what we can all do if we have passion and heart, and if we work together.

Just look at HAMMER today. It is a first-rate facility that keeps Hanford workers safe.

HAMMR has created jobs. It has created economic opportunities and development, and it has the potential now to be a Homeland Security training center for first responders across the country.

Our whole country owes Sam a debt of gratitude for all he has done for so many people.

During my years in the Senate, I have worked with a lot of people. But no one has come close to matching Sam’s energy, his commitment, and his success.

Sam has been a role model to me and to all of us who want to spend our lives giving something back to the communities we care about most. I thank him for helping me be a better representative for all the people of my home State.

Sam was a one-person Chamber of Commerce. He was a visitor’s center and he was a cheerleading squad all wrapped into one. Sam Volpentest was the heart and soul of the Tri-Cities. He was one of a kind. Sam will be dearly missed, but he will not be forgotten.

LOCAL LAW ENFORCEMENT ENHANCEMENT ACT OF 2005

Mr. SMITH. Mr. President, I rise today to speak about the need for hate crimes legislation. Each Congress, Senator KENNEDY and I introduce hate crimes legislation that would add new categories to current hate crimes law, sending a signal that violence of any kind is unacceptable in our society. Likewise, each Congress I have come to the floor to highlight a separate hate crime that has occurred in our country.

On October 31, 2002, Patrick Vogrich was convicted of murder on a wheelchair. According to police, Mr. Vogrich beheaded his disabled client Larry Rap to death with a hammer in an apartment outside of Chicago, IL. The apparent motivation for the attack began when Mr. Rap ran into Mr. Vogrich with his wheelchair. According to police, Mr. Vogrich was convicted of murder on November 19, 2002.

I believe that the Government’s first duty is to defend its citizens, to defend them against the harms that come out of hate. The Local Law Enforcement Enhancement Act is a symbol that can become substance. I believe that by passing this legislation and changing current law, we can change hearts and minds as well.

SEQUENTIAL REFERRAL REQUEST—INTELLIGENCE AUTHORIZATION ACT FOR FY 2006

Mr. WARNER. Mr. President, I ask unanimous consent that my letter to the majority leader dated September 29, 2005—no one has come close to matching Sam’s energy, his commitment, and his success.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

Senator BILL FEIST, Majority Leader, U.S. Senate, Washington, DC.

DEAR MR. LEADER: Pursuant to paragraph (b) of S. Res. 400 of the 94th Congress, as amended, I introduce the Intelligence Authorization Act for Fiscal Year 2006, as just reported by the Select Committee on Intelligence, be sequentially referred to the Committees on Appropriations for a period of 10 days. This request is without prejudice to any request for an additional extension of five days, as provided for under the resolution. Moreover, the resolution provides that the period of referral does not begin to run until the committee to which the bill is referred receives the bill, “in its entirety and including annexes.” Thus, the 10 days of initial referral will not begin to run until the Committee on Armed Services receives the classified annex to the bill, as well as the bill and report.

I request that I be consulted with regard to any unanimous consent or time agreements regarding this bill.

With kind regards, I am,
Sincerely,

JOHN WARNER, Chairman.

NATIONAL HISPANIC HERITAGE MONTH

Mr. FEINGOLD. Mr. President, we are currently observing National Hispanic Heritage Month, a time when many Americans and the community and the country at large remember and celebrate the profound contributions of Hispanic culture that are woven into the great cultural fabric of America. National Hispanic Heritage Month is celebrated between September 15 and October 15, to coincide with the Independence Day anniversaries of nations throughout Latin America. In 1968, President Lyndon Johnson’s proclamation of National Hispanic Heritage Month was authorized by Congress. In 1988, the recognition was expanded to a month-long celebration.

America is home to nearly 41 million Latinos, including a thriving population in my home state of Wisconsin. This month, we should take the time to embrace the many important contributions throughout American history of American Latinos that affect all of our everyday lives. This month we celebrate the historic efforts of Cesar Chavez, Jaime Escalante, Roberto Hernandez, Henry Cisneros, Ellen Ochoa and Roberto Clemente, to name just a few. We celebrate their work to break down barriers and create bridges for future generations.

But as we celebrate Hispanic heritage, it is also time to address the challenges that face the Hispanic community, such as access to education and health care, fair working conditions, racial profiling and, for many, an ability to keep their family together while working to become legal, permanent residents of this great country. I am a strong supporter of the SOLVE Act, introduced by Senators KENNEDY and MCCAIN, that would help keep many Latino families together while their petitions for permanent legal residency are processed. The legislation would help hard-working Hispanics and others become legalized citizens and would offer a new temporary worker program.

While we work to improve our immigration system, we must enhance the education of Latino students. Many Latino students face social, economic, and language barriers that can prevent them from receiving the top-quality education they, like all other students, deserve. We must increase funding for English proficiency programs, programs to help low-income students attend college, and programs to help parents involve themselves in their children’s education. It must be a priority for Congress to ensure equal education for all so the Hispanic community can continue to flourish and contribute to American culture.

In closing, I express my hope that the 101st Congress begins to address these and other pressing priorities for Latinos across the country. We should not limit our celebration of National Hispanic Heritage Month to saluting the achievements of Hispanics, we also need to make sure that we act on the educational, health, labor and other needs of all Americans of Hispanic heritage.

WATER TECHNOLOGY AND INTERNATIONAL AID

Mr. DOMENICI. Mr. President, fresh water is a substance that we as Americans assume will be available when and where we want it. However, the disruption of water and wastewater services following Hurricane Katrina and Hurricane Rita has shown how fragile those assumptions can be. The resulting fear, panic and instability are what we rarely experience in this Nation. However, as we look around the globe, those same fears, sense of panic, and sense of instability is a daily occurrence for over 1 billion people across the globe who have little or no hope for a speedy resolution of their concerns.

We must help solve the expanding problems of insufficient clean drinking water and inadequate wastewater treatment. These are matters of international importance for several reasons. First, we are a member of an increasingly international world, and the expansion or contraction of economies the world over affects our industry and economy. Furthermore, disease knows no borders and can spread through water. Most importantly, we care about the well being of others. All these national policy goals are intrinsically related to adequate water and wastewater treatment across the world.

There are many ways that we can help address this world-wide problem. However, lasting solutions require that local individuals and institutions have the capacity to maintain and expand their own services.
This point has been hammered home by a report to be released by the Center for Strategic and International Studies and Sandia National Laboratories today. The report reinforces what any organization addressing international water issues already knows: the local community, accept, maintain and take responsibility for the solution to their water issues. There are several initiatives in place in our country that are helping local communities across the globe in this regard.

The Department of Energy National Laboratories have tested tools and techniques for improving our domestic capacity in the desert southwest. The labs have shared that information with institutions around the globe to help strengthen local capacity.

As an example, Sandia National Laboratories’ efforts to create new technologies to address major U.S. water issues are being applied to critical water concerns in strategically important Middle East. Ongoing interactions with Iraq, Jordan, Libya and Israel are helping address water safety, security and sustainability issues with technologies in water management modeling and real-time monitoring and desalination.

Sandia is also working to rebuild Iraq’s science and technology capacity in collaboration with the Arab Science and Technology Foundation and the Department of Energy and Science. Last week in Amman, Jordan, Sandia co-hosted a meeting where proposals developed by Iraqi scientists and their international collaborators were reviewed and presented to international funding agencies. Two such proposals for improving water resources management in Iraq were presented by Sandia staff and their Iraqi counterparts.

Separately, Sandia is working with the United Nations Educational, Scientific and Cultural Organization to develop a proposed planning framework for water management in Iraq. This framework will utilize an advanced water management model developed at Sandia coupled with training of Iraqi water managers and scientists. This proposed framework is expected to be presented to Iraq’s Ministry of Water in November.

In other areas, Sandia has reached a preliminary agreement with the Royal Scientific Society, RSS, in Jordan to pilot test a new technology for real-time collaborative development of water management models over the Internet. This technology will enable U.S. and Jordanian water experts to jointly assemble, test and deploy water management models via secure, real-time while half a world apart. Sandia has also developed a proposal with the Jordanians to pilot test real-time water quality monitoring technology utilizing Sandia’s chem-lab-on-a-chip technologies.

In Libya, Sandia is working on a program with the Departments of Energy and State to reconfigure former Libyan weapons scientists on development of peaceful technologies that will enable Libya to develop a strong, internationally-protected economy. Water is a very high priority for the Libyans, and they are reconfiguring their former weapons development laboratory into a facility they plan to use for Energy and Water Desalination Research Center. Sandia is helping identify desalination technologies for use in Libya, with particular attention to technologies for treating the brackish water that makes up pumice oil and gas.

Further, Israeli water experts came to Sandia in 2003 to learn about water security. The trip led to a series of visits between Israeli water security experts, the Environmental Protection Agency’s National Homeland Security Research Center, and Sandia. These interactions resulted in a collaborative proposal to test Sandia’s real-time, chem-lab-on-a-chip water quality monitoring and desalination technology in Israel’s water supply system.

Congress helped develop these tools by allowing the Department of Energy Laboratories to use part of their resources for laboratory-directed research purposes. In the case of Sandia, these seed funds have produced sensor technologies to test water for contaminants and terror agents, numerical models to help groups jointly manage and plan for the future and reduce the impact of drought. Technologies that may reduce costs and make impaired water available for beneficial uses, and tools to detect and respond to terrorist attacks in our municipal drinking water systems. These seed projects have then been extended and are coming to fruition under direct funding we have provided through the Department of Energy, DOE.

The work at Sandia National Laboratories does not represent a comprehensive view of what is going on around the DOE. In fact, twelve of our national laboratories, all of whom have worked to expand and protect water supplies in some way, have worked jointly for three years to develop an outline of the ways water and energy resources are inter-related. These institutions are now working under DOE direction to develop a report to Congress on this interdependency, which I believe will help us determine which programs will most effectively ensure sufficient water supplies to support our energy needs and sufficient energy supplies to meet our water needs.

Additionally, these national laboratories are now working with both Federal and non-Federal institutions around the U.S. to develop a technology development roadmap. This effort will clearly identify our highest priority investments in research, development and commercialization so we can expand our nation’s water supplies. The projects led by these efforts led to a $40 million stockpile of the only antiviral medication effective against H5N1 flu; expansion of the ability of our State and
