¹ Less than 0.05 percent of GDP.

Note.—Congressional Budget Office expects that under current policies, revenues will remain just around 19 percent of GDP (see the table above), but spending growth will outstrip revenues. Within the spending totals, some categories grow and others shrink. The government's big health care programs—Medicare and Medicaid—continue to grow, and together they represent 5 percent of GDP in 2003 (compared with 4.1 percent in 1998). Net interest outlays inch down from 3.1 percent of GDP in 1998 to 2.8 percent in 2003. Social Security benefits stay at about 4.7 percent of GDP. In 2003, the big demands that the baby-boom generation will place on Social Security and Medicare are 5 years away. Most other spending programs roughly preserve their 1998 shares. A sole exception is discretionary spending—defense, international, and domestic. These programs are assumed in the baseline projections, to keep up with inflation once the Budget Enforcement Act's caps expire in 1996. They, therefore, dwindle gradually as a share of GDP, from 6.7 percent in 1998 (already a historic low) to 6.1 percent in 2003.

In certain instances, subtotals, totals and the deficit are not exact due to rounding.

¹ Projections assume that discretionary spending is adjusted for inflation up to the statutory caps that are in effect through 1998. All discretionary spending other than spending from the violent crime reduction trust fund is assumed to equal the caps in 1998 and to grow from that level at the rate of inflation in later years. Unspecified reductions show the cuts that would be needed to satisfy the caps.

Debt held by the public	49.9	49.4	48.9	48.6	48.4	48.1	48.0

¹Excludes interest costs of debt issued by agencies other than the Treasury (primarily deposit insurance agencies).

²Principally Civil Service retirement, military retirement, Medicare, unemployment insurance, and the highway and the airport and airway trust funds.

³Primarily interest on loans to the public and to the Resolution Trust Corporation and the Bank Insurance Fund.

⁴Differs from the gross Federal debt primarily because most debt issued by agencies other than the Treasury is excluded from the debt limit.

Note.—Projections of interest and debt assume compliance with the discretionary spending caps in the Budget Enforcement Act.

²Consumer Price Index for all Urban Consumers (CPI-U).

Note.—The forecast labeled “administration” in this table reflects the administration’s estimate of its own programs’ effects on the economy. The Congressional Budget Office forecast is based on data available through November 1996 and does not reflect fourth-quarter data for gross domestic product or the Consumer Price Index published in January 1997. The blue chip forecasts are based on a survey of private forecasters published on March 10, 1997. Congressional Budget Office’s forecasts projections are based on current policy assumptions, whereas the administration’s forecasts and projections are based on balanced budget economic assumptions.

² In 1976, the fiscal year was moved from July–June to October–September. The 3-month period from July through September 1976 is not represented in this table. The value for CPI-U during this period is 57.3; the value of CPI-X1 during this period is 59.9.

³ Congressional Budget Office forecast from The Economic and Budget Outlook: fiscal years 1997–2006, May 1996.

NA—Not available.

Note.—Data beginning in 1978 are for all urban consumers; earlier data are for urban wage earners and clerical workers. Data for CPI-U beginning 1983 incorporate a rental equivalence measure for homeowners' costs (the measure used in determining CPI-X1) and therefore are not strictly comparable with earlier figures.
