(PURSUANT TO SEC. 5, S. RES. 49, 94TH CONGRESS)

WASHINGTON, D.C. 20510

December 15, 1975

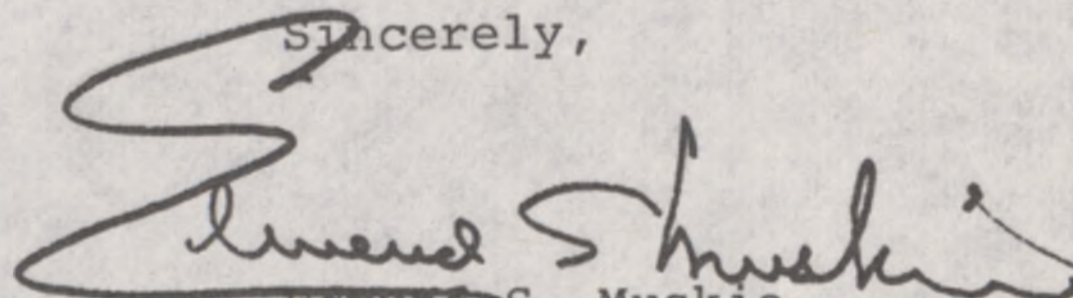

Honorable Abraham Ribicoff
Chairman
Government Operations Committee
United States Senate
Washington, D. C. 20510

Dear Mr. Chairman:

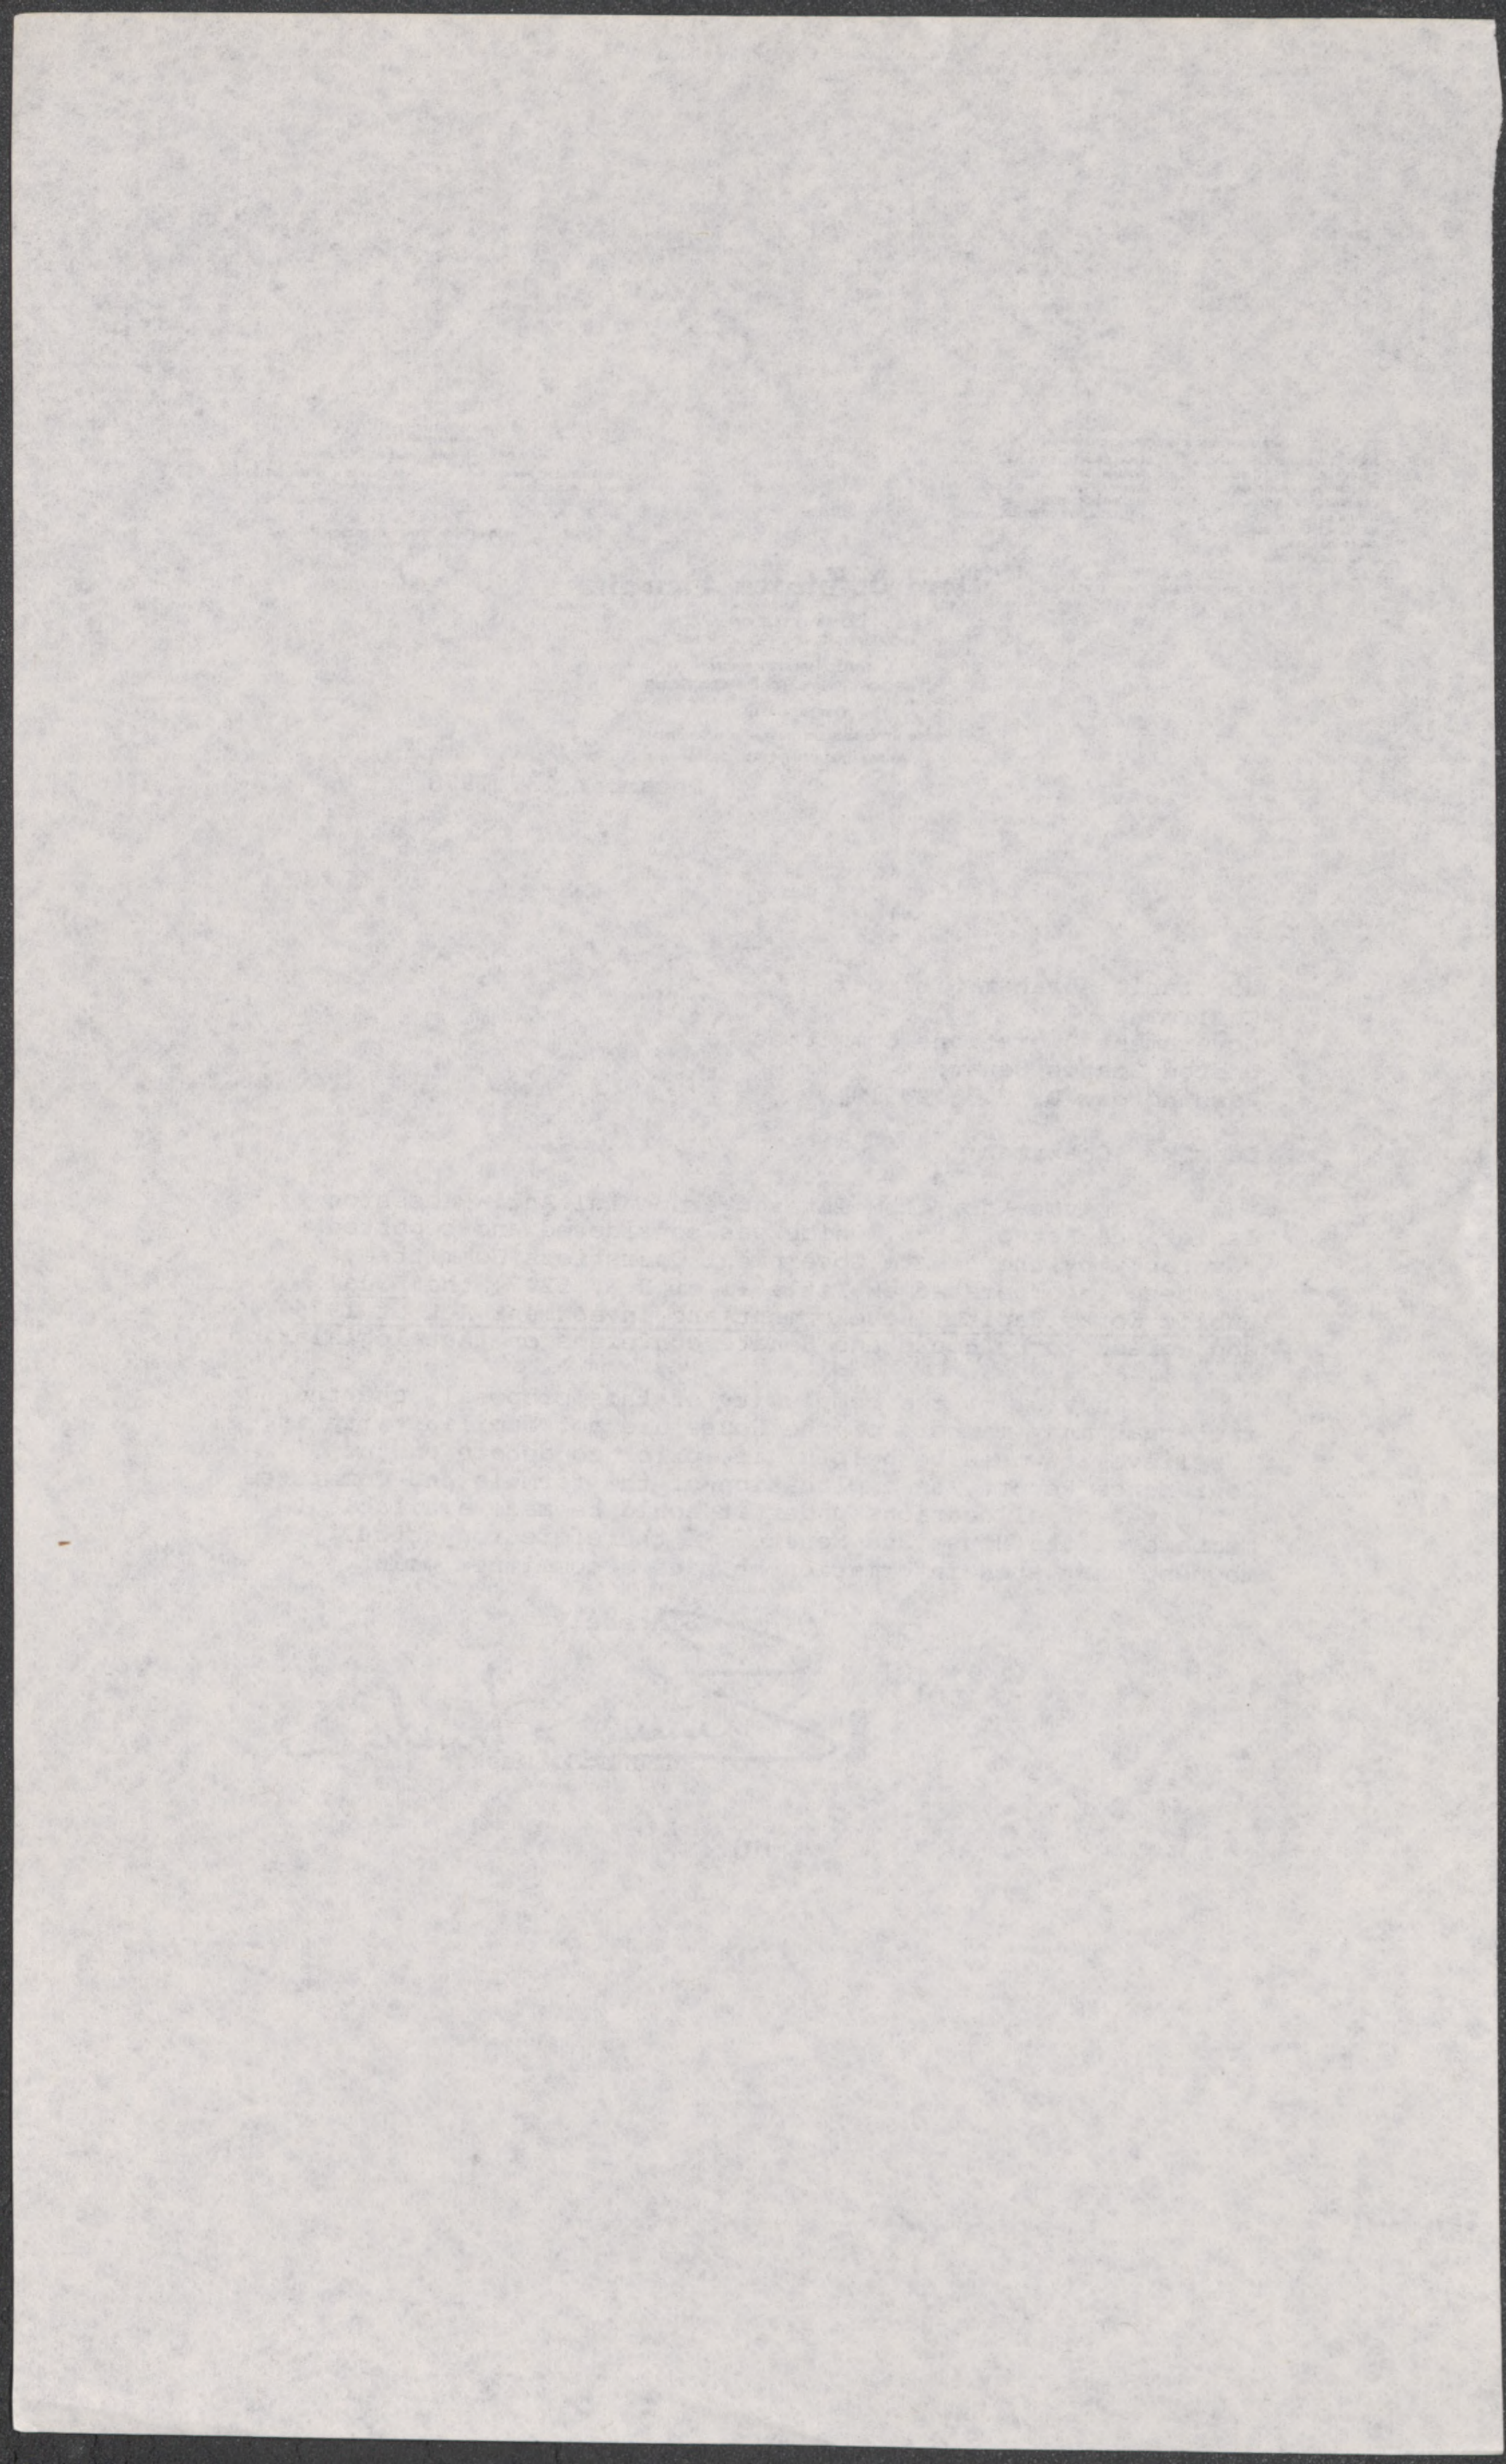

As you know, the Intergovernmental Anti-Recession Assistance Act of 1975, which was considered and reported favorably by the Senate Government Operations Committee, has been incorporated as Title II of H.R. 5247, the Local Public Works Capital Development and Investment Act of 1975 and agreed to by House and Senate conferees on that legislation.

In view of the complexity of this proposal, and the fact that many members of the House are not familiar with it, I believe it would be helpful if, prior to debate on the Conference Report, an explanation of the formula and Committee estimates of allocations under it could be made available to members of the House and Senate. I therefore respectfully request that such information be made a committee print.

Sincerely,

Edmund S. Muskie

(III)

EXPLANATION OF ALLOCATION FIGURES

The allocation figures in the two following charts are based on funding at an annual level of \$1.5 billion. This level is set by the average national unemployment rate for the first quarter of calendar 1975, which was 8.3%. (NOTE -- Since the national unemployment rate for November of 1975 was also 8.3%, the authorization level for this program at the current unemployment level would be the same as it was last winter. However, since local unemployment rates may have fluctuated since the first quarter, the allocations in the following charts should be viewed as approximate estimates of what they would be had more recent unemployment data been used.)

Because of the delay in collecting and verifying local unemployment figures, there is a lag of one quarter between the computation of quarterly allocations and the quarterly data upon which that payment is based. Thus, if the program goes into effect on April 1, 1976, payments for that quarter will be based on unemployment for the last calendar quarter of 1975.

The allocation figures themselves are at an annual level. For example, according to Chart No. 1, the State government of Rhode Island would receive an allocation of \$4.8 million. This means that if the level of funding for the program and the unemployment rate for the State of Rhode Island remained the same for a year, Rhode Island would receive \$4.8 million. Had the program been in effect as of July 1 of this year, the first quarterly payment to the Rhode Island State government would have been one quarter of this amount, or \$1.2 million. Every

quarter, the formula will be recomputed using the more recent unemployment data and the new program funding level, if any. Thus, the allocation figures will vary somewhat from quarter to quarter, to reflect changing unemployment levels.

On both charts, asterisks indicate jurisdictions which have an unemployment rate below 6% and which therefore do not receive their allocation. The allocations computed for these jurisdictions are returned to the Treasury, for use in the contingency fund under Section 6 of the bill.

A. State Government Allocations

Chart No. 1 shows the formula allocations computed for the 50 state governments. At a funding level of \$1.5 billion set by first quarter unemployment, one third -- or \$500 million -- is set aside for state governments.

Other information shown on this chart includes:

- First quarter average unemployment rate.
- Excess unemployment factor, determined by subtracting the state's average unemployment rate for the base period (1967-69) from the first quarter average unemployment rate.
- State allocation as a percentage of total state taxes raised. This percentage figure correlates very closely with the excess

unemployment factor, or that part of a state's unemployment attributed to recession.

B. Local Government Allocations

Chart No. 2 is a computer print-out showing the formula allocations computed for all individual local jurisdictions (those for which the Manpower Administration has unemployment data) and for all balance of state categories. At a funding level of \$1.5 billion set by first quarter unemployment, two thirds -- or \$1 billion -- is set aside for local governments.

Other information shown on the print-out includes:

- Adjusted taxes.
- Average first quarter unemployment rate.
- Local allocation as a percentage of total local taxes raised. This figure correlates closely both with the average unemployment rate and the taxes raised.

On the print-out, the names of the states are not listed. However, the local jurisdictions are grouped by state and appear in alphabetical order by state.

At the end of each state grouping is a Balance of State entry. The data on this line represents the taxes and unemployment of all local jurisdictions in the state except for those listed individually above the Balance of State entry. The allocation figure on this

line is to be distributed among jurisdictions making up the balance of the state as much as possible, according to their taxes and unemployment.

The unemployment rates listed on the print-out do not include decimal points. On the first entry on the print-out -- Baldwin County (Alabama) -- the unemployment rate appears as 54. This should be read as 5.4%. For the second entry, Calhoun County, the unemployment rate is 12.6%.

Similarly, the percentage of taxes column contains no decimal point. Most of these entries contain six digits. For entries with six digits, the decimal point should appear after the first digit. Thus, for Calhoun County, the percentage of taxes should read 5.93438%. For Baldwin County, the entry has only 5 digits. Its percentage of taxes should read 0.65891%. A few entries in this column contain seven digits. For these, the decimal should be placed after the first two digits.

State Allocations
As a Percentage of Taxes
