we could just keep on expanding the U.S. GNP by 5, 6, 7, or 8 percent. I think we are all retreating from that now, you know, asking ourselves about the quality of life.

You look at these people in some of these underdeveloped countries, and it is pretty clear they are just as happy as we are at least. There is an awful lot of unhappiness in a highly developed country like America. I mean when they are out on their little ancestral places they are infinitely more happy there than when they become part of the urban unemployed proletariat.

Are we getting a different sense of goal that recognizes really what you want is not people just producing more and wasting more, spilling more into the local streams and oceans and so on, but people who are living a decent, wholesome life even though they are not consuming or wasting many goods?

Mr. ARMSTRONG. That may well be true but it is also true that most of the leaders of the developing countries think in terms of the kind of goals that we have been used to.

Mr. LONG. I know it. Should we be going along with that view?

Mr. ARMSTRONG. We have to try to sort of, it seems to me, indicate that you don't have to have a basic inconsistency. You can have growth and yet you can have a healthy growth and reasonable growth.

The rate of growth really isn't all that fast in most cases but if they have a choice, as I have heard a god many of them say, between a dirty factory or no factory they will take the dirty factory.

Mr. LONG. Do you think that is right?

Mr. ARMSTRONG. I don't know. They think it is right.

Mr. LONG. They are looking at it differently?

Mr. ARMSTRONG. They are looking at it differently and you have to allow for the fact they are going to do that.

Mr. LONG. A lot of people making those decisions are going to own those factories and own the land and this means wealth and power to them. That is the thing that bothers me so much about our development.

Mr. ARMSTRONG. Your problem is it gets into one of whether you are going to be paternalistic in some ways. We think we know a little better because we have been through some of this and it is kind of hard to get that point across sometimes and have it accepted.

Mr. LONG. Do you think it is paternalism?

Mr. ARMSTRONG. I don't say I think it is. They see it that way.

Mr. LONG. It would be impossible to satisfy them with any kind of development policy. You probably couldn't satisfy them or us. Don't you agree that we ought to try to make sure that our development policies at the very minimum aren't doing any harm?

Mr. ARMSTRONG. I think so; yes.

Mr. LONG. Do you think you could say that about our development policies in the past—that they have not, on net balance, done any harm?

Mr. ARMSTRONG. Well, everybody, of course, has his own definition of "harm," too.

Mr. LONG. I think somebody could come along and write a book proving that on balance probably our whole development policy has done more harm than good, at least for a number of countries.

Mr. ARMSTRONG. There have been articles and such on this.

Mr. LONG. I haven't seen many of them because I have been so busy getting votes and getting elected. I have seen the countries. But here are several statements by respected economists that suggest that our aid may have done more harm than good:

1. "In general, foreign assistance has neither accelerated growth nor helped to foster democratic political regimes. If anything, aid may have retarded development by leading to lower domestic savings, by distorting the composition of investment and thereby raising the capital-output ratio, by frustrating the emergence of an indigenous entrepreneurial class, and by inhibiting institutional reforms."

Source: K. B. Griffin and J. L. Enos (economists, Magdelen College, Oxford), "Foreign Assistance: Objectives and Consequences," "*Economic Development and Cultural Change*," April 1970, pp. 325-26.

2. "Large losses in activities and projects financed by aid have been reported in many poor countries. In fact, they have been a recurrent theme of official report in India and Ceylon. Though it is difficult to assess in each instance exactly what costs have been taken into consideration in these documents, the losses have often been so huge that it is safe to assume that the country would have been better off without the project."

Source: P. T. Bauer (professor at London School of Economics and fellow at Gonville and Gaius College, Cambridge), "*Dissent on Development*," 1971, pp. 99–100.

3. "Much of the aid received by underdeveloped countries, notably India, Indonesia, and Ghana, has been in the form of heavily subsidized loans, but because the use of aid has not served materially to improve the income-earning capacity of these countries they are now saddled with large debts without a commensurate increase in the capacity to serve them."

Source: P. T. Bauer, "*Dissent on Development*," p. 108.

Mr. ARMSTRONG. But you have to recognize, of course, that the condition antecedent was usually stagnation in many places and dependence on a single crop.

One reason for a low level of population growth was the fact that you weren't providing essential health services and your infant mortality was very high, and you get a very high level of infant mortality that will give you a stable population; and on the surface it looks all right, but if you go out and count the number of children's graves in the graveyard it is not that cheerful.

With new health services, in Latin America, you greatly increase the prospects for life on the part of the newly born.

Mr. LONG. Do you think that is good?

Mr. ARMSTRONG. Well, I don't know.

Mr. LONG. You know, nobody likes to see people——

Mr. ARMSTRONG. From a humanistic standpoint you have to say you think it is good, yes.

Mr. LONG. I realize that. But sometimes you have to be hard boiled and certainly our health programs, wouldn't you agree, have been the most successful of all our programs around the world?

Mr. ARMSTRONG. I should think so, yes.

Mr. LONG. And what we have around the world is a tremendous population explosion which can't go on forever.

Mr. ARMSTRONG. If you use your health program to get into some form of population management, then you ought to be on your way.

Mr. HENNESSY. On the other hand, I think if you are providing new jobs for the people, both rurally and in the urban areas, then I think you have some reasonable balance where you are not just surfeiting the——

Mr. LONG. What is the rate of population growth in most of the developing world?

Mr. HENNESSY. I think it varies. Some of them, like Singapore, Taiwan, Korea, brought it down to 1.5 to 2 percent. In Latin America I think it is 3.2 so it is quite high. You have India higher than they would like.

Mr. HENNESSY. I would hate to give my own personal formula for each individual country but I would certainly think, and it depends on the size of the country and national resources—

Mr. LONG. What should we be aiming at worldwide?

Mr. HENNESSY. If the country has a lot of underutilized resources you might want more people rather than less but some of them are overcrowded.

Mr. LONG. We are approaching 4 billion people. I do think we ought to have some philosophy of what kind of population the world can stand if we are making worldwide health programs to keep people surviving and living longer.

You say 1 percent, 1.5 percent, 3 percent.

Mr. HENNESSY. I would be happy with 1, 1.5 percent, but there again you get into national policies and there may be reasons in certain countries that are underpopulated and would have more resources if there were more.

Mr. LONG. I once saw a little piece of elementary mathematics done to the effect that if you assumed that the world population at the time of the birth of Christ would have been 100,000—of course it was much bigger than that— and if it increased 1 percent a year since that time, we would now have a population equal to 4 billion people per square fot of the Earth's surface.

One percent compounded for any length of time is fantastic. It is obvious that somebody has to develop a long-run population policy.

If we are going to go in and save people's lives without any philosophy about what else we can do, then we could be accelerating the population growth rate.

ECONOMIC PERFORMANCE CRITERIA

What economic performance criteria does the World Bank require that member countries meet in order to continue to receive loans?

Mr. REYNOLDS. The most general requirement certainly is a soundly managed overall economy, sound economic policy looking toward resource mobilization, and efficient use of resources. Of course they are underdeveloped countries, and one of the manifestations of their state of underdevelopment is oftentimes their policies aren't as sound as we might like them to be. But within the limits of what is possible for them, they are expected to pursue sound policies. The Bank does everything it can to encourage that.

LAND REFORM

Mr. LONG. Is land reform for tenants and landless agricultural laborers one of those performance criteria?

Mr. REYNOLDS. That is one aspect, yes, where it is a major problem.

Mr. LONG. In your judgment have we been achieving very much land reform?

Mr. Reynolds. It is a difficult area. It is one——

Mr. Long. Isn't it true that there has been very little accomplished in the way of land reform?

Mr. Reynolds. It varies from country to country but certainly there are countries where it is a major problem where little has been accomplished.

Mr. Long. Has really very much been done anywhere?

Mr. Reynolds. I think quite a bit has been accomplished in a number of countries.

Mr. Long. Which ones?

Mr. Reynolds. I can't cite them right off.

Mr. Hennessy. Mexico, Taiwan.

Mr. Long. Do you really think there has been much land reform in Mexico?

Mr. Hennessy. Once again it's a relative concept but I would consider that a success case, Taiwan another one, Iran. Here again, as in our past discussions, this is a very difficult area. In the case where massive land reforms have been carried out I think everyone is worse off.

Mr. Long. Can you find out what percentage of the population of Mexico has been benefited by land reform? I got the impression when I was there it was very tiny.

Mr. Hennessy. Part of the problem has been you have the big holdings and the very little holdings. I think the ejido system, which has been communal, has run into problems where it is owned by the community. You have two or three generations and it is divided into these very small sizes. You have the other side where there are too large holdings and you have economic efficiency.

Mr. Long. You have put your finger on the big conflict where you have to make a choice on this land reform. There isn't any question about it. Every student of land reform have always come up with the finding that land reform causes agricultural productivity to go down: The little plots don't produce as much. Consequently land reform has always been discouraged regarded with a certain amount of dismay and horror, for that reason.

On the other hand, if the kind of question I was developing a little while ago makes any sense, whether we shouldn't be looking for something besides just piling up goods, namely a better life for people, even if they are not producing as much, then shouldn't we be looking at it from that point of view and go for land reform even if it doesn't mean producing as much?

Mr. Hennessy. I think within limits. Clearly we don't want to return them to——

Mr. Long. I want to know, are the multilateral, banks thinking about this, or is this just a couple of words here and there, you weigh it and in the end you say we are going to go ahead with our big plots because it produces more?

Mr. Hennessy. I think the bank has given attention to it. Here again it's not one of those areas you can just block off in black and white and say they should do this or that. We are trying to learn by our experience and by the bank's experience. There have been areas where it has been carried out.

I think here again you are right in saying the criteria may be determinative. You don't want to return them to subsistence farming.

They have to produce enough to feed themselves and some excess so they can improve their lot. I think the problem comes up more where there is a dearth or a lack of additional resources, where they have to divide up what is already there. Many of the countries have virgin lands that have not yet been colonized. I think the banks have carried forward programs to get people into new areas. That certainly to me is more productive, if there is abundant fertile land, than trying to split up what is already producing.

Mr. LONG. Contrary to what I said a little while ago, I have just been informed that recent studies have shown that small farms can be more productive per acre than large farms, in Taiwan, for example, and in Japan.

Mr. HENNESSY. I think Taiwan and Japan are two cases where it has been, but there again there are limits. They haven't gone back to the subsistence level.

Mr. LONG. I agree if you are on a starvation level, then it might be very disastrous to launch a large-scale land reform. India might be a good example. On the other hand, much of Latin America, much of Asia, are not on the edge. They are really fairly well off compared with India, you know, like a whole order of magnitude better off than India.

Jamaica, I believe, which is very poor, would be a whole order of magnitude better off than India would be. In such places, you can experiment. You do have room for maneuvering.

Mr. HENNESSY. I think we should provide more detail of what the Bank has done, because I think——

Mr. LONG. Let's see if we can get that. I would like to at least get them thinking.

[The information follows:]

[From Agriculture Sector Working Paper, June 1972]

LAND POLICY

The pattern of land ownership and the contractual and customary relationships between landlords and tenants can have a considerable influence on production, employment, and income distribution in agriculture. In developing countries, land represents a much higher proportion of total wealth than in developed countries, and inegalitarian patterns of land ownership are a major source of income inequality. Furthermore, the owners of land usually possess political and economic power which can be exercised in ways that harm the interests of the bulk of the rural people. Land reforms aimed at securing a more equal distribution of land have been prosecuted succesfully in a number of countries, though in some cases at the cost of an initial drop in agricultural production. Some land reform measures have been little more than political gestures and have been ineffective, or even counterproductive.

Whether measures designed to break up large holdings—such as land distribution, progressive land taxes, or the imposition of ceilings on the size of individual holdings—will be undertaken depends on what society considers equitable, and on the balance of political forces. However, the need for productive efficiency and employment creation also has to be considered. Although a landholding is not necessarily the same thing as a farm operating unit, the pattern of landownership does affect the way in which land is used, and does so in two main ways.

First, because the amalgamation or subdivision of owned parcels of land to form operating units involves transaction and coordination costs,[1] there is a

[1] These include the cost of negotiating contractual arrangements, each party's uncertainty regarding the competence and good faith of the other, and, in general, all the monetary, physic, and time costs involved in the association of two or more persons in a single enterprise. These costs are the basic source of the disincentives to efficiency which inhere in many rental arrangements and which are discussed in the next paragraph.

tendency for landholdings and farm operating units to coincide. If the economies or diseconomies of scale are strong, operating units will tend to become of optimum size, despite the transaction and coordination costs. But the economies of scale generally are not very strong. It is the pattern of landownership, therefore, that largely determines the size of operating units. Size, in turn, influences the character of farm operations. With small holdings, the agriculture is likely to be more labor intensive, with lower output per man but probably no less output per acre. It will also require more publicly provided credit and extension services, but probably use less purchased inputs.

Second, the incentive to improve the land and use it efficiently depends in part on whether the person who cultivates the land also owns it; and, if not, on the contractual arrangements between the owner and the operator.[2] Ownership and operation will tend to be divorced if the size of the owned parcel of land is very different from the optimum-sized operating unit. (Absentee ownership also implies the separation of operation from ownership.) Under tenancy arrangements, there is frequently little security of tenure, nor are there guarantees that the tenant will be compensated for the improvements he may make on the farm. His incentive to invest in farm improvements is thus blunted. Similarly, the tenant's or manager's incentive to farm efficiently is reduced if he does not share fully in the rewards of efficient operation.

These deficiencies in contractual relationships are usually not simply the result of landlords and tenants being thoughtless, but reflect the fact that there are difficulties and costs involved in devising tenancy contracts that preserve all the incentives. Tenancy reforms which give the tenant greater scope for exercising entrepreneurship usually reduce the landlord's entrepreneurial role correspondingly, so that the gain in efficiency is not clear cut; there may, in fact, be a loss. Tenancy is a device whereby landlord and tenant combine their resources in a common enterprise: there are bound to be conflicts of interest and some blunting of incentives.

Owner-operated farming is often favored because it avoids the need to reconcile the interests of owners and operator through rental and other contractual arrangements. It is also favored because, with the rent component of farm income accruing to the operator, a more egalitarian pattern of income distribution is generally promoted. The inclination to provide land to the largest possible number of small farmers means that the size of the operating unit tends to become as small as is compatible with reasonably efficient operation and the provision of a socially acceptable minimum standard of living for the operators.

More recently, as the implications of demographic changes have become clearer, the principal virtue seen in small-scale family farming is that it can provide employment and, to a lesser extent, can economize on purchased inputs. If small holdings tend to be more social productive than large holdings—in that they produce as great an output per unit area using more of the abundant and less of the scarce resources—the conflict which many have perceived between an equitable distribution of land and efficiency in farming may be largely illusory.

Belief in the existence of this supposed conflict was often bolstered by an exaggerated idea of the economies of scale that could be realized in agriculture. Some Governments therefore favored the establishment of large-scale cooperative or collectively owned farm enterprises. However, the management of such enterprises has often been weak. Current approaches favor retaining owner-operated production units but assisting them through cooperative, collective, or state-owned organizations that can realize economies of scale and exercise bargaining advantages in the provision of off-farm and some specialized on-farm services.

Whatever size of farm it is desired to promote, it is not merely a matter of breaking up large holdings; some farms are so small that they could never support a family, even if modern techniques are used to increase production. Such units can be viable if suitable opportunities exist for off-farm employment, but, where they do not, land reform measures are required to bring farm sizes up to some minimum level.

This can sometimes be accomplished by combining small farms with land that is being redistributed: in Tunisia, for example, land taken over from colons was available for redistribution. But since it is politically difficult to enlarge holdings by dispossessing some small holders (unless they can be induced to leave to take up other jobs), often the best that Governments can do is to try

[2] Communal ownership of land is not discussed in this paragraph. However, it should be noted that in some cases it provides sufficient incentives to cultivators.

to prevent the situation from getting worse. Inheritance laws which prohibit the subdivision of land below a certain size of holding can help in this respect.

Small farmers suffer from a number of disadvantages, of which perhaps the most serious are meager financial resources, restricted access to credit, and the consequent reluctance to adopt new techniques. Land redistribution therefore needs to be accompanied by the extension of credit, marketing and technical advisory services to small farmers. Often these services or functions were previously performed by landlords. If they are not provided, the impact of land reform on production, and possibly also on the welfare of the new small holders, is likely to be adverse.

THE IMPACT OF NEW TECHNOLOGY

New agricultural technology which increases output per unit area is essentially land substituting in character, since it enables a given output to be produced from fewer hectares of land. Its widespread adoption will tend ultimately to diminish the relative importance of agricultural land and the share of agricultural revenue attributable to land. On a global basis, this tendency does exist. But in regions that have been favored by the new technology, land values have risen. For example, the introduction of the new high-yielding varieties has increased the value of wheatland in many parts of Asia

However, in areas where the new technology has not been applied, the value of wheatland will tend to fall, since the overall increase in wheat production will tend to depress wheat prices. The danger therefore is that in regions where the new technology is being adopted, income inequalities may worsen, the tendency being reinforced by the fact that the larger farmers are usually the first to adopt the new techniques. Far from reducing social tensions in rural areas, the spread of the new technology is likely to sharpen them, and lead to greater demand for the implementation of measures, such as land reform, for the redistribution of income and wealth.

Use of the new technology may often be accommodated only with difficulty by existing tenancy arrangements. Although the latter are not without their deficiencies, they are often reasonably well adapted to the conditions of traditional agriculture. But they may need extensive revision if the new technology is to be adopted and its benefits equitably shared. For example, under crop-share tenancy—which, as compared with cash tenancy, or the use of hired labor, serves the purpose of dividing risks between the landlord and the tenant—each party has an incentive to supply too little of the inputs for which he is responsible. In practice, it appears that this tendency is often held in check so that each tends to adhere to customary norms of performance: at any rate, there is little evidence that share-rented farms are operated much less efficiently.

However, new technology, particularly since it involves increased use of purchased inputs, will require a new set of commitments from landlord and tenant, and perhaps also changes in the customary shares into which produce is divided. Until the revisions are made, the incentives to adopt new techniques that depend on the use of purchased inputs may be seriously impaired.

Furthermore, it appears that rather than entering into revised tenancy agreements, landlords in areas favored by the new technology have been tempted to let their tenancy agreements lapse and to farm the land themselves, using hired labor and machinery. Several considerations probably explain this behavior: It may be easier for landowners to introduce new techniques by directly supervising hired workers; being uncertain about the yield increases that can be attained, they may have found it difficult to negotiate revised tenancy agreements; and legal protection of tenants—or the threat of it—may have prevented the negotiation of contracts acceptable to the landlord. Another possible explanation is simply that modern agriculture is intellectually more engaging and financially more rewarding than traditional farming.

There is a good deal of fragmentation of landholdings in some countries, especially in South Asia. Under traditional agriculture and with underemployment of labor, fragmentation probably does little to constrain production, and reduces risks to some extent. The effects of fragmentation are more serious under modern agricultural conditions since it increases the costs of distributing inputs, of appraising credit requests, and of arranging for custom services. It becomes highly inconvenient when labor is in short supply, as now happens in some areas at harvesttime.

The inconvenience of fragmentation is greatest in irrigated areas, since it raises the costs of distributing water (both directly and through the loss of cultivable land to additional canals). Also, labor shorages at harvest time are

more likely to occur in areas served by irrigation. Consolidation of land is difficult to arrange in practice; farmers are usually reluctant to participate voluntarily because they fear that the land they receive may be less valuable than the land they give up.[3]

IMPLEMENTATION OF LAND REFORMS

The historical record shows a tendency for land reforms to be enacted in law but not successfully—or only partially or slowly—implemented in practice. Where the program has been vigorously prosecuted, the results have sometimes been adverse, in that agricultural output has fallen and the condition of those whom it was intended to benefit has not been improved, or has even deteriorated. The record is, in a sense, unfair to land reform in that it has often been implemented in times of great social tension, and against strong opposition, by radical governments. But even in a favorable environment, successful implementation requires a good deal of political courage and administrative finesse.

Land reform is expensive, both in terms of the fiscal cost of compensating the former owners, and of the human and material resources required to administer it properly and to provide services to the newly-created small holders or cooperative enterprises. It also suffers from perverse announcement effects: owners faced with the threat of losing their land—usually compensation is incomplete, so that a degree of expropriation is involved—cease to improve it and allow existing facilities to deteriorate; and laws which promise tenants security of tenure lead landords to dismiss their tenants and replace them by hired laborers and/or machinery. Thus a difficult dilemma arises if the adverse announcement effects are to be minimized: the redistribution of land should be done rapidly, but a piecemeal approach is more in keeping with the limited fiscal and administrative resources of governments.

Attempts to bring about land reforms have sometimes been frustrated by vested interests, and governments may feel they have to proceed cautiously because production might be disrupted in the initial stages. In some cases governments, bowing to the pressure for land reform, but lacking the will to take effective action, have enacted token legislation. However, such political expediency usually worsens the existing situation, as landlords take evasive or defensive actions to the detriment of both production and the employment opportunities of tenants and rural workers.[4]

It is clear that agricultural development cannot do all it might to improve rural life if the distribution of land ownership is highly skewed. Despite the political and administrative difficulties involved, governments should pursue land policies which help disperse the benefits of agricultural progress widely rather than allowing them to go to only a small segment of the population. Steps should at least be taken to tax the higher rental incomes arising from public investments, and to reinvest the proceeds in infrastructure so as to increase the income-earning opportunities of wider strata of the population. If this is not done, rising land values will make it increasingly difficult to redistribute the land later.

Although the Bank's overall influence on these matters is bound to be slight, it can take explicit account, in its appraisal work, of whether the benefits of a project are likely to be widely dispersed or captured by only a few individuals. The burden of financing the compensation paid to owners under land redistribution programs is the responsibility of the governments concerned, but the Bank can assist in financing other programs designed to raise the productivity of those to whom the land is distributed.

---

[3] Voluntary participation may be more readily encouraged if consolidation is accompanied by land improvement works, such as irrigation or land leveling within existing irrigation schemes. Since all participants are likely to benefit, each may be less concerned—so the argument runs—as to whether he receives precisely the same share of improved land as he had of the original unimproved land.

[4] A study of the impact of land reform legislation on two Indian villages showed that although laws were framed to improve the position of tenants (by limiting the amount of rent payable, and by giving them greater security of tenure and the right to purchase land) the results left them worse off. Owners were able to evade the legislation by various means, including the replacement of tenants by hired laborers. It is interesting to note that a new tenurial relationship—a form of quasi-tenancy (but not legally classifiable as tenancy)—was devised to meet the situation.

INTEGRATED SMALLHOLDER DEVELOPMENT

Smallholder development frequently takes place within projects for regional rural development, irrigation, and settlement. Sometimes it is possible to assist smallholders through the provision of credit alone. But in most cases—especially in Africa—smallholder development has to be of an integrated nature. In other words, it has to provide for such items as technical advice and marketing facilities (including roads), as well as credit for on-farm development and input purchase. Such integrated smallholder development programs are relatively recent (dating mainly from the early 1960's); and patterns of organization and management are not well established in many countries.

The Bank's lending has, therefore, involved a large degree of innovation. While some trends are beginning to emerge, not enough is known yet about smallholder motivation in different environments to make any firm judgments. It is likely that the period of innovation will continue for some time, and will be increasingly based on the applied economic research sponsored by the Bank and the work of the rural development unit. Existing tenurial arrangements may create substantial difficulties in smallholder development. The Bank has, therefore, found it necessary at times to insist on cadastral surveys, and increased permanency in usufruct and/or tenure rights, before financial support is provided.

Two principal strategies of integrated smallholder development have emerged. The first concentrates attention on a specific cash crop of high potential as a focal point for rural development. An example is the Kenya smallholder tea project which provided credit and extension services for smallholders scattered throughout the tea-growing zones, together with complementary tea-processing factories and access roads. For many cash crops, however, the application of this strategy is limited by market prospects, even if particular projects are successful and the climate and soils are suitable over wide areas.

The second strategy is to concentrate attention on the overall development of a specific geographical area which has a high potential and is of manageable size. The activities supported include production both for subsistence, and for a marketable surplus, and such aspects as soil conservation, local marketing facilities for food surpluses, input supplies, roads, and social services. Recent examples of such a strategy are the Lilongwe and Karonga projects in Malawi, the Wolamo project in Ethiopia, and the Casamance project in Senegal.

The principal danger in this strategy is that too many scarce resources, particularly of trained manpower, may be concentrated on a small area. It may become difficult to apply the strategy on a large scale later because of budgetary and manpower constraints. Thus there is a continuing attempt to determine the minimum package of inputs and services which can make a substantial impact on a large number of widely distributed smallholders farming under varying conditions.

Within both strategies, it is advantageous for small farmers to group together in some way to obtain economies of scale in procuring inputs and marketing their produce. This end has been achieved in a variety of ways in accordance with local traditions and outlook, but no definitive trend has been established. In certain cases, commercial or state-owned estates have formed nuclei for smallholder development, providing smallholders with essential services. In other cases, the service cooperative has been the favored solution. Where cooperatives are unpopular, possibly because of earlier failures, or where they are still in their infancy, semiautonomous state agencies have sometimes been found to work well. One of the keys to success in all these organizational forms is the quality of the management.

LAND SETTLEMENT

The settlement of new lands has been supported by the Bank whenever appropriate opportunities have arisen. However, there are not many parts of the world with large areas of suitable and unexploited land. The settlement of new lands has high priority, therefore, only in some countries.

The trend within settlement projects financed by the Bank has been toward reducing the "public" input and relying more on the settlers' own efforts. Otherwise, in countries where principal initial purpose of settlement is to provide

large numbers of families with at least a subsistence income, public budgetary constraints would severely restrict the number of settlers that could be accommodated. Recent settlement projects (e.g., in Colombia, Papua/New Guinea, and Tanzania) thus concentrate on the provision of low-cost access roads, technical advisory services and credit for onfarm development, and construction of drinking water sources.

ESTATES, SEED PRODUCTION, AND FORESTRY

Some countries continue to seek Bank finance for private and public sector tree crop estates. A start has been made in a small way with the financing of integrated projects covering seed multiplication, processing, and marketing. This field of activity should become important as the benefits of modern agriculture are spread more widely.

Another subsector which has so far received little Bank lending, but which is expected to grow in importance, is forestry (though forest industries have been extensively helped with the industrial context). The demand prospects for forest products are favorable.

Mr. REYNOLDS Kenya is a country where there have been World Bank projects specifically designed to facilitate a shift from large landholding patterns of production to small holder patterns of production.

Mr. LONG. Why weren't they shown to me when I was in Kenya 2 years ago?

Mr. HENNESSY. This year you can ask at the annual meeting of the bank, which is going to be in Kenya.

Mr. LONG. All they showed me was game. I was glad to see the game, although after you have seen an elephant a couple of times you know what an elephant looks like. I was never shown a single AID project that I can recall offhand in the entire 2 or 3 days that I was in Kenya. I saw the Ambassador, had very excellent dinners and all that kind of stuff, but no projects.

Mr. HENNESSY. The annual meeting of the Bank this year will be in Nairobi, in Kenya.

Mr. LONG. That is where I was, as well as upcountry quite a bit.

Mr. HENNESSY. If your time and schedule permits, we will make a formal invitation now that you come along, and we will make sure you do get a chance to look at some of these particular projects. I think there is a small-holder tea-plantation project and I believe Congressman Conte in 1967 saw that in its initial stages. I think there are some real gains here that are worth seeing.

Mr. LONG. How do these plantations operate?

Mr. HENNESSY. The ownership of the plantations themselves? I am not sure whether they are 100 percent cooperatives. These are the former British-owned ones. Now they are Kenyan owned.

Mr. REYNOLDS. Oftentimes I think what happens in land reform is that the mere fact of breaking up the land into new patterns of own-

---

[1] These figures, for the most part, are included in the global figures for the credit component of Bank lending mentioned in the subsection on "Agricultural Credit" above.

[2] This move into tropical and semitropical zones has been made practical by the development of new techniques, particularly improved animal health control, use of tropical legumes for pasture improvement and upbreeding of local cattle with improved cattle which are less susceptible to disease and insects.

[3] Beef fattening and milk production have been found to be practical for small holder operation (as opposed to breeding, which usually demands larger herds, especially under marginal rangeland conditions), although milk production by small holders demands an effective extension service and marketing infrastructure.

[4] In view of stiffer sanitary regulations in the main importing countries, increasing amounts of beef exports are in the form of precooked meats and almost all beef exports now have to be bone-out.

ership, by itself can have a detrimental effect on production, if you don't combine it with programs designed to provide credit and needed supplies of one kind or another to the new owners. But taken in conjunction with these ancillary programs, if you will, generally it has a quite positive effect on production.

Mr. ARMSTRONG. A good example of both plantation and smallholder agriculture is Malaysia in rubber. They have gone ahead with a very good scientific replanting program on plantations, but at the same time they have given the same facilities to the small holder, and encouraged him to expand his acreage and have small farms. Almost any size plot in rubber is efficient because of the nature of the product and the processing.

Mr. LONG. When I was in Malaysia a number of years ago I was shown one of those places, but I understand it was owned by the Lee family, I believe. They must own thousands and thousands of acres.

Mr. ARMSTRONG. There are a lot of big owners but there are also an awful lot of small holders.

Mr. LONG. I saw some nice little land reform programs going on in Colombia, but by and large you don't see very much.

I hope our AID and multilateral institutions get the message. We have spent scores of billions of dollars, not very effectively, and as I said before, may have caused more harm than good, well-intentioned as we probably were. I think time is running out for foreign aid so far as the people are concerned. I don't know whether my colleagues would agree with me on that or not.

Rightly or wrongly, what would you think, Ed?

Mr. ROYBAL. It is running out.

Mr. LONG. Would you agree?

Mr. MILLER. I would indeed.

Mr. LONG. You can't explain it to people. It gets imposed from the top and people vote on it because they are urged to, but very few Congressmen agree with it. I guess if you took a secret ballot it would probably lose by about 10 to 1. If that is true, something has got to happen if we are not going to have the whole thing collapse.

If you want to go on with a good thing in the years to come, we have to try to learn to make it more effective.

Mr. ARMSTRONG. The Secretary of State has asked Under Secretary Casey to do some special work on this. A lot of work is going on in the State Department on it. You might find it useful to talk to Secretary Casey sometime. I will report this to him.

Mr. LONG. The only justification foreign aid has ever had from my point of view is improving the lot of the ordinary guy, his income and his education. But it has been justified before Congress on many different grounds that one can't help wondering whether it has any justification at all. You know: "It will help sell American goods." "It is rent for American military bases." "It gets the United States power and influence among the countries of the world," and on, and on, and on. It is like a little boy who comes home late. You ask him where he has been and he tells you. You are inclined to believe it, but then he tells you another reason why he hasn't been home on time. After he gives the third or fourth reason you decide you don't believe any of them.

The committee is adjourned until 1 o'clock.

WEDNESDAY, MAY 30, 1973.

MILITARY ASSISTANCE AND FOREIGN MILITARY CREDIT SALES PROGRAMS

WITNESSES

VICE ADM. RAY PEET, U.S. NAVY, DIRECTOR, DEFENSE SECURITY ASSISTANCE AGENCY, AND DEPUTY ASSISTANT SECRETARY OF DEFENSE (INTERNATIONAL SECURITY AFFAIRS) FOR SECURITY ASSISTANCE

CURTIS W. TARR, UNDER SECRETARY OF STATE FOR SECURITY ASSISTANCE

ERICH F. VON MARBOD, COMPTROLLER, DEFENSE SECURITY ASSISTANCE AGENCY

BENJAMIN FORMAN, ASSISTANT GENERAL COUNSEL FOR INTERNATIONAL AFFAIRS, DEPARTMENT OF DEFENSE

DONALD S. FLOYD, SPECIAL ASSISTANT FOR CONGRESSIONAL RELATIONS, OFFICE OF THE ASSISTANT SECRETARY OF DEFENSE FOR INTERNATIONAL SECURITY AFFAIRS

COL. ELLWOOD E. JOHNSON, U.S. AIR FORCE, OFFICE OF THE COMPTROLLER, DEFENSE SECURITY ASSISTANCE AGENCY

COL. H. E. GEORGE, JR., U.S. AIR FORCE, OFFICE OF THE SPECIAL ASSISTANT FOR CONGRESSIONAL RELATIONS, OFFICE OF THE ASSISTANT SECRETARY OF DEFENSE FOR INTERNATIONAL SECURITY AFFAIRS

Mr. PASSMAN. The committee will come to order.

We shall continue our examination of the foreign aid and assistance requests for fiscal 1974. We shall start this afternoon on the budget requests for the military assistance military credit roles programs. We have as witnesses Vice Adm. Ray Peet, U.S. Navy, Director, Defense Security Assistance Agency and Deputy Assistant Secretary of Defense (International Security Affairs) for Security Assistance; and other witnesses whose names will be spread upon the record at this point.

Admiral Peet, we welcome you before this subcommittee. I believe it is the first time you have ever appeared officially as the Director of the Military Assistance Program.

Admiral PEET. Yes, sir.

Mr. PASSMAN. Let me say it could be that we are going to have some rather lengthy hearings. There will be a lot of friendly questions asked, and some unfriendly questions. That is the way congressional committees operate. Personally I am going to take a pro position. I reached that conclusion some 5 or 6 years ago, and I stated I would maintain that position of supporting the military program as well as our defense program until we could see some prospects of a lasting peace. In my considered judgment we have made tremendous progress in that direction in the past 4 years in that our President has concluded the Vietnam war, he brought home during his tenure 543,000 troops, and reduced the cost from $29 billion annually down to the neighborhood of $1 billion annually. Whether he is a Republican or Democrat, it is a significant and great accomplishment. I think we are headed directly for a long and lasting peace, but there are just certain areas where we have made tremendous advancements, and I think this is noteworthy for the record.

In Vietnam, beginning under President Eisenhower, later under President Kennedy, under President Johnson, and then President Nixon, all of your admirals, generals, and great leaders, congressional and otherwise, supported the policy in Vietnam. Because of that policy, we invested $141 billion of our resources, 56,000 precious lives and

303,000 casualties. For all these many years these people said this was necessary. It is perfectly obvious to me that if we should today pull the rug out and say there is no more military aid to Vietnam, that investment would be down the drain.

As far as I am concerned the same thing is true in Korea. Beginning with President Truman, and including all the Presidents up to the present one, all of your great generals and admirals of the past, all of your congressional leaders of both branches said this was a proper action in Korea. We made a $35 billion investment in Korea, plus 33,000 lives, and 105,000 casualties. We are realists. We know North Korea is ready to come south any time we withdraw our troops and military assistance. Here is a powerful enemy just to the north with an air force four times that of South Korea. You just don't have to be too smart to know what would happen if we should withdraw our troops, as is advocated by some, and you cut off military assistance.

I want you to know my position. We shall certainly be critical of certain areas when the hearings have started, but when I take a very pro stand on certain areas, I want you to know I do it upon the basis of research in the record which I have just recited.

With that said, Admiral, you state that your fiscal 1974 request for military assistance programs worldwide is $685 million, is that correct?

Mr. VON MARBOD. That is correct.

Mr. PASSMAN. That is $131,900,000 above the continuing appropriations which you are operating under at the present time.

I assume, Admiral, that you have a statement that you would like to make to the committee, in support of your budget request for fiscal 1974.

Admiral PEET. Yes, sir.

GENERAL STATEMENT

Thank you, Mr. Chairman.

Mr. Chairman and members of the subcommitte, thank you for the opportunity to present the military security assistance program for which the administration is seeking fiscal year 1974 appropriations.

I am accompanied this morning by Mr. Erich von Marbod, Comptroller of the Defense Security Assistance Agency and Mr. Ben Forman, Assistant General Counsel of the Department of Defense.

The national security interests of the United States have been well served by the programs of military security assistance since their inception. Had we not provided the military equipment and related training needed by our friends and allies to create and maintain an adequate military posture, we could not now rely on the strength and stability of our world partners. They are an important adjunct of the total national power we can bring to bear in our continuing effort to reduce international tension and advance the cause of lasting peace throughout the world.

The military security assistance program needs greater understanding. One of the factors that can contribute to this understanding is a full and frank statement of the objectives of the program. These objectives can be summarized as follows:

First and foremost, the program supports the U.S. national security interests by strengthening the defense capability of selected friendly

and allied nations to maintain internal security, to defend against external aggression, and to contribute toward regional defense and stability.

Second, the military security assistance program fosters favorable attitudes toward the United States and its policies and objectives and helps influence friendly and allied countries to pursue national objectives compatible with U.S. military strategy and U.S. foreign policies.

Third, the program assists in obtaining and maintaining necessary rights, authorizations and facility arrangements at key locations for U.S. forces and helps to deny them to forces opposed to U.S. interests.

Finally, the military security assistance program serves as an essential instrument of the Nixon doctrine. As such, the program assists to develop, within the capability of selected friendly and allied countries, an appropriate degree of defense self-reliance, thereby reducing dependency upon and cost to the United States, developing partnership, and enhancing negotiations.

To achieve these objectives, the country programs which have been developed for fiscal year 1974 have been prepared with specific planning concepts in mind:

Section 504(b) of the Foreign Assistance Act of 1961, as amended, provides a key concept which is followed during the preparation process. Namely, the military security assistance program is planned, programed, and budgeted in direct competition with U.S. forces programs and other activities of the Department of Defense. This helps to insure that a dollar spent on military assistance to foreign countries is as necessary as a dollar spent for the U.S. Military Establishment.

The relationship of the recipient nation's defense capability to U.S. security interests is also considered.

Consideration is given to the realistic force level of recipients based upon what is needed, what the country can sustain, and what can be provided.

Economic, political, and social conditions within the countries are factors that are considered as is the impact of the military assistance program on these conditions.

Provision of military security assistance is predicated upon recognition by recipient nations that responsibility for their defense is a matter on which they must make the basic decisions and be willing to devote a fair share of their own resources. Recipient nations are expected to use resources effectively and progressively assume greater responsibility for their own defense by a greater and greater contribution of their own resources.

U.S. grant military assistance and credit resources normally are concentrated toward the provision of capital requirements. Recipient countries are expected to assume, as early as possible, responsibility for the bulk of their operating and maintenance costs.

All forms of assistance are considered in the development of the country programs involving military security assistance. These include: grant military assistance (including the utilization, where possible of excess defense articles), foreign military sales for credit and cash, military training programs, security supporting assistance and other U.S. economic assistance, ship transfers under various statutes, and third country military and economic assistance.

We are seeking the committee's favorable consideration of funding for grant military assistance and foreign military sales credit programs

for fiscal year 1974. The total authorization for the grant military assistance program for fiscal year 1974, as proposed, is $771.5 million for which $652 million in NOA is being requested. The total authorization proposed for fiscal year 1974 for foreign military sales credits is $760 million for which $525 million NOA is being requested. In addition, $33 million in NOA is being requested for the international military education and training program.

As in prior years, the major portion of the proposed grant military assistance effort would be directed to East Asia—with $502 million for the Republic of Korea, the Khmer Republic, Indonesia, the Philippines, and Thailand. These five countries in East Asia will account for 65 percent of the total grant assistance program being requested.

To assist U.S. security interests in the Near East, $121 million are being requested as grant assistance for Turkey and Jordan. Other recipients of grant military assistance include Ethiopia and Tunisia at $12.9 million, nine countries in Latin America at $9.5 million, and Spain and Portugal at $3.3 million.

The military assistance program for fiscal year 1974 represents a decrease in the number of nations receiving grant material. Only 20 recipient nations are included, of which 8—Korea, the Philippines, Indonesia, Cambodia, Thailand, Jordan, Turkey, and Ethiopia—will receive 82 percent of the total effective MAP funding being requested.

Before proceeding further I would like to point out that all the regional and country MAP dollar levels which I am providing in my presentation here today are consistent with the data presented to you in our Department of Defense congressional presentation document. Supply operations and other administrative costs related to the delivery of equipment to recipient countries during fiscal year 1974, including that programed from prior years, are included in our general cost line and are not included in the regional and country figures I will present.

The total foreign military sales credit program for fiscal year 1974, as proposed, is $760 million, for which $525 million in NOA is being requested. The bulk of these funds would be allocated to the Near East with $465 million for Israel, Greece, Turkey, Lebanon, and Saudi Arabia. The remainder would be apportioned to Latin America ($150 million for 12 countries), East Asia ($127 million for 5 countries), and Africa ($18 million for 3 countries). Parenthetically I might add at this point that the U.S. Treasury will realize receipts in fiscal year 1974 of principal and interest from prior year credit programs, approximately $250 million.

Foreign military sales credits have assumed major importance as an element of the military security assistance program. These credits not only offer friendly and allied nations a direct source of funds to strengthen their defensive capabilities, but also provide a means of enhancing U.S. exports and improving the U.S. balance-of-payments position. The amounts used for direct credit will be repaid to the U.S. Treasury, with interest, by the governments to which these credits are made available.

In addition to the grant materiel program and the foreign military sales credit program $33 million is being requested for the separate international military education and training program.

Military assistance training and orientation in the United States and at certain overseas locations, offered to the military and military-related civilian personnel of allied and friendly countries, constitute an effective and productive element of the military security assistance program. We believe we should place this important program on a more permanent basis than at present. We are proposing, therefore, a new international military education and training program for fiscal year 1974.

Of the 44 countries proposed for participation in grant training programs, 24 will receive no grant materiel assistance. The $33 million funding request for training will provide for the attendance of over 43,000 foreign military personnel at various courses of instruction offered at facilities operated or sponsored by the Department of Defense.

As noted earlier, eight countries will receive 82 percent of the total MAP funding being requested. The contents of the programs which we have developed for these eight countries will now be covered in some detail.

For Korea we propose to allocate $238.8 million for MAP funding, $25 million for foreign military sales credits and $2.4 million for training. The Republic of Korea is a staunch and loyal ally of the United States. Its importance is based upon its strategic location.

In fiscal year 1971 a modernization plan was developed with the Government of the Republic of Korea to strengthen and modernize its armed forces. Progress in implementing this plan has been delayed by the reduced security assistance funding levels during fiscal year 1972 and 1973. The funds requested for fiscal year 1974 are necessary to continue the Korean force modernization plan and will assist in regaining the momentum lost in fiscal year 1972 and 1973. The funds requested for fiscal year 1974 will assist the Koreans to develop a credible deterrent posture, and will permit progress toward attainment of more defense self-reliance by the Koreans.

The fiscal year 1974 MAP program for the Republic of Korea will provide funding for a squadron of F–5E aircraft, self-propelled artillery, other weapons, and trucks. The program proposed will provide for improvements in its air defense posture, in the protection of its long coastline, and in the firepower and mobility of its ground forces to meet the North Korean threat.

In addition we propose $25 million in foreign military sales credits for South Korea during fiscal year 1974. The Republic of Korea has embarked upon several projects employing its own resources to improve its military capability. These projects include vehicle modernization and the assembly/production of tactical radios, ammunition, and small arms. As appropriate, FMS credits will be utilized to help develop these projects of self-reliance and will provide momentum to continuing Korean force modernization.

The strong and traditional ties of friendship between the Philippines and the United States are recognized in the proposed security assistance program for the Philippines in fiscal year 1974—$19.3 million for MAP grant assistance, $3 million for foreign military sales credits, and $631,000 for training.

Economic growth of the Philippines since its independence in 1946 has not been sufficient to permit the country to meet all of its military requirements. Stability in the Philippines is of particular importance

to the United States. The Philippines needs assistance to modernize its armed forces and constabulary to provide internal security, to protect U.S. bases and facilities, and to contribute to the process of sound nation-building. The urgency of this need has been compounded by recent natural disasters, the recovery from which demands a significant share of available Philippine resources.

The MAP program proposed for the Philippines for fiscal year 1974 will provide an improved air transport capability, additional helicopters, some trucks and small arms, and better communications equipment. To provide the Philippines with the opportunity to exercise more defense self-reliance, depending on the availability of resources, we propose a level of $3 million in FMS credits for the Philippines.

Military security assistance for Indonesia is oriented primarily toward the development of a capability to establish and maintain internal security in this strategically located and important nation. As Indonesia recovers from the chaotic economic effects of the Sukarno regime, it is playing an increasingly important role in the affairs of the region.

For Indonesia we propose a program of $20.8 million for MAP grant assistance and $2 million for training during fiscal year 1974. The program has been carefully prepared to include only the equipment which the armed forces can absorbe and utilize effectively in their internal security and civic action projects and in their role as a stabilizing element in the Indonesian society. Equipment will include additional air transport capability, trucks and some small arms, and communications gear. A relatively high level of operating and maintenance parts and supplies is deliberate to assure that U.S. assistance will keep U.S.-origin equipment in operation.

Indonesia looks primarily to the United States for assistance, though it receives limited help from other countries. Indonesia recently accepted a squadron of F–86 fighter aircraft from Australia. This is the type of regional cooperation and assistance which we have been encouraging. We hope to see more examples of third country assistance, not only here, but elsewhere.

Continuing hostilities require that substantial grant assistance be provided to Cambodia to enable it to establish and maintain forces capable of sustaining its independence. For fiscal year 1974 we are proposing a grant military assistance program of $167.2 million and a training program of $5.8 million.

Because of active hostilities, the content of the program for Cambodia places heavy emphasis on ammunition ($97 million) and other supplies and equipment ($33.4 million). In addition, the program will provide to Cambodia cargo and trainer aircraft, helicopters, several patrol ships and craft, trucks, some howitzers, and small arms. The proposed fiscal year 1974 program for Cambodia is an important instrument in the efforts of the United States to produce an effective cease-fire throughout Southeast Asia.

The United States provides military security assistance to Thailand in the context of common aims and mutual cooperation. Thailand continues to play a vital role in contributing to the attainment of our objectives in Southeast Asia. Over the longer term, an independent and stable Thailand is important to U.S. national security interests because of Thailand's role as an active leader in the promotion of economic, political and security cooperation in Southeast Asia.

Thailand's stability and capacity to play a constructive role in Southeast Asia are being threatened by a Communist inspired and supported insurgency within its borders. The responsibility to counter the insurgency is clearly that of the Thai Government, but it requires continuing U.S. military assistance to provide the modernization and the equipment necessary to mount effective counterinsurgency operations and to improve defense against external threats. U.S. military grant assistance minimizes the adverse impact that military improvement measures would otherwise have on Thai economic and social development.

The proposed fiscal year 1974 program for Thailand will provide $55.8 million MAP grant assistance, $15 million in foreign military sales credits, and $1.5 million for military training. The proposed program puts a premium on providing the Thais with better equipment for countering the insurgency and for increasing the level of such operations. Emphasis is being placed on ammunition, supplies and communications equipment. Equipment to be provided will include helicopters, a few light strike and trainer aircraft for attrition, trucks, and small arms, foreign military sales credits of $15 million are proposed for fiscal year 1974 to initiate Thailand in the use of this procedure to provide for its requirements.

Turning to the Near East, Jordan and Turkey constitute two major programs in the area.

Jordan has weathered many crises, but it continues to face serious challenges from the radical Arab States, and there remains a possibility of the resurgency of guerrilla activity to threaten Jordanian internal security. Our proposed program for Jordan for fiscal year 1974 forms a particularly significant element in our efforts to insure a military balance in the Near East and to produce a settlement of Arab-Israeli differences. The moderate leadership of Jordan contributes to those ends.

The proposed fiscal year 1974 program for Jordan amounts to $35.6 million in MAP grant assistance, plus $468,000 for training. Specifically, the program will provide F–5E aircraft for aid defense, some tanks and small arms, as well as ammunition and communications equipment. The program will help maintain Jordan as a bulwark against disruptive forces in the area.

Turkey has been a determined and cooperative ally of the United States for many years. Geographic position is one important reason why Turkey is an especially valuable country in which to locate NATO and U.S. activities and defense facilities. The continuing involvement of the Soviet Union in the Arab world and the impressive Soviet naval presence in the Mediterranean underscore the strategic importance of Turkey to the United States and to NATO.

Grant military assistance in the amount of $85.5 million is proposed for Turkey in fiscal year 1974. The program will provide armored personnel carriers, several helicopters, tactical communications equipment, tank and anti-tank weapons, war reserve munitions, and a minimum amount of operations and maintenance support. Another $2.5 million will be allocated to Turkey under the international military education and training program. In addition, $75 million in foreign military sales credits are proposed to permit Turkey to continue the financing of its purpose of two squadrons of F–4E aircraft.

Ethiopia assists the United States with certain transit and other rights, and helps promote stability and the cause of moderation throughout most of Africa and in much of the Middle East. This country is now undergoing an increased threat as a result of Soviet supplied war material and the provision of Communist technical aid to Somalia. The proposed grant assistance program for Ethiopia totals $10.5 million in fiscal year 1974, plus $796,000 for training under the international military education and training program. Program content will provide trucks, small arms, ammunition, helicopters, and communications equipment, together with funds for operations and maintenance.

In addition to the eight countries discussed, I would like to comment on our proposed programs in Latin America. Most of the countries in Latin America currently are undertaking modest force modernization programs and desire to acquire their training, equipment, and technology from the United States. If the United States does not respond positively to their requests for assistance, they probably will go to third country sources at a higher cost for them and a loss of influence for us.

Our proposed military security assistance programs in Latin America vary considerably from country to country. They provide for a $9.5 million grant military material program to be allocated to the economically lesser developed countries of the hemisphere and a training program in the amount of $11 million. Our proposal includes a foreign military sales credit program in the amount of $150 million. These programs will help to maintain our security position in the hemisphere, keep Latin America alined with us on security issues, and avoid their political alienation.

Finally, let me report on the overall status of the foreign military sales program. Today, foreign military sales are running at a level about eight times that of the military grant aid authorized by the Foreign Assistance Act. We estimate fiscal year 1973 foreign military sales will approximate $3.8 bilion—$3.28 billion for cash and another $550 million utilizing credit provided in accordance with the provisions of the Foreign Military Sales Act. During fiscal year 1973, the U.S. Treasury is expected to receive repayments amounting to $197 million toward the principal of previous credits, and an estimated $57 million in interest. U.S. commercial sales of defense articles are estimated to be $694 million in fiscal year 1973. During the 10-year period from 1964 through 1973, the total value of foreign military sales was $17.45 billion, excluding commercial sales. Comparing U.S. military grant assistance under the Foreign Assistance Act, the U.S. foreign military sales during this 10-year period, U.S. sales exceeded grant assistance by $10 billion.

In conclusion, Mr. Chairman, each of the forms of security assistance administered by the Department of Defense serves a specific purpose. Every individual country program is composed of what has been determined to be the amount and blend of security assistance which will prove most effective in promoting the national security and foreign policy objectives of the United States with respect to the particular recipient country. You are urged to approve appropriations, for the full amount of the President's request: namely, $525 million in NOA to cover a $760 million credit sales program, $652 million

for grant military assistance to cover a program of $771.5 million, and $33 million in NOA for the international military education and training program. The proposed fiscal year 1974 program which is being presented to this committee is a valuable and highly effective instrument of U.S. security and foreign policy. We request your continued support for this vital program which will permit us to continue to pursue U.S. objectives from a positions of strength.

At this time, Mr. Chairman, I am ready to answer questions which you and members of the committee may have.

BIOGRAPHIES

Mr. PASSMAN. Thank you very much, Admiral, for your statement. I would like to insert in the record at this time the biographical sketch of Vice Adm. Raymond E. Peet, U.S. Navy.

[The information follows:]

VICE ADM. RAYMOND E. PEET, U.S. NAVY

Vice Adm. Raymond Edward Peet was born in Oneonta, N.Y. He was graduated from Binghamton North High School in Binghamton, N.Y., in 1939 and from the U.S. Naval Academy in June 1942 with the class of 1943.

During World War II, he served 2 years as gunnery officer and executive officer aboard the destroyer U.S.S. *Converse* (DD–509) and became a veteran destroyerman. His ship received the Presidential Unit Citation for service in the Solomon Islands with Destroyer Squadron 23, the illustrious "Little Beaver" squadron commanded by Arleigh "31-knot" Burke. He also served on the destroyer U.S.S. *Aulick* (DD–569) in the Okinawa and Philippine Island campaigns.

In 1948, Admiral Peet received a master's degree in electrical engineering from the Massachusetts Institute of Technology where he was a member of the MIT chapter of Sigma Xi National Engineering Honor Society. Subsequently, he served as ordnance electronics officer on the staff of Commander, Operational Test and Evaluation Force, in Norfolk, Va.; plans and progress officer at the Naval Proving Grounds in Dahlgren, Va.; gunnery officer aboard the battleship U.S.S. *New Jersey* (BB–62); commanding officer of the destroyer U.S.S. *Barton* (DD–722) when she won the battle efficiency pennant in 1957; and aide to Chief of Naval Operations, Admiral Arleigh Burke.

Admiral Peet spent a year under instruction with Vice Adm. H. G. Rickover in the Naval Reactor Branch of the Atomic Energy Commission. In March 1961, he was assigned as prospective commanding officer of U.S.S. *Bainbridge* (DLGN–25), the world's first nuclear powered frigate, which he placed in commission on October 6, 1962. In each of the two years during which he served as her first commanding officer, *Bainbridge* was awarded battle efficiency penants.

After graduating from the National War College in Washington, D.C., in 1965, Admiral Peet was assigned as military assistant to the office of the Secretary of Defense. He was selected to flag rank in 1966 and served thereafter as director of a ship acquisition study group in the Office of the Chief of Naval Materiel. In February 1967, after completion of that study, he was ordered to duty as Comamnder Amphibious Group Two and served in that assignment for 16 months. He next assumed command of the Amphibious Training Command, U.S. Atlantic Fleet, on August 9, 1968.

In June 1969, Admiral Peet was ordered to the Office of the Secretary of the Navy as Director, Office of Program Appraisal; and it was from this assignment that he was nominated by the President for promotion to vice admiral and to commander of 1st Fleet, in which capacity he served until June 1972.

Admiral Peet became Director of the Defense Security Assistance Agency in the Office of the Secretary of Defense on June 15, 1972, assuming simultaneously

the attendant duties and functions of Deputy Assistant Secretary of Defense (International Security Affairs) for Security Assistance.

Admiral Peet's awards, in addition to the Presidential Unit Citation, include the Distinguished Service Medal, the Legion of Merit, Bronze Star with Combat "V," and two letters of commendation.

Admiral Peet and his wife, the former Dian Hutchinson of Union, Oreg., have a son, Gary, age 23, who was born in Norfolk, Va. He graduated from Duke University in June 1972, and is presently a postgraduate law student at the College of William and Mary in Williamsburg, Va.

Mr. PASSMAN. I believe you have been before the committee before, have you not?

Mr. VON MARBOD. Not before this committee, sir.

Mr. FORMAN. I have, sir.

Mr. PASSMAN. If you will, and also the Assistant General Counsel, leave biographical sketches so we may place those in the record at this point.

[The information follows:]

ERICH FRITZ VON MARBOD

Erich F. von Marbod was born in Wenatchee, Wash., on January 23, 1929. He received his education at Broadway-Edison High School, Seattle, Wash.; Everett College, Everett, Wash.; the University of Washington, Seattle, Wash.; University of Maryland and Harvard University Graduate School of Business.

He served in the U.S. Army from 1945 to 1947 and his last assignment was as a parachutist with the 11th Airborne Division in the Far East.

In 1952, Mr. von Marbod entered Government service in the field of financial management. For the past 21 years, he has served in financial and other management positions of increasing responsibility with the Department of the Army, Department of the Air Force, and the Office, Secretary of Defense.

In October 1971, Mr. von Marbod was appointed the first Comptroller of the newly established Defense Security Assistance Agency.

Mr. von Marbod is the recipient of the Department of the Army Outstanding Civilian Award, two Department of the Air Force Outstanding Civilian Awards, two Department of the Air Force Meritorious Civilian Service Awards and the Secretary of the Defense Meritorious Civilian Service Medal.

Mr. von Marbod and his wife, the former Lola Vera Olds of Natrona County, Wyo., live in McLean, Va. They have two daughters at home, 15-year-old Teri and 13-year-old Tami.

BENJAMIN FORMAN

Benjamin Forman has been the Assistant General Counsel, International Affairs, Department of Defense since 1959, having previously served as Deputy Assistant General Counsel.

Prior to his service with the Department of Defense, Mr. Forman was a trial attorney in the appellate section, civil division, Department of Justice, and also served for a period of time as a Special Assistant to the Attorney General.

He has degrees from the College of the City of New York, University of Nebraska, and the Harvard Law School.

His bar membership includes the U.S. Supreme Court, New York and Massachusetts. He has served as a member of the executive council of the American Society of International Law and also held other positions in that Society.

JUSTIFICATION MATERIAL

Mr. PASSMAN. We will insert certain justification material in the record at this point.

[The justifications follow:]

The security assistance programs discussed in this volume are essential elements of the more measured bilateral relationships we seek throughout the world. In some countries these programs help reduce the need for the presence of United States forces by providing the means to increase indigenous defense capabilities. In other countries, these Security Assistance programs are essential in helping to achieve United States political objectives. In all cases, each program is in itself important to U.S. interests.

This volume provides detailed information on four types of assistance, each of which makes a specific and significant contribution in support of foreign policy and national security objectives of the United States. These are Security Assistance programs administered in accordance with the Foreign Assistance and Foreign Military Sales Acts. These programs are:

* Equipment, supplies and services provided as grant aid under the Military Assistance Program (MAP);
* Credit and credit guarantees for sales of military assistance and training authorized by the Foreign Military Sales (FMS) Act;
* International Military Education and Training Program; and
* Excess Defense Articles.

Military Assistance Program

Since 1950 the Military Assistance Program has provided equipment, supplies and services on a grant basis to meet the urgent and priority needs of allied and friendly countries whose requirements cannot be met in any other way.

In recent years the number of grant military assistance programs has been reduced as the economic capabilities of recipient countries have improved and these countries have assumed an increasing share of their defense requirements. The Military Assistance Program for FY 1974 reflects a still further decrease in the number of recipients and the amount of assistance provided. Grant materiel assistance in FY 1974 is planned for only 20 nations, of which eight--Cambodia, Ethiopia, Indonesia, Jordan, Korea, Philippines, Thailand, and Turkey--will receive 82 percent of the total. Greece ceased being a grant recipient earlier this year and the grant materiel programs for the Republic of China on Taiwan (ROC) and Liberia will terminate on June 30, 1973. Additionally, 11 of the 20 grant recipients may purchase additional equipment under the Foreign Military Sales Act for credit.

The $652 million in new obligational authority requested for the FY 1974 Military Assistance Program is the amount needed to fund items that can only be obtained from new procurement, or for replacement of equipment supplied from Department of Defense stocks not in excess. With few exceptions, all grant military materiel provided to other countries is purchased in the United States from U.S. suppliers. No funds or credits are provided under the Military Assistance Program for local procurement by recipient foreign governments or their representatives.

Foreign Military Sales Credit

The emphasis placed by the Nixon Doctrine on encouraging our Free World partners to become more self-reliant, makes it axiomatic that nations having the economic capability should procure their own military equipment and services for cash or for credit on appropriate terms. Allied and friendly countries which have achieved this capability should be able to obtain appropriate armaments and services from the United States, provided the United States has or can produce a competitive product meeting their needs. To deny such countries access to U.S. military technology and materiel often forces them to procure inferior or more costly arms elsewhere which are neither in their best interests nor those of the United States. Undue restrictions on U.S. Foreign Military Sales credits limit the supply of these credits to less than the demand and thereby lessen the contribution such sales could make to strengthening their security and the United States economy.

Foreign Military Credit Sales and credit guaranties have assumed major importance as a key element of the Security Assistance Program. Not only do they offer allied and friendly nations a direct source of funds

for military equipment and associated training needed to strengthen their defensive capabilities, but they do so on a basis that enhances U.S. exports and improves the U.S. balance of payments position. The $525 million in new obligational authority requested for Foreign Military Sales credit needed to facilitate such sales in FY 1974, will be used both for direct credits and for guarantee of private credits. The amounts used for direct credits will be repaid to the U.S. Treasury with interest by the governments to which it is made available. That portion used for the guaranty reserve remains with the Treasury until such time as a claim for default must be satisified. Developing countries are seldom able to expend substantial sums of cash for the purchase of modern weapons systems, and seldom obtain credits from private sources on reasonable terms. Credits provided or guaranteed by the United States through the FMS program are, therefore, essential if these countries are to purchase the military equipment and services they need, and thus diminish their dependence on grant assistance for support and maintenance of an adequate defense posture.

International Military Education and Training Program

A most effective and productive form of Security Assistance is the training and orientation offered as grant aid to the military and military-related civilian personnel of recipient nations. Because of its far-reaching impact on the security and progress of these nations, it is clearly in the best interests of the United States to make optimum use of this means of advancing important objectives in the international community. Accordingly, a new International Military Education and Training Program is proposed for FY 1974. Of the 44 participating countries, 24 will receive no grant MAP materiel assistance. The $33 million in new obligational authority requested for this new military training and education program in FY 1974 will fund both the attendance of 43,282 foreign military personnel at various courses of instruction offered by training facilities operated or sponsored by the Department of Defense, and orientation visits by senior foreign military officers to U.S. military installations where they will have an opportunity to observe modern management methods.

The training given selected military and military-related civilian personnel from foreign countries serves three important purposes. It teaches them defense-related skills, methods and concepts which they are unable to acquire at home or from third countries; it encourages the development of professionalism and dedication; and, most significantly, it prepares them to multiply the benefit of their training by sharing what they have learned with their countrymen when they return home to positions of increased responsibility and influence. For these reasons, it is generally recognized that, dollar for dollar, that form of grant aid to be provided under the International Military Education and Training Program represents one of the most productive investments which can be made by the United States in the progress and stability of recipient nations.

Excess Defense Articles

In meeting the priority defense requirement of allied and friendly nations, the Department of Defense seeks to make maximum use of defense articles which are excess to the needs of U.S. Armed Forces. No new appropriated funds, except for necessary repair and shipment, are involved in this form of grant military aid. Use of excess defense articles to meet military assistance requirements is governed by two principles. First, this material is used only to meet pre-established requirements fully eligible for provision as grant aid and which, if not supplied from this source, would have to be purchased. Secondly, an item is not programmed from new procurement or from non-excess stocks if there is a reasonable outlook that it can be obtained from excess. To implement these principles, requirements programs submitted from the field are screened carefully against projected availabilities of items from excess and, wherever possible, requirements are programmed from this source. Thus, the programs presented in this document include excess materials to the extent its availability can be foreseen. In addition, dollar values have been included to account for excess items that, although not currently forecast as being available from excess during FY 1974, undoubtedly will become available and match validated but as yet unprogrammed MAP requirements. Thus, effective use of Excess Defense Articles in the Security Assistance program reduces the amount of new obligational authority required to support that program.

O&M OF MAP INSTALLATIONS	-	600	600
STORAGE AND MAINTENANCE OF MAP MATERIEL	874	1,490	1,102
OTHER TRAINING COSTS	3,501	1,265	-
TOTAL	30,123	91,090	93,948

* Includes $8,602 thousand former MAAG and Command Training costs which through FY 1972 was distributed in country program.
** Non-additive. Included in Administrative Expenses.

Administrative Expenses - Funds cover the cost of administration of the Military Assistance Program, including program planning and development and management at the seat of government, at major field command headquarters and at the MAAG level. This activity includes reimbursement to the State Department.

Reimbursement to State - Funds in this category provide reimbursement to the State Department for administrative support of MAAG personnel, including local hire, maintenance of vehicles, transportation and rents.

Inspector General, Foreign Assistance - These funds reimburse the State Department for the Department of Defense share of this office.

Supply Operations - Packing, handling, crating, port loading and inland water and air transportation costs associated with deliveries of grant aid materiel and excess defense articles (EDA) whether from prior year undelivered balances or from current year's programs are included in this category. In FY 1973, a change in accounting treatment was directed which removed supply operations costs from country programs and characterized all such costs as General Costs. This change stemmed from an audit recommendation which concluded that efforts to distribute these costs to country programs distorted program levels and their presentation.

O&M of MAP Installations - These funds provide for the cost of operating and maintaining family housing units allocated to MAP personnel in Korea. Prior to FY 1973, these costs were a part of the Korean program. In FY 1973, a change in accounting treatment was directed which removed these housing costs from the country program and categorized them (although peculiar to Korea) as a general cost.

Storage and Maintenance of MAP Materiel - Due to unforeseen circumstances such as a decision to halt deliveries to a particular country, MAP-owned materiel must occasionally be held for brief periods of time pending final disposition. The cost of storing and maintaining such materiel in a ready-to-issue condition cannot, under these circumstances, properly be charged to an individual country program.

Other Training Costs - Prior to FY 1974, these funds provided for those training costs of a broad nature which cannot be determined on a country or regional basis. They include publication of training material, the informational program, limited official representation expenses, training of U.S. personnel for MAP assignments and English language training overhead costs, all of which are included in the FY 1974 International Military Education and Training Program.

Revised May 1, 1973

UNCLASSIFIED

Funds for administering the Military Assistance Program derive primarily from two sources. They are:

1. Military Assistance Appropriation

The Military Assistance Appropriation pays (1) pay and allowance of U.S. civilian and local indigenous personnel; (2) change of station travel for U.S. civilian personnel and dependents; (3) temporary duty travel for both civilian and military personnel; (4) rents, communications, and utilities at the MAAG level; (5) printing and reproduction; (6) supplies and materials; (7) vehicles and other equipment required in performance of duties; (8) other contractual services; (9) fifty per cent of MAAG aircraft support costs; and (10) reimbursement to State Department for those materials and services provided by the U.S. Embassies on a common service basis.

2. Military Department Appropriations

These appropriations pay those costs for military personnel which would be incurred under any circumstances and are not peculiar to military assistance activities. These costs include (1) pay and allowances; (2) travel expenses incident to change of station; (3) operation of welfare and recreational facilities; and (4) medical care. In addition, these appropriations pay fifty per cent of MAAG aircraft support costs and the cost of dependent schooling for both civilian and military personnel.

The Role and Strength of MAAGs and Missions Abroad

Department of Defense Military Assistance Advisory Groups in foreign countries, commonly referred to as MAAGs, are engaged in the planning and implementation of coherent, balanced Security Assistance country programs which make maximum contribution to U.S. security objectives, and at the same time, move the friendly country progressively toward achievement of self-sufficiency in its own security. They are the key elements in the system through which military assistance and foreign military sales requirements are identified and the resulting grant aid programs and sales arrangements are developed and implemented. These groups in many cases also perform important functions related to transfer of material to the foreign countries, training of foreign military personnel and advising the foreign military forces in a wide variety of functions related to defense. These groups are the primary means by which the Secretary of Defense carries out responsibilities assigned him under the Foreign Assistance and Foreign Military Sales Acts.

The Department of Defense is dedicated to the principle of maintaining a minimum military presence in foreign countries that is consistent with the basic purposes and mission of the MAAGs. Thus, the need for MAAGs, their size, and the types of personnel assigned are kept under constant review within the Department of Defense. As the situation in a particular foreign country changes, all of these elements of the MAAG's structure are adjusted so that the objectives of minimum presence and maximum efficiency are in balance.

During the period 1961-1971, the total strength of MAAGs worldwide was reduced over 75 per cent. While these reductions have occurred, the total value of program operations has generally remained steady or increased. In some countries where circumstances permitted, MAAG functions were consolidated with other U.S. agencies in-country to achieve additional savings in personnel and costs. There have been, of course, some instances in the last few years, where, in order to support U.S. national policy, it was necessary to increase MAAG strength or to establish new groups; examples of this are in Cambodia and Indonesia. This process of constant surveillance and new initiatives to achieve greater efficiency at the lowest possible level will continue.

Pursuant to Section 512 of the Foreign Assistance Act of 1971, and in continuation of established DOD practices of efficient manpower management, a minimum of 15% reduction of U.S. military personnel assigned MAAGs worldwide was directed. Reductions were effected by 30 September 1972.

FY 1974 DEPARTMENT OF DEFENSE FUNDED ASSISTANCE PROGRAM

(Data Submitted Pursuant to Sec 634(h) of the FAA)

UNCLASSIFIED

In accordance with PL 89-374, March 25, 1966, funding support of South Vietnam and other Free World forces in Vietnam was transferred to the regular defense budget. PL 90-96, September 29, 1967, transferred funding of assistance to Laos and Thailand to the regular defense budget. The Foreign Assistance Act of 1971 (PL 92-226) required that funding of assistance to Thailand be returned to the Military Assistance Program effective 1 July 1972. The data below represent the level of new obligational authority provided in the DOD budget

FOREIGN MILITARY SALES LEGISLATION INCLUDED WITH MILITARY ASSISTANCE PROGRAM PRIOR TO FY 1968

a/ The Mutual Security Act of 1959, PL 86-108 approved July 24, 1959, states "There is hereby authorized to be appropriated to the President for the fiscal years 1961 and 1962 such sums as may be necessary from time to time to carry out the purpose of this chapter, which sums shall remain available until expended."
b/ Foreign Assistance Act of 1961 authorized $1,700.0 million, no executive branch request for authorization required.
c/ A total of $375.0 million appropriated under PL 89-374 dated March 24, 1966 for liquidation of obligations and/or reservations incurred pursuant to authority in Section 510 of the FAA of 1961, as amended during FY 1965 ($75.0 million) and FY 1966 ($300.0 million).
d/ Includes $24.1 million for U.S. support of International Military Headquarters added to the original request of $596.0 due to Congressional action.
e/ The additional $176 million authorized over the Executive Branch request was in lieu of revolving fund authorization.
f/ By Joint Resolution making continuing appropriations for FY 1970.
g/ Includes $500 million for Israel authorized by PL 91-441 and appropriated by PL 91-665.
h/ CAA limitation.

a/ Operating costs represent the value of equipment, supplies, and services required to operate and maintain the capability of country assets, low unit value secondary items and all expendables-except war reserve ammunition, initial stockage level of spare parts and secondary items programmed as a part of a major item or system investment. Also included in operating costs are the charges for supply operations (shown as general costs, not distributed by country) which represent the costs of packing, crating, handling and transportation incurred in the issue and transfer of materiel in the operating and maintenance category as well as logistics management expenses.
b/ Investment costs represent the value of equipment, supplies and services which increase the force capability including initial unit equipment, war reserves of equipment and ammunition, replacement of obsolescent equipment by improved types, the initial stockage level of spare parts programmed for shipment concurrent with related major items, all construction and the cost of supply operations (shown as general costs, not distributed by country) required for investment materiel and services.

SEPARATION OF ACCOUNTS

Mr. PASSMAN. Mr. Shriver.

Mr. SHRIVER. Thank you, Mr. Chairman.

Admiral Peet, a number of the items in your request have been shifted to new accounts or set aside as separate accounts for the first time. I refer specifically to the shift of the President's supporting assistance program for Cambodia, Laos, and South Vietnam over to an account called Indochina postwar reconstruction assistance.

Admiral PEET. Yes, sir.

Mr. SHRIVER. And the transfer of the military training program to a separate account. This makes comparisons difficult. Referring to the table on page 39 of your summary book, if we are to get an accurate comparison of your total program level for fiscal 1974, we would have to add $630 million, which is requested for Indochina, to the $1.3 billion, is that correct?

Admiral PEET. $632 million is earmarked for supporting assistance and relief construction for Indochina.

Mr. SHRIVER. Do we add that then to the $1.3 billion?

Admiral PEET. We do, yes, sir.

Mr. SHRIVER. What is it you are actually intending to spend in fiscal 1974 for your program?

Admiral PEET. When you talk about my program, sir——

Mr. SHRIVER. I am talking about military assistance.

Admiral PEET. Supporting assistance doesn't come within my purview. That is managed and handled by Dr. Hannah, Mr. Nooter of AID, and Dr. Tarr of the State Department.

Mr. SHRIVER. Do the figures listed there for grant military assistance for fiscal 1972 and 1973 reflect the elimination of the training program from that account for fiscal 1974?

Admiral PEET. Yes; they do. The training has been pulled out of the grant military assistance country and regional figures in the State summary presentation.

Mr. SHRIVER. Comparison for the 3 fiscal years is accurate then for the grant program?

Admiral PEET. Yes, sir, on a country and regional basis.

Mr. SHRIVER. Aside from the new title, how does the Indochina postwar reconstruction assistance program for Cambodia, South Vietnam, and Laos differ from the supporting assistance program there for fiscal 1973?

Admiral PEET. I don't know the details of that difference.

Mr. SHRIVER. How are we going to make comparisons then?

Admiral PEET. I think you will have Bob Nooter coming here before you shortly to talk about that particular point. I would rather not testify as to the makeup of the $632 million for reconstruction. I don't know the details. I believe you will have a group coming before you to talk to that matter.

Mr. PASSMAN. Yes; that is correct.

TOTAL PROGRAM ACCOUNTS

Mr. SHRIVER. I have been on this committee since 1965, and it is difficult reading these justifications. What is the status of your authorizing legislation which would provide for these changes in your accounts?

Admiral PEET. We appeared before Dr. Morgan's committee just last week, and it is still in committee.

Mr. SHRIVER. In addition to this request, how much is being requested for military assistance for the defense budget?

Admiral PEET. That is a subject that is being debated also.

Mr. SHRIVER. I mean in your requests?

Admiral PEET. In the one submitted to the Hill, it is about $1.9 billion.

Mr. SHRIVER. Almost $2 billion?

Admiral PEET. Yes, sir. The total program ceiling is $2.1 billion and $1.9 billion is the new obligation authority.

Mr. SHRIVER. Military assistance would be $630 million?

Admiral PEET. In addition to that. When you said "military assistance," I want to be sure I understand. I thought you were still talking about the reconstruction money that is akin to supporting assistance.

Mr. SHRIVER. That is what it is?

Admiral PEET. Yes, sir.

SOUTH KOREA DETERRENT CAPABILITY

Mr. SHRIVER. You mentioned in your statement the need to help South Korea develop a credible deterrent posture in order to meet the North Korean threat.

Admiral PEET. Yes, sir.

Mr. SHRIVER. I think I have been reading in the papers of a lessening of tensions over there. Is that true?

Admiral PEET. There is a hope of lessening of tensions inasmuch as the two countries are trying to get together.

Mr. SHRIVER. What is the status of that?

Admiral PEET. ———.

Mr. SHRIVER. My 5 minutes are up, Mr. Chairman.

[Discussion off the record.]

STATUS OF THE DOLLAR

Mr. PASSMAN. I want to make this statement for the record.

We have been arguing the last few days here about the position of the dollar abroad. A frightening thing happened today. The dollar dropped to an alltime low, and all European nations are running from the dollar. It caused Dow-Jones to drop 8 points in the first hour. It is the greatest threat to the dollar in the history of our country. Did you hear that on the news broadcasts?

Adimral PEET. Yes, sir.

Mr. PASSMAN. Keep that in account when you make these requests.

Admiral PEET. Yes, sir.

RECIPIENT COUNTRY RESPONSIBILITY

Mr. PASSMAN. Mr. Roush.

Mr. ROUSH. Thank you, Mr. Chairman.

I would want the record to reflect, in a very respectful way, that I do not share my chairman's positive view toward the military assistance program. As a matter of fact, I take a very negative view toward

the military assistance program, and I thought perhaps that might help you in providing answers.

Admiral PEET. It orients me, sir.

Mr. ROUSH. In your statement, pages 2 and 3, the last sentence on page 2 and continuing over to page 3, you state:

> Provision of military security assistance is predicated upon recognition by recipient nations that responsibility for defense is a matter on which they must make the basic decisions and be willing to devote a fair share of their own resources.

Admiral PEET. Yes, sir.

Mr. ROUSH. What is considered an index as to a fair share of their own resources?

Admiral PEET. I don't believe we have any fixed index, sir. In the short time that I have been with this program one thing that I have found is that you have to take each country by itself, and evaluate whether or not it is participating or devoting a fair share to its defense. There are many examples around the world. We are trying to get them to increase in many cases, and I think we are being successful. Korea is an example. You hear that perhaps the percentage of the gross national product that they devote toward defense is too small compared to what is going on in North Korea. However, I think you have to look at it as a whole. You have to look at what their economic situation is and how much they can afford to devote. It doesn't do any good if they spend a large percentage for defense and then have economic troubles.

Mr. ROUSH. Would you say that a nation which is operating with a surplus in their treasury each year is a nation which requires assistance from this country, military assistance?

Admiral PEET. Here again you would have to look at the circumstances, sir, on a country-by-country basis.

Mr. ROUSH. It isn't difficult for me, Admiral, to come to the conclusion that if a nation is operating with a surplus in its treasury, that they are not devoting their own resources to their own national defense, and are leaning on this country. I know this is true with regard to certain countries which are recipients under this military assistance program and under your other program.

Let's take a nation which perhaps devotes say only 2 percent of its gross national product to its own national defense. Would you say that is a nation which is devoting its fair share of its own resources to its defense?

Admiral PEET. In my opinion, that is too low and, in those cases where that is the fact, we are trying to get them to increase it.

Mr. ROUSH. Let's increase that to 3 percent.

Admiral PEET. I wouldn't be a good judge to decide what the crossover point is. That is State's purview and responsibility.

GNP PERCENTAGE FOR NATIONAL DEFENSE

Mr. ROUSH. My time is about up, but let me express my concern here. I caused a study to be done last year by the Library of Congress, Mr. Chairman. It was in two parts. One part dealt with the nations receiving military assistance and the percentage of their gross national product which they devoted to their own national defense. How many do we have, 44 countries?

Admiral PEET. Involved in the program?

Mr. ROUSH. Yes.

Admiral PEET. There are 44 countries, both materiel and training.

Mr. ROUSH. Forty-four. I think at that time I had 47 listed.

Admiral PEET. Yes, that is in the ball park.

Mr. ROUSH. Of those, only 4 of those 47 countries devoted a larger proportion of their gross national product to their national defense than did the United States. All the rest of them devoted a lesser portion. Of the 40-some countries, Mr. Chairman, I also discovered that there were 4 countries that were operating with a surplus in their budget, and yet we were called upon to provide military assistance. This bothered me, Admiral.

Admiral PEET. You have to be careful of those figures, Mr. Congressman, in that oftentimes when we say percent of the gross national product devoted to national defense, the figure may be misleading because, in addition they do spend a large amount on their police and other similar forces to create stability in the country.

PURPOSE OF TRAINING PROGRAMS

Mr. ROUSH. The Chairman mentioned the training programs a moment ago. We are providing training programs for both Pakistan and India. Are we preparing them so they can conduct a pretty good war against each other again?

Admiral PEET. I don't think that is a fair conclusion. We provide training for them. It gives us a certain influence in the country. I think the value of training in the military assistance program has proven itself over the years. If you want to have influence in a country, and you want to try to prevent their fighting each other, providing them with training and the equipments that they are going to get one way or another gives you a lot more leverage than just standing aside.

Mr. ROUSH. My time is up, Mr. Chairman.

Mr. PASSMAN. Thank you. This may contribute something to our deliberations. Let us take Japan. After World War II, we imposed a restriction on Japan whereby she could not support armed forces as such and this was included in her Constitution. Until they change the constitution we are going to have to live by what we imposed upon them under the occupation days, isn't that true?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Of course they just don't have the votes in the Diet to amend their Constitution at this time. This is one of the things we are confronted with.

The views of my colleague from Indiana and mine are not as far apart as he would imagine at this time. I only say that I support this program, but I have certain reservations about certain nations, and I think possibly 25 of them should be eliminated just by a stroke of the pen. I am only talking about those nations where we have made these tremendous investments, and unless we continue our support, it is perfectly obvious that these big investments will go down the drain.

MILITARY ASSISTANCE ON LOAN BASIS

If the recipient nations of the military assistance program, let us say Cambodia, Laos, Korea, and South Vietnam should agree that all subsequent military assistance and economic aid should be on a

loan basis, rather than on a grant basis, if they themselves agree to that would you not support that position?

Admiral PEET. Yes, sir. Our basic policy to phase out the grant aid as fast as we can in any country and convert to FMS sales.

Mr. PASSMAN. I named four countries in particular there. If these four countries should say, "We are willing now to accept military and economic assistance on a loan basis, to be repaid in dollars on a concessionary basis of course, then you would support that position.

Admiral PEET. Yes, sir. However, in the case of three of the four countries, that would be a very difficult thing to do right now. We are doing that in the program for Korea.

Mr. PASSMAN. You are not all the way. I don't see why, if the people who run this program agree that we have now reached a point where we should provide this aid on a loan basis and not a grant basis, we should not pursue this course of action. If they are developing countries, we would assume when they have some degrees of stability that they would become self-supporting and would be able to start repaying these loans subsequently, is that right?

Admiral PEET. Yes, sir.

Mr. PASSMAN. You never know when these countries are going to strike oil or some other mineral or some other condition takes place which would start these people on their way. I don't think we should prejudge who may or may not be able to pay. You would have to cross that bridge when you get to it, would you not?

Admiral PEET. Yes, sir.

Mr. PASSMAN. But all of your aid, whether it is economic or military, is based on the premise that these are developing nations, and they will sooner or later become self-sufficient, and would be able then to stand on their own. I believe this observation is certainly worthy of your study. After World War II, when European nations were flat on their backs, we came up with the Marshall Plan and put it on a grant basis. I think there was some $32 billion of grant aid we gave to the European nations. Had we made the $32 billion available on a concessionary loan basis, such as the IDA formula, you would be in your third repayment phase now and they would be repaying on these loans. They are waxing fat with wealth now and they could very easily be repaying us, so in this instance we just didn't look far enough into the future. I hope we don't make that mistake now with these developing nations and just continue giving grants.

I know enough about our economy that I don't sleep at night just worrying about actually what kind of a deplorable situation we are getting ourselves into as a nation. As we sit here this afternoon, there are $80 billion floating around the world. The nations want to get rid of them. They are in excess of need to meet their commitments to commerce. We don't have any gold to pay for them. They want to dump these dollars. This was a bulletin that the dollar had dropped to its lowest point in the history of America. Of course with that the New York Stock Exchange had an 8 point drop in its first hour of operation. It just points up again that it is time to get our house in order. I do wish I could make some small contribution, without having my thoughts considered on the basis of personality. I try to be reasonable.

I hope that you gentlemen will give some thought to the necessity of keeping your request, as Dr. Hannah would say, your taking price, to a level that will not contribute to building up these surplus dollars abroad.

Admiral PEET. Mr. Chairman, there are several examples in the history of this program of cases in which we have shifted from grant to sales. These have been success stories.

Mr. PASSMAN. I want to commend you, and I just hope that you try to get more countries to switch to a loan basis.

Admiral PEET. We have approximately $250 million coming into the Treasury this year in principal and interest on direct loans we have made under this program and $90 million of repayments to U.S. banks for guaranteed loans.

Mr. PASSMAN. I am not quarreling with that. That may be 25 percent actually of what you expend each year. I don't think that you are trying to build a defense now against switching these countries to loans?

Admiral PEET. No.

Mr. PASSMAN. But if these people are willing to accept it on a loan basis we should go forth with it.

Admiral PEET. Absolutely.

Mr. PASSMAN. I want to commend you. Anything we can get helps that much.

Now we come back to Mr. Miller.

MAP PERCENTAGE FOR EAST ASIA

Mr. MILLER. I noticed where you state in prior years the major portion of the proposed grant military assistance effort will be directed to East Asia, with $502 million for five countries.

Admiral PEET. Yes, sir.

Mr. MILLER. That will account for 65 percent of the total grant assistance program being requested. Can you give us a little more information as to why those particular five countries, and were they the same five countries that were allocated the bulk of the assistance last year?

Admiral PEET. They are the same as last year, Mr. Miller. Obviously, with our 5-year modernization plan, there is a large amount allocated to Korea and Cambodia——

Mr. MILLER. Korea and the 5-year effort there, would that military assistance be necessary for the 5-year effort that you speak of.

Admiral PEET. We atempted to look at Korea with a view toward how can we best proceed to phase that country out of this program and get our troops out of the country. I believe it was in 1971 that the administration, working together with the Koreans, came up with this 5-year modernization plan in an effort to make them self-sufficient as far as the military is concerned. We are well into the program but we are well behind dollarwise, as you probably know, Mr. Miller.

MANUFACTURE AND PURCHASE OF MAP ITEMS

Mr. MILLER. The assistance that we send there will be items manufactured in this country and not dollars, is that correct?

Admiral PEET. Yes, sir. However, there is an effort to make them self-sufficient in some areas such as small arms and they are attempting to succeed in that effort.

Mr. MILLER. Is that saying then that dollars would be sent, and they would manufacture the small arms in their country?

Admiral PEET. No. We don't pay for anything that is manufactured in their country. We have, in a few cases, provided them with the capital investment items from U.S. sources necessary to do that sort of thing. All expenditures are made in the United States.

Mr. MILLER. What I am driving at is, in no way would we be sending dollars to Korea, and they in turn contracting with a third nation for military assistance equipment?

Admiral PEET. No, sir.

Mr. MILLER. Thank you. That is all, Mr. Chairman.

KOREA 5-YEAR MODERNIZATION PLAN

Mr. PASSMAN. Thank you, Mr. Miller.

Maybe we should place in the record at this point at least my understanding of the situation we have in Korea. I believe at the time the Nixon announcement at Guam with respect to the Nixon doctrine was made, we had 60,000 troops in Korea, and incidentally, we had maintained that number or a greater number in Korea for some 20 years, but under the Nixon doctrine, he said we will bring home 20,000 of our troops. The Koreans protested, but then they reached an agreement that they would modernize the Korean Forces at an expense of $1,500 million, but we would save $1,100 million by bringing the troops home, so under the Nixon doctrine, the net cost for the 5-year period would only be $400 million, is that correct?

Admiral PEET. Yes, sir, as I understand it, it is.

Mr. PASSMAN. I believe it has been testified to that the agreement was as close to a treaty as we could get without actually having a treaty.

Admiral PEET. Yes, sir.

Mr. PASSMAN. Thank you very much. Mr. Long.

Mr. LONG. I yield to Mr. Yates.

MAP POLICIES AND OBJECTIVES

Mr. YATES. On page 1 of the statement the following appears: "The military assistance program needs greater understanding." How is it possible to get greater understanding of your program if so much of it is classified?

Admiral PEET. Mr. Yates, I think it is an understatement that it needs greater understanding, and I feel badly that we haven't explained it better. As far as classification is concerned, I will tell you anything that I know about the program.

Mr. YATES. That line just struck me. You say in the second paragraph: "The military security assistance program fosters favorable attitudes toward the United States and its policies and its objectives." What are its policies and objectives?

Admiral PEET. I have attempted to enunciate them at the bottom of the page and over on the next page. I have made this statement unclassified.

Mr. YATES. Its policies and objectives are "to help influence friendly and allied countries to pursue national objectives compatible with U.S. military strategy." Is that what you are telling me?

Admiral PEET. Yes. The policies and objectives are established not by me but by the State Department. I am the manager of the program.

Mr. YATES. How may we know that the Nation's national objectives are compatible with U.S. military strategy and U.S. foreign policy?

Admiral PEET. There are two ways. One, the program is an instrument of our country's foreign policy; and second, it is important to our country's defense policy. You have to look at the individual plans and goals for each country. You almost have to consider it country by country, Mr. Yates.

Mr. YATES. That is why I must confess to some confusion now. Early in the Vietnam war, we were told that the reason we were in Vietnam was because it was feared that if Vietnam were taken over by the North Vietnamese, that would strengthen the Communist Chinese. That is correct, isn't it? This was one of the arguments for our intervention at that time?

Admiral PEET. I will defer to your reading of it.

Mr. YATES. Isn't that your understanding of what was said at the time?

Admiral PEET. It was a very complex and confused situation, to say the least, Mr. Yates.

Mr. YATES. But you are not answering my question. Wasn't that one of the rationalizations given to the program?

Admiral PEET. I am sure it was one of them.

Mr. YATES. Is that still part of our national foreign policy? Are we not now engaged in building up a friendly relationship with the People's Republic of China?

Admiral PEET. Yes, sir.

Mr. YATES. And if that is true, is there the same need for military assistance in the Far East as existed some years ago?

Admiral PEET. It is a relative matter. As far as Vietnam is concerned, Mr. Yates, it is not under this program. It has been funded by MASF.

Mr. YATES. There are countries that are funded by this program?

Admiral PEET. Yes, sir, there are.

Mr. YATES. Why are we funding those countries?

Admiral PEET. Because the executive branch feels it is in the best interests of the United States to do so. The reasons differ around the world. Sometimes it is for political reasons, sometimes it is for forward defense reasons, and sometimes it is for the bases that we have access to in these countries. There are many reasons why we do it around the world.

POLICY RESPONSIBILITY

Mr. YATES. May I ask you why we are doing it in Cambodia now?

Admiral PEET. Yes, sir. I think the President feels that it is in the best interests of the United States, and that it will expedite or make more meaningful the peace effort that is going on over there. I want to be sure it is always understood that I don't have the responsibility for that type of policy.

Mr. YATES. Who does, somebody from the State Department?

Admiral PEET. The State Department.

Mr. YATES. Is there anybody from the State Department here?

Admiral PEET. They will be testifying before you in other sessions.

Mr. PASSMAN. And we will of course have the Secretary of State and the Secretary of Defense.

Admiral PEET. You will have Dr. Tarr.

Mr. YATES. You are telling me you are the military arm of that policy?

Admiral PEET. Yes, sir.

Mr. PASSMAN. We will subsequently have Secretary Rogers and also the Secretary of Defense. For various reasons we have had to postpone their appearances.

Mr. YATES. This gentleman is not from the State Department?

Admiral PEET. Mr. Forman is a counsel in the Defense Department. I am touchy about that because so many people have accused the Department of Defense of establishing these policies, but we don't.

Mr. YATES. I will save those questions for somebody else. I assumed that when you came up here with a statement as to carrying out these objectives, that you were going to testify respecting the objectives, but I will reserve my questions on that. I have no further questions at this time, Mr. Chairman.

Mr. PASSMAN. Admiral, even though you may not embrace the policy, you are taking the position that the policy is wrong, are you?

Admiral PEET. No; I am not.

Mr. PASSMAN. Thank you very much. Mr. Conte.

Mr. YATES. Is he taking the position the policy is right?

Mr. PASSMAN. I just want to be sure, because you are putting in your disclaimer there.

Admiral PEET. I will do my best to defend the policy. I am supporting the policy.

Mr. YATES. You are because you are an admiral in the U.S. Navy?

Admiral PEET. Yes, sir.

Mr. YATES. Charged with the duty of carrying out the policy?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Thank you. Mr. Conte.

EXECUTIVE AGREEMENT OBLIGATIONS

Mr. CONTE. Admiral, how much of the grant, sale, credits, and training contained in the budget request are necessary as a result of obligations undertaken by this country in executive agreements?

Admiral PEET. All the commitments have been made with the proviso that they are subject to the appropriation of money by the Congress of the United States.

Mr. CONTE. There is no doubt about it, but——

Admiral PEET. You see, you run into this sort of thing—whether or not that modernization plan in Korea is a commitment. Mr. Laird bent over backward to say that it was a plan, but many of the Koreans looked upon it as a commitment. I think technically it is not a commitment.

Mr. CONTE. Is there any way you can give us a breakdown of how much is going to each country because of executive agreements?

Admiral PEET. I will do my best. I will try to provide that.

[The information follows:]

Approximately $199 million in credit assistance and $118 million in grant assistance have been included in the fiscal year 1974 security assistance budget request as a result of commitments undertaken in executive agreements. Virtually all of these funds are in support of joint projects designed to improve the defensive capabilities of our allies. Because of budgetary and other considerations, these projects have been phased over more than 1 year. In each case, the agreements are clear that their implementation in future fiscal years is contingent upon the availability of funds and appropriate legislative authority.

I will review briefly the amounts involved for the various countries and the projects they are intended to support.

For the Republic of China, we have requested $10.7 million in credit assistance to support a program for the assembly of ——— on Taiwan. This program was initiated in October 1972. An additional $20.5 million in credit assistance and $28.3 million in grant assistance have been requested in support of a program, undertaken in February 1973, for the co-production of ——— on Taiwan.

For Greece, we have requested $65 million in credit assistance for the procurement of ——— as part of a modernization program for the Greek Air Force, undertaken in March 1972.

In the case of Jordan, we have requested $35.6 million in grant assistance to carry out the third phase of a modernization program agreed in May 1971.

The program for Korea includes sums for four agreed multiyear projects. They are:

$3 million in credit assistance in support of a program, undertaken in April 1971, for the production of ——— in Korea.

$2.6 million in grant assistance and $1 million in credit assistance in support of a similar ——— production program agreed in January 1972.

$5 million in credit assistance for procurement of ——— as agreed in July 1972.

$48 million in grant assistance as part of a program, agreed in August 1972, to modernize the Korean Air Force with ———.

For Malaysia, we have requested $19 million in credit assistance under a multiyear program for the procurement of ——— undertaken in June of 1972.

For Spain, we have requested $3.4 million in grant assistance to carry out commitments undertaken by the United States in the 1970 Agreement of Friendship and Cooperation. Under that agreement, as you will recall, the Spanish Government, for its part, granted the United States the right to use military facilities in Spain.

Finally, for Turkey, we have requested $75 million in credit assistance for the procurement of ——— as part of a program, undertaken in August 1972, to modernize the Turkish Air Force.

OPERATING AND MAINTENANCE COSTS

Mr. CONTE. You state the primary objective of the assistance and credit resources are directed to the capital requirements of the recipient countries. You also state these countries are expected to assume the bulk of operating and maintenance costs. How much of the request for fiscal 1974 is for operating and maintenance costs? Please provide a country-by-country breakdown for the record.

Admiral PEET. Yes, sir, I will be glad to. Our basic policy is to eliminate that type of cost from the grant programs. We have reached the point where most country programs are primarily composed of capital investment. We expect the countries to pay for the operating costs themselves; but we haven't achieved that in all cases, as you know.

Mr. CONTE. You will supply that for the record?

Admiral PEET. Yes, sir.

[The information follows:]

Of the request for fiscal year 1974 $283 million (37 percent) is for operating and maintenance costs. The breakdown by country is as follows:

Country	*Thousands*
East Asia and Pacific:	
Cambodia	$131,845
Indonesia	8,427
Korea	47,563
Philippines	4,361
Thailand	27,288
Regional total	219,484
Near East and South Asia:	
Jordan	2,100
Turkey	18,364
Regional total	20,464
Europe: Portugal	262
Africa:	
Ethiopia	4,655
Tunisia	488
Regional total	5,143
Latin America:	
Bolivia	1,033
Dominican Republic	279
El Salvador	50
Guatemala	9
Honduras	60
Nicaragua	194
Panama	137
Paraguay	167
Uruguay	763
Regional Program	525
Regional total	3,217
General costs	34,493
Worldwide total (TOA)	283,063

PURCHASE OF SPARE PARTS

Mr. CONTE. You indicate that the sales credits have a favorable impact on U.S. balance of trade.

Admiral PEET. Yes, sir.

Mr. CONTE. How much of the credit sales for 1974 are for spare parts for equipment purchased in prior years? How much are these countries spending on direct purchase of these spare parts of 1974?

Admiral PEET. I would like to provide that for the record. It is a detail I don't have with me right now.

[The information follows:]

THE 1974 SALES CREDIT—SPARE PARTS

On the basis of past performance, we estimate that approximately 20 to 25 percent of the sales credit for 1974 are for spare parts to maintain equipment purchased in prior years. We are unable to ascertain the value of such spare parts being purchased directly from industry by these countries during 1974 because much of the data pertaining thereto are not available from the Commerce Department until after the fact.

PAST LEVEL OF COMMERCIAL SALES

Mr. CONTE. Page 11 you provide 10-year figures for the foreign military sales, commercial sales, and grant assistance. What has the level of commercial sales been over the past 10 years?

Admiral PEET. I will provide that, too. It is at least half a billion a year.

[The information follows:]

During the 10-year period from 1964 through 1973, the total value of commercial sales was $4.3 billion.

STATUS OF SALES ACCOUNTS

Mr. CONTE. How many of the credit sales agreements are now in default? What is the outstanding principal value of these defaults? Please provide for the record a list of the countries in default and the amounts of defaults.

Admiral PEET. I will; but in summary, there are four countries right now that are in default—or in arrears—which is really a better term technically. It is 2 million out of a total of several billion.

Mr. LONG. Can you give us those countries?

Admiral PEET. Yes, sir. They are Chile, Ecuador, Paraguay, and Tunisia. We will provide the details for the record.

[The information follows:]

CURRENT STATUS OF OFFICIAL LOANS AND CREDITS OUTSTANDING ARREARS (MORE THAN 90 DAYS) AS OF APR. 25, 1973

	Principal	Interest	Total	Oldest due date
Chile	$1,007,765	$319,432	$1,327,197	January 1973.
Ecuador	441,334	143,113	584,447	October 1968.
Paraguay		63,362	63,362	January 1958.
Tunisia		50,800	50,800	June 1965.
Total arrears	1,449,099	576,707	2,025,806	

SUPPLY OPERATIONS REQUEST

Mr. CONTE. In your justifications for supply operations you show an increase of almost $8 million just because a new accounting procedure was adopted in fiscal 1973 rather than at the beginning. If not, why is the increase so large?

Admiral PEET. There has been a change in the accounting.

Mr. VON MARBOD. The increase in supply operations is directly related to our forecast of deliveries in fiscal year 1974. The supply operations account is treated as an annual account. For that reason, the amount identified for fiscal year 1974 would provide for moving items

that have been in the pipeline, as well as for estimated deliveries funded by the new obligation authority for fiscal 1974. To repeat, the supply operations are based on our best estimate of deliveries for the fiscal year. I will be happy to provide more detail for the record.

[The information follows:]

The amount shown for supply operations is directly related to deliveries.

Deliveries for fiscal year 1972 were $429,107—supply operations for the same period amounted to $62,037 or 14.5 percent.

Estimated deliveries for fiscal year 1973 are $439,938—the latest estimate for supply operations is $64,500 or 14.6 percent.

The amount of $69,200 for supply operations was arrived at by taking 14.7 percent of the estimated deliveries of $470,000 for fiscal year 1974.

OVERFLIGHT AND BASE RIGHTS

Mr. CONTE. You state the base and the overflight rights might have to be preserved or expanded in East Asia and the Pacific. Are there any particular areas in mind where it is necessary to expand these flights in fiscal 1974?

Admiral PEET. The overflight rights are important to us in the Philippines and in many of the areas if we are going to do our job in Vietnam, Cambodia, and so on.

I do not have the expanded area right in mind.

Mr. CONTE. Could you get that for the record?

Admiral PEET. I will get it for you.

[The information follows:]

OVERFLIGHT RIGHTS

The United States obtains overflight rights from the various countries in the East Asia Pacific region in two ways: as a part of formal agreements generally involving troop positioning and support and on an ad hoc basis. The latter arrangement requires the clearance of individual flights, as in the case of Burma, and imposes a considerable administrative burden when such flights are necessary. It would be desirable to reduce that burden where practicable by having formal arrangements made in advance to cover such instances. It is in this context that overflight rights should be expanded in the future.

Mr. CONTE. You state the bases in the Philippines are of prime importance?

Admiral PEET. Yes, sir.

Mr. CONTE. Your justification also shows an increase in aid to the Philippines for the coming year.

I was recently at Clark Air Force Base. What is our relationship with the Philippines with regard to our base rights there?

Are we under any pressure? Is the relationship good?

Admiral PEET. Currently I think our relationship is very good. We responded to them in a very meaningful way when they had a national disaster not too long ago.

Mr. CONTE. The flood disaster?

Admiral PEET. Flood disaster.

However, we probably will have to renegotiate our base agreement in the not too distant future. ———. In the CPD we have given a summary of the situation.

Mr. CONTE. You can expand for the record on that.

Admiral PEET. All right, sir.

[The information follows:]

———. Overall, Philippine MAP authorizations have declined to an average of about $16 million over the past several years, as compared to an average of $23.1 million from fiscal year 1946 to fiscal year 1970, and it has been increasingly difficult for the Philippines to effect significant progress toward modernization of equipment and forces. ———.

CAMBODIAN AIR OPERATIONS

Mr. CONTE. Where are the overseas training programs taking place for the Cambodian forces? How much of the training is being done by U.S. personnel at these overseas locations?

Admiral PEET. We are not doing any in-country training with U.S. personnel, but we are doing some in Thailand. I believe a certain amount is done in the United States.

Mr. CONTE. You no doubt heard the debate on the Cambodian issue on the floor a couple of weeks ago. There was a tremendous amount of discussion with regard to the number of American planes that have been lost over Cambodia in the past year.

Admiral PEET. Yes, sir.

Mr. CONTE. Could you give us a clear picture of how many planes were shot down, how many planes just went down because of malfunction, how many helicopters have gone down and how many people we have lost in Cambodia?

Admiral PEET. I will have to provide that for the record.

[The information follows:]

AIRCRAFT LOSSES IN CAMBODIA

The number and nomenclature of airplanes lost by the United States over Cambodia during the period January 27, 1973, through June 4, 1973 follows:

Type aircraft	Cause	Crew status
1 OV-10	Hostile fire	1 killed in action.
1 OV-10	Unknown	1 killed in action.
2 F-4	Hostile fire	2 missing in action, 2 recovered.
1 A-7	Aircraft malfunction	1 recovered.
1 A-7	Hostile fire	1 killed in action.

Mr. CONTE. This is very important.

Admiral PEET. Yes, but you understand that is different from the military assistance program for Cambodia. The combat air operations are funded——

Mr. CONTE. In the Defense appropriation bill?

Admiral PEET. Yes, sir.

Mr. CONTE. You know we cannot just put blinders on.

Admiral PEET. No, I am not asking you to.

Mr. CONTE. I have no doubt that this is going to come up when this bill comes on the floor of the House. This is a question that is going to be bandied around again. Your aide here was shaking his head yes, he knows.

Admiral PEET. No, it is coming—no question about it.

I believe Admiral Moorer is prepared to testify before this committee on that subject. He usually accompanies the Secretary of Defense.

Mr. PASSMAN. Who is that?

Admiral PEET. The Chairman of the Joint Chiefs, Admiral Moorer.

Mr. PASSMAN. Yes, he will be here with the Secretary of Defense.

Mr. CONTE. You think we ought to let this question go until then?

Admiral PEET. I will be glad to provide what you asked for for the record.

Mr. LONG. I did not quite hear the question of the gentleman.

Mr. CONTE. You remember the debate. There was great confusion over how many planes were shot down.

Mr. YATES. As opposed to being lost?

Mr. CONTE. Lost because of malfunction or something else; how many American personnel had been killed or how many had lost their lives, either through enemy fire or through malfunction?

In other words, I want a complete detailed report with regard to the Cambodian operation: helicopters, airplanes, and personnel.

Mr. LONG. Very good question.

Mr. CONTE. I will not take any more time.

EFFECT OF MILITARY ASSISTANCE CURTAILMENT

Mr. YATES. Mr. Chairman, may I ask you a question? Is it in order to ask this witness what would happen if the military assistance, which is requested, is not provided in accordance with your request to the countries that are outlined in your testimony?

Admiral PEET. Yes. I think it would be disastrous in many cases as far as U.S. interests are concerned.

Mr. YATES. In other words, is this in your field, your province to explain what would happen militarily. Is this something I should ask the witness from the State Department?

Admiral PEET. If you want a military assessment, I would prefer you to get that type of information from the Chairman of the Joint Chiefs.

Mr. YATES. OK.

Admiral PEET. He is responsible for that and ready to testify on that subject.

Mr. YATES. You have a very limited function in presenting this activity to the committee?

Admiral PEET. Yes, sir, I think I do. I am the manager of the program.

Mr. YATES. I will defer, OK.

MASF COUNTRIES

Mr. PASSMAN. Should we not state for the record at this point that until about 5 years ago, this committee handled all funds for Vietnam, Laos, and Thailand.

Mr. CONTE. At one time.

Mr. PASSMAN. Yes; they transferred these assistance programs over to the defense appropriation bill. Then, subsequently, they returned Thailand to this subcommittee. So even though Thailand until a year

ago was funded under the military appropriation bill, Thailand now is back under this subcommittee?

Admiral PEET. Yes, sir.

Mr. PASSMAN. You have only two that are not in this bill, Laos and Vietnam?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Let me say this, Admiral: The Chairman of this subcommittee is just trying to do a creditable job. I am not important, but this is an important subcommittee. It has a lot of responsibility. Otherwise, there would be no purpose for having this subcommittee.

INVITATIONS TO WITNESSES

Now, we observe in the room that a lot of people are absent who should be here. We see our very good friend from the State Department who must have been alerted he ought to get on down here and at least observe the deliberations.

Admiral PEET. Christian Chapman, yes.

Mr. PASSMAN. You have Mr. Curtis W. Tarr, Under Secretary of State for Security Assistance, do you not?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Is he not over all of this area?

Admiral PEET. He is the coordinator for the program. We work together every day.

Mr. PASSMAN. This is his bailiwick, this is under him.

Admiral PEET. Yes, sir; you have him scheduled to appear.

Mr. PASSMAN. Why is he not here now?

Admiral PEET. He was not invited.

Mr. CHAPMAN. He was not invited.

Mr. PASSMAN. Do you have to invite these people? Let me extend an invitation to him now, because his counterpart in economic aid is Dr. Hannah, is he not?

Admiral PEET. Yes, sir.

Mr. PASSMAN. I assume Mr. Tarr is an expert in this area.

Admiral PEET. He would be delighted to be here.

Mr. PASSMAN. I think it is his responsibility to be here and justify this program or back you up.

Admiral PEET. I think there is a misunderstanding; the invitation came to me only and, it was a——

Mr. PASSMAN. It was not an invitation to you, it was a notification that the hearings would start. I did not think we would have to get out formal embossed invitations to get you people down here.

Admiral PEET. No, sir, but I did get one from you.

Mr. PASSMAN. We did not emboss them.

Admiral PEET. I did not mean to imply it was embossed.

Mr. PASSMAN. I know; after all, this is his business and it is serious.

Admiral PEET. It is with me.

Mr. PASSMAN. We extend Mr. Tarr an invitation. I did not know we had gotten to that point. I just thought we would notify him that the hearings would start and they would have whatever witnesses they thought were quite appropriate because there are a lot of questions we want to ask. So if you will please extend him an invitation for us.

Admiral PEET. I am sure he will be here.

Mr. PASSMAN. Good.
Mr. Bevill?

POLICY RESPONSIBILITY

Mr. BEVILL. As I understand the Admiral's situation, actually, in effect, these programs are handed to you and they say this is what you are going to get for this country and that country, and it is up to you to administer?

Admiral PEET. In my capacity as Director of the Agency, that is true. I also have a Deputy Assistant Secretary of Defense hat which involves me in the formulation of policy with State and so on—certainly within Defense. But the policy responsibility lies with State.

Mr. BEVILL. Is the policy a political decision?

Admiral PEET. Yes, sir; it is set forth that way in section 622 of the Foreign Assistance Act.

Mr. BEVILL. In each of these countries I notice that you point out in your statement, each country has to be treated a little different or it may be a different problem and have to have a different solution.

Admiral PEET. Yes, sir.

Mr. BEVILL. I assume that, for example, the additional proposed $25 million in foreign military sales credits for South Korea, that would be decided really through the State Department?

Admiral PEET. Yes, sir. We have a council known as the SAPRC, Security Assistance Policy Review Council. These matters are brought up at that Council, which is chaired by Dr. Tarr, the Deputy Under Secretary of State. It is decided by the Council what the allocation will be by country.

Mr. BEVILL. This would be based on consultations with the country involved; for example, the Republic of South Korea?

Admiral PEET. We have consultation with the country team, which includes the MAAG, the Ambassador, and representatives from other departments of the Government. The CINC's are involved. Here in Washington, the NSC staff, Treasury Department, Commerce Department, AID, Defense, State—all are represented.

Mr. BEVILL. This is done each year, is that correct?

Admiral PEET. Yes, sir. What results is the congressional presentation documents that you have available.

Mr. BEVILL. In making these commitments to these countries, that is the Council that come up with all these figures——

Admiral PEET. Yes, sir. They are not commitments to the countries, although many people interpret them as such.

Mr. BEVILL. I see.

Admiral PEET. I know what you mean.

Mr. BEVILL. They would be recommendations?

Admiral PEET. Yes, sir.

Mr. BEVILL. What role this country should play as far as that particular country is concerned?

Admiral PEET. Yes, sir.

SEPARATION OF TRAINING PROGRAM

Mr. BEVILL. Now you have started this year, I noticed somebody mentioned it earlier, the $33 million education fund is handled separately.

Admiral PEET. Yes, sir.

Mr. BEVILL. What is the purpose of separating this? I am sure there is some good reason for it.

Admiral PEET. In order to improve understanding of the program, as Mr. Yates had indicated, and because we had difficulty along this line, we are trying to separate out the training countries.

There are many Members of Congress who are in favor of training. There are a number of countries around the world, in the neighborhood of 25, to which we provide training only—no material, equipment or anything of that sort. We wanted to separate that out, give it visibility, hopefully introduce a little more permanence into the training program worldwide.

Mr. BEVILL. When you say training, is this training confined to military training?

Admiral PEET. It is primarily a military training and education program.

That program is discussed on page 2 of the CPD.

Mr. BEVILL. But it is not altogether military training or education?

Admiral PEET. I think you would call it military training.

Mr. BEVILL. Yes. This certainly would not overlap with the economic program, then, would it?

Admiral PEET. No. We coordinate with State, trying to make sure that it does not.

Mr. BEVILL. I see.

AID TO TURKEY

Now, you have funds here, for example, that go into Turkey?

Admiral PEET. Yes, sir.

Mr. BEVILL. Are there any other countries giving Turkey any military assistance?

Admiral PEET. Yes, sir. I think they get something in the neighborhood of ——— percent of their total assistance program from Germany; Canada provides some.

I can provide this for the record if you like.

Mr. BEVILL. I wish you would.

(The information was supplied to the committee.)

Admiral PEET. Turkey is one of the more fortunate countries. It does get additional third country assistance.

Mr. YATES. Do you mean sales or assistance?

Admiral PEET. Assistance. In this case, it is grant.

Mr. BEVILL. Can you tell me where we benefit? Where do the taxpayers of the Nation benefit from these contributions to Turkey?

Admiral PEET. Well, I think they benefit in many ways as far as grant aid to Turkey is concerned. It is designed to make Turkey a more effective member of the NATO community and thus help us to better protect the southern flank at NATO, which is one of our forward defense areas.

Of the grant aid dollars that we spend, better than 95 percent of it is spent in the United States, not only for Turkey but worldwide.

Now, on the credit side, Turkey is doing remarkably well and making the transition from grant to credit. Just last year we closed a sizable deal with Turkey which is a credit program for the purchase of F–4's. We loaned them money and the interest rate for that loan

turned out to be ——— percent. Turkey is doing very well in purchasing on a credit basis.

Mr. BEVILL. Is Turkey a free country? Is it a Communist-dominated country?

Admiral PEET. Certainly, in my mind, they are very anti-Communist.

Mr. BEVILL. Very anti-Communist?

Admiral PEET. They are right on the border of the U.S.S.R. I just came back from a trip to Turkey during which we discussed their program. They are very much concerned about the need to modernize their forces and they are concerned about the threat on their borders. They need all the help that they can get.

DECREASE IN GRANT ASSISTANCE

Mr. BEVILL. Now, Admiral, I think it is commendable that we are getting more into the sales, away from the grant.

Admiral PEET. Yes, sir.

Mr. BEVILL. I think this is in line with President Nixon's policy; it certainly is good to get away from this giveaway business. But I notice that you keep asking for more money.

Admiral PEET. Yes, sir.

Mr. BEVILL. How do you explain that?

Admiral PEET. Well, I think in the case of Turkey we are trying——

Mr. BEVILL. Not just Turkey; I am talking about the overall program.

Admiral PEET. I think you notice the shift. The grant is decreasing; the credit is increasing.

Over the past several years, to give you a comparison, I think we have had about $10 billion more in sales than we did in grant. So it is a program that is paying off in the long run, as far as balance of payments of this country is concerned.

Mr. BEVILL. I am looking here now, it says, "military assistance program, in fiscal year 1972, $549.9 million," I assume.

Admiral PEET. Yes, sir.

Mr. BEVILL. And then in 1973, $819.7 million.

Admiral PEET. That is what we requested, but we did not get it.

Mr. BEVILL. You received $588 million?

Admiral PEET. Yes, sir. That is total obligational authority and not new obligational authority.

Mr. BEVILL. Here for 1974 you are asking for $771.5 million, if I read this correctly.

Admiral PEET. Yes, sir, in total obligational authority.

Mr. BEVILL. Now that is on the military assistance program; that is what you call the grant program, is it not?

Admiral PEET. Yes, sir.

Mr. BEVILL. You are asking us for $99 million more—the total appropriation at the bottom, which would be more accurate, it says you are asking—you got $553 million last year, now you are saying you need $652 million this year in grant money.

Admiral PEET. Yes. You recall that in 1973, the current fiscal year, we are operating under continuing resolution authority. We were restricted to expenditures at the rate established in the prior year.

Mr. PASSMAN. Part of it comes out of the pipeline?

Admiral PEET. Yes, sir; some deliveries do come out of the pipeline.

Mr. BEVILL. Same as you had last year.

Admiral, I have always supported your program, but I am getting more and more concerned about the way we are spending money.

Admiral PEET. Yes, sir.

Mr. BEVILL. The more I look into these things, the more concerned I get. I am anxious to see us head in the other direction.

You are cutting down on grants, as I understand.

Admiral PEET. Yes, we are.

Mr. BEVILL. That is the goal, but then when I look at what you are asking for, you are asking for more money every year.

Admiral PEET. Yes. Korea is a good example of why. We are asking for the money to carry out a modernization plan that will enable us to cut back by helping them to become self-sufficient militarily.

Mr. PASSMAN. Would the gentleman yield at that point?

If both Korea and Vietnam agreed to accept all military assistance on a loan basis, repayable in dollars you would support it, would you not?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Thank you very much.

Go ahead.

Mr. BEVILL. That is all I have, Mr. Chairman.

POSITION TITLES

Mr. PASSMAN. I yield to Dr. Long.

Mr. YATES. May I ask you a question——

Mr. LONG. Is this coming out of my time?

Mr. YATES. The Deputy Assistant Secretary of Defense title was for a civilian, I thought.

Admiral PEET. No. There are some military people who are in that role.

Mr. YATES. Who are Assistant Secretaries of Defense?

Admiral PEET. Yes, sir, Deputy Assistant Secretaries of Defense.

Mr. YATES. When did this practice——

Admiral PEET. In that capacity, I report to a civilian, Ambassador Hill, who is the Assistant Secretary of Defense for International Security Affairs; as the Director of the Defense Security Assistance Agency, I report directly to the Secretary of Defense.

Mr. YATES. I must say. I was under the impression——

Mr. PASSMAN. Gentlemen, may we take a brief recess and vote?

[Short recess.]

MILITARY AID ON A LOAN BASIS

Mr. PASSMAN. The committee will come to order.

I yield to Mr. Long.

Mr. LONG. I think there is quite an effort in which the chairman seems to join, and I do not want a response from the chairman for the time being, that we are somehow getting a better deal on foreign aid by shifting to a loan program. I know you are not the man with whom to take this up, but I just want to put it on the record, that this will only work if we get our loans back.

Admiral PEET. Our record to date is very good on that line.

Mr. LONG. I know it is.

Admiral PEET. It is outstanding.

Mr. LONG. That is the standard line. Of course it would be, as long as they expect to get more loans from us, we are going to get our money back. The test is when we stop lending and giving.

Admiral PEET. Is it in our best interest, though, to stop, Dr. Long?

Mr. LONG. I say when the time comes—you expect we are going to keep on lending forever?

Admiral PEET. I think we will keep on lending for quite some time. It is a pretty good deal for the United States.

Mr. LONG. Why lend if there never comes a time when we get paid back?

Admiral PEET. We do get paid back. This year alone the Treasury will receive $25 million.

Mr. LONG. How much are you sending out?

Admiral PEET. This year? We are asking for new obligational authority of $525 million. The $250 million is the repayment from past loans.

Mr. LONG. I know.

Admiral PEET. The deals we have made with the countries are excellent ones.

Mr. LONG. What happens—have you made any estimates—as these loans accumulate, pile up? The interest payments increase and there will come a time when the amount that these countries have to pay us in annual debt service is greater than the amount they are getting from us.

Admiral PEET. We watch that very carefully and take into consideration the circumstances in the individual countries before we make the loans.

Mr. LONG. Is that not in the nature of things?

If we are ever going to get paid back, is there not going to have to come that time when what they are paying back to us is greater than what we are giving them?

Admiral PEET. Yes, sir.

Mr. LONG. That is the test.

Admiral PEET. We are a long way from that point.

Mr. LONG. Do you not have to look forward to that?

Admiral PEET. Yes, but it is still quite a way.

Mr. LONG. Wait a minute. If you are not looking forward to that, then you are just giving us a bunch of propaganda.

Admiral PEET. We are looking forward to shifting from grant to credit to cash.

Mr. LONG. Do you have any models set up of how this debt service is going to accumulate as the loans accumulate?

Admiral PEET. Yes, sir; I can give you that information.

Mr. LONG. So that in 3, 4, 5 years, 10 years, assuming we continue to lend at current amounts, that they are going to be owing us or having to pay us.

Mr. VON MARBOD. Dr. Long, Treasury and OMB are preparing pro forma statements which will do exactly that.

Mr. LONG. Put that in the record.

[The information follows:]

ESTIMATED PROJECTION OF FMS CREDIT REPAYMENTS BY FISCAL YEAR AND GUARANTEED PRIVATE LOAN[1]

[Values in millions of dollars]

Country	Unpaid balance as of June 30, 1973	Payments due by fiscal year—

[1] Excludes interest since interest payments are variables which depend on actual dates of disbursements.

[2] Projected cancellation of credit availability.

[3] Utilization of $17,000,000 of credit availability is under review.

[4] Fiscal year totals do not add to overall total due to footnotes 1 and 2.

Admiral PEET. You have to do it country by country.

Mr. LONG. I know that. I would like to see it all added up and see when the time is going to come when they are going to have to be paying more each year than they are going to get from us. That will show us whether they are ever going to pay us back. If somebody keeps lending me money, and I say to myself I am not going to pay them back, I am not going to tell them that. I will pay them back while they are lending but not when I have to pay out of my own money. It is easy for me to do that. In the meantime you can say that they are paying back. But actually, we are paying ourselves back.

Admiral PEET. There are countries that we are not lending to which are paying us back.

Mr. LONG. Name them.

Admiral PEET. India, Iran, Jordan, Liberia, Pakistan, and Singapore do not have proposed fiscal year 1974 credit programs but are making payments against previous loans.

Mr. LONG. I thought you said they were in default.

Admiral PEET. No, I did not say they were in default. As to the arrearages, the record sometimes indicates that there is room for argument as to whether they owe it to us in certain cases. We are talking about very small percentages, worldwide.

Mr. LONG. Again I would like you to give us a list for the record of what we have sold these countries on military sales and loans and all kinds of things, and what they have paid back.

Admiral PEET. Yes, sir.

Mr. LONG. What the percentage is.

[The information follows:]

THE FOLLOWING COUNTRIES ARE THOSE IN ARREAR

[Value in thousands]

Country	Credit loans	Payments						Percent arrea
		Due		Paid		Arrear		
		Principal	Interest	Principal	Interest	Principal	Interest	
Chile	32,429.4	$7,967.8	$1,246.5	$6,960.0	$927.1	$1,007.8	$319.4	14.3
Ecuador	572.9	441.3	143.1			441.3	143.1	100.0
Paraguay	217.4	217.4	63.4	217.4			63.4	22.5
Tunisia	5,014.3	2,814.3	569.7	2,814.3	518.9		50.8	.01

[1] Percent in arrears reflects both principal and interest.

PROJECTED DEBT SERVICING

Mr. LONG. I would like to have a projection for the future of what the debt service is going to accumulate to, the percentages and so on, so that we can approximate the time at which the real rub is going to come; namely, when they are going to have to pay us back more than we are giving them at that time.

I think you are going to find from past history in international lending, not just in U.S. experience, but for all countries, when that time comes, defaults occur. I predict and I hope you are around, and I hope I am around long enough to see this happen since it will take a few years, that you are going to find that we are not going to get the money back from most of these countries.

Mr. FORMAN. May I ask for clarification of what it is you are asking for? Are you asking when we will reach the point where in a particular year, a particular country will owe us more that year than we are disbursing?

Mr. LONG. I have in mind a projection annually.

Mr. FORMAN. Are you interested in whether, in a particular year, we are getting back more than we are lending that year or at any particular point in time?

Mr. LONG. We do not know whether we will get it back.

Mr. FORMAN. Or when the total debt is more than what we are doing for the country?

Mr. LONG. I want to know what their debt service will be at that time in comparison with what we would be lending them if we continued to lend at current rates; do you see what I mean?

Admiral PEET. Yes, sir; I think I understand what you mean.

Mr. LONG. If you can do that, that would be a good help.

Mr. PASSMAN. Thank you very much, Dr. Long.

Mr. LONG. Have I used up 12 minutes of my 5 minutes?

Mr. PASSMAN. We will be back to you. Thank you very much.

Mr. LONG. I have all these ideas and I never get to explore more than one of them.

Mr. PASSMAN. Off the record.

[Discussion off the record.]

Mr. PASSMAN. I believe my good friend from Maryland will read the record and when the record is properly read the repayment experience on loans has been good.

Mr. LONG. Would the Chairman yield on that?

Mr. PASSMAN. Yes, sure.

Mr. LONG. The gentleman speaks as if this were a business-like thing. If it is business, any businessman wants security. You cannot do that among nations, I realize that.

Mr. PASSMAN. Dr. Long, since we have had the program on a give-away basis so long, if you can come up with a plan that conceivably will put it on a business basis, and we start getting money back, is that not better than to continue an outright grant program?

Let me make my record if I may.

Mr. LONG. If I can add to that.

Mr. PASSMAN. You want to argue.

Mr. LONG. The gentleman answered me and I think I have a right to rejoinder.

Mr. PASSMAN. No; this is not any place to debate.

Mr. LONG. Your assumption is that putting this program on a loan basis is business because we are getting something back. This assumes we are getting back their money. It is quite possible, is it not, that we are paying ourselves back?

This year, for example, they are asking us to increase the amount of military and foreign credit sales grant aid. Now that amounts really to our saying that we are going to kid ourselves, put this on a loan basis, and that we are going to pay them enough extra money so that they are going to be able to pay us back part of this loan.

Mr. PASSMAN. I am not arguing with you, I want to get along with my questions. I want to say that my friend has a right to his own convictions.

STATUS OF PREVIOUS LOANS

I would like, if I may, to cite for the record the experiences we have had with loans to foreign countries.

I believe with the exception of the so-called World War I and II debts that on loans to nations, we have had a remarkable record of repayment. Most of the World War debts have been ignored because I think it was felt all the world was fighting for its life.

Mr. LONG. What about lend-lease to England in World War II—did we ever get any of that back?

Mr. PASSMAN. I am talking about loans since World War II now.

Mr. LONG. Lend-lease was composed of loans.

Mr. PASSMAN. I am not arguing. I will yield to you when I finish my statement and my interrogation of the witnesses.

Now let's take the Export-Import Bank, we handle that money. They have been in business, I believe, for some——

Mr. FORMAN. About 40 years.

Mr. PASSMAN. About 30 years or 40 years. Now this is an outfit that makes loans to foreign governments and foreign companies to finance the export of our commodities. I think by and large they have a remarkable repayment record, have they not?

Admiral PEET. Yes.

Mr. PASSMAN. Billions of dollars has been paid into the U.S. Treasury in the way of income taxes on profits made by the manufacturers who export their goods. Then if you follow that on down, the individual that helped manufacture the commodities, he too, earned a good living and paid substantial taxes into the U.S. Treasury.

Now if we move over to the Agency for International Development, and they have had a marvelous repayment record, I believe that under the development loan fund there is less than 1 percent of the nations delinquent on their loan repayments.

Under the military credit sales program loans have been made to various countries and some of these countries have paid those loans back and they have not requested additional credit, have they?

Admiral PEET. That is right.

Mr. PASSMAN. I believe they, too, have a remarkable repayment record.

Now am I correct, Admiral, in assuming that the repayment of a loan is based almost entirely upon the understanding that you have at the time you make the loan?

Admiral PEET. Yes, sir.

Mr. PASSMAN. We must take into account the premise of foreign aid from its inception up until today which has been based upon the fact that we are helping underdeveloped or developing countries; is that correct?

Admiral PEET. Yes, sir.

Mr. PASSMAN. I think many Members of the House at one time or the other, with the exception of the chairman, has supported these authorizations. I never voted for a nickel in authorizations since I have been here.

The premise is that these are developing nations and if we help them, sooner or later they will be self-sufficient and they in turn may be in postion to help us and to repay on loans made to them.

So I am not going to ridicule in advance of making a nation a loan until there has been some default.

Our experience has been too good. Most of the nations, I believe, which we refer to as developing nations, that we have made loans to have repaid those loans, is that not the record?

Mr. VON MARBOD. Yes, sir, it is.

Mr. PASSMAN. If you look at the record of repayment, in almost every category of government organization where we made loans and had an understanding about repayment these loans have been repaid, have they not?

Mr. VON MARBOD. They have

Mr. PASSMAN. So it is certainly better to put it on this basis and later charge part of it off than to take the position that every nation we are helping is crooked and that they are never going to meet any commitments when we start aiding them. I am not going to take that position.

Mr. LONG. They are paying back our money.

Mr. PASSMAN. The gentleman has a right to his opinion. But I do not take the position that everybody is a crook. I am trying to be quite factual about this.

Mr. LONG. If we are being factual——

Mr. PASSMAN. The repayment record on loans for many, many years has been good in all categories; is that a fair statement?

Mr. VON MARBOD. Outstanding.

Mr. PASSMAN. Thank you; let me ask you this——

Mr. LONG. Would the chairman yield on that?

Mr. PASSMAN. No, I am not going to at this particular time.

Mr. LONG. The gentleman is making a record.

Mr. PASSMAN. It just happens I am not yielding at this time.

NEW OBLIGATIONAL AUTHORITY

Admiral, there is a rather large request being made for aid and assistance this year. As we look at South Vietnam, the amount requested in the Defense budget is $1.9 billion, is that correct?

Admiral PEET. Yes.

Mr. VON MARBOD. For South Vietnam and Laos, Mr. Chairman.

Mr. PASSMAN. I am talking about the program in the immediate area of Southeast Asia.

Mr. VON MARBOD. Yes, sir.

Mr. PASSMAN. What is the division of the $1.9 billion between Laos and Vietnam?

Mr. VON MARBOD. $311 million of the new obligational authority identified for fiscal year 1974 is for Laos. The balance of $1.6 billion is for South Vietnam, Mr. Chairman.

Mr. PASSMAN. Then we move to the military assistance program as such. You are asking for $685 million in new obligation authority.

Mr. VON MARBOD. The $685 million includes training, sir.

Mr. PASSMAN. I want to look at the total.

Mr. VON MARBOD. Yes, sir, $685 million.

Mr. PASSMAN. I know, but cutting it into two parts does not reduce the amount.

Mr. VON MARBOD. No, sir.

Mr. PASSMAN. So it is $685 million?

Mr. VON MARBOD. In new obligational authority.

Mr. PASSMAN. We are not talking about expenditures but new obligation authority.

Mr. VON MARBOD. Yes, sir.

Mr. PASSMAN. That is what examine on. You are asking for $525 million in military credit sales?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Now we are in hopes that a good part of the $685 million can likewise be in loans. If that should be true, then at least, I think it is a step in the right direction. But if we move specifically now to military credit sales, could you give the committee a breakdown as to what nations you are proposing to provide military credit sales?

Admiral PEET. Yes, we can.

Mr. VONMARBOD. Mr. Chairman, for which fiscal year?

Mr. PASSMAN. 1974.

Mr. VONMARBOD. For fiscal year 1974, we are proposing for foreign military credit sales a total program of $760 million, of which we are——

Mr. PASSMAN. Let me go back so I can understand it.

I am looking at $525 million for the NOA request. What is the additional amount involved?

Mr. VONMARBOD. The difference between the $525 million in new obligational authority and the total ceiling requested of $760 million for foreign——

Mr. PASSMAN. Please, if we may, deal specifically with new obligational authority.

Mr. VONMARBOD. Yes.

Mr. PASSMAN. $525 million?

Mr. VONMARBOD. Yes, sir.

Admiral PEET. It is on page 3 of the CPD.

Mr. PASSMAN. I know. But if I am going to go by these books, I would not have you down here. That makes a total request of $3.110 billion when you total these three categories in new obligational authority?

Mr. VONMARBOD. Yes, sir.

Mr. PASSMAN. Question No. 2, how much do you have in undisbursed funds in category No. 1, namely, funds for Vietnam and Laos?

Mr. VONMARBOD. Mr. Chairman, I would like to provide for the record what is in the pipeline for Vietnam and Laos, if I may.

Mr. PASSMAN. All right.

[The information follows:]

MILITARY AID IN THE PIPELINE FOR SOUTH VIETNAM AND LAOS

Section 737(b) of the Department of Defense Appropriation Act, 1973 (Public Law 92-570, Oct. 26, 1972), requires a report to the Congress of the estimated value of military assistance service funded (MASF) support furnished on a quarterly basis.

Based on the reporting concepts and related data available under current DOD implementation of this provision, it is estimated that, as of March 31, 1973, the amount of the "pipeline" for South Vietnam was approximately $775 million, and the amount of the "pipeline" for Laos was approximately $80 million. In this context the term "pipeline" should be equated with estimates of unobligated amounts from current and prior year MSAF programs and as such would include all appropriations rather than solely material. Based on experi-

ence for the period July 1, 1972, to March 31, 1973, these unobligated amounts from fiscal year 1973 and prior year programs would cover obligations for somewhat less than 4 months in South Vietnam and less than 3 months in Laos, with 3 months of fiscal year 1973 remaining.

MAP PIPELINE

Mr. PASSMAN. Now category No. 2, the military assistance program, what do you have undisbursed in the pipeline for this item?

Mr. VONMARBOD. Mr. Chairman, the amount in the MAP pipeline as of June 30, 1972, was $692.059 million. We are estimating that, as of June 30, 1973, it will be $617.007 million.

Mr. PASSMAN. If you will, in answering these questions, in each instance give the committee your estimate as of June 30.

Mr. VONMARBOD. Yes, sir.

UNOBLIGATED FUNDS

Mr. PASSMAN. Now category No. 3, military credit sales, what are you going to have unobligated?

Mr. VONMARBOD. We are estimating that there will be zero unobligated balance for foreign military credit sales as of June 30, 1973.

PRIVATE FINANCING

Mr. PASSMAN. What programs are going to be deobligated for military credit sales to bring this up to $700 million plus?

Mr. VONMARBOD. We are estimating, Mr. Chairman, private financing of $313.3 million which we will guarantee at a charge to our new obligation authority of $78.3 million.

Mr. PASSMAN. I am not too sure that I quite understand.

Admiral PEET. The difference between the new obligating authority and the $760 million total is the private financing less funds set aside for DOD guaranteee.

Mr. PASSMAN. Are you saying then that the $525 million will enable you to make sales of $700 million?

Mr. VON MARBOD. Yes, sir; $760 million.

Admiral PEET. Yes, sir; using some of it for guarantee.

Mr. PASSMAN. Do you guarantee those repayments?

Mr. VON MARBOD. We do.

I would like at this point to defer to Mr. Forman of our General Counsel's Office, whom I feel can give you a good explanation.

Mr. FORMAN. Yes; we guarantee the banks.

TOTAL MILITARY SALES AUTHORIZATION

Mr. PASSMAN. Since the inception of the military sales program, what has been the amount authorized by the Congress, cumulative?

Mr. VON MARBOD. From the inception of the program preceding the Foreign Military Sales Act of 1968?

Mr. PASSMAN. Before the Military Sales Act; that is good enough.

Mr. VON MARBOD. Starting with 1968, Mr. Chairman, the amount of new obligational authority appropriated for foreign military sales in fiscal year 1969——

Mr. PASSMAN. Just give the grand total.

Mr. VON MARBOD. It was $296 million for fiscal year 1969.

Mr. PASSMAN. Would you mind giving the grand total? That is what we are interested in.

You can put that in the record if you will, by year, but give us the grand total.

Mr. VON MARBOD. I would like to provide for the record the NOA by year since the inception of the Foreign Military Sales Act.

[The information follows:]

Fiscal year:	*Amount (in millions)*
1969	$296
1970	70
1971	700
1972	400
1973	400
Total	1,866

Admiral PEET. I can give you a ball park figure. From 1950 to 1972, the grand total was over $18 billion.

Mr. PASSMAN. That is good enough.

Military credit sales is $18 billion?

Mr. VON MARBOD. That is cash and credit together.

Mr. PASSMAN. Cash and credit. All right, cash and credit out of this appropriation?

Mr. VON MARBOD. Credit sales of $3.2 billion were covered between 1950 to 1972 from this appropriation. Countries have paid the United States directly for the cash sales during this period.

Mr. PASSMAN. What is the outstanding amount at this time?

Mr. VON MARBOD. There is——

Mr. PASSMAN. Under accounts payable?

Mr. VON MARBOD. I would like to provide that for the record.

Mr. PASSMAN. I must have something on it now, because you destroy the entire record if you do not give me the information requested. You are bound to have it.

Mr. VON MARBOD. Speaking to the $18 billion figure, Mr. Chairman, we have delivered or expended $12,566,900,000 through fiscal year 1972. Speaking to the FMS credit loan figure of $3.2 billion, we have received about $1.25 billion of repayments through fiscal year 1972.

Mr. PASSMAN. All right. Then the outstanding, in accounts payable, at this time is about——

Mr. VON MARBOD. About $5.6 billion, for the total, including almost $2 billion of FMS credit payments.

I would like to provide a precise number for the record.

[The information follows:]

About $5,579,617,000.

RECOUPMENT ON FOREIGN MILITARY SALES

Mr. PASSMAN. Subtract that, if you will. What is the difference?

Admiral PEET. It is over $5.6 billion.

Mr. YATES. Is that $5.6 million or billion?

Admiral PEET. Billion dollars.

Mr. PASSMAN. Let me make the record.

You have made military credit sales of $18 billion?

Mr. VON MARBOD. Cash and credit.

Mr. PASSMAN. Cash and credit against military sales?

Mr. VON MARBOD. Yes, sir, through fiscal 1972.

Mr. PASSMAN. Even though I hate to see this country manufacturing military equipment as a business and keep people thinking about wars, it follows nevertheless, of this $18 billion, under the law under which we are operating today, the manufacturers pay about 52 percent of their net profits into the U.S. Treasury in the way of income tax. So when this is delivered, they declare a profit, as it is paid in, they pay tax on that, do they not?

Mr. VON MARBOD. They do.

Mr. PASSMAN. So after all, of the $18 billion in sales, there is only $5.6 billion outstanding; so if you did not collect a dime of it, it certainly means that you had a net recoup out of cash and credit out of this one item of $12.4 billion; is that correct?

Mr. VON MARBOD. That is correct, Mr. Chairman.

Mr. PASSMAN. Could you state for the record at this point the nations that are indebted to us for the outstanding military sales? Could you do hat?

Mr. VON MARBOD. Mr. Chairman, as of today there are four countries in arrears for repayments of credit loans.

Mr. PASSMAN. I did not ask you that question.

I asked if you would place in the record at this point the amount of money, by country, which is owed to the U.S. Government representing the $5.6 billion outstanding; will you do that?

Mr. VON MARBOD. I will do that.

[The information follows:]

The following amounts by country represent the undelivered balances which are not necessarily the amounts due. These amounts will become due and payable as we need funds to make progress payments to the manufacturers and where delivery is made. Of the total, we had cash on hand from customers totalling $376.6 million and unexpended credit of $634.1 million for a total of $1,010.7 billion. This would decrease the total outstanding balance of $4.6 billion.

FMS undelivered balances by area and country as of June 30, 1972

Mr. PASSMAN. How many nations are presently delinquent and by amount.

Mr. VON MARBOD. Mr. Chairman, as of today four nations are delinquent, Chile, Ecuador, Paraguay, and Tunisia—for repayment of loans, while there may be cash customers which have not met individual billings precisely on time, these would not be classified in arrears in the same sense as overdue loan payments we are discussing today.

Mr. PASSMAN. For an aggregate of what?

Mr. VON MARBOD. $2,025,800 of overdue payments for funds loaned under the FMS credit appropriation.

Mr. PASSMAN. $2 million out of $5 billion?

Mr. VON MARBOD. Yes, Mr. Chairman.

STATUS OF MAJOR CREDIT ACCOUNTS

Mr. PASSMAN. All right, sir. Could you name the largest creditor we had at the peak of operation?

Admiral PEET. It is Israel by far.

Mr. PASSMAN. All right, Israel. What has been the total credits extended to Israel?

Mr. VON MARBOD. Mr. Chairman, the cumulative credits extended to Israel through fiscal year 1973 amount to ———.

Mr. PASSMAN. What has been the repayment on that amount?

Mr. YATES. Does he mean 1973 or 1972?

Mr. VON MARBOD. Through fiscal year 1973. We have consummated the fiscal year 1973 program with the Government of Israel.

Mr. PASSMAN. That is right, so you can include it, so you can get the grand total up to date.

Mr. VON MARBOD. Yes, sir.

Mr. PASSMAN. What have they repaid on this account?

Mr. VON MARBOD. If I may state it in terms of the credits outstanding, they amount to $1,216,100,000.

Mr. PASSMAN. By process of a little arithmetic, we get it, do we not? Our clerk likes to figure. What is the difference?

Mr. VON MARBOD. $193 million.

Mr. PASSMAN. They have paid $193 million cash on the account?

Mr. VON MARBOD. Yes, sir.

Mr. PASSMAN. And they are not in arrears at this time?

Mr. VON MARBOD. They are not.

Mr. PASSMAN. They are up to date?

Mr. VON MARBOD. They are up to date.

Mr. PASSMAN. Let's take, if we may, the next largest creditor.

Mr. YATES. Would it be possible to find out when that period was, Mr. Chairman?

Mr. PASSMAN. He gave it to us. Cumulative.

Mr. YATES. Beginning as of what time?

Mr. PASSMAN. If you will, place in the record the total sales by year, then you get the grand total, then place in there the repayments by year.

Mr. VON MARBOD. I will do that.

[The information follows:]

GOVERNMENT OF ISRAEL—TOTAL FMS CREDIT SALES AND REPAYMENTS BY FISCAL YEAR

[In millions]

Fiscal year—[1]	Amount of sale	Repayment	Outstanding balance
1963 and prior	$24.8	$4.1	$20.7
1965	11.5	3.5	28.7
1966	80.8	5.4	104.1
1967	6.3	12.3	98.1
1968	25.0	12.4	110.7
1969	85.0	14.5	181.2
1970	30.0	14.0	197.2
1971	545.0	30.1	712.1
1972	300.0	45.2	966.9
1973	300.0	50.8	1,216.1
1974		88.2	1,127.9

1982		87.0	281.6
1983		47.5	233.7
1984		32.5	201.2
1985		201.2	0
Total	1,408.4	1,408.4	0

[1] No activity for fiscal year 1964.

Mr. PASSMAN. Take the next largest creditor.

Mr. YATES. Mr. Chairman, I hate to interrupt your train of thought.

Mr. PASSMAN. You are not interrupting.

Mr. YATES. With respect to Israel, what is the first year?

Mr. PASSMAN. That is what we are requesting.

Mr. YATES. You are putting it in the record and I do not know what it is.

Mr. VON MARBOD. Fiscal year 1959, Mr. Yates.

Mr. YATES. Thank you.

Mr. PASSMAN. So it is 15 years old up to 1973. And they are up to date?

Mr. VON MARBOD. Yes, sir.

Mr. PASSMAN. Now the next largest creditor.

Mr. YATES. Mr. Chairman, off the record.

[Discussion off the record.]

Mr. PASSMAN. If you will, put all the facts in there.

I do want the record to show that this program is 22 years old and the aggregate sales have been $18 billion, $5.6 billion has been repaid, and there are four countries delinquent at this time for the small amount of $2 million.

Now, who is the next largest creditor? I believe we are establishing that the countries are responsible and pay their obligations—whether it is for canned fish or machineguns.

Mr. VON MARBOD. Germany is the next largest.

Mr. PASSMAN. Take Germany. What has been the total credit sales to Germany?

Mr. VON MARBOD. There have been no credit sales to Germany, Mr. Chairman.

Mr. PASSMAN. Then they are not a creditor.
Mr. VON MARBOD. There are cash sales to Germany of $5,102,051,000.
Mr. PASSMAN. It makes a good record and a good profit.
But let's get to the next creditor nation.
Admiral PEET. Turkey is another high creditor. They just started.
Mr. PASSMAN. Get into some that have some age on them.

SALES TO REPUBLIC OF CHINA

Mr. VON MARBOD. I believe I would refer you then, Mr. Chairman, to the Republic of China on Taiwan as a creditor under foreign military sales.
Mr. PASSMAN. What has been the total sales to the Republic of China?
Mr. VON MARBOD. Cash sales, Mr. Chairman?
Mr. PASSMAN. Total sales?
Mr. VON MARBOD. Total sales, $330,272,000 through fiscal year 1972, including $214.5 million of loans financed under FMS credit.
Mr. PASSMAN. What has been the repayment?
Mr. VON MARBOD. Repayments of loans Mr. Chairman, through fiscal year 1972, about $70 million, and they are current on both credit-financed and cash sales.
Mr. PASSMAN. Of the credit extended to them, they are current.
Mr. VON MARBOD. They are current, Mr. Chairman.
Mr. PASSMAN. I believe as we look at the record we are now borrowing money from the Republic of China. I think the largest amount we borrowed from them is $20 million, is that correct?
Mr. VON MARBOD. I don't know the answer to that question.
Mr. PASSMAN. Would you like to know the facts? Look at the record. Here it is. Let's just show that all people are not crooks. You will find it on page 87 of the Treasury bulletin of May 1973. I believe it shows we have been repaying on that loan but they did make us a loan of $20 million.
Mr. VON MARBOD. Thank you, Mr. Chairman.

MAP IN THAILAND

Mr. PASSMAN. Admiral, as was pointed out last year, Thailand's future budget request for military assistance will be considered in connection with the foreign aid appropriation bill instead of the Defense appropriation bill for fiscal 1974, is that correct?
Admiral PEET. Yes, sir.
Mr. PASSMAN. What are you requesting for Thailand?
Admiral PEET. In the MAP program?
Mr. VON MARBOD. For Thailand, Mr. Chairman, for fiscal year 1974 we are requesting $58,462,000 for material and supply operations. In addition to that, Mr. Chairman, we are asking for $1,500,000 for the training program for Thailand.
Mr. PASSMAN. If at some subsequent date it should be the policy of the Congress that we are going to change over to a loan basis, and you enter into a loan agreement to be repaid in dollars with Laos, Cam-

bodia, Korean, and Vietnam, then I would assume that that would include Thailand, would it not?

Mr. VON MARBOD. It would indeed, Mr. Chairman. As a matter of fact, for fiscal year 1974 we are estimating ———.

Mr. PASSMAN. That is fine, but I want to get these people on a loan basis altogether rather than on a grant basis. This is very embarrassing, but we might as well keep the record straight. We went out to Thailand and borrowed $100 million from Thailand at 6 percent interest to be repaid in 4½ years, and that money falls due on July 2, isn't that correct?

I want to ask this question of our friend here who is the counsel. Would you get the committee a little report and place it in the record as to what the United States is going to do on this $100 million loan due Thailand on July 2, whether we are going to be able to repay it taking into account what happened to the dollar today. It went to an all-time low and went all to pieces in Europe. Will you get us that report?

Mr. FORMAN. Yes, sir.

[The information follows:]

On December 31, 1968, $100 million in nonmarketable treasury bonds and notes were purchased by the RTG. These bonds paid 6 percent interest with a 4½ year repayment period beginning on July 2, 1973. On that date, the U.S. Government will begin repayment. We have no indication to date that the Thai Government will renew these bonds and we can foresee no circumstances under which we would not maintain the repayment schedule.

U.S. INVESTMENT IN KOREA AND VIETMAN

Mr. PASSMAN. Would you supply for the record an up-date of the tables appearing in the House Appropriations Report of last year on pages 4 and 5 showing the very large investment we have made in Korea and Vietnam, including the estimates for fiscal year 1973?

Mr. VON MARBOD. We will be happy to, Mr. Chairman.

[The information follows:]

U.S. investment in Korea

	Billions
Estimated Korea war costs DOD (fiscal years 1950–51)	$18.0
Cost of maintaining U.S. military forces in Korea (fiscal years 1954–72)	9.8
Military assistance grant aid (fiscal years 1950–72)	3.5
Economic assistance programs (fiscal years 1946–72)	5.6
Total	36.9

U.S. military casualties in the Korean war

Died from hostile causes	33,629
Died from nonhostile causes	20,617
Total deaths	54,246
Wounded or injured, nonfatal	103,284
Wounded or injured, fatal (added to deaths)	2,501
Total wounded	105,785
Missing in action	5,866
Captured or interned	7,140

99-614 O - 73 - pt. 1 - 65

U.S. investment in Vietnam (outlays full costs)

	Billions
Estimated Vietnam war costs DOD (fiscal years 1965–73) (Includes MASF program)	$135.5
Economic assistance programs (fiscal years 1962–72)	4.6
Military assistance program (fiscal years 1962–65) (Funded Under Foreign Assistance Act)	0.9
Total	141.0

U.S. military casualties in connection with the Vietnam conflict

(January 1, 1961 through July 28, 1973)

Died from hostile causes	46,079
Died from nonhostile causes	10,309
Total deaths	56,388
Wounded or injured, nonfatal	303,653
Wounded or injured fatal (added to deaths)	5,164
Total wounded	308,817
Unaccounted for	1,249

Estimated outlays (full cost basis)

Fiscal year:	Billions
1969	$28.8
1970	23.1
1971	14.7
1972	9.4
1973 (estimate)	7.0

NOTE.—The narrative in the middle of page 5 of the committee report should reflect a reduction in U.S. forces in Vietnam from a high of 543,500 down to a level of 206 as of May 31, 1973. Of this number, 156 are Marine Corps guards for the U.S. Embassy in Saigon, and 50 are assigned to the Defense Attaché Office of the Embassy.

U.S. TROOP REDUCTIONS OVERSEAS

Mr. PASSMAN. Is it not true that the funds requested for security assistance are needed to implement the Nixon doctrine, which is aimed at reducing direct U.S. involvements overseas, and which requires our allies to assume a greater role in providing for their own security? I mean the Nixon doctrine when fully implemented will mean bringing all of our boys home from that part of the world, is that correct?

Admiral PEET. Yes, sir.

Mr. PASSMAN. As I read the record in 1969 we had 543,000 U.S. troops in South Vietnam, and today we are down to zero, is that correct?

Admiral PEET. Yes, sir.

Mr. PASSMAN. As I read the record, I believe that the costs of the war in 1969, with all the involvement in Vietnam was running $29 billion a year, and under the present projections the maximum military aid, would be in the range of $2 billion?

Mr. VON MARBOD. That is correct.

Mr. PASSMAN. Could you tell the committee what other troop reductions have taken place since the implementation of the Nixon doctrine by country and numbers. Could you place that in the record if you don't have it immediately available?

Mr. VON MARBOD. Yes; it was 20,000 in Korea.

[The information follows:]

Reductions in Numbers of U.S. Military Personnel by Country in Western Pacific Area Other than South Vietnam

June 30, 1969 to December 31, 1972 [1]

Country:	*Thousands*
Thailand	5
Japan (including Ryukyu Islands)	21
Philippines	12
South Korea	23

[1] Includes personnel both in-country and afloat offshore.

NIXON DOCTRINE BENEFITS TAXPAYER

Mr. PASSMAN. Could you please tell the committee what savings have accrued to the American taxpayers as a result of the Nixon doctrine?

Mr. VON MARBOD. In the case of Korea, Mr. Chairman, there have been savings realized as reported in last year's record of $100 million a year.

Mr. PASSMAN. Net savings?

Mr. VON MARBOD. Yes, sir.

Mr. PASSMAN. Over and above expenditures?

Mr. VON MARBOD. Yes, sir.

VIETNAM PEACE AGREEMENT VIOLATIONS

Mr. PASSMAN. We established earlier for the record, and I would like to have you verify it, that the cost of the Vietnam conflict from start to conclusion I guess in January, is $136 billion. That is the estimate we got. That is a tremendous amount of money. I believe the lives lost from start to finish are 56,000.

Admiral PEET. Yes, sir.

Mr. PASSMAN. And the casualties around 308,000. I think we would all appreciate a word from you at this time, since I know you do stay completely up to date every day on the movements in that area, about the violations in Vietnam as such. Have they slowed down in the last few days?

Admiral PEET. ———.

[Discussion off the record.]

FUNDING FOR TURKEY, JORDAN, ETHIOPIA, AND TUNISIA

Mr. PASSMAN. I yield to Mr. Roybal.

Mr. ROYBAL. I want to go into another phase of this thing altogether.

Mr. PASSMAN. Do you want to wait until we get to that?

Mr. ROYBAL. Whatever you say.

Mr. PASSMAN. I yield to Mr. Roybal.

Mr. ROYBAL. I would like to inquire with regard to the amounts of money that are being made available to Turkey and Jordan, Ethiopia and Tunisia. Can the amounts broken down as to what each individual country will be getting?

Admiral PEET. Yes, sir, we have that in the CPD and will provide it for the record, if you like.

Mr. ROYBAL. I would like to have that in the record.

[The information follows:]

[In thousands of dollars]

	MAP	International military education and training program	FMS credit
Turkey	85,501	2,499	75,000
Jordan	35,632	468	
Ethiopia	10,454	796	
Tunisia	2,476	324	2,500

LATIN AMERICAN COUNTRY PROGRAMS

Mr. ROYBAL. Insofar as Latin America is concerned you have $9.5 million and also moneys for Spain and Portugal in the amount of $3.3 million. Do we have a breakdown with regard to countries in Latin America?

Admiral PEET. Yes, we do.

Mr. ROYBAL. Can you tell me which of the Latin American countries will be receiving the most money?

Admiral PEET. I believe Bolivia receives the most. The program proposed this year amounts to close to $4 million. That is in the grant program. With respect to credit, we are thinking in terms of about $4 million for Bolivia.

Mr. ROYBAL. Why is it necessary to have that much for Bolivia? Are they more in trouble than usual?

Admiral PEET. There is a very unstable situation in Bolivia as you know and we are trying to help stabilize it.

Mr. ROYBAL. Isn't it internal?

Admiral PEET. Most of it is internal. As far as Bolivia is concerned we are primarily concerned about internal stability.

Mr. ROYBAL. But they don't really have border problems, do they?

Admiral PEET. Yes, some.

Mr. ROYBAL. What country?

Admiral PEET. Most of them do——

Mr. ROYBAL. One Latin American country invading the other?

Admiral PEET. They have a great history of that. They are concerned. Whether we believe it or not they believe they do have a problem along that line.

Mr. ROYBAL. So we make available the moneys necessary for them to perpetuate their belief that they are being invaded?

Admiral PEET. No.

Mr. LONG. We build up both sides.

Admiral PEET. No, we don't provide equipment except that which we feel can be used for their internal stability.

MILITARY TRAINING PROGRAM IN BOLIVIA

Mr. ROYBAL. We do provide military training for them, do we not?

Admiral PEET. Yes, we do.

Mr. ROYBAL. How much will it be costing us to train Bolivians in the United States?

Admiral PEET. We have broken down what we propose for training by countries too. The training program we are proposing for Bolivia in fiscal year 1974 amounts to $454,000.

Mr. ROYBAL. For training?

Admiral PEET. Yes, sir; for Bolivia.

Mr. ROYBAL. As long as we have started with the training, can you also if you don't have it at the moment supply for the record the breakdown for Bolivia loans?

Admiral PEET. What we propose to do with that $454,000 for training and the FMS credits for fiscal year 1974? We will provide that for the record; yes, sir.

[The information follows:]

$454,000 PROVIDED FOR TRAINING

	Number	Cost (in thousands)
Student training in United States (number of students):		
Flying	5	$132
Operations	1	7
Maintenance	23	18
Logistics/administrative	4	3
Professional/specialist	14	42
Orientation	3	3
Total	50	205
Student training overseas (number of students):		
Operations	51	136
Communications	11	26
Maintenance	19	31
Logistics/administrative	11	21
Professional/specialist	2	4
Orientation	7	4
Total	101	222
Mobile training teams overseas (number of teams):		
Communications/electronics	1	2
Supply/maintenance	1	4
Personnel/administration	1	3
Other	2	9
Total	5	18
Field training, contractor technicians	3	4
Training aids, books, maps and publications		5
Total		454

Note: The $4,000,000 foreign military sales credit is for the purchase of ——.

Mr. ROYBAL. How many officers do you train with $454,000?

Admiral PEET. There will be 50 in the United States as proposed. Overseas there would be about 101.

Mr. ROYBAL. So there are 151 officers who are being trained?

Admiral PEET. No, we are training a total of 151 officers and enlisted men.

TRAINING FOR SOPHISTICATED WEAPONS

Mr. ROYBAL. These people who come to the United States are trained with sophisticated U.S. weapons, are they not?

Admiral PEET. It depends on what you mean by sophisticated. They are given basic training. They are given all types of training, whatever is needed.

Mr. ROYBAL. Do they get the same kind of training that a U.S. military man gets?

Admiral PEET. No, not necessarily.

Mr. ROYBAL. You mean they don't train them that way?

Admiral PEET. Some of it is similar.

Mr. ROYBAL. It seems to me that if they get proper military training that they are trained in sophisticated military weapons.

Admiral PEET. The word "sophisticated" is a relative term. What used to be sophisticated years ago is no longer sophisticated now. They have helicopters, armored personnel carriers, that sort of thing, which they are taught to operate and maintain.

Mr. ROYBAL. When you use the term "sophisticated weapons" what do you mean? Maybe I don't really understand the word.

Admiral PEET. It is a rather vague term. Many people call a F–4 a sophisticated weapon, or an F–5 aircraft a sophisticated weapon.

Mr. LONG. But not you, of course. These planes are just modern symbols.

Admiral PEET. It is relative. It just depends on what age you are living in.

Mr. LONG. Or what you are talking about.

Admiral PEET. I agree.

Mr. LONG. We were talking about Latin America, with primitive economies and primitive military systems.

Admiral PEET. I am not so sure that I would call Brazil and countries of that sort all that primitive. Would you, Dr. Long?

Mr. LONG. Militarily?

Admiral PEET. Yes.

Mr. LONG. Come on.

PURCHASE OF SOPHISTICATED WEAPONS

Mr. PASSMAN. This is a pertinent question, Mr. Roybal, on the subject of sophisticated weapons. You say an F–4 is a sophisticated weapon?

Admiral PEET. Yes, sir. In the past, we have considered an F–4 a sophisticated weapon.

Mr. PASSMAN. A sophisticated weapon today that becomes excess tomorrow is delivered to a nation as excess property, does it cease to be sophisticated?

Admiral PEET. No, I wouldn't say that.

Mr. ROYBAL. What I am trying to get at, Mr. Chairman, is what the term "sophisticated weapon" would mean. I say that it may not mean sophisticated weapon to the General of the Armies of the United States, but it sure is sophisticated to the general of a country in Latin America.

Admiral PEET. I agree that "sophisticated" is a relative term. What might be sophisticated for one of our recipient countries might not be sophisticated for another recipient.

Mr. ROYBAL. Who haven't had these weapons, whose men are trained in the United States in the use of these weapons, so when they do return then to Latin America, they, of course, will first of all demand that their country have those weapons in which they were trained.

Admiral PEET. We are faced with a special situation in Latin America. The countries feel they need certain equipment. They are going to

buy them whether we like it or not. They will either buy them from us or they will buy them from other countries in the world, and their purchases will include sophisticated equipments as you apparently understand sophisticated equipments.

The Latin American countries to which we refused to sell what we were defining at that time as sophisticated equipments, such as jet aircraft, bought large numbers of them from France.

Mr. ROYBAL. Of course they bought from France, and I was on the committee at that time that appropriated the money that made it possible for a Latin American country to buy Mirages from France. They bought them from France but we in turn lend the money almost to the penny to that Latin American country, so what actually did happen was that we supplied the cash that was necessary to make that purchase. I don't want to argumentive on this point, but what I wanted to establish was your definition of a sophisticated weapon, and whether or not looking at this from the standpoint of the Latin Americans they were, in fact, receiving from us sophisticated weaponry. In your opinion are they getting sophisticated weapons insofar as they are concerned?

Admiral PEET. It depends on the country concerned. It is on a case-by-case basis. As I understand your definition of sophisticated weapons, yes. This is a subject that we in Government debate here, and State decides whether or not they are sophisticated for a particular country and whether that country should receive those weapons. That is not decided in the Department of Defense and we do not train them to use weapons that they do not have and are not programed to have.

RELATIONSHIP OF TRAINING TO SALES

Mr. ROYBAL. You bring them to West Point, don't you?

Admiral PEET. I imagine there are occasions where some come.

Mr. FORMAN. Not under this program.

Admiral PEET. I don't believe we do under this program.

Mr. ROYBAL. But they do come to West Point, that is officers in various Latin American countries and countries all over the world do come to West Point?

Admiral PEET. They probably do.

Mr. SHRIVER. Do they come for training? I don't know.

Mr. ROYBAL. They have in the past. They may not now.

Mr. PASSMAN. I believe Samosa from Nicaragua was trained under this program.

Mr. CONTE. Africans have been trained as well.

Admiral PEET. The various academies do have foreign students from time to time, in limited numbers, pursuant to special statutes, such as 10 U.S.C. 6957.

Mr. ROYBAL. What we do is train them militarily in the United States. Then we send them to their countries and after being trained with M–16 they are sure not going to be satisfied with the M–1 as an example. So they demand the M–16, and we give it to them. The M–1 is just as deadly as the M–16 if the target is right.

Admiral PEET. Yes, sir.

Mr. ROYBAL. But nevertheless we do give them that M–16 when they don't need it. We give them pursuit planes, we give them bombers.

Admiral PEET. We don't even give the M–16 promiscuously. There are many countries to which we deny M–16's.

Mr. ROYBAL. But there are many countries that you give them to.

Admiral PEET. Yes, sir; and we also sell them.

Mr. LONG. Sell the rifles for U.S. money that we loan countries to buy them with, isn't that right?

Admiral PEET. We sell them to some countries on a cash basis and, in one instance, on a credit basis.

FMS CREDIT ACCOUNTS

Mr. LONG. You have a large program in foreign military sales credit. You are selling materiel on credit; are you not?

Mr. SHRIVER. They pay it back.

Mr. LONG. You mean you hope they will pay it back someday. They haven't paid it back yet.

Admiral PEET. The record speaks for itself.

Mr. LONG. You mean they are paying it back, Garner, but they have not paid it back. There is a very great difference.

Mr. SHRIVER. They aren't in default.

Mr. PASSMAN. Would the gentleman yield? This argument could go on forever. You do yield?

Mr. ROYBAL. I yield.

Mr. PASSMAN. You could argue this from now on about what is good and what is bad, credit or cash, but I believe most of the business done in America is on credit, whether it is a department store, a food store, a corner store, banks, finance companies, financing automobiles or appliances. The country lives and thrives on credit, does it not? Is that just about the record?

Admiral PEET. I think it is, sir.

Mr. PASSMAN. This is a system under which we operate, not only domestically but on a national basis, on extending credits, and that is just a part of the system. If you are going to try to establish a record that everybody is a crook who borrows money or charges something down at a department store, we are in quite a mess. Thank you for yielding.

Mr. ROYBAL. There are how many countries then that are in arrears in their payments? There are four?

Admiral PEET. There are four.

Mr. ROYBAL. Will you tell me what countries they are again?

Admiral PEET. Ecuador, Chile.

Mr. ROYBAL. Those are Latin American countries?

Admiral PEET. Yes, also Paraguay and Tunisia.

Mr. ROYBAL. Of the four, three are Latin American countries?

Admiral PEET. Yes.

Mr. LONG. I thought you mentioned Peru as one of them before.

Admiral PEET. I didn't mention Peru.

Mr. ROYBAL. Are we making available any of these sophisticated or nonsophisticated weapons to those countries that are now in arrears?

Admiral PEET. We will check each one for the record. I don't believe we are, but I am not all that positive.

Mr. ROYBAL. I think the committee would like to know whether or not these countries are going to be receiving any of these moneys.

Admiral PEET. Let me also point out that for even these arrearages that amount to about $2 million, there is room for debate. We are in the midst of negotiating with the countries whether they are in actual arrearage.

Mr. ROYBAL. I yield to Mr. Long.

Admiral PEET. As has been pointed out, in the Tunisian case, they paid back all the principal. We are arguing whether or not they have given us enough interest.

Mr. ROYBAL. The truth of the matter is that they are in arrears whether it is just a matter of a small amount on the principal or not.

Admiral PEET. I want to be sure I am fair about it. If any department store had arrearages as small as those we are talking about, they would be ecstatic.

Mr. ROYBAL. I yield to Congressman Long and I have one other question to ask before I conclude.

FMS TO ECONOMICALLY POOR COUNTRIES

Mr. LONG. On the question of whether they have paid this money back, of course I maintain you haven't gotten it back until you have gotten it all back with interest. Whether that will happen, only time will tell. I know a little bit about economic history. There I am not as optimistic as my colleague, the chairman, is. Let me point out that here—for Latin America—we have something like $61 million for fiscal 1972 from foreign military sales credit, $59 million for fiscal 1973, and $150 million proposed for fiscal 1974.

We are selling to poor countries. Some of these countries are desperately poor. It makes you weak when you go up into the hills of Colombia, Guatemala, and see how poor these people are. We are supposed to be trying to develop their economies, to educate the people, to make them better off. And instead we are selling them military goods which they will have to pay for some day. And this military equipment does not create any productive capacity out of which that repayment can be made. Thus we are diverting resources from economic development, from education, from health.

Admiral PEET. Yes, sir.

Mr. LONG. Into military expenditures not only now but in the future, because they are going to have to pay for the goods in the long run.

Admiral PEET. Yes, sir.

Mr. LONG. In fact these countries have had a hard time even building up the productive base to repay loans that were made for economic development purposes, let alone for military purposes.

Admiral PEET. Yes, sir.

Mr. LONG. And this is a very large sum. As Mr. Roybal has pointed out, it is pretty hard to justify these loans from the standpoint of an external threat. Of course you are arguing that these countries are afraid of each other, isn't that right?

Admiral PEET. There is some of that, yes, sir.

Mr. LONG. What else are they afraid of if not each other?

Admiral PEET. Dr. Long, if I had my preference as to whether they get economic or military loans there is no question but that I would give them economic loans. However, the choice is not always ours.

Mr. LONG. The big point I want to get at is why are we giving them military loans with which to frighten each other?

Mr. VON MARBOD. Dr. Long, for fiscal year 1974 we are proposing a $150 million foreign military credit sales program for 12 Latin American nations.

Mr. LONG. Which is almost three times what it was in this current fiscal year.

LATIN AMERICAN FMS PROGRAM

Mr. VON MARBOD. This program is intended to help those countries upgrade their military equipment, much of which is of World War II vintage. The equipment is exceedingly expensive, if not impossible, to maintain. In the majority of cases, it is more economical to replace this equipment.

The major portion of the total fiscal year 1974 credit sales program for the region, $128 million—or about 85 percent of the $150 million total—is planned for five countries: Argentina, $22.5 million; Brazil, $56 million; Colombia, $15 million; Peru, $20 million; and Venezuela, $15 million.

Funds for Peru are contingent upon lifting the suspension imposed by section 3(b) of the Foreign Military Sales Act.

Mr. PASSMAN. Will you yield? I believe you have used 17 minutes of the 5 minutes.

Mr. LONG. When do we get to the point where we can ask regular questions? We are going to be here the rest of the afternoon.

Mr. PASSMAN. We are going to be here for 2 weeks on this bill. I want to be courteous.

Mr. LONG. It is very frustrating to try to get a point in the record——

Mr. PASSMAN. Each person must wait his turn.

Now, Mr. Roybal?

Mr. ROYBAL. We have a vote on the floor, Mr. Chairman.

Mr. PASSMAN. You proceed.

Mr. ROYBAL. I want a breakdown also on Spain and Portugal. Why is it they need $3.3 million and for what purpose is that amount going to be used?

Admiral PEET. We can give you a breakdown as to what it is used for. Base negotiations concerning Portugal, the Azores and Spain are involved.

[The information follows:]

MILITARY ASSISTANCE TO SPAIN AND PORTUGAL

U.S. military assistance in fiscal year 1974 is being provided to Spain as part of the quid pro quo called for under the 1970 Agreement of Friendship and Cooperation. This agreement, which provided for a total of $26 million in U.S. millitary assistance over a 5-year period, enables us to utilize important military bases and facilities in Spain until September 1975, at which time a 5-year renewal of the agreement may be negotiated. Past and current U.S. military assistance on the $26 million commitment is as follows:

	Millions
Fiscal year 1972 (actual)	$11.2
Fiscal year 1973 (actual)	9.9
Fiscal year 1974 (proposed)	3.3
Total	24.4

The balance ($1.6 million) to be provided in fiscal years 1975 and 1976, will terminate the U.S. commitment under the 1970 Agreement of Friendship and Cooperation. The $3.3 million in fiscal year 1974 is primarily to pay for aircraft

spares, vehicles, weapons, ammunition and communication equipment to permit some Spanish force modernization, and contributes to the military security assistance objective of closer Spanish association with Western security interests. The major share of equipment provided to Spain under the fiscal year 1972 and fiscal year 1973 military security assistance programs assisted in modernizing the Spanish Army and consisted primarily of tanks, APC's artillery, and related communication equipment.

The equipment and training we will provide to Portugal in fiscal year 1974, all of which is oriented toward Portugal's NATO-related mission in ASW and air defense, strengthens Portuguese ties to NATO. U.S. military assistance over the last several years helped maintain contact with the Portuguese military during a period when there was no formal agreement for basing rights in the Azores. ——— a fact which continues to make the small annual military assistance for Portugal important.

Mr. ROYBAL. Sometime I would like to be able to understand the philosophy behind the statement that if they do not buy it from us, they are going to buy it someplace else.

Admiral PEET. We can give you the history on that.

Mr. ROYBAL. I wish you would.

Admiral PEET. We are not the biggest seller in Latin America. We rate third in Latin America behind England and France. They both sell more in Latin America than we do.

Mr. ROYBAL. They have pursuit planes and others, yet they have no one to pursue. Why do they need them?

Admiral PEET. We have been very careful to make sure we do not unbalance or destabilize the situation in Latin America. The State Department controls me completely in regard to what we can sell.

Mr. PASSMAN. Could you delay just a moment?

Mr. ROYBAL. I am through.

INTERNATIONAL COOPERATION IN ARMS SALES

Mr. PASSMAN. Admiral, how many nations manufacture military equipemnt that could be sold to other nations?

Admiral PEET. A considerable number.

Mr. PASSMAN. How many?

Admiral PEET. Practically all the European countries.

Mr. PASSMAN. You are talking about 15, are you not?

Admiral PEET. Closer to 30, I would say.

Mr. PASSMAN. All right, 30.

Have you ever made an attempt to reach an agreement with these countries that manufacture military equipment that they would not sell to these underdeveloped countries military equipment?

Because I see the point very clearly, if we do not sell them equipment some other nation will sell it to them.

Admiral PEET. Yes, sir.

Mr. PASSMAN. All we are doing is giving grant aid to the Latin American countries; they in turn use their resources to buy military equipment.

I support what I thought was Mr. Roybal's position and for that matter Dr. Long's and other members of this subcommittee, that these nations are just not able to have these expensive military complexes, and unless we can get an agreement with the other nations who manufacture and sell them equipment, it simply means from here on until the end of time we will be giving them economic aid, then they take their resources and buy military aid.

There should be some way of bringing it under control. Is there any food for thought in that suggestion?

Admiral PEET. I would think that there is.

Mr. PASSMAN. Because what benefit do we get actually as a nation out of providing military equipment either on a sales or a grant-aid basis to Latin America?

Admiral PEET. We are trying to stabilize the situation. Certainly if there is no stability in a country, you are not going to make any progress.

Mr. PASSMAN. Is the military for stability within the country?

Admiral PEET. Yes.

Mr. PASSMAN. They do not need the type of airplanes we had suggested or battleships or destroyers to maintain stability, do they?

Admiral PEET. We are very careful about selling in that area.

Mr. PASSMAN. The facts are, if we do not sell them some other nation will?

Admiral PEET. That has happened before, particularly in Latin America.

Mr. PASSMAN. It is perfectly obvious if we give them economic aid, they take their resources and buy the equipment; is that true?

Admiral PEET. I can insert a detailed answere in the record.

Mr. PASSMAN. That is true?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Gentlemen, let's recess until tomorrow at 1 o'clock. The committee is adjourned.

THURSDAY, MAY 31, 1973.

Mr. PASSMAN. The committee will come to order.

Yesterday I mentioned, as I did last week, when we had the young man from the Treasury, that we had devalued the dollar by, I guess, 10 percent, in some instances more, since 1971, and that we were on the way to another crisis and I was somewhat ridiculed by him, almost directly. The handwriting was on the wall. So yesterday I mentioned to the committee that the bulletin had hit the air about the dollar having dropped to an all-time low, gold prices hit a record $113.25, the dollar nosedived to its lowest postwar rate at the Frankfurt Foreign Exchange when the Central Bank raised the discount rate, so on and so forth.

We all know there is something wrong, and pressure, personalities, lobbyists, and overselling just prevent many of the committees of Congress from facing up to their responsibility of doing something about it.

Mr. Secretary, you know as well as I do that this committee was unable to persuade a majority of Congress to cut out the aid to the so-called multinational organizations, where all the funds go out and nothing comes back and those requests skyrocketed and helped bring about this mess.

I do not know where we stand. But at least I can always point out for the record what is happening, just in hopes that somewhere along the way before it is too late, we will come to our senses. I believe I made this statement one time and had the witnesses agree: "You can drain the largest water tank in America one drop of water at a time if you just keep draining it, can you not?"

Admiral PEET. Yes.

Mr. PASSMAN. That is just what we are doing. We are two-bitting ourselves to death. There are so many programs. This one appears small and so does that one. But collectively we get into frightening expenditures, where the dollars go out and fewer of them come back.

PROTECTING OUR INVESTMENT IN ASIA

Yesterday, you may recall, Admiral, we expressed a desire to have with us, at least part of the time, Under Secretary of State for Security Assistance the Honorable Curtis W. Tarr and I welcome him here today.

If we go back to the beginning of the Vietnam conflict, or beginning with the conditions that built this into one of the longest, hottest, most expensive wars we ever had, we have to recognize that we spent $141 billion of our resources doing what all the Presidents, going back to President Eisenhower, Kennedy, Johnson, Nixon, said should be done. We sacrificed 56,000 of our precious youth in that conflict and had 308,000 casualties.

Again may I say, following the advice of all those great Presidents, all of the Secretaries of State, Under Secretaries, Secretaries of Defense, and all your great admirals and generals, we have a large investment there and unless we are willing to go that last 1 percent, then all of it will be down the drain.

If I live to be 100, I can never reconcile what the Congress did a few days ago by pulling the rug on Cambodia, because any man who is willing to face facts knows very well that every move that the President has made in connection with that conflict has been a wise move. So we did want you here to have the benefit of your thinking as we move along with the examination on the military portion of this bill, or security assistance, I believe it is captioned today.

DUTIES OF THE UNDER SECRETARY OF STATE FOR SECURITY ASSISTANCE

With the tolerance of the committee, I would like to ask the Secretary certain questions, then yield to the other members to do likewise, before I return to the policy that we have followed, and that is each member having all the time he requires to examine.

If we may, Mr. Secretary, since we did not request this of you last year, will you furnish a brief biography?

Mr. TARR. I will be happy to.

[The information follows:]

DR. CURTIS W. TARR SWORN IN AS UNDER SECRETARY OF STATE FOR SECURITY ASSISTANCE

Dr. Curtis W. Tarr of Arlington, Va., today was sworn in as Under Secretary of State for Security Assistance, a new position created this year under the Foreign Assistance Act.

In this position, Dr. Tarr will exercise the authority vested in the Secretary of State "for the continuous supervision and general direction of economic assistance and military assistance programs * * * to the end that such programs are effectively integrated both at home and abroad and the foreign policy of the United States is best served thereby." (FAA of 1961 as amended, section 622(c).) These programs included security supporting assistance (SA), military assistance (MAP), and foreign military sales (FMS). A small staff was recruited last year to assist in the carrying out of these responsibilities.

Dr. Tarr has been serving as Director of Selective Service since his appointment to that position in March of 1970.

Born September 18, 1924, in Stockton, Calif., Dr. Tarr entered Stanford University in 1942. His college education was interrupted by military service during World War II; for 18 months he was a technician in the U.S. Army on combat duty in Europe. He completed his B.A. in economics at Stanford in 1948 and continued at Harvard, earning a masters in business administration in 1950.

In 1950 Dr. Tarr became a research assistant and instructor at Harvard Graduate School of Business. He was named vice president of the Sierra Tractor & Equipment Co., in Chico, Calif., in 1952. He left that company in 1958 for graduate study at Stanford University. In 1962 he completed his Ph. D. in American history and became director of Stanford's summer session and assistant dean in its school of humanities and sciences.

Dr. Tarr assumed the presidency of Lawrence College at Appleton, Wis., in 1963. Under his leadership the college was consolidated with Milwaukee-Downer College to form Lawrence University in 1964. Dr. Tarr remained as president of Lawrence until he was appointed Assistant Secretary of the Air Force for Manpower and Reserve Affairs in June 1969. His previous experience in Government includes service as a staff member specializing in defense studies for the Second Hoover Commission in 1954–55, and as chairman of the Governor's Task Force on Local Government Finance and Organization for Wisconsin from 1967 to 1969.

Dr. Tarr holds the honorary degree of doctor of humane letters, conferred by Ripon College, Wis., in 1965 and by Grinnell College, Iowa, in 1969.

He is married to the former Elizabeth May Myers. They have two daughters, Pamela and Cynthia.

Mr. PASSMAN. Could you tell the committee just what your duties are and what your relationship is with the Defense Department concerning military assistance and sales under the MAP program?

Mr. TARR. Mr. Chairman, in our Foreign Assistance Act of 1961, as amended, the responsibilities of the Secretary of State are quite clear. The act says that the Secretary of State will determine whether there are programs in countries, and if there are programs under the act, the extent of those programs. The Secretary must make certain that these programs do not go counter to the foreign policy of the United States.

Until a short time ago, there was no organizational framework in the Department of State to make certain that the Secretary could comply fully with these requirements under the act. Moreover, the responsibility for doing so was vested in various parts of the Department. The Congress decided that it would be appropriate to establish in one office primary responsibility for the supervision of the security assistance program in the name of the Secretary. For that reason, the position of Under Secretary for Security Assistance was established in the foreign assistance legislation for fiscal year 1972.

I was appointed to the position a year ago. I have attemped to do just what the act requires. I try to determine, in concert with all of those interested agencies and bureaus of the Government whether there should be programs and, if there should be, their nature and scope.

Throughout the year, in all of the transactions that relate to security assistance, I try to determine very carefully whether the program conforms to the foreign policy of the United States.

Now, many people ask how specifically involved do you become in the program. The President has delegated to the Agency for International Development the requirements under the act that relate to supporting assistance as well as to development and technical assistance.

The President has delegated to the Department of Defense the administrative responsibilities for the MAP program and the foreign military sales program.

That means that I am not responsible on a daily basis for the administration of the act. And it also means that my relationships with

Vice Admiral Peet, who acts for the Department of Defense in the administration of his part of this program, and Mr. Nooter, in the Agency for International Development, must be very close.

We talk almost daily, some days almost hourly, on the telephone. I am frequently in the Department of Defense. Admiral Peet often is in the Department of State. Similarly, I work very closely with Mr. Nooter on supporting assistance matters.

Perhaps some specific examples would be helpful.

Vice Admiral Peet would not look to me for guidance if there were insignificant determinations, or judgments that had to be made about whether a few more dollars should go into ammunition or should go into parts for trucks. He has experts who study these problems in these countries and he comes up with decisions on his own.

On the other hand, sometimes we become involved in debates about what type of airplane is appropriate for a country, or whether there should be a sale of particular aircraft. Sometimes we become involved in whether tanks should be sold or, if we do sell them, what type of tank is appropriate. Or, whether armored personnel carriers go to a particular country. Then I am involved.

Mr. PASSMAN. Then you are charged with the direct responsibility for the security supporting assistance program as a civilian?

Mr. TARR. Yes, sir.

AIMING TOWARD SELF-SUFFICIENCY

Mr. PASSMAN. May I ask you this question, Mr. Secretary: It is my understanding, and this dates back to the beginning of the so-called foreign aid program, when U.S. foreign aid began to spread from its original concept in the so-called underdeveloped, now developing nations; the program was based on the premise that the developing nations will sooner or later become developed and be self-sufficient and make their contribution to the world of nations; is that your understanding?

Mr. TARR. Yes, in two different ways: as nations develop, they will not look to us for further grant support, but will take over the responsibility either——

Mr. PASSMAN. That was my question. A developing nation, if we had some assurance that they would and could never develop, then it would be absolutely pointless for us to be in there. We are in there, I would assume, to help underdeveloped nations start developing. We would hope that is still the goal. Is it?

Mr. TARR. It is still a hope; yes.

Mr. PASSMAN. It could be a hope, but is it the goal, to help these nations develop to where they would be self-sufficient?

Mr. TARR. Exactly.

AID ON A LOAN BASIS

Mr. PASSMAN. Upon that basis, if the nations that we refer to presently as developing nations, for instance Laos, Cambodia, South Vietnam, and Korea, to name a few, if they should be willing to accept all aid on a loan basis rather than on a grant basis, would you support that system?

Mr. TARR. I would if we thought there was a reasonable chance they could repay the loans.

Mr. PASSMAN. Who is going to make that decision, the President of the country or some Washington bureaucrat?

My question is, if the Presidents of those nations say, "We have accepted your generosity on the grant-aid basis previously, we are now willing to move in and accept your aid, both military and economic, on a concessionary loan basis," would you support that?

Mr. TARR. There are some nations in which I would be hesitant.

Mr. PASSMAN. Why?

Mr. TARR. Because the leadership in the country realizes that it will have responsibility for a limited time, but beyond that, whatever obligations it incurs become the responsibility of someone else.

Mr. PASSMAN. Is it not so that your opinion only lasts as long as you are in this position?

Mr. TARR. That is right.

Mr. PASSMAN. Off the record.

[Discussion off the record.]

Mr. PASSMAN. Back on the record.

ADMINISTRATION OF INDOCHINA RECONSTRUCTION

Now, the military assistance and sales programs are administered by the Defense Department; is that correct?

Mr. TARR. Administered by the Defense Department.

Mr. PASSMAN. By the Defense Department. The security supporting asistance which is grant-aid is administered by Dr. Hannah's shop?

Mr. TARR. That is true.

Mr. PASSMAN. Your job is to coordinate these programs through the State Department; is that correct?

Mr. TARR. That is true.

Mr. PASSMAN. Do you tell the Defense Department which countries should be funded and in what amounts?

Mr. TARR. That is true.

Mr. PASSMAN. After consultation with, I would assume, the Secretary of State and the ambassadors from those nations?

Mr. TARR. And the interested geographic bureaus in the Department of State.

Mr. PASSMAN. Now, what agency will be responsible for administering the Indochina postwar reconstruction program if we should ever have such a program?

Mr. TARR. The administration will be in the Agency for International Development.

Mr. PASSMAN. Do you present plans call for the Agency for International Development to administer the program?

Mr. TARR. Yes.

ADDITIONAL DUTIES OF THE UNDER SECRETARY FOR SECURITY ASSISTANCE

Mr. PASSMAN. Mr. Shriver, do you want to question the Secretary?

Mr. SHRIVER. Yes.

You sort of explained what your responsibilities are.

Mr. PASSMAN. My apologies, I thought he had finished. He spent 8 minutes on it. Let's pick up where you left off.

Mr. SHRIVER. Do you have any further responsibilities than those enumerated in your 8-minute dissertation?

Mr. TARR. Mr. Shriver, I have other responsibilities in the Department.

Mr. SHRIVER. That is what I meant.

Mr. TARR. Which are assigned to me by the Secretary.

On a temporary basis, I am now handling the problems that Mr. Macomber formerly handled before he went to Turkey. I am doing this only on an acting basis with the understanding that it is not a permanent arrangement. I do not know how long I will have this responsibility. From time to time, the Secretary also asks me to look at other things simply because he feels that I might have some qualifications to do them. They are usually of short duration.

The understanding that I have had with the Secretary and with the Deputy Secretary is that my responsibilities in security assistance are my primary responsibilities and they have the primary demands on my time.

INTERNATIONAL LIMITATION OF ARMS SALES

Mr. SHRIVER. Mr. Tarr, in all of the discussions between our Government, our allies and the Soviet Union, do you know of any indication or action toward eventually limiting the volume of arms sales and grants to the developing nations?

Mr. TARR. No.

Mr. SHRIVER. Has there been any conversation about this?

Mr. TARR. I know nothing of this at this point. I think that——

Mr. SHRIVER. Do you think that would be a good idea?

Mr. TARR. I think eventually it is a natural extension of our whole activity in the area of SALT, on the one hand, and the MBFR discussions on the other.

Mr. SHRIVER. We were talking here yesterday about some of the developing nations needing to put their funds into education or people programs; they are asking us to put economic assistance into those countries and using their own funds or other funds to buy U.S. or some other nation's armaments. It just seems ridiculous for them to build up unneeded forces.

Mr. TARR. Mr. Shriver, I feel very strongly that if money is not needed for armaments, it is wasted regardless of the resources of the country. There are so many things that need to be done in every country that we ought to do what we can to limit these expenditures.

Mr. SHRIVER. Maybe the discussion should not be with those developing countries, but with the powers that supply the armaments.

Mr. TARR. I think one of the difficulties of trying to carry out this kind of discussion with the Soviet Union is that obviously there are many people, many countries who are able to take it upon themselves to supply these arms. The Soviet Union, for instance, could not speak for all of the countries behind the Iron Curtain.

Mr. SHRIVER. No, I know. There are a lot of countries that participate in sales.

Admiral PEET. Also, it is very difficult for us to barter, as the Soviets do.

U.S. MILITARY ASSISTANCE PERSONNEL OVERSEAS

Mr. SHRIVER. The justifications show authorized military assistance personnel in countries in which we do not have military assistance programs, such as Japan, Denmark, Italy, Netherlands, Norway. We have

99-614 O - 73 - pt. 1 - 66

125 U.S. military assistance personnel in Saudi Arabia where we have only a sales program. What are all those people doing?

Mr. TARR. I think that you will find that——

Mr. SHRIVER. Are they acting as sales agents for military equipment?

Mr. TARR. Not as sales agents, but they certainly are involved in some of the work that nations naturally expect from us, as a result of sales programs. I think the responsibility for the sale itself is clearly placed on the manufacturer.

Admiral PEET. May I talk to that point for a minute? When I assumed this job about a year ago, I had heard that comment. So I proceeded to audit the countries, most of them which you have mentioned, and others. I looked at it from our point of view, from the Ambassador's point of view, from the CINC's point of view, and from the individual country's point of view.

I examined this matter in detail. I found in every case, particularly those involving the mini-MAAG's in Northern Europe, that the Ambassador felt it in the best interest of the United States to maintain their presence. The four or five people stationed in these individual countries serve a very useful purpose, from a sales point of view, as well as in monitoring the use of items we have already delivered, as the Congress has charged us to do.

We talked to the officials of individual countries at very high levels. They all insisted that maintaining these people in these countries was still a good idea.

The CINC, who needs representation in each of these countries——

Mr. SHRIVER. Instead of using the jargon of the Penatgon, what do you refer to as CINC?

Admiral PEET. "CINC" refers to the Commander in Chief, which would be General Goodpaster in the European area, and Admiral Gayler in the Pacific area for example, who are responsible for our military representation, and for looking after our military interests.

Mr. SHRIVER. Thank you.

Admiral PEET. Then, of course, our own interest in the continuing presence of such groups is overwhelming. I have difficulty finding objection on the part of anybody who has any degree of responsibility in these countries.

Mr. SHRIVER. I think that needs to be clarified; that is why I asked the question.

Admiral PEET. Yes, sir.

Mr. SHRIVER. I think I have used up my 5 minutes, though, Mr. Chairman.

Mr. PASSMAN. Thank you, Mr. Shriver.

DEBATE ON COMMITTEE FIVE-MINUTE RULE

We have returned to the 5-minute rule, Dr. Long.

Mr. LONG. Are we ever going to get away from the 5-minute rule? I do not want to ask any questions. I have had my questions under the 5-minute rule. I want to be in a position of asking questions without having the Chairman pounce on me whenever I make a good point.

Mr. PASSMAN. Let's straighten the record out.

We were under the 5-minute rule yesterday; when we yielded to you 5 minutes, you used 12.

Mr. LONG. Yes.

Mr. PASSMAN. Then I yielded to the gentleman from California and you used 17 minutes.

Mr. LONG. I am not objecting——

Mr. PASSMAN. I would like to yield you 5 minutes at this time to question Secretary Tarr.

Mr. LONG. Could you tell me when I will be allowed to speak? I do not want to ask questions now.

Mr. PASSMAN. I should say we all have to be patient but we will get around to everybody. We returned this morning to the 5-minute rule because of Mr. Tarr.

Mr. LONG. So I will not get a chance to ask any questions this afternoon except under the 5-minute rule, is that right?

Mr. PASSMAN. I don't know how long we will run today.

Mr. LONG. I am willing to wait.

Mr. PASSMAN. We have to learn not to be impatient.

Mr. LONG. I have a lot in common with the chairman.

Mr. PASSMAN. We brought the Under Secretary in, and as a matter of courtesy, since he was not here yesterday, we thought we would return to the 5-minute rule.

Mr. LONG. Perfectly all right.

Mr. PASSMAN. Since you have no questions now, I yield to Mr. Miller.

ASSISTANCE HELPS U.S. BALANCE OF PAYMENTS

Mr. MILLER. I just had one question, Mr. Chairman. It is concerning the testimony yesterday where we state that these credits not only offer friendly and allied nations a direct source of funds to strengthen their defensive capabilities, but also provide a means of enhancing U.S. exports and improving the U.S. balance-of-payments position.

I am wondering, while the Secretary is here, along with the Admiral, if we could verify that. If we are going to furnish the funds that will be producing the material, whatever it may be, that will be shipped to another nation, how would that improve our U.S. balance-of-payments position?

Mr. TARR. If I may attempt an answer to that, I would like to start from a little different point of view and say that the primary reason for our doing this is not to enhance our balance of payments; our primary reason for doing this is to provide our friends and allies with the material that they think they need to provide for their security insofar as that is in our interest.

Now the way in which it does have an effect on the balance of payments is that when we provide funds for credit, the material is purchased in this country and it is exported abroad. Immediately there is no effect. Ultimately there is, when the loan is repaid. When the loan is repaid, then dollars in the hand of foreign nations are brought back to the United States.

Mr. MILLER. What is the length of time of the loans?

Mr. TARR. The maximum at the present time is 10 years.

Mr. MILLER. Thank you, Mr. Chairman.

Mr. PASSMAN. Thank you.

Of course, the same answer would apply to any of the lending agencies, whether it is Export-Import Bank or your Development Loan Fund or the new proposal where everything switches over to a loan rather than a grant basis; if and when these payments are finally paid,

it will affect the balance-of-payments situation, whereas on a grant basis there is no way that it can help, is that right?

Mr. TARR. That is right.

Admiral PEET. But it does not hurt it.

Mr. PASSMAN. What?

Admiral PEET. It does not hurt it either.

Mr. PASSMAN. Of course it hurts it; if you look at the public debt, we are pricing ourselves out of the world market.

Admiral PEET. I was referring to the fact that the dollars do not go abroad, they are spent in the United States.

Mr. PASSMAN. But when the ships go to sea loaded with our goods, the bills go down to the U.S. Treasury, you understand.

Admiral PEET. Yes, sir.

Mr. PASSMAN. What you do is create inflation, run the public debt up, so it is bound to have its effect. Otherwise, you could just triple foreign aid and become more prosperous and then triple it again. So we killed your argument 25 years ago and they agreed not to use it any more. It is all right, you have a right to reinstate it. The more you give away, the more prosperous we would be if your theory held up. But it does not do it.

Let's take a little recess and vote.

[Recess.]

Mr. PASSMAN. The committee will come to order. Mr. Bevill?

Mr. BEVILL. Thank you, Mr. Chairman.

COORDINATION OF AID

Mr. Secretary, I believe your office coordinates the efforts of the Agency for International Development and Admiral Peet's agency coordinates the Defense Security Assistance Agency?

Mr. TARR. I do with the Agency for International Development insofar as it is a supporting assistance program. But most of their activities are aside from security assistance.

Mr. BEVILL. I see. It is only that portion of the AID then that deals with security?

Mr. TARR. It is security assistance that I am concerned with.

Mr. BEVILL. Which would be very small?

Mr. TARR. Well, this year we are asking for only $100 million in supporting assistance. We are not sure whether the Indochina program will be enacted. If it is, that will add a considerable additional amount.

Mr. BEVILL. Is there someone in the State Department that does coordinate the balance of the AID program? AID, I guess, is an agency of the State Department.

Mr. TARR. Yes, it is. For the Secretary, the Under Secretary for Economic Affairs is concerned with the other programs of the Agency for International Development.

ROLE OF THE INTERNATIONAL BANKS

Mr. BEVILL. Is anyone in the State Department coordinating the efforts of these various international banks and international associations? We have six, I believe.

Mr. TARR. Yes, the Under Secretary for Economic Affairs, Mr. Casey.

Mr. BEVILL. Now the chairman mentioned the Export-Import Bank a moment ago. Now this Bank has actually played a very important role in reducing our balance-of-trade deficit, has it not?

Mr. TARR. Yes, sir.

Mr. BEVILL. In financing foreign sales.

Is there any effort in the State Department to try to direct more of this aid over to the Export Bank in the form of letting them borrow the money or getting the goods financed, rather than giving them to them?

Mr. TARR. That is the responsibility of Mr. Casey, although our areas in this respect do overlap.

Now, there are some limitations on the Export-Import Bank, on how much they can lend. But try to work with them on some of these matters, so that they need not——

Mr. BEVILL. But there is more effort being concentrated in that direction, in trying to get us away from this business of giving away, handing out checks and goods over the world?

Mr. TARR. Yes. It definitely is the policy of this administration to reduce the grant part of this program as quickly as we can.

Admiral PEET. I might speak to a point there.

We deal very closely, all of us, with the Export-Import Bank. It makes loans primarily to the developed countries. In providing credit pursuant to the Foreign Military Sales Act. we deal with the developing or the undeveloped countries.

Mr. BEVILL. I see.

Admiral PEET. Currently, we are involved with the Export-Import Bank in working out loans for Iran. General Toufanian, Vice Minister of War, is coming over here to be my guest.

Mr. BEVILL. Using that as an example, Admiral, if a loan is made to Iran by the Export-Import Bank, would the coordinating official there in the State Department be aware of that loan?

Mr. TARR. Yes.

Admiral PEET. We are aware of it. It is a direct deal between Iran and the Export-Import Bank, under the cognizance of Chairman Kearns.

Mr. TARR. But we necessarily have to take all of these factors into account.

Mr. BEVILL. Yes; but does the right hand know what the left hand is doing over there?

Mr. TARR. We certainly hope so.

Mr. BEVILL. I think it is commendable that you are coordinating these, and that you are headed in that direction, because as you can see, it is becoming more and more urgent as far as the taxpayers of this Nation are concerned.

Mr. TARR. No question about it.

Admiral PEET. We work with them during the budget planning stage in determining how much they should budget for loans to countries which participate in the military sales program.

Mr. TARR. One of the things we are trying to do more of, even before we are able to terminate all of our military assistance support,

which is grant support, we are trying to bring these countries along on a loan basis.

For instance, we did it last year with Turkey. We still give grant assistance to Turkey, but increasingly we are asking Turkey to borrow money to pay for these things. Increasingly we are asking the Koreans to borrow money to pay for its military needs. The Republic of China is now dependent entirely on its sales program.

Mr. BEVILL. Has my time expired, Mr. Chairman?

LOAN OBLIGATIONS OF SUCCEEDING GOVERNMENTS

Mr. PASSMAN. Thank you, Mr. Bevill.

I would assume that the President of the United States will continue to function as President, meeting with the leaders, making commitments, incurring obligations, under our system they will be respected until the end of time unless they are, by legislation, reversed; is that not the way we operate? Is that not the way all governments of the world operate, whether it is a dictator or an elected President, that he assumes the responsibility under oath of running the country and any obligation he incurs carries over to his successor?

Therefore, if the Presidents of the developing countries say, "You have been very generous, we are now willing to move over to a loan basis," why should you prejudge whether their successors will like or dislike that arrangement? It is not important whether they like or dislike it, as long as they got value received for it.

Whether you know it or not, the foreign aid bill is in trouble this year, very serious trouble.

On my opinion, if you are going to have a foreign aid program, it would be much better to place the U.S. assistance on a loan basis rather than just provide outright grants.

MILITARY ASSISTANCE FOR LATIN AMERICA

Yesterday we were discussing, Admiral, military assistance for the Latin American countries.

Admiral PEET. Yes, sir.

Mr. PASSMAN. I think we are all greatly worried about the situation that we find ourselves in. I think there are some 16 recipient nations of our military assistance program in Latin America; is that the correct number?

Admiral PEET. Yes, sir.

Mr. PASSMAN. These nations are sovereign nations. We cannot tell these nations how they are to dispose of their own resources, or what disposition they make of their foreign exchange.

I guess we woud have to accept that as a fact, would we not?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Is it just as true that if we do not sell them military equipment, that they are going to buy it from other nations?

Admiral PEET. The record shows that to be true, sir.

Mr. PASSMAN. Now, of course, that is frustrating, but the facts are, as we established yesterday, we give them economic grant aid, by the billions of dollars which releases to them their resources and foreign exchange to buy military equipment and pay cash where they want to; is that correct?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Now, could you provide for the record if you could. for a 10-year period, No. 1, our military sales by year—amounts now, not items.

Admiral PEET. Yes, sir.

Mr. PASSMAN. Let's say U.S. military assistance by year, whether it is grant or sales and by country.

Admiral PEET. We can do that.

(The information follows:)

VALUE OF FOREIGN MILITARY ASSISTANCE/FOREIGN MILITARY SALES TO SELECTED LATIN AMERICAN COUNTRIES 1950–72 (U.S. ONLY)

[In millions of U.S. dollars]

Recipient country	1950–69	1970	1971	1972	Cumulative total 1950–72	Cumulative total Including value of undelivered programs

Note: Totals may not add due to rounding.

REQUEST FOR MILITARY SALES AND ASSISTANCE TOTALS

Mr. PASSMAN. Do likewise for military sales and assistance from the other nations of the world for the same 10 years. Then the amount of economic aid, for the same 19 nations for the 10 years.

Now that is going to be quite an assignment.

Admiral PEET. Yes, sir.

Mr. PASSMAN. We want to include all spigots. If you can do that, that will give us information by which we could intelligently arrive at some conclusion as to what amount we should provide for Latin America.

[The information was provided to the committee and a portion of it follows:]

VALUE OF ECONOMIC AID TO SELECTED LATIN AMERICAN COUNTRIES 1962–72

[In millions of dollars]

	1962–65	1966	1967	1968	1969	1970	1971	1972	1962–72
Argentina	200.3	35.7	1.6	43.7	59.5	23.3	39.0	44.7	447.8
Bolivia	195.6	37.3	29.3	18.6	29.7	8.0	11.7	60.0	390.2
Brazil	960.5	345.9	270.0	347.3	57.1	217.2	192.6	322.3	2,712.9
Chile	512.1	111.4	238.1	96.3	80.3	26.3	8.6	9.0	1,082.1

Paraguay	34.0	14.8	5.0	6.3	16.5	8.1	12.6	4.9	102.2
Peru	217.2	42.5	33.0	18.5	22.9	16.9	19.5	75.3	445.8
Uruguay	34.1	6.8	3.5	36.0	4.0	19.4	6.5	10.1	120.4
Venezuela	186.8	9.2	33.6	66.2	4.5	16.2	14.7	43.8	375.0
Total									9,468.7

Mr. PASSMAN. There just seems to be some type of feeling in the Congress that everything should go to Latin America and never deny them anything they ask for. But with that chart, then we would be able to maybe arrive at some conclusion later.

UTILIZATION OF PUBLIC LAW 480 FUNDS

Admiral, I believe under section 104(c) of Public Law 480, you are able to utilize the local currencies for common defense purposes.

Adimral PEET. Yes, sir, there is a provision that permits us to do so.

Mr. PASSMAN. Are you exercising your right under that provision to utilize these funds?

Admiral PEET. In a few cases, we are: Korea is an example.

Mr. PASSMAN. Then the amount is limited, is it not?

Admiral PEET. It is an AID-administered program.

Mr. PASSMAN. I know, but it still can be used in the military, can it not?

Admiral PEET. Yes; it can, for budget support, and it has been in Korea.

Mr. PASSMAN. We know that, but that is another part that does not show up on your request.

Admiral PEET. You are absolutely right.

Mr. PASSMAN. Is that correct?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Since you utilize it, and it is in your shop to be utilized, we would like to know the amount if we could.

Admiral PEET. Yes, sir.

Mr. PASSMAN. Do you have it, Mr. Comptroller?

Mr. VON MARBOD. No, sir, I do not.

Admiral PEET. I do not think we have that right here. We will provide it for the record if we may, sir.

Mr. PASSMAN. All right.

I wish, if you would, provide for the record a list showing each country and the amount under this section.

[The information follows:]

LOCAL CURRENCY USES UNDER SECTION 104c OF PUBLIC LAW 480

Up until 1971, Public Law 480 sales agreements signed with Korea provided for grants of a portion of won proceeds for military budget support under section 104(c) of the act. Agreements signed with Korea in 1972–73, however, do not provide for any 104(c) grants nor is it anticipated that such grants will be included in any future Public Law 480 sales agreements with Korea. Only two countries—Cambodia and Vietnam—now receive 104(c) grants. Public Law 480 sales agreements signed with Cambodia in fiscal year 1973 provide for grants of up to the equivalent of $20.6 million; those with Vietnam provide for $142.8 million equivalent.

Mr. PASSMAN. The facts are, this so-called excess currency is running out, is it not?

Admiral PEET. Yes, sir, the Public Law 480 local currency is dwindling fast; there is not much left.

Mr. PASSMAN. I believe at one time we had excess currency in Thailand, did we not?

Admiral PEET. I believe so, sir.

CONTINUED CONCERN FOR THE DOLLAR

Mr. PASSMAN. At this time we are borrowing money from Thailand. We borrowed $100 million from them. It is due on July 2. I am just wondering whether we are going to be able to pay it or whether we will be able to get them to extend it. Do you know of that?

Mr. TARR. No, I do not.

Mr. PASSMAN. It was a bad policy and fortunately this administration recognized that it was a bad policy and stopped it. After all, we have $80 billion floating around the world that everybody is running from.

As I said yesterday and I repeated this morning, the dollar dropped to its all-time low, and any person that knows anything about economics, and the professor here certainly has a great knowledge of it, could detect 10 days ago that we were headed for this fall. But the Assistant Secretary of the Treasury, who is determined to give away our money on a one-way street through these multilateral organizations argued with me. He even suggested that I was wrong about the dollar. But the dollar sure took a spanking yesterday.

If we do not cut out this monkey business, it is going to keep on taking a spanking.

LOCAL CURRENCY DEPOSIT REQUIREMENTS

Mr. PASSMAN. In section 514 of the Foreign Assistance Act, recipients of military assistance or excess defense articles are required to deposit in local currency an amount equal to 10 percent of the value of such assistance for use by the United States to pay its cost in that country. Is that still in effect?

Admiral PEET. Yes, sir.

Mr. PASSMAN. What if there is no excess local currencies to deposit? Then the law is not effective, is it?

Admiral PEET. Sir, the law is designed to generate sufficient U.S.-owned local currency to meet all our official costs in a given country. We are not asking the host country to deposit excess currencies. The concept and intent of the law is to avoid spending U.S. dollars to purchase host country currency in order to pay our official costs in country. Where the United States has sufficient U.S.-owned local currency—that is, local currency excess to our needs, the law provides for a waiver of the deposit requirement which the President can exercise. Although collections have been slower than we would like, the law has been effective in terms of its purpose.

Mr. PASSMAN. As we said, it looks like we are just wasting a lot of ink printing that because we are down now to where you just don't have these excess currencies, do you?

Mr. TARR. I misunderstood what you said, Mr. Chairman. My understanding is that if we need the money, if we have things that need to be paid for in that country, then we ask for 10 percent of the value of what is transferred to be placed on deposit.

Mr. PASSMAN. Then you would have to set 10 percent of your allocation aside?

Mr. TARR. If we do not have enough money to pay our bills in that country we must set aside 10 percent.

Mr. PASSMAN. Of your cash aside, because if there are no excess currencies, there is no way you can set it aside. How can you use local currencies that you don't have?

Admiral PEET. We gain the currencies by the 10-percent deposit requirement.

Mr. PASSMAN. Let me put it this way then. This would be applicable whether it is dollars or so-called local currency.

Mr. TARR. Mr. Chairman, may I give you an example of this the way I understand it to work. In Indonesia we take so much money to operate our mission there. We do not have enough local currency generated by Public Law 480 on sales to pay for all of our local expenditures.

Mr. PASSMAN. I know that.

Mr. TARR. Therefore, we charge the Indonesians 10 percent of our grant program, which they must put on deposit for our use in that country.

Mr. PASSMAN. Whether or not you have excess currency rather than them taking it out of their foreign exchange account, they provide local currency.

Mr. TARR. Exactly.

Mr. PASSMAN. If they run out, all they have to do is print some more.

Mr. TARR. That is right.

Mr. PASSMAN. It is in effect requiring a 10-percent payment on the grant military aid, but rather than accepting it in cash you accept it in local currency.

Admiral PEET. Mr. Chairman, we keep a detailed account of these agreements country by country. If you would like, I can put in the record the status of these agreements to reflect those countries with which we have agreements, those which we have waived through Presidential determination, those which have been exempted as excess currency countries, and those excluded as base rights countries. As you

know, Cambodia, Laos, and Vietnam are specifically excluded by statute.

[The information follows:]

SECTION 514—COUNTRY AGREEMENTS

AGREEMENTS CONCLUDED

Afghanistan	Guatemala	Nigeria
Argentina	Honduras	Panama
Austria [1]	Iran	Paraguay
Bolivia	Jordan	Peru
Brazil	Korea	Portugal

Chile	Liberia	Senegal
Colombia	Malaysia	Uruguay
Dominican Republic	Mali	Venezuela
El Salvador	Mexico	Zaire
Finland	Nepal	
Ghana	Nicaragua	

PRESIDENTIAL WAIVER UNDER SECTION 614

Philippines	Thailand

EXCESS CURRENCY WAIVER—SECTION 514(b)

Ceylon	Morocco	Tunisia
India	Pakistan	Turkey [2]
Indonesia		

BASE RIGHTS EXCLUSION—SECTION 514(c)(1)

Ethiopia	Portugal (limited to Azores package)	Spain

EXEMPTIONS—SECTION 514(C)(2)

Cambodia	Laos	Vietnam

[1] Unilateral agreement concluded.
[2] Expires 1 July 1973.

Mr. PASSMAN. Why is the Administration asking that this legislation be repealed?

Mr. TARR. Can I answer off the record?

[Discussion off the record.]

ARMS SALES GENERATE INFLUENCE

Mr. PASSMAN. I think all of us are working and praying that we may have a world of peace, where we can use much of our time in the pursuit of happiness. How can we really move in that direction if we are helping to arm almost every nation on the face of the Earth? How can you go into a small nation, whether it is Latin America or Africa, train them in the use of this equipment, and after you get them trained it is perfectly obvious they then want the equipment, don't they?

Admiral PEET. It generally follows.

Mr. PASSMAN. What is the answer to this, Mr. Secretary?

Mr. TARR. There are not any easy answers to that question. I think, however, that together with their natural inclination to acquire armaments, we hope to continue to have some influence over the way in which they use them, and the purposes for which they might potentially employ them.

We know that our position of not doing anything for these countries is not necessarily a stabilizing influence.

Mr. PASSMAN. Do you know of any instance where we have ever had any influence? We talk about having influence, but when the chips are down they do whatever they please, don't they?

[Discussion off the record.]

DETERMINATION OF LATIN AMERICAN SECURITY NEEDS

Mr. PASSMAN. How can we determine what part of the equipment that we give on a grant-aid basis to Latin America is actually needed for internal security? That is one of the arguments in favor of grant aid, isn't it, Admiral?

Admiral PEET. Yes, sir, that is our intent.

Mr. PASSMAN. What equipment do they need for internal security and what are they buying? Are we giving them, in addition to what is needed, equipment that is absolutely not essential for internal security?

Admiral PEET. There is a fine line to be drawn, but the range of some equipments precludes their use for invading other neighboring countries.

Mr. PASSMAN. Aren't we furnishing small destroyers and a lot of other equipment to some of these nations that has nothing whatsoever to do with their internal security?

Admiral PEET. Yes, sir.

ARMS CONTROL FOR DEVELOPING NATIONS

Mr. PASSMAN. It looks to me like the answer would be—and some day we are going to have to explore it—to talk to other nations that furnish or sell arms and see if we can't reach an agreement to cool this thing down. Selling arms is built into our free-enterprise system. A manufacturer makes just as much profit, if not more, from selling arms as selling refrigerators. They have got literally thousands of people keeping this thing going. If you have some way of taking the profit out of it, you may make a lot of progress, you understand, in pulling a lot of these people away from these advance posts trying to sell military equipment. Isn't that what we are actually doing in almost all of these countries that are interested in buying military equipment? The manufacturers have salesmen there, don't they?

Admiral PEET. Yes, they do. The ships are, however, a different proposition, unrelated to the other examples.

Mr. PASSMAN. You and I both know, and I wouldn't cast any reflection on the military, but when they need six of something they buy a dozen to make sure they don't run out, and I imagine that same thing is true all over the world. I know something about surplus. I used to handle them when I was in the Navy. Somewhere along the way if we don't get this thing cooled down, it just simply means that all of these billions of dollars given in economic aid to build them up is down the drain. I wonder if any thought has ever been given to this. We talk about arms control with Russia. How about arms control with all the developing nations? I think it would be worth exploring.

REDUCTION OF MAAGS

Under section 512 of the Foreign Assistance Act in 1961, as amended, there is a provision requiring a reduction of the military assistance advisory groups, MAAG, and military missions by at least 15 percent by September 1972. Admiral, could you tell the committee if you have accomplished or complied with this section and what effect this reduction has had on the supervision of the various military assistance programs in foreign countries?

Admiral PEET. Yes, sir; we have complied with that provision. In fact, we did better than the 15 percent. We are in the neighborhood of about a 19-percent reduction in our authorized levels.

Mr. PASSMAN. That is average across the board?

Admiral PEET. Yes, sir.

COMPLIANCE WITH LIMITATIONS ON SALES TO GREECE

Mr. PASSMAN. Under section 620(V) of the Foreign Assistance Act of 1961 as amended, there is a provision which limits the aggregate amount of assistance furnished to Greece under the Foreign Assistance Act and sales made to Greece under the Foreign Military Sales Act in any fiscal year to not to exceed the aggregate amount expended for such assistance in fiscal year 1971. Have you been able to comply with that and still maintain a reasonable, balanced program?

Admiral PEET. Yes, sir, we have and can give you the status for the record if you would like. I think the figure is roughly $70.1 million and we are close to it.

Mr. PASSMAN. I assume you expect to continue to comply with it in 1973.

Admiral PEET. Yes, sir, absolutely. It is certainly my intent to do that.

Mr. PASSMAN. What will be the effect on the operation of the program with this in effect? Will it be satisfactory?

Admiral PEET. Speaking to Greece now, Mr. Chairman?

Mr. PASSMAN. I believe this provision applies purely to Greece.

Admiral PEET. Yes, sir, it does. As you know Greece was zeroed out as far as any grant assistance in the 1974 program is concerned. With respect to equipment, their's is totally a sales program. We hope, however, to continue some grant training.

Mr. PASSMAN. I don't think Greece as such was ever placed in a developed country category, was it? It is one of the very old nations.

Admiral PEET. Our major undertaking with Greece, Mr. Chairman, is the $65 million credit sales program we propose for fiscal year 1974 to fund the F–4's that they ordered from us a year or so ago.

Mr. PASSMAN. It is rather odd and amusing that we take countries, some of them 2,000 or 2,500 years old and still call them developing countries. Our imagination really takes us far afield. As I have often said, I believe the Constitution now is 185 years old, isn't it?

Admiral PEET. Yes, sir.

Mr. PASSMAN. And at the time it was adopted we were a primative, underdeveloped Nation of 3 million. We developed on our own because

of that great political document the Founding Fathers gave us provided freedom which developed incentive and from incentive developed initiative, and by that we became the greatest, the freest, the strongest, the wealthiest, the quickest of any nation in recorded history. I believe when you do for foreign nations what they could do for themselves they become complacent and they just never will develop. It is just like a spoiled child. While we were underdeveloped some of these old nations were considered developed, and it looks like we are becoming underdeveloped while we help the so-called underdeveloped nations to develop. While they become developed and we become underdeveloped I wonder if they will help us when we become underdeveloped?

Admiral PEET. Our definition of "developed," as you well know, is based purely on economic factors.

Mr. PASSMAN. The committee stands adjourned until June 5 at 1 o'clock.

Mr. LONG. I object for the record. I want my objection put in the record that we were not given adequate time to complete the questioning.

TUESDAY, JUNE 5, 1973.

EMPHASIZING NEED TO CONTROL THE DOLLAR

Mr. PASSMAN. The committee will come to order.

I wish I could develop a new technique on how to persuade people to my way of thinking. I mentioned about 10 days ago I had the Assistant Secretary of the Treasury here. He was defending some of the multilateral organizations. I mentioned how we had so consistently been outsmarted in the international markets. We were discussing, in connection with the Asian Development Bank, that the Japanese have in their possession over 20 billion excess U.S. dollars and how the Japanese were so very clever in outsmarting us that even though they had these surplus dollars, when they got ready to buy the 747 airplanes, rather than pay cash, they bought them on terms from the Export-

Import Bank. The dollar now has been depreciated by 35 percent against the Japanese yen so they pay us back with these depreciated dollars.

I said within a matter of days there is going to be a tremendous slump in the dollar. I think he said he could not imagine me suggesting that the dollar was in more trouble. Two days later the dollar nosedived to where it has reached a frightening all-time low in all the European markets, is that not correct, Mr. Secretary?

Mr. TARR. Correct.

Mr. PASSMAN. When are we going to come to our senses and stop letting the very people who are contributing tidbits to the multilateral organizations manipulate the United States and build up tremendous dollar reserves, not of their own choosing, but the very fact that they cannot refuse to take dollars for the merchandise.

So it looks to me like the work of this committee is cut out. I hope somewhere along the way that there can be a meeting of the minds that the time has come to have a tight bill, and to put the program on a loan basis. If there is any money going to be paid back, let it be paid back into the U.S. Treasury, not back into some international organization, as the present law calls for.

Mr. Shriver?

Mr. SHRIVER. Thank you, Mr. Chairman.

ROLE OF SECURITY ASSISTANCE

Mr. Tarr, would you discuss at some length the role security assistance plays in the implementation of the Nixon doctrine? Or put it in the record. That would save some time perhaps.

Mr. TARR. I would be happy to write up a statement for the record.

Mr. SHRIVER. Very well.

[The information follows:]

Security Assistance and the Nixon Doctrine

The best way of answering the question of the relationship between Security Assistance and the Nixon Doctrine is to quote directly from the President. In his report of February 18, 1970, the President set forth his views as follows:

..."The world has dramatically changed since the days of the Marshall Plan. We deal now with a world of stronger allies, a community of independent developing nations, and a Communist world still hostile but now divided.

"Others now have the ability and responsibility to deal with local disputes which once might have required our intervention. Our contribution and success will depend not on the frequency of our involvement in the affairs of others, but on the stamina of our policies. This is the approach which will best encourage other nations to do their part, and will most genuinely enlist the support of the American people.

"This is the message of the doctrine I announced at Guam - the 'Nixon Doctrine.' Its central thesis is that the United States will participate in the defense and development of allies and friends, but that America cannot - and will not - conceive all the plans, design all the programs, execute all the decisions and undertake all the defense of the free nations of the world. We will help where it makes a real difference and is considered in our interest."...

p.6

..."Our important interests and those of our friends are still threatened by those nations which would exploit change and which proclaim hostility to the United States as one of the fundamental tenets of their policies. We do not assume that these nations will always remain hostile, and will work toward improved relationships wherever possible. But we will not underestimate any threat to us or our allies, nor lightly base our present policies on untested assumptions about the future.

"At the beginning of my trip last summer through Asia, I described at Guam the principles that underlie our cooperative approach to the defense of our common interests. In my speech on November 3, I summarized key elements of this approach:

" - The United States will keep all its treaty commitments.

" - We shall provide a shield if a nuclear power threatens the freedom of a nation allied with us, or of a nation whose survival we consider vital to our security and the security of the region as a whole.

" - In cases involving other types of aggression we shall furnish military and economic assistance when requested and as appropriate. But we shall look to the nation directly threatened to assume the primary responsibility of providing the manpower for its defense.

"This approach requires our commitment to helping our partners develop their own strength. In doing so, we must strike a careful balance. If we do too little to help them - and erode their belief in our commitments - they may lose the necessary will to conduct their own self-defense or become disheartened about prospects of development. Yet, if we do too much, and American forces do what local forces can and should be doing, we promote dependence rather than independence.

"In providing for a more responsible role for Asian nations in their own defense, the Nixon Doctrine means not only a more effective use of common resources, but also an American policy which can best be sustained over the long run"...
pp 55-56

In his report of May 3, 1972, the President set forth the following views:

..."When I entered office we faced a situation unique in American post-war experience. An era was behind us. In the immediate aftermath of World War II challenges to our security could be met with the assurance that our strategic nuclear position was overwhelmingly superior. By January

1969, the United States no longer enjoyed this strategic preponderance.

"The Soviet Union had embarked on a formidable expansion of its nuclear arsenal. We could chart with some certainty when the Soviet Union would surpass us in numbers of intercontinental and submarine launched ballistic missiles; we could also project when they could close the technological gap in strategic weapons. Our own offensive building program had virtually ceased, as we had shifted our effort to qualitative improvements. We had developed a concept for ballistic missile defense of our territory, but had no active deployment. We faced a negotiation on strategic arms controls, but had only begun to analyze the relationship to strategic weapons decisions.

"At the same time, our spending for defense had grown substantially. Almost all the increases, however, had been absorbed by the war in Vietnam. The costs of new weapons were escalating, as were the expenses of maintaining the men of our armed forces. In addition, we were bearing burdens abroad for the common defense that seemed out of proportion to those borne by our allies. More than a million Americans were stationed overseas, and our reserves at home were minimal.

"Yet, I found that our strategic doctrine called for an American capability to fight in two major theaters simultaneously. The confrontation atmosphere of the Cold War persisted in both Europe and Asia. But the international environment after 25 years suggested new opportunities for diplomacy and, accordingly, for adjustments in military planning. The rigidity of the confrontation between East and West was easing, and the conduct of nations could no longer be viewed in the simple bipolar context of military blocs.

"The need for an urgent re-examination of our national security policy and programs was obvious. There were four overriding questions:

" - What doctrine was appropriate for our strategic forces in an era when the threat of massive retaliation alone was no longer credible in all circumstances and decisive nuclear superiority was probably unattainable?

" - What should the interrelationship be between the programs required for maintaining our strength and our proposals for limiting strategic arms through negotiations?

" - How could we simultaneously satisfy pressing domestic needs, meet our responsibilities in Vietnam, and maintain the capabilities of our other forces in a period when non-nuclear challenges were an important dimension of the security problem?

" - How could we, in coordination with our allies, strengthen our mutual defense in a manner that retained their confidence in our reliability but permitted them to play a more prominent role?"

" Early in my first term, I made a series of decisions that resulted in a new concept of national security, reflected in the Nixon Doctrine."... pp.178-179

"Obviously, American forces alone cannot balance the strong capabilities of potential adversaries. For this reason our planning udner the Nixon Doctrine has emphasized the strengthening of mutual defense by bolstering allied capabilities.

"In NATO, it is often forgotten that our allies provide nearly 90 percent of ground forces and the majority of alliance air and naval craft. American ground forces are concentrated in Germany where they constitute over one-fourth of the forces in this vital area. Along with our allies we are taking additional measures to strengthen NATO forces. Expenditures by individual members for force modernization have increased for the third consecutive year, and under the billion dollar five-year European Defense Improvement Program, NATO communications, anti-armor and air defense capabilities continue to improve. United States capabilities are also being improved, and our ground forces are being strengthened by selectively transferring men from support to combat units.

"Programs in Asia too have achieved remarkable success in strengthening allied capabilities. In Southeast Asia, progress in Vietnamization was demonstrated by the effective Vietnamese defense on the ground against all-out invasion. In Northeast Asia, South Korean forces are growing in effectiveness as a result of our joint program for modernization, and the Korean economy is now able to support more of the recurring costs of maintaining these forces without hampering normal economic growth.

"Our Asian allies are also becoming more self-sufficient in dealing with subversion and guerrilla warfare, which remain a potent threat. As our friends develop greater local and regional military sufficiency under the Nixon Doctrine the need for our direct involvement diminishes. In the meantime, the stabilizing presence of our forces in the area enhances the wider framework of security and gives encouragement to further allied efforts to develop their capacity for self-defense.

"In the current delicate international balance of forces, I believe our general purpose forces are now at the minimum level consistent with our safety and our interests. However, as we assess our requirements for the late 1970's and beyond, we will not let the perceptions and experiences of the past drive our planning for deterrence of wars of the future. We will ensure that our planning and doctrine are attuned to the evolving international situation and to our strategic needs in a new era.

"Many nations in the world whose security we consider important to our own face military challenges, often instigated or supplied by third countries. A stable international system requires that small countries be secure and independent, and that they be able to protect their security and independence mainly by their own efforts.

"For this reason, American support of other nations' defense efforts has always been a vital component of our security policy and an essential element in maintaining international stability. In today's multipolar world, and as the United States adjusts its role from one of preponderance to one of sharing responsibilities more widely, this supportive role becomes all the more central to our policy.

"As great as our resources are, it is neither possible nor desirable for the United States to pay most of the costs, provide most of the manpower, or make most of the decisions concerning the defense of our allies. Nor, is it necessary. Our allies are determined to meet the threats they face as effectively as possible within the limits of their resources. Under the Nixon Doctrine, our role in our Security Assistance programs is to share our experience, counsel, and technical resources to help them develop adequate strength of their own.

"We provide this support through various programs of Security Assistance: grant military assistance to friendly countries unable to afford equipment which is essential to their self-defense; foreign military sales for cash or credit; and supporting assistance, which provides budgetary support to a few key countries to enable them to sustain their economies in spite of unusually heavy defense requirements.

"These programs have been a part of our policy for more than 25 years. They have met specific needs in a wide variety of cases. Our programs and means have reflected a careful and continuing assessment of our interests and needs in changing conditions.

"The success of these programs is strikingly evidenced by the changes over time in the composition of the program. The growing self-sufficiency and self-reliance of our friends - which our assistance is designed to promote - are reflected in the declining necessity for grant aid and the dramatic increase in their ability to take financial responsibility for their defense needs. Our grant military assistance has dropped from over $4 billion twenty years ago to less than $1 billion today, exclusive of South Vietnam. Where once our program was almost entirely on a grant basis, today sales make up by far the major portion of the program.

"In 1966 the largest military assistance grants went to the Republic of Korea, Turkey, the Republic of Vietnam, the Republic of China, Greece, and Iran. In 1974, in contrast, Iran will purchase all military equipment, paying fully for everything received. Greece and the Republic of China will

receive no grant materiel, and both are turning increasingly to cash and credit sales. The security requirements of South Korea and Turkey continue to require grant assistance, but both are moving toward increased use of credits as their economies continue to expand. The success of our programs in helping South Vietnam and South Korea build capable forces of their own has permitted us to withdraw all our forces from South Vietnam and 20,000 men from South Korea. These are two of the most significant demonstrations of how Security Assistance is precisely what enables allies to take up more of the responsibility for their own defense.

"The assistance of the United States cannot be effective unless an ally is willing and able to mobilize its own people and resources for its national defense. No country can escape responsibility for its own future. None of our friends would wish to do so. The encouragement, counsel, and assistance we provide can make a crucial difference to their success"...

pp.189-191

ENCOURAGING GROWTH OF THIRD-COUNTRY ASSISTANCE

Mr. SHRIVER. It is mentioned in the statements that are before the committee that the growth of third-country assistance in Southeast Asia is a trend that you want to encourage. Would you elaborate on that?

Admiral PEET. Yes, sir. We are anxious to develop that trend. For example, we are encouraging the Australians to assist the Indonesians, and the Australians have already given them F–86's.

In another area, both State and Defense are very anxious for Japan to do more to assist other countries in the region.

Mr. SHRIVER. Is Australia taking more of a hand in Indonesia?

Admiral PEET. Yes, I think there is every indication that they are. We discuss the matter with the Indonesians and with the Australians at every opportunity.

Mr. SHRIVER. Has it been just talk so far, or have they actually put in assistance?

Admiral PEET. In the case of Australia, there has been a considerable amount of assistance—the most recent case is the F–86 transfer that I mentioned.

The Indonesians wanted to modernize their Air Force; and rather than buy aircraft from us which they could not afford, we encouraged the Australians to meet that requirement, when GOA first expressed an interest in providing these aircraft.

Mr. SHRIVER. And what does that equipment amount to in money?

Admiral PEET. I do not have the exact amount of money, but there are 16 aircraft involved.

Mr. SHRIVER. All right. Would that be classified?

Admiral PEET. Yes, sir, the information is taken from a classified source.

[The information follows:]

THIRD COUNTRY AID

During the Australian Prime Minister's visit to Indonesia in June 1972, it was announced that Indonesia would be the recipient of one of the largest defense cooperation programs Australia has ever carried out—a $20 million package to be provided between July 1, 1972 and June 30, 1975. [Figures in Australian dollars.]

Mr. SHRIVER. Specifically, what is Japan doing?

Admiral PEET. I think that it is more an encouragement on our part at this stage.

Mr. TARR. Yes, sir, except the Japanese have contributed in the stabilization of the Cambodian economy.

For instance, our contributions for fiscal year 1973 are planned at $17.5 million, half of the estimated total of $35 million will come from all the other people who contribute.

The contributors are Japan, $7 million; Australia, $1 million; United Kingdom, $490,000; Thailand, $250,000; New Zealand, $100,000; Malaysia, $10,000. It is limited but there are other programs that are now underway.

ALLIED CONTRIBUTION TO PEACE IN ASIA

Mr. SHRIVER. What are our allies in Asia doing to help achieve a cease-fire in Cambodia; countries like Thailand? Are we the only ones involved in this cease-fire effort except for the North Vietnamese?

Mr. TARR. In terms of the people who have actually signed the documents, you know of the four parties involved in the ICCS.

In terms of quiet diplomatic moves, we have indications that many nations are working toward this. It seems that it is to the advantage of the people who have supplied materiel to the North Vietnamese to encourage it. We think that governments generally in that part of the world are encouraging it as best they can.

Obviously we are very important in the whole scheme of things because of the level of our effort.

Mr. SHRIVER. Well, the basis for much of our assistance over there has been to develop regional strength so that these countries can defend themselves against aggression. My question is: Where are they now?

Mr. TARR. Although we have tried to develop regional programs in that area of the world, they have not been nearly as successful as the NATO effort has been.

Admiral PEET. On the military assistance side, the Republic of China on Taiwan came to our assistance readily when we needed to get more equipment into South Vietnam. Thailand is being very cooperative by enabling us to have forces there.

U.S. MILITARY SALES TOTALS

Mr. SHRIVER. Now, on the growing military equipment sales of our Government and others, I have read that international trade in such equipment runs about $7 billion annually and is expected to increase to $15 billion by 1980. Have you seen those figures?

Admiral PEET. I have not seen the exact figures.

Mr. SHRIVER. Would that be in the ball park, about what is anticipated?

Admiral PEET. Well, it depends on the assumptions. I would say $7 billion in total world sales is not too far off.

Mr. SHRIVER. How much of this would be accounted for by U.S. sales, whether for credit or for cash.

Admiral PEET. Credit and cash, this year I think we are roughly at $4 billion-plus.

For 1973, we expect cash and credit sales to be about $3.8 billion. Commercial sales will run roughly about $700 million.

Mr. LONG. Does that include credit and cash sales?

Admiral PEET. FMS credit and cash sales for 1973 should be about $3.8 billion; commercial sales, not FMS, about $700 million for 1973. For 1974 we are estimating FMS credit and cash total——

Mr. LONG. That is $4.5 billion altogether?

Admiral PEET. Yes. A little over that.

In 1974, we are estimating the total cash and FMS credit sales at about $4.7 billion, and commercial sales a little over $700 million.

TERMINATION OF GRANT MILITARY ASSISTANCE

Mr. SHRIVER. Now you are proposing to terminate grant military assistance in fiscal 1974 for Taiwan, Greece, and Liberia?

Admiral PEET. Yes, sir.

Mr. SHRIVER. Are there other countries which are nearing this stage?

Mr. TARR. We hope so.

Mr. SHRIVER. Would you list in the record all the countries?

First, in the record list all the countries in which you have terminated grant aid over the past 4 years.

[The information follows:]

NUMBER OF COUNTRIES WITH MAP MATERIEL PROGRAMS

	Fiscal years—				
	1970	1971	1972	1973	1974
Total	24	23	20	21	20
East Asia	5	5	5	[1] 6	[2] 5
NESA	2	[3] 5	[4] 3	3	[5] 2
Europe	2	2	2	2	2
Africa	4	[6] 3	3	3	[7] 2
Latin America	11	[8] 7	[9] 7	7	[10] 9

[1] Thailand moved from MASF to MAP.
[2] China, Republic of, dropped from MAP.
[3] Jordan, Lebanon, and Sri Lanka added.
[4] Lebanon and Sri Lanka dropped.
[5] Greece dropped.
[6] Zaire dropped.
[7] Liberia dropped.
[8] Ecuador, El Salvador, and Honduras dropped.
[9] Colombia dropped.
[10] El Salvador and Honduras added.

Mr. SHRIVER. What are some of them, offhand?

Mr. TARR. I think the number since 1965 has dropped to about, now about one-half what it was then. Was it not 40-some?

Admiral PEET. There may be some confusion as to whether we are talking about materiel or just grant training. We have dropped a sizable number from the list of those receiving materiel grant aid. However, we are encouraging grant training to continue in many cases.

Mr. TARR. We can provide that.

Mr. SHRIVER. Put that in the record.

[The information follows:]

NUMBER OF MAP RECIPIENTS

	Materiel only	Training only	Materiel and training	Total
1965	1	16	42	59
1972		24	20	44

All or a part, as indicated, of the military assistance to the following countries has been ended since 1965.

MATERIEL ASSISTANCE	TRAINING ASSISTANCE	MATERIEL AND TRAINING
Netherlands	Denmark	Norway
India	Iraq	Greece
Nepal	Syria	Burma
Pakistan	Nigeria	Japan
Saudi Arabia	Sudan	Laos (MASF)
Zaire	Upper Volta	Vietnam (MASF)
Liberia		Costa Rica
Mali		Ecuador
Morocco		Iran
Senegal		Guinea
China		Libya
Argentina		
Brazil		
Chile		
Columbia		
Peru		

Military assistance, as indicated, has been initiated to the following countries since 1965.

MATERIEL ONLY	TRAINING ONLY	MATERIEL AND TRAINING
Indonesia [1]	Sri Lanka	Cambodia
Jordan [1]	Ghana	
Tunisia [1]		

[1] Received training in 1965.

Admiral PEET. The total number of MAP and FMS countries in 1971 was 71.

In 1972, it was 75.

In 1973, the number is down to 65, both MAP and FMS. However, as Dr. Tarr pointed out, we have done considerably better than that because we have cut the number of countries receiving grant aid in half since 1965. We do plan to continue the grant training in many cases.

SALES AND TRAINING FOR CHILE

Mr. SHRIVER. Now I am not trying to get specific by country, except as it relates to one country. You are requesting $10 million for credit sales and $1 million for training for Chile.

Admiral PEET. Yes, sir.

Mr. SHRIVER. That is in fiscal 1974.

Now, what would be the effect, in your opinion, if Congress were to expressly prohibit this program for Chile?

Admiral PEET. Well, the training effect is obvious. We would have a lot less influence with the people we train.

As far as credit is concerned, it would cause us to be noncompetitive with other countries which are making sales to Chile.

For example, we are currently considering F–5 and A–37 sales to Chile. If we are not able to provide them credit, at least at the cost of money to the United States, then we do not have much chance of making a sale to that country. They are going to look to either the French or the Russians for those aircraft.

Mr. TARR. I think, if I may add, the important thing is that we have not specifically decided to do business with the Government of Chile. The President has signed the waiver authority which would open up the door to that possibility. Many things obviously have to be taken

into account before we actually come to the point where we were willing to do business with Chile.

One of the things that we have in mind is that we would like to continue to cooperate with the military leadership in Chile.

Mr. PASSMAN. Would the gentleman yield?

Mr. SHRIVER. Certainly.

Mr. PASSMAN. This has always confused me. It seems to me that what you are saying, that you people are trying to have more influence with the President or the leadership of Chile, than their own people are going to have.

I just cannot rationalize that type of thinking. Maybe some people can. I sure cannot.

MALTA BASE AGREEMENT

Mr. SHRIVER. I brought this up before, but I have not really had a good convincing argument as to why the United States must put up one-fourth of the annual contribution to support the defense agreement concluded between the United Kingdom and the Government of Malta. This is essentially a base rental agreement, is it not?

Mr. TARR. It is a NATO base rental.

Mr. SHRIVER. To what extent do the U.S. ships use that base?

Mr. TARR. It is used primarily by the British ships.

Mr. SHRIVER. Why do we have to put up a fourth of the money?

Mr. TARR. Well, this is an agreement we worked out with our NATO allies because we thought it was important for us to continue the use of that base for NATO Forces, rather than to have it available for use by other forces. We negotiated the agreement on the basis that we would make our payments——

Mr. SHRIVER. When was that done?

Mr. TARR. Well, it was done about a little over a year ago.

Mr. SHRIVER. How long does the agreement go?

Admiral PEET. I do not know. The Department of Defense is not involved.

Mr. TARR. Let me provide it for the record.

[The information follows:]

DURATION OF AGREEMENT ON MALTA

The duration of the agreement on Malta is for 7 years. The agreement was signed March 26, 1972, and will therefore expire on March 26, 1979.

Mr. SHRIVER. Admiral, you are requesting $78.3 million under the credit sales program for the guarantee of private financing. What level of private financing will this support?

Admiral PEET. It will support about $313 million, or four times the $78.3 million.

TRAINING IS NO. 1 PRIORITY

Mr. SHRIVER. The justifications state that, dollar for dollar, the training program represents one of the most productive investments which can be made by the United States in the progress and stability of recipient nations.

Would you rate these training programs as priority No. 1 if Congress, for instance, decides it is necessary to reduce your budget request?

Admiral PEET. In view of the fact that training has been made a separate part of the request, I think we would all agree it should be the last thing to be cut.

Mr. TARR. I would.

Mr. SHRIVER. That would be your first priority?

Mr. TARR. Yes.

EXCESS DEFENSE ARTICLES

Mr. SHRIVER. In describing the excess defense articles request, the justifications include the following sentence:

> Dollar values have been included to account for excess items that, although not currently forecasts as being available from excess during fiscal year 1974, undoubtedly will become available and match validated, but as yet unprogramed, MAP requirements.

Admiral PEET. Yes, sir.

Mr. SHRIVER. What does that mean?

Admiral PEET. Well, we have a problem with excess defense articles because it is hard for us to forecast when they will be excess to the services' needs. However, each year a certain amount does become available; and we attempt to program that item, to make the most of it.

We have used excess over the years as a substitute for purchasing new items. There has been a lot of talk over the years as to how these items are valued.

A number of years ago one of my predecessors—I believe before this committee—was asked what he thought the average value of the excess was. He estimated roughly one-third of acquisition cost, and we have been living with that figure since then.

However, in the meantime, we have looked at several hundred items of equipment and have found none having an actual value equal to or greater than one-third acquisition cost. For example, the current actual value of excess aircraft is only about 15 percent.

Most of the materiel coming out of Vietnam and other places that becomes excess is unusable from our point of view, but it is of value to some countries where labor costs are low, as for example, in Taiwan. They can take one of our jeeps or trucks that we would sell as scrap and make it look like a brandnew vehicle in short order.

We try to make the most of this sort of thing around the world.

Mr. SHRIVER. I yield to the chairman.

Mr. PASSMAN. Is it not true that if we did not utilize this excess equipment, these nations actually can make use of it and in many instances it serves the same purpose as new equipment, then under the law you have to junk it?

Admiral PEET. Yes, sir.

Mr. PASSMAN. You may get possibly as low as one-half of 1 percent on the dollar against actual acquisition cost; is this not true?

Admiral PEET. Yes. We have some examples of this.

Dr. Tarr, in dealing with excess tanks, has insisted if we give an excess tank to the country, they have to update it and modernize it, as they are doing in Turkey. They have to turn in an old tank, so that they do not build up excessive operation and maintenance costs.

We are trying to manage it that way.

COST OF MILITARY ASSISTANCE PERSONNEL

Mr. SHRIVER. I have just one more question under the general questions before I get to your specific countries. Can you estimate how much will be expended under the Defense budget for regular pay and other costs for military assistance personnel in fiscal 1974?

Admiral PEET. Yes; all the uniformed people in the MAAG's and other missions are paid from the Defense budget.

Mr. SHRIVER. Can you estimate how much that is?

Admiral PEET. We can give it to you.

We are estimating that the total cost of supporting these units, including pay and allowances, will be close to $50 million for fiscal 1974.

Mr. SHRIVER. Thank you, Admiral.

INTRODUCTION OF NEW COMMITTEE MEMBER

Mr. PASSMAN. Thank you, Mr. Shriver.

Members of the committee and witnesses, I would like to take a little time and introduce you to our newest committee member, Bill Chappell, Jr., of Florida.

Welcome to the committee, Bill.

Mr. CHAPPELL. Thank you, sir; good to be here.

Mr. PASSMAN. The chairman saw fit to assign Mr. Chappell as a temporary member of this subcommittee. He is a very able Member and we know he is going to make a substantial contribution.

Let me just state briefly if I may, Bill, that this subcommittee abides by the 5-minute rule adopted by the House, and that when we call the committee to order, each member may consume 5 minutes in questions and answers. Then when we have gone around the table, after each member uses his 5 minutes, then each member may consume all the time he feels is necessary to ask his questions. If it takes the newest member on the committee a full day, he is entitled to that full day.

Now, of course, all the members have had their 5 minutes on the military and we are moving around the table now on what we refer to as general questions on the overall military assistance program. After we have gone through the general questions, then we will return to the country examination.

That is where it is rather time-consuming. We may require at least 2 weeks to finish our questioning on the military when we get into the country examination.

So that you may be on a par with the other members of the committee, I would like to yield to you at this time the required 5 minutes as fixed by the Congress. We will then get back in regular order around the table.

DETERMINING SELF-HELP CAPABILITY

Mr. CHAPPELL. Mr. Chairman, I am so new I do not have very many questions to ask. As a matter of fact, I have just one I would like to ask, which is probably very elementary.

How do you determine how capable these other nations are in really participating in their own self-defense and balance it with our necessity to keep them in the picture for our own national security?

Admiral PEET. That is a difficult thing for us to do. We have a comprehensive system for doing this.

The primary source of information, of course, is the Ambassador and the country team that exists in-country. They submit their recommendations through two channels to Washington.

In one, the Ambassador goes directly to State; in another, the Ambassador passes on the MAAG submission that goes to the CINC and, from him, to the Joint Chiefs, and to the Secretary of Defense.

In the Pentagon, the Joint Chiefs meld these recommendations with their requirements. They put out what we call a joint strategic objectives plan which they meld with the military assistance plan. That is one way where the two are put together.

I have the responsibility in the Office of the Secretary of Defense for reviewing these plans and making sure that they are consistent. Of course, Dr. Tarr coordinates the effort of State, AID, Defense, and the whole program. He chairs a council that is called the SAPR Council. At that council he hears recommendations as to how we would divide and spend this money.

The responsibility for actually allocating the money and deciding whether or not there will be a program at all in a given country is assigned by law to the Secretary of State.

Mr. CHAPPELL. Thank you, Mr. Chairman.

Mr. PASSMAN. Thank you, Mr. Chappell. It was a very good question.

NATIONS WHERE AID HAS BEEN SUSPENDED

Mr. PASSMAN. Could you please provide a list for the record showing which countries you have suspended military assistance to for the last 5 years and the reason for this suspension?

Admiral PEET. I will provide the information.

[The information follows:]

MILITARY ASSISTANCE SUSPENSIONS

Country and reason
Nigeria, civil war.
Pakistan/India, war between the two states.
Peru, U.S. fishing boat seizures.
El Salvador/Honduras, border conflict.
Ecuador, fishing boat seizures and expulsion of U.S. military group.

EFFECTS OF DEVALUATION

Mr. PASSMAN. Could you tell the committee what effects the recent dollar devaluation had on the military assistance program and the foreign military credit sales program?

Mr. VON MARBOD. In the area of MAP administration, the major impact of the latest dollar devaluation was felt in the increased operating costs of our MAAG's and missions worldwide. The bulk of these increases in fiscal year 1973 will result from the increased cost of local national salaries, rents, and local services and procurements. The military assistance program will also reimburse the Department of State a greater amount in fiscal year 1973 for those countries where State provides administrative support to the MAAG or mission.

Although complete cost data is not available at this time, USEUCOM has estimated the increased costs that will be incurred by the MAAG's and missions under that command will be $110,000 in fiscal year 1973. That amount, of course, reflects only the result of the devaluation for a period of less than 6 months. The fiscal year 1974 impact should be much greater.

In the area of supply operations, we seldom have transportation, packing, crating, and handling services performed by a foreign concern. To the extent that we do, though, the charges for the services rendered would be higher than before the devaluation of the dollar. The price of those few items procured offshore also would increase.

Foreign military credit sales were not affected to any degree, since the funds are used for procurement of items and services of U.S. origin. Repayments of FMS credit loans are made in U.S. dollars. However, the cost of the items to the customer would be lower when expressed in his local currency; that is, he would need less local currency to procure the dollars to make the repayment.

USE OF UNITED STATES CARRIERS

Mr. PASSMAN. Are all goods that are purchased in the United States required to be shipped on U.S. carriers?

Admiral PEET. U.S. military items sold commercially for export need not be shipped on U.S. carriers. Nor is there such a statutory requirement for military items sold by the U.S. Government for cash or on nonconcessional credit terms under the Foreign Military Sales Act, as amended. However, it is Department of Defense policy, specified in DOD Instruction 2110.12, that materiel will move on U.S. flag ships "except when such ships are (1) not available or (2) available only at prices higher than private persons are charged," or when air transportation is to be afforded such materiel, U.S. flag aircraft will be used "except when such aircraft are not available or capable of satisfying the transportation requirement or when foreign flag carriers will accept payment in excess or near-excess U.S.-owned foreign currencies which U.S. flag carriers will not accept." Section V.B. 7 of that instruction states that this policy specifically applies to credit sales and "will be applied to the fullest extent possible to cash sales." The same policy is applied to DOD cargo traffic pursuant to DOD Directive 4500.9 (Title 32 C.F.R., sec. 178.3). Sec. 910(b) of theMerchant Marine Act, 1936, as amended, is applicable to the shipment of military items either granted or sold under concessional credit financing terms. The typical provision on this subject contained in the standard credit agreement executed under the Foreign Military Sales Act, as amended, provides: "All ocean transportation of the defense articles shall be on vessels of United States registry. The Government of the United States will give sympathetic consideration on a case-by-case basis to requests by the borrower justifying shipment on vessels of the registry of the borrower. Consideration will be given to security requirements of the borrower to assure safe arrival."

Mr. PASSMAN. As you know, last year the Congress provided $2,500,000 for the regional naval training center in Florida and I understand by certain articles that I have received that these amounts were impounded by the executive branch. Would you please comment on this situation and does the Defense Department have any intention of obligating these funds in fiscal year 1974?

Admiral PEET. The Congress did provide a separate amount of $2,500,000 in fiscal year 1973 continuing resolution authority to establish and operate a training center for Latin American naval personnel at Key West, Fla. However, during review of budget submissions from all executive branch agencies the decision was made by the Office of Management and Budget not to use the funds for this center in the interest of holding Federal outlays for fiscal year 1973 to $250 billion. These funds have not been used for any other purpose.

There are no plans to use these funds in fiscal year 1974. Any or all of the $2.5 million not obligated fiscal year 1973 would lapse, and it would be legally unavailable during fiscal year 1974 unless reappropriated. Additionally, no fiscal year 1974 MAP funds are earmarked for this purpose.

EXCESS EQUIPMENT

Mr. PASSMAN. In a General Accounting Office report dated March 21, 1973, there was a great deal of criticism concerning the use of excess defense articles, which is handled under the Department of Defense. I guess one of the main criticisms was that the Department of Defense expanded the use of excess Defense articles in the military assistance programs to compensate for reductions in military assistance programs appropriations. Would you please comment on this General Accounting Office report?

Admiral PEET. The Department of Defense responded to these criticisms by letter October 4, 1972, and the response was included as appendix V of the GAO report. The Department does not accept this conclusion. The expanded use of EDA in MAP was the result of increased availability of EDA which could be utilized to meet both funded and unfunded requirements. The reduction in MAP appropriations at this same time was coincidental and not a controlling factor.

Mr. PASSMAN. In Public Law 91–672, as amended, a ceiling was placed on the excess equipment program of $185 million. Are you requesting an increase in the ceiling for fiscal year 1974?

Also, is it not true that if you are denied the right to allocate excess equipment to the recipient nation in the military assistance program the equipment would have to be declared surplus and sold for scrap because you cannot sell it to civilians?

Admiral PEET. The requested excess defense article ceiling for fiscal year 1974 is $185 million; unchanged from Public Law 91–672, as amended. Should the DOD be denied the right to allocate excess defense articles to MAP recipient nations the excess materiel would be available to satisfy possible requirements of other U.S. Government agencies prior to transfer to defense property disposal offices for demilitarization and disposal to highest bidder. It is likely that a high percentage of such materiel would indeed be disposed of as scrap should it be unavailable for MAP purposes.

TOTAL FUNDS AVAILABLE

Mr. PASSMAN. In addition to your NOA request of $685 million, you anticipated other funds will become available through the appropriations, recoupments, and reimbursements which will make the total funding available for fiscal year 1974 of $804,500,000. Would you list

for the record the amount anticipated to become available in fiscal year 1974 for each of these items?

Mr. VON MARBOD. Yes, sir.

[The information follows:]

FISCAL YEAR 1974 (BUDGET ESTIMATED)

	Million
Budget authority	[1] $685.0
Reappropriation	5.0
Reimbursement	[2] 74.5
Recoupment	40.0
Total	804.5

[1] Includes $33 million requested for international military education and training program.

[2] Includes reimbursement of $69.5 million for Project Enhance.

BUDGET ESTIMATES AND APPROPRIATIONS

Mr. PASSMAN. Would you please update the table that appeared on page 726 of last year's hearings, which shows the budget estimates, appropriations and unobligated balances for this purpose over the years?

Mr. VON MARBOD. Yes, sir.

[The information follows:]

BUDGET ESTIMATES, APPROPRIATIONS, AND UNOBLIGATED BALANCES

[In millions of dollars]

	Budget estimate	Appropriation	Unobligated balances continued available in subsequent years
Fiscal year:			
1950	1,314.0	1,314.0	213.2
1951	5,178.0	5,222.5	759.7
1952	5,997.7	5,744.0	436.1
1953	4,598.4	4,219.8	1,905.9
1954	3,648.6	3,230.0	2,422.5
1955	1,580.0	1,192.7	33.9
1956	1,422.2	1,022.2	195.5
1957	3,000.0	2,017.5	538.8
1958	1,600.0	1,340.0	21.5
1959	1,800.0	1,515.0	52.1
1960	1,600.0	1,300.0	50.9
1961	2,000.0	1,800.0	58.1
1962	1,885.0	1,600.0	64.2
1963	1,500.2	1,325.0	25.8
1964	1,405.0	1,000.0	4.4
1965	1,055.0	1,055.0	22.2
1966	1,170.0	1,170.0	11.1
1966 supplemental	[1] 375.0	375.0	----
1967	917.0	792.0	11.9

1972	705.0	500.0	2.3
1973	819.7	[2] 550.6	[3] 5.0
1974	804.5	----	----

[1] To liquidate sec. 510 authority utilized in fiscal year 1965 ($75,000,000) and fiscal year 1966 ($300,000,000)

[2] CRA.

[3] Estimate.

RECOUPMENTS

Mr. PASSMAN. Please also update the table which appeared on page 727 of last year's hearings concerning the original estimates of recoupments and the actual by year.

Mr. VON MARBOD. Yes, sir.

[The information follows:]

RECOUPMENTS—ORIGINAL ESTIMATE VERSUS ACTUAL, FISCAL YEARS 1961–73

[In millions of dollars]

Fiscal year	Original estimate	Actual
1961		
1962	155.8	120.6
1963	317.7	240.7
1964	204.6	250.0
1965	125.0	124.8
1966	135.0	152.0
1967	78.0	146.2
1968	100.0	156.5
1969	65.0	86.4
1970	62.0	68.5
1971	47.9	31.4
1972	36.0	28.9
1973	22.5	40.3
	30.0	

PROCUREMENT LEADTIME

Mr. PASSMAN. Would you place in the record a list showing the average leadtime needed to procure various items of military equipment?

Admiral PEET. There is no meaningful average leadtime to be associated with delivery of MAP equipment since the worldwide program varies so extensively in item makeup and in individual procurement/delivery problems. The following discusses the MAP pipeline and delivery leadtimes in terms of various categories:

Much of the pipeline, with regard to an individual program year, is delivered within a 18-month period subsequent to the date on which it is entered on a MAP order to the military departments. This includes a wide range of repair parts and commodities which the military departments are in a position to deliver from stock or for which the procurement lead time is less than 18 months.

On a diminishing basis, various segments of the pipeline will carryover in an undelivered status for more than 18 months. These include material items with a procurement leadtime as high as 3 years, if no problems develop, and are represented by certain types of aircraft, ships, engineering equipment, radars and communications equipment.

Various factors can extend the time period in which a funded program must be carried as undelivered, for example, when appropriations are delayed and requirements/funding priorities so dictate an item may be placed on MAP order very late in the fiscal year. This may add the major portion of a year to the average delivery leadtime. In other cases, an item on MAP order must await a "buy-cycle" of the procuring military department. This also delays delivery to the MAP customer.

Occasionally significant delays occur in delivery due to difficulty in obtaining a product which meets the qualitative requirement. This may occur when the procuring service, operating under small business practices, awards a contract to a bidder who subsequently defaults or has problems. Procurement of AN/PRC–25/77 radios is an example.

Finally, higher priority customers cause delay in MAP deliveries. This has been and is still the case with regard to Southeast Asia where MAP has had to wait.

Based on past experience, it therefore may be stated that a greatly diminished pipeline may still be undelivered 4 or 5 years after program funding. The pipeline is reviewed on a continuing basis to: (*a*) assure prompt deliveries against valid requirements. (*b*) retain in an undelivered status only those items which can be completely justified, and (*c*) close out (recoup) all line items not completely justified.

COUNTRY ALLOCATION

Mr. PASSMAN. Place in the record a list showing the countries which will be receiving some type of military assistance in fiscal year 1974, indicating whether the country will receive material or training or both.

Admiral PEET. Yes, sir.

[The information follows:]

Country	MAP (material)	IMET (training)	Country	MAP (material)	IMET (training)
Cambodia	X	X	Ghana		X
ROC	X[1]	X	Liberia	X[1]	X
Indonesia	X	X	Mali		X
Korea	X	X	Morocco		X
Malaysia		X	Senegal		X
Philippines	X	X	Tunisia	X	X
Thailand	X	X	Zaire		X
Afghanistan		X	Argentina		X
Greece	X[1]	X[1]	Bolivia	X	X
India	X[1]	X	Brazil		X
Iran	X[1]		Chile		X
Jordan	X	X	Colombia		X
Lebanon	X[1]	X	Dominican Republic	X	X
Nepal		X	El Salvador	X	X
Pakistan		X	Guatemala	X	X
Saudi Arabia		X	Honduras	X	X
Sri Kanka	X[1]	X	Mexico		X
Turkey	X	X	Nicaragua	X	X
Austria		X	Panama	X	X
Finland		X	Paraguay	X	X
Portugal	X	X	Peru		X
Spain	X	X	Uruguay	X	X
Ethiopia	X	X	Venezuela		X

[1] Reflects delivery/expenditure of prior years programs only.

Mr. PASSMAN. Are you planning to add or delete any military assistance countries in fiscal year 1974 and if so, what are the countries?

Admiral PEET. In our request for fiscal year 1974 we have added small material programs for El Salvador and Honduras. We have not included any request for material programs for Liberia and the Republic of China on Taiwan (ROC); however, we plan a program for training for these two countries. Greece is not included in our request for either material or training programs.

COUNTRIES EXPERIENCING A COUP

Mr. PASSMAN. Admiral, could you tell us if any countries to which we were supplying military assistance have experienced a military coup this past year?

Admiral PEET. A military coup occurred in Honduras during 1972. Honduras is the recipient of a small grant MAP program of approximately $500,000.

SUSPENSION OF AID

Mr. PASSMAN. Has the United States suspended military or economic assistance this past year, and, if so, for what reason?

Admiral PEET. Due to seizures of U.S. fishing boats, U.S. foreign military sales assistance to Peru was suspended in December 1972 and reinstated in May 1973. Economic assistance was not suspended.

SOPHISTICATED WEAPONS

Mr. PASSMAN. Have you supplied any sophisticated weapon systems to any underdeveloped countries this past year, or do you plan to supply such systems in fiscal year 1974?

If so, please list the country and indicate why the country is in need of such assistance.

Also, is it not true that these underdeveloped nations would purchase this equipment from other sources if the United States refused to supply it?

Admiral PEET. Your query raises the very interesting question as to what, in today's environment, is a sophisticated weapon. When the reference to sophisticated weapons was placed into the existing legislation, it was illustrated with the words "jet aircraft and missiles." Few today view either jet aircraft or missiles, per se, as sophisticated although some versions of these systems are indeed complex. Notwithstanding the speed with which items now transition from a state of newness and so-called sophistication to a commonplace position in the world's armaments, we seek diligently to pursue the intent of the legislation dealing with sophisticated weaponry and all weapons considered for grant aid or FMS are examined in that light. Specifically as regards jet aircraft, in 1973 Korea, Turkey, and Jordan were recipients. However, except perhaps for the F–4 in Korea, we would not really view the aircraft as sophisticated. In fact, some of these aircraft had already served long years in the U.S. inventory and were excess to our needs. Also during fiscal year 1973 aircraft missiles were provided to Korea and antitank missiles were provided to Turkey. These transfers in each instance were for the purpose of improving country defense capabilities. During fiscal year 1974 we plan to provide additional jet aircraft to Korea and Turkey, and antitank missiles to Turkey and Jordan.

Experience has proved that less developed countries do not consider security to be a luxury reserved for the more affluent. Recent Latin American purchases of French and United Kingdom military aircraft, tanks and ships in the face of U.S. restrictions on the supply of so-called sophisticated weapons is a case in point.

DEVELOPED COUNTRIES RECEIVING AID

Mr. PASSMAN. Would you also list for the record the developed countries which the United States is supplying grant military assistance or military credit sales to in fiscal year 1973, the reasons these developed countries are receiving such assistance and what developed countries are planned to be added in fiscal year 1974?

Admiral PEET. Using the interest equalization tax as a guide for the determination of developed countries, the following nations benefited under grant military assistance in fiscal year 1973:

Spain received $9.2 million in accordance with the agreement of friendship and cooperation.

Portugal $.9 million. Primarily for mission support, spare parts, and training. This assistance was provided for improvement in antisubmarine and antiair warfare capabilities.

Saudi Arabia $.2 million. This assistance is for mission support and training and was provided to maintain close relations with this moderate Arab country.

FMS credit assistance was not provided to these countries during fiscal year 1973, but we are proposing $20 million to Saudi Arabia as FMS credits in fiscal year 1974. No additional developed countries are planned to receive grant or military credit sales assistance during fiscal year 1974.

FORWARD DEFENSE COUNTRIES

Mr. PASSMAN. Several years ago you used the terminology "forward defense countries" which meant the countries that were essential to the national defense of the United States, I assume. Could you tell the committee which countries are now considered essential to the national security of the United States?

Admiral PEET. The United States has entered into eight collective defense treaties—four multilateral and four bilateral—for the purpose of providing mutual security and collective defense against major threats to the common interests of the United States and its treaty partners.

The four multilateral treaties are:

The North Altnatic Treaty;
The Southeast Asia Collective Defense Treaty;
The Inter-American Treaty of Reciprocal Assistance; and
The Security Treaty with Australia and New Zealand.

The four bilateral treaties are with Japan, the Republic of Korea, the Republic of China, and the Philippines.

All of the countries associated with the United States in these treaties are considered important, if not essential, to the national security of the United States.

Mr. PASSMAN. Could you tell us what percent of the total grant equipment proposed by the MAP program in fiscal year 1974 for these countries will be used for investment and updated equipment?

Admiral PEET. The only NATO countries programed to receive grant military assistance in fiscal year 1974 are Turkey and Portugal: 72 percent of Turkey's MAP will be used for investment and updated equipment, and 55 percent of Portugal's MAP will be used for investment and updated equipment.

Japan does not receive grant MAP. Eighty percent of the Republic of Korea's MAP, 77 percent of the Philippines MAP, and 51 percent of the MAP program for Thailand will be used for investment and updated equipment.

There are nine Rio pact countries in Latin America which are proposed recipients of grant materiel in fiscal year 1974. The percent of each country program to be used for investment and updated equipment is as follows:

Bolivia	74
Dominican Republic	65
El Salvador	88
Guatemala	99
Honduras	85
Nicaragua	81
Panama	40
Paraguay	70
Uruguay	24

COUNTRIES WHERE THE UNITED STATES HAS BASE RIGHTS

Mr. PASSMAN. In what countries does the United States presently have base right privileges?

Admiral PEET. The United States uses real estate for specific activities in 42 countries and areas overseas. We currently have military bases in the following countries:

The Azores (Portugal), Belgium, Bermuda, Canada, Cuba, Ethiopia, Germany, Greece, Greenland (Denmark), Iceland, Italy, Japan, Korea, Morocco, Netherlands, Philippnies, Ryukyus, Spain, Taiwan, Thailand, Turkey, United Kingdom, Bahrain, and Diego Garcia.

Mr. PASSMAN. What countries in the last 5 years have withdrawn our base rights?

Admiral PEET. Pakistan withdrew United States base rights in 1969 and Libya in 1970.

Mr. PASSMAN. Of the countries that have withdrawn our base rights privileges is the United States still supplying them with military aid?

Admiral PEET. No, except pipeline delivery of previously embargoed spare parts to Pakistan which were purchased under FMS credit prior to fiscal year 1973. Pakistan continued to receive grant military training for 78 students in fiscal year 1973, and a continuing modest grant military training program is proposed for fiscal year 1974.

OFFSHORE PROCUREMENT

Mr. PASSMAN. In the justifications you state with a few exceptions, all grant military materiel provided to other countries is purchased in the United States from U.S. suppliers. What military items would be purchased outside the United States and in what countries?

Mr. VON MARBOD. Examples of items procured from sources outside the United States are: mortars from Taiwan, unit equipment from Korea, POL from Singapore, magazines from Korea, radars from Canada, overhaul of Navy ships in Singapore, aircraft repair and rehabilitation in Japan, Taiwan, or Thailand.

Mr. PASSMAN. Why shouldn't we make it a condition that all military items supplied must be purchased from U.S. sources?

Mr. VON MARBOD. Some of the items required are not produced in the United States. Domestic procurement would be uneconomical, since offshore procurement is usually not authorized unless the U.S. cost is more than 50 percent in excess of the cost of foreign supplies or services. In addition, the leadtime often involved in procuring the items domestically, would prevent us from meeting established target dates. Offshore procurement might also be necessary to fulfill U.S. commitments on cost-sharing projects or to support foreign policy objectives.

Mr. PASSMAN. What part of the fiscal year 1974 budget request for military assistance will be used for procurement outside the United States?

Mr. VON MARBOD. Approximately $5 million.

TRANSITION FROM GRANT-AID

Mr. PASSMAN. In the justifications you indicate that the grant aid is to be terminated as rapidly as possible and a transition is to be made to a sales basis. However, I note the budget request for military assistance is above what was requested last year. Could you explain how this transition is presently being implemented?

Admiral PEET. It is difficult to effect an orderly transition to increased emphasis on foreign military sales when our requests for both grant programs and FMS credit programs are reduced when NOA is provided by the Congress at levels considerably less than our requests.

For fiscal year 1973, the administration requested $527 million in NOA for the foreign military sales credit program. Congress provided, by continuing resolution authority, $400 million in NOA for fiscal year 1973. For fiscal year 1974, the administration is requesting $525 million in NOA for the foreign military sales credit program. This is about the same level as the administration's fiscal year 1973 request.

For the grant military assistance program for fiscal year 1974, the administration is requesting less NOA than we requested for fiscal year 1973. In fiscal year 1973, our request was for $780 million in NOA for the military assistance program. Congress has provided, by continuing resolution authority, $553.1 million in NOA for fiscal year 1973. For fiscal year 1974, the administration is requesting $652 million in NOA for the military assistance program. Therefore, in terms of NOA, our request for the military assistance program is $128 million less for fiscal year 1974 than our request for fiscal year 1973.

Mr. PASSMAN. Could you please tell the committee which countries have been eliminated from the grant military assistance program for the past 5 years?

Admiral PEET. Since the beginning of fiscal year 1969, Iran, Libya, Argentina, Brazil, Chile, Peru, Eucador, and Greece have been eliminated from the grant materiel military assistance program. Greece ceased being a grant recipient on Jaunary 1, 1973. In addition, the Republic of China and Liberia will be terminated as grant material aid recipients as of June 30, 1973. Modest training programs are proposed to continue during fiscal year 1974 for Argentina, Brazil, Chile, Colombia, Peru, the Republic of China, and Liberia under the international military education and training program.

FUNDS FOR REFURBISHING

Mr. PASSMAN. Are funds included in the fiscal year 1974 MAP appropriation request to refurbish and refit equipment obtained through equipment loans?

If so, how much is requested in fiscal year 1974 for this purpose?

Also, what type of equipment is involved in these loans and what countries will receive this equipment in fiscal year 1974?

Admiral PEET. Yes. A total of $9.7 million of the fiscal year 1974 MAP request is for ship overhauls of loans of naval ships to Cambodia, Indonesia, Korea, Philippines, Turkey, Ethiopia and Bolivia.

COORDINATION OF MAP PROGRAM

Mr. PASSMAN. How are the military assistance programs for South Vietnam and Laos coordinated with the MAP program you are justifying when these two countries receive their funding from the Department of Defense appropriations?

Admiral PEET. The military assistance programs for South Vietnam and Laos are reviewed in relation to the total forces concept at the same time other defense programs are reviewed. By integrating all such programs into the defense planning, each is measured against the other to determine allocation of resources. Therefore, programs for South Vietnam and Laos are coordinated with MAP to insure that balanced MASF and MAP assistance programs are formulated, coordinated and presented to the Congress.

POLITICAL OBJECTIVES

Mr. PASSMAN. In the justifications it is stated that in some countries the security assistance programs are essential in helping to achieve U.S. political objectives, would you tell us what countries are involved here and what the political obectives are?

Admiral PEET. The United States has political objectives in all countries which request and receive our security assistance—objectives which our assistance is designed to promote. In the Middle East, for example, we seek to strengthen and preserve moderate but threatened Arab governments, such as Jordan and Lebanon, and friendly oil-producing states in the Persian Gulf. Our objective is to maintain stability in the region and thereby facilitate a settlement of the Middle East dispute. We also seek to maintain close and confident bilateral and alliance relationships as well as good military relations with Turkey. In Korea and Southeast Asia, a principal political objective is to enable allied and friendly governments to maintain the truce and negotiate with neighboring Communist regimes from a position of adequate military strength rather than weakness. In countries such as Indonesia and the Philippines, we seek to strengthen the structure of a central government which is still in the process of nation building but has experienced difficulties in maintaining internal security and control.

In every case, the U.S. political objectives are directly related to the advancement of U.S. security and interests.

LEGISLATIVE RESTRICTIONS

Mr. PASSMAN. Could you please provide for the record a list showing what legislative restrictions are presently applied to the military assistance program, the foreign military sales program, the excess defense articles program, and the international military education and training program?

Mr. FORMAN. Yes sir. I would note that, legally speaking, the excess defense articles program is an integral part of the military assistance program, and that all statutory restrictions upon the grant of defense articles are applicable to excess as well as nonexcess defense articles. There is, however, one statutory restriction which is applicable solely to the grant of excess defense articles. Section 8 of Public Law 91-672 (FMSA amendments of 1971), as amended, imposes a worldwide ceiling on the amount of excess defense articles which may be granted without charge to the military assistance appropriation.

I would also note that, legally speaking, grant military training is a part of the military assistance program. Section 644(f) of the Foreign Assistance Act of 1961, as amended, includes training in the definition of "defense service," and so all statutory restrictions applicable to military assistance generally, except where it is otherwise expressly provided, are now applicable to grant military training. While the administration is proposing the restructuring of grant military training into a separate international military education and training program in the context of the authorizing legislation that proposal has not been enacted to date. Section 510 of the Foreign Assistance Act of 1961, as amended, which imposes a ceiling on the number of MAP trainees in the United States in any fiscal year, is the only statutory restriction which is applicable solely to grant military training.

The following lists of major restrictions on MAP, FMS, and FMS credits are intended as summary information for purposes of handy reference and are not intended to be either exhaustive or definitive.

[The information follows:]

MAJOR RESTRICTIONS ON MAP IN FOREIGN ASSISTANCE ACT OF 1961, AS AMENDED

The following are the major restrictions and constraints on military assistance contained in the Foreign Assistance Act of 1961, as amended.

1. Section 504(a)—a. (Mundt amendment)—Assistance, other than training in the United States, shall not be furnished to more than 40 countries.

b. (Conte amendment)—Sophisticated weapons systems shall not be furnished to any underdeveloped country without the President determining that it is important to the national interest to do so.

2. Section 505(b), Foreign Assistance Act—No defense articles shall be furnished on a grant basis to any country at a cost in excess of $3 million in any fisacl year unless the President determines:

(1) Country conforms to purpose and principle of U.N. charter.
(2) Defense articles used for own defense.
(3) Country takes all reasonable measures to develop defense capabilities.
(4) Increased ability to defend itself is important to security of United States.

3. Section 505(c) (Church amendment)—No military assistance can be granted to a country having sufficient wealth to maintain and equip its own military forces at adequate strength without undue burden to its economy.

4. Section 505(d), Foreign Assistance Act—Any country which uses defense articles or services in substantial violation of the law is immediately ineligible for further assistance.

5. Section 507(a)—In each fiscal year, the value of bilateral grant aid, not including training, to the American Republics shall not exceed $10 million.

6. Section 508 (Ellender amendment)—Assistance, including training, to African countries can only be for internal security and civic action and cannot exceed $25 million in each fiscal year.

(Section 33 of the Foreign Military Sales bill specifies that the combined total of grants and sales shall not exceed $100 million for Latin American countries and $40 million for African countries in each fiscal year.)

7. Section 509, Foreign Assistance Act—Requires Chief MAAG certification as to recipient countries capability to use defense articles having a value of more than $100,000 unless waived by State and Defense and Congress notified.

8. Section 510 (Fulbright amendments)—The number of foreign military students trained in the United States in any fiscal year may not exceed the number of foreign civilians brought to the United States under the Mutual Educational and Cultural Exchange Act of 1961 in the immediately preceding fiscal year.

9. Section 514, Foreign Assistance Act (10 percent foreign currency deposits)—Requires MAP recipients (except Cambodia and base rights countries) to pay 10 percent of MAP and 10 percent of fair value of excess defense articles (with $20 million annual ceiling on deposits); President can waive any amount if all United States Government costs payable in the foreign currency can be paid without buying more of that currency.

10. Section 604, Foreign Assistance Act—Requires that determination be made for procurement outside the United States that:

(1) No adverse effect on U.S. economy.

(2) Market price of commodities procured in bulk is less than United States.

11. Section 620—"Prohibitions Against Furnishing Assistance." No assistance shall be furnished:

(a)(1)* * * to Cuba nor to any country which furnishes assistance to Cuba.

(a)(3) * * * to a country that allows its ships and aircraft to trade with Cuba.

(b) and (f) * * * to a Communist country.

(c) * * * to a country which fails to pay admitted debt to U.S. citizen.

(e) * * * to a country that has expropriated, nationalized or seized property owned by a U.S. citizen or any business which is owned at least 50 percent by U.S. citizens (Hickenlooper amendment).

(i) * * * to any country which the President determines is engaging in or preparing for aggressive military efforts.

(m) * * * to any economically developed nation capable of sustaining its own defense burden and economic growth, except (1) to fulfill firm commitments made prior to July 1, 1963, or (2) additional orientation and training expenses during each fiscal year in an amount not to exceed $500,000.

(n) * * * to a country that trades with North Vietnam.

(q) * * * to any country which is in default in excess of 6 months in payment to the United States of principal or interest on a loan.

(t) * * * to a country that severed diplomatic reltaions with the United States.

12. Also under section 620:

(j) The President "shall consider" termination of assistance to any country which permits or fails to take adequate measures to prevent damage or destruction of U.S. property by mob action.

(o) In determining whether or not a country is to receive aid, "consideration shall be given" for excluding aid to any country which seizes or imposes a penalty against U.S. vessels fishing in international waters.

(p) No assistance shall be furnished the U.A.R. unless to do so is "essential" to U.S. national interest.

(v) No MAP or FMS credits shall be provided to Greece unless waived by President for national security requirements; waiver can permit obligations up to $71 million in any fiscal year (fiscal year 1971 ceiling).

(w) No MAP, FMS cash or credit sales, or munitions licenses to Pakistan unless President reports East Pakistan situation stable and refugees permitted to return.

13. Section 652, Foreign Assistance Act, specifies that the President shall not exercise any special authority granted to him under sections 506(a), 610(a), and 614(a) of the FAA unless notification is given to Congress prior to intended exercise.

14. Section 7, Foreign Military Sales Act, specifies that unless the sale, grant, loan, or transfer of any international fighter aircraft has been authorized by the Foreign Assistance Act or Foreign Military Sales Act, unless it is commercial sales transaction, such aircraft will not be provided any country except South Vietnam.

15. Section 8, Foreign Military Sales Act, limits the granting of excess defense articles provided under any law by any U.S. Government agency except AID to $185 million at 33⅓ percent of acquisition value (except to Vietnam prior to fiscal year 1973). Excess defense articles granted that exceed the value specified requires transfer of MAP funds to the Treasury. Further, the section specifies that the President must inform the Congress on each decision to provide major excess defense articles that were not previously reported to the Congress. Also requires quarterly reports on the total value of all deliveries.

Major Restrictions on FMS and FMS Credits in Foreign Military Sales Act, as Amended

The following are the major restrictions and constraints on foreign military sales (FMS) and foreign military sales credits contained in the Foreign Military Sales Act, as amended.

Sales to be approved only when consistent with U.S. foreign policy; foreign aid purposes in FAA; extent and character of military requirements; economic and financial capability of purchaser; proper balance among sales; MAP; and economic aid, impact of sales on social and economic development programs, and impact of sales on existing or incipient arms race. (Sec. 1.)

Sales may be made only for purposes of internal security, legitimate self-defense, civic action, or regional or collective arrangements consistent with U.N. Charter, or requested by the U.N. (Sec. 4.)

Sales of unclassified, commercially available items to economically developed nations from new procurement prohibited unless President waives in the national interest. (Sec. 22.)

Sales should not be approved to arm military dictators who are denying growth of fundamental rights or social progress to their people. (Reuss amendment, sec. 1.)

Sales, credits and guarantees cut off for 1 year if country seizes or fines U.S. fishing vessels in international waters, unless President waives cutoff as important to U.S. security. (Pelly amendment, sec. 3(b).)

No FMS credits or guarantees for less developed countries to buy sophisticated weapons such as missiles and jet aircraft for military purposes, except Greece, Turkey, Iran, Israel, Republic of China, Philippines, and Korea; President may waive if financing is important to U.S. national security. (Conte amendment, sec. 4.)

Sales, credits, and guarantees cut off if economically less developed country diverts economic aid, or its own resources, to military expenditures to a degree which materially interferes with its development. (Sec. 35.)

Secretary of State responsible for determining whether there shall be a sale to any particular country and the amount of the sale. (Sec. 2(b).)

President must determine eligibility of purchaser on basis that sales will strengthen U.S. security and promote world peace. (Sec. 3(a)(1).)

Purchaser must agree not to transfer purchased items without prior U.S. consent; prompt report to Congress when such consent given. (Sec. 3(a)(2).)

Sales and FMS credits made only for U.S. dollars. (Secs. 21, 22, and 23.)

FMS credits must be repaid within 10 years. (Sec. 23.)

FMS credit and guarantee standards and criteria; for example, interest rates, established by President. (Sec. 34.)

Offshore procurement with FM credit and guarantee funds required prior Presidential determination. (Sec. 42(c).)

Provide financing by U.S. institutions may be guaranteed by United States upon obligation of 25 percent of face amount of guarantee. (Sec. 24.)

Ex-Im Bank financing of sales to economically less developed countries prohibited. (Sec. 32.)

Cash received from FMS and from repayments of FMS credits cannot be used for financing new credits or guarantees. (Sec. 37.)

Ceilings on grant aid and sales combined: Latin America $100 million and Africa $40 million; President may waive if important to U.S. security up to 50 percent of ceiling over ceiling. (Sec. 33.)

Reporting to Congress required:

Semiannual reports of past sales, credits, and guarantees to or for economically less developed countries (sec. 35(b)).

Semiannual forecasts of sales, credits, and guarantees to or for economically less developed countries (sec. 35(b)).

Semiannual reports of munition list exports by United States or private U.S. firms to any foreign recipient or purchaser (sec. 36(a)).

Annual reports of dollar value of cash and credit FMS orders commitments to order, estimated orders, and estimated commercial orders and commitments to order received by U.S. private firms (sec. 36(b)).

Munitions control licensing requirements remain in force. (Sec. 36(c).)

Arms control consequences must be taken into consideration when evaluating any FMS sale. (Sec. 42(a)(3).)

Secretary of State must advise Congress prior to coproduction (or licensed production outside United States) transactions with details as to its value and probable impact on U.S. employment and on U.S. production. (Sec. 42(b).)

Provisions of Atomic Energy Act and 10 U.S.C. 7307 (requiring separate legislation for major ship loans and sales) unaffected by Foreign Military Sales Act, as amended. (Sec. 44.)

PROCUREMENT COSTS

Mr. PASSMAN. On page 1 of the justifications, you state, "To deny such countries access to U.S. military technology and materiel often forces them to procure inferior or more costly arms elsewhere which are neither in their best interest nor those of the United States." Would you please discuss this statement briefly for the committee?

Admiral PEET. Many nations are desirous of modernizing their military forces and are determined to do so. The reputation of the United States for quality of equipment and for support of the equipment is probably unequaled by any other industrial nation. There is no question but that most friendly and allied nations would prefer to purchase equipment for their force modernization from the United States. Our technology is so great and in such depth that a given, desired military capability, no more and no less, is likely to be available either off the shelf or with slight modification.

Let me give you a specific example. The F–5E is a unique aircraft. It has the capability to fulfill a number of missions: Air defense, close air support, interdiction, and counterinsurgency. The aircraft costs about $2.3 million each, including flyaway costs, peculiar support and training devices, and initial spare parts and engines. Competitor aircraft being offered by third countries include the French Mirage F–1 and the French/British Jaguar. The comparable costs of these aircraft are ——— respectively, and these foreign competitors do not have the flexibility, and most likely the reliability, of the U.S. F–5E, which has been developed so successfully as the international fighter aircraft at the request of Congress.

Third-country competition has been, and is, aggressive. Sales are enhanced by concessions and subsidies by third-country Government, which clearly understand that their sales can serve to increase their influence over their country-customers, to the loss of U.S. influence, and to increase their follow-on sales, to the loss of the U.S. economy.

MILITARY SALES RESTRICTIONS

Mr. PASSMAN. On the same page you also state that "undue restrictions on U.S. foreign military sales credit limit the supply of these credits to less than the demand and thereby lessen the contribution such sales could make to strengthening their security and the United States economy." Could you please tell the committee what restrictions the foreign military sales credit program is now operating under?

Admiral PEET. In addition to the adverse impact created by the annual reductions made by the Congress to the requested foreign military sales credit authorization and appropriations levels some of the other unduly restrictive provisions of the FMS Act are:

1. Regional ceilings on foreign military sales;
2. Repayment of FMS credit within a period not to exceed 10 years;
3. Not permitting the guaranty of credit from private foreign sources;
4. Not allowing the sale of promissory notes without renewed charges against both the credit ceiling or new obligation authority;
5. Not limiting the charge against the credit ceiling and new obligation authority to principal only (any guaranty that covers interest would not be charged);
6. The earmarking of $300 million for Israel.

EQUIPMENT SALES

Mr. PASSMAN. Is it not true that if the United States does not make these sales to the countries they will obtain the equipment from other sources?

Admiral PEET. That is correct. Our experience has been that if the United States cannot make the sale of defense articles to meet otherwise approved and valid military requirements, the country will turn to other suppliers, principally European countries and Canada.

EFFECT OF SALES ON BALANCE OF PAYMENTS

Mr. PASSMAN. Is it not true that if the United States made these sales it would favorably affect our U.S. balance-of-payments position?

Admiral PEET. That is correct. Every FMS credit sale means defense articles and services flowing from the United States and dollars to pay for those goods and services flowing into the United States. Of course, the balance-of-payments impact is much more immediate in the case of cash sales than in the case of credit sales which may be repaid over a period of years. If we had the authority to issue guarantees to private foreign financing sources, the disbursements of dollars from those sources to U.S. suppliers would have a more immediate impact on the U.S. balance of payments through the repatriation of these dollars.

BENEFITS OF TRAINING PROGRAM

Mr. PASSMAN. You indicate that one of the most effective and productive forms of security assistance is the training and orientation of-

fered as grant aid to the military and military-related civilian personnel of recipient nations. Could you please tell the committee what makes this program so beneficial?

Admiral PEET. The most significant benefit of this and precursor instructional programs is its contribution to the security of the United States. The instruction provided to foreign students, by enhancing the foreign country's capability for internal and external defense, improves the total force strength of free world forces and reduces the overall reliance on U.S. forces. The identifiable long-term products of the program, including the highly trained forces of the NATO alliance members, the Korean forces who continue to show their ability and determination, and the increasingly competent Southeast Asian forces —paced by a continuing withdrawal of U.S. combat forces overseas— attest to the success of these programs in support of U.S. security objectives.

Instruction of foreign students in U.S. schools offers particular advantages to the United States. The instruction received is of standard high caliber and produces a general similarity and compatibility of security doctrine, organization, and operations; this is of great importance in emergency situations in facilitating bilateral and regional defense matters. Further, the conduct of the instruction demonstrates instructional standards and techniques which are carried home for application. As a bonus result of any course in the United States, the student gains a firsthand impression of United States, its people, institutions, value standards, and way of life. In many cases, this contact has a long-term favorable influence upon the individual and establishes valuable channels of communications with U.S. military and civilian elements that continue long after the schooling is complete. In certain areas, U.S. military instruction of foreign students accomplished at selected overseas sites, such as the school and academy in the Canal Zone, has certain unique advantages. In this case, travel and operating expenses are reduced; a common foreign language is used where feasible, for the instruction; and the recipient countries contribute to the faculty manning.

SEPARATE TRAINING PROGRAM ITEM

Mr. PASSMAN. Why do you propose this year to separate the training program into a separate line item appropriation?

Mr. VON MARBOD. Dr. Curtis Tarr, the Under Secretary of State for Security Assistance, has been working with us at Defense in a common effort to make more effective use of security assistance programs; and we have identified a need to place greater emphasis on the importance of training provided as grant aid to foreign military and military-related personnel. Because such training is a major means of increasing the self-sufficiency of developing nations, it has long been generally recognized that, dollar for dollar, it represents a particularly productive investment of grant aid. It also fosters close relationships with the military in allied and friendly nations and creates a sense of common purpose which affords the United States a position of influence and thereby enables us to advocate courses of action consistent with our own interests as well as those of the countries receiving the training.

Mr. PASSMAN. Last year it was handled under the regular military

assistance program, and I can't see why there would be any more benefit at this point to have a separate appropriation.

Mr. VON MARBOD. One of several distinct advantages of the proposed change in the legislation is that a separate international military education and training program would elevate the status of training in juxtaposition to the material programs and thus emphasize its ongoing importance as an instrument of U.S. policy uniquely adapted to implement the Nixon doctrine principle of encouraging military self-sufficiency among our friends and allies. The proposed legislative change would also facilitate the presentation, review, justification, and implementation of Defense-administered security assistance by placing each of its three elements—foreign military sales, military assistance program materiel grant aid, and international military education and training—under separate legislative titles.

Mr. PASSMAN. Do you find that after you have trained a military trainee from another country he usually is pro-United States?

Admiral PEET. Yes, sir. Furthermore, he spreads this pro-United States attitude among his contemporaries and subordinates when he returns home.

REPAIR COST FOR EXCESS EQUIPMENT

Mr. PASSMAN. Under the excess defense articles program you indicate that no new appropriation funds, except for necessary repair and shipment, are involved in this form of grant military aid. Could you please tell the committee where the funds are located that will finance this repair and shipment cost?

Admiral PEET. The repair and shipment costs would be financed by the military assistance program fiscal year 1974 appropriated funds.

UNOBLIGATED BALANCES

Mr. PASSMAN. On page 3 you indicate that in fiscal year 1972 under the military assistance program, you had a $2,300,000 unobligated balance. Could you explain to the committee how this happened and do you anticipate any unobligated balance in fiscal year 1973 or fiscal year 1974?

Mr. VON MARBOD. The unobligated balance represents annual appropriations not obligated by the military departments. It is practically impossible to obligate the entire amount allocated. It should be noted that the fiscal year 1972 amount is $3.5 million less than the fiscal year 1971 unobligated balance of $5.8 million. We anticipate an unobligated balance of not less than the fiscal year 1972 amount for fiscal year 1973 and fiscal year 1974.

Mr. PASSMAN. Does this unobligated balance return to the Treasury?

Mr. VON MARBOD. Over the years the unobligated balance has been reappropriated by the Congress for use in the ensuing fiscal year; however, if the amount was not reappropriated, the funds would revert to the Treasury.

TRANFERS OF FUNDS

Mr. PASSMAN. Also on page 3, you indicate, under the military assistance program for fiscal year 1974 that $69.5 million will be transferred from the Department of Defense. Would you please explain this item to the committee?

Admiral PEET. The $69.5 million represents costs incurred to transfer major items of equipment to the Republic of Vietnam in October 1972, when it appeared that a Vietnam cease-fire agreement was imminent. Major items transferred included ——— F–5A aircraft from Iran, ——— F–5A aircraft from the Republic of China, and ——— F–5A aircraft from the Republic of Korea.

During negotiations to obtain this equipment, the United States agreed to bear certain costs of equipment replacement or substitution. These costs are detailed on page 28 of the Congressional Presentation Document. All of these costs are being borne initially by MAP, subject to reimbursement from the military assistance service funded accounts which are appropriated to bear the costs for military equipment transfers to the Republic of Vietnam. Requests for funds to accomplish this reimbursement to the MAP account have been presented to the Congress in the Defense Department's budget for fiscal year 1974.

TRAINING COST

Mr. PASSMAN. On page 7, under "International military education and training program," you indicate that in fiscal year 1972 you trained a total of 40,816 trainees at a cost of $33,952,000 and in fiscal year 1974 you propose to train 43,282 trainees at a cost of $33 million. Could you please explain to the committee how you are able to train so many more trainees in fiscal year 1974 than you were able to in fiscal year 1972 at a lesser cost?

Admiral PEET. The costs of $33,952,000 in fiscal year 1972 and $33 million in in fiscal year 1974 represent the total training program dollars, which consists of formal student training, mobile training teams, DOD/contractor technicians, and other training support costs. Considering the cost directly associated with formal student training, in fiscal year 1972 we trained 40,816 trainees at a cost of $19,535,000, and in fiscal year 1974 we propose to train 43,282 trainees at a cost of $19,809,000. The number of trainees proposed for fiscal year 1974 includes a large number of Cambodians scheduled for training overseas under a third country arrangement. Although the number of trainees involved in this training is large, the cost to conduct the training is considerably low. Additionally, it is noted that the total training program for fiscal year 1972 included MAAG/command support cost of $8,566,000; whereas, commencing with fiscal year 1973 this cost is no longer chargeable to the MAP training program.

SPECIFIC INCREASE IN EXCESS EQUIPMENT PROGRAM

Mr. PASSMAN. On page 8 of the justifications, under the "Excess defense articles program," you indicate that several Latin American countries will receive a substantial increase in their allocation for fiscal year 1974. The countries I see off hand are: El Salvador, Honduras,

Paraguay, and Uruguay. Could you please explain to the committee why those countries are receiving such a large increase?

Admiral PEET. The figures shown as proposed fiscal year 1974 excess defense article programs are best estimates derived by reviewing valid equipment requirements of the countries against projected excesses. The increase for El Salvador and Honduras can be attributed to the fact that assistance in the past has been curtailed because of the 1969 border conflict between those two countries. The increase for Paraguay is based on anticipated greater participation in the excess program in order to acquire vehicles and engineer equipment. Uruguay increase primarily represents possible acquisition of excess S2E patrol aircraft. In addition, increased use of excess defense articles can be attributed, to some degree, to recipient countries interest in achieving self-sufficiency by upgrading within their own resources their in-country repair facilities.

CAMBODIA TRAINING PROGRAM

Mr. PASSMAN. On page 6 under the "International military education and training program," you indicate that Cambodia will receive quite a substantial amount of funds for training and a good deal of this training will be conducted overseas. Would yo please tell the committee who is conducting this training for the Cambodians?

Admiral PEET. Overseas training for the Cambodians in fiscal year 1974 will be conducted in Thailand by the Royal Thailand Government. This training will consist of courses in various basic military skills that cannot be provided in Cambodia.

Additionally, some overseas training in courses primarily involving Air Force techniques and Army intelligence will be conducted by U.S. mobile training teams at specific locations in Thailand.

DETAIL OF LAOS REQUEST

Mr. PASSMAN. On page 75 you indicate that $311.2 million will be provided under the Department of Defense appropriations to Laos. Would you please tell the committee what these funds will finance?

Admiral PEET. The fiscal year 1974 MASF program of $311.2 million for Laos was developed prior to cease-fire developments in Southeast Asia. After a reassessment of the MASF requirements in light of the recent situation in Southeast Asia, the Deputy Secretary of Defense advised appropriate congressional committees of revisions to the MASF program in letters dated June 15 and June 25, 1973. In these letters the fiscal year 1974 MASF program for Laos was reduced from $311.2 million to $100.0 million. A breakout of the original and revised fiscal year 1974 Laos MASF programs will be provided. [The information follows:]

FISCAL YEAR 1974 MILITARY ASSISTANCE SERVICE FUNDED (MASF) PROGRAM FOR LAOS

[In millions of dollars]

	President's budget (January 1973)	Revised program (June 1973)
Personnel support: Subsistence (rice and protein supplements)	18.7	10.9
Operation and maintenance	191.5	75.9
Equipment and supplies	100.7	25.2
Logistic support	4.0	4.0
Requirements office	3.2	3.2
Training	1.5	1.5
Packing, crating, handling, and transportation	22.1	7.0
Travel	.4	.4
Contractual support	57.5	33.9
Fuel (aircraft)	2.1	.7
Procurement	101.0	13.2
Weapons	.2	.2
Ammunition	40.8	
Vehicles	.5	.5
T-41 trainer	.1	.1
Aircraft support	9.0	7.2
Air munitions	50.4	5.2
Total	311.2	100.1

UNDELIVERED EQUIPMENT

Mr. PASSMAN. On page 80 of the justification, you indicate that $12,000 in equipment is still undelivered for Burma as of June 30, 1972, and you also indicate that $696,000 is also undelivered to India as of June 30, 1972. Would you please tell the committee what type of equipment that is, and why it is still undelivered since these programs have been terminated for some time, I assume?

Admiral PEET. The grant aid programs for Burma was terminated in 1968 although a small training program continued through 1971. The undelivered materiel balance is now zero. The dollar balance is being corrected to reflect this fact.

The undelivered balance in the India program will be on the books for several years as the pipeline is being delivered out against a U.S. Government commitment to complete a long-term highway construction project.

Mr. PASSMAN. Would you also please explain the $292,000 undelivered item to the credit of Norway appearing on page 80?

Admiral PEET. The Norway balance should be zeroed out by June 30, 1973. The undelivered balance of funds recorded was held while the cost-shared ship construction project contracts were being renegotiated for final settlement. All ships have been delivered.

Mr. PASSMAN. On page 80 you also indicate that $610,000 is undelivered to the credit of Chile and $481,000 is undelivered to the credit of Ecuador. Is the United States still planning to deliver these items to these two countries considering Chile has nationalized a great deal of U.S. property and Ecuador has seized many fishing boats?

Admiral PEET. The Chile grant aid materiel pipeline is being delivered out on a routine basis although no new materiel programs are being initiated since this country is training only. In lieu of grant aid Chile is purchasing their military needs under FMS. Of the $610,000 balance, $422,000 was delivered in December 1972, leaving an actual

balance of $188,000 which should be delivered out within the next 9–10 months.

The Ecuador pipeline was recently canceled and is now zero.

TRAINING COSTS

Mr. PASSMAN. On page 81 you list a table showing the students trained under the military assistance program from fiscal year 1950 through fiscal year 1972 and I note in this table you have listed trainees from Austria, Belgium, Denmark, France, Germany, et cetera, listing other developed countries also. Is it not safe to assume that the United States does not presently finance trainees from developed countries at this time?

Also, don't the developed countries pay for their trainees themselves?

Admiral PEET. The United States is not financing under MAP the cost of any trainees from developed countries, except for Austria, Portugal, Spain, and Saudi Arabia. A small training program is provided Austrian military personnel to strengthen the independence of that country. The program for Spain is an important part of the quid pro quo terms annexed to the 1970 Agreement of Friendship and Cooperation. A small program is provided to Portugal to strengthen the country's ties with NATO. A training program is provided to Saudi Arabia because of the U.S. continuing interest in supporting its moderate Arab leadership and in maintaining access to Saudi petroleum resources. The other developed countries do pay for their trainees.

Mr. PASSMAN. I now yield to Dr. Long. If you will chair the committee temporarily, Dr. Long, I would appreciate it.

Mr. LONG. We will take a recess in order to vote.

[Recess.]

GAO REPORT ON THE PHILIPPINES

Mr. LONG. The committee will come to order. Admiral, a GAO report on military assistance to the Philippines, April 12, just recently, said:

> The Philippine Government has not provided adequate financial support for its own forces.

In general terms, it says the United States should consider whether aid other than military aid would better serve the mutual security of the United States and the Philippines.

What is your reaction to these conclusions?

Admiral PEET. We have taken note of the GAO finding and of the fact that the GAO report says the Philippines have not provided resources necessary to use effectively equipment provided under MAP, particularly construction equipment. This is, of course, a significant factor in MAP planning, and continuous efforts are being made through the military assistance advisory group to improve utilization. The Government of the Philippines has indicated that steps will be taken to allocate manpower and financial resources to rectify this situation.

Mr. LONG. How long has this situation been going on in which the Philippine Government has not been making proper use of the equipment we have given them and not providing adequate support for its own forces?

Admiral PEET. I would have to check the exact time span.

Mr. LONG. Approximately how long?

Admiral PEET. I do not know.

Mr. LONG. You said you had looked into it. I would have thought this would be something that you would be fairly familiar with.

Admiral PEET. The staff has looked into it. I would be glad to provide additional information.

Mr. LONG. When you ask somebody to correct a situation, I think it is important to know, when you are trying to judge whether they are going to do anything about it, how long it has been going on. If it is just something going on for a few months, that is one thing. If it has been going on for many, many years, you have to ask yourself, are they really going to do anything about it?

Admiral PEET. I do not want to give the impression that it has been going on for many years. I do not think it has. But I do not know exactly how long. I will check and let you know.

Mr. LONG. I would appreciate that.

[The information follows:]

According to the GAO report, which covers the entire period during which we have been providing grant military assistance to the Philippines, it has been going on since the beginning of the program for that country in 1950.

U.S. BASES KEY TO INTEREST IN PHILIPPINES

Mr. TARR. Mr. Chairman, one thing in the Philippine program that we do need to keep in mind is that our interest is conditioned by the presence of two large bases that we have there.

Mr. LONG. I am not quite sure I understand what you mean. You mean we have to give them this stuff even if they do not use it well in order to ——— ——— is that what you mean?

Mr. TARR. I think that the conditions we place upon the programs that they carry out with our assistance are somewhat different, where we have large base interests.

Mr. LONG. Let's spell it out.

You mean we really have to put up with things that are rather distressing or unfortunate simply because ———.

Mr. TARR. Yes.

Mr. LONG. We are ——— basically?

Mr. TARR. Yes.

Admiral PEET. Yes. And any reduction I think in this type of aid would certainly have an impact on their ability to maintain law and order in the country.

Mr. LONG. I must say I like it much better when you spell it out like that.

Admiral PEET. I will do my best.

Mr. LONG. Well, it takes a little while.

Mr. Secretary, had you known whether this condition was going on for some time?

Mr. TARR. Mr. Chairman, I saw either a news item or something that came across my desk to the effect that the Government Accounting Office had made a report, but I have not studied the report.

Mr. LONG. I wish you would tell us about that.

Is this the only way we can get ———? You know there are various different types of ———. We can give better economic aid, help them

more with their education, and everything else. Why do we have to give them military aid ———.

Admiral PEET. I think we do both, Mr. Long.

Mr. LONG. Of course we do, but we are putting an awful lot of military aid into all these countries. We are all worried about it. It is certainly not helping them develop.

Admiral PEET. In the case of the Philippines, we are talking about something in the order of $20 million, which covers all of these things.

Mr. LONG. $20 million?

Admiral PEET. ———, it is——

Mr. TARR. Training.

Admiral PEET. Training, and a whole series of things.

Mr. LONG. Compared with what for economic aid?

Admiral PEET. I do not have that. I will put it in the record.

Mr. TARR. I do not.

[The information follows:]

PROPOSED FISCAL YEAR 1974 ECONOMIC ASSISTANCE TO THE PHILIPPINES

The amounts of economic assistance proposed for the Philippines in fiscal year 1974 are as follows:

	Millions
Development loans	$26.5
Technical assistance	10.0
Public Law 480, title I	35.0
Public Law 480, title II	17.0
Total	88.5
Emergency flood relief	50.0
Total	138.5

Admiral PEET. For 1974, we do not plan any supporting assistance.

Mr. TARR. We put $50 million in there in the flood, too.

Mr. LONG. There are lots of ways we can ——— there besides giving them a lot of equipment they may not make good use of, isn't that right?

GAO/IGA REPORTS

Admiral PEET. Yes, I think there are.

However, regarding the GAO report, there are about seven different organizations that audit these operations around the world. You have to examine each case in detail to determine what is behind it, what the reason is. I would be glad to give you a full accounting.

Mr. LONG. Would you discount the GAO report?

Admiral PEET. I find they do not always have the whole story. This is why these reports bounce back and forth.

Mr. LONG. When you say seven auditing organizations, what are the others?

Admiral PEET. The Office of Management and Budget Reviews these activities around the world; the State Department has an IGA group, etc.

Mr. LONG. The GAO is the only one that is speaking for Congress, though, is it not?

Admiral PEET. Well, the IGA is a child of Congress.

Mr. LONG. What is the IGA?

Mr. TARR. That is the Inspector General of Foreign Assistance, an office created by the Congress for overseeing these programs.

Mr. LONG. They are all children of Congress, but some of them are not responsive.

Admiral PEET. These reports are made by humans who do not always get all the facts.

I would be glad to supply you with all the details in any one of the cases they mention.

Mr. LONG. I do think this business of giving people aid when they are not using adequately the aid we are giving them is something that has to be looked at from the point of view of efficiency. I hope very much that you will give us a reply on that and that we can see that something is going to be done.

Admiral PEET. I would be glad to.

[The information follows:]

The GAO report to which you have reference contends that generally, over the years during which we have been providing grant military assistance, the Government of the Philippines has not devoted a sufficient portion of its national budget to defense. This is a conclusion with which we do not agree, and to which we have responded in the appendix to the report. When I mentioned resources necessary to make effective use of equipment provided through the military assistance program, I was referring specifically to the fact that construction equipment which we furnished in 1967 has been put to marginal use and given marginal maintenance.

The recent floods in central Luzon have made the Republic of the Philippines sharply aware of the currently limited capability of its construction battalions, and have focused governmental interest on the need to improve the engineer capabilities of its armed forces.

MILITARY VERSUS ECONOMIC AID FOR PHILIPPINES

Mr. TARR. We are about to begin new negotiations with the Philippine Government on those bases. ———. So many of these things will come into play as we become involved in negotiations.

Mr. LONG. Do you agree with the GAO conclusion that military aid to the Philippines should be decreased in favor of economic aid?

Admiral PEET. Mr. Chairman, if there were a choice, and we could have one or the other and accomplish what we need to accomplish in the best interests of the country, I would always be in favor of economic aid as opposed to military aid.

Mr. TARR. It depends on the wishes of the Government, however. The Government of the Philippines certainly has a vote in the way in which they spend potential resources available to them.

Admiral PEET. One thing certain in this business, if you have stability in a country, you may make some progress, but if you do not have stability, you certainly will not make any progress.

Mr. LONG. Are you operating on the assumption that the customer is always right, no matter what he wants?

Admiral PEET. I hope not.

Mr. LONG. You talk like that, though, for example——

Admiral PEET. I am here to defend the programs.

Mr. LONG. You say that if we do not give them military aid on credit, these countries will buy their arms elsewhere. Aren't you really saying that the customer is right and that we are going to satisfy him?

Admiral PEET. No, I do not think I am saying that the customer is necessarily right. What I am saying is that if the customer is going to buy an airplane regardless, I would rather have him buy a U.S. airplane than a French or a Soviet airplane.

Mr. LONG. What would you say about a drug addict if he is going to buy heroin, would you rather have him buy it from you than from somebody else?

Admiral PEET. Do you think that is a comparable case?

Mr. LONG. Well, isn't that your argument?

Admiral PEET. I do not——

Mr. LONG. Isn't your argument that you are justifying military aid on the basis that it is better to buy weapons from us if they are going to buy it. I would say you can carry that to a ridiculous conclusion. I have just done that.

Admiral PEET. The example that I used was an airplane.

Mr. LONG. Airplanes—just like drugs—can kill people, many people.

Admiral PEET. I know. But we attempt to be very responsible as far as an airplane is concerned.

Mr. LONG. In what sense?

Admiral PEET. In the sense that, in many cases, we sell them aircraft with limited capability, we make sure, whenever we possibly can, that it is a defensive aircraft rather than one with strong offensive capabilities.

We try to be responsible in this regard.

SUPERSONIC PLANES TO LATIN AMERICA

Mr. LONG. Are you selling these underdeveloped countries any supersonic fighters, fighter planes?

Admiral PEET. Of course the definition——

Mr. LONG. You know what a supersonic plane is?

Admiral PEET. Yes, I do, but there is the question of developed and underdeveloped countries.

Mr. LONG. The Philippines are——

Admiral PEET. In Latin America we have not been selling supersonic fighters. However, the State Department is considering some on a case-by-case basis.

The F–5E aircraft is considered a supersonic aircraft.

Mr. TARR. It is.

Admiral PEET. Yes, it is.

Mr. LONG. He gave us the same story yesterday. A sophisticated weapon depends on what you mean by a sophisticated weapon. I am trying to get to a particular weapon. A supersonic plane is a sophisticated weapon, is it not?

Admiral PEET. Yes, sir.

Mr. LONG. For a developing country, or a poor country?

Admiral PEET. I am not trying to be facetious. It is better in some cases for a lesser developed country to have a sophisticated weapon.

Mr. LONG. Why?

Admiral PEET. It is easier to maintain and they have the advantage of the advanced technology. It will cost them less in the long run in many cases. There are many reasons.

Mr. LONG. What is the use, could you tell me what is the use of a supersonic plane for a country in Latin America?

Admiral PEET. For their self-defense.

Mr. LONG. Or the Philippines either, for that matter. Who are they supposed to use it against?

Admiral PEET. Each country has its own concerns.

Mr. LONG. Yes, name one.

Admiral PEET. Brazil, Chile.

Mr. LONG. Who is Brazil going to use it against?

Admiral PEET. She feels she needs it for her own self-defense and internal stability.

Mr. LONG. Against whom?

Admiral PEET. Against her neighbors.

Mr. LONG. Against which of her neighbors?

Admiral PEET. She has border problems.

Mr. LONG. Name the countries; do you know them?

Admiral PEET. Venezuela is a neighbor—also Peru and Bolivia.

Mr. LONG. Are they friends of ours?

Admiral PEET. Yes, I hope they are.

Mr. LONG. So we are selling planes, and you are trying to justify sale of planes to Brazil for weapons to be used against other countries that we are friendly with?

Admiral PEET. No, sir.

Mr. LONG. Is it not true?

Admiral PEET. No, it is not. I do not sell a single aircraft in Latin America unless it is the policy of this Government to do so.

Mr. LONG. You are trying to justify it.

Admiral PEET. Yes.

Mr. LONG. All right, we are trying to find out the justification.

BRAZILIAN NEED FOR MODERN AIRCRAFT

Admiral PEET. Take Brazil as an example. She feels she needs modern aircraft.

Mr. LONG. Against countries which are friendly to us?

Admiral PEET. I do not say that it is against countries which are friendly.

Mr. LONG. They are the only possible targets, are they not?

Admiral PEET. No, she has her internal stability to maintain.

Mr. LONG. Would you use a supersonic plane against guerrillas?

Admiral PEET. The F–5E aircraft was designed as a multimission aircraft. For example, it could be deployed in air defense, close support, interdiction, and counterinsurgency.

Mr. LONG. How fast do they go?

Admiral PEET. We do not even have any in our inventory.

Mr. LONG. How fast do they go?

Admiral PEET. It has flown 1.6 mach or almost 1,200 miles per hour.

Mr. LONG. And you use them against insurgents? How do you find insurgents? Have we not been through all this in Vietnam?

Admiral PEET. I am having difficulty tracking the logic.

Mr. LONG. You sure are. How do you use something against a guy who is in the woods or merging into the woodwork, how do you use fancy weapons like this against him?

Admiral PEET. You have to take into consideration the nature of counterinsurgency warfare. This aircraft was designed and built for that purpose among others.

Mr. LONG. Explain to me how it is done.

Admiral PEET. Air defense.

Mr. LONG. How do you find the insurgent and——

Admiral PEET. They do not use it in cases such as that where they are in the woods. But it carries weapons and they can use it to drop weapons, and fight units of the river traffic—things of that sort. We found that oftentimes in Vietnam, for example, they were up against high performance equipment given to the enemy by other countries.

U.S. MILITARY POSTURE AND ADVICE

Mr. LONG. Are you still maintaining that the type of warfare that we tried to conduct in Vietnam was in our best interest, using all this fancy equipment, high-powered weapons and everything against people who are almost impossible to find?

Admiral PEET. Mr. Long, I am not here——

Mr. LONG. You are a military man. Are you still maintaining that type of posture? I am very interested to know. I am not going to talk you out of it.

Admiral PEET. I am not here to defend Vietnam or how we got into it. I do not think the military got us into Vietnam. But once we were asked to do a job, I hope we did it and we did it well.

Mr. LONG. That is your position now, but, of course, you were not around 10 years ago when I sat on the Armed Services Committee and listened to advice from the generals.

Now the posture is that the military did it under orders from the President. I do not want to take President Johnson off the hook. He made a great bungle. But he made it with some of the most atrocious advice from the military that a President has ever gotten. If you people have not realized that by this time, you are not doing a service to yourself or to your country.

Admiral PEET. I happen not to agree with you.

Mr. LONG. Go back and read some of the testimony 8, 10 years ago, before the Armed Services Committee.

Admiral PEET. I think this country is pleased, Mr. Chairman, with a military that is completely subservient to civilian control. When you ask us for military advice, we give you military advice.

Mr. LONG. Well——

Admiral PEET. We do not question a decision that is made contrary to our advice. This country is blessed by having that type of military.

Mr. LONG. You doubtless believe that when you say it, and there are lots of people who agree with you. In a sense, you are right.

Admiral PEET. Yes, sir.

Mr. LONG. But there are ways of getting questions asked, you know that.

Admiral PEET. Yes, sir.

Mr. LONG. There are ways of giving advice which give a President no choice other than to go ahead with the particular course of action. We are getting way far afield from my original question, but the President, who was unwarranted even on the basis of the military advice he got from sending so many people to Vietnam, nevertheless got all kinds of advice and information, because I was there and I got it all at the same time—advice that certain military tactics would be successful in Vietnam. And they were not.

Now, I would have hoped by this time you would have learned that lesson. If you have not learned that lesson, you are not going to be

in the position of advising the political leaders of the future, because a political leader cannot tell the military we want something done and make that decision in a vacuum. There has to be a whole body of information on which he bases it.

Admiral PEET. Absolutely.

Mr. LONG. Is that not true?

Admiral PEET. Yes.

Mr. LONG. OK.

CAMBODIAN "PHANTOM TROOPS"

I assume you are aware of news reports in the Wall Street Journal and other papers about the widespread corruption in the Cambodian Army?

Admiral PEET. Yes, sir.

Mr. LONG. Why should the United States give $167 million in grant military assistance to Cambodia when much of that money goes into the pockets of corrupt officers?

Admiral PEET. Given the question the way you state it, there is no reason in the world for giving that much grant aid.

Mr. LONG. You have heard, have you not——

Mr. SHRIVER. When did you quit beating your wife?

Mr. LONG. You have not heard of all of ghost armies over there, of 120,000 people?

Admiral PEET. Yes, sir, we are very familiar with the report. We abhor the payment of nonexistent troops, and are doing everything we possibly can to correct the situation.

Mr. LONG. What are we doing?

Admiral PEET. We have a detailed report to give you on this matter. We have provided it to the Congress on many occasions.

Ambassador Swank is following the problem daily. Here again, this is an AID program. It is not a situation of giving them dollars which they are passing out. That is not the case.

[The information follows:]

First, it should be clearly understood that there is no connection between military assistance program grant aid and the reported payroll practices.

The United States releases foreign currencies generated by AID-financed commercial imports programs and Public Law 480-financed food-for-peace programs as budgetary support to the Khmer Republic. The United States-Khmer project agreements provide that these funds will be used for defense budget needs, primarily pay and allowances. Although these currencies are not released for pay of specific units, they constitute a significant portion of the Khmer military budget.

The payroll practices were an outgrowth of the rapid expansion of the Khmer armed forces from 35,00 to 200,000-plus troops in a wartime environment. The manpower, personnel, and finance systems carried over from the French were incapable of dealing with this expansion. These systems, which provided for recruitment, payroll computation and payment by unit commanders, were subject to abuse by unscrupulous commanders. Militarily as well as economically, significant changes were required in the Force Armee Nationale Khmer (FANK) management structure to bring all of the organizational, management, and financial problems of the FANK under control.

In the payroll area, much has been accomplished. Recruitment policies have been changed. Personnel identification practices have been installed. Payroll computation and payment responsibilities have been withdrawn from unit commanders and assigned to central finance regions. Manpower and payroll strength reporting has been improved. In addition, the project agreement of calendar year 1973 contains seven specific management provisions which must be complied with prior to release of funds.

Progress has been made, but much remains to be done. Central finance activities in particular must be expanded from military regions II and III to all military regions. Hopefully, this can be accomplished within the next several months.

Mr. LONG. Just how is it done?

Mr. TARR. Mr. Chairman, the $167 million that you talk about represents materiel programs that are transferred to the Cambodian Army. Now if small parts of this material have actually been sold and the money pocketed by the officers, we do not know of such instances.

Mr. LONG. Does that not actually happen? You do not know of instances of that?

Mr. TARR. No.

Mr. LONG. Despite all types of newspaper reports?

Mr. TARR. The newspaper reports——

Mr. LONG. You do not believe the newspaper reports?

Mr. TARR. No, no, no. The newspaper reports refer to something quite different from what we have just discussed. The newspaper accounts refer to payments made by the Cambodian Government to troops in the Cambodian Army.

Mr. LONG. That is one type of corruption, yes.

Mr. TARR. Yes.

Mr. LONG. There have been others, have there not?

Mr. TARR. Well, this is the only type about which I am aware.

Mr. LONG. Outside of that, Cambodia is a perfectly clean, aboveboard operation, except for the fact they have a ghost army of about 40 percent of their entire army?

Mr. TARR. It is an Oriental country.

Mr. LONG. And that is all there is to it? We cannot do anything about it?

Mr. TARR. We are certainly trying to improve the payroll practices in the Cambodian Army, yes. But there is a lot there that obviously we cannot influence over a short period of time.

Mr. LONG. Are we asking for more money this year for military assistance and supporting assistance for Cambodia?

Mr. TARR. We are asking for $180 million. When we put the budget together, we formulated it on the basis of what we could best predict at that time. Precisely what our needs will be we obviously cannot know. But the demands, if we are able to get a cease-fire, would probably be less than what we have asked for.

Mr. LONG. You are asking for $180 million in 1974?

Admiral PEET. Yes; $180 million.

EFFECT OF INDOCHINA AID CUTOFF

Mr. LONG. A Washington Post article of June 4, just the other day, reports that some American military officials in Vietnam feel a cutoff of U.S. military aid to Indochina would result in a reduction in the violence between the opposing forces.

Have you seen staff reports from the field arguing this point of view? This is American military officials in Vietnam who have put forth that view.

Mr. TARR. Mr. Chairman, I have not seen any cables that came from the field that indicated this, but I think it is clear that if we did not supply ammunition to the Cambodian Army, there wouldn't be any shots fired.

Mr. LONG. We are talking about Vietnam now.

Mr. TARR. The same is true in Vietnam. If we cut off the supply of ammunition we will cut off the supply of firepower.

Mr. LONG. I have a report which says U.S. military officials here are, "watching the results of the reduction with interest in search for clues about what would happen if Congress cut off the supply of military aid to the governments."

Mr. TARR. Does this refer to the B–52 sorties?

Mr. LONG. This is an article from a June 2 newspaper the one I am reading right now.

Mr. SHRIVER. A newspaper article?

Who are they talking about? What people are they referring to? "Reliable sources"?

Mr. LONG. I am just asking whether it is true that military officials have said this. I am not saying it is true. I am asking them if they know anything about it.

Mr. SHRIVER. They have said they don't.

Mr. LONG. Does that mean you are saying there weren't any such statements?

Mr. TARR. Were not any what?

Mr. LONG. Any such military suggestions that a cutoff of military aid to Indochina would result in a reduction of violence. Isn't that the main effect of our putting military in there, to simply step up the action?

Mr. TARR. I am not aware of any report, Mr. Chairman.

Mr. LONG. You are not aware of the report?

Mr. TARR. Of any report.

Mr. LONG. Are you, admiral?

Admiral PEET. No, sir, but it certainly follows that if we cut out the ammunition it will certainly reduce the violence.

REPORTED SALES OF MILITARY GASOLINE

Mr. LONG. I have a report here that military gasoline has a way of winding up on sale to the public of South Vietnam and that a cutback of supplies is largely an attempt to cut back on black marketeering.

Admiral PEET. Mr. Chairman, we investigate as thoroughly as we know how every such report that we get.

Mr. LONG. They all turn out to be unfounded?

Admiral PEET. No, we don't say that. Some of them do have foundation, and we do what we can about it. We are happy to report the results of our investigation.

Mr. LONG. Do you feel that your field staff and Washington staff are giving you all the information you need to make informed decisions?

Admiral PEET. You never get as much information as you would like, but the field reporting has been excellent. You have to do what is best in your judgment.

Mr. TARR. Mr. Chairman, in France in 1944 it is alleged that one of the reasons that Patton's tanks were stopped over on the border of Germany was that so much gasoline had been siphoned off from our pipelines for civilian uses that we did not have sufficient fuel to carry us forward. The difficulty with gasoline is that when a lot of people can use it, it is extremely hard to keep control over it.

REPORTED JET SALES TO BRAZIL

Mr. LONG. I have a Washington Post article of May 31 which reports that Brazil will buy 48 American F–5E jet fighters at a price of $1.6 million each or $77 million. Is that report accurate?

Admiral PEET. I can speak to that. We are talking about it, but the transaction has not been consummated.

Mr. LONG. It hasn't been made?

Admiral PEET. No, sir.

Mr. LONG. Would it be a credit sale or a cash sale?

Admiral PEET. We don't know. It hasn't been decided yet which it would be.

Mr. LONG. Can you tell us what some of the options are?

Admiral PEET. It could be either.

Mr. LONG. It could be a credit sale?

Admiral PEET. Yes, sir.

Mr. LONG. You have already talked about why Brazil needs a supersonic fighter.

Admiral PEET. Not very satisfactorily.

Mr. LONG. Not very satisfactorily, no. Are you saying it is entirely against internal subversion?

Admiral PEET. No, sir, I am not going to say that.

Mr. LONG. You won't say that none of these could be used against other countries bordering Brazil?

Admiral PEET. Yes, sir, they could be.

Mr. LONG. And these other countries are just as good friends of ours as Brazil, right?

Admiral PEET. They are friends of ours, we hope. We hope all countries of Latin America are and continue to be friends of ours. We also hope we continue to have influence with them. I think that is important to us, at least from a Defense Department point of view. That is the way we look at it.

Mr. LONG. Do you think it makes sense to sell to countries that are friendly to us, weapons to be used against each other?

Admiral PEET. We know that when we decided not to do so in the case of Latin American countries, they bought the Mirage aircraft.

Mr. LONG. I asked you a while ago about the drug addict and you didn't feel it was apropos.

Admiral PEET. I felt we were comparing apples and oranges.

Mr. TARR. I feel about your analogy of selling heroin to a heroin addict——

Mr. LONG. On the ground that if you don't sell it to him he will get it somewhere else. The drug pushers soothe their consciences with that aspect, you know, that they can sell drugs to the drug addict, because if they don't, somebody else will.

Mr. TARR. We have to keep in mind that we have airplanes ourselves in our own inventories, our own national forces use them. We sell these aircraft. I think the analogy you brought up does not really serve a useful purpose.

Mr. LONG. You feel, in other words, that jet planes are a good thing, a very wholesome thing, and that we shouldn't worry about what they are used for, is that it?

Mr. TARR. I feel that nations have a natural inclination to maintain some military forces, even though they may be on relatively friendly terms with their neighbors.

Mr. CHAPPELL. Will the gentleman yield for a question at this point.

Mr. LONG. Sure.

IMPORTANCE OF MAINTAINING STABILITY

Mr. CHAPPELL. Isn't it true, Admiral and Doctor, that in everyone of the South American countries, Brazil included, you have a high contingency of insurgency going on all the while which is sponsored by the Communist nations and therefore it is impossible to determine at any given moment when one of those countries will turn communistic and attempt to use that communistic force against one of our friends? Therefore, it is important and essential for us to keep those countries stable which are friends of ours so we can help them be an effective deterrent against the further spreading of communism in South America. Isn't that the real answer to that?

Mr. TARR. I believe it is certainly part of it, but I think that in addition there are two areas where we are particularly concerned about insurgency ——— but there are other places as well.

Mr. CHAPPELL. Isn't it true that Cuba is the schooling place for Communists in South America, and isn't it true that they are perpetually trying to gain influence over each and every one of those countries and it is therefore important for us to keep ourselves in a stable position with those countries and lend every influence toward friendship with these nations rather than have them turn to the Communist world for alliances?

Mr. TARR. That is what we would hope. In addition——

Mr. CHAPPELL. That is what you are trying to do, isn't it, Doctor?

Mr. TARR. Yes, and in addition we hope that these sales programs will make it possible for us to have a continuing relationship with these countries, a relationship that is essential to the servicing of the equipment and the maintenance of United States technical personnel in these countries.

Mr. CHAPPELL. Isn't it true, too, that the South American mind is such that it feels it has to be on the winning side, or it is going to be gobbled up in complete destruction, different from our own situation in this country? With them one must win all the way or he will lose all the way, which is to say if we give a weak image or a weak front to these South American countries, or a weak position toward communism, then they are going to be inclined to say, "If the United States isn't going to be strong against communism, then by golly we had better make our deal with both sides. We had better play both sides against the middle and we had better make our alliances with the Communist nations and with the United States." Isn't that a fact? Isn't that the way the mind works down there?

Mr. TARR. It is possible.

Mr. CHAPPELL. So it is an important thing to maintain our friends down there with up-to-date equipment. We wouldn't sell them a pocketknife when they needed a sword, would we?

Admiral PEET. I would hope not.

Mr. YATES. Would you sell them a sword when they needed a pocketknife?

Mr. CHAPPELL. No, I wouldn't, but I would try to be reasonable when this situation might occur, and try to make certain we do keep the stability where they will not need either the knife or the sword; but as long as it is there, I think we have got to retain a strong position.

Mr. LONG. Is the gentleman from Florida stating his general position? I just want to find out what his thinking is.

Admiral PEET. We have turned down a number of sales to Latin America because we felt that they didn't need the sword as opposed to a penknife.

Mr. LONG. Do you accept this position as he states it, the position of the gentleman from Florida?

Mr. YATES. Mr. Chairman, I can't hear the question.

Mr. LONG. I am asking the gentleman whether he accepts it.

Mr. CHAPPELL. I would like to know that, too. I would like to know if my position is wrong on that.

U.S. SUPPORTS RECIPIENT PERCEPTION OF NEEDS

Admiral PEET. The position that I accept is that they are sovereign countries just as the United States is, and just as the United States perceives its need for aircraft, many of those countries perceive their need for aircraft, and we can't play God. We can't be paternalistic and say whether they will have them or whether they won't have them.

Mr. LONG. I am not sure you have answered the question of whether you agree with the gentleman. I think he stated a position. I don't agree with it, but I think he stated it extremely clearly from his point of view. I just want to know whether you agree with it.

Mr. CHAPPELL. I would like to know, too.

Admiral PEET. I find that I don't have any difficulty with it.

Mr. LONG. You have no difficulty with it at all?

Admiral PEET. Not with his statement. I am much closer to his position.

Mr. LONG. Do you have any difficulty with his statement?

Mr. VON MARBOD. I don't have any difficulty with the gentleman's statement.

Mr. LONG. You agree with it?

Mr. VON MARBOD. I find it very articulate.

Mr. LONG. Do you agree with it?

Mr. VON MARBOD. I am not sure, Dr. Long, that I heard the entire statement.

Mr. LONG. I thought he made it very clear. I thought his voice was very loud and clear. He has been talking to constituents for many years. He is a very able and articulate man. Do you agree with it, Mr. Tarr?

Mr. TARR. I agree with it, with the addition that I placed upon it. There are, I think, valid needs in the eyes of people in Latin America for military forces above and beyond what is necessary to combat insurgency.

Mr. LONG. So that quite aside from the insurgency question, you think we should give them weapons or finance them or sell them or

otherwise help them get weapons to use against their neighbors who also are asking for weapons to use in turn against them.

Mr. TARR. Mr. Chairman, one thing I think that we should make clear is that we do not intend these weapons in every case to be used.

Mr. LONG. Do they have——

Mr. TARR. Quite obviously. Let me give you an example. There are two nations on the Korean Peninsula. By all the rules of logic, you could argue that both of these nations would be better off if they weren't armed.

Mr. LONG. Are we financing the North Koreans?

Mr. TARR. We are not financing the North Koreans.

Mr. LONG. Are we giving them any weapons?

Mr. TARR. We are not giving them any weapons.

Mr. LONG. Would you approve it if we did?

Mr. TARR. I would not approve it.

Mr. LONG. All right. Then why should we be doing this in Latin America?

Mr. TARR. But the point is that——

Mr. LONG. Or in any other friendly country? Why should we be arming friendly countries against each other? You have already admitted now that you approve of sales of weapons above and beyond the needs to combat insurgents.

Mr. TARR. Because these countries are friendly with us. You are automatically assuming that, by logical induction, they will never have sore points in their issues between themselves. This is absolutely fallacious because——

Mr. LONG. The point is, we are trying to help them.

Mr. TARR. Because A is friendly with B, and C is friendly with B, A is not necessarily friendly with C.

Mr. LONG. Of course. I thought that was the whole point.

Mr. TARR. This is exactly what you have argued. You said these people are all friends of ours, and so why do we sell them these things that might be used against each other.

Mr. LONG. So they can be used against each other. You have just pointed out they may not be friendly with each other but they are good friends of ours. We are trying to help them, but of course doesn't that make the offense even greater, knowing that they may fiight with each other, knowing they may have differences with each other. We nevertheless persist in helping countries, both of which are friendly with us, to arm against each other. Does this make sense?

NEED TO MAINTAIN BALANCE OF MILITARY FORCES

Mr. TARR. Because experience has generally shown that if these people have some capability to defend their interests, there is a better chance for peace in an area than if there is no balance of military forces.

Mr. LONG. You are arguing then that there is a better chance of peace between two countries that are more heavily armed against each other than there is if they don't have many arms. Is that the type of thinking that you want me to accept?

Mr. TARR. The point is that you cannot govern what both sides will have.

Mr. LONG. That is a different matter.

Admiral PEET. But that is the history in Latin America.

Mr. LONG. Of course we have had a history of financing India against Pakistan, and Pakistan against India.

Admiral PEET. Yes; we did provide assistance but not for that purpose.

Mr. LONG. And a number of other countries. By this time I had thought we were backing away from that type of thing because we had been burned so badly.

Admiral PEET. I think we have shown a great deal of restraint and will continue to show restraint.

Mr. LONG. I agree that these are sovereign countries. We can't force them not to buy, or prevent them from buying weapons, but that is another question. What you are proposing here is that the American taxpayer reach down in his pocket and take money that we need desperately for local projects to help them directly or indirectly to arm against each other.

Admiral PEET. Let me talk to that.

Mr. LONG. You are trying to justify it?

Admiral PEET. That is not what we are doing in the case of Brazil.

FAVORABLE EFFECT OF CREDIT SALES

Mr. LONG. I just asked you if you were proposing to do this with credit sales, and you said that was a possibility.

Admiral PEET. If we do provide credit, it would be a sale to Brazil at the cost of money to the United States. That would be a loan over 8- to 10-year period; and at the current rate, we would receive 6⅞ percent interest.

Mr. LONG. Did you know, Admiral, that I have constituents back home, and we all do, who are trying to get money from the Small Business Administration, who would love to get money at 6 or 7 percent, would love that kind of a deal, and cannot get it because we don't have it?

Admiral PEET. In addition almost all the money involved is spent in the United States. The equipment is manufactured here, the business is here, and it has a very favorable impact on the balance of payments.

Mr. LONG. Would you argue that if we give a loan to a small business in Maine or Mr. Chappell's district, that money wouldn't be spent in the United States?

Admiral PEET. No, sir.

Mr. LONG. It will, won't it?

Admiral PEET. Absolutely, and I am all for such a loan.

Mr. LONG. The difference is that we are helping American business and at the same time keeping the goods in the United States as well as the money, whereas in your case we are sending goods out of the United States, and not only that the goods are being used to arm countries against each other that by your own admission, are friendly to us but not necessarily friendly to each other. By this action of ours we may foment war.

UNITED STATES SELLS ON CASE-BY-CASE BASIS

I would like to make another point that Mr. Chappell raised. I think he raised a valid point. That is holding down subversion. We all want to do that. Have any of these weapons prevented any countries from being overcome by subversion? In the case of Peru, we sold them some pretty hot shot weapons, and in the case of Chile we sold them quite a few good weapons. That didn't keep them from going Communist or Socialist when the time came, did it?

Admiral PEET. In the case of both of those countries we denied them the "hot shot" weapons. We have not sold any significant items to Peru.

Mr. LONG. Maybe later on but we sold weapons to them before that time because I remember very clearly that we did.

Admiral PEET. It is a country that went to the French and bought Mirages when we denied them the F–5.

Mr. YATES. What country are we talking about?

Admiral PEET. Peru in this case.

Mr. LONG. I can remember after the Long-Conte amendments went through—that cut off any aid to countries that were diverting their own resources or the resources we gave them to buy sophisticated weapons systems. I was down in Chile about 6 or 8 months after that, a year after that, and they were very angry with us at the time. That was, of course, under the old regimes. I spent an hour with Belande and we had already sold them considerable quantities of weapons. And they went out and bought others, but it didn't keep them from going Socialist or Communist when the time came, because when they went, they went by election.

Admiral PEET. And it didn't keep them from buying from foreign countries either.

Mr. LONG. The point we are trying to make is that giving countries very fancy and sophisticated weapons is probably a very blunt instrument so far as holding or keeping them from adopting a political system which we don't like, isn't that true?

Admiral PEET. Yes.

Mr. ROUSH. Will the chairman yield for a question?

Mr. LONG. Yes.

JUSTIFICATION OF F–5E SALES

Mr. ROUSH. These planes being proposed for sale to Brazil, are they considered sophisticated weapons?

Mr. YATES. The F–5E, isn't it?

Admiral PEET. I think many people would consider any supersonic aircraft a sophisticated weapon. However, that particular weapon, the F–5E, is designed for foreign sale. It is designed for that purpose. It gives them an air defense capability and some limited offensive capability.

Mr. ROUSH. According to this document, which I have before me now, section 4 of the Foreign Military Sales Act precludes the use of foreign military sales credit for the purchase of sophisticated weapons systems, is that correct?

Admiral PEET. Yes; unless the President makes a finding, a Presidential determination, which he has done in this case.

Mr. LONG. Which he always will. It is a big loophole.
Mr. YATES. Will you yield for a question?
Mr. LONG. I will be glad to.

RESULT OF REFUSAL TO SELL

Mr. YATES. Is our relationship less close to Peru because we did not sell them supersonic aircraft, and they bought French supersonic aircraft?
Mr. TARR. I think it is; yes.
Mr. LONG. It is less close.
Mr. TARR. It is less close for two reasons. The first one is that there is a feeling of hostility there as a result of our refusal to sell. The second is that they have not been entirely satisfied with the French equipment, and they blame it on us.
Mr. LONG. They don't blame it on the French?
Mr. TARR. They blame it on us because they wanted to buy ours in the first place.
Mr. LONG. They don't blame it on the French?
Mr. TARR. I guess they blame it on the French too, but we are not necessarily enhanced by their animosity toward the people from whom they purchased it.
Mr. YATES. Why did we refuse to sell them the aircraft they wanted? Did they want Phantoms? Was this the aircraft they wanted or were they willing to accept other aircraft?
Admiral PEET. It was the F–5A, which is the first version of the F–5.
Mr. YATES. Of the F–5?
Admiral PEET. Yes, sir.
Mr. YATES. Not the F–4?
Admiral PEET. No, sir.
Mr. YATES. And the F–5A, which we refused to sell them, are now the subject of a sale to Brazil, or possible sale?
Admiral PEET. A later model, the F–5E.
Mr. YATES. The same general plane though?
Admiral PEET. Yes; but more capability.
Mr. YATES. It still isn't up to the Phantom?
Admiral PEET. No.

AIRCRAFT SALES TO KUWAIT AND SAUDI ARABIA

Mr. YATES. Mr. Chairman, may I continue for a few moments?
Why are we proposing to sell Phantoms to Saudi Arabia and to Kuwait?
Mr. TARR. Obviously it is a complicated question. Our national interests in the area are substantial from several points of view. We have a historic friendship with the State of Israel. We have——
Mr. LONG. Is that friendship being helped by our sale of weapons to Kuwait?
Admiral PEET. We hope that it is not being hurt.
Mr. LONG. Have the Israelis told you that?
Mr. TARR. The Israelis don't see it that way, but obviously we are able to do some thinking on our own. The Government of Kuwait is

faced with a very difficult situation. The Government of Iraq is building a base very near the border with Kuwait. The entrance to the channel is actually guarded by two unoccupied islands. The area offshore of the islands may contain oil. The Government of Iraq wants to encourage the Russians to use their bases, and probably will be successful in that regard. The Government of Iraq, who are developing a base, want control of those islands. The Government of Kuwait does not want to give them up.

Mr. YATES. Which country has sovereignty over those islands?

Mr. TARR. Kuwait. Also the surveyors have never defined the boundaries very well between some of these nations in the desert areas. A small amount of land is worth a great deal of money in some parts of the Near East, and so the people in Kuwait say, "We have a real problem." For that reason we have talked with the Government of Kuwait about military equipment. We have not yet talked with them about F–4's.

Mr. YATES. Of course the newspapers have indicated that——

Mr. LONG. Will the gentleman yield?

I understand that this is going to be a credit sale, is that correct?

Mr. TARR. To Kuwait?

Mr. LONG. No?

Mr. TARR. No.

Mr. LONG. It is going to be entirely cash?

Mr. TARR. We have not heard about any credit sales.

Mr. LONG. I would like to know whether we are considering selling some of these weapons to Kuwait on a credit basis.

Mr. YATES. It is the richest country in the world per capita.

Mr. TARR. We are not.

Mr. LONG. You can assure us that these sales will be cash sales?

Admiral PEET. Certainly there will be no FMS credit. They can deal with the Export-Import Bank.

Mr. TARR. Or they might borrow from the Chase-Manhattan Bank.

Mr. LONG. This is all part of our administration policy. But it is just a different credit pocket that it is going out of; isn't it?

Mr. TARR. But the point is that we have talked with them about military equipment which we think they have every reason to believe that they should have.

Mr. YATES. In your justification I don't find any reference to Kuwait.

Mr. TARR. The reason that there is no justification for Kuwait is that if the sale were a cash sale, it would not be involved in this particular program for which we are seeking funds.

WORKING FOR MIDDLE EAST BALANCE OF POWER

Mr. YATES. I would imagine that Kuwait could pay cash for these planes, too. Does it make sense to sell F–4's to any of these countries?

Mr. TARR. In that area, many of the countries are worried about Soviet deliveries of high performance aircraft that are probably an equal of the F–4.

Mr. YATES. You are talking about the Mig-23?

Mr. TARR. Yes. In the Mig family, once you get up to Mig-19 you talk about aircraft with capabilities in particular regards, and some of the more powerful aircraft do not have the maneuverability and so forth, but we are talking in part about 21's and 23's.

Mr. YATES. My question was why does it make sense to sell F–4's at this time in an area like the Middle East which is a virtual tinderbox which some experts fear will disturb the balance of power. Just the mere announcement of possible sale may upset that, let alone the actual sale itself; isn't that correct?

Mr. TARR. I doubt it.

Mr. LONG. Isn't this almost certain to bring about requests from other countries in the Near East for weapons?

Mr. YATES. It isn't only weapons. It is the Phantom. I can understand the United States selling your F–5 or another plane like that, which doesn't have the range or the capability of the Phantom. The Phantom has the capability of reaching all the cities of Israel from even the remotest areas of Saudi Arabia, for example. I think that the argument that if they don't buy the Phantom from the United States they will buy the Mirage from France isn't very effective because the Mirage doesn't have the range or the capability of the Phantom.

Why then are we even thinking of upsetting the balance that presently exists in the Middle East, particularly at a time when Egypt's President is rattling the sabre, as he is?

SOME SALES HAVE LONG LEADTIME

Mr. TARR. One thing you have to consider, when you talk about F–4 aircraft, you are talking about deliveries at least several years hence. You are not talking about the balance as it is right now. When you talk about Sadat rattling the sabre you are not talking about 5 years from now. You are talking about the present.

Mr. YATES. But you are also talking about the F–4 right now which in turn gives encouragement to Israel's enemies; does it not?

Mr. TARR. But you are not talking about present capability.

Mr. LONG. Wait a minute. Isn't it true that as soon as a sale like this is announced that other countries swing into action? Do you think they are going to wait, Mr. Secretary, do you honestly believe other countries are going to wait until 2 or 3 years from now, until those Phantoms are delivered, before they start to respond by getting weapons of their own, or taking measures of their own to defend themselves?

Mr. TARR. I am not sure what countries.

Mr. LONG. Are you really trying to tell us that?

Mr. TARR. I am not sure what countries the chairman is talking about.

Mr. LONG. We know a great many countries in the Middle East who are hostile to each other. We know the Arab nations are hostile to each other as well as to Israel. We know that Israel is concerned about them. Can you honestly say you know all the ramifications of this?

Mr. TARR. I am still trying to think of what countries you have in mind though.

Mr. LONG. Iam talking about Saudi Arabia, Iraq, Iran, Syria, Jordan, and Egypt.

Mr. YATES. Not really Iran, I think.

Mr. LONG. I beg your pardon?

Mr. YATES. If the chairman will permit me I don't think we are talking about Iran in the context of the confrontation between Israel and the Arab Nations.

Mr. LONG. Probably not. But how do we know for sure?

NATURE OF SALES TO KUWAIT

Mr. YATES. There seems to be some justification for considering the Iraqi threat to the Persian Gulf at this time. I think that much is certain, but again I wonder whether or not it makes sense to use what seems to be the ultimate weapon, in terms of the Middle East, which is the Phantom. I am not talking about nuclear weapons. I am talking about what has come to be considered to be the ultimate weapon in that area and the sign of U.S. support.

Admiral PEET. There seems to be a misunderstanding. We have not offered F–4's to Kuwait.

Mr. YATES. Then the newspaper stories are erroneous.

Mr. TARR. They are a little bit ahead.

Mr. LONG. What are you considering selling to Kuwait?

Mr. TARR. The time that we have had in Kuwait has talked about a half billion dollar package, about half of which——

Mr. LONG. Are we promoting this?

Mr. TARR. About half of which is involved in material.

Mr. LONG. Are we promoting this?

Mr. ROUSH. Let him answer it, Mr. Chairman.

Mr. TARR. This has been at the request of the Government of Kuwait. When I say half of the material, I mean that the other half is primarily involved in their logistics establishment, and three fields which they intend to build.

Now, of the material, the aircraft that they have thought about is the F–8 aircraft.

Mr. LONG. A what?

Mr. TARR. F–8 aircraft.

Mr. LONG. Eight?

Mr. TARR. F–8, which is a naval aircraft with considerably less performance capability than one would expect from an F–4, and not the range. Where we will come out on these negotiations we are not sure. Also involved are some tanks and artillery pieces and miscellaneous end items.

Mr. LONG. Whatever the package is, we are conducting negotiations to greatly increase the military capability of Kuwait, is that not so?

Mr. TARR. Kuwait virtually has no military capability now.

Mr. LONG. So this would be a very great relative increase.

Mr. TARR. If Kuwait buys these items, it will make it possible for Kuwait to bolster its military forces.

Mr. LONG. Now my question. Are we promoting this? Did we get this thing going? Did we initiate this?

Mr. TARR. I think the initiative came from the Government of Kuwait when they were faced with attacks by Iraqi troops on their border. When they became alarmed, they began to look for help.

THREAT TO SAUDI ARABIAN SECURITY

Mr. YATES. May I go back to Saudi Arabia? What is the argument with respect to Saudi Arabia? Presumably there is some justification, according to your testimony, for Kuwait to consider herself to be threatened. Does such a threat exist in the case of Saudi Arabia?

Mr. TARR. I think, to some degree, the Saudi Arabians are concerned about the same general threat that Kuwait is.

Mr. YATES. The same two islands are involved?

Mr. TARR. No; not necessarily the two islands, but the effect of Iraq and Syria arming heavily. In addition, also the Saudi Arabians are concerned about problems in the two Yemens on their southern border.

The Saudi Arabians, I think, feel very strongly that they are sitting on top of approximately half of the world's oil supply, and unfortunately we live in a world where sometimes people separate you from your good fortune, if there is no way in which you can make it painful for them to do so.

Mr. YATES. Who is trying to take Saudi Arabia's fortune away from them?

Mr. TARR. I think that as they look at the whole energy crisis which the world faces, they have concerns in general without allocating the blame to any one specific country.

Mr. YATES. And will the sale of 34 Phantoms, 24 or 34, if my memory of the newspaper report is correct, protect them against the world's predators?

Mr. TARR. I think they feel that if they have some capability of defending themselves, at least they would be able to thwart the kind of attack that some other power or groups of powers might try to launch through countries that would ally themselves with those powers.

Mr. YATES. We have been talking as though this is in isolation, this kind of a problem. Isn't it necessary to consider that question in the context of all the other problems of the Middle East?

Mr. TARR. Exactly.

Mr. YATES. Namely, the potential outbreak of war again with Israel; and is it not possible that the sale of such planes to Saudi Arabia be the spark that sets off the tinderbox?

Mr. TARR. Obviously, we hope that this will not be the case.

Mr. YATES. But it would be less the case if you didn't sell them; wouldn't it?

MAINTAINING U.S. TIES WITH THE MIDDLE EAST

Mr. TARR. I think the thing that you have to balance obviously is not only our concern for Israel and our concern for some kind of military balance in the area, but our concern for continuing ties in this region upon which we are going to be heavily dependent for our energy in years ahead.

Mr. YATES. If that is true, then this sounds a change of policy with Israel, doesn't it?

Mr. TARR. I think not.

Mr. YATES. I don't see how you can avoid it. If you are worried about the question of energy, you are going to move away from Israel toward the nation that possesses the energy resources.

Mr. TARR. The reason I answered as I did is that I think our support of Israel has never been to the complete exclusion of friendships in the Arab world. We have tried from the very outset to maintain our ties with the Arab world.

Mr. YATES. That may be true but you still don't have ambassadorial relations with the countries, do you? You don't with Egypt, for example, do you?

Mr. TARR. We don't have an ambassador.

Mr. YATES. You don't in Iraq. You don't in a number of them.

Mr. TARR. We don't have an ambassador in Libya, although we have relations there. We certainly have ambassadors in Saudi Arabia and Kuwait.

CONTROL OF EQUIPMENT SOLD

Mr. YATES. There is no way of preventing the Phantoms that are sold to Saudi Arabia from being used against Israel, is there?

Mr. TARR. You do have some control over it. If the planes were transferred, and all of this assumes that there will be a sale of planes, which we are not the least bit certain of right now——

Mr. YATES. If you are not certain of it I wish you hadn't made the announcement, because I think the announcement has stirred up the Middle East. If the sale isn't to take place, I would think it would be embarrassing.

Mr. TARR. Well, the French made the announcement.

Mr. YATES. How did the French know about it?

Mr. TARR. Because the Saudi Arabians are talking with the French about aircraft.

Mr. YATES. About the Mirage?

Mr. TARR. Yes.

Mr. YATES. And we are trying to sell them Phantoms in order to forestall the French from selling them Mirages?

Mr. TARR. Obviously we are in competition with the French.

Admiral PEET. This is a later model of the Mirage. There are different models of the Mirage as there are of the F–5.

Mr. YATES. The later model of the Mirage still isn't up to the Phantom, point I.

Admiral PEET. It is close.

Mr. YATES. The Phantom is still the symbol, isn't it, of American prestige and American support?

Admiral PEET. Yes, but less so than it used to be, don't you think?

Mr. YATES. Oh, no, not at all.

Admiral PEET. Very much so, I think.

Mr. YATES. Not at all. You are trying to make a case that I don't think is true. I am sorry I interrupted you, Mr. Tarr, in connection with the question I had asked you, which was there is no way of preventing these planes, if they are sold, from being transferred to Egypt, for the use of Egypt's or Libya's air forces. If there were a war against Israel, they could be used by the Iraqi air force or any of the Arab nations' air forces, isn't that true?

Mr. TARR. If the planes were sold to Saudi Arabia, they would be sold under a contractual arrangement that prohibited their transfer

without our authority to third countries. Obviously they could be flown to a third country, but with sophisticated equipment like this, unless you have the parts that are required—an F–4 is a sophisticated aircraft, Mr. Chairman——

Mr. LONG. It is hard to nail these things down. I am glad we have nailed down that at least one weapons system is sophisticated.

Mr. TARR. Unless you have a continuing supply not only of spare parts but information about changes in servicing, maintenance, and all the rest, you cannot maintain this aircraft in flying status.

Mr. YATES. Isn't this true of the Mirage as well? Isn't that a sophisticated aircraft as well?

Mr. TARR. Yes.

Mr. YATES. And didn't the Libyans transfer their Mirages to the Egyptians 2 or 3 weeks or a month after they had told the French they wouldn't do it? Isn't this true, sir?

Mr. TARR. May I answer off the record?

[Discussion off the record.]

NEED FOR CAUTION IN MIDDLE EAST SALES

Mr. YATES. You say Saudi Arabia sits on half of the world's oil resources. If that is a paramount point in your mind, what happened to our close relationship with Israel? Will not spare parts be sold as well and are we not going to send our technicians and our information to Saudi Arabia. Let me point out to you again, Mr. Tarr, that prior to the 1967 war in Israel, the United States gave tanks to Jordan under the assurance by Jordan that they would not be used against Israel. Israel captured those tanks and when they were captured they weren't in Jordan. The point is don't you think it is somewhat naive to expect that once these planes are in the Middle East, that if a conflagration begins, if hostilities begin that they won't be used where a combination of allies think they should be used, namely against Israel?

Mr. TARR. Obviously this is the reason that we need to keep careful focus on the military balance or the possible combination of forces that might prevail in that area.

Let me ask you another question, however. If Saudi Arabia had very sophisticated French F–5 Mirages in considerable numbers and if the powers that be in the Arab States decided that they were going to launch an attack on Israel, would we be in a stronger position to prevent that attack by their having French aircraft or their having American aircraft?

Mr. YATES. I believe you would be in a stronger position if they had French aircraft and you were supplying American aircraft to Israel.

Mr. TARR. Well, what could you do about it?

Mr. YATES. I don't know what that question means what would you do about it. You mean about supplying Israel with F–4's?

Mr. TARR. Obviously you would importune them not to go to war.

Mr. YATES. Right.

Mr. LONG. At the same time helping them to go to war.

Mr. YATES. Yes. If the French are going to sell Mirages to the Saudi Arabians, from what I understand is happening in the plane versus plane confrontation in the Middle East, the Phantom is still a stronger plane than the Mirage, even the sophisticated Mirage.

Mr. TARR. The sophisticated Mirage hasn't flown yet so we are not sure.

Mr. YATES. The most sophisticated Mirage that is flying. The Phantom is still ahead of them.

Mr. TARR. It is ahead of the one that is flying. We are talking about another model.

PHANTOM IS SYMBOL OF AMERICAN SUPPORT

Mr. YATES. If it were my choice I would rather have America's continued support for Israel. You want to sell Sky Hawks to the Arab countries, all right, sell your Sky Hawks, but I think the Phantom or what is it, your F–5 that you have also been selling around, if you want to do that, fine, but I think the Phantom, the F–4, is peculiarly in the Middle East the symbol of American strength and American support, and that is why I think it is essential that you think of this very, very carefully, extremely carefully before you go through with it. I am sorry the announcement was made before you go through with it.

Mr. CHAPPELL. May I ask one further question?

POSSIBILITY OF COUPS EXISTS

I think we didn't go far enough on the South American situation. I think all of us concur that it is completely possible for the nation or the leadership in the nation to have power and control over the weaponry of that nation, and there would be circumstances where a rebelling group would hope to obtain the power, and therefore acquire that military strength and equipment that went with it, so I think all of us would concur that the very fact we sell this equipment to a country doesn't deter it, doesn't keep it from falling into the hands of insurgents, but the point is haven't we been emphasizing the idea that we sell to our strong and stable friends to try to help them remain strong and stable, and to keep them in a position where they can protect themselves against what could become an insurgency takeover in another country which would become communistic, and therefore be the enemy of that country and ours? Isn't that a fair statement, Admiral?

Mr. LONG. Would you agree with what the gentleman, Mr. Chappell, has just said?

Admiral PEET. I had trouble hearing and following.

Mr. LONG. You will have to speak much more loudly.

Mr. CHAPPELL. Maybe that is too much country boy talk. Forget it, Admiral.

Admiral PEET. I apologize, sir.

Mr. LONG. How about you, Doctor? Were you close enough to hear?

Mr. TARR. I heard you talking.

Mr. YATES. You were thinking of the Middle East.

Mr. TARR. I was thinking of the Middle East.

CONTROLLING SALES OF ARMS TO COUP-PRONE COUNTRIES

Mr. LONG. I heard Mr. Chappell, I thought. He asked shouldn't we give our friends or countries more friendly to us the weapons that they need to defend themselves against Communist neighbors? I don't

know that anybody is going to quarrel with that, but I want to first question whether we are really carrying out this policy. We are furnishing weapons to countries to defend themselves against other countries that are just as free from communism or subversion. We seem to do it indiscriminately. Second, when countries do get taken over by subversion or communism, it is usually done from within, and then what happens? All of the weapons that we have given to that country up to then are in the hands of a Communist-type country that is no longer friendly to us, so we have run counter to our own interests.

Mr. CHAPPELL. Mr. Chairman, that was the next point I was coming to. Are we taking all of the steps necessary in the best selection of those countries with whom we are going to work out our military assistance programs? Are we taking the necessary steps to make certain we are not providing weapons which tomorrow might be used against our friends and ourselves by their falling into the hands of the common enemy, communism? Is that right or wrong?

Admiral PEET. Mr. Chairman, if there is one thing that we go into thoroughly on a country-by-country basis, it is the analysis of forces and their impact on the balance of power in a given area. We certainly take this into consideration throughout all Latin America. Dr. Tarr and I were concerned about the previous questions on the Middle East because we give a lot of thought to the balance of power.

Mr. CHAPPELL. That is the name of the game all over the world, balance of power; isn't it?

Admiral PEET. Absolutely.

DICHOTOMY OF PHILOSOPHIES

Mr. CHAPPELL. What are the two combating forces or philosophy? Aren't we talking about that which we generally regard as our democratic and free enterprise system as opposed to what is generally known as communism? Aren't those the two opposing philosophies generally?

Mr. YATES. I think what the Admiral described as being in opposition to each other the first day as I recall his testimony, Bill, was the countries that are friendly to us and those that are not friendly to us. I don't think he used the term "communism" at that time, did you, Admiral?

Admiral PEET. No; I think all of us try to stay away from talking about "stemming the tide of communism" and that sort of thing. I think that is what is bothering some of us about your statements.

Mr. CHAPPELL. You are worried about whether you call a spade a spade; aren't you?

Admiral PEET. No, I don't think so, but I think it tends to oversimplify the situation. Each one is very complex.

Mr. CHAPPELL. The point is you are still talking about the balance of power.

Admiral PEET. Yes, sir.

Mr. CHAPPELL. That is the name of the game everywhere, and there still is the common enemy which you say is lined up as not being our friend and we all know who we are talking about; don't we? We are talking about a philosophy which is anti-American, and that is communism; isn't it?

Admiral PEET. We are not disagreeing, sir.

RATIONALE FOR FMS TO CHILE AND PERU

Mr. LONG. In line with what the gentleman from Florida has raised, let's look at the foreign military sales credit program for fiscal year 1974—$10 million for Chile and $20 million for Peru. That is $30 million out of $150 million, one-fifth of our entire military sales credit program for fiscal 1974 for all Latin America goes to two countries that I thought were very dubious so far as being countries that we were alined with.

Admiral PEET. We can tell you what we anticipate the sales will be and what they would cover.

Mr. LONG. You have the figures right here. Aren't they your figures?

Admiral PEET. Yes, sir.

Mr. LONG. $10 and $20 million.

Admiral PEET. Those amounts are anticipated sales to those countries, and they do not include F–4's or anything that sort.

Mr. LONG. But why are we selling them anything? Why are we doing any business with them? They are not friendly to us. We are worried about them.

Admiral PEET. We feel that after study and careful consideration by the State Department and others in this country——

Mr. LONG. That is not an answer at all, Admiral.

Admiral PEET. Somebody has to make this type of decision—to decide that it is in the best interests of the United States.

Mr. LONG. You are not answering my question. I asked you why you did it and you say somebody did it in the best interests of the United States. We want to know why it is in the best interests of the United States.

Admiral PEET. There are many reasons why it is in the best interests of the United States.

Mr. LONG. Name one.

Admiral PEET. I will do my best. It is in the interest of having friendly relations with these countries. If they want to buy from the United States, refusing to sell to them is not a very friendly act.

Mr. LONG. Wait a minute, these are sales to them.

Admiral PEET. Yes, sir.

Mr. LONG. Of weapons.

Admiral PEET. Yes, sir.

Mr. LONG. And we are talking now about furnishing weapons to countries in Latin America because we are worried about communism and subversion.

Admiral PEET. I didn't say we were selling weapons to them for that purpose.

Mr. LONG. If we are not talking about subversion, what are we talking about?

Admiral PEET. As Director of the sales program, I believe that if Chile and other countries in Latin America want to buy aircraft because they feel it is in the best interests of their country, it is their decision, not ours. I am not trying to force these aircraft on them.

CHILEAN NATIONALIZATION OF U.S. PROPERTY

Mr. LONG. I thought that Chile was taking away or confiscating our property. I thought we regarded such confiscations as the types of

things that we didn't want to happen in South America, and that is why we are furnishing weapons to Brazil and other countries, because we didn't want those countries to be subverted and overturned. You told me that was our reason. And then here we have a country that has already been taken over by the forces of evil, and lo and behold, you are giving them sustenance, and justifying it as being in the best interests of the United States. How do you justify it, Admiral?

Admiral PEET. Mr. Chairman, I probably would have difficulty justifying it in this forum; but as an American citizen, I feel that these sales to Chile are justified.

Mr. LONG. That is your answer?

Admiral PEET. Yes, sir.

Mr. LONG. As an American citizen?

Admiral PEET. It is, unless you want to go into a debate on economics and all the other factors that go into making such a decision.

Mr. LONG. We are not trying to get into economics at this moment. I have other questions about economics, such as why we have given in a certain number of years over $1 billion worth of weapons. I believe that that roughly matches all economic aid that we have given them. Basically, haven't they spent on weapons an amount equal to what we have given or made available to them for economic aid?

The figures are perhaps out of date by now, but at one time we found that the South American countries as a bloc had spent on weapons, from us and from other countries, the equivalent of all the money we had given them in economic aid, both grant and assistance. Thus, our entire effort to raise their standard of living, their education, and so on had gone into weapons. There I think you are getting into economic questions. What is the aim of our whole economic foreign assistance policy as you see it, or have you thought it through? The State Department is probably better able to answer that. What do you see as the purpose of our whole foreign aid policy, because I don't see that we have a clear purpose. We can't justify it. It is hard enough to justify to our taxpayers, isn't that right, Mr. Roush—even if we think we have a clear aim in view—but to justify it when we don't know what our aim is, is even more difficult.

Mr. ROUSH. I haven't tried to justify it to my constituents.

Mr. LONG. You can't justify it. You just stand there and listen to the storm and hope it dies away.

Mr. TARR. Mr. Chairman, may I come back to the question that you asked about Chile. When we put the $10 million in this program for Chile, we had no idea of a specific program that might be carried out. As you know, these figures are illustrative.

———. It might be reasonable to put a figure in for Chile, not knowing more about the future than simply that.

U.S. RELATIONSHIP WITH PERU

With respect to Peru, we have two outstanding differences. One relates to our problems with the fishing fleet, the other to the seizure of American corporations and the payment of the assets of those corporations. We are trying to work on——

Mr. LONG. We are rewarding them for seizing our corporations.

Mr. TARR. We are trying to work on both of these problems.

Mr. LONG. I am not quite sure what you mean when you say work on them. They have seized our ships; they have seized our corporations. Now, are we rewarding them for doing this?

Mr. TARR. We know that a great deal of discussion between nations is necessary with respect to the law of the sea, and we are preparing for the Law of the Sea Conference. The initial discussions begin some time this summer, and the first of the Conferences will be held next spring.

The cod war in Iceland simply illustrates the problem that many nations have with respect to control over fishing rights adjacent to their shores.

Mr. LONG. I do not see how that answers my question.

Mr. TARR. We hold, as a nation, with what now is the law of the sea, the 3-mile limit, but my guess is that as we move into negotiations in the Law of the Sea Conference, most nations will want some change, particularly as it relates to fishing rights.

———.

Mr. LONG. How does that relate to military sales, to countries that have seized our ships and seized our factories?

SALES PLANS TO PERU ARE ILLUSTRATIVE

Mr. TARR. We have not actually gone ahead with sales to Peru.

Mr. LONG. But you have them here planned and we are being asked to approve this. It is part of your illustrative budget.

Mr. TARR. We have put in as an illustrative figure the possibility of sales to Peru. But this is not intended to declare that we definitely will have sales to Peru.

Mr. LONG. Why do you even propose it?

Mr. TARR. Because we think there is a possibility———

Mr. LONG. Are you trying to buy this friendship, is that it? Are we trying to buy them off, hoping we can appease them in some way? Is that what you are talking about?

Mr. TARR. We feel that if we can solve these two outstanding difficulties there is no reason why we should not go ahead and do business with them.

Mr. LONG. What you have told them is that one good way of getting something out of us is to seize our ships and grab our plants. Is that awfully good psychology for dealing with anybody, either our friends or countries hostile to us?

PERU RELATIONS BASICALLY SOUND

Mr. TARR. We have disagreements, obviously, with respect to fishing rights, but this does not mean that, across-the-board, we disagree with the Peruvians. It does not mean that our relationships on that one point alone are absolutely sour. The American contacts with Peru are considerably more extensive than those that are affected, either by their seizure of our plants or by the seizure of our fishing boats. At a time when Peru was actually seizing some of our corporate assets, there were other American corporations who were investing in Peru.

Recently an American banking group——

Mr. LONG. Are they covered by OPIC, those countries?

Mr. TARR. I do not know.

Mr. LONG. Investing with the idea that we will bail them out through OPIC, Overseas Private Investment Corporation?

Mr. TARR. I cannot answer that.

Mr. LONG. I can see why a company would want to keep on investing in a country if they knew we were going to bail them out if they got into trouble.

Mr. TARR. I know that recently an American banking group loaned the Government of Peru $100 million.

Mr. LONG. This raises very interesting questions about OPIC. I wonder whether we knew about that when the OPIC discussions came up?

This never was brought out at the time we were being asked to talk about the OPIC thing.

Mr. TARR. I cannot testify on OPIC because I do not know.

Mr. LONG. Does the State Department know about this?

Mr. TARR. Well, they do, but I do not know about everything that goes on in the State Department, Mr. Chairman, and I apologize.

Mr. LONG. Well, you are just citing this an an example?

Mr. TARR. I am merely saying there are concerns in Peru that are larger than the two issues that I have described.

Mr. LONG. You really do not think that this is Congress' business. It kind of irritates you when we raise these things; is that right, Mr. Secretary?

Mr. TARR. Mr. Chairman, it does not disturb me in the least that you have valid concerns, and I commend you for them. The thing——

Mr. LONG. Why are you irritated then by my raising this? Do you not think it is our business to know about this? We had a very spirited discussion on OPIC on this whole question of our bailing out companies that invest in Peru, Chile, elsewhere.

This $100 million thing you just talked about was not mentioned. Now you are mentioning it as a plus, whereas I would have thought it was a minus.

Mr. TARR. Mr. Chairman, I have never, once, taken the view that Congress should be kept from any information, that they should be brushed aside on any discussion. I have always listened as well as I could to what Congressmen say.

Mr. YATES. Mr. Chairman, will you yield for a few more questions?

Mr. LONG. Yes.

UNITED STATES-SAUDI, KUWAITI DISCUSSIONS

Mr. YATES. May I return to the Middle East again? How long have the discussions been going on for the sale of planes to both Saudi Arabia and Kuwait?

Admiral PEET. In the case of Kuwait, since late 1971. I think there is a misunderstanding, Curtis, about F–4 sales to Saudi——

Mr. YATES. You mean to Kuwait?

Admiral PEET. Yes, sir, Kuwait. No F–4's have been requested by or for sale to Kuwait.

Mr. YATES. No F–4's to either country?

Admiral PEET. Not for Kuwait. We have not offered F–4's for sale to Kuwait. The question of whether or not we will offer the sale of F–4's to Kuwait has not been decided. Itwould take quite some time

to consummate a sale of F–4's to Kuwait and it also would be some time before that country would be ready or able to accept and operate them.

Mr. YATES. The French have broken the news that you were discussing with them, is what your testimony was.

Mr. TARR. About a week ago?

Mr. YATES. Right.

How long have your discussions been going on? It is now public knowledge is the point I have been making

How long have your discussions been going on?

Mr. TARR. About 2 weeks.

Admiral PEET. Something like that.

Mr. YATES. Just 2 weeks?

You mean the French broke it almost immediately.

Mr. TARR. They did within a day.

Admiral PEET. Yes, are you talking about Kuwait now?

Mr. YATES. Talking about both countries.

Admiral PEET. The deal with Saudi Arabia is a different matter. Sales to Saudi Arabia are not being discussed in detail as are sales to Kuwait. A team is in Kuwait right now talking and negotiating. You read in the papers about a $500 million deal with Kuwait including specific items. We are preparing letters of offer. F–4 sales to Saudi Arabia are an entirely different matter.

Mr. YATES. What you are saying is, both of these should be kept separate, the Saudi deal should be kept separate from the Kuwait deal?

Admiral PEET. Yes, very much so.

Mr. YATES. All right. Take the Saudi deal, how long have the discussions been going on?

Mr. TARR. About 2 weeks.

Admiral PEET. What led to these very recent discussions is the fact that the Saudis have been talking to the French about various aircraft and whether or not the French would sell them high performance aircraft. They then turned to our Government and asked if it would be willing to sell F–4's to them.

Mr. YATES. And what did our Government say?

Admiral PEET. A policy decision reported in the paper recently announced that we would be willing to do so?

Mr. YATES. A policy decision by whom?

Mr. TARR. The President.

Mr. YATES. The President said yes, we would be willing to sell you F–4's?

Admiral PEET. Yes, sir, that is what was announced.

SAUDIS, ARM SALES AND OIL

Mr. YATES. Is there a quid pro quo for that other than the sales price?

Mr. TARR. No.

Admiral PEET. Not to my knowledge.

Mr. YATES. Is there any talk of any oil concessions as a result of this?

Mr. TARR. No.

Mr. YATES. No relationship at all between the oil that Saudi owns and making it available to the United States?

Mr. TARR. No.

Mr. YATES. This is purely an arms deal?

Mr. TARR. Yes.

Admiral PEET. I can assure you that the balance of forces was very carefully considered.

Mr. TARR. But with respect to the Saudis themselves, there is no quid pro quo.

Mr. YATES. Other than the actual money for the planes?

Mr. TARR. Yes.

Mr. YATES. Such as it is.

Mr. TARR. Yes.

Mr. YATES. What are we depending on, their good will, to supply us with oil? You indicated this was one of the considerations earlier in your testimony, I thought.

Mr. TARR. It would be good will in part. It would be the fact that we are a consumer and they are a seller.

You know, in business transactions——

Mr. YATES. Then there is no relation, in other words, if we sell them the F–4's, they might just turn around and not sell us the oil? I mean there is no connection between the two is what you are saying?

Mr. TARR. None that I know of.

Mr. YATES. None that you know of. And oil had nothing whatsoever to do with this.

Mr. TARR. Well, it has not been involved in the discussions about the possibility that we might sell them F–4 aircraft.

Mr. YATES. Have you had other discussions with the Saudis about oil relating to arms at all?

Mr. TARR. No; but our companies have had discussions on the price of oil with all of these countries.

Mr. YATES. On the price of oil. Have the companies interceded for an arms deal?

Mr. TARR. No.

Mr. YATES. Have any of the representatives of the companies interceded for an arms deal. I think of Mr. Connally going to the Middle East recently.

Mr. TARR. No; he has not been involved in this.

Mr. YATES. Not involved in any way?

Mr. TARR. No.

Mr. LONG. Can we get some idea then why you are selling them arms?

Mr. YATES. Yes; what is the reason?

Mr. LONG. Why are we doing it?

Mr. YATES. Why are we doing it? Why the change, why the policy decision? The policy decision by the President represents a new attitude on his part, does it not?

Mr. TARR. Yes; because we have not up to this time said to the Saudis that we will do this.

Mr. LONG. We will recess until the end of the quorum.

[Recess.]

DECISION TO NEGOTIATE F–4 SALES TO SAUDIS

Mr. LONG. The committee reconvenes.

Mr. YATES. Mr. Tarr, you indicate that the decision to enter negotiations with the Saudis was a policy decision that was made by President Nixon. Is my understanding correct?

Mr. TARR. The President made the decision about F–4 aircraft. We have not had a prohibition against sales of military equipment to the Saudis.

Mr. YATES. The President was the one who made the decision to make available F–4 aircraft to the Saudis; do I understand correctly?

Mr. TARR. If they wanted to buy them, yes.

Mr. YATES. If they wanted to buy them.

Do you know—I had asked you the question, do you know whether or not any of the oil companies requested that this be done?

Mr. TARR. I am not aware of any.

Mr. YATES. You are not aware of any.

You would not know why the President had changed—this represents a change of policy on the part of the President; does it not?

Mr. TARR. It does with respect to the F–4.

Mr. YATES. Was any reason advanced by the President as to why he did this?

Mr. TARR. Well, he did it on the recommendation of both the Department of State and the Department of Defense. In other words, when these questions come to the President, they come as a result of departmental recommendations and both Departments recommended that he do it.

Mr. YATES. May we know why, the reasons for the Department of Defense decision and the Department of State decision, or are these confidential?

Mr. TARR. Well, I think I have given you the logic of the Department of State position.

Mr. YATES. OK.

Mr. TARR. I do not think the Department of Defense position was any different.

Admiral PEET. That is correct. We were in agreement. We do not consider the Phantom to be the symbol that you apparently feel it is.

Mr. YATES. I feel it is. I think most of the people in the Middle East think that it is. I happen to think——

Admiral PEET. We probably would have agreed a few years ago, but I do not think that is the case today.

Mr. YATES. You do not know?

Admiral PEET. No, sir.

Mr. YATES. Did you give me an answer to my question as to when the President made his decision? Did I ask you that?

Mr. TARR. Yes; and I think it was about 2 weeks ago yesterday.

Admiral PEET. About that time.

PROCEDURES, RESTRICTIONS OF F–4 SALES

Mr. YATES. What is the procedure now? The President gives you this decision. Does it go back to you? To whom in the Department of State does it go for implementation?

Mr. TARR. Well, it comes to the Secretary. Then we prepared a cable to our Ambassador in Saudi Arabia and asked that he notify the Government.

The next move, if there is one, will be on the part of the Saudi Arabian Government.

Mr. YATES. In other words, they can buy as many Phantoms as they want to buy now?

Mr. TARR. No.

Mr. YATES. What is the President's decision? Is there a limitation on the President's decision?

Mr. TARR. No. The President's decision is that in principle he would agree to the sale of F–4 aircraft to Saudi Arabia. But thus far there has been no discussion of numbers.

CONSIDERATIONS IN CONSUMMATING SALES TO SAUDIS

Mr. YATES. I go back to my question: Can the Saudis buy as many F–4's as they want?

Mr. TARR. They could ask for any number that they want. Before we agreed to a number, we would look very closely to the forces in the area. We would also look to some degree on their ability to utilize the aircraft with respect to the training of pilots and all the rest.

We need also to balance out our other commitments of F–4 aircraft against the capability of the company to produce the aircraft.

We are talking about deliveries here that are considerably removed from the present. The timelag on an F–4 from the time that they let contracts for the components until the aircraft is delivered is about 2 years, is it not?

Admiral PEET. I would say it is at least that——

Mr. VON MARBOD. At least.

Admiral PEET. By the time you get them on the production line, delivered and the purchasing country prepared to operate them.

Mr. TARR. There you are talking about more than 2 years.

Admiral PEET. Well down the pike.

Mr. TARR. But my point is this: You have to look at openings in the line when aircraft might possibly be delivered.

Mr. YATES. Are they still delivering F–4's to the U.S. Air Force?

Mr. TARR. Yes.

F–4 SALES TO OTHER COUNTRIES

Mr. YATES. They are? Are F–4's being sold to other nations than Israel?

Mr. TARR. Yes.

Mr. YATES. To which other nations are F–4's being sold?

Mr. TARR. Turkey, Greece, Germany, Iran, and Japan?

Admiral PEET. No, I do not think so in the case of Japan—at least not whole aircraft. We are selling Japan parts on a government-to-government basis in support of its F–4 coproduction line.

Mr. YATES. Does a newly purchasing country have to get in line behind these countries or can you vary the delivery schedules in accordance with what you decide they should be? This is not a chronological matter, is it, in terms of delivery? You can decide whether planes are diverted to Saudi rather than to Germany, can you not?

Admiral PEET. It is normally on a first come, first served basis.

Mr. TARR. It is not easily done.

Mr. YATES. I realize that.

Mr. TARR. The flexibility in production lines primarily comes from the schedule of deliveries to our own forces.

Mr. YATES. I would think they would be first.

Admiral PEET. There is another factor involved in that each country orders its own aircraft and they are not all configured alike.

For example, some things may be denied to one country but not to another, or one may want something that another does not want. The aircraft ordered carries its own distinctive characteristics when it goes down the production line.

MIDDLE EAST ARMS "RACE" VERSUS "BALANCE"

Mr. YATES. Are you concerned at all that the sale of F–4's to Saudi and possibly Kuwait may spark another arms race in the Middle East?

Mr. TARR. There obviously is a buildup of arms in the Middle East that has been going on for a long time.

The most impressive countries in this buildup have been Israel, Syria, Iraq, and Iran.

Mr. YATES. And Egypt, too. Egypt has received an enormous amount of arms from the Russians, have they not?

Mr. TARR. Exactly. Although these deliveries now have been terminated and have been for some time.

Now we see that these nations and others probably will be continuing to acquire arms.

With respect to Israel, we obviously hope that some form of peace agreement beyond a cease-fire can be worked out in the relatively near future. The situation that Israel faces becomes more difficult the longer we wait for a settlement in the Middle East.

Mr. YATES. What you are saying then is that the answer is yes, that an arms race is on now and will continue; is this correct?

Mr. TARR. An arms buildup; yes, sir.

Mr. YATES. OK. If Saudi Arabia and Kuwait are able to buy F–4's from the United States, Israel will have to meet that challenge, will she not, by buying more F–4's, if they are made available by the United States, or by other arms?

Mr. TARR. It depends on the capabilities of the countries that she sees as possible antagonists. The thing that the Israelis need to look at and we need also to look at is the countries surrounding her. The one thing I think that needs to be added to the point that you made is that if the problems between Israel and the nations surrounding her were settled to the satisfaction of all parties, it might have very little influence on what Saudi Arabia or Kuwait would want to acquire with respect to the kinds of equipment we are talking about.

Mr. YATES. That is a pretty remote contingency, is it not?

Mr. TARR. I hope not?

Mr. YATES. Presently?

Mr. TARR. I hope not too remote.

Mr. LONG. Will the gentleman yield?

Mr. YATES. I join you in that hope, but we are trying to be realistic in addition to our wishing.

I would think that, based upon the present setup, your information is probably better than mine, I only know what I read in the newspapers, but from what I read in the newspapers, the possibility or the probability of settlement is still quite remote at this time.

Mr. LONG. Will the gentleman yield?

Mr. YATES. I will as soon as he answers the question?

That is correct, is it not, Mr. Tarr?.

Mr. TARR. There is no basis right now for immediate settlement.

Mr. YATES. I yield to the chairman.

Mr. LONG. Well, you know, I would hope we had some clear idea what we are trying to achieve.

Are we trying to achieve peace in the Middle East?

Mr. TARR. Yes.

ARMS SALES: PEACE IS MAIN OBJECTIVE

Mr. LONG. Well, that is a very worthy aim.

I have here a statement that says the arms sales can also be viewed within the context of a major effort by the Nixon administration over the past year or so to increase U.S. arms sales abroad to help the balance of payments. Sales are also designed to keep the U.S. defense industry working without paying for that work solely out of the Pentagon's budget.

Now, do you see any conflict between those two aims, trying to keep the peace and at the same time promoting arms sales to improve our balance of payments and to sell goods from the defense industry?

Mr. TARR. Mr. Chairman——

Mr. LONG. You feel those are compatible?

Mr. TARR. The byproduct of arms sales is an improvement in the balance of payments, but that may not necessarily be the aim of the sale, where this says that it is our aim to keep defense industries busy and improve the balance of payments.

Mr. LONG. Peace is the main objective.

Mr. TARR. We would not disagree.

Mr. LONG. You view peace as the main objective and these weapons as merely products, and you would be willing to sacrifice them to preserve the peace.

Mr. TARR. Exactly.

Mr. LONG. Would you agree with that?

Admiral PEET. Yes, and I would like to correct any erroneous impression to the contrary. We don't promote arms sales in the Defense Department.

Mr. YATES. Will the sale of F–4's to Saudi Arabia and Kuwait promote peace in the Middle East? That doesn't make sense, does it?

Admiral PEET. I think it might. I think it might help under certain conditions.

Mr. YATES. Do you want to put that on the record?

Admiral PEET. We are not promoting the sales. We hope they will help to advance the best interests of the United States.

Mr. YATES. How will it help peace in the Middle East, Admiral, if you add more weapons of war to the Middle East? Will that promote the peace?

Mr. TARR. It might deter the aggressive tendencies of both Syria and Iraq.

Mr. YATES. Is it likely to promote peace between Israel and her neighbors?

Mr. TARR. Insofar as you have a counterweight to those two nations it doesn't hurt at all.

Mr. YATES. Will you be training, in the event that you sell the F–4's to Saudi Arabia and Kuwait, will you be training her pilots in the use of planes?

Mr. TARR. Undoubtedly we will be training a lot of their personnel.

Admiral PEET. We keep talking about F–4's for Kuwait and I would sure like to have the record corrected.

Mr. YATES. It is my fault.

Admiral PEET. We haven't discussed F–4 sales to Kuwait at all.

Mr. YATES. I think the newspaper talks about F–4's to Kuwait.

Mr. TARR. They do.

Mr. YATES. You say you are not going to sell F–4's to Kuwait?

Mr. TARR. There is not yet Presidential——

Mr. YATES. Approval?

Mr. TARR. Approval.

Mr. YATES. Kuwait has asked for them?

Mr. TARR. Yes.

STRENGTH OF KUWAITI ARMED FORCES

Mr. LONG. A little while ago, Mr. Secretary, you said Kuwait had practically no armed forces and this would be adding to it, but it didn't have anything now. I have here a statement saying U.S. arms shipments will more than double Kuwait's current armed forces which now consists of an army of about [———] men and about [———] older British and Indian tanks, [———] British built jet fighters. That is quite a substantial addition, isn't it, to Kuwait, assuming that this is correct, or would you dispute the accuracy of that?

Mr. TARR. I think that was exactly my point, Mr. Chairman.

Mr. LONG. I thought you said they had very little now and this is a doubling. In other words, they have a considerable armed force now, but I got the impression from you before that they didn't have any, or very little.

Mr. YATES. ——— isn't very much.

Mr. TARR. ——— is not a considerable force, given what they have to defend.

Mr. LONG. You are probably right.

Mr. TARR. The population of Kuwait is just under 1 million people; isn't it?

Mr. LONG. I know it is very small. I think Mr. Yates' point is the main one. That is the fear engendered in other countries by one country's buying some very sophisticated weapons systems. Another point is mentioned here: "Officials say details on when equipment will be delivered, how much will be paid for in credit or cash will be required are still to be negotiated." Apparently credit is envisioned here, unless these reports are all wrong. This is another newspaper report I am reading.

Mr. TARR. Apparently it is by the writer of the article, Mr. Chairman, but we have not heard about it.

Mr. LONG. Are you prepared to say for sure that there is absolutely no credit involved in this proposed sale to Kuwait?

CREDIT CONSIDERATIONS FOR KUWAIT AND SAUDI ARABIA

Admiral PEET. I am prepared to say that there is no FMS credit involved in the sale to Kuwait.

Mr. YATES. Is that true of Saudi Arabia?

Mr. LONG. It could be some other kind of credit?

Mr. TARR. Bank credit.

Admiral PEET. If they go to private banks, that is possible, isn't it, Ben? I couldn't say they won't be able to do that around the world, but as far as foreign military sales credit is concerned, we can say unequivocally that it is not involved.

Mr. SHRIVER. Kuwait won't need credit, will they? Don't they have enormous reserves?

Admiral PEET. Yes, sir.

Mr. LONG. That was the purpose of my question.

Mr. SHRIVER. That would be true with Saudi Arabia. They won't need credit.

Admiral PEET. Yes, they should not need credit.

THE SAUDI OIL FACTOR

Mr. LONG. That is why I asked because they have so much money. There have been several indignant questions raised. Why on earth do you give credit to a country with as much cash as Kuwait. On this matter of oil—this is my last question—it is said all along we must keep the friendship of Arab countries because they control all this oil, and we need the oil. Isn't it true that they need the money as much as we need the oil?

Admiral PEET. I am sure they would like to have the money. It is a question of their need. I sometimes have the impression they have more money than they know what to do with.

Mr. YATES. They are certainly asking for more and more money in connection with their negotiations with the oil companies.

Mr. LONG. There is no harm in asking.

Mr. YATES. They are getting it.

Mr. LONG. I somehow can't picture these countries sitting on their oil for a very long time, but that is another matter. You say you are not doing this for the oil anyway; is that correct?

Mr. TARR. I think the point is that there are many places where they can sell their oil, and a union of consumers would be a very difficult thing to organize and police.

Mr. LONG. Any union is hard to organize. I have never known a monopoly yet that stood up for very long whether it was a sellers organization or a buyers organization.

OTHER SAUDI ARMS PURCHASES

Mr. YATES. Are the Saudis buying other arms than the F–4's or is that confidential?

Mr. TARR. They might buy some F–5E aircraft.

Mr. VON MARBOD. They are on order now.

Mr. TARR. What else they might have in mind I don't know.

Admiral PEET. They are buying a naval capability.

Mr. YATES. From the United States?

Admiral PEET. Yes, sir, a 19-ship package.

Mr. YATES. What kind of a navy are you selling them?

Admiral PEET. It is more of a coast guard.

Mr. LONG. The finest navy money can buy.

Admiral PEET. I wouldn't agree with that. It is more of Coast Guard—patrol craft and vessels of that sort.

Mr. YATES. Are these destroyers or destroyer escorts?

Admiral PEET. No, sir; they are small craft.

Mr. YATES. Are you selling them any submarines?

Admiral PEET. No, sir.

Mr. LONG. How can the coming arms sales to Saudi Arabia and Kuwait fail to encourage an inter-Arab arms race?

Admiral PEET. Kuwait is a small country with a small defense establishment. It faces a much larger and more powerful neighbor, Iraq, which has only recently forcibly asserted claims to Kuwait territory. If Kuwait proceeds with its plans, its defense will definitely be enhanced but it will pose no offensive threat to Iraq.

Our defense relationship with Saudi Arabia goes back to World War II. It continued during the period of our containment policy, when we were concerned about Soviet expansion, and in the mid-1960's after Saudi cities were subjected to air attack by Egyptian aircraft. At present, Saudi Arabia must concern itself about the threat from a Soviet-armed and trained Iraq and from a hostile South Yemen, also armed and trained by the U.S.S.R.

In providing defensive equipment to Saudi Arabia and Kuwait, we believe we are helping them to meet their legitimate security requirements and to acquire the necessary military capability to help deter aggression, defend themselves if attacked, and carry out their responsibilities for maintaining peace and stability in the gulf, through cooperative efforts with other gulf states and without outside interference by nongulf states.

Mr. LONG. Are you willing to accept responsibility for striking the match to the Middle East powder keg?

Admiral PEET. Mr. Long, I don't really see the situation in that way. As I have said, our arms supply policy toward Persian Gulf states is aimed at assisting certain of the states whom we see as needing help to meet legitimate security requirements and as playing important roles in maintaining peace and stability in the area.

Mr. LONG. Could not F–4 Phantom jets and F–8 Crusader jets to be sold to Saudi Arabia and to Kuwait be used against Israel in any future Arab-Israel war?

Admiral PEET. No F–4's have yet been sold to Saudi Arabia, and no F–8's or other advanced aircraft have been sold to Kuwait. We have offered in principle to sell a limited number of F–4's to Saudi Arabia, but have received no response to our offer. Kuwait is still considering what aircraft to buy and has made no decision on the F–8.

If either sale went through, the recipient would be obligated by the terms of the sales contract not to transfer the aircraft to a third party without first obtaining the written consent of the U.S. Government. No one can absolutely guarantee, of course, that they would not be transferred to a third party or used against Israel. But we have every reason to believe that both countries would live up to their obligation

and honor their commitments. Moreover, it seems to me that they would not wish to risk jeopardizing their own self-interests by such transfers. Our willingness to sell these aircraft is based on a Mig-21 threat to these states from Iraq and, in the case of Saudi Arabia, from South Yemen; it is related to the Persian Gulf, not to the Near East.

Mr. LONG. If these aircraft could be used against Israel, why are we thus threatening our staunchest ally in the Middle East, for small balance-of-payments benefits?

Admiral PEET. We do not believe a decision by Saudi Arabia or Kuwait to buy the F–4 or F–8 will threaten Israel. We very carefully considered the effect, if any, of either sale on the military balance in the Middle East. We concluded that neither sale would change the balance. We would sell only a limited number of the aircraft. The F–4 could not be fully operational in Saudi Arabia before the late 1970's, at the earliest. The Israelis have several hundred modern aircraft, including F–4's, A–4's, Mirages, and Super Mirages (the latter currently being produced in Israel), in their inventory and large numbers of well-trained and experienced pilots and support personnel. While posing no military threat to Israel, the sale of the aircraft to Saudi Arabia and Kuwait would serve important U.S. interests in the Persian Gulf/Arabian Peninsula area.

Mr. LONG. Mr. Coughlin, do you have some questions?

Mr. COUGHLIN. I just wanted to commend both the admiral and Mr. Tarr for their patience. We have been sort of bouncing back and forth between the Middle East and South America, with great alacrity. I guess we still will have an opportunity to go perhaps in a more orderly fashion through the various countries later.

Mr. LONG. That comes later on a line item basis.

Mr. COUGHLIN. I have no further questions at this time.

Mr. LONG. Mr. Shriver?

Mr. SHRIVER. No further questions.

Mr. LONG. Mr. Chappell?

Mr. CHAPPELL. No.

Mr. LONG. Mr. Yates?

AFRICAN CONCERNED OVER MAP TO PORTUGAL

Mr. YATES. Thank you, Mr. Chairman. At the United Nations I was our representative to the committee of 24. The African nations strongly criticized the United States for the furnishing of arms to Portugal, which they claimed were used to crush the African independence movements. Do you still find that to be true?

Mr. TARR. Yes.

Mr. YATES. Do you encounter this in connection with your relations with the African nations?

Mr. TARR. Yes; the program that we have with Portugal is involved in our base agreement in the Azores. We stipulate all that we provide to the Portuguese Government that it will not be used in Africa. The African nations nevertheless treat this as a point of difficulty in our relations.

Mr. YATES. Do we have any proof that the weapons are not being used in Africa?

Admiral PEET. I think the key point is that the equipment and training we provide is all oriented towards Portugal's NATO related mis-

sion in ASW and air defense, we try to monitor use of the equipment provided as closely as we can.

Mr. YATES. Do we know that any of the weapons we furnish to Portugal for NATO are not being used in Africa to quell so-called freedom movements?

Admiral PEET. We do everything we can to control use of the equipment, including having them sign an agreement to the effect that they will not use this equipment for prohibited purposes; but you never have absolute control over something that you sell.

Mr. YATES. Are we selling any weapons to any of the African states?

Admiral PEET. Not weapons, but we do sell some material to Zaire, Tunisia, and Morocco.

Mr. YATES. Do we sell any to South Africa?

Admiral PEET. No, sir.

Mr. YATES. Thank you.

Mr. LONG. If there are no further questions the committee will adjourn until 1 o'clock tomorrow afternoon.

WEDNESDAY, JUNE 6, 1973.

Mr. PASSMAN. The committee will come to order.

We shall continue this afternoon our examination of the budget requests for the military assistance and sales programs.

GENERAL COSTS

I would like to ask some questions about the regional items.

First, maybe, we should ask then about the general cost.

I believe the 1974 estimate is $93,948,000. The 1973 program was $91,090,000. There is an increase in your request of $2,858,000 over the 1973 program. Is that correct?

Mr. VON MARBOD. That is correct, Mr. Chairman.

Mr. PASSMAN. With some reductions in certain areas, why would this general cost category be higher?

Mr. VON MARBOD. Mr. Chairman, we are estimating that during fiscal year 1974 there will be an increase in deliveries of end items—MAP grant aid materiel from the pipeline and excess defense articles—which will require an increase in packing, crating, handling, and transportation funds. This accounts for the increase in supply operations from $61,460,000 to $69,200,000.

Mr. PASSMAN. That answer is adequate and I think reasonable. It is just a question of the commodities costing more, so it takes more money to deliver the same amount of hardware.

Mr. VON MARBOD. And an increased quantity being moved, Mr. Chairman.

PRESENTATION OF SUPPLY OPERATION FIGURES

Mr. PASSMAN. The supply operation item was previously included under each country, is that true?

Mr. VON MARBOD. That is true, Mr. Chairman.

Mr. PASSMAN. Why did you lump it in one item?

Mr. VON MARBOD. We were recently criticized by our own auditors for estimating and managing our supply operation on an individual country basis. The auditors felt we would have better visibility of this account, better management of it if we treated it as a package. We do, however, indicate in each individual country program the amount that we estimate will be required during the fiscal year for the movement of materiel.

Mr. PASSMAN. It follows, nevertheless, though, you have to transfer out of this account right back to the same countries the equivalent of what you had in previous years for these countries?

Mr. VON MARBOD. That is true, and you will note in the presentation document that we have indicated the amount by country and have also dealt with supply operations on a worldwide basis. You can view it both ways.

Mr. PASSMAN. What you are saying is, under the country programs it is still in, but you lift it out to show one grand total. It is still allocated according to need and your prior estimates as to the needs under general costs for these countries.

Mr. VON MARBOD. It is indeed, Mr. Chairman.

Mr. PASSMAN. I don't quarrel with the system. I think it is well to have it where you can look at it and know the total.

MAAG'S

Mr. PASSMAN. Are the Military Assistance Advisory Groups—the people responsible for identifying the military requirements needed by the various countries, covered under military assistance?

Admiral PEET. Yes, Mr. Chairman we think they are. There are some countries which have been phased out of the grant military assistance program and we are considering further MAAG reductions in these countries.

Mr. PASSMAN. Could you, Admiral, briefly state the MAAG operation and explain how the costs are divided between the appropriation bill presently under consideration and the defense appropriations bill?

Admiral PEET. Yes, sir, the MAP appropriation pays about 40 percent of the U.S. cost of MAAG operations while other defense appropriations cover the remaining 60 percent. Military salaries account for more than 50 percent of the costs that are paid from other defense appropriations.

The fiscal year 1974 military assistance program budget request contains funds to cover a portion of the operating of the MAAG's worldwide. Those costs chargeable to the military assistance appropriation are estimated to be $16.5 million and are included as part of the administrative expense category in the general cost section of our congressional presentation document.

In addition to these costs funded by the military assistance appropriation, the military departments provide support to our MAAG's primarily in terms of funding those costs associated with military personnel, such as pay and allowances and permanent change of station costs of personnel moving to MAAG assignments. The total estimated cost of support to be provided by the military departments in fiscal year 1974 is $49.9 million.

Mr. PASSMAN. In some instances, you maintain MAAG's in countries where the United States no longer has a military assistance program, is that correct?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Why?

Admiral PEET. Of particular concern are the MAAG's in northern Europe, the so-called mini-MAAG's in countries which no longer receive grant assistance.

I have looked at this situation quite thoroughly since I have been in my present job and I have visited the area. We have talked with officials of the countries involved; we have talked to our Ambassadors; we have talked to the military leaders in Europe and we have consulted with the office of the commander in chief, Europe. It has been the subject of much debate and audit. We have concluded that Uncle Sam gets his money's worth out of these MAAG's.

Mr. PASSMAN. But you no longer have a military program. You have been in those countries for so many years training those people how to operate their own shops. I just wonder what knowledge you can impart to these people you have already trained?

Admiral PEET. It is not just a matter of imparting knowledge to these countries.

Mr. PASSMAN. Then what is it?

Admiral PEET. It is a matter of having advisers available in those countries. They assist in the sales effort and they carry out other responsibilities.

For example, the Congress requires us to keep track of the end items we have delivered in the past to make sure they don't go to third countries——

Mr. PASSMAN. When these items are no longer useful and you have no military assistance program, do you then bring the MAAG people home?

Admiral PEET. Yes; whenever we can, but there are some advantages of their presence in host countries, which I would not want to overlook. For example, we get very valuable information from these people, even in the European countries. They have valuable contacts with manufacturers; we get technical information and other information with regard to sales potential. We learn what our competition is in the country, and we maintain contact with a body of people in those countries, that we could not do if we did not retain that presence.

Mr. PASSMAN. I can accept that. I am thinking about the benefits derived from our dollars. We find no Government ever cuts off an expense that is capable of voting, and the military never drops any personnel.

Admiral PEET. I am sure there are many people who think so, but I hope we are being harder nosed about it than that. In those countries, there is an average of about seven military personnel in these groups.

Mr. PASSMAN. I know that, but you can nickel and dime a millionaire to death. You can take a number of these little programs, and they will add up to a lot of money.

MAP-FUNDED PERSONNEL

Are the administrative expenses for the military sales program and the excess defense articles program funded from the "MAP administrative expense" item, Admiral?

Admiral PEET. Yes, sir, they are.

Mr. PASSMAN. How many people are engaged in the various military assistance programs?

Admiral PEET. Our 1973 authorization figure for the MAAG's, Missions, and MIL groups is 2,280 military personnel. This figure does not include attachés.

Mr. PASSMAN. Could you give us the total number of personnel presently used in countries where we no longer have a military assistance program?

Admiral PEET. Yes, sir.

[The information follows:]

The total number of U.S. military security assistance personnel authorized in fiscal year 1973 in MAAG's/Missions/Milgps, or as augmentees to Defense Attaché Offices in countries where there is no military assistance program proposed for fiscal year 1974, is 333. However, 246 of these personnel are authorized in countries which still have MAP undelivered balances which must be managed until delivery. Therefore, the balance, or 87 personnel, is the actual number of military personnel not engaged in still active military assistance programs. These personnel, however, have a continuing responsibility for end-item supervision of MAP materiel provided in prior years.

EFFECT OF MAAG PERSONNEL REDUCTION

Mr. PASSMAN. I believe you have put into effect a 15-percent reduction in personnel assigned to the MAAG's.

Admiral PEET. Yes, sir; in accordance with section 512 of Public Law 82–226.

Mr. PASSMAN. What effect has that had on your operation, either good or bad?

Admiral PEET. We are not doing a number of the things we were able to do before. We have made a thorough review of it. We are not able to keep track of the end items as required by law, in the same detail that we were able to. You have to give up something when you reduce the number of personnel.

Mr. PASSMAN. I know we all want to be completely honest about this. Do you think the money saved by reducing the personnel is more than offset in possible other losses by not having control and not being able to keep up with the end items?

Admiral PEET. I personally don't think so.

Mr. PASSMAN. Then have you had a loss or a profit, if we must think in terms of dollars and cents by the reduction?

Admiral PEET. In terms of dollars, it has to be a savings to the United States.

Mr. PASSMAN. If it is offset by maybe not keeping account of expensive end items——

Admiral PEET. We have attempted to get rough dollar figures per man, and it appears that each man we have in these countries is roughly responsible for monitoring $800,000 in equipment sales.

Mr. PASSMAN. For each man?

Admiral PEET. Yes, and if you have more men, it means less dollar value per man and better supervision.

Mr. PASSMAN. You either have been overstaffed or you haven't been overstaffed. You may save a dollar in personnel costs, but you may lose $4 in losing track of valuable equipment. What we are trying to do is find out whether or not you have a profit dollarwise or a loss dollarwise.

Admiral PEET. I think there is a loss dollarwise, but I can't quantify it very well.

Mr. PASSMAN. You say for each person that you have in the MAAG groups, there is $800,000 worth of equipment under his supervision.

Admiral PEET. We have averaged this out to include all equipment of U.S. origin, and we believe each man supervises equipment amounting to that much in value.

Mr. PASSMAN. And the fewer the men, the less supervision?

Admiral PEET. Yes, sir.

Mr. PASSMAN. On page 11, you indicate security assistance personnel are located at Commander-in-Chief Pacific, Commander-in-Chief Europe, and Commander-in-Chief South. Could you tell us where these headquarters are located?

Admiral PEET. Commander-in-Chief Pacific is in Honolulu; Commander-in-Chief South is in Panama; Commander-in-Chief Europe is in Stuttgart, Germany.

EAST ASIA AND PACIFIC REGION

Mr. PASSMAN. Admiral, as we break down the military assistance program by regions, I notice in the East Asia and Pacific region, your 1974 estimate is $530,140,000, which is an increase of $165,168,000 over your 1973 program. Is that true?

Admiral PEET. Yes, sir. Primarily for Korea and Cambodia.

Mr. PASSMAN. What percentage would come from prior unobligated funds and what would be out of the new appropriation funds, say for fiscal 1973?

Mr. VON MARBOD. In fiscal year 1973, Mr. Chairman, we are estimating $2.3 million from reappropriations of prior year funds and $27.9 million of recoupments from the pipeline, or the prior year approved and funded programs.

Mr. PASSMAN. Recoupment means deobligated from accounts where you have no need and you either reobligated or lost it; is that correct?

Admiral PEET. That is correct, Mr. Chairman.

In addition to that, we have $5.5 million of reimbursements in fiscal year 1973.

Mr. YATES. How does he allocate these between countries?

Mr. PASSMAN. The military assistance program is submitted on an illustrative basis. They furnish an estimate. Then subsequently, if you have to reprogram, you do so. Is that correct?

Admiral PEET. That is correct, Mr. Chairman, but we also include an estimate of these recoupments and reimbursements in our total program.

Mr. YATES. Does this mean then that the figures we are looking at in the unclassified chart for East Asia and Pacific security assistance program actually really mean nothing, that they can move these around as they want to move them around?

Mr. PASSMAN. I don't think that you could handle this on any basis other than illustrative. I think the shifts have been less than 5 percent over a period of years. We used to ride herd on you people for making too large transfers. I think it has been under 5 percent.

Admiral PEET. We have a maximum limitation of 10 percent.

Mr. PASSMAN. We have worked on this for many years to get control of it.

Mr. LONG. These transfers have been rather small. I am not quite sure why you say they can't be handled in any other way. It looks to me like it is a stable thing that could be handled on a line item basis. We have military construction handled on a line item basis. I don't see why it couldn't be done here.

Mr. PASSMAN. Let me go off the record.

[Discussion off the rceord.]

Mr. LONG. Do you get permission from the committee on this?

Mr. VON MARBOD. On page 82 of our Congressional Presentation Document, we show, by country, the fiscal year 1973 program as presented to the Congress in March 1972. We also show the fiscal year 1973 program as of January 1973, and the net change between the two.

You will see that in each case the later figure is well within the dollar amount presented to the Congress.

Mr. LONG. That is very reassuring.

Mr. VON MARBOD. After the authorization and appropriation, or the approval of a final continuing resolution authority for the fiscal year if there is no permanent appropriation, we do give the Congress advice as to the distribution of the program, country by country.

Mr. PASSMAN. Thank you very much.

Mr. LONG. I am still not sure I understand it, Mr. Chairman. I know the explanation is here, but the transfer has been made and now you are explaining it and I am glad you are explaining it, but do you, Admiral, call up Mr. Passman and inform the committee that you are planning to make a change of 5 or 10 percent in this particular program before you do it, or do you just feel you have that freedom to move in with the 5 or 10 percent?

Mr. PASSMAN. It is in the basic law. The law says they have flexibility up to 10 percent.

Admiral PEET. If a change is greater than 10 percent, we are required to notify the Congress. There is a reason for this, as the chairman has pointed out. The numbers are not that precise.

Mr. LONG. I think 10 percent is a reasonable sum.

Mr. PASSMAN. Let me say this. I have chaired the committee for 19 years and I knew from the first year I handled the bill that all of this was given on a——

Mr. LONG. That I have known.

Mr. PASSMAN. "Illustrative" basis. You say you believe you need the money here, but having it on an illustrative basis you can transfer

to other areas, but you are limited to a 10 percent transfer and you have kept it at an average of about 5 percent and it would appear to me that is an excellent record.

Mr. LONG. All I want to say is this, that this is the first time I have known about this 5 or 10 percent business, that you did keep within this amount. For many years I have been uneasy about this illustrative business and felt it should be line items and after this statement here I am greatly reassured. I just can't understand why this didn't come out.

LINE ITEM ADJUSTMENTS

Mr. YATES. Mr. Chairman, I am not reassured if I understand what the admiral said. The law is that you may transfer any amount up to the full amount, but you must give notice to the committee that you have transferred, is that correct?

Mr. FORMAN. There may be a little confusion as to what step of the process we are talking about. There are two stages involved here. One is the period dating from the time we come up here with our congressional presentation books and give our testimony until the time an appropriation act is passed. We are presenting an illustrative program and there may necessarily be changes between the time the books are put together—based on budget estimates and recommendations from the field which antedate it by quite a long period—and time of enactment; also, the Congress, in its wisdom, may have reduced the actual appropriation, thus requiring changes in the program.

Now, to reflect the congressional action of reductions in appropriations plus changes in the international situation, adjustments are made in the program and these show up beginning at page 82.

Now, these adjustments are not transfers in the sense that you are familiar with it in the context of a transfer between appropriation accounts for line items but are merely adjustments in a single line item.

Mr. PASSMAN. That is a good explanation. Elaborate for the record because we have 4,000 or 5,000 questions to ask.

Mr. LONG. I think this is very important and I hope we can——

CLARIFYING 10-PERCENT LIMITATION ON TRANSFERS

Mr. PASSMAN. At one time you got all your money on an illustrative basis, both economic aid and military assistance. You could give it all to one country and you would not be in violation of the law. So, subsequently, the Congress enacted a law that gave you a variation of 10 percent. You have 10 percent flexibility which to my way of thinking is extremely reasonable. Because you can't predict right down to the very last bolt and nut as to where you need this, but the very fact that over a period of years you have kept the transfers within 5 percent would indicate to me that that is a good record.

In the past the people who justify the funds could come in and justify a hospital in Guatemala and build a summer resort in Morocco and would be within the law. We have tried to get on top of this. Now there is a limitation as to what you can transfer and we have what I consider good control.

If you exceed 10 percent then, of course, you do come to the committees and get their advice before you proceed to obligate. Is that stated correctly?

Mr. FORMAN. This is the point I was just leading up to. After the appropriation act——

Mr. YATES. I haven't been on the committee, Mr. Chairman——

Mr. FORMAN. If I may continue for just a minute, sir.

Section 653 of the Foreign Assistance Act requires us to present to the Congress within 30 days after the appropriation our distribution of the program within the amounts appropriated by the Congress. Thereafter the President is authorized to change that notification to the Congress only by 10 percent unless he makes certain findings and if he makes those findings then he has to give the Congress 10 days prior notice.

Mr. LONG. Will the gentleman yield?

Mr. PASSMAN. Yes, for a question.

Mr. LONG. Let me get this in my mind now firmly.

Now, we have a $1.9 billion assistance program for fiscal year 1974.

Mr. PASSMAN. This is very clear. This is the law. If you will read it, that is the law.

Mr. LONG. I am trying to understand it now. This is a $1.9 billion assistance program, is that right?

Admiral PEET. Counting military assistance, credit——

Mr. LONG. Five percent of that would be $100 million, is that right?

Admiral PEET. No, we are not talking about 5 percent of $1.9 billion.

Mr. LONG. That is what I want to know.

Admiral PEET. We are discussing the military assistance portion of it.

Mr. FORMAN. The 10 percent pertains to the amount allocated to the country for military assistance and security supporting assistance.

Mr. LONG. This is the 10 percent of that country's share and not of the total amount?

Mr. FORMAN. That is correct.

Mr. LONG. Which is a much tighter discipline?

Mr. PASSMAN. The law is very specific.

Mr. LONG. Otto, you know a great deal more about this than anybody else.

Mr. PASSMAN. Let me say this, gentlemen. We are asking our questions. Please make notes of the questions you want to ask and I will get through with my questions as quickly as possible and you can take all the time you need.

COMMITTEE CONTROL ON FUND TRANSFERS

Mr. YATES. Mr. Chairman, may I point out that one of the critical items of dispute in the last supplemental bill was the question of the transfer of military funds. I think it is very important. I think it is essential that the appropriations—it is the means by which the Appropriations Committee keeps control.

What the basic law does is——

Mr. PASSMAN. You are talking about the Department of Defense.

Mr. YATES. Yes.

Mr. PASSMAN. That is Department of Defense, not this committee. This committee has good control.

Mr. YATES. I wonder why you have a different situation insofar as control over the budget is concerned?

Mr. PASSMAN. The legislation has been enacted into law by the Congress following the recommendations of the Foreign Affairs Committee and the Foreign Relations Committee, so they give us these guidelines and what we have done, Mr. Yates, over a period of years, is to be sure they live with these guidelines. Previously you had no limitation and you could program the funds all in one country if you desired. Personally, I am very well satisfied with the control, but I still don't know why this should continue to be on an illustrative basis.

Mr. YATES. Mr. Chairman, if you have control, how can you say it is illustrative then?

Mr. PASSMAN. It is illustrative.

Mr. YATES. Then you don't have control.

Mr. PASSMAN. We control it because they wouldn't get the money the following year. The committee has the right to say, "You don't get the money; you violated your commitment to us and for that reason we cut your funds off." You have to trust somebody. When they come up with a serious violation we will jump down their throats.

Mr. YATES. Mr. Chairman, if it is illustrative, you have no control——

Mr. PASSMAN. We have control on the amount of money that we give them to operate on.

Mr. YATES. Do you mean total?

Mr. PASSMAN. Beyond that point they are controlled by the basic law passed by the Congress, which was just mentioned. If they violate that, then they are responsible not only to this committee; they are responsible to the authorizing committees and Congress.

We have control only on the total amount.

Mr. LONG. This is not then an illustrative thing. It seems to me illustrative is a misleading term here.

Mr. PASSMAN. To the extent that previously you had no limitation. The limitation is a recent thing and it is still illustrative to the extent that you may cancel out a complete program. Is that not right? Just erase it altogether?

You throw that into a recoup category. We have but one control. That is the amount of money we give you. Beyond that you have to operate according to the authorization bill. They are the ones who fix the guidelines within which you must operate. Is that correct?

RECOUPING DEOBLIGATED FUNDS

Mr. LONG. The chairman just said that they can cut out an item completely.

Mr. PASSMAN. Right.

Mr. LONG. Then you say this goes into some sort of a kitty?

Mr. PASSMAN. No, not a kitty. You have unused funds.

Mr. LONG. Then what happens to that money?

Mr. PASSMAN. Let me explain it. You justify funds for a project. Subsequently you find that you are not going to allocate these funds to that project. So this money then becomes unobligated. Then what you do instead of saying, "This has been deobligated and we wish to reobligate," you apply the terminology "recoup," but what it means is funds were previously obligated, then deobligated, and you are desirous then of having it reappropriated for future obligation, is that right?

Mr. VON MARBOD. We must rejustify to the Congress.

Mr. YATES. What happens to funds that are deobligated? Do we recapture them?

Mr. PASSMAN. We have a habit of reappropriating and unless we do reappropriate you can't use the funds.

Mr. LONG. Within that year or the next fiscal year?

Admiral PEET. Recoupments and reappropriations are a part of our total program. We estimate what they are going to amount to in a given year and that amount is included in the total obligational authority on which the country figures are based.

Mr. LONG. The chairman says the money is put in some sort of a box. Then you reappropriate it. Is that for this or next fiscal year?

Mr. PASSMAN. It would apply to the next fiscal year.

You come up with a billion dollar program. They say, "We have a hundred million dollars unobligated. We are going to be able to recoup from prior obligations $50 million. We need new funds of $850 million to wind up the program."

Is that said correctly?

Mr. FORMAN. That is correct.

Mr. PASSMAN. If we refuse to give you the right to use these recouped funds, it simply means if your programs are sound you would have to increase your request for new appropriations, would you not?

Mr. VON MARBOD. Exactly, Mr. Chairman.

Mr. PASSMAN. That is in the record from cover to cover.

Now, if I may get back on the record, what percentage of total funds requested for MAP in fiscal 1974 will be allocated to the East Asia and Pacific Region?

You may place that in the record.

[The information follows:]

Of the total program requested for fiscal year 1974 ($771.5 million) the percentage proposed for the East Asia and Pacific Region is 69 percent ($530.1 million).

Mr. PASSMAN. Please furnish for the record a table showing the percentage and amount by country which is planned to be allocated in 1974 for operation and investment. You can put that in the record.

[The information follows:]

	Total program		Operating [1]		Investment [2]	
	Thousands	Percent	Thousands	Percent	Thousands	Percent
East Asia and Pacific:						
Cambodia	$167,194	100	$131,845	79	$35,349	21
Indonesia	20,826	100	8,427	40	12,399	60
Korea	238,789	100	47,563	20	191,226	80
Philippines	19,269	100	4,361	23	14,908	77
Thailand	55,762	100	27,288	49	28,474	51
Regional costs	28,300	100			28,300	100
Regional total	530,140	100	219,484	41	310,656	59
Near East and South Asia:						
Jordan	35,632	100	2,100	6	33,532	94
Turkey	85,501	100	18,364	21	67,137	79
Regional total	121,133	100	20,464	17	100,669	83
Europe:						
Portugal	323	100	262	81	61	19
Spain	3,026	100			3,026	100
Regional total	3,349	100	262	8	3,087	92
Africa:						
Ethiopia	10,454	100	4,655	45	5,799	55
Tunisia	2,476	100	488	20	1,988	80
Regional total	12,930	100	5,143	40	7,787	60

[1] Operating costs represent the value of equipment, supplies, and services required to operate and maintain the capability of country assets, low unit value secondary items and all expendables—except war reserve ammunition, initial stockage level of spare parts and secondary items programed as a part of a major item or system investment. Also included in operating costs are the charges for supply operations (shown as general costs, not distributed by country) which represent the costs of packing, crating, handling and transportation incurred in the issue and transfer of materiel in the operating and maintenance category as well as logistics management expenses.

[2] Investment costs represent the value of equipment, supplies, and services which increase the force capability including initial equipment, war reserves, replacement of equipment by improved types, the initial stockage of spare parts programed concurrent with related major items, all construction and the cost of supply operations (shown as general costs, not distributed by country) required for investment materiel and services.

Mr. PASSMAN. Please also indicate which countries in the East Asia and Pacific Region, no matter if they receive U.S. assistance or not, presently have U.S. troops stationed within their borders. Place this in the record.

[The information follows:]

U.S. TROOPS IN EAST ASIA AND PACIFIC REGION

U.S. troops are presently located in significant numbers in the following East Asia and Pacific Region countries: Thailand, Japan, Philippines, South Korea and the Republic of China.

Mr. PASSMAN. What U.S. troop withdrawals have been made from the countries located in this region during the past year, Admiral?

You may put that in the record.

[The information was provided for the committee.]

U.S. FORCES AND INVESTMENT IN KOREA

Mr. PASSMAN. We want the record to show the facts.

It is my understanding that from the end of the Korean war up until 4 years ago we had maintained a troop level in Korea in the neighborhood of 60,000 troops. Under the present administration's doctrine it called for bringing the troops home with what I have always thought was an understanding that we will modernize your military forces so in effect you would have the same protection and one would offset the other. It would permit the release of our troops and, as it applies to Korea, it seems that we brought 20,000 troops home at a savings of $1.1 billion over a 5-year period and that we conditionally committed ourselves to military assistance of $1.5 billion during that same period which actually means that the net cost of the military assistance program is actually $400 million and not $1.5 billion, if you apply the savings.

Admiral PEET. Yes, sir.

Mr. PASSMAN. I want to repeat now that we maintained that troop level in Korea for some 20 years until 4 years ago when we came up with this new system of modernizing and letting them furnish their own men so ours could be brought home. Have I stated it correctly for the record?

Admiral PEET. I believe that is correct, sir.

Mr. PASSMAN. Thank you very much, sir.

I think the cost of the Korean conflict was $35 billion and the total deceased was 33,629, and the wounded in action was 105,785.

That is the investment we have in Korea. Now, it is a question of whether we want to spend sufficient money to protect that investment for a few more years or whether we are willing to say that all of our past five Presidents and all of the great leaders during that period were wrong. So that must be a decision made by the Congress. As far as I am concerned, I am going to vote to protect that investment.

KOREA 5-YEAR PLAN ESSENTIAL

In your candid opinion, Admiral, without our military assistance for Korea, do you believe Korea could survive and defend itself against an attack if it should come?

Admiral PEET. Certainly not today. The modernization program is important to Korea's self-defense capability.

Mr. PASSMAN. Doesn't North Korea have about five airplanes to South Korea's one—is that a true statement?

Admiral PEET. I have heard that the ratio of modern fighter aircraft is about ———.

Mr. PASSMAN. Let's read it into the record. Your case will either stand or fall on facts.

Admiral PEET. North Korea has an estimated 500 fighters and ——— bombers.

Mr. PASSMAN. Now, you will compare that with Korea's equipment.

Admiral PEET. I have one table in terms of squadrons and the other table in terms of planes, I will provide the comparable data for the record.

[The information was provided to the committee.]

Mr. PASSMAN. Off the record.

[Discussion off the record.]

Mr. PASSMAN. Our record shows in North Korea they have an Air Force with a strength three times that of South Korea.

If that doesn't justify military assistance for Korea, then all these five Presidents, all the great admirals, generals, and Secretaries of State have been wrong for 20 years.

Mr. LONG. Is that a qualitative superiority as well as quantiative, in that ratio?

Admiral PEET. It is difficult to give a ratio on quality.

Mr. LONG. 300 very modern planes are worth 3,000 old ones. Is this superiority qualitative?

Admiral PEET. Yes; both qualitative and quantitative.

Mr. PASSMAN. Off the record.

[Discussion off the record.]

CAMBODIA

Mr. PASSMAN. At page 13 you indicate that the military assistance provided to most of the countries in this region was needed to insure that the United States may preserve or expand existing base rights and overflight rights in the various countries. Are these the primary reasons or one of the primary reasons for the military assistance program?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Now, if we may look at Cambodia. Your estimate for fiscal year 1974 is $167,194,000, an increase of $33,919,000; is that correct?

Admiral PEET. Yes, sir.

Mr. PASSMAN. I shall not go into the pros and cons. I will just ask the questions and let each member make up his own mind as to whether he likes or dislikes the program.

Over the past year there has been a great deal of criticism concerning Cambodia. The United States supplies a large amount of aid to Cambodia. It has been said the amounts requested are required to protect our interests. Is that correct?

Admiral PEET. Yes, sir.

Mr. PASSMAN. I must ask some questions which deal with sensitive areas.

How many and what type of personnel are presently located in Cambodia?

Admiral PEET. We have those numbers. As you know, we are restricted by law to a total of 200 Americans in Cambodia.

Mr. PASSMAN. That is military?

Admiral PEET. No, sir, not all military.

Mr. PASSMAN. How about civilians?

Mr. TARR. The total is 194 civilians and military.

Admiral PEET. I have a readout on this.

The legislative ceilings are 200 U.S. personnel and 85 third-country nationals paid by the U.S. Government.

The number of U.S. Government, civilian and military personnel, and contract personnel paid with U.S. funds now in Cambodia: U.S. military and civilian personnel, 194, including 9 U.S. citizen contract personnel

Mr. PASSMAN. That is a good enough answer.

How about the other countries?

Mr. YATES. Is that Cambodia alone?

Admiral PEET. That is Cambodia alone. We are well within the limit.

Mr. PASSMAN. Do other nations have personnel in Cambodia?

Admiral PEET. They do and I will have to provide that for the record.

Mr. PASSMAN. Can you tell me at this point whether other countries do have personnel there?

Admiral PEET. Military personnel?

Mr. PASSMAN. Both military and civilian.

Admiral PEET. I believe Taiwan does.

AID, EMBASSY PERSONNEL IN CAMBODIA

Mr. TARR. Our Embassy people are in the 194.

Mr. PASSMAN. What percentage would you require for the Embassy if we were not pulling out of this involvement?

Mr. TARR. I think that Embassy and AID are about one-half and I think we have about 100 military.

Mr. PASSMAN. OK now, let's back up. How many do we have assigned to the Embassy that you would have there regardless of the circumstances? How many for AID, and how many would be in the military category? Then you are down to actually how many people that would be there on account of the dwindling involvement.

Admiral PEET. I will provide the information for the record.

[The information follows:]

About 50 percent of the 194 U.S. personnel in Cambodia are military personnel; that is, about 100 of 194. If there were no military assistance program, of course, there would be no mission for the 74 personnel now working there as the military equipment delivery team (MEDT). If there were a cease-fire, the size of the Office of the Defense Attache could probably be reduced from its present size to as few as 10. Under any circumstances we would expect to have military attachés in Cambodia so long as there is an embassy there. So, in summary I would estimate that the minimum military presence in Cambodia under a situation of no military assistance program would be about 10 military attaches. If there were a diminished MAP, there would be a requirement to assign some additional military personnel to take care of MAP matters, the exact number depending on the amount of work.

Mr. PASSMAN. It would appear there would be only about 35. You said two-thirds, did you not?

Mr. TARR. That is my recollection.

THIRD COUNTRY PERSONNEL IN CAMBODIA

Mr. PASSMAN. It makes a different story, doesn't it, when you break it out like that. Does Taiwan have military personnel, advisers, or what?

Admiral PEET. I believe they have some advisory personnel there, Mr. Chairman.

Mr. YATES. Mr. Chairman, who pays for their services?

Mr. PASSMAN. I would assume Taiwan pays for it. They started an aid program of their own.

Admiral PEET. That is correct.

Mr. PASSMAN. That is another nation that is cooperating. We went out and borrowed $20 million from them, I believe.

Mr. YATES. We borrowed from them?

Mr. PASSMAN. We borrowed $100 million from Thailand. We are paying them 6 percent interest and it is due July 3.

Admiral PEET. In 1967.

[Discussion off the record.]

IMPROPER USE OF U.S. SUPPLIES

Mr. PASSMAN. Last year it was stated that some Cambodian officials were selling supplies to the Communist forces. Has this in fact happened, and could some of the supplies which were sold have been provided by the United States? What answer do you have to that?

Admiral PEET. Mr. Chairman, I am not aware of the report that Cambodian officials have been selling supplies to the Communist forces; however, I am aware that it has been reported that some U.S. supplies were sold by the Vietnamese in an improper way.

Mr. PASSMAN. Would you say a large quantity?

Admiral PEET. No, sir.

Mr. PASSMAN. A small quantity?

Admiral PEET. I would not say a large quantity. The matter has been investigated and I would be glad to provide the details for the record.

Mr. PASSMAN. Has it reached frightening proportions?

Admiral PEET. No, sir.

Mr. PASSMAN. Would you place something in the record on that.

[The information follows:]

During January through March 1972, the DOD Directorate for Military Assistance and Overseas Audits examined into reported improper sales of U.S. military equipment in South Vietnam and Cambodia. This report documents the only instances of improper sales of U.S. military materiel involving Cambodian officials known to have occurred. It involves, not sales to Communists but purchases of materiel by Cambodian officials from South Vietnamese forces.

BACKGROUND

The original finding made by OSD auditors in early 1972 was based primarily on information voluntarily furnished by Cambodian Army (FANK) brigade commanders. The Khmer Armed Forces had been engaged in a rapid build-up of forces. There were shortages in weapons and materiel available to equip and arm the newly formed units and new recruits. A desperate need existed to strengthen the armed forces immediately in order to avoid a military defeat. Direct contact between Vietnamese Army (ARVN) units and FANK units was then necessary and prevalent U.S. advisers were not with either force in Cambodia, property accountability was difficult at best, and both ARVN and FANK personnel took advantage of the situation—ARVN by selling and FANK by buying U.S. military materiel. The materiel known to exceed $450,000 in value at MAP prices included .38-caliber revolvers, M–16 rifles, M–60 machineguns, PRC–25 radio sets, jeeps, 5-ton trucks, and bulldozers. When the sales were discovered, the Chief, U.S. Military Equipment Delivery Team–Cambodia (CHMEDTC) discussed the problem with FANK authorities and received assurance that appropriate action would be taken.

CURRENT STATUS

Corrective action was taken by FANK in March 1962. Evidence presently available to CHMEDTC indicates that the practice was discontinued and has not recurred. Additionally, the current ground combat situation in which border contact is no longer possible has placed a real physical obstacle in the path of such activity. Certain management practices introduced by CHMEDTC including an end item utilization inspection procedure conducted jointly by FANK general staff and MEDTC personnel physically reconcile records with weapons on hand. The results of these inspections do not suggest the continued existence of arms trafficking.

SUMMARY

Reports of improper sales of military equipment are based on 1972 OSD auditor findings. Available evidence indicates the practice has been discontinued and that equipment acquired has been picked up on FANK records. CHMEDTC remains alert to the situation and will continue to monitor the use and disposition of U.S. military property in Cambodia.

Mr. PASSMAN. On page 16 you indicate the trained forces of Cambodia used to be 35,000 troops, but now it is 220,000 who are partially trained and partially equipped. Are these partially trained and partially equipped troops able to sustain the independence of Cambodia?

Admiral PEET. We hope so, sir.

Mr. PASSMAN. What other countries are providing aid to Cambodia, and in what amounts? If you don't have it you can put it in the record.

Admiral PEET. May I provide that for the record?

[The information was provided to the committee.]

OTHER THIRD COUNTRY INVOLVEMENT IN CAMBODIA

Mr. PASSMAN. Are the Japanese helping any?

Mr. TARR. They are in economic aid, Mr. Chairman.

Mr. PASSMAN. How much and on what basis?

Mr. TARR. I think the figure is $7 million.

Mr. PASSMAN. How much?

Mr. TARR. $7 million.

Mr. PASSMAN. You could put up that much. On what terms?

Mr. TARR. This is a grant.

Mr. PASSMAN. A grant?

Mr. TARR. Yes.

Mr. PASSMAN. How about in the credit sales?

Mr. TARR. No, this is for the stabilization of their currency.

Mr. PASSMAN. When was that made, Mr. Secretary?

Mr. TARR. It has been going for the 2 years that I know of, but I don't know when it started.

Admiral PEET. On the security assistance side there is nothing from Japan.

Mr. PASSMAN. What?

Admiral PEET. On the security assistance side, it is zero.

Mr. PASSMAN. You indicate that most of the training for Cambodia has been conducted in other Asian countries. Would you tell the committee what other Asian countries these Cambodian forces were trained in?

Admiral PEET. The majority of the training was provided in Thailand, sir.

Mr. PASSMAN. Is this paid for out of Cambodian resources or out of ours?

Admiral PEET. Out of the total military assistance we have allocated to Cambodia.

DEFINING "DISPOSABLE" EXCESS EQUIPMENT

Mr. PASSMAN. On page 16 you indicate under fiscal 1974 authorities requested item excess equipment is listed with the word "disposable" out to the side.

Admiral PEET. Yes, sir.

Mr. PASSMAN. Would you, Admiral; explain the use of this word?

Admiral PEET. Ben, do you want to cover that, the word "disposable" here?

Mr. FORMAN. I have no idea. I assume it must be an error.

Mr. PASSMAN. I don't want to delay the hearings because members are going to become impatient. We need an explanation of this and we are going to have to take a little time to find out what it means. I will be asked and I won't have the answer if you don't have it.

Admiral PEET. My understanding, Mr. Chairman, of the excess——

Mr. PASSMAN. We are worried about that word stuck out on the side.

Admiral PEET. I understand.

Mr. PASSMAN. I want to be a perfect gentleman about this. If you don't have it would you please furnish it for the record?

Admiral PEET. Yes, sir.

[The information follows:]

The word "disposable" shown throughout the congressional presentation document was inadvertently used in relation to excess defense articles. These defense articles do not fall into the category generally defined as being disposable property. This terminology will be removed in future publications of the CPD.

MAP SUPPORT FOR CAMBODIAN FORCES

Mr. PASSMAN. It appears that most of the requests for fiscal 1974 will be used to provide ammunition to the Cambodian forces, is that correct?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Then I assume that the majority of this military assistance program is designed just to maintain Cambodian forces in the field, is that correct?

Admiral PEET. Yes, sir.

Mr. PASSMAN. On page 17 you indicate that $33,436,000 is programed in fiscal 1974 for other equipment and supplies. Could you tell the committee what is under this category?

Admiral PEET. It is miscellaneous items. We will provide the information for the record.

[The information follows:]

Full track tractors.
Earthmoving and excavating equipment.
Craner and crane-shovels.
Miscellaneous construction equipment.
Materials handling equipment.
Photographer equipment supplies and spare parts.
Parachutes and aerial delivery equipment.
Metalworking machinery.

Special industrial machines.
Power and distribution equipment.
Lights and fixtures.
Other support equipment.
Office machines.
Pumps and compressors.
Prefab and portable structures.
Firefighting equipment.
Clothing, textiles, and individual equipment.
Drugs, biologicals, and surgical dressings.
Other dental and medical supplies.
Hand and measuring tools.
General supplies.
Industrial supplies.
Jet fuel.
Aviation gasoline.
Automotive gasoline.
Diesel fuel.
Chemicals.
Other petroleum, oil, and lubricants.
Construction supplies.

CAMBODIAN TECHNICAL ASSISTANCE

Mr. PASSMAN. Also on the same page, you programed $1,336,000 in fiscal 1974 for technical assistance and special services. Please explain to the committee what is covered under this category.

Admiral PEET. We will provide a statement for the record, sir.

Mr. YATES. Mr. Chairman.

Mr. PASSMAN. I will yield.

Mr. YATES. If you provide it for the record, we don't know what is going on in a sense, because the chairman is following a very coherent kind of examination, and if we could have even a barebones explanation, Mr. Chairman, I think it would be helpful.

Mr. PASSMAN. Do you have any information on this last question?

Mr. VON MARBOD. Technical assistance requested for fiscal year 1974 will provide support to the weapons systems that have been introduced into Cambodia; for example, T–28 aircraft, AU–24 aircraft, and C–123 aircraft. With respect to special services——

Mr. PASSMAN. What are you talking about when you say special services and technical assistance?

Mr. VON MARBOD. I will have to provide information on the special services for the record. It is in the category with technical assistance provided in connection with the weapons systems that we are introducing into Cambodia.

[The information follows:]

Funds programed for fiscal year 1974 Cambodia MAP under the heading of "Special Activities" provide support for psychological warfare operations, including the preparation and distribution of leaflets, pamphlets, and magazines.

Mr. PASSMAN. Then you are not talking about technical assistance as we think about your bilateral technical aid program.

Mr. VON MARBOD. We are not, Mr. Chairman.

Mr. PASSMAN. You are talking about military.

Mr. VON MARBOD. We are indeed.

Mr. PASSMAN. I have nothing but praise for our President getting us out of that mess, and for my money I think we made a terrible mistake not letting him finish this thing in Cambodia, because you are

getting ready to lose the large investment we have made in South Vietnam, but I don't think we should set up a program to continue this.

Admiral PEET. No, sir.

Mr. PASSMAN. The time has come to get these people on their own.

Mr. VON MARBOD. The technical assistance and special services line item, Mr. Yates, also covers pay for the services of the 85 technical contractor support people who are third-country nationals.

[Discussion off the record.]

PIPELINE FOR CAMBODIA

Mr. ROUSH. As a matter of explanation, on page 17 does the chart under "Deliveries and Expenditures" and under the total column here under "Available for DEL/XP," does that mean that that amount is still available and in the pipeline?

Mr. VON MARBOD. That is the amount, sir, that we estimate will be available for delivery during fiscal year 1973. It includes both the pipeline, or the undelivered balance as of June 30, 1972, and the fiscal year 1973 program for Cambodia.

Mr. ROUSH. How much would remain in that column as of the close of the fiscal year 1973?

Mr. VON MARBOD. It depends on the consumption of the material in country, and the country's ability to receive the equipment. In the case of Cambodia, we could analyze the current status and give an updated forecast.

Mr. ROUSH. May I ask, going over then to the last column, about the $164.244 million figure?

Mr. VON MARBOD. That is the amount we estimated would be in the pipeline at the end of fiscal year 1973. However, this estimate was prepared at the time that this presentation document went to the printer. We could update it for you for the record.

Mr. ROUSH. I think it would be valuable, Mr. Chairman, if it was updated.

REQUEST FOR UPDATED PROGRAM FIGURES

Mr. PASSMAN. I wish you would. I want to commend the gentleman. I am glad you brought it up. I want to say at this point that it appears to be awfully high. If you have $164 million in the pipeline under your military assistance program, then I am not going to be too happy over the amount you are requesting. I won't debate it with you because you know what you think you may need, but you were very fair a moment ago to say it is hard to estimate what you will need. This is a pretty big pipeline for this little country. I wonder if you could, as my friend suggested, update these figures, and, if you would, give us a spread on what it represents.

Mr. VON MARBOD. We will be happy to, Mr. Chairman. Ammunition consumption these past months has been high, and for that reason I would prefer to update this table. It is about 6 months old now.

[The information follows:]

The Cambodia MAP pipeline data presented in the fiscal year 1974 CPD was prepared over 6 months ago. Undelivered balances were calculated using an empirical formula applicable to most MAP recipient countries, but which does not reflect the unique situation obtaining in Cambodia. Based upon the most recent reports available, the Cambodia MAP pipeline on June 30, 1973, was

approximately $70 million. This figure represents little, if any, ammunition, being comprised primarily of major items requiring long leadtimes for procurement.

There is no practical way of supporting Cambodia during fiscal year 1974 by reprograming this MAP pipeline.

Cambodia MAP Pipeline Composition as of June 30, 1973.

Mr. TARR. Mr. Chairman, may I add a word. When we prepared this budget for Cambodia, the only basis we thought we could prepare the budget on was the basis that something like the activity in Cambodia would continue. If the activity does not continue, then obviously these expenditures are not appropriate.

Mr. ROUSH. But, Mr. Chairman, the witness says these figures are 6 months old.

Mr. PASSMAN. We just asked them to update them.

Mr. ROUSH. I know, but it seems rather ridiculous to me that they should bring figures 6 months old to this committee and then testify as they have.

Mr. PASSMAN. May I say this. You know the figures that we are looking at in the total budget, they started making this budget up 18 months ago. Any budget you get, I don't care where it is——

Mr. LONG. These are their up-to-date figures?

Mr. PASSMAN. These are up to date. All these budgets are 18 months old. All budgets are starting 1 year and 6 months in advance of presentation. I don't like it, but you know if you started reading the budget from cover to cover, it would take you 6 months and 3 days just to read and understand it.

Mr. ROUSH. I think that the witness should be prepared to give us updated information and facts, not 6 months old facts, when they come in here, even though their budget was printed sometime ago.

Mr. PASSMAN. Let me agree with the gentleman and restate that all budgets are 18 months old before they reach the Congress. That is they were started 18 months ago, and you have to finalize these things at least 3 months in advance of presentation to the Congress. This Government is so complex and so big, I don't know of any way to shorten it. I am just as unhappy over it as you, but it is physically impossible just to pull all of these figures out of the sky overnight and put them on paper. We ask the specific question. Bring us up to date as far as possible.

Mr. YATES. As of what time will it be considered that they have brought these figures up to date?

Mr. PASSMAN. We are going to ask them to project it to June 30. All of our calculations or needs, and our markup will be based upon what they estimate they will have on hand as of June 30.

Mr. YATES. But do they have any actual figures, Mr. Chairman, rather than computations as of a certain recent date?

Mr. PASSMAN. They can possibly go back and give it to you as of June 30 now. What can you do?

Mr. VON MARBOD. The information just now being developed by the accountants will cover the period through March 31, 1973.

Mr. PASSMAN. When will that be available?

Mr. VON MARBOD. It is being developed now, Mr. Chairman. I would estimate that it would be available within 3 weeks from now.

Mr. PASSMAN. Please place it in the record at the quickest possible date. Let me say this for the benefit of the new members of the committee. On foreign aid you have 4,406 projects in 101 nations of the world. You can get an idea of the task that falls to this committee and those are only the ones we can put our fingers on. It would take us 5 years to examine on this program so we have to hit and miss.

Admiral PEET. Mr. Chairman, to put the problem in perspective, we have hundreds of thousands of line items in these programs. Most of the figures are not very far off, but I defy anybody to determine from what is going on in Cambodia right now, what our needs will be in fiscal year 1974. I would be misleading you if I said the figures I am giving right now based on what we think we will need next year for Cambodia were not subject to change as the situation changes.

Mr. YATES. We were asking what is in the pipeline rather than what you expect next year.

Admiral PEET. We can give you a pipeline figure through the 31st of March 1973.

Mr. PASSMAN. We want this, as you know, Admiral, at the conclusion of the hearings.

I would also like an accurate estimate as far as possible on the amount of deobligated funds that you are asking us to reappropriate for new obligations, and of course the amount then of the total unobligated funds.

Admiral PEET. Yes, sir.

[The information follows:]

It is estimated that the deobligated funds which we are asking you to reappropriate for new obligations will amount to $5 million. The estimate for recoupments is $40 million; however, if the current trend in this area of activities continues, the figure of $40 million will be too high and an estimate of $30 million seems more realistic. Reimbursements are expected to reach about $5 million.

INDONESIA

Mr. PASSMAN. If I am not mistaken, Indonesia was stricken with a severe drought during the past year and has had great food shortages, is that correct?

Admiral PEET. That is correct, rice in particular.

Mr. PASSMAN. If that is the case, it looks as though Indonesia will be in great need of food supply instead of military assistance. Would you please comment?

Admiral PEET. Another severe drought could obviously cause another severe food supply situation. However, Indonesia has made

significant strides on its food supply production and programing, and should be in relatively good shape, barring another unusual turn of the weather. Progress in the economic field cannot take place without internal stability and thus, I feel, that our military aid program also contributes to economic improvement in Indonesia.

CIVIL ACTION PROJECTS

Mr. PASSMAN. In the justifications you indicate that some of the equipment supply will be used for civil action projects. Could you tell the committee what sort of projects are under this category?

Admiral PEET. Roadbuilding and the erection of associated bridges are good examples, as these type projects contribute to both military and civilian needs. The various types of engineer equipment can be used for construction of schools and other public facilities in relatively underdeveloped areas, while serving as training for the military personnel involved.

THIRD COUNTRY ASSISTANCE

Mr. PASSMAN. Would you please tell the committee what other countries are supplying assistance and in what amounts?

Admiral PEET. Currently, Australia is the only other country with an active assistance program for Indonesia, although New Zealand has recently indicated the possibility of offering limited amounts of training assistance. The Australian program amounts to about [———] million over a 3-year period.

INTERNAL SUBVERSION

Mr. PASSMAN. Could you please tell the committee what internal subversion presently threatens Indonesia which requires the provision of the U.S. funds?

Admiral PEET. There are currently two [———] insurgencies, one located in West Irian and the other in North Kalimantan along the Sarawak/Sabah border.

U.S. PERSONNEL

Mr. PASSMAN. How many American military personnel are presently stationed in Indonesia?

Admiral PEET. There are currently 70 military personnel stationed in Indonesia.

SHIP TRANSFERS

Mr. PASSMAN. I note that you are programing in fiscal year 1974 $1,802,000 for ships which includes spare parts, but I note under the units provided to Indonesia that there are no ships listed. Would you please tell the committee what these funds will be used for?

Admiral PEET. Those funds will be used to support 24 ships of U.S. origin in the Indonesian Navy, which were transferred in prior years.

TRUCK REQUIREMENTS

Mr. PASSMAN. I note that you plan to provide about 900 trucks to Indonesia in fiscal year 1974. Could you please tell the committee the need for so many trucks?

Admiral PEET. We have about 10 projects in Indonesia which involve the supply of trucks as a normal part of the table of organization, and that number is not considered excessive. These trucks will contribute significantly to internal security and civic action through the balanced support of ongoing projects ——— for rapid deployment of forces and equipment throughout the archipelago. Other related projects are the expansion of a nationwide military communications and control system, engineering construction of roads and bridges, and modernization of the armed forces logistics capability and maintenance facilities.

KOREA

Mr. PASSMAN. If I remember correctly, 3 years ago the United States entered into a 5-year modernization agreement with Korea aimed at updating her armed forces. Since the military assistance program has been reduced rather substantially over the past 2 years has this agreement been adversely affected by these reductions?

Admiral PEET. Orderly progress in implementing the 5-year modernization plan according to the originally envisaged schedule, has been disrupted due to reduction in fiscal year 1972 and 1973 military assistance funding. However, the overall objectives of the modernization program remain valid and it is hoped sufficient resources will be made available to achieve these objectives.

Mr. PASSMAN. Do the Koreans feel that we are not living up to our part of agreement?

Admiral PEET. Korean officials have expressed apprehension regarding the U.S. intention to complete the modernization plan given reduced funding levels in fiscal years 1972 and 1973.

Mr. PASSMAN. What will the total 5-year plan cost the United States in military assistance funds?

Admiral PEET. The modernization plan called for $1.5 billion over the 5-year period fiscal years 1971 to 1975 including the value of excess defense articles and other nonreimbursable transfers.

U.S. EQUIPMENT TRANSFERS

Mr. PASSMAN. In addition to the funds provided under the military assistance program, what additional U.S. equipment has been transfered to Korea during this modernization period?

Admiral PEET. The following major items of U.S. equipment have been transferred to Korea under Public Law 91–652 which permitted transfer of the equipment of withdrawing U.S. forces from the Republic of Korea:

Major Equipment

Helicopters OH–23	[Deleted.]
Utility aircraft U–6	
Landing craft mechanized	
Self propelled artillery (8 in., 175mm)	
Mediums tanks (M–48)	
Trucks (¼T–5T)	
Carbines and rifles	
Machine guns and submachine guns	
Howitzers (105mm, 155mm)	
Recoilless rifles	
Hawk missiles and supplemental equipment	
Honest John missiles and supplemental equipment	

The acquisition value of the equipment transferred is $270.9 million.

The following major items of equipment have been transferred as excess defense articles as of March 31, 1973:

Major Equipment

ASW aircraft (S–2)	[Deleted.]
Trainer aircraft (T–41)	
Cargo aircraft (C–123)	
Helicopter (OH 23)	
Observation aircraft (O–1)	
Utility aircraft (U–6)	
Trucks (¼T–5T)	
Carbines and rifles	
Machine guns	
Bullpup missiles and supplemental equipment	

The acquisition value of the excess equipment transfered is $114.2 million.

The following major items of equipment are being furnished to the Republic of Korea to replace items supplied under Project Enhance Plus to SVN:

Major equipment

M–16 rifle	[Deleted]
Machinegun, cal. .50	
81–mm mortar	
4.2 in mortar	
57–mm recoilless rifle	
106mm recoilless rifle	
105mm howitzer	
155mm howitzer	
¾-ton truck (ambulance)	
2½-ton truck	
5-ton truck	

The following major items were provided to the Republic of Korea at no cost to MAP in satisfaction of the $7.5 million fiscal year 1971 obligation under the Brown memorandum which the United States owed to the Republic of Korea. The Republic of Korea agreed to accept equipment lent to its forces in SVN to discharge the fiscal year 1971 obligation. Total acquisition value of the equipment was approximately [deleted] million.

Major equipment

Observation a/c O–1G	[Deleted]
Airplane, U–21	
UH–1H helicopter	
M–60 machineguns	
105mm howitzer	

U.S. SAVINGS

Mr. PASSMAN. Could you please tell the committee what savings have resulted because of the withdrawal of 20,000 U.S. troops from Korea?

Admiral PEET. It is estimated that the withdrawal of 20,000 U.S. military personnel and the deactivation of the withdrawn division will result in saving to the DOD budget over a 5-year period of approximately $1.1 million.

Mr. PASSMAN. How many U.S. troops do we presently have stationed in Korea?

Admiral PEET. As of April 30, 1973, United States forces in the Republic of Korea total ———.

Mr. PASSMAN. Have any plans been made to withdraw additional United States troops from Korea in the near future?

Admiral PEET. There are no plans to reduce U.S. military forces during fiscal year 1974.

DOMESTIC PRODUCTION

Mr. PASSMAN. In the justifications you indicate that FMS credit will be used to improve domestic production capabilities. Would you please tell the committee what domestic production capabilities you are talking about?

Admiral PEET. FMS credit requested for fiscal year 1974 is intended to support Korean production of small arms ammunition, M–16 rifles and assembly of PRC–77 tactical radios. In addition, we are examing the feasibility of expanding the Republic of Korea arsenal capability in order to produce larger caliber ammunition such as artillery rounds. In the future, similar programs will be considered on a case-by-case basis with the objective of improving Korean self-reliance. This objective is in consonance with the Nixon doctrine to improve the defense self reliance of friends and allies.

DEFENSE CAPABILITIES

Mr. PASSMAN. Would you please tell the committee what are the present defense capabilities of South Korea when compared with North Korea?

Admiral PEET. Both the South Korean and North Korean armed forces must depend in a contingency situation on extensive outside logistics support. The South Korean Army considerably outnumbers the North Korean Army ———. However, replacement of obsolete equipment such as vehicles and communications equipment is still required to maintain the ROK Army readiness posture. In the air, however, the South Koreans are at a definite disadvantage. The North Korean Air Force has nearly 500 jet fighters, some of which are Mig–19 and Mig–21 models, as compared to ——— jet fighters in the ROK Air Force. As a result of this strong North Korean air threat, the ROK air defense capability requires considerable improvement. The North Korean Navy has some missile boats and submarines which represent a threat to ROK shipping. Additionally, the ROK needs a craft capable of countering NK infiltration from the sea. ———.

TROOPS IN VIETNAM

Mr. PASSMAN. Has Korea withdrawn all her troops from Vietnam at the present time?

Admiral PEET. ROK forces were completely withdrawn from South Vietnam in March 1973, in keeping with the provisions of the Paris Accords.

MODERNIZATION EXTENSION

Mr. PASSMAN. Because of the reduction in military assistance funds over the last several years, has this had the effect of extending the 5-year modernization agreement to 6 or 7 years?

Admiral PEET. As a result of reduction in military assistance funds in fiscal year 1972 and fiscal year 1973 it appears that the modernization program cannot be completed in 5 years and must be extended. The time required to complete the objectives of the plan is dependent upon the level of security assistance funding appropriated over the next several years.

GRANT REDUCTION

Mr. PASSMAN. Do you have any estimate at this time when the grant assistance program will be able to be phased out of Korea?

Admiral PEET. There is no firm time estimate as to when grant military assistance to Korea can be phased out; however, following completion of the modernization program it is expected that grant assistance can be drastically reduced.

AIRCRAFT REPLACEMENT

Mr. PASSMAN. On page 21 you indicate that in fiscal year 1974, ——— F–5E aircraft are scheduled to be provided to Korea. Are those aircraft to be added to the present inventory or to replace obsolete aircraft?

Admiral PEET. The ——— F–5E aircraft in the fiscal year 1974 request are scheduled to replace obsolete F–86 aircraft currently in the ROK Air Force inventory.

PHILIPPINES

Mr. PASSMAN. On page 22 you make the statement that the U.S. military interest in the Philippines stems from several closely related factors, ———. Would you please tell us the committee why this is such a strategic country?

Admiral PEET. The Philippines are strategically located near the midpoint of the periphery of Asian nations extending from Korea to Indonesia. The U.S. Naval complex, composed of Naval Base Subic Bay, Naval Air Station Cubi Point, and Naval Communication Station Philippines, provides a full range of naval air, ship repair, logistics, and command, and control support functions, ———. These bases are 1,350 to 1,750 miles closer to Southeast Asia than are Sasebo, Guam, and Yokosuka. They thereby provide a significant advantage for naval and air forces conducting operations in the South China Sea, Indian Ocean, and Southeast Asia. ———. The Subic/Cubi complex provides efficient support for operations throughout a major portion of the Southeast Asia littoral and well into the Indian Ocean.

DEBT BURDEN

Mr. PASSMAN. You indicate in the justifications that the Philippines face a serious debt servicing burden. Could you tell the committee to what country the Philippines owes most of its money to?

Admiral PEET. The largest single foreign creditor of the Philippines is the United States.

Mr. PASSMAN. What other countries does the Philippines owe money to?

Admiral PEET. The Philippines also owes money to Japan, West Germany, the United Kingdom, France, Canada, and international banking institutions (IBRD and IMF).

INTERNAL PROBLEMS

Mr. PASSMAN. On page 22 you indicate that the United States has to provide a certain amount of assistance or the Filipinos may fear that the United States is losing interest in her country which in turn might affect the security of the U.S. bases there. Would the security of the U.S. bases there be threatened because the Philippine Government would be unable to hold down the uncertainties within her country?

Admiral PEET. I would consider that possible, but not probable. Such possibilities will depend significantly on the course of events over the next year and associated progress of the Philippine Government in instituting socioeconomic reforms, while keeping insurgency movements under control.

Mr. PASSMAN. Could you please tell the committee what the present internal situation is in the Philippines at the present time?

Admiral PEET. The Muslim insurgency in the southern area is a significant internal threat. At the moment it has been stabilized, but could regenerate at any time. The Communist insurgency in the northern area is relatively dormant at this time, but represents a more direct threat to our U.S. base interests which are in that sector. The Philippine Government has been under martial law since September 1972, in order to effectively deal with insurgency problems and to institue socioeconomic reforms.

Mr. PASSMAN. Have the U.S. bases and facilities in the Philippines been threatened in this past year?

Admiral PEET. There have been no significant threats during this past year.

AIRCRAFT NEEDS

Mr. PASSMAN. On page 23 I note that you plan to provide ——— C–119 aircraft to the Philippines in fiscal year 1974. Could you tell the committee why the Philippines need such a large number of these cargo aircraft?

Admiral PEET. One need only to look at a map of the Philippines to see the need for air and sea transport within that island archipelago. Moreover, the Philippines is in the typhoon belt and is faced, annually, with the need for civic action/disaster relief operations in all areas to one degree or another.

THIRD COUNTRY AID

Mr. PASSMAN. What other countries are providing assistance to the Philippines and in what amounts?

Admiral PEET. ———.

GAO REPORT

Mr. PASSMAN. In a GAO report dated April 12, 1973, entitled "Military Assistance and Commitments in the Philippines," there were many criticisms directed toward the military assistance program. Several of these criticisms are as follows:

> The Department of Defense continued to provide military assistance to the Philippines although the Philippine Government had not provided adequate financial support for its own forces. Furthermore, the Philippine Government did not furnish the sources necessary to effectively use the military assistance provided.

Would you please comment on the criticisms contained in the GAO report and indicate what has been done to correct this situation?

Admiral PEET. The Defense position to the referenced GAO report is covered in some detail in appendix II to that report. DOD disagreed with the conclusion which the GAO report drew from the finding of inadequate financial support. DOD rationale is based on the purpose of the Foreign Assistance Act of 1961 which points toward providing assistance to countries which cannot support their own needs. Notwithstanding, the GOP has been making positive efforts to improve its self-reliance. The Armed Forces budget has been increased to meet extra costs involved with providing a more self-reliant security program, which includes the goal of more efficient utilization of resources. U.S. assistance constitutes only about 10 percent of the total required to sustain and modernize the Philippine Armed Forces (AFP). By providing items which are difficult to make or obtain. U.S. assistance continues to help the AFP make continued progress toward self-sufficiency.

THAILAND

Mr. PASSMAN. The next country we will consider in this region is Thailand for which the fiscal year 1974 program is estimated to be $55,762,000 an increase of $19,880,000 above the current fiscal year program. Would you please tell the committee briefly the need for this large increase over fiscal year 1973 funds?

Admiral PEET. For fiscal year 1973 we requested $60 million in grant aid for Thailand. Because we were forced to operate the worldwide military assistance program during fiscal year 1973 on reduced CRA funding, it was only possible to allocate to Thailand a portion of our original request, which did not satisfy the program objectives. The fiscal year 1974 request in fact represents a small decrease from the fiscal year 1973 request.

Mr. PASSMAN. In the justifications you indicate that this assistance is needed ———. It appears that possibly some of our objectives in Southeast Asia have changed since the cease-fire was signed. Could you please tell the committee what the U.S. objectives are at the present time in light of the current cease-fire agreement?

Admiral PEET. As Mr. Kissinger noted in his press conference of January 24, 1973, during which he discussed the imminent Vietnam agreement, the deployment of U.S. forces to Thailand would be related to the degree of danger in this region. We have indicated that until North Vietnam's intentions and actions vis-a-vis the cease-fire agreement become clear, and the Indochina situation becomes more stable than it is at present, it will be necessary to maintain U.S. forces in Thailand. Once a cease-fire has been accomplished in Cambodia, and once North Vietnam's performance of its obligations under the cease-fire agreement is satisfactory, it will be possible to review the need for the current level of forces there, and hopefully to begin a gradual, phased reduction in the level of these forces.

FOREIGN EXCHANGE

Mr. PASSMAN. Also on page 24 you indicate that U.S. military grant assistance is essential to minimize the adverse impact that necessary military improvement measures would otherwise have on Thai economic and soical development. Could you please tell the committee what the present foreign exchange balance is in Thailand?

Admiral PEET. Thailand: Official reserves—in millions of U.S. dollars—as of January 28, 1973:

Monetary authorities:	
Gold	$98.8
SDR's	34.4
IMF gold tranche position	40.4
Foreign exchange	1,036.4
Subtotal	1,210.0
Commercial banks:	
Assets	237.6
Liabilities	358.8
Subtotal	—121.2
Total	1,088.8

AID REDUCTION

Mr. PASSMAN. You state also that you anticipate reducing the level of U.S. grant aid to Thailand as their capability to counter the insurgency is achieved. Could you tell the committee if there is any timetable when the reduction of this grant aid will come about?

Admiral PEET. Our military assistance program to Thailand focuses on the improvement of Thai capabilities to counter the insurgency. Because of the uncertain nature of the insurgent threat, and the capacity for its level and scope to be significantly influenced by external factors such as instability in neighboring countries or increases in foreign Communist support, we cannot project any precise timetables for a reduction in grant aid. However, we would expect, given the extension of current trends in the insurgency and Thai counterinsurgent capabilities, that continued improvements in Thai capabilities will permit reductions to occur.

U.S. SUPPORT OF THAI FORCES

Mr. PASSMAN. In a newspaper article, it was stated that about 16,000 to 17,000 Thai irregular forces are serving in Laos which cost the American taxpayer $100 million a year. Are these figures still valid and from what account is this money provided?

Admiral PEET. The statistics in the article are not precise but are of the proper order of magnitude. ———.

THIRD COUNTRY ASSISTANCE

Mr. PASSMAN. Could you please tell the committee what third country assistance is being provided to Thailand and in what amounts?

Admiral PEET. The most recent figures available for assistance to Thailand by international organization and third countries are as follows (in millions of U.S. dollars):

IBRD (fiscal year 1972)	42.2
Asian Development Bank (fiscal year 1972)	18.0
UNDP special fund (fiscal year 1972)	3.8
UNDP technical assistance (current year)	.6
Other U.N	2.4
Japan (current year 1971)	———
Germany (current year 1971)	———
All other DAC members (current year 1971)	10.5

EQUIPMENT DELIVERIES

Mr. PASSMAN. On page 25 I note that you plan to deliver a very small amount of equipment during fiscal year 1973. Could you tell the committee why these deliveries are so small during the current fiscal year?

Admiral PEET. The amount of equipment noted on page 25 to be delivered during fiscal year 1973 reflects only deliveries funded by Foreign Assistant Act funds during fiscal year 1973. As you know, from fiscal year 1968 to fiscal year 1972, military assistance to Thailand was funded from military department appropriations under MASF procedures. In addition to MAP-funded deliveries, $85.3 million of defense materials and services funded in previous years under MASF is expected to be delivered during fiscal year 1973.

QUALIFIED PILOTS

Mr. PASSMAN. Also on page 25, you indicate that quite a large number of aircraft are scheduled to be provided to Thailand in fiscal year 1974. Does Thailand have the capability of providing qualified pilots for these aircraft?

Adimarl PEET. Military equipment is provided to foreign governments under the MAP program only after it has been ascertained that the recipient can effectively utilize the equipment. As of the fourth quarter of fiscal year 1973, the Royal Thai Air Force (RTAF) had ——— rated pilots and an in-country capacity to train ——— pilots/year ——— are expected to be graduated this year, which will satisfy all the undergraduate pilot training requirements anticipated as a result of aircraft to be provided under MAP. The United States will have to provide some special training through MAP or FMS.

U.S. TROOPS IN THAILAND

Mr. PASSMAN. How many U.S. military personnel do we have stationed in Thailand at this time?

Admiral PEET. There are approximately 44,000 U.S. military personnel stationed in Thailand at this time on both a permanent and temporary basis.

REPUBLIC OF CHINA

Mr. PASSMAN. Is it not true that you are programing $5,700,000 for supply operations to the Republic of China for fiscal year 1974?

Admiral PEET. Yes.

Mr. PASSMAN. Would you please tell the committee what this amount for supply operations will be used for?

Admiral PEET. This figure—$5.7 million—covers P.C.H. & T. for items in the pipeline from prior years program which are estimated for delivery in fiscal year 1974.

Mr. PASSMAN. Is it not also true that you have programed presently $500,000 for training in fiscal year 1974 for the Republic of China?

Admiral PEET. Yes.

Mr. PASSMAN. If I am not mistaken, both of these costs used to be counted in the grant aid program several years ago; is that not correct?

Admiral PEET. Yes. We in Defense, together with Dr. Curtis Tarr, the Under Secretary of State for Security Assistance, have been seeking means to more effectively use our security assistance programs. The importance to training foreign military and military-related civilian personnel under the grant program must be emphasized. We generally recognize that the training element of the security assistance program, dollar for dollar, represents a productive investment in influence and in developing friendly countries self-sufficiency.

The funding for supply operations continues to be included within the military assistance program.

CREDIT SALES PROGRAM

Mr. PASSMAN. Even though the grant aid program to the Republic of China has been greatly reduced, we are still providing a rather substantial foreign military credit sale program to this country, is that not correct?

Admiral PEET. The Republic of China has undertaken a sizable FMS credit program. In fiscal year 1974, it is anticipated that $65 million in FMS credit will be provided.

Mr. PASSMAN. Is this not an indication that the Republic of China has been one of the success stories in our military aid program by converting from grant aid to military credit sales?

Admiral PEET. Yes.

MAINTAIN COMMITMENTS

Mr. PASSMAN. Is it not true that the United States fully intends to honor all its treaty commitments with the Republic of China?

Admiral PEET. In President Nixon's U.S. Foreign Policy Report to the Congress of May 3, 1973, the following is stated in part on page 108:

* * * The United States has maintained a policy of friendship for the 15 million people of Taiwan. We retain diplomatic ties, commitments under the Mutual Defense Treaty of 1954, and close contacts with them.

ECONOMIC GROWTH

Mr. PASSMAN. The way I read the record the Republic of China has experienced extremely successful economic growth in the last several years. Is this not the reason that we have been able to phase out our grant military aid program to this country?

Admiral PEET. Yes. Except for $0.5 million for training only. The Republic of China future defense material requirements will be financed entirely with cash and FMS credit.

GAO REPORT

Mr. PASSMAN. In a General Accounting Office report dated August 29, 1972, there were several recommendations made for the United States to pursue with the Republic of China. Some of these recommendations were as follows: ———. Would you please comment on these recommendations and indicate what actions have been taken?

Admiral PEET. The Department of Defense responded to the GAO report by letter of November 30, 1972. ———.

MALAYSIA

Mr. PASSMAN. Would you please tell the committee what type of insurgency is present in Malaysia at the present time which would require the United States to provide equipment?

Admiral PEET. Malaysia has active Communist insurgencies on two fronts, in the north along the Thailand border, and to the east where Sarawak borders the Indonesian, Kalimantan territory. We do not provide any equipment under grant aid to Malaysia, but do have an ongoing sales program.

Mr. PASSMAN. You indicate in the justifications that a training program is scheduled for fiscal year 1974 of $200,000. Could you then explain to the committee why the United States feels it must provide this assistance?

Admiral PEET. ———.

Mr. PASSMAN. Could you please tell the committee what third countries are providing assistance to Malaysia and in what amounts?

Admiral PEET. ———.

PROJECT ENHANCE

Mr. PASSMAN. The last item to be considered in this region is Project Enhance for which the fiscal year 1973 program was $41,200,000 and the estimated fiscal year 1974 program is $28,300,000.

Would you please explain to the committee just what this Project Enhance Plus is?

Admiral PEET. Project Enhance Plus is the identifying name for the series of equipment transfers to the Republic of Vietnam ———.

Mr. PASSMAN. You indicate that quite a large amount of these funds are needed for bailment cost. Could you please tell the committee what bailment costs are?

Admiral PEET. Bailment costs are the costs incurred by MAP for loaning the aircraft and associated supporting equipment to the MAP recipient ——— under section 503 of the Foreign Assistance Act. Costs include the payment of a monthly depreciation charge to the Department of Defense organization which has loaned the equipment, spare parts for the equipment, and reconditioning of the equipment upon return to U.S. inventories.

Mr. PASSMAN. Is it correct to say that these funds are needed to reimburse the various countries for equipment that you borrowed from them to ship to Vietnam prior to the cease-fire agreement?

Admiral PEET. No, sir. We did not borrow the equipment as such. Rather the equipment was returned from the MAP country to MAP ownership, was transferred by MAP to the military departments, and was then transferred to Vietnam under the military assistance service funded program. The MAP funds requested for fiscal year 1974 are to ———. The fiscal year 1973 MAP account has borne $41.2 million of these costs, subject to reimbursement from the MASF accounts.

Mr. PASSMAN. Where do you plan to get the funds to reimburse the military assistance program for these costs?

Admiral PEET. We plan to be reimbursed from fiscal year 1974 funds appropriated to the Defense Department under the MASF program for the value of the F–5A's transferred by MAP to the military departments.

Mr. PASSMAN. Is there a request in the defense appropriations bill for ——— million in fiscal year 1974 to reimburse the military assistance program for the fiscal year 1973 and fiscal year 1974 Project Enhance costs?

Admiral PEET. That is the amount requested to reimburse MAP for the value of the equipment transferred to the Military Departments.

Mr. PASSMAN. Of the total funds reimbursed, will all this reimbursement be used to just replace the equipment that was sent from these countries to Vietnam?

Admiral PEET. The funds will be used to fund the MAP.

Mr. PASSMAN. Will any of the funds that you are requesting for reimbursement be used to upgrade equipment that was in these countries?

Admiral PEET. Some of the funds will be used to complete financing of ——— F–5E aircraft to ——— to replace the ——— F–5A aircraft which were transferred to the Republic of Vietnam. The F–5E has superior capability to the F–5A, so in that instance we are upgrading equipment.

Mr. PASSMAN. You indicated that a great deal of aircraft were shipped to South Vietnam prior to the cease-fire. Are you convinced that the South Vietnamese have the capability of maintaining and piloting all these aircraft?

Admiral PEET. The overall goal of the Vietnamization program included the self-sufficiency of the RVNAF in providing for their own incountry security against the North Vietnamese. Throughout the planned improvement and modernization of RVNAF, new arms and equipment were provided to all service components; however, additional unprogramed military equipment was required to counter the more sophisticated enemy weapons used in the massive invasion of

last year. Additionally, the successful RVNAF counteroffensive coupled with the subsequent imminent Paris negotiations, required the accelerated delivery of equipment already programed for the RVNAF.

Near East and South Asia

Mr. Passman. As we go to the Near East and South Asia region, we find that your estimate for fiscal 1974 is $121,133,000.

Admiral Peet. Yes, sir.

Mr. Passman. That is an increase of $26,987,000 over your fiscal year 1973 program, is that correct?

Admiral Peet. Yes, sir.

OPERATION AND INVESTMENT ALLOCATIONS

Mr. Passman. What amount and percent of the total proposed program for fiscal year 1974 will be allocated for operation and investment?

Mr. von Marbod. Mr. Chairman, for fiscal year 1974, we estimate that 17 percent of the Near East and South Asia program will be allocated to operating costs and 83 percent to investment costs.

Mr. Passman. I wish there was some way that I could comprehend the actions of some of our people, both military and civilian. We are the elected representatives of the people and we must protect them from excessive spending practices. The time has come when we are either going to get our fiscal house in order or we are going to completely isolate ourselves. I sat here and argued with the Assistant Secretary of the Treasury the other day about the trouble the dollar was in. He was upset that I would even suggest the dollar was going to decrease in value again. Now the dollar lost about 5 percent just since I had the discussion with him.

TRAINING IN INDIA AND PAKISTAN

Let's lok at India and Pakistan which is handled under this region. We have given to India net aid of $7,772,000,000. You don't actually have to be smart to know that India is not pro-United States.

We have given to Pakistan, $4,434,000,000 in net aid. Of course both countries are siphoning off funds out of the international organizations, as I brought out earlier, where they put in $1 and take out $40 or $50.

You are asking for money to train Indian and Pakistani troops in fiscal year 1974, aren't you?

Admiral Peet. Yes, sir, we are requesting funds for a training program.

Mr. Passman. What is the benefit and the profit to our great country, Admiral?

Admiral Peet. Dr. Tarr.

Mr. Passman. All right, the admiral yields to the Under Secretary of State.

Mr. Tarr. Mr. Chairman, the logic of these training programs——

Mr. Passman. What logic? Whose logic?

Mr. TARR. Our logic for these training programs is that it is of some assistance for us to continue to maintain contacts with the military people in these nations.

Mr. PASSMAN. I don't want to be ugly. You mean you want to build them up now so they can start another war between themselves out there and knock out all the equipment we have given them?

Admiral PEET. No, sir, Mr. Chairman, that isn't our objective.

Mr. PASSMAN. Admiral, if you train people, you understand, to use guns, then they are going to want guns.

Admiral PEET. The use of guns isn't the extent of our training.

Mr. PASSMAN. You are talking about military training. You are not in the economic aid field. Aren't you talking about a military training program for India?

Admiral PEET. Across the board.

Mr. PASSMAN. I am talking about India and Pakistan.

Admiral PEET. Yes, sir.

Mr. PASSMAN. Aren't you training their military personnel?

Admiral PEET. Yes, sir. Looking at it from the point of view of the country team in India, the Ambassador's point of view——

Mr. PASSMAN. Who is Ambassador there?

Admiral PEET. Ambassador Moynihan.

Mr. PASSMAN. A fine man. I bet he couldn't load a double barreled shotgun. What does he know about the military needs of India?

Admiral PEET. But he does know that the influence and contacts we gain by military to military relationships in India are very helpful.

Mr. PASSMAN. What contacts? Can't you have contacts without military?

Admiral PEET. It is very difficult in some of these countries to maintain contacts without the military.

Mr. PASSMAN. This is something that has sprung up since World War II trying to teach everybody how to fight, train them, and then later give them guns. I respect these people and I respect you but regardless of how heavily you draw upon your imagination, to go back into Pakistan and India with a training program and you know very well the Communists are furnishing equipment to Pakistan and India.

Now you go into India: don't you have one or two MIG plants in India put there by the Russians?

Mr. TARR. We have at least one that I know of.

THE RUSSIAN PRESENCE

Mr. PASSMAN. Not we. Let's say the Russians have a Mig plant. They have a submarine base underway there, don't they?

Mr. TARR. I don't know about the submarine base.

Mr. LONG. I want to offer my hearty agreement with what the chairman is saying. I agree with him 100 percent.

Mr. PASSMAN. It is hard to comprehend why we provide this training.

Admiral PEET. This item is primarily a political one as far as India is concerned.

Mr. PASSMAN. It is all political.

Admiral PEET. The Russians have thousands of people in India.

Mr. PASSMAN. Let them have them in there. We are not competing with the Russians.

Mr. LONG. Would the chairman yield on that?

Mr. PASSMAN. I yield.

Mr. LONG. We are acting as if we put a lot of military people into a country we gain their friendship. I want to cite you one case.

Admiral PEET. That is just one factor.

Mr. LONG. And make an observation in which the presence is counterproductive. That was the case of the Russians in Egypt. We thought it was a terrible thing when the Russians went into Egypt. I went there last year and talked to all our diplomatic people and talked to the Egyptians themselves and their leaders. There is one thing that they all agreed on. They hated the Russians like poison. Everything the Russians did had made them mad. Sadat himself whom I sat with and talked with for an hour told me—he didn't put it in quite those terms, but he did say "I don't want any foreigners on my soil." It wasn't too long afterward that he ordered them out.

The Russians bungled it when they built the Aswan Dam. I have seen reports that this dam may be one of the greatest tragedies to Egypt because of the effects of it, destroying the normal ecological balance, accelerating the siltation and spreading parasitic snails.

I saw a steel mill that the Russians built about 30 miles out of Cairo that would have been obsolete 30 years ago and they just got it built. It is the most pathetic operation I have ever seen. They had 600,000 people turning out a couple hundred tons of steel a year. They brought the ingots and the coal all the way from Russia, put the material through this mill in kind of a demonstration operation, and then sent it all the way back to Russia again. You know, a total phony operation.

Mr. PASSMAN. I agree with you.

Mr. LONG. We felt terrible when the Russians went into Egypt, but I will bet you that that was one of the best things so far as our getting along with Egypt. They all agreed that the Americans were pretty popular. Even then the American planes were being used by the Israelis to bomb Cairo, but nobody had any grudge against the Americans. It is the Russians they all detest.

BRINGING THE AID PROGRAMS UNDER CONTROL

Mr. PASSMAN. Giving away our weapons to secure friends is indeed a new concept which started after World War II. I would hate to bore you with this story, but I do know what the record shows. When they started this so-called economic aid program for Europe, it took the older members, who were very courageous, and clothed with seniority to go down to the well of the House and say, Mr. Speaker, we are now embarking upon a program that could conceivably take us into 17 European nations. The cost may reach $15 billion, and it may require 5 years to finish the program."

Now you contrast $15 billion to $250 billion. You contrast 17 nations to 127 nations that we went into with this foreign-aid program. Five years? No. You are in the 26th year and still going strong. Now either you people bring it under control or let us bring it under control.

I respect you, but when I see that you people are asking for military training for India and Pakistan, it just doesn't make sense, especially when we have poured some $12 billion of our wealth into those countries.

We say that we want to trade with Russia and China, and we made a big grain sale to Russia and I applaud it. I think we are getting back badly needed dollars and gold and that is the way to get along, to go out and fight for these world markets and get our minds off war. If we are going to follow that philosophy, let the Russians come on in to aid these countries. Let them spend all the resources they want to. I don't see why the United States would take it upon itself to think it is going to influence other people of the world by paying out these tidbits. I just don't think you are going to do it. We have to talk this way because of the sad, sad plight of the dollar. Of course we are in trouble.

Admiral PEET. Mr. Chairman, may I put in the record a detailed breakdown of what we plan for India and Pakistan?

Mr. PASSMAN. Put in all the information you can but don't fail to recognize one thing. You are asking for money for a military assistance program in both Pakistan and India. Training it may be, but you know and I know, Admiral, that usually training leads to guns and equipment. Otherwise there won't be any use in training them. You are not training them to hunt doves, are you?

Admiral PEET. No, sir.

[The information follows:]

SECURITY ASSISTANCE PROGRAMS FOR INDIA AND PAKISTAN

There is no grant military assistance and no FMS credit proposed for India or Pakistan in fiscal year 1974. Under the international military education and training program, the following is proposed for India and Pakistan in fiscal year 1974: India, $200,000 (23 students); Pakistan, $243,000 (52 students).

RECENT DELIVERIES TO INDIA AND PAKISTAN

Mr. PASSMAN. Has the United States shipped any military equipment to these two countries during the current fiscal year, no matter what source it may be from, such as cash sales, commercial sales, or the Export-Import Bank?

Mr. TARR. Yes, I think we have.

Mr. PASSMAN. What category?

Mr. TARR. We will have to put that in the record.

[The information follows:]

MILITARY DELIVERIES TO INDIA/PAKISTAN—FISCAL YEAR 1973

During the current fiscal year, deliveries of military equipment to India amounted to $38,000 under FMS cash sales. This was for miscellaneous supplies. Shipments to Pakistan during the same time frame amounted to ——— M–113A1 armored personnel carriers. This was also a FMS cash transaction which was approved in 1970. Shipment was delayed due to the embargo.

Commercial exports during fiscal year 1973 to India and Pakistan

Commodity	*Value*
India:	
Aircraft C–119 spares	$761
HC–434 polymer	6,360
Revolvers, 2	[1]184
Total	7,305

[1] Cosigned to individual(s) for personal use.

Commercial exports during fiscal year 1973 to India and Pakistan—Continued

Commodity	*Value*
Pakistan:	
Aircraft, T-33 spares	$159,680
Miscellaneous aircraft C.P.A. & A	17,000
Parachutes, 264	77,352
Military electronic C.P.A. & A	118,409
Revolver, 1	[1] 74
Ammunition, .38 caliber, 200	24
Riot control agents	16,678
Total	389,217

[1] Consigned to individual(s) for personal use.

Mr. TARR. The nature of things that we have delivered are parts for equipment that already had been sold to them or given to them.

Mr. PASSMAN. Through what accounts did they finance it? Does anyone know?

Gentlemen, if you don't have the answer, put it in the record.

[The information follows:]

The FMS items delivered to India and Pakistan were cash transactions.

U.S. POLICY IN INDIA AND PAKISTAN

Mr. PASSMAN. Could you tell the committee what the position is of the United States with regard to the shipment of military equipment to these two countries at this particular time?

Admiral PEET. Yes, I have that here. There was a Presidential directive dated March 12, 1973, which terminated the embargo and reinstated the military supply policy originally promulgated in April 1967. That policy allowed direct government-to-government and commercial cash sales of spare parts for previously supplied equipment and of nonlethal end items.

Mr. PASSMAN. To what country?

Mr. TARR. Both.

Admiral PEET. To Pakistan and India, sir. Our policy regarding the sale of nonlethal end items and ammunition was administered on a selective and limited, case-by-case basis. Decisions under the policy were made with certain criteria in mind, notably whether or not a particular sale would contribute to an arms race in South Asia or would lead to a significant diversion of resources from development to defense.

Mr. PASSMAN. What kind of ammunition, blanks?

Admiral PEET. No, sir.

Mr. PASSMAN. Popgun ammunition or something else nonlethal. I am just wondering what kind of ammunition was provided.

Admiral PEET. We haven't sold any ammunition since the embargo was lifted.

Mr. PASSMAN. But you included it in what you just read in the record.

Admiral PEET. Yes, sir, sale of ammunition would be considered on a case-by-case basis.

Mr. PASSMAN. Are you not contradicting yourself?

Admiral PEET. This is the policy that has been put into effect.

Mr. LONG. This was in 1967.

Admiral PEET. It was the policy then and it was reinstated when the embargo was lifted last March.

Mr. YATES. If it is nonlethal what is it doing in the program?

Mr. LONG. Only 2 years before that I was on the Pakistan-India border just after a battle between India and Pakistan and saw acres and acres of equipment that we had been giving both sides that had been destroyed in that war.

Mr. PASSMAN. Let's take a brief recess.

Admiral PEET. That was one of the factors which helped to stop it.

[Short recess.]

Mr. PASSMAN. The committee will come to order. I guess we had better get this on the record.

Admiral, where do India and Pakistan purchase most of their military equipment from since the U.S. suspension of the MAP program to these two countries in 1965?

PRINCIPLE SUPPLIERS OF ASSISTANCE TO INDIA AND PAKISTAN

Admiral PEET. Pakistan from China and India from Russia.

Mr. PASSMAN. I believe under our understanding over a period of years that we provided no military equipment for India, making an exception only when they were attacked by China; is that correct?

Admiral PEET. Yes, sir.

Mr. PASSMAN. So we actually poured billions of dollars into India in economic grant aid while they were using their resources to purchase equipment from Russia. Would you accept that as a factual statement?

Admiral PEET. Yes, sir.

Mr. PASSMAN. I appreciate that. You ought to get two more stars. It almost runs me crazy to realize these are the facts of life. This is really frightening. We just pour money in by the billions of dollars and then they turn around and buy military equipment from Russia.

No doubt the Russians make a good profit, too. Let's not forget, as I mentioned, Mr. Yates, this unbelievably high figure of nearly $8 billion in bilateral aid to India. They also collected out of IDA, this international organization, $1,751,000,000. Remember that we put up 40 percent of IDA, and the closest nation is Great Britain with 12 percent. Yet Great Britain has extremely favorable, profitable trade ties with India, so really the donor becomes the recipient. How about Pakistan now. In addition to their $4.4 billion in bilateral aid, they picked up $523 million out of IDA.

INDIA AND PAKISTAN

What amounts of military assistance have India and Pakistan received from Communist nations since 1965? List each contributing country and the amount contributed.

Admiral PEET. Since 1965, India and Pakistan have negotiated security assistance agreements with Communist countries in the amounts shown below (value in million U.S. dollars). It is estimated that most all of the equipment covered in the agreements has been delivered.

	Amount
India:	
U.S.S.R.	------
Czechoslovakia	------
Poland	------
Bulgaria	------
Total	------
Pakistan:	
PRC	------
U.S.S.R.	------
Czechoslovakia	------
Total	------

MIDDLE EAST

Mr. PASSMAN. You state that the replacement of the existing regimes might seriously jeopardize the vital enterprise of constructing a desirable peace. Do you think the United States should be in a position of trying to maintain a government in a certain country?

Admiral PEET. Again, this is perhaps a question outside my official purview. But in my opinion, it is not so much a matter of whether the United States should seek to impose or maintain a given government on a country, but whether U.S. support contributes to the security, stability, and well-being of a country, consistent with our own interests and objectives.

GREECE

Mr. PASSMAN. Do you feel that the Greek armed forces are an effective fighting force that are essential to the North Atlantic Alliance?

Admiral PEET. I believe that the Greek forces remain fully committed to NATO and are effective and capable in carrying out assigned NATO missions. This has been demonstrated by Greek units participating in the recent NATO military exercises Dawn Patrol and Alexander Express. Modernization of their forces is important and FMS credit proposed in the fiscal year 1974 security assistance program will help the Greeks in attaining that objective.

Mr. PASSMAN. What countries have withdrawn support from the Greek Government over the past 2 years and why was this support withdrawn?

Admiral PEET. We are aware that the Federal Republic of Germany (FRG) has suspended a modest grant aid program for the Greeks, but we do not know the reason for this decision. However, during the past 2 years, the FRG has provided submarines and Cobra antitank weapons. France has supplied AMX tanks and fast patrol craft with the Exocet missile. Additionally, Italy, the United Kingdom, and the Netherlands have provided radio sets and infrared binoculars while Canada continues to provide spare parts support for the T–33 aircraft in the Greek inventory.

TURKEY

Mr. PASSMAN. Are the Turkish Armed Forces also an effective fighting force that is essential to the NATO agreement?

Admiral PEET. Turkey is a staunch and dedicated supporter of NATO, and is fully aware that its strategic location on NATO's south-

eastern flank requires it to be strong. Turkey's commitment has been demonstrated repeatedly by the very capable performance of its Armed Forces in various NATO exercises. The Turks must continue programs to modernize their forces if the southeastern flank is to remain strong. U.S. security assistance still plays a major role in this regard.

IRAN

Mr. PASSMAN. You point out that Iran has been an example of a major security assistance success in that you used to provide them with grant assistance and military credit sales but now all of this assistance has been terminated. Could you tell the committee how much the United States has provided to Iran from all sources?

Admiral PEET. I will place it in the record.

[The information follows:]

IRAN

U.S. overseas loans and grants, fiscal years 1946–72

[In millions of dollars]

ECONOMIC PROGRAMS	
A. Official development assistance:	
AID and predecessor agencies, total	600.8
Loans	219.7
Grants	381.1
Food for peace, total	112.5
Title 1, total	56.8
Repayable in U.S. dollars, loans	17.6
Payable in foreign currency (planned for country use)	[1] 39.2
Title II, total	55.7
Emergency relief, economic development, and world food	33.1
Voluntary relief agencies	22.6
Other official development assistance	42.0
Peace Corps	14.7
Other	27.3
Total, official development assistance	755.3
B. Other official economic programs:	
Export-Import bank loans	336.6
Other loans	84.3
Total other official loans	420.9
Total economic programs	1,176.2

[1] Includes $10.5 million for common defense under Section 104(c), Public Law 480, of which $4.6 million is on a loan basis.

U.S. overseas loans and grants, fiscal years 1946–72—Continued

[In millions of dollars]

MILITARY PROGRAMS

Sec. assistance (changed to FAA or FMSA appropriations)	1,340.7
Sales credits (FMS)	504.0
Grants	836.7
Transfers from excess stocks (Public Law 91–672 value)	20.6
Ship loans	12.7
Export-Import Bank military loans	[2] 220.0
Total military programs	1,594.0

[2] Iran is now classified as "developed" by the Export-Import Bank.

Mr. PASSMAN. Could you tell the committee if Iran is pro-United States at this time?

Admiral PEET. The United States has had a friendly relationship for many years with Iran. There are many areas of close cooperation, both official and unofficial, in the economic, political, and social spheres. This situation exists in the military and national security area. In addition to our military advisory effort the two countries continue to cooperate in CENTO. The grant aid relationship has now been phased out, partially at Iran's request, but Iran still looks to the United States as the primary source for the purchase of the military equipment and advice it needs. Similarly, Iran looks to the United States as the major source of overseas training for its military personnel, and at this time there are more than 1,000 Iranian military personnel receiving military training here. Finally, Iran is most cooperative with the United States in providing access and overflight rights for our use.

JORDAN

Mr. PASSMAN. Is it likely that these subsidies from Arab states to Jordan would be continued at some later time?

Admiral PEET. This question falls more properly within Dr. Tarr's field.

MIDDLE EAST BALANCE

Mr. PASSMAN. Do you feel that U.S. military aid provided to the Middle East will help to maintain the balance of power and ease tensions in that area of the world?

Admiral PEET. Military aid in the form of arms, equipment, training, etc. is not the only ingredient but it is one highly important factor. For example, it helped restore a military balance following the Soviet and Egyptian buildup along the Suez Canal after the cease-fire went into effect in August 1970. I believe that this has been a major factor in maintaining the cease-fire since that time. Obviously, diplomatic efforts to maintain the cease-fire and to seek a negotiated settlement

must also be continued. As another example, I might also add that the supply of arms to Jordan over the years has been an essential element in helping King Hussein maintain stability in his kingdom.

Mr. PASSMAN. Since there have been lengthy discussions on the possibility of a fuel shortage in the future, does U.S. military aid to the Middle East take on more importance since large oil deposits are located there?

Admiral PEET. That's a difficult matter to measure. It would be easy, even natural, to assume that the U.S. motivation for military assistance to Middle East nations is the result, basically, of our interest in Middle East oil. But the situation is considerably more complex than that. The United States has also had longer standing ties, military and nonmilitary, with the Persian Gulf area, chiefly with Iran but also with Saudi Arabia. Today we also look to these nations as being responsible for their own defense and to cooperate in maintaining stability in the area. Thus, U.S. policy in the Persian Gulf area is based on several important and interrelated objectives. Access to and availability of Middle East oil is certainly one of those objectives.

IRAN

Mr. PASSMAN. What important facilities does the United States presently have in Iran?

Admiral PEET. Iran provides the United States with overflight and staging rights for the Military Airlift Command.

TERMINATION OF GRANTS TO GREECE

Mr. PASSMAN. On page 31 you indicate that Greece has terminated its military grant aid program with the United States. We this termination made at the insistence of the United States or was this taken on the initiative of the Greek Government?

Admiral PEET. In early January 1973, the Government of Greece announced its decision to terminate grant aid effective January 1, 1973. Speculation as to the motivating factors which lie behind that decision would not likely be reliable or useful at this time.

Mr. PASSMAN. Is it true then that Greece will only receive military credit sales in fiscal year 1974?

Admiral PEET. Yes, sir. FMS sales credits will finance sales by the military departments as well as by private suppliers.

GRANT AID TO SALES

Mr. PASSMAN. Are there plans in the near future to switch more countries from grant military aid to military credit sales? Please indicate which countries and approximate timetable.

Admiral PEET. Our current forecast is that no more grant military materiel will be provided to ——— as of the end of fiscal year 1975. For fiscal year 1974 we are proposing grant materiel to only 20 countries. We currently consider it unwise to eliminate grant materiel altogether, except for ——— but we certainly plan reductions in the

levels to be provided all countries, consistent with our national interests and the ability of the individual countries to attain defense self-reliance.

HOMEPORTING IN GREECE

Mr. PASSMAN. What progress has been made concerning the homeporting of certain U.S. 6th Fleet units in Greece?

Admiral PEET. Phase I of the program to homeport a carrier task group (CTG) in Athens, which included the homeporting of Commander Task Force 60 (CTF-60), Commander Destroyer Squadron 12 (COMDESRON 12), a six-ship destroyer squadron, and the establishment of a U.S. Navy Fleet Support Office in Athens, Greece, was implemented during the summer and fall of 1972.

Phase II—the final phase—includes the homeporting of an aircraft carrier, the dependent support ship U.S.S. *Sanctuary* (AR 17), and a carrier air wing in Athens. While final authority has not been granted, the former Secretary of Defense, Mr. Laird, conditionally approved the implementation of the Navy proposal for this phase on 31 December 1972. The current target date for implementation is in spring of 1974.

CHANGE OF TRAINING STATUS

Mr. PASSMAN. Your table appearing on page 31 is kind of misleading because you list several countries in fiscal year 1974 that do not have any grant assistance programs listed for them. But is it not true that these countries will receive training programs during fiscal year 1974 whereas in the past these training programs were indicated as part of the military assistance program?

Admiral PEET. The answer to your question is in the affirmative. I would like to point out, however, that neither Greece nor Iran will receive any training during fiscal year 1974, except that they may elect to purchase training under foreign military sales procedures. For the other countries shown on page 31 the amount of grant training proposed for each during fiscal year 1974 is shown on page 6.

NEPAL

Mr. PASSMAN. I note that you plan to program $30,000 in fiscal year 1974 for training for Nepal. Could you tell the committee why you find it necessary to supply such a small amount of training to this country? Does the United States feel that Nepal is needed to maintain U.S. security in that part of the world?

Admiral PEET. Because of Nepal's rather isolated strategic position our very modest security assistance effort is designed to help ———. The $30,000 in training ——— assists Nepal in the use and maintenance of transportation and communications equipment previously supplied. Our interests are served by a stable, independent, developing Nepal that helps to promote security in South Asia.

GREEK PROGRAM

Mr. PASSMAN. According to the Foreign Assistance Act of 1971, the aggregate amount expended for assistance provided under the Foreign Assistance Act of 1961 and sales made to Greece under the Foreign

Military Sales Act cannot exceed such assistance and sales amounts expended in fiscal year 1971. What were these expenditures in fiscal year 1971, and what was expended in fiscal year 1973 and what are your estimates of expenditures in fiscal year 1974?

Admiral PEET. Expenditures for Greece in fiscal year 1971 were $71 million consisting of $67 million in MAP grant aid deliveries and $4 million of expenditures against prior year FMS credits. Based on these deliveries/expenditures, section 620(v) imposes a ceiling of $71 million per fiscal year on (1) grants under the FAA, (2) FMS credits obligated (agreements), and (3) the face amount of FMS guaranties issued.

For fiscal year 1973, the grant aid program is $1.1 million and the FMS credit agreement is $58 million. For fiscal year 1974, there is no proposed MAP grant aid program. The estimate for FMS credits for fiscal year 1974 is $65 million.

JORDAN

Mr. PASSMAN. Could you briefly tell the committee what the internal situation is in Jordan at the present time?

Admiral PEET. As in the past, the Jordanian state continues to rest on the twin pillars of the Hashemite monarchy and the Jordanian Armed Forces. King Hussein, who remains the dominant figure in the regime, is committed to maintaining the internal security and independence of Jordan, and he enjoys the loyal support of the military establishment which is dominated by stalwart Bedouin tribesmen. Since 1970 and 1971 when the armed forces put an end to Jordan-based operations of disruptive groups, security has prevailed throughout the kingdom. As long as the army retains its capabilities, a resurgence of dissident activity is very unlikely and the continued stability of the Jordanian state seems assured.

Mr. PASSMAN. Is there any external threat of invasion of Jordan at the present time?

Admiral PEET. We do not see an immediate threat. In 1970 Jordanian ground and air forces successfully fended off a short-lived invasion by Syrian armored forces in support of internal insurrection in Jordan. Since that time Jordan's military capabilities have improved, partly as a result of U.S. military assistance, and threats from more radical neighbors appear to have diminished. However, a major quantitative increase in the military capabilities of Jordan's neighbors could be an enticement for them to intervene once more. Consequently, we feel that Jordan faces a potential, albeit diminished, external threat which requires that its military needs be kept under continuing review.

Mr. PASSMAN. Could you also tell the committee what the present internal situation is in Lebanon and is there any external threat at the present time for this country?

Admiral PEET. The recent fighting which occurred in Lebanon during May between government and Palestinian guerrilla forces ended in a ceasefire in May. However, tensions persist and future outbreaks of insurgency, perhaps with external support, are distinctly possible during the next few months, ———.

MODERNIZATION

Mr. PASSMAN. You indicate that in 1971 the United States and Jordanian representatives agreed on a plan for military modernization. Does this modernization program have any definite time period to be completed?

Admiral PEET. The program originally envisaged was for a 3 year ——— program to replenish battle losses from the 1970 fighting and to assist the Jordanians in reorganizing their armed forces.

———.

EXCESS EQUIPMENT

Mr. PASSMAN. On page 33 you indicate that the excess defense articles program will increase from $3,500,000 in fiscal year 1973 to $15 million in fiscal year 1974. Could you please tell the committee the need for this very large increase?

Admiral PEET. The $15 million is an estimated level for Jordan. Jordan is capable of participataing in the self-help program, since the Jordanians are able to perform the repair and rehabilitation required on excess equipment. It is anticipated that with this capability Jordan will submit requirements for excess equipment during fiscal year 1974. The granting of these items to Jordan should aid in furnishing some of the equipment required to improve its armed forces.

Mr. PASSMAN. Could you also tell the committee what type of equipment you plan to provide under the excess defense articles program of $15 million in 1974?

Admiral PEET. The type of equipment proposed includes vehicles, trailers, spare parts of all types, and perhaps some artillery and ammunition.

LEADTIME FOR AIRCRAFT

Mr. PASSMAN. I notice on page 33 that you provided ——— F–5E aircraft in fiscal year 1973 but these planes will not be delivered until sometime after fiscal year 1973 is over. Could you please tell the committee just what the time lapse is from when the aircraft are purchased to when they are actually delivered?

Admiral PEET. At the present time approximately ——— months are required from the initial funding for a purchase to the delivery of the F–5E. Fiscal year 1973 funding for the ——— F–5E's for Jordan was committed in January 1973, and delivery of these aircraft is scheduled to begin in ———.

Mr. PASSMAN. Has the United States provided Jordan with F–5E aircraft prior to fiscal year 1973?

Admiral PEET. ———.

COST OF MODERNIZATION

Mr. PASSMAN. What is the total price tag on the modernization program agreed to with Jordan?

Admiral PEET. The original program was for a dollar value of approximately ———. Depending on funding authorizations this program could largely be completed in fiscal year 1974. ———.

THIRD COUNTRY AID

Mr. PASSMAN. What other countries are providing military aid to Jordan and in what amounts?

Admiral PEET. During 1972, security assistance to Jordan was provided by India, ———, Spain, and by the United Kingdom.

TURKEY

Mr. PASSMAN. The next country we will consider in this region is Turkey for which the fiscal year 1974 estimate is $85,501,000, an increase of $27,051,000 above the current fiscal year program. Could you please tell the committee the need for this rather substantial increase?

Admiral PEET. The fiscal year 1973 MAP request for Turkey was $89,440,000. Under fiscal year 1973 CRA, Turkey's share of worldwide MAP is estimated at $58,450,000; this is a reduction of $30,990,000 from the fiscal year 1973 MAP request. Accordingly, the fiscal year 1974 MAP request for Turkey of $85,501,000 reflects what we believe to be the minimum required to provide essential modernization items of equipment and operation and maintenance support for Turkey's armed forces.

Mr. PASSMAN. What U.S. facilities do we presently have located in Turkey?

Admiral PEET. There are five principal U.S. facilities in Turkey: Sinop Common Defense Installation, Sinop; Ankara Air Station, Ankara; Pirinclik Common Defense Installation, Diyarbakir; Incirlik Common Defense Installation, Adana; Karamursel Common Defense Installation, Karamursel. Cigli Air Base, Cigli, is no longer actively used by U.S. forces, but is available for a NATO contingency. Additionally, there are various water supply facilities, housing annexes, radio relay sites, and so forth.

SHIP LOANS

Mr. PASSMAN. ———. Are there any anticipated ship loans to be made to Turkey in fiscal year 1974?

Admiral PEET. ———.

THIRD COUNTRY AID

Mr. PASSMAN. What other countries are providing military aid to Turkey and in what amounts?

Admiral PEET. Other countries providing military aid to Turkey in 1973 are: Canada, Federal Republic of Germany, and Italy. The estimated value of other country military aid to Turkey is: Canada ———, Federal Republic of Germany ———, and Italy ———. Also, the Federal Republic of Germany sold ——— in arms to Turkey for cash.

Mr. PASSMAN. Is any of this third country assistance to Turkey being provided on credit terms and if so, what are the terms of these sales?

Admiral PEET. Although Turkey is starting to buy small amounts of defense articles from some European countries, notably Germany

and England, we do not believe credits were involved in these sales since the amounts of money involved were not large. We do not have the details of these sales.

BALANCE OF PAYMENTS

Mr. PASSMAN. On page 34 you indicate that U.S. military assistance has meant that Turkey's delicate balance of payments has not been unduly weakened by large scale purchases abroad of military equipment and has contributed to a new promising foreign exchange position. Could you please tell the committee what the current balance of payment is in Turkey and also what is their current foreign exchange position? I might also remind you that the United States has a very delicate balance-of-payments problem at this point.

Admiral PEET. Since the devaluation of the lira in 1970, Turkey's balance of payments has turned around with surpluses superseding a long period of deficits. Remittances from Turkish workers abroad amounted to $740 million in 1972. Exports have also risen rapidly, although not as rapidly as imports—mostly raw materials and capital goods required by Turkey's continued industrial growth. Therefore, it has been primarily as a result of worker's remittances that foreign exchange reserves have mounted from very low levels to some $1.6 billion. Thus the recent trend is favorable, but almost completely dependent on a single variable. Turkey's economy is beginning to blossom, but she continues to look to the U.S. Government for help in evolving from a grant aid recipient to a producer and purchaser of defense materials. In this latter respect, credit repayments for Turkish military imports from the United States will be a help to the U.S. balance-of-payments position.

INCREASE IN PROGRAM

Mr. PASSMAN. On page 35 you indicate that the total U.S. security assistance to Turkey amounts to $213 million in fiscal year 1974. Could you please explain why we are providing such a very large increase?

Admiral PEET. The total fiscal year 1973 security assistance, including MAP and FMS credit, request for Turkey was $145.8 million. The total fiscal year 1974 security assistance request for Turkey is $213 million. This reflects an increase of $67.2 million—$55 million of which is required to permit Turkey to continue credit financing for its purchase of two squadrons of F–4E aircraft. The remaining $12.2 increase is reflected primarily in the excess defense article estimate.

AIRCRAFT

Mr. PASSMAN. On page 35 you indicate that in fiscal year 1974 it is proposed to provide Turkey with F–5 aircraft. Does the Turkish air force presently have any F–5 aircraft on hand?

Admiral PEET. Yes, sir, they do.

SERVICE OF EQUIPMENT

Mr. PASSMAN. Could you please tell the committee if the Turkish armed forces has the ability to service all the equipment that we are now providing her and keep this equipment in an operational position?

Admiral PEET. Yes, sir, the Turkish armed forces are capable of servicing all the equipment that we are now providing and keeping the equipment in an operational condition.

GREECE

Mr. PASSMAN. Was the decision made by Greece to terminate the U.S. grant assistance to her country based on the fact that her economy has improved to a point where grant assistance is no longer needed?

Admiral PEET. The decision made by Greece to terminate U.S. grant assistance reflects increased self-sufficiency on the part of this country but may not have been based wholly on that fact.

Mr. PASSMAN. Could you please tell the committee what other countries are providing assistance to Greece and in what amounts?

Admiral PEET. Other countries providing security assistance to Greece in 1973 are: Spain ———, and Federal Republic of Germany and France completing delivery of equipment covered under prior contracts. The total estimated value of this assistance is ———. Specific dollar value by country is unknown.

EXCESS EQUIPMENT

Mr. PASSMAN. You indicate that no excess defense articles will be supplied to Greece in fiscal year 1974. Do you have any estimate at all if excess defense articles will be supplied to Greece at any future date?

Admiral PEET. We have no estimate at this time on excess defense articles which may be supplied to Greece at any future date on a grant basis or to be sold to Greece.

ISRAEL

Mr. PASSMAN. On page 37, in connection with the country of Israel, you state that given the substantial quantities and sophistication of Soviet equipment supplies to Arab nations, the maintenance of this arms balance has required that we supply Israel with more and better arms. Wouldn't this very fact indicate that we are starting an arms race in that area of the world if we keep supplying more and better arms than other countries are being supplied?

Admiral PEET. We recognize the very real danger of an arms race in the Middle East, and we have tried to insure that our own arms deliveries do not contribute unnecessarily to such a race. For this same reason, this administration repeatedly has suggested to the Soviet Union a joint arms embargo in the Middle East, but such advances always have been rejected. Accordingly, we have continued to supply arms to the extent we consider this necessary, either to insure that the arms balance does not tip against Israel or to enable moderate Arab regimes to maintain internal security and protect themselves from external attack. I believe this has been an important element in maintaining a general cease-fire in these last 3 years.

THIRD COUNTRY AID

Mr. PASSMAN. What other countries are providing aid to Israel and in what amounts?

Admiral PEET. During 1972, security assistance to Israel was provided by West Germany ——— and by the United Kingdom ———.

Mr. PASSMAN. We have provided Israel with a great deal of sales credits in the past. Could you tell the committee what effect these credits are going to have on the ability of Israel to pay her debts at some future date?

Admiral PEET. At present levels, Israel should be able to repay its debts to us without difficulty. As I mentioned earlier, Israel is an example of a major security assistance success story, and given its rapidly growing economy, it should be able in the near future to reduce—and perhaps eliminate entirely—its reliance on further arms credit.

Also, as a result both of the continuing cease-fire in the area and a significant increase in domestic production of arms, Israel has been able to stabilize the level of its military expenditure so that increases in GNP can be freed for debt repayment rather than increases in arms expenditures.

LEBANON

Mr. PASSMAN. You state that the U.S. security objectives in Lebanon are both political and military. Could you please tell the committee just what these military and political objectives are?

Admiral PEET. Lebanon, as a historic bridge between the Western and Arab Worlds, is a state with which we have always had special ties. Like Jordan, Lebanon has supported U.S. peacemaking endeavors in the Middle East and has contributed toward maintaining stability in this area. ———. Thus, the continuation of a moderate and pro-Western regime in Beirut is important to our regional objectives. From a military standpoint we are concerned that the Lebanese Armed Forces retain a sufficient capability to maintain internal security, to contain activity by distruptive internal elements, and to deter external interference in the form of infiltration or limited incursions into Lebanese territory.

THIRD COUNTRY AID

Mr. PASSMAN. What third countries are providing assistance to Lebanon and in what amounts?

Admiral PEET. During 1972, security assistance to Lebanon was provided by Czechoslovakia, ———; Belgium, ———; France, ——— and Yugoslavia, ———. In addition, Lebanon contracted for helicopters valued at ——— from Italy.

SAUDI ARABIA

Mr. PASSMAN. On page 39 in connection with the security assistance program for Saudi Arabia you state that the United States has important security related interests in Saudi Arabia. Could you tell the committee just what these important security related interests are?

Admiral PEET. Yes, essentially they include our interest in the continued availability of Saudi and Persian Gulf oil to the United States

and to our allies in Europe and in Asia, in Saudi Arabia's continued and increasingly important role as a moderate regional power with a stake in regional stability and tranquility, and an occasional overflight privileges.

THIRD COUNTRY AID

Mr. PASSMAN. What third countries are providing assistance to Saudi Arabia and in what amounts?

Admiral PEET. During 1972, security assistance to Saudi Arabia was provided by France, ——— and the United Kingdom, ———. Another ——— worth of military equipment is to be provided to Saudi Arabia by France, Italy, and the United Kingdom.

Mr. PASSMAN. Is Saudi Arabia considered pro-United States?

Admiral PEET. I don't know that I would characterize the relationship in precisely those terms. I think it is fair to say that Saudi Arabia and the United States maintain a close and basically friendly relationship. However, the Saudi Arabian Government is opposed to U.S. policy as regards the Arab-Israel dispute. Nevertheless, our two countries also have several important interests in common. For example, aside from important commercial relationships, Saudi Arabia looks to the United States as the major source for equipment and assistance in modernizing and developing its armed forces.

Mr. PASSMAN. The committee stands adjourned.

TUESDAY, JUNE 12, 1973.

Mr. PASSMAN. The committee will come to order.

EUROPE

We will discuss the estimates for the Europe region today. Your 1973 program is $10,271,000 and your 1974 estimate is $3,349,000 which is a reduction of $6,922,000 below your 1973 program, is that correct?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Would you supply for the record the percentage and amount of the fiscal 1974 budget request which will be allocated to operation and investment?

Admiral PEET. Yes, sir.

[The information follows:]

[Dollar amounts in thousands]

	Total program		Operation[1]		Investment[2]	
	Amount	Percent	Amount	Percent	Amount	Percent
East Asia and Pacific:						
Cambodia	$167,194	100	$131,845	79	$35,349	21

[1] Operating costs represent the value of equipment, supplies, and services required to operate and maintain the capability of country assets, low unit value secondary items and all expendables—except war reserve ammunition, initial stockage level of spare parts and secondary items programed as a part of a major item or system investment. Also included in operating costs are the charges for supply operations (shown as general costs not distributed by country) which represent the costs of packing, crating, handling, and transportation incurred in the issue and transfer of material in the operating and maintenance category as well as logistics managment expenses.

[2] Investment costs represent the value of equipment, supplies, and services which increase the force capability including initial equipment, war reserves, replacement of equipment by improved types, the initial stockage of spare parts programed concurrent with related major items, all construction and the cost of supply operations (shown as general costs, not distributed by country) required for investment materiel and services.

Mr. PASSMAN. On page 41 you indicate that grain aid is one consideration on the continuing availability to the United States of bases and facilities in the countries. Could you tell the committee what bases the United States has in Spain ——— I would assume that that statement applies to these two countries, does it not?

Admiral PEET. Yes, sir; it does.

Mr. PASSMAN. Would you state for the record now, or insert it, the number of bases that we have in Spain, ———.

Admiral PEET. Yes, sir.

Mr. PASSMAN You can place that in the record.

Admiral PEET. Yes.

[The information follows:]

U.S. BASING FACILITIES IN SPAIN AND PORTUGAL

In Spain, we have major facilities at Spain's Rota Naval Base and at three Spanish air bases in support of our defense comitments in the European Central Region and along NATO's Southern Flank. One of these, Moron Air Base near Seville, is maintained in standby status for use only during periods of crisis or war. We also have minor communications and support facilities at several other locations in Spain.

In Portugal, as you indicated, US forces are stationed at Lajes field in the Azores. They perform antisubmarine warfare and ocean surveillance missions, support transatlantic staging and deployments, and maintain and operate important communications equipment. We have no other basing facilities in Portugal although a few US personnel are assigned to NATO IBERLANT Headquarters and to the US Military Assistance and Advisory Group and Defense Attache Office in the Lisbon area.

MORAL INVESTMENT

Mr. PASSMAN. It is my understanding—I hope I have the understanding—that both Spain ——— have as much investment in this military program as we do, do they not?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Don't they realize if Communism is not good for this country, or any other philosophy that destroys freedom, then it would likewise not be good for Spain ———.

Admiral PEET. Yes, sir.

Mr. PASSMAN. Why wouldn't they be willing to receive us with open arms and say you are not only doing this for your own security but for our security, and really pay us to keep these bases in their country, ———. Had you looked at it from that standpoint?

Admiral PEET. We have four bases in Spain.

Mr. PASSMAN. It gives Spain security, does it not?

Admiral PEET. Yes, I feel it does, although our basing agreement with Spain does not embody a security commitment and we are in no way obligated to defend Spain or spanish territory.

Mr. PASSMAN. They are supposed to be as anti-Communist as we are. Let us meet it headon and that is, the Russian military power is what we have to dread, isn't that so?

Admiral PEET. Yes, sir.

Mr. PASSMAN. It should be as much a dread to them as it is to us. It seems this should be reversed. Instead of us paying them to have bases

in their country, they ought to pay us to have bases there. Wouldn't that make sense if you were trying to bargin that thing out?

Admiral PEET. Yes, on that basis, it would.

Mr. PASSMAN. Thank you very much. We will take a brief recess.

[Short recess.]

AID TO PORTUGAL

Mr. PASSMAN. The committee will be in order.

Admiral, on page 14, you indicate that it should be noted that the U.S. offer in the last negotiation with Portugal was limited to economic assistance. Would you tell the committee when the military assistance program would be phased out in Portugal and we would only be providing economic assistance?

Mr. TARR. We have not set a definite date. My understanding was that this was primarily a ——— I would think it depends on that.

Mr. PASSMAN. The language confuses me because if I read history correctly, at one time Portugal was considered the wealthiest nation in Europe and now Portugal is considered a poor nation in Europe and yet they steadfastly refused to accept our aid. They said our people are accustomed to their standard of living and if you come in you will spoil them as you have all other nations and even though they were a poor country in Europe they would not accept a dime. They said, "Stay out with your aid program" and they would not accept it. The people seemed to be poor but very happy. The only program we had was the ———. It is hard for me to associate the philosophy of the late leader of that country with the fact that we are talking about economic aid.

Admiral PEET. We in Defense consider it purely a ———.

Mr. PASSMAN. What you are actually talking about is not economic grant aid ———.

Admiral PEET. Yes, sir.

Mr. PASSMAN. Rather than giving military equipment you are giving them aid either in dollars or commodities?

Admiral PEET. Yes.

———.

Mr. PASSMAN. This was a clear indication of how unnecessary this aid program was in so many places. One of the poorer countries in Europe said they did not want aid and they would not take it.

Did I state that correctly as you understood it, Mr. Secretary?

I got a lot of nods, but you don't register nods.

I did state it correctly?

Mr. TARR. I think so.

Mr. PASSMAN. Thank you very much.

Admiral PEET. Yes, sir.

AID VERSUS LOANS

Mr. PASSMAN. You also indicate that most of the European countries have developed and now produce their own military equipment. In fact, you go on to point out, Admiral, that much of their equipment is competing with U.S. foreign military sales. I assume by that, that then it is true that the U.S. aid has helped these countries get back on their feet and reach a point where they are now very competitive with military production in our country, is that not correct?

Admiral PEET. Yes, sir, it is. That is an accurate statement.

Mr. PASSMAN. I have stated time and time again, and it does not hurt to have it in the record one more time, I go right back to the European countries and our so-called Marshall plan under the Truman administration. I think we gave the European countries a total of some $32 billion in aid.

I guess we would say that hindsight is better than foresight. Had we provided this $32 billion on a loan basis in conventional terms, they would now be paying these loans back.

Isn't that the way you figure it?

Admiral PEET. Yes.

Mr. PASSMAN. So they are waxing fat with wealth, making Mickey Mouse currency out of our money. If there was a clear cut example of how necessary and desirous it would be to switch this program over to a loan program rather than a grant program, all we have to do is look at Europe. We say these nations are developing nations that we are helping. I would assume by that you people who are asking for aid believe that they would sooner or later develop so that they could use their foreign exchange in sufficient amounts to repay these loans. Isn't that correct?

Mr. TARR. Yes.

Mr. PASSMAN. I am doing everything in my power to get through to the Members of Congress that we better get it on a business basis, and some 20 years from now it would be mighty nice to have some of this money coming back in.

U.S. COMPETITORS IN MILITARY SALES

Could you tell the committee, Admiral, what countries now produce their own military equipment and are making sales to third countries in competition with the U.S. sales?

Admiral PEET. Yes, sir; we can provide an accurate list for the record. Primarily, they are England, France, Italy, and Sweden.

Mr. PASSMAN. Will you put it in the record?

Admiral PEET. Yes, sir.

[The information follows:]

LIST OF ARMS PRODUCING COUNTRIES

Countries now producing their own military equipment and making sales to third countries are: England, France, Germany, Canada, Italy, Sweden, Netherlands, Belgium, Switzerland, Israel, Spain, Russia, and Czechoslovakia.

PREFERENCE FOR U.S. EQUIPMENT

Mr. PASSMAN. You indicate that many European countries still prefer to purchase United States equipment. Could you tell the committee why these countries prefer United States equipment over equipment produced in other European countries?

Admiral PEET. Most of the European countries are in the NATO alliance. These countries for the most part are developed countries, and compared to the less developed countries of the world, have relatively large defense budgets. For the most part, the European countries can produce most of their own military requirements, however, when they decide to produce defense articles of a sophisticated nature

to modernize their forces, they first look to the United States. The reasons for this are as follows:

(1) We develop and produce for our own needs the most sophisticated and effective weapons in the world.

(2) The United States production lines run over a long period of time and the countries can procure from us at relatively economic prices.

(3) After World War II the United States supplied a large amount of military hardware to European countries initially under the grant aid program and subsequently through the foreign military sales channel. The European countries have great experience with United States military hardware and know full well the United States has the best support system in the world. Our record of supporting a sophisticated system in terms of spare parts, training and supporting tests and repair equipment associated with end items is excellent.

For the reasons given above and the fact that a European country can come to the Department of Defense and ask us to buy defense equipment for them on the same basis that we buy from United States industry to meet our own needs. European countries still prefer to purchase United States equipment rather than from third countries.

AUSTRIA AND FINLAND TRAINING PROGRAMS

Mr. PASSMAN. I note you plan to provide Austria with a $30,000 training program in fiscal year 1974 and Finland with a training program of $20,000 in fiscal year 1974. Could you please tell the committee why the United States feels that it must provide grant aid for training for these two developed countries?

Admiral PEET. The small international military education and training programs provided for Finnish and Austrian military personnel strengthen the independence of these countries which border the U.S.S.R. and the Warsaw Pact nations, respectively.

Mr. PASSMAN. Since these two training requests are such a small sum, why couldn't these two countries pick up the cost for this military training?

Admiral PEET. They probably could. However, we believe it is in the U.S. interest to continue these small training programs which provide a modest western influence to the military personnel of these two neutralist countries on the edge of the Iron Curtain.

PORTUGAL

Mr. PASSMAN. The first country in this region is Portugal, for which the fiscal year 1974 estimate is $323,000. Is it not true that this $323,000 does not include $477,000 that is going to be provided to Portugal for training?

Admiral PEET. Yes, sir, it is true.

Mr. PASSMAN. Could you please tell the committee what third country assistance is being provided to Portugal and in what amounts?

Admiral PEET. Third country assistance to Portugal consists of equipment sold by Spain ——— and by France ——— together with minor items provided over a 5-year period. It is estimated that procurement of these items will cost the Portuguese Government about ——— in fiscal year 1974.

Mr. PASSMAN. Would you please tell the committee what equipment will be provided with the $323,000 requested in fiscal year 1974?

Admiral PEET. The $323,000 is to provide for Navy training ammunition to support NATO exercises; communications equipment and spares primarily to assist the Portuguese Navy in attaining minimum standards revised by NATO STANAGS; and spares for aircraft, vehicles and weapons to maintain MAP equipment in operating condition. All of this equipment is oriented toward Portugal's NATO-related mission in ASW and air defense.

SPAIN

Mr. PASSMAN. The next country in this region is Spain, for which the fiscal year 1974 estimate is $3,026,000, a decrease of $6,174,000 below the fiscal year 1973 program. Could you please tell the committee how you were able to reduce this program so drastically under the current year's program?

Admiral PEET. U.S. military assistance in fiscal year 1974 is being provided to Spain as part of the quid pro quo called for under the 1970 agreement of friendship and cooperation. This agreement, which provided for a total of $26 million in U.S. military assistance over a 5-year period, enables us to utilize important military bases and facilities in Spain until September 1975, at which time a 5-year renewal of the agreement may be negotiated. Past and current U.S. military assistance on the $26 million is as follows:

MAP

Fiscal year:	*Millions*
1972 (actual)	$11.2
1973 (actual)	9.2
1974 (proposed)	3.4
Total	23.8

The balance ——— to be provided in fiscal year 1975 and 1976, will terminate the U.S. commitment under the 1970 agreement of friendship and cooperation.

Mr. PASSMAN. On page 45 you indicate that the 1970 agreement of friendship and cooperation enables us to utilize important military bases and facilities in Spain until 1975. Do you anticipate at this time that you will have trouble in renewing such an agreement in 1975?

Admiral PEET. I do not believe that negotiations for renewal of United States-Spanish basing agreement are yet underway; however, I personally feel that there are formidable economic and political problems to be faced in gaining extension/renewal of our rights to use facilities on Spanish bases. Successive administrations have reaffirmed the inseparable link between U.S. and European security and have vowed to make force reductions/withdrawals only in the context of reciprocal and balanced actions by our Warsaw Pact adversaries. I would hope that renewal of the Spanish basing agreement would be viewed in the context of overall U.S./European security by all parties concerned.

Mr. PASSMAN. You indicate that the grant aid program will contribute to the objective of closer Spanish association with western

security interest. Would you please explain this statement to the committee?

Admiral PEET. Yes sir. You may recall that for many years, the United States has been promoting the proposition of Spanish membership in NATO. It is our belief, that security considerations have considerable influence on prospects for attainment of this objective. Accordingly, as one of a number of measures to foster a Spain-NATO link, we try to provide NATO-compatible military equipment and training in return for base rights granted by Spain. In this way, we hope to improve Spain's capability to contribute to western defense and, at the same time, to promote increased NATO planning and cooperation with Spanish forces which are increasingly NATO compatible in terms of doctrine and equipment. Ultimately, we hope our Allies will support full NATO membership for Spain. This would bolster overall U.S./European mutual defense capabilities and should permit some reduction in U.S. defense expenditures in Europe.

THIRD COUNTRY AID

Mr. PASSMAN. Would you please tell the committee what third country assistance is being provided to Spain and in what amounts?

Admiral PEET. France [deleted] being constructed in Spain and [deleted].

USE OF FISCAL YEAR 1974 REQUEST

Mr. PASSMAN. Would you please tell the committee what the $3,026,000 fiscal year 1974 request will be used for?

Admiral PEET. The $3,026,000 fiscal year 1974 request will be used primarily to pay for aircraft spares, vehicles, weapons, ammunition and communications equipment.

SHIP LOANS

Mr. PASSMAN. Will any ship loans be made to Spain in fiscal year 1974?

Admiral PEET. Yes, sir. It is anticipated that the USG will offer the [deleted] to Spain in fiscal year 1974.

AFRICA

Mr. PASSMAN. Now, we move along to Africa. The 1973 program is $11,921,000. You are asking for an increase of $1,009,000 for fiscal 1974, is that correct?

Admiral PEET. Yes, an increase of $1 million.

Mr. PASSMAN. Don't drop off that little $9,000. Some of us have not saved that much.

Admiral PEET. The principal increase is in Ethiopia.

Mr. PASSMAN. Please provide for the record a table showing the percentage and amount of funds to be allocated in fiscal 1974 to this region for operation and investment.

Admiral PEET. Yes, sir.

[The information follows:]

	Total program		Operations		Investment	
	Amount	Percent	Amount	Percent	Amount	Percent
Africa:						
Ethiopia	$10,454	100	$4,655	45	$5,799	55
Tunisia	2,476	100	488	20	1,988	80
Regional total	12,930	100	5,143	40	7,787	60

OPERATION AND INVESTMENT

Mr. PASSMAN. Would you please at this time state for the record what you mean by the term "operation" and the term "investment"?

Admiral PEET. Operating costs represent the value of the equipment supplies and services required to operate and maintain the capability of country assets.

Investment costs represent the value of equipment supplies and services which increase the force capability including initial equipment and so on.

Mr. PASSMAN. You will break that down for the record in two parts?

Admiral PEET. Yes, sir.

[The information follows:]

OPERATIONS

Operating costs represent the value of equipment, supplies and services required to operate and maintain the capability of country assets, low unit value secondary items and all expendables—except war reserve ammunition, initial stockage level of spare parts and secondary items programmed as a part of a major item or system investment. Also included in operating costs are the charges for supply operations (shown as general costs, not distributed by country) which represent the costs of packing, crating, handling and transportation incurred in the issue and transfer of materiel in the operating and maintenance category as well as logistics management expenses.

INVESTMENT

Investment costs represent the value of equipment, supplies and services which increase the force capability including initial equipment, war reserves, replacement of equipment by improved types, the initial stockage of spare parts programmed concurrent with related major items, all construction and the cost of supply operations (shown as general costs, not distributed by country) required for investment materiel and services.

PROGRAM FOR MOROCCO

Mr. PASSMAN. You indicate that some of the aid provided to the African region is to be used to meet limited objectives to promote ———.

Admiral PEET. Yes, sir.

Mr. PASSMAN. Admiral, if I recall the record correctly, one of the most expensive and modern bases we had anywhere in the world was in Morocco, is that correct?

Admiral PEET. Yes, it was a SAC base.

Mr. PASSMAN. Also, if I recall the record correctly, they told us to get out and we got out.

Admiral PEET. Yes, sir. We withdrew from the SAC bases in 1963.

Mr. PASSMAN. Giving up that investment.

Admiral PEET. Yes, sir.

Mr. PASSMAN. Then why are we back in Morocco?

Admiral PEET. At the time of our withdrawal from the SAC bases ———.

Mr. PASSMAN. Again is Morocco considered a free nation of the world, or a nation seeking to be free?

Mr. TARR. I think so.

Mr. PASSMAN. Then why wouldn't they welcome us with open arms and maybe make a little contribution to us for the protection we would give them?

Mr. TARR. Mr. Chairman, our program in Morocco is primarily a sales program. The only part that we have on a grant basis is our training.

Mr. PASSMAN. Morocco is where we had one of the most expensive and modern bases we had anywhere in the world. We used it and 10 years ago they said get out. I remember that so very well.

Admiral PEET. We lost a number of bases in that area.

Mr. PASSMAN. You are very fair about it. We did not negotiate to get out. We were told to get out and we got out, that is all. I happen to know that as Americans were moving out the Russians were moving in. They had some of their technicians arriving on the base in Morocco before we actually had gotten all our equipment out.

Do you remember that, Mr. Secretary?

Mr. TARR. No, I do not.

Mr. PASSMAN. Have a look at the record, you will find it just as I stated. We have been bringing it up to date from time to time. What kind of grant aid assistance do you have for Morocco?

Mr. TARR. For training only.

Mr. PASSMAN. What is the cost of it?

Mr. TARR. We show a million dollars proposed.

Mr. PASSMAN. Where do you train the Moroccans? Are they trained in this country?

Admiral PEET. Yes, they are scheduled for training in this country.

Mr. TARR. Primarily.

Mr. PASSMAN. For what purposes are they trained militarily?

Mr. TARR. I would think a lot of this is professional and pilot training.

Admiral PEET. Yes, sir; Professional and pilot training.

Mr. PASSMAN. How about sales to Morocco? Do we have a sales program in Morocco?

Admiral PEET. Yes, sir.

We propose about $12 million in credit in 1974.

Mr. PASSMAN. Are they also buying Russian equipment?

Mr. TARR. They are buying equipment from nations other than ours.

Mr. PASSMAN. Would you put something in the record on where they are buying it?

Admiral PEET. Yes, sir.

[The information follows:]

SOURCES OF MOROCCAN MILITARY EQUIPMENT

The principal countries from which Morocco has received military equipment are the U.S.S.R., Czechoslovakia, and France. Morocco has over the years also received a small amount of military equipment from Belgium, West Germany and Israel.

ETHIOPIA: U.S. FACILITIES AND INTERNAL SECURITY

Mr. PASSMAN. I think we should have you state for the record, if you would be a little more specific as to the type of facilities you have for Ethiopia.

Admiral PEET. Yes, sir.

[The information follows:]

U.S. FACILITY, ETHIOPIA

The U.S. military facility in Ethiopia is Kagnew Station at Asmara, which is a communications station, serving primarily as a relay link for our worldwide defense communications system, ship-to-shore communications for US Naval units transiting the western Indian Ocean, and an earth terminal for the defense satellite communications system. The State Department also utilizes Kagnew Station for its diplomatic communications from Ehiopia as well as for communications links in East Africa.

Mr. PASSMAN. Admiral, you say that some of the countries are trying to improve their internal security capabilities. Could you tell the committee what countries in Africa have an internal security problem and just what the problem is?

Admiral PEET. Ethiopia has a quite serious internal security problem involving its neighbor, Somalia. Haile Selassie comes here quite frequently to discuss the subject. In Morocco, the King has his problems. He was in a plane that was shot at 10 months ago.

MAINTAINING AFRICAN BALANCE

Mr. PASSMAN. Admiral, you say that the military sales and assistance programs try to reflect a policy of discouraging arms races. Could you please tell the committee if you have been successful in discouraging arms races between African countries?

Admiral PEET. In every action we take in Africa, we try to limit arms and maintain a military balance.

Mr. PASSMAN. You try to. Are you meeting with success? That is what we want to know.

Admiral PEET. I believe that question would be more appropriately addressed to the State Department.

Mr. TARR. We have two problem areas. One is in Somalia, where there has been a buildup, but we are hopeful that it won't get out of hand. The other one is in Libya, where we know about what they have done with their neighbors to the east, the Egyptians. But they have also been a difficult country for some of the Arab nations to the west as well.

ENCOURAGING CONTRIBUTION OF METROPOLES

Mr. PASSMAN. You state on page 47 that where possible you have encouraged the former metropoles to provide the security resources needed by the new Africa states. Have you been successful in this effort?

Admiral PEET. Not as successful as we would like to be. Germany has made some contributions, and Italy some and France as well, but we have not been overwhelmingly successful.

Mr. PASSMAN. Then you can tell the committee who these former metropoles are.

Admiral PEET. Yes, we can.

Mr. PASSMAN. Will you place it in the record?

Admiral PEET. Yes, sir.

[The information follows:]

FORMER METROPOLES

The metropoles that continue to provide military assistance to their former colonies are the United Kingdom, France, Belgium, Germany, and Italy.

REASON FOR PROGRAM

Mr. PASSMAN. You indicate that small token programs have been developed to promote limited U.S. foreign policy objectives. Could you please tell the committee what these limited foreign policy objectives are?

Admiral PEET. These small programs are designed to demonstrate U.S. interest in these countries and help promote favorable relations. While many African countries continue to rely primarily on their former metropole for defense support, some seek to avoid total dependence on these former ties and look to us and to other countries to supplement their customary sources of military assistance.

LIBERIA

Mr. PASSMAN. On page 47 you state that it should be noted that material assistance for Liberia has been phased out. Is it not true that Liberia is scheduled to receive $100,000 in training for fiscal year 1974?

Admiral PEET. Yes, that is true.

PERSONNEL BEING SENT TO UNITED STATES

Mr. PASSMAN. What countries will send military personnel to the United States?

Admiral PEET. At this time, consideration is being given to the Ivory Coast, Upper Volta, and Niger.

Mr. PASSMAN. How much will these visits cost and what will be included in the cost?

Admiral PEET. The cost of each visit will be approximately $8,000. The cost includes funds for transportation and living allowances for three participants, plus the cost of an escort officer.

Mr. PASSMAN. Will any training be conducted on these visits?

Admiral PEET. No formal training, per se, is conducted on these visits; however, the visit is one of the most effective methods of training in the U.S. command and control and management systems.

Mr. PASSMAN. Does the United States pay for their air transportation to the United States?

Admiral PEET. The United States does pay for their air transportation to the United States and return.

ETHIOPIA

Mr. PASSMAN. The first country in this region is Ethiopia, for which the fiscal year 1974 estimate is $10,454,000, an increase of $1,954,000 above the current fiscal year program. What type of equipment will be provided in the proposed fiscal year 1974 program?

Admiral PEET. ——— aircraft, ——— helicopters, various vehicles, ammunition, spares and secondary items of equipment, and the overhaul of aircraft engines.

Mr. PASSMAN. You indicate that grant material assistance is directed primarily toward satisfying operation and maintenance requirements of the Ethiopian Armed Forces. Does this mean that very little new equipment is usually provided to this country?

Admiral PEET. Yes, this is true. Eight to nine million dollars is needed for operating and maintenance requirements of the Ethiopian military forces, which includes minimum replacement for older equipment being attrited. With reduced appropriations in past years, this was about the amount we were able to finally allocate Ethiopia.

FORCE DATA

Mr. PASSMAN. I note in the force data table that you indicate Ethiopia presently has ———. Could you please tell the committee why the Ethiopian Armed Forces have so many units in excess of what the objective is?

Admiral PEET. That is a typographical error. ———.

THIRD COUNTRY AID

Mr. PASSMAN. Could you please tell the committee what third countries are providing assistance to Ethiopia and in what amounts?

Admiral PEET. Yes. It is estimated that during the fiscal years 1972–74 period, the Federal Republic of Germany will deliver ——— equipment. In fiscal year 1972, the Netherlands sold ——— to the Ethiopians, ———.

SHIP REQUEST

Mr. PASSMAN. You indicate that $228,000 is proposed for fiscal year 1974 for ships (including spares). Would you please tell the committee what this amount will be used for?

Admiral PEET. This amount is for operating and maintenance requirements of the Ethiopian Navy ship inventory. Primarily spare parts.

MOROCCO

Mr. PASSMAN. On page 52 in connection with the security assistance program for Morocco you indicate that this program will promote a sense of security against external aggression. Would you please tell the committee what sort of external aggression exists at the present time in Morocco?

Admiral PEET. [———].

Mr. PASSMAN. You indicate that the United States has important facilities in Morocco and you mention Kenitra, Bouknadel, and Sidi

Yahia. Would you please tell the committee what sort of facilities we have at these three locations?

Admiral PEET. The U.S. naval communications complex in Morocco includes facilities at (i) the Royal Moroccan Air Force Base at Kenitra where most of the support facilities are located, (ii) a communications system at Sidi Yahia, and (iii) a transmitter station at Bouknadel. The Moroccan facilities are part of the Navy's worldwide communications system, [———].

THIRD COUNTRY AID

Mr. PASSMAN. Would you please tell the committee what third countries are contributing funds to Morocco and in what amounts?

Admiral PEET. No funds have been provided for military purposes, to our knowledge. However, France and Belgium made military sales to Morocco in fiscal year 1972 and France is providing for credit sales in fiscal year 1974.

TUNISIA

Mr. PASSMAN. Why is it beneficial to the United States to help Tunisia to help improve her defense capabilities?

Admiral PEET. [———]. Tunisia is important to the United States because of its strategic location on the southern flank of NATO, its willingness to facilitate periodic visits by 6th Fleet units and because of its moderating posture on Middle East issues.

THIRD COUNTRY AID

Mr. PASSMAN. Could you please tell the committee what other countries are providing assistance to Tunisia and in what amounts?

Admiral PEET. France provided [———] equipment in fiscal year 1972 [———].

TYPE OF EQUIPMENT

Mr. PASSMAN. Would you please tell the committee what type of equipment is proposed to be provided to Tunisia in fiscal year 1974?

Admiral PEET. [———] vehicles, ammunition, communications equipment, construction equipment, and spare parts.

NEED FOR INCREASE

Mr. PASSMAN. Would you please also tell the committee the need for this rather substantial increase in fiscal year 1974?

Admiral PEET. Our proposed fiscal year 1973 program for Tunisia had to be reduced because of the limited funds available under the fiscal year 1973 continuing resolution authority. The proposed increase in the fiscal year 1974 program is partially to compensate for the fiscal year 1973 reduction.

ZAIRE

Mr. PASSMAN. On page 54 in connection with the security assistance program for Zaire, why does the United States feel that the maintenance of internal security of this country is important to the interest of the United States?

Admiral PEET. Because of its size, location, and potential wealth and importance, Zaire (formerly the Belgian Congo) is a key country in Africa [———]. Our assistance has helped support Zairian forces in their successful efforts at putting down past rebellions and promoting the stability of the country. Zaire has a growing industrial and consumer market of interest to U.S. exporters. Private U.S. investment there is expected to increase sharply over the next few years.

THIRD COUNTRY AID

Mr. PASSMAN. Could you please tell the committee what other countries are providing assistance to Zaire and in what amounts.

Admiral PEET. Belgium sold [———] equipment during fiscal year 1972, and United Kingdom provided [———] equipment in fiscal year 1972, France's deliveries totaled [———] in fiscal year 1972 [———] and it is estimated that deliveries from France in fiscal year 1973–74 period will total [———].

TRAINING

Mr. PASSMAN. You indicate the $400,000 will be provided for training to Zaire in fiscal year 1974. Could you please tell the committee what type of training this will finance?

Admiral PEET. The $400,000 will provide training in communications, electronics, maintenance, operations, as well as general professional training such as command and general staff courses, and limited orientation visits.

LATIN AMERICA

Mr. PASSMAN. On Latin America, your 1974 estimate is $10 million, is that correct?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Your 1973 program was $16,400,000, is that correct?

Admiral PEET. Yes, sir.

Mr. PASSMAN. If you just made a record at this point and stopped you would show a reduction of $6,400,000, but is it not true that the fiscal 1974 total does not include $10,665,000 in training costs that were included in the fiscal 1973 program?

Admiral PEET. That is true, sir.

Mr. PASSMAN. So the facts are, you are asking for $20,665,000 against a 1973 program of $16,400,000?

Admiral PEET. That is correct.

Mr. PASSMAN. So it is a very substantial increase rather than a decrease, is that correct?

Admiral PEET. Yes. It is an increase of over $4 million.

MULTILATERAL AND BILATERAL AID TO LATIN AMERICA

Mr. PASSMAN. Am I correct when I say that all of the recipient nations of Latin America where we have a military program are likewise recipients of our bilateral program as well as the multilateral program; isn't that correct?

Admiral PEET. I do not know.

Mr. PASSMAN. Let me ask the distinguished Secretary. Am I stating it correctly?

Mr. TARR. Yes, sir.

Mr. LONG. Venezuela receives mostly multilateral aid.

Mr. PASSMAN. Which means these countries take their resources to build up their military, placing their orders in many instances with foreign competition, while we provide the money for their economic aid; is that correct, Mr. Secretary?

Mr. TARR. In many cases.

Mr. PASSMAN. Of course, this is very strange and it is something that we should have an understanding about sooner or later. If we are going to furnish substantial bilateral aid whether it is on a concessionary loan basis or direct grant aid, then there should be some stipulation that if they just insist on buying military equipment, at least they should buy it from us. I think we have made the record in prior years that they are going to have military equipment, our wishes notwithstnding. Is that a statement of fact?

Mr. TARR. I think that is right.

Mr. LONG. It is not one that I would accept.

3D COUNTRY SUPPLIERS TO LATIN AMERICA

Mr. PASSMAN. It is not a question of whether I like it or dislike it. I am trying to make the record for what it is. They have made it abundantly clear that they are going to buy military equipment and they are buying military equipment from foreign nations. Could you tell the committee at this time what countries they are buying military equipment from?

Admiral PEET. Yes, sir. They are buying from France, England, Sweden, and Italy, among others. We have a list we can provide for the record.

Mr. PASSMAN. Could you tell us in detailed amounts for the last year the purchases from foreign countries?

Admiral PEET. Yes, sir. To give you some idea, we are No. 3 in total dollar value of sales.

Mr. PASSMAN. I want to know what they are buying from the other foreign nations.

Admiral PEET. We can provide that.

Mr. PASSMAN. Could you give us some information now because we have to make a few recordings on this mentally as we go along.

Admiral PEET. French sales are in the neighborhood of ——— million.

Mr. PASSMAN. ——— million?

Admiral PEET. Yes, sir.

Mr. LONG. A year?

Admiral PEET. Yes, a year.

For England, total sales to Latin America amounted to ——— million for the period from '68 to '72.

[The information was provided to the committee.]

Mr. LONG. This is too fast.

Mr. PASSMAN. Let me make my point, Doctor.

Mr. LONG. That was not one year.

Admiral PEET. No, sir.

BILATERAL AID AND MILITARY PURCHASES

Mr. PASSMAN. These people are actually buying military equipment in the aggregate at just about the same level of our bilateral aid annually. I think our bilateral aid is something like $1.2 billion.

Admiral PEET. Yes, it is.

I will have to get the third country sales for you on an annual basis. I have the figure for 1968 to 1972. The total in that period is about $1.35 billion.

Mr. PASSMAN. How many years?

Admiral PEET. From 1968 to 1972. That is total third country sales.

Mr. PASSMAN. Four years.

Admiral PEET. Yes, sir.

Mr. PASSMAN. What is our economical bilateral aid to them during that period? About $4 billion? So they are spending about 28 percent of the amount on military items. How much did they buy from the United States during that same period?

Admiral PEET. $334 million, from 1968 to 1972.

Mr. PASSMAN. Was that on grant aid?

Admiral PEET. No, it was actual purchases or sales.

Mr. PASSMAN. How about the grant aid part? This will make sense if you just bear with me, gentlemen.

Admiral PEET. About $75 million.

Mr. PASSMAN. They bought $75 million from us.

Admiral PEET. It was grant military assistance.

Mr. PASSMAN. How much did they purchase from us?

Admiral PEET. The purchases amounted to $334 million.

Mr. PASSMAN. Which means they are purchasing about four times as much from foreign countries as they are purchasing from us. Yet we are feeding the kitty from a bilateral aid approach of about $1,200 million a year.

Have I stated that accurately?

Admiral PEET. Yes, sir, as I understand it.

Mr. SHRIVER. If you will yield, weren't there some restrictions on their purchases from us?

Admiral PEET. Very much so.

Mr. SHRIVER. That was in the Foreign Assistance Act or action of this committee?

Admiral PEET. Yes, sir.

Mr. LONG. Was that during the period of the Long-Conte amendments?

Mr. SHRIVER. Yes, it would be.

Admiral PEET. Yes.

Mr. PASSMAN. It follows, nevertheless, and notwithstanding our wishes they still purchased four times as much equipment from foreign nations as they did from the United States.

Admiral PEET. Yes, sir.

UNITED STATES IS THIRD IN LATIN AMERICAN SALES

Mr. ROYBAL. I wanted to know how many countries were selling more to Latin America than we were.

Admiral PEET. The United Kingdom and France.

Mr. ROYBAL. Only two countries.

Admiral PEET. Yes, sir.

Mr. ROYBAL. Then we are No. 3.

Admiral PEET. Yes, we are No. 3.

Mr. ROYBAL. Are we No. 3 as of last year, or is this over a period of several years?

Admiral PEET. Our position is based on data from fiscal year 1968 through fiscal year 1972.

Mr. PASSMAN. That does not change the grant total, that through 1968–72 they purchased four times as much from foreign countires as they purchased from the United States. You haven't changed that, have you?

Admiral PEET. No, sir.

Mr. ROYBAL. I wanted to know whether beginning last year we were selling more to Latin America than to other countries. The overall aggregate may show that we are No. 3, but are we now catching up and perhaps even exceeding the other countries?

Admiral PEET. I do not believe we are, Mr. Congressman, because of the constraints and the ceiling on credit sales.

Mr. ROYBAL. Can that be made for the record?

Admiral PEET. Yes, it can; and I will provide it. There is something else I would like to point out to prevent misunderstanding. When we discuss grants and sales in Latin America we are talking about two entirely different groups of countries. The countries that are buying the equipment are Argentina, Brazil, Chile, Venezuela, Colombia, and so on. We are not providing them any grant assistance except for training.

[The information follows:]

In fiscal year 1971 we were third in military sales to Latin America and in fiscal year 1972 we were second. However, the relative ranking of the United States in foreign military sales to Latin America as compared to other individual selling countries during any one fiscal year is really dictated by the total annual amount of military equipment purchases made by Latin American countries. If they are not buying much, the United States will rank higher; if they are buying in large amounts, the United States will rank low. Latin American countries generally prefer U.S. equipment and doctrine, and will purchase as much as we can provide. Low credit appropriations, the legislative ceiling and other restrictive amendments limit the amount of sales in any 1 year to a maximum of $150 million. Therefore, our relative ranking will rise or lower depending on the total military purchase made by Latin American countries during a year. As an example, in fiscal year 1970 when we had no credit authorization we were sixth. In fiscal year 1971, with a credit authorization, we rose to third. In fiscal year 1972 we were second; however, the aggregate total Latin American military purchases from all countries during fiscal year 1972 was about $115 million less than in fiscal year 1971. The restrictions on so-called "sophisticated" equipment to Latin America further limits the U.S. competitive position in relation to other selling countries.

Mr. TARR. Mr. Chairman, I would like to give a little different answer. I think that our position in the market is improving.

Mr. PASSMAN. Improving is a good word, but it is a question of how much we are improving.

Let us make the record.

Mr. LONG. You glory with the idea of selling them arms and seem to think that it is so nice that we are catching up with the other supplying countries. Do you really feel good about that, Mr. Secretary? Do you feel good, that we are selling our share of weapons to a continent that is so desperately poor and falling behind all the time in its development efforts?

Mr. TARR. Mr. Long, I understand Mr. Roybal's question to be an honest attempt to try to evaluate the American position in the market.

Admiral Peet gave an answer that indicated that he thought our position in the market was not changing.

Mr. LONG. You called this an improvement. That was your word. It carries a certain connotation.

Mr. TARR. I thought it might be helpful to the committee if I gave my view.

Mr. LONG. Why don't you say we are increasing quantitatively or something like that. To us the word "improvement" I think is disgusting.

Mr. TARR. That our sales are increasing quantitatively in the market?

Mr. LONG. That is better. The word improvement that you used I think is revolting.

Mr. PASSMAN. Thank you, Dr. Long. The word sophisticated is a question of interpretation as to what is or is not sophisticated equipment; isn't that true?

Admiral PEET. That is true.

Mr. PASSMAN. If Latin Americans are determined that they are going to buy military equipment, our wishes notwithstanding and our restrictions and legislation notwithstanding they will buy the equipment. We are putting the bilateral aid in on a grant basis, which permits them to use their own resources to buy from our competitors and we really indirectly put up the money and lose the profit. It would appear to me this thing should be looked at again.

EFFECT OF RESTRICTIVE LEGISLATION

Mr. PASSMAN. As we know, the shift to the European market has happened in the last 6 or 7 years. As the Congress started restricting this aid they started shifting their purchases to foreign nations. Isn't that a statement of fact?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Didn't this thing start in that direction about 6 or 7 years ago when we put in restrictive legislation?

Admiral PEET. Yes, sir.

Mr. LONG. You remember, Mr. Chairman, that the purpose was to cut off aid.

Our idea at that time was to say if you want to go ahead and buy all these weapons, whether from us or from other countries, you are not going to get bilateral aid from the United States.

Mr. PASSMAN. I am a realist.

Mr. LONG. I agree that if they want to go ahead and buy arms we cannot stop them. But at least we do not have to finance this insanity. Apparently that is what the State Department and the military want to continue to do.

Admiral PEET. Mr. Chairman, you have to get into practical cases and decide what is in the best interests of the United States. I think Dr. Tarr and I agree.

Mr. PASSMAN. We are not quarreling with you.

Admiral PEET. However, I would like to address the specific problems facing the United States. Take the one facing us in Brazil. It in-

volves sophisticated equipment that Brazil is going to buy, F–5 and C–130 aircraft.

Mr. LONG. Why don't we stop giving them aid?

Admiral PEET. We are not giving Brazil any grant aid. I think it is in the best interests of this country to sell those aircraft to Brazil. She is going to buy them. I think it is also in our interest to give Brazil credit at the cost of money to the United States.

Mr. LONG. If the Chairman will yield——

AID THROUGH MULTILATERAL ORGANIZATIONS

Mr. PASSMAN. No, I am not yielding at this point. Let us get the record straight, Doctor. You say we are not giving them aid. Admiral, we are being bypassed by the multilateral organizations. Let us look at the Inter-American Development Bank, those people are into us for billions of dollars. This year they are trying to offset this committee's cut last year and also ask for a new amount. They are trying to circumvent the work of this committee. They do not have to get funds as bilateral aid. The can go through the multilateral organization, bypassing this committee, and they get it. Again if you just have to have an aid program, have it bilateral and let these people pay this money back into the U.S. Treasury. Don't feed it to them through one of the international organizations where none of it ever gets back to the U.S. Treasury. You know that they are in big in the Inter-American Development Bank, are they not?

Admiral PEET. Yes, sir.

Mr. PASSMAN. They are trying to make fools out of this committee. They are offsetting the work of the committee. What can we do about that? If you had all types of restrictive legislation as it would apply to sophisticated equipment, it would not apply to the Inter-American Bank, would it?

Admiral PEET. No, sir.

Mr. PASSMAN. It would not apply to the International Development Association and it would not apply to the International Finance Company or the World Bank.

Admiral PEET. No, sir.

Mr. PASSMAN. There we are.

Admiral PEET. Dr. Tarr and I are only addressing——

Mr. PASSMAN. We are not quarreling with you. We are showing how ridiculous we are to let these people outsmart us. They do not have to get bilateral aid because they go through the international organizations and get multilateral aid and maybe get three times as much. Isn't that true?

Admiral PEET. Yes, sir.

Mr. BEVILL. Mr. Chairman, may I ask a question?

Doesn't that money that we put into the Inter-American Bank go through our committee?

Mr. PASSMAN. It goes through our committee, but they say these funds have been authorized and we had this agreement, now you are obligated to put up the funds. We made the record abundantly clear we do not have to give them a nickel because it is all predicated upon an appropriation. They are trying to bypass this committee by these multilateral requests.

Mr. LONG. Isn't this backdoor spending, Mr. Chairman?

Mr. PASSMAN. That is not the point. The point is that they cancel out the work of this committee when we make reductions by going through one of the multilateral organizations. The multilateral organizations have grown, I believe, by 500 percent in 4 years, just about destroying this committee. There is no use to make cuts because they go right into a multilateral organization and offset it. What we are worrying about, Admiral, is how the State Department can justify going back into Chile with a military assistance program.

Mr. LONG. And Peru.

NEED FOR CHILEAN AID PROGRAM

Mr. PASSMAN. First let us take Chile. How can you justify an aid program in Chile?

Admiral PEET. From a Defense Department point of view, we consider Chile a political problem and therefore primarily a matter of State interest. ———.

———.

Mr. PASSMAN. Let us get back to the basics. You are talking about a Communist form of government.

Admiral PEET. In Chile, yes, sir.

Mr. PASSMAN. They expropriated all the American company properties, did they not? Could a country be any more Communist than Chile?

Admiral PEET. I would prefer that State answer that question.

Mr. PASSMAN. Could they? Do you know of any country that could be any more Communist than Chile?

Mr. TARR. Mr. Chairman, I think you are right. The problem here is the orientation of the government and the hope is to——

Mr. LONG. Buy them off.

Mr. TARR. ———.

Mr. PASSMAN. How could they get any closer to communism than they are?

Admiral PEET. They can't. However, we are maintaining influence; ———.

Mr. PASSMAN. Pursuant to provisions of section 4, the Foreign Military Sales Act, the President signed a Presidential determination, on May 21, 1973, in which he determined that the extension of credit to the governments of Argentina, Brazil, Chile, Colombia, Venezuela, in connection with the sale of F–5 military aircraft is important to the security of the United States.

DECIDING TO AID CHILE

Who made the interpretation that it would be in the interest of the security of the United States? How could they ever interpret that as being favorable to the United States? The President didn't do that. The State Department cooked this up.

Admiral PEET. The President signed that determination as is required by law.

Mr. PASSMAN. It takes 1,293 men to do everything that is issued in the name of the President. Everything that is done is done in the name of the President because it is his administration. Who actually

reached this determination and upon what reasoning did they base this decision on?

Mr. TARR. Mr. Chairman, it was primarily a determination by the two departments, State and Defense.

———.

The Chief of Staff of the Army of the Government of Chile has just returned from an extensive trip, both in the United States, Europe and Russia. ———.

Mr. PASSMAN. According to this determination it has been made.

Mr. TARR. No, sir. The determination is not a determination that we will sell.

Mr. PASSMAN. They are now eligible.

Mr. TARR. That is correct.

Mr. PASSMAN. I want to be fair about this. Actually, where is this decision made? Who sits in on the policymaking meeting when you come up and submit this to the President for his approval? Of course the President must follow the recommendations of his subordinates because, as I say, according to the computer, it takes 1,293 individuals to do everything that is issued in the name of the President. At what level do you discuss sales of aircraft to, let's say, Chile?

PARTICIPANTS IN AID DECISION

Mr. TARR. Let's take that piece of paper as an example. It was primarily developed in the Latin American regional bureau.

Mr. PASSMAN. Who is head of the regional bureau in Latin America?

Mr. TARR. The man who has recently taken that responsibility is Mr. Kubisch.

Mr. PASSMAN. From what area of endeavor did he come—out of the free enterprise sector?

Mr. TARR. No, he was the Deputy Chief of Mission in Paris.

Mr. PASSMAN. By Chief of Mission, you mean you are talking about AID?

Mr. TARR. He was the No. 2 man in our Embassy.

Mr. PASSMAN. He has a position under the Ambassador? He heads up this team. Who is on that board with him?

Mr. TARR. He has a couple of hundred people who work for him.

Mr. PASSMAN. This is not at a high level like in the Department between Secretaries of State. You are considering it at a level below the ambassadorial level, aren't you? I want to be honest about it.

Mr. TARR. I wouldn't say below the ambassadorial level.

Mr. PASSMAN. You just said he was head of that team.

Mr. TARR. No, no, before he became——

Mr. PASSMAN. What is his title now?

Mr. TARR. Assistant Secretary.

Mr. PASSMAN. Which one? There are a hundred of them.

Mr. TARR. Assistant Secretary for American Republic Affairs. Then after he develops this position——

Mr. PASSMAN. With the assistance of whom, Mr. Secretary?

Mr. TARR. At the outset with the assistance of the people in the bureau who work for him. Then it is signed out by, my guess is, three or four people in the Department, including the Secretary.

Mr. PASSMAN. In his Department?

Mr. TARR. No, the Secretary of State.

Mr. PASSMAN. You have reached the initialing stage. All they do is initial it. I don't want to cast any reflections. They may be the smartest people in the world. These decisions are actually made at a level even below the ambassadorial level. This moves up to the Secretary of State after the decision has been made. Then his responsibility is to initial it. Isn't that about it?

Mr. TARR. On a case like this, the Secretary would be actively involved.

Mr. PASSMAN. How can you spread a man so thin? We have an AID program going in over a hundred nations. This is one little thing we are getting into. Aren't we in accord that these people cannot get in on all of these little, let's say, contracts that we enter into?

Mr. TARR. They can't get in on all of them. But if you were to call up the Secretary of State right now or to call up the Deputy Secretary of State, they would be very familiar with this particular program.

Mr. PASSMAN. Then they wouldn't be very familiar with a lot of other things, would they?

Mr. TARR. That is right.

Mr. PASSMAN. Let's face up to it. Do you know anything in Chile that is owned by any American companies that hasn't been expropriated since that Government has gone into office? Anything worth taking home they picked up, didn't they?

Mr. TARR. I think so.

PROJECTED PROGRAM FOR CHILE

Mr. PASSMAN. Gentlemen, we know that is true. Let's get right down to the terms of F–5 sales to Chile. What are the terms? It has to be discussed now.

Admiral PEET. The determination merely permits us to negotiate. We haven't done that yet. Even before the matter reached State for a decision on this determination, the Country Team and the Ambassador had both addressed it, approved it, and wanted to do it. We are in the process of discussing it. We are not sure we can do it.

Mr. PASSMAN. Gentlemen, from little acorns big trees grow. I didn't know of one of these programs that didn't blossom up into a full-fledged program. If you know one, name it for the record. I don't know of anything that can stop you except maybe this committee. This program would provide training, would it not?

Admiral PEET. Yes, sir. But this sort of thing they pay for.

Mr. PASSMAN. They are going to pay for the training?

Admiral PEET. They would pay for everything in connection with the F–5 sale.

Mr. PASSMAN. You don't say anything about it here. You are bound to have had some estimates or projections as to what you do. Could you tell the committee, if not now, for the record, what types of services would go with the sale of F–5 aircraft?

Admiral PEET. The normal procedure is for the country to request a letter of offer from us. Such a letter of offer would include, in some cases, the training. It would also include the spare parts support and ground equipment.

Mr. PASSMAN. Could you tell the committee there would not be any grant aid that goes with it?

Admiral PEET. Absolutely.

Mr. PASSMAN. What are the maximum terms of your military credit sales?

Admiral PEET. As it looks now, it would be at the cost of money, which varies each month. It is now 6⅞ percent, but I think it's going higher this month.

Mr. FORMAN. It probably will be higher.

Mr. PASSMAN. I am an enthusiastic supporter of military sales. It means money for our country and profit for the Treasury and it means if we don't sell it to them someone else will. I want your assurance that this will be either cash or it will be on credit terms if it's approved.

Admiral PEET. It would be FMS cash or credit.

Mr. PASSMAN. With the minimum terms?

Admiral PEET. Minimum terms would be cost of money to the United States over an 8- to 10-year period.

Mr. PASSMAN. I thought you limited it to 7 years.

Admiral PEET. The law permits terms up to 10 years.

Mr. PASSMAN. That is the maximum?

Admiral PEET. Yes, sir.

Mr. BEVILL. What is FMS?

Mr. TARR. Foreign military sales.

Mr. SHRIVER. You are proposing about $1 million for next year?

Admiral PEET. No, sir, it is $10 million.

Mr. PASSMAN. We presently have a grant-aid program for Chile on military. Now we are proposing to move it over on the sales basis and then cancel out any subsequent grants in military.

Admiral PEET. Grant materiel for Chile was terminated in 1968.

Mr. PASSMAN. How about the training, Admiral?

Admiral PEET. We are proposing $1 million in training.

Mr. PASSMAN. In other words, you are going to continue the training on a grant-aid basis?

Admiral PEET. Yes, sir.

Mr. PASSMAN. I am almost ready to give up!

Admiral PEET. That is the request.

ALLOCATION

Mr. PASSMAN. Would you please provide for the record a table showing the percentage and amounts you propose to allocate for the region in fiscal year 1974 for operations and investment.

Admiral PEET. Yes, I will provide that data for Latin America. [The information follows:]

LATIN AMERICAN COST CATEGORIES

[In thousands of dollars]

Country	Total program, dollars	Operating[1]		Investment[2]	
		Dollars	Percent	Dollars	Percent
Bolivia	3,996	1,033	26	2,963	74
Dominican Republic	796	279	35	517	65
El Salvador	400	50	12	350	88
Guatemala	1,080	9	1	1,071	99
Honduras	400	60	15	340	85
Nicaragua	1,023	194	19	829	81
Panama	230	137	60	93	40
Paraguay	550	167	30	383	70
Uruguay	1,000	763	76	237	24
Regional program	560	560	100		
Regional total	10,035	3,252	32	6,783	68

[1] Operating costs represent the value of equipment, supplies, and services required to operate and maintain the capability of country assets, low unit value secondary items and all expendables—except war reserve ammunition, initial stockage level of spare parts and secondary items programed as a part of a major item or system investment. Also included in operating costs are the charges for supply operations (shown as general costs, not distributed by country) which represent the costs of packing, crating, handling and transportation incurred in the issue and transfer of materiel in the operating and maintenance category as well as logistics management expenses.

[2] Investment costs represent the value of equipment, supplies and services which increase the force capability including initial unit equipment, war reserves of equipment and ammunition, replacement of obsolescent equipment by improved types, the initial stockage level of spare parts programed for shipment concurrent with related major items, all construction and the cost of supply operations (shown as general costs, not distributed by country) required for investment materiel and services.

COUNTRIES EXPERIENCING A COUP

Mr. PASSMAN. Could you tell us if any countries in Latin America have experienced a coup this past year, and if so, has the United States suspended military aid to these countries?

Admiral PEET. Two Latin American countries experienced coups in 1972. In Ecuador, Army Commander in Chief General Guillermo Rodriguez led a coup on February 15, 1972, against President Jose Maria Velasco Ibarra. The primary motivation was to prevent the expected election in June of a leftist reformer as President. In Honduras, Armed Forces Commander in Chief General Oswaldo Lopez led a coup on December 4, 1972, to replace the weak coalition government of President Ramon Cruz. There had been widespread criticism of the ineffectiveness of 77-year-old President Cruz' weak government, and many sectors of society had turned to General Lopez, who had ruled the country from 1963 through mid-1971, to intervene.

U.S. military aid to Ecuador was already in suspension at the time of the coup as a consequence of the fishing seizure issue and the withdrawal of the U.S. military group from Ecuador. Military assistance to Honduras, consisting primarily of training, was not suspended during the coup.

RULING GOVERNMENTS

Mr. PASSMAN. How many Latin American countries are now being ruled by governments which took power by force?

Admiral PEET. There are five governments in Latin America which came to power by force and have remained in power without seeking legitimization through the electoral process. These are Bolivia, Cuba, Eduador, Honduras, and Peru. In three additional countries Brazil,

Panama, and Paraguay—governments that originally came to power by force have since held elections which have confirmed the government in power.

RESTRICTIONS ON AID

Mr. PASSMAN. The United States can restrict or suspend its own aid and restrictions have been placed on our military aid, but what is to prevent any of these countries from obtaining desired weapons from other countries?

Admiral PEET. We have no direct control over sovereign countries purchase of military equipment from third countries.

Mr. PASSMAN. Could you please tell the committee what restrictions have been placed on military aid to Latin America?

Admiral PEET. The executive branch reviews and considers requests for military security assistance on a country-by-country basis. With regard to the numerous legislative restrictions with which the committee is aware, the following listing summarizes the content of these restrictions:

Section 33 of the Foreign Military Sales Act limits the aggregate total of grant, foreign military sales (cash and credit), and ship loans to $100 million (excluding training). The President has authority to raise this ceiling in any year up to $150 million.

Section 23 of the Foreign Military Sales Act limits credit repayment to a 10-year period.

Section 32 of the Foreign Military Sales Act prohibits Ex-Im Bank financing of military sales to less-developed countries.

Section 3(b) of the Foreign Military Sales Act specifies that no sales, credits, or guaranties for period of 1 year shall be made to any country which has seized, taken into custody, or fined an American fishing vessel for engaging in fishing activities beyond the 12-mile limit. The President may waive this provision for national security or upon receipt of reasonable assurances from the country involved that future violations will not occur and promptly so reports this fact to the Congress.

Section 1 of the Foreign Military Sales Act states that it is the sense of Congress that sales and guarantees shall not be approved where they would have the effect of arming military dictators who are denying the growth of fundamental rights or social progress to their own people.

Section 35 of the Foreign Military Sales Act specifies that, when the President finds that any less-developed country is diverting development assistance, furnished under the Foreign Assistance Act or sales under the Agricultural Trade Development and Assistance Act, to military expenditures or diverting its own resources to unnecessary military expenditures, to a degree which materially interferes with its development, such country shall immediately be ineligible for further FMS sales and guarantees until the President is assured that no further diversion will take place.

Section 504(a) of the Foreign Assistance Act and section 4 of the Foreign Military Sales Act prohibit use of funds for provision of "sophisticated weapons systems, such as missile systems and jet aircraft" for military purposes to underdeveloped countries.

Section 507 of the Foreign Assistance Act limits the grant, to Latin America, of defense articles to $10 million.

Section 514 of the Foreign Assistance Act requires countries to deposit in a special U.S. account 10 percent of the value of grant assistance provided (includes materiel, training, and excess defense articles).

Section 510 of the Foreign Assistance Act limits the number of military students that can be brought to CONUS for training in any one fiscal year.

Section 620(e) of the Foreign Assistance Act specifies that the President shall suspend assistance to any country which fails to take appropriate steps to provide compensation or relief after:

Having nationalized, expropriated, or seized ownership of U.S.-controlled property;

Having taken steps to repudiate or nullify existing contracts or agreements with any U.S. citizen, corporation, partnership, or association; or

Having imposed or enforced discriminatory taxes, restrictive maintenance, or operational conditions, or other actions that have the effect of nationalizing or expropriating, or otherwise seizing ownership or control of property;

Such suspension shall continue until the President is satisfied that appropriate steps are being taken and no other provision of this act shall be construed to authorize the President to waive the provisions of this subsection.

Section 620(o) of the Foreign Assistance Act requests that consideration shall be given to excluding from assistance any country which seizes or imposes any penalty or sanctions against any U.S. fishing vessel for fishing activities in international waters. This provision is not applicable in any case governed by international agreement to which the United States is a party.

Section 113 of the Foreign Assistance Appropriation Act, 1972, states that no part of any appropriations contained in the act may be used to provide assistance to Ecuador, unless the President determines that the furnishing of such assistance is important to the national interest of the United States.

The Fishermen's Protective Act states that, in any case where a vessel of the United States is seized by a foreign country in territorial waters or on the high seas on the basis of claims therein not recognized by the United States, and a fine, license fee, registration fee or any other direct charge must be paid in order to secure the prompt release of vessel and crew, the owner shall be reimbursed by the Secretary of the Treasury and the amount of such reimbursement notified to that country. The Secretary of State shall take such action as he deems appropriate to make and collect claims against such foreign country for the amounts so reimbursed and payments so made. If a foreign country fails or refuses to make payment in full within 120 days after such notification, the Secretary of State shall transfer an equal amount from any Foreign Assistance Act funds appropriated by Congress and programed for the current fiscal year for that country to a special Fishermen's Protective Act account. The sanctions outlined in the Fishermen's Protective Act may be waived if the President certifies to Congress that it is in the national interest.

The Naval Vessel Loan Extension Act—Argentina, Brazil, Chile Colombia, Federal Republic of Germany, Greece, Republic of Korea, Portugal, Spain and Peru—Public Law 90-224, 81 Stat. 729 (December 26, 1967) states that any agreement for a new loan or extension of a loan agreement shall be subject to the condition that the loan will be immediately terminated upon a finding by the President that the country with which such agreement was made has seized any U.S. fising vessel for fishing activities in international waters.

THIRD COUNTRY AID

Mr. PASSMAN. Could you tell us what Latin American countries are presently purchasing weapons from nations other than the United States and in what amounts?

Admiral PEET. The most recent year for which we have data is fiscal year 1972. The data is as follows:

Third country sales to Latin America by purchaser (fiscal year 1972)

	Millions
_____	$0.5
_____	67.0
_____	8.0
_____	6.5
_____	3.6
_____	194.3
Total	279.9

Mr. PASSMAN. Which nations are presently supplying the major volume of defense business to Latin America at this time?

Admiral PEET. In the last year for which we have data, fiscal year 1972, the suppliers were Belgium, Canada, France, Spain, Great Britain and the United States, with France, the United States, Canada and Great Britain being the major suppliers, in that order.

The amounts of sales were as follows:

	Millions $
Belgium	
Canada	
France	
Spain	
Great Britain	
United States	

UNITED STATES SUSPENSION OF AID

Mr. PASSMAN. At the present time, is U.S. military aid suspended to any of the Latin American countries?

Admirla PEET. Yes, foreign military sales activities and grant assistance have been suspended to Ecuador because of seizures of U.S. fishing boats outside the 12-mile limit, the expulsion of our U.S. military group and denouncing the military assistance bilateral agreement and their ineligibility because of section 620(q) of the Foreign Assistance Act.

Mr. PASSMAN. I note this year that apparently there is no military aid scheduled to be provided to Ecuador in fiscal year 1974. Could you please tell the committee if this is the result of the suspension of aid to Ecuador because of the seizure of U.S. fishing boats?

Admiral PEET. In accordance with section 3(b) of the Foreign Assistance Act, foreign military sales were suspended resulting from Ecuador's seizures of U.S. fishing boats. Ecuador's reaction to this suspension was to request the U.S. military group to leave and to terminate the military assistance agreement which then resulted in our suspension of grant programs.

U.S. ARM SALES

Mr. PASSMAN. I have read several articles which indicate that Europe is fast becoming the arms supplier for Latin America. Many people have argued that the United States should not supply arms to Latin America because it will lead to an arms race and divert their efforts from economic development. I guess these articles prove the point that if the United States does not sell arms to Latin American countries they will buy the equipment from other sources. Will you please comment?

Admiral PEET. Our experience has been that whenever the United States has been unable to respond to requests for sale of arms to Latin America, whether for reasons of legislative restraints, lack of available credit or policy determinations, the country in question has been able to obtain the equivalent weapons from a third country.

Mr. PASSMAN. By not making these sales, is it not true that the United States not only loses the sales transaction which is usually paid back in dollars at the going interest rate, but American industry loses the business and the U.S. Treasury loses additional tax dollars from the business loss?

Admiral PEET. The sales credits extended by the U.S. Government are always paid back in dollars and usually at the going interest rate. The loss of sales is a direct loss of profits to U.S. business in most cases, and any loss of profits to U.S. business results in a loss of tax dollars to the Treasury. In addition, we have a balance-of-payments loss because repayments on loans are made in dollars which might otherwise not be repatriated.

TERMS OF SALES

Mr. PASSMAN. Could you please tell the committee what the terms of the sales are which are made from other countries to Latin America?

Admiral PEET. We do not have complete information on terms of sales by third countries. However, we have information about certain sales in which ——— concerns reportedly offered an interest rate of 3 percent on a portion of the sale with the balance at 7 percent, thus reducing the effective rate. The ——— is reportedly offering a 3-percent interest rate with a 20-year repayment period. We believe that the terms of sale by the United Kingdom and Canada are similar to ours.

ECONOMY OF FORCE AREA

Mr. PASSMAN. On page 55, you use the term "economy of force area," relating to Latin America. Could you please tell the committee what you mean by this terminology?

Admiral PEET. In military parlance, an "economy of force area" suggests one in which we attempt to accomplish our purposes through use or application of only a small or modest level of resources, while concentrating our principal forces or efforts elsewhere.

NATURAL RESOURCES

Mr. PASSMAN. You also indicate that military assistance will be used to maintain access to important natural resources. Could you please tell the committee what natural resources you have in mind here?

Admiral PEET. Latin America has supplied a number of important natural resources to the United States, including petroleum, bauxite, iron ore, antimony, cadmium, copper, tin, zinc, lead, and bismuth. The U.S. Government seeks to establish conditions throughout the Latin American region which will provide long-term access to these currently identified and other potential deposits of natural resources. One element of the effort to maintain favorable relations involves the provision of military assistance.

U.S. MILITARY BASES

Mr. PASSMAN. Would you please tell the committee where the U.S. military bases and facilities are located which are considered to be essential to U.S. security efforts?

Admiral PEET. The U.S. military base structure in the Caribbean area meets a variety of security needs. Functionally, these facilities fall into the following categories:

Antisubmarine warfare (ASW).

Panama Canal defense.

———.

Strategic communications.

Scientific, technological, and navigation.

Headquarters, training, and support.

First, antisubmarine warfare. ———.

The tactical and support bases for antisubmarine warfare are located at U.S. Naval Station Roosevelt Roads, P.R., an U.S. Naval Base, Guantanamo, Cuba.

Ramey AFB, P.R., and Howard AFB, C.Z., could also support the ASW effort. The United States also has ASW air patrol base rights in Surinam, Curacao and Aruba.

The bases on which we rely for defense of the Panama Canal are located as follows:

U.S. Naval Base, Guantanamo, Cuba.
Albrook Air Force Base, C.Z.
Howard Air Force Base, C.Z.
Army air defense facilities, Canal Zone.
Canal Zone Army bases.

———.

The facilities providing strategic communications are located as follows:

———.

The facilities supporting the scientific, technological, and navigation efforts are located as follows:

Atlantic Undersea Test and Evaluation Center (AUTEC), Andros Island, Bahamas and British Virgin Islands.
USAF Eastern Test Range (ETR), with stations at: Grand Bahama, Bahama Islands, Grand Turk, and Antigua.
U.S. Army Tropical Test Center, Canal Zone.
USAF Jungle Survival School, Canal Zone.
U.S. Coast Guard facilities at: San Salvador, Bahama Islands; South Caicos; Cape San Juan, Puerto Rico; Charlotte Amalie, U.S. Virgin Islands.
U.S. Navy OMEGA Station, Trinidad.

The support bases which provide control headquarters, housing, training and service support for the operating forces are located as follows:

Ramey Air Force Base, P.R.
U.S. Naval Station, Guantanamo, Cuba.
U.S. Naval Station, Roosevelt Roads, P.R.
Howard Air Force Base, C.Z.
Canal Zone army bases.
Jungle Operations Training Center, Fort Sherman, C.Z.
Numerous Reserve training centers located in Puerto Rico.

PURPOSE OF AID

Mr. PASSMAN. You state on page 55 that rising nationalism, violent extremism, and political confrontations continue to create problems in the hemisphere. You don't expect that the United States will ever correct all these problems by providing assistance, do you?

Admiral PEET. The United States cannot solve the problems of the Latin American countries; rather, that initiatives will need to come from within the countries themselves. However, the United States can help in this effort by providing assistance in a spirit of partnership and cooperation.

Mr. PASSMAN. You also state that security assistance helps to maintain the United States as the predominant foreign military influence in Latin America. Do you think the United States still maintains this position?

Admiral PEET. In general, we believe this condition still obtains, although it has been eroded in recent years. It is in this regard that we are concerned over the existing large body of legislation which places restrictions and limitations on the provision of military security assistance to the Latin American countries.

INSURGENCY

Mr. PASSMAN. Could you tell the committee what countries presently have an active insurgency movement within their borders?

Admiral PEET. Insurgency persists in a number of Latin American countries but at a relatively low level. In Colombia, small insurgent groups continue active, with some increase in their level of activity being noted in early 1973. In Venezuela, increased guerrilla activity in late 1972 and early 1973 led to successful government counteraction, seriously damaging future guerrilla capability. In Guatemala, the Cuban-supported rebel armed forces, in the past year and a half, has engaged in small-scale activity, including urban terrorism. In Mexico, a variety of small guerrilla groups have been able to elude government forces, but they are only sporadically active. Small guerrilla bands also exist in Brazil and in Bolivia, but they are relatively inactive. In Argentina, Chile, and other countries, militants have concentrated on terrorist activity rather than small guerrilla operations. The insurgent scene in Uruguay has been relatively quiet since the security forces cracked down on the Tupamaros last year. In none of these countries do the insurgents pose a serious threat to the governments concerned, principally because of their lack of significant support and the improved capabilities of the security forces in countering the insurgent efforts. Nevertheless, insurgent groups remain capable of disruptive activity.

MOBILE TRAINING TEAM

Mr. PASSMAN. Would you please tell the committee what a mobile training team is and how it functions?

Admiral PEET. Mobile training teams are composed of military department personnel on temporary duty for the purpose of training foreign personnel. They are provided for a specific training requirement in-country which is beyond the capability of the MAAG or military group and for which it is more expeditious, practical, and economical to bring the training to the country. These teams are, at times, dispatched to provide training associated with the countries receipt of equipment and to determine country training needs. In all cases, these teams are designed to train instructors in-country; thus, promoting in-country self-sufficiency.

U.S. INFLUENCE

Mr. PASSMAN. You state that the United States is still able to exert considerable influence in Latin America. Would you please tell the committee what type of influence we are able to exert?

Admiral PEET. With regard to our military relations, the Latin American military and their U.S. counterparts have worked successfully together on matters of mutual security for many years. This professional relationship has created avenues for communication and a degree of mutual understanding which we consider to be a continuing, positive factor in our overall relations with the countries of this region.

HAITI

Mr. PASSMAN. According to a newspaper article in April, it was noted that the country of Haiti had been put back on the eligible list to receive U.S. foreign military credit sales and credit programs. Could you please tell the committee if there are any plans at the present time to supply military equipment to Haiti?

Admiral PEET. Haiti has at various times requested U.S. Government assistance, both technical and materiel. Haiti was included on the list to permit flexibility in reviewing requests from the Haitian Government on a case-by-case basis. ———.

ARGENTINA

Mr. PASSMAN. On page 58, in connection with the security assistance program for Argentina, you state that the Argentine armed forces will act to preserve political stability. Does this mean that the armed forces act as a police force to hold down any opposition government?

Admiral PEET. The Argentine armed forces, as well as many of their counterparts in South America, envision their security role in a very broad way. If they perceive a threat to the country's political institutions or to their own military institutions, which they view as a vital safeguard of national welfare, they may move to oust the government in power, replacing it themselves or with another government. This is a self-perception that is of long standing and deeply ingrained. It is a view held also by many civilians. The military in Argentina, as elsewhere, is often called in to support police when a threat to public order arises. This does not mean, however, that the military would act as a repressive "police force" to quiet all opposition to whatever government is in power.

For some time the preceding administration, under a military junta headed by General Lanusse, was committed to returning the country to civilian rule. This was accomplished through the March 1973, elections, which led to the inauguration of Peronist Hector Campora on May 25. At the same time, however, the army, police, and gendarmerie have increased their efforts against terrorist groups. These insurgent organizations hope eventually to overthrow the government, but persistent government actions have prevented the terrorist groups from becoming significant threats.

JET AIRCRAFT

Mr. PASSMAN. You also indicate that some of the security assistance program aims are to be responsive to requests for purchase of modern jet aircraft. Would it be true to say that if we don't supply jet aircraft to Argentina she will purchase them from European sources?

Admiral PEET Yes. Argentina has made a deliberate decision in favor of gradual modernization program over a period of years and has clearly indicated a preference for U.S. equipment in achieving their program objectives. Nevertheless, past legislative restraints and

reduced credit authorizations on our foreign military sales programs have impacted on our ability to respond favorably to Argentina's requests. This has resulted in their armed forces turning increasingly to third countries as a source of weapons to support their modernization programs. Until the United States demonstrates flexibility in its responses to requests, the trend toward European purchases in Argentina, as well as the rest of Latin America, is likely to continue.

THIRD COUNTRY AID

Mr. PASSMAN. Could you please tell the committee what third countries are supplying aid to Argentina, and in what amounts, and on what terms?

Admiral PEET. Currently, the United Kingdom, France, and West Germany are to deliver some $135 million worth of military equipment covered under prior contracts. The UK is to deliver ——— transport aircraft and ——— destroyers, with a total value of about ———. France is to deliver ——— jet fighter aircraft and radar and air defense electronic equipment, with a total value of about ———. West Germany is to deliver ———, valued at about $———. The only information on terms available covers the French aircraft contract, ———.

BOLIVIA

Mr. PASSMAN. On page 59, in connection with the security assistance program for Bolivia, you state that in fiscal year 1974, Bolivia faces the threat of internal subversion supported by external sources. Would you please explain this situation to the committee?

Admiral PEET. ———.

THIRD COUNTRY AID

Mr. PASSMAN. Is Bolivia receiving any assistance from third countries?

Admiral PEET. Canada, Switzerland, and Brazil are scheduled to deliver some $6 million worth of military equipment to Bolivia in 1973. Bolivia purchased ——— trainer aircraft valued at about ——— from Canada; ——— armored reconnaissance vehicles and 10,000 rifles with an estimated total value of ——— from Switzerland, and is to receive ——— trainer aircraft with an estimated value of ——— from Brazil as a gift. No information on terms is available but Bolivian purchases are generally small cash transactions.

SHIPS AND SPARE PARTS

Mr. PASSMAN. Would you please explain the $270,000 proposal for fiscal year 1974 for ships and spare parts?

Admiral PEET. Bolivia is developing a river patrol and transportation force in their remote northern region. Specifically, the proposed $270,000 will provide for in-country overhaul and modification of two steel hull vessels to be used for transportation on the major rivers; ancillary equipment necessary to assist Bolivia in outfitting the in-country construction of 5 45-foot boats; repair and rehabilitation

of a river patrol craft; and spare parts for existing equipment in the Bolivian Navy inventory.

BRAZIL

Mr. PASSMAN. On page 60 in connection with the security assistance program for Brazil, you indicate that Brazil has a dynamic economy. If this is the case, why do you find it necessary to provide $800,000 for training for Brazilian armed forces?

Admiral PEET. A military dialogue, rapport, and influence must be built and maintained between the friendly and allied nations and the United States if we are to avoid misunderstandings and, in an emergency, work together. Also we know that effective United States relationships with friendly and allied military forces serve to diminish the possibility of undesirable incursions by other military elements into those countries.

Training's utility, effect and influence, in terms of United States objectives, warrant its continuation on a grant basis. In the case of Brazil, the training costs to the United States are reduced. Brazil does not receive per diem from the United States for their personnel attending formal courses of instruction and, in accordance with section 514 of the Foreign Assistance Act, they deposit 10 percent of the cost of the training provided.

Mr. PASSMAN. Don't you think that Brazil would be able to pay this sum on her own?

Admiral PEET. Brazil would probably be able to pay; however, if she were forced, it would probably result in Brazil utilizing less training, accompanying loss of influence and a possible turn to third countries for some of her training needs.

THIRD COUNTRY AID

Mr. PASSMAN. Would you please tell the committee what third countries are providing aid to Brazil, in what amounts, and on what terms?

Admiral PEET. During the coming 6 years, the United Kingdom, France, Italy, and West Germany are scheduled to deliver some $600 million worth of military equipment to Brazil under previous contracts. No new 1973 contracts are known to have been concluded.

———.

CHILE

Mr. PASSMAN. On page 61, in connection with the security assistance program for Chile, I note that you plan to provide $1 million for training in fiscal year 1974 as an outright grant. Why are we providing grant aid to Chile when Chile has nationalized such a large amount of United States property?

Admiral PEET. The military in Chile are not politically oriented.

SALES PROGRAM

Mr. PASSMAN. You also indicate that you are going to provide $10 million in foreign military credit sales. Are these sales made at going interest rates and to be repaid in 10 years?

Admiral PEET. We expect that the credit will be at the cost of money to the U.S. Treasury, with repayment in 8 years. These are our usual terms.

NATIONALIZATION

Mr. PASSMAN. Has any progress been made in negotiations with Chile concerning the nationalization of United States property in that country?

Admiral PEET. The bilateral discussions with the Government of Chile have been in progress since December 1972, and my understanding is that the process is continuing. The Department of State heads the United States delegation at these talks and I would defer to that department for further information on this matter.

THIRD COUNTRY AID

Mr. PASSMAN. Could you please tell the committee what third countries are providing assistance to Chile, in what amounts, and on what terms?

Admiral PEET. The United Kingdom and France are scheduled to deliver some $128 million worth of military equipment to Chile under prior contracts. ———.

The contract terms are unknown.

———.

During 1973, Chile contracted for another $11 million worth of equipment from West Germany, Belgium, Italy, Spain, and France. The 1973 purchases all appear to be cash on very short-term credit sales.

COLOMBIA

Mr. PASSMAN. On page 62, in connection with the security assistance program for Colombia, you state that splintered insurgency threat remains in the country and the armed forces have little prospect of eliminating this threat. There seems to be a rather hopeless outlook for this country, doesn't it?

Admiral PEET. I would by no means call the outlook for Colombia hopeless. It is just that insurgency has persisted for decades in the country, and the presently active guerrilla bands generally remain in rugged mountainous and jungle pockets, in relatively isolated areas of the country. These small areas are generally under guerrilla control, and banditry and guerrilla activity in these areas is almost a way of life. Despite the fact that the Colombian security forces are generally well trained and engage in counterinsurgency operations, and despite the fact that the insurgents consist of various relatively small bands, the likelihood that insurgency can be totally eliminated is very small. This does not mean that the insurgents now are or in the foreseeable future will be a serious threat to the Colombian Government.

Mr. PASSMAN. Does that mean that the United States is going to have to supply security assistance to this country forever?

Admiral PEET. The United States terminated grant material assistance to Colombia in 1970. We currently provide only grant training assistance which is expected to continue for the foreseeable future. Colombia also purchases modest amounts of equipment under FMS

cash and credit sales programs, which also can be expected to continue, subject to legislative authorization and appropriation of credit funds.

THIRD COUNTRY AID

Mr. PASSMAN. What third countries are providing assistance to Colombia, in what amounts and on what terms?

Admiral PEET. France, West Germany, and Italy are scheduled, under prior contracts, to deliver some $53 million worth of military equipment to Colombia. France delivered ——— jet fighter aircraft ——— and is to deliver ——— more. The value of these deliveries is about ———. The French contract, with a value of ———. West Germany is to deliver ——— submarines, valued at ———, terms are unknown. Italy is to deliver ———, valued at ———, terms are unknown.

DOMINICAN REPUBLIC

Mr. PASSMAN. On page 63, in connection with the security assistance program for the Dominican Republic, you state the armed forces would probably be capable of maintaining internal security in the absence of a large amount of outside assistance to the insurgents. What internal security problem does the Dominican Republic have and from what source would be the assistance from outside?

Admiral PEET. The greatest security threat facing the Dominican Republic is the hit-and-run terrorist activity, most likely in the urban areas. The most active group currently is the Dominican Popular Movement (MPD) and a faction of this organization called the "Plinio Group." ———.

EL SALVADOR

Mr. PASSMAN. On page 64, in connection with the security assistance program for El Salvador, I note this year you are starting a materiel assistance program to this country. Could you please tell the committee why you find it necessary to reintroduce a military materiel program to this country?

Admiral PEET. Although our materiel programs were suspended after the 1969 outbreak of hostilities with Honduras, undelivered balances of nonlethal equipment from past programs were allowed beginning in 1970. The armed forces want to modernize and become more professional. We think that under current conditions a small program of the kind proposed contributes to a helpful and cooperative relationship between U.S. representatives and key members of their armed forces. ———.

Mr. PASSMAN. In the justification you state that relations with Honduras remain strained because of the 1969 war. Don't you think that by supplying these two countries with material assistance, they might feel that they have the strength to renew war with each other?

Admiral PEET. ———. Our efforts are designed to reduce the likelihood of conflict between the two countries.

GUATEMALA

Mr. PASSMAN. On page 65, in connection with the security assistance program for Guatemala, you indicate that the internal disorder is

externally supported. Could you please tell the committee the source of this external support?

Admiral PEET. ———.

HONDURAS

Mr. PASSMAN. On page 66, in connection with the security assistance program for Honduras, you state that the grant materiel assistance program is subject to final review and approval. Would you please tell the committee who has the final say so on this program?

Admiral PEET. As with other military security assistance programs, the Secretary of State has final responsibility for determination of program recipients and levels.

MEXICO

Mr. PASSMAN. On page 67, in connection with the security assistance program for Mexico, I note that you plan to program $140,000 for training in fiscal year 1974. Don't you think the Mexican Government could pay for this training since it's such a modest amount?

Admiral PEET. Perhaps, however, this minimal program sustains the historic relationship between the Mexican military and the U.S. Military Establishment.

NICARAGUA

Mr. PASSMAN. On page 68, in connection with the security assistance program for Nicaragua, I note that the excess defense articles program has jumped from $22,000 in fiscal year 1972 to a program of $1,500,000 in fiscal year 1974. Would you please tell the committee why there is a need for such a large increase in this program.

Admiral PEET. Nicaragua's activity in the excess defense articles program has increased since the Managua earthquake disaster. Equipment being sought primarily is engineering equipment for their engineering units directly involved in the rebuilding process.

PANAMA

Mr. PASSMAN. On page 69, in connection with the security assistance program for Panama, I note you plan to provide $230,000 for military assistance in fiscal year 1974. Could you please tell the committee what type of equipment will be provided from these funds?

Admiral PEET. This program will provide a few vehicles, some aircraft engine overhauls and minor pieces of maintenance equipment; however, most of the program will provide spare parts for items already in their inventory.

Mr. PASSMAN. Has relationships between the U.S. Government and the Panamanian Government improved any in the past year or so?

Admiral PEET. I would say that our relations with Panama have not improved. The recent meeting of the U.N. Security Council in Panama City during the period March 15–21, caused a dip in our bilateral relations, but it appears that our differences are normalizing. This doesn't mean that all is well between our two countries.

———.

THIRD COUNTRY AID

Mr. PASSMAN. Could you please tell the committee what third countries are providing assistance to Panama and in what amounts?

Admiral PEET. Panama has no pending deliveries of major military equipment. In 1973, the country purchased ———.

PARAGUAY

Mr. PASSMAN. On page 70, in connection with the security assistance program for Paraguay, I note that the total security assistance program has jumped from $700,000 in fiscal year 1973 to $2.4 million in fiscal year 1974. Could you please tell the committee the need for this very large increase?

Admiral PEET. Since the only appropriations that were provided in fiscal year 1973 were those reduced levels under "Continuing resolution authority" only $450,000 of the originally proposed program could be funded. This, coupled with the requirement to provide engineer equipment to replace worn out equipment, has increased the total security assistance program for Paraguay. It should be noted that the bulk of this increase results from an increase to the excess defense articles program rather than funded programs.

PERU

Mr. PASSMAN. On page 71, in connection with the security assistance program for Peru, you state that Peru has particular strategic importance for the United States due to its potential influence that derives from its unique form of reformist government and programs. Would you please explain this statement to the committee?

Admiral PEET. The present military government came to power in a bloodless coup in 1968. The government's stated aims center on the restructuring of Peru's basic institutions so that all citizens will have a voice in shaping major political, economic and social programs. The government claims to be neither captialist nor Communist and is nationalist and moderately leftist. It has adopted a neutralist stance in its dealings with the major powers and therefore its success will directly affect U.S. relationships with other Latin American nations who are watching the "Peruvian model" carefully as a potential solution to their own problems.

Mr. PASSMAN. You also state that in the event that existing restraints are lifted, the fiscal year 1974 program is designed to respond to a stated Peruvian need for continued force modernization. Could you please tell the committee what you mean by "in the event that existing restraints are lifted"?

Admiral PEET. The lifting of existing restraints was referring to the President's authority to waive the provision of the Pelly amendment, section 3(b), of the Foreign Military Sales Act. This waiver was made by the President in May of this year, after publication of the "Congressional Presentation Document."

THIRD COUNTRY AID

Mr. PASSMAN. Could you please tell the committee what third countries are providing assistance to Peru, in what amounts, and on what terms?

Admiral PEET. The United Kingdom, West Germany, Argentina, and France are scheduled to deliver some $67 million worth of military equipment under prior contracts. The United Kingdom is to deliver ——— reequipped destroyers, valued at ———. Terms call for payment over a ———. West Germany is to deliver ——— submarines valued at ———. Argentina is delivering about ——— worth of truck-mounted 106-millimeter recoilless rifles and miscellaneous trucks. The original contract worth ———, half of which was delivered in 1972, called for an ——— interest. France is to deliver ——— jet fighter aircraft valued at ——— terms are unknown. Thus far in 1973, Peru has contracted for another $16 million worth of equipment from the Netherlands, U.S.S.R., Canada, Yugoslavia, and Spain. Terms of the 1973 purchases are unknown.

URUGUAY

Mr. PASSMAN. On page 72, in connection with the security assistance program for Uruguay, I note you indicate that the total security assistance program has increased from $1.9 million in fiscal year 1973 to $6.4 million in fiscal year 1974. Could you please tell the committee the need for this large increase?

Admiral PEET. Uruguay's increase primarily represents possible acquisition of excess S–2E patrol aircraft as well as providing for acquisition of equipment through foreign military credit sales. Sales credits could not be provided in fiscal year 1973 within the available funds appropriated under continuing resolution authority.

Mr. PASSMAN. Why is this very small nation considered important to U.S. security efforts?

Admiral PEET. Uruguay has faced a major internal security threat posed by Tupamaro terrorism since 1968. Failure to aid the country in containing this threat to stability might well contribute to an increase in terrorism and consequent political instability elsewhere in the hemisphere.

VENEZUELA

Mr. PASSMAN. On page 73, in connection with the security assistance program for Venezuela, I note you indicate that access to petroleum gives Venezuela special strategic interest for the United States. Could you tell the committee how much oil the United States imports from Venezuela and is the Venezuelan Government pro-United States at the present time?

Admiral PEET. Crude oil and refined products imported directly from Venezuela amount to approximately 1.5 million barrels per day. Another 1 million barrels per day of refined products is imported from Caribbean and Canadian refineries using Venezuelan crude. In other words, over 60 percent of Venezuelan production is directly or indirectly imported into the United States.

The Venezuelan Government remains pro-United States despite several recent foreign policy initiatives which are irritants in bilateral relations. ———.

Mr. PASSMAN. You also indicate that the security assistance programs are aimed at permitting continued implementation of a U.S. policy of "even-handedness" between Venezuela and Colombia. Could you please tell the committee what this policy of even-handedness is?

Admiral PEET. The policy of "even-handedness" means that military equipment of the same type and quantities will be offered to each country for purchase from the United States.

THIRD COUNTRY AID

Mr. PASSMAN. Would you please tell the committee what third countries are providing assistance to Venezuela, in what amounts, and on what terms?

Admiral PEET. France, West Germany, the United Kingdom, Canada, and Italy are scheduled to deliver military equipment valued at $185 million under prior contracts.

FOREIGN MILITARY CREDIT SALES

Mr. PASSMAN. As we think in terms of military sales, I have been an enthusiastic supporter of this program because people are going to buy military equipment, not just in Latin America but everywhere. There is a big profit in it. We are either going to sell it or our competition is going to sell it. So if it's for cash or on short terms, I wouldn't know why we shouldn't stay in the field until we can finally cool the world down to where people are going to move out of the area of trying to prepare for war.

Your 1974 estimate for military credit sales is $525 million. Is that correct?

Admiral PEET. Yes, sir.

Mr. PASSMAN. The committee then is considering the appropriation request for $525 million for fiscal 1974, which would be used to provide a total credit sales program for 1974 in the aggregate of $760 million. Is that correct?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Admiral, what are the average terms on military credit sales?

Admiral PEET. The average over a period of time is approximately 6 percent.

Mr. PASSMAN. You are talking about 6 percent interest. Do you charge the going rate at the time you approve the sale?

Admiral PEET. Yes, sir.

Mr. PASSMAN. I am talking now about the terms of the sale. What is the average?

Admiral PEET. Eight to ten years.

Mr. PASSMAN. Don't you have some on 2 and 3 years?

Admiral PEET. I don't believe so. I can give you a list of them.
Mr. PASSMAN. All right.
[The information follows:]

FISCAL YEAR 1973 CREDITS—TERMS OF SALE

Country	Amount of loan	Repayment period (years)	Moratorium (years)
Argentina	11.5	8	
Brazil	15.0	8	
Chile	6.5	8	
Chile	5.9	8	2
China	10.7	10	
China	3.0	8

Turkey	20.0	10	2
Venezuela	7.6	8	

[1] 50 percent DOD direct credit—balance under DOD guaranty.

CASH AND CREDIT SALES

Mr. PASSMAN. We are dealing now with credit sales of $525 million. What are your estimated cash sales in military equipment for fiscal 1974?

Admiral PEET. $3.9 billion.

Mr. PASSMAN. In round figures?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Your cash sales will be in the neighborhood of $4 billion?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Whereas your credit sales would be in the neighborhood of a half a million dollars.

Admiral PEET. We are asking $525 million for NOA credit. Total credit sales will be more than that. The estimate is $760 million.

Mr. PASSMAN. If you use it on the basis of your program, it simply means your cash sales will be five times the credit sales.

Admiral PEET. Yes, sir.

GOOD REPAYMENT RECORD

Mr. PASSMAN. What has been your experience of repayment on military credit sales?

Admiral PEET. Outstanding.

Mr. PASSMAN. Do you have any that are delinquent at this time?

Admiral PEET. There are four in arrears. They amount to about $2 million at most out of a total of billions of dollars. Some of those are debatable.

Mr. PASSMAN. What has been the total military sales?

Admiral PEET. FMS credit sales over the years total is $3.1 billion, through fiscal year 1972.

Mr. PASSMAN. Over $3 billion. Then less than one-half of 1 percent are in arrears at this time. That is a commendable record, gentlemen, regardless of what you are selling.

Mr. LONG. What about rescheduling? Are some of these loans not in arrears because they have been rescheduled?

Admiral PEET. There are a few. We can provide that for you.

[The information follows:]

Five Government of Chile credit agreements executed during the period 1966 through 1969, with an outstanding balance of $12,095,254 as of December 31, 1971, were rescheduled. The rescheduling for each individual credit was done within the statutory limitation of 10 years between the initial date of loan utilization and the final date of repayment.

Following are the consolidated loan repayment schedules for the five agreements:

	Original principal repayment schedule	Revised principal repayment schedule
Year:		
1972	$2,766,075	[1] $333,315
1973	2,471,672	2,243,600
1974	2,471,672	2,471,670
1975	1,448,335	1,360,417
1976	1,375,000	1,360,417
1977	1,375,000	1,360,417
1978	187,500	* 1,360,418
1979		1,323,750
1980		281,250

[1] In addition to the revised principal repayment of $333,315 for 1972, interest due in the amount of $528,314 was also paid. Interest would continue to be computed in accordance with the terms of the basic agreement.

Mr. PASSMAN. But you will throw them in the category of being past due, would you not? They would be in that category until you have refinanced and added the interest.

Admiral PEET. I think there is a technical point involved. Chile was rescheduled.

Mr. PASSMAN. Any others?

Mr. LONG. I think the full amount of rescheduling and the reasons why and everything ought to be put in the record. To me that is the same as——

Admiral PEET. It's a very minor amount.

Mr. PASSMAN. In Chile, you rescheduled what amount?

Admiral PEET. I don't have the details of the rescheduling.

Mr. PASSMAN. You used the word "marvelous" in describing the repayment record.

Admiral PEET. Yes, sir. In fact, I would say it's outstanding.

Mr. PASSMAN. I think it's outstanding, too. As far as you know, Chile is the only nation you have rescheduled?

Admiral PEET. Chile is the only one we have rescheduled. The others that are in arrears are Ecuador, Paraguay, and Tunisia.

Mr. PASSMAN. How much was Chile, this one nation?

Admiral PEET. Chile had the largest arrearage—$1.3 million. The oldest due date is as recent as January 1973. They only recently became delinquent. As Dr. Long points out, there was some rescheduling in the case of Chile.

Mr. PASSMAN. You said at one point $3 million, Admiral.

Admiral PEET. Yes, sir.

Mr. PASSMAN. Still that is nothing compared to the total sales.

Mr. LONG. Would the chairman yield?

Mr. PASSMAN. Not until I make the record, Doctor. Then I will.

Admiral PEET. May I read this statement:

As a result of prior negotiations on April of 1973, the Department of Defense and the Government of Chile executed five amendments to provide for a rescheduling of payments for the fiscal year 1966 through 1969 credit arrangements.

MILITARY CREDIT SALES OUTSTANDING

Mr. PASSMAN. What is your outstanding in military credit sales? By that I mean accounts receivable.

Mr. VON MARBOD. Mr. Chairman, we estimated that the balance due against credit sales will be $1,791,300,000 as of June 30, 1973.

Mr. PASSMAN. That total amount in arrears is a very small percentage of this total. If all the funds in arrears went down the drain tomorrow, it represents a small percentage of the total repayments and cash sales.

Admiral PEET. Yes, sir, the amount in arrears does.

Mr. PASSMAN. I think that is the most marvelous record that has ever been read into the record. I don't see why if we are going to have military assistance programs, we shouldn't have it on a term basis. When people are willing to buy it that way, until this thing can be cooled off sufficiently and until people start thinking about something else, I wouldn't know why we shouldn't stay in this business.

Admiral PEET. The policy direction given me is to move that that way.

Mr. PASSMAN. I do appreciate it. I believe you will get another policy direction that may be that all the military, with the exception of possibly training, will go on a loan basis. It makes me feel better to know we are moving in a direction of a business operation and the funds will come back into the U.S. Treasury.

PROPORTION OF REPAYMENTS TO LOANS

Mr. LONG. Aren't we still lending more to these countries each year than we are getting back from them in principal and interest?

Admiral PEET. Yes, sir. I will give you the accurate figure.

[The information follows:]

Estimated fiscal year 1973 collections from repayments against loans financed from the FMS credit accounts were:

	Collected by United States against direct loans	Collected by private banks against guaranty loans	Total
Principal	$197.1	$24.9	$222.0
Interest	56.6	8.9	65.5
Total	253.7	33.8	287.5

Note: Fiscal year 1973 financing of new Foreign Military Sales credit loans was:

DOD direct loans	$331.8
Guaranteed loans	218.2
Total	550.0

Mr. LONG. What are we asking for?

Admiral PEET. We are asking $525 million in new obligational authority for credit this year.

Mr. LONG. So more money is going in that direction than is coming back in this direction?

Admiral PEET. Yes, sir.

Mr. LONG. Is there any reason then why any country ought to default at this point since they are still getting more from us than they are paying back to us in principal and interest?

Admiral PEET. You made that point the other day. I have a hard time following it, Dr. Long, because it differs country by country.

Mr. LONG. Is there any country from which we are getting back more in principal and interest in any year than we are giving to them?

Admiral PEET. I believe there are a number of them.

Mr. LONG. Would you put that down in the record?

Admiral PEET. Yes, sir.

[The information follows:]

STATUS OF FOREIGN MILITARY SALES CREDIT PROGRAMS FOR COUNTRIES NOT PROPOSED FOR CREDIT FINANCING IN FISCAL YEAR 1974

1. There are several countries which have been extended FMS direct or guarantee credits during fiscal year 1950–72, but do not have proposed FMS credit program for fiscal year 1974. Some of these have paid off previous loans completely; others are in process of completing loan payments. All shown below are in current status.

2. Following are such countries which have completed loan payments fully for credit utilization to date.

Country:	*Principal repayment*
Australia	[1] $111.3
Austria	[2] 15.7
Belgium	7.8
Japan	34.8
Mexico	4.3
Netherlands	2.2
New Zealand	1.5
Nigeria	.3
NATO Maintenance Supply Services Agency	16.3
Spain	2.3
Sudan	1.5
Total	198.0

[1] Excludes credit projected for cancellation or not yet utilized.
[2] $2.5 million has not yet been deposited in FMS credit accounts, but is deposited in the U.S. Treasury.

3. Following are such countries which have not completed loan repayments, but which are current in repayments:

Country	Principal repayment (June 30, 1973)	Balance owed (June 30, 1973)
India	$8.9	[1] $1.8
Iran	344.3	159.7
Italy	.3	*
Jordan	12.2	56.8
Liberia	.9	2.2
Pakistan	5.9	4.1
Singapore	14.4	4.6
Sri Lanka	.2	.1
Total	387.1	229.3

[1] Excludes $17,000,000 of credit availability which is under review.
* Less than $50,000.

4. In addition, France ($80.4 million) and Yugoslavia ($1.4 million) had offset agreements which were financed through FMS credit accounts and which are paid fully.

Mr. LONG. I want to know also whether you have scheduled for the future when these countries will find that their interest and principal repayments are much larger than any sum of money that we are currently scheduled to give them, so that the real crunch is going to come at that time?

Admiral PEET. Yes. We are attempting to work that up. You asked for it in a previous session.

[1] Project cancellation of credit availability.
[2] Utilization of $17,000,000 of credit availability is under review.
[3] Fiscal year totals do not add to overall total due to footnotes [1] and [2].

Mr. PASSMAN. Gentlemen, I am not in a position to say everybody is a crook. I am not going to take that position, to say that everybody is a crook. Under this interpretation, it would be a crook. It simply means as long as you give us more credit, we are going to pay you but we are going to stop paying when you stop giving us credit. What has been the total amount of the military sales credits since its inception? We need to know that at this point.

TOTAL CASH AND CREDIT SALES BALANCE

Mr. VON MARBOD. Mr. Chairman, from the inception, total military sales credits through fiscal year 1972 amount to $3,147,827,000.

Mr. YATES. When is the inception? What is the date?

Admiral PEET. From 1950 through 1972.

Mr. PASSMAN. Let's take the period. Let's take step two. What is the outstanding at this time?

Mr. VON MARBOD. Mr. Chairman, we project that, through fiscal 1973, the amount outstanding for direct FMS credit will be $1,791,300,000.

Mr. PASSMAN. You have actually sold on terms $3,147 million and the outstanding at this time is only $1,791 million. Actually, they have repaid $1,356 million, is that correct? I just want the record straight, that you can't say everybody is dishonest simply because they may buy on credit. Have I stated it correctly for the record, that your repayments almost equal the present outstanding balance?

Mr. VON MARBOD. That is correct, Mr. Chairman.

Mr. PASSMAN. That is it! These same nations, some of them have made cash sales, have they not?

Mr. VON MARBOD. Yes, they have made cash purchases.

Mr. PASSMAN. In addition to the credit sales?

Admiral PEET. Cash sales amount to a sizable figure.

Mr. PASSMAN. Let's get that now. You would have to add to that cash sales.

Mr. VON MARBOD. Cash sales, Mr. Chairman, for the period 1950 through 1972, are $14,998,717,000.

Mr. PASSMAN. That we have received in cash?

Admiral PEET. That is FMS cash sales.

Mr. PASSMAN. If you take the $14 billion plus $3 billion, that is $17 billion. So you have brought back in something like $17 billion or $18 billion in either cash or credits during this period to the same nations and your total outstanding against that aggregate is only $1,791 million.

Admiral PEET. FMS cash sales lead to a substantial volume of commercial sales.

Mr. LONG. How much economic aid have we given over this same period so that we have paid for these arms purchases out of another pocket? While we are getting money back from these countries, we are financing the repayments out of another pocket.

Mr. PASSMAN. Let's take that up with Dr. Hannah.

Mr. LONG. Let's put that in the record.

Mr. PASSMAN. You have brought in something like $17 billion in cash out of military credit sales and cash sales.

Admiral PEET. Yes, sir.

Mr. PASSMAN. The total outstanding against all of this operation, as of this time, is $1,791 million. Is that correct?

NO DEFAULTS ON CASH SALES

Mr. VON MARBOD. It's not entirely correct, Mr. Chairman. The $1,791 million is outstanding on the direct FMS credit. There are also accounts receivable against the $14.9 billion cash sales figure that I mentioned. They run in the neighborhood of $14 billion.

Mr. PASSMAN. Cash between nations is considered to run 18 months, is it not?

Mr. VON MARBOD. They pay under dependable undertakings at such times and in such amounts as we require when we bill them.

Mr. PASSMAN. And they are completely up to date on that account?

Mr. VON MARBOD. They are, indeed.

Mr. PASSMAN. Because it is a cash sale. When it's shipped, they receive the invoices and they pay it?

Mr. VON MARBOD. We have no defaults on the cash sales.

Mr. PASSMAN. Please, gentlemen, if we may, even though I am against certain military, I don't want to say everybody is dishonest. If I go down to the bank to borrow $1,000 for my business, I would hate for the president of the bank to say, "Well, you better let him have $2,000. If you don't, he won't pay the $1,000." Or, "Give him $3,000, or he won't pay the $2,000." I don't move on that basis at all. People are either honest or dishonest.

I think some of these nations have been dishonest, but I would certainly place them in the minority rather than in the majority.

There are no degrees of honesty.

Mr. LONG. I have known some big crooks and some little crooks.

Mr. PASSMAN. Could you place in the record a list of the countries that owe us the $1.7 billion?

Mr. VON MARBOD. Yes, Mr. Chairman.

[The information follows:]

PROJECTION OF FMS DIRECT CREDIT

REPAYMENTS BY FISCAL YEAR, EXCLUDING INTEREST

[Values in millions of dollars]

[1] Projected cancellation of credit availability.
[2] Utilization of $17,000,000 of credit availability is under review.

Fiscal year totals do not add to overall total due to footnotes [1] and [2].

Mr. PASSMAN. Could you give us a general idea at this time who some of these nations are?

Admiral PEET. Yes, sir.

Mr. VON MARBOD. China owes $117.4 million.

Mr. PASSMAN. I believe you are talking about the Republic of China?

Mr. VON MARBOD. Yes, sir.

Mr. PASSMAN. This is up to date?

Admiral PEET. Yes, as of June 30.

Mr. PASSMAN. This country is one country that gladly made us a loan in the amount of $20 million out of their foreign exchange account. I believe that they are making the greatest progress in the Republic of China of any nation on the face of the Earth. They have a 12-percent adjusted growth in their economy.

Mr. VON MARBOD. That is a statement of fact, Mr. Chairman. China is one nation that is paying us back more this year than we are extending in FMS credit.

Mr. PASSMAN. They are one of our best accounts.

What other nations?

Mr. VON MARBOD. The Government of Israel, as of June 30, 1973, will owe us $887.7 million against FMS direct credit. Iran——

Mr. PASSMAN. It's a wonder you hadn't gotten a lot of applause when you mentioned Israel because I haven't heard anybody in the Congress who is opposed to Israel.

Mr. LONG. I would like to ask some questions.

Mr. PASSMAN. It will be your time in a little while.

Mr. LONG. You just asked if there were any questions and I was about to talk.

Mr. PASSMAN. How about Iran?

Mr. VON MARBOD. Iran, $159.7 million.

Mr. PASSMAN. What has been their total history of payment since we started?

[The information follows:]

The total value of FMS credit (both direct and guaranty) extended to Iran was $504 million. This was authorized in credit agreements between fiscal year 1965 and fiscal year 1969 inclusive. As of June 30, 1973, Iran will have repaid $344.3 million of loan principal, thus leaving a balance of $159.7 million of remaining principal payments. The account is current.

Mr. PASSMAN. Next country?

Mr. VON MARBOD. Korea owes $56.2 million in FMS direct credit.

Mr. PASSMAN. They too are up to date?

Mr. VON MARBOD. Yes, sir; they are.

Mr. PASSMAN. They are one of our best customers now.

Mr. VON MARBOD. Yes. The next country is Argentina, $40.3 million.

Mr. PASSMAN. They are up to date?

Mr. VON MARBOD. Yes, sir.

Mr. PASSMAN. The next country?

Mr. VON MARBOD. Greece, $101.8 million; Turkey $35 million.

Mr. YATES. I have a question.

Mr. PASSMAN. I yield to Mr. Yates.

Mr. YATES. Admiral Peet, when I examined you about the military defense program, I was told that my examination of you was classified. Many of the things that I asked you about I find in the Washington Post today covering your testimony in the Senate yesterday. Why wasn't that classified?

Admiral PEET. Mr. Yates, it was. It was a closed hearing. I didn't reply to you that it was classified. I said the hearings are in executive session, and the record is considered classified until portions of it are declassified.

Mr. YATES. The chap who was sitting behind you on the sofa, you are with the State Department?

Mr. FLOYD. I am with the Defense Department.

Mr. YATES. He said it's all classified.

Admiral PEET. Until after the transcript is reviewed and then a good portion of it is declassified.

Mr. YATES. Was the transcript declassified?

Admiral PEET. Yes, and a statement before Senator Inouye was an unclassified statement.

Mr. YATES. What about the things you asked, Mr. Roush?

Mr. ROUSH. Of course, I was concerned about Cambodia and the secret portion of this document which relates to the number of people in their armed services. I find a clipping which states how many people are in the armed services of Cambodia.

Admiral PEET. The 220,000 figure?

Mr. ROUSH. They give various figures, but they also give what they claim to be authoritative figures.

Mr. TARR. This is based on the Lowenstein report.

Admiral PEET. I don't believe that was in my statement.

Mr. ROUSH. It wasn't in your statement, but how in the world do we let things like that get out then?

Admiral PEET. I wish I knew the answer to that question, Mr. Congressman. We have a difficult time with security.

Mr. ROUSH. I will tell you the truth, Mr. Chairman, had I to do this over again I would have voted against the executive session.

Mr. LONG. I will vote against all executive sessions.

Mr. PASSMAN. Gentlemen, you can always vote your convictions. That is your business. But you can't blame these witnesses, you understand, for leaks out of the Pentagon or the leaks out of the State Department.

Mr. SHRIVER. Or leaks out of the commitee.

Mr. PASSMAN. I have been on this commitee in executive session and we were under oath in years past when we marked a bill to keep the action quiet until we reported. Before I could get to my office I would have a call from a paper wanting me to verify a certain figure. This seems to be true in Government, that you have a lot of leaks. You have had leaks out of the Government. You have had leaks out of the State Department ever since I have been a Member of Congress. Because of the very fact that the Washington Post and New York Times are getting information I don't think we can charge these witnesses with that problem. Neither do I believe we should reveal 20 times the amount of classified material simply because there has been one leak on one item.

Admiral PEET. Mr. Chairman, we have tried to be as forthcoming as we possibly could be. Most of this CPD is unclassified, and it so states. The 1974 figures are unclassified.

Mr. ROUSH. Mr. Chairman, I am not condemning these witnesses, nor am I accusing them of disclosing information. What I am saying is that there has been a leak somewhere, that other people take a different view than we take. I am also saying, Mr. Chairman, that very little of what we have undertaken here by way of hearing, I believe, would fall within a classified classification.

Admiral PEET. That is true.

Mr. ROUSH. This being the case, I would hope, Mr. Chairman, that we might carefully review next year that which is classified, undertake to do that in executive session, but otherwise have open sessions.

Mr. PASSMAN. You are going to find me ready to cooperate. But a lot of the changes put into effect have made a mockery of our processes. You open these hearings up. There haven't been four outside people here since we started these hearings several weeks ago. They are just not interested.

Admiral PEET. Mr. Chairman, this transcript becomes unclassified after it's reviewed.

Mr. PASSMAN. Not all of it.

Admiral PEET. Some of it.

Mr. PASSMAN. You do have certain classified material that you do delete, do you not?

Admiral PEET. Absolutely.

Mr. PASSMAN. Don't use the term "all."

Admiral PEET. I'm sorry, sir, I didn't mean "all," Mr. Chairman. The vast majority of it is unclassified. As soon as the transcripts are reviewed, and the classified portions deleted, the rest of the record becomes unclassified.

Mr. PASSMAN. I will cooperate with the committee. I do know this, that where one piece of information leaks there may be 50 pieces of valuable information that do not leak. I think it's actually a disservice to let all nations know what they are in for in this bill. Because they will say, "You are giving this country more than you are giving us." I have always respected the classified label. I don't even take it out of my office.

But you can't just open the entire thing up because there may be a little leak somewhere. I read in the Washington Post or the New York Times, matters which were revealed in our own hearings, and I didn't know how it got out.

FINANCING

Would you please explain the difference between the requested amount and the total credit sales amount?

Admiral PEET. The difference between the $525 million NOA and the total $760 million credit program is 75 percent of DOD-guaranteed private financing.

Mr. PASSMAN. How about the private financing category?

Admiral PEET. The $313.3 million is the total amount of private financing guaranteed by DOD, but we are only required to obligate $78.3 million to cover this guarantee.

Mr. FORMAN. Mr. Chairman, those are loan agreements signed by the banks themselves with the countries concerned. We guarantee the notes.

Mr. PASSMAN. Is that included in the prior credit sales figure that you gave me?

Mr. FORMAN. Yes, sir. The figures he was giving you included both the direct credits and the DOD guaranteed.

AMOUNT OF CONTINGENT LIABILITY

Mr. PASSMAN. You have a contingent liability of how much?

Mr. VON MARBOD. Through fiscal year 1972, total credit sales were $3.1 billion, of which $2 billion was DOD direct and $1 billion DOD guaranteed.

Mr. PASSMAN. It's all right as long as we have it together. The committee would like to know what your contingent liability is. You can place it in the record.

[The information follows:]

As of June 30, 1973, it is estimated that $487.5 million will not yet have been paid to banks which have made guaranteed loans. Thus, the contingent liability against FMS credit accounts, for guaranteed loans outstanding, would be $487.5 million.

Mr. PASSMAN. I want the record accurate. Let's think in terms of the Export-Import Bank. They finance certain military sales, do they not?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Is that included?

Admiral PEET. No; it is not included.

Mr. FORMAN. No; except that fiscal year 1968 and prior Export-Import Bank loans have been included in figures furnished earlier, providing that these loans were guaranteed from FMS credit.

Mr. PASSMAN. How much is that?

Mr. VON MARBOD. To answer the earlier question on contingent liabilities, Mr. Chairman, the amount outstanding is about $487.5 million. We will have to furnish for the record the outstanding balance of direct loans made by the Export-Import Bank for the purchase of military equipment.

Mr. PASSMAN. Put it in the record.

[The information follows:]

As of April 30, 1973, the Export-Import Bank had authorized a net amount of $2,140.9 million of direct loans to developed nations for the purchase of military equipment in the United States. Of this amount, $1,170.2 million in principal either had been repaid by customers or the loan had been sold to private institutions. Thus, assuming the full amount of all authorized loans is utilized, there is an outstanding unrepaid principal balance of $970.7 million on these loans.

UNOBLIGATED BALANCE

Mr. PASSMAN. I note on page 3 of the justification that you show an unobligated amount of $15.4 million for fiscal year 1972. Could you tell the committee how you were able to come up with an unobligated balance for this fiscal year?

Admiral PEET. In fiscal year 1972, we were able to achieve a $550 million FMS credit program utilizing only $384.6 of the $400 million

new obligation authority (NOA) by exercising, to the maximum extent, section 24 of the FMS Act, "guarantees". We guaranteed $220.5 million of private financing, the major part being for Israel—$150 million, which required only $55.13 million NOA or 25 percent set aside in reserve to guarantee the full amount of private financing.

Mr. PASSMAN. Does this unobligated amount flow back into the Treasury?

Admiral PEET. Yes; the availability of that amount expired at the end of the fiscal year.

Mr. PASSMAN. Do you anticipate that you will have an unobligated balance lapsing in fiscal year 1973 or 1974?

Admiral PEET. We have completed FMS credit agreements to the full amount of the $550 million credit program authorized under CRA for fiscal year 1973. During fiscal year 1973 we had a nearly similar situation as in fiscal year 1972. Although we were authorized $400 million NOA to achieve the $550 million program, we used only $386.4 million. This again was the result of utilizing the guarantee authority in section 24 of the FMS Act. As in fiscal year 1972, the major part of the $218.2 million private financing guaranteed in fiscal year 1973 was $157.5 million for Israel.

If we obtain the total FMS credit program authority and level of appropriations requested, we hope to be able to guarantee $313.3 million private financing, assuming that this amount can be obtained. If a larger amount of private financing can be obtained we will, of course, be able to use less of the appropriation. However, since we have not in the past been able to involve private financing much above $200 million, we hope we are not overly optimistic in planning on $313 million private financing during fiscal year 1974.

PRIVATE FINANCING

Mr. PASSMAN. Also on page 3 you indicate that you have planned to obtain private financing of $313.3 million in fiscal year 1974 whereas this amounted to only $200 million in fiscal year 1973. Do you think you will be able to obtain that much increase in private financing in fiscal year 1974?

Admiral PEET. We are not certain we will be able to obtain $313 million private financing during fiscal year 1974. Much will depend on economic/financial conditions in this country during the period and much also depends upon the potential creditor country. It is true that the most we have had in private financing in the past has been slightly over $200 million and most of this has been for Israel. We are hopeful, however, that we can achieve approximately $300 million in the coming fiscal year.

Mr. PASSMAN. The reason I asked that question is because several years ago we were told that it was difficult to obtain a large amount of private financing. Could you please tell the committee what has changed that situation?

Admiral PEET. In recent years we have been able to obtain a rather substantial amount of credit (up to $157 million) for Israel. More recently credit for Greece and the Republic of China has been available. We believe, although we are not certain, that based on explorations we have made with the U.S. banking community, private financing may

now be obtained for some of the larger Latin American countries and perhaps other countries like Turkey.

FOREIGN MILITARY SALES, FISCAL YEAR 1974

Mr. PASSMAN. You plan to have a total foreign military sales program of $4,688,100,000 in fiscal year 1974, is that correct?

Admiral PEET. Yes, that is the present estimate.

Mr. PASSMAN. Could you tell the committee how that compares to the current fiscal year?

Admiral PEET. We estimate total foreign military sales for fiscal year 1973 at $3,830,300,000. As at the end of the third quarter we have achieved about 90 percent of that total or approximately $3.4 billion. We will come very close to the estimated figure.

Mr. PASSMAN. Would you please break that total down into cash sales and credit sales?

Admiral PEET. The cash portion of the estimated $3.8 billion above the $550 million credit sales during fiscal year 1973 is approximately $3.3 billion.

Mr. PASSMAN. In addition you indicate that $726,525,000 will be provided in commercial sales. Would you please explain this item?

Admiral PEET. This estimate for fiscal year 1974 is based on prior years performance modified by known private negotiations with a high potential of acceptance.

Mr. PASSMAN. Do you coordinate the cash and credit sales program in order to provide some control over the total operation?

Admiral PEET. Yes, we do. All credit sales are closely monitored primarily for the purpose of achieving the maximum political and defense benefit to the United States and secondly to stay within appropriated monetary ceilings.

Mr. PASSMAN. Does the Department of Defense review all the cash sales?

Admiral PEET. Cash sale for Latin America and Africa are managed to avoid surpassing the ceilings established by the Congress in these two regions. Of course all sales, regardless of how they are financed, are reviewed and approved only when they are consistent with the foreign policy interests of the United States and when they meet Department of Defense guidelines which govern military export sales activities. These guidelines are continually under review and reflect the criteria upon which sales proposals are likely to be judged at any given time.

Mr. PASSMAN. How are you able to determine what commercial sales will be made in each year so this aspect of military sales can be considered when reviewing country programs?

Admiral PEET. In accordance with statute, DOD encourages to the extent practicable, the direct use of commercial sources in lieu of FMS for purchase of valid needs. In this context, all elements and agencies of DOD engaged in FMS activities request representatives of U.S. industry to keep appropriate elements of DOD informed as to their planned and actual activities relating to commercial sales. In addition, we receive quarterly reports of deliveries of military items purchased directly from private industry. The estimate we provide to the Congress as to future commercial sales are based on such information.

Mr. PASSMAN. Does the Department of Defense approve commercial sales?

Admiral PEET. The responsibilities of the President contained in section 414 of the National Security Act of 1954, as amended, to control the export and import of arms, ammunition, and implements of war are delegated by Executive order to the Department of State. That Department works closely with the Department of Defense in this function. Through the country desks of ISA, and the Directorate for Strategic Trade and Disclosure, the Department of Defense reviews and recommends approval or disapproval of commercial sales of potential military end use items which appear on the munitions control list.

REPAYMENTS

Mr. PASSMAN. When the credits are paid back to the United States, isn't this money plus interest returned to the U.S. Treasury?

Admiral PEET. Yes; for those FMS credit loans which are financed entirely from the FMS credit appropriation. For those where the FMS credit appropriation guarantees commercial bank loans, this repayment is of course made to the bank.

Mr. PASSMAN. Have you had any bad debt experience in the credit sales program?

Admiral PEET. We have had an excellent repayment record for the program. As of the end of April 1973, we had roughly $2 million of overdue debts, in contrast to receipts of roughly $1 billion in loan repayments since the beginning of the program. We expect that amount to be reduced to less than $1 million by around the beginning of fiscal year 1974.

TERMS OF SALES

Mr. PASSMAN. What are the average terms of these credit sales?

Admiral PEET. Terms depending upon several factors chief among which are the type of equipment financed, the conditions under which it is sold, and, sometimes, the customer nation. As a general rule the interest charge is such as to recover "cost of money" to the U.S. Treasury at the time the sale is consummated, and the length of principal and interest repayments will be 8 to 10 years.

Mr. PASSMAN. Are any countries receiving concessionary terms at the present time or in the past?

Admiral PEET. Yes; a few countries are receiving concessionary rates in the sense that interest charges are less than the current cost of money to U.S. Treasury. Most of these programs involve multiyear financing and it has been our practice to continue interest rates for multiyear programs at the rate initially committed to those programs.

Mr. PASSMAN. Would you please tell the committee what countries these are?

Admiral PEET. During the current fiscal year, 1973, the following countries received FMS credit at slightly concessionary interest rates: ———. During fiscal year 1972, the following countries received FMS credit at slightly concessionary interest rates: ———.

FMS TRUST FUND

Mr. PASSMAN. Would you please explain the foreign military sales trust fund for which there is a budget estimate for contract authority of $3,090 million in fiscal year 1974?

Admiral PEET. The United States has established a separate trust account to account for each country's payments for FMS orders placed under cash terms of sale(that is, under section 21 and 22 of FMSA, amended). The estimate shown in the President's budget represents the aggregate of these separate trust funds. The contract authority line item reflects the estimated new obligational authority to be established in the trust fund during fiscal year 1974. The estimate is based on the total new cash sales orders expected to be received during fiscal year 1974, rather than payments estimated to be received. Aggregate payments estimated to be received during fiscal year 1974 are shown as on the line item "Appropriation to liquidate contract authority" in the value of $2,490,708,000.

Mr. PASSMAN. How does the foreign military sales program relate to this trust fund and what are your duties with respect to trust fund, if any?

Admiral PEET. As noted above, the trust fund is the amount which reflects financial transactions authorized under sections 21 and 22 of the FMS Act whereas the credit sales program (section 23 and 24 of the FMS Act) is financed from the annual FMS credit appropriation. My responsibilities are the same for both portions, in that I am responsible for establishing policies required to manage the entire FMS program.

Mr. PASSMAN. Isn't it true that this contract authority becomes available automatically and there is no action required by Congress?

Admiral PEET. This is correct because it is based upon the contractual agreement of the nation involved to pay all costs of the sale for deposit directly into the trust fund when such costs are due, and thus no U.S. appropriation is required.

EXTENSION OF TERMS

Mr. PASSMAN. I note in the authorization bill that was recently introduced in the House that there is a proposal to extend the terms of the credit sales from 10 to 20 years. Could you tell us the reason for this extension.

Admiral PEET. The reason for the administration requesting the extension of the repayment term for FMS credit from 10 years to up to 20 years is as follows:

Many less developed countries, because of their modest defense budgets, need to stretch repayments over as long a period as possible. Major weapons systems like aircraft, artillery, and ships will be in use by those countries for at least 20 years. If financing is the critical element of the acquisition, and we cannot offer longer term credit, the prospective buyer will turn to other countries who can supply similar defense articles and who can and do offer credit repayment terms of longer than 10 years.

In light of cuts in military grants, this will help countries like Korea and Turkey to spread payments over a longer period of time.

In order to meet shortfalls in military grant, we need more concessionary loan terms.

Mr. PASSMAN. Are there any other changes suggested in the authorization bill that apply to the foreign military credit sales program?

Admiral PEET. There are several other changes that we have requested in addition to extending the repayment from 10 years to 20 years. These are:

1. Requesting a total foreign military sales credit program of $760 million and $525 million in new obligation authority (appropriations) to achieve the total credit program.
2. Requesting the authority to guaranty funds from private foreign sources.
3. Requesting the authority to sell promissory notes without a double charge against either credit ceiling or NOA.
4. Requesting authority to limit the charge against the credit ceiling and NOA for guarantees to the principal. That part of the guarantees that cover interest would not be considered for this purpose.
5. Requesting the removal of the earmarking of not less than $300 million FMS credit for Israel.
6. Requesting the elimination of counting of cash sales against Latin America and Africa ceiling.
7. Requesting to increase the Latin American ceiling from $100 million to $150 million.

ALLOCATION

Mr. PASSMAN. What countries will receive the major part of the credit sales in fiscal year 1974?

Admiral PEET. The major recipients of FMS credits for fiscal year 1974 are:

	Millions
Israel	$300
Turkey	75
Republic of China	65
Greece	65
Brazil	56

These countries account for over $560 million of the $760 million authorization we are requesting. The remaining countries and the amounts of FMS credit for fiscal year 1974 are shown on page 5 of the fiscal year 1974 Congressional Presentation Document.

TRANSITION FROM GRANTS TO SALES

Mr. PASSMAN. Could you please tell the committee what countries are presently in the process of making the transition from grant military aid to the credit sales program?

Admiral PEET. Countries current in the process of evolution from grant to FMS credit are Korea and Turkey.

Korea is still in the early stages of moving from a grant to FMS credit program. Korean grant is proposed to increase in fiscal year 1974 as a result of the 5-year modernization program. The Korean FMS credit program has developed from a zero level in fiscal year 1967 to $25 million projected for fiscal year 1974.

The Turkish FMS credit program has grown from a zero balance in fiscal year 1967 to a projected level of $75 million in fiscal year 1974.

Concurrently, the Turkish grant program is declining as indicated by the request of $89.4 million in fiscal year 1973 versus the $85.5 million request for fiscal year 1974.

The trend toward termination of the grant program will continue in these two countries as they become financially capable of funding an increasing share of their defense requirements. During fiscal year 1973, China and Greece completed the transition from grant military materiel assistance to FMS credit. In subsequent years, additional nations will join these countries in making the transition from grant to FMS credit commensurate with country economic growth and progress.

MALAYSIA

Mr. PASSMAN. On page 5 I note that you list credit sales of $8,550,000 in fiscal year 1972 and $10 million in fiscal year 1973 for Malaysia, but in last year's justification you indicated that there would be no credit sales extended to Malaysia for fiscal year 1972 and fiscal year 1973. Could you please tell the committee why this program was changed from last year's justification?

Admiral PEET. The sale of F–5 aircraft to Malaysia on June 30, 1972, for a total value of $42 million was developed and consummated subsequent to the issuance of the fiscal year 1973 congressional presentation document (dated March 15, 1972). The Malaysians requested FMS credit assistance for financing the procurement and the fiscal year 1974 CPD reflects the funds required during fiscal years 1972, 1973, and 1974 to finance this sale.

TURKEY

Mr. PASSMAN. You indicate also on page 5, that the Turkey credit sales program will increase from $20 million in fiscal year 1973 to $75 million in fiscal year 1974. Can this total increase be attributed to the fact that Turkey is one of the countries that is in the transition from grant aid to credit sales?

Admiral PEET. For the foreseeable future, Turkey will need some form of assistance in maintaining the effectiveness of its armed forces. Our program in Turkey is now shifting from a total grant-aid program to a combination of grant and FMS resources. However, reductions in military assistance for Turkey have delayed the modernization and upgrading of the armed forces of this country. This necessarily affects NATO's collective capabilities on the exposed southeastern flank.

Turkey's ground forces need increased mobility and firepower; its navy is handicapped by the obsolescence of some of its ships and installed equipment; its air force requires replacements for its obsolete F–84 and High-Time F–100D fighter aircraft. The magnitude of current and prospective defense requirements is well beyond that which the Turkish economy, even with the currently favorable balance-of-payments picture, could be expected to absorb. The improvement in the Turkish economy has enabled the Turks to undertake the financing of a significant portion of the costs of modernizing their armed forces. To provide the fiscal balance to modernize Turkey's armed forces,

while maintaining the maximum possible effectiveness of forces in being, a mix of military assistance and Turkish resources will be required.

BRAZIL

Mr. PASSMAN. Also on page 5, I note that you plan to increase the Brazil credit sales program from $15 million in fiscal year 1973 to $56 million in fiscal year 1974. Could you please tell the committee why you are providing this country with such a large amount of credit sales when Brazil is considered one of the most economically developed countries in Latin America?

Admiral PEET. Brazil is the largest country in Latin America, roughly the size of the United States with a population of over 100 million. It has a legitimate requirement for modernization and expansion of its armed forces, particularly its air and naval forces, for purposes of air defense, coastal patrol, border surveillance, and internal communications. At the same time Brazil is expending a high proportion of its budget on internal development and does not have a large surplus for arms purchases. We feel that the amount of credit we propose to offer Brazil is justified in terms of its requirements and the country's budgetary situation.

Mr. PASSMAN. It seems that if Brazil is such an advanced country economically that she would be able to pay cash for this equipment, don't you agree?

Admiral PEET. Brazil has a legitimate requirement for modernization and expansion of its armed forces, particularly its air and naval forces, for purposes of air defense, coastal patrol, border surveillance and internal communications. At the same time Brazil is expending a high proportion of its budget on internal development and does not have a large defense budgetary authorization in 1 single year for arms purchases. We feel that the amount of credit we propose to offer Brazil is justified in terms of its requirements and the country's budgetary situation.

We are satisfied that Brazil is not in a position to pay cash for all of its arms requirements.

CHILE

Mr. PASSMAN. I note in last years justifications that you plan to provide Chile with a credit sales program of $5 million in fiscal year 1972 and also $5 million in fiscal year 1973, but in this years justifications on page 5, I note that you have actually provided Chile with $10 million credit sales in fiscal year 1972 and $12,400,000 in fiscal year 1973. Would you please tell the committee why you have increased the Chile program by such a substantial amount over what was justified last year?

Admiral PEET. The decision to increase the amounts of credit extended to Chile in fiscal year 1972 and fiscal year 1973 was based on several factors. Chile has had and still has a valid requirement for modernization of its armed forces, most of which were obsolete and unsupportable logistically. We wished to retain the traditional relationship between the Chilean and U.S. armed forces, and felt that this

required that the United States should be responsive to requests for sales from the United States. ———.

Mr. PASSMAN. You also indicate that a credit sales program of $10 million will be provided to Chile in fiscal year 1974. Why are we extending credits to Chile in light of her nationalization of United States private investment?

Admiral PEET. Chile has had and still has a valid requirement for modernization of its armed forces, most of which were obsolete and unsupportable logistically. We wished to retain the traditional relationship between the Chilean and U.S. armed forces, and felt that this required that the United States should be responsive to requests for sales from the United States. ———.

TYPE OF EQUIPMENT

Mr. PASSMAN. Could you please tell the committee what type of equipment will be provided by these credit sales?

Admiral PEET. Chile has asked for credit in fiscal year 1974 to procure Air Force and Navy support equipment and for modern tactical communications and support equipment.

U.S.S.R. SALES

Mr. PASSMAN. I notice in a newspaper article that the Soviet Union has also provided credit sales to Chile. Could you please tell the committee what the amount of these sales are and what the terms were?

Admiral PEET. We understand that the Soviet Union has offered credits to Chile for military equipment; however, to date, we understand that they have not accepted any of the credit that has been offered.

TERMS OF SALES

Mr. PASSMAN. What are the terms of the credit sales provided by the United States to Chile?

Admiral PEET. The last credits we extended to Chile were at cost of money to the U.S. Treasury and an 8-year repayment period. The actual interest rate for fiscal year 1973 FMS credit was 6⅜ percent on one portion and 6⅞ percent on another.

ADMINISTRATIVE EXPENSES

Mr. PASSMAN. Are the administrative expenses for the cash and credit sales program included under the military assistance program? If so, how much in the way of administrative expenses can be allocated to the sales program?

Admiral PEET. Most of the costs of administering the foreign military sales programs, both cash and credit, are recovered by charging an administrative surcharge to the customer nation. This surcharge normally is 2 percent of the value of goods or services sold. However, certain costs of administering the foreign military sales program at headquarters level are included in the budget for the military assistance program. The budget includes about $800,000 for the Office of the

Secretary of Defense, and about $1,700,000 for the three headquarters of the military departments, for costs relatable to negotiation and administration of the foreign military sales program.

BALANCE OF REQUESTS

Mr. PASSMAN. I note on page 5 that you plan to initiate credit sales programs to quite a few countries in fiscal year 1974 that in the past have not been part of the program. Of the countries that you plan to initiate a new credit sales program in fiscal year 1974 and have in the past been receiving grant military aid, has there been a corresponding decrease in the amount of grant aid we will provide these countries in fiscal year 1974?

Admiral PEET. The country FMS credit program levels portrayed in the fiscal year 1974 congressional presentation document (CPD) are illustrative and reflect current best estimates of probable sales credit requirements during fiscal year 1974. The fiscal year 1973 CPD reflected illustrative FMS credit programs to Saudi Arabia, Bolivia, Mexico, Peru, and Uruguay. Accordingly, the new credit sales programs proposed for fiscal year 1974 are for the Philippines, Thailand, El Salvador, and Honduras. There is a reduction in the amount of grant aid requested for the Philippines and Thailand in fiscal year 1974 as contrasted to the fiscal year 1973 request. Country-by-country comparison is as follows:

[Dollars in millions]

Country	Grant aid request	
	Fiscal year 1973	Fiscal year 1974 [1]
Philippines	$20.8	$19.9
Thailand	60.0	57.2
El Salvador	.8	.9
Honduras	.7	1.2

[1] Includes the international military education and training program to provide valid comparison to fiscal year 1973 grant aid request.

KUWAIT

Mr. PASSMAN. I notice in a recent newspaper article that the United States has negotiated a $500 million arms sales with Kuwait. Is this a cash sales transaction?

Admiral PEET. The negotiations for the sale of various military equipment by the United States to the Government of Kuwait are not yet completed. The Kuwaitis have indicated an interest in acquiring ———. They have requested information from the U.S. Government as to what might be available, what the operational characteristics of available equipment are and the price and delivery times of such items. The requested information has been or is currently being furnished to the Government of Kuwait. We understand that the Kuwaiti Government has requested similar data from potential European suppliers. We anticipate that whatever purchases are made by Kuwait will be on a cash basis.

IRAN

Mr. PASSMAN. I note that we have had a huge cash sales program to Iran for the last 2 fiscal years. Could you please tell the committee why she is buying so much military equipment?

Admiral PEET. Iran's acquisition of military equipment is viewed as a long-term program to satisfy Iranian long-term defense requirements. Since 1965, Iran has been purchasing military equipment from the United States under the terms of the Foreign Military Sales Act and, as you indicate, the pace of acquisition has recently accelerated. The acceleration is viewed as a result of three main factors: Iran's sense that, with the withdrawal of the British from the Persian Gulf in 1971, a period of instability could result; Iran's belief that it needed to modernize its armed forces both to provide a credible deterrent to aggression in the Persian Gulf area and to successfully defend itself if attacked; and the increasing oil revenues which enable Iran to pursue a policy of economic and social reform while also purchasing the military equipment needed for defense requirements.

In addition, it should be pointed out that the actual delivery of the equipment purchased in the last 2 years will extend over several years and, once the equipment is delivered, it will form the foundation for the Iranian Armed Forces throughout the 1970's and into the 1980's.

SAUDIA ARABIA

Mr. PASSMAN. I note on page 5 that you plan to provide a military credit sales program to Saudi Arabia in fiscal year 1974 of $20 million. Isn't Saudi Arabia considered a developed country?

Admiral PEET. Yes; for interest equalization tax purposes Saudi Arabia is considered a developed country.

Mr. PASSMAN. I was always under the impression that the credit sales program was used by the less developed countries to obtain military equipment. Would you please comment on this?

Admiral PEET. The fiscal year 1974 FMS credit program illustratively presented in the congressional presentation document includes only one economically develped nation and that is Saudi Arabia. With this exception, the credit sales program is exclusively for less developed nations.

An FMS credit program for Saudi Arabia is presented since the Saudi Government has found it necessary in recent years to seek deferred payment arrangements for several major military projects. The Saudi financial situation is good and much of the proposed FMS credit sales could be paid in cash. However, it is considered highly important that the United States be able to respond favorably to a Saudi request for credit in order to maintain effective political relationships with this moderate Arab country, to protect U.S. economic interests in Saudi Arabia and to assure continued U.S. access to abundant Saudi oil resources.

GAO REPORT

Mr. PASSMAN. In a General Accounting Office communication to the Secretary of Defense it was noted that the Federal Republic of Germany did not pay the administrative charge on its standard foreign military sales program purchases. It was estimated that the cost

amounting to about $19 million in fiscal year 1972 alone, were not recovered from Germany. Could you please tell the committee if the United States has approached the Federal Republic of Germany about paying these administrative charges?

Admiral PEET. The Department of Defense did not acknowledge the validity of the General Accounting Office finding, particularly with regard to the $19 million estimate. However, we did initiate a special cost study in order to identify the costs of administering the German program. We intend to furnish the completed study to the Department of State during July 1973. The Department of State would have to approach the Germans on this matter, and it has not yet done so.

Mr. PASSMAN. Do any other countries owe the United States for administrative charges on the foreign military sales program or does Germany owe additional funds?

Admiral PEET. All countires except Germany and Canada—the charge to Canada is waived for mutuality of treatment—are paying administrative charges.

TURKEY

Mr. PASSMAN. In connection with the foreign military credit sales program for Turkey in fiscal year 1974 for which you project an amount of $75 million could you please tell the committee what these funds will be used to purchase?

Admiral PEET. During fiscal year 1973, the Government of Turkey bought two squadrons of McDonnell Douglas F–4E fighter aircraft. This sales amounted to approximately $200 million. Turkey needed FMS credit to assist in financing this procurement and the $75 million in fiscal year 1974 is all required for this purpose.

ISRAEL

Mr. PASSMAN. I note you plan to program $300 million in credit sales to Israel in fiscal year 1974. Do you have any estimates what the next fiscal year's request for Israel will be?

Admiral PEET. Israel is an example of a major security assistance success story. Through fiscal year 1973, the United States has extended $1.42 billion in credit to Israel and an added $300 million is being offered in fiscal year 1974. ———.

Israel is entering its sixth successive boom year; its projections for the coming year are the envy of the region: continuing full employment, a per capita GNP of $2.200—fiscal year 1973 GNP officially estimated at $8.74 billion—a reduction in personal income taxes for the second successive year, a real growth in GNP of about 9 percent a year, a one-third rise in foreign exchange reserves—which have tripled in the last 3 years—and continuing heavy contributions from its supporters abroad.

In view of the excellent state of Israel's economic health and the fact that her military modernization program has been completed, it is planned that the fiscal year 1975 security assistance program for Israel will be handled solely on an FMS cash basis. Our planning in the Department of Defense for fiscal year 1975 is to provide any further equipment to Israel on an FMS cash basis.

SALE TERMS

Mr. PASSMAN. What are the terms of credit sales extended to Israel?

Admiral PEET. The terms of credit sales extended to Israel in fiscal year 1973 were in accordance with the Foreign Military Sales Act, as amended, with interest charged at cost of money to the U.S. Government and with repayments to be made within 10 years after delivery of the defense articles or the rendering of defense services. It is expected that fiscal year 1974 credits to be extended to Israel will be at no less than these same terms.

PORTION PRIVATE FINANCED

Mr. PASSMAN. How much of the fiscal year 1974 request of $300 million for credit sales to Israel will be private financing?

Admiral PEET. If we receive $525 million NOA to achieve a $760 million total FMS credit program, as is contained in the administration's request, we expect to secure private financing for at least 50 percent of the $300 million for credit sales to Israel in fiscal year 1974. If we receive less than the $525 million NOA we will be forced to obtain a larger portion of private financing with the impact of higher interest rates for Israel for the entire $300 million program.

COMMERCIAL SALES

Mr. PASSMAN. On page 37 in connection with the program for Israel I note that you list $50 million in fiscal year 1974 for commercial items. Would you please tell the committee what this item is?

Admiral PEET. Israel acquires a portion of her military requirements from commercial sources in the United States. The item of $50 million in fiscal year 1974 for items procured directly from U.S. defense industry would cover acquisition of such things as aircraft and vehicles spares, communications equipment, aircraft and tank engines and spares, and other miscellaneous items of military hardware.

MOROCCO

Mr. PASSMAN. On page 52 in connection with the foreign military credit sales program for Morocco, I note you have allocated $3.5 million in fiscal year 1974 for air defense radar. Could you please tell the committee why Morocco needs such equipment?

Admiral PEET. Requirement for air defense radars has been a long-standing one for Morocco as an integral part of its defensive system against external aggression. The radar would provide Morocco with an early warning capability of approaching aircraft and could also be used to control its own aircraft, particularly during inclement weather.

INDONESIAN REQUEST

Mr. PASSMAN. I yield to Mr. Shriver.

Mr. SHRIVER. Page 18 shows that in nine cases listed in the force data information for Indonesia, the forces in being are greater than force objectives. How much of this request totaling almost $30 million is to

be spent on these nine types of units which already exceed the objectives? Can you break that down by unit?

Admiral PEET. Yes, sir.

[The information follows:]

In the case of Indonesia, the Chief, U.S. Defense Liaison Group, is charged with responsibility for conducting frequent end item utilization inspections to insure that MAP support is limited to selected force elements. With regard to the nine types of units listed as being above objective strengths, fiscal year 1974 MAP support will be provided as follows:

[Classified information deleted.]

From the above, it may be seen that MAP does not support all of the forces in being that are within the stated objectives, and supports none of those in being above those objectives.

SOUTH KOREA MODERNIZATION PLAN

Mr. SHRIVER. You are requesting $309 million for South Korea. This represents more than half of that country's defense budget. It's almost twice the fiscal 1973 program.

Admiral PEET. Yes, sir.

Mr. SHRIVER. South Korea will receive no assistance from other countries, as was in the case of fiscal 1972 and fiscal 1973. So it's all up to us. Is that correct?

Admiral PEET. Yes, sir; it is.

Mr. SHRIVER. You say that this $309 million is the minimum required to continue the modernization plan.

Admiral PEET. The $309 million includes FMS credit.

Mr. SHRIVER. It includes the excess and the credit?

Admiral PEET. That is true, excess and credit.

Mr. SHRIVER. Congress reduced the request for this modernization plan in 1972 and 1973 and yet there has been a lessening of tensions, as I understand, between the North and the South. Will you comment on that and tell us why it's so important in fiscal 1974 to get the modernization plan back on schedule?

Admiral PEET. The modernization plan was designed to give South Korea a capability to deter a North Korean attack with U.S. naval and air augmentation and U.S. logistical support.

We feel that it's important that the South Koreans be able to deal from strength in negotiations with the North.

Mr. SHRIVER. Is there a lessening of tensions between the North and the South?

Mr. TARR. Mr. Shriver, I think that at least cosmetically there is a lessening of tensions. We are not yet sure exactly what these moves mean. We feel quite certain that the North Koreans want very much to be accepted in the United Nations. They have already been accepted in the World Health Organization.

There is a good possibility that their efforts to begin discussions with the South toward the eventual goal of putting the two halves of Korea together are in order to foster some of these things that they want in terms of their foreign relations.

We are very hopeful that the initial conversations can continue to flourish into more meaningful ones. We do feel, however, that there is a better chance for this to happen if the South Korean force is modernized and the South Koreans thereby have the strength to continue on their own without our present backing.

REDUCTION OF U.S. FORCES IN KOREA

Mr. SHRIVER. What has been the reduction in force there?
Mr. TARR. Of U.S. forces?
Mr. SHRIVER. Yes.
Mr. TARR. About 20,000 men.
Admiral PEET. The reduction took place in fiscal 1971.
Mr. TARR. That leaves about 40,000.
Mr. SHRIVER. What is the plan, if any, for further reduction?
Mr. TARR. We have taken the position that we would look again at this matter when the modernization program was completed. I think other than that we have not made any commitment.
Mr. SHRIVER. Is it anticipated that that will be completed?
Mr. TARR. If we are funded at this level for 2 years, it would be completed in terms of the investment items which are the most important.

CONTINUED ASSISTANCE TO PHILIPPINES

Mr. SHRIVER. The justification given for continued assistance for the Philippines ———. That I can understand. What is the justification for the large increase in our security assistance program from 1972 to 1973 while the Philippine Government increased its own defense spending very little?
Admiral PEET. I believe there was $50 million for disaster relief.
Mr. TARR. Yes. Because of the flood on Luzon, we put in that $50 million by a special congressional action. It was put into supporting assistance.
Mr. SHRIVER. It's really not supporting assistance.
Mr. TARR. Frankly, it should have been in a special part of the more traditional AID legislation, but it seemed at the time to be convenient in that emergency to put it in that way.

THAILAND AND SEATO

Mr. SHRIVER. Mr. Secretary, would you again state for the record what our commitment is to Thailand under the SEATO Treaty or any other agreement we may have?
Mr. TARR. I would like to have something prepared for the record on that, if I may.
[The information follows:]

Article IV, paragraph 1, of the SEATO Treaty states: "Each Party recognizes that aggression by means of an armed attack in the Treaty Area [which "is the general area of South-East Asia, including also the entire territories of the Asian Parties, and the general area of the South-West Pacific not including the Pacific area north of 21 degree 30 minutes north latitude"] against any of the parties or against any State or territory which the Parties by unanimous agreement may hereafter designate would endanger its own peace and safety, and agrees that it will in that event act to meet the common danger in accordance with its constitutional processes." An "understanding of the United States of America" was appended to the Treaty in which it was stated: "The United States of America in executing the present Treaty does so with the understanding that its recognition of the effect of aggression and armed attack and its agreement with reference thereto in Article IV, paragraph 1, apply only to Communist aggression but affirms that in the event of other aggression or armed attack it will consult under the provisions of Article IV, paragraph 2 [which provides that if 'in the opinion of any of the Parties, the inviolability or the integrity of the territory or the sovereignty of political independence of any Party in the Treaty Area or of any

other State or territory to which the provisions of paragraph 1 of this Article from time to time apply is threatened in any way other than by armed attack or is affected or threatened by any fact or situation which might endanger the peace of the area, the Parties shall consult immediately in order to agree on the measures which should be taken for the common defense'].''

In a communique issued on March 6, 1962, following meetings between then Secretary of State Dean Rusk, and Thai Foreign Minister Thanat Khoman, the Secretary reaffirmed that, in the event of communist armed attack against Thailand, the SEATO obligation of the United States to act to meet the common danger in accordance with its constitutional processes is "individual as well as collective." This did not extend the United States commitment beyond that undertaken in the SEATO Treaty itself. In his opening remarks at the May 20, 1969, meeting of the SEATO Council of Ministers, Secretary of State Rogers said that "we continue to adhere to the Treaty and to regard the Rusk-Thanat Communique as a valid restatement of the responsibilities set forth in Article IV, paragraph 1, of the Treaty."

Mr. SHRIVER. What is Thailand's commitment under the SEATO Treaty with regard to the security of its neighbors?

Mr. TARR. I will have to provide that at the same time.

[The information follows:]

A protocol to the Southeast Asia Collective Defense Treaty designated states and territory to which the provisions of Articles III and IV were to be applicable. It states in part as follows:

"The Parties to the South-East Asia Collective Defense Treaty unanimously designate for the purposes of Article IV of the Treaty the States of Cambodia and Laos and the free territory under the jurisdiction of the State of Vietnam."

"The Parties further agree that the abovementioned states and territory shall be eligible in respect of the economic measures contemplated by Article II."

In 1962 Thailand, along with twelve other nations, signed a "Declaration on the Neutrality of Laos" in which the signing countries agreed to "respect the wish of the Kingdom of Laos not to recognize the protection of any alliance or military coalition, including SEATO." In 1964 the Cambodian government informed the SEATO Secretary-General that it "categorically" refused the protection of SEATO, as provided in the protocol to the SEATO Treaty. A second, similar message was also sent in 1965 at which time the SEATO Council directed the Secretary-General to respond, pointing out that paragraph 3 of Article IV of the Treaty provides that no action may be taken on the territory of a Protocol State without its invitation or consent. The Secretary-General's letter to the Cambodian government stated that "the SEATO members would, of course, respect this provision of the Treaty and the wishes of the Cambodian Government in this context." On March 31, 1970, the Cambodian Ministry of Information announced that "the Salvation Government of Cambodia has never contemplated joining SEATO: Cambodia's attitude remains unchanged and its policy remains one of strict neutrality without participation in any military pact."

While the Department cannot speak for the Royal Thai Government, we assume that Thailand, as a member of SEATO, continues to adhere to all the commitments under the Treaty, including the protocol.

NEGOTIATING FOR PEACE IN CAMBODIA

Mr. SHRIVER. Incidentally, I don't believe it's clear to the American people, or to Members of Congress, concerning who is fighting whom in Cambodia. Would you comment on that?

Mr. TARR. Mr. Shriver, the main thrust of the fighting in numbers of people is the insurgent Cambodians fighting against the forces of the Lon Nol government.

The insurgent Cambodians are in most cases trained by North Vietnamese or by special cadre forces of the Cambodian insurgents who have been taken to Hanoi and trained and then brought back. In some instances the leadership of the Cambodian insurgent forces are provided by North Vietnam officers.

There is also a Vietcong contingent.

Interestingly enough, the insurgent forces apparently all do not follow the beat of the same drummer. There is some disagreement among them which makes it difficult to find one leader with whom negotiations can be carried out. But all that, notwithstanding, at the present time they are all fighting against the Lon Nol forces and that gives them a kind of unity.

Mr. SHRIVER. We are not directly negotiating with anybody from Cambodia at the present time, are we?

Mr. TARR. You mean with the insurgents?

Mr. SHRIVER. Yes.

Mr. TARR. We are not dealing with anybody directly. We are dealing with North Vietnam ———.

UNITED STATES AND THIRD-COUNTRY AID TO CAMBODIA

Mr. SHRIVER. Page 17 of the justifications shows that Cambodia will receive no assistance from countries other than the United States in fiscal 1973 or fiscal 1974. What are the official positions of the other Western-oriented countries in that area, such as Australia?

Mr. TARR. Mr. Shriver, the Australians are not involved in military assistance, but they are in economic assistance.

Mr. SHRIVER. What are they doing?

Mr. TARR. We are the only ones who are involved in military assistance. The contributions of other countries in economic assistance are the following: Japan, $7 million; Australia, $1 million; the United Kingdom, $490,000; Thailand, $250,00; New Zealand, $100,000; and Malaysia, $10,000.

Mr. SHRIVER. All that is less than $10 million.

Mr. TARR. All of that amounts to $8,820,000.

Mr. SHRIVER. What is the official position of New Zealand?

Mr. TARR. New Zealand has been interested sufficiently to make a small contribution of economic aid to Cambodia.

Mr. SHRIVER. No military?

Mr. TARR. No military.

Mr. SHRIVER. Thailand?

Mr. TARR. Thailand has done two things. As I indicated, they have been involved in a small economic program in Cambodia. They also have trained Cambodian troops in Thailand.

Mr. SHRIVER. The Republic of China?

Mr. TARR. I know of no involvement of the Republic of China.

SECURITY ASSISTANCE FOR THAILAND

Mr. SHRIVER. Security assistance for Thailand is increasing almost $40 million, while the Thai defense budget overall will rise only $26 million. Will you comment on that?

Admiral PEET. $20 million of that increase is in military assistance, in addition to which we propose $15 million in FMS credit for that period.

Mr. TARR. Mr. Shriver, another factor involved here is that the program for fiscal year 1973 was not what we had intended it to be, but it was reduced. We operated under the continuing resolution authority.

The year prior in fiscal year 1972 our actual assistance to Thailand,

including all forms of assistance, was on the order of $100 million. This included items that are not shown in the column for fiscal year 1972 on the sheet on page 25.

Mr. SHRIVER. I was talking about 1974. I am not talking about prior years.

Mr. TARR. I realize that, Mr. Shriver, but my point was this: In 1972 when they were covered, primarily under military assistance service funding, the program was about the level of $100 million. Then when it dropped down as low as it did in fiscal year 1973, because of our continuing resolution authority and because we were funded under the Foreign Assistance Act and not under service funding, the people in positions of leadership in Thailand were quite upset saying that our lack of support—military support indicated that we no longer were interested in supporting their programs.

BASE SUPPORT FACTOR IN U.S. AID

Mr. SHRIVER. How long do you figure we will have to continue to support their programs?

Mr. TARR. The level of our programs in Thailand are conditioned by two factors. The most important is that we are using Thailand extensively for base support of our activities.

Mr. SHRIVER. For the defense of the United States?

Mr. TARR. As this base support falls off—for instance, we are using seven air bases in Thailand——

Admiral PEET. A sizable number in connection with our Southeast Asia activity.

Mr. SHRIVER. All that relates to the defense of Thailand, too, does it not?

Mr. TARR. It does to some degree.

Mr. SHRIVER. To what degree does it relate to U.S. defense?

Mr. TARR. To this degree, that we opened two bases when we began to withdraw our forces out of Vietnam. So we are relying much more heavily on Thailand now than we did at the height of our operations in Vietnam.

Admiral PEET. We support Cambodia out of Thailand.

Mr. SHRIVER. I realize that.

We had been fighting the war against North Vietnam out of Thai bases.

Admiral PEET. Yes, sir.

As far as the U.S. defenses are concerned, the relationship is no different than in the case of Indonesia or Latin America.

Mr. SHRIVER. I see.

Admiral PEET. U.S. security interests are served.

Mr. SHRIVER. The statement was that they felt we were not giving them enough.

Mr. TARR. They felt we were not giving them enough, given our heavy reliance on their base facilities.

Mr. SHRIVER. It is for their defense against communism, or North Vietnam, or whatever.

Mr. TARR. I think it is hard to justify all of it as strictly in their defense. I think the Thais feel that they might be able to come to their own arrangements with the people who are antagonistic toward them

much more easily except for the problems that have prevailed in Vietnam itself.

THIRD COUNTRY ASSISTANCE TO THAILAND

Mr. SHRIVER. Let me ask you this: Thailand received in 1973, ——— in third country assistance. Yet according to your justifications, nothing is expected in fiscal 1974 from these other sources. Will you explain that?

Admiral PEET. It is very difficult for us to estimate. We do not know of any for 1974.

Mr. TARR. I do not know where it came from in 1973.

Mr. SHRIVER. Wouldn't Japan be interested in giving them some assistance?

Mr. TARR. There is not a great deal of military assistance that Japan is able to give.

Mr. SHRIVER. How about economic assistance? They are pretty good with electronics. Maybe they need some new radios for their police in Bangkok.

Admiral PEET. It is our policy to try to interest them in providing that sort of assistance.

Mr. TARR. Yes, I think so.

Admiral PEET. We are not always successful.

Mr. TARR. Who was the third country?

Admiral PEET. I will have to provide it.

[The information follows:]

The sources (consisting of military sales) of third country assistance to Thailand in fiscal year 1973 are:

Germany	———
United Kingdom	———
	———
Total	———

THAI OPERATING COSTS

Mr. SHRIVER. In fiscal 1973, 78 percent of the MAP program in Thailand went for operating costs. The situation has improved in the proposed 1974 program. My question is: Why was it so high in 1973?

Mr. TARR. Mr. Shriver, I think the easy answer to that is that the more one scales down the program, the higher the amount will be in operating costs.

Mr. SHRIVER. The less program you have the greater your operating expense?

Mr. TARR. Yes, if the anticipation at the start of the year is that the program will be at a certain level, and then if it is reduced to 60 percent of that level and they already have assumed the higher level, when they make up their military budget, then their tendency will be to put it into operating costs so that they can meet the commitments in their budget.

Admiral PEET. However, our basic policy is to zero out the operating costs in the program.

Mr. SHRIVER. As your programs scale down, the operating expenses should be less not greater, it seems to me.

Mr. TARR. We feel that the appropriate investment for us is not in operating cost but in the equipment that we can transfer.

"ENHANCE PLUS"

Mr. SHRIVER. Concerning Project "Enhance Plus"———

You are replacing ——— F–5A's which the Republic of China furnished for this project with ——— F–5E's.

Mr. VON MARBOD. That is correct.

Mr. SHRIVER. How was that authorization brought about?

Mr. VON MARBOD. The Republic of China on Taiwan provided ——— squadrons of F–5A's, or ——— aircraft. The negotiations conducted to secure the release provided for furnishing ——— F–5E aircraft at a cost of $45.9 million. In addition, we have agreed to return ——— F–5A's to the Republic of China on Taiwan.

Mr. SHRIVER. Page 26 shows ——— in fiscal 1973 for Taiwan for ———.

Admiral PEET. ———.

Mr. SHRIVER. How long have you had that?

Admiral PEET. This is basically an Army weapon which they have had in their inventory since 1969. The U.S. Navy has been working on shipboard installations of this missile during the last 18 months.

U.S. PERSONNEL IN IRAN

Mr. SHRIVER. On page 29, Iran is mentioned as a major security assistance success. MAP material aid, and credit sales have now been terminated. I read recent reports that our military personnel there are growing in number.

Admiral PEET. Yes, sir.

Mr. SHRIVER. How many U.S. military assistance or advisory personnel are now in Iran? How many would you anticipate being there in fiscal 1974?

Admiral PEET. There are numerous U.S. units in Iran. The MAAG is just one of them.

I believe there are something in the neighborhood of 200 U.S. personnel assigned to the MAAG. An increased number will be in Iran as a result of inserting U.S. technical assistance training teams. We reported to each of the committee chairmen in the Congress having an interest in the matter that, as we make sales of helicopters, aircraft, or other equipment, we send in technical teams to do a particular job such as teaching the Iranians how to operate or assemble the equipment. When a team completes its job in 6 months to a year or two, it comes out of the country. The largest number we expect to have in-country at any one time under the current program is something on the order of 500 additional people. Those are military and civilian. We are trying to keep the military to an absolute minimum. Wherever we can use contract personnel, we do.

Mr. SHRIVER. Let me ask this question. There has been a lot of conversation in here about what is classified and what is unclassified. It is this kind of thing that in previous years has been taken from the record because we were talking about what some other country has in the way of defenses. Isn't this what will happen this year in regard to numbers of aircraft of a certain kind we anticipate giving to these countries?

[Discussion off the record.]

JORDAN

Mr. SHRIVER. You mentioned Jordan's loss of subsidies from Libya and Kuwait due to the internal conflict in September 1970. How much did those subsidies from Libya and Kuwait to Jordan amount to?

Admiral PEET. I do not know that. I will provide it.

[The information follows:]

At the itme they were suspended (October 1970), we estimate the Libyan and Kuwaiti subsidies to Jordan amounted to ——— respectively.

Mr. SHRIVER. It is in the justification. I don't know the reason, but it is mentioned. Page 33 shows ——— F–5E's for Jordan in fiscal 1973 and ——— more in 1974. Yet the force data on the preceding page shows ——— fighterbomber squadrons in being in that country while the force objective is ——— squadrons. Would you explain the need for these additional planes?

Admiral PEET. I would have to check with the country director for the rationale for that. Most of the rationale for our program in Jordan is related to her internal security.

Mr. SHRIVER. That is why I wondered why they needed the additional planes.

Mr. TARR. My assumption is they are phasing out old aircraft and they gain enough increased capability with the newer model aircraft to get along with a smaller squadron structure. I will provide it.

[The information was provided to the committee.]

PREPARATION OF PROGRAM JUSTIFICATIONS

Mr. SHRIVER. When are these justifications prepared with reference to these hearings?

Admiral PEET. In some cases, we start almost a year in advance. The information is a good 6 months old in many cases.

Mr. TARR. They are nearly final by January, are they not?

JORDAN AND NEAR EAST STABILITY

Mr. VON MARBOD. With respect to Dr. Tarr's point on phasing out, the Jordanians will be phasing out the F–104 aircraft.

Mr. SHRIVER. While our assistance to Jordan is to increase by $20 million in 1974, that country's overall defense budget will go up only $3 million. There is no third-country assistance, so it is all up to us again. Our allies in Europe also have a large stake in the stability in that area. I am wondering why they are not helping this effort to keep the peace.

Admiral PEET. It is another political program involving political judgment as to what we do.

Mr. SHRIVER. Why is it our responsibility entirely? Why is not Germany or the United Kingdom or Italy or even Japan helping, considering our fiscal and balance-of-payments problems in this country?

Mr. TARR. I think part of our difficulty with respect to Jordan is the awareness on our part that if Jordan became unstable internally, it would make it all the more difficult for Israel and for the continued cease-fire in that area.

I think you are absolutely correct that some of the nations in Europe should have as great a stake in the stability of the Near East as we do.

Mr. SHRIVER. They are pushing us around on the dollar.

Mr. TARR. Exactly. But if they do not have, then still is it wise for us to say that because others will not take part that we should abandon the situation? It would be impossible, I think, for us to abandon our support of Israel. ———.

TURKEY'S CONTINUING NEED FOR ASSISTANCE

Mr. SHRIVER. Page 34 mentions Turkey is now in a promising foreign exchange position. Would you tell us about that?

Admiral PEET. Basically, Turkey's foreign exchange position has improved because a number of Turkish workers have gone to Europe—Germany and elsewhere—and are sending money home. The effect on the Turkish balance of payments has been very significant.

Mr. SHRIVER. I understand that. I talked with Mr. Toner, our AID Mission Director there, who is in town for a few days. But they still have high unemployment in that country.

Even while their men are off in Germany.

Admiral PEET. I have just returned from a trip to Turkey during which I reviewed their situation. You are right. It is still a poor country.

Mr. SHRIVER. Why is it important—and I think we ought to put this in the record—or in the best interests of the United States that we offer military assistance to Turkey?

Admiral PEET. Turkey is the southern flank of NATO and, as the Turks point out, they are located on the border of the Russian Bear. The Bulgarians also appear to them as a great threat. ———. Turkey is a forward defense area for us from the Pentagon point of view. ———.

TURKEY STRATEGICALLY IMPORTANT

Mr. SHRIVER. There has been an improvement in their political situation internally, has there not?

Admiral PEET. Yes, sir. Recently they settled on a compromise candidate. Although he is an ex-Admiral, he is really a legislator and an ambassador. He was acceptable to both parties. I think he is an excellent compromise candidate ———.

Mr. TARR. Mr. Shriver, may I add to Admiral Peet's testimony, in addition to all he said with which I concur, Turkey has some special importance to us in problems that are more a concern in our defense than they are in Turkey's defense. ———.

So Turkey is important geographically as far as our own defense needs are concerned.

Mr. SHRIVER. I further understand that the program that we worked with the Government of Turkey and the people of Turkey for the elimination of poppies which feed our own drug problem has really worked.

Admiral PEET. Yes, sir.

Mr. SHRIVER. Although this is under another type of assistance, I think it indicates that they do keep their word; they do participate and

cooperate with the United States and are worthy of friendly actions toward them.

Mr. TARR. Are their farmers learning how to grow other crops now?

Mr. SHRIVER. Yes, they are. Wheat and feed grains. They have been experimenting with these crops, and successfully so. They are almost self-sufficient.

Admiral PEET. It is a problem for us in Turkey in this regard. We made that agreement, and it is a good one which everyone is supporting. However, while we increased our contribution to Turkey on that hand, we decreased it on another hand through military assistance, and they think it was premeditated.

ADDITIONAL ASSISTANCE TO TURKEY

Mr. SHRIVER. Turkey is to receive $71 million in third-country assistance in fiscal 1974 according to your justifications.

Admiral PEET. Yes, to the best of our knowledge.

Mr. SHRIVER. Could you identify that aid?

Admiral PEET. May I submit that for the record, sir?

[The information follows:]

It is estimated that ——— estimate will be in the form of grants from the FRG. We hold no information as to what this aid will be used for. We do not know whether the remaining ——— will be in the form of credit ———. The contract covering deliveries over several years, has an estimated value of about ———. Therefore, part or all of the ——— may be made available in the form of credit to pay for these items.

Admiral PEET. Most of it comes from Germany.

Mr. SHRIVER. Again in Turkey we see a considerable number of trucks.

Admiral PEET. Yes, sir.

Mr. SHRIVER. Will you provide for the record the total number of trucks included in your worldwide program for the 1972, 1973, and 1974 fiscal years?

Admiral PEET. Yes, sir.

Mr. SHRIVER. Include where those trucks were and are to be purchased.

Admiral PEET. Yes, sir.

Mr. SHRIVER. There are a few members here who would like to know that. We have had this information heretofore. We would be interested in the total dollar cost.

[The information follows:]

The number of trucks programmed under MAP in FY 72 and FY 73 with their dollar values, and our proposal for FY 74 are shown in the chart following. It should be noted that as a general rule within the Department of Defense we first utilize to the maximum extent possible assets on hand in our service inventories. As a consequence many of the listed vehicles were provided as excess at reduced cost. Many others were provided after being rebuilt at US Army facilities. Of those from new procurement, the primary contractors, on the basis of competitive bidding, are the following:

¼ ton truck M151A2—AM General, South Bend, Indiana.
2½ ton truck M35A2—AM General, South Bend, Indiana.
2½ ton truck M600 Series—Diamond Reo, Lansing, Michigan.
5 ton truck M809 Series—AM General, South Bend, Indiana.

[Dollars in millions]

Type	Fiscal year 1972 MAP		Fiscal year 1973 MAP		Proposed fiscal year 1974 MAP	
	Quantity	Value	Quantity	Value	Quantity	Value
¼ ton	5,424	$2.7	1,634	$0.9	3,414	$1.8
¾ ton	604	2.0	142	.6	621	1.4
1 ton	12		4			
2½ ton	6,787	34.1	1,654	4.9	4,597	38.0
5 ton	1,646	1.8	565	.7	1,693	11.7
Other trucks	90	.3	53	.1	8	
Commercial trucks	272	.6	437	1.2	287	1.4
Total	14,835	41.5	4,489	8.4	10,620	54.3

Mr. ROUSH. The committee will stand in recess until we return from the floor.

[Brief recess.]

Mr. ROUSH. The committee will come to order.

CONCERN FOR ISRAEL AND LEBANON

Mr. SHRIVER. Page 37 states that beginning in fiscal 1974 Israel will receive no third-country assistance. Have they received it in the past?

Admiral PEET. We have an estimate of ——— million for fiscal year 1973. I am not sure from what country. ——— I can get that information for you.

[The information follows:]

Admiral PEET. During 1972 military assistance to Israel was provided by West Germany ——— and the United Kingdom ———. The 1973 third country assistance to Israel of ———, million was provided by Italy.

Mr. SHRIVER. Page 38 states the Lebanese Armed Forces and security forces are ill-equipped to face the internal and external threats to security. Would you comment on this?

Mr. TARR. ———.

They have a very serious problem internally. Obviously, once again that relates to our concern for Israel. We feel that they are worthy of some support from us.

Mr. SHRIVER. What is their internal problem?

Mr. TARR. The Fedayeen?

Mr. SHRIVER. The guerrilla forces.

Mr. TARR. Some of them are held rather tightly in camps. They are reasonably well armed.

Mr. SHRIVER. Are they former refugees?

Mr. TARR. They are Palestinian refugees who are held in camps in various spots around the country.

Admiral PEET. They are armed and trained.

Mr. TARR. Yes.

Mr. SHRIVER. I understand this. If we can retain it in the record, it would be helpful.

What other countries are furnishing Lebanon with military assistance?

Mr. TARR. There have been some offers from Iran to assist the Lebanese. Whether any of these have been consummated thus far, I am not sure. My guess is that they have not. Admiral Peet, are you aware of any other countries involved in Lebanon?

Admiral PEET. I am not.

Mr. TARR. That is the only one I know of.

FMS CREDIT FOR SAUDIS

Mr. SHRIVER. The Saudi Arabian Government has large foreign reserves; does it not?

Mr. TARR. Very large.

Mr. SHRIVER. Why, then, do they need FMS credit sales?

Mr. TARR. Mr. Shriver, when we developed this proposal, we thought that the sales from Saudi Arabia would be quite large. We thought also there might be a possibility that they would wish to finance some of these purchases with credit from banks on a government-to-government arrangement. This would require some guaranteed banking from Federal funds. The money is not actually used, but it is simply set aside for a guarantee under the way in which we handled the program.

It is not likely that they will seek to do this. With the reserves that they have, there isn't that much possibility that they will use it. This is why we put the figure in at the time we put the program together.

Mr. SHRIVER. I believe they are also considered a developed country.

Mr. TARR. If they are not, they are becoming that quickly.

Mr. SHRIVER. I mean in your justifications, they are so considered.

ANTICIPATING COUNTRY ALLOCATIONS

Admiral PEET. Yes, sir. However, we had difficulty with the total credit dollar—that is, allocating it country by country. It is very difficult to predict requirements so far in advance; but I can assure you that we are going to need all of that total dollar. In fact, we could have put quite a bit more to effective use this year in the best interests of the United States.

Mr. SHRIVER. What has been your past experience? Has your program varied considerably from what you testified to when you were before this committee?

Admiral PEET. On the FMS credit, we have generally used most of the funds given us. Because we have both a total program restriction and a new obligational authority restriction, we may not use all the NOA when we are able to extend more credit on a guaranty basis.

Mr. SHRIVER. But you haven't switched around too much, have you?

Admiral PEET. Although I have not used all my NOA, I have extended all the credit programed for 1973; and I could program quite a bit more. For example, Taiwan would like to have more. There are several countries around the world that would like more money—that is, credit at the cost of money to the United States.

SAUDI-UNITED STATES BALANCE OF TRADE

Mr. SHRIVER. Page 39 states that the United States enjoys an annual balance of trade of over $200 million in regard to Saudi Arabia. Would you explain that for the record?

Admiral PEET. The Saudis buy much more from us than we buy from them, even including their oil.

Mr. SHRIVER. You call that $20 million for credit sales "National Guard Modernization."

Admiral PEET. We are negotitaing a sizable program with the Saudis right now. They want to modernize their national guard in the country. The King considers the modernization of the national guard of major importance to him. It amounts to about a $300 million program.

Mr. SHRIVER. You have asked for $20 million in credit sales.

Admiral PEET. Yes, sir.

Mr. SHRIVER. Is it like our National Guard?

Admiral PEET. It is difficult to say.

Mr. SHRIVER. I withdraw the question.

Admiral PEET. There are several other programs under consideration for Saudi Arabia; including an F–5 program; and as you heard recently, the President has signed a determination that we would permit sales of F–4's to Saudi Arabia. There is also a naval program for Saudi Arabia which is actually more of a coast guard program than a navy program.

SPAIN AND PORTUGAL THIRD-COUNTRY AID

Mr. SHRIVER. In fiscal 1974 Portugal is to receive ——— million. Could you identify that aid? Is that ———?

Mr. TARR. Just a moment. May I interject? The estimate for third-country assistance for Portugal is ——— million.

Mr. SHRIVER. That is what I was referring to.

Mr. TARR. Who will provide that I don't know.

Mr. SHRIVER. That is what my question was.

Mr. TARR. I don't know.

Mr. SHRIVER. Also third-country assistance of ——— million for Spain.

Admiral PEET. Yes, sir.

Mr. SHRIVER. You don't know?

Admiral PEET. No, sir.

Mr. SHRIVER. Someone wrote this.

Admiral PEET. ———. I don't have that information, but I can get it for you.

[The information was provided to the committee.]

Mr. TARR. May I make a point for the record, that when we say third-country assistance, that may be grant or it may be concessionary sales or it may be a combination of both.

ORIENTATION FOR AFRICAN MILITARY PERSONNEL

Mr. SHRIVER. Page 47 mentions orientation training visits for military personnel from selected African countries. What is accomplished by them? Of what value to the United States is that?

Admiral PEET. The question concerns orientation visits.

Mr. VON MARBOD. During orientation visits, we try to provide a balanced tour to U.S. military installations, and training facilities which will offer participants an opportunity to observe maintenance and supply management courses and other activities of that nature.

Mr. SHRIVER. What is the purpose?

Mr. VON MARBOD. The purpose?

Mr. SHRIVER. Is it a junket?

Admiral PEET. Orientation visits serve several purposes, depending on the country with which we are dealing.

Mr. SHRIVER. Expand on that for the record.

[The information follows:]

Orientation training is generally provided specially selected foreign personnel to familiarize them with specific US equipment, techniques and procedures. Orientation training is conducted in a manner to achieve a maximum learning experience for the foreign personnel who participate. In addition to the purely military objectives to be achieved through orientation, it is intended that, as a result of careful student selection, participation in these tours will serve to enhance mutual understanding, cooperation and friendship between US forces and participating nations. In some countries, we provide orientation tours for classes of their senior military schools. These serve the same purpose as domestic and foreign field tours serve US senior service schools. It provides the student and selected faculty members an opportunity to view military operations using latest equipment based on modern military doctrine, techniques and procedures. It provides an opportunity for foreign personnel to view first hand the magnitude and extent of U.S. defense and deterrent efforts and to put their own capabilities and capacities in proper perspective. Orientation training also provides key foreign personnel with official exposure to the operating levels of the Government, both military and civilian, as well as exposure to US industry and our society in general. Key foreign personnel, who attend their nations' senior service schools and can participate in orientation training, are the prospective leaders of their countries military establishments, and frequently they are placed in positions of considerable power and influence in their governments. In many cases, completion of the countries' major service schools is an absolute prerequisite for assignment to key staff positions and for promotion to flag rank. The value accruing to the US from orientation training cannot be quantified, but it is judged to be one of our most worthwhile and productive efforts.

Mr. SHRIVER. As we are spending taxpayers' money for this, there must be a better reason than just saying it's political.

DECREASING ROLE OF KAGNEW IN ETHIOPIA

Would you describe for the committee, especially for the new members, the role played by the Kagnew communications station in Ethiopia? You got into that a little while ago.

Admiral PEET. Yes; we did. Kagnew has been an important communications station for our Armed Forces, both the Army and the Navy. ———.

Mr. ROUSH. The committee will stand adjourned until 1 p.m. tomorrow afternoon.

WEDNESDAY, JUNE 13, 1973.

AFRICAN PROGRAM REQUESTS

Mr. PASSMAN. The committee will come to order. I yield to Mr. Shriver.

Mr. SHRIVER. Thank you, Mr. Chairman.

When I concluded yesterday afternoon we were talking about Ethiopia and two items in the Ethiopian force data which appear to be out of line. I refer to 11 field artillery battalions and 11 light tank battalions,

while the force objective calls for only one of each type of battalion. Will you comment on that?

Admiral PEET. Yes. We have looked at those data since the hearing yesterday. ———.

Mr. SHRIVER. From which countries will Morocco receive $4 million in military assistance in 1973? Is it a sale?

Admiral PEET. It is $4 million, entirely from France, and it is a sale.

Mr. SHRIVER. So all of those we were talking about before were sales except Germany and Turkey?

Admiral PEET. Yes, sir.

Mr. SHRIVER. What is the justification for your program requests for Tunisia for fiscal 1974? It is more than 2½ times the fiscal 1973 program.

Admiral PEET. A large share of the increase from $2.4 to $6.3 million was for credit sales of about $2.5 million.

Mr. SHRIVER. Sales?

Admiral PEET. Yes, sir.

Mr. SHRIVER. What is the justification for any continued U.S. military assistance program for Zaire?

Admiral PEET. The former Belgium Congo?

Mr. SHRIVER. Yes.

Admiral PEET. Internal security again is the primary reason. We have been making some C–130 sales to that country, and we have substantial interests in the country as does Belguim.

Mr. SHRIVER. Commercial interests?

Admiral PEET. Commercial interests primarily ———.

Mr. TARR. Except for a small training program, it is a sales program.

Mr. SHRIVER. Except for what?

Mr. TARR. A small training program. It is entirely a sales program.

UNITED STATES, FRANCE, AND UNITED KINGDOM IN LATIN AMERICA

Mr. SHRIVER. Do you intend to amend your proposed program for Argentina in view of the recent political developments in that country?

Admiral PEET. I don't know of any proposed changes. It would be a State Department initiative to do so.

Mr. SHRIVER. Dr. Tarr?

Mr. TARR. Mr. Shriver, I think it is a little early for me to make any statement. ———.

Mr. SHRIVER. From what sources will Argentina receive ——— million in third country assistance in fiscal 1974?

Admiral PEET. It is estimated that there will be ——— million in sales from France, ——— million from Germany, ——— million from the Netherlands, and ——— million from the United Kingdom.

Mr. SHRIVER. All sales?

Admiral PEET. Yes, sir. Their business is going strongly European.

Mr. SHRIVER. Why?

Mr. TARR. ———.

Admiral PEET. We also have indications from the Argentine military that they resent having been turned down on some U.S. equipment. As a result they are not looking to us; they are looking to Europe.

BRAZIL

Mr. SHRIVER. On page 66 you say there are no major internal or external threats to political stability and continued economic progress in Brazil, yet you are proposing a program of $56 million in that country for fiscal 1974. This is a large increase over the 1973 level of $16 million. My question is, why?

Admiral PEET. That is entirely FMS credit sales. There are two major sales we are considering right now. One is the F–5 sale and the other the C–130 sale. We are proposing credit for 1974 in the amount of $56 million.

Mr. SHRIVER. What are the sources and types of aid from third countries to Brazil for 1974?

Admiral PEET. Here again, it is primarily from France and the United Kingdom—$——— million in sales from France; $——— million from Italy, and $——— million from the United Kingdom.

CHILE

Mr. SHRIVER. Do you know of Soviet assistance to Chile that has been accepted by Chile?

Admiral PEET. I don't know what they have accepted. ———.

Mr. SHRIVER. The third-country sources in Chile, according to the justification, show ——— million.

Admiral PEET. Yes, sir.

Mr. SHRIVER. From what countries?

Admiral PEET. ——— million in sales from France and ——— million from the United Kingdom.

Mr. SHRIVER. All sales?

Admiral PEET. Yes, sir.

AID TO EL SALVADOR AND HONDURAS

Mr. SHRIVER. The justifications state that neither El Salvador nor Honduras face military threats except from each other, yet we are to continue our military assistance to each of them on a comparable level. Will you comment on that?

Mr. TARR. Mr. Shriver, perhaps I could comment on that. Their problems have been with each other—that is, uncertainty as to what the other would do. We have worked awfully hard through our ambassadors to bring these people together. Part of the uncertainty has been a lack of awareness on one side as to what the military capabilities were on the other. Actually the capabilities are not great on either side.

What we have sought to do was to talk with each country about a very small program for each which would be identical. In addition, Guatemala ———.

So what we have done is to offer the same small program to all three countries with the hope they would be satisfied then that each was protected from the other and they could begin serious discussions. They are getting along better now than they have for the last year and a half. We are hopeful that the situation will continue to improve.

SECURITY ASSISTANCE FOR MEXICO

Mr. SHRIVER. In the justifications at page 67 it is mentioned that ———. We are not forcing them to take this $2.6 million request are we?

Admiral PEET. No, sir, but we are offering them $100,000 in training and $2.5 million in credit.

Mr. SHRIVER. Are they ———.

Admiral PEET. ——— we don't have a grant program.

Mr. SHRIVER. The training would be.

Admiral PEET. Training is a little different. ———.

Mr. SHRIVER. These are credit sales?

Admiral PEET. Yes, sir.

PANAMA CANAL TREATY SITUATION

Mr. SHRIVER. Do either of you know what the current treaty negotiation situation is between the United States and Panama?

Admiral PEET. No, sir; I don't.

Mr. TARR. ———.

It appears that we require a new point of departure in Panama to begin serious conversations. We hope that we can do that.

Mr. SHRIVER. What is the justification for more than tripling the program for Uruguay for fiscal 1974? Their defense need hasn't increased significantly over the last 3 years. Why this increase?

Mr. TARR. The major portion of that increase is in excess defense articles.

———.

Mr. SHRIVER. It has been right along.

Mr. TARR. Exactly. I think this would reflect our concern for the insurgency.

Admiral PEET. A large portion of the $2 million increase is for sales.

Mr. SHRIVER. It is for credit sales?

Admiral PEET. Yes, sir.

Mr. TARR. Then you have $1.8 million in excess defense articles, also an increase.

Mr. SHRIVER. And that is a gift.

Admiral PEET. It is grant aid.

Mr. SHRIVER. I think that is all, Mr. Chairman. Thank you.

Mr. PASSMAN. Thank you, Mr. Shriver.

I want to yield to Mr. Bevill on military.

Mr. BEVILL. Yes, sir.

Mr. Secretary, on Panama at page 57, Latin America security assistance $230,000. I believe Mr. Shriver was asking about the agreement on that. Do we have an agreement expiring on the Panama Canal?

Mr. TARR. Yes, we do. I don't know the exact date for that treaty to run out. A year and a half, I believe.

Mr. BEVILL. But we own the canal; don't we? The United States built it and paid for it, and we own the canal.

Mr. TARR. My understanding is we were granted the use, occupation, and control of the Canal Zone in perpetuity but we do not actually own the land on which the canal is built. I think our treaty that goes back to the Theodore Roosevelt Administration confirms the sovereignty of the Government of Panama to the soil of the Canal Zone. I believe that is the difficulty. Can you help us, Ben?

Mr. FORMAN. My recollection is there is no time limit on the treaty itself. As Dr. Tarr said, however, the treaty does recognize that the Panamanians have what the Secretary of State, about 50 years ago, called titular sovereignty to the canal when and if we ever get out. The problem is not so much that we are working under a treaty deadline of time, but that the pressures of changing events in the international scene is causing us, and has caused us over the past several years, to try to negotiate a new agreement. There is also the problem of the adequacy of the present canal and the possible need for building a sea level canal.

Mr. BEVILL. This situation is continuing to worsen as far as their demands. They want us to turn the canal back to them and get out. That is the effect of their attitude; isn't it?

Mr. TARR. Over the last 3 years the condition has worsened.

Mr. PASSMAN. Will the gentleman yield briefly at this point so I can make a contribution I think to the record for our subsequent consideration?

Mr. BEVILL. Yes.

MEXICO

Mr. PASSMAN. Something was said about Mexico ———.

Admiral PEET. Yes. Mr. Shriver was reading from the justification which indicates we are ———.

Mr. PASSMAN. You mean ———.

Admiral PEET. ———.

Mr. PASSMAN. This committee will serve no useful purpose in another 2 or 3 years unless we do something to bring multilateral organizations under control.

We have actually given Mexico ——— $385 million, and $173 million of it was outright grants. So we see a disappearing program on the surface for Mexico. But listen to this if you will: They have gotten $597,800,000 out of the Inter-American Development Bank. I don't guess they are ——— out of that multilateral organization are they?

Admiral PEET. Apparently not, sir.

Mr. LONG. When I was down in Mexico a couple of years ago, and didn't know all about this multilateral aid, I was quite interested and strongly impressed when Mexicans told me they didn't receive any aid and didn't want any aid.

Mr. PASSMAN. That is right.

Mr. LONG. They said that they wouldn't even take a typewriter if it were sent down to a convent that wanted to use it in its education programs. They wanted to stand on their own two feet.

Mr. PASSMAN. Thank you, Mr. Long.

Mr. LONG. You were telling me how much Mexico is getting in multilateral aid. The same thing happened in Venezuela. They said they weren't getting aid, and it turned out they were getting hundreds of millions in multilateral aid.

Mr. BEVILL. This Panama Canal situation is one which, if I were much more informed on, I would feel better about it. I don't think we ought to give these people anything. We built this Panama Canal. They have come up here and are making demands on us and telling us what we have to do. I predict right now they will get anywhere from half to all they ask for. It seems to me that is too often our policy and I don't agree with that kind of policy. As I say, my knowledge of the situation is very limited. I think we are continually giving—here we are the most powerful nation on earth, and when any little country asks for anything we seem to say we are going to give it to them to make them feel good. That is the impression I get from most of these programs. The foreign aid program has been going on since World War II. It wasn't started as a handout but it is a handout now. We try to buy goodwill I think. You can't buy goodwill or friendship. Here is Panama getting $230,000, just a drop in the bucket, but those people are marching down there and telling us what we have to do and what we haven't got to do. I would like to see the State Department tell them you are not going to get it, you can forget about it, and end it. It would seem to me this would be a more logical approach than slipping them a few thousand, $100,000, and negotiating with them. Since you are asking for the full loaf, we are going to give a half a loaf. This is just a layman's thinking.

I think I am expressing the feelings of my constituents when I say we don't like what has been going on in the Panama Canal Zone, we don't like their policy, and we don't feel like the taxpayers ought to be handing them any money or giving them anything.

Mr. LONG. Will the gentleman yield?

Mr. BEVILL. Yes.

Mr. LONG. I was at the Panama Canal several years ago and had long talks with our Ambassador there and some of the members of their parliamentary body. Right or wrong, they have a somewhat different view of the thing. It is well known of course that we didn't dicker with them over the Panama Canal. We really took it from them under a revolutionary government which made a deal with us. So the thing wasn't done in what you might call arm's length bargaining. They feel strongly about the terms of the lease. But I couldn't find anybody that wanted the canal back for them to run. Maybe they have changed their position on this and you may be more up-to-date than I am.

Mr. BEVILL. It is my understanding they are demanding we yield it back to them.

Mr. LONG. There was talk then, about that. When you talk to them you find out that that isn't really what they want. They want better lease terms, more up-to-date in what dollars are worth. They also want a deal whereby some compensation is made for the profits made by the people running the canal, mostly U.S. people, who make something of a racket out of it, who have their own PX and who own the private economy and lord it over the others. The way they look at it, it is their only asset.

Of course, it would cost billions to build another canal if it was ever made impossible for us to stay there. The Nicaraguan Canal doesn't make too much sense, I understand. Milton Eisenhower talked to me

a long time and said that if we build another canal, we ought to build it in Panama.

It might be in our own self-interest to try to come to terms with Panamanian popular feeling because they do have a point of view. And after you have talked to them, it does make some sense in terms of our national interest.

Mr. BEVILL. Of course, this is a very important thing to the defense of our country. I appreciate what you have said but we could say the same thing about the Indians—we ought to give this country back to the Indians, if you want to take it that way.

Mr. LONG. There aren't very many Indians left to give it back to, but there are quite a few Panamanians.

Mr. BEVILL. I frankly feel we are too soft on these things.

Mr. LONG. I agree about the handouts. I think most of foreign aid is poorly conceived and not in the national interest. But I think that there is another side to the Panama story.

NEED TO TIGHTEN UP AID PROGRAM

Mr. BEVILL. As I say, my knowledge is limited on the details of it. This is the way it looks to me.

I will wind up by saying the foreign aid was started for a very good purpose. As we know, it was to rebuild Germany and the countries we had wiped out, and then we have made it handouts every year ever since. Of course this is getting a little off the subject.

Mr. PASSMAN. We have one rule in this committee. You examine the way you want to, say what you want to, and take all the time you want. So don't surrender your position.

Mr. BEVILL. Mr. Chairman, I would wind up by saying I feel very strongly we need to eliminate these foreign aid programs, that is not what they were created for, and it has become a handout program. We are trying to buy good will and you cannot buy good will, you cannot buy friends. What I am saying is I am anxious to see this program done away with completely and get into the loans, and then on the loans I want us to tighten up and not just make a handout of them. I think this is something that we need to think about and do. I know a year or two ago we were running about $12 billion a year in just handouts.

Mr. PASSMAN. Will the gentleman yield?

Mr. BEVILL. Yes.

Mr. PASSMAN. I want to thank the gentleman for that contribution. I feel the same as the gentleman and I will try with his assistance to switch this program from grants to loans. Already many country leaders have expressed a willingness to accept our aid on a loan basis. You are familiar with it aren't you, Mr. Secretary? This went from President to President to our President and that is what we are going to do—switch it over to a business basis providing we can get the cooperation from all the people involved.

I yield to Mr. Coughlin.

Mr. COUGHLIN. I have no questions right now.

Mr. PASSMAN. I yield to Mr. Roush.

Mr. ROUSH. Thank you, Mr. Chairman.

MOOSE-LOWENSTEIN REPORT

There have recently been reports of the so-called Lowenstein-Moose report. As I indicated the other day, there are varying accounts as to the number of troops the Cambodians have in the field. Your own figure I believe is 220,000.

Admiral PEET. Yes, sir, that is what we are supporting.

Mr. ROUSH. I observe from the account that these vary. The Chief of the U.S. Military Equipment Delivery Team in Cambodia puts the effective strength at 275,700, and the Defense Attaché's Office puts it at 261,518. The Joint Chiefs of Staff briefers put it at 175 to 190,000. The State Department official estimate Cambodian strength is 150,000 and yours is 220,000. Is yours correct?

Admiral PEET. I am not sure which is correct. As a practical matter, it is difficult to keep track of the exact number of troops in Cambodia. I read the article you are referring to. However, I have not seen or read the Moose-Lowenstein report issued to the press, and we got it about the same time.

Mr. ROUSH. Your estimate does not include the payment of phantoms, does it? You don't have included in your figure the phantom soldiers referred to in this article?

Admiral PEET. The phantom soldier issue is one that has been debated for some time and we have made several statements about it. Dr. Tarr has talked at length to this subject.

Mr. TARR. I might be able to answer this question. I have read the report and I have visited with our military equipment delivery team personnel in Cambodia.

One of the problems with phantoms is that until now the Army of Cambodia has operated on a pay system that was inherited from French colonial period, one in which payments were not made by the government to the individual soldier, but instead were made by the government to a commanding officer of a unit who then was responsible for the pay of the soldiers. This obviously leads to the possibility for corruption, and there is evidence that there has been corruption in at least some of the units of the Cambodian Army.

Our personnel have been deeply disturbed by these reports, and accordingly we have been working with the Cambodian Army for some time to perfect payroll practices more consistent with our method of paying, which is from the Government directly to the soldier.

We have developed a system, and it is now installed in two of the five military regions of Cambodia. The reason it is not installed in more places is that we are working with very few people in Cambodia, and do not have the manpower to introduce a wholesale adoption of these methods.

We are encouraged, however, that personnel from the General Accounting Office returned recently and said that in their opinion this will be a satisfactory system, and they are looking forward to the time when it can be adopted for the entire country.

Mr. PASSMAN. We will recess for a vote and if you get back first, Mr. Rousch, you start the committee.

[A brief recess was taken.]

TROOP LEVELS IN CAMBODIA

Mr. ROUSH. The committee will come to order.

Dr. Tarr, did you finish your explanation?

Mr. TARR. Yes.

Mr. ROUSH. Could you tell us the number of North Vietnamese troops in Cambodia?

Admiral PEET. The present estimate is about 8,000.

Mr. ROUSH. This report states 5,000. You feel it is at least 8,000. Is that correct?

Mr. TARR. I think it depends on whether you mean how many North Vietnamese are actually in Cambodia or how many are contributing directly or indirectly to the action against the Cambodian forces.

Mr. ROUSH. Let's talk about the number which are in Cambodia.

Mr. TARR. I think we have been talking about 8,000. But I believe we have to be very careful to interpret these intelligence figures in a way which is justified on the basis of the way in which the information is collected. We really don't know with precision.

Mr. LONG. You didn't conduct a door-to-door census.

Mr. TARR. The flow of people and supplies through northeastern Cambodia makes it almost impossible for us to know precisely how many at any one time are in there.

Admiral PEET. I do not think the figures are inconsistent. Moose and Lowenstein are talking actual combat troops, and I think we are in close agreement that there are between 4,000 and 5,000.

Mr. ROUSH. What would be the size then of the insurgent force?

Admiral PEET. The intelligence estimate is approximately 40,000.

Mr. ROUSH. This same article to which I have been referring speaks of us paying Laotian flyers not to fly. Would you like to speak to that?

Mr. VON MARBOD. Yes, Mr. Roush. Until March 1973, Laotian pilots were paid a combat bonus amounting to about $1.50 per sortie. In March of this year, the system was changed to one by which the RLAF pilots are paid on a monthly basis. The present system provides an incentive pay of $50 per month for fighter pilots and forward air control pilots. All others are paid $20 a month. This method of payment is consistent with systems used in the military worldwide, including our own system. The system does not pay pilots not to fly. On the contrary, it encourages pilots to stay on flight status and to remain proficient.

Additionally, the system obviously eliminates any claim that RLAF strike sorties occasionally flown in response to cease-fire violations might be executed merely to provide bonuses for the pilots. The thrust of the statement in the newspaper attributed to Mr. Moose and Mr. Lowenstein is therefore incorrect.

U.S. CONTROL OF INTERNATIONAL DRUG TRAFFIC

Mr. ROUSH. I would like to turn to another matter here for just a moment. I am concerned with the U.S. policy with regard to the international drug traffic. As I understand the law, the President could, if he saw fit, determine that a country or certain countries had failed to take adequate steps to control the drug traffic of that country, and that if he found they did not, then certain of our, I guess maybe all

of our so-called foreign aid programs including the program for which you are responsible then would terminate insofar as that country is concerned. Do I correctly state that?

What I shall do is read into the record the section of the law as I have it. "Notwithstanding any other provision of the law, the President is authorized to furnish assistance to any country or international organization on such terms and conditions as he may determine for the control, the production of, processing of, smuggling of and traffic in narcotics and psychotropic drugs. The President shall suspend economic and military assistance furnished under this or any other act and shall suspend sales under the Military Foreign Sales Act and under title I of the Agricultural Trade Development and Assistance Act of 1954 with respect to any country when the President determines that the government of such country has failed to take adequate steps to prevent narcotic drugs and other controlled substances, as defined by the Comprehensive Drug Abuse Prevention and Control Act of 1970, produced or processed in whole or in part in such country, or transported through such country from being sold illegally within the jurisdiction of such country to the United States Government personnel or their dependents or from entering the United States unlawfully. Such suspension shall continue until the President determines that the government of such country has taken adequate steps to carry out the purposes of this chapter."

Is that your understanding of the law?

Mr. FORMAN. Yes, sir. That is section 481 of the Foreign Assistance Act.

Mr. ROUSH. Have the provisions of this act at any time had any effect on your own activities?

Mr. FORMAN. I don't know of any instance in which the President has made a finding which required the cutoff of military assistance or sales.

Mr. ROUSH. Has the administration or the President through any person in his administration required your particular agency to assist in making any determination that a country has or has not complied with the control of the drug traffic in that country?

Mr. FORMAN. I am not sure if I can answer the question in the way you put it.

Mr. ROUSH. Answer it then as you would.

Mr. FORMAN. The President has established a Cabinet Committee on International Narcotics Control. That Cabinet committee had a working group established as the implementing arm of the Cabinet committee. Underneath that was a coordinating committee and supplementing that were interagency regional committees chaired by the Department of State in which the Department of Defense participated. So through that mechanism, through participation on each one of these tiers from the Cabinet committee on down through the interagency regional committees, the Department of Defense certainly has been participating in the various studies and actions taken to try and control the narcotics traffic.

Mr. ROUSH. Do you have people in various countries of the world where you are making your sales, where you are giving military assistance?

Admiral PEET. Yes, sir.

Mr. ROUSH. Has any requirement ever been laid upon those people to assist in a determination as to whether or not any country is controlling its drug traffic, to your knowledge?

Admiral PEET. Not to my knowledge. They are members of the Country Team in the country, but that would be the responsibility of the Ambassador rather than the military assistance advisory personnel.

Mr. ROUSH. Under the act, counselor, who makes the determination that adequate steps are taken to prevent illegal sales or illegal transportation of narcotics to the United States? Is this the group you spoke of a moment ago?

Mr. FORMAN. Basically there is a relationship between the Cabinet committee and the Secretary of State. They have overlapping functions in this area. But primarily as far as this section is concerned, it is the Secretary of State.

Mr. ROUSH. Do you know whether or not there is liaison with the customs officials?

Mr. FORMAN. The customs officials and the other agencies concerned with narcotics are represented in the groups I have mentioned, sir.

Mr. ROUSH. Do you know reports submitted indicating the source of drug illegally coming into the United States?

Mr. FORMAN. You mean reported to the public, sir?

Mr. ROUSH. Submitted to this Cabinet group you spoke of or to your agency?

Mr. FORMAN. I can't speak personally to that, sir, since I am not one of the members of one of these groups. I do know that they are active and there is full coordination of the intelligence agencies. For example, the Central Intelligence Agency is also represented in the group I have mentioned.

RESPONSIBILITY FOR DRUG CONTROL MEASURES

Mr. ROUSH. I gather from the tone of your answer you feel it is not your responsibility to take any affirmative steps to make a determination on behalf of the President or the administration that a country has failed to control its drug traffic?

Mr. FORMAN. It is certainly not the responsibility of the Department of Defense. It would be the responsibility of the Secretary of State to make such a recommendation to the President. The point I was trying to make is that we along with other agencies of the Government do work closely in this area.

Mr. ROUSH. Is there any showing or proof or any other requirement made of countries receiving training assistance, military assistance, or buying through credit sales that they have in fact undertaken a positive course of action to control their drug traffic?

Mr. FORMAN. Not by the Department of Defense, sir. This section of the act, like the other prohibitions of the act, or other sections of the act imposing prohibitions which make countries ineligible if certain conditions happen, are responsibilities vested in the Department of State, and we look to the Department of State to advise us when those conditions occur. For example, to give you some illustrations, you have various provisions in here with regard to countries whose ships carry cargoes to North Vietnam or Cuba or to countries which expropriate assets of American corporations without paying just compensation. The responsibility for administering those sections, for

making the necessary factual determinations is in the State Department. Until such time as we are advised by the State Department that a country has not met one of these conditions, and is therefore ineligible, we proceed on the basis of the standing eligibility of the country.

Mr. ROUSH. That has never happened?

Mr. FORMAN. In the narcotics field?

Mr. ROUSH. Yes.

Mr. FORMAN. As far as I know, it has never happened.

Mr. ROUSH. Do you know which countries of the world are or might be the source of narcotic drugs which are coming to the United States? Has any determination been made or list compiled of countries of the world which or might be the source of narcotic drugs coming into the United States?

If you don't know say so.

Mr. FORMAN. I don't know from my personal knowledge. I have read that the greatest source of opium production is the so-called Golden Triangle in Southeast Asia; Turkey; and to some extent Afghanistan.

Mr. ROUSH. Recently in my local papers appeared an article concerning Afghanistan, in which it was pointed out that aid which had been given to Afghanistan to reclaim land had resulted in the land being used for the production of poppies, which reaped a rich harvest for those farmers. Apparently no action has been taken except to deplore this condition.

Let me make something clear here. I am not trying to trap you all into anything here. I am merely laying the groundwork here for legislation which I think will be appropriate at a later date. I would be asking the same questions of other people who appear before this committee, and I am trying to establish a record here. These questions are not intended to embarrass you nor are they intended to put you on the spot in any way. I realize that you follow policy. I also realize that you follow the directions that are given to you, but I am trying to lay the groundwork here for questioning which will occur later on this same subject and will result in questions being propounded to other witnesses.

Does anyone else want to comment before we take a recess?

Admiral PEET. We want to be sure that you understand we are concerned about it. We want to be sure that we are complying with the law. We think that we are in every respect.

Mr. FORMAN. I want to make it clear, sir, that I have tried to be as responsive as I could in my answers, and the reason you are not getting better answers or answers which are more satisfactory to you is that the personnel who are present here today are not the personnel who are involved in the narcotics control program.

I assure you that other witnesses who will be here will be better able to speak to that.

Mr. ROUSH. I understand that. I am merely trying to find out whether or not you have been the recipient of any directions from those who are responsible for the narcotics control program or whether you have in any way participated in any affirmative action which has resulted from a determination being made under this particular section of the law I cited.

You have told me that you are not.

Admiral PEET. That is correct.

Mr. ROUSH. I am satisfied that you have given me a truthful answer. I had to get that on the record.

We will take a brief recess now.

[Brief recess taken.]

U.S. SUPPORT OF LAOTIAN TROOPS

Mr. LONG. The committee will come to order.

We have already had a question from Mr. Roush about paying Laotian pilots not to fly combat missions. If there is a ceasefire agreement in Laos, why is the United States budgeting $107 million for Thai irregular troops?

Mr. VON MARBOD. I believe you are referring to the $107 million that is in the Defense budget to support the special guerrilla units during 1974?

Mr. LONG. Yes.

Mr. VON MARBOD. The support of those forces will continue because they are the most valuable bargaining chip we have for bringing about the withdrawal of the North Vietnamese forces that are present in that country. The cease-fire provides that these forces be withdrawn 60 days after the formation of the provisional government.

Mr. LONG. 15,000 to 20,000 in the regular forces.

Mr. VON MARBOD. Yes, sir.

Mr. LONG. What are these irregular forces?

Mr. VON MARBOD. They are light infantry and light artillery.

Mr. LONG. What do you mean by irregular? Mercenaries, hired soldiers?

Mr. VON MARBOD. Yes, sir, they are hired and paid. They are all volunteers.

Mr. LONG. Volunteers out of patriotism or for dollars?

Mr. VON MARBOD. I cannot answer that, Dr. Long.

Mr. LONG. I wonder whether the effectiveness of mercenary troops has been high?

Mr. VON MARBOD. This particular force is very effective.

Mr. LONG. You say 60-day period. How much of that 60 days has elapsed?

Mr. VON MARBOD. None, Dr. Long. The provisional government has not been formed.

Mr. LONG. Who are the people, that these irregular forces whom we are paying, are fighting against? What is the threat in Laos?—the North Vietnamese, or is it Communist Laotians, or who?

Mr. VON MARBOD. Prior to the January 27 accords, they were engaged with North Vietnamese and Pathet Lao forces.

Mr. LONG. Can you give us some figures on the numbers on each side?

Mr. VON MARBOD. I can provide that for the record.

[The information follows:]

FRIENDY AND ENEMY FORCES IN LAOS

There are two categories of friendly forces in Laos: Laotian forces, both regular and irregular, and Thai irregular forces. The totals in the various categories are as follows:

Laotian Regular Army Forces	48,000
Laotian irregular forces (integrated with the regular forces now)	18,000
Laotian Air Force	2,050

River flotilla	330
Neutralist forces (who side with the Royal Laotian Government)	5,800
Total	74,180
Thai irregular forces	7,330

Enemy forces present in Laos are estimated as follows:

North Vietnamese Army Forces	61,610
Pathet Lao or Lao Communist	29,665
Neutralist forces (who side with the Communists)	1,725
Total	93,000

In addition, there are approximately 30,000 Chinese forces along the major Chinese road system in northern Laos.

Mr. LONG. You cannot give us any idea of what we are up against in Laos?

Mr. VON MARBOD. I can provide that for the record.

Mr. LONG. It would be helpful if we knew it now.

Admiral PEET. Assistance to Laos and Vietnam is in the Defense budget. It is not covered by the Foreign Assistance Act.

SECOND PARIS PEACE ACCORD

Mr. PASSMAN. I don't want to interfere, but if the distinguished gentleman would yield, I understand that they have reached an accord in Paris and there would in all probability be no more Laotians fighting or South Vietnamese fighting and the things we traded for and President Nixon traded for have come to pass.

Admiral PEET. I heard it was signed at 11 o'clock this morning.

Mr. PASSMAN. It looks like a good, solid peace that we have prayed for has come to pass.

Thank you, Dr. Long.

Mr. LONG. How long do you think this peace will last?

Mr. PASSMAN. The record looks mighty good if you look at what we turned over to Mr. Nixon and what he has given to us. I don't want to be a hero worshipper, but he has done a commendable job and under very difficult circumstances. It looks like we got something permanent.

Thank you, Dr. Long.

Mr. LONG. We have had peace for a great many months in Vietnam but the fighting still goes on.

Mr. PASSMAN. Not with our men. Ours are home.

Mr. LONG. But we are still paying for it. Money continues to go in there.

Mr. PASSMAN. We are paying only a small amount of what it cost us 4 years ago.

U.S. PRESENCE IN VIETNAM

Mr. LONG. The thing is that quite aside from that, we have about 15,000 civilian advisers in Vietnam, do we not?

Mr. VON MARBOD. They are not advisers. Counting all U.S. personnel in Vietnam now—military, DOD civilians and civilian contract personnel—there are only about 5,000.

Mr. LONG. What are they?

Mr. VON MARBOD. Basically, they are logistics personnel.

Mr. LONG. Technicians?

Mr. VON MARBOD. Logisticians.

Mr. LONG. All right. The point is, we still have American nationals who are in Vietnam. We still have a war going on in Vietnam. And we are still paying large sums of money. I wonder——

Mr. VON MARBOD. There are roughly 5,000 and they are primarily——

Mr. LONG. What?

Mr. VON MARBOD. U.S. national civilians. Not military but civilians and——

Mr. LONG. Where?

Mr. VON MARBOD. In South Vietnam.

Mr. LONG. How many do we have in Laos?

Admiral PEET. Laos is not a part of our program. We don't have those figures.

Mr. LONG. You don't carry that?

Admiral PEET. No, sir.

Mr. PASSMAN. You don't have anything to do with Vietnam either?

Admiral PEET. No, sir, neither Vietnam nor Laos.

Mr. PASSMAN. I brought this in because it was great news. I didn't think the doctor would mind my interrupting to get this before you.

Admiral PEET. Our estimates for Cambodia may be changed because the assumptions are considerably different, given the signing of that treaty or accord.

Mr. PASSMAN. Signed at 11 o'clock this morning.

Mr. LONG. You say the same thing in Cambodia, there is no——

Admiral PEET. Cambodia is a MAP country.

PAYMENT OF CAMBODIAN SOLDIERS

Mr. LONG. What portion of our military aid to Cambodia goes for salaries of Cambodian soldiers?

Mr. VON MARBOD. None of the military assistance program dollars go for pay of personnel.

Mr. LONG. How are these people paid? Defense?

Mr. VON MARBOD. No, they receive support through local currency arrangements that Dr. Tarr spoke about earlier.

Mr. TARR. Mr. Long, perhaps I could help on that. They are paid from the budget of the Cambodian Government. Their budget in turn is supported by the revenue that comes in part from the sale of commodities that are made available under our commodity import program.

Mr. LONG. Play that over slowly.

Mr. TARR. All right. Perhaps some figures would help.

In 1972 the total expenditures of the government were $193 million.

Mr. LONG. What government?

Mr. TARR. Of the Cambodian Government. This would include payments——

Mr. LONG. Salaries?

Mr. TARR. Salaries of Cambodian soldiers.

In that period our contribution to the commodity import program was $16.5 million. These would be commodities that were purchased with U.S. dollars. The commodities were made available to the Cambodian Government. The Cambodian Government sold the commodities on the market and used the proceeds from the sale to support the——

Mr. LONG. What commodities were involved and how did they come from the United States to Cambodia? The American taxpayer didn't give them money but commodities, which they then converted into money. Is that right?

Mr. TARR. That is correct. I am sorry that I cannot tell you what commodities were involved in that year.

Mr. LONG. Can you put that in the record?

Mr. TARR. Yes, sir.

[The information follows:]

TYPES OF COMMODITIES FUNDED BY CIP

In FY 1972 the AID Commodity Import Program for Cambodia expended funds for the following categories of commodities:

Petroleum and Petroleum Products; Natural or Manufactured Gas; Chemical Elements and Compounds; Dyeing, Tanning and Coloring Materials; Essential Oils, Soaps and Cleansing Preparations.

Synthetic Resins & Plastics Materials; Chemical Products & Materials; Rubber Manufactures; Wood and Cork Manufactures; Paper and Paper Manufactures.

Textile Yarns & Articles; Nonmetallic Mineral Manufactures; Nonferrous Metals; Manufactures of Metal.

Machinery, Other Than Electric; Electrical Machinery, Apparatus & Appliances; Transport Equipment.

Lighting Fixtures; Professional and Scientific Equipment; Transportation, Insurance & Other Charges.

Mr. LONG. Are these commodities coming from our military aid program?

Mr. VON MARBOD. No, sir, they are not.

Mr. LONG. Where do they come from?

Mr. TARR. They would be things like agricultural products, petroleum, perhaps some——

Mr. LONG. What budget do they come out of?

Mr. TARR. They come out of the supporting assistance budget, which is part of the Foreign Assistance Act.

Mr. LONG. I should have said, what proportion of our military and economic aid to Cambodia goes for salaries of Cambodian soldiers?

Mr. TARR. The answer would be indirectly because of this commodity import program in 1972, $16.5 million out of that total budget of $193 million.

The reason I use the $193 million is that is the latest figure that I have for their government finances. Our program in commodity imports went up substantially in 1973 to $45.6 million, but I don't know what their government budget was in this the same year.

Mr. LONG. I no longer understand, if I ever did, what you really meant. You are talking about $193 million. That is paid out, all our military and economic aid to Cambodia?

Mr. TARR. No. $193 million were total expenditures of the Cambodian Government in the year 1972.

Mr. LONG. Everything?

Mr. TARR. For everything. That is the latest figure I have.

Mr. LONG. That was not my question. What I want to know is how much economic and military aid have we given to Cambodia and how much of that goes for salaries of Cambodian soldiers.

Mr. TARR. Mr. Long, I will read these figures into the record. In 1972 we provided $178.1 million in our military assistance program; $37.1 million in our supporting assistance program; $1.9 million in

our training program. In 1973 we provided $142 million in our military assistance program, $68 million in our supporting assistance program, and $4.7 million in our training program.

Mr. LONG. Roughly the same amount in toto?

Mr. TARR. Yes, sir.

Of these $37.1 million in the supporting assistance program in 1973, $16.5 million was in commodity imports, which helps to support their government expenditure.

Mr. LONG. I am trying to find out how much of this aid went for the salaries of Cambodian soldiers.

Mr. TARR. I cannot give you that figure.

Mr. LONG. We are trying to investigate this phenomenon of phantom units and salaries pocketed by Cambodian officers to get some feeling for how much we are paying out in money that does not go to accomplish the purpose for which it is intended.

Mr. TARR. Mr. Long, I am sorry but I don't have available the information that you want. I would have to provide that for the record.

[The information follows:]

SUPPORT FOR CAMBODIAN MILITARY BUDGET

Commodity imports (including PL 480) are provided through the Economic Assistance Program and generate local currency. In FY 72 these funds covered about one-third of the $106 million military budget; the rest was funded by borrowing by the GKR. The attribution of counterpart generated by the Assistance Program to military pay and allowances is more symbolic than real. Currencies generated could have been attributed to the civil budget with the funding for the military budget coming from the loans.

ELIMINATING CAMBODIAN PHANTOM TROOPS

Mr. LONG. What do you propose to do about this problem? I understand that the phantom soldiers—or "ghost army," as they have been called—number roughly half of the soldiers for which we are paying.

Mr. TARR. Mr. Long, what we intend to do about it is what we have already started to do about it; that is, to revise the practices by which members of the Cambodian Army are paid. As I explained earlier when you were not here, the Cambodian Army heretofore has been paid under the French colonial system, whereby the commander and not the individual soldier was paid by the Government and then it was the commander's responsibilty to pass that money on.

Obviously in some cases it was not passed on in a very effective manner with respect to indigenous soldiers.

Mr. LONG. Was that always true?

Mr. TARR. It certainly could have been.

Mr. LONG. Is that why the system originated?

Mr. TARR. The logic for the system in the first place. We have developed a system which is similar to our system of payment which goes from the Government to the individual soldier and it is now being used in two of the five military districts of Cambodia. The General Accounting Office recently made a survey of the system which now is operating, and they have concluded that it will be an effective means for elimination of this problem. One of the difficulties that we have

had in trying to institute this system on a more rapid basis is that we are limited to 200 Americans in Cambodia by law at any one time. Thus we have not been able to bring in as many people as would be required for an immediate transition of the whole Cambodian Army to this system.

PURPOSE OF F–5E DEVELOPMENT

Mr. LONG. Is it true that the Northrup F–5 fighter jet sold to many developing countries is not used by the U.S. Armed Forces at all but produced exclusively for export?

Mr. VON MARBOD. That is not correct. The F–5E was introduced into the Defense budget not only to support the foreign sales but also as part of the military assistance service funded program—as part of our Vietnamization efforts in South Vietnam.

Mr. TARR. The point, Mr. Long, is that we do not anticipate that it will be used by active U.S. forces, although the prototype aircraft was first developed as a training plane for the U.S. Air Force.

Mr. LONG. What I am asking is, Are not these planes produced as a commodity for sale? General Motors does not produce any automobiles, to speak of, which are used by General Motors. They produce cars to sell and make money on. What we are trying to find out is, to what extent is this country producing arms to make money?

Admiral PEET. I am sure Northrup expects to make money on the F–5 aircraft.

Mr. LONG. I am talking about our aircraft. The State Department keeps talking about our precarious balance of payments, which is another way of saying, "Make money on these arms, get some dollars." That is why anybody wants to sell anything—to get dollars.

Mr. FORMAN. The F–5E aircraft was not developed at the initiative of the Department of Defense; it was done at the initiative of the Congress of the United States. The funds for the development of that aircraft, research and development, were inserted in the Department of Defense budget at the specific instigation of the House Armed Services Committee. The Department of Defense had not gone to the Armed Services Committee and asked for that money. The Armed Services Committee decided that a new airplane was needed to replace the aircraft which was in the inventory of our friends and allies, which was becoming out of date, that a less sophisticated aircraft was needed by these countries, one that would be simple, easy and less expensive to maintain and also one that was needed when we pulled out of Vietnam. It was at their express direction, which was later concurred in by the Senate, that the aircraft was built. It was done pursuant to a directive of the Congress that it be done as a result of the flyway competition between manufacturers as to which would be the aircraft selected.

Mr. LONG. You feel Congress was really responsible for producing planes to sell abroad and make money?

Mr. FORMAN. In the case of that aircraft; yes, sir.

Mr. LONG. I have no doubt you are right. If there are inequities, I am sure Congress is in up to its ears. I don't think it could have gone on all this time with just the administration and the State Department carrying on. I know that an awful lot of Congressmen

have a mistaken idea that these arms sales somehow promote the glory of the United States when we make money by selling weapons. We can always find a way to justify that.

U.S. ARMS SALES HELP CREATE STABILITY

A Christian Science Monitor article of May 29, 1973, reports figures on arms sales which show the United States to be the largest supplier of arms and munitions in the world. From 1961 to 1971, U.S. arms exports were $22.8 billion. The closest competitor for the same period was Russia, with $14.8 billion. Protected U.S. arms sales for fiscal year 1974 are $4 billion.

Is this true? Is the United States the largest supplier of arms and munitions in the world for export?

Admiral PEET. Yes, sir.

Mr. LONG. Do you feel that this is an appropriate role for the United States?

Admiral PEET. Given the circumstances that exist in the world today, I do, sir.

Mr. LONG. Just how does this solve the problems in the world today? Do you feel that if there is a demand it is our job to supply it—is that it—without trying in any way to restrain that demand?

Admiral PEET. In my mind, it is a very simple situation, if you don't have stability in the world, you won't make any progress. With stability you may or may not, but at least you have a chance.

Mr. LONG. Tell me how selling $22.8 billion worth of arms and being the largest arms supplier in the world promotes stability.

Admiral PEET. It enables countries to maintain stability and keep their governments functioning, instead of having utter chaos.

Mr. LONG. I hear what you say, but tell me how that is done.

Admiral PEET. It depends upon the situation in any given country. Some of them have internal problems, insurgency problems.

Mr. LONG. Do you know of any countries that have used these arms to keep insurgents from taking over? We have had a number of countries in recent years that have been taken over by insurgents.

Admiral PEET. Yes, sir.

Mr. LONG. In any case, have arms helped prevent those takeovers?

Admiral PEET. I cases where they have taken over, obviously they have not.

Mr. LONG. We have had about a dozen countries in Latin America taken over by insurgents. Of course, when the insurgents takeover they have the weapons, don't they?

Admiral PEET. Yes, sir.

Mr. LONG. Does that promote security, stability?

Admiral PEET. It is not an ideal world. I would have to evaluate it country by country as the State Department does. Let me make clear that the decisions are not made by the Defense Department. You are asking someone who does not have control over such decisions.

NEED TO MAINTAIN U.S. INFLUENCE

Mr. LONG. You have told me a disturbing thing—that the United States, which I like to think is a good country, is selling half again as many weapons, instruments of death, to the world—and to poor countries—as Russia. Most of us were brought up to believe Rus-

sia is a bad country; that they wear the black hats. You tell me that these arms sales promote stability. Would you agree that when Russia sells large amounts of arms to the world, that those sales also promote stability?

Admiral PEET. From her point of view, I suppose it does. In the sections of the world where they have influence, we are trying to maintain a balancing influence. I would rather we have the influence than the Russians. I think that is our choice. Either they do it, or we do it.

Mr. LONG. I can name many, many countries taken over by insurgents even though we sold them a lot of weapons. Can you name any country that used the weapons we sold them, high-powered weapons, to prevent insurgents from taking over?

Admiral PEET. That is what we are doing in Vietnam right now.

Mr. LONG. Have we been very successful?

Admiral PEET. I hope if the report that the Chairman has given us is true——

Mr. PASSMAN. If the gentleman would yield—wouldn't that apply to Korea and Taiwan?

Admiral PEET. Yes, sir. There are many countries in that category.

Mr. PASSMAN. Many countries where in all probability our aid prevented a Communist takeover?

Admiral PEET. Yes, sir.

Mr. PASSMAN. That being true in Turkey and Greece?

Admiral PEET. Yes, sir, the history of the program is replete with successes.

Mr. LONG. If we are promoting stability and doing good by the world by selling $22.8 billion of arms, then Russia is doing good for the world by selling $14.8 billion; is that right?

Admiral PEET. According to that criterion, we are doing better; and I hope we continue to do so. ——— I would rather have them under our influence than under Russian influence.

Mr. VON MARBOD. The $22 billion figure, Dr. Long, includes sales to NATO members—Germany, France, United Kingdom, Belgium, Italy, Netherlands, Norway, Denmark, Greece, and Turkey and also to Japan. These sales are for valid self-defense needs of our partners.

U.S SPHERE OF INFLUENCE IN SOCIALIST COUNTRIES

Mr. LONG. Do you feel that that is true of Chile and Argentina, Peru, Bolivia?

I come back to this question of helping our friends and guarding against our enemies. We have two countries in Latin America ———, Peru and Chile. I notice that we have sold them or propose to sell them more weapons this year ———.

Admiral PEET. Yes, sir.

Mr. LONG. ——— which countries are relatively friendly to us. Explain that.

Admiral PEET. Yes, I think I can.

Purchases by those countries have been limited for reasons with which you are familiar. They are at the point where they feel they have to purchase, and they are going to purchase. I still have hopes ——— I think that is better than being under Russian influence.

Mr. LONG. Isn't it hard to explain, even to yourself, why we are selling weapons to countries that have gone Socialist, to countries that have confiscated American weapons and incurred the deep displeasure of American taxpayers, and why we propose to sell these countries more weapons this next year instead of selling arms to the countries that border on them which have been friendly and represent no Communist or Socialist threat?

Admiral PEET. Again I have to make a case-by-case evaluation.

Mr. LONG. That is what I am trying to do.

Admiral PEET. According to the morning paper, you will find the military in Chile has joined the cabinet again.

The military in Chile is desirous of buying American equipment.

———.

Mr. LONG. Then by your criterion, when a country goes Communist or Socialist, we reward them by helping them even more than we do when they remain more alined to our system. Is that right?

Admiral PEET. No, sir; I don't necessarily consider it a reward when we advance credit at the cost of money to the United States.

Mr. LONG. Would you have sold weapons to the Germans in World War II while we were fighting them?

CONTINUING ARMS SALES TO CHILE

Admiral PEET. Of course I wouldn't, not while we were fighting them. I am speaking more from the State Department point of view, but we still have hopes of——

Mr. LONG. Exactly. But the point——

Admiral PEET (continuing). Winning friends and influencing people.

Mr. LONG. A country doesn't necessarily help it by providing weapons to another country. You have to feel that somehow you want to build that country up. Isn't it true that by selling weapons you are building ——— them, are you not?

Admiral PEET. I think in this case it is to our advantage to sell weapons. However, I would be the first to agree with you, if my choice were to sell weapons or sell economic aid of some sort. I would take the economic aid as opposed to the weapons, no question about that. The choice is not mine to make.

Mr. LONG. It is not, but we are looking to you for help and guidance. Isn't it true that by shaping grant and aid policies, you have some influence on what these countries buy? Do we have to just assume that the buyer is always right, that the customer is right, no matter what he wants, and that you should sell to him out of our money?

Admiral PEET. We do have influence on what they buy and we turn down many sales to the Latin American countries.

Mr. LONG. Why can't we turn down more arms sales?

Admiral PEET. We are trying. Every sale we make has to have the approval of the State Department, the Ambassador, the Country Team, and so forth. We have shown great restraint.

Mr. LONG. That doesn't seem hard to get when you are selling weapons——

Admiral PEET. If my only motive was just to make sales, I would find it very hard to get approval across the board. That is not our motivation, Dr. Long. It bothers me that you feel that it is.

Mr. LONG. I don't understand what your motivation is.

Admiral PEET. The best interests of the United States.

Mr. LONG. One minute you tell me that the motivation of our arms sales is to stabilize the world and prevent countries from being taken over by insurgents. Then when two countries are taken over by insurgents, you move in and sell them even more weapons than you sell to the countries around them that have not been taken over by insurgents. I find this hard to understand.

Admiral PEET. Perhaps Mr. Forman can elucidate.

Mr. FORMAN. I am disturbed by your repeated statements that all these countries have been taken over by insurgents. I am unaware of any insurgent movements which seized power in Chile.

INSURGENT COUPS

Mr. LONG. It was a constitutional takeover but one which we didn't view with great happiness.

Mr. FORMAN. ——— it was not a guerrilla movement that came into power by taking over the government by force of arms. It came into power by election. Other than Castro's Cuba, I cannot think offhand of any insurgent movement, guerrilla movement by fighting in the streets, taking over a government.

Mr. LONG. Exactly. That is what I have been trying to say all along. Here you are selling billions of dollars of weapons to countries to prevent them from being taken over by insurgent movements when all the takeovers are usually by vote, constitutional movement. There is no real threat that you have to worry about.

Mr. FORMAN. I would argue the other way.

Mr. LONG. You have just said so that there was no threat.

Mr. FORMAN. No, I would say the support we have given has prevented these insurgent movements from taking over. Worldwide there has been very little in the form of insurgency movements that have succeeded in the past decade or so.

Mr. LONG. I agree. I think a survey conducted about 5 or 6 years ago indicated that there were not many more than several hundred insurgents in all of Latin America. It was a bogus threat—I always felt it was—contrived to provide justification for the sale of arms. This is precisely the point I am trying to make; that is, when countries get taken over, they are taken over to a large extent by some political force in the country that decides to move in with some group of colonels, either Leftists or Rightists. And they move in and take it over. It does not matter how many weapons you give them. In fact, the more weapons you give them, the stronger the government is that takes over, against our particular wishes. Isn't that right?

Mr. FORMAN. This is not true in all cases. As you will recall, Che Gueverra was an active insurgent in Latin America, but he was caught.

Mr. LONG. Cuba is the one case?

Mr. FORMAN. I am not talking about Cuba. Gueverra elsewhere.

Mr. LONG. What did he accomplish elsewhere?

Mr. FORMAN. He got himself killed as a result of the fact that people in that country had been trained in counter-guerrilla activities and stopped that insurgency movement. I think also you have to put these Latin American sales in context. Certainly we recognize tne moral force of what you are saying.

Mr. LONG. Do you really?

Mr. FORMAN. I do, Admiral Peet does, and Dr. Tarr does.

Mr. LONG. Admiral Peet was quoted in the Christian Science Monitor of May 29, 1973, as being weary of talk of merchants of death.

Admiral PEET. I am.

Mr. LONG. That statement does not indicate that you recognize the moral force of what I am saying.

Mr. FORMAN. As a moral matter, neither countries nor individuals should be encouraged to expend money foolishly, for a wrong order of priorities. Let us put this in perspective in Latin America. In the Latin American context, the percentage of the gross national product spent on the national defense budget runs roughly about 2 percent. Some of these countries, such as Brazil, are very large countries. Brazil is larger geographically than the United States. When you take that 2 percent of the gross national product, and bear in mind that roughly about three-quarters of that is going for pay and allowances and other operating costs and only a small balance of that is going to replace obsolete hardware, you are talking perhaps of one-half of 1 percent of gross national product. While you may deplore even one-half of 1 percent, it is really not that significant.

Mr. LONG. Isn't it? Wouldn't you agree that 1 percent or 2 percent of the GNP of a desperately poor country is too much because its ability to save capital is very tiny? After the people of this country have paid for necessities like food and clothes, they have very little left over. That is true of poor countries. Their savings, or capital accumulation, is bound to be extremely small. If you take 2 percent of the GNP of that country, it can be a very large percentage of its capital accumulation. Its savings is all that the country can use to get ahead on, and it has lost a large part of that by spending 2 or 3 percent of its GNP on defense. We all know that Latin American countries are not moving ahead. Many volumes have been written about this. The Alliance of Progress is a failure. You can go anywhere in Latin America, and once you get outside the cities, you see virtually no progress. The people are as poor as ever. Except that more of them are poor. Yet the very thing that we need to provide—the schools, roads, and housing, all that these people need to get ahead—we are putting into weapons. While it may not be a very large percentage by our standards, it is a very large percentage by theirs. Wouldn't you agree with that?

Mr. FORMAN. Dr. Long, I can only reiterate, as has been stated earlier, that we are talking in terms of a small percentage of their budget, and of their total expenditures. Second, unless you are going to abolish their armed forces completely, and certainly that would be desirable around the world if we could achieve general disarmament under effective international control measures, if we are not going to abolish armed forces around the world, armed forces will exist and they are going to want weapons, however much you may deplore——

Mr. LONG. Do we have to finance armed forces?

Mr. PASSMAN. If we don't, foreign competition will. It is that simple.

Mr. FORMAN. It is that simple, but it is not just that we don't want to lose to foreign competition. As Admiral Peet said, we would rather——

Mr. LONG. The merchants of death argument?

Mr. FORMAN. We are not interested in just getting——

Mr. LONG. That is what the merchants of death argument is. If we don't sell the weapons, then, somebody else will, and somebody else will make the money.

Mr. FORMAN. We are not doing it just to make money but for foreign policy and security reasons. We are not making any money at it if we are giving them credit at the cost of money to the United States. We don't make a dime out of it.

Mr. PASSMAN. Will the distinguished gentleman yield?

Mr. LONG. If I could finish, and then I will.

I agree that these sales are not in the interest of the United States. Although I do think that what is happening is that the American taxpayer is paying the bills. But certain people in the United States are making money out of it. Certainly the business firms exporting the weapons are making money from the sales. It is in their interest to promote these arms sales.

As for the old "merchants of death" argument of the 1930's, I agree that America is not making money out of this. There are certain people, like the State Department, that think we are.

Mr. PASSMAN. In keeping with my agreement yesterday, Dr. Long, the admiral must depart promptly at 3 o'clock. You may resume your questioning tomorrow.

Mr. LONG. Thank you.

Mr. PASSMAN. The gentleman has an appointment.

Mr. LONG. I have one in Baltimore and this fits in with my schedule.

Mr. PASSMAN. We are speaking about what we are selling Latin America. Competition is selling $3 worth of equipment to Latin America for each $1 we sell; is that true?

Admiral PEET. Yes, sir.

Mr. PASSMAN. They are buying 75 percent of their needs abroad. If we didn't provide them, they would switch the other 25 percent?

Mr. YATES. Arms needs?

Mr. PASSMAN. Yes. Planes and everything. Straighten the record out on this. It is important.

You mentioned Russia sells $14 billion worth of military equipment to our $22 billion. If you take the percentage of any other category where we sell, it means that their effort in the military is far greater than any other endeavor; is that correct?

Admiral PEET. Yes, sir.

Mr. PASSMAN. After all, what percentage is that of the total commerce in the world sales for Russia? Russia is making a greater effort percentagewise than we are when you consider their total world sales of all commodities. I thought you would want that in the record.

Admiral PEET. I appreciate that.

Mr. PASSMAN. Thank you, gentleman. The committee is adjourned.

THURSDAY, JUNE 14, 1973.

U.S.S.R. MILITARY AID THREE TIMES THAT OF UNITED STATES

Mr. PASSMAN. The committee will come to order.

As we concluded the hearings yesterday, we were discussing the amount of Russian military sales as compared to U.S. military sales. As we have checked the record, we find that in 1972 the Russian military assistance was $1,562 million. This represented 0.3 of their gross national product, whereas America's military assistance was $1,201 million, which is 0.1 of our gross national product, so as you relate the percentage of military assistance to the gross national product, the Russians gave exactly three times as much as the United States.

The actual statistics as applied to the military assistance program, for emphasis I want to repeat that Russia has actually exceeded ours, but when you break it down on the basis of a percentage of Russia's gross national product in relationship to our gross national product, it simply means their effort is three times greater than ours.

Of course it is true we have just concluded a very expensive war in Vietnam, and thanks to a great President for concluding it under the most difficult circumstances, and that is not included, of course, in the military assistance total. That is aside and apart from military assistance as we consider it.

[Discussion off the record.]

COMMODITY IMPORT FUNDS FOR CAMBODIA

Mr. YATES. Admiral, yesterday I think it was Mr. Long who was interrogating you about payments to the Cambodian soldiers.

Admiral PEET. Yes, sir.

Mr. YATES. Was it Mr. Long? Somebody was interrogating you about this.

Admiral PEET. Yes, both Dr. Tarr and me.

Mr. YATES. Perhaps it was Mr. Roush. Did you tell him how much we were paying the Cambodian soldiers? Did you reply to this question?

Admiral PEET. Dr. Tarr answered that question. It is a rather involved matter.

Mr. TARR. I don't think we said how much of our commodity import program funds go to the payment of salaries. I think I promised Mr. Long to provide something for the record.

Mr. YATES. For what purposes are our commodity import funds used? That is one of them, to pay salaries of the Cambodian soldiers. For what other purposes are they used?

Mr. TARR. Mr. Yates, the only thing I know about is that the commodity import program funds go to the general support of the budget, but specifically what purposes they are assigned to I don't know. I will have to provide that for the record.

Mr. YATES. Who assigns them?

Mr. TARR. I think this is a part of the negotiations that we have with the Government at the time we worked out the terms for the commodity import program.

Mr. YATES. Do we verify the expenditures in any way, to see that they are allocated in accordance with the agreement?

Mr. TARR. I think we have to, but I will have to provide that for the record.

[The information follows:]

SUPPORT OF THE CAMBODIAN BUDGET

The bulk of CIP-generated local currency is used in support of the Cambodia military budget. Within the military budget the specific use of the funds is governed by an annual military budget support program agreement between the USG and the GKR. During current year 1972, CIP counterpart riels were largely used for military salary purposes. Other military uses included airfield improvements, training centers, dependent housing, temporary housing, and prisoner-of-war facilities. One nonmilitary use has been a local currency loan to the Cambodian rice purchasing organization to buy local rice and jute bags. In addition, a small portion of such local currency generations is reserved for U.S. administrative expenditures in Cambodia.

The GKR budget is, of course, reviewed to insure compliance with the program agreement. Where local currency proceeds are used in support of the military budget, the U.S. military equipment delivery team assumes responsibility for observing and monitoring fund utilization. The U.S. Economic Counselor is responsible for monitoring local currency attributed to the civilian budget.

PAYMENT OF THIRD COUNTRY TROOPS IN CAMBODIA

Mr. YATES. Are there soldiers of any other nation fighting in Cambodia, whose salaries we pay?

Mr. TARR. Not that I know of.

Mr. YATES. How about Philippine soldiers?

Admiral PEET. There are none in Cambodia, sir.

Mr. TARR. I don't think so.

Mr. YATES. Koreans? No other country has soldiers fighting in Cambodia?

Mr. FORMAN. None that we are financing. I don't know of any that we are financing.

Mr. YATES. We were financing the salaries of soldiers of some of those countries during the war in Vietnam.

Mr. FORMAN. Of the troops in Vietnam, but there never were third country troops deployed from Vietnam to Cambodia, apart from those who were in Vietnam during the cross border operations in the summer of 1970.

Mr. YATES. Are all the troops from other countries who were in Vietnam out of Vietnam now?

Mr. FORMAN. Yes, sir.

U.S. CIVILIANS IN CAMBODIA

Mr. YATES. Are there any civilians whose salaries we are paying for fighting in the war in Cambodia?

Mr. FORMAN. Civilians fighting?

Mr. YATES. Or in advisory capacities?

Mr. FORMAN. No. We don't have any civilians fighting, and there are no civilians who are in the position of advisors to the Cambodian army. Under the statute there is a limitation of 85 third country nationals whom we may have in country paid by our funds, and those civilians or third country nationals are used in a variety of jobs, some of which are on the embassy side, some on the military side, but they are in a technical support logistics function.

Mr. TARR. We do have Air America people under contract who often fly on hazardous missions and might be lost as a result of combat actions.

Mr. YATES. They aren't engaged in combat flying?

Mr. TARR. No; but they might be flying a small airplane and encounter difficulty.

THIRD PARTY INTERMEDIARY

Mr. YATES. Tell me whether my memory is correct. In times past, when we have wanted arms to go to certain countries, on occasion we have used Germany or another country as an intermediary. Is my memory correct on that?

Mr. FORMAN. No, sir, if by your question you mean have we deliberately shipped arms to country A to ship it to country B. We have never done that to my knowledge.

Mr. YATES. No, no. It isn't quite that way, but haven't we asked Germany to enter into an arms agreement that we did not want to fulfill?

Mr. FORMAN. I think you may be referring to a question concerning M–47 tanks?

Mr. YATES. Yes.

Mr. FORMAN. About 5 or 6 years ago?

Mr. YATES. Yes.

Mr. FORMAN. As to whether or not Germany might take tanks which had been previously furnished to it by us, and which they no longer needed, and furnish it to Pakistan? That transaction never was accomplished.

Mr. YATES. We are engaged in no such activities today, using a third party as an intermediary for the furnishing of arms.

Mr. FORMAN. Well, there are occasions from time to time when a country comes to us and says that it has been asked by a third country to supply it with some arms, which the first country got from us, and depending on the facts of the case and the policies, we may or may not give our consent. We furnish periodic reports to the Congress of each such transaction.

MAP IN EUROPE

Mr. YATES. I notice in your European program you are giving certain arms to Spain. Why are we doing that?

Admiral PEET. Spain is a base rights country, Mr. Yates. It is a quid pro quo.

Mr. YATES. This is a part of the quid pro quo for the rental of bases in Spain?

Admiral PEET. Yes, sir. It is in accordance with a 1970 agreement.

Mr. YATES. Is this true of Finland too? I notice you are giving some arms to Finland.

Admiral PEET. I don't believe there is anything other than training.

Mr. YATES. Have I misinterpreted that chart you gave us?

Mr. TARR. There is a possibility for some training in Finland, but we have not had a material program there. We had $30,000 last year, $11,000 the year before. When I say last year I mean fiscal year 1973. We show $20,000 this year.

Admiral PEET. It is for three training billets.

Mr. YATES. I am looking for the page on Greece. I don't find it here.

Mr. TARR. It is Near East and South Asia. It is because in the State Department they come under this.

Admiral PEET. Page 36.

ONLY SALES FOR GREECE

Mr. YATES. I notice there is a rather substantial arms relationship with Greece proposed. There is $65 million proposed for a credit sale in 1974, is that correct?

Mr. TARR. Mr. Yates, we entered into an agreement with the Government of Greece in fiscal year 1972 for the purchase of F–4 aircraft. There is a requirement for payments on that contract each year for what, 4 years?

Admiral PEET. No, sir, 3 years.

We have extended $45 million in credit for fiscal year 1972 and $58 million for fiscal year 1973. The remaining $50 million is due in fiscal year 1974.

Mr. YATES. What is represented by the $65 million as listed in your sheet?

Admiral PEET. It includes $50 million for the F–4's. We have not determined the exact purpose of the remainder. We are sure Greece will want that much or more to meet other requirements.

Mr. YATES. Was that just a guess then?

Admiral PEET. All these figures are estimates.

Mr. TARR. Except the $50 million that we know under the contract will be required for payment.

Admiral PEET. That is the case when we enter into a multi-year arrangement.

Mr. YATES. Greece will receive no military assistance in fiscal year 1974. What I am talking about is the column under military assistance program. There is none listed for Greece in 1974.

Admiral PEET. None is planned.

Mr. TARR. Not even training.

Admiral PEET. So it is zero grant aid.

ASSISTANCE FOR THE NEAR EAST AND SOUTH ASIA

Mr. YATES. It is zero all the way around for India?

Mr. TARR. I think there is a very small training program in India.

Mr. YATES. That is not listed on the sheet.

Mr. TARR. No. I am sorry, Mr. Yates, but we have to refer you to another page.

Mr. VON MARBOD. Page 6.

Mr. YATES. Shouldn't the pages be reconciled?

Admiral PEET. Training is a separate program.

Mr. YATES. Should I also refer back for possible assistance to Iran, or are we giving no assistance to Iran?

Admiral PEET. There is nothing for Iran—not even credit.

Mr. YATES. We are giving $35 million in military assistance to Jordan, is that correct?

Admiral PEET. Yes, sir.

Mr. YATES. Of what does that consist?

Admiral PEET. F–5 aircraft, vehicles, et cetera. On page 33 there is a listing of the items. It includes ammunition, communications equipment, and so on.

Mr. YATES. I see $65 million for security support and assistance for Jordan in the next fiscal year. Can you tell us what that is for?

Mr. TARR. There is a very small part of that which is involved with the extension of an irrigation system in the Jordan Valley. I think it is about $10 million, which will include about $5 million actually for capital improvement projects, and then some money for village development, agricultural credit loans, this kind of thing, so the full thing is about a $10 million program.

Mr. YATES. Is it not listed as $65 million?

Mr. TARR. No, I mean of the $65 million.

Mr. YATES. Of the $65 million, $10 million is for the items you just described.

Mr. TARR. Yes. The remainder I think is simply to support the budget of that nation.

Mr. YATES. I see $5 million listed for Lebanon. What is the $5 million in credit sales to Lebanon for?

Admiral PEET. As shown on page 38, there are ——— patrol craft, some armored personnel carriers, some general purpose vehicles, et cetera.

Mr. TARR. I think though, to be honest, Admiral Peet, on this one we have to keep in mind some of the problems that the Lebanese Government has had recently with the fedayeen. It is possible they are going to come back and want to change this substantially, and they may put a considerable amount of this into ammunition. ———.

Admiral PEET. The matter is currently being negotiated.

Mr. TARR. We have to really look at these as illustrative.

ASSISTANCE BY THIRD COUNTRIES

Mr. YATES. I notice ——— million for third country assistance with respect to Saudi Arabia. What does that mean?

Admiral PEET. ———. That ——— million represents sales programs from Italy in the amount of ——— million, and from France, about ——— million.

Mr. YATES. In what?

Admiral PEET. Sales.

Mr. YATES. Of arms?

Admiral PEET. Yes, sir.

Mr. YATES. Perhaps I wasn't clear in my earlier interrogation, but that is what I thought I was asking about: whether we helped in the sale of arms from third countries to other countries.

Admiral PEET. No, this doesn't involve us at all. It is an estimate of the credit sales by third countries to Saudi Arabia.

Mr. YATES. Will we pay for it?

Admiral PEET. No, not in any way.

Mr. TARR. Mr. Yates, that line is just simply to give you a feeling of balance for all that is being done from all sources for the country. It is found in each one.

Mr. YATES. Third country assistance then shows what will go to the country under consideration from other countries?

Admiral PEET. Yes, sir. Mr. Shriver was particularly interested in who else is helping.

Mr. YATES. Why should Italy be doing that? Have we asked her to do it? Why is Italy helping Lebanon with arms?

Admiral PEET. It depends on how one defines "help." It is credit sales.

Mr. YATES. Do we have any participation in it at all?

Admiral PEET. No, sir.

Mr. YATES. Then this is a separate deal worked out between Lebanon and Italy?

Admiral PEE. Yes, sir. In some areas of the world, we encourage such arrangements. For example, we encourage Australia to assist Indonesia.

Mr. YATES. The program for Turkey is pretty substantial, isn't it?

Admiral PEET. The Turkish program is our third largest.

Mr. YATES. Who assists Turkey with third-party assistance? I notice it is listed for $7.8 million.

Admiral PEET. The current estimate is a ——— sale from Canada and a ——— grant from Germany.

Mr. YATES. Are we a part of that in any way?

Admiral PEET. No, we are not. We are in favor of that grant from Germany.

FMS FOR GREECE

Mr. YATES. What would happen if we didn't engage in credit sales for Greece?

Admiral PEET. It would make it very difficult for Greece, because the F–4 sale was a multiyear arrangement involving $143 million in FMS credit.

Mr. YATES. How much of that has been concluded?

Admiral PEET. $45 million in 1972 and $58 million in 1973.

Mr. YATES. How many planes are involved?

Mr. TARR. ———. That is for all 3 years.

Mr. YATES. What is meant by the item "U.S. security assistance"?

Mr. TARR. As opposed to third-country assistance.

SECURITY SUPPORTING ASSISTANCE FOR ISRAEL

Mr. YATES. I notice Israel is listed for $325 million. Is that the sum total of credit sales plus security supporting assistance?

Admiral PEET. Yes, the $325 million total includes $300 million in credit sales and $25 million in supporting assistance.

Mr. YATES. Did Israel receive $50 million in supporting assistance for the fiscal year 1973?

Mr. TARR. Yes, sir.

Mr. PASSMAN. It was earmarked, I believe, so we could be sure it went to Israel.

Mr. YATES. Why is that reduced to $25 million for this fiscal year?

Mr. TARR. The reason we put in the reduction was that the Israelis' foreign exchange reserves have gone up to over $1 billion, and we thought this would be adequate.

The Senate, in their authorization bill, put it back at $50 million.

Mr. PASSMAN. I believe we also earmarked $50 million for Israel for other relocation of Soviet Jews.

Mr. TARR. That is right.

Mr. YATES. That is a different portion of the program, is it not?

Mr. TARR. That is what was in the ——

Mr. PASSMAN. Continuing resolution?

Mr. TARR. It was in John Hannah's part of the program.

Mr. PASSMAN. I wanted the record to show it. We also earmarked $300 million for military credit sales.

TERMS OF MILITARY CREDIT SALES

Mr. YATES. When you speak of a military credit sale, do you have varying terms for different countries, or do you generally have the same pattern of sales?

Mr. TARR. Mr. Yates, we have either the requirement they pay the cost of money to the U.S. Government, or we have the option to offer concessionary terms.

In the program to Israel it has been concessionaire on the part of the U.S. Government lending so that the total program, including private bank credit, will work out to the cost of money to the United States. The part that we fund is below the cost of money to the U.S. Government, but the whole thing evens out at the cost of money to the U.S. Government since the bank credit portion is higher.

Mr. YATES. How long are the credit terms?

Admiral PEET. Eight to 10 years.

Mr. YATES. When is the first payment made?

Admiral PEET. Sometimes there is a moratorium of 2 years. It varies and depends on the contract.

Mr. TARR. Israel is making payments on her loans now.

Mr. YATES. When were her first loans?

Mr. VON MARBOD. Fiscal year 1959.

Mr. FORMAN. The normal credit agreement provides for repayment on principal to begin approximately 1 year after the date the agreement is signed.

DELINQUENT CREDIT ACCOUNTS

Mr. YATES. Have there been any defaults in the military credit sales?

Mr. VON MARBOD. No defaults. There are four countries presently in arrears.

Mr. PASSMAN. Aggregating only $2 million though.

Mr. VON MARBOD. That is correct.

Mr YATES. Which are the countries?

Mr. VON MARBOD. Chile, Ecuador, Paraguay and Tunisia.

Mr. YATES. Are you pressing them for payment or do you propose to extend it?

POSSIBLE DIFFICULTIES IN COLLECTION PROCEDURES

Mr. VON MARBOD. We are pursuing the normal collection procedure.

Mr. TARR. The record might well show that in some of these we list as being in arrears there are points of difference between our Government and the government in question so that it is not all that clear that they are in fact in arrears, but to be conservative, we show it as a nation in arrears.

Mr. YATES. Is that true with respect to each of the countries?

Mr. TARR. Of the four, I think it is true of two at least.

Admiral PEET. Each case is a little different. Sometimes there is an argument over whether or not more interest is owed.

Mr. YATES. Are there countries that ask for more than 10 years, or is that statutory?

Mr. TARR. It is statutory, but we are asked.

Admiral PEET. Particularly in the case of Israel.

Mr. ROUSH. How can there be uncertainty in the amount owed? Are the agreements so loose that they are subject to the kind of an interpretation that would permit us to come to the place where we are uncertain? There is no uncertainty in how much I owe the bank. I know that.

Mr. FORMAN. I would like to answer that in very general terms. With regard to Paraguay, there was and is to some extent a continuing argument about deliveries—a question of whether the amount delivered fully satisfied the quantity of the order, and, second, whether there was defective merchandise. It is not an argument about the amount of money specified in the agreement, but whether we supplied what we said we would supply.

In the case of Tunisia, it was a very old agreement. The problem there is that the Army, a number of years, gave the Tunisians what purported to be a final billing and they paid it.

Several years later, the Army, in readjusting its books, decided they had made a mistake and billed Tunisia again. Tunisia has since that time paid the new principal amount demanded and has been arguing it should not be held liable for the interest differential between the time they paid what they thought was the final bill and years later when the Army said no, they had made a mistake.

In the case of Chile, Chile has been in bad financial condition, as you may know, and has become in arrears in its debt payments to a group of countries throughout the world. These countries have gotten together, including the United States, to agree on a rollover of the Chile debt.

It is not an argument about whether they owe the money; it is a general inability to meet their debts worldwide.

U.S. REFUSALS TO SELL ARMS

Mr. YATES. Have we turned down any countries that have asked for arms assistance?

Admiral PEET. Yes, sir.

Mr. YATES. Can you tell me which they are?

Admiral PEET. For example, this year Taiwan would like to have more arms assistance than we have been able to provide.

Mr. YATES. Is that because of our new détente with the Peoples Republic of China?

Admiral PEET. ———. We have insufficient credit money to go around. There are Latin American countries in the same category. Turkey would like to have more credit assistance than we are able to provide.

Mr. YATES. Are the reasons the same?

Admiral PEET. Yes, sir, ———.

Mr. YATES. Mr. Chairman, thank you.

Mr. PASSMAN. Of the $2 million that is in arrears, that is, $2 million out of outstanding sales of $1,800 million? Is that correct?

Mr. VON MARBOD. That is correct, with respect to direct financing.

Mr. PASSMAN. I believe you told us earlier in the hearings that Israel was completely up to date on her commitments, is that correct?

Mr. VON MARBOD. Yes; Mr. Chairman, Israel is current.

UNITED STATES, RUSSIAN MAP LEVELS

Mr. PASSMAN. For the benefit of the members who left the committee room yesterday afternoon to rush to the floor for the vote, I think I should say it is up to the chairman to keep the record straight.

The U.S. military assistance program in 1972 was $1,201 million. Russia's military assistance program was $1,562 million for the same period.

The U.S. gross national product was $1,151,800 million in 1972 and Russia's GNP was $578,121 million, so as a percentage of the GNP that is made available for military assistance. Russia's is 0.3 of their gross national product, whereas, the United States' is 0.1 of its gross national product.

Mr. YATES. Mr. Chairman, how do we know about Russia's military assistance?

Mr. PASSMAN. Well, our intelligence gives it to us.

Mr. YATES. I thought much of Russia's military assistance was surreptitious.

Mr. PASSMAN. I can only quote the figures given to me. If there is argument about the correctness of them, you will have to take it up with the people who gave them to me in the Defense Department.

We have never established any inaccuracies in prior years. Russia is allocating 0.3 of their GPN to the military assistance program whereas we are allocating only 0.1 so mathematically their effort is three times that of ours. Have I stated that correctly for the record?

Adimral PEET. Yes, sir, based on the data available.

Mr. PASSMAN. I just wanted to show that their effort is three times as great as ours in this field.

U.S.S.R., CHINESE MAP RECIPIENTS

Mr. YATES. Would the same source that gave you those figures about Russia to able to tell us what countries that assistance was going to?

Mr. PASSMAN. Unless there is objection, we will place in the record at this point a list of the countries we provide military assistance to and opposite that list the countries that the Russians are providing military assistance to. Can you do that?

Mr. YATES. Perhaps we should also know where the Chinese assistance is going.

Mr. PASSMAN. Would you place that in the record too?

Admiral PEET. Yes, sir.

[The information was provided to the committee.]

Mr. YATES. Are there other countries or are these the three major suppliers of arms?

Mr. PASSMAN. The others are selling. I don't know that there is anything in the way of grants.

If you have anything further, put it in the record.

Admiral PEET. This will all be on a classified basis.

CLASSIFICATION OF PROGRAM INFORMATION

Mr. PASSMAN. We are quoting these figures from information furnished to us by the Defense Department. We have been doing this for many years. Heretofore we haven't put it on the record and if it is not classified, I would like to see it on the record.

Mr. YATES. Mr. Chairman, are the allocations of "Military assistance" in previous years classified too? For instance, for 1973 and 1972? Are those classified?

Mr. PASSMAN. These documents have been greatly declassified when compared to several years ago.

Mr. YATES. The principal reason why we don't reveal it for the record, as I understand it, is that you don't want the countries to know about it.

Mr. PASSMAN. I don't want to retract my statement that these justifications have been greatly declassified when compared to several years ago. Is that a statement of fact?

Mr. TARR. Mr. Yates is talking about information on what Russia might be doing.

Mr. PASSMAN. I thought you were talking about ours.

Admiral PEET. Even for past years that type information is classified.

Mr. YATES. I was wondering whether the information given us each year becomes declassified after passage of time. Does it remain classified?

Mr. TARR. On country totals we don't classify ours now.

Mr. PASSMAN. Previously, Mr. Secretary, you classified it by amount. You gave as the reason if country A found out what country B was getting, then country C would want to get as much as country A.

When you say it is classified, we accept it as such.

You folks agreed subsequently it would not be classified. Have I stated it correctly?

Admiral PEET. Yes, sir.

U.S.–U.S.S.R. OVERLAPPING OF ASSISTANCE

Mr. MILLER. The chairman mentioned that Russia is offering countries military assistance. Is it possible that Russia is offering it to some of the same countries to whom we are offering military assistance?

Mr. PASSMAN. I believe there is some overlap. I think they are trying to offer and have accepted assistance to such countries as India, Nepal, and a few others like this where we also have an interest and we are in competition with them.

Would you include Pakistan?

Admiral PEET. The countries receiving Russian assistance are Bangladesh, Bulgaria, Cuba, Czechoslovakia, Egypt, East Germany, Hungary, India, Libya, Nepal, North Korea, North Vietnam, and Pakistan.

Mr. MILLER. So there is some overlap?

Admiral PEET. The only countries listed to which we have given military assistance are India, Libya, Nepal, and Pakistan.

U.S. ASSISTANCE TO LATIN AMERICA

Mr. MILLER. You spoke of Latin America the other day. We have many domestic programs for Latin America. We now have the Public Law 480 food program, the AID program, the multilateral banks that are aiding Latin American countries, and we are contributing to those multilateral banks.

Then apparently some of the countries in Latin America are able to release some of their funds in order to purchase military hardware. What are we really gaining? Whether we need to slow down on one or slow down on the other. That is, the domestic help or the military help. It seems to go in a complete cycle.

I am wondering what are we gaining by this kind of a program, plus the fact —are we driving some of the countries apart in Latin America, where we would be hoping they would pull together instead?

Admiral PEET. I think that is a question more appropriately addressed by the State Department. I have nothing to do with the other programs to which you refer. However, with regard to the military assistance, we have to maintain a balance. State allocates the dollars country by country. As we have said before, these countries are going to buy military equipment one way or another; and I, for one, feel it is better they buy from us than from some other country.

Mr. TARR. Mr. Miller, in general I think it would be fair to say there is no area of the world over which we have more anxiety in the preparation of this program than Latin America. Almost every approach that we have attempted has in one way or another gone awry.

We went through the process of denying the sale of equipment to Latin American nations. We all know the degree to which Latin American nations turned to other sources for the purchase of this equipment. Something that is not as well known is the degree of animosity that we created among these people by refusing to sell to them on the grounds that we were making a judgment that should have been reserved for them to make on their own.

I understand now, as I read the papers, that we are credited with all kinds of actions that I have never heard debated in the councils of government. In the development of this program, I never heard one word with respect to balance of payments. We have tried to talk about what would be best for us in advancing our valid interests in Latin America.

It is not a good answer to your question, but what I would like to convey is a sense of distress on my part and on the part of those with whom I have talked since we have tried to develop a reasonable program for nations with which we would like to continue to be friendly.

Mr. MILLER. Would you assume if we took all the dollars that are sent to the Latin American countries for military assistance and put that on the domestic program side that they in turn would still go to a third nation to purchase military hardware.

Mr. TARR. I am sure they would.

PROTECTION OF PANAMA CANAL

Mr. MILLER. Let's cover one area of Panama. I understand there is some assistance to Panama. This would be for their National Guard, as I understand. Do they guard the canal as such? Do we not have troops there guarding the canal?

Mr. TARR. When I was there about a year ago, Mr. Miller, I think we had a brigade in place, but it would be difficult to argue that either we or the Panamanians have enough on site to guard the canal. There is a certain amount of protection there for an incident, but certainly not enough to forestall anything like an invasion if anyone really wanted to invade us. We would have to rely on shifting forces from elsewhere for a major campaign with our forces assigned to the Canal Zone securing the airfields needed to receive the reinforcements.

U.S. EFFORTS TO INSURE OIL FLOW

Mr. MILLER. Let's shift over to the Near East and South Asia.

I notice in the booklet we have we speak about the stability of and access to the Persian Gulf area with the tremendous oil reserves which are of great importance to most of the free world.

What part of the military assistance program would be used in order to gain for us the needed petroleum? We are very much aware of the fossil fuel shortage and the energy crisis that we have at the present time. What part of the budget we have before us would be used as a guarantee of that flow of petroleum to our country?

Mr. TARR. I know of no way I could break down these figures to indicate what portion might be a guarantee for the flow of oil; rather, the entire program is put together with the hope it can accomplish a variety of objectives, for us, one of which is access to oil.

Mr. MILLER. We have in our own congressional district a situation in which industry at the present time is not able to expand or new industry is not able to open and furnish jobs to the people of our district. We have been confronted with this and we have even been confronted with the task of finding oil supplies to operate schools. We have service stations allocating gasoline. I think this certainly comes into one area of operation right here. I wonder what else you may be doing that would help us guarantee petroleum into our country from the various nations that you may be helping, or from other oil reserve nations?

Mr. TARR. Mr. Miller, obviously our oil comes from a variety of foreign countries. Of course, we also do rely upon domestic supplies to a considerable extent. With regard to the oil coming from either Venezuela or Ecuador our programs in those areas are in part conciliatory, in part an encouragement to the continuing flow. ——— But we in the State Department try to balance these out as best we can and maintain the flow of oil.

In Venezuela the Secretary made a very determined effort to gain the continuing cooperation of the Venezuelans, with a considerable amount of success, I think.

In the Near East some of the highest quality oils we are getting at the present time come to us from Libya.

There has been a great deal of criticism of our policy toward Libya because it has been judged that we have not been sufficiently firm with Libya, that American firms continue to make contracts with Libya to help them support, for instance, their Lockheed C–130 aircraft. ——— continue to maintain the flow of oil, which is some of the highest quality oil in the entire world.

With respect to the largest reserves of oil, namely in Saudi Arabia, and to a lesser extent in Kuwait and Iran—you already know what we are atttempting to do. We have worked very hard to cooperate with the Saudi Arabians in the ways in which they have sought our cooperation; partly in the organization of their National Guard elements; partly in providing for them the military equipment that they have sought; partly in giving them the advice that they have needed in their economic program.

You know of our sales program in Iran, what we have done to provide technicians for their use. You know about what we have determined we will do if Kuwait so desires.

That is a general roundup. I hope it is not too rambling an answer to your question.

LIBYAN OIL AND AID SITUATION

Mr. MILLER. Going back to Libya, you have mentioned the problems there, and also that we are receiving oil from Libya. The chairman has referred to the amount of military assistance being offered by Russia to the various countries around the world.

Would Libya be one of those countries?

Mr. TARR. No, she is not. One thing about Libya is that Colonel Qaddafi has been fiercely anti-Russian. His main source of help has come from France and to a lesser degree from Italy. Italy, of course, is a substantial investor in the oil development in Libya.

Now, in an indirect way, there has been some assistance from Russia to Libya, simply by virtue of the assistance that has come from Russia to Libya's neighbors, and thereafter some movement of equipment on a loan basis, particularly aircraft.

There is some evidence now that there are some Mig 21 aircraft owned by Algeria now stationed in Libya and the reverse, some Libyan Mirage aircraft are now stationed in Algeria, and there has been some movement also between Libya and Egypt.

Mr. MILLER. You spoke of Italy's interest there. Does the United Kingdom, France, and Italy have military assistance programs to any of the countries in the world?

Mr. TARR. Not that I know of. There are difficulties, however, in determining at what point concessionnaire sales become grant programs, but so far as I know, except maybe for small amounts of ammunition or excess defense articles, the assistance from these countries comes on a sales basis.

Mr. MILLER. Perhaps Admiral Peet has some information on this.

Admiral PEET. Our information confirms what Mr. Tarr says. However, we do show some cash sales from Russia to Libya. The third country, I would have to check that as far as Libya is concerned. I haven't that information with me.

[The information follows:]

Mr. MILLER. You do show some cash sales, Russia to Libya.

I understood from Dr. Tarr that we didn't have——

Mr. TARR. I didn't know of any.

Admiral PEET. It doesn't show what type of sales in the report we have.

Mr. TARR. This isn't so. I apologize, Mr. Miller, because I have never heard of any.

Mr. MILLER. Does it give the amount?

Mr. TARR. It says "from Soviet Union and China in 1972" but it doesn't say which.

Admiral PEET. We haven't a breakdown. It is in the amount of [———].

SOURCE OF OIL FOR INDOCHINA

Mr. SHRIVER. A moment ago oil was mentioned. Where does the oil or fuel used in Indochina come from? What is used in our bombers?

Mr. FORMAN. It all comes from offshore purchases. I don't know which country. None is coming from U.S. sources.

Mr. SHRIVER. That has been true all along, hasn't it?

Admiral PEET. The checks I have made show that to be true.

Mr. FORMAN. I think that is correct.

Mr. TARR. It probably comes out of the Persian Gulf.

U.S. INTERESTS IN LIBYA

Mr. MILLER. Dr. Tarr, do you know whether we have refineries there in Libya?

Mr. TARR. No, I don't.

Mr. MILLER. With this aid, military assistance from Russia, even though it is military sales going to Libya, and with the problem we have with energy now, I am wondering if we are in a position where even that oil from Libya could be cut off rather hurriedly?

Mr. TARR. Could be cut off to us.

Mr. MILLER. That supply to us could be cut off.

Mr. TARR. It very definitely could be cut off. The Libyans could sell their oil elsewhere if they made the right kinds of long-term agreements, rather easily.

Admiral PEET. I believe most of the Libyan supply goes to Europe right now.

Mr. MILLER. Do you have information through the State Department as to what length of time we enter into contracts with Libya and other countries? Are they short term contracts that could create great problems for us in the near future, or do we have long-term contracts?

Mr. TARR. I think it is not the length of the contract, but the possibility of the Government taking over the company that limits our leverage.

They took over a rather small U.S. interest just the other day, Bunker-Hunt, which was a part of the old British Petroleum group. British Petroleum was taken over some time ago and the Bunker-Hunt interests were taken over just the other day. There are rumors this morning about the possibility of expropriating three other American companies somewhat larger than Bunker-Hunt.

Mr. MILLER. Thank you, Mr. Chairman.

MULTILATERAL APPROACH

Mr. PASSMAN. As we move along new statistics are brought to our attention and we like to provide them for the benefit of the committee because one of these days there will be a markup and the information will be helpful.

We have established that under the bilateral aid loan program, the funds come back into the U.S. Treasury for the benefit of the American taxpayer, where on all multilateral organizations it is a one-way street. The funds go out and nothing comes back.

If we go back 13 years ago when the international financial institutions got under way, the appropriation was $73,666,000. At that time the bilateral program was $3,716 million.

Now we look at this year's bilateral requests for military and economic aid, it is $2,501 million whereas the multilateral requests jumped up to $1,234 million. Last year, even after very substantial reductions, the Congress appropriated in the continuing resolution $738,380,000 for the financial institutions which was the largest multilateral program that we have ever had.

This year they are asking for all of our cuts from last year to be reinstated, bringing it up to $1,234 million.

They are trying to increase the multilateral operation so they can tell us we must give them whatever they ask for. In effect, the committee will be done away with unless we can get on top of the multilateral requests and cut them and get it back to a bilateral basis where the funds will be fed into the U.S. Treasury rather than into some outside organization.

I bring this up for only one reason: we were told this morning by some of our spies that this committee's opposition notwithstanding, they were going to create the African Development Bank out of the Development Loan Fund without any authorization as such. I don't like it.

Mr. SHRIVER. Where did you hear it?

Mr. PASSMAN. Our spies gave it to us. We have a good spy system here.

I agreed earlier to yield to the new member of our committee, Mr. Chappell.

PANAMA AGREEMENT

Mr. CHAPPELL. Gentlemen, I am sorry I had to miss so much of your testimony before the committee.

Let me ask a basic question. For example, on the Panama security assistance program—are we on that now? Let me ask, how does this agreement work with Panama? For example, what part do they play in the security of the canal? How does this operate?

Mr. TARR. The security of the canal is our responsibility. I explained yesterday the territory on which the canal is built is and has been recognized as Panamanian, with the United States having been granted the right to act as if the territory is sovereign.

———.

Mr. CHAPPELL. Actually, I suppose what you are saying is that the security of it mainly is ours, and so far as the Congress is concerned, lies primarily with the Armed Services Committee. Is that correct? In other words, the part you refer to here only relates to what moneys

we would appropriate for the use of that country in programs which would be allied with our security in all of Latin America.

Admiral PEET. It adds to stability in the country.

EXPLANATION OF CHANGES IN MAP ANALYSIS

Mr. TARR. We are not really talking about the defense of the canal here.

Mr. CHAPPELL. I notice in the military assistance program analysis, you have the explanation of your major changes. Let me be sure I understand what you are talking about. You are talking about a change from what, the 1972 budget, or are you talking about a change between the 1973 and what is proposed?

Admiral PEET. When we presented the 1973 program, our proposals were based on the amount of NOA the administration requested. We did not get a 1973 bill and were only given continuing resolution authority. The changes made to accommodate the difference between the amount of the continuing resolution authority and what we had requested are explained in that section.

Mr. CHAPPELL. Is that explained under net change?

Admiral PEET. Yes, sir.

Mr. CHAPPELL. You are saying that is the difference between what you requested and what you got, including the continuing resolution?

Admiral PEET. Yes, sir.

Mr. TARR. What we got was available under continuing resolution, because the program had no funding last year.

EFFECT OF MAP FUNDING CUTS

Mr. CHAPPELL. Where they refer to "deleted" aircraft, what do you mean by that?

Admiral PEET. We mean that we had to delete those aircraft because we could not fund them within the CRA money that was available.

Mr. CHAPPELL. It was deleted because you didn't get enough money to do what you wanted to do under your originally recommended program?

Admiral PEET. Yes, sir. We are attempting to explain to you the effect of being limited to CRA.

Mr. CHAPPELL. I notice that you have many, many instances where you have used the word "deleted." Does it apply to aircraft and training entirely?

Admiral PEET. Yes, sir, it applies to any previously programed item.

Mr. CHAPPELL. What effect has that had on your overall purpose?

Admiral PEET. It had a debilitating effect.

Mr. CHAPPELL. Can you demonstrate this in some specific way?

Admiral PEET. I think perhaps the best example is the Korean modernization plan.

Mr. CHAPPELL. Where is that page?

Mr. TARR. Page 82, third from the bottom.

Admiral PEET. The objective of that plan was to modernize the Korean Forces so we could withdraw our troops in a reasonable length of time. We are more than $230 million behind in that plan, and we are not able to modernize those forces at the rate which we would have liked to maintain.

Mr. CHAPPELL. The point was to modernize the Korean Forces and thereby relieve our own obligations. For example, in manpower?

Admiral PEET. Yes, sir. It was to make them self-sufficient.

Mr. CHAPPELL. You had $96 million less than you thought you needed. In other words, you had $96 million deleted by these various things, and you are saying that $96 million prevented you from moving along with the Korean modernization, as you wanted. Are those programs set in terms of years or what?

Admiral PEET. The modernization plan is a 5-year program we negotiated with the Koreans.

Mr. CHAPPELL. How does it change the time frame then?

Admiral PEET. It delays it considerably.

Mr. CHAPPELL. Are we talking about 1 year, 5 years, 25 percent of the goal?

Admiral PEET. It will delay the program at least 2 years, in my opinion. However, we are in the process of making another analysis of that plan.

Mr. CHAPPELL. So you haven't a really good answer as to what the effect has been?

Admiral PEET. No, sir, not at the moment.

Mr. CHAPPELL. Can you demonstrate it in some other way, with some other country where you can specifically say what the results of those deletions have been?

Admiral PEET. In all of them, it reduces the defense capability; but it is hard to quantify the effect.

Take, for example, Indonesia. We are attempting to help Indonesia get back on her feet. As a result of our not being able to provide certain assistance, she finds herself unable to develop her Coast Guard. It is necessary for a country consisting of many islands to patrol those islands and keep contraband from entering. Because Indonesia is unable to do that, it is more difficult for her to get on her feet, become self-sufficient, and progress from dependency on us for grant assistance to a position in which she can stand on her own and buy whatever she needs.

DETERMINATION OF AID IMPLEMENTATION

Mr. CHAPPELL. What process do you go through to determine when one of these countries can stand on her own feet? What criteria do you use for this?

Admiral PEET. There are a number of factors involved. Working with State and others, we determine whether or not, if we withdraw our support, she will be able to stand on her two feet economically, or if she will be in such a weak condition that neighboring countries can move in.

Mr. CHAPPELL. Take the case of Indonesia where you determine that you are going to give so much money to bring them up to a certain level. How do you make certain that the moneys which you put in there actually get to the industries, and so forth, so that that country is going to make maximum use of that money to become self-supporting?

Admiral PEET. No money is provided through this particular program. We deliver equipment, not money. We have a military advisory group in Indonesia which supervises end item use.

Mr. CHAPPELL. Teach them how to use it?

Admiral PEET. Not only that, but we keep track of the equipment after it is delivered to see that it is used properly and in accordance with the agreements made with that particular country.

Mr. CHAPPELL. That is primarily for security purposes. Do you touch any of the economic factors in the moneys which go into these countries?

Mr. Secretary, what I am trying to find out is, a lot of us oppose foreign aid and many times I think we oppose it because we don't think the money is doing any good. I am trying to determine how you decide what you want to do, and you find out what the ends are, but how do you determine the means by which you seek to obtain that end and can you demonstrate to us how those means work in such a way that we might make a judgment decision as to whether the means are good enough for us to supply the money, or whether they are not?

Admiral PEET. Dr. Hannah will be testifying to this point in connection with AID programs. In each country, there is an Ambassador and a country team which includes both military and economic aid representation. That team, knowing the situation in the country and working with the country representative, develops the program for the country. That program is then passed for review through the U.S. chain of command.

Mr. CHAPPELL. Admiral, in talking to some people from these other countries, they seem to make the point that we impose our methodology so much upon them sometimes that they literally are unable to use that method and find themselves in a very wasteful situation, which suggests the question: Do you in the development of these programs, ask them to delineate their own problems and then to propose a solution, using the methodology which is familiar to them, or do we impose so much of our thoughts on them that they literally can't perform efficiently?

Mr. TARR. Mr. Congressman, I think this is certainly our weakness. That we tend to impose a United States solution on nations that are not prepared for it; this is what we must necessarily try to avoid.

Now, the program we have before us is primarily a program that relates to security and insofar as it is possible for our people to do so, they are instructed to try to solve security problems on the basis of that particular country's potential, expertise, the level of training, awareness.

There has been a great deal of talk in this and other committees about our program in Cambodia. One of the problems we have had in Cambodia is that here quite clearly is a country that is not capable immediately of assuming all of the niceties of our program with respect to controlling inventories, paying soldiers, and all the rest, and we have gotten into serious problems because of that.

I think part of your question aims at our attempts to improve the economy as opposed to improving the security.

Mr. CHAPPELL. I recognize that, but isn't there a very keen correlation between the two?

Mr. TARR. Of course.

Mr. CHAPPELL. While you are attempting to handle the security factors, don't you also have to be cognizant of how you can employ the technology there to help them improve themselves economically? My point is they are tremendously correlated, aren't they?

Mr. TARR. The relationships are close, and insofar as it is possible we do try to take these into account. We try to work with the Agency for Economic Development so that they are aware of what we seek to do, and we are aware of what they seek to do. I have a man in my office who works constantly on these economic problems of areas in which we operate. Yes, we do try.

Mr. CHAPPELL. I suppose in general what you are saying with reference to the military assistance program analysis sheets is that all of those items where you have marked "Deleted" are programs which you are attempting to reestablish in this recommended budget, is that right? So, if one would go through and glean that out, we would understand you are trying to get that back in. Is that the simplest way to say it?

Admiral PEET. Yes, sir, generally speaking.

Mr. CHAPPELL. Mr. Chairman, I am sorry I am so dumb on some of this stuff, but I did want to ask those basic questions. Thank you.

Mr. PASSMAN. I want to say to our new member he has impressed me, he has impressed the committee and he has impressed the witnesses with his line of questioning.

I heard a new definition of foreign aid. What you just asked reminds me of that definition. It is taking money from the poor people in a rich country and giving it to rich people in poor countries.

Mr. CHAPPELL. That is about it, too.

HELP FOR DEVELOPING NATIONS

Mr. PASSMAN. I think that is a pretty good description. I believe we are 185 years away from the constitution, aren't we?

Mr. TARR. Yes, sir.

Mr. PASSMAN. And some of the nations we are helping had thriving civilizations 2,000 years ago, didn't they? And 185 years ago we were a primitive nation of 3 million. So we underdeveloped while the developing nations were becoming underdeveloped while we were developing. Now we are becoming underdeveloped again trying to help underdeveloped nations, previously developed to develop again. I wonder when we succeed in becoming underdeveloped helping the underdeveloped nations develop if the then developed nations will come back and help an underdeveloped nation recover again.

Mr. LONG. You lost me there about 1850.

Mr. MILLER. Should we put that in the contracts?

Mr. PASSMAN. I think it ought to be in there. Now I am going to yield.

IMPROVING NEAR EAST EXCHANGE

Mr. CHAPPELL. I do have one more question I would like to ask, Mr. Chairman, with reference to the Near East.

Isn't there some way for us to get a better quid pro quo for the assistance which we are giving there in exchange for some minimums of fuel?

Mr. TARR. I think the only answer I can give to that is that the nations that we really are assisting are not the ones that have any fuel.

Mr. CHAPPELL. Is that entirely true?

Mr. TARR. It is very nearly true.

Mr. CHAPPELL. Of course Kuwait is not asking for any particular thing.

Mr. LONG. They sure are. We are proposing to sell them maybe $500 million worth of arms and equipment.

Mr. CHAPPELL. Let's discuss that for a moment. You are saying Kuwait wants to purchase from us so much military equipment. Are they not sufficiently interested in our equipment as opposed to some others to give us some kind of par-gaining advantage so that we can better tie down some of those fuel resources?

GAINING CONCESSIONS ON FUEL RESOURCES

Mr. TARR. I think at the present time the two nations where this might be a question, Kuwait and Saudi Arabia, there is a very good chance that we will not sell anything to them at all, because from the sheer point of competitive strength, we may not get the sale.

To introduce into this yet another requirement, namely if we sell you *x* number of F–4 aircraft you will guarantee to provide us the present level of——

Mr. CHAPPELL. Or sell to us.

Mr. TARR. That is what I mean, you will continue to sell to us, I think this would only complicate the negotiation and make it more difficult for us to make the sale.

Mr. CHAPPELL. Aren't these countries over there going to be compelled as the fuel shortage gets more acute, to arm themselves more and more to try and protect themselves against the have-nots?

Mr. TARR. I think this is the point, ———.

Mr. CHAPPELL. I think I get the picture. What you are saying is that in the missionaries, if I might coin a word, through the industrial products, through our military products, ———.

Mr. TARR. ———.

Mr. CHAPPELL. Then a follow-up question on that.

How does this relate to South America?

———.

Admiral PEET. Yes, sir.

Mr. CHAPPELL. Isn't that what you are trying to say?

Admiral PEET. Yes, indeed. Mrs. Meir was quoted in the paper the other day as saying that the one thing she has against Moses is that he led them to a land without oil.

Mr. TARR. He was 40 years in the wilderness and then finally pushed them into a place where there were no oil wells.

Mr. SHRIVER. We have, though, down through the years given considerable aid to countries that do have oil. Libya $228.6 million in grants from AID, Saudi Arabia $366 million. We have contributed through our AID programs to those countries that do have oil. I could pick out a lot of others.

Mr. TARR. Mr. Shriver. I think the question was, Isn't there some way that our present aid agreements can help to insure the source of petroleum? My response in the Near East was that the place where

we most need now to insure the source of supply for petroleum or those areas wherein grant aid or credit sales aid we are really giving nothing.

PREFERENCE FOR BILATERAL AID

Mr. SHRIVER. But hasn't the attitude been we are doing this out of humanity in this country and we are not expecting anything in return? We don't even want those people to know we are giving it. I think the chairman and I have seen some instances of that throughout the world, where the credit wasn't even given to our country for assistance that our taxpayers had given.

Mr. PASSMAN. Will the gentleman yield?

Mr. SHRIVER. Certainly.

Mr. PASSMAN We went to the rescue with our resources when they really needed help.

Mr. TARR. That is right.

Mr. PASSMAN. And they should know something about the definition of reciprocity. Would you buy that?

Mr. TARR. I would. Mr. Chairman, I would interpret your position with respect to discouraging the use of multilateral lending agencies, and also with the institution of more credit sales as opposed to grants as being a direct response to this historic attitude where we would somehow work to the advantage of the nation if no recipient of the aid ever knew where it came from.

Mr. PASSMAN. Unfortunately that is true of multilateral. The recipient does not know the donor and the donor does not know the recipient. You know that. Let me say this about the multilateral institutions. We don't know what country the funds are allocated to, for what purpose, for what amount, until after the fact, if ever. This committee is denied the right to examine those who administer the program, isn't that correct?

Mr. TARR. That is right.

Mr. PASSMAN. And the donor does not know the recipient, the recipient does not know the donor. Then if any of this is ever paid back it goes into the organization, never back into the U.S. Treasury. It is a matter of principle to me. If we are going to give it away let's let people know where it is coming from.

I hope I misunderstood your reply. Did you say that the Russians have a military assistance program in Bangladesh?

Mr. TARR. They have certainly trained pilots.

Admiral PEET. You are quite right, I did read Bangladesh from the list, but I failed to note that the next column shows the amount of zero.

Mr. PASSMAN. I am so glad we have cleared that up because we have poured an awful lot of economic aid into Bangladesh. Now I want to yield to Mr. Coughlin. You have been very patient.

CLARIFYING FMS FIGURES

Mr. COUGHLIN. Thank you very much, Mr. Chairman. As a new member of the committee, at the risk of plowing some ground that has already been plowed, I would like to go through your program here point by point for a bit, if I could. On page 3 of your justification you indicate that the foreign military sales credit program request is for $760 million.

Admiral PEET. Yes, sir.

Mr. COUGHLIN. There is an additional item saying DOD financed foreign military sales of $446 million. What is that?

Mr. FORMAN. A breakout of the first item.

Mr. COUGHLIN. So the $760 million is total.

Mr. FORMAN. Yes, sir.

Mr. COUGHLIN. Then the military assistance program is an additional $771 million, am I correct?

Mr. VON MARBOD. Yes, you are correct. However, we request only $652 million in new obligational authority.

Mr. COUGHLIN. I understand. Then the military training program is $33 million, is that correct?

Mr. VON MARBOD. That is correct.

Mr. COUGHLIN. In the early testimony it was said that there were cash sales of military equipment of $3.28 billion. Is that in addition to these other figures?

Mr. VON MARBOD. We estimate that fiscal year 1974 cash sales will be $3,928,100,000. No appropriations from the Congress are required for cash sales.

Mr. COUGHLIN. What are those, cash sales of military equipment to other countries?

Mr. VON MARBOD. Defense articles and services are sold to other countries in accordance with the provisions of sections 21 and 22 of the Foreign Military Sales Act and for the most part, under the section 22 provisions which authorize dependable undertakings whereby the country agrees to pay in such amounts and at such times as we require their money to meet disbursement.

Mr. COUGHLIN. Then in addition to that there was another $694 million in commercial sales?

Mr. VON MARBOD. Our estimate for fiscal year 1974 commercial sales is $726,525,000; here again, such sales do not involve appropriations by the Congress.

Mr. COUGHLIN. What is the difference between those and the cash sales?

Mr. VON MARBOD. Cash sales are made by the Department of Defense to foreign governments or military establishments or international organizations. Commercial sales are made by U.S. industry to foreign governments.

FUNDS AND MATERIEL FOR CAMBODIA

Mr. COUGHLIN. Now going to the Far East and Pacific section of your justification starting with Cambodia, the request for assistance to Cambodia is $167 million plus in military assistance, is that correct?

Mr. VON MARBOD. For fiscal year 1974, military assistance will be $167,194,000. In addition, we estimate that supply operation costs—those costs required to move materiel in the pipeline—will approximate $13,500,000. We have also allocated $5,800,000 to the training program for Cambodia.

Mr. COUGHLIN. And that is a substantial percentage of the total Cambodian defense budget?

Mr. VON MARBOD. It is indeed.

Mr. COUGHLIN. The largest item that I note of military assistance to Cambodia is for ammunition. The second largest is for other equip-

ment and supplies. What does the other equipment and supplies item consist of?

Mr. VON MARBOD. The other equipment and supplies for which we are seeking authorization and appropriation in fiscal year 1974 include aircraft and aircraft spare parts, vehicles, communications equipment. The other equipment and supplies would include engineering equipment, organizational base maintenance equipment, items of that sort.

Mr. COUGHLIN. Your justification has a separate item for aircraft, but there are also aircraft in the other equipment items, is that correct?

Mr. VON MARBOD. I was using "equipment and supplies" generically. I should have identified the aircraft separately.

Mr. COUGHLIN. None of these aircraft, as your justification would indicate, are fighter aircraft that are going to Cambodia?

Mr. VON MARBOD. The aircraft we propose for fiscal 1974 are cargo aircraft, trainer aircraft, UH–1 Helicopter and O–1 observation aircraft, all of which, as I said, we expect will come from excess.

Mr. COUGHLIN. But no fighter aircraft.

Mr. VON MARBOD. No fighter aircraft.

UNITED NATIONS AND THIRD COUNTRY ASSISTANCE TO INDONESIA

Mr. COUGHLIN. Moving on to Indonesia, if I might, the request there is for $20,826,000, am I correct?

Mr. VON MARBOD. You are correct. Again, we estimate that an additional $2,200,000 will be required for supply operations, and $2,000,000 for training.

Mr. PASSMAN. Would the gentleman yield at that point?

Mr. COUGHLIN. Yes.

Mr. PASSMAN. At one time Indonesia purchased only Russian military equipment, and they ran up an indebtedness there I think of millions of dollars. Did they ever succeed in working out an agreement on how they were to repay Russia that tremendous debt?

Mr. TARR. I think the discussions are underway now.

Mr. PASSMAN. If the gentleman will yield for one other question. Are they using the Russian equipment and spare parts from Russia or are they abandoning it?

Mr. VON MARBOD. They are having considerable difficulty in obtaining spare parts support for that equipment.

Mr. TARR. Much of it has been abandoned.

Mr. PASSMAN. It has been abandoned for junk I guess.

Mr. VON MARBOD. Yes, sir.

Mr. COUGHLIN. The aircraft that are being sent to Indonesia are F–51's, is that correct?

Mr. VON MARBOD. We do not propose to provide any F–51 aircraft during fiscal year 1974, Mr. Congressman.

Mr. TARR. There were six, Mr. Congressman, that went there 2 years ago.

Mr. SHRIVER. Would you yield?

What kind of help has Australia given?

Mr. VON MARBOD. Australia has given Indonesia F–86 aircraft manufactured in Australia.

Mr. SHRIVER. Is that all?

Admiral PEET. There are some others.

Mr. TARR. They are helping with the training.

Admiral PEET. Australia gave about ——— worth of grant aid in fiscal year 1973, and we estimate she will give the same amount this year.

Mr. SHRIVER. That isn't very much.

Admiral PEET. No, sir.

Mr. SHRIVER. Indonesia is really very close to Australia.

Mr. COUGHLIN. But the major item in this year's request is for spare parts for those aircraft, is that correct?

Mr. VON MARBOD. That is correct, as it relates to support of U.S. aircraft, not the Australian.

ESTIMATE OF MATERIEL FOR KOREA

Mr. COUGHLIN. Going on to Korea, the request for Korea is $238,789,000, am I correct?

Admiral PEET. Yes, sir.

Mr. VON MARBOD. Here again, Mr. Congressman, we are estimating that we will require an additional $22,500,000 to move materiel in the Korean pipeline; and we are also estimating a training program of $2,400,000.

Mr. COUGHLIN. And this is roughly half of the total Korean defense budget, is that correct?

Admiral PEET. Yes, it is.

Mr. COUGHLIN. The first major item in the assistance to Korea is for aircraft. Those are F–5 fighter aircraft that are being supplied to Korea, is that correct?

Mr. VON MARBOD. Yes, sir. They are F–5E model aircraft which are just starting to come from production.

Mr. COUGHLIN. And the other major item is $65 million for vehicles and weapons. What is the general nature of those?

Admiral PEET. It is trucks, howitzers, and other equipment of that sort.

Mr. VON MARBOD. That figure includes 5,865 trucks in addition to other items.

FISCAL YEAR 1974 PROGRAM FOR THE PHILIPPINES

Mr. COUGHLIN. Moving on to the Philippines, the request for the Philippines is $19,269,000, is that correct?

Mr. VON MARBOD. That is correct. In addition, we estimate $2,100,000 for supply operations cost, and $600,000 for training program.

Mr. COUGHLIN. I am having difficulty determining what that is being spent for.

Mr. VON MARBOD. The fiscal year 1974 program for the Philippines includes aircraft spare parts and aerospace ground equipment. Vehicles is another major category. The aircraft line item includes ——— UH–1 helicopters.

THAI ASSISTANCE, U.S. ORIGIN

Mr. COUGHLIN. Moving to Thailand, the request is for $55,762,000 in military assistance and $15 million in credit sales.

Mr. VON MARBOD. We are also estimating Mr. Congressman, $2,700,000 to move materiel in the pipeline, and $1,500,000 for training.

Mr. COUGHLIN. The largest single item is for F–5 aircraft; is that correct?

Mr. VON MARBOD. That is correct, including spare parts for aircraft.

Mr. COUGHLIN. And our assistance in this case is roughly a third of the total defense budget of Thailand.

Admiral PEET. Our request would represent about one-seventh of the Thai defense budget.

Mr. SHRIVER. Would you yield a moment?

Mr. COUGHLIN. Yes.

MAP SPENT IN UNITED STATES

Mr. SHRIVER. We may have asked this before, but there is one member from Michigan who always wants to know. MAP is buying trucks from Michigan, U.S.A., and you are not supplying any Japanese or other countries' trucks.

Mr. VON MARBOD. No, sir. The fiscal 1974 program for Thailand includes 1,561 trucks, 777 of which we will attempt to provide as excess defense articles.

Mr. SHRIVER. So some of them will come off the shelf as excess?

Mr. VON MARBOD. It will indeed.

Mr. SHRIVER. Some will not be new property, but it will all be American.

Mr. VON MARBOD. It will indeed. At this point, I would like to emphasize that all funds appropriated for the grant military assistance program, with the exception of certain administrative costs of our military groups overseas, and some minor offshore procurement programs, are spent in the United States. We estimate that, during fiscal year 1974, 95 percent of our $652 million new obligations authority request will be spent within the continental United States.

Mr. PASSMAN. However, the bills are sent to the U.S. Treasury to be paid and not to Thailand, on this grant aid. When the ships go to sea, the bills are sent to the U.S. Treasury to be paid for?

Mr. VON MARBOD. They are, indeed, Mr. Chairman.

UNITED STATES-THAILAND ASSISTANCE

Mr. PASSMAN. What effort is Thailand making to defend herself?

Mr. TARR. About $200 million.

Mr. PASSMAN. What is our grant aid going to be to Thailand?

Mr. VON MARBOD. We are estimating $58,462,000 plus $1.5 million for training.

Mr. PASSMAN. They are in more danger from the threat of communism than we are.

Mr. VON MARBOD. Indeed, Mr. Chairman.

Mr. PASSMAN. They are very wealthy by our standards. They have $1 billion reserve in the foreign exchange account and they are making money, I assume, off of a lot of our personnel there. Four years ago, we went into Thailand and got into a diplomatic wrangle with them about trying to borrow $250 million. Thailand finally agreed they would make a loan of $100 million, so we borrowed $100 million

from Thailand to be repaid at 6 percent interest in 4½ years and that $100 million falls due July 2.

I thank the gentleman for yielding.

AID FOR NEAR EAST

Mr. COUGHLIN. Moving on to the Near Eastern section of the justification, I understand there is no aid request for fiscal 1974 for Afghanistan, India, Iran, Nepal, and Pakistan.

Mr. VON MARBOD. As set forth on page 6 of the presentation, we are requesting funds to provide training for several of these countries.

Mr. COUGHLIN. Training only and no equipment?

Mr. VON MARBOD. That is correct.

Mr. PASSMAN. If I may interrupt again, something came into my hands recently and I will not reveal the source. It would be quite unethical. It concerns the attitudes of some countries with regard to the multilateral aid provided. A high-level U.S. Government official went to Latin America, the national leaders kept asking for aid. When he tried to talk to them about what we were doing in multilateral aid, they brushed that aside saying, "Oh, we know that, but what are you going to do?"

That just shows that the recipient countries of this multilateral aid are not interested that the United States is the main donor in their institutions and they feel these funds are provided by the organization and not by the United States primarily.

Mr. COUGHLIN. In Greece the $65 million in proposed credit sales is primarily for F–4E aircraft?

Mr. VON MARBOD. That is correct, Mr. Chairman.

Again, Greece, as a member of NATO, this is quite an important purchase to them.

Mr. COUGHLIN. And the $300 million in foreign credit sales to Israel, the bulk of that is for F–4 aircraft and A–4 aircraft, is that correct?

Mr. VON MARBOD. That is correct.

Mr. COUGHLIN. Of the $35,632,000 aid to Jordan, the bulk of that is for F–5E aircraft, is it not?

Admiral PEET. That is correct.

Mr. COUGHLIN. In the aid to Lebanon in the amount of $5 million in foreign credit sales, there are no aircraft involved in that?

Mr. VON. MARBOD. No, there are no aircraft involved.

Mr. TARR. I believe on that program we should emphasize once again that that program is in flux now as a result of recent difficulties. A lot of this money could well go into ammunition.

Mr. COUGHLIN. The aid to Saudi Arabia in the amount of $20 million in foreign credit sales—none of that is for aircraft, is that correct?

Mr. VON MARBOD. None of that is for aircraft.

Mr. TARR. We don't think they are going to use that amount. We initially put that in in the event we needed matching money for private credit for some of their purchases but we think it is highly unlikely that they will use it.

Mr. COUGHLIN. Finally in the aid to Turkey in the amount of $85 million military assistance, and $75 million in credit sales, the military assistance indicates that is for F–100 aircraft, is that correct?

Mr. VON MARBOD. The F–100 aircraft, Mr. Congressman, will be supplied as excess defense articles. However, we do require money for the reconditioning of those aircraft before they are delivered.

Mr. COUGHLIN. And the sales credits are primarily for F–4E aircraft?

Mr. VON MARBOD. Yes, Mr. Congressman. During fiscal year 1974, we would like to finance $75 million for Turkey's purchase of F–4's. That is a very important purchase for Turkey as a member of NATO.

NO FIGHTER AIRCRAFT FOR AFRICA

Mr. COUGHLIN. I will skip over Europe if I may and go to Africa. The $12 million in foreign sales credits proposed for Morocco are primarily for aircraft, none of which are fighter aircraft, is that correct?

Mr. VON MARBOD. Six C–130 transport aircraft are included in the $12 million foreign military credit sales we are proposing.

Mr. COUGHLIN. But none of that is for fighter aircraft?

Mr. VON MARBOD. No, none of that is for fighter aircraft.

Mr. COUGHLIN. In Tunisia the proposal is for $2,476,000 in military assistance and $2,500,000 in foreign military sales credits.

None of that is for fighter aircraft?

Mr. VON MARBOD. No, none is for fighter aircraft.

Mr. COUGHLIN. In either the military or the credit sales?

Mr. VON MARBOD. Neither includes the fighters.

AIRCRAFT SALES TO LATIN AMERICA

Mr. COUGHLIN. If I might move for a minute to Latin America. In Argentina, there is a request of $22,500,000 for foreign credit sales. Approximately $1.6 million is for fighter aircraft?

Admiral PEET. ———.

Mr. COUGHLIN. None of the rest is for tactical aircraft?

Admiral PEET. No, sir. ———.

Mr. COUGHLIN. Of the proposed $3,996,000 in military assistance to Bolivia and $4 million in foreign credit sales, is any of that for tactical aircraft?

Admiral PEET. ———.

Mr. COUGHLIN. Of the $10 million proposed for military credit sales to Chile, approximately $6.5 million is for tactical aircraft; is that correct?

Admiral PEET. We are uncertain just what Chile will want to use that credit for. It is under negotiation right now.

Mr. COUGHLIN. Would a substantial part be used for tactical aircraft?

Admiral PEET. I think it could be, yes, sir.

Mr. COUGHLIN. Of the $15 million in proposed foreign credit sales to Colombia, do you expect any portion of that to be for tactical aircraft?

Admiral PEET. No, sir, I do not.

Mr. COUGHLIN. Of the $20 million proposed in foreign military credit sales to Peru, approximately $10 million of that would be earmarked for tactical aircraft; is that correct?

Admiral PEET. ———.

Mr. COUGHLIN. Finally, of the $15 million proposed in foreign military credit sales to Venezuela, none of that would be for tactical aircraft?

Admiral PEET. No, I don't expect so.

Mr. COUGHLIN. Thank you very much. Thank you, Mr. Chairman.

Mr. PASSMAN. Mr. Coughlin, you did a superb job.

Mr. Miller, have you any questions?

Mr. MILLER. I have one question if I may, Mr. Chairman.

Mr. PASSMAN. Proceed, sir.

UNITED STATES-SAUDI ARABIA BALANCE OF PAYMENTS

Mr. MILLER. On page 39 of your security assistance program booklet it states, concerning Saudi Arabia, that the United States has important security-related interests in Saudi Arabia, one being the uninterrupted flow of oil from the largest exporter of crude oil in the world to the United States. But it goes on to indicate that the United States enjoys an annual balance of trade of over $200 million with Saudi Arabia. It is my understanding that we are purchasing billions of dollars worth of petroleum from Arabia and I understood we had a deficit balance of payments with Saudi Arabia. I am not sure what this statement means.

Mr. TARR. I really don't know what the figures are.

Admiral PEET. I will verify it for the record, but I believe we have a favorable balance with Saudi Arabia, and that the deficit is with the aggregate oil producing countries.

Mr. MILLER. It was my understanding we had an unfavorable balance with Arabia. Could you clear that up for the record? It may be correct, but I would certainly like to have it checked on the basis of the information we already have. Thank you.

Thank you, Mr. Chairman.

[The information follows:]

The United States enjoys a favorable balance of trade with Saudi Arabia. In fiscal year 1972, U.S. exports to Saudi Arabia were $314 million. Imports totaled $194 million, leaving the United States a net balance-of-trade advantage of $120 million.

REQUESTS OR A RESULT OF COMMITMENT

Mr. PASSMAN. Mr. Conte.

Mr. CONTE. How much of the grants, sales, credits, and training contained in the budget request is necessary as a result of obligations undertaken by this country in executive agreements? Would you also provide the committee with a detailed breakdown of how much going to each country is necessary because of these executive agreements? Would you also please provide a similar breakdown indicating what the United States is receiving in return for these commitments?

Admiral PEET. Approximately $199 million in credit assistance and $118 million in grant assistance have been included in the fiscal year 1974 security assistance budget request as a result of commitments undertaken in executive agreements. Virtually all of these funds are

in support of joint projects designed to improve the defensive capabilities of our allies. Because of budgetary and other considerations, these projects have been phased over more than 1 year. In each case, the agreements are clear that their implementation in future fiscal years is contingent upon the availability of funds and appropriate legislative authority.

I will review briefly the amounts involved for the various countries and the projects they are intended to support.

For the Republic of China, we have requested $10.7 million in credit assistance to support a program for the assembly of ——— on Taiwan. This program was initiated in October 1972. An additional $20.5 million in credit assistance and $28.3 million in grant assistance have been requested in support of a program, undertaken in February 1973, for the coproduction of ——— on Taiwan.

For Greece, we have requested $65 million in credit assistance for the procurement of ——— as part of a modernization program for the Greek Air Force, undertaken in March 1972.

In the case of Jordan, we have requested $35.6 million in grant assistance to carry out the third phase of a modernization program agreed in May 1971.

The program for Korea includes sums for four agreed multiyear projects. They are:

—$3 million in credit assistance in support of a program, undertaken in April 1971, for the production of ——— in Korea.

—$2.6 million in grant assistance and $1 million in credit assistance in support of a similar ——— production program agreed in January 1972.

—$5 million in credit assistance for procurement of ——— as agreed in July 1972.

—$48 million in grant assistance as part of a program, agreed in August 1972, to modernize the Korean Air Force with———.

For Malaysia, we have requested $19 million in credit assistance under a multiyear program for the procurement of ——— undertaken in June of 1972.

For Spain, we have requested $3.4 million in grant assistance to carry out commitments undertaken by the United States in the 1970 Agreement of Friendship and Cooperation. Under that agreement, as you will recall, the Spanish Government, for its part, granted the United States the right to use military facilities in Spain.

Finally, for Turkey, we have requested $75 million in credit assistance for the procurement of ——— as part of a program, undertaken in August 1972, to modernize the Turkish Air Force.

OPERATING AND MAINTENANCE COST

Mr. CONTE. You state that the primary objective of the assistance and credit resources are directed to the capital requirements of the recipient countries. You also state that these countries are expected to assume the bulk of the operating and maintenance costs. How much of the request for fiscal 1974 is for operating and maintenance costs? Please provide a country-by-country breakdown of this for the record.

Admiral PEET. Of the request for fiscal year 1974, $283 million (37 percent) is for operating and maintenance costs. The breakdown by country is as follows:

[In thousands of dollars]

East Asia and Pacific:	
Cambodia	131,845
Indonesia	8,427
Korea	47,563
Philippines	4,361
Thailand	27,288
Regional total	219,484
Near East and South Asia:	
Jordan	2,100
Turkey	18,364
Regional total	20,464
Africa:	
Ethiopia	4,655
Tunisia	488
Regional total	5,143
Europe:	
Portugal	262
Latin America:	
Bolivia	1,033
Dominican Republic	279
El Salvador	50
Guatemala	9
Honduras	60
Nicaragua	194
Panama	137

SPARE PARTS

Mr. CONTE. You indicate that the sales credits have a favorable impact on the U.S. balance of trade. How much of the credit sales for 1974 are for spare parts for equipment purchased in prior years, and how much are these countries spending on direct purchases of spare parts in 1974?

Admiral PEET. On the basis of past performance, we estimate that approximately 20 to 25 percent of the credit sales for 1974 are for spare parts to maintain equipment purchased in prior years. We are unable to ascertain the value of such spare parts being purchased directly by these countries during 1974, because much of the data pertaining thereto are not available from the Commerce Department until after the fact.

Mr. CONTE. You have provided 10-year figures for the foreign military sales, excluding commercial sales and grant assistance. What has the level of commercial sales been over the last 10 years?

Admiral Peet. During the 10-year period from 1964 through 1973, the total value of commercial sales was $4.3 billion.

SUPPLY OPERATIONS INCREASE

Mr. CONTE. The budget request for supply operations shows an increase of almost $8 million. Is this because the new accounting procedure was adopted during fiscal 1973 rather than at the beginning? If not, why is the increase so large?

Admiral PEET. The amount shown for supply operations is directly related to deliveries.

Deliveries for fiscal year 1972 were $429,107—supply operations for the same period amounted to $62,037 or 14.5 percent.

Estimated deliveries for fiscal year 1973 are $439,938—the latest estimate for supply operations is $64,500 or 14.6 percent.

The amount of $69,200 for supply operations was arrived at by taking 14.7 percent of the estimated deliveries of $470,000 for fiscal year 1974.

COUNTRIES IN ARREARS

Mr. CONTE. How many of the credit sales agreements are now in default? What is the outstanding principal value of these defaults? Please provide for the record a list of the countries in default and the amounts of the defaults.

Admiral PEET. There are no countries that are presently in default. However, there are four in arrears. They are reflected in the following chart:

[Values in thousands]

Country	Credit loans	Payments					
		Due		Paid		Arrear	
		Principal	Interest	Principal	Interest	Principal	Interest
Chile	32,429.4	7,967.8	1,246.5	6,960.0	927.1	1,007.8	319.4
Ecuador	572.9	441.3	143.1	----------	----------	441.3	143.1
Paraguay	217.4	217.4	63.4	217.4	----------	----------	63.4
Tunisia	5,014.3	2,814.3	569.7	2,814.3	518.9	----------	50.8

INDONESIA

Mr. CONTE. Is Australia the sole source of the third party assistance for Indonesia?

Admiral PEET. Currently, Australia is the only other country with an active assistance program for Indonesia, although New Zealand has recently indicated the possibility of offering limited amounts of training assistance. The Australian program amounts to about ——— over a 3-year period.

Mr. CONTE. What is the status of the internal security in Indonesia at present? Is it serious enough to warrant the need for two airborne brigades for internal security?

Admiral PEET. ———. I am certain that the existence of the two airborne brigades will serve as a valuable deterrent to any significant dissident challenge in that farflung archipelago.

KOREA

Mr. CONTE. What is the status of the bilateral negotiations between the North and South Koreans? You indicate that the need for the military requirements for the Republic of Korea may decrease in the

coming years. Could you provide a summary of what the estimates on this lessened need over the next 5 years might be in light of current conditions and progress?

Admiral PEET. The main forum for bilateral negotiations between the Republic of Korea and North Korea is the South-North coordinating committee. The third South-North coordinating committee meeting was held June 12–13, 1973, at which wide ranging points of view were presented by both sides. No new agreements were reached and each side reiterated the same basic proposals they had previously espoused at the second meeting on March 14–16, 1973. The next meeting is planned for September 1973.

Projections of decreased military assistance in future years are based on the following factors: completion of the 5-year modernization plan, continued favorable Republic of Korea economic growth, and continued reduction in area tensions, The Republic of Korea should be able in the post-plan period to assume through FMS cash and credit sales the major responsibility for maintaining its armed forces. Thus the amount of grant assistance required should decrease substantially. A precise schedule for such a phase down has not been determined since the 5-year plan is behind scheduled implementation and economic growth rate projections should be confirmed by experience.

Mr. CONTE. You indicate that the credit sales program level is based on what is determined to be the maximum they should undertake. Whose estimate is this? Does the Republic of Korea want to participate at a higher level?

Admiral PEET. The FMS credit level for fiscal year 1974 was based on the request of the country team and was approved by interested departments of the executive branch. The Republic of Korea has not asked to participate at a higher FMS level.

Mr. CONTE. You are requesting authority to grant ——— trucks to the Republic of Korea in the coming year. How many trucks have we provided through sales and grants in the past 5 years?

Admiral PEET. During 1969 and 1970, the United States provided ——— vehicles to the Republic of Korea through grant aid. No vehicles were provided through sales. The Korean modernization program which began in fiscal year 1971, called for a total of ——— vehicles of all types—one-quarter ton, three-quarter ton, 2½ tons, 5 tons, and 2½ tons and 5 tons dump trucks) to fill equipment shortages and replace obsolete vehciles in the Republic of Korea inventory. Since the beginning of the modernization plan, the United States has provided a total of ——— vehicles against that objective level. The source of these vehicles is as follows:

Funded under MAP	———
Transferred, Public Law 91-652	———
Excess defense articles	———
Total	———

Mr. CONTE. What is the basis for the need of ——— Sidewinder missiles? How many does the Republic of Korea have now?

Admiral PEET. The Sidewinder missile is an air-to-air missile used by tactical fighters. The ——— in the fiscal year 1974 program for Korea are intended for use on the F–5A, F–5E, and F–4 aircraft in the Republic of Korea Air Force inventory. The Republic of Korea

now has ——— of this type missile in its inventory. Based on the enemy threat, the total Republic of Korea Air Force missile requirement is ———. These ——— Sindewinder missiles are necessary to assist in filling this shortfall.

PHILIPPINES

Mr. CONTE. What is the source of the third country assistance in the Philippines and what form does it take?

Admiral PEET. Australia is providing, as grant aid, ——— 45-foot patrol boats at a cost of ———. Singapore sold a ——— patrol boat to the Philippines, which was delivered in 1972.

Mr. CONTE. What is the status of the Philippine effort to curb internal dissidence? How significant a threat is this dissidence to the Luzon base at this time?

Admiral PEET. The Muslim insurgency in the southern area is a significant internal threat. At the moment it has been stabilized, but could regenerate at any time. A limited Communist insurgency in the northern area is relatively dormant at this time, but represents a more direct threat to our U.S. base interests which are in that sector. The Philippine Government has been under martial law since September 1972, in order to effectively deal with insurgency problems and to institute socio-economic reforms.

Mr. CONTE. Has there been any indication on the part of the Philippine Government of a desire to start requesting rental payments for the bases?

Admiral PEET. Thus far there has been no official indication on the part of the Philippine Government. Last fall some of the political opposition party members made statements relating to the need for rent, which received front page coverage at the time, so the seed is definitely there. Currently, the Philippine Government has indicated a desire to review all of our military and economic agreements, but nothing definite has been agreed upon between us. The base agreement renegotiations were active until last year, when they were postponed. The Philippine Government might request that they continue again this summer, depending on what solidifies with regard to its interest in reviewing other agreements during the same relative time frame.

THAILAND

Mr. CONTE. You state the Thai Government will be assuming more of the costs of operating costs. Will this take effect in 1974? How much more will the Thai be assuming in this coming fiscal year?

Admiral PEET. The Thai Government will be assuming more of their operating costs. In fiscal year 1973, 78 percent of the military assistance program funds for Thailand were expended for O. & M. costs; in fiscal year 1974, 49 percent is programed to be expended. Assuming greater O. & M. costs by the Thais will be dependent upon the extent of their counterinsurgency operations and the attrition of military equipment. U.S. security assistance can prevent these costs from adversely affecting Thai economic stability and economic and social development.

Mr. CONTE. Would you please describe the cost sharing arrangement with the Thais on the two patrol frigates?

Admiral PEET. The cost sharing arrangement with the Thais on the two patrol frigates is as follows:

PF *107* ——— cost sharing venture; ——— million each country.—U.S. share funded by fiscal year 1968 MASF funds.—Ship constructed by American Shipbuilding Co., Toledo, Ohio.—Ship was delivered November 1971.

PF *108* ——— cost sharing venture.

Thai share ——— million; US ——— million.—U.S. share funded by fiscal year 1970 MASF funds.—Ship being constructed at Norfolk Shipbuilding & Drydock Co.—Ship was launched 26 May 1973.—Ship scheduled for delivery January 25, 1974.

Mr. CONTE. What are the sources of the third country assistance for fiscal 1972 and 1973? Why is there none for fiscal 1974?

Admiral PEET. The sources of third country assistance for Thailand for fiscal year 1972 are Germany ———, Singapore ———, United Kingdom ———, Japan ———.

The sources—consist of military sales—in fiscal year 1973 are: Germany ———, United Kingdom ———.

The sources and amounts of third country assistance for Thailand for fiscal year 1974 are unknown at this time.

REPUBLIC OF CHINA

Mr. CONTE. One-third of the military sales credits to Taiwan are for the F–5 aircraft. How large is their fighter force now, and how many aircraft will this increase their force by?

Admiral PEET. As of July 1, 1972, Taiwan's fighter force consisted of ——— squadrons of fighter interceptors ——— F–104's) and ——— squadrons of tactical fighters ——— F–5A's and ——— F–100's).

In accordance with the memorandum of understanding of February 9, 1973, between USG and GRC, the F–5E will replace the F–100/F–104 aircraft on a squadron-by-squadron basis as the F–5E aircraft are introduced into the GRC inventory from the coassembly/coproduction facility in Taiwan. Therefore, the coassembly/coproduction of F–5E's on Taiwan will not cause any increase in the fighter force of the Republic of China Air Force.

MALAYSIA

Mr. CONTE. You state that the Malasians are increasingly looking to the United States for military forces. The justifications also show a substantial decrease in third-party assistance. Could you indicate the reasons for this increasing reliance on the United States and the decreases of third-party aid?

Admiral PEET. Third-party aid has decreased as Malaysia has become more self-reliant. I do not think it is a matter of increasing "reliance" on the United States, but a matter of Malaysia's own choice on a case-by-case basis, reflecting a desire to purchase top quality equipment with solid logistical backup. Her official posture remains nonalined with regard to major power relationships.

Mr. CONTE. What will be the extent of the cash purchases of rifles, armored cars, and other equipment by the Malaysians in 1974? Will these all be U.S. purchases?

Admiral PEET. We anticipate that Malaysia will purchase $3 to $5 million of these categories of items during fiscal year 1974 and we expect that most all will be purchased from the United States.

PROJECT ENHANCE

Mr. CONTE. Have all the equipment transfers from other countries to Vietnam been accomplished yet?

Admiral PEET. Yes, sir.

Mr. CONTE. What was the total value of the equipment that was transferred under the Project Enhance Plus?

Admiral PEET. The value, considering the age of the equipment, would be approximately $70 million.

JORDAN

Mr. CONTE. How solid are the assurances that the military assistance being provided to Jordan will not be turned against Israel?

Admiral PEET. There is, of course, no absolute assurance that one sovereign nation will not under certain circumstances find itself at war with another. It seems highly unlikely that, after losing its most populous and economically lucrative territories to Israel in 1967, Jordan would want to risk further losses. ———.

Mr. CONTE. Have any of the weapons provided to Jordan in the past been diverted from the military forces to fedayeen forces by theft, capture, or otherwise?

Admiral PEET. During the period of unrest which existed in Jordan between 1967 and 1970 it is possible that such diversions may have taken place on a small scale, although we have no details. Since the pacification operations which the Jordanian Army carried out in 1970–71 we can state with reasonable assurance that no military items have been diverted from its stocks to any insurgent groups.

Mr. CONTE. What is the most recent assessment of the ability of King Hussein to control the activities of the fedayeen in Jordan?

Admiral PEET. There has been no fedayeen activity of any significance in Jordan since the army launched a series of security operations in 1970 and 1971. Since that time the military has been strengthened, partly as a result of U.S. military assistance, and is considered capable of coping with any internal threat to the stability of Jordan.

Mr. CONTE. What type of training is being provided to the Jordanians being trained in the United States?

Admiral PEET. We are training Jordanian Air Force personnel in aircraft, jet engine, electronic systems, and armament maintenance; also in flying and ground safety procedures. Jordanian Army officers, for the most part, attend the advanced courses at the various U.S. Army branch schools.

Mr. CONTE. How many jet fighters are in active service in the Jordanian Air Force at the present time?

Admiral PEET. ———.

Mr. CONTE. Why is none of the aid provided to Jordan being done through credit sales?

Admiral PEET. Because of Jordan's acute economic dilemma, worsened considerably by the termination of subsidies from Libya

and Kuwait, we have refrained from offering FMS credit in fiscal year 1973 and fiscal year 1974.

Mr. CONTE. How much will Jordan be purchasing in cash sales in fiscal year 1974?

Admiral PEET. Estimates at this time are extremely tenuous but our current projection is around ———.

TURKEY

Mr. CONTE. What is the present state of internal stability in Turkey? Is any of the request attributable to need for internal security measures? Has the recent agreement to terminate the production of opium in Turkey affected that country's internal security?

Admiral PEET. The internal stability and security of Turkey is good. Martial law, initially imposed in 1971, has been progressively eased and is in effect now in only four of the country's 67 provinces. The Government is stable and, with the approach of general elections in October, political activity is vigorous. Our request reflects the requirement for a strong, effective ally on NATO's strategically important southeastern flank, rather than to internal security needs. The agreement to terminate opium production has not affected Turkey's internal security.

Mr. CONTE. Would you please detail the third party assistance for Turkey in the coming year and what this aid will be used for. How much of this ——— is in grants and how much is credit? Turkey will be receiving a substantial number of aircraft in fiscal year 1974? What is the need for this great increase? Are any being retired in the next year?

Admiral PEET. It is estimated that ——— of the ——— estimate will be in the form of grants from the FRG. We hold no information as to what this aid will be used for. We do not know whether the remaining ——— will be in the form of credit.—— The contract, covering deliveries over several years, has an estimated value of about ———. Therefore, a part or all of the ——— may be made available in the form of credit to pay for these items. The aircraft being received by Turkey in fiscal year 1974 are ———. These aircraft will replace obsolete ——— aircraft currently in the inventory.

GREECE

Mr. CONTE. What are the "high priority modernization requirements' you list for Greece? They do not appear to be reflected in the tables in the justifications.

Admiral PEET. The other high priority modernization items are ———.

Mr. CONTE. Are there any indications that the recent abortive coup in Greece will necessitate rethinking of plans to provide assistance to Greece?

Admiral PEET. No grant assistance is being furnished Greece. We do believe that Greece requires financial assistance rather than grant aid. In light of Greece's strategic position in the Eastern Mediterranean we hope to continue to provide such credit funds that will enable Greece to meet its NATO commitments.

ISRAEL

Mr. CONTE. What is the reason for the withdrawal of other countries from providing assistance to Israel? What countries are these?

Admiral PEET. Among the countries supplying arms to Israel, only France has announced a policy of "no-sales" to that country. ———.

Mr. CONTE. Could you please provide us with an assessment of how Israel stands militarily with regard to the opposing Arab States?

Admiral PEET. ———.

Mr. CONTE. How much in the way of Soviet armaments have moved into the Arab region in the past year? To what countries are these arms going?

Admiral PEET. In the past year the following Soviet equipment has been delivered as indicated:

To Syria: ———.

To Peoples Democratic Republic of Yemen: ———.

To Iraq: ———.

To Egypt: ———.

Mr. CONTE. What is the size of Israel's air force now?

Admiral PEET. Israel's air force consists of the following: ——— transport aircraft, ——— jet fighters (supersonic), ——— jet fighters (subsonic), ——— helicopters.

LEBANON

Mr. CONTE. The justifications indicate that third country assistance to Lebanon is decreasing. The sales credits to that country are also decreasing. Will Lebanon continue to be able to minimize the fedayeen activities within the country in light of these developments?

Admiral PEET. So far the Lebanese Armed Forces have demonstrated the ability to cope with internal threats they have faced. The Lebanese Government has displayed a most commendable determination in the face of considerable pressure. While external assistance has decreased somewhat, we understand that Lebanon has allocated a considerable sum from its own resources to national defense.

Mr. CONTE. Are the Lebanese making any direct purchase of armaments from the United States at the present time? What do they plan to do in 1974?

Admiral PEET. The Government of Lebanon is presently making a number of direct purchases of armaments from the United States.

SAUDI ARABIA

Mr. CONTE. The third country assistance to Saudi Arabia showed a marked increase in fiscal 1973. What is the source of this assistance and what are the Saudi Arabians using the assistance for?

Admiral PEET. Since early 1972, Saudi Arabia has spent almost ——— on military equipment and technical assistance from the United States, the United Kingdom and France. These large expenditures were prompted by Saudi border troubles with South Yemen, by the British withdrawal from the Persian Gulf in 1971, and the continuing Soviet-supported arms buildup in Iraq and South Yemen. Although

King Faysal does not feel threatened by Israel, he is concerned over the possible impact on his country of a new round of Arab-Israeli hostilities. ———

Third country deliveries during fiscal year 1973 include the final shipment of ——— armored personnel carriers. In addition, another ——— worth of military equipment is to be provided by France, Italy and the United Kingdom. A ——— agreement was signed with London in May 1973 covering maintenance, training, and support for the Saudi Arabian Air Force over the next 5 years. The accord includes air-defense support equipment but not aircraft. The contract is described as a continuation of a 1965 contract with the United States and United Kingdom for training on and maintenance of Lightning aircraft and for operating the King Faysal Air Academy in Riyadh and the technical training institute in Dhahran. About ——— will be spent on housing and maintenance facilities at various air base.

Mr. CONTE. How much is the Saudi Arabian Government spending in fiscal year 1973 on direct purchases of armaments? How much does it plan to purchase in fiscal year 1974? What are the sources of these purchases?

Admiral PEET. In addition to the $20 million credit for modernization of the national guard, the Saudi Arabian Government has spent an estimated $273.8 million cash in fiscal year 1973 and we estimate another $413.5 million cash in fiscal year 1974. Apart from the defense articles being procured from France as stated earlier, defense articles in these estimated values have been procured or are being procured from the United States.

Mr. CONTE. Would you please describe the national guard modernization program the Saudi Arabians will be undertaking in fiscal 1974?

Admiral PEET. In March 1973, the U.S. Government and the Government of Saudi Arabia signed a memorandum of understanding in which the United States agreed to assist the Saudis in a program to modernize the Saudi Arabian National Guard. The program consists of three major elements:

(*a*) Sale of defense equipment and services through foreign military sales (FMS) channels.

(*b*) Design and construction of necessary facilities, installations, and supporting elements.

(*c*) Development, installation, and initial operation of training, communications, logistics, and maintenance systems.

Currently, estimated cost of the program is $300 million. Implementation is envisioned over an unspecified number of years.

PORTUGAL

Mr. CONTE. Do we now have an agreement with Portugal for the Azores base? What is the amount of economic assistance which the U.S. Government has offered for the base agreement?

Admiral PEET. Yes, sir. The United States has stationed forces in the Azores since World War II. The current arrangements are based on the Defense Agreement of September 6, 1951 (TIAS 7078), concluded pursuant to article 3 of the North Atlantic Treaty, and extended by various bilateral and unilateral arrangements including most recently, an exchange of notes on December 9, 1971. This extension

covered a 5-year period from the date negotiations commenced in 1969 and will expire on February 3, 1974. Economic assistance to Portugal in exchange for rights to station U.S. forces in the Azores during the 5-year period consisted of: a 2-year Public Law 480 program in the amount of $15 million per year, a willingness to provide Export-Import Bank developmental loans of up to $400 million—which Portugal has not utilized—the no-cost lease of one hydrographic research vessel, a grant of $1 million for educational development projects, and nonmilitary type DOD excess equipment in the amount of $5 million at initial acquisition cost. Although not directly tied to the Azores base rights agreement, we have continued to provide less than $1 million annually in military aid to Portugal. This consists mostly of training and spare parts for NTO-oriented Portuguese antisubmarine and air defense forces.

Mr. CONTE. Why does the fact that the U.S. offer for the Azores lease agreement is limited to economic assistance make the continuation of the military assistance program necessary?

Admiral PEET. As mentioned above, the limited U.S. military assistance program for Portugal is only indirectly related to the Azores basing agreement. We believe that continuation of this modest program is important to the security interests of the United States in that it supports Portugal's NATO-committed forces, primarily in the areas of air defense, antisubmarine warfare, and training and spares for previously provided U.S. equipment to be used in the NATO area. ———. The continuing need for military assistance for Portugal is reviewed anually and will be given particularly close scrutiny as the Azores agreement expiration date approaches.

Mr. CONTE. Would you please specify the ships and aircraft the Portuguese will receive under MAP in 1974?

Admiral PEET. We do not plan to provide any ships or aircraft to Portugal under MAP in 1974.

Mr. CONTE. What is the source of the $4.4 million increase in the third country assistance to Portugal in fiscal year 1974?

Admiral PEET. Third country assistance to Portugal consists of equipment sold by Spain (——— Navy Corvettes) and by France ——— helicopters) together with minor items to be provided over a 5-year period. It is estimated that procurement of these items will cost the Portuguese Government about ——— in fiscal year 1974. This assistance is separate from the ——— million listed in the fiscal year 1972 column on page 44 of the CPD.

SPAIN

Mr. CONTE. Are negotiations underway to negotiate a continuation of our use of the military bases and facilities in Spain? Will these be concluded by executive agreement again?

Admiral PEET. The 1970 United States-Spanish Friendship and Cooperation Agreement does not expire until September 1975. We do not expect to commence negotiations for extension or renewal for some months yet. Nevertheless, we are undertaking preliminary studies concerning our need for facilities on Spanish bases in the future and Spain's former foreign minister, Lopez Bravo, discussed the future of the agreement during his April meetings with the Secretaries Richardson and Rogers here in Washington. As you probably

know, there has been a recent change of government officials in Spain and we have not, as yet, had any indication of their views on the timing of negotiations.

Mr. CONTE. Would you please detail the aircraft to be provided to Spain under MAP in 1974?

Admiral PEET. We do not plan to provide any aircraft to Spain under MAP in 1974.

Mr. CONTE. What training will be provided to the Spanish military in the United States during 1974?

Admiral PEET. We plan to provide training in repair and maintenance of communications and electronics equipment; helicopter and aircraft repair and maintenance; helicopter and aircraft maintenance test pilot training; radar and Hawk missile maintenance; and a variety of naval afloat training.

Mr. CONTE. In your general comments on Europe, you noted that European military procurement tends to be cyclical. Do you have any projections as to when the next upward cycle will be? Do you have an estimate as to its magnitude?

Admiral PEET. We do not project our estimates of total sales, both FMS cash and credit beyond 1 year in the future. We have found that sales projections beyond 1 years are totally unrealistic because the data upon which such estimates are based, data such as future approved foreign defense budgets, continuance of current production lines, third country competition with U.S. products, et cetera, are highly unreliable.

ETHIOPIA

Mr. CONTE. What is the status of our communications station at Kagnew Station in Ethiopia? Do we have a lease? What are we committed to under the lease?

Admiral PEET. ———. Planned reductions and the transfer of management responsibility from Army to Navy are expected to reduce the total complement to about 600 DOD personnel in fiscal year 1974. We have a 1953 base agreement with Ethiopia that runs to May 1978, although leases signed under that agreement may be terminated upon 1 year's notice.

MOROCCO

Mr. CONTE. Your estimates of the third country assistance to Moroco indicate a substantial upsurge. What is the source of this aid? Is this aid being used to purchase aircraft? If so which type?

Admiral PEET. The ——— indicated for third country assistance is for ——— transport aircraft and small arms and ammunition. The bulk of this material was provided by France with the remainder furnished by the United Kingdom.

ZAIRE

Mr. CONTE. The third country assistance for Zaire shows a marked increase in fiscal year 1972 and 1973. What is the source of this aid? What is this aid being used for?

Admiral PEET. During December 1969, Zaire negotiated the purchase of ——— armored cars from France at a cost including spare parts of ———. In March of 1970, a contract was completed also with France for ——— helicopters. The cost of the spare parts was ———

plus an additional ——— for 20 millimeter cannons for ——— of the helicopters. ——— were delivered in 1971. Announcements in May 1971 indicate that an additional ——— helicopters were ordered. Beyond the fact that ——— helicopters were delivered, no additional details are known.

LATIN AMERICAN TRAINING PROGRAM

Mr. CONTE. You state that, in part, the Latin American training program is directed to promote U.S. influence and doctrine. Would you please explain what you mean by that statement.

Admiral PEET. As I indicated in a previous question, on the subject when one discusses military relations it is significant to note that the Latin American military and their U.S. counterparts have worked successfully together on matters of mutual security for many years. This professional relationship has created avenues for communication and a degree of mutual understanding which we consider to be a continuing, positive factor in our overall relations with the countires of this region. With regard to doctrine, the needs of mutual security are best satisfied when the participating armed forces are agreed on matters of operating theory.

LATIN AMERICAN THIRD COUNTRY AID

Mr. CONTE. You indicate that the U.S. effort in the credit assistance area has reduced the tendency of the Latin Americans to purchase arms from third countries. How much will they be purchasing from third countries in the coming year?

Admiral PEET. We are not able to predict how much the Latin American countries will spend on arms purchases from third countries in the coming year. We are able to predict, however, that if we do not have adequate credit to cover the items they desire to purchase from the United States, the Latin Americans will turn to third country sources that will provide the necessary credit.

Mr. CONTE. You also indicate that you expect a downward trend in the training and materiel programs in the coming years. Could you provide us with some hard estimates which are the basis for this trend? What is the reason for the downward trend if they are not purchasing as much from third countries?

Admiral PEET. Provision of military security assistance is predicted upon recognition by the recipient that responsibility for their defense is a matter on which they must make the basic decisions and be willing to devote a fair share of their own resources. We consider phasing down grant materiel assistance when it is consistent with our interests and with attainment of reasonable economic stability and growth which allows the recipient country to acquire the amount previously provided under grant with their own resources. Many countries in Latin America are approaching this plateau. This is not to say we are indiscriminately terminating grant materiel assistance and forcing them to go to third countries for their defense needs. It is a planned phasedown of the grant materiel program with appropriate transition to U.S. foreign military credit sales as necessary.

ARGENTINA

Mr. CONTE. You have a short term estimate for the ability of the Argentinian forces to contain insurgency. What about the long term?

Admiral PEET. ——— isolated acts of terrorism, such as kidnapings, political assassinations, and robberies, are virtually impossible to control. Although there has been a spate of such terrorist acts in Argentina recently, they do not yet represent a serious threat to the Government.

Mr. CONTE. What is Argentina's need for A–4 aircraft?

Admiral PEET. Argentina has programed the purchase of ——— additional A–4 aircraft to compensate for attrition within its present A–4 fleet. Seventy-four A–4's have been purchased over the past 5 years and this U.S. fighter remains one of Argentina's first line fighter aircraft. Despite the purchase of three aircraft and 14 Mirage fighters from France, overall effectiveness of the air force is hampered by obsolete equipment, particularly in the air defense and close air support areas. Argentina still must rely heavily on the F–86F, a Korean war vintage aircraft. The A–4's, relatively simple to operate and maintain, allow for continued phaseout of their older aircraft and may reduce the possibility that the air force will seek additional expensive supersonic aircraft.

BOLIVIA

Mr. CONTE. You indicate that the internal subversion of Bolivia is supported by external forces. What are these forces and what is the extent of the assistance they are rendering to the insurgents?

Admiral PEET. ———

ARGENTINA

Mr. CONTE. Why is it necessary for Argentina to develop an enhanced antisubmarine warfare capability?

Admiral PEET. Argentina, with its vital sealanes, feels constrained to protect them. It also keenly feels the requirement to maintain arms parity with its neighbors, that is: Chile and Brazil in the ongoing regional balance-of-power political arena. Pride and national self-esteem also play a part in Argentina's desire to obtain more modern equipment.

Mr. CONTE. You expect the third country assistance for Argentina to more than double over 1973. The figure is also more than nine times what it was in fiscal 1972. What is the reason for this massive increase and what is the source? What is Argentina using this money for?

Admiral PEET. The data you are discussing is our best estimates on delivery data. Therefore, Argentina's yearly expenditures may not show such a drastic percentage of increase. In any event, it does show the costs which Argentina considers as being required to satisfy their modernization program. Argentina is purchasing equipment from Canada, France, Federal Republic of Germany, Netherlands, and the United Kingdom. The equipment includes armored personnel carriers, tanks, helicopters, aircraft, air defense radar, ammunition, ships, and communications equipment.

Mr. CONTE. Are we getting into a competition situation with any other countries to see who can provide the most military aid to any of the Latin American countries? If so, which ones and how much aid are they giving?

Admiral PEET. In the context of your question, I assume when you are talking aid you are referring to foreign military sales for which

the country either pays cash or we extend credit which is repaid to the U.S. Government in full, plus interest. Our request for additional FMS credit is not to provide Latin American countries with more arms than any other supplier; it is only to have adequate authorizations and appropriations to respond to the Latin American countries' requests to the United States to purchase military equipment. Low authorizations and appropriations have precluded the United States from responding favorably in the past, which in part, resulted in the Latin American countries redirecting their purchase requests for equipment to European sources.

CHILE

Mr. CONTE. If President Allende has largely withstood pressure to accept Soviet military aid, why has the third-country assistance for Chile climbed from $20 million in 1972 to $128 million in 1974? What is the source of this aid? How much of it is from the Soviet Union?

Admiral PEET. ———. The increase in third-country sales activities is actually delivery data rather than purchases made during a fiscal year. Therefore, Chile's yearly purchases may not show such a drastic increase. The purchases have been made primarily from the United Kingdom and France. As yet, Chile has not purchased military equipment from the Soviet Union.

Mr. CONTE. What effect has the United States/Chilean military relationship had on the other political problems we have been having with that country, particularly the questions surrounding the nationalization of certain U.S.-owned industries?

Admiral PEET. ———.

COLOMBIA

Mr. CONTE. Do you expect that the arms we are proposing to provide to Colombia will enable their armed forces to do a better job of controlling the insurgency?

Admiral PEET. Yes. The helicopters and possible fighter aircraft will give the Colombians a greatly improve reaction capability. These purchases will allow troops and air support to be immediately directed against insurgents in isolated areas. ———.

Mr. CONTE. Would you describe the U.S. policy of evenhandedness between Colombia and Venezuela? What is the basis for the adoption of this policy?

Admiral PEET. The policy of "evenhandedness" means that military equipment of the same type and quantities will be offered to each country for purchase from the United States. The basis for this policy is to avoid any accusation that the United States is attempting to favor one country over another, particularly where there is a potential basis for confrontation over a border dispute.

DOMINICAN REPUBLIC

Mr. CONTE. Is there an expectation of increased outside assistance to the insurgency effort in the Dominican Republic in the time between now and the May 1974 election? Do you have contingency plans to deal with such an upsurge? If so, what is the plan and how much will it cost?

Admiral PEET. ———.

EL SALVADOR AND HONDURAS

Mr. CONTE. Why is there an effort to maintain parity aid with El Salvador and Honduras? Does this not foster the continuation of the flareups between these two countries and make the results of these flareups more destructive?

Admiral PEET. It is hoped that by applying an evenhanded policy with respect to military aid to El Salvador and Honduras, and maintaining strong influence with the government and military we have the best opportunity to assist in maintaining peace in Central America. Such a policy does not foster flareups between the two countries but rather has precluded such flareups and contributed to a military balance which has maintained relative peace since the 1969 dispute.

MEXICO

Mr. CONTE. You indicate that you expect to make credit sales to Mexico of an undetermined type of aircraft. What types of aircraft are under discussion? How many aircraft are involved here? What is the need for these aircraft?

Admiral PEET. We do not intend to make any credit sales to Mexico for aircraft and no credit funds have been requested for such sales.

PANAMA

Mr. CONTE. You indicate that there is a purpose of facilitating cooperation between the United States and the Panamanian National Guard to predispose the National Guard to repression of riots and insurgency. Where does the Panamanian Government come in here? Is this being done outside of diplomatic channels and government to government channels? Why?

Admiral PEET. There can really be no action taken or agreements made by the Panamanian National Guard without the express approval of Brigadier General Torrijos, Commander of the National Guard and "Supreme Chief" of the Panamanian Government. So, the efforts to bring about cooperation between U.S. forces and the Panamanian National Guard are well-known by the Government of Panama. On the U.S. side of the picture, all items of U.S. interest in the canal, to include suggested areas of mutual cooperation between U.S. forces and the Panamanian National Guard, are initially discussed by the Panama Review Committee (PRC) which is composed of the U.S. Ambassador to Panama, the USCINCSO, and the Governor of the Canal Zone. Once the PRC decides that a certain measure is a good idea, it is submitted to State for interagency approval prior to adoption.

PERU

Mr. CONTE. What is the justification for the need of giving A–4 aircraft to Peru?

Admiral PEET. The provision to Peru of A–4 aircraft, already proven as a viable and relatively uncomplicated fighter in Argentina, would aid in moderate force modernization and possible preclude the purchase of more expensive third-country aircraft (perhaps additional Mirages from France).

FISHING DISPUTES

Mr. CONTE. Would you please describe the status of the attempts to resolve the question of fishing rights and the like, which bring the restrictions of section 3(a) of the Foreign Military Sales Act into play?

Admiral PEET. A number of proposals have been made to end the dispute, without success. The most recent initiative dates from August 1969 when a Quadripartite (United States, Ecuador, Peru, and Chile) Fisheries Conference convened. Chile is not directly involved in the present dispute, although associated with it through the Declaration of Santiago of 1952. ———. Chile, Ecuador, and Peru have rejected international arbitration or referral of the dispute to the ICS.

COMMITTEE APPRECIATION

Mr. PASSMAN. Admiral Peet, Dr. Tarr, Mr. von Marbod, and Mr. Forman, it has been my privilege to serve on the Committee on Appropriations for 25 years of 27 years in the Congress, and on this particular subcommittee 21 years and the privilege of chairing the committee for 19 years, and I cannot recall during my long tenure on this committee when we had witnesses any more responsive, and who had done their homework any better than all you gentlemen. Very few questions have gone unanswered. You had the answers, and I am sure you have impressed all members of this committee.

I want to assure you that this committee will be responsible, considering the limitations of our cash intake. As far as I know, this will conclude the hearings on the military assistance part of the bill until the Secretary of Defense can be heard.

KEEP PROGRAM TIGHT

I think we should, however, bring to your attention that we are going to have to borrow this money. It is certainly not coming out of current revenue, because I think we have all agreed that our own departments and our own defense come ahead of foreign aid.

You do buy that, don't you? If you have a deficit, you have to charge that to foreign aid.

There are $80 billion floating around the world for which we have no reserves to redeem them. Is that not right?

Mr. TARR. Yes, sir, Mr. Chairman.

Mr. PASSMAN. Please try to keep the program as tight as you can. I realize what you are up against, and for the first time, I say I realize better than ever before that we just cannot discount Russia. While they are trying to build up their presence in these countries, I guess it is necessary for us to be there. Until some time that we can work out some agreement where people are going to think in terms of freedom and not war, some military expenditures will be necessary.

Thank you again, gentlemen.

Admiral PEET. Thank you very much, Mr. Chairman.

Mr. PASSMAN. The committee is adjourned.

MONDAY, JULY 23, 1973.

SECRETARY OF DEFENSE

WITNESSES

HON. JAMES R. SCHLESINGER, SECRETARY OF DEFENSE
ADM. THOMAS H. MOORER, U.S. NAVY, CHAIRMAN OF THE JOINT CHIEFS OF STAFF
JOHN O. MARSH, JR., ASSISTANT SECRETARY OF DEFENSE (LEGISLATIVE AFFAIRS)
VICE ADM. RAY PEET, U.S. NAVY, DEPUTY ASSISTANT SECRETARY OF DEFENSE (INTERNATIONAL SECURITY AFFAIRS) FOR SECURITY ASSISTANCE AND DIRECTOR, DEFENSE SECURITY ASSISTANCE AGENCY
COL. ROBERT M. LUCY, U.S. MARINE CORPS, LEGAL ADVISER AND LEGISLATIVE ASSISTANT TO THE CHAIRMAN, JOINT CHIEFS OF STAFF
BENJAMIN FORMAN, ASSISTANT GENERAL COUNSEL FOR INTERNATIONAL AFFAIRS, DEPARTMENT OF DEFENSE
ERICH F. VON MARBOD, COMPTROLLER, DEFENSE SECURITY ASSISTANCE AGENCY
DONALD S. FLOYD, SPECIAL ASSISTANT FOR CONGRESSIONAL RELATIONS, OFFICE OF THE ASSISTANT SECRETARY OF DEFENSE FOR INTERNATIONAL SECURITY AFFAIRS

Mr. PASSMAN. The committee will come to order.

We shall continue this afternoon our examination of the request for foreign assistance. This afternoon we will consider the request for funds for military assistance, as well as military credit sales. We have before us as witnesses the Honorable James R. Schlesinger, Secretary of Defense, and Admiral Moorer, Chairman of the Joint Chiefs of Staff; also the Honorable John O. Marsh, Assistant Secretary of Defense for Legislative Affairs, and Vice Adm. Ray Peet, Director, Defense Security Assistance Agency, who appeared before the committee earlier; Col. Robert M. Lucy, Mr. Benjamin Forman, Mr. Erich F. von Marbod, and Mr. Donald S. Floyd, supporting witnesses.

Mr. Secretary, Admiral Moorer, Admiral Peet, we are very happy to have you here before the committee. I would assume that you have a statement that you would like to make before the committee, Mr. Secretary and Admiral Moorer.

STATEMENT OF THE SECRETARY OF DEFENSE

Secretary SCHLESINGER. Yes, sir.

Mr. Chairman and members of the committee, I am pleased to have this opportunity so early in my tenure as Secretary of Defense to appear before you and outline my views on the U.S. security assistance program.

Adm. Thomas H. Moorer, Chairman of the Joint Chiefs of Staff will follow me with his military assessment of the program. Vice Adm. Ray Peet, who serves as both the Deputy Assistant Secretary of Defense (International Security Affairs) for Security Assistance

and Director of the Defense Security Assistance Agency, has already discussed the content and management of the military assistance and foreign military sales programs. Unless requested, I do not propose to repeat any of the information he has provided.

Over the past several years, I have watched with great interest the heated debates on the Hill and in the press over the size, relevance, and overall importance of the security assistance program to our foreign and national security policies. The critics of the program have argued that since the world's economy is growing stronger, and since we have been able to negotiate certain arms control agreements, we have arrived at the era of détente and there is no longer a need for security assistance programs. As a result, the argument over security assistance has tended to dissolve into sterile debates over issues such as whether the cold war is truly over or whether our allies are getting a free ride at the expense of the economic health and well-being of the United States.

I am concerned at this trend of events because I am convinced that a viable U.S. security assistance program is an inseparable element of the national security program of the United States. I believe both programs are necessary to realize the fundamental principles of the Nixon doctrine.

The first is partnership with friendly nations in which the obligations as well as the benefits of peace are appropriately shared.

The second is a sufficiency of overall military strength, both United States and allied, in relation to that of others.

The third is a willingness, in company with our friends, to negotiate in order to seek solutions to the underlying causes that lead to conflict.

As the world has grown economically stronger and more diverse, the nature of the requirement for security assistance has changed. Europe, the recipient of an overwhelming portion of our military aid in the early 1950's, ceased to require U.S. military assistance more than a decade ago. Only small residual programs related to base rights remain. Japan has paid for all her military forces for many years. Grant aid to Latin America is a fraction of what it was in the 1950's. And, as their economies have strengthened, a growing list of countries have made the transition from grant military assistance to foreign military sales credits. They include, in addition to the European countries and Japan: Brazil, the Republic of China on Taiwan, Greece, Saudi Arabia, Malaysia, Argentina, Lebanon, Morocco, Zaire, and Colombia. By any standard, this is an impressive record of success for the security assistance program and a record of responsible change in accordance with actual conditions and situations. Continuing program adjustment has permitted the concentration of the resources we now request from Congress in a few high priority countries for maximum impact. Given reasonable levels of appropriations in the short term, we fully expect that most of the few remaining recipients of our grant aid will be able to move to a credit basis within the foreseeable future. Indeed, achieving that goal has become one of the major objectives of the security assistance program.

Thus, I agree with those who believe grant aid should be phased down, and if possible phased out, as rapidly as possible consistent with U.S. foreign policy objectives. This, however, must be done rationally and not arbitrarily and precipitously if we are to preserve and

strengthen the excellent international security arrangements that now exist. I believe that this is what we are doing and that the programs we are proposing reflect our efforts in this direction.

My intent is to outline for you the realistic goals and objectives I believe the administration's security assistance program can achieve. The review of the program which I have conducted since assuming office has reinforced my conviction that the levels of appropriation requested by the administration are appropriate.

The level of funding for these programs was decided by the President after considering most carefully the needs and priorities in relation to all other programs of the U.S. Government. These decisions culminated a planning and programing process that commenced more than a year and a half ago and which involved accumulation and analysis of data in several stages by our MAAGS and ambssdors in the foreign countries concerned, by our unified commanders, by the Joint Chiefs of Staff, and by numerous offices in the Departments of Defense and State. In addition, significant issues were addressed by other interested agencies of the executive branch such as the Office of Management and Budget, the National Security Council staff, and the Department of the Treasury. In brief, the programs proposed are the result of thousands of hours of data collection, analysis, and consultation during which a large number of foreign policy, economic, and military considerations were coordinated in order that we might propose programs that best serve a variety of U.S. interests.

Before I review the case for security assistance for you, let me begin by telling you what I think the program by itself cannot do:

It cannot substitute for strong U.S. defense forces to maintain fundamental U.S. security and protect our position in the world.

It cannot guarantee the success of our efforts to negotiate a more stable structure of international peace.

It cannot be directed to "buying" the support of our friends and allies for U.S. views and leadership, even on security issues. And,

It cannot guarantee or require that our friends and allies will maintain the purest of democratic governments in their respective countries.

It is important to keep this list of things the program cannot do in mind, because exaggerations of the program's expectations have been one of the main sources of disillusionment with its performance. Similarly, to judge the whole by examination of a single piece can be very dangerous. This program is the product of a long legislative and executive history, a history of success. Criticism may be easy if focus is on an isolated incident. But if we look at it in broad perspective, as we should, I believe we must conclude that security assistance is essential to overall U.S. interests and objectives.

Many of the misconceptions about what realistically to expect from security assistance derive from the remarkable continuity of this program since the late 1940's. While we have continued to propose, review, and fund military assistance in much the same manner each year, the place of U.S. security assistance in the world has changed dramatically in the past 25 years. In the late 1940's and early 1950's when security assistance had just begun, we were furnishing aid to a war-ravaged Europe and Asia seriously threatened with Communist takeover and a largely undeveloped Latin America in a world where the only strong economy and defensive capability was vested in the United States. In

1950, our friends and allies could neither afford to pay for their own military capability, nor could they look to alternative suppliers of military equipment—none existed in the non-Communist world. In that environment it is not surprising that the world's gratitude for our help was so great, or that the relative contribution of a dollar of security assistance to allied and collective security was so substantial.

Given this changed world environment, however, what rationale is there for even the limited security assistance program we are proposing? Today, there are two sets of complementary reasons for a continuing security assistance effort, one political and the other military. Politically, U.S. security assistance contributes in a major way to the maintenance of regional stability in three key areas: Northeast Asia, Southeast Asia, and the Middle East. It is also the fundamental mechanism for implementing the Nixon doctrine so that our allies can, over time, become truly self-reliant. And self-reliance not only enhances stability but decreases the probability of U.S. involvement in contingencies.

Militarily, the security assistance program makes a vital contribution to overall U.S. national security goals.

It contributes to the selective strengthening of the self-defense capability of certain key allies whose security is threatened; in some cases—for example, South Korea—this has reduced the requirement for U.S. forces, both in total numbers and numbers deployed oversas.

It secures for us continuing access to key bases and facilities around the world, bases which are important to the United States as well as allied security.

It fosters good military relations with our friends and allies and assures they acquire compatible military equipment.

As I have already said, our military security assistance programs are now concentrated in a few important countries. The bulk of the grant military assistance program goes to five countries, and almost half of the requested credit program authorization is for Israel. The Chairman of the Joint Chiefs of Staff will provide you with a military assessment of the need for these programs, but I wish to review for you the requirement, as I see it, for continuation of these programs in fiscal year 1974 at the levels the administration has proposed.

Korea.—The United States agreed with the Government of the Republic of Korea in 1970 to help modernize the Korean Armed Forces over a 5-year period. The $1.5 billion modernization program was designed to bring equipment in the Korean Armed Forces up to the standard of the North Korean Forces without endangering the continued rapid growth of the South Korean economy. Shortly South Korea should be in a position to finance most, if not all, of her defense needs. The Congress provided sufficient funds so that the program proceeded as planned in the first year; however, serious shortfalls in congressional funding the past 2 years have caused us to fall substantially behind in this important program. In order to make the necessary progress toward completing the program, we need appropriations in the amount requested—$239 million.

From a political point of view, Korea is one of the crucial areas of the world for the maintenance of peace. Stability in a military sense is tied to the maintenance of strong ROK defense forces, and it can be eroded if ROK confidence in U.S. support is threatened at this time.

Repeated failure of the United States to fulfill the funding objectives of the modernization plan could raise serious Korean doubts, on both sides of the demilitarized zone, about the long-term reliability of the U.S. commitment. Because any new conflict in Korea would immediately impinge on all four of Asia's major powers—the United States, the U.S.S.R., the People's Republic of China, and Japan—we have a large stake in the continued peace and stability of the peninsula. Our programs have helped to give South Korea the strength and confidence to deal with their own security problems, including a willingness to enter into negotiations with North Korea. For these reasons, we must not now undermine our own security interests in northeast Asia by underfunding of the Korean modernization plan.

Cambodia.—Our security assistance program for Cambodia is in a different category from other programs because this is the only grant military assistance program for a country actively engaged in hostilities to defend itself against aggression. By any peacetime standard, the $167 million requested for Cambodia would be out of proportion to the size and relative importance of the country. So long as there is no cease-fire in Cambodia, however, war-related consumables—primarily ammunition—will keep our MAP expenditures high. At present we are actively engaged in seeking a peaceful end of the hostilities in Cambodia to reinforce and strengthen the cease-fire agreements in Vietnam and Laos. Now that the Vietnam agreement has been strengthened through the four power communique of June 13, we are hopeful that a cease-fire in Cambodia can be arranged. If this should occur in the near future, actual U.S. military assistance expenditures in Cambodia in fiscal year 1974 might be considerably lower than programed. If adequate funds are not available, we might see not only the collapse of the Cambodian Government, but the rapid erosion of the Vietnam and Laos agreements—in short a collapse of the whole structure of peace in Indochina that the President has so painstakenly put together through years of negotiation. I understand and respect the views of the majority of the Congress on further U.S. involvement in the Indochina hostilities, and believe that this body would wish to see a promising conclusion to that tragic war. It is crucial to the success of our current efforts that the military assistance program in Cambodia be sustained. This is particularly true in view of the impending cessation of our combat involvement.

Thailand.—Last year Thailand returned to regular military assistance program funding after 5 years under military services funding. However, because that program had to be administered under continuing resolution authority last year, only $36 million could be made available for Thailand. This represented a substantial and dramatic cut from the previous funding level and was a serious shock to the Thai Government. Because of the importance of the extensive military facilities Thailand makes available to us in connection with the Indochina situation, maintaining a strong Thai military capability to deal with local and regional security threats is important to the United States. We are, therefore, seeking $55 million for grant military assistance and $15 million in credits for Thailand in fiscal year 1974. Assistance at this level should assure Thailand's ability to play a stabilizing role in the emergency equilibrium in Southeast Asia.

Turkey—U.S. security assistance to Turkey is now beginning to take on a different character as Turkey is relying less on grants and making greater use of credit sales. Nearly 50 percent of the program we propose for Turkey for fiscal year 1974 will be credit for foreign military sales. Turkey continues to play a vital role in the security of Europe as the eastern Mediterranean anchor of NATO's southern flank. Collective security considerations warrant continued grant assistance to Turkey while she strengthens her economy to the point where credit alone becomes a viable alternative. A continuing program at the levels recommended not only supports a staunch ally but is otherwise in the U.S. interest.

Jordan.—A stable Jordanian Government with a moderate outlook is essential to a just and existing resolution to the Arab-Israeli confrontation. Jordan is the only direct Arab protagonist in the dispute which has retained full diplomatic relations with the United States. Moreover, if the present Jordanian Government were to fall, the likely result would be a marked military and political shift in the area having a serious adverse effect on U.S. Middle East policy and U.S. endeavors toward a Middle East peace settlement.

Having weathered its most severe crisis in September 1970, Jordan continues to face serious challenges from the radical Arab States and the potential resurgence of Palestinian guerrilla activity. The Jordanian Armed Forces remain a well-trained, highly disciplined, and effective fighting force. They require arms and equipment to retain their effectiveness and self-reliance. The general economic disruption resulting from the September fighting has simply not permitted Jordan to purchase its requirements, and continued map grant aid is essential to help Jordan cope with the problem. The Jordanian program proposed for fiscal year 1974 is a key element in maintaining stability in the Middle East.

Israel.—Israel's economy is stronger than it has been in the past and her balance-of-payments situation has improved, but the risks of war are still present. This year's recommended credit program of $300 million sales reflects the continuing need for the United States to assist in the maintaining a military balance in the Middle East. This balance is essential to stability in the area while the search for a settlement continues.

On a worldwide basis, the foreign military sales credit program has assumed major importance as a key element of the military security assistance program. This program is the best instrument available for assisting allied and friendly nations to transition from the grant military assistance program to the full economic self-sufficiency which will enable them to purchase their defense requirements for cash. The Congress can help us in diminishing the need for grant aid by providing the FMS credit authorities and funding we are seeking. Not only does the program offer less developed allied and friendly nations a direct source of financing to be used to improve their defense capabilities and thus do more for themselves, but it does so on the basis of our national self-interest. Finally, it should be noted that these appropriated foreign military sales credit funds will be repaid to the U.S. Treasury in dollars, in full and with interest, at rates established by the U.S. Treasury Department.

Before any major military sale is made or credit is extended under the provisions of the Foreign Military Sales Act, the proposed sale or

credit receives a comprehensive analysis to insure that it will be consistent with our foreign and national security policy interests. U.S. economic considerations do not serve as the basis for the determination whether or not to extend credit for military sales. Economic benefits from military sales credit are, however, important and measurable in terms of favorable impact on the national economy and on our balance-of-payments problem. Furthermore, they set the stage for cash sales.

It has been conservatively estimated that 100 jobs in U.S. industry are sustained for each $1 million in foreign military sales which are financed by the credit appropriations we are requesting.

The bulk of the credit funds requested will be made available to the near Eastern countries. Latin America will be the second largest regional recipient of credit assistance. It is clear that Latin American countries feel compelled to modernize their military forces. They prefer U.S. manufactured equipment, but they have clearly established a pattern of acquiring equipment from other foreign sources if they cannot obtain the equipment they want from the United States.

The major worldwide third country suppliers of arms are France and the U.S.S.R. As a matter of interest, these countries conduct their military sales primarily for economic and political reasons. They have few, if any restrictions or ceilings to meet. The U.S.S.R. not only negotiates unit value but offers credit financing for military sales on about the same terms as those on which it extends credit for economic assistance—20–25 years at about 2-percent interest. In some cases, the U.S.S.R. utilizes barter arrangements as means of loan repayment.

Parenthetically, I might add at this point that there are indications that the Soviet Union exported more supersonic aircraft and surface-to-air missiles during the period 1967–71 than all other world suppliers combined.

We do not contend that we should offer credit to selected Latin American countries, or any other country, on the same terms and for the same reasons as do the U.S.S.R. and France. The United States should, however, offer credit assistance to selected Latin American countries in support of their modernization efforts, which are not overly ambitious—on the whole, less than 2½ percent of their GNP is spent for defense. By so doing, we can preempt the development of major third power military influence in Latin America in order to serve our own national interests in the region.

Mr. Chairman, we seek this committee's favorable consideration of appropriations for the fiscal year 1974 grant military assistance and foreign military sales credit programs reflected in this year's department of defense congressional presentation document. Inadequate funding of the security assistance program such as that for fiscal years 1972 and 1973 precludes effective implementation of the "Nixon doctrine." I therefore urge your continued interest and support for the essential programs we have discussed today.

STATEMENT OF THE CHAIRMAN OF THE JOINT CHIEFS OF STAFF

Admiral MOORER. Mr. Chairman and members of the committee: I am pleased that you have again afforded me the opportunity to present a military assessment of the 1974 security assistance program. This presentation should be considered a continuation of the Military

Posture Statement which I delivered to the Armed Service Committees and Defense Appropriations Subcommittees earlier this year. The conclusions reached in that statement must be considered essential prolog to this appraisal. The following military realities are of particular importance:

The ABM Treaty and the Interim Agreement on Strategic Offensive Arms reflect the relative strategic parity that now exists between the United States and the Soviet Union.

The Soviet quantitative strategic superiority in the number of missile launchers, megatonnage, and throw weight is compensated for by U.S. quantitative superiority in numbers of warheads and our overall qualitative strategic superiority. It should be noted, however, that the Soviet Union is steadily narrowing our technological lead and has the potential to overtake our quantitative lead in numbers of warheads.

The fundamental change in the overall strategic balance, reflected above, places greater emphasis on general purpose forces, while at the same time, political, fiscal, and manpower realities have prescribed smaller U.S. general purpose forces.

Our potential adversaries continue to improve their large general purpose forces, particularly with regard to modernization of weapons and equipment.

It is against this background that we must consider the role played by our allies and examine the impact of the security assistance program. A judicious and viable security assistance program supports our efforts to maintain a deterrent against aggression. Our increasing general purpose forces require that we place much greater reliance upon our allies in the common defense. As the President has said:

> Unless we in America work to preserve the peace, there will be no peace. Unless we in America work to preserve freedom, there will be no freedom * * * we shall do our share in defending peace and freedom in the world, but we shall expect others to do their share.

U.S. OBJECTIVES—I

Security assistance seeks to support U.S. security objectives in several ways. First, by enhancing effective self-defense capabilities throughout the free world and when combined with diplomatic and other actions by encouraging regional cooperation between the United States and its allies. This objective is exemplified by our assistance to Turkey, Greece, and Korea.

a. *Turkey.*—Turkey's strategic importance is based upon her geography, her determination to maintain independence and sovereignty against historic pressure from the Soviet Union, and the competent and dedicated nature of her armed forces. The constant presence of strong Soviet naval power in the Mediterranean underscores the strategic importance of Turkey to NATO, to CENTO, and to the United States. Our aid to Turkey is designed to assist Turkey in maintaining her NATO forces, including the necessary mobilization base, to facilitate Turkey's growing self-reliance in providing for her own defense needs and to improve the country's capability to provide logistics support for Turkish and allied forces.

Turkey's ground forces need increased mobility and firepower. Its navy is handicapped by ship obsolescence and its air force urgently requires replacement for its older fighter aircraft. The magnitude of

current and prospective defense requirements far exceeds that which the Turkish economy can reasonably be expected to support. Grant aid in the amount of $85.5 million is proposed for Turkey in fiscal year 1974 and is required to provide armored personnel carriers, tactical communications, tank and antitank weapons, and war-reserve munitions. In the absence of this program, Turkey's ability to perform her essential role of protecting the southeastern flank of NATO would be seriously degraded with an increase in the risks to essential U.S. interests. In this regard, Mr. Chairman, I attended a NATO meeting held in Turkey during May of this year and would like to reaffirm the importance of our security assistance program to Turkey and the importance of Turkey to the defense of the free world. I would be glad to comment on this further, if you desire, during the question period.

b. *Greece.*—Greece is located in a central position with regard to the strategic areas of the Turkish Straits, the Suez Canal, and the Hellenic Thrace. The Government of Greece announced its decision to terminate grant aid, effective January 1, 1973. Sixty-five million dollars in FMS credit is required to permit Greece to complete the financing of its purchase of aircraft for the F–4E squadrons and other high-priority equipment required for force modernization. This example of increased self-sufficiency on the part of a former grant aid recipient belies the allegation that this program is a static holdover from the post-World War II era.

c. *Korea.*—The strategic importance of the Republic of Korea stems not only from its proximity to the Peoples Republic of China, Soviet Union, and Japan, but also from the nature of its military forces and facilities. These facilities and forces are key elements in the U.S. forward defense strategy in Northeast Asia. In unfriendly hands, the Republic of Korea would pose a major threat to U.S. security interests by serving as a platform for aggression against the Japanese homeland and other islands to the south. The Korean people have determinedly resisted continued Communist aggression and have remained a staunch and loyal ally. In order to assist in maintaining the Republic of Korea as an independent nation, the United States initiated in fiscal year 1971 a Korean force modernization plan. The reduced level of funding for MAP in fiscal year 1972 degraded this plan by some $85 million and prohibited reaching our planned objectives. Similarly, reduced funding in 1973 severely constrained the overall program. The objectives established by the 5-year plan remain valid and implementation is essential to the maintenance of a credible deterrent posture in the Republic of Korea. The program for fiscal year 1974 includes $238.8 million in grant assistance and $25 million for FMS. Any significant reduction in grant aid would seriously jeopardize the modernization plan. The Republic of Korea has based its defense plans on the accomplishment of the 5-year modernization plan and regards the U.S. contribution to this program as an indicator of our commitment to treaty obligations. We should not abandon our interests in this area.

II

Second, our security assistance program supports our security objectives by enabling U.S. allies and friends to maintain internal security and counter aggression individually or with regional assistance

without direct engagement of U.S. forces. It is essential that our friends and allies maintain the capability to resist internal subversion and to maintain the peace in the face of local rivalries. They must be strong enough to cope with such strife without our involvement. If we are to honor our treaty commitments, and we must, it is essential that our allies create an ability to deter subtheater localized aggression to a greater extent than in the past. The Philippines, Thailand, and Cambodia are examples of countries in which we are striving toward this objective.

a. *Philippines.*—Our ties with the Philippines are bound in history and formalized under SEATO and our bilateral mutual defense treaties. Economic growth of the Philippines, since its independence from the United States was granted in 1946, has been slow and is still insufficient to permit the country to meet its full military requirements. This is particularly true in the face of the current insurgency. The people of the Philippines require assistance to modernize their armed forces and their constabulary.

The security assistance material program amounting to $19.3 million and the $3 million FMS credit are designed to provide mobility, firepower, and communications—the three basic elements required to combat insurgency forces. We are providing helicopters and transport aircraft, machine guns, recoilless rifles, and other weapons, together with long-range communications equipment. In order to assist the Government of the Philippines in improving their antismuggling capability and logistics support, we are also providing naval patrol and mobility aircraft. Through our longstanding association with the Philippines, to include the security assistance program, the United States has had unimpeded use of bases such as Clark Air Base and the naval base at Subic.

b. *Thailand.*—Politically, Thailand has a leading position among Southeast Asian nations. It is a major rice producing and exporting country. Its armed forces and geography contribute greatly to the growing stability in that unhappy part of the world and to SEATO. The Thai Government has permitted us to maintain on her soil bases for the military forces necessary to support the U.S. interests in Indochina. The internal stability and security of Thailand have been threatened by a Communist inspired and supported insurgency. Countering this insurgency is the responsibility of the Thai Government, but they cannot fully discharge this responsibility without technical and material support from the United States. Our assistance program is designed to assist in the training and development of the Thai armed forces so that they can maintain internal security and stability and be able to conduct effective military operations, in conjunction with allies, in the event of a major external aggression. We are requesting about $60 million in grant aid so that the Thais may modernize their armed forces and increase the level of operations against the insurgents. We will provide aircraft, vehicles, weapons, ammunition, and communications equipment. We, of course, anticipate reducing our grant aid as the Thai capability to counter the insurgency is achieved. The Thais will then assume more of the operating costs now made by grant aid and will acquire equipment through cost-shared procedures and FMS. An independent and friendly Thailand serves as a stabilizing

influence in the entire Southeast Asia area. Our assistance is necessary to preserve this influence.

c. *Cambodia.*—Unfortunately, in spite of numerous efforts to establish a cease-fire in Cambodia, continuing hostilities require that substantial grant assistance be provided the Government of Khmer Republic, so that it may establish and maintain forces capable of sustaining its independence. A major obstacle in this endeavor has been the fragmented organization of the insurgents, which has resulted in the absence of a single person in authority with whom to negotiate. The Democratic Republic of Vietnam does not appear to be inclined either to negotiate an end to the fighting itself or to pressure other insurgent groups to negotiate. Currently, there are at least 70–75,000 troops located in Cambodia opposing the government of the Khmer Republic, approximately one-third of which are Vietnamese. The U.S. assistance programs are designed to help develop light infantry with limited artillery and air support. The $167.2 million program for Cambodia is intended to provide her with the wherewithal to resist aggression on the ground. Of course, Khmer requirements for external assistance are directly related to the prospects of a Cambodian peace settlement. The Khmer Republic, while maintaining a neutral political stance and continuing diplomatic relations with the Soviet Union, East Germany, Poland, Bulgaria, and Czechoslovakia, has determined to resist the North Vietnamese invasion and maintain the Khmer nation as an independent country in Southeast Asia. Our current security assistance program has now become even more essential to this effort with the establishment of a legislative deadline for ceasing U.S. combat air operations in Cambodia.

III

Third, providing all or part of the quid pro quo essential for rights, authorizations, and facilities arrangements. We have global interests which are vital to our continued economic and political survival. Our forward defense strategy is designed to protect these interests, and advance basing helps insure the result.

Spain.—The U.S. military assistance being provided to Spain, is a part of the compensation called for by the 1970 Agreement of Friendship and Cooperation. Spain is of strategic importance because it dominates the western approaches to the Mediterranean and provides major air and naval facilities. The agreement enables us to maintain these important facilities until 1975. The $3 million grant aid contained in the fiscal year 1974 request will provide for Spanish force modernization and contribute to closer Spanish associations with Western security interests.

IV

Finally, fostering favorable attitudes toward the United States and its policy and encouraging recipients to pursue military objectives compatible with U.S. military strategy.

Latin America.—Latin America represents an excellent example of this objective. We have had continuing interests, as well as long standing friendly relations, with most of the nations of Latin America.

The objective of security assistance in this area is to insure the continuance of our traditional effective ties with the armed forces of the region. We believe that our minimum levels of military assistance help to prevent the establishment of a military power base hostile to the United States in this hemisphere.

TOTAL FORCE CONCEPT

Mr. Schlesinger has already alluded to the total force concept. I would like, however, to add a word of my own. The total force concept is implemented by capitalizing on the potential of our available resources and assets, to include the military forces of our allies. It follows, of course, that reliance upon our allies requires that their forces be manned, trained, equipped, and combat ready. Otherwise, such reliance would detract from our own security. I cannot stress too strongly that the alternative, as unpalatable as this may be today, is larger U.S. general purpose forces. The total force concept will acquire purpose and credibility only if we assist those nations with whom we have mutual security interests. An inadequate security assistance program could, therefore, jeopardize our existing commitments, both in a regional and a bilateral sense, and thereby increase the risks to our own vital interests.

FOREIGN MILITARY SALES

The foreign military sales position of the security assistance program yields certain indirect military and economic benefits which impact favorably on U.S. security interests and deserve some examination. The volume of U.S. foreign military, Government-to-Government, and commercial sales equaled $1.4 billion in 1970, $2.6 billion in 1971, and $4 billion in 1972. Projected figures for 1973 and 1974 are $4.5 and $5.4 billion, respectively. These sales have had a significant favorable impact on our balance-of-payments problem and produce major benefits in terms of maintaining U.S. defense production lines and cost reductions associated with sharing the overhead for U.S. equipment.

I am not unaware of the criticism of any arms sales and the legitimate concern for channeling the scarce resources of developing countries into economic and domestic programs. But we cannot dictate to other nations. If a nation is convinced that its security is threatened and judges its arms requirements differently than we do, our ability to affect its decision is limited to our power to persuade. Our power to persuade is dependent upon the good will, the confidence, and trust we have developed with the military leaders, governments, and people of these countries. If we refuse to provide the military equipment these nations feel is necessary to their security, the choice they face is to forgo the material they consider essential to the continued development of their armed forces or to acquire it from either Western Europe, the U.S.S.R., or the PRC. Experience has demonstrated that the choice is an easy one. When we have been unable to sell U.S. military material or services, our friends and allies have turned to other sources. These sources often provide material far more sophisticated and far more expensive than otherwise available U.S. equipment. If we provide the material, our power to persuade is enhanced and our ultimate purpose—peaceful evolution and development—is served.

SECTION 514 AND MAAGS

No discussion of the security aspects of the Foreign Assistance Act would be complete without commenting upon the adverse effect of section 514 of the act and noting the role played by our MAAG's and missions.

a. *Section 514.*—We urgently request the repeal of section 514 of the Foreign Assistance Act, which requires a 10 percent payment to the United States for grant aid and excess defense articles, except under limited circumstances. I recognize that the intent of this provision was to insure budgetary discipline by the host country. My discussions with military leaders, however, clearly indicate that our friends and allies believe that such a requirement is not only a real reduction in resources available for national defense, but also officious intermeddling and insulting. In more than one nation, friendly relationships have been damaged by what the host country conceives of as our effort to couple the needs of the common defense with the desire to dictate how they should run their national economy.

b. *MAAG's and Missions.*—The role of military assistance advisory groups is broader in scope than the processing of military assistance program requests, training quotas, and sales agreements. The chief of the advisory group, under the general supervision of the Ambassador, serves as the Secretary of Defense's representative with the Ministry of National Defense and is a high-level adviser to the military establishment of the host government. He also serves as the essential link between the Commander in Chief of the U.S. Unified Command and the Joint Chiefs of Staff on one hand, and the host government on the other. In the past 10 years, advisory personnel man-years have dropped from 9,553 to 2,280. In accordance with section 512 of the Foreign Assistance Act, a reduction in assigned U.S. military personnel in excess of 15 percent has been made.

Many ongoing projects whereby military assistance functions are changing from the traditional unit advisory tasks to higher level management activity aimed to improving long-term country self-sufficiency would be jeopardized by any significant reduction now in MAAG strength beyond that already planned. Additional significant reductions now could force the advisory effort to deteriorate to an unacceptable degree. Also, most countries view continuing reductions in MAAG strength as another indication of lessening U.S. interest in support of their self-sufficiency—a signal we certainly do not wish to make at this time.

SUMMARY

In conclusion, grant aid and foreign military sales are integral parts of our national security program and must continue to be based on the actual and growing military capabilities of our potential adversaries. We must also continue to insure adequate protection for those global interests which are vital to our economic and political survival. The total force concept is an important element in this defense strategy. An effective security assistance program provides only those essential resources, otherwise unavailable, to assist our allies in sharing the defense of the free world. An inadequate security assistance program could jeopardize our existing treaty commitments and cast doubt on our continued presence in forward defense areas which are essential to our national security. Continued eroding of our security assistance

program will most likely result in increased requirements in U.S. force levels to meet our national security needs, with a resulting larger total national security expenditure.

The Nixon doctrine envisages our allies relying to a greater extent on the use of their own resources, particularly manpower, in the deterrence of aggression and the common defense. The security assistance program, through the provision of minimum essential material and training, serves to help our friends and allies to help themselves. This raises the threshhold of direct U.S. involvement, and it also yields certain military and economic advantages that impact favorably on U.S. security interests. Multiple advantages also accrue to the United States through the foreign military sales program. In the interest of peace and national security, I strongly urge that you support the proposed security assistance program for fiscal year 1974.

FISCAL YEAR 1974 MAP AND FMS ESTIMATES

Mr. PASSMAN. Thank you, Mr. Secretary and Admiral Moorer.

Mr. Chairman, we are so happy you could come by.

Mr. MAHON. I have no questions. I just wanted to stop by and extend a welcome to the Secretary.

Mr. PASSMAN. I just mentioned that under the policy on which we proceed each committee member is limited to 5 minutes the first time around, and because of the large subcommittee we pretty much have to abide by those rules. We want you to be as complete as possible but your answer should also be brief.

Before yielding, I would like to state for the record that your 1974 estimate for military assistance is $685 million, is that correct?

Secretary SCHLESINGER. Yes, sir.

Mr. PASSMAN. The foreign military credit sales request for fiscal 1974 is $525 million?

Secretary SCHLESINGER. Yes, sir.

Mr. PASSMAN. That is the new obligational authority?

Secretary SCHLESINGER. That is new obligational authority, I believe.

Admiral PEET. Yes, sir.

Mr. PASSMAN. At this time I would like to yield to Mr. Shriver.

ELIMINATING DOD "LUXURIES"

Mr. SHRIVER. Thank you, Mr. Chairman.

Mr. Secretary, I want to welcome you to these hearings and to wish you well as you assume your new responsibilities.

Secretary SCHLESINGER. Thank you, sir.

Mr. SHRIVER. Also, I want to welcome the other gentlemen with you and our former colleague, John Marsh.

In your July 3 remarks, Mr. Secretary, at the Pentagon, you told the personnel in your department they would have to accept adjustment and change and to do without what you described as "luxuries."

Will you expand on that? What you are referring to when you ask them to do without luxuries?

Secretary SCHLESINGER. I think I had primarily two things in mind. One is there has been an understandable tendency, with the relatively open budgets of the past, to associate some gold plating with the procurement of certain types of military hardware. Capabilities were

built in that were not really worth the cost, for example. I think that is what I had reference to primarily. In addition to that, there are some areas, such as the enlisted aides, in which we have been making an attempt to cut down and which have received a certain amount of attention. These are the types of service which were quite understandable in accordance with the past mores of the society but which seem to be less acceptable in today's society.

REBUILDING NORTH VIETNAM

Mr. SHRIVER. In March of this year, your predecessor, Mr. Richardson, said some funds for rebuilding North Vietnam could come from the Pentagon budget, although no funds were included for that in the 1974 request. Could this be done without congressional approval?

Secretary SCHLESINGER. No, sir.

Mr. SHRIVER. There are no funds anywhere in the 1974 budget for that?

Secretary SCHLESINGER. No, sir.

Mr. LONG. There are no funds for what?

Mr. SHRIVER. For rebuilding North Vietnam. I was interested in your observation on page 7 as to what military assistance cannot do. I agree with you that the expectations regarding this program have at times been exaggerated.

Secretary SCHLESINGER. That is right.

LONG-TERM EFFECTIVENESS OF AID

Mr. SHRIVER. Would you further comment on the long-term effectiveness of these expenditures in terms of U.S. strategic interests?

Admiral Moorer, you might want to add to whatever he may say in that regard.

Secretary SCHLESINGER. I think that military assistance contributes toward maintaining a collection of states which stand ready to resist the incursion of other states that are hostile to the United States of America. As we review military assistance, I think that we must keep in mind that there is fluidity in the politics of any recipient nation, but that the foundation on which military assistance rests is that the large majority of these states, when given relatively limited assistance by the United States, will hopefully, continue to be friendly toward the United States or, at a minimum, to resist the pressures from those states overtly hostile to the United States.

Because of this fluidity, I think that one must recognize that any particular recipient nation could slip over the edge because its politics were reversed, and in some sense, that money would have been wasted. So there is an element of risk here. When one is purchasing military hardware for the United States, one has a high degree of security that that hardware will be available to us in our defense policies. One has a greater risk associated with the recipient states.

Nonetheless, given the world in which we live, military assistance programs have a very substantial role to play. First, providing that margin of resources which are reinforced by a desire for self-help on the part of the recipient nation may permit it to withstand external pressures which we regard as contrary to our interests. Second, in a

number of cases we maintain friendly relations with a country through the provision of very limited amounts of financial assistance, and in some cases obtain our quid pro quo for base rights, or the equivalent.

Mr. SHRIVER. Do you want to comment further?

Admiral MOORER. I certainly concur in what the Secretary said, and would go on to say that from a purely military standpoint, there are some intangibles that flow from the military assistance program in terms of the ability to communicate, the standardization of weapons systems, the application to what we call the "total force concept," and so on, that could not be obtained if the weapons came from other sources. I think it has been fairly well proven, for instance, in Latin America, where we had restrictions, the countries simply turned to others for the assistance, and in the process we lost not only the rapport and cooperation I mentioned, but also from our own selfish point of view, we lost the impact on our economy.

Mr. SHRIVER. Where do they turn?

Admiral MOORER. In Latin America there have been cases where they bought ships from England and missile systems from Germany; frequently, all over the world. France has had a most active military sales program throughout the world.

Mr. SHRIVER. Thank you, gentlemen.

My 5 minutes are consumed, I will be back later.

Mr. PASSMAN. Thank you, Mr. Shriver.

Mr. Long?

LIMITING ARMS SALES TO LATIN AMERICA

Mr. LONG. Has any attempt been made, Mr. Secretary and Admiral Moorer, to work out agreements with France and Britain and other suppliers to cut down on the sales of arms to Latin America—that is, an arms nonproliferation treaty?

Secretary SCHLESINGER. I am not familiar, Mr. Long, with any such attempt.

Mr. LONG. We are helping them through NATO and defending them. Don't we have some leverage there to use so that they will stop selling all these arms and so that we won't have competition between "merchants of death"?

Secretary SCHLESINGER. Let me come back to that question after making one other observation. A difficulty with the attempt to preclude sources of supply abroad for Latin America is that there is always somebody, as you will remember well from your days as a fellow economist and professor, who remains outside the cartel. In this case, the Soviet Union remains outside of the cartel, and one of the problems in this area has been that the Soviet Union has been willing to provide arms where the West has refused to do so. As a consequence, that represents an entering wedge.

Mr. LONG. Do we not have some leverage over the Soviet Union to persuade them to agree to an arms nonproliferation treaty in view of our selling them grain and our assisting the development and modernization of their civilian industry, which they seem to want very desperately?

Secretary SCHLESINGER. That is an interesting point with regard to the attempt to work with the Soviets. To my knowledge there has not been any attempt as yet.

Mr. LONG. Our Government did not make any explorations along the line of controlling arms traffic when the Soviet Union came to us for grain?

Secretary SCHLESINGER. Not to my knowledge.

CAMBODIA BOMBING REPORTS

Mr. LONG. I am sure you are as disturbed as everyone by the falsification of reports of some of the bombing in Cambodia—the bombing that recently transpired.

Can you tell us whether you now have adequate safeguards to insure that no falsified reports on where our military assistance goes are prepared—so that Congress knows that the military assistance for which it appropriates money goes where it was intended to go?

Secretary SCHLESINGER. Let me say with regard to that, Mr. Long, that we all would repudiate falsification in any form. I think in this particular case that the charge has gotten out of proportion. Careful records were kept with regard to the bombing, and these records were available to all who had a need to know. There was a cover story, as we well know, because of the diplomatic problems associated with the bombing.

Mr. LONG. You mean some people in Congress were given the correct information?

Secretary SCHLESINGER. Yes, sir.

Mr. LONG. But the whole Armed Services Committee or Congress in general was not told about this?

Secretary SCHLESINGER. That, of course, is a decision of the chairman of whichever committee is informed. Each chairman decides how he wants to handle that material. I was really referring to the need to know within the executive branch.

Mr. LONG. Don't you think that all the Congress needs to know whether we are bombing in Cambodia without any announcement? In fact, when statements were made that we were not?

Secretary SCHLESINGER. As you recognize, I was not here at the time.

CONGRESSIONAL NEED TO KNOW

Mr. LONG. I understand. I am not blaming you. I am looking to see whether we can work out safeguards to make sure that this does not happen again or does not happen for the military assistance program.

Secretary SCHLESINGER. I believe that we in the executive branch should be responsive to the way they wish to manage affairs on the Hill. If it is the desire in the Congress that a committee should be briefed in its entirety, that is the way the executive branch should respond.

Mr. LONG. I wonder whether that means that you feel that this falsification of reports of bombing sorties over Cambodia was actually instigated by the Congress itself or the congressional leadership and you folks went along. Is that what you are saying?

Secretary SCHLESINGER. No, sir; I hope there is no hint of my saying that. The authorization came down from the very top, from the National Security Council. It should be underscored that the military services responded to an authorized command, and they responded as they should.

Mr. LONG. Basically it came from the President, the services carried out their orders.

Secretary SCHLESINGER. That is right.

Mr. LONG. And certain leaders in Congress were briefed, is that right?

Secretary SCHLESINGER. That is right.

Mr. LONG. But not Congress as a whole.

Secretary SCHLESINGER. That is right.

Mr. LONG. I think that puts a heavy burden on the congressional leaders that knew about that who did not explain it to their colleagues in Congress.

FACTUAL CONFUSION OVER BOMBING

Secretary SCHLESINGER. Originally, Mr. Long, there was a cover story for reasons that I think are apparent. The cover story is one that has frequently been used. It seems to me that this may have gone awry in a number of respects. One of these is that after the need for maintenance of cover disappeared, the data base that is used at the DOD was still cranking out answers to questions, and it cranked out erroneous answers.

Mr. LONG. The bureaucracy kept grinding false answers out after there was no longer any desire on the part of the leadership to do this.

Secretary SCHLESINGER. That is right. The left hand did not know what the right hand was doing under those circumstances, as a result of which there was a goof, for which I think we in the Defense Department owe the people on the Hill an apology. But I restrict this to these answers to questions that came from the Hill.

The raids themselves were done under the appropriate authority, and while one may question the desirability of those raids and the desirability of the orders, I do not think—and I am not suggesting that you do, Mr. Long—one should criticize the Air Force or the other services for carrying out those duly authorized raids.

Mr. LONG. I think there is plenty of blame to go around. I wonder what possibility remains in the case of the foreign-aid program, whether military or economic, for the left hand not to know what the right hand is doing.

NEED FOR COVER STORY

Secretary SCHLESINGER. There is always that possibility and we will strive to guard against it. What I tried to indicate was that in the case of the Cambodian bombing, we in the Department meticulously kept accurate records so that everybody who was within the prescribed list of those with a need to know had accurate information. That accurate information has been given to the Hill. There was the cover story for general consumption, but there was no desire to falsify the record. There was a goof in responding to some questions from the Hill in this last year or so, but that was inadvertent.

Mr. LONG. So any falsification of the records came about as a result of bureaucratic oversight, you would say?

Secretary SCHLESINGER. The erroneous response to the questions that came from the Hill in the last year, roughly, was merely a plain glitch.

Mr. LONG. I don't know what a "glitch" is.

Secretary SCHLESINGER. A mistake.

In the earlier period of time, a deliberate decision was made that there would be a cover on these raids. As you know, there are covers in many cases involving either military operations or operations which, for a variety of diplomatic reasons, cannot be openly admitted. But I want to distinguish very carefully between a cover story and any intention whatever to cover up, which is a phrase that has been used in the press.

Mr. LONG. If I may say one last sentence, and this is all I have to say, it does seem to me that these cover stories are designed more to cover information from the American public than they are from the enemy. Because, as has been pointed out, the Cambodians knew they were being bombed, so any cover story was really protecting this information from the American people. And in a democracy it does not seem to me that this is right.

Secretary SCHLESINGER. I hope, Mr. Long, we are not guilty of that. If I may go off the record for a moment.

Mr. YATES. Mr. Chairman, if I may, what is the difference between a cover and a coverup?

[Discussion off the record.]

Admiral MOORER. If I may, Mr. Chairman, you have to remember also at that time, Mr. Long, that the diplomatic relations with Cambodia were being broadened—we established the Embassy in Phnom Penh. You recall that Senator Mansfield paid a visit to Sihanouk at about the same time. On the other hand, this followed immediately after the time that President Johnson ordered the bombing halt and negotiations were just getting off the ground in Paris. They never really got off the ground, but were just getting started.

One of the understandings, so to speak, when the bombing was ordered, was that the North Vietnamese would not shell cities. But at that particular time they were shelling Saigon frequently, as you recall. In addition to that they had the three divisions, the 5th, 7th, and 9th, that were operating against Saigon and retreating back into the sanctuaries in Cambodia. The United States at that time was in the position of publicly announcing understandings, then, the North Vietnamese deliberately violated them and the United States did nothing about it. So this was part of the overall pattern of defense against this flagrant violation that we were subjected to. We did not want to reveal it to the public because of Sihanouk's request.

Secretary SCHLESINGER. Mr. Chairman, there was a question about the difference between cover and a coverup.

COVER VERSUS COVERUP

Mr. YATES. Your response to Mr. Long sought to make a distinction between cover and coverup and I don't believe the record adequately reflects that and that is why I followed up by asking whether you would state for the record the difference between the cover and coverup.

Secretary SCHLESINGER. The difference is that in the case of a coverup, something which is inappropriate has become public, or threatens to become public, and the parties who feel guilty about the reprehensible action attempt to hide it. By contrast, a cover is planned and used in advance rather than after the fact, because knowledge about mili-

tary operation, if it were disclosed, would be helpful to the enemy. Or in this case, if something were to be openly admitted, it would be diplomatically damaging to the United States. Under those circumstances, a cover story is provided to limit those who know the actual range of operations.

Cover is a traditional device. I can point out hundreds of occasions in which this device has been used. During the Second World War, for example, a cover was adopted just before D-day to mislead the Germans into believing that there would be an attack on the Calais coast rather than in Normandy, where it actually occurred.

The purpose was to enable the Nation to carry out an operation effectively; in that case a military operation, in this case a political-military operation. But the cover is designed to help the country. A cover-up is by contrast designed to prevent guilty parties from having their misdeeds brought before public attention.

As I said before, I believe that the Air Force acted with great skill in this enterprise, and, since a legitimate order came down from above making this an authorized operation, I do not believe that the people in the military should be criticized.

WHEAT SALES TO RUSSIA

Mr. PASSMAN. Thank you, Mr. Secretary.

Thank you, Mr. Yates.

I think I should maybe make one observation for the record at this point because if we let these things build up later on we don't get to ask the questions. With respect to the wheat sale to Russia, my people were very happy—that is, those who had their investments in surplus grain and I am sure I speak for the gentleman from Kansas that we were very happy to see this large wheat sale—maybe our hindsight is better than the foresight. But on the other hand we did not do anything for Russia that we did not for other nations.

We were glad to make the sale. We had a tremendous surplus of wheat and rice. The very fact that at a subsequent date it appears that a scarcity has developed does not change the original sale. We did not provide any subsidy to Russia that we did not provide to all other nations where we were making sales, isn't that correct?

Secretary SCHLESINGER. Yes, sir.

Mr. PASSMAN. If we had a surplus today people would be applauding this sale and not criticizing it. None of us could look into the future and anticipate that we would be approaching a shortage of food. So I think the record should say that we made no concession to Russia that we didn't make to other nations and we are getting something back for it, either dollars or gold, and we expect to get paid for this wheat, the part that has not been paid for already.

Mr. Miller?

CONTINUING NEED FOR NATO

Mr. MILLER. Thank you, Mr. Chairman.

Mr. Secretary, Admiral Moorer, Admiral Peet, we are glad to have you before the committee.

I see a couple of things, Mr. Secretary, in your statement that I would like to pursue or at least get a little more detail. You say that

the world has grown economically stronger and more diverse and the nature of requirement for security assistance has changed. You go on to state that Europe has received the overwhelming portion of our military aid in the early fifties, and yet at the present time it is a very small amount that they would be receiving. Are you taking into consideration NATO and can you tell us about the continued need for NATO now that we have wheat sales to the Communist bloc and now that we have the feed grain sales to mainland China? Will we continue to have the need for NATO that we have had in the past?

Secretary SCHLESINGER. In my judgment, very much so. It was not my intention to get beyond the area of military assistance. The growth of the European economies permits them to provide their own military hardware. In fact, in a number of respects the Germans are providing certain classes of hardware for us at the present time. But we will continue, in my judgment, to need NATO as long as there is a substantial military presence to the east of the Elbe River, and as long as we wish to maintain a military balance on the European Continent. At the present time the United States provides something on the order of 28 percent of the ready resources or forces. Our European allies provide something on the order of 72 percent of those ready forces. American leadership is probably necessary in order to make the Alliance work, and that requires some commitment of the U.S. forces.

NO FORCE REDUCTIONS

Mr. MILLER. But you would not say that there is a possibility that we could reduce our forces in Europe on the basis of the commitments that have been made between the two sides.

Secretary SCHLESINGER. No, sir.

There is no basis for a reduction whatsoever. In fact, one of the parties to whom you refer, the Chinese, have been going around in both Europe and the United States, pointing out that the Russians are not to be trusted and there is a requirement for military strength in Europe. The Communist bloc at this point is rather divided, if you accept the Chinese view of this. There is no encouragement to be drawn with regard to any kind of relations that we have developed with the Russians.

EASING BALANCE OF PAYMENTS

Mr. MILLER. We have heard quite a bit of discussion about this in the past but as long as we have our forces in Europe we will have this great problem of the balance of payments.

It has been stated that we could supply the equipment there but not necessarily have our forces there.

Is it possible to remove some of the personnel from Europe at the present time?

Secretary SCHLESINGER. I think what your question suggests is that we must have a solution to the balance-of-payments drain represented by the stationing of our forces in Europe. We seek to isolate from the rest of the balance of payments those reductions in available foreign exchange which come from stationing our forces in Europe.

I believe we can work out a mechanism to achieve that and at the same time retain our forces in Europe.

EFFECT OF DEVALUATION ON GI'S OVERSEAS

Mr. SHRIVER. If the gentleman will yield for a moment, I would like to ask one very brief question. What effect does this devaluation have on dependents over there? Our GI's are now having a real problem.

I am getting some letters and every Congressman is on this subject.

Secretary SCHLESINGER. To the extent they do not live in Government quarters or must live on the economies of these countries, a devaluation of the U.S. dollar gives them less accessability, given their level of incomes, to foreign exchange. If they are living in quarters which they rent from private landlords in Germany, the number of dollars that they have to pay for their rent increases.

Similarly if they draw on the German economy for food or any——

Mr. SHRIVER. I understand that. But isn't one answer to bring some of them home? If the stories we hear are true, it is costing our own people much more to live over there.

Secretary SCHLESINGER. I think the answer whether to increase or decrease our forces in Europe should be determined by the perception of the military risks to the NATO Alliance rather than by the hardships of any individual soldiers over there.

Mr. SHRIVER. Well, now——

Secretary SCHLESINGER. There are other ways of dealing with this problem, and I think we can talk about other methods of providing living accommodations for those of our forces in Europe who do not have Government accommodations. There are methods of subsidization.

In my judgment it would be an error for us to change our military posture in accordance with the fluctuations of the U.S. dollar.

ASSURING AN ENERGY SUPPLY

Mr. MILLER. Turning to another subject, Mr. Secretary, we are all concerned with the energy problem and the fossil fuel shortage we have in this country at the present time.

We are seeing that much of our military assistance would be centered to the Northeast Asia, Southeast Asia, and the Middle East where we have found quite a bit of petroleum. How does our military assistance program tie in to help assure us in some way of ample energy to this country? Do you in any way evaluate this in our military assistance program?

Secretary SCHLESINGER. You are talking about the general dependence of the American economy on foreign sources of supply.

Mr. MILLER. Yes.

Secretary SCHLESINGER. I think our military assistance plays a major role in stabilizing the Middle East, which has become so important as a source of energy, not only for the United States but also Western Europe and Japan, with whom we are closely associated.

As you know, there is a fair degree of turmoil or potential turmoil in the Middle East. There are certain nations in the area that are friendly toward the United States, or have a close relationship with the United States—Jordan and Saudi Arabia. There are a number of other states that have either fallen into the camp of the Soviets, or which have radical regimes which seek to disrupt the relationships that exist be-

tween the moderate regimes and the United States. To the extent that we can shore up the moderate regimes with our military assistance programs, they play some role in stabilizing the area.

I think we are insuring, or doing our best to insure, a continuing flow of oil from the Middle East to the United States and to our allies in Western Europe and Japan as well.

BOMBING DEADLINE

Mr. MILLER. I have one final question.

As I recall, Mr. Secretary, a couple of weeks ago you indicated that the President may have to ask for an extension of the August 15 bombing deadline, is that correct?

Secretary SCHLESINGER. I think I was asked the question by a reporter: Was it possible that the President might ask for an extension? I said it was quite possible.

Mr. MILLER. I see. Then you have nothing further to add to that at this time?

Secretary SCHLESINGER. No, sir.

Mr. MILLER. Have the conditions changed?

Secretary SCHLESINGER. I think there has not been any fundamental change of conditions and that it may well remain a possibility.

Mr. MILLER. Thank you.

Mr. PASSMAN. Thank you, Mr. Miller.

Thank you, Mr. Secretary.

Mr. Bevill?

Mr. BEVILL. Thank you, Mr. Chairman.

I certainly want to welcome the Secretary and our old colleague, Jack Marsh, but I want to especially welcome our native Alabamian, Admiral Moorer. Alabama is very proud of the job he is doing and we are very happy to have you with us this afternoon, Admiral.

Admiral MOORER. Thank you, sir.

CAREER MILITARY PERSONNEL

Mr. BEVILL. Mr. Secretary, I have just one or two short questions that I want a little information on. One of the things I keep running into is that so many of our young men that want to be career military men are becoming so discouraged. I realize this probably will be a problem a hundred years from now, but I am hoping that an effort can be made to encourage these young men—I can name two from my district that went into the service for the purpose of making a career, and I know we are not going to have too many people seeking a career in the military, or it appears that way—one is stationed, a new lieutenant, in Germany, and the thing you were talking about there is working a hardship on him. There are little things like that, not only that which hit him, 30-percent decrease in his pay—the two 10-percent devaluations, but the Germans increase the value of their money about 10 percent—he is drawing somewhere between 60 and 70 percent of the purchasing power that he had just a few months ago in Germany.

He is a young married man, so he is really having a difficult time paying his bills, this has discouraged him a great deal.

On top of that I understand the military canceled out the old standing provision to ship his car back when his tour of duty ends there. So it seems that these things are kind of piling up on them.

Then there is another one. I am throwing these out as examples, and I hope they will be of some help. I am not being critical when I say these things, but I am hopeful that overall there will be some effort, if there is not any now, to alleviate some of these things. This man needed a few days to get married—he had gotten orders to go to Korea—I called Army liaison, which I don't usually do, and they were very cooperative.

But this was one of the young men in my neighborhood and I knew the physical condition of his parents—and he was gung ho to have a military career, going in as a private and was real pleased with the military—when he finished school, he was told you don't have time to get married, you are going to Korea. Actually, he did manage to get married. When I called the head of liaison, I was told, or I had the feeling that they called the company commander and they called back and gave me the report. This was a situation that I felt needed special attention because I knew this young man was interested in being a career man and they discouraged him right off the bat. He was taken off the track right quick.

These are things that I think are being overlooked. I think too many of these decisions are being made at the company or battalion level, and there is not enough policy along the line to encourage these young men to stay in the service and try to give them some consideration on their assignments.

Certainly being an old World War II veteran I can appreciate that you cannot let everybody go where they want to go, and that sort of thing. In this particular instance I understand there were two men wanting to go to South Korea, he wanted to stay so he could get married, did get married, but then the report I received from the Army liaison was, he will get orders tomorrow going to South Korea. He never has gotten any orders. That was the last report I got. This was a month ago. So somebody is not following through. I guess I call liaison myself once a year. I was discouraged myself with it. These are the things I throw out just for what they are worth. I hope some effort is going into trying to make these things as easy for these young men as far as their family responsibilities are concerned so we can maintain an All-Volunteer Service. These are two fine young men I have known all my life. I think it was a mistake to turn them against the Armed Services when they were set to stay in. It was done unnecessarily in my judgment.

Secretary SCHLESINGER. We will followup on this particular instance, but more generally you point quite rightly to the need for the DOD to be as attentive as it can to the people problems that we have always had and will continue to have. Some of these problems are more striking in this period of the all-volunteer force. We appreciate your drawing this particular episode to our attention and we would be happy to hear about any others that come to your attention.

Mr. BEVILL. Thank you, sir. That is all.

Mr. PASSMAN. Thank you. Mr. Bevill.

[Discussion off the record.]

BREAKDOWN OF SALES FIGURE

Mr. PASSMAN. Mr. Coughlin.

Mr. COUGHLIN. Thank you, Mr. Chairman.

Mr. Secretary and Admiral, it is certainly a privilege to have you here.

Mr. Secretary, in your justification sheets you indicate a total of $1.7 billion in total security assistance and in earlier testimony we were told of another $3.9 billion in sales of military equipment for overseas projects. Is it possible to get a breakdown of where that $3.9 million in sales goes?

Secretary SCHLESINGER. We can do that.

Admiral PEET. It is on page 90 of the Congressional Presentation Document.

Secretary SCHLESINGER. Those are not, of course, funded by the Government. They are cash sales. So the figure is much larger than the request that is being made in this budget hearing.

Mr. COUGHLIN. Thank you.

ASSISTANCE FOR KOREA

The second question I had: A major item in your request is about $288 million in security assistance for the Republic of Korea.

How much of that money will be spent in the United States?

Secretary SCHLESINGER. Virtually all of it.

Mr. COUGHLIN. Do we have any indication that a corresponding amount is being supplied to North Korea by the Communist bloc countries? It seems like an incredible amount for one small country.

Secretary SCHLESINGER. As you know, it has been the attempt of the U.S. Government to achieve stabilization on the peninsula. At this point, the South Koreans are negotiating with the North Koreans. We want to maintain a military balance, and we recognize that it will be desirable, as the Korean economy improves, for them to go out on their own, and for us to diminish the amount of grant assistance.

I do not know the amount of assistance going to the North Koreans at this point in time, but we can get a figure for you. It may be classified, but we will give it to you privately, if you like.

I think it is probably a lower sum, however, than the one we are talking about. What we are trying to do is build up the capability of the South so that they can be independent.

[The information follows:]

COMMUNIST MIITARY ASSISTANCE TO NORTH KOREA

In the period 1954 through June 1973, the U.S.S.R. and the PRC supplied over ——— in military assistance to North Korea. The value of U.S.S.R. assistance is estimated at ——— the value of PRC assistance is ———. In 1972, the U.S.S.R. supplied an estimated ——— and the PRC ———.

Admiral MOORER. I want to point out that the types of weapons that the Soviets are providing to the North Koreans are in the expensive categories—mig 21s, guided missiles, Komar missile boats, and

so on. These are sophisticated types of equipment. I am sure the cost runs into a very substantial sum, since they happen to have more missile sites and more aircraft than do the South Koreans.

SOUTH AMERICAN INCREASE IN AID

Mr. COUGHLIN. I have one final question, if I may.

In the South American area there is considerable increase in the amount of proposed assistance to both Brazil and Peru. Is there any particular reason for this substantial increase?

Is there any particular threat to those countries that warrants the increase?

Secretary SCHLESINGER. Going back to Mr. Long's earlier question, the U.S. Government is not urging any of the countries in Latin America to acquire armaments. When they get an indigenous desire to acquire armaments and turn to various suppliers, we have, for a number of reasons, urged them to be very parsimonious in the acquisition of arms. At this point in time, however, when Peru and Brazil both seek to acquire these armaments and indicate a desire to maintain U.S. influence and to avoid recourse to other suppliers, we feel that it is desirable to supply from the United States rather than for somebody else to be the supplier. There is no external threat that we can specify.

Mr. COUGHLIN. Thank you, Mr. Chairman.

Mr. PASSMAN. Thank you Mr. Coughlin.

Mr. Roush.

EFFECT ON NEGOTIATIONS OF DEADLINE FOR COMBAT ACTIVITIES IN CAMBODIA

Mr. ROUSH. Thank you, Mr. Chairman.

Mr. Secretary, have any changes occurred since the preparation and presentation of the justification on military assistance which would dictate any changes in the program which we should be aware of?

Secretary SCHLESINGER. I do not think there are any fundamental changes.

I think that one can say that the situation in Cambodia, and perhaps the situation in the Middle East, is a little more uncertain than it was at the time that the program was made up.

Mr. ROUSH. The question was for the purpose of leading me to the next question, which involves the situation in Cambodia. The Congress with the administration fully concurring agreed on the August 15 deadline for military activities in and over Cambodia, is that correct?

Secretary SCHLESINGER. U.S. combat activity.

Mr. ROUSH. U.S. military activity in and over Cambodia, is that correct?

Secretary SCHLESINGER. Yes, sir.

I believe it is combat activities of the United States.

Mr. ROUSH. I could not remember the exact words, and I did not have them before me, but I will accept that. My point is that the administration readily agreed with the Congress on that date. Why did they agree to that?

Secretary SCHLESINGER. I can only speculate on that. I think the answer was that at that time it was hoped that by August 15 a diplo-

matic settlement might be achieved which would eliminate the need for the U.S. airpower.

Mr. ROUSH. In agreeing to that date, do you feel that strengthened or weakened your hand insofar as the negotiations?

Secretary SCHLESINGER. I cannot see how it would help in negotiations to have a date fixed in advance.

Mr. ROUSH. I can't either. That is the reason I asked the question: Why did the administration agree to the date?

Secretary SCHLESINGER. I think the answer must reflect certain other factors, such as the desire to avoid a direct confrontation between the executive branch and the legislative branch with regard to the continuing resolution authority.

SHARED RESPONSIBILITY FOR BOMBING CUTOFF

Mr. ROUSH. There would be no intent on the part of the administration to put this monkey on the Congress' back in the event the the Lon Nol government in Cambodia collapsed, would there?

Secretary SCHLESINGER. I could not speculate on that.

Mr. ROUSH. You surely can answer "yes" or "no" to that question. It is not a matter of speculation. I am merely asking you if there was any intent to put the monkey on the back of the Congress.

Secretary SCHLESINGER. Not to my knowledge. The only thing I would say in that connection is that Congress did take some vigorous action with regard to the 15th of August, and that therefore Congress will be in a position to share responsibility.

Mr. ROUSH. Yes, and it would be shared with the administration, which fully acceded to that date, is that not correct?

Secretary SCHLESINGER. I think it is a shared responsibility, yes.

CAMBODIAN MAP LEVEL

Mr. ROUSH. What effect then, if any, will the August 15 cutoff date have insofar as our military assistance program to Cambodia is concerned?

Secretary SCHLESINGER. Insofar as the Government of Cambodia continues to be able to function, the cutoff date should not have any effect on the numbers we have presented. I think that the argument over the years by those who have criticized the involvement of U.S. military forces that this should not be funded through the DOD budget but instead be MAP funded. That is precisely what is being done here; the moneys being asked for are part of the MAP grant.

I would not expect, so long as the Cambodian Government is able to function effectively, that there would be any reduction in the request.

Mr. ROUSH. At the moment you do not expect any changes in the level of military assistance to Cambodia over and above that which you have previously presented to the committee.

Secretary SCHLESINGER. I would not expect any such change at the present time.

The effect of the withdrawal of U.S. combat support does increase the burden on the Cambodian Government, and we may come to the point at which some additional MAP grant assistance should be given to that

Government. But I only want to mention that as a possibility because we have no such intention at the present time.

Mr. ROUSH. Thank you, Mr. Chairman. My time is up.

Mr. PASSMAN. Thank you very much.

Mr. Conte.

KOREAN SHORTFALL

Mr. CONTE. Mr. Secretary, welcome to the committee. I am sorry I am late. I am on the delegation entertaining the Korean members of Parliament who are here for 3 days.

The Vice Speaker spoke to us and said that 40 percent of the defense budget of Korea is for military defense of that country. You state in your statement that our plan with respect to the development of the South Korean force has fallen behind because of the limited appropriation available. You also state that the present program is designed to bring the South Koreans up to the standards without endangering their economic growth.

In the light of the lesser appropriations granted for this purpose in recent years, how much of the shortfall have the South Koreans made up?

Secretary SCHLESINGER. I am not able to answer that question now. My presumption is that this refers largely to U.S. equipment and that there has not been any substantial increase in their purchase of U.S. equipment because of the shortfall below the agreement that was entered into some years ago. The question is, With what part of the shortage they funded themselves?

Mr. CONTE. That is right.

Secretary SCHLESINGER. The answer is probably a trivial sum.

Mr. CONTE. They have shown an increasing willingness to enter negotiations with North Korea?

Secretary SCHLESINGER. Yes, sir.

KOREAN SELF-CONFIDENCE

Mr. CONTE. On significant issues in recent months, are there any indications of worry on their part of their ability to meet the challenge, or lack of confidence on the prospect of good relationships with the United States?

Secretary SCHLESINGER. I'm sorry, I missed that. Lack of confidence in what?

Mr. CONTE. Are there any indications of worry on the part of the Koreans on their ability to meet the challenge, or the lack of confidence on the prospect of good relationships with the United States?

Secretary SCHLESINGER. I think they have expressed concern with regard to their ability to bargain effectively with the North Koreans during this period of time. They are concerned with certain qualitative aspects of the North Korean posture, such as the superiority that the North Koreans enjoy with regard to tactical airpower, and these are quite naturally a cause of concern to the South Koreans.

I don't think there is any deep-seated fear that should be exaggerated.

Mr. CONTE. I have only great admiration for the Koreans, and I have shown it on this committee for the years I have been on it. I think they have done more out there than any country I ever visited. Certainly they did more whether you agree with the war or not in South

Vietnam. I think General Westmoreland said that man to man they compared with the American soldiers out there. They stuck their necks out and helped us out.

Secretary SCHLESINGER. Yes, sir.

BUDGET REPROGRAMING

Mr. CONTE. If a cease-fire is achieved in Cambodia, you note that military assistance expenditure requirements would be substantially reduced.

Secretary SCHLESINGER. Yes, sir.

Mr. CONTE. If this is the case what do you plan to do with the portion of the planned budget that would become available?

Secretary SCHLESINGER. We would certainly come back and consult with the Congress with regard to any settlements and their impact on the MAP budget. The answer to your question depends, in part, on the total resources that we get out of the Congress this year for this program.

A number of programs have been made very tight because of our attempts to deal with the situation in Cambodia. Should funds become available as a result of reduced requirements in Cambodia, we might seek relief for some of the very tight budgets for particular countries in the Middle East. But we would certainly plan to consult with you in the event that occurred.

THAILAND FACILITIES

Mr. CONTE. With the phaseout of Cambodia and the rest of Indo-China, how much need is there to maintain the military facilities and the heavy expenditures we have in Thailand?

Secretary SCHLESINGER. If at the time that we have stabilization of the conditions in Indochina generally our requirements in Thailand were substantially diminished——

Mr. CONTE. Would we turn over some of the bases? We have big bases in Thailand. Will we turn over any of those to the Thai?

Secretary SCHLESINGER. At the present time, I do not think we have plans to do so, but it is possible that we might.

SOVIET EXPORTS TO THIRD COUNTRIES

Mr. CONTE. You stated that the Soviet Union had exported more supersonic aircraft and surface-to-air missiles between 1967 and 1971 than all the rest of the suppliers of the world combined. How much of this equipment went to North Vietnam and how much of this equipment went to Egypt?

Secretary SCHLESINGER. Very substantial shares, and also India.

Mr. CONTE. Those three were the principal recipients?

Secretary SCHLESINGER. Yes. There is also a not insignificant amount going to a number of the other countries in the Middle East, such as Iraq and Syria.

LATIN AMERICAN DESIRE FOR ARMS

Mr. CONTE. Maybe this question has been asked of you. I, together with Congressman Long, many years ago had an amendment on the Foreign Aid bill that no weapons of war should be given, sold on credit, or otherwise, to any undeveloped nation of the world with the

exception of five nations that we mentioned, Thailand, Korea, Israel, and so on. At that time we were really aiming our guns on Latin America. Since that time we have been criticized a lot for this amendment.

One time they burned me in effigy on a campus in Peru. They were really upset on this amendment.

Mr. LONG. One time I was told by Senator Montoya that it would not be safe to go to Lima. But actually they treated me courteously.

Mr. CONTE. Most of these countries in Latin America are poor, the illiteracy rate in Peru is one of the highest in the world, so every dollar they get ahold of they should put into the humanitarian programs to take care of the needs of the people. When we got hot on this amendment they were just starting the so-called jet club down there. I think Chile got into it and Brazil got into it and Argentina, and before you know it, Peru got into the thing. We quizzed the military at great length at that time and we wanted to know what the danger was in Peru of invasion. There was no danger of invasion. There were very few insurgents in the country. If you gave them an old Garand rifle, that would be enough to fight each other. Because of that amendment the Peruvians bought the jets from France, the Mirage. Of course, France has gone in heavily since that time in Latin America.

What is the answer to this thing? Those countries don't seem to have any threats from other countries; if anything, it is always a threat from within.

What is the answer here?

Secretary SCHLESINGER. I think, Mr. Conte, that we fully understand and sympathize with the objectives of the amendment. There is no reason for an arms race in Latin America. If all of the states would refrain, and desired to refrain, from purchases of equipment, then those resources could be used in other ways. So the question is: How to bring about the change in attitude amongst these governments? I think we also recognize that these are all sovereign states and our ability to prescribe attitudes for them is limited. Where you have a government which desires to purchase military equipment for prestige reasons, or for internal bureaucratic reasons, and has determined to purchase that military equipment, then they will purchase it wherever they can get it.

We feel that under those circumstances we probably should be responsive to that kind of desire, even though in some ultimate sense we would prefer that the desire not be there, partly because of the dollar earnings, but also because the states that provide military equipment to the less-developed countries acquire an influence. We are reluctant to see that kind of influence acquired, particularly in Latin America, by states in the Eastern Hemisphere. I do not know that we have an answer to that other than a more sober attitude on the parts of governments when there is no external threat.

Mr. CONTE. The military aid programs have been criticized for lack of centralized coordination which is designed to insure that they fulfill the policy objectives of the program. Part of the basis for this criticism is based on the fact that 17 separate programs are authorized by separate congressional committees and administered by separate executive agencies. What is your response to this criticism?

Secretary SCHLESINGER. The executive branch, in connection with the Congress has taken substantial steps to improve the management

of the security assistance program. The most important step was the creation of an Undersecretary of State for Security Assistance who assists the Secretary of State in exercising general direction and continous supervision of the security assistance program. Dr. Curtis Tarr, the Undersecretary for Security Assistance, has instituted a planning and review cycle in which all agencies involved in security assistance participate, and he coordinates all ongoing programs in this area.

TOTAL MILITARY AID

Mr. CONTE. What is the total extent of our military assistance proposed for fiscal year 1974 when all the programs, including direct commercial sales, are taken into account?

Mr. SCHLESINGER. The programs for military assistance proposed for fiscal year 1974 consist of the following:

Grant military assistance	$771.5
Foreign military sales credits	760.0
International military education and training program	33.0
Security supporting assistance	124.0
Commercial sales	726.5
Total	2,415.0

CAMBODIA

Mr. CONTE. In light of the August 15 bombing cutoff, are there any plans to have countries which are receiving sophisticated aircraft under the military assistance program provide aerial support for the Cambodian Government's combat operations? If so, would you please specify what these plans are.

Mr. SCHLESINGER. There are no such plans.

Mr. CONTE. Has there been any significant effort to use the nonmilitary portion of our foreign aid programs as a leverage point to try to have some of the lesser developed countries devote more of their resources to their domestic needs rather than the heavy emphasis which is placed on their military forces?

Secretary SCHLESINGER. Before the United States establishes a nonmilitary aid program, the recipient country must have demonstrated a strong commitment to economic development. Such a commitment can exist alongside a requirement, also felt strongly by the recipient country, for adequate national defense. The country itself must decide what it must spend for defense purposes. There is no perfect calculation which would tell the United States whether a given aid recipient is spending too much on defense, to the detriment of economic development. The United States along with other aid donors, does scrutinize the adequacy of the recipient country's development expenditures. If these are adequate, one presumes that military expenditures are not significantly draining resources away from development.

EUROPE

Mr. CONTE. As you know, there is increasing pressure in the Congress to reduce the size of our military contingent in Europe. Part of the reason for this is the impact that these personnel have on the U.S. balance-of-payments problems. In light of the massive amount of

money the United States is devoting to maintaining these forces in Europe, why is it necessary to continue to support residual programs related to base rights? What is the cost of these residual programs in 1974?

Secretary SCHLESINGER. The U.S. security assistance program for Spain is a limited program with limited objectives. It is entirely a quid pro quo for base rights granted under the 5-year Friendship and Cooperation agreement consumated between the United States and Spain in 1970. This agreement permits United States use of facilities at Rota Naval Base, three air bases, and various lesser communications and logistics support sites throughout Spain. This balanced complex of bases and facilities is an important part of our overall defense commitment in central Europe, the Atlantic and along NATO's southern flank. Spain makes these facilities available to the United States in the interest of overall Western security but without benefit of a security guarantee such as that enjoyed by NATO members. In lieu of such a guarantee, the material quid pro quo, which has nearly been satisfied, not only enhances the capability of Spain's armed forces to contribute to Western defense, but permits us to encourage development of Spain's forces in a way that is compatible with NATO in terms of equipment and doctrine. ———. The cost of this program in 1974 is $5.426 million which includes $0.4 million for training. The small U.S. security assistance program for Portugal contributes to a climate of bilateral relations in which other U.S. goals—such as the use of Lajes Base in the Azores—can be effectively pursued. This program supports Portugal's NATO committed forces, primarily in the areas of air defense and antisubmarine warfare, ———. The cost of this program in 1974 is $0.9 million which includes $0.5 for training.

MOVE TO CREDIT

Mr. CONTE. You state that most of the remaining recipients of grant aid will be able to move to a credit basis in the foreseeable future. Which countries will not be able to? How long a period are you referring to when you say "foreseeable future"?

Secretary SCHLESINGER. The trend from grant to sales is now well established within our security assistance program. In the past 10 years, grant military assistance has decreased from $1,800 million to $550 million while foreign military sales have risen from $700 million to $1,500 million. FMS credits are a major factor facilitating this transition. The transition process will be protracted in those nations facing continued internal unrest or aggression from external sources, nations where grant aid provides for necessary U.S. base rights, and nations where grant aid is provided more on the basis of political than military rationales. The "foreseeable future" is a euphemism for the time frame of our planning, which is 5 years in this case. For security assistance, such planning is related more to the requirements of the Defense budget system than the clarity of our view of the future.

Mr. CONTE. You state that the program cannot guarantee that our friends and allies will maintain the purest form of democratic government. To what exetent is the program being used to encourage this? I would like you to particularly direct your response to Greece and South Vietnam.

Mr. SCHLESINGER. U.S. policy objectives toward Greece have remained fundamentally unchanged since the coup of April 21, 1967. As you are probably aware, the United States shortly after this military takeover, placed an embargo on the delivery of grant aid major military items to Greece. Except for some exceptions made during the Czechoslovakian crisis of 1968, this embargo remained in effect until September 22, 1970, when this administration announced its policy of full resumption of military aid to Greece. This embargo proved ineffective in that it did not encourage a full return to constitutional norms. This U.S. decision on full resumption of military assistance for Greece was based on United States and NATO security considerations. On January 1, 1973, Greece renounced any further grant security assistance from the United States. However, beginning in fiscal year 1969 the United States instituted a credit assistance program for Greece which is proposed for continuance. In light of Greece's strategic position in the eastern Mediterranean, we hope to continue to provide such credit assistance that will enable Greece to meet its valid military requirements. Whatever the philosophical or legal arguments concerning Greece's internal affairs, the strategic importance of the country cannot be disregarded. Without a strong, effective Greece, Turkey is in jeopardy, the eastern Mediterranean is more open to Soviet expansion and the Near East with its oil is isolated still further from Western influence.

Since the beginning of our involvement in South Vietnam the United States has urged the Vietnamese to strengthen their democratic process and we have offered concrete advice on how they might accomplish this. We believe we have been quite successful. The Republic of Vietnam has a very democratic constitution drawn up by a freely elected constituent assembly. Their President has been twice elected in full elections as have both houses of their legislature. Their elections, while not perfect, have been commended by international observers. All of this has been accomplished in a land with almost no democratic heritage and during a prolonged period of external and internal armed aggression.

Our military assistance to South Vietnam has been predicated on the needs of South Vietnamese security and has not been used as a bludgeon to force them into a particular political mold. We believe governmental institutions freely decided upon will be more lasting and beneficial than ones directed from abroad.

KOREA

Mr. CONTE. You state that our plans with respect to the development of a modernized South Korean force have fallen behind because of the limited appropriations available. You also state that the present program is designed to bring the South Koreans up to standards without endangering their economic growth. In light of the lesser appropriations granted for this purpose in recent years, how much of the shortfall have the South Koreans made up for? What was the growth of the South Korean GNP last year?

Mr. SCHLESINGER. The Republic of Korea Government has not taken over any of the equipment modernization costs of military development. However, the Republic of Korea has assumed responsibility for funding an additional $50 million annually for operation and main-

tenance costs since the institution of the 5-year modernization plan. The Republic of Korea achieved a real growth rate of 7.1 percent in its GNP in 1972.

Mr. CONTE. The South Korean Government has demonstrated increasing willingness to enter into negotiations with North Korea on several very significant issues in recent months. Are there any real indications of worry on their part of their own ability to meet the challenges or of a lack of confidence in the prospect for continued good relations with the United States?

Secretary SCHLESINGER. The South Korean Government has undertaken bilateral negotiations with North Korea and on June 23, 1973, President Park offered new foreign policy proposals concerning Republic of Korea relations with the United Nations and Communist countries. These progressive initiatives toward reunification and continued peace in the area were matters of prior consultation with the U.S. Government, and were launched, in part, because the Republic of Korea Government was confident the United States would honor its commitments under the 1954 United States-Republic of Korea Mutual Defense Treaty. However, South Korea is seriously concerned about the delays experienced in fulfilling the Republic of Korea military 5-year modernization program. This bilateral program is the foundation for eventual Republic of Korea self-sufficiency on security matters in the area and its completion should encourage them to continue their flexible policies toward peaceful resolution of tensions on the peninsula.

CAMBODIA

Mr. CONTE. If a cease-fire is achieved in Cambodia, you note that military assistance expenditure requirements would be substantially reduced. If this is the case, what do you plan to do with that portion of the planned budget that would be available?

Secretary SCHLESINGER. The amount of savings available should a cease-fire be achieved in Cambodia is directly dependent upon the cease-fire date. I would anticipate that any savings resulting from a Cambodian cease-fire would be reprogramed to fund other deferral high priority MAP requirements such as completing the U.S. portion of Korea modernization plan objectives.

THAILAND

Mr. CONTE. With the phaseout of our combat involvement in Cambodia and the rest of Indochina, how much need is there to maintain the extensive military facilities in Thailand? Are there plans to turn some of these facilities over to the Thai Government? Will the Thais use these facilities to provide combat assistance for Cambodia?

Mr. SCHLESINGER. The principal military facilities utilized by the United States in Thailand include a port (Sattahip) and seven airfields (U Tapao, Khorat, Ubon, Udorn, Nakhon Phanom, Nam Phong, and Takhli). These facilities are the property of the Royal Thai Government which permits us to use them rent free. Although we have no specific plans at the moment, we anticipate that our use of these facilities will be phased down as the Southeast Asian security situation permits. We will, of course, turn over to the Royal Thai Government

the buildings and other improvmeents that we have constructed on the bases for our use. The Thai will be able to use these facilities, which are their own. in any way they choose. However, in the light of public statements by senior Thai officials that Thailand will not intervene militarily in Cambodia unless Thailand's own boundaries are threatened, we doubt that these facilities will be used by the Thai to provide combat assistance for Cambodia under presently foreseeable circumstances.

The foregoing information reflects the situation which obtained on July 23, 1973. Since that time, the United States has announced the decision to withdraw from Thailand 3,550 military personnel and about 100 aircraft. This move will end U.S. military operations at Nam Phong.

DETERMINATION OF TYPE OF AID

Mr. CONTE. You state that economic policies do not serve as the basis for the determination of whether to extend credit for sales. Do these policy considerations enter into the consideration of whether to make a grant of assistance? How does this statement relate to the statement you made on page 6, where you said that the level of funding for these programs was the result of an overall and careful evaluation of the military assistance programs and their relationship to all the other programs of the U.S. Government?

Secretary SCHLESINGER. U.S. economic policies do not serve as the basis for determining whether to provide a country grant assistance or extend credit for sales. This type determination is made considering a variety of factors, to include recipient nation economic capabilities, threat, and country progress toward defense self-reliance. Formulation of the military assistance program funding level is only arrived at following an intensive examination of these requirements vis-a-vis U.S. indigenous force requirements under the total force concept of planning within the Department of Defense. The military assistance program levels thus derived may be further modified during executive branch review of all other programs of the U.S. Government to include the AID economic supporting assistance program.

LATIN AMERICA

Mr. CONTE. You note that the Latin American countries are not overly ambitious in their defense modernization efforts and that they spend less than 2½ percent of their GNP on defense. What portion of the budget of these countries is devoted to defense? Does this include the so-called "public safety portion" of their expenditures?

Secretary SCHLESINGER. In the 1966–72 time period, defense expenditures averaged 11 percent of total Government expenditures. By the term "public safety," I assume you are referring to the traditional police functions concerning the enforcement of civil law and maintenance of law and order. With the exception of three small Central American countries that are unable to support both police and military establishments and therefore have only one force concerned with both police functions and external defense, all other countries of significant size have a separate military institution which allows for definitive identification of defense expenditures.

AVAILABILITY OF OIL

Mr. CONTE. We have a substantial interest in our relations with the countries of the Persian Gulf because of our need for oil. The extent of our sales and grants of military equipment to this region seem to be a reflection of this interest. Do we have executive agreements with any of the countries in this region which tie the availability of military weapons to these countries to the oil that they will make available to us?

Secretary SCHLESINGER. The United States has no executive agreements with any of the countries of the Arabian Peninsula-Persian Gulf region which tie availability of military weapons to these countries to oil which they make available to consumer countries including the United States. Military equipment furnished to these countries are on a sales and not a grant basis——

Mr. CONTE. Since the British left the gulf, Iran has given some very clear indication that it wants all foreign military forces to stay out of the gulf. How have we and the Russians responded to that desire?

Secretary SCHLESINGER. Probably a better statement of Iran's wishes is that no foreign military forces should replace the British. The United States continues to maintain the same level of forces we have had for over 20 years—the small Middle East force operating out of Bahrain. We look to the Gulf States to assume responsibility for their own security and stability, and we are willing to assist them in attaining that capability. The Soviets have made occasional port visits to Iraq, and they are assisting Iraq in the development of port facilities at Umm Qasr, but we have no evidence at this time that they intend to station forces in the gulf to fill any "vacuum" created by the British departure.

SAUDI ARABIA

Mr. CONTE. Recently, Saudi Arabia has given clear signals that it wants us to reduce our arms flow to Israel if we want to be able to be assured of a supply of oil from that nation. How have we responded to that? Are our arms sales levels to Saudi Arabia tied to the weapons we are supplying to Israel?

Mr. SCHLESINGER. Our arms sales levels to Saudi Arabia are not tied to the weapons we are supplying to Israel. They are based on a mutual discussion of Saudi Arabia's security needs and the responsibilities it has for security in the Arabian Peninsula. In deciding on arms requests from Saudi Arabia, we consider very carefully the effect such sales could have on the overall Middle East balance and on the search for a Middle East settlement. ———. The Saudis are aware of their responsibility to help provide oil to meet rising world demand. At the same time, however, they have indicated the need to present convincing political and economic justification if they are to allow oil production to go well beyond the ability of their economy to absorb growing oil revenues. ——— (Saudi Arabia's production has trebled in the last 4 years and is now almost 9 million barrels per day.) There is also pressure in Saudi Arabia to limit further oil production growth until the large amount of gas now being flared (3.5 billion cubic feet daily) as a result of the quantum jumps in oil production is put to economic use.

Mr. CONTE. How will Russian assistance in establishing a port at Umm Qasr in Iraq affect our future plans in the area?

Mr. SCHLESINGER. The Soviets are helping Iraq develop Umm Qasr as an important port and naval base. Although their ships occasionally visit Umm Qasr, the Soviets do not appear to be utilizing the port as a base. At the present time, their activities at Umm Qasr have not prompted any fundamental change in DOD policy concerning this area.

KUWAIT

Mr. CONTE. How does our assistance to Kuwait relate to the development of this port and the possible threat that Iraq poses to Kuwait?

Mr. SCHLESINGER. Russian assistance in developing a port at Umm Qasr in Iraq has not directly affected U.S. military sales proposals tc Kuwait. Kuwait first approached the United States as a possible source of arms in 1971 after the British defense commitment was ended, and a U.S. survey team first visited Kuwait in February 1972. An Iraqi claim to two Kuwaiti islands which dominate the waters leading to Umm Qasr and the Iraqi seizure of a Kuwaiti border post last March prompted the Kuwaitis to intensify their discussions with the United States to improve their military defenses.

Our offer to help Kuwait improve her defenses is related to the general Iraqi threat to Kuwait, not specifically to the development of the port of Umm Qasr. Kuwait's desire for U.S. assistance is primarily related to air and ground, rather than naval, defenses. While detailed discussions have been underway with the Kuwaitis for several months regarding the sale of arms and related supporting equipment and facilities, no contracts have yet been signed.

IRAQ

Mr. CONTE. Iraq seems to have stopped short of breaking with the West and seems to be trying to straddle the fence with the United States and the Russians. Could you provide us with an evaluation of our relationships with the country and how Iraq's relationships with the other gulf nations stand?

Mr. SCHLESINGER. There have been no diplomatic relations between the United States and Iraq since 1967, but each country has maintained a small "interests section" in the other's capital. Several days ago, we noted a speech by Siddam Hussein, the No. 2 man in the Iraqi Government, addressing the possibility of improved ties with the United States and Britain. Regarding the second part of your question, Iraq has had long-standing territorial rivalries with Iran and Kuwait.

Again, we have some recent indications of willingness by these parties to resolve some of these issues.

FRENCH SALES

Mr. CONTE. What is the extent of French arms sales to the oil nations? Are their sales tied to the supply of oil available to France?

Secretary SCHLESINGER. ———.

Mr. CONTE. Are the French operating their arms sales programs to any of these countries in such a manner as to limit the availability of oil from these nations to the United States or any other nation?

Secretary SCHLESINGER. ———.

ARAB TERRORISTS

Mr. CONTE. In which of the oil nations to which we are making grants or sales of arms are the Arab terrorists a significant threat to the government in power now?

Mr. SCHLESINGER. We do not see any direct, immediate internal threats to any of those states. In none of them do we find armed, active Palestinian guerrilla organizations such as existed in Jordan prior to 1971. ———.

MIDDLE EAST

Mr. CONTE. One expert has characterized the big power rivalry in the Persian Gulf as a rivalry which is being carried out by proxy. Is this an accurate assessment of the situation? Are these arms sales really contributing to the stability of the region?

Mr. SCHLESINGER. I really would have some difficulty in applying the term "proxy" to the situation in the Persian Gulf. Naturally I am concerned by the amount of Soviet activity and influence in Iraq today, but you may have noticed in recent days that a very high ranking member of the Iraqi Government has publicly addressed the possibility of improved ties with the United States and Britain. I hardly think that is the mark of a proxy nation. My impression has been that those Arab States accepting Soviet assistance have stubbornly clung to their identity as Arab States first and that the Soviets have by no means called all the shots. Remember also their experience in Egypt in 1972.

From a U.S. DOD standpoint, the two nations with which we have most of our relationships in the Persian Gulf area are Saudi Arabia and Iran, two completely independent and sovereign states. Iran has close ties with the United States, but it also has significant relations with the Soviet Union. The Shah himself is a man of strong convictions. We also have good relationships with Saudi Arabia. King Faisal and the Saudis have firm convictions, too, and they do not approve of certain aspects of our Middle East policy. We share certain common objectives and interests with these two nations, but they are by no means proxies. Both zealously guard their freedom of action. Nor do we have any desire to manipulate those countries and, if we did, I cannot imagine how we could even hope to do so. We respect these nations and their leaders and we seek no proxy among them. Indeed, we look to them to be responsible for their own security in the area with the United States assisting through the sale of arms and technical assistance they may seek.

Mr. CONTE. Mr. Chairman, you have been most kind to me.

RESTRICTING SALES TO UNDEVELOPED COUNTRIES

Mr. PASSMAN. Thank you, Mr. Conte. Your line of questioning is always interesting. In the past my distinguished colleagues, Mr. Conte and Mr. Long, have done an excellent job in endeavoring to tighten up sales in certain underdeveloped countries. As it applied to an

appropriation bill it is usually good for 1 year at a time and then it expires.

We now have permanent legislation in the Foreign Assistance Act of 1961, section 504 which reads:

> That none of the funds appropriated pursuant to this subsection shall be used to furnish sophisticated weapons systems, such as missile systems and jet aircraft for military purposes to any underdeveloped country, unless the President determines that the furnishing of such weapons system is important to the national security of the United States and reports within 30 days each such determination to the Congress.

I believe that is now permanent legislation.

Of course, you are living by this. Any exceptions made to the rule have to be based upon a determination by the President.

Is that correct?

Admiral MOORER. Yes, sir.

Mr. PASSMAN. Mr. Yates.

APPROVING THE COVER STORY

Mr. YATES. Mr. Secretary, I join my colleagues in warmly welcoming you to the committee.

I would like to follow up on Mr. Long's questions. You said that the authorization for the cover bombing of Cambodia came from the top—the very top. Does this mean the President authorized it?

Secretary SCHLESINGER. I would put it this way: This was discussed in the National Security Council. While I have no direct information that the President gave the order, I cannot imagine that the bombing would have occurred with the President's disapproval.

Mr. YATES. Does he chair the National Security Council?

Secretary SCHLESINGER. Yes, sir.

Mr. YATES. Did he chair it at the time this order was given?

Secretary SCHLESINGER. I am certain that he did, although I have no direct knowledge.

Mr. YATES. You stated also that the information was made available to certain Members of Congress. If this is true, why were any records falsified by the Air Force?

Secretary SCHLESINGER. I tried to refute that assertion before, Mr. Yates. Falsification is a word that is being quite unfairly used in this connection.

What happened at that time was that there was an order to bomb from the Government to the Air Force, and there was an order simultaneously to limit, because of diplomatic reasons, those who knew. For this reason, the records that were kept were restricted to those in the chain of command.

In addition, because of the American penchant, if I may put it that way, for keeping accurate statistics so that the Comptroller's Office and other offices in the DOD would know precisely the amount of munitions expended, there was another record that we kept in which the totals of the bombing in Cambodia were included as part of the Vietnamese totals. The purpose of this was to permit these offices to make their analyses more accurately and to insure that all bombs were accounted for. Since these offices were not part of the group that was believed to have a need to know, they were not privy to the knowledge that bombing was going on in Cambodia.

BOMBING RECORDS NOT DESTROYED

Mr. YATES. Are you saying that the Major whose story came out in the newspaper was not telling the truth when he said that he was ordered to destroy records of bombing in Cambodia?

Secretary SCHLESINGER. I think that his story, which I have not read——

Mr. YATES. It was in the paper.

Secretary SCHLESINGER. I have not read his testimony. I have read what was said in the paper about that. I think the destruction probably applied to the coordinate cards. On each and every day that you have this kind of strike, coordinates are sent to the field so that the bombers can be accurately guided to the targets. These coordinate cards were burned. However, that is worlds apart from saying that there was a destruction of the records, because the records were being kept at SAC headquarters. They did not want these records floating around because this was a cover operation and there was a desire that the coordinates for these strikes not be made known during the period of time. We have perfectly accurate records, and these perfectly accurate records have been made available to the Hill.

Mr. PASSMAN. Would the gentleman yield in this instance?

Mr. YATES. I will.

INITIATING BOMBING REQUESTS

Mr. PASSMAN. This is by request of the Cambodian Government that we initiate these strikes?

Mr. YATES. No.

Secretary SCHLESINGER. The Cambodian Government acquiesced, or it was willing that these strikes occur, or did not protest. There is a certain amount of obscurity as to precisely what degree——

Mr. YATES. The initiative of accord did not come from the Cambodian Government.

Secretary SCHLESINGER. That is not certain.

Mr. YATES. That is what I am trying to find out, Mr. Secretary. What is certain?

Secretary SCHLESINGER. Mr. Yates, I understand your desire to find this out. I am curious myself. I do not have the answer to the question.

Mr. PASSMAN. This is not the exception. This has been practiced in all warfare, has it not, going back to World War I and II.

Secretary SCHLESINGER. That is right.

Mr. PASSMAN. And the Korean war.

Mr. YATES. Mr. Chairman, what has not been the exception?

Mr. PASSMAN. Providing "cover" for these strikes. I think the same thing applied when we landed in Normandy didn't they practice this subterfuge, if you want to use the word, to get in? Has it not been pretty much true in warfare that it is necessary to proceed on this basis?

Mr. YATES. I think that is subject to interpretation.

Mr. PASSMAN. Let each man interpret it himself. If the gentleman will yield further.

Mr. YATES. I will be glad to yield further.

Mr. PASSMAN. Without exception it comes down from the Commander in Chief, the President. You do not do anything without it coming down from the President all the way down to the bottom. Isn't that true?

Admiral MOORER. That is true.

Secretary SCHLESINGER. Mr. Yates, if I may amplify on that, there are three questions that arise. One is whether it was wise to have these strikes in Cambodia. A second question is whether the United States should have cover in diplomatic or military circumstances of this sort. The third is when the need for cover has ended, how quickly do you tell the story? I think the third question in this case is quite limited, though pertinent.

I think we were remiss in a number of ways, but that the really major questions concern the wisdom of the strikes and whether the United States should have a cover story for such operations.

Mr. YATES. Mr. Chairman, is it in order for me to ask the Secretary when we find out about whether this request came from Prince Sihanouk to place that in the record?

Mr. PASSMAN. It is the prerogative of the Executive and the military, if they stamp classified on it, we are going to respect it. As far as you getting the information you are entitled to it.

Secretary SCHLESINGER. Mr. Yates, we will endeavor to answer the question.

[The information follows:]

CAMBODIA—REQUEST FOR ASSISTANCE

The Secretary of State addressed this question on June 25, 1973, in the course of remarks before Members of the House of Representatives. While Sihanouk was still in office, there were large numbers of North Vietnamese troops in Cambodian sanctuaries along the South Vietnamese border. In 1968 Chester Bowles, Mr. Habib, and Mr. Spivak called on Sihanouk to discuss this question. Sihanouk said he did not want the North Vietnamese troops in his country. He wanted to get rid of them and he hoped the United States could do something to assist. Sihanouk said he did not want it known that he acquiesced in the bombing, but requested U.S. action to get North Vietnamese troops out of Cambodia.

Mr. YATES. Thank you, sir.

FUNDING FOR CAMBODIA

On page 15 you make what seems to me to be a rather alarming statement. You say:

If adequate funds are not available we might see not only the collapse of the Cambodian Government but the rapid erosion of the Vietnam and Laos agreements; in short, a collapse of the whole structure of peace in Indochina that the President has so painstakingly put together through years of negotiation.

We know that the Congress has voted with the consent of the President to end active combat by all U.S. forces in Cambodia on August 15. You are saying that we have to make funds available to Cambodia. Is this to be in substitution for such funds?

Secretary SCHLESINGER. No, I think it is a complement to the present bombing, and when the bombing ceases it is a necessary ingredient for the Cambodian Government to be able to continue to resist the insurgents.

Mr. YATES. How much money have you requested for the purpose?

Secretary SCHLESINGER. I think it is $167 million or thereabouts.

Mr. YATES. Will $167 million keep the Lon Nol government going after August 15?

Secretary SCHLESINGER. It is adequate for their defense operations.

Mr. YATES. It is adequate?

Secretary SCHLESINGER. Yes, sir.

Mr. YATES. The $167 million should prevent the collapse of the Cambodian Government and therefore the erosion of the Vietnamese-Laos agreement?

Secretary SCHLESINGER. I think the reverse of that logic is not necessarily persuasive. What we have said, I think, in the past, is that withdrawal of U.S. air support is not going to help this regime continue to flourish, but it could survive. It cannot survive both with the withdrawal of U.S. air support and elimination of the MAP program.

Mr. YATES. Thank you Mr. Chairman.

Mr. PASSMAN. Thank you, Mr. Yates.

I shall be as brief as possible.

U.S. INVESTMENT IN FOREIGN AID

Mr. YATES. Mr. Chairman, before you start, may I apologize to the Secretary, I want to offer an amendment on the floor so I must leave.

[Discussion off the record.]

Mr. PASSMAN. I guess over the period of years I have been the most antiforeign aid Member of Congress. I think of all military as a complete waste, every dime of it. But until some smart mind can develop a system whereby we can have external and internal security without it then we are going to have to have a military. I think for the past 7 years without exception I have supported the military assistance program.

I don't think I will ever have to apologize for my position. I move pretty much on numbers and statistics. If I read the record correctly, if we take Korea, actually our commitment goes back some 22 or 23 years. If you want to pick up with the Korean war in 1950 or 1951, and if we look at what we have invested in Korea, we find it was with the endorsement of President Truman, subsequently Presidents Eisenhower, Kennedy, Johnson, and Nixon. But our actual disbursements in dollars has been $35.2 billion. That was the amount of money we spent there which had the approval of all of our great military leaders and civilian leaders. The number of deaths during the Korean war was 33,629. The casualties were 105,785. To my way of thinking that is a tremendous investment, not only in resources but in precious lives. So I have to yield to those great minds who know what we should or should not do. As I look at the record and hear the statistics revealed in different briefings we had in Korea and elsewhere, it is a foregone conclusion without a military assistance program for Korea sooner or later that investment could go down the drain; could it not?

Secretary SCHLESINGER. I think there is that risk, Mr. Chairman.

Mr. PASSMAN. As far as the air power is concerned, the North Koreans have about four modern fighters to South Korea's one; do they not?

Admiral MOORER. Yes, sir.

U.S. FORCES IN KOREA

Secretary SCHLESINGER. That is about right.

Mr. PASSMAN. That could be a tremendous threat, when you take numbers of four to one in favor of the enemy. If I understand it correctly, the Nixon doctrine calls for a reduction in U.S. military

strength but an increase in military equipment so as to modernize the forces of the recipients of the military assistance program; is that correct?

Secretary SCHLESINGER. It is to eliminate the need for U.S. ground forces in particular, but U.S. forces in general.

Mr. PASSMAN. When this Nixon doctrine was announced, I believe we had 60,000 troops in South Korea, and even though the Koreans protested we brought home 20,000 of the troops that we maintained there for some 20-odd years.

Secretary SCHLESINGER. Yes, sir.

Mr. PASSMAN. By reducing 20,000 U.S. troops in Korea over a 5-year period, it was a net savings of $1,100,000,000. That is what we saved by bringing home the 20,000 troops.

Admiral MOORER. $1,100,000,000.

Mr. PASSMAN. We saved $1,100,000,000.

Secretary SCHLESINGER. Yes, sir.

Mr. PASSMAN. The total cost of the modernization program over the same period was $1,500,000,000.

Secretary SCHLESINGER. Yes, sir.

IMPLIED COMMITMENT TO KOREA

Mr. PASSMAN. So in reality the modernization program for Korea, which we certainly agreed to, whether it was in writing or not—your predecessor Mr. Laird testified to that effect and I believe you are—we have a type of commitment that we will provide $1.5 billion over a 5-year period.

Secretary SCHLESINGER. We have a plan, Mr. Chairman.

Mr. PASSMAN. Let us say an implied commitment.

Secretary SCHLESINGER. I think that is a fair way to put it.

Mr. PASSMAN. Would you accept it on that basis? I think that is what Secretary Laird indicated for the record.

Secretary SCHLESINGER. Part of that one and a half billion can be met by sales credits and guarantees.

Mr. PASSMAN. We just hope sooner or later a good part would be. To be perfectly honest with you, the President of Korea, President Park, agreed that he would accept all military assistance on a loan basis. I had not pursued that. He said absolutely, on concessionary terms, that all subsequent aid would be accepted on a loan basis.

Secretry SCHLESINGER. That is the intention, yes, sir.

U.S. INVESTMENT IN VIETNAM

Mr. PASSMAN. Now, if we may have a look at Vietnam. I don't want to develop into a foreign aid enthusiast, but above everything else I want to be a realist because we all love this great country of ours. If we go out and have a look at Vietnam, actually the aid program started under President Eisenhower—I believe he made the first commitment of economic aid and maybe military advisers—and subsequently it had the endorsement of President Kennedy, President Johnson, and President Nixon. Again when we look at the record, when our present Commander in Chief was sworn in, we had 542,500 troops in Vietnam. Today we are down to zero, are we not?

Secretary SCHLESINGER. Yes, sir.

Mr. PASSMAN. That is a great accomplishment for any President. It is unbelievable that a man could accomplish so much in such a brief period of time, especially with so many influential people constantly pulling the rug and sending these emissaries to North Vietnam, carrying with them aid and comfort. It is a wonder we concluded that war successfully.

If we must think in terms of investment, and this happened under all of these Presidents that I just read into the record, it has cost us $141 billion. That is an awful lot of money. I believe that our deaths are 56,044, with 303,000 casualties, wounded men that we are going to have to look after in the future. That, too, is a tremendous investment, is it not?

Admiral MOORER. Yes, sir.

Mr. PASSMAN. Do you think that a nation could possibly survive and protect this tremendous investment in resources and precious lives without aid?

Secretary SCHLESINGER. No, sir.

Mr. PASSMAN. So we are being absolutely foolish for giving any thought to cutting this back below a safe level?

Secretary SCHLESINGER. That is correct, sir.

Mr. PASSMAN. As far as I am concerned, that is the way I am going to vote. I might also say that these people likewise agreed reluctantly to accept military assistance on a loan basis. But they are willing to accept economic aid on a loan basis. I think that the foreign aid bill is in trouble this year. At certain points along the way we are going to get in trouble. I think the tighter we can make the program the better it is going to be for all concerned.

TERMS OF MILITARY CREDIT SALES

Now with respect to foreign military credit sales, you are requesting $525 million. All of these sales are made on the basis they will be repaid in U.S. dollars.

Secretary SCHLESINGER. Yes, sir.

Mr. PASSMAN. What is the average term?

Secretary SCHLESINGER. It varies between 6 and 7—whatever the cost of money to the United States.

Mr. PASSMAN. Six to seven years.

Secretary SCHLESINGER. Six or seven percent.

Mr. PASSMAN. I am speaking about the length of term in repayment.

Secretary SCHLESINGER. It is 10 years, approximately.

Mr. PASSMAN. Without exception all of the loans are made on the basis that the recipient pay the going rate of interest.

Secretary SCHLESINGER. Concessionary rates of interest are occasionally authorized, but the general standards and criteria of these loans require not less than the cost of money to the U.S. Government.

Mr. PASSMAN. If it happens to go to 8 percent, they pay 8 percent.

Secretary SCHLESINGER. Yes, sir.

Mr. PASSMAN. In this instance it simply means that nations are going to buy military hardware, and if we don't sell it some other nation will.

A European nation or Russia. Isn't it just that simple?

Secretary SCHLESINGER. Yes, sir.

Mr. PASSMAN. If we go through with a military credit sales, No. 1 it means a profit to the manufacturer and it furnishes employment. Furthermore, the manufacturer no doubt, pays about 50 percent of his profits to the U.S. Treasury in taxes.

Secretary SCHLESINGER. That is correct.

U.S. BENEFITS FROM FMS

Mr. PASSMAN. If you don't have a military credit sales program, you deny the people employment. You deny the manufacturer the profit. You deny the U.S. Treasury of these tax receipts. If we could block military sales everywhere and have no other nation sell the military hardware, maybe we could give some thought not to furnishing military sales ourselves. As you just said, it is a foregone conclusion that these people are going to buy military hardware, either from the United States or they are going to buy from some competitor—and more likely from Russia if we don't provide it. Is it that simple?

Secretary SCHLESINGER. It is very much that way.

REPAYMENT RECORD

Mr. PASSMAN. What has been your record on repayment on military credit rates?

Secretary SCHLESINGER. Excellent, Mr. Chairman.

Mr. PASSMAN. Have you had any rollover on any of the loans?

Secretary SCHLESINGER. The arrears are only $2 million, Mr. Chairman.

Mr. PASSMAN. Out of a total?

Secretary SCHLESINGER. Of all of the billions in sales, there are about $2 million in arrears. If there has been any adjustment of debt, we would have to provide that for the record.

Admiral PEET. As of July 1 it's down to $800,000.

Mr. PASSMAN. $800,000 delinquent out of the total outstanding. Total prior sales are what?

Secretary SCHLESINGER. Many, many billions of dollars.

Mr. PASSMAN. Many billions of dollars. You have less than $1 million that is delinquent?

Secretary SCHLESINGER. Yes, sir.

Mr. PASSMAN. And they are paying the going rate of interest?

Secretary SCHLESINGER. Yes, sir; generally speaking.

Admiral PEET. With some minor exceptions in the case of sales to Greece and Turkey.

TREND TOWARD MORE FMS THAN MAP

Mr. PASSMAN. The increase in the request for funds for military sales is brought about to a very large extent by a decrease in the request for grant military aid, is that true?

Secretary SCHLESINGER. That is correct, Mr. Chairman.

Mr. PASSMAN. Is it not true that the funds requested for military assistance, mainly military credit sales, are needed to protect the very large investments the United States has made to help other countries maintain their freedom?

Secretary SCHLESINGER. I think that is the intention, sir.

Mr. PASSMAN. Would you place in the record at this point a table showing the comparison of your request for fiscal 1974 as compared to the 4 previous years in the area of grant aid and also military sales?

Admiral MOORER. Yes, sir.

[The information follows:]

MAP GRANT AID AND FMS CREDITS—REQUESTS FOR APPROPRIATIONS

[In millions of dollars]

Fiscal year	Map grant aid		FMS credits	
	Requested	Appropriated	Requested	Appropriated
1970	425	350.0	275.0	[1] 70
1971	690	690.0	772.5	[2] 700
1972	705	500.0	510.0	400
1973	780	[1] 550.6	527.0	[1] 400
1974	685	----------	525.0	----------

[1] Continuing resoltuion authority.
Includes $500,000,000 for Israel appropriated by Public Law 91-665.

KOREA AND VIETNAM INVESTMENT

Mr. PASSMAN. Would you supply for the record the updated tables appearing on pages 4 and 5 of the House Report for last year showing the very large investment we have made in Korea and Vietnam, including the estimated figures for fiscal year 1973?

Secretary SCHLESINGER. Yes.

[The information follows:]

	Dollars in billions
U.S. investment in Korea:	
Estimated Korean war costs DOD (fiscal years 1950–54)	18.0
Cost of maintaining U.S. military forces in Korea (fiscal years 1954–72)	9.8
Military assistance grant aid (fiscal years 1950–72)	3.5
Economic assistance programs (fiscal years 1946–72)	5.6
Total	36.9
U.S. investment in Vietnam:	
Estimated Vietnam war costs DOD (fiscal years 1965–73) (includes MASF program)	135.5
Economic assistance programs (fiscal years 1962–72)	4.6
Military assistance program (fiscal years 1962–65) (funded under Foreign Assistance Act)	.9
Total	141.0
Estimated outlays—full cost basis:	
Fiscal year:	
1969	28.8
1970	23.1
1971	14.7
1972	9.4
1973 (estimate)	7.0

U.S. military casualties in the Korean war

Died from hostile causes	33,629
Died from nonhostile causes	20,617
Total deaths	54,246
Wounded or injured, nonfatal	103,284
Wounded or injured, fatal (added to deaths)	2,501
Total wounded	105,785
Missing in action	5,866
Captured or interned	7,140

U.S. Military casualties in connection with the Vietnam conflict (Jan. 1, 1961 through July 28, 1973)

Died from hostile causes	46,079
Died from nonhostile causes	10,309
Total deaths	56,388
Wounded or injured, nonfatal	303,653
Wounded or injured, fatal (added to deaths)	5,164
Total wounded	308,817
Unaccounted for	1,249

REDUCING U.S. TROOP STRENGTH

Mr. PASSMAN. It has been stated earlier that the funds requested for security assistance are needed to implement the Nixon doctrine, which is aimed at reducing direct U.S. involvement overseas and which requires our allies to assume a greater role in providing for their own security.

Secretary SCHLESINGER. That is correct, Mr. Chairman.

Mr. PASSMAN. As we stated earlier, by the Nixon doctrine we have been able to reduce our troop level overseas, have we not?

Admiral MOORER. Yes.

Mr. PASSMAN. Especially in Korea?

Admiral MOORER. Yes.

Mr. PASSMAN. Would you list for the record other areas where we have been able to reduce the troop strength?

Admiral MOORER. Yes, sir.

[The information follows:]

COMPARISON OF U.S. TROOP STRENGTHS

The following chart lists U.S. troop strength in the East Asia and Pacific area as of June 30, 1970, and March 31, 1973:

	June 30, 1970	Mar. 31, 1973
South Vietnam Thailand Japan (including Okinawa) Philippines South Korea Taiwan	[Deleted.]	
Total	[Deleted.]	

APPLAUDING THE PRESIDENT

Mr. PASSMAN. I am always impressed with statistics. I am a Democrat and I will remain in the party until they bury me. I have said before 5,000 people down in my hometown, when you only had 150 Republicans, that for my money Richard M. Nixon is the greatest President this Nation ever had I made that statement simply because I look at 542,500 troops and then I look at zero and I look at the fact that we were slowly but surely driving China back into the arms of Russia. They were ready to make that leap, but this man had the foresight to move out in front and not ask them to come here or meet him half-way, but go to China.

I think we have actually just reversed ourselves completely. I think we could have been in serious trouble in another 5 years. I think President Nixon has turned this thing around and he is cooling the world down. I am not talking about Watergate, but the man's real accomplishments. It looks like we are just on the threshold of a period of great peace and prosperity. Don't you see it that way?

Secretary SCHLESINGER. Yes, sir.

Mr. PASSMAN. I think history will record this as the greatest move ever made by any President in the history of America, when he established this dialog between China and the United States. I feel that way. I am saying it out of my heart. I say it down in my district and I say it on the floor of the House and I say it in this committee. If you will judge the man by his real accomplishments, you have to give him straight A's. That is the way I feel.

KOREA

If I remember correctly, 2 years ago the U.S. entered into a 5-year modernization agreement with Korea aimed at updating her armed forces. Since the military assistance program has been reduced rather substantially over the past 2 years, has this agreement been adversely affected by these reductions?

Secretary SCHLESINGER. As a result of reduction in military assistance funds in fiscal year 1972 and fiscal year 1973, it appears that the modernization program cannot be completed in 5 years and must be extended. The time required to complete the objectives of the plan is dependent on the level of security assistance funding appropriated over the next few years.

Mr. PASSMAN. Wasn't this agreement entered into with the understanding that the United States would provide funds for force modernization which would allow us to remove 20,000 troops from Korea?

Secretary SCHLESINGER. The Republic of Korea 5-year modernization plan was not a precondition for the withdrawal of U.S. forces from Korea. The modernization plan was developed to increase Republic of Korea self-sufficiency in security matters, while U.S. force levels in Korea are dependent upon both Korean peninsula and theater commitments in the area. These two security aspects, although related, were not directly tied to each other.

Mr. PASSMAN. Do the Koreans feel that we are not living up to our part of the agreement?

Secretary SHLESINGER. Although U.S. congressional funding restraints have seriously delayed fulfillment of the modernization pro-

gram, it is planned to complete the program even if it does require a stretchout of the time required. Funding of the modernization program will reassure the Republic of Korea and others that our national commitment to the defense of and eventual self-sufficiency for our allies is to be taken seriously.

OTHER ARMS SUPPLIERS

Mr. PASSMAN. I have read several articles which indicate that Europe is fast becoming the arms supplier for Latin America. Many people have argued that the United States should not supply arms to Latin America because it will lead to arms races and divert their efforts from economic development. I guess these articles prove the point that if the United States does not sell arms to the Latin American countries they will buy the equipment from other sources. Will you please comment?

Secretary SCHLESINGER. Latin America is spending approximately 1.85 per cent of GNP on defense activities. In recent years, the restrictive provisions of the FMS Act, such as the regional ceiling on Latin America, reduced FMS credit program authorization and appropirations and prohibitions against the sale of sophisticated weapons to less developed countries, have discouraged the Latin American countries from acquiring military equipment. The Latin American countries have demonstrated their national sovereignty (and perhaps resentment) by purchasing during fiscal years 1968–72 approximately $1.3 billion worth of military hardware from European countries and Canada, and only $334 million from the United States, or 20 percent from the United States and 80 percent from third countries.

Mr. PASSMAN. By not making these sales, is it not true the United States not only loses the sales transaction which is usually paid back in dollars at the going interest rate, but American industry loses the business and the U.S. Treasury loses additional tax dollars from the business loss?

Secretary SCHLESINGER. It is true that U.S. industry and U.S. labor have lost a significant amount of profitable business and jobs as a result of Latin American sales contracted with third countries. The U.S. Treasury has also been denied its corresponding share of tax revenues. ———

Mr. PASSMAN. Could you tell the committee which countries are selling arms to Latin America, in what amounts, and the terms of the sales?

Secretary SCHLESINGER. I will provide the information.

[The information follows:]

ARMS SALES TO LATIN AMERICA 1972–JUNE 1973

Arms sales to Latin America (excluding the United States) totaled over $385 million for the period January 1972-June 1973. The major sources were France ——— and the United Kingdom ———. Together, they accounted for some 70 percent of total sales to Latin America. Thirteen other countries sold a total of $114 million worth of equipment to the area.

The major types of equipment being sold to Latin America during this time frame are a variety of ground equipment; a cruiser, submarines, and patrol boats; fighter, trainer, and transport aircraft and helicopters.

The main recipients are Brazil ——— and Venezuela ———. These countries acquired a total of ——— or some ——— percent of all Latin American purchases.

Nine other Latin American countries purchased a total of ——— worth of equipment. ———

EXCESS EQUIPMENT

Mr. PASSMAN. In Public Law 91–672, as amended, a ceiling was placed on the excess equipment program of $185 million. Are you requesting an increase in the ceiling for fiscal year 1974?

Also, is it not true that if you are denied the right to allocate excess equipment to the recipient nation in the military assistance program the equipment would have to be declared surplus and sold for scrap because you cannot sell it to civilians and is it not true that if a ceiling is placed on the excess equipment program, an additional amount would have to be requested in dollar appropriations for the military assistance program in order to fulfill the equipment needs of these various countries?

Secretary SCHLESINGER. The requested excess defense article ceiling for fiscal year 1974 is $185 million; unchanged from Public Law 91–672, as amended. Should the DOD be denied the right to allocate excess defense articles to MAP recipient nations, the excess materiel would be available to satisfy possible property disposal offices for demilitarization and disposal to highest bidder. It is likely that a high percentage of such materiel would indeed be disposed of as scrap, should it be unavailable for MAP purposes. The $185 million ceiling proposed for continuation is deemed sufficiently high to permit transfer of identified excess military articles to MAP recipients. If the ceiling were to be drastically lowered, precluding supply of major amounts of excess articles to MAP, it is likely that increased dollar appropriations for MAP would be required.

REPUBLIC OF CHINA

Mr. PASSMAN. Is it not true that the United States fully intends to honor all its treaty commitments with the Republic of China?

Secretary SCHLESINGER. Yes; we will. Notwithstanding recent developments in our China policy, U.S. treaty commitments with the Republic of China remain in force. We have given repeated high-level assurance to the Republic of China concerning our continued adherence to these commitments.

MIDDLE EAST

Mr. PASSMAN. Do you feel that U.S. military aid to the Middle East will help the balance of power and ease tensions in that part of the world?

Secretary SCHLESINGER. U.S. military aid to friendly countries in the Middle East is designed to accomplish those ends. We have found it necessary to supply arms to Israel, for example, because of massive arms shipments by the Soviet Union to certain of its Arab neighbors, notably Egypt and Syria, with which Israel unfortunately finds itself in conflict. We have sold sufficient military equipment to Israel to enable it to deter an attack by these neighbors or to defend itself decisively and effectively if an attack should nevertheless come. This has been a major factor in sustaining the Suez Canal cease fire, a U.S. initiative, these past 3 years. We have provided military aid to Jordan

that has permitted that country to defend itself from its Soviet-supplied neighbors and to maintain its internal security against extremists. Military assistance is also being provided to countries in the area of the Persian Gulf and the Arabian Peninsula. The withdrawal of Britain's military presence and the continuing military support that the Soviet Union gives to some of its neighbors, notably Iraq and the People's Democratic Republic of Yemen, have caused some of these countries to turn to the United States for assistance in improving their defense capabilities. We have reacted affirmatively to these requests, in the spirit of the Nixon doctrine, to enable them to take up the main responsibility for their own defense and to cooperate among themselves to insure regional peace and security.

Mr. PASSMAN. Since there have been lengthy discussions on the possibility of a fuel shortage in the future, does U.S. military aid to the Middle East take on more importance since large oil deposits are located there?

Secretary SCHLESINGER. Projections vary, of course, but conservatively we estimate that, if present trends continue, the United States will import about half of its oil requirements in 1980 and that half of this will come from the Persian Gulf. Saudi Arabia and Iran will account for much of these gulf imports. This fact naturally reinforces our already existing desire for continued good relations with the oil-producing countries of the Middle East. We look to security assistance, along with our economic, technical assistance, cultural exchange, and the other programs to deepen and extend these good relations.

BASES ON OKINAWA

Mr. PASSMAN. Since Okinawa has reverted to Japan, does the United States still maintain bases on Okinawa?

Secretary SCHLESINGER. Yes, we still have approximately 40,000 military personnel on Okinawa. For the most part they are based at six major installations, that is, Kadena and Futenma Airbases; Army's 2d Logistical Command; Camps Sukiran, Courtney, and Hansen. Prior to reversion, we held 147 facilities and areas in the Ryukyus ranging in size from the forementioned down to small, unmanned communications sites. This number has been reduced to 86, and further potential reductions/consolidations may reduce this number to fewer than 50 by 1976.

GRANT TO LOANS

Mr. PASSMAN. I note that Greece has been phased out as a military assistance grant recipient in fiscal year 1974. Are there plans in the near future to switch more countries from grant military aid to military credit sales? Please indicate which countries and approximate timetable.

Secretary SCHLESINGER. Yes, sir. A major objective of the military assistance program is to continue the transition of grant aid recipient nations to foreign military sales credit and cash, to the extent that that trend continues to support U.S. national security interests and the military capability of friendly and allied countries is not hampered by undue financial burdens. It is not possible to provide a timetable indicating countries to be totally transitioned from grant assistance

99-614 O - 73 - pt. 1 - 87

since that determination in each instance must be based on a weighing of pertinent economic, military and political factors as they exist at the time transition is proposed.

EFFECTIVENESS OF NATO NATIONS

Mr. PASSMAN. Do you feel that the NATO nations are participating effectively in the collective security of Europe?

Secretary SCHLESINGER. Of course, from my vantage point as U.S. Secretary of Defense, I would like to see our NATO Allies do more, but it should also be acknowledged that our NATO partners participate substantially and effectively in our collective security. Most NATO deployed forces are supplied by our allies—approximately 90 percent of the ground forces, 80 percent of the ships, and 75 percent of the aircraft.

Our allies are also improving their forces significantly. As former Secretary of Defense Richardson noted in his annual Defense report to the Congress in March 1973, allied defense budgets are up 30 percent from 1970, a substantial increase after inflation. The European members of NATO plan to put into service more than 600 tanks, 500 combat aircraft, a substantial number of submarines and destroyers and other sophisticated equipment from this year through 1976.

However, the Federal Republic of Germany helps offset in significant ways the costs of our forces in Germany. The present offset agreement between our two countries amounts to more than $2 billion for the fiscal year 1972–73. A new agreement is now under negotiation for the next period. In addition, the European Defense Ministers have recently agreed to examine the problem of finding additional multilateral means to neutralize the balance-of-payments costs that fall on the United States resulting from our forces in Europe.

All of these defense efforts represent a continuing and invaluable European contribution to the collective security of NATO.

THAI IRREGULARS

Mr. PASSMAN. In a newspaper article, it was stated that about 16,000 to 17,000 Thai irregular forces are serving in Laos which cost the American taxpayer $100 million a year. Are these figures still valid and from what account is this money provided?

Secretary SCHLESINGER. As has been testified to in the Congress on numerous occasions, Thai volunteers in Laos are supported by the United States Defense Department funds (MASF) are used for this program. The $100 million figure for fiscal year 1973 was accurate, but no fiscal year 1974 funds have been requested for this program. In the meantime, the current number of Thai volunteers is classified; however, there are fewer than 16,000 troops at the present time.

KOREA AND THE PHILIPPINES

Mr. PASSMAN. There has been some discussion as to why the United States should supply military assistance to Korea and the Philippines when these two countries are operating under a government that has been termed "authoritarian." would you please comment?

Secretary SCHLESINGER. Both Korea and the Philippines have to some degree strengthened the executive branch of their government during the past year; in Korea to strengthen the government's position in its new foreign policy initiatives with North Korea, and in the Philippines to combat insurgency and speed the implementation of much needed social and economic reforms. The U.S. Government has taken the position that these changes are internal domestic changes undertaken by a sovereign nation. Since President Park's government in Korea and President Marcos' government in the Philippies are the legitimate authority in their respective countries, U.S. military assistance is provided to Korea and the Philippines through these existing national authorities.

Mr. PASSMAN. Are these two countries returning to a more democratic form of rule?

Secretary SCHLESINGER. As for future trends, one can hope the national emergencies which preceded the recent political restructuring in Korea and the Philippines will ease and allow a subsequent readjustment of domestic forces to take place.

CAMBODIA

Mr. PASSMAN. Over the past year there has been a great deal of criticism concerning Cambodia. The United States supplies a large amount of aid to Cambodia but it has been said that because of the corruption a large amount of funds has been diverted into the pockets of Cambodian officials. One such criticism was that salaries were being paid to 100,000 nonexistent soldiers. Would you please comment on this situation and indicate what has been done?

Secretary SCHLESINGER. In late December 1972, various news media reported on a news conference given by Kheem Reth, the Information Minister of the Khmer Republic (Cambodia). At the conference, which was held to discuss Government efforts to eradicate corruption within the civilian and military establishment, the Khmer Government acknowledged that it had been overpaying military commanders about $2 million on monthly payrolls for soldiers who exist only on paper.

Rather than report on the Government's efforts to eradicate corruption, the media reported on the more lurid aspects of the situation, thus creating the impression that the U.S. Government was financing payroll padding and other corrupt practices with no concern for the consequences.

The facts are quite different. The military situation in the Khmer Republic and Southeast Asia was responsible for the expansion of the Cambodian Army from a strength of 35,000 men in 1970 to a projected level in excess of 200,000. The manpower, personnel, and finance systems of the Khmer were based on French colonial practices and incapable of coping with this rapid force expansion. Possibilities for corruption existed on every hand. This corruption, however, was directed against the Khmer Government and not the United States. Both the Khmer and United States Governments were aware of the implications from the first. Failure to expand the force structure would cause the military situation to deteriorate; failure to curb the corruption could cause economic collapse. The U.S. Government chose

to encourage the Khmer Government in management actions essential to the establishment of effective manpower, personnel, and finance systems. The Khmer Government has been receptive to this approach to the problem and is rapidly moving toward implementation of these systems.

The United States was also moving to provide economic assistance to the Khmer Republic. FAA title 1, security supporting assistance commodity import programs and Public Law 480 food-for-peace programs generated counterpart currencies for support of the Khmer national budget. The United States administratively retains some control over the portions of the budget to which these funds are applied. It determined they should be applied to elements of the defense budget, primarily pay and allowances. It was thus able to encourage management improvements under the implied threat of withholding release of these counterpart funds to the Khmer Government. The table following shows that the United States was supporting a significant portion, but not all of the Khmer defense budget.

	[In millions of dollars]	
	Fiscal year 1971	Fiscal year 1972
Cambodia commercial imports program	70.0	16.5
Food for peace program (80 percent country use portion)	6.8	16.6
Total	76.8	33.1

	[In billions of riels]		
	Calendar year 1971	Calendar year 1972	Calendar year 1973
Khmer defense budget	11.549	18.524	21.000
Counterpart generated and applied	1.745	5.430	[1] 1.963
Percent	15	29	

[1] Total of releases in Calendar year 1973 as of May 31, 1973. Total releases for calendar year 1973 are estimated at 7,000,000,000 riels. ($1 = about 220 riels).

The "phantom army" has not yet been eliminated, but the Khmer have appointed a new chief of staff and assistant chief of staff for personnel; begun institution of a uniform unit strength accounting system, defined units in the force inventory; dissolved and consolidated many units; and established a finance structure to centralize payroll operations. We believe these and other action underway will eliminate many of the corrupt practices of the past and contribute significantly to a sounder and more manageable national defense budget.

Ambassador Swank continues to give the matter his personal attention; but the problem has many ramifications and does not lend itself to easy or direct solution by U.S. elements in Cambodia. There has, however, been some slight improvement; and, in the meantime, we have responded to the very understandable interest and concern of the Congress by providing all available information to both the General Accounting Office in the field and to committee staff members who have visited Cambodia.

Mr. PASSMAN. Were any people convicted of wrong doing?

Secretary SCHLESINGER. In November 1972, the Khmer Armed Forces Chief of Staff announced the trial of Lt. Col. Sar Sakhone, a brigade commander, for payroll padding. Since then there have been unofficial reports of three or four other cases of disciplinary action against individual officers for this malpractice. However, the Khmer are seeking to eliminate payroll padding through tighter and more effective administrative procedures.

Mr. PASSMAN. It has also been said that despite large amounts of U.S. aid, the Cambodian Army is no match for the Communist forces. Would you please comment?

Secretary SCHLESINGER. The Khmer insurgent forces, supplied, cadred, trained, and supported by the North Vietnamese Army, have proved to be very tough opposition for the Cambodian Army despite the materiel and equipment we have given our friends. Still, the army of the Khmer Republic is in the field despite the Communist efforts to destroy the Khmer Republic. The capital at Phnom Penh, the major lines of communication and the major population centers remain under government control.

Mr. PASSMAN. What other forces are presently fighting in Cambodia besides Cambodians?

Secretary SCHLESINGER. The North Vietnamese; the Vietcong (South Vietnamese Communists); and prior to August 14, 1973, the U.S. Government conducted combat air operations.

Mr. PASSMAN. How many and what type of U.S. personnel are located in Cambodia?

Secretary SCHLESINGER. By act of Congress, the number of Americans in Cambodia is limited to 200. Of this number, approximately 50 percent are U.S. military personnel. The remainder are civilian employees of various U.S. Government agencies.

Mr. PASSMAN. Last year it was stated that some Cambodian officials were selling supplies to the Communist forces. Has this in fact happened and could some of the supplies which were sold have been provided by the United States?

Secretary SCHLESINGER. This was a report which came to us unofficially. Since then, we have had no confirmation that any activity of this nature has taken place. We have monitored this and will continue to do so through official contacts with the Khmer authorities and the visits and end-use inspections made by members of our mission in Phnom Penh.

SECURITY ASSISTANCE

Mr. PASSMAN. What countries are involved in the political justification for security assistance? What are the political objectives involved?

Secretary SCHLESINGER. President Nixon has provided a clearly defined perspective on the general purposes and goals of the security assistance program. As a vital instrument of U.S. foreign policy, security assistance is used to reinforce our efforts to develop a stable international system, one in which nations that look to the United States for support have the resources necessary to defend themselves against external attack or foreign domination.

Within this context, the emphasis we place on our efforts involves increased self-reliance on the part of recipient nations. Thus, our security assistance is intended to bolster the capacity of South Korea to meet any foreseeable attacks from the North, for Thailand to cope with externally-supported insurgent movements, for Jordan to deal with fedayeen or external threats, and for Israel to insure its capacity to meet any military crisis that may arise as a result of military action by neighbors unwilling to resolve area problems through peaceful negotiation.

At the core of this approach is the view that political and allied problems can be resolved in due course when the parties to a dispute recognize that a solution cannot be imposed by military means. In brief, our security assistance programs are intended to enhance the self-defense capabilities of selected nations to increase the likelihood that the political-diplomatic path will be followed in the search for a solution to regional problems.

That this course of action has political effect is reflected in current north-south talks on the Korean Peninsula, efforts to effect a cease-fire in Southeast Asia, the 3-year cease-fire in the Middle East, and the hopeful beginning in détente between the Soviet Union and the United States—hallmarked by the Strategic Arms Limitation Talks, as well as those relating to mutual balanced force reductions and European security.

Mr. PASSMAN. Would you give the committee a brief statement concerning the effectiveness of the present cease-fire arrangement in Southeast Asia and do you feel the cease-fire has progressed to the point where Cambodia, Laos, and South Vietnam could start a reconstruction program?

Secretary SCHLESINGER. The effectiveness of the cease-fire in Southeast Asia, or more properly, in the Republic of Vietnam, can be described from various points of view. From the viewpoint of a cessation of hostilities, it is unfortunate that sporadic fighting is still taking place and that the North Vietnamese are continuing to infiltrate men, materiel, and equipment into South Vietnam without regard to the provisions of the January cease-fire agreement or the subsequent communique. From the viewpoint which considers the intensity and duration of the enmity between the South iVetnamese and the antagonists, however, the relative peace which exists certainly points to the successes achieved in negotiation and leaves hope for continued improvement in relations between the contending parties. It is my belief that, as far as Vietnam is concerned, the level of fighting has been reduced to a point not only at which a reconstruction program could begin, but to a point at which a reconstruction program should begin. The replacement of the economic infrastructure and subsequent economic development should be initiated now so that Vietnam regains its footing as it passes successfuly through the post cease-fire period. Reconstruction programs for Cambodia and Laos should await the achievement of an effective cease-fire.

PRESENT SITUATION IN CAMBODIA

Mr. PASSMAN. Would you, Mr. Secretary, and Admiral Moorer, give us a briefing on the situation in Cambodia as of this time?

Secretary SCHLESINGER. I think Admiral Moorer might well do that.

Mr. PASSMAN. You are privileged, of course, to take from the record anything that is classified. What is the situation as of this time, Admiral Moorer? Does it look like we are going to get a peace agreement?

Admiral MOORER. First, if I may give the military situation. As you know, the activities of the insurgents have been aimed primarily at choking off the lines of supply into Phnom Penh; in particular, the Mekong River, Highway 4, which runs from old Sihanoukville—the main seaport of Cambodia—and Highway 5, which runs from the northwest into Phnom Penh and comes from the very rich rice-producing area of Battambang. All of the action that we have had, almost without exception, has been either directed at these lines of supply or at certain outlying population centers, such as Takeo and Kom Pong Cham.

The insurgents have been using hit-and-run tactics. Of course, the U.S. air effort has been designed and utilized in such a way as to support troops in combat, to assist in maintaining these lines of supply open, and to destroy enemy supply centers when they are in isolated areas, but not in population centers.

During the weekend, the Cambodians did succeed in first, getting an 8 ship convoy up the Mekong; second, in bringing about 337 trucks from Kompong Som into Phnom Penh loaded with rice and supplies and, third, bringing a convoy of 155 trucks loaded with rice into Phnom Penh from Battambang.

Generally speaking, as of today, the supply of the key requirements, namely rice and petroleum, is up to standard stock level.

However, the insurgents are continuing to direct their forces toward Phnom Penh. They have at the moment moved in along the Prek Thnot River, which is just south of Phnom Penh. They are really focusing most of their effort from the south toward the city and from the northwest toward the city. This is the situation today.

The insurgents have lost large numbers of people, but at the same time we have intelligence indications that they intend to persist in this effort.

One factor that will be brought to bear very shortly is the rainy season, which will cause that area to flood in many places and consequently restrict the areas in which the insurgents can maneuver and operate.

On the Cambodian side, of course, there is the Council of Lon Nol, Chengtleng, Sirik Matak, and In Tam—the four members—who in recent weeks, have put into effect a conscription law in an effort to provide more manpower for their own forces.

Things do go slowly in Cambodia. They started out from scratch with practically no capability in terms of military leadership or organization and things of this kind. So there is, in effect, now this kind of low-order combat which would be, as I say, aimed at primarily choking off Phnom Penh, from food and supplies.

One of the problems has been that the attacks on the outlying villages have caused many refugees to move into Phnom Penh. This, of course, aggravates the problem of the supply of rice and petroleum.

So far as the exact details of negotiations are concerned, I am not privy to those. As they now stand, the objective would be to first bring about a cease-fire.

Mr. PASSMAN. Are they continuing to negotiate?

Admiral MOORER. Yes, sir. Of course, this impacts on Hanoi. It impacts on Moscow and also on Peking.

But the basic objective would be to bring about a cease-fire and to establish some kind of arrangement which would end the conflict.

One has to recognize that if the North Vienamese have clear access to Cambodia, including the seaport, that the situation in South Vietnam would be put in jeopardy. That is one of the main reasons why Cambodia is so important.

Second, the Thais would be very perturbed if Cambodia were under full control of the Communists. That is the problem we are faced with at the moment.

DIFFICULTY IN CAMBODIA PREDICTED

Mr. PASSMAN. As I say, we have to deal with these facts as we see them. This administration concluded the South Vietnam war. I think now when we look back at it, the critics recognize that the President indicated great courage and great wisdom when he went into Cambodia and cutoff that sanctuary where there Communists would come across, hit us, and run back over there and enjoy their lemonade and have fun. I think it was a great move he made and it is also recognized in the mining of the harbors around Haiphong. I think that is generally recognized as one of the great decisions of a President.

Again, those bombers brought them back to the negotiating tables in Paris, everything indicates great wisdom and very careful planing for this man to conclude this war under most difficult circumstances.

But some of us now, who have been on this committee for 21 years, looking at the record, see that he is not going to be able to exercise that wisdom and knowledge in trying to deal with this situation in Cambodia.

What do you think is going to happen when August 15 comes and these people recognize that we can no longer provide air strikes? Do you think it's going to worsen?

Admiral MOORER. I think that is likely. It certainly makes the task of the Cambodian Government's forces much more difficult. Also, it will permit the NVA/VC negotiators to drive a harder bargin, bearing in mind, of course, that the North Vietnamese have never complied with article 20 of the Agreement, namely, that all foreign forces would be withdrawn from South Vietnam.

Mr. PASSMAN. That was the agreement that they agreed to live up to, did they not?

Admiral MOORER. Yes, sir. They have lived up to none of it. Consequently, Mr. Chairman, although, as I said before, things happen relatively slowly in Cambodia, I think it puts the Cambodian armed forces in a very precarious position.

Mr. PASSMAN. How could you get supplies into them when you remove that cover? Isn't that going to be rather difficult, to get supplies into Cambodia?

Admiral MOORER. Yes, sir. As I say, the enemy effort is directed toward the main lines of supply that feed Phnom Penh.

Mr. PASSMAN. Mr. Shriver?

Mr. SHRIVER. Thank you, Mr. Chairman.

SEPARATING TYPES OF CAMBODIAN TROOPS

Did you say there are about 75,000 Vietnamese troops in Cambodia opposing the Government there?

Admiral MOORER. Yes, sir. I would like to give you a table, if I may, sir, because you can get into all kinds of difficulties trying to separate out support troops, combat troops, North Vietnamese, and the different types of insurgent troops.

Mr. SHRIVER. When you are talking about Vietnamese, you are talking about those from North Vietnam?

Admiral MOORER. Yes, where you have the regular combat forces. Regular forces are 2,000 to 3,000 Vietcong and 3,000 to 4,000 NVA combat forces. The administrative services—those that are transporting materiel down from the Ho Chi Minh Trail on into the sanctuaries—consist of 2,000 to 3,000 Vietcong and 2,000 to 4,000 North Vietnamese. In the insurgents groups, which of course are Cambodians, there are 40,000 to 50,000. So you have somewhere in between 49,000 to 64,000 overall combination North Vietnamese, Vietcong, and insurgents. I will provide a table.

[The table follows:]

The continuing refinement of estimates produced the following new figures:

Insurgents	40,000–50,000
NVA:	
Combat	2,000– 3,000
Rear service	10,000–20,000
VC:	
Combat	1,000– 2,000
Rear service	2,000– 3,000
Total	55,000–78,000

Mr. SHRIVER. What is the size of the Armed Forces of the Government?

Admiral MOORER. About 180,000.

Mr. SHRIVER. What is that Government?

Admiral MOORER. Khmer Republic. About 180,000 would be the realistic answer.

Mr. SHRIVER. You don't think that would be adequate? It certainly would be, wouldn't it, if they had some material assistance? I don't mean our combat forces.

Admiral MOORER. Traditionally, we have always found, even in the Malay Peninsula and South Vietnam, it requires far more regular forces to fight the insurgents. You cannot fight them on a 1-for-1 basis because of the nature of the operations. This has been proven over and over again.

SOUTH VIETNAMESE AIR FORCE

Mr. SHRIVER. We see in the media, relative to the Air Force of South Vietnam, that they have the third largest or the third best Air Force in the world. Is it capable of taking over the need that you have described for air support?

Admiral MOORER. I don't think that the South Vietnamese Air Force would be in a position to replace, let's say, in total capability what the U.S. Air Force has been providing.

On the other hand, they do have a strong capability. The very significant question, of course, relates to the legalities under the peace agreement, the diplomatic arrangements, and the need for the South Vietnamese forces inside South Vietnam. All these have to be considered when one tries to determine what assistance the South Vietnamese can give in Cambodia. But they cannot replace the U.S. Air Force. It was never the intent, when setting up the South Vietnamese Air Force, to structure it in the image of the U.S. Air Force.

Secretary SCHLESINGER. I believe that MASF for that purpose is precluded under the present amendments to the Defense Appropriations Act, Mr. Shriver.

ENCOURAGING ARMS LIMITATION

Mr. SHRIVER. I want to endorse Chairman Passman's conclusions relative to sales of arms to other nations. We have arms limitations negotiations going on and are soon to be resumed. I mention this because of a report released June 19, 1973, by the Bureau of Intelligence and Research of the State Department, where they pointed out that Latin American arms spending averaged almost $300 million annually during the 6 years 1967 to 1972. The total was about $1.7 billion over that period. While this might not be a very large percentage of the total gross national product of these countries, 2½ percent to 3 percent, that amount of money certainly could have provided effective support for economic development. I realize that much of that comes from our allies in Western Europe; only 13 percent comes from the United States.

It seems to me that this problem should be a subject of some importance in any negotiations with our allies and with other suppliers.

There isn't anybody from the State Department here today, is there?

Secretary SCHLESINGER. No, sir.

Mr. SHRIVER. We are negotiating with the Soviet Union. I trust that these things enter into those negotiations, at least relative to selling arms over the world.

Is one of the reasons you advance, Mr. Secretary, for our continuing U.S. personnel in the NATO forces, the point that these arms negotiations are now going on?

Secretary SCHLESINGER. Yes, sir.

Mr. SHRIVER. The negotiations relate to arms balances worldwide, I presume, and not just to the United States and Russia.

Mr. PASSMAN. This is very important. If we may refer to the Secretary's statement on page 21, referring to nations;

> They prefer U.S. manufactured equipment, but they have clearly established a pattern of acquiring equipment from other foreign sources if they cannot obtain the equipment they want from the United States.

NATO MEETING IN TURKEY

Mr. SHRIVER. That is what I was contending a while ago.

Admiral, would you tell us more about your observations from the NATO meeting held in Turkey earlier this year?

Admiral MOORER. Yes, sir. I would be very happy to. I attended the nuclear planning group meeting of NATO. But after the meeting was over, I visited Turkey's headquarters, along with Admiral Peet. They briefed us on their requirements, and on their concerns.

One has to remember that the Turks have a common border with the Soviets. In spite of their very austere economy, they have put forward, I think, a very strong effort to protect the southern flank of NATO, certainly in the area of manpower.

Consequently, I believe our assistance to Turkey constitutes one of the most productive contributions we can make in terms of the overall defense of the NATO Alliance. The Turks, as you know, certainly demonstrated their fighting capability in Korea. They were outstanding over there. They are tough. They realize they are living right under the gun and they are willing to move forward with a firm effort to contribute to NATO.

But they do have, of course, economic problems and they do need assistance. They make the best. I believe, of what assistance is given them.

PHILIPPINE INSURGENTS

Mr. SHRIVER. You mentioned the insurgency forces in the Philippines in your statement.

Admiral MOORER. Yes.

Mr. SHRIVER. How many are there? Give us some background.

Admiral MOORER. This is a longstanding problem which stems from the argument over Sabah north of Borneo. The Muslims have been infiltrating, moving into Mindanao through Jolo Island and up through that island chain. There is quite a bit of smuggling that goes on in that area that the Philippine Government has been trying to resist. More recently there has been actual combat in Mindanao between certain elements of the Government forces and the Muslim insurgents. I believe the Philippine Government is now trying to come to an accommodation with these people.———. I have talked to some of the representatives of the Philippine Government on this problem.

The Muslim guerrilla type action has been financed, I think, in some cases all the way from ———. It's a longstanding problem that the Philippine Government must deal with. It's a harassing type of thing in the southern part of the Philippines. ——.

THAILAND GRANT AID

Mr. SHRIVER. You say on page 8 you anticipate reducing our grant aid as the Thai capability to counter the insurgency is achieved. In view of what you said a little while ago, do you foresee any timetable?

Admiral MOORER. We have been encouraging the Thais to emphasize their capabilities to deal with insurgency, most of which is in the northern part of Thailand, with some smaller amount toward the Malay Peninsula. I think it's fair to say that in the last 2 or 3 years the Thais have made significant improvement in this capability.

The point is that this really refers back to the importance of Cambodia, because it would be desirable for the Thais to be able to concentrate all their effort on their insurgency action rather than being concerned about the Communist threat next door in Cambodia also.

Mr. SHRIVER. It's the same thing; is it?

Admiral MOORER. No, sir; I don't think it's quite the same thing. These insurgents, as you know, are more or less a mixture coming down from the north. I don't think that there is the direct control over them by the North Vietnamese as one might expect if the North Vietnamese took over Cambodia.

Mr. SHRIVER. Coming down from the north of Thailand or coming from China?

Admiral MOORER. Some of them operate back and forth across the border of northern Laos and China, but mostly in the northern part of Thailand, sir.

TEN-PERCENT DEPOSIT REQUIREMENT

Mr. SHRIVER. You are proposing the repeal of section 514 of the Foreign Assistance Act, which requires a 10-percent payment to the United States for grant military assistance and excess defense articles. You say the recipients of this aid consider such a requirement to be meddling or intermeddling or insulting. Why would a 10-percent repayment be considered officious, intermeddling, whatever that is?

Admiral MOORER. I have had this expressed to me. They feel by virtue of the record, for one thing, that they have fulfilled their obligations with respect to the loans. And there is no question about the fact they will pay what they owe on time. They feel——

Secretary SCHLESINGER. There is a particular area where this is regarded as troublesome. That is in the education and training area. If we invite somebody to come to Fort Leavenworth, for example, for a year's education, a military man's education as part of the regular training establishment, he is more or less a guest. I think the countries in Latin America regard that deposit requirement as lacking in hospitality. Let me underscore the education and training part of this as being particularly meddlesome.

Mr. SHRIVER. Thank you, Mr. Secretary.

Mr. ROUSH. Is this a provision of the Foreign Assistance bill which was just reported out of committee, which we are going to be debating this week?

Mr. SHRIVER. It's part of what we have been operating under. It has been in there before. I don't know whether it's included in the one we will have up this week or not. They have asked for the repeal of it, so I assume the Committee on Foreign Affairs has considered that.

Admiral MOORER. They had discussed a percentage as high as 25 percent, I believe.

Mr. SHRIVER. I am informed it is out. My question is still good.

Mr. ROUSH. My objection still stands.

Mr. SHRIVER. Thank you.

Mr. PASSMAN. Thank you, Mr. Shriver. I yield to Mr. Long.

Mr. LONG. Thank you, Mr. Chairman.

RESTRICTION OF BOMBING INFORMATION

The decision to develop a cover story or in any case to show bombing in Cambodia as if it were taking place in Vietnam—to present those statistics to the Nation or to Congress or to whomever they went to—you say that this came from the highest levels of the administration. Is that right, Mr. Secretary?

Secretary SCHLESINGER. No, sir. I believe that the decision to strike at Cambodia in that time frame was a decision that came down from the highest levels. But there was also an order to inform as few people as possible.

The particular point you are referring to, which is the methodology that was used to keep the bomb totals accurate, was one that was worked out within the Department of Defense so that even though those people were precluded from knowing that we were striking at Cambodia at that time, the bomb totals would be accurate for other purposes.

Do I make myself clear, Mr. Long?

Mr. LONG. What I want to find out is who ordered the so-called falsification of thousands of reports that showed that the B–52 bomber pilots were blowing up South Vietnam instead of Cambodia. Who ordered creation of that separate erroneous set of records?

Admiral MOORER. I don't know who ordered it, sir. The instruction was, as I understand it—and I wasn't Chairman of the Joint Chiefs of Staff at that time—that the orders and results concerning the bombing in Cambodia would be sent by a special channel. Then, in the routine course of reporting, the scheduled flights, the expenditures of bombs and the fuel consumption would be fed into a computer. I don't know whether you have ever seen one of these printouts or not, but as Secretary Schlesinger said, it was primarily and almost solely for the purpose of handling the logistics support and procuring gasoline, positioning bombs, and things of this kind.

Obviously the objective was to not dilute or interfere with the logistics support which was vital, while at the same time maintaining in a very secure channel, for those who are authorized to have the information, what was taking place in the case of these special flights.

Mr. LONG. There was bombing going on. I think there were 3,600 sorties going into Cambodia. Nobody knew about this. The American public didn't know about it. Congress didn't know about it.

KNOWLEDGE OF BOMBING

Admiral MOORER. I beg your pardon, sir. The chairmen of the committees knew about it.

Mr. LONG. That is what I want to ask.

Admiral MOORER. That is my understanding.

Mr. LONG. The chairmen of each one of the committees knew about it? Did Chairman Hébert know about it?

Admiral MOORER. He wasn't chairman then. Mr. Rivers was chairman then. He knew about it.

Mr. LONG. Did Mr. Mahon know about it?

Admiral MOORER. I am not sure. I am answering you from secondhand knowledge because I don't know who was informed by Mr. Laird or others. I have been told that Mr. Stennis knew about it.

Mr. LONG. Did Mr. Laird know about the doctoring of the statistics on the bombing runs? Did Mr. Laird know about it?

Admiral MOORER. I am sure that Mr. Laird was aware that these special precautions were being taken, because he was familiar in detail with the operation, I would think.

Mr. LONG. Are you saying that as a supposition or are you saying it as a statement?

Admiral MOORER. The Secretary of Defense is aware of all the operations that are going on.

Mr. LONG. I have a statment here that Mr. Laird emphatically denied any complicity in the falsification of official bombing reports.

Admiral MOORER. You are coming right back to the point that the Secretary made some time ago, sir. That is that——

Mr. LONG. It's a question of whether it's a falsification or coverup or what have you. No one wants to call it falsification.

Admiral MOORER. No one was deliberately falsifying a report because the report was complete when you read both parts of it.

Mr. LONG. The point is the report showed 3,600 bombing raids taking place in Vietnam when they really took place in Cambodia.

Admiral MOORER. Yes, sir. But the people who needed the information also had the other report. They could read it in its entirety and knew exactly what was going on.

RESPONSIBILITY FOR COVERUP

Mr. LONG. They must have known, did they not, that Congress was not being told about this. After all, 3,600 bombing sorties is quite something. It took place over a period of a year or so. Let's grant that they knew about the bombing. But didn't they also know that information was being withheld from the public?

Admiral MOORER. Certainly from the public, sir. That was the order at that time: to keep a minimum number of people aware of the operation; only those who needed to know.

Mr. LONG. So Mr. Laird knew about the fact that an erroneous set of information was being presented to the public?

Admiral MOORER. I don't think I should answer that. I don't agree with that.

Mr. LONG. Mr. Laird knew about a cover story. He knew that the full story was not being told to the public. Is that correct?

Admiral MOORER. I think you should ask Mr. Laird what he knew about it, because I wasn't Chairman of the Joint Chiefs of Staff at that time.

Mr. LONG. Mr. Friedheim on Thursday placed the responsibility for releasing the so-called false information on Deputy Defense Secretary William P. Clements, Jr. and Admiral Thomas A. Moorer. What was your role in this, Admiral Moorer? You knew about the bombing, of course?

Admiral MOORER. Yes, as a member of the Joint Chiefs of Staff, I knew about the bombing.

Mr. LONG. Did you know that there were two sets of data being kept, so that the public thought bombing was taking place in Vietnam when it was actually taking place in Cambodia? Did you know that?

Admiral MOORER. I am not responsible for the data that is presented to the public. I do not release information. I did know of the data base limitations since the JCS is responsible for the maintenance of the data base.

Mr. LONG. What about the Armed Forces?

Admiral MOORER. Mr. Friedheim made the statement that Mr. Clements and I were the senior civilian and military officials in the building at the time. I do not have the responsibility for our congressional relations. Neither do I ever make press releases.

Mr. LONG. So you disclaim all responsibility for any disingenuousness, or whatever you want to call it, that resulted in the public not knowing that bombing was taking place in Cambodia?

Admiral MOORER. I am not responsible. I do not disclaim that I knew about the operation.

Mr. LONG. So that you dispute what Secretary Friedheim says?

Admiral MOORER. Yes, sir. I don't agree with what he said in terms of having a joint responsibility for this. The military people, as the Secretary said, carry out orders. We do not make arrangements with the Congress on our own.

Mr. LONG. Who ordered you to keep this a secret or to cover this up so far as the public was concerned or to let as few people know about it as possible?

Admiral MOORER. I go back to the time when this was initiated. I was not the chairman. The instructions, as I understand it, were twofold.

Mr. LONG. Were you Chairman during any time that this bombing took place?

Admiral MOORER. No, sir. It finished with the cross border operations in April 1970. I became Chairman in July of 1970. I want to make it clear that I was fully aware of the fact they were bombing across the border, sir. I was aware of that. But so far as the detailed planning, and so on was concerned, I normally would not attend a meeting, that was involved in that kind of close-held planning, as the Chief of Naval Operations. That is what I was at the time.

SORTIE INFORMATION ACCURACY

Mr. LONG. I have an article that says that the senior Pentagon official made a blunder, a "blunder of some magnitude," by twice sending to Congress falsified reports.

Mr. PASSMAN. That is a newspaper article?

Mr. LONG. Yes.

Secretary SCHLESINGER. That is an accurate quote from Mr. Friedheim.

Mr. LONG. A senior Pentagon official made a blunder, a "blunder of some magnitude" by twice sending to Congress falsified reports. We will say that the word "falsified" is the reporter's term.

Secretary SCHESINGER. I think in that case these were inaccurate reports.

Mr. LONG. It's an inaccurate report?

Secretary SCHLESINGER. Let me try——

Mr. LONG. The Pentagon is not sorry and does not apologize for this in any sense?

Secretary SCHLESINGER. That is not correct, sir. We indicated very clearly that insofar as inaccurate information was provided, in the last 18 months approximately, that that was the result of an error.

Mr. LONG. You would say that inaccurate information was furnished to Congress?

Secretary SCHLESINGER. Yes, sir. Let me review that for you, if I may take a moment. As I indicated earlier, there was a cover story. The cover story involved the diversion of raids from Vietnam to Cambodia. Accurate bombing totals were kept. These were reflected in the data bank as strikes against South Vietnam so that the logisticians,

the comptroller's office, and others would know what was being expended, though not necessarily what the targets were.

In addition to that and separate from it, there was an accurate reflection of the targeting that was known to those who had a need to know.

Unfortunately, when this information went to the Hill—I believe at the time Mr. Seamans was Secretary of the Air Force and one time when Mr. Richardson was Secretary of Defense—the data that was being churned out of the data base was not integrated with the accurate targeting information, so that, unfortunately, inaccurate information was sent to the Hill at that time. I think that was a blunder and we are sorry that that occurred.

DETERMINING "NEED TO KNOW"

Mr. LONG. Thank you very much.

You use the term "need to know"; that is to say the information about what bombing was taking place and where it was taking place was confined to those who needed to know. Who do you feel is covered by that "need to know" and who is excluded from it? Would you say Congressman Long had any need to know this?

Secretary SCHLESINGER. Of course, I have to speculate at the time. That depends on how the Congress wishes to conduct its affairs. It seems to me that in such circumstances it is necessary as part of the American system to have that information available to the Hill. Just how broadly it should be available on the Hill depends upon the methods according to which the Congress structures itself.

Within the Military Establishment, within the DOD, the rule is that the fewest possible should know because that provides the minimum of leaks.

I don't think that Admiral Moorer or any of the chiefs or any of the commanders are offering advice to the civilians or the political appointees anywhere in the Government with regard to the extent and breadth and depth of the knowledge to be provided on the Hill or elsewhere.

RESTRICTING THE PROVISION OF INFORMATION

Mr. LONG. I have a statement here. You can say whether you think it's accurate or not. The statement says:

> The information was given to a couple of sympathetic members of the Senate Armed Services Committee. From that point of view, the services then had carried out what they felt was their responsibility for telling Congress about it.

Admiral MOORER. Not the services. The services do not reveal this kind of information. That is a point I think we have to get clear.

Secretary SCHLESINGER. It's not the duty of the military to provide this information. It's the duty of the civilian leadership. Whether it was too narrow or too broad is not a question here.

Mr. LONG. I quote, "The Pentagon satisfied its notion of honor by tipping off two sympathetic members of the Armed Services Committee."

Secretary SCHLESINGER. I think the list of people informed is much longer than that.

Mr. LONG. Could we have a list of who was informed?

Mr. PASSMAN. The Speaker can clear that up. One of the first men informed is the Speaker of the House of Representatives.

You were dealing in a bloody war where we were having Americans killed every day. This was not just a futile exercise. What you were trying to do was win the war and save American lives. The commander, those responsible, must have gotten through to the President or whoever that we needed to do this and it was approved. But this was during the bloody war and the ends justified the means in all probability.

Mr. LONG. We can differ on that. I think the American people are increasingly disturbed because, after all, the war at that time had never been extended to Cambodia. This was before the orders were given for the South Vietnamese troops to invade Cambodia. This was the preinvasion of Cambodia. Cambodia was a brandnew ball game so far as this was concerned.

When 3,600 bombing sorties had taken place in Cambodia before we knew anything about our involvement in Cambodia at all, then I think we are in a somewhat different situation than keeping the lid on tactical operations so that the enemy doesn't know about what they are.

Secretary SCHLESINGER. I appreciate your point, Mr. Long. The point I am making, however, is that if the military establishment is told to do something, and information about what it is doing is restricted, then the fact that the military establishment is responding correctly to its orders is not widely known.

SOURCE OF RESTRICTION ON INFORMATION

Mr. LONG. I would like to know whether that order came from the President to do this and to tell just as few people as possible, only the people who had a "need to know." That was a very narrow list.

Secretary SCHLESINGER. I cannot give you the specifics. The order certainly came from the White House.

Mr. LONG. But you cannot specify that it came from the President?

Secretary SCHLESINGER. I am sure the President approved the bombing himself.

Mr. LONG. But not necessarily the withholding of information or whatever you want to call it. Use a hard word or a soft word. What would you say about that, admiral?

Admiral MOORER. As I believe we said earlier, the President as Commander-in-Chief authorizes every operation of this kind. What we are saying is we had total civilian control of this operation.

Sir, I would like to make one other point associated with that.

Mr. LONG. We hope we do.

Admiral MOORER. I guarantee you we do.

UNAUTHORIZED BOMBING

Mr. LONG. There is the case of General Lavelle.

Secretary SCHLESINGER. That is one point we wish to make, Mr. Long. There has been a comparison between this and the Lavelle affair, in which there was unauthorized bombing. This is entirely different. This is an example of civilian control working effectively, meticulously. One can disagree or agree with the policy decision, but there is no question that civilian control was maintained and appropriate orders were followed.

99-614 O - 73 - pt. 1 - 88

Mr. LONG. In other words, this is quite a different thing from the Lavelle case?

Secretary SCHLESINGER. Yes, sir.

Admiral MOORER. Of course.

Mr. LONG. I brought the Lavelle case up because you said that these things don't happen without being authorized. In that case it did.

Admiral MOORER. But it was stopped.

Mr. LONG. Many people still think General Lavelle acted on orders, which were then disavowed. Whether they were right or wrong in thinking that, many people feel that way.

Admiral MOORER. They were wrong. He did not have orders to do what he did.

Mr. LONG. All I can say is that if the poor guy did act on orders, I feel sorry for him.

BOMBING REDUCED SCOPE OF WAR

Admiral MOORER. Could I add one point? When you are talking about bombing Cambodia, I think you have to remember, Mr. Long, as I am sure you do, that these sanctuaries were located along an ill-defined border. We are talking about targets just on the edge of the border.

Second, the North Vietnamese, in total violation of the 1954 Geneva Accords, were down there in division strength. I think the idea of leaving them with this sanctuary indefinitely did nothing more than add to U.S. casualties.

Mr. LONG. I am inclined to agree with that. After all, my son fought in that war with the 101st Airborne. He had to fight these guys and knew where the weapons were coming from.

When we went into Cambodia, we greatly enlarged the war so far as we were concerned. We made a tremendous policy decision that I think the American people had a right to participate in.

Admiral MOORER. Yes, sir. But I don't think we enlarged the war. I think we reduced the war.

Mr. LONG. We were supposed to be out of Vietnam, but we are still in Cambodia.

Admiral MOORER. We don't have any combat troops in Cambodia.

Mr. LONG. But we are bombing in Cambodia, and that endangers American lives and costs money and fuel and all that kind of thing.

Mr. PASSMAN. If the gentleman will yield. Didn't going into Cambodia help conclude the war?

Mr. LONG. That is a matter of opinion.

Mr. PASSMAN. The record shows it had a lot to do with shortening the war. You certainly saved lives, did you not? Isn't the record sufficiently clear on that?

Admiral MOORER. Yes.

Mr. LONG. You may be quite right about that, Mr. Chairman. All I am saying is that we are a democracy. The American people do have a right and the congressional representatives have a right to participate in these decisions. We did not have a chance to participate in that decision in regard to the extension of the war to Cambodia. You are probably right so far as bombing the trails and all that. From a strictly military point of view it probably was an advantageous military move. But from the standpoint of policy and strategy, that is another question. Here I think the whole Congress had a right to participate.

EFFECT OF PUBLIC KNOWLEDGE

Mr. PASSMAN. Could I ask Dr. Long at this point what would have happened if the public had known we were developing the A bomb? You got the money through the Congress. You developed it and were ready to use it and you had less than 50 Members of Congress who knew anything about it. What would have happened if you had let the public in on the fact that we only had two of those bombs and if we had dropped both of them what would have happened? During war time there are certain things that you have to withhold from the American public.

Mr. LONG. Mr. Chairman, if I could interrogate the witness——

Mr. PASSMAN. Let's understand it's the prerogative of the chairman to keep this record straight, and I will do so when it's necessary. You proceed normally.

Mr. LONG. I might point out, of course, that that was a total war.

NEED FOR SECRECY IN WARTIME

We knew what war we were in. We weren't branching out into new wars and into new countries.

Secretary SCHLESINGER. I think in that case the invasion of North Africa, at which time the United States was not involved with the government of Vichy France, is something that is parallel to this.

Our point is that in wartime, secrecy must be maintained. I think you agree with that.

Your question, I think, goes to whether this was so widesweeping a policy decision that the confines of secrecy ought to have been reconsidered.

Mr. LONG. Exactly. I think you put it very well, Mr. Secretary. I suppose secrets do have to be maintained in war. The more all-out and total war it is, then probably the more total the secrecy should be, although I think Hitler ruined his country because he was able, under his system, to keep secrets. He got his country involved in a war that ruined his own country. He would have benefited, it seems to me, in talking over policy with the German equivalent of Congress. But that is quite a different matter.

Secretary SCHLESINGER. The point I wish to emphasize is that the Air Force people and the military people did what they were required to do by civilian control. They should not be credited or blamed in this exercise.

Mr. LONG. That is where we come up with a problem, because apparently some Senators don't feel that way. We have Senator Hughes accusing him of a deliberate lie and Senator Symington, I believe, is quite irate about it, although this is not expressed in explicit terms.

Secretary SCHLESINGER. I think he is not directing his irateness toward the Department of Defense in this matter.

Mr. LONG. I don't know who is guilty in this. All I do know is that we did bomb another country which we had never officially bombed before, and we presented the statistics as if we were bombing in Vietnam. That, to me, is quite a serious thing. While it might be justified as the chairman says, in total war, this was a long way from being a total war. This is a very small war from the standpoint of a threat to our total national security.

I would hope that we would keep these things in perspective. The idea that because you do something in a total war that you are justified in doing this in any kind of a war you get into is a distorted interpretation of national security.

FUTURE COVER STORIES

Whatever you call this, whether you want to call it a falsification or whether you want to call it erroneous statistical reporting, or whether you want to call it a coverup, or whether you want to call it a cover story, or a confining of information to those who are on a need-to-know basis, would you, as Secretary of Defense, agree to such a step again in the future?

Secretary SCHLESINGER. It would depend on the circumstances entirely.

Mr. LONG. Under the same circumstances?

Secretary SCHLESINGER. That is a difficult question to answer because the circumstances can never be the same.

Mr. LONG. All I am asking is in the same circumstances.

Secretary SCHLESINGER. You mean with the public attitudes that we had in 1969 and congressional attitudes that we had in 1969 as opposed to 1973? Or are you talking about the congressional attitudes of 1973?

Mr. LONG. I don't know that the congressional attitudes are very different now from then. More people want to get out of the war now than did then. So it would probably have been safer for you to have released the information then than now.

Secretary SCHLESINGER. I think in 1969 and earlier it was an accepted technique on the Hill that certain key committee chairmen be informed, and be consulted on their decision as to how widely knowledge should be spread throughout the Congress, and that this was acceptable to people who were not committee chairmen.

Mr. LONG. Would you now concede that a different atmosphere prevails and, given the new feeling in Congress and in the country, that you would pursue quite a substantially different policy?

Secretary SCHLESINGER. I certainly would recommend it, Mr. Chairman.

Mr. PASSMAN. Weren't you just on the edge of Cambodia? You were not way into the interior. You were bombing on the fringe?

Secretary SCHLESINGER. We were bombing sanctuaries that were being utilized by the North Vietnamese along the edge of the border.

Mr. LONG. To use an illustration that the chairman has used many times, isn't that like being a little bit pregnant? If something took place like this without your knowledge and it came to your attention, would you make it public?

Secretary SCHLESINGER. In response to the first part of your question, if something were carried on within the Department of Defense without my knowledge, that would not be a tolerable act. That would be intolerable to me and I would punish whomever was responsible.

Mr. LONG. These are two things, of course. One was the bombing, which you did under orders. The other one was coming up with a set of statistics which was very misleading, at least so far as many Congressmen are concerned.

Secretary SCHLESINGER. And it was an error. I keep emphasizing the fact that that was a mistake.

Mr. LONG. Would you undertake to fix the responsibility and discipline the person who was responsible for that?

Secretary SCHLESINGER. Yes, indeed. Yes, indeed.

Mr. LONG. Thank you very much, Mr. Secretary. This has been very useful and very informative.

Are there any circumstances concerning security assistance (all transfers of resources, including those forms which require no appropriation, such as excess defense articles) in which you would consider falsifying reports on the amount of aid furnished—as was done concerning Cambodian bombing in 1969–70?

Secretary SCHLESINGER. There was no falsification of the record with regard to the B–52 bombing in Cambodia, and there are no circumstances in which we would falsify reports on the amount of aid furnished. As I stated earlier, in the case of the 1969–70 B–52 operations over a small segment of Cambodia, U.S. forces in South Vietnam were engaged in battle with an enemy who used this area as a sanctuary. The operations were necessary to save American lives but could not be made a matter of public record for diplomatic reasons. No such circumstances would pertain with regard to security assistance.

In this regard, it should be noted that military assistance at the Governments of South Vietnam and Laos is not part of the security assistance program but is funded by the appropriate services as part of the defense budget.

LATIN AMERICA

Mr. LONG. The administration foreign aid bill proposed to remove the ceiling on military cash sales to Latin America and to raise the ceiling on military credit sales and military grant aid to Latin America.

The administration argues that if the United States doesn't sell these countries arms, someone else will.

Has the United States tried to negotiate an agreement with other arms suppliers not to sell arms to Latin America as a sort of arms nonproliferation treaty?

Secretary SCHLESINGER. The United States has looked to the Latin American nations to take the initiative in limiting the introduction of armaments into the region. The Latin Americans have proposed several arms control measures from time to time, beginning in 1902. The most recent initiative by Colombia in 1971 resulted in approval by the OAS General Assembly in 1972 of a general resolution interpreting a declaration made by the Latin American Presidents in 1967 to the effect that it was the aim of the Latin American Governments to apply maximum resources to economic and social development and to restrict military expenditures to those indispensable to the requirements each state deems necssary for its own security. Beyond this very general sentiment of intention, the Latin American countries have not been able to agree to a more specific or binding commitment.

The United States has demonstrated support for arms control in Latin America and has continued to welcome initiatives from the region. It should be recognized, however, that the Latin American nations view the maintenance of a military establishment with modern

armaments as a basic appurtenance of national sovereignty. Any attempt unilaterally by the United States or multilaterally with other arms-supplier nations to restrict their quest to modernize their military forces would be viewed by the Latin American nations as paternalistic and as an unnecessary interference in their internal affairs. We will nevertheless continue to support proposals for regional arrangements as we have done in the United Nations and other regional fora, including the OAS, to seek to build an international consensus on the transfer of conventional arms.

Mr. LONG. Why don't we just cut off all our aid if they continue to buy arms from other suppliers?

Secretary SCHLESINGER. Despite the recent upsurge in military equipment purchases by the Latin American nations, the region expends an average of less than 2 percent of its GNP for military purposes. This is the lowest total of any region of the world.

We believe that the suspension of aid to any Latin American country in retaliation for their purchase of military equipment from other suppliers would be viewed as unnecessary interference in their sovereign affairs.

Recent history has indicated that unilateral attempts to restrict the importation of weapons to levels below those which the Latin American nations perceive to be necessary are not successful. Rather, they cause unnecessary irritations in our mutual relations, often increase rather than decrease the levels of sophistication of weapons which they finally acquire, and divert Latin American military purchases to other countries to the detriment of our balance of payments.

FUNGIBILITY OF FUNDS

Mr. LONG. Is it not true that given fungibility of funds, there is no way to prove that our economic aid to Latin American countries does not go for military purchases or does not make possible the use of other resources for military purchases?

Secretary SCHLESINGER. I am not aware of any conclusive data demonstrating the diversionary effects of Latin American military expenditures on the rate of economic growth. The bulk of their military expenditures have been absorbed by personnel costs, as in the United States, which has left only modest sums for major material procurement. In addition to their traditional military functions, the military in many Latin countries participate actively in civic action programs promoting economic and social development. Since the percentage of GNP devoted to military expenditures has averaged approximately 2 percent for the past several years, we tend to believe that the reallocation of this small amount to civilian purposes would have little overall effect on Latin America's economic growth.

MIDDLE EAST

Mr. LONG. Mr. Secretary, do you feel that the proposed arms sales to Saudi Arabia and to Kuwait will provide "support for indigenous regional collective security efforts * * *", a quote from a statement by Assistant Secretary of State Joseph J. Sisco June 6, 1973, before House Near East Subcommittee. Is not the real purpose of these arms sales to aid our efforts to obtain a sufficient supply of crude oil from

these two major suppliers and secondly, to aid our balance of payments?

Mr. SCHLESINGER. Dr. Long, I don't think it's quite that simple or clear cut. Currently, the United States obtains only a small percentage of its oil imports from Middle East sources but there's no question that our interest in Middle East oil supplies is increasing substantially. The motivation for U.S. arms sales in the Persian Gulf area, however, is the product of a more complex set of factors.

First of all, arms sales, although an important element, is only one instrument in our relationships with states bordering the Persian Gulf. There are important political and economic elements as well.

Second, we are not forcing our arms on these nations, but rather, responding to their requests. This is consistent with our policy to encourage friendly states in the area to assume the responsibility for their own defense and to encourage the larger states in the area to cooperate among themselves and with the smaller states to assure the collective security of the area.

Third, in the case of Saudi Arabia, the supplying of U.S. arms is by no means a recent development. For example, there are substantial Saudi Arabia defense programs involving U.S. commercial or governmental assistance which date well back into the 1960's, well before the current surge of interest in energy problems. Currently, the Saudis are deeply concerned over the security threat posed by Iraq and the PDRY, both armed and supported by U.S.S.R. Our programs clearly demonstrate our interest in their security and provide support for the Saudi role in the security of the area as a whole.

In the case of Kuwait, we have been responding to their initiative following the British decision to end its protective treaty relationship and to withdraw its operational military forces in the area by the end of 1971. The Kuwaitis first came to us in the summer of 1971, seeking U.S. assistance in strengthening their defenses. We first sent a survey team to Kuwait in early 1972. And although there have been rather intensive negotiations this spring and summer, again in response to their initiative, no contracts have yet been signed.

Concerning balance of payments as a causative factor in our arms sales—these sales do, of course, assist in coping with the adverse balance of payments or BOP, but I know of no case in the entire Middle East area in which the BOP has been the principal element, or even a major element, in a U.S. decision to sell. Rather, these decisions have been based on a combination of political and military factors; the BOP benefit has been a bonus.

In summary, I would say that a number of important and interrelated objectives form the basis of U.S. policy in the Persian Gulf area and access to oil is certainly one of these.

CAMBODIA

Mr. LONG. Is it not likely that the present Cambodian Government will fall to the Communist forces. If so, will not all our military aid fall into the hands of the Communists—all the military supplies that the United States has furnished?

Mr. SCHLESINGER. We cannot predict whether or not the Government of the Khmer Republic will be able to continue its resistance. It is making a serious effort to defend itself and we are trying to provide

it the means to do so. More than half the military assistance we are furnishing the GKR consists of expendables such as munitions which are used up at a rapid rate. In other cases, supplies can be destroyed before being captured.

CREDIT SALES

Mr. LONG. Please provide for the record the following table.

(*a*) Projected FMS (credit sales) repayments by country from fiscal year 1974 through fiscal year 1995 separated into principal and interest with the assumption that FMS credit sales will continue at the levels requested for fiscal year 1974 until 1995.

(*b*) Then subtract repayments from credits in a separate column, showing positive and negative amounts.

(*c*) Show in a separate column the FMS credit sales to be granted each country under the assumption in (*a*).

(*d*) Do not include Israel in this table but make a separate table for Israel with the following information:

(1) Total FMS credit sales by fiscal year since beginning of the program. After fiscal year 1973, continue FMS credit sales at the level of $300 million per year up to 1985.

(2) Repayments by fiscal year from the beginning of the program through fiscal year 2000—separated into principal payments, interest payments, and total repayments.

(3) Outstanding balance in the final column.

Secretary SCHLESINGER. The information requested is contained in the following tables.

[The tables follow:]

Mr. LONG. Please provide for the record the amounts of military cash sales (government to government) for which payments are more than 90 days late—by country.

Secretary SCHLESINGER. I will provide the information for the record. To put the information in perspective, I should point out that the United States has collected somewhat over $12 billion of payments for military cash sales since the inception of the program. Also, we do not view late payments for cash sales as arrearages, in the sense that we define the term for deliquencies for credit sales, for two main reasons: First, cash sales do not involve a predetermined arrangement as to the specific date when a payment is due. Instead, we submit thousands of individual billings each year for funds as they become due in order to meet progress payments or payments for materiel shipments, and the magnitude of this system results in a certain amount of unavoidable confusion. Second, in most instances, countries will have made payments for certain arrangements in advance of due dates, while they are being carried on our books as overdue against certain other arrangements.

To give an extreme example of this latter point, there is one country which invaribly appears on our listings as being overdue by amounts averaging several hundreds of thousands of dollars. This figure represents the value of overdue billings against specific cash sales transactions.

On the other hand, the value of undisbursed funds in the trust account for this country averages over $50 million. This figure represents the amount of funds which the country has paid, for specific transactions other than those included in the overdue billing listing, in advance of the time that the funds were due for disbursement.

Mr. LONG. Please provide for the record the total payments for military cash sales (government to government) outstanding at the present time.

Secretary SCHLESINGER. There have been about $18.1 billion of military cash sales arrangements made, and the United States has received $12.3 billion of payments as of June 30, 1973. Outstanding amounts which will be due subsequent to June 30, 1973, pertaining to existing sales arrangements, therefore approximate $5.8 billion.

Mr. PASSMAN. Thank you, Mr. Long.

Mr. Miller?

JAPANESE ASSISTANCE

Mr. MILLER. Mr. Secretary, you have stated in your testimony that Japan has paid for all her military forces for many years.

Secretary SCHLESINGER. Yes, sir.

Mr. MILLER. At the present time we have gone so far that Japan owns a part of our national debt—if I am not mistaken, a little over $3 billion. In that part of the world we are helping many countries. Do you find that Japan is also helping those same countries?

Secretary SCHLESINGER. The Japanese are giving some economic assistance to some of the countries that we are helping. I think they are giving aid to Vietnam and some aid to Indonesia. I am not aware of the extent of their assistance program.

Mr. MILLER. Is it possible for us to find out what amount, whether it be the percentage, or the totals that would be given?

Secretary SCHLESINGER. We will try and find that figure and supply it for the record.

Mr. MILLER. If we could have the military assistance and also the total economic assistance for the record, I would appreciate that, Mr. Chairman.

[The information follows:]

JAPANESE FOREIGN ASSISTANCE

As a matter of policy the Government of Japan does not participate in military assistance programs. The Japanese have made steady progress, through both multilateral and bilateral channels, in their foreign economic assistance programs to the point where they are second only to the United States in terms of total resource flows to the less developed countries. Total Japanese foreign assistance is now close to the U.N. goal of 1 percent of GNP. It was announced on July 30, 1973, that the Government of Japan will give $50 million in aid to the Republic of Vietnam this calendar year ($20 million humanitarian grants and $30 million primarily commodity loans). Project aid is also, in effect, for Thailand, Burma, and Indonesia. The Japanese Government is committed to a policy of improving its performance, increasing the volume of aid in general, and easing its terms and is specifically committed to a large-scale contribution to the reconstruction effort in Indochina.

Japanese development assistance began in the 1950's in the form of reparation grants and export credits. In the 1960's, development loans and technical assistance became increasingly important, and Japan began to finance infrastructure projects in certain countries in addition to extending commodity aid. After steady progress throughout the 1960's, Japanese official development assistance achieved an increase of over 70 percent between 1968 and 1972 from $356 million in 1968 to $611 million in 1972, making Japan the fourth largest DAC donor. Japan's total resource flows to less developed countries were 0.93 percent of GNP in 1972 as compared to 0.64 percent for the United States. In ODA, however the United States at 0.29 percent of GNP in 1972 outperformed the Japanese 0.21 percent.

PERSIAN GULF SITUATION

Mr. MILLER. I am very much concerned about what we spoke of earlier; that is, the petroleum from the Persian Gulf area and how our military assistance program may continue to aid us in this regard. As we know, the type of country and economy that we have today operates on petroleum and fossil fuels. Today we have a problem.

I read in your testimony—I don't believe it listed the exact amount—some one-half would be allocated to Israel.

Secretary SCHLESINGER. The $760 million is nearly one-half of the new obligational authority requested for foreign military sales.

Mr. MILLER. Something in excess of one-half. Now we have the Arab——

Secretary SCHLESINGER. Foreign military sales credits and guarantees.

Mr. MILLER. Credit, yes. But we do have the problem of the Arab countries and Israel at the present time. In that area, of course, we have much of the petroleum. Do you feel that we are upsetting the balance and could have our petroleum cut off because of some of the military assistance that may be offered to some of the countries in that area?

Secretary SCHLESINGER. I think we must recognize that the politics of that area are rather awkward from our standpoint. Undoubtedly the tension between Israel and the Arab States is not conducive to absolute security of the flow of oil to the Western World.

Mr. PASSMAN. Would my friend yield just briefly?

Mr. MILLER. Yes. I had more to add.

Mr. PASSMAN. I want you to continue.

ACHIEVING AID OBJECTIVES

Mr. MILLER. We are not criticizing you or military assistance in any particular country, but the one thing we are interested in is the flow of oil toward our shores. I am aware of the volume of oil that is coming now from that area and I know we will be in trouble if we do not continue to have that oil.

I would hate to see us have the military assistance upset our economy. I have a question that I am not sure just what it means, but perhaps, Mr. Secretary, and Admiral Moorer, you can straighten it out for me.

In your testimony that you have presented here for us today there is one place on page 10, Admiral Moorer, you state:

> Finally, fostering favorable attitudes toward the United States, its policy of encouraging recipients to pursue military objectives compatible with U.S. military strategy.

There you are speaking of the military assistance program, as I understand it.

> Fostering attitudes and encouraging those countries to pursue military objectives compatible with U.S. military strategy.

Then I see in the Secretary's statement on page 7, the statement that it cannot be directed to bind the support of our friends and allies for U.S. advice and leadership even on security issues. They seem to be diametrically opposite and I am wondering what——

Admiral MOORER. No, sir, I do not agree they are opposite. I agree with the Secretary. You cannot guarantee it by giving aid. On the other hand, the fact that you do give aid, I believe, facilitates what I referred to earlier as cooperation insofar as encouraging recipients to pursue military objectives compatible with U.S. military strategy. This spills over into what we call the total force concept. This is a concept which considers the military resources of our allies to supplement the capabilities of the United States in meeting certain common strategic requirements such as maintaining freedom of the seas, meeting treaty commitments, and things of that kind.

That is what I was trying to say. This is not in conflict with what the Secretary says, in my view. It does foster favorable attitudes. It does not buy or guarantee the attitudes. I think it is a question of degree.

Secretary SCHLESINGER. What one gets is a more sympathetic audience. As the chairman pointed out, a very substantial amount of equipment has gone to India. That did not guarantee the long-term relationship between India and the United States that might have been anticipated. The Soviets invested a vast amount in Egypt and Indonesia and they thought they might be buying support there. There is nothing that can guarantee it.

What it does bring is a feeling of comity between these countries and particularly between ourselves and Latin America, which is the point Admiral Moorer was addressing himself to.

Mr. MILLER. I read it a little differently but I can understand the possibility of this sort of thing happening and leaving the impression with us of being diametrically opposite.

Admiral MOORER. I am sorry, sir. It may have been a poor choice of words on my part.

COMMUNIST BLOC ASSISTANCE

Mr. MILLER. I just wanted to clarify it if you had other reasons. That was the purpose of the question. I had one other question. As I recall, Mr. Secretary, earlier in the day you were talking about the Communist bloc countries supporting three major countries, or at least providing the majority of their aid. Am I correct that you said Turkey?

Secretary SCHLESINGER. No, sir. I mentioned primarily Egypt, India, and North Vietnam in reference to the total volume. Syria and Iraq were mentioned as secondary. Turkey has received no assistance that I know of from the Soviets.

Admiral MOORER. I might add that people overlook the fiasco the Soviets had in Indonesia, where they supplied the TU-16 bombers, guided missiles, and cruisers, and the whole system collapsed.

Secretary SCHLESINGER. Or one might add China. There was a very substantial contribution.

COMPETING WITH COMMUNIST ASSISTANCE

Mr. MILLER. What I was really leading up to is the fact that we are aiding some countries and apparently Russia would also be offering military assistance to those same countries. We had some testimony

on that earlier. Should we be attempting to outbuy them, if that is the proper word, or offer more assistance? This came up earlier as I recall where a number of nations were receiving military aid both from our country and from the Soviets.

Secretary SCHLESINGER. I think in the case of any nation that our military assistance program should be very carefully tailored to specific objectives. If I may go off the record——

Mr. PASSMAN. Yes, Mr. Secretary.

[Discussion off the record.]

Mr. MILLER. I can see each year it is stepping up where we would be competing with another country and the Government of Chile would be in a position to go to the highest bidder.

Secretary SCHLESINGER. I think your question is right on the mark, Mr. Miller. I think the circumstance you envisage is one in which we should not become engaged. What we are talking about in this specific case is a very limited aid program ———. But we and the Russians, I think, ought not to get into this game of trying to outbid one another ———. I think the chairman hinted earlier that something of this sort may have occurred in the case of India. In that case, we backed out.

Admiral MOORER. I think the important thing here is the attitude of the military in Chile ———. They are constitutionalists. As the Secretary says, they remain apart from the political activity. For instance, they have expressed a desire to buy the F–5 aircraft. They have some equipment we have supplied by grant or sale in years gone by. They still require spare parts for the equipment, if they are going to continue to operate it. The Soviet aid has been offered and administered through Allende. We have the Soviet aid coming into the civilian political arena, ———. But I agree with you, it has to be played like an organ.

Mr. MILLER. It does, indeed. It is a tight wire thing. I can see our military assistance going up and up until there would be no limit.

Admiral MOORER. This is cash and credit. It is not grant aid.

FUNDING SPARE PARTS PURCHASES

Mr. MILLER. You brought up a point about the spare parts. We do have many planes around the world in a number of nations. I understand that we do stock spare parts for those planes somewhere in the AF in order to keep most of those planes in operation. Is that a part of the military assistance budget we are talking about today?

Admiral PEET. In some countries, it is.

Admiral MOORER. They have to buy them.

Admiral PEET. As a general rule, 10 percent of the acquisition value of the airplane is spent in spare parts support each year.

Mr. MILLER. Apparently our Air Force would purchase those spare parts, inventory them, and have them available to go. I have been told by the Air Force that they can furnish most of the spare parts within hours. I would assume we are saying that it would be necessary for the Air Force to maintain an inventory, because I can hardly see the private companies maintaining that inventory. It would be terribly expensive for them to attempt to do this.

Admiral MOORER. Yes, sir.

In some cases the Air Force is operating the same kind of aircraft. This whole thing is based on planning factors associated with the number of hours that each aircraft is operational, wherever it happens to be, and is going to fly. They know about how.

Spare parts will be applied to keep these aircraft operating at that level. It is on a cash and credit basis that these countries that have received the aircraft can purchase the spares that they consume.

MAINTAINING SPARE PARTS INVENTORY

Mr. MILLER. We are still not getting back into this large inventory that is apparently somewhere maintained by our Air Force. We are not talking about a few hours; we are talking about a number of billions of dollars that would be necessary in order to maintain the amount and proper kind of engines.

Admiral PEET. One of the most important reasons foreign countries buy from us is that we have the particular item in our inventory and are able to provide the logistics support for it.

In a very few exceptional cases, we maintain an inventory of equipment that we don't have in our own services. However, we do not do so when it is no longer economically profitable or advisable.

Mr. SHRIVER. Does that run into billions of dollars?

Admiral PEET. Not in this category. The billions of dollars would be for equipment we have in our inventories—the F–4's and the A–7's and items of that sort. Other countries are able to take advantage of the fact that we have a significant spare parts logistical base for those aircraft, and they buy.

Mr. MILLER. Let us assume that we would sell F–4's to a country, and 10 percent would be allocated for spare parts, and they would have the F–4's for many, many years. When they are sold to that country, doesn't the contract state that we would have spare parts available for x amount of years in the future?

Secretary SCHLESINGER. No.

Mr. MILLER. Then it would be necessary for the military to inventory those parts?

Secretary SCHLESINGER. No, sir, there are no arrangements of that sort.

What may be the case, for example, is that if there is an ally that is using U.S. aircraft, and if we believe that that ally has too thin an inventory and we anticipate circumstances in which we would be involved with them, then we may have inventories of certain types of hardware that we would be prepared to rush in if war came. But these are not the normal circumstances. These would be extraordinary circumstances.

Admiral PEET. In some cases, we suggest to them that they buy at least 2 years of spare parts support with their initial purchases.

Mr. MILLER. I cannot visualize them not wanting this in the contract.

In other words, if you purchased from the United States a military aircraft that we are speaking of, you would want it stipulated in the contract that you would be able to keep that aircraft in operation more than 2 years. So I am wondering whether a part of the funds that we are talking about in the program today would be that type of support of inventory that may be maintained in this country to be able

to send out rather hurriedly around the world all the necessary parts that could in effect amount to billions of dollars.

Secretary SCHLESINGER. I don't think it is a substantial sum in any event, Mr. Miller. But we would have to go through and see to what extent some of the inventories maintained by the U.S. military establishment may be indirectly related to the support of the forces of foreign countries.

I am not sure that there is a significant sum here but we should check in order to get an appropriate response to your question.

[The information follows:]

MAINTAINING SPARE PARTS INVENTORY

Spare parts in the amount of approximately $272 million are currently carried in the inventories of our military departments in anticipation of foreign country requirements. For countries purchasing their requirements from us, these inventories (in the amount of about $248 million) have been bought and paid for in advance by those countries. In the case of grant aid recipients, the inventories (in the amount of about $24 million) have been purchased with departmental funds. No MAP funds are being requested or used to purchase spare parts in anticipation of foreign country requirements.

Mr. MILLER. I would appreciate it very much. Thank you very much. Thank you, Mr. Chairman.

INDONESIAN PROSPECTS OF PROSPERITY

Mr. PASSMAN. Thank you, Mr. Miller. I was critical of Indonesia's aid, having some knowledge of the tremendous amount of military assistance being given by Russia to Indonesia. They have a new President and evidently he is energetic and possesses great integrity and they are going great guns out there. The Ambassador just happened to come to my office this morning and we were talking about the potential in Indonesia. I was surprised to learn that their No. 1 export is fossil fuel, and it is growing all the time. Their No. 1 export for earnings is crude oil.

Admiral MOORER. Yes, sir.

Mr. PASSMAN. They just discovered recently an island that is almost sinking with nickel. It is the largest nickel deposit that the world has ever known. Another island is almost solid copper. The ore content is 30 percent copper as it comes out of the ground. So I guess the potential in Indonesia conceivably is as great as the United States. It is unbelievable what they may have there if they have a stable Government in another 25 years.

Mr. MILLER. At that point could I add one thing?

Mr. PASSMAN. Certainly.

FMS REIMBURSEMENT BY TRADE

Mr. MILLER. Mr. Secretary, has it been considered that we could make a trade, instead of actual cash sales, whereby we would send, as an example, aircraft or ships, but in return we could collect with fossil fuel or the minerals and stockpile in this country the minerals and fossil fuels and the natural resources that we seem to be depleting so fast?

Secretary SCHLESINGER. To my knowledge that has never been explored, Mr. Miller.

Mr. FORMAN. We used to have the authority to do that, sir, but Congress repealed that authority in 1967.

Admiral MOORER. It is illegal.

Mr. MILLER. Then we had better give it consideration and put it back on the books.

Our economy operates in such a way that this highly industrial nation is running on oil and we are using up our resources so fast so that we better look to our stockpiling.

Right now as we are sending the military hardware, we better have something back in return that will be usable in the future.

Mr. PASSMAN. I hope we do go back to it.

Mr. MILLER. Thank you, Mr. Chairman.

Mr. PASSMAN. Mr. Roush.

Mr. ROUSH. Thank you, Mr. Chairman.

OBJECTION TO MILITARY ASSISTANCE

Mr. Secretary, this is the first year I have had the pleasure of serving on this subcommittee, and I have grown to appreciate my chairman very much. As time goes on, I see such a marked difference in our philosophy I wouldn't want the record to in any way indicate that I share all of his philosophies, although I respect them, because he is indeed a great chairman. I am not a "wild-eyed liberal" who is a newcomer to the Congress. I have been here quite a while. Over that period of time my feelings and convictions have been tempered, I think, a great deal. Perhaps the program under the purview of this subcommittee which gives me the most difficulty is the military assistance program.

I wonder if perhaps we have not come to the time in history where this country should be promoting something other than military force as a means of solving our problems. I find it very, very difficult to understand why—nor do I find a satisfactory explanation in your testimony—we should be giving military assistance to many of the countries to whom we are giving military assistance.

I do not understand why we should give military assistance to Ethiopia and Tunisia in Africa. I do not see that military assistance contributes to the safety and well-being of this country, nor insures to our benefit.

I find it just unacceptable, nor can I find a substantial rationale, for military assistance to the countries of South America.

Secretary SCHLESINGER. Mr. Roush, let me take some moments to try to answer your question. I think there will always be differences of opinion with regard to specific countries which are recipients. I think that is healthy as long as those differences of opinion remain. Our case where there is unanimity is when there are nations clearly under attack and we feel obligated to support them. In other cases there are nations that are clearly unfriendly and hostile and nobody argues about providing support. Then there will be a collection of nations in between in which one person will say this country deserves it, and another person will say that it does not. Now may I go off the record for a minute?

[Discussion off the record.]

POSITIVE EFFECTS OF AID TO LATIN AMERICA

Secretary SCHLESINGER. In the case of Latin America, I think the reasons for this have been mentioned earlier. We give very little grant aid in Latin America.

Admiral PEET. Less than $10 million in materiel grant aid.

Secretary SCHLESINGER. It is a trivial sum in Latin America. Mostly what we are talking about in Latin America is credit for sales. One can well argue that the United States is an economic beneficiary of such provision of assistance. I think that Mr. Conte and Mr. Long have raised questions in the past whether or not this is of economic benefit to the United States, which I think both Mr. Conte and Mr. Long would agree with, although I should allow them to speak for themselves. There may be political drawbacks to providing assistance. It is sometimes argued that if other nations want to be suppliers of hardware, the United States has a political obligation not to provide that hardware. The argument on the other side, which we endorse, is that hardware will be provided in any event.

The United States benefits first in terms of the economic gains it obtains in the balance of payments; and, second, in terms of maintaining influence, ———.

Mr. ROUSH. May I interrupt for a moment?

In your testimony you say U.S. economic determinations do not serve as a basis for determining whether or not to extend credit military sales. You go on to justify such a reason. You just stated that this was a primary reason.

INFLUENCING LATIN AMERICAN INVESTMENTS

Secretary SCHLESINGER. The word you used there was "determine" and I think that was one of the reasons. But the principal reason, it seems to me, is the whole pattern of association between ourselves and Latin America. There are governments in Latin America, whether rightly or wrongly, whether they misperceive a threat or whether they are doing certain things for prestige purposes, that are determined to have enough military hardware.

Mr. ROUSH. Isn't part of our obligation to determine whether or not it is right or wrong for them to receive military assistance from the United States? We should not depend merely on their perception on such matters, should me, Mr. Secretary?

Secretary SCHLESINGER. I don't think it is a question in this case of military assistance, in the sense that you are using the term, because there is a return of the resources. You used the phrase "right or wrong"——

Mr. ROUSH. You used it, Mr. Secretary.

Secretary SCHLESINGER. No; I think you used it.

Mr. ROUSH. You used it before I did. That was my frame of reference.

Secretary SCHLESINGER. I may have said it earlier. I think along with the current view that the United States has no obligation to be the world's policeman, that we should be fairly restrained in deciding that we should be the world's moralist, also. We ought to be very reticent about deciding what is right and wrong for other countries.

Whether it is wise or unwise for them to invest their resources in this way is something on which we have spoken out.

I think that the U.S. Government makes it clear in many of these cases that we do not think that it is a wise investment of their resources. but that these are sovereign governments and they decide on their own policies. In many cases everything indicates that it would be better from the standpoint of their public benefit to invest their resources in education and flood control.

If there is a decision by the government to purchase military hardware, then it is, in our judgment, preferable that the United States be the supplier. But we are not urging them—and just this very morning Admiral Moorer will confirm that I stated very clearly to the people in the Department that we ought not to be out there urging other nations to buy arms that they could ill afford.

Mr. ROUSH. I am glad to hear you say that.

Mr. LONG. Will the gentleman yield?

MAAG'S AS SALESMEN

Mr. ROUSH. Yes, I yield.

Mr. LONG. I think you believe that and I am sure that that may be the top policy. As a practical matter, I know of instances where our military missions are basically salesmen for American weapons and are persuading countries to expand their military. I can name a country where I was told that by members of the military mission several years ago, and they felt very contrite and unhappy about it.

Secretary SCHLESINGER. I think that is correct. I think Secretary McNamara, as you will recall, decided that it would be wise in terms of American policy to attempt to balance what was called the DOD balance of payments by very forthrightly pushing sales and huckstering other countries to acquire military hardware. I myself regard that as an inappropriate policy.

Mr. LONG. I am glad you do.

Secretary SCHLESINGER. And we ought not to do that.

NEED TO COLLECT SALES CREDITS

Mr. LONG. If I can pursue this subject just a bit longer, you said something about the balance of payments. You are an economist and I might say you are a very well known economist—before I got into this business and stopped keeping track of economists. You came from a very distinguished economics department at the University of Virginia. I am sure you must realize that you don't improve your balance of payments when you sell products for IOU's.

Secretary SCHLESINGER. You don't improve it. You don't improve it as much immediately as if you have cash sales.

Mr. LONG. Our problem is to get some cash. We have plenty of IOU's all over the world. We have sent out $80 or $100 billion. We have IOU's and we have money all over the place.

Our problem is to get cash now to help with our balance of payments. This we do not accomplish by selling weapons on long term credits.

Secretary SCHLESINGER. I think that is right.

What we should be attempting to do, Mr. Long, is to move from grants to credit when we can, to move from credit to cash when we can, to move from longer term to shorter term credit when we can, because of the reasons that you specify.

I think the whole tenor of this program, particularly on the grant side, has been in that direction.

EFFECT OF MAP ON BALANCE OF PAYMENTS

Mr. ROUSH. My next question was, what effect does or will the military assistance program have in fiscal year 1974 if we project it on our balance-of-payments situation?

Secretary SCHLESINGER. I think we can give you the effect of this. Of course, on the balance of payments taken by itself, it is beneficial.

The benefits in this narrow economic context—and I think we agree that the narrow economic context was not the determinant—stretch over a number of years. This year the U.S. balance of payments is improved because of sales that we made in the sixties, or in 1972. You must view the whole pattern. On balance, of course, the provision of this equipment, through sales, whether cash or credit, is going to be beneficial to the balance of payments.

Mr. ROUSH. I yield to the gentleman.

UNDERSTANDING THE PROGRAM FORMAT

Mr. PASSMAN. You know our philosophy is not as far apart as you think. I lack an awful lot of being in favor of a lot of military assistance. I realize we would drive them in all probability to the European market. I am talking about Latin America. Every year the justification format changes and you have to work overtime to try to put it together. What do we see on the surface? The Department moved training out of grant aid. If you look at the justifications you think that the grant aid has dropped from $16,400,000 to $10 million. But that is not so. If you put the same thing in the 1974 request then it is up to $20,665,000. It is way above your training for fiscal 1973. Isn't that correct?

Admiral PEET. Yes; we did separate training this year.

Mr. PASSMAN. You separated it. You usually carry your training in one package?

Admiral PEET. Yes, sir.

Mr. PASSMAN. Your book shows there has been a substantial reduction whereas in reality there has been a substantial increase. You move from $16 million to $20,665,000. These are things that make our task rather difficult. You can defend military credit sales if we were not filling the till from the back door, but you move into the economic sector of your aid program for Latin America and you find this year it is almost double the request of last year.

Much of it is moved over into the multilateral organizations. We find this year there is $1,234,380,000 for multilateral alone for Latin America before you get into bilateral. If you are going to permit them to take out of their resources dollars to pay cash or terms for military equipment and we are going to triple the amount of economic aid, then what do you wind up with? You wind up with a can of worms that it is almost impossible for any of us to understand or digest. I know that

I have stated these statistics correctly for the record and we will do a lot of discussing of this thing before we ever mark this bill up, I hope. I thank the gentleman for yielding.

EXPLANATION OF SECTION 514

Mr. ROUSH. Mr. Chairman, my next question I wanted to direct to Admiral Moorer, with regard to section 514: In your testimony you say, "* * * which requires a 10-percent payment to the United States for grant aid and excess defense articles." I am not familiar with the statute, but I want to be clear on it. Do I understand that even for grant aid they must pay us 10 percent?

Admiral PEET. That is correct.

Admiral MOORER. That is right, with a few limited exceptions.

Admiral PEET. In the House version of the fiscal year 1974 legislation, it is deleted; but it is a requirement for 1973.

Mr. ROUSH. When we refer to grant aid we are referring to military grant aid.

Admiral MOORER. The military assistance program.

Mr. ROUSH. In other words, when we list these various military assistance programs, and we have so much in grant aid to Cambodia they have to provide a payment of 10 percent of so many million.

Admiral PEET. There is a waiver for Cambodia. Where we have base rights, and where we are involved in action such as Cambodia, the requirement is waived.

Mr. ROUSH. When you refer to excess defense articles, are you referring to credit sales?

Admiral PEET. No, sir.

Secretary SCHLESINGER. That is military equipment that has been declared excess to U.S. mobilization reserves and we can provide that to other countries.

Mr. ROUSH. Does the statute also include credit sales? I gathered from your testimony that it did. It does not?

Mr. FORMAN. This 10 percent you are talking about relates solely to the grant program which consists of the following three elements: The grants of nonexcess defense articles, grants of excess defense articles, and grants of training.

Mr. ROUSH. Thank you very much.

I do not see anything wrong with it. I don't see how that is dictating how they should run their national economy, and I don't see how in the world it could damage a friendly relationship when we are doing so very, very much for them. I just don't see how that could be too much of a deterrent, and that if they consider it a deterrent, it seems to me it is just an indication that they want a little more than we are giving them. I don't feel unhappy about such a provision in the law.

Secretary SCHLESINGER. I understand your point, Mr. Roush. As I indicated earlier, I think this is particularly mettlesome in the case of education and training. If we invite a Latin American officer to come to Fort Leavenworth for the year as part of the education and training, it is a point of some dispute, particularly within Latin America, that we in effect require them to put up 10 percent of the money for a guest. It seems to vitiate our hospitality. I think there is the area where there is the greatest criticism.

Mr. ROUSH. We consider them a guest, I agree. I don't think we should be considering them a guest. I would place them in an entirely different category than I would a guest.

Thank you, Mr. Chairman.

Mr. PASSMAN. Mr. Coughlin.

CONFUSION OVER PROGRAM PRESENTATION

Mr. COUGHLIN. Mr. Chairman. I will be brief. I gather we have a vote coming on. I must say some of the presentations confused me somewhat because we have figures for Cambodia but not for Laos.

Secretary SCHLESINGER. Laos and South Vietnam are part of the MASF account in the Defense Department budget that does not go through this budget.

Mr. COUGHLIN. There is a justification for $311 million for Laos Is that the total aid for Laos?

Secretary SCHLESINGER. The total for NOA for MASF is $1.2 billion. That is not in the MAP.

Mr. COUGHLIN. Cambodia is.

Secretary SCHLESINGER. That is right. Cambodia is in the Security Assistance Budget.

Mr. COUGHLIN. Why are these two countries placed in different assistance categories?

Secretary SCHLESINGER. That was a decision by Congress some years ago.

The initial authorization was for Vietnam, in which we were then fighting. Laos and Thailand were added later to the MASF account along with South Vietnam. A year ago Thailand was removed. Laos and Vietnam for a year at least will continue to be part of the MASF account. Where it will be a year from now is anybody's guess. But Vietnam and Laos are not included here in the MAP request.

RETURNING MASF TO MAP

Mr. SHRIVER. I believe there is something in the new Foreign Assistance Act to bring it back in.

Secretary SCHLESINGER. When it would be returned has been the subject of some debate. Ultimately it is quite reasonable to return to the MAP account.

Mr. PASSMAN. Incidentally the bill the Foreign Affairs Committee is reporting out this week will take care of that. I think both Vietnam and Laos will be returned to this committee.

Admiral PEET. I think MASF funding might be extended for 1 more year.

REQUEST TO DECLASSIFY SALES FIGURES

Mr. COUGHLIN. The final question I have is: In determining the amount of American military hardware that is flowing to various parts of the world, the portion that is the result of direct cash sales is really quite significant. If you look at Saudi Arabia we show a $20 million foreign assistance figure. But we have a ——— cash sale. May I ask if there is any reason why the total amount of these cash sales and commercial sales cannot be declassified so that this whole thing can be put in some perspective?

Secretary SCHLESINGER. I believe some of those figures are declassified.

Mr. COUGHLIN. They show them all as classified.

Secretary SCHLESINGER. I don't know if any are classified.

Admiral PEET. They are only classified when they pertain to cash sales to specific countries.

Mr. COUGHLIN. Is there a way to declassify figures for specific countries so you know how much American paraphernalia is going to a particular country?

Admiral PEET. They are estimates, and we are reluctant to reveal those estimates as to what other countries are going to spend next year. The Saudis and Iranians are particularly sensitive with respect to what they buy. They don't want us telling the world they are going to buy so much next year.

Secretary SCHLESINGER. We can tell you after the fact when it is no longer a guess.

Mr. COUGHLIN. How about the 1973 figures, can they be declassified?

Secretary SCHLESINGER. I see no reason not to.

Admiral PEET. I believe they have been.

Mr. COUGHLIN. Are they declassified in fact?

Secretary SCHLESINGER. I believe so.

Admiral PEET. I think the actual figures are.

It is the State Department's responsibility to classify.

U.S. GOVERNMENT APPROVES ALL SALES

Mr. COUGHLIN. The final thing I want to ask: In terms of cash sales, are they licensed cash sales? In other words, they have to be bought through the American military; do they not? These are not cash sales on the civilian market.

Secretary SCHLESINGER. They don't have to be bought through the American military. Any sale of military hardware does require approval of the U.S. Government. But something on the order of three-fourths will be bought through the Department of Defense and one-fourth will be bought outside the DOD.

Mr. COUGHLIN. But with the approval of the U.S. Government.

Secretary SCHLESINGER. Yes.

Mr. COUGHLIN. Thank you, Mr. Chairman.

UPDATING PROGRAM PURCHASING POWER

Mr. PASSMAN. Mr. Secretary, before we drop the curtain, as a former member of the Office of Management and Budget, you can imagine some of the problems we are confronted with. You take these multilateral organizations that have pyramided their accounts. They have untold billions that are undisbursed. Now they come back and say:

> The money you previously gave to us won't buy what it would buy when you gave it to us. We want you to make it retroactive so that the billions of dollars you gave us previously will buy what we want this year.

This year they are requesting over $2 billion for this purpose.

So you know we do have some things to worry about. Thank you an awful lot.

I guess that concludes this hearing.

Cuban Refugee Program

STATEMENT OF HON. DOMINICK V. DANIELS OF NEW JERSEY

Before adjourning, I would like to include a statement, with attachments, in the record from Congressman Daniels concerning the Cuban refugee program.

[The statement follows:]

Congress of the United States,
House of Representatives,
Washington, D.C., July 30, 1973.

Hon. Otto E. Passman,
Chairman, Subcommittee on Foreign Operations, House Committee on Appropriations, Washington, D.C.

Dear Mr. Chairman: I am submitting to you and your subcommittee material in support of my request for Cuban refugee program assistance to three communities in my present and former congressional district. Enclosed is the testimony of the three mayors of the Hudson County, N.J. communities—West New York, Weehawken, Union City, N.J.—before the General Subcommittee on Education of the House Education and Labor Committee. The mayors' testimony concerned primarily the extraordinary burden on citizens of the communities to pay for the education expenses incurred as a result of the influx of Cuban refugees since passage of the Migration and Refugee Assistance Act of 1965.

The mayors' testimony sets out statistically the financial, logistical, and educational burden on the communities. The health and welfare problems faced are similar and I understand that your committee has before it data submitted by the HEW Social and Rehabilitation Service concerning those conditions. But none of these statistical data can possibly reflect the real impact that the sudden influx of refugees has had on the communities.

The three communities (hereinafter referred to as North Hudson) are made up of a stable population which has lived in North Hudson for many generations. For the most part they have been of Italian, Irish, German, Jewish, and other European backgrounds. Until 1965 there was little change in the ethnic makeup of North Hudson and while people have strongly endeavored to maintain their cultural identity they have lived and worked together, each respecting the other's culture and identity. Indeed, North Hudson gives the lie to the melting pot theory of a homogeneous America.

This character of North Hudson perhaps answers the question of why, of all places in the country, it was such a strong attraction for so many Cuban refugees. In fact, North Hudson ranks second only to Dade County, Fla.—which is so close to Cuba itself—in the concentration of Cuban immigrants. The State of New Jersey is the target for the largest number of Cuban refugee resettlements in the Nation and the number of resettlements in North Hudson is 10 times the State average.

Naturally, this has affected the school systems. In the city of Union City, for example, the number of Cuban children in the public schools in 1966–67 increased by 356. In the 1971–72 school year (latest data) the increase in Cuban children tripled by 1,033. Today, between 50 percent and 60 percent of the children in North Hudson public schools are children of Cuban refugees. Many of these children still do not speak English well. Many of their parents have been unable to find jobs.

The mayors of the communities have set out the statistics and cost data. The cost of education is for all practical purposes the same in all the communities and the data from one community is for the most part relevant to each of the others.

Mr. Chairman, I urge you and the subcommittee to consider carefully this data and the request for assistance to North Hudson. The people of these towns are middle class working people who have always held to traditional American values. They accepted the Cubans into their communities because they earnestly and honestly felt it was their duty and responsibility as Americans to do so.

They understood the Cubans' problems because they too came from a heritage of immigrants. North Hudson residents understood also that the Cubans were fleeing from communism, that our country's position was opposed to that of the Cuban Communist government diplomatically and ideologically. They felt that it was not merely sufficient to be rhetorically against communism but that they must, having been called upon, make some sacrifice and accept the refugees who had fled from Communist Cuba. North Hudson has accepted refugees and has been a focal point for refugees from Hungary, Czechoslovakia, and other countries from which people have fled for political reasons.

But there is only so much sacrifice a community can bear. The traditional community life of North Hudson has been drastically changed. Many long-time residents have been faced with non-English speaking neighbors. They have been faced with persons of an unfamiliar culture and they have had to distinguish between Spanish-speaking Cuban immigrants and Spanish-speaking Puerto Rican immigrants who come from extraordinarily different cultures despite their common language. In spite of some Federal assistance they have nevertheless borne great health and welfare costs. Their education costs have risen tremendously in spite of Federal impact aid assistance which has been partially impounded and which has not been adequate to offset the expenses necessary to suddenly absorb so large a number of non-English speaking political refugees.

I am proud of my constituents. There has never been violence against the newcomers. There has been no prejudice, no rancor, no attempt to force them to leave. My constituents have seen their duty and they have nobly borne the challenge. Regardless of the monetary contribution by the Federal Government and distributed among all Americans, the people of North Hudson will have borne the greatest sacrifice and met the greater challenge.

I earnestly believe that the Federal Government should make at least the contribution to the communities of North Hudson that it does to Dade County, Fla. The situations are identical and the impact on North Hudson may well be greater when measured in terms of percentages of Cuban refugees in the public school systems.

Sincerely,

DOMINICK V. DANIELS,
Member of Congress.

STATEMENT OF HON. ANTHONY DEFINO, MAYOR, WEST NEW YORK, N.J.

Mr. DEFINO. Congressman Perkins, I thank you for the opportunity to appear here today. I would like to make one note before I commence my testimony. I note that three of the cities involved all claim to be the most densely populated in the State of New Jersey.

At the time, sir, when the Federal Government spent 70 percent of its total budget for education purposes—I may be wrong on the percentage—at a time when the President and the Congress should be concerned with increasing the moneys for the purpose of education, we have to appear in Washington on what I consider a most sad occasion, to give testimony on something that I think is evident, the need for more funds for educational purposes. We have peculiar problems in my own community by virtue of the Cuban impact which I would like to comment on briefly. I believe you have the figures and you were well acquainted with the problem.

If the Federal Government has a foreign policy that it wishes to implement with the Cuban situation, I don't think they should expect the towns of West New York and Union City and other impact areas to bear the cost. If they want to look good, I think they should pay the bills. I think the rest of the world should know they are trying to pay the impact on the cost of the communities and only in the form of real property taxation which I am happy to see your bill will alleviate. The concept of equal cost, the concept of equal education as pointed out by the superintendent of schools in Bayonne in terms of the California decision and the New Jersey decision is a mandate to the legislature, if one can mandate a legislature, to take care of this problem which has created inequality in education. I am seriously perplexed in what we call the greatest country in the world that anyone could propose to cut back moneys for education when we all know when we talk of defense of this country that we are going to spend moneys to educate and rehabilitate a foreign power that we just had the peace with, we are going to spend that money without very much hesitation, but we overlook the needs of our own country.

I think our first line of defense, sir, is to educate our youth because I am firmly convinced that it is our youth which will make the country strong. I would like to point out if I had not been helped when I was at the university with funds from the Federal Government, which I pay back now, but for which I am grateful, that I would not be an attorney today. I would not have had an opportunity to be educated as an attorney and make a wonderful living which I thank God I had the opportunity to have. I think the more moneys you can give, the Congress and the President, to the young people of our country to make them responsible citizens and give them the responsibility of education, is the greatest opportunity you can give because this country can only remain strong if youth has the proper education, to say nothing of the fact that among that youth, sir, might be the man or the lady, in view of the fact of liberation movement today, the man or the lady who will bring the cure for cancer or the cure for other deseases which we seem to overlook when we talk about education. Not this committee because I think we are here today among friends.

I also would like to comment on the beneficiaries of this education. West New York is not the beneficiary of this educational structure. Union City is not the beneficiary. But you, the Federal Government, and young men and women who are educated in the local communities can go on to other parts of the country and contribute to the country. You have many young people here who were educated in local schools who are now helping you, the Congress, and helping the President and advising the President and advising the Congress, and their education was received on a local basis, but the Federal Government and State government are beneficiaries. I say they should pay on a partnership basis. As far as appropriations go, a brief comment because I don't want to get involved in political problems—except I am involved as mayor of the community—and I am not getting the money. I think the final arbiter of appropriations is the public. They will say on election day, when Congress goes back to their district, they will either vote for or against them if they thought their appropriations were out of order. I don't think that the President should interfere in that area. I hope he is not within hearing distance. The point that I make is my presentation,which you have, sir, the fact that I favor the title 2 equalization grants although I think they are not as large as they should be, but that is, of course, a question of your investigation and your information. I think we need this money. There should be no question that titles 1, 2, and 3 or whatever programs are functioning should not be cut off. I don't know why they would discuss that. That should not be a question of discussion. What should be discussed is how much more money you can give us to assure the finest education for the children of our country. Also, we were obtaining Cuban aid to pay for the education of Spanish-speaking children because of this impact. It was insufficient. We would not turn it down because we take every dollar we can to insure the type of education that is necessary. But that was insufficient. Now we are losing that because we have gotten some of it through hardship funds. That is also a sad comment that education should be funded through hardship.

The fact is that that was insufficient. We need that. We need titles 1, 2, 3 moneys and we need moneys that are going to be advanced through this legislation. We need as much as we can get, not simply because we want to, although we consider it an important factor, reducing the impact of the real property taxation situation upon our constituents, but because we can no longer afford to give the type of education that is necessary.

In West New York we have a budget of $7,800 thousand to educate our children. We have 9,000 students. It will go up and up.

I refer to my superintendent's wisdom and knowledge in the area of education. My knowledge only comes by virtue of being an administrator but my administration, gentlemen, is dependent upon the Congress, the Federal Government and the State government. I can only administrate if I have the money, so it is a simple proposition. If we do not get the funds, if we do not get more funds, I am here and I brazenly states, it is not a question of getting the funds that we are supposed to lose. That is too simple. We want more funds and if we do not get them, the quality of education will suffer, the country will suffer. I know you are all for us and we have to convince No. 1600 Pennsylvania Avenue of the problem and that you want us to help. I think that all persons, not only those who come here to testify but those involved in government, should cry out to the President that he is now triffling with what I consider the most important national product of this country, our young, our children. The fact that I look at each of you gentlemen, I don't want to indulge in your educational background, but

I would assume it was sufficient. I wonder what would have happened if we had not had people like yourselves educated to sit here today to help us. That is my statement, gentlemen.

I rely on my written testimony for the official record. I want to thank you, Congressman Perkins, for your efforts and I hope and pray that our coming here today will have some impact. I don't pretend to think that we are of sufficient magnitude to do that, but I think this problem, and again, the town I am a mayor of is a microscopism of New York City, with all of the problems. In fact, there are some who have convinced Mayor Lindsay to run in that community, but, of course, we might get more problems; but the point is that we have asked you and we wish to thank you for this opportunity, sir.

[The prepared statement of Mayor DeFino follows:]

"STATEMENT OF HON. ANTHONY M. DEFINO, MAYOR, WEST NEW YORK, N.J.

"The town of West New York, N.J., is situated on the west bank of the Hudson River, directly opposite mid-town Manhattan. According to the 1970 census, the town has approximately 45,000 residents who are crowded into an area of less than 1 square mile. West New York is an urban microcosm suffering from the same problems which effect the Nation's major cities. Further aggravating these problems is the fact that West New York is the single most densely populated community in the United States.

"Among the many problems confronting West New York is the problem of financing the local school district. As in all other areas of the country the property tax is the method used to meet rising school costs in West New York.

"The municipal budget for 1972 called for $11,369,636 to be raised by taxation. This figure can be broken down in the following manner:

"County	$2,556,262
"Municipal	4,112,355
"School	4,701,019

"The 1972 tax rate for West New York was $82.14 per $1,000 assessed valuation; 41 percent of this, or $33.75, went directly for school purposes. The average assessment in 1972 for a two-family home was $16,000. The average property tax in 1972 for a two-family home was $1,300. The average amount paid by a two-family homeowner in 1972 for school purposes was $533.

"In 1973 the total amount to be raised by taxation will be $12,281,890. Of this total $5,154,719 will be for school purposes. This represents an increase of approximately 10 percent in the amount of money to be raised via taxation for school purposes.

"Currently there are six public grammar schools, one public high school, four parochial grammar schools, and one parochial high school serving West New York. Approximately 9,000 children are presently enrolled in these schools—6,800 children are enrolled in the public school system and 2,200 children are enrolled in parochial schools.

"Of these 6,800 public school pupils, 64 percent are of Spanish-speaking background and 58 percent of the total school age population are children of Cuban refugees.

"In recent years the Federal Government has assisted the community in it's dealings with the problems generated by the Cuban influx under the provisions of impact moneys, commonly referred to as Cuban aid. We have been advised by our congressional representatives that these moneys will no longer be forthcoming..

"Local taxpayers have recently borne the cost of building a new elementary school which was needed to alleviate overcrowded conditions in the amount of $4,700,000.

"We are presently in the process of expanding our present school facilities in the following manner:

"One public elementary school extension, $1,728,000, and

"One public high school extension, $2,362,400.

"The above extensions are sorely needed in order to afford the schoolchildren of West New York ample opportunity to meet the ever-changing nature of today's challenging society.

"It is my feeling that the Federal Government must take the initiative in dealing with financial crisis which daily confronts municipalities across the Nation as a direct result of the spiraling cost of education. Only the Federal Government has the resources with which to deal with a crisis of such proportion.

"The traditional method of financing local school districts via real property

taxation is no longer workable. In West New York, for example, we are, in effect forcing one- and two-family homeowners—the backbone of every community—to sell their homes and move to the suburbs.

"An alternate method of raising the money needed for educational purposes must be devised if the local communities, as we know them, are to survive.

"I recognize that one of the primary objectives of such legislation would be the creation of a partnership between State and Federal Governments which would result in improving the quality of education throughout the Nation. I must point out, however, that in the past State governments have been somewhat reluctant to assume a proportionate share of the cost of education.

"I am, therefore, in favor of title II, equalization grants, since this would result in the State's assumption of direct responsibility for education at the end of a 5-year period. In this fashion, the burden of providing moneys for the education of 9,000 children would no longer fall predominantly on the back of 2,370 homeowners as is presently the case in West New York."

Mr. DANIELS. I call next the mayor of the adjoining city of Union City, Mayor William Meehan.

STATEMENT OF HON. WILLIAM MEEHAN, MAYOR, UNION CITY, N.J.

Mr. MEEHAN. Mr. Chairman and members of this committee, in behalf of the people of the Union City, I wish to thank you for allowing me to come down here and present to you what is a most critical situation for the city of Union City and in the Hudson County area. Specifically, I would like to thank Congressman Daniels and Congressman Helstoski who represents us in the Ninth District for their concern and efforts in getting us before this committee.

I would like to give just a few facts about the city before I go into the other areas. Our city comprises a compacted density populated area of 1.4 square miles. The 1970 census showed a population of approximately 58,000. More accurately, the number of residents was in excess of 60,000. Today, we are approximately 65,000. We can state that the census of 1970 was incorrect on the basis that the forms were written in English and many of our residents cannot read or write English. They are Spanish. All of them threw the census forms in the garbage cans because no one knew what they were. So the census records are wrong. We are the most densely populated city in the United States and we are also the most heavily taxed. We have mostly two-family homes in our area. We have no industry whatsoever. We are basically what you would call the bedroom community for the city of New York. With the emergence of the Cuban nationals coming to Union City because of the Federal policy in allowing the Cuban people to leave Cuba, our Spanish population went from zero in the early part of 1960 to over 30,000 in a period of 10 years. Our population in Union City is almost 55 percent Spanish, almost all of which speaks only Spanish. Statistics will show that New Jersey has the highest percentages of resettlement in the entire part of the United States and our area runs 10 times our State average. On direct resettlement, there is a larger percentage of Cuban refugees in our area than in 46 of the States of the United States, including the District of Columbia.

In Union City, the resettlement is only 60 times the national average, a ratio of better than 60 to 1. In New York City the ratio is better than 30 to 1.

The influx of Cuban children to Union City schools since the Cuban airlift, which the Government of the United States so generously allowed to take place so the Cuban families could be reunited on their leaving the island of Cuba, from the year 1966, we have had an increase of 1,184 students of Cuban descent. In 1967, it went to 2,045; in 1968, 2,699; in 1969, 3,452; in 1970, 4,253; in 1971 and 1972, 4,574. Union City received Cuban impact funds basically from the year of 1970. Up until that time Union City was called upon to support the Cuban people, who were now coming into the area, in the area of education. The total cost for Cuban education at that time in 1969 was $2,475,084. In 1971–72, the cost is now $4,600,824.

The total enrollment of Cuban children in our schools, as of October 1972, was approximately 5,000 or 55 percent of all students enrolled in Union City schools. In 1972, our cost for the entire school situation will be $10 million. We must spend more than twice as much money in 1972 and 1973 for current expenditures as we did in 1966–67. We now have more than 5,000 Cuban children in our schools as a direct result of a Federal policy. The airlift that had been stopped for awhile which gave Union City a breather has now been renewed by the Federal Government. More people are now coming into the United States. We are

also told that there are 29,000 Cubans waiting in Madrid, Spain, to be released by the Federal Government so they can come to the United States. We know beyond a shadow of a doubt that at least 25 to 30 percent will wind up in the Union City-west New York area. Where are we going to put them? We have no schools now. The principal source of income that we have, as I stated before, is from two-family residences. We have no industry. We do not have a waterfront. We do not have railroads. We do not have any type of industry other than the embroidery industry which is highly machined to the point where we have maybe 10 people working in a factory. The people of Union City have borne all of the increases in the taxes. We cannot do it any more. Our taxes are too high and our rents are too high. I am here seeking justice for the people of Union City. It is the responsibility of the Federal Government to provide funds necessary to meet a condition created by the Federal Government. We have not and we will not shut out anyone who wants to come to the city of Union City. Only question is how do we provide for the people of the city of Union City who come? I realize this is an education committee but I also would like to explain that this influx that is a result of the Federal policy also hits us as far as public safety is concerned. Police and firemen are people who need to be paid. Teachers have to be paid. The money must come from the taxpayer. Because of the fact that we have such a large influx of people, the cost of government of running the city of Union City has gone out of proportion.

We feel in Union City that the people of Union City can no longer meet the obligation fostered upon us by the Federal Government. The Federal Government has extended the hand of justice to the Cuban refugees, but it is a strange brand of justice that slaps the hand of the recipient and at the same time ignores that segment of the population which has accepted the recipient. The action of the Federal Government must be to accept full responsibility and not create a situation and then turn its back on us. I have given the overall situation in the testimony that I have submitted to you.

I would like to stress the fact that Union City, west New York, and Weehawken are unique. We are more unique than any other part of the United States. I say that we are unique in the fact that we have people who do not speak our language coming into a school system and into an area whereby we are trying to cope with a problem. The only way we can make the American dream come true for them is to break through the language barrier, to be able to instruct them in the way of American life. Revenue sharing is a nice situation but in Union City, is becomes a disaster. It becomes a disaster because in one hand they give us x amount of dollars which they give to every other city of the United States and take away money that is desparately needed to handle the situation that has been handed to us by the Federal Government. What the effect on the school system is, I do not deal with it every day, so therefore for me to try to explain to you what would happen in the school system with the reduction of these funds would be presumptuous on my part. I have with me the assistant superintendent of Union City schools who can do a far better job than I will ever do. He works with the problem every day and he has been with the Cuban impact funds and the title I program for the past 5 or 6 years and maybe longer. I would prefer to have him testify.

Chairman PERKINS. Let him put the statement in the record and just summarize it. I think you have gone into it so thoroughly that we really understand it. Let your assistant school superintendent summarize it here if you don't mind.

Mr. SIMON. Congressman Perkins and gentlemen, I do want to thank you for your invitation for us to come here and talk about H.R. 69 and revenue sharing. We share the views of Dr. Hin and the previous speakers which need very little elaboration. It would only be a reemphasis of ideas that have come across thoroughly to you. We shall put into the record our own precise detailed record of what——

Chairman PERKINS. Without objection we will include it in the record.

[The statement referred to follows:]

"STATEMENT OF HON. WILLIAM J. MEEHAN, MAYOR, UNION CITY, N.J.

"Mr. Chairman, members of this committee, in behalf of the people of Union City, N.J. I wish to thank you for this opportunity afforded me to present to you what in fact is a most critical situation which requires your immediate attention.

"Specifically I want to thank Congressmen Dominick Daniels and Henry Helstoski for their concern and efforts in arranging for this appearance.

"At the outset may I state that financial aid is required now, immediately.

"Very candidly, gentlemen, this requirement for immediate financial aid is a direct result of actions of the Federal Government.

"Our city comprises a compact, densely populated area of 1.4 square miles. The 1970 census showed a population of approximately 58,000, however, more accurately the number of residents was in excess of 60,000 and today approximately 65,000. This gives to Union City the unenviable distinction of being the most densely populated city in the United States.

"With your permission I shall briefly review the history of the past two decades. The events of which I am sure you are familiar, however, the effect of these events upon Union City of which you are probably not aware.

"Gentlemen, it is the effect of these events which has prompted our appearance before you today. It is the effect of these events which requires immediate financial assistance.

"Less than two decades ago, 1960, the census disclosed no appreciable Spanish-speaking population in Union City. Beginning with the internal conflict in Cuba and the emergence of Fidel Castro, many Cuban Nationals began fleeing their homeland emigrating to the United States. Many of these middle-class Cuban refugees began settling and were well received in Union City.

"Our geographic location is an ideal one. We are located directly across the Hudson River from midtown New York City, access to midtown Manhattan, within 15 minutes via the Lincoln Tunnel, is available on an around-the-clock basis. Numerous bus companies provide convenient transportaton for commuters. Highways U.S. Route No. 1, U.S. Route No. 9, New Jersey South S–3 and the New Jersey Turnpike provide ready and efficient access to major areas. The Holland Tunnel, George Washington Bridge, Newark Airport, Essex, Bergen, and Middlesex Counties—a radius of approximately 30 miles—can be reached in about 30 minutes. It was only natural for middle-class Cubans to settle here. Retail business opportunities were available and the refugees became an integral part of our city by purchasing homes and establishing businesses.

"Recognizing the victory of Fidel Castro in Cuba, our government recognized the desire of many Cubans to flee their homeland. Our Federal Government responded charitably. We initiated the "airlift" resulting in a mass exodus of Cubans from the mainland to the United States. The objective of our Federal policy was to bring from Cuba relatives of refugees already in this country, so as to effect family reunions in communities to which the earlier arrivals have been settled.

"Cuban nationals already settled in Union City, the result of our Federal policy was to create an overburdening impact upon our city. In a very short period of time our Spanish-speaking population soared from almost nil to approximately 30,000. This impact affected every phase of life in Union City, principally housing and education.

"An examination of the official records of the Cuban refugee center gives a graphic description of the impact resulting from Federal policy. We must remember that these official figures relate only to direct resettlements. In actuality, the impact is even greater than that which is disclosed by statistics. Therefore, the need is even greater than the vast need established by the statistics.

"I wish to point out, gentlemen, that our neighboring community of West New York has a similar history, and recently the affect of this impact is being felt by our neighboring community of Weehawken. However, my colleagues, Mayor Anthony De Fino and Stanley Iacono, of West New York and Weehawken, respectively, are also here to testify and will relate to their respective communities.

"The statistics disclose that New Jersey has the highest percentage of resettlements in the Nation. Our area runs 10 times our State average.

"The records disclose that if we divide the total number of persons resettled by the more than 2,000 cities who have accepted these refugees, we come up with a city average of approximately 70 resettlements per city. This is the national average.

"In Union City the resettlement is more than 60 times the national average, or we see a ratio of better than 60 to 1. In West New York the ratio, as compared to the national average, is better than 30 to 1.

"As a matter of fact, on direct resettlement, there are a larger number of Cuban refugees in our area than in 46 States and the District of Columbia (including Florida, Massachusetts, Michigan, Ohio, Pennsylvania, and Texas).

"I should now like to briefly disclose to you gentlemen the influx of Cuban children to Union City schools since the 'air lift' began:

"1966 to 1967, increase	356
"1967 to 1968, increase	757
"1968 to 1969, increase	900
"1969 to 1970, increase	1,050
"1970 to 1971, increase	1,022
"1971 to 1972, increase	1,033

"With the influx in our school system we find a direct increase in cost as follows:

	Cuban refugees	Per capita cost	Total cost for Cuban refugees
1966 to 1967	1,194	$559	$786,846
1967 to 1968	2,045	662	1,353,790
1968 to 1969	2,699	700	1,899,300
1969 to 1970	3,850	776	2,987,600

"Gentlemen, in a short 3-year period we see an increase in cost of more than $2 million.

"The total enrollment of Cuban children in our schools as of October 1972, is approximately 5,000 or 55 percent of all students enrolled in Union City schools.

"Gentlemen, now let us look at the cost for current expenditures, comparing with 1966–67 school year with the 1972–73 school year:

"1966–67, cost, $4,878,794.

"1972–73, cost over $10 million.

"We must spend more than twice as much money in 1972–73 for current expenditures as we did in 1966–67, because we now have more than 5,000 Cuban children in our schools as a direct result of Federal policy. Gentlemen, where do we get this money? In all fairness should it not be the Federal Government who must provide the funds necessary to educate these children?

"Our actual school buildings consist of seven elementary schools and two high schools. In addition, we utilize as school facilities, portable classrooms, church basements, housing project, annex to a parochial school, and an office building. Making every effort and utilizing every means to house and educate our students, we have instituted a program whereby our high school students are on an eight-period day in one school, and a nine-period day in the other, with an anticipated increase of 100–150 students in 1973–74. Adding to the dilemma we have the probable loss of parochial schools which further increases our public school population.

"Gentlemen, where shall we put these students, how do we offer the necessary programs, if we must cut staff because Cuban aid stops?

"The airlift has been renewed by the Federal Government. The influx continues. Recently, many of the refugees who have resettled in other areas of our State have been moving into our area.

"WHERE ARE WE GOING TO HOUSE THE CHILDREN?

"I wish to cite just a few additional critical areas in our school system which will become hazardous with the cessation of aid:

"A. Class size: If Cuban aid stops, how do we prevent class size from going over 30? Is this being fair to the children, the teachers, the parents, the community, the Nation?

"B. Supportive services: If Cuban aid stops, what happens to our bilingual counselors, testors, psychologists, etc.?

"C. Special instructional staff: If Cuban aid stops, where do we get the necessary funds for teachers of English as a second language, bilingual teachers desperately needed to help children who cannot read, speak, or write English?

"Applying the foregoing facts to any American community would create a vast impact on the society, costs, functions, attitudes of its residents (refugee and citizen). When applied to our area the effect is devastating.

"Our principal source of income is derived from ratables received from residential premises. The greater majority are two-family residences, some multidwelling and recently two luxury highrisers. We do not have waterfront or railroad ratables. We have no appreciable industrial or commercial ratables,

"Our people, taxpayers and rent payers, have borne the brunt of the normal increase cost of local government.

"After two decades of lack of planning and inefficiency, the citizenry elected a new administration in 1970. In a move for economy and efficiency this administration eliminated superfluous municipal jobs, improved purchasing techniques, and consolidated municipal functions.

"The people can no longer be asked to carry the cost of this additional burden implemented by the Federal Government. Our taxes are too high, our rents are too high.

"For several years, as outlined above, the people of Union City have been meeting the cost of a situation created by the Federal Government which cost rightfully should have been borne by the Federal Government.

"During the past several years we did receive aid, however, the amount we received was less than the amount required. The people had to make up the difference.

"I am not here just asking for your assistance. It is not a situation where the city of Union City has created a situation and is now asking for your help. I am here seeking justice for the people of Union City. It is the responsibility of the Federal Government to provide the funds necessary to meet a condition created by the Federal Government.

"As I pointed out, not only has the Federal Government failed to justly meet the cost of its created situation, now the Federal Government wants to withdraw even that portion of its whole obligation which it has committed itself to. Gentlemen, is this justice? I ask you, without intending sarcasm, "Is this the American way?"

"In addition to the impact upon our educational system, this impact effects other areas of life in our community.

"Our housing must be adversely affected. Over 60,000 residents in an area of 1.4 square miles. The supply for housing cannot meet the exceptional demand. In many instances we see the tenant at the mercy of landlords. High rents keep going higher.

"In addition, we see apartments and rooms created in dwellings which cannot contain them. Economically, to meet taxes, two family homeowners must, by economic necessity, seek additional income. This only could lead to a health and sociological problem.

"I also must mention that problem of public safety. As you know, in our community, impacted as we are, police and fire protection must be implemented to meet the increased need. Again, we are talking economics. Again, we can trace this added service and cost directly to Federal policy.

"What type of community is this that has willingly shouldered such an unconscionable share of the burden of this Federally motivated influx? What consideration has the Federal Government shown to the people of our area?

"Gentlemen, the people of Union City, West New York and North Hudson, can no longer meet the obligation of the Federal Government.

"Our citizens are overtaxed and overstrained. We are not second-class citizens. The truth of the matter is that our people have made a Herculean effort these past years, economically, emotionally, sociologically, to withstand this burden established and fostered upon us by the Federal Government.

"We welcome our newly arriving neighbors. In them we see a future hope for development of our community. However, what development can be made if we are choked off at the very start. If our children, both native born and refugee are denied complete education, if our services must be curtailed, if our security (police and fire) is stagnated.

"If our Federal Government continues to enforce an unjust economic burden on the existing drained resources, economic and otherwise, of this community, the result will be inevitable. We will see our Federal Government destroy us, and with us the hope and aspirations of tens of thousands of these refugees.

"Our Federal Government has extended the hand of justice to Cuban refugees. Is it not a strange brand of justice that slaps the hand of the recipient and at the same time ignores and disregards that segment of its population who has shouldered the load and willingly accepted the recipient?

"Gentlemen, the action of the Federal Government must be to accept its full responsibility, not to create a situation and then turn its back.

"What I have set forth is reality. In decency and justice I say, "do not turn your back on the people of Union City."

"In closing, again permit me to thank you for this opportunity to appear before you."

Mr. SIMON. I would like to, if I may, refer to something about revenue sharing which very few people here would know. That is about 4 years ago. Commissioner Marland invited representatives from the State of New Jersey and New York to a meeting at the Commodore Hotel at which time we were to meet him for the first time. He had just come into office a few months before. The gist of his speech at that time was entirely devoted to the idea of revenue sharing for education. We had just a few questions at the time because it was so new but the thing that worried us most of course was just what would it mean in dollars and cents not just the year in which revenue sharing would be implemented but the year after and the year after. At that time, about 4 years ago, the answer was, well, we really don't know. We think that we should be able to do better the second year. It is 4 years later and when the same question is raised about revenue sharing we get not even that kind of an answer. We get a hasty response that leads us to have very very serious doubts about the value on an enduring basis of any revenue sharing program. I think it is so indirect in contrast with H.R. 69 which talks of 5 years. It is not afraid to say so. It says 5 years. We support H.R. 69 because everyone of its titles has meant as much to Union City as we shall spell out in detail as it has meant to Bayonne and the other cities. I would simply like to say first about the Cuban impact. I have been connected with ESEA since 1965 since it was first introduced, and with Cuban impact since 1969, October 3, when we made an appearance here at a hearing of your committee, Congressman Perkins, through Congressman Daniels' bill. I would like to remind you that at that time we brought with us two young ladies, two high school students who were Spanish youngsters who never knew a word of English before they came to our schools, and that the community without the Cuban impact moneys at that time had spent funds of its own to the best of its ability in giving them the English phrasing sufficient enough so when they came here to make an appearance before the committee, everyone of the members of the committee was astounded at the quality of their performance and their presentation. I might say that both ladies have gone on to do very well in our country. But they represented just two kids. Since the Cuban impact funds have come to us, we have been able to provide English as a second language training beyond any city of comparable size in the United States. As a matter of fact, we provided training for each teacher of ESL for the State. We have 24 ESL teachers on the staff now in our small school. We have 21 bilingual teachers, most of whom we have been able to get through Cuban impact aid.

It is a curious thing that happens that has not been mentioned in any presentation here, that is, with Cuban impact aid and with ESEA aid, we have been able to initiate programs that were so successful that the community then seeing the need for these things, seeing the success of it, has taken over and paid for it far beyond what they really are able to do. I can only urge the rest of the committee to have the same dedication that you gentlemen have here to support H.R. 69 and to bring back Cuban aid as well to our community. Thank you.

Mr. MEEHAN. The tax situation in Union City is really out of proportion and in a moment of levity may I say that you people have 14 years in Congress and your job is a lot more steady than mine as far as the taxes are concerned.

Thank you very much for allowing us to be here this morning.

Mr. DANIELS. Mr. Chairman, both Mayor DeFino and Mayor Meehan have testified as to the density of the population in both of their communities. As a result of the impact of the Cuban refugees, in both of their communities, the problems of west New York and Union City have now spilled over to the adjoining community of Weehawken. I am pleased to present the mayor of that community as the next witness. Mayor Stanley Iacono of Weehawken.

STATEMENT OF HON. STANLEY IACONO, MAYOR, WEEHAWKEN, N.J.

Mr. IACONO. Thank you, Congressman, Mr. Chairman, and members of the committee, I take this opportunity to thank you for giving us an audience here with you this morning and especially to Congressman Daniels, although on opposite side of the political fence, I can only tell you whenever Weehawken has come for his assistance, Congressman Daniels has been there and on behalf of all of the people of Weehawken, I thank you Congressman, for your help.

Mr. DANIELS. I appreciate your comments.

Mr. IACONO. I am submitting this presentation to you this morning in hope of gaining some Federal financial assistance in our area. It seems to be that we

all had the same mutual problems as the Congressman just explained what has been the problems of both Mayors DeFino and Meehan, it is also our problem in Weehawken. That is because western New York being at the north of Weehawken, Union City being at the west of Weehawken, Hoboken being to the south, and to the east of Weehawken is New York City, the greatest financial area in the entire world. What is happening is that people are moving into Weehawken because of the proximity to New York City being that it is only 10 minutes away. We do have many Cuban refugees coming into Weehawken approximately right now 4,000 residents. Back in 1965 we only had 9.8 percent when the impact started to effect the neighborhood and now we are up to 19.3, although by Government standards we don't qualify because the minimum should be 20 percent. However, the bill that we support for the extension of these programs certainly feel that this could help a small town of a population the size of 13,383. Back in 1940 and 1950, we did not have any problems and we would not have to worry about revenue sharing or about certain bills that we need for the difficulties that we are experiencing. We don't have the railroads operating like they have back in the forties and fifties. Forty-seven percent of our taxes were paid for by the State subsidies. Therefore, the entire complexity has changed. We do have a serious problem because we do have an obligation to our community to give the children the best education available. We seek your help in helping us do this. I wish we did not have to seek your help. I would have liked to have said we could do this on our own. However, that is an impossible task at the present time. We do have title 1 in our school system for the mere amount of $10,000. We could only keep that in one school. We have four schools in our system and the rest that we tried to hire the bilingual teachers, that all comes through the taxpayers' dollars. However, we would like to see that program expanded. It seems that when revenue-sharing allocations are made for funds, a town, because of the population size, doesn't qualify. In Weehawken we received $40,000 for this year, $20,000 at the last quarter of last year. But as Mayor DeFino said, we all take what we can get because of the problems that are curtailing our services.

Our tax rate is a poor situation because it is dealing with our education system in Weehawken. I am going on my 5th year in office. Within the last year the taxes have increased up to $25.64. This is why whenever any programs are available we want to take advantage. We want the Government to realize that because of size, we still have the same problems. They may be small problems, but we have the problems. When I see a bill such as title 1 on H.R. 69, it is encouraging to hope and to feel that consideration will be given to a small town regardless of the other situations.

In closing, I would like to say that we all have mutual problems. Mayor Meehan states he doesn't know where the people are going to move from Union City anymore. I can tell you they are moving into Weehawkan. I wish we had additional dollars to build the schools we want to build. Recently, we had $3 million bond issue which is so needed in our school system. The schools are overcrowded by the increasing population of the Cuban refugees and we had to knock this bond issue down because of the current tax rate, because of the increased tax rate of last year. This is a crime. This is a shame. Because this is how we are trying to give the education the best quality education we can to our community. So if we can get some additional assistance in this federally impacted school district area, I feel that something is happening for the betterment of the entire community. I thank you.

Mr. DANIELS. Mayor Iacono, do you have any other witnesses to present?

Mr. IACONO. I have my superintendent of schools if you wish to have him elaborate.

Mr. DANIELS. I will leave it up to him if he wishes to give a brief statement on the Cuban refugees in the school system.

Mr. GENDRIN. I want to thank Chairman Perkins for allowing me to be here with our mayor today. We have always had a great respect for Congressman Daniels.

I have seen many changes come over Weehawken in the 42 years that I have been there. I can honestly say that these Spanish-speaking boys and girls are being very well received by the neighborhood of West New York, Union City, and Weehawken. I feel proud of these boys and girls for their behavior. They do not give some of the disciplinary problems. I wish some of the English-speaking children in Weehawken gave us as few problems as they do. They are eager for an education. I was so sorry to find that these two buildings that we needed so

urgently were knocked down a few weeks ago. I sincerely believed that this committee and others who may be able to help this north Hudson area please do so.

I thank you.

[The statement referred to follows:]

"STATEMENT OF HON. STANLEY D. IACONO, MAYOR, TOWNSHIP OF WEEHAWKEN, N.J.

"I am Stanley D. Iacono, mayor of the township of Weehawken.

"I am submitting this presentation to you in the hope of gaining Federal financial assistance for the Weehawken school system to meet the ever-mounting burden on our taxpayers caused by the resettling of hundreds of Cuban refugees into our community.

"The township of Weehawken is located in northern Hudson County at the New Jersey terminus of the Lincoln Tunnel, immediately across the Hudson River from Manhattan. We are bordered on the east by the Hudson River, to the north by the town of West New York, to the west by the city of Union City, and to the south by Hoboken. The population totals 13,383 on a land mass of 520 acres or .9 square miles.

"Because of our unique setting, many families choose to settle here and work in New York City, the home of the greatest financial opportunity in our nation. It takes these commuters only 10 minutes to reach Manhattan through the Lincoln Tunnel. This geographical arrangement seems to be particularly appealing to the Cuban refugees, as an estimated 4,000 have settled into our community, virtually all since 1965.

"Our school system, of course, has been hard hit by this influx of 2,171 resident children in average daily attendance in our four schools today, we have 622 Spanish surnamed pupils, or 28.6 percent. When this is compared with the 1965–66 school year, when our Spanish surnamed pupils, numbered only 177 of the 1,815 resident students or 9.8 percent, the increasing magnitude of the problem is readily recognizable.

"Consider the following:

"(A) Our staff in 1965 did not have the proper training to teach Spanish-speaking students. We were forced to hire bilingual teachers for these children, at a greater expense to the board and, therefore, the taxpayer.

"(B) New textbooks were purchased for use by these children until they could function in a regular classroom, again at the expense of the board and the taxpayer.

"(C) Our high school has been forced to revert to the "stagger system," whereby the normal eight-period day was expanded to 10 periods. Seniors attend morning classes and the balance of the student body attend the afternoon sessions.

"(D) The implementation of dividers was adopted in our schools in the hope of providing more classroom space. Multipurpose rooms, originally used for conferences, recreation, and speeches, have now become classrooms with inadequate blackboard space, lighting, and furnishing, making them generally not conducive to study.

"(E) In one instance, funds for environmental classes were approved, yet our school board was forced to refuse them because physically, the classroom space was not available.

"(F) During the 1965–66 school year, the board of education employed 118 teaching personnel and 56 nonteaching personnel. Today, we have 163 teachers on the payroll and 63 nonteachers, an increase of 45 and 7, respectively.

"The burden on the Weehawken taxpayer has grown tremendously. Since our 1965–66 school budget, the cost to our taxpayers of educating the Weehawken schoolchildren has increased almost twofold, from $1,153,782 to $2,120,219.

"Our residents have an overall tax rate today of $66.69 per thousand compared with just $45.20 in 1970. Of this, our school board receives $28.95 as opposed to just $25.75 3 years ago. To cite an example, for a homeowner whose property and house have been assessed at $40,000, he will pay $2,667.60 per year in city tax, $1,157.74 of which will go toward education.

"It is no wonder that a $3 million bond issue to add 10 classrooms each to Roosevelt and Wilson schools was rejected by the township council after public hearings. The citizens simply cannot afford the added tax burden this would necessitate.

"To be sure, of 13,383 residents of Weehawken, some 2,580 are senior citizens (60 and over). This 19.3 per cent of the population, most of whom are on a fixed income, can ill afford the tax rate they are presently paying, to say nothing of additional taxes. Another 16.2 percent of the population (2,171) are students and make little, if any, contribution to the Township.

"This totals over one-third (35.5 percent of the whole community (not counting 4.2 percent unemployed)), leaving an overwhelming burden on the remainder to support our tax share to Hudson County, the local school system, local services and veterans and senior citizens.

"The school system has made accurate and complete surveys of our Cuban population over the past three school years, in a vain attempt to qualify under title I of Public Law 81-874, Financial Assistance in Federally Affected Areas. Each time we have fallen short of the required 20 percent minimum, though our Cuban refugee student population continues to grow.

"I cannot help but assume that our problems caused by the influx are similar to those of our neighboring communities, only on a smaller scale. Yet, we are refused proportionate assistance to meet them.

"This year, the school board began pilot project in bilingual education as opposed to the English as a second language approach. This is indeed a costly proposition, yet we feel it is the superior method in educating our predominantly Spanish-speaking students.

"But the present program only begins to touch those in need of remediation because of language difficulties.

"Accordingly, we have made application under the Bilingual Education Act (title VII, ESEA) for a grant of $140,019 to fund a full-scale program for one school year. We can only hope the Office of Education recognizes our plight and funds the program.

"Indeed, upon close examination of the supporting data, which follows, it becomes obvious that the Weehawken school system and the Weehawken taxpayer both are in a desperate situation.

"In closing, I am certainly proud of the Federal Government for granting asylum to those Cuban refugees who escaped Castro's island and later, for diplomatically arranging for others to live in the freedom of America. Now the same Government must help the municipalities where these refugees have settled in solving the unique problems which have resulted.

"What began as a noble act of mercy has become an overwhelming problem to the taxpayers of our community.

"As representatives of the people, with the power to approve appropriations and the responsibility to make our Nation greater internally, I and the Weehawken citizenry plead for your help.

"Appendix I

"THE WEEHAWKEN SCHOOLS

"Weehawken High School (grades 9–12):
"(A) Built in 1940.
"(B) Houses 38 classrooms.
"(C) Present enrollment of 1,150, including tuition paying students from Secaucus.
"Daniel Webster School (grades K–6):
"(A) Built in 1940.
"(B) Houses 24 classrooms.
"(C) Present enrollment of 389.
"Theodore Roosevelt School (grades K–6):
"(A) Built in 1928.
"(B) Houses 28 classrooms.
"(C) Present enrollment of 518.
"Woodrow Wilson School (grades K–8):
"(A) Built in 1926.
"(B) Houses 25 classrooms.
"(C) Present enrollment of 613."

APPENDIX I

TOTAL AVERAGE DAILY ENROLLMENT

School year	Resident	Total
1965 to 1966	1,815.2	2,137.4
1966 to 1967	1,976.7	2,480.3
1967 to 1968	2,027.5	2,575.1
1968 to 1969	2,083.7	2,654.5
1969 to 1970	2,095.9	2,653.o
1970 to 1971	2,144.5	2,710.0
1971 to 1972	2,145.1	2,697.2
1972 to 1973 (estimate)	2,171.0	2,741.0
1973 to 1974 (estimate)	2,183.0	[1] 2,593.0

[1] Reflects the building program in Secaucus which will gradually phase our these students, and their tuition.

Note: The total includes tuition paying students from Secaucus who attend Weehawken High School.

APPENDIX III

LOCAL TAX LEVY FOR EDUCATION

School year:	Tax levy for education
1965 to 1966	$1,153,782.00
1966 to 1967	1,244,455.00
1967 to 1968	1,344,594.98
1968 to 1969	1,612,352.00
1969 to 1970	1,602,588.00
1970 to 1971	1,847,506.00
1971 to 1972	1,867,842.00
1972 to 1973 (anticipated)	2,120,219.00
1973 to 1974 (anticipated)	2,525,823.00

APPENDIX IV

TAX RATE AND AMOUNT TO SCHOOLS

Year of taxation	Tax rate	Amount to schools
1965 [1]	$111.08	$32.14
1966 [1]	117.48	38.87
1967 [1]	113.48	57.92
1968	47.47	26.40
1969	46.51	25.05
1970	45.20	25.75
1971	53.01	24.78
1972	66.69	28.95

[1] Before 100 percent assessment.

Mr. DANIELS. Mr. Chairman, I would like to ask each of the mayors a question and I would like them to give his own response to my next question. I believe you mayors have given us your school population figures relative to the number of Cuban refugees that you have in your schools. I would like you to advise this committee as to the ratio between Cuban population to total population. Mayor DeFino, I believe you said you had 9,000 students enrolled in your elementary and secondary schools.

Mr. DEFINO. That includes parochial, 6,800 public-school pupils, 64 percent of those are Spanish-speaking.

Mr. DANIELS. Mayor Meehan, can you tell us the percentage of refugees enrolled in the public schools?

Mr. MEEHAN. Fifty-five percent; 5,000 out of 9,000 Cubans.

Mr. IOCONNO. We have 26 percent, 19.3 percent qualified for Cuban aid, but we have other Spanish-speaking students that would come up to around 26 or 26 percent of the total population.

Mr. DEFINO. Sixty-four percent are Spanish-speaking. Fifty-eight percent are Cuban because we have other Spanish-speaking pupils.

Mr. MEEHAN. Congressman Daniels, if I could impose upon the committee for a moment, I also have with me Dr. Luisa de la Torre, who is a Cuban national, who is now an American citizen. She is a trustee on our board of education in Union City. I would like her to say a few words on behalf of what type of work we are trying to do.

Mr. DANIELS. Do you have any objection, Mr. Chairman?

Chairman PERKINS. No objection. Mrs. De la Torre?

Mrs. DE LA TORRE. I am one of thousands and thousands of Cubans who came to Union City in the last decade. We came here and we now have sons and daughters who are first-generation Cuban Americans. We are proud to be Americans and be fathers and mothers of the first generation of Cuban Americans, but we are changing our feelings because we were happy when we came here seeking freedom. Now we are changing that feeling to a guilty one because we are bringing too many problems to the cities that open their arms to us and since I am on the board of education and trying to help my community, I would tell you one point. We have been living in peace and harmony, because of those programs we had with Federal moneys ESL because we are trying to adopt and adjust our children to American way of life. If we don't have those moneys we don't have those programs. I don't know the future and peace and harmony of our cities.

Mr. DANIELS. Thank you, Mr. Chairman.

Dr. HIN. Would it be permissible for Dr. Rossnick of our State board of education to make a brief statement?

Chairman PERKINS. Yes.

STATEMENT OF DR. GERALD H. ROSSNICK, VICE PRESIDENT, BOARD OF EDUCATION

Dr. ROSSNICK. Again, we are grateful for the past interest and devoted interest of this committee and I know the future interests of this committee for welfare of youngsters in both the State of New Jersey and the Nation. Going around the State of New Jersey as I do as a delegate, I hear many, many things in regards to the purposes of education. Today, we feel that those of us who are vitally concerned with the educational process in this Nation should be in mourning for the President's methodical destruction of the educational foundation of this entire Nation. The future of America lies with the children outside of this building. Its future citizens, its leaders, future congressmen, future Cabinet men, and indeed its future President depend on not wronging the foundation of our seat through curtailment of needed funds to promulgate sound educational principles and practices. By restricting learning skills, guidance, techniques, and the like, through a cutback in Federal funds, basically provided by the very same taxpayers who expect dollar accountability through fair and proper spending, this to us is undemocratic and totally unrealistic in the real world of today. Throughout the State and throughout our constituents here, we again beg you to consider all programs vitally needed for the children of America because the children of America will keep America as great as it is today.

Thank you.

Mr. DANIELS. That concludes the presentation, Mr. Chairman. I would, however, ask unanimous consent to introduce into the record a letter I wrote in the latter part of January to Roy A. Ash, Director of the Office of Management and Budget with regard to the cutting off of section 3 funds for the town of West New York and the city of Union City. I did not make in that letter any statement with regard to the problem of the township of Weehawken. However, I did ask for an appointment to confer with him with regard to this problem. I am indeed sorry to say that it was over a month before I received a pro forma response to my letter. I would like to incorporate this letter into the record at this time.

Chairman PERKINS. Without objection, it is so ordered.

[The letter referred to follows:]

"JANUARY 29, 1973.

"ROY L. ASH,
"*Director, Office of Management and Budget,*
"*Executive Office Building, Washington, D.C.*

"DEAR DIRECTOR: Pursuant to title I, section 3(b) (3) of Public Law 81-874 as amended by Public Law 91-230, the town of West New York and the city of Union City, N.J., were authorized to receive reimbursement for education expenses paid out on behalf of children of Cuban refugees. These refugees settled in the two communities as a result of the Migration and Refugee Assistance Act of 1962 (Public Law 87-510) and the subsequent Federal Cuban airlift.

"Under Public Law 81–874, as amended, children of Cuban refugees may be counted among those children for whom school systems are otherwise reimbursed under title I, Public Law 81–874, section 3(b) (3)[1]

"It was the opinion of the Congress that Cuban refugees, brought into the United States under Federal sponsorship and who settle in large numbers in specific communities have a similar and as great an impact on those communities as do uniformed or other Federal personnel for whom school systems are reimbursed. Because the refugees are brought into the country under the sponsorship of the Federal Government, the Congress determined that the Federal Government has a responsibility to contribute toward their welfare.

"The impact of the Federal Government's Cuban airlift has been far greater on the municipalities of Union City and West New York than many Federal installations. In the two New Jersey communities, the percentage of non-English-speaking children in the school system jumped from insignificance to over 50 percent within 2 years. Thus, as a result of the Federal airlift, these two communities must provide special education facilities including additional teachers with bilingual training, extensive teacher training, special texts, and additional counseling facilities and other resources exclusively to provide for refugee children. In Union City, if the Federal contribution were ended, local taxes would have to be raised $7 per thousand.

"The two communities have a long history of meeting their responsibilities. They originally accepted the refugees into the community without turmoil and have provided extensive assistance in integrating the newcomers into the community. Nevertheless, they felt that the Federal Government must and by right ought to pick up part of the financial cost of initially integrating the refugees into the community. I agree as did the Congress and the administration for the past 3 years.

"It should be noted that the law authorizing Federal payments to the two school systems provides only for the costs of initial impact. It is effective only so long as (1) 20 percent of the school population consists of children of Cuban refugees and (2) the parent has been a refugee within 3 years prior to the beginning of the fiscal year. Thus, the child of a parent who has been in a refugee status for longer than the designated period cannot be counted toward reimbursement for education expenses.

"This provision reflects the rationale that by the time a refugee has been here 3 years, he or she will have become self-supporting and a taxpaying member of the community. Thus, the provision for reimbursement of expenses on behalf of refugees has an automatic suicide clause which effectively cuts off funds when they are presumably no longer needed. The communities, the Congress, and the administration agreed that this was an equitable arrangement. In fact, however, as a result of rising prices and unemployment, the arrangement has not worked out as anticipated and the communities have not been able to realize the tax equity anticipated.

"The decision to cut off these funds to West New York and to Union City seems so grossly unfair, so arbitrary a renunciation of the 1970 agreement between the communities and the Federal Government, that I can only assume that the decision must have been inadvertent as part of the decision not to fund "B" children under impact aid.

"I would appreciate the opportunity of meeting with you to discuss the reestablishment of these funds in the Federal budget, either as part of the impact aid formula or the Cuban refugee program of the HEW Social and Rehabilitation Service.

"Sincerely,

"DOMINICK V. DANIELS,
"*Member of Congress.*

"[1] Reimbursement is based upon 'the number who were in average daily attendance . . . during a fiscal year, and who, while in attendance . . . resided with a parent [or guardian] who was at any time during the 3-year period immediately preceding the fiscal year for which the determination is made a refugee who meets the requirements of Sec. 2(b)(3) (A) and (B) of the Migration and Refugee Assistance Act of 1962.'

"A refugee under the 1962 act is defined as an alien who has fled from and cannot return to a nation or area of the Western Hemisphere because of racial, religious, or political persecution or fear of persecution.

"In order for a school system to be eligible for aid, at least 20 percent of the children in average daily attendance must be children of refugees.

Mr. DANIELS. Mr. Chairman, I would ask unanimous consent to have included in the record a letter from the Board of Education, West New York, N.J., addressed to me, Congressman Daniels, dated January 25, 1973.

Chairman PERKINS. Without objection, it is so ordered.

[The letter referred to follows:]

"BOARD OF EDUCATION,
"*West New York, N.J., January 25, 1973.*

"Hon. DOMINICK DANIELS,
"*House of Representatives,*
"*Washington, D.C.*

"DEAR CONGRESSMAN: Enclosed please find facts and figures which help to explain the crisis situation which the west New York schools are presently facing and which show how necessary it is to secure Federal funds because of the tremendous impact the Cuban refugees have had on our schools.

"You will note that our budget expenditures have tripled since 1963 when the Castro emigration to west New York became serious. The following table shows this clearly:

"Year:	*Budget*
1962 to 1963	$2,500,118
1963 to 1964	2,578,452
1964 to 1965	2,579,237
1965 to 1966	2,854,000
1966 to 1967	3,146,238
1967 to 1968	3,440,853
1968 to 1969	4,043,665
1969 to 1970	4,828,535
1970 to 1971	5,581,862
1971 to 1972	6,279,620
1972 to 1973	7,409,843

"At the very same time, our budget practically tripled from 1962 to 1972; during this same period of the Cuban impact upon our schools, our population increased from 4,518 pupils in 1962 to 6,900 in 1972–73.

"In 1962, there were 224 Cuban refugees in our system. Here is a schedule of what happened thereafter:

"Year:	*Cuban refugees*
1962	224
1963	317
1964	510
1965	1,274
1966	1,896
1967	2,373
1968	2,945
1969	3,260
1970	2,616
1971	2,400
1972	2,380

"Based on our per capita cost per pupil, west New York spent $8,432,534, on Cuban refugee children up to 1970 and about $14 million to the present date.

"While it is true that the number of Cubans coming in to west New York is slowing down, nevertheless, our problem is a continuous one. Right now, we have 3,744 Cubans in our system. There are 4,242 boys and girls of Spanish extractions. Our Cubans represent 57.2 percent of our population; the balance of the Spanish section brings this up to 64.8 percent.

"On our part, we have tried to meet this challenge head on. We have established English as a second language class which costs us $500,000 each year just for 520 of the more recent arrivals and these pupils represent merely 13 percent of the total Spanish population.

"We need help badly. Our tax situation and our school problems depend so much on Federal aid.

"We know that just as you have worked so diligently on our behalf for the past 10 years, that we can count on you once more.

Very truly yours,

CARL RAPARELL,
"*Superintendent of Schools.*

"Enclosures."

Year	Budget expenditures	Enrollment
1962 to 1963	$2,500,118.12	4,518

"BOARD OF EDUCATION,
"*West New York, N.J., January 3, 1973.*

"*To Whom It may Concern:*

"The six elementary schools and the Memorial High School which make up the West New York school district are free from any discrimination as to race, color, religion and economic status.

"All our elementary schools are treated in the same fashion. Each has its own library, librarian, remedial teachers, vocal teachers, home economics teacher, shop teacher, art teacher, and instrumental music teacher. The special services offered by the child study team, two psychologists, a psychiatrist, a learning disability specialist, a social worker, and a medical team are open to all school and to all pupils on an equal basis.

"When books, material, equipment are purchased, each school gets its proportionate share. Because of the influx of the Spanish speaking pupils, bring educationally deprived and economically disadvantaged pupils to our Town, we go out of our way to spend more money for these groups. These pupils are not concentrated in one school. The percentage of Spanish-speaking pupils in our elementary schools range from 52 percent to 87 percent and in the high school it is 55 percent.

"As far as the make-up of the faculty of each school is concerned, we have no "punishment" school where "problem" pupils or "problem" teachers or inferior or inexperienced teachers are "exiled" or sent. While we have had a high turnover of the faculty during the last 10 years, we find after an examination, that the faculties of each school consist of teachers, some with over 30 years experience, other with 20 years, as well as younger teachers. There is a happy balance of age and experience. Very few teachers are shifted to other schools, but if it is done, it is because that teacher has a special service which would be helpful and then only if the teacher desires to transfer.

"When we hire new teachers, in spite of salaries, we consider experienced teachers. For the last 8 years, we have met the challenge of the Cuban and Spanish emigration which make up 64.3 pecent of our school registration, by hiring over 35 English as A second language teachers, 18 of whom were formerly teachers in Cuba.

"There is no discrimination in West New York as to race, color, religion. On the contrary we go a long way to meet our primary problem—to help our children who have come to us from South America and Cuba and to help other deprived boys and girls.

"Very truly yours,

"CARL RAPARELLI, *Superintendent of Schools.*

Chairman PERKINS. Mr. Forsythe, any questions?

Mr. FORSYTHE. No, thank you, Mr. Chairman.

Chairman PERKINS. Let me thank all of you for your appearance here today. I feel you have been very helpful to the committee. I am particularly delighted that Mr. Daniels made arrangements to see that you got down here. We look forward to your return sometime in the future and we will do the best job we can writing the legislation. We thank all of you.

[Whereupon, at 12 p.m. the meeting adjourned, to reconvene at 9:30 a.m., March 15, 1973 in room 2557.]

STATEMENTS OF INTERESTED INDIVIDUALS AND ORGANIZATIONS

Mr. PASSMAN. I would also like to include in the record several statements received by the committee covering various subjects before the committee.

[The statements follow:]

STATEMENT BY GAYNOR I. JACOBSON, CHAIRMAN, COMMITTEE ON MIGRATION AND REFUGEE AFFAIRS OF THE AMERICAN COUNCIL OF VOLUNTARY AGENCIES FOR FOREIGN SERVICE, INC.

Mr. Chairman: I am Gaynor I. Jacobson chairman of the Committee on Migration and Refugee Affairs of the American Council of Voluntary Agencies for Foreign Service, Inc., and executive vice president of United HIAS Service.

Other vice chairmen of the committee are as follows:

Mr. Charles Sternberg, executive director, International Rescue Committee, Inc.

Rev. John W. Schauer, director Immigration Services, Church World Service.

Mr. Donald E. Anderson, director Lutheran Immigration and Refugee Service, LCUSA.

Mr. Edmund E. Cummings, associate director, Migration and Refugee Services, U.S. Catholic Conference.

Dr. Jan Papanek American Fund for Czechoslovak Refugees, Inc.

Mrs. Tatiana Schaufuss, executive vice president, Tolstoy Foundation, Inc.

This statement is presented on behalf of the voluntary agencies directly concerned with migration and refugee assistance in all areas of the world. Twenty-six voluntary agencies (see attached list) comprise membership of the committee which represent major religious faiths, nonsectarian and nationality agencies. These agencies and their local community constituencies have as their primary concern, the expellee, displaced and homeless persons who are in need of care of a diversified nature and who seek asylum and resettlement in the United States. The agencies have a broad network of cooperating organizations which give such service as counseling, moral and spiritual guidance, vocational and linguistic training, and job placement. They also care for the aged, sick and handicapped and help in their adjustment in the resettlement process.

We are delighted that our Government is involved in these programs, thus expressing the humanitarian concerns so visible through the work of the voluntary agencies. The relief refugee, and rehabilitation programs of the voluntary agencies are carried on through the generosity of the American people. In the last three decades they have contributed hundreds of millions of dollars; in addition there are counterpart agencies in other countries supported by citizens of those countries.

It is the belief of the agencies that there should be established, as proposed in Amendment No. 84 to S–1248 (the State Department authorization bill) introduced jointly by Senators James B. Pearson and Edward M. Kennedy, a new Office of Humanitarian and Social Services within the Department of State headed by an Assistant Secretary of State so that higher priority can be given to assistance for refugees, migrants and victims of natural disasters.

The agencies have been seeking this reform for several years. The need has been recognized in many quarters. Establishment of an Office of Humanitarian and Social Services was recommended in 1970 by the President's Task Force on International Development (the so-called Peterson Commission) and its was proposed in 1971 as part of the International Development and Humanitarian Assistance Act recommended by the White House. The agencies feel that in 1973 the need is greater than ever, and that the time to take this action is now. Such an office, the agencies feel, not only would improve their working relationship with the Government, but could foster increased mutual support of intergovernmental and international organizations operating in the areas of refugee and migration affairs and disaster relief.

The size and nature of the problems are such that programs are carried on in partnership with the Special Assistant Secretary of State and the Office of Migration and Refuge Affairs as well as intergovernmental and international organizations such as the Intergovernmental Committee for European Migration (ICEM) and United Nations High Commissioner for Refugees (UNHCR). As recent experiences have demonstrated, with unforeseen emergency refugee developments it cannot be predicted when a new refugee problem will emerge and from what area. The refugee problem is a proliferating one generated from every part of the world, as reflected by recent movements of Asian Ugandans and peoples from the Soviet Union and Europe.

The United States has a proud tradition of providing opportunities for refugees and migrants. This humanitarian concern is a significant element in the objective of dealing with problems from which refugee situations originate, such as expulsion or oppression by their countries of origin, or political tensions, military actions and natural calamities which call for international concern.

As the House Appropriations Subcommittee on Foreign Operations deliberates regarding the fiscal year 1974 budget for migration and refugee assistance, the voluntary agencies are concerned that appropriations be adequate to meet the manifold and diverse needs. The voluntary agencies are of the firm opinion that the budget request of $8,800,000 for fiscal year 1974 be the minimum amount approved to insure programs not only of an ongoing nature but to meet new problems as they may emanate from East Europe, Africa, Asia, Near and Far East, and Latin America, so that we may be assured that any budget approved is one that will more than meet the minimal needs. It is recommended that the Appropriations Committee therefore, consider an increase in the above figures to meet new contingencies.

Such programs as the U.S. refugee programs should have adequate support as they represent the concern for the refugee who has fled his homeland and who requires maintenance and other types of assistance in connection with the resettlement in the United States. These programs have already helped meet many urgent refugee requirements such as housing, counseling, job placement, specific family needs and other related services. They symbolize continued U.S. concern and interest in refugees. In this regard, we support the continuation of the Cuban refugee program now in the Department of Health, Education, and Welfare. Another important program which requires adequate support concerns thousands of Chinese refugees who have fled to Hong Kong seeking refuge. Admission into the United States of as many as possible of these unfortunate persons would relieve the extremely crowded conditions under which they live and would also help in bringing about family reunion.

It is an established fact that migrants and refugees admitted to this country for asylum and resettlement contribute substantially to the American economy by their skills and talents as well as by the fact that many of them establish industries and also pay taxes to the Government. In the main, they make a significant contribution by their competence and by the fact that they are a self-maintaining group of people.

The voluntary agencies in their turn make their contribution in many ways. They recognize and respect the diverse ethnic and cultural backgrounds of the refugees whom they service—Armenians, Asian Ugandans, Chinese, Cubans, Czechoslovaks, Hungarians, Lithuanians, Poles, Roumanians, Russians, Sudanese, Ukranians, Yugoslavs, et cetera. They are mindful of the need to help in cultural adjustment in the long process of entering the mainstream of American life.

They also give to the refugees an understanding not only of their basic rights but of the responsibilities of citizenship. Moral support is given by the agencies to offset the reaction of the refugees to their having been uprooted and the need for adapting to the basic features of the new way of life into which they enter.

The voluntary agencies would urge consideration by Congress of appropriations of additional funds to meet the requirements of such international agencies as Intergovernmental Committee for European Migration and the United Nations High Commissioner for Refugees which are reaching out to thousands of needy people in critical situations and changing conditions. ICEM's work in transporting refugees and migrants, sometimes on very short notice, is well known. Their training of artisans and moving of skilled workers into developing countries has been of great value. Likewise, the UNHCR as an international agency has been able to respond to refugee crisis quickly and expeditiously. It has been particularly effective in refugee work in developing countries. The expulsion of the Asian Ugandan provides a telling example of the role played by both these organizations over and beyond their regular programs. It is important, and the voluntary agencies so urge, that Congress make adequate provision of funds to meet the basic requirements of both ICEM and UNHCR and support their program and projects to the fullest. In addition, they recommend that every possible consideration be given to an increase in appropriations of funds for the United Nations Relief and Works Agency for Palestine Refugees (UNRWA) to obviate reduction of needed services. It is this cooperative relationship between the intergovernmental agencies, the international agencies, the voluntary agencies and the U.S. Government that provides the most successful method of work in the area of refugee assistance.

The voluntary agencies wish to express their conviction that migration and refugee assistance serves the best interest of the United States and helps bring about social, economic, and political stability in areas of the world where there might otherwise be unrest and possibly chaos.

Mr. Chairman, the Committee on Migration and Refugee Affairs appreciates this opportunity to present its earnest recommendation that in your consideration of appropriations for the Migration and Refugee Assistance Act adequate funds be provided for the important and effective programs covered by this act.

MEMORANDUM

SUBMITTED BY THE AMERICAN ISRAEL PUBLIC AFFAIRS COMMITTEE

May we, on behalf of the American Israel Public Affairs Committee, submit our views to your subcommittee with respect to American assistance to Israel.

Members of your committee are well aware of the generous assistance which

our government has provided to Israel since 1951. This aid has enabled Israel to defend herself from attack and, at the same time, to absorb the more than 1.5 million refugees who have poured into Israel seeking sanctuary from all parts of the world since she was established in 1948.

Congress has always been sympathetic to Israel's problems and may take satisfaction in the knowledge that American funds have been used effectively and prudently, and that Israel has made great strides toward economic stability.

We now respectfully urge your favorable consideration of two grants which have been approved by both Houses and which are proposed for fiscal 1974:

Fifty million dollars in security supporting assistance, which is included in the pending Mutual Development and Cooperation Act;

Thirty-six and one-half million dollars to assist in the resettlement of Soviet Jews, which is included in the State Department Authorization Act.

Our past assistance to Israel

It should be emphasized that most of the assistance provided to Israel in the past has taken the form of loans. Grant aid, which was initiated in 1951 after Israel had absorbed 600,000 refugees in her first 3 years, was gradually scaled down and ended in 1959. During this period Israel received development loans which are being repaid with interest.

Grant aid to Israel was resumed in 1971 because of Israel's huge defense burden. Since that time grant supporting assistance to Israel has totaled $100 million.

Critics of American aid to Israel frequently distort the figures and contend that Israel has received more assistance than we have rendered to the Arab States.

In fact, our aid to the Arab States has far exceeded that extended to Israel. The figures show that between 1946 and 1972 our grant aid to the Arab States totaled $2.7 billion, of which $404 million was in the form of military grants. During the same period, grant economic aid to Israel totaled $420 million. Unlike her Arab neighbors, Israel has never received grant military assistance from the United States.

Moreover, the Arab States have received vast military and economic aid from the Sovet Union. Since Czechoslovakia first sent arms to Egypt in 1955, Russia and other Communist countries have poured huge quantities of weapons into Egypt, Iraq, Syria, and seven other Arab States—conservatively estimated at more than $6 million. In addition, to our regret, England and France have also made weapons available to Arab countries and Israel has never been permitted to relax in the struggle to maintain an adequate defense deterrent.

While it is true that Israel has been able, in the last several years, to make some slight reductions in her defense expenditures, she must now take into account the fact that the United States, England, and France are expanding their arms supplies to the Arab States, particularly in the Persian Gulf. Israel must now include these countries on her strategic map because of the omnipresent danger that these new planes, tanks, and other weapons may find their way into the arsenals of Arab States on Israel's frontiers.

Israel's defense expenditures are still astronomically high—41 percent of her budget and 26 percent of her GNP in 1972. Most of this burden is carried by the Israeli taxpayer, who is among the highest taxed in the world.

An income of 20,000 Israel pounds (less than $5,000) bears a tax of 50 percent. An income of 42,000 Israel pounds (approximately $10,000) bears a tax of 63 percent.

Critics have suggested that U.S. supporting assistance to Israel could be cut because Israel's economic position has improved during the past 2 years, as evidenced by her growing dollar reserves. Such arguments overlook two crucial factors:

(1) Israel's reserves have fluctuated greatly. When President Nasser opened his war of attrition against Israel in 1969, the Bank of Israel's net reserves plummeted. They reached a low point of $338 million in 1970; they rose to $361 million in 1971; to $576 million in 1972; and to $1,070 million in the beginning of 1973. (These do not include deposits of foreign banks and foreign individuals). These reserves are still low for a country like Israel which is dependent on imports for essentials and in an exposed geopolitical situation. If war were to break out again, reserves would go down sharply because of the need to buy additional materiel, because tourism would decline and, also, because Israel would have to mobilize people from factories and fields, sharply reducing production and the capacity to export.

(2) It must also be pointed out that the 1970–72 increase in reserves to a working level was financed to a large part by borrowing. While reserves rose, Israel's external debt has risen sharply since the Israelis have been compelled to go deeply into debt to pay for both defense and resettlement of refugees. The figures show this rise.

External debt:	*Billions*
1970	$2.1
1971	2.6
1972	3.4
1973	4.1
1974 (forecast)	4.5

This means that Israel has had the highest per capita foreign currency debt in the world for more than a decade. It now stands at about $1,300 per person. This huge debt imposes a massive burden on the Israelis. Israel's external debt service cost $532 million in 1971; $687 million in 1972; for the current year it is estimated at $705 million and it is expected to rise to $800 million in 1974.

Israel still has a substantial foreign exchange deficit: $1,234 million in 1970, $1,203 million in 1971, $1,100 million in 1972. The forecast for 1973, approximately $1,360 million, for 1974, $1,300 million.

It should be noted that all U.S. supporting assistance programs for Israel are utilized to purchase goods and services exclusively in the United States. The $50 million voted last year for supporting assistance was used to purchase mainly electronic equipment, automotive equipment, containers, tractors and to finance shipping on U.S. flag vessels.

Aid for Soviet Jews

There are two Israels. There is the Israel which has defended the security of her citizens. The other is the Israel which has generously opened her door to those who came from displaced persons camps, from behind the iron curtain, from ghettos in Arab lands—from some 100 countries around the world. Many of them came impoverished for they were ravaged in war and despoiled by the governments of the countries from which they fled.

In the last two years there has been an extraordinary immigration of Jews from the Soviet Union, after more than half a century of imprisonment. While only a small proportion of those seeking to leave Russia have been granted exit visas, the fact is that some 31,652 came into Israel in 1972 and almost half that number came in the first 6 months of 1973. Israel has the ability and the will to absorb these newcomers, even as she has done in the past. She has had the support of world Jewry, which has given generously of its philanthropic funds to help Israel. But it should be recognized that the funds available have not been adequate. The fact is that many of the Jews who have come to Israel since 1948 have never been fully absorbed in the country, because Israel had to pay so dearly for her defense.

Last year the Congress voted to give economic assistance for the absorption of the refugees from the Soviet Union. It voted an authorization of $85 million for this purpose. The Appropriations Committee approved a $50 million grant and these funds are being effectively utilized to facilitate absorption through the instruments of the United Israel Appeal and the Intergovernmental Committee for European Migration. These funds are being used for care and maintenance, for transit centers, for new absorption centers and hostels, for the construction of apartments and acquisition of mobile homes, for training and retraining, for hospitals and medical services.

It should be emphasized that the contribution which the United States is making represents a small part of the total cost. The Government of Israel has estimated that the productive integration of the 35,000 Soviet immigrants into the Israel economy anticipated in the forthcoming year requires a total expenditure of some $390 million. In addition, Israel expects approximately 25,000 immigrants from other countries in 1973. Most of this is financed by the contributions of world Jewry, as well as by the sale of Israel bonds.

We trust that your subcommittee will give its approval to the new $36.5 million authorization included in the proposed State Department budget.

Over the years the Israelis have fought their own defense battles. They have carried their own defense burdens. They have not asked us for the gift of our weapons or for the gift of our manpower. They have truly served as a situation of strength and stability in the Middle East, helping to preserve vital communi-

cation lines and resources. Self-reliant, they have not only maintained their own independence but they have also contributed to the security of others in their region. Their presence has deterred aggressive elements from threatening the integrity and independence of other states.

The continued existence of a strong and economically viable Israel is a factor for peace in the Middle East, serving the national interest of the United States.

Mr. PASSMAN. The committee is adjourned.
